Commercial Bank Examination Manual

Division of Supervision and Regulation
Commercial Bank Examination Manual
Summary of Changes

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the April 2020 supplement.

Section 1000.1

Section 1000.1, “Examination Strategy and Risk-Focused Examinations,” was revised to update the subsection on de novo bank examination frequency and scope. A de novo bank is a bank that has been in operation for three years or less. The section provides information on supervisory expectations for de novo subsidiaries of bank holding companies with assets greater than $3 billion. In addition, the section explains that de novo state member banks are ineligible for the alternate examination program for the first three years of their operations. See SR-20-16, “Supervision of De Novo State Member Banks.”

Section 1001.1

Section 1001.1, “Community Bank Supervision Process,” was updated to explain the updated template for the report of examination for state member banks with less than $10 billion in total assets. Significant updates to this template are as follows.

- The former Matters Requiring Board Attention page was renamed to the Matters Requiring Attention page. The updated page also includes a reference to SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance.”
- The Directorate Responsibility page was updated to include standard language informing the bank of its right to appeal material supervisory determinations. See 85 Federal Register 15,175 (March 17, 2020) for more information on the Federal Reserve’s appeals process.
- The former Summary of Examination Ratings and Conclusions page was broken into two distinct sections entitled Summary of Examination Ratings and Examiner Conclusions. The Summary of Examination Ratings section contains the numerical ratings of the bank. The Examiner Conclusions section contains a qualitative summary of examiners’ supervisory activity.
- The Concentrations of Credit page instructions were updated to note that the “Concentrations of Credit” section to the manual and SR-20-8, “Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach,” provide more information on the calculation of the denominator of concentration ratios.

Sections 2024.1, 2024.2, and 2024.3

Section 2024.1, “Private Placements,” is a new section. This section is based on material from section 4130, which was reorganized to differentiate content explaining risk-management practices at a supervised institution from examination practices and considerations in reviewing private placement activities. Section 2024.1 provides more background information concerning the Securities and Exchange Commission’s rules related to private placements. Sections 2024.2, “Examination Objectives,” and 2024.3, “Examination Procedures,” were also revised.

Sections 2040.1, 2040.2, 2040.3, and 2040.4

Section 2040.1, “Loan Portfolio Management,” was updated to remove material on tying arrangements as this topic is addressed in section 6080.1, “Regulation Y: Prohibitions Against Tying Arrangements.” The discussion of credit risk review systems was also removed. See the explanation of changes to section 2041.1 for more information. The material related to mortgage banking was removed and converted into a new standalone manual section (2044.1). Sections 2040.2, “Examination Objectives,” and 2040.3, “Examination Procedures,” were also revised to align with the interagency examination documentation (ED) modules. Section 2040.4, “Loan Portfolio Management: Internal Control Questionnaire,” was removed from the manual.
Section 2041.1

This new section, “Credit Risk Review Systems,” describes the “Interagency Guidance on Credit Risk Review Systems” issued by the Federal Reserve, Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and National Credit Union Administration (NCUA). The guidance discusses sound management of credit risk, a system of independent, ongoing credit review, and appropriate communication regarding the performance of an institution’s loan portfolio to its management and board of directors. This interagency guidance replaces attachment 1 of the 2006 “Interagency Policy Statement on the Allowance for Loan and Lease Losses.” See 85 Federal Register 33,278 (June 1, 2020) and SR-20-13.

Sections 2044.1 and 2044.3

These new sections address “Mortgage Banking” and contain relevant information that was previously in section 2040.1, “Loan Portfolio Management.” While the information pertaining to the risk management of mortgage banking remains relevant, the accounting references are outdated and will be revised in a future update to the manual. In addition, the examination procedures that were previously located in section A.2040.3, “Loan Portfolio Management: Comprehensive Mortgage Banking Examination Procedures,” were moved to section 2044.3, “Mortgage Banking: Examination Procedures.”

Sections 2050.1, 2050.2, 2050.3, and 2050.4

Section 2050.1, “Concentrations of Credit,” incorporates guidance issued by the Federal Reserve, FDIC, and OCC (agencies) on a common approach for defining credit concentration ratios. As of March 31, 2020, for banks that have adopted the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Topic 326, Financial Instruments—Credit Losses that implements the current expected credit losses (CECL) methodology, the agencies’ examiners will calculate credit concentration ratios using tier 1 capital plus the allowance for credit losses attributed to loans and leases as the denominator. For institutions that have not adopted CECL, the agencies’ examiners calculate credit concentration ratios using tier 1 capital plus the entire allowance for loan and lease losses as the denominator. Further, section 2050.1 was reorganized and a new subsection on supervisory considerations for assessing concentrations was added. Section 2050.2, “Concentrations of Credit: Examination Objectives,” section 2050.3, “Concentrations of Credit: Examination Procedures,” and section 2050.4, “Concentrations of Credit: Internal Control Questionnaire,” were removed from the manual.

Sections 2070.1, 2070.2, 2070.3, and 2070.4

Section 2070.1, “Allowance for Loan and Lease Losses,” which contains the 2006 “Interagency Policy Statement on the Allowance for Loan and Lease Losses,” (SR-06-17) was revised to remove the attachment to the policy statement on loan review systems. This guidance on loan review systems was superseded by SR-20-13 and is available in section 2041.1, “Credit Risk Review Systems.” Section 2070.3, “Examination Procedures,” has been revised to align with the interagency ED modules. Sections 2070.2, “Examination Objectives,” and section 2070.4, “Internal Control Questionnaire,” were removed from the manual. See the explanatory note on SR-06-17 for more information.

Sections 2071.1 and 2071.3

Section 2071.1, “Allowance for Credit Losses,” is a new section that incorporates the “Interagency Policy Statement on Allowances for Credit Losses.” (See SR-20-12.) The Federal Reserve, OCC, FDIC, and NCUA issued this statement to address the changes to U.S. generally accepted accounting principles as promulgated by the FASB in Accounting Standards Update (ASU) 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments and subsequent amendments issued since June 2016. The May 2020 statement describes the measurement of expected credit losses under the CECL methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB ASC Topic 326; the design, documentation, and validation of expected credit losses.
loss estimation processes, including the internal controls over these processes; the maintenance of appropriate allowances for credit losses (ACLs); the responsibilities of boards of directors and management; and examiners’ review of a bank’s ACLs. With the issuance of the May 2020 statement, the 2006 “Interagency Policy Statement on the Allowance for Loan and Lease Losses” is partially superseded for institutions that have adopted the CECL methodology. The 2006 statement will be made inactive after all institutions have adopted the CECL methodology in 2023. Section 2071.3, “Allowance for Credit Losses: Examination Procedures,” was added to the manual.

Sections 2072.2 and 2072.3
Section 2072.2, “ALLL Methodologies and Documentation: Examination Objectives” and 2072.3, “ALLL Methodologies and Documentation: Examination Procedures” were removed from the manual. The examination objectives and procedures for assessing an institution’s ALLL methodology are fully incorporated into sections 2070.2 and 2070.3. In addition, procedures for assessing an institution’s allowance for credit losses methodology are found in section 2071.3.

Sections 2080.1 and 2080.4
Section 2080.1, “Commercial and Industrial Loans,” was revised to remove the discussion on the shared national credits program, which is now a standalone section to the manual. See section 2089.1. Much of the content in the subsection on “Tie-In Arrangements,” was removed because this topic is covered in this manual’s section 6080.1, “Regulation Y: Prohibitions Against Tying Arrangements.” Section 2080.4, “Commercial and Industrial Loans: Internal Control Questionnaire,” was removed from the manual.

Section 2088.1
This section, “Off-site Review of Loan Files,” was revised to modify the applicability of the guidance in the section. The guidance applies to the assessment of state member banks with less than $100 billion in total assets that are in the community banking organization (CBO) and regional banking organization (RBO) supervisory portfolios. Previously, the guidance applied to the assessment of state member banks with less than $50 billion in the CBO and RBO supervisory portfolios. The section also notes that Reserve Banks and the state member bank should discuss the technical procedures and security practices for conducting off-site loan reviews when contingency operating circumstances necessitate a full-time telework environment.

Section 2089.1
This new section, “Shared National Credits,” provides a high-level description of the Shared National Credits (SNC) supervisory program. The Federal Reserve, OCC, and FDIC established the SNC program to evaluate large and complex syndicated credits. The program provides for uniform treatment and increased efficiency in shared-credit risk analysis and classification of the largest and most complex credits shared by multiple financial institutions.

Section 3020.1
This section, “Assessment of Capital Adequacy,” was revised to include
• A revised definition to high volatility commercial real estate (HVCRE). Section 214 of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) modified the capital treatment of HVCRE by adding section 51 to the Federal Deposit Insurance Act (FDIA).
• A discussion on the community bank leverage ratio (CBLR) framework. The CBLR framework provides for a simple measure of capital adequacy for certain community banking organizations, consistent with section 201 of the EGRRCPA.
• Updated information regarding supervisory leverage ratio expectations for de novo banks. In general, the Federal Reserve expects each de novo bank to maintain a tier 1 leverage ratio of at least 8 percent for the first three years of its existence. See SR-20-16.
• Updates to the stress capital buffer and the countercyclical capital buffer requirements.
References to adjusted allowances for credit losses, which applies to institutions that have adopted the CECL methodology.

Sections 3035.1 and 3035.3

The material in these new sections on “Prompt Corrective Action” was previously in section 4133. These sections were created so that the material would be closer to other sections in the manual related to capital. Section 3035.1 was revised to describe the prompt corrective action (PCA) implications for institutions that qualify for and opt in to the CBLR framework. A depository institution or depository institution holding company that qualifies for and opts in to the CBLR framework will be considered to have met the “well capitalized” ratio requirements for PCA purposes. For more information on the CBLR framework, see 84 Federal Register 61,797 (November 13, 2019). The section was also revised to describe how the supplementary leverage ratio factors into the PCA ratios for an advanced approaches bank or bank that is a Category III Board-regulated institution (as defined in 12 CFR 217.2). Section 3035.3, “Examination Procedures,” was revised to include several minor technical edits.

Section 4130.1, 4130.2, 4130.3, and 4130.4

The material in section 4130.1, “Private Placements,” section 4130.2, “Examination Objectives,” and section 4130.3, “Examination Procedures,” was updated and moved to sections 2024.1, 2024.2, and 2024.3, respectively. Section 4130.4, “Private Placements: Internal Control Questionnaire,” was removed from the manual.

Sections 4133.1, 4133.2, and 4133.3

Section 4133.1, “Prompt Corrective Action,” and section 4133.3, “Prompt Corrective Action: Examination Procedures” were updated and moved to sections 3035.1 and 3035.3, respectively. Section 4133.2, “Prompt Corrective Action: Examination Objectives,” was moved to section 3035.2 without revision.

Sections 4180.1, 4180.2, 4180.3, and 4180.4

The content of sections 4180.1, 4180.2, 4180.3, and 4180.4, collectively describing “Investment-Funds Support,” was moved to section 6074 and renamed “Regulation W: Investment-Funds Support.”
Sections 6074.1, 6074.2, 6074.3, and 6074.4

Section 6074.1 on “Regulation W: Investment-Funds Support,” section 6074.2, “Examination Objectives,” section 6074.3, “Examination Procedures,” and section 6074.4, “Internal Control Questionnaire,” are based on material previously in section 4180. No substantive edits were made to these sections.

Section 6080.1

This new section, “Regulation Y: Prohibitions Against Tying Arrangements” provides an overview of Section 106 of the Bank Holding Company Act Amendments of 1970 (section 106). Section 106, as implemented by the Federal Reserve Board’s Regulation Y (12 CFR 225), prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. The outdated content related to section 106 was removed from other manual sections, namely section 2040.1, “Loan Portfolio Management,” and section 2080.1, “Commercial and Industrial Loans.”

Section A.2040.3

This section, “Loan Portfolio Management: Comprehensive Mortgage Banking: Examination Procedures” was incorporated into section 2044.3, “Mortgage Banking: Examination Procedures.” As a result, section A.2040.3 was removed from the manual.
Summary of Changes

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the May 2019 supplement.

Table of Contents

The Table of Contents was updated to reflect the changes described below. In addition, the 6000 series major section heading was updated to remove the commercial bank report of examination template and instructions, which are in section 1001.1 of the manual. Going forward, the 6000 series major section heading will contain sections on key regulations that pertain to safety and soundness examinations of state member banks. These sections summarize and explain the rules, as amended, but are not substitutes for the rules themselves.

Section 1000.1

This section, “Examination Strategy and Risk-Focused Examinations,” was updated to note that examiners should convey, if evident, both the root cause of a supervisory finding and the potential effect of a finding on the organization. The section also describes key factors examiners should consider in determining whether to recommend additional formal or informal investigation or enforcement action for an organization. Lastly, the section also includes a reference to SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance,” which examiners should also consider when communicating supervisory findings.

Section 1001.1

Minor updates were made to section 1001.1, “Community Bank Supervision Process.” This section includes references to SR-20-8, “Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach,” and SR-19-9, “Bank Exams Tailored to Risk (BETR).” Minor typographical errors were corrected.

Sections 1020.1, 1020.2, and 1020.3

Section 1020.1, “Federal Reserve System Bank Surveillance Program,” was updated to include information on the Federal Reserve’s use of outlier metrics to assist examiners and other supervisory staff in determining the scope of safety-and-soundness examinations. The role of outlier metrics is particularly important in pre-examination planning at community and regional state member banks. Combined with examiner judgment, outlier metrics are used to classify the levels of risk at a state member bank within individual risk dimensions, such as credit, liquidity, and operational risk. Federal Reserve examiners then tailor the bank examination to reflect the levels of risk present. See SR-19-9, “Bank Exams Tailored to Risk (BETR),” for more information. The examination objectives (section 1020.2) and examination procedures (section 1020.3) also were revised.

Section 2040.1

This section, “Loan Portfolio Management,” was updated to remove the discussion related to Regulation O, which is now covered in section 6050.1 of the manual.

Sections 2110.1, 2110.2, 2110.3, and 2110.4

This section, “Floor Plan Loans,” was revised to improve its clarity and to add additional guidance references. For instance, material in the section was revised to consolidate supervisory considerations in the review of a bank’s floor plan loans into one part of the section. The examination procedures in section 2120.3 were also revised to align with the interagency examination documentation (ED) modules. Section 2120.2, “Floor Plan Loans: Examination Objectives,” and section 2120.4, “Floor Plan Loans: Internal Control Questionnaire,” were removed from the manual.
Sections 2120.1, 2120.2, 2120.3, and 2120.4

Section 2120.1, “Direct Financing Leases,” was revised to provide updated accounting references for lease accounting. The section states that leases should be accounted for in accordance with accounting standards issued by the Financial Accounting Standards Board (FASB). The lease accounting standard currently applied by public business entities, “Leases (Topic 842),” was issued by FASB in February 2016, and supersedes ASC Topic 840, Leases, by 2021. The examination procedures in section 2120.3 were revised to align with the interagency ED modules. Section 2120.2, “Direct Financing Leases: Examination Objectives” and section 2120.4, “Direct Financing Leases: Internal Control Questionnaire,” were removed from the manual.

Sections 3025.1 and 3025.3

This new section, “Dividends,” was previously section 4070.1. In addition to moving the section closer to the other sections in the manual related to capital, this section was revised to include references to guidance on capital planning processes, including the issuance of dividends, for bank subsidiaries of large holding companies. The section also includes a new discussion on the capital conservation buffer, which limits capital distributions and discretionary bonus payments for banking organizations that do not hold a specified amount of common equity tier 1 capital in addition to the amount of regulatory capital necessary to meet the minimum risk-based capital requirements. (See 12 CFR 217.) The examination procedures in section 3025.3 were also revised.

Sections 4050.1, 4050.2, 4050.3, and 4050.4

The contents of “Transactions Between Member Banks and Their Affiliates” (sections 4050.1, 4050.2, and 4050.3), were moved to section 6070 and renamed “Regulation W: Transactions Between Member Banks and Their Affiliates.” Section 4050.4 was removed from the manual.

Sections 4052.1, 4052.2, 4052.3, and 4052.4

The contents of “Bank-Related Organizations” (sections 4052.1, 4052.2, and 4052.3), were moved to section 6072 and renamed “Regulation W: Bank-Related Organizations.” Section 4052.4 was removed from the manual.

Sections 4070.1, 4070.2, 4070.3, and 4070.4

The contents of sections 4070.1, “Dividends,” and 4070.3, “Dividends: Examination Procedures,” were updated and moved to sections 3025.1 and 3025.3 of the manual, respectively. Section 4070.2, “Dividends: Examination Objectives,” and section 4070.4, “Dividends: Internal Control Questionnaire,” were removed from the manual.

Section 5000.1

This section, “Duties and Responsibilities of Directors,” was updated to remove contents related to the Depository Institution Management Interlocks Act as implemented by Regulation L. The relevant content on Regulation L was moved to section 6040.1, “Regulation L: Depository Institution Management Interlocks Act.”

Section 5020.1

This section, “Overall Conclusions Regarding Condition of the Bank,” was updated to remove the contents related to the review of Bank Secrecy Act (BSA) and anti-money-laundering (AML) compliance at state member banks. Section 6010.1, “Regulation H: Bank Secrecy Act and Anti-Money-Laundering,” was developed to provide a brief description of supervisory activities related to the review of BSA and AML compliance programs at state member banks.

Section 6000.1

Section 6000.1, “Commercial Bank Report of Examination,” was removed from the manual. The primary report of examination template is located in section 1001.1, “Community Bank Report of Examination.”
Supervision Process.” The 6000 series major section heading will contain sections on key regulations that pertain to safety-and-soundness examinations of state member banks.

Section 6010.1
This new section, “Regulation H: Bank Secrecy Act and Anti-Money-Laundering,” was developed to provide a brief introduction of the BSA and AML compliance program and suspicious activity reporting requirements for banks under Regulation H. The section notes that additional details on the BSA/AML program, suspicious activity reporting requirements, and all other laws, regulations, and examination procedures pertaining to the BSA, are described in the Federal Financial Institutions Examination Council (FFIEC) BSA/AML Examination Manual.

Section 6040.1
This new section, “Regulation L: Depository Institution Management Interlocks Act,” provides an overview of the Depository Institution Management Interlocks Act, as implemented by Regulation L (12 CFR 212) and subpart J of Regulation LL (12 CFR 238.91-.99). These regulations prohibit a management official of a depository institution or depository institution holding company from serving simultaneously as a management official of another depository organization if the organizations are not affiliated and both either are very large or are located in the same local area.

Sections 6050.1 and 6050.3
This new section, “Regulation O: Loans to Executive Officers, Directors, And Principal Shareholders of Member Banks,” provides an overview of the Federal Reserve Board’s Regulation O (12 CFR 215), which implements many of the laws pertaining to extensions of credit by banks to their insiders. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank’s lending decisions. The section outlines Board staff legal opinions on Regulation O and supervisory considerations for assessing compliance with Regulation O. The content in section 2040.1 related to Regulation O was removed from the manual. Examination procedures (refer to section 6050.3) were developed.

Sections 6070.1, 6070.2, and 6070.3
This new section, “Regulation W: Transactions Between Member Banks and Their Affiliates,” contains the content that was previously in section 4050. No substantive edits were made to this content. As a result, section 4050 was removed from the manual.

Sections 6072.1, 6072.2, and 6072.3
This new section, “Regulation W: Bank-Related Organizations,” contains the content that was previously in section 4052. No substantive edits were made to this content. As a result, section 4052 was removed from the manual.
Summary of Changes

Section 1000.1

Section 1000.1, “Examination Strategy and Risk-Focused Examinations,” was significantly revised and reorganized. This section addresses key aspects of the Federal Reserve’s supervisory process for safety and soundness examinations for state member banks. Some of the most significant topics covered in this section include examination authority, compliance with laws and the role of guidance, applications under Regulation H (12 CFR part 208), state member bank examination frequency, coordinating supervisory activities, and communicating supervisory findings. Subsequent sections in the manual further describe the examination and supervisory practices that apply to particular supervisory portfolios of state member banks.

Section 1001.1

This new section, “Community Bank Supervision Process,” discusses some of the most significant aspects in the preparation and execution of an examination of a state member bank with $10 billion or less in total assets. The section explains the risk-focused process for examining community banks and describes the written products that facilitate this process. In addition, the section provides an updated description of the community bank report of examination and a revised illustrative template of the community bank report of examination. Relevant report of examination content that was previously in sections 6003.1 and 6005.1 has been incorporated into section 1001.1.

Section 1007.1

This section, “Other Types of Examinations,” was previously Section 6010.1. In addition to the reorganization of the material in this new section, section 1007.1 addresses the Board’s final rules that expanded the examination cycle for certain small state member banks and U.S. branches and agencies of foreign banks. The final rules (83 Fed. Reg. 67,033 (December 28, 2018)) adopted the interim final rules (83 Fed. Reg. 43,961 (August 29, 2018)) without change. The final rules amended Regulation H (12 CFR part 208) and Regulation K (12 CFR part 211), which raised the total asset threshold (from less than $1 billion to less than $3 billion in assets) for certain qualifying state member banks and U.S. branches and agencies of foreign banks to be eligible for an 18-month examination cycle. See SR-18-7, “Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations,” for more information.

Section 1011.1

The contents of this new section, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion,” were previously part of section 1000.1, “Examination Strategy and Risk-Focused Examinations.” A new section was developed to improve the organization and presentation of manual content. The new section also provides more information on the applicability of the guidance to supervised institutions as well as updates for several references.

Section 1012.1

The contents of this new section, “Risk Management Processes and Internal Controls of Firms Having $50 Billion or More in Total Assets,” were previously part of section 1000.1, “Examination Strategy and Risk-Focused Examinations.” A new section was developed to improve the organization and presentation of manual content. In addition to the content being moved, the section provides more information on the applicability of the guidance to supervised institutions and contains minor editorial edits.

Section 2190.1

Section 2190.1, “Bank Premises and Equipment,” was revised to provide updated account-
ing standards about leases. In February 2016, the Financial Accounting Standards Board (FASB) issued a new accounting standard on leases, Accounting Standards Update No. 2016-02, Leases (Topic 842), which revises the accounting for lease transactions. The section also was revised to provide guidance on the treatment of operating leases as an investment in bank premises under Regulation H upon the implementation of the new lease accounting standard. See SR-19-7, “Statement on the Implications of the New Lease Accounting Standard on Regulation H,” for more information.

Section 3050.1

Section 3050.1, “Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion,” has been removed from the Commercial Bank Examination Manual. Eighteen months after the Economic Growth, Regulatory Relief, and Consumer Protection Act’s (EGRRCPA) enactment (May 24, 2018), financial companies with total consolidated assets of less than $250 billion that are not bank holding companies (BHCs) will no longer be subject to the company-run stress testing requirements in section 165(i)(2) of the Dodd-Frank Act. On EGRRCPA’s date of enactment, BHCs under $100 billion in total consolidated assets were no longer subject to section 165(i)(2). The agencies’ regulations implementing company-run stress testing provide that the agencies may extend any deadline relating to company-run stress testing. In order to avoid unnecessary burden for depository institutions (including state member banks) and to maintain consistency between BHCs and depository institutions, the agencies are extending the deadlines for all regulatory requirements related to company-run stress testing for depository institutions with average total consolidated assets of less than $100 billion until November 25, 2019 (at which time both statutory exemptions will be in effect). For more information, see the inter-agency statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act issued on July 6, 2018.

Sections 4140.1, 4140.2, 4140.3, and 4140.4

Section 4140.1, “Real Estate Appraisals and Evaluations,” has been revised significantly. This section provides a brief summary of the Board’s appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real estate appraisals and evaluations. Previously, section 4140.1 contained the entire contents of the December 2010 “Interagency Appraisal and Evaluation Guidelines.” The revised manual section includes a brief summary of the December 2010 Interagency Appraisal and Evaluation Guidelines, as well as a hyperlink to the guidelines. (See SR-10-16.) The examination objectives (section 4040.2), examination procedures (section 4140.3), and internal control questionnaire (section 4140.4) also were revised.

Section 6000.1

This section, “Commercial Bank Report of Examination,” has been revised to remove much of the content related to the communication of supervisory findings. This content on the communication of supervisory findings has been incorporated into the revised section 1000.1, “Examination Strategy and Risk-Focused Examinations,” to improve manual content organization.

Sections 6003.1 and 6005.1

The relevant content from section 6003.1, “Community Bank Examination Report,” and content of 6005.1, “Community State Member Banks and Holding Companies Rated Composite “4” or “5” (Examination and Inspection Report Format),” have been incorporated into section 1001.1, “Community Bank Supervision Process.” As a result, sections 6003.1 and 6005.1 were removed from the Commercial Bank Examination Manual.

Section 6010.1

The relevant content in this section, “Other Types of Examinations,” was moved to section 1007.1 of this manual to consolidate high-level supervisory process information into the 1000
sections of the manual. Accordingly, section 6010.1 was removed from the Commercial Bank Examination Manual.

Section A.2000.1

This section, “Cash Accounts: Financial Recordkeeping and Reporting Regulations-Examination Procedures,” was removed from the Commercial Bank Examination Manual. This section was a placeholder and did not contain background information or examination procedures. For more information and examination procedures on monetary instrument recordkeeping requirements under the Bank Secrecy Act, see the Federal Financial Institutions Examination Council Bank Secrecy Act/Anti-Money Laundering Examination Manual.

Section A.4140.1

Real Estate Appraisals and Evaluations: Appendices A-D was removed from the Commercial Bank Examination Manual. The appendix provided a commentary on the 12 exemptions from the agencies’ appraisal regulations and explanation of the agencies’ statutory authority to provide for appraisal regulatory exemptions and the application of these exemptions. This information is provided in the 2010 Interagency Appraisal and Evaluation Guidelines. (See SR-10-16). Section 4140.1 was revised to include hyperlinks to these appendixes and include brief summaries of the appendixes. As a result of the revisions to section 4140.1, the information in section A.4140.1 was determined to be duplicative and, therefore, was removed from the manual.
Summary of Changes

Sections 3020.1, 3020.2, 3020.3, 3020.4

The section, “Assessment of Capital Adequacy,” has been completely revised to reflect the Board’s issuance of several final rules related to capital over the past five years. Primarily, the section was revised to reflect a 2013 final rule (78 Fed. Reg. 62018 (October 11, 2013)), which replaced the general risk-based capital rules, advanced approaches rule, market risk rule, and leverage rules in accordance with certain transition provisions. See also the Board’s Regulation Q (12 CFR 217). Regulation Q implements international regulatory capital standards adopted by the Basel Committee on Banking Supervision and certain requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, including the removal of credit ratings from capital rules. The section provides updated examination guidance on the assessment of the “capital adequacy” component of the Uniform Financial Institution Ratings System (CAMELS rating system). The examination objectives (section 3020.2) and examination procedures (section 3020.3) were also revised. The internal control questionnaire section (section 3020.4) was removed from the manual.

Sections 3030.1, 3030.2, 3030.3, 3030.4

Section 3030.1 has been significantly revised. The section was renamed from “Assessing Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs” to “Overview of Asset-Backed Commercial Paper Programs.” Much of the section was eliminated from the manual as the material did not reflect the current capital rules. The previous capital rules permitted banking organizations with qualifying internal risk-rating systems to use those systems to apply the internal-ratings approach to their unrated direct-credit substitutes extended to ABCP programs that they sponsored by mapping internal risk ratings to external rating equivalents. The revised capital rules (78 Fed. Reg. 62018 (October 11, 2013)) replaced references to credit ratings with new measures of creditworthiness.

Section 4010.1, 4010.2, 4010.3

The section, “Earnings—Analytical Review of Income and Expense,” has been revised. The section was renamed from “Analytical Review and Income and Expense,” to highlight that the section provides examination guidance on the assessment of the “earnings” component of the CAMELS rating system. The section includes an updated discussion on how examiners generally utilize the Uniform Bank Performance Report in assessing the adequacy of a bank’s earnings. The examination objectives (section 4010.2) and examination procedures (section 4010.3) were also revised.

Section 4052.1; 4052.3, 4052.4

This section, “Bank-Related Organizations,” was revised to remove specific references to nationally recognized statistical rating organizations from the section. Descriptions of certain bank-related organizations were updated to reflect the definitions of those organizations in the Board’s regulations, such as Regulation H and Regulation K. The section now contains a brief description on the role of savings and loan holding companies as a related organization. The subsection on “Intercompany Transactions” was also updated to use terminology for referencing insured depository institutions, which more closely aligns with the language in the Board’s Regulation W (12 CFR 223). In addition, the section was updated to reference a 2014 update to the interagency policy statement on tax allocation in a holding company structure. See SR letter 14-6, “Addendum to the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure,” for more information. The examination procedures (section 4052.3) and internal control questionnaire (section 4052.4) were also revised.
Section 4100.1, 4100.2, 4100.3

The section, “Litigation and Other Legal Matters, and Examination-Related Subsequent Events,” was revised to highlight that appropriate examination staff should notify the enforcement section of the Board’s Legal Division of any investigations or other legal actions being conducted by governmental regulators or criminal prosecutors against a bank when such information is ascertained during the examination process. The description of legal risk in the section was also updated to align with the Federal Reserve’s supervisory guidance for assessing risk management at supervised institutions. See SR letter 16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion” and SR letter 95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies,” for more information. The examination objectives (section 4100.2) and examination procedures (section 4100.3) were also revised.

Section 4180.1, 4180.2, 4180.3, 4180.4

The section, “Investment-Funds Support,” was revised to clarify that a state member bank’s management should notify and consult with the Federal Reserve prior to the bank providing material financial support to its advised funds. The section was also revised to remove a reference to the abolished Office of Thrift Supervision and to update an accounting standards reference. The examination objectives (section 4180.2), examination procedures (section 4180.3), and internal control questionnaire (4180.4) were also revised.

Section 6010.1

The section, “Other Types of Examinations,” was revised to reference an August 2018 interim final rule (83 Fed. Reg. 43961 (August 29, 2018)) that amended Regulation H (12 CFR 208) and Regulation K (12 CFR 211), which raised the total asset threshold (from less than $1 billion to less than $3 billion in assets) for certain qualifying insured depository institution to be eligible for an 18-month examination cycle. See SR-18-7, “Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations,” for more information.

Subject Index

The Subject Index was removed from the Commercial Bank Examination Manual. Effective December 31, 2017, the Board no longer offers print versions or subscriptions for the Commercial Bank Examination Manual. The elimination of the print version of the Commercial Bank Examination Manual has rendered the Subject Index obsolete. Manual readers can use the search function within the online version of the manual to find material.
Summary of Changes

Section 2150.1

This section, “Energy Lending—Reserve-Based Loans,” has been significantly revised to provide updated guidance on prudent risk management of energy lending activity to examiners reviewing reserve-based lending. Section 2150.1 contains an overview of the oil and gas industry, and reserve-based lending. A new discussion on repayment analysis and analyzing the financial statements of exploration and production borrowers has been added to the section. The section includes an updated sample repayment analysis for determining the borrower’s ability to repay total secured debt within a reasonable time. The section also conveys guidance described in SR letter 16-17, “Supervisory Expectations for Risk Management of Reserve-Based Energy Lending Risk.” Topics covered in SR letter 16-17 that are discussed in the section include market issues and risk ramifications for banks engaging in reserve-based lending as well as supervisory expectations for credit risk management and underwriting practices.

Section 2200.1

This section, “Other Real Estate Owned,” was revised to provide updated accounting and reporting standards with regards to other real estate owned (OREO). The section notes that until the effective date of Accounting Standards Update (ASU) 2014-09, “Revenue from Contracts with Customers,” which includes amendments to Accounting Standards Codification (ASC) Subtopic 610-20, “Other Income—Gains and Losses from the Derecognition of Nonfinancial Assets,” the primary accounting guidance for sales of foreclosed real estate is ASC Subtopic 360-20, “Property, Plant, and Equipment—Real Estate Sales.” ASU 2014-09 is effective for fiscal years beginning after December 15, 2018. When the amendments to ASC Subtopic 610-20 take effect, ASC Subtopic 360-20 is superseded for real estate sales not accompanied by a leaseback and becomes the primary accounting guidance for sales of foreclosed real estate. Descriptions of the superseded accounting methods for gain recognition of OREO were removed from the section, as were several outdated references.

Section 3050.1

This section, “Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion,” was updated to address changes to the agencies’ rules implementing Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) company-run stress testing disclosure requirements since the issuance of SR letter 14-3, “Supervisory Guidance on Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets of More Than $10 Billion but Less Than $50 Billion.” For more information on the changes to the Board’s stress testing rules, see 80 Fed. Reg. 75419 (December 2, 2015).

Section 4133.1, 4133.2, 4133.3

This section, “Prompt Corrective Action,” was revised to update the capital ratios used to trigger specific actions that are designed to restore a bank to financial health through the prompt corrective action (PCA) framework. In 2013, the Federal Reserve Board implemented higher minimum capital requirements and adjusted ratios in four of the five capital categories of the PCA framework. The final rule established a common equity tier 1 capital requirement, and specified criteria that instruments must meet in order to be considered common equity tier 1 capital, additional tier 1 capital, or tier 2 capital. The Federal Reserve has maintained the general structure of the existing PCA framework while incorporating increased minimum capital requirements. The examination objectives, section 4133.2, and the examination procedures, section 4133.3, were also revised.
Section A.4150.1

This new appendix has been added to the manual to provide a listing of key Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC)® References. The table can also be used as a reference for manual users looking to find the appropriate ASC reference for precodification FASB references, that is, references that were established before June 2009, that are found throughout manual. More information regarding the FASB ASC® Codification can be accessed at [http://asc.fasb.org/](http://asc.fasb.org/).

Summary of Changes

Foreword

Minor revisions were made to the Foreword to provide updated information on how to order the Commercial Bank Examination Manual and how to access it on the Federal Reserve Board’s website at https://www.federalreserve.gov/publications/supmanual.htm.

Preface

The Preface was removed from the manual. Previously, the Preface contained chronological information regarding the changing legislative and regulatory environment of the banking industry. This section was removed because the information was duplicative and readers can locate more comprehensive discussions on developments in the banking industry in the specific manual sections.

Section 1000.1

This section, “Examination Strategy and Risk-Focused Examinations,” was revised to reflect references to an interim final rule that amended Regulation H to raise the total asset threshold for which an insured depository institution can be eligible for an 18-month examination cycle rather than a 12-month examination cycle from less than $500 million to less than $1 billion. The interim final rule was made effective February 29, 2016, with the Board approving the final rule in December 2016. The final rule adopted the interim final rule without change. See SR-17-2, “Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations.” Modifications were made to the alternate year examination program to reflect the guidance transmitted in SR-17-2. In addition, minor grammatical edits were made to several pages in this section.

Section 1015.1

This section, “Conflict-of-Interest Rules for Examiners,” was revised to include changes resulting from the issuance of SR-16-16 / CA-16-7, “Special Post-Employment Restriction for Senior Examiners.” The letter was issued to announce an amendment to the Board’s rule on Post-Employment Restrictions for Senior Examiners (12 CFR 264a), which expands the definition of “senior examiner.” This amendment was developed to promote consistency in post employment ethics rules across the Federal Reserve System and to address the risk associated with individuals leaving the Federal Reserve for employment with a regulated entity.

Section 2080.1

This section, “Commercial and Industrial Loans,” was revised to remove a subsection titled “Loan Sampling and Coverage Requirements” because the guidance was outdated and no longer reflected the supervisory approach to loan review at large state member banks. Subsequent sections in the manual describe loan sampling and coverage expectations for state member banks with less than $50 billion in total assets.

Section 6010.1

This section, “Other Types of Examinations,” was revised to provide updated terminology and high-level guidance on the Federal Reserve’s supervisory responsibilities of information technology, trust activities, transfer agent activities, securities dealer activities, and consumer compliance at state member banks. The section was also updated to include a reference to the December 2016 final rule that amended Regulation H and Regulation K, which raised the total asset threshold for an insured depository institution to be eligible for an 18-month examination cycle. See SR-17-2 for more information. This section now includes a reference table with a partial list of key guidance and resources that apply to the supervision of the entities and activities described in this section.

Summary of Changes

Section 1000.1

This section, “Examination Strategy and Risk-Focused Examinations,” was amended to include changes resulting from the June 8, 2016, issuance of SR-16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion.” The supervisory guidance applies to assessing risk-management practices at state member banks, bank holding companies, and savings and loan holding companies (including insurance and commercial savings and loan holding companies) with less than $50 billion in total consolidated assets and foreign banking organizations with combined U.S. assets of less than $50 billion. When SR-16-11 was issued, SR-95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies,” became applicable only to state member banks and bank holding companies with $50 billion or more in total assets. Both SR-95-51 and SR-16-11 are included in this manual section. (Refer to SR-16-11 and its attachment.)

Section 4020.1

This section, “Liquidity Risk,” is revised to include “Interagency Guidance on Funds Transfer Pricing Related to Funding and Contingent Liquidity Risks,” issued March 1, 2016. The guidance (refer to appendix 3 of this section) was issued to address weaknesses observed in some large financial institutions’ funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. (Refer to SR-16-3 and also to the March 1, 2016, attachment to the interagency guidance, “Illustrative Funds Transfer Pricing Methodologies.”) FTP is an important tool for managing a firm’s balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. If done effectively, FTP promotes more resilient, sustainable business models. (Refer to SR-16-3 and its attachments.)

Summary of Changes

Section 1000.1

This section, “Examination Strategy and Risk-Focused Examinations,” is revised to include a discussion of a rule that amended Regulation H to raise the statutory maximum total asset threshold for a state member bank (SMB) to be eligible for the expanded 18-month examination cycle (as opposed to 12 months) from less than $500 million to less than $1 billion in total assets. A SMB with less than $1 billion in total assets may be eligible for the 18-month examination cycle if it satisfies certain qualifying criteria. (Refer to SR-16-6 and its attachment.)

Sections 1020.1, 1020.2, 1020.3

Section 1020.1 on the “Federal Reserve System Bank Surveillance Program” discusses “Enhancements to the Federal Reserve System’s Surveillance Program.” (Refer to SR-15-16, and its attachment.) The Surveillance Program uses algorithms that are incorporated into regular monitoring systems to identify aspects of state member banks’ financial condition and performance that may warrant possible supervisory attention. In addition to the Watch List and its use of the Supervision and Regulation Statistical Assessment of Bank Risk (SR-SABR) early warning model, the algorithms’ main components are the Outlier List, the State Member Bank Monitoring Screen, and the Intercompany Transactions Exception List. The algorithms use data gathered on the Call report, other financial regulatory reports, as well as examination data to identify institutions exhibiting financial deterioration, weaknesses, an increased or changing risk profile, or deviations from supervisory expectations. Also, the monitoring systems may identify complex operations, can be used to detect novelities or departures from expected performance or risk patterns, and they identify the institutions that fail the key screening criteria. The surveillance results can be used in pre-examination planning to schedule and determine the type of risk-focused examination to be performed, to assess significant risk exposures, outlooks, and possible non-compliance concerns, and to calibrate supervisory and examination resources to risk. The Surveillance Program’s objectives, phases, structure, and maintenance are discussed in the section along with additional information on the metrics, procedures, and write-up requirements. The examination objectives, section 1020.2, and the examination procedures, section 1020.3, are revised.

Section 2088.1

This new section, “Off-site Review of Loan Files,” announces to state member banks (SMBs) with less than $50 billion in total assets, that they have the option to have Federal Reserve examiners review loan files off site during full-scope or target examinations. Federal Reserve examiners may conduct an off-site loan review provided the SMB has communicated its willingness to participate in the program and is able to appropriately image and send its legible and sufficiently comprehensive loan information to the Federal Reserve Bank in a secure manner. (Refer to SR-16-8.)

Section 4128.1

This section, “Private Banking,” is revised to provide supplemental information about customer identification program (CIP) requirements found in section 326 of the USA PATRIOT Act (referred to as the “CIP” rule). The CIP rule requires a bank to obtain sufficient information to form a reasonable belief regarding the identity of each “customer.” The definition of an “account” is provided, and also information for determining if an “account” has been created. Under the CIP rule, a person that opens a new account is deemed to be a “customer.” (Refer to SR-16-7 and its interagency attachment.)

Section 6010.1

This section is revised under the subheading, “U. S. Activities of Foreign Banking Organizations,” to include amendments made to section 10(d) of the Federal Deposit Insurance Act (FDI Act) that permit a longer cycle to conduct examinations of insured depository institutions.
based on certain qualifying criteria – at least once every 18 months instead of 12 months. The Board approved on February 29, 2016, a rule that amended Regulation K, which resulted from the FDI Act amendments. Regulation K governs the on-site examination cycle for Board supervised U.S. branches and agencies of foreign banks. A U. S. branch or agency of a foreign bank with less than $1 billion in total assets may be eligible for an 18-month, instead of a 12-month, on-site examination cycle if it received, at its most recent examination, a composite condition rating of “1” or “2” under the supervisory rating system and if it satisfies other qualifying criteria. (Refer to SR-16-6 and its attachment.)

Foreword

THE CHANGING BANK EXAMINATION ENVIRONMENT

The banking industry continues to be increasingly complex. The changing banking and economic environment may reflect potential risks posed to financial institutions and their subsidiaries, bank-related organizations, consumers, and the public. Other risks may be posed by other types of entities and their subsidiaries, competitors, stakeholders, and other outside third parties. To address the risks, complexity, and competitiveness of the banking industry, Congress and state governments continually approve legislation, and their bank regulatory agencies develop and approve the implementing or other new regulations, all to safeguard the safety and soundness of banks and bank-related organizations.

As part of the Federal Reserve’s supervisory process, the banking institution’s board of directors or senior management may be requested to initiate various forms of corrective action that may be the result of a supervisory examination or supervisory contact to assure the bank’s compliance with federal statutes, regulations, or supervisory policies of the Federal Reserve Board and other federal financial institution regulatory agencies. Banks, bank supervisory agencies and their examiners, and other supervisory staff are constantly confronted with a changing operating environment. Examiners must continually remain alert to unforeseen and unnecessary risks that are posed to, or by, the financial institutions and other bank-related organizations that they may, or may not, supervise and examine. Certain types of activities, transactions, or practices that the bank or other institutions engage in can pose significant risks. The bank’s board of directors and senior management are responsible for being aware of, implementing, maintaining, and monitoring adequate internal controls over those risks.

EXAMINATION PROCESS

The state member bank examination process is the Federal Reserve’s fact-finding arm in discharging its regulatory and supervisory responsibilities. The essential objectives of an examination are (1) to provide an objective evaluation of a bank’s soundness, (2) to determine the level of risk involved in the bank’s transactions and activities, (3) to ascertain the extent of compliance with banking laws and regulations, (4) to permit the Federal Reserve to evaluate the adequacy of corporate governance and to appraise the quality of the board of directors and management, and (5) to identify those areas where corrective action is required to strengthen the bank, improve the quality of its performance, and enable it to comply with applicable laws, regulations, and supervisory policies and guidance. Examiners should also evaluate and determine the prudence of the bank’s practices.

An examination’s scope is primarily risk-focused but may cover every phase of banking activity, or it may concentrate on specific areas that deserve greater emphasis because of their potential effect on a bank’s soundness. The scope and planning for a bank’s examination is an integral and important part of the overall examination process. With the enactment of new laws and regulations and the issuance of additional guidance, the scope of an examination continually expands to ensure that all new and existing functional risk areas of a bank are adequately reviewed. New laws, regulations, supervisory policies, guidance, and interpretations result from emerging issues within the banking industry or are tied to specific industry events.

To assess the bank’s performance and summarize its overall condition, examiners use the Uniform Financial Institutions Rating System (UFIRS), which is commonly referred to as the CAMELS rating system. The examiner’s primary objectives are to evaluate the (1) quality and adequacy of the bank’s capital (C); (2) the quality of the bank’s assets (A); (3) the capability of the board of directors and management (M) to identify, measure, monitor, and control the risks of the bank’s activities and to ensure that the bank has a safe, sound, and efficient operation that is in compliance with applicable laws and regulations; (4) the quantity, sustainability, and trend of the bank’s earnings (E); (5) the adequacy of the bank’s liquidity (L) position; and (6) the bank’s sensitivity (S) to market risk—the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect the bank’s earnings, capital, and liabilities sub-
ject to market risk. Once this process is completed, examiners will have the basis for rating the CAMELS components, which, in turn, provide the basis for assigning the bank’s overall composite rating. Evaluations of the components are to take into consideration the institution’s size and sophistication, the nature and complexity of its activities, and its risk profile. During the examination, examiners evaluate the nature of the bank’s operations, the adequacy of the bank’s internal controls and its internal audit function, and the bank’s compliance with laws and regulations.

RISK-FOCUSED EXAMINATION PROCESS

The Federal Reserve began to further emphasize the importance of sound risk-management processes and strong internal controls in the mid-1990s when evaluating the activities of state member banks. There was an increased emphasis on establishing, maintaining, and monitoring of internal controls. System examination staff were also instructed to assign a formal supervisory rating to the adequacy of a state member bank’s risk management and internal control processes. The greater focus on risk management did not diminish the importance of assessing the CAMELS components. Rather, the rating of risk management summarized much of the analysis and findings regarding the member bank’s process for monitoring and controlling risks in these other key areas. As a result, the assigned risk-management rating highlights and incorporates further the qualitative and quantitative aspects of the examiners’ review of the bank’s overall process for identifying, measuring, monitoring, and controlling risk throughout the institution.

Greater emphasis on risk-focused supervision continued in 1997 when the Federal Reserve introduced its risk-focused framework for the supervision of large complex institutions. Supervisory processes were designed to focus more effectively on an organization’s primary risks and internal controls and the processes for managing and monitoring principal risks. The framework pertained to institutions with a functional management structure and a broad array of products, services, activities, and operations. This program is managed by an assigned central point of contact (CPC), assisted by a dedicated team of examiners who conduct target reviews of functional areas and product lines during a supervisory cycle.

A supervisory framework also was begun for community banks. The framework relies on examiner judgment when determining the scope of the examination during the planning process. Examiners are able to customize the examination procedures to be performed on-site at the bank. The examiner-in-charge (EIC) outlines the risk profile of the bank and the examination activities.

ABOUT THIS MANUAL

The goal of the Commercial Bank Examination Manual is to organize and formalize longstanding examination objectives and procedures that provide guidance to the examiner, and to enhance the quality and consistent application of examination procedures. The manual provides specific guidelines for:

- determining the scope of an examination;
- determining the procedures to be used in examining all areas of a bank, including those procedures that may lead to the early detection of trends that, if continued, might result in a deterioration in the condition of a bank;
- evaluating the adequacy of the bank’s written policies and procedures, the degree of compliance with them, and the adequacy of its internal controls;
- evaluating the work performed by internal and external auditors;
- evaluating the performance and activities of management and the board of directors;
- preparing workpapers that support examination reports and aid in evaluating the work performed; and
- using objective criteria as a basis for the overall conclusion and for the resulting comments and criticism, regarding the condition and quality of the bank and its management.

The CPC or EIC must properly plan and organize the examination before work begins. Initial decisions concerning examination scope can usually be made based on the nature of the bank’s operations; its size; the past experience of the CPC or EIC with the bank; the previous examination report’s information, including the condition of the bank at that examination; com-
communications with the bank (e.g., the board of directors and senior management) between examinations; and analysis of the information derived from the bank’s Uniform Bank Performance Report, Call Report, or off-site surveillance screening of data. The planning of work and pre-examination procedures are covered in the Examination Planning section of this manual.

The manual is also intended to guide examiners in their efforts to encourage banks to develop written policies and related procedures in all areas where none exist, and to correct situations where there are deficiencies in, or a lack of compliance with, existing procedures. To aid examiners, this manual includes topics such as loan portfolio management, investment portfolio management, asset and liability management, earnings analysis, capital analysis, and service area analysis. A section on the appraisal of bank management guides examiners in assembling and evaluating information from all other manual sections and helps uncover inconsistencies in the application of bank policies among various management groups. Examiners should be able to increase the level of professionalism and the soundness of the banking system by encouraging all banks to follow the best practices that currently exist in the banking industry. However, this approach should not discourage the development and implementation of conceptually sound and innovative practices by individual banks.

Although this manual is designed to provide guidance to the examiner in planning and conducting bank examinations, it should not be considered a legal reference. Questions concerning the applicability of, and compliance with, federal laws and regulations should be referred to appropriate legal counsel at the Reserve Banks or the Board. In addition, the manual should not be viewed as a comprehensive training guide. Separate training programs and examination modules provide more detailed instructions to assist the examiner in better understanding banking operations and applying examination procedures.

Examiners should view the manual as a working tool and guide. In most sections of the manual, examination procedures and internal control questionnaires are provided to form the basis for a bank examination. These procedures should lead to consistent and objective examinations of varying scope. The bank’s condition is disclosed by the performance of the examination procedures, including the review of internal controls and audit function, and the evaluation of the results or findings, not by the examiner’s judgment alone.

HOW TO USE THIS MANUAL

Organization

The Commercial Bank Examination Manual is divided into 10 major parts, separated by divider tabs:

• Part 1000—Examination Strategy and Risk-Focused Examinations
• Part 2000—Assets
• Part 3000—Liabilities and Capital
• Part 4000—Other Examination Areas
• Part 5000—Assessment of the Bank
• Part 6000—Federal Reserve Examinations
• Part 7000—International
• Part 8000—Statutes and Regulations
• Appendix
• Index

Sections in each part are made up of four subsections, where applicable:

• supervisory policy and guidance by topic,
• examination objectives,
• examination procedures, and
• internal control questionnaire

The primary sections summarize and provide details on the respective topics. This information is expanded upon and reinforced through the Federal Reserve’s educational and training programs and the examiner’s experience on the job.

The examination objectives describe the goals that should be achieved, which should be of primary interest to the examiner. Two of the objectives may determine the scope of the examination for the specific area of examination interest: (1) the evaluation of the system of internal controls and of bank policies, practices, and procedures and (2) the evaluation of the scope and adequacy of the audit function. Other common objectives are to determine compliance with laws, regulations, supervisory policies, procedures, guidance, and any interpretations, and to determine the need for corrective action.

The examination procedures include proce-
dures to be performed during a full scope, comprehensive examination. In some instances, not all of the procedures will apply to the bank; examiners may exercise some flexibility depending on the particular characteristics of the bank under examination. The materiality and significance of a given area of bank operations are the examiner’s primary considerations in deciding the scope of the examination and the procedures to be performed. Examiner flexibility results in examinations tailored to fit the operations of the bank.

The evaluation of a bank’s internal control environment should encompass a review of the internal audit activities and the implementation of selected internal control questionnaires (ICQs), which set forth standards for operational control. Due to the difference between an examination and an audit, it is not anticipated that every ICQ will be applied. ICQs used during an examination should be made up of three elements: (1) those mandated for all examinations; (2) those selected by the CPC or EIC based upon his or her experience, knowledge of problems within the bank, and perception and analysis of risk; and (3) those that focus on areas where on-site evaluation of operational control appears warranted in light of the results of the examination of internal audit activities. In addition to serving as a guide during on-site evaluations, the ICQs can be used in the appraisal of operational audit techniques in banks where the scope of internal auditing includes such considerations. The ICQ steps marked with an asterisk require substantiation by observation or testing; they are considered fundamental to any control program regardless of the size of the institution. These steps should be incorporated in management control programs in smaller banks to compensate for the absence of internal auditing.

Following the main parts of the manual are a listing of statutes and regulations administered by the Federal Reserve and an appendix that includes various forms, checklists, statements, and guidelines, which provide the examiner with additional information regarding certain topics.

Numbering System

The manual is arranged using a numbering system based on the manual’s sections and subsections. For example, the primary Internal Controls section is numbered 1010.1. The examination objectives subsection for that section is numbered 1010.2, and so on. Subsections are usually numbered consecutively regardless of the number of subsections within a particular section.

The appendix sections begin with the letter A, followed by the number of the section to which the item relates. For example, the Supplement on Internal Auditing for the Internal Control section is numbered A.1010.1. Should the Internal Control section have more than one appendix item, the numbering would appear as A.1010.1, A.1010.2, etc.

Updates

Subsequent to the March 1994 reprint of this manual, all new or revised manual pages are dated the month and year for which they were issued. There is an effective date at the top of the first page of each section that shows when the section’s information was last updated.

The manual is usually updated in the spring and fall of each year; special supplements may be issued if needed. On the back of the title page is a checklist so you can record when an update has been filed. For this manual to be most useful, it is essential that updated pages be filed as soon as possible. The most recent version of the manual is also available on the Board’s website at www.federalreserve.gov/publications/supmanual.htm. If you have any questions about receiving updates, please contact Printing and Fulfillment, Mail Stop K1-120, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452-3245, or at www.federalreserve.gov/files/orderform.pdf.
### Table of Contents
Commercial Bank Examination Manual

This general table of contents lists the major section heads for each part of the manual:

### APPENDIX

- A.1010.1 Internal Control: Supplement on Internal Auditing
- A.4150.1 Review of Regulatory Reports
INTRODUCTION

The Federal Reserve shares supervisory and regulatory responsibility for domestic banks with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC) at the federal level, and with individual state banking departments at the state level. The Federal Reserve is the primary federal supervisor of state-chartered banks that have chosen to join the Federal Reserve System. Such domestically operating banks are called state member banks (SMBs).

Regulation and supervision are distinct, but complementary, activities. Regulation entails establishing the rules within which financial institutions must operate—in other words, issuing specific regulations governing the formation, operations, activities, and acquisitions of financial institutions. Once the rules and regulations are established, supervision—which involves monitoring, inspecting, and examining financial institutions—seeks to ensure that an institution complies with those rules and regulations, and that it operates in a safe-and-sound manner.

Section 39 of the Federal Deposit Insurance Act (FDI Act) requires each federal banking agency to establish certain safety-and-soundness standards by regulation or by guideline for all insured depository institutions. In accordance with section 39, the agencies’ guidelines cover three types of standards: (1) operational and managerial standards; (2) compensation standards; and (3) such standards relating to asset quality, earnings, and stock valuation as they determine to be appropriate. The safety-and-soundness standards that the agencies use to identify and address problems at insured depository institutions before capital becomes impaired. The agencies believe that the interagency standards for safety and soundness serve this end without dictating how institutions must be managed and operated. These standards are designed to identify potential safety-and-soundness concerns and ensure that action is taken to address those concerns before they pose a risk to the deposit insurance funds.

As the primary federal supervisor for SMBs (as well as bank holding companies, savings and loan holding companies, intermediate holding companies, and other banking entities), the Federal Reserve can take formal enforcement actions against these institutions for violations of laws, rules, or regulations, unsafe or unsound practices, breaches of fiduciary duty, and violations of final orders.

The purpose of this section is to describe key aspects of the Federal Reserve’s supervisory program for safety-and-soundness examinations that are relevant to SMBs. Subsequent sections in this manual will further describe the examination and supervisory process of SMBs by supervisory portfolio, which is based on the banks’ complexity, activities, asset size, and financial and operational risk factors.

EXAMINATION AND SUPERVISORY AUTHORITY

The Federal Reserve System’s statutory examination authority permits examiners to review all books and records maintained by a financial institution that is subject to the Federal Reserve’s supervision. This authority extends to all documents. Section 11(a)(1) of the Federal Reserve Act provides that the Board has the authority to examine, at its discretion, the accounts, books, and affairs of each member bank and to require such statements and reports as it may deem necessary. Therefore, Federal Reserve supervisory staff (including examination staff), may review all books and records of a banking organization that is subject to Federal Reserve supervision.

CONFIDENTIALITY PROVISIONS

The complete definition of confidential supervisory information (CSI) is in 12 CFR 261.2(c). Generally, CSI consists of any documents prepared by Federal Reserve staff that contains

---

2. See 12 CFR 208, appendix D-1.
3. Supervision and Regulation SR-97-17, "Access to Books and Records of Financial Institutions During Examinations and Inspections," details the procedure supervisory staff should follow if a banking organization declines to provide information asserting a claim of legal privilege.
4. Supervisory staff include Federal Reserve staff who are conducting supervisory activities during the on-site examination and in connection with examination preparation, monitoring, and surveillance activities that are conducted off-site from a supervised institution’s offices.
supervisory views regarding a supervised institution, or confidential information obtained from a supervised institution. These include examination reports, operating and condition reports (from continuous monitoring, for example), and information related to, derived for, or contained in such reports. Information gathered in the course of investigations related to enforcement actions is also CSI.

Importantly, CSI does not include “documents prepared by a supervised firm for its own business purposes and that are in its possession.” (Refer to 12 CFR 261.2(c)(2).) This means that a supervised firm may share information that was submitted to the Federal Reserve with third parties so long as that information was not produced specifically for the Federal Reserve and does not contain any information that suggests supervisory views or supervisory actions communicated to the supervised firm by the Federal Reserve.

Under the Board’s Rules Regarding the Availability of Information (12 CFR 261), banking organizations are prohibited from disclosing confidential supervisory information without prior written permission of the Board’s General Counsel. Board staff have taken the position that identification of information requested by, or provided to, supervisory staff—including the fact that an examination has taken or will take place—is related to an examination and falls within the definition of confidential supervisory information.

Confidentiality Provisions in Agreements that Prevent or Restrict Notification to the Federal Reserve

The Federal Reserve has stated and clarified its expectations regarding confidentiality provisions that are contained in agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties. It is contrary to Federal Reserve regulation and policy for agreements to contain confidentiality provisions that (1) restrict the banking organization from providing information to Federal Reserve supervisory staff (refer to 12 U.S.C. 1820(d)); (2) require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or (3) require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve examination or any nonpublic Federal Reserve supervisory initiative or action. Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. See SR-07-19, “Confidentiality Provisions in Third-Party Agreements,” and SR-97-17, “Access to Books and Records of Financial Institutions During Examinations and Inspections,” for more information. For information on the restrictions pertaining to the very limited disclosure of confidential supervisory ratings and other nonpublic supervisory information, see SR-05-4, “Interagency Advisory on the Confidentiality of Nonpublic Supervisory Information,” and SR-96-26, “Provision of Individual Components of Supervisory Rating Systems to Management and Boards of Directors.”

OBJECTIVES OF THE SUPERVISORY PROCESS

The Federal Reserve is committed to ensuring that the supervisory process for all institutions under its purview meets the following objectives:

- Provides flexible and responsive supervision. The supervisory process is dynamic and forward-looking, so it responds to technological advances, product innovation, and new risk-management systems and techniques as well as to changes in the condition of an individual financial institution and to market developments.
- Fosters consistency, coordination, and communication among the appropriate supervisors. Seamless supervision, which reduces regulatory burden and duplication, is promoted. Examiners review the institution’s risk assessments, key control functions, and monitoring systems. Federal Reserve examiners conduct joint examinations with other federal banking agencies and alternate examinations with state bank supervisors. Examiners tailor

---

5. 12 CFR 261.20(g).

6. See also this manual’s section, “Overall Conclusions Regarding Condition of the Bank.”
supervisory activities to an institution’s condition, risk profile, and unique characteristics.

• Promotes the safety and soundness of financial institutions. The supervisory process effectively evaluates the safety and soundness of banking institutions, including assessing risk-management systems and financial condition as well as determining compliance with laws and regulations.

• Provides a comprehensive assessment of the institution. The supervisory process integrates “specialty” areas (for example, information technology, trust, Bank Secrecy Act (BSA)/anti-money laundering (AML), and consumer compliance) and functional risk assessments and reviews, in cooperation with interested supervisors, into a comprehensive assessment of the institution.

RISK-FOCUSED EXAMINATIONS

The Federal Reserve began to further emphasize the importance of sound risk-management processes and strong internal controls in the mid-1990s when evaluating the activities of SMBs. (See SR-96-14, “Risk-focused Safety and Soundness Examinations and Inspections,” and SR-95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies.”) To ensure that institutions have in place the processes necessary to identify, measure, monitor, and control their risk exposures, Federal Reserve supervisory activities focus on evaluating the appropriateness of a bank’s risk management practices and processes. Under a risk-focused examination approach, examiner resources are focused on a bank’s highest risk areas. However, when examiners find weakness in a bank’s risk-management processes or internal controls, such as an inadequate loan review function, examiners would increase the sample of loans to review or will perform additional loan transaction testing. In addition, if an examiner believes that a banking organization’s management is being less than candid, has provided false or misleading information, or has omitted material information, then examiners will expand the scope of their on-site transaction testing.

The Federal Reserve recognizes that transaction testing by itself is not sufficient for ensuring the continued safe-and-sound operation of a banking organization. Evolving financial instru-

ments and markets have enabled banking organizations to rapidly reposition their risk exposures. Therefore, periodic assessments of the condition of a financial institution that are based on transaction testing alone cannot keep pace with the moment-to-moment changes occurring in a bank’s risk profile.

The examination approaches for both community banks and large banks are risk-focused processes that rely on an understanding of the institution, the performance of risk assessments, the development of a supervisory plan or examination scope, and examination procedures tailored to the institution’s risk profile. However, the Federal Reserve has tailored its supervisory approach for a large bank versus a community bank. The process for large institutions relies more heavily on a dedicated supervisory team with central points of contact and supervisory plans consisting of various activities such as continuous monitoring activities, target reviews, or horizontal supervisory activities. In comparison, for community banks, the Federal Reserve conducts a point in time examination, which is supplemented by off-site surveillance monitoring. The Federal Reserve’s supervisory approach differs for community banks versus larger more complex banks to address differences in banks’ activities, operations, and risk profiles. In comparison to community banks, large complex banks typically have more financial products, sophisticated risk-management systems (including audit and internal controls), greater management structure, and a wider geographic dispersion of operations.

COMPLIANCE WITH LAWS AND REGULATIONS

Compliance with relevant laws and regulations should be assessed during the examination process. The steps taken to complete these assessments will vary depending on the circumstances of the institution subject to review. When an institution has a history of satisfactory compliance with relevant laws and regulations or has an effective compliance function, only a relatively limited degree of transaction testing need be conducted to assess compliance. At institutions with a less satisfactory compliance record or that lack a compliance function, more extensive review will be necessary.
Role of Supervisory Guidance

The Federal Reserve, FDIC, National Credit Union Administration (NCUA), OCC, and the Bureau of Consumer Financial Protection (collectively the “agencies”) issue various types of supervisory guidance, including interagency statements, advisories, bulletins, policy statements, questions and answers, and frequently asked questions, to their respective supervised institutions. A statute or regulation has the force and effect of law. Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the agencies do not take enforcement actions based solely on supervisory guidance. Rather, supervisory guidance outlines the agencies’ supervisory expectations or priorities and articulates the agencies’ general views regarding appropriate practices for a given subject area. Supervisory guidance often provides examples of practices that the agencies generally consider consistent with safety-and-soundness standards or other applicable laws and regulations, including those designed to protect consumers. See SR-18-5/CA-18-7, “Interagency Statement Clarifying Role of Supervisory Guidance.”

APPLICATIONS UNDER REGULATION H: 12 CFR 208

Regulation H (12 CFR 208) defines the membership requirements for SMBs; describes membership privileges and conditions imposed on these banks; sets out procedures for requesting approval to establish branches and for requesting voluntary withdrawal from membership; provides information for registering and filing financial statements; sets out procedures for dealing with banks that are less than adequately capitalized; and establishes real estate lending standards. Below is description of various applications SMBs file under Regulation H.

Bank Merger

A bank must file an application for prior Federal Reserve approval under section 18(c) or section 5(d)(3) of the FDI Act to merge with another bank or thrift institution, respectively, or to acquire the assets, or assume the liabilities, of another bank or thrift institution, if the resulting institution is to be an SMB.

Bank Service Company

An SMB must file an application for prior Federal Reserve approval under section 5(a) of the Bank Service Company Act (BSC Act) to invest in or establish a bank service company if the company would engage in activities under sections 4(c), 4(d), or 4(e) of the BSC Act. A bank (regardless of its charter) must file an application for prior Federal Reserve approval under section 5(b) of the BSC Act to invest in or establish a bank service company if the company would engage in activities under sections 4(b) or 4(f) of the BSC Act.

Change in Control

A person or a group acting in concert, as defined in Regulation Y (12 CFR 225.2), proposing to acquire voting shares of an SMB may be required to provide prior notice to the Federal Reserve in accordance with Regulation Y (12 CFR 225.43).

Domestic Branches

An SMB must file an application for prior Federal Reserve approval under Regulation H (12 CFR 208.6) to establish a new branch facility. An application must be filed, whether the branch is located in the state where the bank is headquartered (intrastate branch) or whether the branch is located in another state (interstate branch). In addition, applications for de novo interstate branches are subject to state filing requirements and to capital, management, and community reinvestment standards. See SR-11-3, “De Novo Interstate Branching by State Member Banks.” See also, SR-13-7/CA-13-4, “State Member Bank Branching Considerations.”

Section 109 of the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 (the Interstate Act) (12 U.S.C. 1835a) prohibits any bank from establishing or acquiring a branch or branches outside of its home state primarily
for the purpose of deposit production. In 1997, the banking agencies published a joint final rule implementing section 109. (See 62 Fed. Reg. 47728, September 10, 1997.) Section 106 of the Gramm-Leach-Bliley Act of 1999 expanded the coverage of section 109 of the Interstate Act to include any branch of a bank controlled by an out-of-state bank holding company. On June 6, 2002, the Board and the other banking agencies published an amendment to their joint final rule (effective October 1, 2002) to conform the uniform rule to section 109. (See 67 Fed. Reg. 38844.) The amendment expands the regulatory prohibition against interstate branches being used as deposit-production offices to include any bank or branch of a bank controlled by an out-of-state bank holding company, including a bank consisting only of a main office. See Regulation H, 12 CFR 208.7(b)(2).

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) modified the federal statute governing de novo interstate branching by SMBs. As a result, as of July 22, 2010, an SMB is authorized to open its initial branch in a host state by establishing a de novo branch at any location at which a bank chartered by the host state could establish a branch.9

An SMB that desires to establish a new branch facility may be eligible for expedited processing of its application by the Reserve Bank if it is an eligible bank, as defined in Regulation H (12 CFR 208.2(c)).

A member bank also may choose to submit an application that encompasses multiple branches that it proposes to establish within one year of the approval date. Unless notification is waived, the bank must notify the appropriate Reserve Bank within 30 days of opening any branch approved under a consolidated application. The approval to open a branch is valid for one year. During this period, the Board or the appropriate Reserve Bank may notify the bank that in its judgment, based on reports of condition, examinations, or other information, there has been a change in the bank’s condition, financial or otherwise, that warrants reconsideration of the approval. (See Regulation H, 12 CFR 208.6(f).)

Insured depository institutions that intend to close branches must comply with the requirements detailed in section 42 of the FDI Act (12 U.S.C. 1831r-1). Section 42(e) requires that banks provide 90 days’ notice to both customers and, in the case of insured SMBs, the Federal Reserve Board before the date of the proposed branch closings. The notice must include a detailed statement of the reasons for the decision to close the branch, and statistical and other information in support of those stated reasons. A similar notice to customers must be posted in a conspicuous manner on the premises of the branch to be closed at least 30 days before the proposed closing. There are additional notice, meeting, and consultation requirements for proposed branch closings by interstate banks in low and moderate income areas. Finally, the law requires each insured depository institution to adopt policies for branch closings. (See the revised joint policy statement concerning insured depository institutions’ branch closing notices and policies, effective June 29, 1999. See also 64 Fed. Reg. 34844.) Examiners and supervisors need to be mindful of the section 42 statutory requirements and this joint policy.

Regulation H (12 CFR 208.6(f)) states that a branch relocation, defined as a movement that occurs within the immediate neighborhood and does not substantially affect the nature of the branch’s business or customers served, is not considered a branch closing. Further, Regulation H (12 CFR 208.2(c)(2)(ii)) states (in one of six exclusions) that a branch does not include an office of an affiliated or unaffiliated institution that provides services to customers of the member bank on behalf of the member bank, so long as the institution is not “established or operated” by the bank. For example, a bank could contract with an unaffiliated or affiliated institution to receive deposits; cash and issue checks, drafts, and money orders; change money; and receive payments of existing indebtedness without becoming a branch of that bank. The bank could also (1) have no ownership or leasehold interest in the institution’s offices, (2) have no employees who work for the institution, and (3) not exercise any authority or control over the institution’s employees or methods of operation.

---

8. “Host state” means a state, other than a bank’s home state, in which the bank seeks to establish and maintain a branch. 12 U.S.C. 36(g)(3)(C).
Emergency Applications

Emergency conditions associated with a problem or failing banking organization may allow for processing of an application under the streamlined procedures of the Bank Holding Company Act, the FDI Act, the Change in Bank Control Act, or the Federal Reserve Act.10 The two types of emergency procedures are expeditious action and immediate action. Under the expeditious action procedures, the Federal Reserve allows the public up to 10 days to comment on a proposal. Under the immediate action procedures, the Federal Reserve would act on a proposal as soon as possible. Potential filers are encouraged to contact the Federal Reserve as early as possible to discuss emergency procedures.

Membership

A state-chartered bank proposing to become a member of the Federal Reserve System or a national bank converting to a state-charter and desiring to remain a member of the Federal Reserve System must file an application for prior Federal Reserve approval under of Regulation H (12 CFR 208.3).11 A bank seeking membership should contact the Federal Reserve prior to submitting a final application to allow for the completion of a pre-membership examination, if needed.

Notice of Addition or Change in Directors or Senior Executive Officers

An SMB must provide prior notice to the Federal Reserve to add a director or a senior executive officer if the bank meets the criteria in Regulation Y (12 CFR 225.72). An institution may request a waiver of the prior notice requirement if the individual’s services are needed immediately.

Premises Acquisition

An SMB must provide prior notice to the Federal Reserve under Regulation H (12 CFR 208.21) to increase its investment in bank premises if the aggregate of all such investments and loans, together with the amount of any indebtedness incurred by any corporation that is an affiliate of the bank, will be more than the bank’s perpetual preferred stock and related surplus plus common stock and surplus. The filing threshold is raised to 150 percent of the bank’s perpetual preferred stock and related surplus plus common stock and surplus if the proposal meets the conditions in Regulation H (12 CFR 208.21(a)(3)). See also this manual’s section entitled, “Bank Premises and Equipment,” for more information.

Changes in the General Character of a Bank’s Business

In conjunction with assessing overall compliance with relevant laws and regulations, examiners should review for compliance with the requirements of Regulation H, which sets forth the requirements for membership of state-chartered banks in the Federal Reserve System and imposes certain conditions of membership on applicant banks. Under the regulation, a member bank must “at all times conduct its business and exercise its powers with due regard to safety and soundness” and “may not, without the permission of the Board, cause or permit any change in the general character of its business or in the scope of the corporate powers it exercises at the time of admission to membership.” (See SR-02-9, “Guidance Regarding Significant Changes in the General Character of a State Member Bank’s Business and Compliance with Regulation H,” and Regulation H (12 CFR 208.3(d)(1) and (2))).

SMBs must receive the prior approval of the Board before making any significant change in business plans. The trend toward more diverse, more complex, and, at times, riskier activities at some banks has raised the importance of this prior-approval requirement. Changes in the general character of a bank’s business would include, for example, becoming a primarily financial technology-based operation, or concentrating solely on subprime lending, mortgage lending, or leasing activities. Depending on how they are

---

10. Emergency procedures cannot be used without a letter from the chartering authority of the failing financial institution.

11. A newly organized bank must apply directly to the FDIC for deposit insurance. The bank also should have received at least preliminary approval for a state banking charter prior to filing a final membership application with the Federal Reserve. A draft application may be submitted prior to state action on the charter.
conducted and managed, these activities can present novel risks for banking organizations and may also present risks to the deposit insurance fund. In many cases, these activities involve aggressive growth plans and may give rise to significant financial, managerial, and other supervisory issues.

In applications for membership in the Federal Reserve System, the Federal Reserve considers a bank’s proposed business plan to ensure, at a minimum, that appropriate financial and managerial standards are met. Likewise, the other federal banking agencies consider a bank’s business plan when they review applications for federal deposit insurance, in the case of the FDIC, or applications for a national bank or federal thrift charter, in the case of the OCC. The OCC and the FDIC may condition their approvals of applications on a requirement that, during the first three years of operations, the bank or thrift provides prior notice or obtains prior approval of any proposed significant deviations or changes from its original operating plan. Rather than use similar commitments, the Federal Reserve has relied on the provisions of Regulation H to address situations in which an SMB proposes to materially change its core business plan.

Federal Reserve supervisors should monitor changes in the general character of an SMB’s business as part of the Federal Reserve’s normal supervisory process to ensure compliance with the requirements of Regulation H and with safe-and-sound banking practices. This review should be conducted by the Reserve Bank during the on-site examination of the bank. A significant change in a bank’s business plan without the Board’s prior approval would be considered a violation of Regulation H and would be addressed through follow-up supervisory action.

Minimum Statewide Loan-to-Deposit Ratios

Section 109 of the Interstate Act sets forth a process to test compliance with the statutory requirements. First, a bank’s statewide loan-to-deposit ratio is compared with the host-state loan-to-deposit ratio for banks in a particular state. If the bank’s statewide loan-to-deposit ratio is at least one-half of the published host-state loan-to-deposit ratio, then it has complied with section 109 of the Interstate Act. A second step is conducted if a bank’s statewide loan-to-deposit ratio is less than one-half of the published ratio for that state or if data are not available at the bank to conduct the first step. The second step involves determining whether the bank is reasonably helping to meet the credit needs of the communities served by its interstate branches. If a bank fails both of these steps, it has violated section 109 of the Interstate Act and is subject to sanctions.

RATING THE BANK

Uniform Financial Institutions Rating System

All of the federal banking agencies use the Uniform Financial Institutions Rating System (UFIRS), commonly referred to as the “CAMELS” rating system, as the criteria for rating a bank or thrift. The agencies under the auspices of the Federal Financial Institutions Examination Council (FFIEC) last revised this rating system in 1996. Under the UFIRS, each financial institution, more specifically an insured depository institution whose primary federal supervisory agency is represented on the FFIEC, is assigned a composite rating based on an evaluation and rating of six essential components of an institution’s financial condition and operations. These component factors address the “C”—adequacy of capital; “A”—the quality of assets; “M”—the capability of management; “E”—the quality and level of earnings; “L”—the adequacy of liquidity; and “S”—the sensitivity to market risk.

Evaluations of the components take into consideration the institution’s asset size and sophistication, the nature and complexity of its activ-

---

12. The statewide loan-to-deposit ratio relates to an individual bank and is the ratio of a bank’s loans to its deposits in a particular state where the bank has interstate branches.

13. The host-state loan-to-deposit ratio is the ratio of total loans in a state to total deposits from the state for all banks that have that state as their home state. For state-chartered banks, the home state is the state where the bank was chartered.

ties, and its risk profile. Composite and component ratings are assigned based on a “1 to 5” numerical scale. A “1” indicates the highest rating, strongest performance and risk management practices, and least degree of supervisory concern, while a “5” indicates the lowest rating, weakest performance, inadequate risk management practices and, therefore, the highest degree of supervisory concern.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors comprising that component and its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the financial institution. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

The ability of management to respond to changing circumstances and to address the risks that may arise from changing business conditions, or the initiation of new activities or products, is an important factor in evaluating a financial institution’s overall risk profile and the level of supervisory attention warranted. For this reason, the management component is given special consideration when assigning a composite rating. The ability of management to identify, measure, monitor, and control the risks of its operations is also taken into account when assigning each component rating. It is recognized, however, that appropriate management practices vary considerably among financial institutions, depending on their size, complexity, and risk profile. For less complex institutions engaged solely in traditional banking activities and whose directors and senior managers, in their respective roles, are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. At more complex institutions, on the other hand, detailed and formal management systems and controls are needed to address their broader range of financial activities and to provide senior managers and directors, in their respective roles, with the information they need to monitor and direct day-to-day activities. All institutions are expected to properly manage their risks. For less complex institutions engaging in less sophisticated risk-taking activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Risk Management Rating

The Federal Reserve instituted an explicit risk management rating requirement to be assigned for examinations and inspections commencing on or after January 2, 1996. The risk management rating applies to all SMBs, regardless of their size.15

The rating for risk management is based on a scale of one through five in ascending order of supervisory concern. Examiners should assign this rating to reflect findings within all four elements of sound risk management:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk measurement, monitoring, and management information systems
- comprehensive internal controls

The risk management rating should be reflected in the overall “Management” rating of the institution and should be consistent with the ratings criteria discussed in the section entitled, “Condition of the Bank: Uniform Financial Institutions Rating System.”

Definition of a Full-Scope Examination

The definition of a full-scope examination includes the safety-and-soundness components of the Interagency Uniform Rating System for CAMELS, the safety-and-soundness mandates of the Federal Deposit Insurance Corporation Improvement Act of 1991 and other regulatory priorities. A full-scope examination involves the collection and analysis of data sufficient to allow the examiner-in-charge (EIC) to determine a

15. This rating requirement was introduced by SR-95-51. See also SR-16-11 and the manual section entitled, “Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System” and the Federal Reserve’s Risk Management Rating.
rating for each of the CAMELS components. To make this determination the EIC should ensure various financial and managerial factors are considered during the full-scope examination. It is expected that a full-scope examination would be conducted on a consolidated basis, meaning that all subsidiaries of the bank would be evaluated. The scope of analysis of subsidiaries and the necessity for on-site presence in such subsidiaries and branches of the banking institution should be determined by the EIC after an analysis of the materiality and operational risk inherent in each. In most cases, an on-site examination of material credit extending (issuing) subsidiaries should be conducted. For more information on the minimum expectations for full-scope examinations see SR-94-12, “The Federal Reserve System’s Definition of a Full Scope, On-Site Examination for Safety and Soundness.”

Target Examinations

Target examinations focus intensively on one or two activities rather than assessing all of the safety-and-soundness components of the CAMELS rating system. There are multiple circumstances when the Federal Reserve would conduct a target examination. For instance, if the bank is under a formal enforcement action, compliance with the formal action may be validated, in part, through a target examination. In addition, the Federal Reserve may conduct a target examination of a particular activity, such as the bank’s loan review, between full-scope examinations if off-site monitoring noted deteriorating asset quality at the bank. For more information, see discussion below on SMB examination frequency and coordination.

OTHER EXAMINATION AREAS

Foreign branch and specialty examination findings and the ratings assigned to those areas are taken into consideration, as appropriate, when assigning component and composite ratings under UFIRS. Several specialty examination areas include Compliance, Community Reinvestment, Government Security Dealers, Information Systems, Municipal Security Dealers, Transfer Agent, and Trust.

EXAMINATION-FREQUENCY EXPECTATIONS FOR STATE MEMBER BANKS

The Federal Reserve is required to conduct a full-scope, on-site examination of every insured SMB at least once during each 12-month period, with the exception that certain small institutions can be examined once during each 18-month period. The 18-month examination period can be applied to those banks that

- have total assets of less than $3 billion;
- are well capitalized;
- the Federal Reserve assigned a management component rating of “1” or “2” at the most recent Federal Reserve or applicable state banking agency examination; 17
- were assigned a CAMELS composite rating of “1” or “2” as part of the bank’s rating; 18
- are not subject to a formal enforcement proceeding or action by the Federal Reserve or the FDIC; and
- no person acquired control of the bank during the preceding 12-month period in which a full-scope examination would have been required but for the 18-month examination cycle eligibility provision. 19

The exceptions do not limit the authority of the Federal Reserve to examine any insured member bank as frequently as deemed necessary. The examination cycle was also expanded from 12 months to 18 months for U.S. branches

---

16. See the manual section entitled “Other Examination Areas” for more information on the specialty examination areas.
17. The Board is permitted to conduct on-site examinations of SMBs on alternating 12-month or 18-month periods with the institution’s state supervisor. If the Board determines that the alternating examination conducted by the state carries out the purposes of section 10(d) of the FDI Act. 12 U.S.C. 1820(d)(3). Refer to the discussion below on the Alternate-Year Examination Program.
19. 12 CFR 208.64.
and agencies of foreign banks, subject to specified qualifying criteria. (Refer also to SR-18-7, “Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations.”)

**Bank Secrecy Act/Anti-Money Laundering Examination Frequency**

The Federal Reserve is required to complete a BSA/AML compliance program review at each safety-and-soundness examination conducted at an SMB or U.S. branch or agency of a foreign bank, which is typically every 12 months. However, Reserve Banks should conduct a BSA/AML examination at each examination.

### Table 1. Overview of State Member Bank Examination Frequency and Coordination

<table>
<thead>
<tr>
<th>Total Asset Size of the State Member Bank (SMB)</th>
<th>Composite CAMELS rating of “1” or “2” from the last examination</th>
<th>Composite CAMELS rating of “3” from the last examination</th>
<th>Composite CAMELS rating of “4” or “5” from the last examination</th>
</tr>
</thead>
</table>
| $0 to less than $3 billion | Full-scope on-site exam every 18 months, provided:  
• SMB is well capitalized;  
• SMB received a CAMELS composite rating of “1” or “2” and a management component rating of “1” or “2” at the most recent Federal Reserve or applicable state banking agency examination;  
• SMB not subject to a formal enforcement proceeding or order by Federal Reserve or FDIC; and  
• No person acquired control of the SMB during the preceding 12-month period in which a full-scope exam would have been required but for the 18-month exam cycle.  
Otherwise, full-scope on-site exam every 12 months. May be eligible for alternate-year examination program (AEP). | Full-scope on-site exam every 12 months conducted by the Federal Reserve or jointly with the relevant state banking agency. A targeted exam conducted by the Federal Reserve or jointly with the state banking agency is also required annually for deteriorating institutions. | Two exams are required every 12 months. One of the two exams must be a full-scope exam. Both exams must be conducted by the Federal Reserve or jointly with the relevant state banking agency. |
| $3−$10 billion | Full-scope on-site exam every 12 months. May be eligible for AEP. | | |
| Greater than $10 billion and less than $100 billion | Full-scope on-site exam every 12 months. Some SMBs rated CAMELS composite “1” and “2” may be eligible for an AEP. The SMB is subject to continuous monitoring, and exam activities are intensified based on the severity of issues at the bank. | | |
| $100 billion and above | Full-scope on-site exam every 12 months. The full-scope exam must be led by the Federal Reserve and may be joint with the relevant state banking agency. The SMB is subject to continuous monitoring, and exam activities are intensified based on the severity of issues at the bank. | | |

1. This table provides a brief summary of examination (exam) frequency requirements for SMBs. See the Federal Reserve Board’s Regulation H, (12 CFR 208.64(b)).

2. Examinations of SMBs with more than $10 billion are typically integrated into the consolidated supervision program at the bank holding company.

3. AEPs generally allow exams conducted in alternating years or alternating 18-month periods, as appropriate, to be conducted by the state banking agency. For those SMBs with total assets over $3 billion, there must be a Federal Reserve examiner presence at state-led AEP exams. AEPs are implemented on a state-by-state basis. Consult the appropriate Reserve Bank for further information regarding eligibility and availability of an AEP in a particular state.

AML compliance program review every 18 months if the SMB or U.S. branch or agency of a foreign bank is eligible for and is examined on the 18-month examination cycle. See SR-18-7 for more information.

De Novo Bank Examination Frequency and Scope

A de novo bank is a bank that has been in operation for three years or less. A de novo bank or a recently converted SMB has a different examination frequency from the required 12-month or 18-month examination schedule. The examination frequency for these banks is found in SR-20-16, “Supervision of De Novo State Member Banks.”

Within the first six months following a de novo’s formation or conversion to a state member bank, the responsible Reserve Bank should conduct a targeted examination. In a written report provided to the bank’s board of directors and senior management, the Reserve Bank should summarize the scope of review and supervisory findings but should generally not assign a CAMELS rating.

The responsible Reserve Bank should conduct a full-scope examination, independently, jointly, or concurrently with the state banking department within 12 months of the de novo’s formation or its conversion to a state member bank. Thereafter, the bank should remain on a 12-month cycle until two full-scope, on-site examinations have been conducted. After the bank (1) has had three full-scope examinations, and (2) has been in operation for three years, the Reserve Bank may transition to the statutorily required full-scope examination schedule. After the initial target examination, the next three examinations of the de novo, either led by the Federal Reserve or conducted jointly with the state banking department, should be full-scope. In addition to the supervisory expectations for a full-scope examination, the Reserve Bank should review the de novo for certain capital and managerial related items, which are outlined in SR-20-16.

De Novo Subsidiaries of Bank Holding Companies with Assets Greater than $3 Billion

A Reserve Bank may elect to make a risk-based determination that a de novo that is a subsidiary of a bank holding company with consolidated assets of greater than $3 billion should be examined less frequently than otherwise suggested in SR-20-16 if, in the opinion of the Reserve Bank, the parent company and its subsidiary banks are in satisfactory condition and the parent is considered to be a source of strength to its insured depository institution subsidiaries. Such subsidiary de novos would be expected to maintain capital levels that align with the de novo policy guideline outlined in SR-20-16.

EXAMINATION OF INSURED DEPOSITORY INSTITUTIONS PRIOR TO MEMBERSHIP OR MERGER INTO STATE MEMBER BANKS

A safety-and-soundness or consumer compliance examination of a state nonmember bank, national bank, or savings association seeking to convert its status to a state member will not generally be required prior to the conversion if the institution seeking membership meets the criteria for “eligible bank,” as set forth in the Board’s Regulation H, plus the additional safety-and-soundness and consumer compliance criteria listed below (together referred to as “eligibility criteria”). To meet the Regulation H “eligible bank” criteria, an insured depository institution must

1. be well capitalized under Regulation H, subpart D, Prompt Corrective Action;

2. be subject to a consumer compliance pre-membership or pre-merger examination or CRA review even if it meets all waiver eligibility criteria for safety-and-soundness examination. Similarly, a pre-membership or pre-merger safety-and-soundness examination may be warranted even though the bank meets all of the waiver criteria for consumer compliance and/or CRA.

---

21. SR-20-16 applies to any commercial bank, thrift, Edge Act corporation, or industrial bank that has been in existence for less than three years and is converting to become a state member bank. Insured depository institutions that are in operation for longer than three years and apply to become a state member bank are not covered in SR-20-16 but may be subject to a pre-membership examination as outlined in SR-15-11/CA-15-9, “Examinations of Insured Depository Institutions Prior to Membership or Merger into a State Member Bank.”

22. 12 CFR 208.2(e).

23. Note that a bank may be subject to a consumer compliance pre-membership or pre-merger examination or CRA review even if it meets all waiver eligibility criteria for safety-and-soundness examination. Similarly, a pre-membership or pre-merger safety-and-soundness examination may be warranted even though the bank meets all of the waiver criteria for consumer compliance and/or CRA.
2. have a composite CAMELS rating of “1” or “2”;
3. have a Community Reinvestment Act (CRA) rating of “outstanding” or “satisfactory”;
4. have a consumer compliance rating of “1” or “2”; and
5. have no major unresolved supervisory issues outstanding (as determined by the Board or appropriate Federal Reserve Bank in its discretion), including adverse supervisory findings or ratings by the current primary regulator or Consumer Financial Protection Bureau (CFPB).24

In addition, the insured depository institution seeking membership must meet the following additional safety-and-soundness criteria:

• the management component of CAMELS is rated “1” or “2”
• the on-site “close date” of the most recent full-scope safety-and-soundness examination is less than nine months from the date of the application for membership25
• there have been no material changes to the bank’s business model since the most recent report of examination and no material changes are planned for the next four quarters26
• the annual growth in total assets, measured as of the most recent quarter end on the institution’s Consolidated Reports of Condition and Income, is under 25 percent and planned growth over the next year is less than 25 percent

In cases where a state nonmember bank, national bank, or savings association is merging with an SMB and the surviving institution is an SMB, a safety-and-soundness or consumer compliance examination of the state nonmember bank, national bank, or savings association will not be required so long as the SMB meets all of the eligibility criteria on an existing and pro-forma basis. For example, the SMB would not meet all of the eligibility criteria if its total assets were to increase by 25 percent or more on a pro-forma basis considering both organic growth and assets from the merging institution. Other examples of situations that may cause the merging SMB to not meet the eligibility criteria include, but would not be limited to, a change in senior leadership, a change in strategy, and a situation where the institution with which it is merging is rated less than satisfactory, has major unresolved supervisory issues, or brings new business lines or products to the SMB. (See SR-15-11/CA-15-9, “Examinations of Insured Depository Institutions Prior to Membership or Merger into a State Member Bank.”)

Process for Determining Whether to Waive a Safety-and-Soundness Examination

In all cases, the Reserve Bank must consult with Board supervisory staff when determining whether to waive a safety-and-soundness examination under this policy. Under certain circumstances, a pre-merger or pre-membership examination may be waived even when an institution fails to meet one or more of the safety-and-soundness related eligibility criteria. This can occur if the Reserve Bank, in consultation with Board supervisory staff, determines that conducting a safety-and-soundness examination would be unlikely to provide information that would assist in evaluating the statutory and regulatory factors that the Federal Reserve is required to consider in acting on the membership or merger application.

Process for Determining Whether to Waive a Consumer Compliance Examination or CRA Review

For consumer compliance and CRA, the Reserve Bank should review the most recent supervisory information, including consumer compliance examinations, reviews, and risk assessments, from the appropriate primary banking regulatory agency and the CFPB, if applicable, and consult

---

24. In general, if significant trust or fiduciary activities were found to be conducted in a less-than-satisfactory manner, an insured depository institution would typically not meet this requirement.
25. The close date of an on-site examination is defined as the last date that the examination team is physically on-site at the institution. For examinations for which all or a portion of the work is performed off-site, the close date is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the examiner-in-charge review; or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.
26. A “material change” would be an event that would materially affect the institution’s balance sheet and income statement, such as a sizeable growth, sale, or wind-down of a major business line or assets, or change in senior leadership positions, such as the chief executive officer, the chief financial officer, or the chairman of the board.
with applications staff and supervisory staff in the Board’s Division of Consumer and Community Affairs (DCCA) when determining whether to waive a consumer compliance examination under this policy. However, if the institution seeking to convert to an SMB is rated less-than-satisfactory for consumer compliance, a pre-membership or pre-merger examination should be conducted.

In addition, if the review of supervisory information from the appropriate primary banking regulatory agency and the CFPB, if applicable, identifies significant weaknesses, a pre-membership or pre-merger consumer compliance examination may be warranted, with a focus on the particular area of concern, even if a bank has a consumer compliance examination rating of “1” or “2.”

Documentation Requirement for a Waived Safety-and-Soundness or Consumer Compliance Examination

The Reserve Bank must prepare and maintain documentation supporting its decision not to conduct a pre-membership or pre-merger safety-and-soundness or consumer compliance examination. Documentation should include a memorandum summarizing how the institution meets each of the eligibility criteria or a justification for the waiver for cases where the institution does not meet one or more of the eligibility criteria. The supporting memorandum should summarize the Reserve Bank’s review of the two most recent full-scope safety-and-soundness and consumer compliance examinations conducted by the appropriate primary banking regulatory agency and, when applicable, the CFPB.

Scope and Documentation of the Safety-and-Soundness or Consumer Compliance Examination

All pre-membership or pre-merger safety-and-soundness or consumer compliance examinations can be risk focused and targeted, as appropriate, to the identified area(s) of weakness. Furthermore, the Reserve Bank is not required to issue a report to the institution; however, the review should be documented in a memorandum that is maintained together with the application documents.

To fulfill the examination requirement for an insured depository institution or savings association that is a subsidiary of a bank holding company or savings and loan holding company (hereafter referred to as holding company) with consolidated assets equal to or greater than $100 billion, the supervisory team will generally rely on information gathered through the existing continuous monitoring program. The team is also expected to consider findings from recent examinations that assessed specific risks, lines of business, or control functions, and from reviews such as the Comprehensive Capital Analysis and Review, the mid-cycle supervisory stress test for banks and holding companies, the holding company resolution plans, and the insured depository institution resolution plan. In the event the results of continuous monitoring and prior examinations do not provide the information necessary to assess specific areas of weakness, the supervisory team will conduct a targeted examination.

Supervisory Expectations Post-Merger or Charter Conversion

In all cases, the Reserve Bank remains responsible for adhering to the required frequency timeframes established by Federal Reserve poli-
cies and regulations for both safety-and-soundness and consumer compliance examinations. When the statutory deadline for the examination of an insured depository institution seeking membership is approaching, or has passed, a Reserve Bank should conduct an examination of the institution as soon as is practical after it becomes an SMB. The Reserve Bank should notify Board supervisory staff if the examination mandate will be missed for whatever reason.

In addition, for institutions with $10 billion or more in total consolidated assets, the Reserve Bank should complete the risk assessments and supervisory strategies required for safety-and-soundness no later than 30 days after the conversion or merger, regardless of whether the institution met the eligibility criteria. In preparing the risk assessment and supervisory strategy for an SMB that was formerly a savings association or that acquired a savings association, the Reserve Bank should pay particular attention to activities conducted by any service corporation subsidiary that may not be permissible for an SMB, where such activities have not yet been conformed.

Guidelines for Relying on State Examinations

In 1995, the Federal Financial Institutions Examination Council (FFIEC) announced the adoption of Guidelines for Relying on State Examinations pursuant to section 349 of the Riegle Community Development and Regulatory Improvement Act of 1994. One of the main reasons for issuing this guidance was to establish standards for the purpose of determining the acceptability of state reports of examination under section 10(d)(3) of the FDI Act, 12 U.S.C. 1820(d)(3).

The Federal banking agencies will accept and rely on state reports of examination in all cases in which it is determined that state examinations enable the federal banking agencies to effectively carry out their supervisory responsibilities. The following criteria may be considered, in whole or in part, by a federal banking agency when determining the acceptability of a state report of examination under section 10(d) of the FDI Act:

- The completeness of the state examination report. The state report of examination of a state-chartered, insured depository institution or a state-chartered branch or agency of a foreign bank should contain sufficient information to permit a reviewer to make an independent determination on the overall condition of the institution as well as each component factor and composite rating assigned under the “Uniform Financial Institutions Rating System” used for insured depository institutions and commonly referred to as the “CAMELS” rating system or the “ROCA”

28. The Board, in acting on a membership application, is required to consider whether the corporate powers to be exercised are consistent with the purposes of the Federal Reserve Act (12 U.S.C. 322). In addition, Regulation H (12 CFR 208.3(d)(2)) requires a state member bank to obtain the Board’s permission prior to changing the scope of powers it exercises.

The Federal banking agencies, as part of their routine review of state examination reports, will assess the quality and scope of the reports to determine whether they continue to meet the above general criteria. The Federal banking agencies retain the option in cases in which a state examination report appears insufficient or the condition of an insured institution, as indicated in the examination report or other sources, appears to be seriously deteriorating, to conduct a follow-up examination.

The appropriate Federal banking agency and state banking department will continue to share, discuss and work to resolve any problems or concerns regarding the acceptability of each other’s work or the operation of these guidelines and the alternating examination program as well as other issues of mutual interest.

Ratings Assigned by State Supervisory Agencies under the Alternate Examination Program

Reserve Banks should review all state examination reports on banks included in the AEP. A Reserve Bank should only assign a separate CAMELS rating if there is disagreement with the rating assigned by the state supervisory agency that conducted the examination. In the event that a rating disparity exists, the rating assigned by the Reserve Bank and the rationale for that rating must be communicated to the board of directors of the affected institution and to the appropriate state and federal supervisory agencies.

The rating assigned by the state supervisory agency that conducted the examination should be entered into Federal Reserve systems of record as a full-scope examination. A different rating assigned by the Reserve Bank in connection with the AEP examination should be recorded as an “examination” event with a “supervisory assessment activity” scope. The Federal Reserve rating will serve as the basis for determining compliance with relevant statutes and regulations, and for the conduct of supervisory responsibilities, including supervisory and enforcement activities, the frequency of inspection/examination activity, and general surveillance activity. See SR-99-17, “Supervisory Ratings for State Member Banks, Bank Holding Companies and Foreign Banking Organizations, and Related Requirements for the National Examination Data System,” for more information.

Joint Examination Guidelines

The Nationwide State/Federal Supervisory Agreement, dated November 14, 1996, which addresses the supervision of multistate banking organizations, established guidelines for the conduct of joint examinations. Under the terms of the agreement, the participating state and federal supervisory agencies should make every effort to resolve significant differences that arise during a joint examination. If differences cannot be resolved, the agreement permits each supervisory agency to take action, independent of the other, in the fulfillment of its own statutory and supervisory responsibilities.

An examination should be considered a joint examination only if the participating supervisory agencies agree on the component and composite ratings to be assigned. If the Federal Reserve and the state supervisory agency disagree on the ratings to be assigned, the examination should be termed “concurrent,” and should be recorded as such in the appropriate Federal Reserve system of record. In these instances, both the Federal Reserve rating and the state supervisory agency rating should be entered into the appropriate Federal Reserve system of record. In the event that an examination changes from “joint” to “concurrent” in the course of the examination, the examining Reserve Bank must assign a separate supervisory rating and issue a
separate report of examination. The Federal Reserve rating will serve as the basis for determining compliance with relevant statutes and regulations, and for the conduct of its supervisory responsibilities, including supervisory and enforcement activities, the frequency of inspection/examination activity, and general surveillance activity.

Supervision of State-Chartered Banks

In May 2004, the State-Federal Working Group, an interagency group of state bank commissioners and senior officials from the Federal Reserve and the FDIC, developed a recommended-practices document designed to reiterate and reaffirm the need for a commonsense approach for collaborating with states in the supervision of state-chartered banking organizations. The recommended practices highlight the importance of communication and coordination between state and federal banking agencies in the planning and execution of supervisory activities.

When communicating and coordinating with other agencies, examination and supervisory staff should follow the common courtesies and recommended practices identified in the May 2004 document. The recommended practices reinforce the long-standing commitment of federal and state banking supervisors to provide efficient, effective, and seamless oversight of state banks of all sizes, whether those institutions operate in a single state or more than one state. The recommended practices also minimize, to the fullest extent possible, the regulatory burden placed on state-chartered banks—thus further supporting and fostering a seamless supervisory process. (See SR-04-12, “Supervision of State-Chartered Banks.”)

1. State and federal banking agencies should take steps to ensure that all staff responsible for the supervision and examination of state-chartered banks are familiar with the principles contained in the agreement. State and federal banking agencies should ensure that adherence to the principles in the agreement is communicated as a priority within their respective agencies at all levels of staff—ranging from the field examiners to the officers in charge of supervision and to state bank commissioners.

2. Home-state supervisors should make every effort to communicate and coordinate with host-state supervisors as an important part of supervising multistate banks as specified in the Nationwide Cooperative Agreement executed by the state banking departments and recognized by the federal agencies in the agreement.

3. State and federal banking agencies should consider inviting one another to participate in regional examiner training programs and/or seminars to discuss emerging issues and challenges observed in the banking industry.

4. Federal and state banking departments should maintain and share current lists of their staff members designated as primary contact persons (PCPs) for their institutions.

5. PCPs and EICs from the state banking department(s) and federal agencies should discuss and prepare supervisory plans at least once during the examination cycle, and more frequently as appropriate for institutions of greater size or complexity or that are troubled. The agencies should discuss and communicate changes to the plan as they may evolve over the examination cycle. The supervisory plans should be comprehensive, including examination plans, off-site monitoring, follow-up or target reviews, supervisory actions, etc., as applicable.

6. The PCPs from the home-state banking department and federal banking agencies should make every effort to share reports that their individual agencies have produced through their off-site monitoring program or through targeted supervisory activities.

---

30. The source for the recommended practices is the November 14, 1996, Nationwide State and Federal Supervisory Agreement to enhance the overall state-federal coordinated supervision program for state-chartered banks. The agreement established a set of core principles to promote coordination in the supervision of all interstate banks, with particular emphasis on complex or larger institutions. (See SR-96-33, “State/Federal Protocol and Nationwide Supervisory Agreement.”) These principles are equally applicable and important when supervisors from federal and state banking agencies are communicating and coordinating the supervision of state-chartered banks operating within a single state.
7. State and federal banking agencies should notify one another as early as possible if their agency cannot conduct a supervisory event (e.g., examination) that was previously agreed upon—or if the agency intends to provide fewer examiners/resources than originally planned.

8. Meetings with bank management and directors should involve both the appropriate staff from the home-state banking department and from the responsible federal banking agency, whenever possible. If a joint meeting is not possible or appropriate (for example, the bank arranges the meeting with one agency only), the other agency (the home-state banking department or the responsible federal banking agency, as applicable) should be informed of the meeting.

9. The home-state and responsible federal agency should make every effort to issue a joint exam report in the 45-day time frame identified in the agreement. If circumstances prevent adherence to time frames identified in the agreement, the state and federal agencies should coordinate closely and consider benchmarks or timing requirements that may apply to the other agency.

10. All corrective action plans (for example, memorandum of understanding (MOU), cease-and-desist orders) should be jointly discussed, coordinated, and executed to the fullest extent possible among all examination parties involved. Also, all information on the institution’s corrective action plan and progress made toward implementing the plan should be shared.

11. To ensure that messages to management are consistent to the fullest extent possible, supervisory conclusions or proposed actions should only be communicated to bank management, the bank board of directors, or other bank staff after such matters have been fully vetted within and between the federal banking agency and home-state banking department. The vetting process should, to the fullest extent possible, adhere to the exit meeting and examination report issuance time frames specified in the agreement. All parties should make every effort to expedite the process in order to deliver timely exam findings and efficient regulatory oversight.

12. When differences between the agencies arise on important matters, such as examination conclusions or proposed supervisory action, senior management from the home-state banking department and the appropriate federal banking agency should communicate to try to resolve the differences. In the event that the state and federal banking agency cannot reach agreement on important matters affecting the supervised institution, the respective agencies should coordinate the communication of those differences to the management or board of directors of the supervised institution, including the timing thereof and how the differing views will be presented. (See SR-99-17.)

Coordinating Activities with the Consumer Financial Protection Bureau

On May 16, 2012, the CFPB, the Federal Reserve Board, the FDIC, the NCUA, and the OCC entered into an MOU to facilitate the fulfillment of the agencies’ responsibilities in a manner consistent with the provisions of sections 1022, 1024, and 1025 of the Dodd-Frank Act. The MOU covers depository institutions with more than $10 billion in total assets. The objectives of the MOU, among other things, are to establish which examination schedules must be coordinated, which examinations must be conducted simultaneously, what it means to conduct an examination simultaneously, and how insured depository institutions may request to opt out of simultaneous examinations.31

COORDINATION OF SUPERVISORY ACTIVITIES: COORDINATION ACTIVITIES AMONG THE RESERVE BANKS

Many large banks have interstate operations; therefore, close cooperation with the other federal and state banking agencies is critical. To facilitate coordination between the Federal Reserve and other regulators, District Reserve Banks have been assigned roles and responsibilities that reflect their status as either the responsible Reserve Bank (RRB) with the cen-

The RRB is accountable for all aspects of the supervision of a fully consolidated banking organization, which includes the supervision of all the institution’s subsidiaries and affiliates (domestic, foreign, and Edge corporations) for which the Federal Reserve has supervisory oversight responsibility. The RRB is generally expected to work with LRBs in conducting examinations and other supervisory activities, particularly where significant banking operations are conducted in a local District. Thus, for SMBs, the LRB has an important role in the supervision of that subsidiary. However, the RRB retains authority and accountability for the results of all examinations and reviews that an LRB may perform on its behalf. See SR-05-27/CA-05-11, “Responsible Reserve Bank and Inter-District Coordination.”

Responsible Reserve Bank

In general, the RRB for a banking institution has been the Reserve Bank in the District where the banking operations of the organization are principally conducted. For domestic banking institutions, the RRB typically will be the Reserve Bank District where the head office of the top-tier institution is located and where its overall strategic direction is established and overseen. For foreign banking institutions, the RRB typically will be the Reserve Bank District where the Federal Reserve has the most direct involvement in the day-to-day supervision of the U.S. banking operations of the institution.

When necessary, the Board’s Division of Supervision and Regulation (S&R), in consultation with DCCA, may designate an RRB when the general principles set forth above could impede the ability of the Federal Reserve to perform its functions under law, do not result in an efficient allocation of supervisory resources, or are otherwise not appropriate.

Duties of RRBs

The RRB develops the consolidated supervisory plan and ensures that the scope and timing of planned activities conducted by participating Districts and agencies pursuant to the plan are appropriate. The RRB designates the central point of contact or lead examiner and ensures that all safety-and-soundness, information technology, trust, consumer compliance, Community Reinvestment Act (CRA), and other specialty examinations, inspections, and visitations are conducted and appropriately coordinated within the System and with other regulators. In addition, the RRB manages all formal communications with the foreign and domestic supervised entity, including the communication of supervisory assessments, ratings, and remedial actions.\(^{32}\)

Sharing of RRB Duties

To take advantage of opportunities to enhance supervisory effectiveness or efficiency, an RRB is encouraged to arrange for the LRB to undertake on its behalf certain examinations or other supervisory activities. For example, an LRB may have relationships with local representatives of the institution or local supervisors; leveraging these relationships may facilitate communication and reduce costs. Additionally, LRBs may provide specialty examination resources—in the case of CRA examinations, LRB staff often provide valuable insights into local communities and lending institutions that should be factored into the CRA assessment. When other Reserve Bank Districts conduct examinations and other supervisory activities for the RRB, substantial reliance should be placed on the conclusions and ratings recommended by the participating Reserve Bank(s).

The RRB retains authority and accountability for the results of all examinations and reviews performed on its behalf and, therefore, must work closely with LRB examination teams to ensure that examination scopes and conclusions are consistent with the supervisory approach and message applied across the consolidated organization. If an LRB identifies major issues in the course of directly conducting supervisory activities on behalf of an RRB, those issues should be brought to the attention of the RRB in a timely manner.

If an RRB arranges for an LRB to conduct supervisory activities on its behalf, the LRB is responsible for the costs of performing the activities. If the LRB is unable to fulfill the request from the RRB to perform the specified activities, the RRB should seek System assis-

---

32. See SR-96-33.
tance, if needed, by contacting Board staff or using other established procedures for coordinating resources.

In general, LRBs are responsible for the direct supervision of SMBs located in their district. LRBs and host states will not routinely examine branches of SMBs or issue separate ratings and reports of examination. Similar to the relationship between the RRBs and LRBs, home-state supervisors will coordinate the activities of all state banking departments and will be the state’s principal source of contact with federal banking agencies and with the bank itself. Also, host states will not unilaterally examine branches of interstate banks. Close coordination among the Reserve Banks and other appropriate regulators for each organization is critical to ensure a consistent, risk-focused approach to supervision.

COMMUNICATION OF SUPERVISORY FINDINGS

This subsection on the “Communication of Supervisory Findings” is based on the guidance in SR-13-13/CA-13-10, “Supervisory Considerations for the Communication of Supervisory Findings,” which applies to all Federal Reserve-supervised banking organizations. In a supervisory finding, examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. Examiners should also consider the guidance in SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance,” for more information on the communication of supervisory findings, including the appropriate identification of unsafe or unsound practices or other deficiencies in risk management, including compliance risk management, or other areas that do not constitute violations of law or regulation.

Communication of supervisory findings to the organization’s board of directors is an important part of the supervision of a banking organization. While the board itself may not directly undertake the work to remediate supervisory findings as senior management is responsible for the organization’s day-to-day operations, it is nevertheless important that the board be made aware of significant supervisory issues and ultimately be accountable for the safety and soundness and assurance of compliance with applicable laws and regulations of the organization.

Depending upon the size and complexity of the organization, supervisory findings are communicated in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. These written communications referred to collectively as “reports” in this section are generally directed to the board of directors, or an executive-level committee of the board as appropriate. In turn, the board of directors (or executive-level committee of the board) typically will direct the organization’s management to take corrective action and will provide management with appropriate oversight, including approvals of proposed management actions as necessary.

To be effective, the communication of supervisory findings must be (1) written in clear and concise language, (2) prioritized based upon degree of importance, and (3) focused on any significant matters that require attention.

Reserve Banks must formally communicate Matters Requiring Immediate Attention (MRIAs) and Matters Requiring Attention (MRAs) resulting from any supervisory activity to the organization in these written reports. In order to promote an understanding of these terms, examiners should include definitions of MRIAs and MRAs in all supervisory documents communicating supervisory findings. When included in a safety-and-soundness examination or inspection report, MRIAs and MRAs should be listed in the “Matters Requiring Attention” section. In the case of findings from consumer compliance examinations, MRIAs and MRAs should be reflected in the “Executive Summary and Examination Ratings” section of the consumer examination report.

---

33. The State/Federal Supervisory Protocol and Agreement established definitions for home- and host-states. The home-state supervisor is defined as the state that issued the charter. It will act on behalf of itself and all host-state supervisors (states into which the bank branches) and will be the single state contact for a particular institution.

34. An executive-level committee of the board (such as, the audit committee or risk committee) typically meets regularly, keeps minutes of those meetings, and is accountable to and routinely reports to the board of directors.

35. In a safety-and-soundness report, these definitions could be included on the “Scope” page, in an appendix, or as a footnote on the “Matters Requiring Attention” section. In a consumer compliance report, these definitions could be included on the “Executive Summary and Examination Ratings” section.
affairs report of examination. Only outstanding MRIAs and MRAs are required to be discussed in the report; however, examiners have discretion to discuss closed MRIAs and MRAs in the report if such discussion would be meaningful.

For large banking organizations, an annual roll-up report summarizes the significant findings, based on outstanding MRIAs or MRAs, included in the reports of targeted reviews or other supervisory activities conducted during the supervisory cycle. These findings may be grouped by major supervisory issues, rating components, risks, or themes. This information should enable the banking organization’s board of directors and any executive-level committee of the board to understand the substance and status of outstanding MRIAs or MRAs and focus their attention on the most critical and time-sensitive issues.

Communications to banking organizations concerning safety-and-soundness or consumer compliance MRIAs or MRAs must specify a timeframe within which the banking organization must complete the corrective actions. In certain circumstances, examiners may require the banking organization to submit an action plan that identifies remedial actions to be completed within specified timeframes. Action plans with intermediate- and long-term timeframes that span more than one supervisory or examination cycle with regard to safety-and-soundness matters, or a 12-month period with regard to consumer compliance issues, should include interim progress targets. Both safety-and-soundness and consumer protection or compliance considerations will remain a priority in determining whether the organization’s timeframes to correct the matter are reasonable.

Matters Requiring Immediate Attention

MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant noncompliance with applicable laws or regulations; (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization; and (4) in the case of consumer compliance examinations, matters that have the potential to cause significant consumer harm. An MRIA will remain an open issue until resolution and examiners confirm the banking organization’s corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRIAs to the board of directors (or executive-level committee of the board):

“The board of directors (or executive-level committee of the board), or banking organization is required to immediately…”

Timeframe. The expected timeframe for a banking organization to address MRIAs is generally short, and may be “immediate,” in the case of heightened safety-and-soundness or consumer compliance risk. For MRIAs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account any potential losses to the FDIC’s Deposit Insurance Fund, including the possibility that a delay in action will increase the potential for loss or the cost of resolution.

Organization response. Following its review of MRIAs discussed in the report, the banking organization’s board of directors is required to respond to the Reserve Bank in writing regarding corrective action taken or planned along with a commitment to corresponding timeframes.

Supervisory follow-up. The Reserve Bank must follow up on MRIAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe specified for the action being required, and should be appropriate for the severity of the matter requiring the corrective action. The means of follow-up may vary depending upon the nature and severity of the matter requiring the action. Follow-up may take the form of a subsequent examination, a targeted review, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In such cases, examiners
should consult with enforcement staff. In all instances, examiners are expected to exercise judgment as to the supervisory activities best suited for evaluating a particular issue. Once follow-up is completed, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners are also expected to communicate in writing the results of their work and findings to the banking organization.

Matters Requiring Attention

MRAs constitute matters that are important and that the Federal Reserve is expecting a banking organization to address over a reasonable period of time but when the timing need not be “immediate.” While issues giving rise to MRAs must be addressed to ensure the banking organization operates in a safe-and-sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIAs. Likewise, consumer compliance concerns that require less immediate resolution should be communicated as an MRA. An MRA typically will remain an open issue until resolution and confirmation by examiners that the banking organization has taken corrective action. If a banking organization does not adequately address an MRA in a timely manner, examiners may elevate an MRA to an MRIA. Similarly, a change in circumstances, environment, or strategy can also lead to an MRA becoming an MRIA. The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action as well as the immediacy with which the banking organization must begin and complete corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRAs to the board of directors (or executive-level committee of the board):

“The board of directors (or executive-level committee of the board), or banking organization is required to...”

Timeframe. Communications to banking organizations about MRAs must specify a timeframe within which the corrective action is expected to be completed. The timeframe, at least initially, may require estimation because the banking organization may first need to complete preliminary planning to establish the timeframe for initiating and completing the corrective action. The timeframes for MRAs are likely to become more precise over time as planning evolves and circumstances make the completion of the MRAs more urgent. Timeframes that span more than one examination cycle for safety-and-soundness issues or that exceed 12 months for consumer compliance issues should include appropriate interim progress reports.

Organization response. Following its review of the report, the banking organization’s board of directors is required to provide a written response to the Reserve Bank regarding its plan, progress, and resolution of the MRA.

Supervisory follow-up. The Reserve Bank must follow-up on MRAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. For intermediate- or long-term corrective actions for MRAs, Reserve Bank follow-up may consist of assessing the organization’s progress to address the MRAs, whether satisfactory or unsatisfactory, and noting whether the initial estimated timeframe continues to be reasonable or warrants adjustment.

The means of supervisory follow-up may vary based upon the nature and severity of the matter for which corrective action is expected. Follow-up may take the form of a subsequent examination, targeted review, continuous monitoring, reliance on validation work conducted by internal audit function, reliance on the results of examinations conducted by other supervisors, or any other supervisory activity deemed suitable for evaluating the issue at hand.37

36. Such consultation should be made in accordance with existing guidance to Reserve Bank supervisory staff on the processing of enforcement actions, which provides that recommendations concerning formal enforcement actions should be submitted to the Board’s Legal Division.

37. Examiners may choose to rely on the work of internal audit when internal audit’s overall function and related processes are effective, as discussed in SR-13-1/CA-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.” (See this manual’s section entitled “Internal Control and Audit Function, Oversight, and Outsourcing.”) When relying on internal audit to follow up on MRAs, examiners are expected to review the relevant work papers and, when necessary, meet with internal audit staff who documented the resolution of the issue.
In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In all instances, examiners are expected to exercise judgment regarding the supervisory activities best suited for evaluating a particular issue. Once follow-up is complete, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners also are expected to communicate in writing the results of their work and findings to the organization.

Supervisory Considerations

The volume of MRIAs and MRAs should be one of the many considerations in assigning a supervisory rating to a banking organization. The presence of a large number of MRIAs or MRAs may indicate that additional formal or informal investigation may be necessary or that the initiation of a formal or informal enforcement action may be warranted.

Irrespective of the number of MRIAs or MRAs, in some cases, additional formal or informal investigation may be necessary or the initiation of a formal or informal enforcement action may be warranted based on the severity of the issues, the repeat nature of issues, lack of responsiveness of management, violations of law, insider abuse, fraud, or other material deficiency. In any of these cases, examiners should consult with the Board’s enforcement staff.

Factors in Escalating Issues into Enforcement Actions

The volume of open MRIAs and MRAs and the materiality of the issues therein to the safety and soundness of the banking organization are important overarching considerations in determining whether examiners need to consult with the Board’s enforcement staff in escalating issues into enforcement actions.38 In addition to the guidance presented in SR-13-13/CA-13-10, examiners should consider the following key factors in determining whether to recommend additional formal or informal investigation or enforcement action:

- the organization’s supervisory ratings and financial condition;39
- whether the issues involve unsafe or unsound practices, violations of laws, noncompliance with regulations, insider abuse, fraud, or other material deficiencies;40
- the severity or repetitive or intentional nature of the issues;
- management’s willingness and ability to correct the issues;
- management’s history of instituting timely remedial or corrective actions;
- whether management already initiated corrective action or established procedures to prevent future deficiencies;
- whether criminal or other regulatory authorities are taking a formal enforcement or prosecutorial action against the same institution;
- the organization’s history of violations of laws, noncompliance with regulations and unsafe and unsound unsatisfactory practices; and
- any other circumstances that warrant use of an enforcement action.

As described in this manual’s section, “Formal and Informal Supervisory Actions,” it is important for examiners and supervision staff to provide adequate support for all recommendations for both formal and informal actions in the examination report and associated workpapers.

Revising Supervisory Ratings

Supervisory ratings should be revised whenever there is strong evidence of significant changes to the bank’s financial or operational condition.41 It is important that supervisory ratings reflect a current assessment of an institution’s financial condition and risk profile, as the ratings can affect risk-based deposit insurance premiums, statutory and regulatory requirements, including applications and the prompt corrective action provisions of the FDI Act, and supervisory...
reporting and examination requirements as well as other factors. While supervisory ratings are most frequently revised as a result of on-site supervisory activities, other sources of information reviewed off-site may also indicate the need for a rating change.\footnote{For example, significant change in financial condition may be evident from some combination of reports of examination conducted by other agencies, meetings or other communication with management of the institution, published financial reports or press releases, status reports submitted by the institution as required by an enforcement action, and information generated by ongoing surveillance activities.}

In addition, when a component of one of the supervisory rating systems is changed, the Reserve Bank must also reaffirm or revise the other component ratings and the composite rating, based upon available information at that time. The factors contributing to a change in the rating of a selected component can affect one or more of the other components in the rating system as well as the composite rating. Accordingly, if there is a compelling reason to change a selected component rating, all of the other components in the supervisory rating system must be either reaffirmed or revised. As applicable for holding companies and SMBs, the risk management rating must also be reaffirmed or revised when a CAMELS or holding company rating is changed.

Any change to a component or composite rating and the rationale for that change must be communicated in writing via a letter or report to the board of directors of the affected institution (or to the senior U.S. management official in the case of a U.S. branch, agency, office, or nonbank subsidiary of a foreign bank) and to the appropriate state and federal supervisory agencies. When ratings are revised between scheduled Federal Reserve examinations and inspections, the revised rating should be entered into the appropriate Federal Reserve system of record.

REPORTS OF EXAMINATION

As mentioned above, depending upon the size and complexity of the organization, supervisory findings are communicated in writing in a number of ways. In general, a community bank receives a comprehensive report based on the findings from its statutorily mandated examination every 12 or 18 months. Historically, the agencies promoted consistency in the communication of examination findings by mandating certain pages in the report of examination. In 2019, the FFIEC members agreed on a set of principles that should apply to the completion of all reports of examination. The FFIEC members determined that a principles-based approach for completing the report of examination would better achieve the objectives of promoting consistency and communication amongst the agencies, while allowing individual supervisors the flexibility to document their assessment of financial institutions of different sizes, activities, risk profiles, and financial and managerial condition. See SR-19-6, “Federal Financial Institutions Examination Council Policy Statement on the Principles for Completing the Report of Examination,” for more information. For more information on the structure of the report of examination and timing expectation for completing reports of examination, see this manual’s section entitled, “Community Bank Supervision Process.”

Larger SMBs with greater than $10 billion in assets are generally examined as part of the continuous monitoring and inspection activities of the parent bank holding company. While the Federal Reserve is required to conduct a full-scope, on-site examination of these larger SMB at least once during each 12-month period, the scale and frequency of monitoring activities that inform this rating differs by institution. As such, the format of supervisory letters or examination reports for larger banks varies depending on the scope and subject matter examiners review. For larger SMBs, the Federal Reserve typically delivers the results of the annual SMB full-scope examination and CAMELS rating in the same letter as the bank holding company annual assessment.

Combined Reports

Reserve Banks may issue a combined report for a bank holding company and its lead SMB subsidiary when (1) a bank holding company’s lead bank subsidiary is an SMB and (2) the holding company’s board formally approves the release of a combined report to its lead SMB subsidiary. In cases where the company has more than one SMB, separate examination reports should be prepared for all other SMB subsidiaries. The Reserve Bank should send a letter to a qualified holding company that ex-
It is the option of receiving a combined report. If the holding company’s board wishes to receive a combined report, it should formally approve the release of the combined report to its lead SMB subsidiary by board resolution. (See SR-94-46, “Combined Examination/Inspection Report For Bank Holding Companies With Lead State Member Banks,” and its attachment.)

Timing Standards for Completing Reports

Specific expectations for examination staff to complete the examination report vary depending on factors such as the size of the bank, the condition of the bank, and the level of supervisory coordination for a particular examination. In general, examination staff are expected to complete reports more promptly for SMBs that are poorly rated than SMBs that are in satisfactory condition. The manual sections discussing the supervisory programs of the various portfolios provide more detailed information on timing expectations for completing and sending examination reports to supervised institutions.

ENFORCEMENT ACTIONS

Generally, formal or informal enforcement actions are taken after the completion of an on-site bank examination. These examinations include commercial, trust, electronic data-processing, consumer, or other types of examinations. Formal or informal enforcement actions may also be taken when a Reserve Bank becomes aware of a problem at a bank that warrants immediate attention and correction.

When a bank’s deficiencies are severe, uncorrected, repeat, or unsafe or unsound, or negatively affect the bank’s condition, the Board may issue a formal action to correct practices. The Board is required to publish and make publicly available any final order issued for any administrative enforcement proceeding it initiates. These orders include cease-and-desist, removal, prohibition, and civil money penalty assessments.

Informal supervisory actions are used when circumstances warrant a less severe form of action than the formal supervisory actions described above. Informal actions are not enforceable and their violation cannot serve as a basis for assessing a civil money penalty or initiating a removal and prohibition action. Informal actions are not published or publicly available. These informal actions include commitments, Board resolutions, and MOUs. For more information, see this manual’s section entitled, “Formal and Informal Supervisory Actions.”

APPEALS PROCESS

In general, questions about or objections to supervisory determinations made during the course of an inspection or examination are most effectively handled through the longstanding Federal Reserve practice of resolving any problems informally during the course of the inspection or examination process. If problems cannot be resolved through the inspection or examination process, the Board has developed guidelines that implement the intra-agency appeals process required by section 309 of the Riegle Community Development and Regulatory Improvement Act of 1994. One of the key aspects of the appeals process developed under section 309 is the establishment of the Ombudsman who

1. acts as a liaison between the agency and any affected person with respect to any problem such party may have in dealing with the agency resulting from the regulatory activities of the agency; and
2. ensures that safeguards exist to encourage complainants to come forward and preserve confidentiality

In March 2020, the Board revised its internal appeals process for institutions wishing to appeal an adverse material supervisory determination and its policy regarding the Ombudsman for the Federal Reserve System. See 85 Federal Register 15,175 (March 17, 2020) and the Board’s website for more information on the appeals process and the Ombudsman Policy Statement.
INTRODUCTION

Community banks constitute the largest number of state member banks (SMBs) supervised by the Federal Reserve System. For community banks, the primary purpose of prudential regulation is to ensure the safety and soundness of each individual institution, thereby protecting the deposit insurance fund. The Federal Reserve scales or risk-focuses its supervisory expectations based on the size, risk profile, condition, and complexity of a bank and its activities.

DEFINITION OF A COMMUNITY BANKING ORGANIZATION

For supervisory purposes, the Federal Reserve uses the term “community bank” to generally describe a bank with $10 billion or less in total consolidated assets and “community banking organization” generally to describe an SMB or holding company with $10 billion or less in total consolidated assets.

RISK-FOCUSED SUPERVISION OF COMMUNITY BANKS

The risk-focused methodology for the supervision program for community banks reflects a continuous and dynamic process. The objective of a risk-focused examination is to effectively evaluate the safety and soundness of the bank, including the assessment of its risk management systems, financial condition, and compliance with applicable laws and regulations. In addition, the risk-focused supervision process of community banks aims to align resource requirements for examinations with the risks inherent in the bank’s activities. Examiner judgment is another key element in effectively determining the initial scope of state member bank examinations.

The Federal Reserve has developed technological tools for examiners to improve the efficiency of both off-site and on-site supervisory activities. The goal of these measures is to facilitate greater consistency and more efficient, effective, and risk-focused examinations by better enabling staff to tailor the scope of examinations to the activities and risks of individual banks. The automation of various parts of the community bank examination process save examiners and bankers time, as a bank can submit requested pre-examination information electronically. Through these efforts, the Federal Reserve aims to strike an appropriate balance between off-site and on-site supervisory activities to ensure that community banks are subject to supervision that is both high-quality and resource-efficient.

The risk-focused methodology consists of several steps, each of which uses certain written products to facilitate communication and coordination.

Understanding the Bank

Institutional Overview

The risk-focused supervision process for community banks involves an assessment of the bank that enables examiners to tailor their examination to the bank’s risk profile. In addition to examination reports and correspondence files, surveillance reports identify outliers when a bank is compared to its peer group. Review of this information helps examiners identify a bank’s strengths and vulnerabilities, and is the foundation for determining the examination activities to be conducted.

The institutional overview should contain a concise executive summary that demonstrates
an understanding of the institution’s present condition and its current and prospective risk profiles as well as highlights key issues and past supervisory findings. General types of information that may be valuable to present in the overview include

• a brief description of the organizational structure;
• a summary of the organization’s business strategies as well as changes in key business lines, growth areas, new products, etc., since the prior review;
• an overview of the board of directors, management, and corporate governance;
• a brief analysis of the consolidated financial condition and trends;
• descriptions of internal and external audit;
• risk assessment matrix;
• overview of risk management including key risk types (credit, market, liquidity, operational, legal, and compliance);
• key issues for the organization, either from external or internal factors;
• a description of the future prospects of the organization;
• a summary of supervisory activity performed since the last review;
• considerations for conducting future examinations; and
• the ability to conduct loan review off-site.

Assessing the Institution’s Risks: Risk Tiering, Scoping, and Preliminary Risk Assessment

A bank’s business activities present various combinations and concentrations of the noted risks depending on the nature and scope of the particular activity. Therefore, when assessing the bank’s risks, consideration must be given to the institution’s overall risk environment, the reliability of its internal risk management, the adequacy of its information technology systems, and the risks associated with each of its significant business activities.

The Federal Reserve uses financial metrics to help differentiate the level of risk between banks before examinations. This helps examiners tailor examination expectations and procedures, which are discussed in the scope memorandum.

For community SMBs, the scope of an examination work program for a particular risk dimension depends on a bank’s risk classification, as follows:

• **High risk.** High risk means that under unfavorable market conditions, the bank’s activities for a particular risk dimension often lead to adverse outcomes. Examiners apply the full extent of examination procedures and conduct additional work, as necessary, including independent verification and transaction testing, to reach, support, and document conclusions regarding the level of an SMB’s risk exposure and the adequacy of management’s efforts to mitigate and manage risk.

• **Moderate risk.** Moderate risk means that in unfavorable markets, the bank’s activities for a particular risk dimension occasionally result in adverse outcomes. Examiners apply a subset of examination procedures, with a focus on evaluating an SMB’s key risk drivers and financial reports in order to confirm that risk is moderate. Independent examiner verification and transaction testing are applied to specific areas but reduced relative to high-risk areas.

• **Low risk.** Low risk means the expected incidence of adverse outcomes for a particular risk dimension is low, irrespective of market conditions. Examiners apply a smaller subset of examination procedures for low-risk areas than for moderate-risk areas, with a focus on evaluating an SMB’s key risk drivers and financial reports in order to confirm that risk is low. Independent examiner assessment of risk management is reduced relative to moderate-risk cases.

Supervisory teams design the risk-aligned work programs for each risk dimension, resulting in procedural templates for general use in the examination process. For a given risk dimension, the degree of differentiation between low-, moderate-, and high-risk work programs directly depends, in part, on the predictive capacity of the risk dimension’s surveillance metrics, as confirmed via back testing.

At each examination, the examiner-in-charge (EIC) confirms the risk classifications upon which planned work programs were based and, if needed, adjusts or expands the work pro-

---

2. The procedures that examiners perform for each examination area should focus on developing appropriate documentation to assess management’s ability to identify, measure, monitor, and control risk.
grams. If initial discussions with management or additional information obtained during the examination indicate significant weaknesses in an SMB’s risk management or higher than anticipated risk, examiners are expected to alter an examination’s scope and associated work programs and appropriately document the modifications in examination work papers.

All work programs should continue to include the review and verification of corrective action taken to address any outstanding Matters Requiring Immediate Attention (MRIA) or Matters Requiring Attention (MRA).

DEFINING EXAMINATION ACTIVITIES

Scheduling the Examination

Contact with the bank is encouraged to improve the examiners’ understanding of the institution and the market in which it operates. A pre-examination interview or visit should generally be conducted as a part of each full-scope examination. This meeting gives examiners the opportunity to determine whether there have been any changes in bank management and changes to the bank’s policies, strategic direction, management information systems, and other activities. During this meeting, particular emphasis should be placed on learning about the bank’s new products or new markets it may have entered. The pre-examination interview or visit also provides examiners with (1) management’s view of local economic conditions, (2) an understanding of the bank’s regulatory compliance practices, and (3) its management information systems and internal and/or external audit function. In addition, Reserve Banks should contact the state banking supervisor to determine whether there are special areas of concern where the examiners should focus.

In addition to obtaining an understanding of the institution, Reserve Bank examination staff contacts community bank management prior to an on-site examination in order to provide bank management adequate time to plan for the examination and address logistical issues for the on-site examination team. The EIC, or a designee, should contact bank management 8 to 12 weeks prior to the start date of the examination in order to communicate the proposed examination start and close dates and ensure that bank management and key bank staff are available during the proposed dates. Contacting the bank with the appropriate lead time allows examiners and bank management to reschedule certain supervisory activities if there are conflicts with previously scheduled regulatory, audit, or loan reviews. At that time, bank management may also request that examiners review loan files off-site and make the necessary arrangements for Reserve Bank staff to obtain the technical information necessary to confirm that the bank can support an off-site review. See SR-16-8, “Off-site Review of Loan Files.”

Scope Memorandum

As an integral product in the Federal Reserve’s risk-focused methodology, the scope memorandum identifies the central objectives of the examination. The memorandum also ensures that the examination strategy is communicated to appropriate examination staff, which is of key importance, as the scope will likely vary from examination to examination. Examination procedures are tailored to the characteristics of each bank, keeping in mind its size, complexity, and risk profile. Procedures should be completed to the degree necessary to determine whether the bank’s management understands and adequately controls the levels and types of risk that are assumed. In addition, the scope memorandum should address the general banking environment, economic conditions, and any changes foreseen by bank management that could affect the bank’s condition. Some of the key factors that should be addressed in the scope memorandum are described below.

• Summary of Pre-Examination Meeting. The results of the pre-examination meeting, which is discussed above, should be summarized. Examiners should appropriately describe meeting results that affect examination coverage. For more information, see SR-19-5, “Communication Expectations for Community Bank Examinations and Inspections.”
• Summary of Risk Categories and Corresponding Examination Procedures. The scope memorandum should include a preliminary assessment of the bank’s condition and major risk areas that will be evaluated through the examination process. This assessment is largely driven through the risk-tiering and scoping...
process described above. The scope memorandum should specifically detail the risk category (high, moderate, or low) of each risk type, and provide a description of the expected examination procedures to complete for that area. In addition, any supplemental and reference modules used should be discussed.

• **Summary of Audit and Internal Control Environment.** A summary of the scope and adequacy of the audit environment should be prepared, which may result in a modification of the examination procedures initially expected to be performed. Activities that receive sufficient coverage by the bank’s audit system can be tested through the examination process. Certain examination procedures could be eliminated if a bank’s audit and internal control areas are deemed satisfactory.

• **Summary of Loan Review.** On the basis of the preliminary risk assessment, the anticipated loan coverage should be detailed in the scope memorandum. In addition to stating the percentage of commercial and commercial real estate loans to be reviewed, the scope memorandum should identify which specialty loan reference modules of the general loan module are to be completed. The memorandum should specify activities within the general loan module to be reviewed as well as the depth of any specialty reviews.

• **Job Staffing.** The staffing for the examination should be detailed. Particular emphasis should be placed on ensuring that appropriate personnel are assigned to the high-risk areas identified in the bank’s risk assessment. The institution’s organizational structure and complexity are significant considerations when planning the specific supervisory activities to be conducted. In addition, the scope memo should discuss the examination activities that are expected to be performed on-site at the bank as well as the supervision activities that will be performed off-site.

Banks may need additional time to prepare for an examination, particularly for allocating appropriate bank staff to support heavily reviewed areas. Once the scope memo is finalized, Federal Reserve staff should provide bank management with the contact information of key examination personnel. More specifically, the EIC should provide to bank management a verbal overview of the preliminary scope of review and the size and composition of the examination team, including names, roles and responsibilities, workspace needs, and whether staff members will be working on-site or off-site. The EIC also should inform bank management of the approximate number of trainees that will participate in the on-site examination. The EIC should communicate to bank management any subsequent material changes to the scope of review.

**Entry Letter**

The entry letter or first day letter identifies the information necessary for the successful execution of the examination procedures. The entry letter should be tailored to fit the specific character and profile of the institution to be examined and the scope of the activities to be performed. Thus, effective use of entry letters depends on the planning and scoping of a risk-focused examination. To eliminate duplication and minimize the regulatory burden on an institution, entry letters should not request information that is readily available to Federal Reserve Bank staff. When needed, the entry letter should include requests for information on specialty activities. The specific items selected for inclusion in the entry letter should meet the following guidelines:

• reflect risk-focused supervision objectives and the examination scope
• facilitate efficiency in the examination process and lessen the burden on financial institutions
• limit, to the extent possible, requests for special management reports
• eliminate items used for audit-type procedures (for example, verifications)
• distinguish between information to be sent to the EIC for off-site examination procedures and information to be held at the institution for on-site procedures
• allow management sufficient lead time to prepare the requested information

To allow bank management sufficient time to gather all requested information, examiners should transmit a first day letter to the bank four to eight weeks prior to the examination start date. In addition, when submitting the first day letter, examiners should specify the as-of date for the data requested and note if updated data should be made available on-site. Examiners also should provide contact information for questions regarding the request list and for
technical assistance regarding data transmissions.

Performing Examination Procedures

Overview of Examination Documentation (ED) modules. Interagency ED modules form the basis of the examination procedures to be completed during examinations of state member community and regional banks. The ED modules have been developed and designed to define common objectives for the review of important activities within institutions and to assist in the documentation of examination work. The modules are categorized as primary, supplemental, or reference modules. The primary modules contain procedures to assess capital adequacy, asset quality, management and board oversight, earnings, liquidity, and sensitivity to market risk. The supplemental and reference modules address other subject areas, including procedures for conducting a thorough review of a bank’s loan and investment portfolio, a comprehensive assessment of funds-management practices, the adequacy of internal controls, the accuracy of regulatory reporting, other assets and other liabilities and asset and wealth management.

The modules establish a three-tiered approach for the review of a bank’s activities: The first tier is the core analysis, the second tier is the expanded review, and the final tier is the impact analysis. The core analysis includes a number of decision factors to be considered collectively, as well as individually, when evaluating the potential risk to the bank. To help the examiner determine whether risks are adequately managed, the core analysis section contains a list of procedures that may be considered for completion. When significant deficiencies or weaknesses are noted in the core analysis review, the examiner may reference the expanded and impact analysis for those decision factors that present the greatest degree of risk for the bank.

Use of ED modules. The use of the modules are tailored to the characteristics of each bank based on its size, complexity, and risk profile. As a result, the extent to which each module should be completed will vary from bank to bank. Federal Reserve examiners complete certain ED module procedures based on the bank’s risk category for a particular risk type. The risk-tiering process, which is described above, utilizes both qualitative and financial metrics to identify banks that should be subjected to a higher level of examination testing. Much of this information is gathered through the off-site surveillance process. See the manual section entitled, “Federal Reserve System Bank Surveillance Program,” for more information.

The quantitative information obtained through the surveillance process is only one consideration, albeit an important one, in setting the examination scope and determining the appropriate procedures to apply at an individual bank. Qualitative considerations, including but not limited to, the nature of the risk, risk management practices, management responsiveness to prior examination findings, the number and significance of prior matters requiring immediate attention or matters requiring attention, also affect an examiner’s scoping decision. Examiners should exercise appropriate supervisory judgment when including or excluding examination procedures to complete during an examination.

REQUESTING ADDITIONAL INFORMATION AFTER THE START OF THE EXAMINATION

The EIC should have a process for requesting additional documentation from bank staff that avoids duplicative requests. Suggested methods include (1) requiring examiners to first review information already submitted prior to requesting new information, and (2) centralizing information requests through one designated examiner who must verify whether the information has already been provided.

REPORTING THE FINDINGS: REPORT OF EXAMINATION

Community Bank Report of Examination

The format of the community bank report of examination focuses on content rather than specific pages. The format allows examiners to use certain content headings, which follow a continuous-flow reporting format, and to use

3. The Federal Reserve, the Federal Deposit Insurance Corporation, and representatives from the state banking agencies maintain and develop the ED modules.
certain required report pages. The community bank examination report format may, however, continue to consist of specific or individual report pages, depending on the circumstances.

The community bank report of examination instructions distinguish between mandatory content (when the bank’s condition or circumstances warrant) versus optional content. The examiner thus has discretion in the arrangement of certain content. For examinations (and inspections) of community banking organizations rated “4” or “5,” examiners may use a letter-format report provided all mandatory and any applicable optional information is in the report.

Subject to certain limitations, the examiner may customize and streamline the community bank examination report to focus the examination’s findings on matters of risk and importance to the bank’s overall financial condition. The format for the community bank examination report and its instructions should strengthen communications with the bank’s board of directors and senior management and minimize reporting burden. The report incorporates applicable specialty examination findings with the overall safety-and-soundness findings, thus culminating in a more comprehensive safety-and-soundness assessment.

The scope and depth of matters discussed under a content heading or on an examination report page, whether required or optional, will vary based on the issues and areas of concern presented as well as on their severity. A more abbreviated discussion may be warranted for community banks that are found to be in sound financial condition, with no material concerns or issues. All examination reports should contain sufficient documentation to support findings and supervisory conclusions.

Examiners completing the community bank examination report also should follow the guidance presented in the Interagency Policy Statement on the Report of Examination. Federal Financial Institutions Examination Council members developed a principles-based approach for completing the report of examination to achieve the objectives of promoting consistency and communication amongst the agencies, while allowing individual supervisors the flexibility to document their assessment of financial institutions of different sizes, activities, risk profiles, and financial and managerial conditions. See SR-19-6, “Interagency Policy Statement on the Report of Examination,” for more information.

The instructions below list the content headings or report pages of the open and confidential sections of the community bank examination report. The sequence of applicable pages through the Management/Risk Management section are static. The remaining pages should generally follow the sequence of pages outlined in the template. The financial components (CAELS) may be arranged in order of importance and the corresponding ratios/tables associated with each financial component should be adjusted to illustrate the specific circumstances at the institution.

**COMMUNITY BANK REPORT OF EXAMINATION INSTRUCTIONS**

**Open Section**

**Content Heading or Report Page Title**

**Cover Page**

A separate cover page is mandatory. The cover sheet should contain a statement that the contents of the report of examination contain confidential supervisory information.

**Table of Contents**

A separate table of contents page is mandatory. The table of contents indicates the pages included in the report. All mandatory pages are to be included in each examination report. Optional pages are added as necessary. The mandatory Signature of Directors page is the last page in the open section of the report. Additional supplemental pages may be added to the report at the examiner’s discretion. Page numbers should be included for completeness.

**Scope**

The Scope content heading or report page is mandatory. This page may be a combined content heading or a separate report page. The scope should include the examiner’s comments on examination depth, scope, and procedures per-
formed for each area of review, including any speciality areas. The examination’s scope should generally address the following:

- the date of examination (commencement and conclusion)
- the type of examination (full-scope, targeted, joint, concurrent, combined (bank and bank holding company))
- the agency or agencies conducting the community bank examination
- areas reviewed and analyzed (If the examination is targeted, the examiner should identify specific areas reviewed.)
- the percentage and type of loans reviewed, if any
- a confirmation that examination results were discussed with the organization, including a list of those who attended the meeting
- identification of the bank’s peer group
- if necessary, recognition that the bank is operating under a formal or informal supervisory action (If so, state that the provisions of the action were reviewed and compliance was assessed.)

Summary of Examination Ratings

The Summary of Examination Ratings content heading or report page is mandatory. All supervisory ratings assigned during the examination and for the two previous examinations should be provided. The supervisory ratings should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; they should, however, be made available to the board of directors and management on request. Include any speciality or targeted examination ratings assigned or other assessments, including findings from other on-site supervisory events during the recent Federal Reserve examination cycle. In all cases, a concluding statement should be provided that reminds the directorate of its responsibility to review the entire report of examination. The report should instruct each director to sign the Signature of Directors page.

Examination Conclusions

The Examination Conclusions content heading or report page is mandatory. This section of the examination report informs the bank’s board of directors of the most significant and most important supervisory issues or concerns identified during the examination as well as the examination’s findings and general conclusions.

The board of directors and senior management of an institution that is rated a composite “4” or “5” are to be informed that the bank is a problem institution that warrants special supervisory attention. The board of directors and senior management of banks that are rated composite “3” are to be informed that their condition is not satisfactory, that the bank may be subject to more-than-normal supervision, and that the cited supervisory issues and areas of concerns may cause their bank to be considered a problem institution if the weaknesses are not promptly and adequately addressed. This content heading or report page also should discuss significant weaknesses in 1- or 2-rated institutions, and a brief summary of the bank’s condition should be provided.

This section should contain an overview of the bank’s financial condition. In addition, this section should contain the examiner’s most significant recommendations and management’s plans for corrective action.

In terms of presenting the information, examiners should include references to additional supporting information elsewhere in the report. The most important comments should be described first. Comments should be provided primarily on areas of the bank’s operations and aspects of its financial condition that display weaknesses, deficiencies, or vulnerabilities. While examiners may recognize positive actions taken by management, laudatory or conclusive remarks and endorsements of specific management actions should be avoided.

Significant recommendations presented elsewhere in the report should be mentioned. Significant apparent violations should also be discussed briefly, but they should be presented in greater detail under the content heading or the report page for Apparent Violations of Laws and Regulations.

5. See the subsection below entitled “Community State Member Banks Rated Composite ‘4’ or ‘5’,” for more information on the use of a letter-format report for communicating the findings of on-site, safety-and-soundness examinations that result in composite supervisory ratings of “4” or “5.”
Apparent Violations of Laws and Regulations

The content heading or report page is optional.* However, when apparent violations of federal or state banking laws and regulations are found, it is mandatory that they be listed in detail on this page. Apparent violations of the Bank Secrecy Act should also be listed in detail on the Bank Secrecy Act and Anti-Money-Laundering Compliance report page.

The format for listing apparent violations should be consistent. A heading for each apparent violation listed should name the applicable statute and/or regulation and provide a brief description of what the law covers. This summary should be followed by a brief description of the requirements of the statute and/or regulation and a discussion of how or why the apparent violation occurred. The examiner should describe any plans or recommendations for correction. If a review of the Bank Secrecy Act is conducted separately, or as part of another examination, a statement of this fact should be included under the Bank Secrecy Act and Anti-Money-Laundering Compliance report page.

Matters Requiring Attention

The Matters Requiring Attention content heading or report page is mandatory. It is intended to complement the complete findings of the report of examination and is prepared for the use of the board of directors and the bank’s management. The focus should be on identified problems, rather than on strengths of the organization. Problems should be presented succinctly and clearly. In all cases, the types of actions to be taken by the directors and management to address these problems should be specifically noted.

Include a brief summary statement regarding the status of prior MRIs and MRAs. A detailed assessment of each prior MRIA or MRA is not required. For example, verbiage in the section could state that all, most, or none of the required items were addressed. Comments in this section should provide a reference to any section of the report where issues that are repeated or incomplete are discussed, if applicable. Repeated matters requiring attention that were not considered previously addressed should be explained in this section.

Compliance with Enforcement Actions

The Compliance with Enforcement Actions content heading or report page is optional.* The heading or page is mandatory, however, if the institution is under a formal or informal supervisory action. An assessment that summarizes the institution’s overall compliance with the supervisory action should be included in this section of the report. As appropriate, the examiner should describe the level of compliance for each provision; provide detailed analysis explaining how compliance was achieved; or detail what actions have been taken and what actions are necessary to achieve full compliance. A detailed assessment of provisions that have been in full compliance for more than one examination is not required.

Directorate Responsibility

The content heading or report page is mandatory. This section, which is located after the presentation of key examination findings, is to inform each member of the board that they are responsible for thoroughly reviewing the report of examination. Each director must sign the Signature of Directors page at the conclusion of this report. This page also includes standard language informing the institution of its right to appeal material supervisory determinations. See 85 Federal Register 15,175 (March 17, 2020) for more information on the Federal Reserve’s appeals process.
Management/Risk Management

The content heading or report page is mandatory. A separate section is required. The reported information under this content heading should always include (1) the risk-management numerical rating; (2) the mandatory discussion of the risk factors—types of risk (discussion of operational risk, legal risk, and compliance risk should be included in this section of the report. Discussion of credit risk, market risk, and liquidity risk, should be included in the Analysis of Financial Factors section for the respective financial component); (3) the adequacy of risk management associated with risk levels and risk trends; and (4) the impact of specialty examination areas on relevant risk areas. The fourth item, for example, might consist of a discussion of the impact of any information technology concerns on operational and other relevant risks, what impact any findings on fiduciary activities have on legal or other risks, or compliance concerns. As applicable, examiners should communicate conclusions/findings of any evaluation of the adequacy of an institution’s audit department/program as part of this section. Findings can be communicated as part of the overall Management comments, or as a standalone “Audit” subsection within the Management/Risk Management section. Within this section of the report, management and the board of directors should be evaluated on how they operate the institution in a safe and sound manner and on their ability to identify, measure, monitor, and control the risks of the institution’s activities. Examiners should give consideration to

1. the level, quality, and adequacy of supervisory oversight and support provided by the board of directors and senior management;
2. compliance with banking and other statutes, regulations, and supervisory agreements;
3. the ability to plan for and respond to risks that may arise from changing business conditions or the initiation of a new product or service;
4. the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems used to control risks throughout the bank;
5. the adequacy and level of compliance with the board of directors policies and procedures and the bank’s other internal policies and controls that are necessary to operate the bank in a safe and sound manner;
6. the adequacy of internal accounting control systems, the bank’s audits and audit function, and the bank’s internal control systems (discuss all of these in detail);
7. the responsiveness to recommendations from auditors and supervisory authorities;
8. the reasonableness of compensation policies and avoidance of, or tendency toward, self-dealing;
9. the business strategy and policies and procedures for avoiding conflicts of interests;
10. a demonstrated understanding and willingness to serve the legitimate banking needs of the community;
11. the institution’s management depth and succession;
12. the extent that management is affected by or is susceptible to dominant influence or concentration of authority; and
13. the overall risk profile and performance of the institution.

Examiners should provide the risk-management rating and discuss the risk factors and the adequacy of risk management associated with the risk levels and risk trends. In addition, examiners should discuss the impact of specialty areas on relevant risk areas. For example, examiners should discuss the impact of any information technology concerns on operational and other relevant risks as well as what impact any findings on fiduciary activities or compliance concerns have on legal and other risks. The section should discuss the management and risk-management analysis and “R” rating assignment for the bank holding company RFI/C(D) rating as well as the examiner’s risk management conclusions about the bank holding company.
Risk Assessment Matrix

The inclusion of a risk assessment matrix is mandatory under the Management/Risk Management content heading.

A risk matrix is used to identify significant activities, the type and level of inherent risks in these activities, and the adequacy of risk management over these activities as well as to determine composite risk assessments for each of these activities and the overall institution. A risk matrix can be developed for the consolidated organization, for a separate affiliate, or along functional business lines. The matrix is a flexible tool that documents the process followed to assess the overall risk of an institution and is a basis for preparation of the narrative risk assessment.

Activities and their significance can be identified by reviewing information from the institution, the Reserve Bank, or other supervisors. After the significant activities are identified, the type and level of risk inherent in them should be determined. Types of risk may be categorized as previously described or by using categories defined either by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, the examiner should determine if all relevant types of risk are appropriately captured. If risks are appropriately captured by the institution, the examiner should use the categories identified by the institution.

For the identified functions or activities, the inherent risk involved in that activity should be described as high, moderate, or low for each type of risk associated with that activity. The following definitions apply:

- **High inherent risk** exists where the activity is significant or positions are large in relation to the institution’s resources or to its peer group, where there is a substantial number of transactions, or where the nature of the activity is inherently more complex than normal. Thus, the activity potentially could result in a significant and harmful loss to the organization.

- **Moderate inherent risk** exists where positions are average in relation to the institution’s resources or to its peer group, where the volume of transactions is average, and where the activity is more typical or traditional. Thus, while the activity potentially could result in a loss to the organization, the loss could be absorbed by the organization in the normal course of business.

- **Low inherent risk** exists where the volume, size, or nature of the activity is such that even if the internal controls have weaknesses, the risk of loss is remote or, if a loss were to occur, it would have little negative impact on the institution’s overall financial condition.

This risk assessment is made without considering management processes and controls. Those factors are considered when evaluating the adequacy of the institution’s risk-management systems. When assessing the adequacy of an institution’s risk management systems for identified functions or activities, the focus should be on findings related to the key elements of a sound risk management system: active board and senior management oversight; adequate policies, procedures, and limits; adequate risk management, monitoring, and management information systems; and comprehensive internal controls.

Taking these key elements into account, the examiner should assess the relative strength of the risk management processes and controls for each identified function or activity. Relative strength should be characterized as strong, acceptable, or weak as defined below:

- **Strong risk management** indicates that management effectively identifies and controls all major types of risk posed by the relevant activity or function. The board and management participate in managing risk and ensure that appropriate policies and limits exist, which the board understands, reviews, and approves. Policies and limits are supported by risk monitoring procedures, reports, and management information systems that provide the necessary information and analysis to make timely and appropriate responses to changing conditions. Internal controls and audit procedures are appropriate to the size and activities of the institution. There are few exceptions to established policies and procedures, and none of these exceptions would likely lead to a significant loss to the organization.

- **Acceptable risk management** indicates that the institution’s risk-management systems, although largely effective, may be lacking to some modest degree. It reflects an ability to cope successfully with existing and foreseeable exposure that may arise in carrying out the institution’s business plan. While the institution may have some minor risk management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, poli-
cies and limits, risk-monitoring procedures, reports, and management information systems are considered effective in maintaining a safe and sound institution. Risks are generally being controlled in a manner that does not require more than normal supervisory attention.

- **Weak risk management** indicates risk management systems that are lacking in important ways and, therefore, are a cause for more than normal supervisory attention. The internal control system may be lacking in important respects, particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures. The deficiencies associated in these systems could have adverse effects on the safety and soundness of the institution or could lead to a material misstatement of its financial statements if corrective actions are not taken.

The composite risk for each significant activity is determined by balancing the overall level of inherent risk of the activity with the overall strength of risk management systems for that activity. For example, commercial real estate loans usually will be determined to be inherently high risk. However, the probability and the magnitude of possible loss may be reduced by having very conservative underwriting standards, effective credit administration, strong internal loan review, and a good early warning system. Consequently, after accounting for these mitigating factors, the overall risk profile and level of supervisory concern associated with commercial real estate loans may be moderate.

To facilitate consistency in the preparation of the risk matrix, general definitions of the composite level of risk for significant activities are provided as follows:

- **A high composite risk** generally would be assigned to an activity in which the risk management system does not significantly mitigate the high inherent risk of the activity. Thus, the activity could potentially result in a financial loss that would have a significant negative impact on the organization’s overall condition, in some cases, even when the systems are considered strong. For an activity with moderate inherent risk, a risk management system that has significant weaknesses could result in a high composite risk assessment because management appears to have an insufficient understanding of the risk and uncertain capacity to anticipate and respond to changing conditions.

- **A moderate composite risk** generally would be assigned to an activity with moderate inherent risk, which the risk management systems appropriately mitigate. For an activity with low inherent risk, significant weaknesses in the risk management system may result in a moderate composite risk assessment. On the other hand, a strong risk management system may reduce the risks of an inherently high-risk activity so that any potential financial loss from the activity would have only a moderate negative impact on the financial condition of the organization.

- **A low composite risk** generally would be assigned to an activity that has low inherent risks. An activity with moderate inherent risk may be assessed a low composite risk when internal controls and risk management systems are strong, and when they effectively mitigate much of the risk.

While support comments for operational, legal, and compliance risks will be included in Risk Assessment Matrix section of the report of examination, supporting comments for credit, market, and liquidity risks, can be found under their respective components in the Analysis of Financial Factors section.

- **Operational Risk** is the risk resulting from inadequate or failed internal processes, people, and systems or from external events (this definition is consistent with the Basel committee’s definition of operational risk).

- **Compliance Risk** is the risk of regulatory sanctions, fines, penalties, or losses resulting from failure to comply with laws, rules, regulations, or other supervisory requirements applicable to a financial institution.

- **Legal Risk** is the potential that actions against the institution that result in unenforceable contracts, lawsuits, legal sanctions, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a financial institution.
The following is an example of the Risk Assessment Matrix:

**Analysis of Financial Factors**

The content heading or report page is mandatory. It is to be included as a separate section and should include all analyses and conclusions for each financial component. Subheadings are to be used to depict the ratings and the analysis of the individual components and other topics of discussion. The order is optional. However, the more significant issues should be addressed at the beginning of this analysis. In addition to the CAELS components—Capital adequacy, Asset quality, Earnings, Liquidity, and Sensitivity to market risk—listed below, the bank holding company RFI/C(D) rating system component analysis should be reported in this section, if applicable. Financial tables and graphs are optional. They may also be included in an appendix.

1. **Capital adequacy.** Capital adequacy should be evaluated in relation to relevant regulations, the nature and extent of risks to the bank, and the ability of management to address and control these risks to the organization. Consideration is to be given to (1) the level of, quality of, and changes in capital and the bank’s overall financial condition; (2) the nature, trend, and volume of problem assets and the adequacy of the allowance for loan losses, allowance for credit losses and other valuation reserves; (3) risk exposures, including those presented by off-balance-sheet activities; (4) the quality and strength of earnings; (5) the balance sheet’s composition, including the nature and amount of intangible assets, market risk, concentration risk, and non-traditional-activity risk; (6) equity maintenance and any growth experiences, plans, and prospects; (7) the reasonableness of dividends; (8) the access to capital markets and other appropriate sources of financial assistance; and (9) the ability of management to address emerging needs for additional capital.

2. **Asset quality.** Asset quality should be evaluated in relation to (1) the level, distribution, severity, and trend of problem, classified, delinquent, nonaccrual, nonperforming, and restructured assets, both on- and off-balance-sheet; (2) the adequacy of the allowance for loan and lease losses, allowance for credit losses and other valuation reserves (including the adequacy of the bank’s methodology and written documentation policies, procedures, and practices); (3) management’s awareness of problem loans and their causes and its demonstrated ability to identify, administer, and collect problem assets; (4) the diversification and quality of loan and investment portfolios; (5) the adequacy of loan-administration and lending policies, procedures, and practices; (6) the adequacy of workout procedures for problem credits; (7) the quality of investment securities and the adequacy of investment policies, procedures, and practices; (8) the extent of securities underwriting activities and exposure to
counterparties in trading activities; (9) the
credit risk that is arising from, or reduced by,
off-balance-sheet transactions; (10) asset
concentrations (including those assets, prob-
lem credits, and other transfer-risk problems
in particular economic sectors); (11) the
volume and nature of documentation excep-
tions; (12) the effectiveness of credit admin-
istration procedures, underwriting standards,
risk-identification practices, internal con-
trols, internal loan-review and credit-grading
systems (including noted significant differ-
ences between the internal loan grades and
the examination’s loan classifications), and
management information systems; and (13) the
adequacy of policies, procedures, and prac-
tices involving financial futures and foreign
exchange trading.

3. Earnings. The quality and quantity of earn-
ings should be evaluated in relation to (1) the
ability to provide for adequate capital through
retained earnings; (2) the level, quality
(including the strength of net interest margin,
the amount of noninterest income and ex-
 pense, and the extent of reliance on unusual
or nonrecurring gains or losses), and stability
of earnings; (3) the level of, composition of,
reasonableness of assumptions for, and the
extent of management’s control over any
variances between actual results versus the
budgeted projections of income and expenses
in relation to the size and nature of the bank’s
operations; (4) the vulnerability of earnings
to market-risk exposures; (5) the adequacy of
provisions to the allowance for loan and lease
losses, allowance for credit losses and other
valuation reserves; (6) the impact of extraor-
dinary items, securities transactions, and tax
effects on net income; and (7) the adequacy
of budgeting systems, forecasting processes
(including the reasonableness of assump-
tions), and management information sys-
tems.

4. Liquidity. Liquidity and asset-liability man-
agement should be evaluated in relation to
(1) the trend and stability of deposits; (2) the
degree of and reliance on short-term volatile
sources of funds, including any undue reli-
ance on borrowings or brokered deposits to
fund longer-term assets; (3) the availability
of assets that are readily convertible to cash
without undue loss; (4) the bank’s ability to
securitize and sell certain pools of assets;
(5) the extent and ease of the bank’s access to
money markets and other sources of funding;
(6) the adequacy of and ease of access to
liquidity sources and the bank’s ability to
meet liquidity needs; (7) the level of securi-
ties pledged against liabilities; (8) the bank’s
ability to obtain borrowed funds from outside
sources that are consistent with the bank’s
funding strategies; (9) the effectiveness of
and the extent of compliance with the bank’s
policies and procedures for funding and man-
aging liquidity, interest-rate risk, manage-
ment information systems, and contingency
funding plans; (10) the capability of manage-
ment to properly identify, measure, monitor,
and control liquidity; (11) the level of diver-
sification of funding sources, both on- and
off-balance sheet; (12) the extent of the
bank’s asset-liability and gap-management
practices; and (13) the vulnerability of the
bank’s funding to adverse publicity, increased
reputation risk, and lowered credit ratings.

5. Sensitivity to market risk. Sensitivity to
market risk reflects (1) the degree to which
changes in interest rates, foreign exchange
rates, commodity prices, or equity prices can
adversely affect earnings or the economic
capital; (2) the ability of manage-
ment to identify, measure, monitor, and con-
trol exposures to market risk, given the
bank’s size, complexity, and risk profile;
(3) the nature and complexity of interest-rate
risk exposure arising from nontrading posi-
tions; and (4) where appropriate, the nature
and complexity of interest-rate risk arising
from trading and foreign operations.

Information Technology Assessment
The inclusion of an information technology
(URSIT) assessment as a content heading or
report page is optional. An information tech-

6. Credit risk arises from the potential that a borrower or
counterparty will fail to perform on an obligation.

7. Liquidity risk is the potential that a financial institution
will be unable to meet its obligations as they come due
because of an inability to liquidate assets or obtain adequate
funding (referred to as “funding liquidity risk”) or that it
cannot easily unwind or offset specific exposures without
significantly lowering market prices because of inadequate
market depth or market disruptions (referred to as “market
liquidity risk”).

8. Market risk is the risk to a financial institution’s condi-
tion resulting from adverse movements in market rates or
prices, including, but not limited to, interest rates, foreign
exchange rates, commodity prices, or equity prices.
nology assessment is mandatory, however, if an URSIT rating is assigned or if significant supervisory concerns exist. Information technology activities should be evaluated based on the nature and extent of information technology risks, including management processes, architecture, integrity, security, and availability. The supporting rationale for composite or component IT ratings should be included. Examiners should note whether a list of technical exceptions was provided to management. It may be appropriate to include descriptions of electronic banking activities. The examiner’s conclusions should also be reflected in the Analysis of Financial Factors or the Management/Risk Management sections of the report, as appropriate. Significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

**Bank Secrecy and Anti-Money-Laundering Compliance**

The content heading or report page is optional. The section is mandatory if Bank Secrecy and Anti-Money-Laundering Compliance is assessed and a conclusion is rendered, or if significant supervisory concerns exist. BSA/AML compliance should be evaluated based on the nature and extent of risk and non-compliance. Note whether a list of apparent violations or exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

**Fiduciary Activities Assessment**

The content heading or report page is optional. The heading or page is mandatory, however, if a trust (UITRS) or transfer-agent rating was assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas. Fiduciary activities should be evaluated relative to management’s oversight of fiduciary activities and the nature and extent of risk that the fiduciary activities or business lines evaluated present to the institution. Management’s ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. The supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in the Analysis of Financial Factors or the Management/Risk Management sections of the report, as appropriate.

**Items Subject to Adverse Classification**

The content heading or report page (and the associated content) is mandatory. The topic, however, must be discussed in the examination report. The Summary of Items Subject to Adverse Classification content heading or report page summarizes items classified by the examiner as either substandard, doubtful, or loss as of the examination date (for this page, considered the date relevant to the asset-quality review).

- A *Substandard* asset is inadequately protected by the current sound worth and paying capacity of the obligor or by the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.
- An asset classified *Doubtful* has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.
- Assets classified *Loss* are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery

---

November 2020

Commercial Bank Examination Manual
may be effected in the future. Amounts classified Loss should be promptly charged off.

Total classifications also are presented for the previous examination. Reserve Banks that are engaged in alternate-year examination programs should provide totals contained in the previous examination report prepared by the state when applicable. The examiner also should consider creating a schedule under the Asset Quality content heading or page to detail classifications from additional prior examinations if meaningful trend information is noted. The examiner should also present, in the report narrative, classification trends for certain asset categories if the analysis is meaningful.

For the examinations of banks engaged in international lending, examiners should provide additional information to include categories for other credit-risk problems and value-impaired assets. Adjustments are required to be made for U.S. addressees and non-U.S. addressees.

For banks with foreign activity, the distinction between U.S. and non-U.S. addressees follows the definition set forth in the Call Report instructions: whether a customer is U.S. or non-U.S. is determined by the customer’s principal address, that is, by its domicile. A U.S. address would be in the 50 states of the United States, the District of Columbia, Puerto Rico, or U.S. territories and possessions. Non-U.S. addressees include all other geographical areas.

The examiner should list in the appropriate category the amounts of all credits classified due to transfer risk. The value of credits shown as value impaired should be computed after deducting any allocated transfer-risk reserve that is established against an asset. In determining total classified assets, examiners should arrive at net assets classified due to country risk. Examiners should identify any credits classified due to transfer risk that have received the same or a more severe classification due to credit risk and that are listed above in the summary of classified items due to credit risk. The sum of such assets should be listed in the appropriate column and then deducted to arrive at net assets classified due to country risk. For the purpose of this content heading or report page, any credits classified as value impaired for transfer-risk purposes should not be included in the summary of credits classified due to credit risk, unless the credits are classified loss.

For the purpose of arriving at total classified assets, add the amount classified due to credit risk to net assets classified due to transfer risk for each category. When computing weighted classifications, the residual portion of any value-impaired assets should be assigned the same weight as substandard classifications. However, the residual exposure still remains value impaired for examination and classification purposes. Value-impaired assets held in the trading account should also be included in total classified assets but should not be considered classified assets when computing weighted classifications.

This report page also includes “Specific Items Subject to Adverse Classification.” A full loan write-up is mandatory for all significant or material classified assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite “3,” “4,” or “5.”

**Items Listed as Special Mention**

The content heading or report page (and the associated content) is mandatory. The topic must be discussed in the examination report. The Summary of Items Listed for Special Mention content heading or report page presents the total of assets listed for special mention for the current and one previous examination. A special-mention asset is defined as follows:

A Special Mention asset has potential weaknesses that deserve management’s close attention. If left uncorrected, these potential weaknesses may result in deterioration of the repayment prospects for the asset or in the institution’s credit position at some future date. Special-mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant classification.

The summary does not include assets listed for special mention when computing classification ratios. Reserve Banks that are engaged in alternate-year examination programs should rely on the special-mention total from the previous state’s examination when applicable.

This report page also includes Specific Items Listed for Special Mention. A full loan write-up

is mandatory for all significant or material criticized assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite “3,” “4,” or “5.”

Assets with Credit-Data or Collateral-Documentation Exceptions

The content heading or report page is optional.* The content heading is mandatory if examiners’ ability to assess the loan files or overall asset quality at the bank is compromised because of inadequate information needed for loan line sheets or if the bank’s loan administration systems and processes are deficient, particularly with respect to loan and collateral documentation and collateral values. If the credit data or collateral documentation exceptions are materially significant, this content heading or report page should provide support for a discussion of credit documentation practices under the Asset Quality content heading or report page.

Concentrations

The content heading or report page (and its associated content) is optional.* This page is mandatory if there are materially deficient practices in managing concentrations. If included, the content heading should include a discussion of the appropriateness of risk management practices regarding any materially significant concentrations of assets, liabilities, specific industries, and other categories, as applicable. This discussion should address the effectiveness of the bank’s internal policies, systems, and controls to identify, monitor, and manage the risk associated with the concentrations and address the bank’s alternatives or plans for reducing concentrations. Examination staff should comment on their ability to leverage the bank’s internal concentration reporting when conducting the review and assessment of concentrations.

The content heading or report page should indicate that a concentration includes obligations, direct or indirect, of the same or affiliated interests that represent 25 percent or more of the bank’s capital structure. The reader should also be informed that, for the purposes of this page, the capital structure is defined as tier 1 capital plus the allowance. See also SR-20-8, “Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach” and this manual’s section entitled, “Concentrations of Credit.”

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. The listing should include all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances, advances, letters of credit, and all other items due to the bank as well as loans endorsed, guaranteed, or consigned by related individuals and their related interests.

Concentrations by industry, transfer risk, product line, type of collateral, and other characteristics should be detailed when appropriate. The listing should include amounts due from depository institutions, federal funds sold, and other assets in which payment depends on one financial institution or affiliated group and the total represents 25 percent or more of the bank’s capital structure. Treasury securities, obligations of U.S. government agencies and corporations, and any assets collateralized by these items should not be included in the listing. The requirements of Regulation F (12 CFR 206), as they relate to concentrations involving correspondent banks, should also be considered.

Capital Calculations

The Capital Calculations page is optional.* Inclusion of capital calculations is mandatory, however, if (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a result of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank’s Call Report as of the same date. The third exception could occur if the bank’s examination ratios were calculated at a date other than the end of a quarter, or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report. It should be noted tier 2 capital and risk-weighted calculations are not required for banks that have opted in to the community bank leverage ratio framework.
Other Matters

This content heading or report page is optional. If included, discuss issues or other matters of significance not covered elsewhere in the community bank’s examination report. Discuss also significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the bank is engaged. If issues or concerns are noted, examiners should provide comments on specific areas, such as the following:

- accounting and internal controls
- affiliate relationships
- criminal referral procedures
- emergency preparedness
- financial recordkeeping and reporting regulations
- insurance
- investment in bank premises
- litigation
- security and controls against external crimes
- payments system risk
- nontraditional banking activities (for example, mortgage warehousing or data processing services)
- supervisory reporting
- nondeposit investment products

Other examination matters also may warrant comments on this report page.

Signature of Directors

The content heading is mandatory. A separate report page is required and should be the last page in the open section of the report.

Confidential Section

The “Confidential Section” is mandatory. This section of the bank examination report is mandatory. It must include all information that cannot or should not be disclosed or made available to the bank. It should also include internal administrative and supervisory information relevant to the Federal Reserve System and its staff. The order of the following headings or pages is at the examiner’s discretion.

Directors and Officers

The content heading or report page is mandatory for inclusion in the report. A separate report page is required. All bank directors should be listed in alphabetical order. If the bank elects advisory directors, they should be listed alphabetically under a separate heading. Information requested in the report page header should be supplied for each director. Specific instructions for certain requested information are as follows:

- Under meetings missed, include all meetings a director has not attended between the previous (Reserve Bank or state) and current examination. If a director was elected since the previous examination, list only the number of meetings that they missed since the date of election.

- Under fees paid to each director, indicate whether the compensation is based on attendance.

- Under occupation or principal business affiliation, use concise and descriptive designations (for example, farmer, grocer, or commercial real estate developer).

For banks with active board committees, a code or legend for all committees should be prepared, indicating committee memberships for each director. The Executive Officers portion of the report page uses the Regulation O (12 CFR 215) definition of executive officers, but other significant officers may be included at the examiner’s discretion. Information requested by the report page should be supplied. Additional individuals to be reported may include persons without official designation who exercise considerable influence or executive officers excluded from the Regulation O definition by board resolution who actually maintain a high level of responsibility. Officers should be listed in order of title or position of responsibility, with dominant individuals shown first.

Specific instructions for the requested information for the report page are as follows:

- Examples of assigned areas of responsibility may include administration, policy formulation, lending, operations, or branch manager.

- A salary should indicate the current annual salary. The total bonuses should be reported for the previous year.

If executive officers receive any other pertinent forms of compensation beyond their listed salary and bonus (such as commission-based pay, employment contracts, stock options, unusually large benefits, or affiliated bank salaries and fees), these should be discussed in narrative
General Information

The content heading is mandatory. It includes (1) a discussion of strategic plans, future technology plans, planned bank products or services, or prospects for the bank; (2) significant or sensitive matters regarding the bank’s management not previously addressed; (3) applicable comments on the extent that a particular insider controls or dominates the organization and any adverse effect of insiders on operating policies, procedures, or the overall financial condition of the bank; and (4) a discussion of any recommendations for supervisory actions and any additional material matters of a sensitive or confidential nature not previously addressed. To the extent not included on the Directors and Officers page, this discussion should also include a list of each of the major shareholders of the bank (those having 5 percent or more ownership) and their respective percentage of ownership. When the major shareholder is a bank holding company, its major shareholders and the percent controlled by each shareholder also should be listed. A listing of critical turnkey software vendors or information technology service providers as well as any client institutions for which processing services are provided should be included. Include any significant matters of a confidential nature regarding vendors or third-party service providers. Also include a description of any electronic banking activities.

COMMUNITY STATE MEMBER BANKS RATED COMPOSITE “4” OR “5”

The Federal Reserve has adopted a flexible, letter-format report in lieu of the standard, longer-form report for communicating the findings of on-site, safety-and-soundness examinations and inspections of community banking organizations that result in composite supervisory ratings of “4” or “5.” Examiners may use a letter-format report for examination and inspections of community banking organizations rated “4” or “5,” provided all mandatory and any applicable optional information is in the report. The option of using a flexible letter-format for such community banking organizations will enable Reserve Banks to focus their reports on key findings and improve the communication of supervisory expectations to companies in need of significant improvement. In addition, given the increased examination frequency of community banking organizations with a “4” or “5” rating (typically every six months), the letter format will also hasten the communication of supervisory expectations.

Examiners are to follow the examination report guidance provided above for full-scope examinations of community banking organizations rated “1,” “2,” or “3.”14 That guidance provides for some flexibility in the structuring of the examination reports, so long as all mandatory and applicable optional content is covered. Examiners have flexibility in writing the narrative portion of reports.

Content of the Letter Format of Examination

A letter format report of examination for SMBs rated “4” or “5” should be tailored to fit the particular circumstances of the institution under review and should fully address the key areas that are routinely covered in the mandatory pages of the open and confidential sections of the standard report of examination.

These areas in the open section of the examination report include
• scope of the examination,
• summary of examination ratings,
• matters requiring attention,
• conclusions regarding management and risk management (addressing risk factors and the adequacy of risk management associated with risk levels and trends, which includes a risk-assessment matrix),
• analysis of financial factors,
• summary of items subject to classification or listed as special mention,
• signature of directors, and
• any applicable areas that are described as optional pages in the standard report of examination instructions and are necessary to support examiners’ findings. Examples of these areas include compliance with enforcement actions and apparent violations of laws or regulations.

14. The flexible letter format may also be used on target examinations of 3-rated community banking organizations, as applicable.
These areas in the confidential section of the examination report include:

- directors and officers, which includes information such as duties, length of service, and committee assignments; and
- general information about the institution, including sensitive matters not addressed in the open section of the report such as strategic and information technology plans, planned new products and services, insider influence, and recommended supervisory actions.

Communication of Supervisory Findings

As with standard reports of examination and inspection, the letter-format reports must notify a banking organization and its board of the organization’s supervisory rating and the confidential nature of the letter. The letter-format report should also set forth the deadline by which the organization must reply to the Federal Reserve Bank, including the organization’s plans to address any matters requiring immediate attention or matters requiring attention that are noted in the report. For more information, see this manual’s section entitled, “Examination Strategy and Risk-Focused Examinations.”

COMPLETION STANDARD FOR EXAMINATION AND INSPECTION REPORTS

Community Banks

Safety-and-soundness examination and inspection reports for community banking organizations issued by the Federal Reserve should be completed and sent to the supervised institution within a maximum of 60 calendar days following the “close date” of the examination. These standards apply to formal examination and inspection reports for institutions supervised by the Federal Reserve with $10 billion or less in total consolidated assets, including SMBs, bank holding companies, savings and loan holding companies, Edge Act and agreement corporations, U.S. branches and agencies of foreign banks, and foreign subsidiaries and branches of U.S. banks. For institutions rated composite “3,” “4,” or “5,” Reserve Banks are encouraged to adopt an internal target of 45 calendar days from the close date for sending the reports.

The “close date” of an on-site examination and inspection is defined as the last date that the examination team is physically on-site at the institution. For examinations and inspections for which all or a portion of the work is performed off-site, the “close date” is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the EIC’s review or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

Further, to ensure that findings are communicated to a supervised institution in a timely manner, Reserve Banks should ensure that the duration between the start of an examination/inspection to the completion and delivery of an examination/inspection report does not exceed 90 days. In cases when reports are subject to statutory requirements for other state or federal agency review, such as by the Consumer Financial Protection Bureau (CFPB), Reserve Banks may exceed the guidelines included in SR-13-14, “Timing Standards for the Completion of Safety-and-Soundness Examination and Inspection Reports for Community Banking Organizations,” at the discretion of senior management. However, deviations from these guidelines are expected to be rare. At the discretion of senior Reserve Bank management, additional exemptions from this 90-day guideline may be considered for examinations that are conducted simultaneously on multiple affiliated banks or examinations of larger complex community banking organizations that require additional time on-site to review specialized or complex business lines.  

---

15. Bank and savings and loan holding companies with total consolidated assets of $3 billion or less are subject to a separate program that has different requirements for the issuance of reports of inspection. See SR-13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.”

16. The start date is the date that Reserve Bank examiners and supervisory staff commence the examination and inspection work, excluding pre-examination visitations and preparation.

17. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the “Memorandum of Understanding on Supervisory Coordination” and the June 4, 2012, press release.
In addition, findings and conclusions delivered to a supervised institution at the close date and exit meetings for examinations and inspections must be consistently documented in work papers. At a minimum, documentation should include:

1. a list of attendees at the meetings;
2. a description of significant examination and inspection findings discussed, including preliminary ratings; and
3. a summary of the bank management’s views on the findings and, if applicable, the views of the board of directors.

To the extent conclusions in the final report differ from those discussed at the close date and exit meetings, Reserve Bank examiners and supervisory staff should communicate the reasons for the differences to the supervised institution and document these discussions in their work papers. (See SR-13-14.)

COMMUNITY BANK REPORT OF EXAMINATION ILLUSTRATIVE TEMPLATE

The following pages provide an illustrative template of the community bank report of examination. Detailed descriptions of the report of examination pages are provided above in the subsection entitled, “Community Bank Report of Examination Instructions.” The following template also contains clarifying instructions to examination staff, which are noted by the italicized text.

THIS REPORT OF EXAMINATION IS STRICTLY CONFIDENTIAL

This document has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The document is the property of the Board of Governors and is furnished to directors and management for their confidential use. The document is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 U.S.C. 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20).

Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this document or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors.

Any unauthorized disclosure of the document may subject the person or persons disclosing or receiving such information to the penalties of section 641 of the U.S. Criminal Code (18 U.S.C. 641).

Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this document. In making this review, it should be noted that this document is not an audit, and should not be considered as such.

Examination Conclusions

Apparent Violations of Laws and Regulations
Matters Requiring Attention

Template Instruction: Include material issues that require the attention of the institution’s board and/or senior management in order of importance. Include a brief summary statement regarding the status of prior examination Matters Requiring Attention. Status should communicate if all, most, none, etc. of the required items were addressed. Detailed assessment of each of the prior Matters Requiring Attention is not required. An example of text could include, “All previous Reserve Bank findings are considered to be satisfactorily addressed, unless otherwise noted in this Report of Examination.” The comment should, however, provide a reference to any section of the report where issues that are repeated or incomplete are discussed, if applicable. Repeat Matters Requiring Attention, that were not previously considered addressed, should be noted as such in the details of this section.

Directorate Responsibilities

Each member of the board is responsible for thoroughly reviewing this Report of Examination. Each director must sign the Signatures of Directors page at the conclusion of this report, which affirms that he or she has reviewed the Report in its entirety.

Appeals of Material Supervisory Determinations

Any institution about which the Federal Reserve makes a written material supervisory determination is eligible to utilize the appeals process as described in the “Process for Appeals of Material Supervisory Determinations.” An appeal under this process may be made of any written material supervisory determination, as defined in the Process for Appeals of Material Supervisory Determinations.3

The Board’s Ombudsman (Ombudsman) can provide assistance regarding questions related to the System’s material supervisory determination appeals process. The Ombudsman can also provide assistance to facilitate the informal resolution of concerns prior to the filing of a formal appeal. An institution may contact the Ombudsman at any time by calling 1-800-337-0429, by sending a facsimile to 202-530-6208, by writing to the Office of the Ombudsman, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, or by sending an email to ombudsman@frb.gov.4

---

2. Supervisory follow-up may consist of Matters Requiring Immediate Attention (MRIAs) and Matters Requiring Attention (MRAs). MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant noncompliance with applicable laws or regulations; and (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization. MRAs constitute matters that are important and must be addressed to ensure safe, sound and compliant operation, but the threat is less immediate and, therefore, may be addressed over a reasonable and specified period of time. Thus, the key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action, as well as the immediacy with which the banking organization must begin and complete corrective actions. MRIAs and MRAs will remain open until resolution and examiners confirm the banking organization’s corrective actions.

When issuing a supervisory finding (including through the issuance of an MRIA or MRA), examiners will not criticize an institution for a “violation” of supervisory guidance (as supervisory guidance is not legally binding). When appropriate, examiners may reference (including in writing) supervisory guidance to provide examples of safe-and-sound conduct, appropriate risk-management practices, and other approaches to addressing compliance with applicable statutes or regulations. See SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance.”

4. See also the Ombudsman Policy Statement on the Board’s website.
Compliance with Enforcement Actions

Template Instruction: The Compliance with Enforcement Actions content heading or report page is optional. The heading or page is mandatory, however, if the institution is under a formal or informal supervisory action. An assessment that summarizes the institution's overall compliance with the action should be included in this section of the report. The examiner should include the level of compliance for each provision and provide detailed analysis that includes how compliance was achieved or detail what actions have been taken and what actions are necessary to achieve full compliance, as appropriate. A detailed assessment of provisions that have been in full compliance for more than one examination is not required.
Management/Risk Management

Template Instruction: Provide the risk management numerical rating and discussion of risk factors and the adequacy of risk management associated with risk levels and risk trends. The impact of specialty examination areas on relevant risk areas should be incorporated. For example, the impact of any information technology concerns on operational and other relevant risks should be discussed as well as the impact on legal or other risks of any findings with respect to fiduciary activities or compliance concerns. As applicable, examiners should communicate conclusions/findings of any evaluation of the adequacy of an institution’s audit department/program as part of this section. Findings can be communicated as part of the overall Management comments, or as a standalone “Audit” subsection within the Management/Risk Management section.

Management/Risk Management§ - [Insert management rating]/[Insert risk management rating]
(Comment is mandatory)

Template Instruction: A risk assessment matrix shall be included.

5. Supporting comments for credit, market, and liquidity risks, if not discussed in this section, may be found under their respective components in the Analysis of Financial Factors section.
Analysis of Financial Factors

Template Instruction: Include analysis and conclusions for each financial component in this section using subheadings to depict ratings and analysis of individual components and other topics of discussion. The order is optional; however, the more significant issues should be addressed up front. Narrative comments and support should generally be brief for 1- and 2-rated components and increase in detail and specificity for 3-, 4-, and 5-rated components.

Financial tables below can be customized to match the conclusions, risk, and messages being communicated to institution management. Nonapplicable ratios should be removed or denoted as not applicable with “N/A” in all nonapplicable columns.

**Credit risk** *(Comment is mandatory)*

---

<sup>9</sup> Allowance refers to allowance for loan and lease losses or allowance for credit losses. For more information on the calculation of the denominator of this ratio, see SR-20-8, “Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach,” and the Commercial Bank Examination Manual.

<sup>10</sup> Weighted Adversely Classified Assets is the summation of each classification category utilizing the following weights: Substandard 20 percent, Doubtful 50 percent, and Loss 100 percent.

Market Risk (Comment is mandatory)
Information Technology Assessment

**Information Technology** – [Insert rating(s)]

*Template Instruction: Section is mandatory if an information technology (URSIT) rating is assigned or if significant supervisory concerns exist. Information technology activities should be evaluated based upon the nature and extent of information technology risks including management processes, architecture, integrity, security and availability. Supporting rationale for composite and/or component IT ratings should be included. Note whether a list of technical exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.*

Bank Secrecy & Anti-Money-Laundering Compliance

*Template Instruction: Section is mandatory if Bank Secrecy Act (BSA) and Anti-Money-Laundering (AML) compliance is assessed and a conclusion is rendered, or if significant supervisory concerns exist. BSA/AML compliance should be evaluated based upon the nature and extent of risk and noncompliance. Supporting rationale for the conclusion should be included. Note whether a list of violations or exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.*

Fiduciary Activities Assessment

**Fiduciary Activities Assessment** – [Insert rating(s)]

*Template Instruction: Section is mandatory if a trust (UITRS) or transfer agent rating is assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas. Fiduciary activities should be evaluated relative to management’s oversight of fiduciary activities and the nature and extent of risk to the institution represented by the fiduciary activities or business lines evaluated. Management’s ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. Supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.*
Items Subject to Adverse Classification

Includes assets and off-balance-sheet items which are detailed in the following categories:

Substandard Assets—A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful Assets—An asset classified Doubtful has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

Loss Assets—An asset classified Loss is considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

</tbody>
</table>

### Items Listed as Special Mention

Includes assets and off-balance sheet items which are detailed as follows:

**Special Mention Assets**—A Special Mention asset has potential weaknesses that deserve management’s close attention. If left uncorrected, these potential weaknesses may result in the deterioration of the repayment prospects for the asset or in the institution’s credit position at some future date. Special Mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.

*Template Instruction: The content heading or report page is optional. The content heading is mandatory if examiners’ ability to assess the loan files or overall asset quality at the bank is compromised because of inadequate information needed for loan line sheets or if the bank’s loan administration systems and processes are deficient, particularly with respect to loan and collateral documentation and collateral values. If the credit-data or collateral-documentation exceptions are materially significant, this content heading or report page should provide support for a discussion of credit-documentation practices under the Asset Quality content heading or report page.*
Concentrations

Template Instruction: The content heading or report page is optional. This page is mandatory if there are materially deficient practices in managing concentrations. If included, the content heading should include a discussion of the appropriateness of the bank’s risk management practices regarding any materially significant concentrations in assets, liabilities, specific industries, and/or other categories, as applicable. Examiners should include the basis criteria for identifying a specific concentration. In general, the baseline threshold of a concentration is 25 percent or more of the bank’s capital structure (capital structure for the purposes of concentrations being tier 1 capital plus the allowance). For more information, see SR-20-8, “Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach,” and the Commercial Bank Examination Manual section entitled, “Concentrations of Credits.”
Capital Calculations

Template Instruction: The Capital Calculations page is Optional. Inclusion of capital calculations is mandatory, however, if (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a results of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank’s Call Report as of the same date. The third exception could occur if the bank’s examination ratios were calculated at a date other than the end of a quarter, or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report.

NOTE: This form should remain attached to the Report of Examination and be retained in the bank’s file for review during subsequent examinations. The signatures of committee members will suffice only if the committee includes outside directors and a Resolution has been passed by the full board delegating the review to such committee.
Confidential Section – Directors and Officers

List alphabetically all directors/trustees, executive officers, and principal stockholders. Also indicate their titles. Number of shares owned is not rounded. (J – indicates stock jointly owned; P – indicates preferred stock owned; H – indicates holding company stock owned; C – indicates stock controlled but not owned). For directors, indicate the area of professional expertise (such as law, marketing, lending, mergers/acquisitions) and the type and date of director training attended.

Committees
Confidential Section – General Information

Include a discussion of strategic plans, future technology plans, planned bank products or services, and/or prospects for the bank; significant or sensitive matters regarding the bank’s management not previously addressed; applicable comments on the extent a particular insider controls or dominates the organization and any adverse effect of insiders on operating policies, procedures, or overall financial condition of the bank; and a discussion of any recommendations for supervisory actions and any additional material matters of a sensitive or confidential nature not previously addressed. To the extent not included on the Directors and Officers page, this discussion should also include a list of each major shareholder of the bank (5 percent or more) and the respective percentage of ownership. When the major shareholder is a bank holding company, its major shareholders and the percent controlled should be listed. Include a listing of critical turnkey software vendors, and/or service providers, and any client institutions for which processing services are provided. Include any significant matters of a confidential nature regarding vendors or third-party service providers. In addition, include a listing of e-banking activities. The topics below are provided as examples for examiner consideration.

1. Discuss prospects for the bank including any strategic/technology plans and any new services planned.

2. Discuss any material matters regarding the bank’s condition or management that are sensitive or confidential. If applicable, discuss the extent a particular insider controls or dominates the bank and any adverse effect of insiders on operating policies, procedures, or the financial condition of the bank.

3. Discuss any recommendations for supervisory action.

4. List each major (5 percent or more) shareholder or group and their percentage ownership. When the major shareholder is a bank holding company, list its major shareholders and their percent controlled.

The Federal Reserve adopted a new framework for the consolidated supervision of large financial institutions on December 17, 2012. The framework strengthens traditional microprudential supervision and regulation to enhance the safety and soundness of individual firms. It also incorporates macroprudential considerations to reduce potential threats to the stability of the financial system and to provide insights into financial market trends. The consolidated supervision framework has two primary objectives:

- **Enhancing resiliency of a firm to lower the probability of its failure or inability to serve as a financial intermediary.** Each firm is expected to ensure that the consolidated organization (or the combined U.S. operations in the case of foreign banking organizations) and its core business lines can survive under a broad range of internal or external stresses. This requires financial resiliency by maintaining sufficient capital and liquidity, and operational resilience by maintaining effective corporate governance, risk management, and recovery planning.

- **Reducing the impact on the financial system and the broader economy in the event of a firm’s failure or material weakness.** Each firm is expected to ensure the sustainability of its critical operations and banking offices under a broad range of internal or external stresses. This requires, among other things, effective resolution planning that addresses the complexity and the interconnectivity of the firm’s operations.

These objectives are consistent with key provisions of the 2010 Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). These provisions include enhanced prudential standards, which provide the Federal Reserve with the flexibility to tailor the application of these standards to individual firms or groups of firms. (See SR-12-17/CA-12-14 and the supplemental guidance in SR-13-23.)

### FRAMEWORK APPLICABILITY

The new framework is designed to support a tailored supervisory approach that accounts for the unique risk characteristics of each firm, including the nature and degree of potential systemic risks inherent in a firm’s activities and operations, as well as broader trends across firms. This framework applies to the following institutions:

- **Large Institution Supervision Coordinating Committee (LISCC) firms:** the largest, most complex U.S. and foreign financial organizations subject to consolidated supervision by the Federal Reserve. Nonbank financial companies designated by the Financial Stability Oversight Council (FSOC) for supervision by the Federal Reserve are included in the LISCC portfolio. LISCC firms are considered to pose the greatest systemic risk to the U.S. economy.

  The LISCC is a multidisciplinary body that oversees supervision and evaluates conditions of supervised firms. The committee also develops cross-firm perspectives and monitors interconnectedness and common practices that could lead to greater systemic risk.

- **Large Banking Organizations (LBOs):** domestic bank and savings and loan holding companies with consolidated assets of $50 billion or more that are not included in the LISCC portfolio.

- **Large Foreign Banking Organizations (Large FBOs):** foreign banking organizations with combined assets of U.S. operations of $50 billion or more that are not included in the LISCC portfolio.

In certain instances, the framework applies to the intermediate holding company that is the primary focus of regulations and supervisory activities for the consolidated entity.

---

1. Refer to the firms described in the subsection on "Framework Applicability."
2. “Core business lines” are those business lines (including associated operations, services, functions, and support) that, in the firm’s view, upon failure would result in a material loss of revenue, profit, or franchise value.
3. “Critical operations” are those operations (including associated services, functions, and support) that if they were to fail or be discontinued could pose a threat to the financial stability of the United States.
4. “Banking offices” are defined as U.S. depository institution subsidiaries, as well as the U.S. branches and agencies of foreign banking organizations.
5. 12 USC 5365 and 12 USC 5365(a)(2).
FRAMEWORK OVERVIEW

The supervisory framework comprises the framework’s sections A, B, and C. Sections A and B specify the Federal Reserve’s expectations across the following core areas of supervisory focus:

A. Enhancing Resiliency of a Firm
   (1) Capital and Liquidity Planning and Positions
   (2) Corporate Governance
   (3) Recovery Planning
   (4) Management of Core Business Lines
B. Reducing the Impact of a Firm’s Failure
   (1) Management of Critical Operations
   (2) Support for Banking Offices
   (3) Resolution Planning
   (4) Additional Macroprudential Supervisory Approaches to Address Risks to Financial Stability
C. Conduct of Supervisory Activities

The Federal Reserve may periodically identify additional supervisory priorities beyond these core areas of focus as necessary to enhance firm-specific supervision and develop cross-firm perspectives.

The subsection on “Conduct of Supervisory Activities” (framework section C) outlines the conduct of supervisory activities used to maintain a comprehensive understanding and assessment of each firm. Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other bank supervisors and functional regulators. The Federal Reserve generally relies to the fullest extent possible on the information and assessments provided by other supervisors and regulators to support effective supervision. Supervisory agencies engaged in the supervision of large financial institutions continue to enhance formal and informal discussions to jointly identify and address key vulnerabilities, and to coordinate supervisory strategies for these firms.

As a general matter, this framework is applicable in circumstances when the consolidated organization and its banking offices are in at least satisfactory condition and there are no material weaknesses or risks across these core areas of supervisory focus. The Federal Reserve applies additional supervisory expectations, and undertakes related activities, to address identified concerns including areas subject to formal or informal enforcement action.

ENHANCING RESILIENCY OF A FIRM (SECTION A)

Capital and Liquidity Planning and Positions

The financial crisis demonstrated the need for stronger regulatory and supervisory assessments of firms’ financial resiliency.6 The Federal Reserve noted significant weaknesses in the adequacy of firms’ point-in-time regulatory capital to cover accumulated and prospective risks, as well as in firms’ liquidity buffers and risk-management practices.7 These weaknesses contributed to the failure or near failure of many financial firms and exacerbated the crisis. To support effective capital and liquidity planning, and the adequacy of capital and liquidity positions, each firm should:

a) Maintain strong capital and liquidity positions that not only comply with regulatory requirements, but also support the firm’s ongoing ability to meet its obligations to creditors and other counterparties, as well as continue to serve as a financial intermediary through periods of stress.

b) Have in place robust internal processes that enable the firm to maintain capital and liquidity commensurate with its unique risks under normal and stressful conditions, and to provide timely restoration of financial buffers in the event of drawdown.

c) Maintain processes that enable the identification and measurement of potential risks to asset quality, earnings, cash flows, and other primary determinants of capital and liquidity positions.

d) Utilize comprehensive projections of the level and composition of capital and liquidity resources, supported by rigorous and regular stress testing to assess the potential impact of

---

6. See the Board’s final rule on capital plan requirements for large bank holding companies (76 Fed. Reg. 74631, December 1, 2011); SR-10-6, “Interagency Policy Statement on Funding and Liquidity Risk Management” (75 Fed. Reg. 13656, March 22, 2010); and section 4066.0 of this manual.

7. The capital components of this framework, including those related to stress testing, will apply to savings and loan holding companies after they become subject to minimum regulatory capital requirements.
a broad range of expected and potentially adverse scenarios.
e) Maintain sound risk measurement and modeling capabilities, supported by comprehensive data collection and analysis, independent validation, and effective governance, policies, and controls.
f) Establish goals for capital and liquidity positions that are approved by the firm’s board of directors and reflect the potential impact of legal or regulatory restrictions on the transfer of capital or liquidity between legal entities.
g) Maintain independent internal audit and other review functions with appropriate staff expertise, experience, and stature in the organization to monitor the adequacy of capital and liquidity risk measurement and management processes.

Corporate Governance

In order for a firm to be sustainable under a broad range of economic, operational, legal or other stresses, its board of directors (or equivalent for the U.S. operations of FBOs) should provide effective corporate governance with the support of senior management. The board is expected to establish and maintain the firm’s culture, incentives, structure, and processes that promote its compliance with laws, regulations, and supervisory guidance. Each firm’s board of directors and committees, with support from senior management, should:

a) Maintain a clearly articulated corporate strategy and institutional risk appetite. The board should set direction and oversight for revenue and profit generation, risk management and control functions, and other areas essential to sustaining the consolidated organization.
b) Ensure that the firm’s senior management has the expertise and level of involvement required to manage the firm’s core business lines, critical operations, banking offices, and other material entities. These areas should receive sufficient operational support to remain in a safe and sound condition under a broad range of stressed conditions.
c) Maintain a corporate culture that emphasizes the importance of compliance with laws and regulations and consumer protection, as well as the avoidance of conflicts of interest and the management of reputational and legal risks.
d) Ensure the organization’s internal audit, corporate compliance, and risk management and internal control functions are effective and independent, with demonstrated influence over business-line decision making that is not marginalized by a focus on short-term revenue generation over longer-term sustainability.
e) Assign senior managers with the responsibility for ensuring that investments across business lines and operations align with corporate strategies, and that compensation arrangements and other incentives are consistent with the corporate culture and institutional risk appetite.
f) Ensure that management information systems (MIS) support the responsibilities of the board of directors to oversee the firm’s core business lines, critical operations, and other core areas of supervisory focus.

Recovery Planning

Robust recovery planning is central to ensuring the ongoing resiliency of a firm’s consolidated operations as well as its core business lines, critical operations, banking offices, and other material entities. Each firm should plan for potential financial or operational weaknesses and identify actions to correct those weaknesses. Therefore, each firm should:

a) Maintain clearly documented quantitative and qualitative criteria that would trigger timely implementation of specific elements of the firm’s recovery plan and provide for more rigorous remediation activities if initial actions prove insufficient.
b) Ensure that trigger events reflect a sufficiently broad range of market- and firm-specific stresses across financial, operational, reputational, legal, and compliance risks.
c) Ensure that recovery planning reflects a holistic view of sustainability and resiliency.

9. “Material entities” are subsidiaries or foreign offices of the firm that are significant to the activities of a core business line or critical operation.
10. See SR-08-8/CA-08-11.
Recovery planning should be closely integrated with resolution planning, capital and liquidity planning, and other aspects of financial contingency, crisis management, and business continuity planning.\(^\text{12}\)

d) Undertake recovery testing and training exercises that consider a broad range of internal and external risk scenarios and account for interconnectivities across operations and legal entities.

e) Ensure that the recovery plan is updated as needed, and reflects lessons learned from reviews of trigger events, testing, and training exercises.

f) Ensure that recovery planning is sufficiently integrated into corporate governance structures and processes, subject to independent validation, and effectively supported by related MIS reporting to the board and its committees.

Management of Core Business Lines

Effective management of core business lines is essential to ensuring the resilience of the consolidated organization, as these activities are the primary drivers of the firm’s revenue generation, profitability, and franchise value. For this reason, a firm’s corporate governance should extend (as discussed in the subsection on “Corporate Governance” (framework section A.2)) to the management of each core business line. Each core business line should have:

- Business-line senior management with qualifications and experience commensurate with the size and complexity of related activities and operations;
- A strategic planning process that ensures areas of growth and innovation are effectively managed;
- Appropriate compensation and other incentives that are consistent with the institutional risk appetite and in compliance with laws and regulations;
- An independent and strong risk-management framework that supports identification, measurement, assessment, and control of the full spectrum of risks; and
- Timely identification and resolution of audit, compliance, and regulatory issues

REDUCING THE IMPACT OF A FIRM’S FAILURE (SECTION B)

Management of Critical Operations

The failure or discontinuance of any of a firm’s critical operations could weaken the U.S. economy or pose a threat to the financial stability of the United States. Each of the supervisory expectations outlined around management of core business lines (see the subsection on “Management of Core Business Lines” (framework section A.4)) applies equally to management of critical operations to ensure their financial and operational resilience. Additionally, each firm should ensure that critical operations are sufficiently resilient to be maintained, continued, and funded even in the event of failure or material financial or operational distress. These expectations should be fully reflected in recovery and resolution planning.

Support for Banking Offices

The Federal Reserve’s consolidated supervision program has historically focused on protecting the safety and soundness of U.S. depository institution subsidiaries of bank holding companies and the U.S. branches and agencies of foreign banking organizations (collectively defined as banking offices). This is due to the risks posed by banking offices’ access to the federal safety net. Specifically, these offices pose risks to the payment system, the Federal Reserve’s discount window, and—in the case of most U.S. depository institutions—federal deposit insurance funds.

A consolidated organization should serve as a source of financial and managerial strength to its banking offices. The activities of the parent company and affiliated nondepository subsidiaries should not present material risks to affiliated banking offices, the consolidated organization itself, or to the consolidated organization’s ability to support its banking offices.\(^\text{13}\) Each firm should:

---

\(^{12}\) Business continuity expectations include adherence with expectations set forth in SR-03-9, including the geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

\(^{13}\) Due to structural differences, there are important distinctions in the forms of support provided to U.S. depository institution subsidiaries versus those provided to the U.S.
a) Provide for the strength and resiliency of its banking offices, ensuring prompt financial and operational support so that each office remains in a safe and sound condition under a broad range of stressed conditions.

b) Ensure that the activities of the parent company and nondepository institution subsidiaries do not present undue direct or indirect risks to the safety and soundness of banking offices. This includes the transmission of financial, operational, legal, compliance, or reputational risks that may undermine public confidence in the financial strength of its banking offices.

c) Maintain sufficient liquidity, cash flow, and capital strength at the parent company and nondepository institution subsidiaries to service debt obligations and cover fixed charges. The parent company needs to consider whether there are any legal or regulatory restrictions on financial transfers between legal entities within the organization.

d) Implement and maintain effective policies, procedures, and systems to ensure compliance with applicable laws and regulations. This includes compliance with respect to covered transactions subject to the Board’s Regulation W, which implements sections 23A and 23B of the Federal Reserve Act and limits a bank’s transactions with its affiliates.\(^{14}\)

Resolution Planning

To promote financial stability, the Dodd-Frank Act requires each bank holding company with consolidated assets of $50 billion or more, as well as nonbank financial companies designated by the FSOC, to develop and maintain plans for rapid and orderly resolution in the event of material financial distress or failure. These plans should be utilized as an element of the firm’s strategic planning and address the complexity and interconnectedness of the firm’s operations.\(^{15}\)

The Federal Reserve and the FDIC jointly review a firm’s resolution plan relative to supervisory requirements, including:

a) The firm’s strategic analysis describing its plans for rapid and orderly resolution under the U.S. Bankruptcy Code (or other relevant insolvency regimes). This strategy must not pose systemic risk and must exclude reliance on extraordinary support from the United States or any other government to prevent failure of the firm.

b) The firm’s strategy for maintaining and funding material entities, critical operations, and core business lines in the event of material financial distress.

c) Analysis of potential impediments to resolution, and actions to make the firm more resolvable or otherwise reduce its complexity and interconnectedness.

d) Analysis of whether the failure of a major counterparty would likely result in the material financial distress or failure of the firm.

e) The manner and extent to which an insured depository subsidiary is adequately protected from risks arising from the activities of non-depository subsidiaries.

f) For a U.S. firm with foreign operations, its strategy for addressing the risks arising from these foreign operations to its U.S. operations, and its ability to maintain core business lines and critical operations in foreign jurisdictions.

g) Analysis of whether resolution planning is sufficiently integrated into corporate governance structures and processes, subject to independent validation, and effectively supported by related MIS reporting to the board of directors and its committees.

Additional Macroprudential Supervisory Approaches to Address Risks to Financial Stability

The financial crisis demonstrated that too narrow a focus on the safety and soundness of individual firms can result in a failure to detect and address emerging threats to financial stabil-
ity that arise across many firms. The Dodd-Frank Act requires the Federal Reserve to consider the broader risks to financial stability posed by individual companies and through the interconnectedness among these companies. See section 1040.0.3 of this manual.

The Federal Reserve aims to reduce systemic risks by increasing the capacity of firms and markets to absorb shocks when problems occur, and by reducing potential costs in the event of financial distress or failure of a systemically important institution. Supervision carried out under this framework will support a variety of macroprudential supervisory approaches beyond those already discussed, including:

a) Using insights developed through microprudential supervision and related data collection and analysis to identify, understand, and assess potential systemic risks. Areas of review could include, for example, emerging trends in critical operations, interconnectedness, rapidly expanding markets, cyclical industries, and financial products lacking substitutes or effecting large market segments.

b) Identifying potential risks to financial stability indicated by the information in supervisory stress tests and through trends in scenarios employed by firms in their internal stress tests.

c) Using comparative and aggregate analysis to monitor industry practices, common investment or funding strategies, changes in degree or form of financial interconnectedness, or other developments with implications for financial stability.

d) Coordinating with the Federal Reserve’s supervision of systemically important financial market utilities to identify and address risks related to payment, clearing, and settlement activities, as well as to identify potential structural vulnerabilities.

e) Working closely with the FSOC and other regulators and supervisors to support the designation and supervision of systemically important nonbank firms, and to enhance the monitoring of systemic risk.

f) Enhancing international coordination with foreign counterparts, including national supervisors and international bodies such as the Basel Committee on Bank Supervision, the Financial Stability Board, and the Senior Supervisors Group. These activities focus on enhancing oversight of internationally active financial firms and markets and on minimizing the opportunities for firms to take advantage of weaker or inconsistent regulations.

CONDUCT OF SUPERVISORY ACTIVITIES (SECTION C)

The Federal Reserve uses a range of supervisory activities to maintain a comprehensive understanding and assessment of each firm, including:

a) Coordinated horizontal reviews involve examination of several institutions simultaneously, encompassing firm-specific supervision and the development of cross-firm perspectives. The Federal Reserve recognizes the priority of these reviews through the dedication of multidisciplinary skills and experienced staff. Examples include analysis of capital adequacy and planning via the Comprehensive Capital Analysis and Review (CCAR), as well as horizontal evaluations of resolution plans and incentive compensation practices.

b) Firm-specific examination and continuous monitoring activities are undertaken to maintain an understanding and assessment across the core areas of supervisory focus for each firm. These activities include review and assessment of changes in strategy, inherent risks, control processes, and key personnel, and follow-up on previously identified concerns (for example, areas subject to enforcement actions or other supervisory issues, or emerging vulnerabilities).

c) In developing and executing a detailed supervisory plan for each firm, the Federal Reserve generally relies to the fullest extent possible on the information and assessments provided by other relevant supervisors and functional regulators. The Federal Reserve actively participates in interagency information sharing and coordination, consistent with applicable laws, to promote comprehensive and effective supervision and limit unnecessary duplication of information requests. Supervisory agencies continue to enhance for-

16. “Continuous monitoring activities” include meetings with a banking organization’s management; analysis of internal MIS reports, market indicators, and other internal and external information; review of internal and external audit findings; and coordination with other relevant supervisors and functional regulators and utilization of their work as appropriate.
a firm transfers the risk of a portfolio to a counterparty (which may be a thinly capitalized special purpose vehicle (SPV)) that is unable to absorb losses equal to the risk-based capital requirement for the risk transferred; or

• a firm transfers the risk of a portfolio to an unconsolidated, "sponsored" affiliate entity of the firm (which also may be an SPV).

In cases involving unaffiliated counterparties, while the transactions may result in a significant reduction in a firm’s risk-weighted assets and associated capital requirements under the regulatory capital framework, the firm may nonetheless face residual risks. These residual risks arise because the effectiveness of a firm’s hedge involving a thinly capitalized SPV counterparty would be limited to the loss absorption capacity of the SPV itself. In cases involving unconsolidated “sponsored” affiliates of the firm, the residual risk arises from the implicit obligation the sponsoring firm may have to provide support to the affiliate in times of stress. SR-13-23 addresses how the Federal Reserve supervisory staff will view such risk-reducing transactions in evaluating a firm under the Board’s capital plan rule and the associated annual Comprehensive Capital Analysis and Review (CCAR).

In the case of a risk transfer transaction with a non-affiliated, limited-recourse SPV or other counterparty with limited loss-absorption capacity, Federal Reserve supervisory staff will evaluate the difference between the amount of capital required for the hedged exposures before the risk transfer transaction and the counterparty’s loss-absorbing resources. When evaluating capital adequacy, including in the context of CCAR, supervisory staff will evaluate whether a firm holds sufficient capital in addition to its minimum regulatory capital requirements to cover this difference. In addition, when a firm engages in such a risk transfer transaction, the firm should be able to demonstrate that it reflects the residual risk in its internal assessment of capital adequacy and maintains sufficient capital to address such risk. In this regard, a commitment

APPENDIX A—RISK TRANSFER CONSIDERATIONS WHEN ASSESSING CAPITAL ADEQUACY

The following discussion, SR-13-23, provides supplemental guidance to SR-12-17/CA-12-14 pertaining to the latter’s supervisory focus on an institution’s capital adequacy and liquidity sufficiency. The supplemental guidance centers on how certain risk transfer transactions affect assessments of capital adequacy at large financial institutions (referred to hereafter as a firm). It provides clarification on supervisory expectations when assessing a firm’s capital adequacy in certain circumstances when the risk-based capital framework may not fully capture the residual risks of a transaction.

Risk-mitigation techniques can reduce a firm’s level of risk. In general, the Federal Reserve views a firm’s engagement in risk-reducing transactions as a sound risk-management practice. There are, however, certain risk-reducing transactions for which the risk-based capital framework may not fully capture the residual risks that a firm faces on a post-transaction basis. As a result of inquiries and discussions with market participants, the Federal Reserve has identified specific characteristics of risk transfer transactions that give rise to this concern and on which further guidance is needed, including cases in which

• a firm transfers the risk of a portfolio to a

17. This guidance applies to large financial institutions that are domestic bank and savings and loan holding companies with consolidated assets of $50 billion or more and foreign banking organizations with combined assets of U.S. operations of $50 billion or more.

18. See 12 CFR 217. The risk-based capital framework establishes risk-based and leverage capital requirements for banking organizations, including top-tier savings and loan holding companies, except those that are substantially engaged in insurance underwriting or commercial activities. The guidance in this letter would apply to such entities at such time as risk-based and leverage capital requirements become applicable to them.

19. While the cases described are examples, the principles set forth should apply to other transactions that call into question the degree to which risk transfer has occurred.

20. See 12 CFR 225.8(d)(2)(i). For additional guidance on CCAR, refer to the Federal Reserve’s website at www.federalreserve.gov/bankinfo/ccar.htm. The capital plan rule and CCAR apply only to bank holding companies with total consolidated assets of $50 billion or more.

21. Supervisory staff may also analyze whether the counterparty has liabilities in addition to the specific risk transfer transaction.
by a third party to provide additional capital in a period of financial stress would not be counted toward the loss-absorbing capacity of the counterparty.

Example: A firm has a $100 portfolio that has a capital requirement of $8. If the firm undertakes a transaction to transfer the risk of this portfolio to an unaffiliated SPV with paid-in capital of $3, then the firm would need to be able to demonstrate that, in addition to meeting its minimum regulatory capital requirements, the firm has sufficient capital to cover the $5 difference between the SPV’s capital and the capital requirement associated with the portfolio.

In the case of risk transfer to an unconsolidated, “sponsored” affiliated entity, the nature of the firm’s relationship with the entity calls into question the degree of risk transfer in the transaction. Firms are discouraged from entering into such transactions, which generally do not involve effective risk transfer because of the sponsored entity’s ongoing relationship with the firm and, as noted above, the implicit obligation that the firm may have to provide capital to the sponsored entity in a period of financial stress affecting the sponsored entity. Firms engaging in such transactions should presume for the purpose of their internal capital adequacy assessment as well as for capital planning purposes that no risk transfer has occurred.

Supervisors will strongly scrutinize risk transfer transactions that result in substantial reductions in risk-weighted assets, including in supervisors’ assessment of a firm’s overall capital adequacy, capital planning, and risk management through CCAR. Based on an assessment of the risks retained by the firm, the Board may in particular cases determine not to recognize a transaction as a risk mitigant for risk-based capital purposes. Firms should bring these types of risk transfer transactions to the attention of their senior management and supervisors. Supervisors will evaluate whether a firm can adequately demonstrate that the firm has taken into account any residual risks in connection with the transaction.

APPENDIX B—MANAGING FOREIGN EXCHANGE SETTLEMENT RISKS FOR PHYSICALLY SETTLED TRANSACTIONS

The Federal Reserve notes that the Basel Committee on Banking Supervision (Committee), with input from the Federal Reserve, published “Supervisory Guidance for Managing Risks Associated with the Settlement of Foreign Exchange Transactions” (guidance) in February 2013. This guidance sets forth seven principles or “guidelines” for managing foreign exchange transaction-settlement risks. The Federal Reserve considers this guidance on foreign exchange settlement risks to be a component of its current, broad-based focus on banking institutions’ foreign exchange activities.

The Federal Reserve supports these principles as part of its continuing effort to promote the global financial system’s ability to withstand severe market disruptions, and has determined that the institutions subject to SR-13-24 (covered institutions) should apply the seven guidelines, which are summarized below (see sections 3.1 through 3.7 of the guidance), to their foreign exchange activities, with the following clarifications regarding application of the guidance in the United States.

22. See generally 12 CFR 217.1(d)(1), (d)(3), and (d)(5). In addition, under the Board’s current capital adequacy guidelines for bank holding companies and state member banks (banking organizations), the Board may determine that the regulatory capital treatment for a banking organization’s exposure or other relationship to an entity not consolidated on the banking organization’s balance sheet is not commensurate with the actual risk relationship of the banking organization to the entity. In making this determination, the Board may require the banking organization to treat the entity as if it were consolidated onto the balance sheet of the banking organization for risk-based capital purposes and calculate the appropriate risk-based capital ratios accordingly, all as specified by the Board. 12 CFR parts 208 and 225, Appendix A, section I.

23. This guidance applies to large financial institutions supervised by the Federal Reserve, as defined in SR-12-17/CA-12-14. This guidance does not apply to community and regional banking organizations, defined as those with less than $50 billion in total consolidated assets, unless the banking organization engages in significant foreign exchange activities.

24. While the Committee’s guidance uses the term “bank,” for purposes of SR-13-24, “covered institutions” are those defined in SR-12-17/CA-12-14 as Large Institution Supervision Coordinating Committee (LISCC) firms, large banking organizations (LBOs), and U.S. operations of large foreign banking Organizations (large FBOs), as well as any other banking organization that engages in significant foreign exchange activities.

25. The guidance applies to foreign exchange transactions that consist of two settlement payment flows. This includes spot transactions, forwards, swaps, deliverable options, and...
• **Guideline 1—Governance.** A bank should have strong governance arrangements over its foreign exchange settlement-related risks, including a comprehensive risk-management process and active engagement by the board of directors.

Paragraph 3.1.8 of the guidance states that the board of directors of a covered institution should oversee the management of the compliance function associated with settling foreign exchange transactions. For purposes of the application of the guidelines by covered institutions, senior management should routinely communicate significant compliance matters to the board of directors. The board of directors may choose to delegate regular oversight to a single board member or a committee of the board.

• **Guideline 2—Principal risk.** A bank should use financial market infrastructures that provide payment-versus-payment settlement to eliminate principal risk when settling foreign exchange transactions. Where payment-versus-payment settlement is not practicable, a bank should properly identify, measure, control, and reduce the size and duration of its remaining principal risk.

• **Guideline 3—Replacement-cost risk.** A bank should employ prudent risk-mitigation regimes to properly identify, measure, monitor, and control replacement-cost risk for foreign exchange transactions until settlement has been confirmed and reconciled.

Paragraph 3.3.7 of the guidance refers to transactions with affiliates. Covered institutions are encouraged to exchange variation margin for inter-affiliate transactions as a matter of sound business practice.

• **Guideline 4—Liquidity risk.** A bank should properly identify, measure, monitor, and control its liquidity needs and risks in each currency when settling foreign exchange transactions.

• **Guideline 5—Operational risk.** A bank should properly identify, assess, monitor, and control its operational risks. A bank should ensure that its systems support appropriate risk-management controls, and have sufficient capacity, scalability, and resiliency to handle foreign exchange volumes under normal and stressed conditions.

• **Guideline 6—Legal risk.** A bank should ensure that agreements and contracts are legally enforceable for each aspect of its activities in all relevant jurisdictions.

Paragraph 3.6.2 of the guidance states that institutions conducting business in multiple jurisdictions should identify, measure, monitor, and control for the risks arising from conflicts of laws across jurisdictions and suggests accomplishing these objectives by obtaining legal opinions from qualified internal or external counsel. The Federal Reserve does not expect a covered institution to obtain a legal opinion for every transaction; rather, management should seek legal advice that addresses standardized terms, master netting and other significant agreements, and individual transactions as appropriate.

• **Guideline 7—Capital for foreign exchange transactions.** When analyzing capital needs, a bank should consider all foreign exchange settlement-related risks, including principal risk and replacement-cost risk. A bank should ensure that sufficient capital is held against these potential exposures, as appropriate.

While the Federal Reserve acknowledges the principles set forth in section 3.7 of the guidance, and in particular that all risks related to the settlement of foreign exchange transactions should be considered in determining capital needs under the applicable capital framework, the guidance does not and is not intended to modify the calculation of regulatory capital requirements for covered institutions.
INTRODUCTION

This section provides a brief overview of the Federal Reserve’s policies, practices, and procedures relating to the examination of domestic and international banking departments of state-chartered commercial banks that are members of the Federal Reserve (state member banks or SMBs). The Federal Reserve also has certain supervisory and oversight responsibilities in other areas of banking, both domestic and international, for which it has developed specialized examination procedures, conducts on-site examinations, and generally completes separate examination reports. These other areas of banking, such as information technology, Bank Secrecy Act (BSA) and anti-money-laundering (AML) compliance, and consumer compliance are not covered in depth in this manual. Federal Reserve policies and examination procedures relating to each of these areas are covered in either separate manuals, such as the Federal Financial Institution Examination Council (FFIEC) Information Technology Examination Handbook, FFIEC BSA/AML Examination Manual, and the Consumer Compliance Handbook, or supervisory letters (SR letters) issued by the Federal Reserve.

HOLDING COMPANIES

The Federal Reserve has the sole responsibility for supervising bank holding companies (BHCs) and savings and loan holding companies (SLHCs). These organizations control commercial banks and thrifts that hold most of the insured commercial banking assets in the United States. Substantially, all BHCs and SLHCs are subject to an examination or inspection by Federal Reserve examiners.

Since 2004, the Federal Reserve has used the “RFIC(D)” rating system (RFI rating system) to communicate its supervisory assessment of BHCs regardless of their asset size, complexity, or systemic importance. In 2018, the Board adopted the RFI rating system for non-insurance and non-commercial SLHCs with total consolidated assets of $100 billion or more (referred to as the LFI rating system). The LFI rating system also applies to U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve’s Regulation YY.

INTERNATIONAL

Overseas Operations of U.S. Banking Organizations

The Federal Reserve has broad discretionary powers to regulate the foreign activities of member banks and BHCs so that, in financing U.S. trade and investments abroad, these U.S. banking organizations can be competitive with institutions of the host country without compromising the safety and soundness of their U.S. operations. Under provisions of the Federal Reserve Act and the Board’s Regulation K, SMBs may establish branches in foreign countries subject to, in most cases, the Board’s prior approval. Furthermore, Section 25 of the Federal Reserve Act permits the Board to order special examinations of foreign branches, banks or corporations as it may deem best. However, the Federal Reserve’s examinations of a SMB’s overseas operations and activities are usually conducted at the head office in the United States, where the ultimate responsibility for the overseas activities and facilities may lie. To adequately supervise international operations, examiners and supervisory staff should continuously monitor the bank’s international activities to

1. The Federal Reserve generally refers to supervisory activities of holding companies as inspections, rather than examinations.
2. See SR letter 19-4/CA letter 19-3, “Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion,” and SR letter 13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less,” for more information on the inspection scope and frequency of holding companies with less than $100 billion in assets.
4. For more information, see the “International Banking Activities,” section in the Bank Holding Company Supervision Manual.
understand and assess the extent of its international strategy, trends, operations, and legal-entity structure as well as related governance, risk management, and internal controls.

Edge Act and Agreement Corporations

Under Sections 25 and 25A of the Federal Reserve Act, Edge Act and agreement corporations may engage in international banking and foreign financial transactions, and the Federal Reserve is responsible for conducting examinations of these entities and their branches. (See Regulation K, 12 CFR 211.) Edge corporations are chartered by the Board to conduct an international banking business. Agreement corporations are state-chartered companies that enter into an agreement with the Board to limit their operations to international banking. These corporations, which are usually subsidiaries of SMBs, provide their owner organizations with additional powers in two areas: (1) they may conduct a deposit and loan business in states other than that of the parent, provided that the business is strictly related to international transactions and (2) they have somewhat broader foreign-investment powers than SMBs, being able to invest in foreign financial organizations, such as finance companies and leasing companies, as well as in foreign banks.

U.S. Activities of Foreign Banking Organizations

Foreign entities have operations in the United States and are a significant element in the U.S. banking system. The Federal Reserve has significant authority over foreign banking organizations (FBOs). Its role was enhanced by the Foreign Bank Supervision Enhancement Act of 1991 (FBSEA). The Federal Reserve has broad oversight authority for the supervision and regulation of FBOs that engage in banking in the United States through branches, agencies, commercial lending companies, and subsidiary banks. In fulfilling this responsibility, the Federal Reserve conducts its own examinations and shall rely, to the fullest extent possible, on the reports of examination made by the primary federal or state supervisor of the branch or agency of the foreign bank.

Section 10(d) of the Federal Deposit Insurance Act (FDI Act) generally requires the appropriate federal banking agency for an insured depository institution (IDI) to conduct a full-scope, on-site examination at least once every 12 months, but permits a longer examination cycle—at least once every 18 months—for IDIs that meet certain criteria, including the requirement that the IDI must have total assets below a specified amount. Section 210 of the Economic Growth, Regulatory Relief, and Consumer Protection Act amends section 10(d) of the FDI Act to increase from $1 billion to $3 billion the total asset threshold below which an IDI may qualify for the 18-month examination cycle.

On December 28, 2018, the Board published final rules that adopted without change interim final rules that (1) amended Regulation H to increase, from $1 billion to $3 billion, the total asset threshold under which the Board may apply an 18-month on-site examination for an SMB; and (2) amended, similarly, Regulation K, which governs the on-site examination cycle for Board-supervised U.S. branches and agencies of foreign banks, consistent with section 7(c)(1)(C) of the International Banking Act of 1978. The Board also made a determination that amending the $1 billion threshold to $3 billion would be consistent with safety and soundness principles per 10(d)(10) of the FDI Act.

Amendments to Regulation K parallel the amendments to Regulation H. Under the final rules, a U.S. branch or agency of a foreign bank with less than $3 billion in total assets may be eligible for an 18-month on-site examination cycle if it received, at its most recent examination, a composite condition rating of “1” or “2” under the supervisory rating system (see SR letter 00-14, “Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations”) and if it satisfies the following criteria:

1) Either: (a) the foreign bank’s most recently reported capital adequacy position consists of, or is equivalent to, tier 1 and total risk-based capital ratios of at least 6 percent and 10 percent, respectively, on a consoli-
dated basis; or (b) the branch or agency has maintained on a daily basis, over the past three quarters, eligible assets in an amount not less than 108 percent of the preceding quarter’s average third-party liabilities (determined consistent with applicable federal and state law) and sufficient liquidity is currently available to meet its obligations to third parties;

2) The branch or agency is not subject to a formal enforcement action or order by the Board, Federal Deposit Insurance Corporation, or Office of the Comptroller of the Currency; and

3) The branch or agency has not experienced a change in control during the preceding 12-month period in which a full-scope, on-site examination would have been required but for the 18-month examination cycle eligibility provision.7

The Federal Reserve may consider additional factors when determining the eligibility of a U.S. branch or agency of a foreign bank for an 18-month examination cycle, including whether (1) any of the individual components of the ROCA rating system of a branch or agency of a foreign bank is rated “3” or worse; (2) the results of any off-site surveillance indicate a deterioration in the condition of the branch or agency; (3) the size, relative importance, and role of a particular branch or agency in the context of the foreign bank’s entire U.S. operations otherwise necessitate an annual examination; and (4) the condition of the foreign bank gives rise to such a need.8 Refer to SR letter 18-7, “Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations.”

The FBSEA also requires Federal Reserve approval for establishment of new FBO offices in the United States, and it gives the Federal Reserve the authority to terminate such offices.

INFORMATION TECHNOLOGY ACTIVITIES

The Federal Reserve is responsible for conducting information technology (IT) examinations of SMBs, FBOs, and Edge Act corporations. Section 3 of the Bank Service Corporation Act (12 USC 1863, re-designated as the Bank Service Company Act) generally authorizes bank service companies to perform significant clerical, bookkeeping, or accounting functions, such as demand-deposit accounting and loan processing. Section 7 of the Bank Service Company Act (12 USC 1867) empowers the appropriate federal regulatory agency to examine bank services and operations regardless of whether these services are performed on or off the premises of a particular financial institution. When a financial institution contracts with an external company to provide data processing services, the third-party technology service provider’s activities that pertain to financial institutions are subject to examination. Larger companies that operate in more than one regulatory district or region are examined pursuant to the Significant Service Provider (SSP) examination program.

IT examinations, whether of independent processing companies or an SMB’s own IT functions, are operational in nature and focus on evaluations of internal controls and audit effectiveness. IT examiners have experience that enables them to assess the performance of each data center in four critical functions: audit, management, systems development and programming, and computer operations.

TRUST DEPARTMENTS AND TRANSFER AGENT ACTIVITIES

The Federal Reserve examines trust departments of SMBs, state-chartered trust companies that are members of the Federal Reserve System, and certain nondepository trust company subsidiaries of holding companies. The Federal Reserve also has a program of examinations for those trust companies not supervised by any other federal banking agency. In addition, examinations are conducted of Edge Act corporations that conduct foreign trust or fiduciary services, in accordance with Regulation K (12 CFR 211). These examinations determine whether the trust functions are conducted in accordance with applicable fiduciary principles and with other appropriate laws and regulations. The federal banking agencies originally adopted the Uniform Intergency Trust Rating System (UITRS) in 1978 to evaluate the fiduciary activities of financial institutions on a uniform basis. The FFIEC issued

---

7. 12 CFR 211.26(c).
8. 12 CFR 211.26(c)(2)(ii).
modifications to the UITRS in 1998, in part, to align the UITRS rating definitions with existing safety and soundness ratings definitions and to emphasize the importance of sound risk-management processes.

To engage in providing trust or fiduciary services, a bank must have proper authorization under state or federal law. Under the laws of most states, this requires a specific approval of the state financial supervision agency. Similarly, pursuant to the Board’s Regulation H (12 CFR 208.3(d)(2)), the Board’s permission must be obtained before changing the general character of a bank’s business.

Transfer agents record changes of owners of a security, maintain the issuer’s security holder records, cancel and issue certificates, and distribute dividends. An SMB, a subsidiary thereof or a holding company conducting transfer agent activities, is required to register as a transfer agent with the Federal Reserve. Federal Reserve examiners conduct separate examinations of, and complete separate reports for, the transfer-agency activities of those SMBs and BHCs that are registered with the Federal Reserve as transfer agents.

MUNICIPAL SECURITIES DEALERS, GOVERNMENT SECURITIES DEALERS, AND CLEARING AGENCIES

As a result of the Securities Act Amendments of 1975, the Board is responsible for supervising SMBs and BHCs that act as municipal securities dealers or clearing agencies. Federal Reserve examiners conduct separate examinations of and complete separate reports for both of these activities. A bank, a separate department or division of a bank, or a holding company is required to register as a municipal securities dealer if it deals in municipal securities for its own account other than in a fiduciary capacity.

The Government Securities Act of 1986 (GSA), as amended, gives the Federal Reserve responsibility for examining the government securities activities of an SMB, foreign bank, state branch or state agency of a foreign bank, or commercial lending company owned or controlled by an FBO, or Edge Act or agreement corporation. The GSA requires all government securities brokers and dealers to register with the U.S. Securities and Exchange Commission. Government securities brokers and dealers receive specialized examinations to determine compliance with the GSA. For banks that have a lower level of government securities activities, compliance with the GSA is determined as part of the commercial examination.

The responsible Federal Reserve staff conducting the examination need to fully consider their supervisory responsibilities under the GSA in formulating their supervisory plans and conducting risk-focused examinations. In this regard, two key factors should be considered concerning government securities custodial activities. First, all depository institutions that hold government securities for customers, including securities under repurchase agreements, are subject to the U.S. Department of Treasury’s GSA custody rules. Second, certain financial institutions that are exempt from the definition of a government securities broker or dealer are, nevertheless, subject to the U.S. Department of Treasury’s government securities broker or dealer custody rules when they engage in hold-in-custody repurchase agreements. Under such agreements, the financial institution retains custody of securities that are the subject of a repurchase agreement between the financial institution and a counterparty.9 These issues are more fully described in the examination procedures pertaining to government securities activities.

Reserve Bank staff are to separately report to Board staff only the results of reviews of government securities broker-dealer activities (and such broker-dealer’s related custodial activities). See SR letter 06-8, “Reports of Examinations of Government Securities Activities,” and its attachment, which includes the instructions for the report’s transmittal. When preparing these reports, Reserve Banks have the option of either using the Summary Report of Examination of Government Securities Broker-Dealer Activities and Custodial Activities (GSB-D report) or forwarding a copy of the relevant section of the examination report that contains the same information as required in the GSB-D report.

A clearing agency acts as a custodian of securities for the settlement of securities transactions by bookkeeping entries. Separate report-
ing on the GSB-D form is not required for a government securities custodian that engages in hold-in-custody repurchase agreements but which is otherwise exempt from filing notice as a government securities broker or dealer. See the U.S. Department of Treasury’s regulation on Protection of Customer Securities and Balances (17 CFR 403.5(a) and (d)), and SR letter 93-40, “Department of the Treasury Interpretation Regarding Allocation of Securities to Customer Accounts in Hold-in-Custody Repurchase Transactions.”

CONSUMER EXAMINATIONS

Some banking laws, such as the Truth in Lending Act and the Truth in Savings Act, require banks to disclose information that helps consumers evaluate product options open to them. Other laws (for example, the Community Reinvestment Act and the Equal Credit Opportunity Act) require banks to help meet the credit needs in their communities and promote the availability of credit to all creditworthy applicants. Finally, laws such as the Fair Credit Reporting Act and the Fair Debt Collection Act provide consumer safeguards for the extension, collection, and reporting of consumer credit. At the Federal Reserve, specialized examiners conduct examinations to determine banks’ compliance with these laws and their implementing regulations.

In 2010, Congress enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), which established the Consumer Financial Protection Bureau (CFPB). Under the Dodd-Frank Act, the CFPB has authority to examine IDIs and insured credit unions with consolidated assets of more than $10 billion and their affiliates, to assess compliance with the requirements of 18 enumerated federal consumer financial laws, and to assess risks to consumers and financial markets from consumer financial products and services. The Federal Reserve has consumer compliance supervisory responsibility for (1) SMBs with consolidated assets of more than $10 billion for their compliance with consumer protection laws not specifically assigned to the CFPB, and (2) SMBs with consolidated assets of $10 billion or less for their compliance with all consumer protection laws. The Federal Reserve is also responsible for conducting Community Reinvestment Act examinations for SMBs, regardless of asset size.

This section sets forth the principal aspects of effective internal control and audit and discusses some pertinent points relative to the internal control questionnaires (ICQs). It assists the examiner in understanding and evaluating the objectives of and the work performed by internal and external auditors. It also sets forth the general criteria the examiner should consider to determine if the work of internal and external auditors can be relied on in the performance of the examination. To the extent that audit records can be relied on, they should be used to complete the ICQs implemented during the examination. In most cases, only those questions not fully supported by audit records would require the examiner to perform a detailed review of the area in question.

Effective internal control is a foundation for the safe and sound operation of a financial institution. The board of directors and senior managers of an institution are responsible for ensuring that the system of internal control is effective. Their responsibility cannot be delegated to others within or outside the organization. An internal audit function is an important element of an effective system of internal control. When properly structured and conducted, internal audit provides directors and senior management with vital information about the condition of the system of internal control, and it identifies weaknesses so that management can take prompt, remedial action. Examiners are to review an institution's internal audit function and recommend improvements if needed. In addition, under the Interagency Guidelines Establishing Standards for Safety and Soundness,1 pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831p-1), each institution is required to have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution’s board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report Internal Control—Integrated Framework. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for these purposes, encompass financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

AUDIT COMMITTEE OVERSIGHT

Internal and external auditors will not feel free to assess the bank’s operations if their independence is compromised. This can sometimes happen when internal and external auditors report solely to senior management instead of to the board of directors.

The independence of internal and external auditors is increased when they report to an independent audit committee (one made up of external directors who are not members of the bank’s management). The auditors’ independence is enhanced when the audit committee takes an active role in approving the internal and external audit scope and plan.

The role of the independent audit committee is important. The audit committee’s duties may include (1) overseeing the internal audit function; (2) approving or recommending the appointment of external auditors and the scope

1. For state member banks, see appendix D-1 to 12 CFR 208.
of external audits and other services; (3) providing the opportunity for auditors to meet and discuss findings apart from management; (4) reviewing with management and external auditors the year-end financial statements; and (5) meeting with regulatory authorities.

Public Company Accounting Oversight Board

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002 (Pub. L. No. 107-204). The act addresses weaknesses in corporate governance and the accounting and auditing professions and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee made entirely of independent directors. Publicly owned banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges’ listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality-control, and ethics (including independence) standards for auditors of public companies (subject to Securities and Exchange Commission (SEC) review). (See SR-02-20.) Accounting firms that conduct audits of public companies (registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards. (See www.pcaobus.org.)

Nonpublic banking organizations are encouraged to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance and remain appropriate in light of the organization’s size, operations, and resources. Furthermore, a banking organization’s policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and supervisory action may be taken if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

DISCIPLINARY ACTIONS AGAINST ACCOUNTANTS AND ACCOUNTING FIRMS PERFORMING CERTAIN AUDIT SERVICES

Section 36 of the Federal Deposit Insurance Act (the FDI Act) authorizes the federal bank and thrift regulatory agencies (the agencies)

3a. The rules provide that certain violations of law, negligent conduct, reckless violations of professional standards, or lack of qualifications to perform auditing services may be considered good cause.

3b. See the Federal Reserve’s rules on disciplinary actions against public accountants and accounting firms at 12 CFR 263.94 and 12 CFR 263, subpart J.
stances. Also, an accountant or accounting firm is prohibited from performing audit services for the covered institution if an authorized agency has taken such a disciplinary action against the accountant or firm, or if the SEC or the PCAOB has taken certain disciplinary action against the accountant or firm.

The amended rules reflect the agencies’ increasing concern about the quality of audits and internal controls for financial reporting at insured depository institutions. The rules emphasize the importance of maintaining high quality in the audits of federally insured depository institutions’ financial position and in the attestations of management assessments.

OBJECTIVES OF INTERNAL CONTROL

In general, good internal control exists when no one is in a position to make significant errors or perpetrate significant irregularities without timely detection. Therefore, a system of internal control should include those procedures necessary to ensure timely detection of failure of accountability, and such procedures should be performed by competent persons who have no incompatible duties. The following standards are encompassed within the description of internal control:

Existence of procedures. Existence of prescribed internal control procedures is necessary but not sufficient for effective internal control. Prescribed procedures that are not actually performed do nothing to establish control. Consequently, the examiner must give thoughtful attention not only to the prescribed set of procedures but also to the practices actually followed. This attention can be accomplished through inquiry, observation, testing, or a combination thereof.

Competent performance. For internal control to be effective, the required procedures must be performed by competent persons. Evaluation of competence undoubtedly requires some degree of subjective judgment because attributes such as intelligence, knowledge, and attitude are relevant. Thus, the examiner should be alert for indications that employees have failed so substantially to perform their duties that a serious question is raised concerning their abilities.

Independent performance. If employees who have access to assets also have access to the related accounting records or perform related review operations (or immediately supervise the activities of other employees who maintain the records or perform the review operations), they may be able to both perpetrate and conceal defalcations. Therefore, duties concerned with the custody of assets are incompatible with recordkeeping duties for those assets, and duties concerned with the performance of activities are incompatible with the authorization or review of those activities.

In judging the independence of a person, the examiner must avoid looking at that person as an individual and presuming the way in which that individual would respond in a given situation. For example, an individual may be the sole check signer and an assistant may prepare monthly bank reconcilement. If the assistant appears to be a competent person, it may seem that an independent reconcilement would be performed and anything amiss would be reported. Such judgments are potentially erroneous. There exist no established tests by which the psychological and economic independence of an individual in a given situation can be judged. The position must be evaluated, not the person. If the position in which the person acts is not an independent one in itself, then the work should not be presumed to be independent, regardless of the apparent competence of the person in question. In the example cited above, the function performed by the assistant should be viewed as if it were performed by the supervisor. Hence, incompatible duties are present in that situation.

PROCEDURES FOR COMPLETING ICQs

The implementation of selected ICQs and the evaluation of internal audit activities provide a basis for determining the adequacy of the bank’s control environment. To reach conclusions required by the questionnaires, the examiner assigned to review a given internal control routine or area of bank operations should use any source of information necessary to ensure a full understanding of the prescribed system, including any potential weaknesses. Only when the examiner completely understands the bank’s system can an assessment and evaluation be
made of the effects of internal controls on the examination.

To reach conclusions concerning a specific section of an ICQ, the examiner should document and review the bank’s operating systems and procedures by consulting all available sources of information and discussing them with appropriate bank personnel. Sources of information might include organization charts, procedural manuals, operating instructions, job specifications, directives to employees, and other similar sources of information. Also, the examiner should not overlook potential sources such as job descriptions, flow charts, and other documentation in the internal audit workpapers. A primary objective in the review of the system is to efficiently reach a conclusion about the overall adequacy of existing controls. Any existing source of information that will enable the examiner to quickly gain an understanding of the procedures in effect should be used in order to minimize the time required to formulate the conclusions. The review should be documented in an organized manner through the use of narrative descriptions, flow charts, or other diagrams. If a system is properly documented, the documentation will provide a ready reference for any examiner performing work in the area, and it often may be carried forward for future examinations, which will save time.

Although narrative descriptions can often provide an adequate explanation of systems of internal control, especially in less complex situations, they may have certain drawbacks, such as the following:

- They may be cumbersome and too lengthy.
- They may be unclear or poorly written.
- Related points may be difficult to integrate.
- Annual changes may be awkward to record.

To overcome these problems, the examiner should consider using flow charts, which reduce narrative descriptions to a picture. Flow charts often reduce a complex situation to an easily understandable sequence of interrelated steps.

In obtaining and substantiating the answers to the questions in the ICQ, the examiner should develop a plan to obtain the necessary information efficiently. Such a plan would normally avoid a direct question-and-answer session with bank officers. A suggested approach to completion of the ICQ is to—

- become familiar with the ICQ,
- review related internal audit procedures, reports, and responses,
- review any written documentation of a bank’s system of controls,
- find out what the department does and what the functions of personnel within the department are through conversations with appropriate individuals, and
- answer as many individual questions as possible from information gained in the preceding steps and fill in the remaining questions by direct inquiry.

An effective way to begin an on-site review of internal control is to identify the various key functions applicable to the area under review. For each position identified, the following questions should then be asked:

- Is this a critical position? That is, can a person in this position either make a significant error that will affect the recording of transactions or perpetrate material irregularities of some type?
- If an error is made or an irregularity is perpetrated, what is the probability that normal routines will disclose it on a timely basis? That is, what controls exist that would prevent or detect significant errors or the perpetration of significant irregularities?
- What are the specific opportunities open to the individual to conceal any irregularity, and are there any mitigating controls that will reduce or eliminate these opportunities?

Although all employees within an organization may be subject to control, not all have financial responsibilities that can influence the accuracy of the accounting and financial records or have access to assets. The examiner should be primarily concerned with those positions that have the ability to influence the records and that have access to assets. Once those positions have been identified, the examiners must exercise their professional knowledge of bank operations to visualize the possibilities open to any person holding a particular position. The question is not whether the individual is honest, but rather whether situations exist that might permit an error to be concealed. By directing attention to such situations, an examiner will also consider situations that may permit unintentional errors to remain undetected.

The evaluation of internal control should include consideration of other existing accounting and administrative controls or other circum-
stances that might counteract or mitigate an apparent weakness or impair an established control. Controls that mitigate an apparent weakness may be a formal part of the bank’s operating system, such as budget procedures that include a careful comparison of budgeted and actual amounts by competent management personnel. Mitigating controls also may be informal. For example, in small banks, management may be sufficiently involved in daily operations to know the purpose and reasonableness of all expense disbursements. That knowledge, coupled with the responsibility for signing checks, may make irregularities by nonmanagement personnel unlikely, even if disbursements are otherwise under the control of only one person.

When reviewing internal controls, an essential part of the examination is being alert to indications that adverse circumstances may exist. Adverse circumstances may lead employees or officers into courses of action they normally would not pursue. An adverse circumstance to which the examiner should be especially alert exists when the personal financial interests of key officers or employees depend directly on operating results or financial condition. Although the review of internal control does not place the examiner in the role of an investigator or detective, an alert attitude toward possible conflicts of interest should be maintained throughout the examination. Also, offices staffed by members of the same family, branches completely dominated by a strong personality, or departments in which supervisors rely unduly on their assistants require special alertness on the part of the examiner. Those circumstances and other similar ones should be considered in preparing the ICQ. It is not the formality of the particular factor that is of importance but rather its effect on the overall operation under review.

The ICQs were designed so that answers could be substantiated by (1) inquiry to bank personnel, (2) observation, or (3) testing. However, certain questions are marked with an asterisk to indicate that they require substantiation through observation or testing. Those questions are deemed so critical that substantiation by inquiry is not sufficient. For those questions substantiated through testing, the nature and extent of the test performed should be indicated adjacent to the applicable step in the ICQ.

The examiner should be alert for deviations by bank personnel from established policies, practices, and procedures. This applies not only to questions marked with an asterisk but also to every question in the ICQ. Examples of such deviations include situations when (1) instructions and directives are frequently not revised to reflect current practices, (2) employees find shortcuts for performing their tasks, (3) changes in organization and activities may influence operating procedures in unexpected ways, or (4) employees’ duties may be rotated in ways that have not been previously considered. These and other circumstances may serve to modify or otherwise change prescribed procedures, thus giving the examiner an inadequate basis for evaluating internal control.

Sometimes, when a substantial portion of the accounting work is accomplished by computer, the procedures are so different from conventional accounting methods that the principles discussed here seem inapplicable. Care should be taken to resist drawing this conclusion. This discussion of internal control and its evaluation is purposely stated in terms sufficiently general to apply to any system. Perpetration of defalcations requires direct or indirect access to appropriate documents or accounting records. As such, perpetration requires the involvement of people and, under any system, computerized or not, there will be persons who have access to assets and records. Those with access may include computer operators, programmers, and their supervisors and other related personnel.

The final question in each section of the ICQ requires a composite evaluation of existing internal controls in the applicable area of the bank. The examiner should base that evaluation on answers to the preceding questions within the section, the review and observation of the systems and controls within the bank, and discussion with appropriate bank personnel.

The composite evaluation does, however, require some degree of subjective judgment. The examiner should use all information available to formulate an overall evaluation, fully realizing that a high degree of professional judgment is required.

Applying the ICQ to Different Situations

The ICQs are general enough to apply to a wide
range of systems, so not all sections or questions will apply to every situation, depending on factors such as bank size, complexity and type of operations, and organizational structure. When completing the ICQs, the examiner should include a brief comment stating the reason a section or question is not applicable to the specific situation.

For large banking institutions or when multiple locations of a bank are being examined, it may be necessary to design supplements to the ICQs to adequately review all phases of the bank’s operations and related internal controls. Because certain functions described in this manual may be performed by several departments in some banks, it also may be necessary to redesign a particular section of the ICQ so that each department receives appropriate consideration. Conversely, functions described in several different sections of this handbook may be performed in a single department in smaller banks. If the ICQ is adapted to fit a specific situation, care should be taken to ensure that its scope and intent are not modified. That requires professional judgment in interpreting and expanding the generalized material. Any such modifications should be completely documented and filed in the workpapers.

LEGAL REQUIREMENTS AFFECTING BANKS AND THE AUDIT FUNCTION

The Federal Deposit Insurance Corporation Improvement Act of 1991 amended section 36 of the FDI Act (12 USC 1831m). Since then, the FDIC has made various revisions to its rules at Part 363 (12 CFR 363) and guidelines. When specific reports are required to be submitted to the FDIC to comply with the provisions of compliance with Part 363, the institution must also submit the report to the appropriate federal banking agency and any appropriate state supervisor.

For the purposes of determining the applicability of this rule, an institution should use total assets as reported on its most recent Report of Condition (the Call Report), the date that coincides with the end of the preceding fiscal year. If the fiscal year ends on a date other than the end of a calendar quarter, the institution is to use the Call Report for the quarter end immediately preceding the end of the fiscal year.

Institutions with $500 Million or More in Total Assets

The regulations require these institutions to file two copies of their annual reports with the FDIC, as well as with the appropriate federal banking agency and the appropriate state supervisory agency, that must include the following:

- Audited comparative annual financial statements;
- The independent public accountant’s report on the audited financial statements;
- A management report (comprising its statements and assessments) that is signed by the chief executive officer and chief accounting or chief financial officer. The report should include:
  - A statement of management’s responsibilities for:
    - preparing the annual financial statements;
    - establishing and maintaining an adequate internal control structure and procedures over financial reporting;
    - complying with designated safety-and-soundness laws and regulations pertaining to insider loans and dividend restrictions; and
  - An assessment by management of:
    - compliance with the designated safety-and-soundness laws and regulations pertaining to insider loans and dividend restrictions during the year, which must state management’s conclusions regarding compliance and disclose any non-compliance with these laws and regulations.3c (See SR-13-11.)

If the institution is a public company or a subsidiary of a public company that would be subject to the provisions of section 404 of the Sarbanes-Oxley Act (Section 404), it must comply with the requirement to file other reports issued by the independent accountant as set forth in section 363.4(c) (12 CFR 363.4(c)). The institutions must provide a copy of the independent accountant’s report to the FDIC on the audit of internal control over financial reporting that is required by section 404 with the FDIC within 15 days after receipt. The institutions also are

---

3c. See appendix B of 12 CFR part 363 for further details and illustrative examples of the appropriate wording for the management report.
encouraged to submit a copy of management’s section 404 report on internal control over financial reporting together with the independent public accountant’s internal control report.

Institutions with $1 Billion or More in Total Assets

Section 36 of the FDI Act and Part 363 of the FDIC’s regulations required insured depository institutions with at least $1 billion in total assets to file two copies of additional reports that must include the following:

- Assessments by management of the effectiveness of the institution’s internal control structure and procedures over financial reporting as of the end of the fiscal year (12 USC 1831m(b)(2)(B)(i); and
- The independent public accountant’s attestation report—the independent public accountant is to examine, attest to, and report separately in an attestation report, on the assertions by management concerning the institution’s internal control structure and procedures for financial reporting (12 USC 1831m(c)). This includes the Call Report and the FR Y-9C report. The attestation is to be made in accordance with generally accepted standards for attestation engagements.

Other Requirements—Institutions with $500 Million or More in Total Assets

Financial reporting encompasses, for the purposes of Part 363, both financial statements prepared in accordance with generally accepted accounting principles and those prepared for regulatory reporting purposes. Each institution is to have an independent public accountant perform an audit who reports on the institution’s annual financial statements in accordance with generally accepted auditing standards and section 37 of the FDI Act (12 USC 1831n). The scope of the audit engagement must be sufficient to permit the accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. The audit is to be performed using procedures that will objectively determine the accuracy of management’s assertions on compliance with safety-and-soundness laws and regulations (12 USC 1831m (b)(2)(A)(iii)).

In addition, each institution is required to file a copy of any management letter, qualification, or any other report issued by its independent public accountant with the FDIC within 15 days of receipt of such letter or report. See section 363.4(c) (12 CFR 363.4(c)).

Each institution is required to establish an audit committee of its board of directors. The duties of the audit committee include reviewing with management and the independent public accountant the basis for, and the results of, the annual independent audit reports and the institution’s respective reporting requirements. Each institution with total assets of $1 billion or more, as of the beginning of the fiscal year, is required to have an audit committee, the members of which must be outside directors who are independent of the institution’s management. Institutions with total assets of $500 million, but less than $1 billion or more, as of the beginning of the fiscal year, must have an audit committee, the members of which are outside directors, the majority of whom must be independent of the institution’s management.

Reporting Requirements for Subsidiaries of Holding Companies

Under the FDIC rules, an insured depository institution that is a subsidiary of a holding company may file its audited financial statements at the holding company level (top-tier or mid-tier) if the holding company has total insured depository institution assets comprising 75 percent or more of the holding company’s consolidated assets as of the beginning of the fiscal year. Furthermore, in accordance with 12 CFR part 363, the other reporting requirements can be satisfied at the holding company level if the holding company provides services and functions comparable to the insured depository institution, and the insured depository subsidiary (a) has less than $5 billion in total assets or (b) has a CAMELS composite rating of “1” or “2” when its total assets are $5 billion or more.

In order to facilitate effective and prudential supervision of the holding company, a holding company that has institutions subject to the FDIC rules must submit one copy of the required reports to the appropriate Federal Reserve Bank regardless of whether or not the holding
company submitted these reports on a consolidated basis for its insured depository subsidiaries, and regardless of the charter of the insured depository subsidiary under the holding company. Refer to SR letter 94-3, “Supervisory Guidance on the Implementation of Section 112 of the FDIC Improvement Act,” for further guidance on this filing requirement. (See SR-13-11.)

**Required Management Report Signatures**

As specified in 12 CFR part 363, an insured depository institution and holding company must adhere to the following signature requirements:

- If the audited financial statements and the management report requirements are satisfied entirely at the insured depository institution level, the management report must be signed by the CEO, as well as the CAO or CFO, at the insured depository institution level.
- If the audited financial statements and the management report requirements are satisfied entirely at the holding company level, the management report must be signed by the CEO, as well as the CAO or CFO, at the holding company level.
- If the audited financial statement requirements are satisfied at the holding company level and the management report requirement is satisfied at the insured depository institution level or one or more component requirements are satisfied at the holding company and the remaining component requirements are satisfied at the insured depository institution level, the management report must be signed by the CEO, as well as the CAO or CFO, of both the holding company and the insured depository institution.

**INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING**

The Federal Reserve and other federal banking agencies\(^3\)(the agencies) adopted on March 17, 2003, an interagency policy statement addressing the internal audit function and its outsourcing. The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 (the act) and associated SEC rules.

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, to insured depository institutions with assets of $500 million or more that are subject to the annual audit and reporting requirements of section 36 of the FDI Act, and to nonpublic institutions that are not subject to section 36.

The statement recognizes that many institutions have engaged independent public accounting firms and other outside professionals (outsourcing vendors) to perform work that traditionally has been done by internal auditors. These arrangements are often called “internal audit outsourcing,” “internal audit assistance,” “audit co-sourcing,” and “extended audit services” (hereafter collectively referred to as outsourcing). Typical outsourcing arrangements are more fully described below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the structure, scope, and management of some internal audit outsourcing arrangements may not contribute to the institution’s safety and soundness. Furthermore, arrangements with outsourcing vendors should not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

**Internal Audit Function (Part I)**

*Board and Senior Management Responsibilities*

The board of directors and senior management
are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and delegate the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution’s policies.4

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management’s responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution’s operations. Therefore, institutions generally should also have their internal controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal audit function addresses the risks of and meets the demands posed by the institution’s current and planned activities. To accomplish this objective, directors should consider whether their institution’s internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors’ (IIA) Standards for the Professional Practice of Internal Auditing. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution’s internal audit function.

Structure. Careful thought should be given to the placement of the audit function in the institution’s management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee, using objective criteria it has established, should oversee the internal audit function and evaluate its performance.5 The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters, for example, resources, budget, appraisals, and compensation. Institutions are encouraged to consider the IIA’s Practice Advisory 2060-2: Relation-

---

4. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC’s regulations (12 CFR 363), FDIC-insured depository institutions with total assets of $500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain (1) a statement of management’s responsibilities for preparing the institution’s annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management’s assessment of the institution’s compliance with those laws and regulations, and (2) for an institution with total assets of $1 billion or more at the beginning of the institution’s most recent fiscal year, an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 CFR 363.2(b) and 70 Fed. Reg. 71,232, Nov. 28, 2005.)

5. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC’s regulations must maintain independent audit committees (i.e., consisting of directors who are not members of management). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term audit committee is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement. See Fed. Reg., September 28, 1999 (64 FR 52,319).

6. For example, the performance criteria could include the timeliness of each completed audit, a comparison of overall performance to plan, and other measures.
ship with the Audit Committee, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager.

Many institutions place the manager of internal audit under a dual reporting arrangement: the manager is functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan-review, market-risk-assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the institution’s ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit’s functional reporting to and ability to directly communicate with the institution’s audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA’s Practice Advisory 1110-2: Chief Audit Executive Reporting Lines provides additional guidance regarding functional and administrative reporting lines.

Management, staffing, and audit quality. In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

- A control risk assessment (or risk-assessment methodology) documents the internal auditor’s understanding of the institution’s significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.

- An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.

- An internal audit program describes the objectives of the audit work and lists the procedures that will be performed during each internal audit review.

- An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function’s only role should be to independently and objectively evaluate and report on the effectiveness of an institution’s risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganiza-
tions. This role typically includes helping design controls and participating in the implementation of changes to the institution’s control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function’s consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution’s system of internal control. In order to maintain its inde-
dependence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA’s standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution’s operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

Scope. The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution’s on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit’s control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit’s adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution’s environment, structure, activities, risk exposures, or systems.\(^7\)

Communication. To properly carry out their responsibility for internal control, directors and senior management should foster forthright com-

---

7. Major changes in an institution’s environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These changes include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or dispositions thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) an expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

---

8. When the board of directors fulfills the audit committee responsibilities, the procedures should provide for the submission of employee concerns to an outside director.
and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system, after taking into account the internal audit function’s costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the persons directing and/or performing the review of internal controls are not also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

Internal Audit Outsourcing Arrangements (Part II)

Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourcing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution’s manager of internal audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as “internal audit assistance” or “audit co-sourcing.”

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

Additional Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution’s board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should carefully consider its current and anticipated business risks in setting each party’s internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter.9 Contracts between the

9. The engagement-letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits.
institution and the vendor typically include provisions that—

- define the expectations and responsibilities under the contract for both parties;
- set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
- set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
- establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
- state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
- specify the locations of internal audit reports and the related workpapers;
- specify the period of time (for example, seven years) that vendors must maintain the workpapers;10
- state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
- prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
- state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, U.S. Securities and Exchange Commission (SEC), PCAOB, or regulatory independence guidance.

Vendor competence. Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff’s qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution’s internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

Management of the outsourced internal audit function. Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor’s performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

Communication when an outsourced internal audit function exists. Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution’s manager of internal audit. Decisions not to report the outsourcing vendor’s findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board’s attention, the

---

10. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

(See AICPA Professional Standards, AU section 310.) These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.
concept of “materiality,” as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution’s compliance with laws and regulations, any exception may be important.

Contingency planning to ensure continuity of outsourced audit coverage. When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

Independence of the Independent Public Accountant (Part III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution’s financial statements, the accounting firm will consider the extent to which it may rely on the internal control system, including the internal audit function, in designing audit procedures.

Applicability of the SEC’s Auditor Independence Requirements

Institutions that are public companies. To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC under section 15(d) of that act.11 The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company.12 In addition, if a public company’s external auditor will be providing auditing services and permissible nonaudit services, such as tax services, the company’s audit committee must preapprove each of these services.

According to the SEC’s final rules (effective May 6, 2003) implementing the act’s nonaudit-service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other prohibited nonaudit services to the public company audit client. The SEC’s final rules generally become effective on May 6, 2003, although there is a one-year transition period if the accountant is performing prohibited nonaudit services and external audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period must not have impaired the auditor’s independence under the preexisting independence requirements of the SEC, the Independence Standards Board, and the AICPA. Although the SEC’s pre-Sarbanes-Oxley independence requirements (issued in November 2000, effective August 2002) did not prohibit the outsourcing of internal audit services to a public company’s independent public account-

11. 15 USC 78l and 78o(d).
12. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 USC 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor’s independence. Based on these three broad principles, the other nonaudit services that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client’s accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management or human resources functions; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.
tant, they did place conditions and limitations on internal audit outsourcing.

Depositary institutions subject to the annual audit and reporting requirements of section 36 of the FDI Act. Under section 36, as implemented by part 363 of the FDIC’s regulations, each FDIC-insured depository institution with total assets of $500 million or more is required to have an annual audit performed by an independent public accountant. The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that “[t]he independent public accountant should also be in compliance with the AICPA’s Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.”

Thus, the guidelines provide for each FDIC-insured depository institution with $500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC’s auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC’s January 2003 auditor independence rules once these rules come into effect.

Institutions not subject to section 36 of the FDI Act that are neither public companies nor subsidiaries of public companies. The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company to have its financial statements audited by an independent public accountant. The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies.

As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution’s internal audit activities. These circumstances include, but are not limited to, situations in which—

• splitting the audit activities poses significant costs or burden;
• persons with the appropriate specialized knowledge and skills are difficult to locate and obtain;
• the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution; and
• the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement. In this regard, the audit

13. 12 CFR 363.3(a). (See FDIC Financial Institutions Letter FIL-17-2003 (Corporate Governance, Audits, and Reporting Requirements), attachment II, March 5, 2003.)
15. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding company, once the SEC’s January 2003 regulations prohibiting an external auditor from performing internal audit outsourcing services for an audit client take effect May 6, 2003, or May 6, 2004, depending on the circumstances, the holding company’s external auditor cannot perform internal audit outsourcing work for that holding company or the subsidiary institution.
16. FDIC-insured depository institutions with less than $500 million in total assets are not subject to section 36 of the FDI Act. Section 36 does not apply directly to holding companies but provides that, for an insured depository institution that is a subsidiary of a holding company, the audited financial statements requirement and certain of the statute’s other requirements may be satisfied by the holding company.
17. See, for example, the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Institutions.
18. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the
committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution’s board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety- and-soundness reasons, the institution’s primary federal regulator may require that the institution and its independent public accountant comply with the auditor-independence requirements of the act.19

AICPA guidance. As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA’s Code of Professional Conduct. This code includes professional ethics standards, rules, and interpretations that are binding on all certified public accountants (CPAs) who are members of the AICPA in order for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client’s management or as a client employee. The AICPA’s guidance includes illustrations of activities that would be considered to compromise a CPA’s independence. Among these are activities that involve the CPA authorizing, executing, or consummating transactions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA’s Code of Professional Conduct.

Examination Guidance (Part IV)

Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution’s internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their examination work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution’s internal audit function, regardless of whether it is performed by the institution’s employees or by an outsourcing vendor. Specifically, examiners should consider whether—

19. 15 USC 78j-1.

- the internal audit function’s control risk assessment, audit plans, and audit programs are appropriate for the institution’s activities;
- the internal audit activities have been adjusted for significant changes in the institution’s environment, structure, activities, risk exposures, or systems;
- the internal audit activities are consistent with the long-range goals and strategic direction of the institution and are responsive to its internal control needs;
- the audit committee promotes the internal audit manager’s impartiality and independence by having him or her directly report audit findings to it;
- the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
- the institution has promptly responded to significant identified internal control weaknesses;
- the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and the results of audits are promptly communicated to senior management and members of the audit committee and board of directors;
• workpapers adequately document the internal audit work performed and support the audit reports;
• management and the board of directors use reasonable standards, such as the IIA’s Standards for the Professional Practice of Internal Auditing, when assessing the performance of internal audit; and
• the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution’s internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

• the arrangement maintains or improves the quality of the internal audit function and the institution’s internal control;
• key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
• the scope of the outsourced work is revised appropriately when the institution’s environment, structure, activities, risk exposures, or systems change significantly;
• the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
• the arrangement with the outsourcing vendor satisfies the independence standards described in this policy statement and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution’s independent public accountant; and
• the institution has performed sufficient due diligence to satisfy itself of the vendor’s competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

Examination concerns about the adequacy of the internal audit function. If the examiner concludes that the institution’s internal audit function, whether or not it is outsourced, does not sufficiently meet the institution’s internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the examination should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner’s concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. If the examiner finds material weaknesses in the internal audit function or the internal control system, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution’s management and composite ratings should reflect the examiner’s conclusions regarding the institution’s internal audit function. The report of examination should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

Concerns about the independence of the outsourcing vendor. An examiner’s initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution’s and its vendor’s adherence to the independence standards described in parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner’s concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor...
appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution’s senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution’s external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable. Issued jointly by the Board, FDIC, OCC, and OTS on March 17, 2003.

SUPPLEMENTAL POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve issued this January 23, 2013, policy statement to supplement the guidance in the 2003 “Interagency Policy Statement on the Internal Audit Function and Its Outsourcing” (referred to as the 2003 Policy Statement). Federal Reserve staff has identified areas for improving regulated institutions’ internal audit functions. This supplemental policy statement addresses the characteristics, governance, and operational effectiveness of an institution’s internal audit function. Further, this statement reflects certain changes in banking regulations that have occurred since the issuance of the 2003 Policy Statement. The Federal Reserve is providing this supplemental guidance to enhance regulated institutions’ internal audit practices and to encourage them to adopt professional audit standards and other authoritative guidance, including those issued by the Institute of Internal Auditors (IIA).

This supplemental statement applies to supervised institutions with greater than $10 billion in total consolidated assets, including state member banks, domestic bank and savings and loan holding companies, and U.S. operations of foreign banking organizations. This supplemental guidance is also consistent with the objectives of the Federal Reserve’s consolidated supervision framework for large financial institutions with total consolidated assets of $50 billion or more, which promotes an independent internal audit function as an essential element for enhancing the resiliency of supervised institutions.

Overview—Assessment of the Effectiveness of the Internal Audit Function

The degree to which an institution implements the internal audit practices outlined in this policy statement will be considered in the Federal Reserve’s supervisory assessment of the effectiveness of an institution’s internal audit function as well as its safety and soundness and compliance with consumer laws and regulations. Moreover, the overall effectiveness of an institution’s internal audit function will influence the ability of the Federal Reserve to rely upon the work of an institution’s internal audit function.

This supplemental policy statement builds upon the 2003 Policy Statement, which remains in effect, and follows the same organizational structure, with a new section entitled “Enhanced Internal Audit Practices” and updates to Parts I-IV of the 2003 Policy Statement. Refer to SR-13-1/CA13-1 and its attachment. To avoid historical references and duplication some introductory paragraphs and other small phrases are omitted from the policy statement here, as indicated by a line of asterisks.

19c. Section 4 of this document, however, clarifies certain changes to the Federal Deposit Insurance Corporation regulation (12 CFR part 363) on independence standards for independent public accountants at insured depository institutions with total assets of $500 million or more, which were adopted pursuant to 2009 amendments to section 36 of the FDI Act.
19d. Refer to SR-12-17/CA letter 12-14, “Consolidated Supervision Framework for Large Financial Institutions.”
SUPPLEMENTAL POLICY GUIDANCE

Enhanced Internal Audit Practices

An institution’s internal audit function should incorporate the following enhanced practices into their overall processes:

**Risk Analysis**

Internal audit should analyze the effectiveness of all critical risk-management functions both with respect to individual risk dimensions (for example, credit risk), and an institution’s overall risk-management function. The analysis should focus on the nature and extent of monitoring compliance with established policies and processes and applicable laws and regulations within the institution as well as whether monitoring processes are appropriate for the institution’s business activities and the associated risks.

**Thematic Control Issues**

Internal audit should identify thematic macro control issues as part of its risk-assessment processes and determine the overall impact of such issues on the institution’s risk profile. Additional audit coverage would be expected in business activities that present the highest risk to the institution. Internal audit coverage should reflect the identification of thematic macro control issues across the firm in all auditable areas. Internal audit should communicate thematic macro control issues to senior management and the audit committee.

In addition, internal audit should identify patterns of thematic macro control issues, determine whether additional audit coverage is required, communicate such control deficiencies to senior management and the audit committee, and ensure management establishes effective remediation mechanisms.

**Challenging Management and Policy**

Internal audit should challenge management to adopt appropriate policies and procedures and effective controls. If policies, procedures, and internal controls are ineffective or insufficient in a particular line of business or activity, internal audit should report specific deficiencies to senior management and the audit committee with recommended remediation. Such recommendations may include restricting business activity in affected lines of business until effective policies, procedures, and controls are designed and implemented. Internal audit should monitor management’s corrective action and conduct a follow-up review to confirm that the recommendations of both internal audit and the audit committee have been addressed.

**Infrastructure**

When an institution designs and implements infrastructure enhancements, internal audit should review significant changes and notify management of potential internal control issues. In particular, internal audit should ensure that existing, effective internal controls (for example, software applications and management information system reporting) are not rendered ineffective as a result of infrastructure changes unless those controls are compensated for by other improvements to internal controls.

**Risk Tolerance**

Internal audit should understand risks faced by the institution and confirm that the board of directors and senior management are actively involved in setting and monitoring compliance with the institution’s risk tolerance limits. Internal audit should evaluate the reasonableness of established limits and perform sufficient testing to ensure that management is operating within these limits and other restrictions.

**Governance and Strategic Objectives**

Internal audit should evaluate governance at all management levels within the institution, including at the senior management level, and within all significant business lines. Internal audit should also evaluate the adequacy and effectiveness of controls to respond to risks within the organization’s governance, operations, and information systems in achieving the organization’s strategic objectives. Any concerns should be communicated by internal audit to the board of directors and senior management.
Internal Audit Function (Part I of the 2003 Policy Statement)

The primary objectives of the internal audit function are to examine, evaluate, and perform an independent assessment of the institution’s internal control system, and report findings back to senior management and the institution’s audit committee. An effective internal audit function within a financial institution is a vital means for an institution’s board of directors to maintain the quality of the internal control environment and risk-management systems.

The guidance set forth in this section supplements the existing guidance in the 2003 Policy Statement by strongly encouraging internal auditors to adhere to professional standards, such as the IIA guidance. Furthermore, this section clarifies certain aspects of the IIA guidance and provides practices intended to increase the safety and soundness of institutions.

Attributes of Internal Audit

Independence. Internal audit is an independent function that supports the organization’s business objectives and evaluates the effectiveness of risk management, control, and governance processes. The 2003 Policy Statement addressed the structure of an internal audit function, noting that it should be positioned so that an institution’s board of directors has confidence that the internal audit function can be impartial and not unduly influenced by managers of day-to-day operations. Thus, the member of management responsible for the internal audit function (hereafter referred to as the chief audit executive or CAE) should have no responsibility for operating the system of internal control and should report functionally to the audit committee. A reporting arrangement may be used in which the CAE is functionally accountable and reports directly to the audit committee on internal audit matters (that is, the audit plan, audit findings, and the CAE’s job performance and compensation) and reports administratively to another member of management who is not responsible for operational activities reviewed by internal audit. When there is an administrative reporting of the CAE to another member of senior management, the objectivity of internal audit is served best when the CAE reports administratively to the chief executive officer (CEO).

If the CAE reports administratively to someone other than the CEO, the audit committee should document its rationale for this reporting structure, including mitigating controls available for situations that could adversely impact the objectivity of the CAE. In such instances, the audit committee should periodically (at least annually) evaluate whether the CAE is impartial and not unduly influenced by the administrative reporting line arrangement. Further, conflicts of interest for the CAE and all other audit staff should be monitored at least annually with appropriate restrictions placed on auditing areas where conflicts may occur.

For foreign banking organizations (FBOs), the internal audit function for the U.S. operations of an FBO should have appropriate independent oversight for the total assets of U.S. operations. When there is a resident U.S. audit function, the CAE of the U.S. audit function should report directly to senior officials of the internal audit department at the head office such as the global CAE. If the FBO has separate U.S. subsidiaries, oversight may be provided by a U.S. based audit committee that meets U.S. public company standards for independence or by the foreign parent company’s internal audit function.

Professional competence and staffing. Internal audit staff should have the requisite collective skill levels to audit all areas of the institution. Therefore, auditors should have a wide range of business knowledge, demonstrated through years of audit and industry-specific experience, educational background, professional certifications, training programs, committee participation, professional associations, and job rotational assignments. Internal audit should assign staff to audit assignments based on areas of expertise and, when feasible, rotate staff within the audit function.

Internal audit management should perform knowledge-gap assessments at least annually to evaluate whether current staff members have the knowledge and skills commensurate with the...
institution’s strategy and operations. Management feedback surveys and internal or external quality assurance findings are useful tools to identify and assess knowledge gaps. Any identified knowledge gaps should be filled and may be addressed through targeted staff hires, training, business line rotation programs, and outsourcing arrangements. The internal audit function should have an effective staff training program to advance professional development and should have a process to evaluate and monitor the quality and appropriateness of training provided to each auditor. Internal auditors generally receive a minimum of forty hours of training in a given year.

Objectivity and ethics. Internal auditors should be objective, which means performing assignments free from bias and interference. A major characteristic of objectivity is that the CAE and all internal audit professional staff avoid any conflicts of interest.\(^{19g}\) For their first year in the internal audit function, internally recruited internal auditors should not audit activities for which they were previously responsible. Moreover, compensation schemes should not provide incentives for internal auditors to act contrary to the attributes and objectives of the internal audit function.\(^{19h}\) While an internal auditor may recommend internal control standards or review management’s procedures before implementation, objectivity requires that the internal auditor not be responsible for the design, installation, procedures development, or operations of the institution’s internal control systems.

An institution’s internal audit function should have a code of ethics that emphasizes the principles of objectivity, competence, confidentiality, and integrity, consistent with professional internal audit guidance such as the code of ethics established by the IIA.

Internal audit charter. Each institution should have an internal audit charter that describes the purpose, authority, and responsibility of the internal audit function. An audit charter should include the following critical components:

- The objectives and scope of the internal audit function;
- The internal audit function’s management reporting position within the organization, as well as its authority and responsibilities;
- The responsibility and accountability of the CAE; and
- The internal audit function’s responsibility to evaluate the effectiveness of the institution’s risk management, internal controls, and governance processes.

The charter should be approved by the audit committee of the institution’s board of directors. The charter should provide the internal audit function with the authorization to access the institution’s records, personnel, and physical properties relevant to the performance of internal audit procedures, including the authority to examine any activities or entities. Periodically, the CAE should evaluate whether the charter continues to be adequate, requesting the approval of the audit committee for any revisions. The charter should define the criteria for when and how the internal audit function may outsource some of its work to external experts.

Corporate Governance Considerations

Board of directors and senior management responsibilities. The board of directors and senior management are responsible for ensuring that the institution has an effective system of internal controls. As indicated in the 2003 Policy Statement, this responsibility cannot be delegated to others within the institution or to external parties. Further, the board of directors and senior management are responsible for ensuring that internal controls are operating effectively.

Audit committee responsibilities. An institution’s audit committee is responsible for establishing an appropriate internal audit function and ensuring that it operates adequately and effectively. The audit committee should be confident that the internal audit function addresses the risks and meets the demands posed by the institution’s current and planned activities. Moreover, the audit committee is expected to retain oversight responsibility for any aspects of the internal audit function that are outsourced to a third party.

The audit committee should provide oversight to the internal audit function. Audit

---

19g. IIA standards define conflict of interest as a situation in which an internal auditor, who is in a position of trust, has a competing professional or personal interest. Such competing interests can make it difficult for the individual to fulfill his or her duties impartially.

19h. IIA standards have additional examples of “conflict of interest” for consideration.
committee meetings should be on a frequency that facilitates this oversight and generally should be held four times a year at a minimum, with additional meetings held by audit committees of larger financial institutions. Annually, the audit committee should review and approve internal audit’s charter, budget and staffing levels, and the audit plan and overall risk-assessment methodology. The committee approves the CAE’s hiring, annual performance evaluation, and compensation.

The audit committee and its chairperson should have ongoing interaction with the CAE separate from formally scheduled meetings to remain current on any internal audit department, organizational, or industry concerns. In addition, the audit committee should have executive sessions with the CAE without members of senior management present as needed.

The audit committee should receive appropriate levels of management information to fulfill its oversight responsibilities. At a minimum, the audit committee should receive the following data with respect to internal audit:

- Audit results with a focus on areas rated less than satisfactory;
- Audit plan completion status and compliance with report issuance timeframes;
- Audit plan changes, including the rationale for significant changes;
- Audit issue information, including aging, past-due status, root-cause analysis, and thematic trends;
- Information on higher-risk issues indicating the potential impact, root cause, and remediation status;
- Results of internal and external quality assurance reviews;
- Information on significant industry and institution trends in risks and controls;
- Reporting of significant changes in audit staffing levels;
- Significant changes in internal audit processes, including a periodic review of key internal audit policies and procedures;
- Budgeted audit hours versus actual audit hours;
- Information on major projects; and
- Opinion on the adequacy of risk-management processes, including effectiveness of management’s self-assessment and remediation of identified issues (at least annually).

Role of the chief audit executive. In addition to communicating and reporting to the audit committee on audit-related matters, the CAE is responsible for developing and maintaining a quality assurance and improvement program that covers all aspects of internal audit activity, and for continuously monitoring the effectiveness of the audit function. The CAE and/or senior staff should effectively manage and monitor all aspects of audit work on an ongoing basis, including any audit work that is outsourced. 19

The Adequacy of the Internal Audit Function’s Processes

Internal audit should have an understanding of the institution’s strategy and operating processes as well as the potential impact of current market and macroeconomic conditions on the financial institution. Internal audit’s risk-assessment methodology is an integral part of the evaluation of overall policies, procedures, and controls at the institution and the development of a plan to test those processes.

Audit methodology. Internal audit should ensure that it has a well-developed risk-assessment methodology that drives its risk-assessment process. The methodology should include an analysis of cross-institutional risk and thematic control issues and address its processes and procedures for evaluating the effectiveness of risk management, control, and governance processes. The methodology should also address the role of continuous monitoring in determining and evaluating risk, as well as internal audit’s process for incorporating other risk identification techniques that the institution’s management utilizes such as a risk and control self-assessment (RCSA). The components of an effective methodology should support the internal audit function’s assessment of the control environment, beginning with an evaluation of the audit universe.

Audit universe. Internal audit should have effective processes to identify all auditable entities within the audit universe. The number of auditable entities will depend upon whether entities are captured at individual department levels or

19. The ongoing review of audit work should include risk assessments of audit entities and elements, scope documents, audit programs, detailed audit procedures and steps (including sampling methodologies), audit work papers, audit findings, and monitoring of the timely and effective resolution of audit issues.
at other aggregated organizational levels. Internal audit should use its knowledge of the institution to determine whether it has identified all auditable entities and may use the general ledger, cost centers, new product approval processes, organization charts, department listings, knowledge of the institution’s products and services, major operating and application systems, significant laws and regulations, or other data. The audit universe should be documented and reviewed periodically as significant organizational changes occur or at least during the annual audit planning process.

**Internal audit risk assessment.** A risk assessment should document the internal audit staff’s understanding of the institution’s significant business activities and the associated risks. These assessments typically analyze the risks inherent in a given business line or process, the mitigating control processes, and the resulting residual risk exposure to the institution.

A comprehensive risk assessment should effectively analyze the key risks (and the critical risk-management functions) within the institution and prioritize audit entities within the audit universe. The risk-assessment process should be well documented and dynamic, reflecting changes to the system of internal controls, infrastructure, work processes, and new or changed business lines or laws and regulations. The risk assessments should also consider thematic control issues, risk tolerance, and governance within the institution. Risk assessments should be revised in light of changing market conditions or laws and regulations and updated during the year as changes are identified in the business activities of the institution or observed in the markets in which the institution operates, but no less than annually. When the risk assessment indicates a change in risk, the audit plan should be reviewed to determine whether the planned audit coverage should be increased or decreased to address the revised assessment of risk.

Risk assessments should be formally documented and supported with written analysis of the risks. There should be risk assessments for critical risk-management functions within the institution. Risk assessments may be quantitative or qualitative and may include factors such as the date of the last audit, prior audit results, the impact and likelihood of an event occurring, and the status of external vendor relationships. A management RCSA, if performed, may be considered by the internal audit function in developing its independent risk assessment. The internal audit risk assessment should also include a specific rationale for the overall auditable entity risk score. The overall disposition of the risk assessment should be summarized with consideration given to key performance or risk indicators and prior audit results. A high-level summary or discussion of the risk-assessment results should be provided to the audit committee and include the most significant risks facing the institution as well as how these risks have been addressed in the internal audit plan.

**Internal audit plan.** Internal audit should develop and periodically revise its comprehensive audit plan and ensure that audit coverage for all identified, auditable entities within the audit universe is appropriate for the size and complexity of the institution’s activities. This should be accomplished either through a multiyear plan approach, with the plan revised annually, or through an approach that utilizes a framework to evaluate risks annually focusing on the most significant risks. In the latter approach, there should be a mechanism in place to identify when a significant risk will not be audited in the specified timeframe and a requirement to notify the audit committee and seek its approval of any exception to the framework. Generally, common practice for institutions with defined audit cycles is to follow either a three- or four-year audit cycle; high-risk areas should be audited at least every twelve to eighteen months.

The internal audit plan should consider the risk assessment and internal audit’s approach to audit coverage should be appropriate based on the risk assessment. An effective plan covers individual business areas and risk disciplines as well as cross-functional and cross-institutional areas.

The audit planning process should be dynamic, allowing for change when necessary. The process should include a process for modifying the internal audit plan to incorporate significant changes that are identified either through continuous monitoring or during an audit. Any
significant changes should be clearly documented and included in quarterly communications to the audit committee. Critical data to be reported to the audit committee should include deferred or cancelled audits rated high-risk and other significant additions or deletions. Significant changes to audit budgets and timeliness for the completion of audits should be reported to the audit committee with documented rationale.

**Internal audit continuous monitoring.** Internal audit is encouraged to utilize formal continuous monitoring practices as part of the function’s risk-assessment processes to support adjustments to the audit plan or universe as they occur. Continuous monitoring can be conducted by an assigned group or individual internal auditors. An effective continuous monitoring process should include written standards to ensure consistent application of processes throughout the organization.

Continuous monitoring results should be documented through a combination of metrics, management reporting, periodic audit summaries, and updated risk assessments to substantiate that the process is operating as designed. Critical issues identified through the monitoring process should be communicated to the audit committee. Computer-assisted auditing techniques are useful tools to highlight issues that warrant further consideration within a continuous monitoring process.

**Internal Audit Performance and Monitoring Processes**

**Performance.** Detailed guidance related to the performance of an internal audit should be documented in the audit manual\(^{19l}\) and work programs to ensure that audit execution is consistent across the audit function. Internal audit policies and procedures should be designed to ensure that audits are executed in a high-quality manner, their results are appropriately communicated, and issues are monitored and appropriately resolved. In performing internal audit work, an institution should consider the following.

- **Internal audit scope:** During the audit plan-

- **Internal audit work papers:** Work papers document the work performed, observations and analyses made, and support for the conclusions and audit results. The work papers should contain sufficient information regarding any scope or audit program modifications and waiver of issues not included in the final report. Work papers also should document the specific sampling methodology, including minimum sample sizes, and the rationale for such methodology. The work papers should contain information that reflects all phases of the audit process including planning, fieldwork, reporting, and issues tracking and follow-up. On an ongoing basis, a comprehensive supervisory review should be performed on all audit work, including any outsourced internal audit procedures.\(^{19m}\)

- **Audit report:** Internal audit should have effective processes to ensure that issues are communicated throughout the institution and audit issues are addressed in a timely manner. The audit report should include an executive summary that describes the auditable area, audit’s conclusions, the rationale for those conclusions, and key issues. Most audit reports also include management’s action plans to address audit findings. To ensure that identified issues are addressed in a timely manner, reports should be issued to affected business areas, senior management, and the audit committee within an appropriate timeframe after the completion of field work. Compliance with issuance timeframes should be monitored and reported periodically to the audit committee. At a minimum, internal audit should ensure that management considers the level and significance of the risk when assigning resources to address and remediate issues. Management should appropriately document the action plans either within the audit report or separately.

\(^{19l}\) To facilitate effective, efficient, and consistent practice within the internal audit department, an institution should develop an audit manual that includes comprehensive policies and procedures and is made available to all internal audit staff. The manual should be updated as needed.

\(^{19m}\) An experienced audit manager should perform this review.
• **Internal audit issues tracking:** Internal audit should have effective processes in place to track and monitor open audit issues and to follow-up on such issues. The timely remediation of open audit issues is an essential component of an organization’s risk reduction efforts. Internal audit and the responsible management should discuss and agree to an appropriate resolution date, based on the level of work necessary to complete remediation processes. When an issue owner indicates that work to close an issue is completed, the internal audit function should perform validation work prior to closing the issue. The level of validation necessary may vary based on the issue’s risk level. For higher-risk issues, internal audit should perform and document substantive testing to validate that the issue has been resolved. Issues should be tested over an appropriate period of time to ensure the sustainability of the remediation.

**Retrospective review processes.** When an adverse event occurs at an institution (for example, fraud or a significant loss), management should conduct a post-mortem and “lessons learned” analysis. In these situations, internal audit should ensure that such a review takes place and appropriate action is taken to remediate identified issues. The internal audit function should evaluate management’s analysis of the reasons for the event and whether the adverse event was the result of a control breakdown or failure, and identify the measures that should be put in place to prevent a similar event from occurring in the future. In certain situations, the internal audit function should conduct its own post-mortem and a “lessons learned” analysis outlining the remediation procedures necessary to detect, correct, and/or prevent future internal control breakdowns (including improvements in internal audit processes).

**Quality assurance and improvement program.** A well-designed, comprehensive quality assurance program should ensure that internal audit activities conform to the IIA’s professional standards and the institution’s internal audit policies and procedures. The program should include both internal and external quality assessments.

The internal audit function should develop and document its internal assessment program to promote and assess the quality and consistency of audit work across all audit groups with respect to policies, procedures, audit performance, and work papers. The quality assurance review should be performed by someone independent of the audit work being reviewed. Conclusions reached and recommendations for appropriate improvement in internal audit processes or staff training should be implemented by the CAE through the quality assurance and improvement program. Action plan progress should be monitored and subsequently closed after a period of sustainability. Each institution should conduct an internal quality assessment annually and the CAE should report the results and status of internal assessments to senior management and the audit committee at least annually.

The IIA recommends that an external quality assessment of internal audit be performed by a qualified independent party at least once every five years. The review should address compliance with the IIA’s definition of internal auditing, code of ethics, and standards, as well as with the internal audit function’s charter, policies and procedures, and any applicable legislative and regulatory requirements. The CAE should communicate the results, planned actions, and status of remediation efforts to senior management and the audit committee.

### Internal Audit Outsourcing Arrangements (Part II of the 2003 Policy Statement)

As stated in the 2003 Policy Statement, an institution’s board of directors and senior management are charged with the overall responsibility for maintaining an effective system of internal controls. Responsibility for maintaining an effective system of internal controls cannot be delegated to a third party. An institution that chooses to outsource audit work should ensure that the audit committee maintains ownership of the internal audit function. The institution’s audit committee and CAE should provide active and effective oversight of outsourced activities. Institutions should carefully consider the oversight responsibilities that are consequential to these types of arrangements in determining appropriate staffing levels.

To distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, which may take the form of an engagement letter or similar services agreement. Contracts between the institution and the vendor
should include a provision stating that work papers and any related non-public confidential information and personal information must be handled by the vendor in accordance with applicable laws and regulations. An institution should periodically confirm that the vendor continues to comply with the agreed-upon confidentiality requirements, especially for long-term contracts. The audit committee should approve all significant aspects of outsourcing arrangements and should receive information on audit deficiencies in a manner consistent with that provided by the in-house audit department.

Vendor Competence

An institution should have appropriate policies and procedures governing the selection and oversight of internal audit vendors, including whether to continue with an existing outsourced arrangement. The audit committee and the CAE are responsible for the selection and retention of internal audit vendors and should be aware of factors that may impact vendors’ competence and ability to deliver high-quality audit services.

Contingency Planning

An institution’s contingency plan should take into consideration the extent to which the institution relies upon outsourcing arrangements. When an institution relies significantly on the resources of an internal audit service provider, the institution should have contingency procedures for managing temporary or permanent disruptions in the service in order to ensure that the internal audit function can meet its intended objectives.

Quality of Audit Work

The quality of audit work performed by the vendor should be consistent with the institution’s standards of work expected to be performed by an in-house internal audit department. Further, information supplied by the vendor should provide the board of directors, its audit committee, and senior management with an accurate report on the control environment, including any changes necessary to enhance controls.

The following discussion supplements the discussion in Part III of the 2003 Policy Statement and addresses additional requirements regarding auditor independence for depository institutions subject to section 36 of the FDI Act (as amended in 2009).

Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

The July 2009 amendments to section 36 of the FDI Act (applicable to insured depository institutions with total assets of $500 million or more) require an institution’s external auditor to follow the more restrictive of the independence rules issued by the AICPA, SEC, and PCAOB. In March 2003, the SEC prohibited a registered public accounting firm that is responsible for furnishing an opinion on the consolidated or separate financial statements of an audit client from providing internal audit services to that same client. Therefore, by following the more restrictive independence rules, a depository institution’s external auditor is precluded from performing internal audit services, either on a co-sourced or an outsourced basis, even if the institution is not a public company.

Examination Guidance (Part IV of the 2003 Policy Statement)

The following discussion supplements the existing guidance in Part IV of the 2003 Policy Statement on examination guidance and discusses the overall effectiveness of an institution’s internal audit function and the examiner’s reliance on internal audit.

Determining the Overall Effectiveness of Internal Audit

An effective internal audit function is a vehicle to advance an institution’s safety and soundness.

---

and compliance with consumer laws and regulations and is therefore considered as part of the supervisory review process. Federal Reserve examiners will make an overall determination as to whether the internal audit function and its processes are effective or ineffective and whether examiners can potentially rely upon internal audit’s work as part of the supervisory review process. If internal audit’s overall processes are deemed effective, examiners may be able to rely on the work performed by internal audit depending on the nature and risk of the functions subject to examination.

The supervisory assessment of internal audit and its effectiveness will consider an institution’s application of the 2003 Policy Statement and this supplemental guidance. An institution’s internal audit function generally would be considered effective if the institution’s internal audit function structure and practices are consistent with the 2003 Policy Statement and this guidance.

Conversely, an institution’s internal audit function that does not follow the enhanced practices and supplemental guidance outlined in this policy letter generally will be considered ineffective. In such a case, examiners will not rely on the institution’s internal audit function.

Examiners will inform the CAE as to whether the function is deemed to be effective or ineffective. Internal audit’s overall processes could be deemed effective even though some aspects of the internal audit function may require enhancements or improvements such as additional documentation with respect to specific audit processes (for example, risk assessments or work papers). In these situations, the required enhancements or improvements generally should not be a critical part of the overall internal audit function, or the function should be deemed to be ineffective.

Relying on the Work Performed by Internal Audit

Examiners may rely on internal audit at supervised institutions if internal audit was deemed effective at the most recent examination of internal audit. In examining an institution’s internal audit function, examiners will supplement their examination procedures through continuous monitoring and an assessment of key elements of internal audit, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk assessment; and (4) the adequacy of audit programs and work paper standards. On at least an annual basis, examiners should review these key elements to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

Examiners may choose to rely on the work of internal audit when internal audit’s overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing examination procedures. For example, if an internal audit department performs internal audit work in an area where examiners might also review controls, examiners may evaluate whether they can rely on the work of internal audit (and either eliminate or reduce the testing scheduled as part of the regulatory examination processes). In high-risk areas, examiners will consider whether additional examination work is needed even where internal audit has been deemed effective and its work reliable.

INDEPENDENCE OF INTERNAL AUDITORS

The ability of the internal audit function to achieve its audit objectives depends, in large part, on the independence maintained by audit personnel. Frequently, the independence of internal auditing can be determined by its reporting lines within the organization and by the person or level to whom these results are reported. In most circumstances, the internal audit function is under the direction of the board of directors or a committee thereof, such as the audit committee. This relationship enables the internal audit function to assist the directors in fulfilling their responsibilities.

The auditor’s responsibilities should be addressed in a position description, with reporting lines delineated in personnel policy, and
Audit results should be documented in audit committee and board of directors’ minutes. Examiners should review these documents, as well as the reporting process followed by the auditor, in order to subsequently evaluate the tasks performed by the internal audit function. The internal auditor should be given the authority necessary to perform the job, including free access to any records necessary for the proper conduct of the audit. Furthermore, internal auditors generally should not have responsibility for the accounting system, other aspects of the institution’s accounting function, or any operational function not subject to independent review.

Competence of Internal Auditors

The responsibilities and qualifications of internal auditors vary depending on the size and complexity of a bank’s operations and on the emphasis placed on the internal audit function by the directorate and management. In many banks, the internal audit function is performed by an individual or group of individuals whose sole responsibility is internal auditing. In other banks, particularly small ones, internal audit may be performed on a part-time basis by an officer or employee.

The qualifications discussed below should not be viewed as minimum requirements but should be considered by the examiner in evaluating the work performed by the internal auditors or audit departments. Examples of the type of qualifications an internal audit department manager should have are—

• academic credentials comparable to other bank officers who have major responsibilities within the organization,
• commitment to a program of continuing education and professional development,
• audit experience and organizational and technical skills commensurate with the responsibilities assigned, and
• oral and written communication skills.

The internal audit department manager must be properly trained to fully understand the flow of data and the underlying operating procedures. Training may come from college courses, courses sponsored by industry groups such as the Bank Administration Institute (BAI), or in-house training programs. Significant work experience in various departments of a bank also may provide adequate training. Certification as a chartered bank auditor, certified internal auditor, or certified public accountant meets educational and other professional requirements. In addition to prior education, the internal auditor should be committed to a program of continuing education, which may include attending technical meetings and seminars and reviewing current literature on auditing and banking.

The internal auditor’s organizational skills should be reflected in the effectiveness of the bank’s audit program. Technical skills may be demonstrated through internal audit techniques, such as internal control and other questionnaires, and an understanding of the operational
In considering the competence of the internal audit staff, the examiner should review the educational and experience qualifications required by the bank for filling the positions in the internal audit department and the training available for that position. In addition, the examiner must be assured that any internal audit supervisor understands the audit objectives and procedures performed by the staff.

In a small bank, it is not uncommon to find that internal audit, whether full- or part-time, is a one-person department. The internal auditor may plan and perform all procedures personally or may direct staff borrowed from other departments. In either case, the examiner should expect, at a minimum, that the internal auditor possesses qualifications similar to those of an audit department manager, as previously discussed.

The final measure of the competence of the internal auditor is the quality of the work performed, the ability to communicate the results of that work, and the ability to follow up on deficiencies noted during the audit work. Accordingly, the examiner’s conclusions with respect to an auditor’s competence should also reflect the adequacy of the audit program and the audit reports.

**IMPLEMENTATION OF THE INTERNAL AUDIT FUNCTION**

The annual audit plan and budgets should be set by the internal audit manager and approved by the board, audit committee, or senior management. In many organizations, the internal audit manager reports to a senior manager for administrative purposes. The senior manager appraises the audit manager’s performance, and the directors or an audit committee approves the evaluation.

**Risk Assessment**

In setting the annual audit plan, a risk assessment should be made that documents the internal audit function’s understanding of the institution’s various business activities and their inherent risks. In addition, the assessment also evaluates control risk, or the potential that deficiencies in the system of internal control would expose the institution to potential loss. The assessment should be periodically updated to reflect changes in the system of internal control, work processes, business activities, or the business environment. The risk-assessment methodology of the internal audit function should identify all auditable areas, give a detailed basis for the auditors’ determination of relative risks, and be consistent from one audit area to another. The risk assessment can quantify certain risks, such as credit risk, market risk, and legal risk. It can also include qualitative aspects, such as the timeliness of the last audit and the quality of management. Although there is no standard approach to making a risk assessment, it should be appropriate to the size and complexity of the institution. While smaller institutions may not have elaborate risk-assessment systems, some analysis should still be available to explain why certain areas are more frequently audited than others.

Within the risk assessment, institutions should clearly identify auditable units along business activities or product lines, depending on how the institution is managed. There should be evidence that the internal audit manager is regularly notified of new products, departmental changes, and new general ledger accounts, all of which should be factored into the audit schedule. Ratings of particular business activities or corporate functions may change with time as the internal audit function revises its method for assessing risk. These changes should be incremental. Large-scale changes in the priority of audits should trigger an investigation into the reasonableness of changes to the risk-assessment methodology.

**Audit Plan**

The audit plan is based on the risk assessment. The plan should include a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.

A formal, annual audit plan should be developed based on internal audit’s risk assessment. The audit plan should include all auditable areas and set priorities based on the rating determined by the risk assessment. The schedule of planned audits should be approved by the board or its audit committee, as should any subsequent changes to the plan. Many organiza-
tions develop an audit plan jointly with the external auditors. In this case, the audit plan should clearly indicate what work is being performed by internal and external auditors and what aspects of internal audit work the external auditors are relying on.

Typically, the schedule of audit is cyclic; for example, high risks are audited annually, moderate risks every two years, and low risks every three years. In some cases, the audit cycle may extend beyond three years. In reviewing the annual plan, examiners should determine the appropriateness of the institution’s audit cycle. Some institutions limit audit coverage of their low-risk areas. Examiners should review areas the institution has labeled “low risk” to determine if the classification is appropriate and if coverage is adequate.

Audit Manual

The internal audit department should have an audit manual that sets forth the standards of work for field auditors and audit managers to use in their assignments. A typical audit manual contains the audit unit’s charter and mission, administrative procedures, workpaper-documentation standards, reporting standards, and review procedures. Individual audits should conform to the requirements of the audit manual. As a consequence, the manual should be up-to-date with respect to the audit function’s mission and changes to the professional standards it follows.

Performance of Individual Audits

The internal audit manager should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide them. The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution’s operations and to assess whether internal controls are effective. While audits vary according to the objective, the area subjected to audit, the standards used as the basis for work performed, and documentation, the audit process generates some common documentation elements, as described below.

Audit Program and Related Workpapers

The audit program documents the audit’s objectives and the procedures that were performed. Typically, it indicates who performed the work and who has reviewed it. Workpapers document the evidence gathered and conclusions drawn by the auditor, as well as the disposition of audit findings. The workpapers should provide evidence that the audit program adheres to the requirements specified in the audit manual.

Audit Reports

The audit report is the internal audit’s formal notice of its assessment of internal controls in the audited areas. The report is given to the area’s managers, senior management, and directors. A typical audit report states the purpose of the audit and its scope, conclusions, and recommendations. Reports are usually prepared for each audit. In larger institutions, monthly or quarterly summaries that highlight major audit issues are prepared for senior management and the board.

EXAMINER REVIEW OF INTERNAL AUDIT

The examination procedures section describes the steps the examiner should follow when conducting a review of the work performed by the internal auditor. The examiner’s review and evaluation of the internal audit function is a key element in determining the scope of the examination. In most situations, the competence and independence of the internal auditors may be reviewed on an overall basis; however, the adequacy and effectiveness of the audit program should be determined separately for each examination area.

The examiner should assess if the work performed by the internal auditor is reliable. It is often more efficient for the examiner to determine the independence or competence of the internal auditor before addressing the adequacy or effectiveness of the audit program. If the examiner concludes that the internal auditor possesses neither the independence nor the competence deemed appropriate, the examiner must also conclude that the internal audit work performed is not reliable.

The examiner should indicate in the report of examination any significant deficiencies concern-
ing the internal audit function. Furthermore, the examiner should review with management any significant deficiencies noted in the previous report of examination to determine if these concerns have been appropriately addressed.

Program Adequacy and Effectiveness

An examiner should consider the following factors when assessing the adequacy of the internal audit program—

- scope and frequency of the work performed,
- content of the programs,
- documentation of the work performed, and
- conclusions reached and reports issued.

The scope of the internal audit program must be sufficient to attain the audit objectives. The frequency of the audit procedures performed should be based on an evaluation of the risk associated with each targeted area under audit. Among the factors that the internal auditor should consider in assessing risk are the nature of the operation of the specific assets and liabilities under review, the existence of appropriate policies and internal control standards, the effectiveness of operating procedures and internal controls, and the potential materiality of errors or irregularities associated with the specific operation.

To further assess the adequacy and effectiveness of the internal audit program, an examiner needs to obtain audit workpapers. Workpapers should contain, among other things, audit work programs and analyses that clearly indicate the procedures performed, the extent of the testing, and the basis for the conclusions reached.

Although audit work programs are an integral part of the workpapers, they are sufficiently important to deserve separate attention. Work programs serve as the primary guide to the audit procedures to be performed. Each program should provide a clear, concise description of the work required, and individual procedures should be presented logically. The detailed procedures included in the program vary depending on the size and complexity of the bank’s operations and the area subject to audit. In addition, an individual audit work program may encompass several departments of the bank, a single department, or specific operations within a department. Most audit programs include procedures such as—

- surprise examinations, where appropriate;
- maintenance of control over records selected for audit;
- review and evaluation of the bank’s policies and procedures and the system of internal control;
- reconciliation of detail to related control records; and
- verification of selected transactions and balances through procedures such as examination of supporting documentation, direct confirmation and appropriate follow-up of exceptions, and physical inspection.

The internal auditor should follow the specific procedures included in all work programs to reach audit conclusions that will satisfy the related audit objectives. Audit conclusions should be supported by report findings; such reports should include, when appropriate, recommendations by the internal auditor for any required remedial actions.

The examiner should also analyze the internal reporting process for the internal auditor’s findings, since required changes in the bank’s internal controls and operating procedures can be made only if appropriate officials are informed of the deficiencies. This means that the auditor must communicate all findings and recommendations clearly and concisely, pinpointing problems and suggesting solutions. The auditor also should submit reports as soon as practical, and the reports should be routed to those authorized to implement the suggested changes.

The final measure of the effectiveness of the audit program is a prompt and effective management response to the auditor’s recommendations. The audit department should determine the reasonableness, timeliness, and completeness of management’s response to their recommendations, including follow-up, if necessary. Examiners should assess management’s response and follow up when the response is either incomplete or unreasonable.

EXTERNAL AUDITS

The Federal Reserve requires bank holding companies with total consolidated assets of $500 million or more to have annual independent audits. Generally, banks must have external audits for the first three years after obtaining FDIC insurance (an FDIC requirement) and upon becoming a newly chartered national bank (an OCC
requirement). The SEC also has a longstanding audit requirement for all public companies, which applies to bank holding companies that are SEC registrants and to state member banks that are subject to SEC reporting requirements pursuant to the Federal Reserve’s Regulation H.

For insured depository institutions with fiscal years beginning after December 31, 1992, FDICIA, through its amendments to section 36 of the FDI Act, requires annual independent audits for all FDIC-insured banks that have total assets in excess of $500 million. (See SR-94-3 and SR-96-4.) In September 1999, the Federal Financial Institutions Examination Council (FFIEC) issued an interagency policy statement on external auditing programs of banks and savings associations. The policy encourages banks and savings associations that have less than $500 million in total assets and that are not subject to other audit requirements to adopt an external auditing program as a part of their overall risk-management process. (See the following subsection for the complete text of the interagency policy statement.)

Independent audits enhance the probability that financial statements and reports to the FRB and other financial-statement users will be accurate and will help detect conditions that could adversely affect banking organizations, the FRB, or the public. The independent audit process also subjects the internal controls and the accounting policies, procedures, and records of each banking organization to periodic review.

Banks often employ external auditors and other specialists to assist management in specialized fields, such as taxation and management information systems. External auditors and consultants often conduct in-depth reviews of the operations of specific bank departments; the reviews might focus on operational procedures, personnel requirements, or other specific areas of interest. After completing the reviews, the auditors may recommend that the bank strengthen controls or improve efficiency.

External auditors provide services at various times during the year. Financial statements are examined annually. Generally, the process commences in the latter part of the year, with the report issued as soon thereafter as possible. Other types of examinations or reviews are performed at various dates on an as-required basis.

The examiner is interested in the work performed by external auditors for three principal reasons. First, situations will arise when internal audit work is not being performed or when such work is deemed to be of limited value to the examiner. Second, the work performed by external auditors may affect the amount of testing the examiner must perform. Third, external audit reports often provide the examiner with information pertinent to the examination of the bank.

The major factors that should be considered in evaluating the work of external auditors are similar to those applicable to internal auditors, namely, the competence and independence of the auditors and the adequacy of the audit program.

The federal banking agencies view a full-scope annual audit of a bank’s financial statements by an independent public accountant as preferable to other types of external auditing programs. The September 1999 policy statement recognizes that a full-scope audit may not be feasible for every small bank. It therefore encourages those banks to pursue appropriate alternatives to a full-scope audit. Small banks are also encouraged to establish an audit committee consisting of outside directors. The policy statement provides guidance to examiners on the review of external auditing programs.

The policy statement is consistent with the Federal Reserve’s longstanding guidance that encourages the use of external auditing programs, and with its goals for (1) ensuring the accuracy and reliability of regulatory reports, (2) improving the quality of bank internal controls over financial reporting, and (3) enhancing the efficiency of the risk-focused examination process. The Federal Reserve adopted the FFIEC policy statement effective for fiscal years beginning on or after January 1, 2000. (See SR-99-33.)

INTERAGENCY POLICY STATEMENT ON EXTERNAL AUDITING PROGRAMS OF BANKS AND SAVINGS ASSOCIATIONS

Introduction

The board of directors and senior managers of a banking institution or savings association (instit-
tution) are responsible for ensuring that the institution operates in a safe and sound manner. To achieve this goal and meet the safety-and-soundness guidelines implementing section 39 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831p-1), the institution should maintain effective systems and internal control to produce reliable and accurate financial reports.

Accurate financial reporting is essential to an institution’s safety and soundness for numerous reasons. First, accurate financial information enables management to effectively manage the institution’s risks and make sound business decisions. In addition, institutions are required by law to provide accurate and timely financial reports (e.g., Reports of Condition and Income [call reports] and Thrift Financial Reports) to their appropriate regulatory agency. These reports serve an important role in the agencies’ risk-focused supervision programs by contributing to their pre-examination planning, off-site monitoring programs, and assessments of an institution’s capital adequacy and financial strength. Further, reliable financial reports are necessary for the institution to raise capital. They provide data to stockholders, depositors and other funds providers, borrowers, and potential investors on the company’s financial position and results of operations. Such information is critical to effective market discipline of the institution.

To help ensure accurate and reliable financial reporting, the agencies recommend that the board of directors of each institution establish and maintain an external auditing program. An external auditing program should be an important component of an institution’s overall risk-management process. For example, an external auditing program complements the internal auditing function of an institution by providing management and the board of directors with an independent and objective view of the reliability of the institution’s financial statements and the adequacy of its financial-reporting internal controls. Additionally, an effective external auditing program contributes to the efficiency of the agencies’ risk-focused examination process. By considering the significant risk areas of an institution, an effective external auditing program may reduce the examination time the agencies spend in such areas. Moreover, it can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the Federal Deposit Insurance Corporation (FDIC).

This policy statement outlines the characteristics of an effective external auditing program and provides examples of how an institution can use an external auditor to help ensure the reliability of its financial reports. It also provides guidance on how an examiner may assess an institution’s external auditing program. In addition, this policy statement provides specific guidance on external auditing programs for institutions that are holding company subsidiaries, newly insured institutions, and institutions presenting supervisory concerns.

The adoption of a financial statement audit or other specified type of external auditing program is generally only required in specific circumstances. For example, insured depository institutions covered by section 36 of the FDI Act (12 USC 1831m), as implemented by part 363 of the FDIC’s regulations (12 CFR 363), are required to have an external audit and an audit committee. Therefore, this policy statement is directed toward banks and savings associations which are exempt from part 363 (i.e., institutions with less than $500 million in total assets at the beginning of their fiscal year) or are not otherwise subject to audit requirements by order, agreement, statute, or agency regulations.

Overview of External Auditing Programs

Responsibilities of the Board of Directors

The board of directors of an institution is responsible for determining how to best obtain reasonable assurance that the institution’s financial statements and regulatory reports are reliably prepared. In this regard, the board is also responsible for ensuring that its external auditing program is appropriate for the institution and adequately addresses the financial-reporting aspects of the significant risk areas and any other areas of concern of the institution’s business.
To help ensure the adequacy of its internal and external auditing programs, the agencies encourage the board of directors of each institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors.\textsuperscript{25} However, if this is impracticable, the board should organize the audit committee so that outside directors constitute a majority of the membership.

\textit{Audit Committee}

The audit committee or board of directors is responsible for identifying at least annually the risk areas of the institution’s activities and assessing the extent of external auditing involvement needed over each area. The audit committee or board is then responsible for determining what type of external auditing program will best meet the institution’s needs (see the descriptions under “Types of External Auditing Programs”).

When evaluating the institution’s external auditing needs, the board or audit committee should consider the size of the institution and the nature, scope, and complexity of its operations. It should also consider the potential benefits of an audit of the institution’s financial statements or an examination of the institution’s internal control structure over financial reporting, or both. In addition, the board or audit committee may determine that additional or specific external auditing procedures are warranted for a particular year or several years to cover areas of particularly high risk or special concern. The reasons supporting these decisions should be recorded in the committee’s or board’s minutes.

If, in its annual consideration of the institution’s external auditing program, the board or audit committee determines, after considering its inherent limitations, that an agreed-upon procedures/state-required examination is sufficient, they should also consider whether an independent public accountant should perform the work. When an independent public accountant performs auditing and attestation services, the accountant must conduct his or her work under, and may be held accountable for departures from, professional standards. Furthermore, when the external auditing program includes an audit of the financial statements, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial statements are presented fairly, in all material respects, in accordance with generally accepted accounting principles (GAAP). When the external auditing program includes an examination of the internal control structure over financial reporting, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial-reporting process is subject to any material weaknesses.

Both the staff performing an internal audit function and the independent public accountant or other external auditor should have unrestricted access to the board or audit committee without the need for any prior management knowledge or approval. Other duties of an audit committee may include reviewing the independence of the external auditor annually, consulting with management, seeking an opinion on an accounting issue, and overseeing the quarterly regulatory reporting process. The audit committee should report its findings periodically to the full board of directors.

\textit{External Auditing Programs}

\textbf{Basic Attributes}

External auditing programs should provide the board of directors with information about the institution’s financial-reporting risk areas, e.g., the institution’s internal control over financial reporting, the accuracy of its recording of transactions, and the completeness of its financial reports prepared in accordance with GAAP.

The board or audit committee of each institution at least annually should review the risks inherent in its particular activities to determine the scope of its external auditing program. For most institutions, the lending and investment-securities activities present the most significant risks that affect financial reporting. Thus, external auditing programs should include specific procedures designed to test at least annually the risks associated with the loan and investment portfolios. This includes testing of internal control over financial reporting, such as management’s process to determine the adequacy of the

\textsuperscript{25} Institutions with $500 million or more in total assets must establish an independent audit committee made up of outside directors who are independent of management. See 12 USC 1831m(g)(1) and 12 CFR 363.5.
allowance for loan and lease losses and whether this process is based on a comprehensive, adequately documented, and consistently applied analysis of the institution’s loan and lease portfolio.

An institution or its subsidiaries may have other significant financial-reporting risk areas such as material real estate investments, insurance underwriting or sales activities, securities broker-dealer or similar activities (including securities underwriting and investment advisory services), loan-servicing activities, or fiduciary activities. The external auditing program should address these and other activities the board or audit committee determines present significant financial-reporting risks to the institution.

**Types of External Auditing Programs**

The agencies consider an annual audit of an institution’s financial statements performed by an independent public accountant to be the preferred type of external auditing program. The agencies also consider an annual examination of the effectiveness of the internal control structure over financial reporting or an audit of an institution’s balance sheet, both performed by an independent public accountant, to be acceptable alternative external auditing programs. However, the agencies recognize that some institutions only have agreed-upon procedures/state-required examinations performed annually as their external auditing program. Regardless of the option chosen, the board or audit committee should agree in advance with the external auditor on the objectives and scope of the external auditing program.

**Financial statement audit by an independent public accountant.** The agencies encourage all institutions to have an external audit performed in accordance with generally accepted auditing standards (GAAS). The auditor’s scope should be sufficient to enable the auditor to express an opinion on the institution’s financial statements taken as a whole.

A financial statement audit provides assurance about the fair presentation of an institution’s financial statements. In addition, an audit may provide recommendations for management in carrying out its control responsibilities. For example, an audit may provide management with guidance on establishing or improving accounting and operating policies and recommendations on internal control (including internal auditing programs) necessary to ensure the fair presentation of the financial statements.

**Reporting by an independent public accountant on an institution’s internal control structure over financial reporting.** Another external auditing program is an independent public accountant’s examination and report on management’s assertion on the effectiveness of the institution’s internal control over financial reporting. For a smaller institution with less complex operations, this type of engagement is likely to be less costly than an audit of its financial statements or its balance sheet. It would specifically provide recommendations for improving internal control, including suggestions for compensating controls, to mitigate the risks due to staffing and resource limitations.

Such an attestation engagement may be performed for all internal controls relating to the preparation of annual financial statements or specified schedules of the institution’s regulatory reports.26 This type of engagement is performed under generally accepted standards for attestation engagements (GASAE).27

26. Since the lending and investment-securities activities generally present the most significant risks that affect an institution’s financial reporting, management’s assertion and the accountant’s attestation generally should cover those regulatory report schedules. If the institution has trading or off-balance-sheet activities that present material financial-reporting risks, the board or audit committee should ensure that the regulatory report schedules for those activities also are covered by management’s assertion and the accountant’s attestation. For banks and savings associations, the lending, investment-securities, trading, and off-balance-sheet schedules consist of:

<table>
<thead>
<tr>
<th>Area</th>
<th>Reports of Condition and Income Schedules</th>
<th>Thrift Financial Report Schedules</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loans and lease-financing receivables</td>
<td>RC-C, Part 1</td>
<td>SC, CF</td>
</tr>
<tr>
<td>Past-due and nonaccrual loans, leases, and other assets</td>
<td>RC-N</td>

<td>Trading assets and liabilities</td>
<td>RC-D</td>
<td>SO, SI</td>
</tr>
<tr>
<td>Off-balance-sheet items</td>
<td>RC-L</td>
<td>SI, CMR</td>
</tr>
</tbody>
</table>

These schedules are not intended to address all possible risks in an institution.

27. An attestation engagement is not an audit. It is performed under different professional standards than an audit of an institution’s financial statements or its balance sheet.
Balance-sheet audit performed by an independent public accountant. With this program, the institution engages an independent public accountant to examine and report only on the balance sheet. As with the audit of the financial statements, this audit is performed in accordance with GAAS. The cost of a balance-sheet audit is likely to be less than a financial-statement audit. However, under this type of program, the accountant does not examine or report on the fairness of the presentation of the institution’s income statement, statement of changes in equity capital, or statement of cash flows.

Agreed-upon procedures/state-required examinations. Some state-chartered depository institutions are required by state statute or regulation to have specified procedures performed annually by their directors or independent persons. The bylaws of many national banks also require that some specified procedures be performed annually by directors or others, including internal or independent persons. Depending upon the scope of the engagement, the cost of agreed-upon procedures or a state-required examination may be less than the cost of an audit. However, under this type of program, the independent auditor does not report on the fairness of the institution’s financial statements or attest to the effectiveness of the internal control structure over financial reporting. The findings or results of the procedures are usually presented to the board or the audit committee so that they may draw their own conclusions about the quality of the financial reporting or the sufficiency of internal control.

When choosing this type of external auditing program, the board or audit committee is responsible for determining whether these procedures meet the external auditing needs of the institution, considering its size, scope, and complexity of its business activities. For example, if an institution’s external auditing program consists solely of confirmations of deposits and loans, the board or committee should consider expanding the scope of the auditing work performed to include additional procedures to test the institution’s high-risk areas. Moreover, a financial statement audit, an examination of the effectiveness of the internal control structure over financial reporting, and a balance-sheet audit may be accepted in some states and for national banks in lieu of agreed-upon procedures/state-required examinations.

Other Considerations

Timing. The preferable time to schedule the performance of an external auditing program is as of an institution’s fiscal year-end. However, a quarter-end date that coincides with a regulatory report date provides similar benefits. Such an approach allows the institution to incorporate the results of the external auditing program into its regulatory reporting process and, if appropriate, amend the regulatory reports.

External auditing staff. The agencies encourage an institution to engage an independent public accountant to perform its external auditing program. An independent public accountant provides a nationally recognized standard of knowledge and objectivity by performing engagements under GAAS or GASAE. The firm or independent person selected to conduct an external auditing program and the staff carrying out the work should have experience with financial-institution accounting and auditing or similar expertise and should be knowledgeable about relevant laws and regulations.

Special Situations

Holding Company Subsidiaries

When an institution is owned by another entity (such as a holding company), it may be appropriate to address the scope of its external audit program in terms of the institution’s relationship to the consolidated group. In such cases, if the group’s consolidated financial statements for the same year are audited, the agencies generally would not expect the subsidiary of a holding company to obtain a separate audit of its financial statements. Nevertheless, the board of directors or audit committee of the subsidiary may determine that its activities involve significant risks to the subsidiary that are not within the procedural scope of the audit of the financial statements of the consolidated entity. For example, the risks arising from the subsidiary’s
activities may be immaterial to the financial statements of the consolidated entity, but material to the subsidiary. Under such circumstances, the audit committee or board of the subsidiary should consider strengthening the internal audit coverage of those activities or implementing an appropriate alternative external auditing program.

Newly Insured Institutions

Under the FDIC statement of policy on applications for deposit insurance, applicants for deposit insurance coverage are expected to commit the depository institution to obtain annual audits by an independent public accountant once it begins operations as an insured institution and for a limited period thereafter.

Institutions Presenting Supervisory Concerns

As previously noted, an external auditing program complements the agencies’ supervisory process and the institution’s internal auditing program by identifying or further clarifying issues of potential concern or exposure. An external auditing program also can greatly assist management in taking corrective action, particularly when weaknesses are detected in internal control or management information systems affecting financial reporting.

The agencies may require a financial institution presenting safety-and-soundness concerns to engage an independent public accountant or other independent external auditor to perform external auditing services. Supervisory concerns may include—

- inadequate internal control, including the internal auditing program;
- a board of directors generally uninformed about internal control;
- evidence of insider abuse;
- known or suspected defalcations;
- known or suspected criminal activity;
- probable director liability for losses;
- the need for direct verification of loans or deposits;
- questionable transactions with affiliates; or
- the need for improvements in the external auditing program.

The agencies may also require that the institution provide its appropriate supervisory office with a copy of any reports, including management letters, issued by the independent public accountant or other external auditor. They also may require the institution to notify the supervisory office prior to any meeting with the independent public accountant or other external auditor at which auditing findings are to be presented.

Examiner Guidance

Review of the External Auditing Program

The review of an institution’s external auditing program is a normal part of the agencies’ examination procedures. An examiner’s evaluation of, and any recommendations for improvements in, an institution’s external auditing program will consider the institution’s size; the nature, scope, and complexity of its business activities; its risk profile; any actions taken or planned by it to minimize or eliminate identified weaknesses; the extent of its internal audit program; and any compensating controls in place. Examiners will exercise judgment and discretion in evaluating the adequacy of an institution’s external auditing program.

Specifically, examiners will consider the policies, processes, and personnel surrounding an institution’s external auditing program in determining whether—

- the board of directors or its audit committee adequately reviews and approves external auditing program policies at least annually;
- the external auditing program is conducted by an independent public accountant or other independent auditor and is appropriate for the institution;
- the engagement letter covering external auditing activities is adequate;
- the report prepared by the auditor on the results of the external auditing program adequately explains the auditor’s findings;
- the external auditor maintains appropriate

29. The Office of Thrift Supervision requires an external audit by an independent public accountant for savings associations with a composite rating of 3, 4, or 5 under the Uniform Financial Institution Rating System, and on a case-by-case basis.
independence regarding relationships with the institution under relevant professional standards;
• the board of directors performs due diligence on the relevant experience and competence of the independent auditor and staff carrying out the work (whether or not an independent public accountant is engaged); and
• the board or audit committee minutes reflect approval and monitoring of the external auditing program and schedule, including board or committee reviews of audit reports with management and timely action on audit findings and recommendations.

Access to Reports
Management should provide the independent public accountant or other auditor with access to all examination reports and written communication between the institution and the agencies or state bank supervisor since the last external auditing activity. Management also should provide the accountant with access to any supervisory memoranda of understanding, written agreements, administrative orders, reports of action initiated or taken by a federal or state banking agency under section 8 of the FDI Act (or a similar state law), and proposed or ordered assessments of civil money penalties against the institution or an institution-related party, as well as any associated correspondence. The auditor must maintain the confidentiality of examination reports and other confidential supervisory information.

In addition, the independent public accountant or other auditor of an institution should agree in the engagement letter to grant examiners access to all the accountant’s or auditor’s workpapers and other material pertaining to the institution prepared in the course of performing the completed external auditing program.

Institutions should provide reports issued by the independent public accountant or other auditor pertaining to the external auditing program, including any management letters, to the agencies and any state authority in accordance with their appropriate supervisory office’s guidance. Significant developments regarding the external auditing program should be communicated promptly to the appropriate supervisory office. Examples of those developments include the hiring of an independent public accountant or other third party to perform external auditing work and a change in, or termination of, an independent public accountant or other external auditor.

Definitions

**Agencies.** The agencies are the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS).

**Appropriate supervisory office.** The regional or district office of the institution’s primary federal banking agency responsible for supervising the institution or, in the case of an institution that is part of a group of related insured institutions, the regional or district office of the institution’s federal banking agency responsible for monitoring the group. If the institution is a subsidiary of a holding company, the term “appropriate supervisory office” also includes the federal banking agency responsible for supervising the holding company. In addition, if the institution is state-chartered, the term “appropriate supervisory office” includes the appropriate state bank or savings association regulatory authority.

**Audit.** An examination of the financial statements, accounting records, and other supporting evidence of an institution performed by an independent certified or licensed public accountant in accordance with generally accepted

---

30. The institution’s engagement letter is not a “report” and is not expected to be submitted to the appropriate supervisory office unless specifically requested by that office.

31. When an institution’s financial information is included in the audited consolidated financial statements of its parent company, the institution should provide a copy of the audited financial statements of the consolidated company and any other reports by the independent public accountant in accordance with their appropriate supervisory office’s guidance. If several institutions are owned by one parent company, a single copy of the reports may be supplied in accordance with the guidance of the appropriate supervisory office of each agency supervising one or more of the affiliated institutions and the holding company. A transmittal letter should identify the institutions covered. Any notifications of changes in, or terminations of, a consolidated company’s independent public accountant may be similarly supplied to the appropriate supervisory office of each supervising agency.
auditing standards (GAAS) and of sufficient scope to enable the independent public accountant to express an opinion on the institution’s financial statements as to their presentation in accordance with generally accepted accounting principles (GAAP).

**Audit committee.** A committee of the board of directors whose members should, to the extent possible, be knowledgeable about accounting and auditing. The committee should be responsible for reviewing and approving the institution’s internal and external auditing programs or recommending adoption of these programs to the full board.

**Balance-sheet audit performed by an independent public accountant.** An examination of an institution’s balance sheet and any accompanying footnotes performed and reported on by an independent public accountant in accordance with GAAS and of sufficient scope to enable the independent public accountant to express an opinion on the fairness of the balance-sheet presentation in accordance with GAAP.

**Engagement letter.** A letter from an independent public accountant to the board of directors or audit committee of an institution that usually addresses the purpose and scope of the external auditing work to be performed, period of time to be covered by the auditing work, reports expected to be rendered, and any limitations placed on the scope of the auditing work.

**Examination of the internal control structure over financial reporting.** See “Reporting by an independent public accountant on an institution’s internal control structure over financial reporting.”

**External auditing program.** The performance of procedures to test and evaluate high-risk areas of an institution’s business by an independent auditor, who may or may not be a public accountant, sufficient for the auditor to be able to express an opinion on the financial statements or to report on the results of the procedures performed.

**Financial statement audit by an independent public accountant.** See Audit.

**Financial statements.** The statements of financial position (balance sheet), income, cash flows, and changes in equity together with related notes.

**Independent public accountant.** An accountant who is independent of the institution and registered or licensed to practice, and holds himself or herself out, as a public accountant, and who is in good standing under the laws of the state or other political subdivision of the United States in which the home office of the institution is located. The independent public accountant should comply with the American Institute of Certified Public Accountants’ (AICPA) Code of Professional Conduct and any related guidance adopted by the Independence Standards Board and the agencies. No certified public accountant or public accountant will be recognized as independent who is not independent both in fact and in appearance.

**Internal auditing.** An independent assessment function established within an institution to examine and evaluate its system of internal control and the efficiency with which the various units of the institution are carrying out their assigned tasks. The objective of internal auditing is to assist the management and directors of the institution in the effective discharge of their responsibilities. To this end, internal auditing furnishes management with analyses, evaluations, recommendations, counsel, and information concerning the activities reviewed.

**Outside directors.** Members of an institution’s board of directors who are not officers, employees, or principal stockholders of the institution, its subsidiaries, or its affiliates, and who do not have any material business dealings with the institution, its subsidiaries, or its affiliates.

**Regulatory reports.** These reports are the Reports of Condition and Income (call reports) for banks, Thrift Financial Reports (TFRs) for savings associations, Federal Reserve (FR) Y reports for bank holding companies, and the H-(b)11 Annual Report for thrift holding companies.

**Reporting by an independent public accountant on an institution’s internal control structure over financial reporting.** Under this engagement, management evaluates and documents its review of the effectiveness of the institution’s internal control over financial reporting in the identified risk areas as of a specific report date. Management prepares a written assertion, which
specifies the criteria on which management based its evaluation about the effectiveness of the institution’s internal control over financial reporting in the identified risk areas and states management’s opinion on the effectiveness of internal control over this specified financial reporting. The independent public accountant is engaged to perform tests on the internal control over the specified financial reporting in order to attest to management’s assertion. If the accountant concurs with management’s assertion, even if the assertion discloses one or more instances of material internal control weakness, the accountant would provide a report attesting to management’s assertion.

Risk areas. Those particular activities of an institution that expose it to greater potential losses if problems exist and go undetected. The areas with the highest financial-reporting risk in most institutions generally are their lending and investment-securities activities.

Specified procedures. Procedures agreed upon by the institution and the auditor to test its activities in certain areas. The auditor reports findings and test results, but does not express an opinion on controls or balances. If performed by an independent public accountant, these procedures should be performed under generally accepted standards for attestation engagements (GASAE).

Issued by the FFIEC on September 28, 1999.

UNSAFE AND UNSOUND USE OF LIMITATION OF LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)32 issued an interagency advisory (the advisory) to address safety-and-soundness concerns that may arise when financial institutions enter into engagement contracts (typically referred to as engagement letters) that limit the auditors’ liability for audit services.33 The advisory informs financial institutions34 boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors’ liability. Such provisions may weaken the external auditors’ objectivity, impartiality, and performance and, thus, reduce the agencies’ ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the SEC, the PCAOB, and the AICPA.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management’s assessment of internal control over financial reporting (collectively, audit or audits).

The advisory does not apply to—

• nonaudit services that may be performed by financial institutions’ external auditors,
• audits of financial institutions’ 401(k) plans, pension plans, and other similar audits,
• services performed by accountants who are not engaged to perform financial institutions’ audits (e.g., outsourced internal audits or loan reviews), and
• other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several

32. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

33. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

34. As used in this advisory, the term financial institutions includes banks, bank holding companies, savings associations, savings and loan holding companies, and credit unions.
types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor’s liability with respect to audits in an unsafe and unsound manner.

External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution’s financial statements. The external auditor’s objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution’s internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC’s Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations notes,34a “[a]n institution’s internal and external audit programs are critical to its safety and soundness.” The policy also states that an effective external auditing program “can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC.”

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution’s audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As

with all agreements that affect a financial institution’s legal rights, the financial institution’s legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples.35 Financial institutions’ boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors’ and officers’ liability policies) might not cover losses arising from claims that are precluded by limitation-of-liability provisions.

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

- indemnifies the external auditor against claims made by third parties;
- holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
- limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as limitation-of-liability-provisions.

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agree-

35. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor’s liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory’s appendix A, which can be found in section A.1010.1 of this manual.
ments by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with $500 million or more in total assets are required to have annual independent audits. Furthermore, financial institutions that are public companies must have annual independent audits. The agencies rely on the results of audits as part of their assessment of a financial institution’s safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors’ liability, the external auditors’ objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors’ objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors’ adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC’s rules, pursuant to part 363, require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution’s external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC’s regulations, the external auditor should be in compliance with the AICPA’s Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff. In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC’s auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor’s independence. The FAQ is consistent with the SEC’s Codification of Financial Reporting Policies, section 602.02.f.i, “Indemnification by Client.” (See section A.1010.1 of this manual.)

On the basis of the SEC guidance and the agencies’ existing regulations, certain limits on

36. For banks, see section 36 of the FDI Act (12 USC 1831n) and part 363 of the FDIC’s regulations (12 CFR 363).
37. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.
39. In contrast to the SEC’s position, AICPA Ethics Ruling 94 (ET, section 191.188–189) currently concludes that indemnification for “knowing misrepresentations by management” does not impair independence.
auditors’ liability are already inappropriate in audit engagement letters entered into by—

• public financial institutions that file reports with the SEC or with the agencies,
• financial institutions subject to part 363, and
• certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors’ liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, mandatory ADR) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

• provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
• are not imposed in a coercive manner.

The Advisory’s Conclusion

Financial institutions’ boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution’s external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

CERTIFIED PUBLIC ACCOUNTANTS

This section discusses the standards for competence and independence of certified public accountants (CPAs) as well as the standards required in connection with their audits.

Standards of Conduct

The Code of Professional Ethics for CPAs who are members of the American Institute of Certified Public Accountants (AICPA) requires that audits be performed according to generally accepted auditing standards (GAAS). GAAS, as distinct from generally accepted accounting principles, or GAAP, are concerned with the audi-
tor’s professional qualifications, the judgment
the auditor exercises in the performance of an
audit, and the quality of the audit procedures.

On the other hand, GAAP represents all of the
conventions, rules, and procedures that are nec-
essary to define accepted accounting practices at
a particular time. GAAP includes broad guide-
lines of general application and detailed prac-
tices and procedures that have been issued by
the Financial Accounting Standards Board
(FASB), the AICPA, the SEC, or other authori-
tative bodies that set accounting standards. Thus,
GAAP provides guidance on financial-reporting
and disclosure matters.

Generally Accepted Auditing Standards

GAAS are grouped into three categories: gen-
eral standards, standards of field work, and
standards of reporting.

The general standards require that the audit be
performed by a person or persons having ade-
quate technical training and proficiency; that
independence in mental attitude be maintained;
and that due professional care be exercised in
the performance of the audit and the preparation
of the report.

Standards of field work require that the work be
adequately planned; assistants, if any, be pro-
cer supervised; a proper study and evaluation of
existing internal controls be made for determi-
ning the audit scope and the audit procedures to
be performed during the audit; and sufficient
evidence be obtained to formulate an opinion
regarding the financial statements under audit.

Standards of reporting require that the CPA state
whether the financial statements are presented in
accordance with GAAP. The application of
GAAP in audited financial statements and
reports must achieve the fundamental objectives
of financial accounting, which are to provide
reliable financial information about the eco-
nomic resources and obligations of a business
enterprise. In addition, the informative disclo-
sures in the financial statements must follow
GAAP, or the CPA must state otherwise in the
report.

GAAS recognizes that management—not the
CPA—has primary responsibility for the prepa-
ration of the financial statements and the pre-
sentations therein. The auditor’s responsibility
is to express an opinion on the financial state-
ments. GAAS (or the audit requirements previ-
ously set forth) require that audits cover the
following financial statements: balance sheet,
income statement, statement of changes in stock-
holders’ equity, and statement of cash flows.

GAAS require that CPAs plan and perform
auditing procedures to obtain reasonable assur-
ance that financial statements are free from
material misstatement. Under GAAS, an audit
includes examining on a test basis and should
include evidence supporting the amounts and
disclosures in the financial statements. An audit
also includes assessing the accounting principles
used and significant estimates made by manage-
ment, as well as evaluating the overall financial-
statement presentation.

Independence

In the performance of their work, CPAs must be
independent of those they serve. Traditionally,
independence has been defined as the ability to
act with integrity and objectivity. In accordance
with the rule on independence included in the
SEC’s independence rules and the Code of
Professional Ethics and related AICPA inter-
pretations, the independence of a CPA is considered
to be impaired if, during the period of his or her
professional engagement, the CPA or his or her
firm had any direct or material indirect financial
interest in the enterprise or had any loan to or
from the enterprise or any officer, director, or
principal stockholder thereof. The latter prohibi-
tion does not apply to the following loans
from a financial institution when made under
normal lending procedures, terms, and
requirements:

• automobile loans and leases collateralized by
  the automobile
• loans in the amount of the cash surrender
  value of a life insurance policy
• borrowings fully collateralized by cash depos-
  its at the same financial institution (for exam-
  ple, passbook loans)
• credit cards and cash advances under lines of
  credit associated with checking accounts with
  aggregate unpaid balances of $5,000 or less

Such loans must, at all times, be kept current by
the CPA as to all terms.
Other loans have been grandfathered by the AICPA under recent ethics interpretations. These other loans (mortgage loans, other secured loans, and loans not material to the AICPA member’s net worth) must, at all times, be current as to all terms and shall not be renegotiated with the client financial institution after the latest of—

• January 1, 1992;
• the date that the financial institution first becomes a client;
• the date the loans are sold from a nonclient financial institution to the client financial institution; or
• the date of becoming a member in the AICPA.

The examiner may decide under certain circumstances to test the independence of the CPA through reviews of loan listings, contracts, stockholder listings, and other appropriate measures. Concerns about independence should be identified in the report of examination.

The SEC has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if financial, employment, or business relationships exist between auditors and audit clients, and if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC’s independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

EXTERNAL AUDIT REPORTS

The external auditor generates various types of reports and other documents. These reports typically include—

• the standard audit report, which is generally a one-page document;
• a “management letter” in which the auditor confidentially presents detailed findings and recommendations to management; and
• an attestation report in which the auditor attests to management’s assertion of internal controls and procedures over financial reports (for public companies and institutions subject to section 36 of the FDI Act); and
• other reports from the auditor to regulators during the audit period.

The major types of standard audit reports will never have a heading or other statement in the report that identifies which type it is. Rather, the type of report is identified by certain terminology used in the text of the report. The major types of standard audit reports are described below.

The unqualified report, sometimes referred to as a clean opinion, states that the financial statements are “presented fairly” in conformity with GAAP and that the necessary audit work was done.

The qualified report may generally have the same language as the unqualified report but will use the phrase “except for” or some other qualification to indicate that some problem exists. The types of problems include a lack of sufficient evidential matter, restrictions on the scope of audit work, or departures from GAAP in the financial statements. This type of report is not necessarily negative but indicates that the examiner should ask additional questions of management.

An adverse report basically concludes that the financial statements are not presented fairly in conformity with GAAP. This type of report is rarely issued because auditors and management usually work out their differences in advance.

A disclaimer expresses no opinion on the financial statements. CPAs may issue a disclaimer when they have concluded that substantial doubt exists about the ability of the institution to continue as a going concern for a reasonable period of time. This disclaimer is intended to indicate that the CPA is not assuming any responsibility for these statements.

REVIEW OF THE EXTERNAL AUDITOR’S INDEPENDENCE AND AUDIT

Because of the professional and ethical standards of the public accounting profession, the Federal Reserve has concluded that the examiner should conduct an in-depth review of the competence and independence of the CPA only
in unusual situations. One such situation would be a recent change in CPAs by a bank, particularly if the change was made after an audit had commenced.

Ordinarily, specific tests to determine independence are not necessary. However, there may be occasions when the examiner has sufficient reason to question the independence of a CPA or the quality of his or her work. For example, the examiner may discover that during the period of a CPA’s professional engagement, which includes the period covered by the financial statements on which the CPA has expressed an opinion, the CPA or a member of his or her firm—

• had a direct financial interest in the bank;
• was connected with the bank in a capacity equivalent to that of a member of management or was a director of the bank;
• maintained, completely or in part, the books and records of the bank and did not perform audit tests with respect to such books and records; or
• had a prohibited loan from the bank (as discussed earlier).

In these and similar instances, the CPA would not have complied with professional standards.

The examiner should determine the scope of the CPA’s examination by reviewing the most recent report issued by the CPA. If the audit is in progress or is planned to commence in the near future, the examiner should review any engagement letter to the bank from the CPA. The examiner also should obtain and review any adjusting journal entries suggested by the CPA at the conclusion of the examination. This should be done to determine whether such entries were the result of breakdowns in the internal control structure and procedures for financial reporting.

Under certain circumstances, a CPA may issue a qualified or adverse opinion or may disclaim an opinion on a bank’s financial statements. In such circumstances, the examiner should first determine the reasons for the particular type of opinion issued. If the matters involved affect specific areas of the bank’s operations, a review of the work performed by the CPA may help the examiner understand the problem that gave rise to this opinion. The examination procedures (section 1010.3) describes the steps the examiner should follow when conducting a review of the work performed by the CPA. (See the FFIEC interagency Policy Statement on the External Auditing Programs of Banks and Savings Associations (effective January 1, 2000) (SR-99-33)).

LIMITATIONS OF AUDITS AND AUDITED FINANCIAL STATEMENTS

Although auditing standards are designed to require the use of due care and objectivity, a properly designed and executed audit does not necessarily guarantee that all misstatements of amounts or omissions of disclosure in the financial statements have been detected. Moreover, a properly designed and executed audit does not guarantee that the auditor addressed FRB safety-and-soundness considerations. Examination personnel should be cognizant of the limitations inherent in an audit. The following examples illustrate some common limitations of audits:

• The auditor is not responsible for deciding whether an institution operates wisely. An unqualified audit report means that the transactions and balances are reported in accordance with GAAP. It does not mean that the transactions made business sense, that the associated risks are managed in a safe and sound manner, or that the balances can be recovered upon disposition or liquidation.
• The auditor’s report concerning financial statements does not signify that underwriting standards, operating strategies, loan-monitoring systems, and workout procedures are adequate to mitigate losses if the environment changes. The auditor’s report that financial statements fairly present the bank’s financial position is based on the prevailing evidence and current environment, and it indicates that reported assets can be recovered in the normal course of business. In determining that reported assets can be recovered in the normal course of business, the auditor attempts to understand financial-reporting internal controls and can substitute other audit procedures when these controls are weak or nonexistent.
• The quality of management and how it manages risk are not considered in determining historical cost and its recoverability. Although certain assets and instruments are marked to market (for example, trading accounts), GAAP generally uses historical cost as the basis of presentation. Historical cost assumes that the entity is a going concern. The going-concern concept allows certain mark-to-market losses
to be deferred because management believes the cost basis can be recovered during the remaining life of the asset.

- GAAP financial statements offer only limited disclosures of risks, uncertainties, and the other safety-and-soundness factors on which the institution’s viability depends.
- Under GAAP, loan-loss reserves are provided for “probable losses” currently “inherent” (that is, anticipated future charge-offs are based on current repayment characteristics) in the portfolio. GAAP defines probable as the likelihood that a future event will occur, confirming the fact of the loss. Additionally, the amount of the loss must be reasonably estimable.

COMMUNICATION WITH EXTERNAL AUDITORS

GAAS requires that the external auditor can consider regulatory authorities as a source of competent evidential matter when conducting an audit of the financial statements of a banking organization. Accordingly, an external auditor may review communications from, and make inquiries of, the regulatory authorities.

Generally, the Federal Reserve encourages auditors to attend examination exit conferences upon completion of the examiner’s field work or to attend other meetings concerning examination findings between supervisory examiners and an institution’s management or board of directors (or a committee thereof). Banks should ensure that their external auditors are informed in a timely manner of scheduled exit conferences and other relevant meetings with examiners and of the FRB’s policies regarding auditor attendance at such meetings.

When other conferences between examiners and management are scheduled (those that do not involve examination findings that are relevant to the scope of the external auditor’s work), the institution should first obtain the approval of the appropriate Federal Reserve Bank personnel for the auditor to attend the meetings. The interagency policy statement of July 23, 1992, does not preclude the Federal Reserve from holding meetings with the management of banks without auditor attendance or from requiring that the auditor attend only certain portions of the meetings. (See SR-92-28.)

The 1992 interagency policy statement was issued to improve coordination and communication between external auditors and examiners. Examination personnel should provide banking organizations with advance notice of the starting date of the examination when appropriate, so management can inform external auditors in advance and facilitate the planning and scheduling of their audit work.

Some institutions prefer that audit work be completed at different times than examination work to reduce demands on their staff members and facilities. Other institutions prefer to have audit work and examination work performed during similar periods so the institution’s operations are affected only at certain times during the year. By knowing when examinations are planned, institutions have the flexibility to schedule external audit work concurrent with, or separate from, examinations.

Meetings and Discussions Between External Auditors and Examiners

An external auditor may request a meeting with the FRB regulatory authorities involved in the supervision of the institution or its holding company during or after completion of examinations to inquire about supervisory matters relevant to the institution under audit. External auditors should provide an agenda in advance. The FRB regulatory authorities will generally request that management of the institution under audit be represented at the meeting. In this regard, examiners will generally only discuss with an auditor examination findings that have been presented to bank management.

In certain cases, external auditors may wish to discuss with examiners matters relevant to the institution without bank management representation. External auditors may request such confidential meetings with the FRB regulatory authorities, who may also request such meetings with the external auditor.

Information Required to Be Made Available to External Auditors

Section 931 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and section 112 of FDICIA (12 USC 1811) pertain to depository institutions insured by the FDIC that have engaged the services of an external auditor to audit the banking orga-
FIRREA and FDICIA require banks to provide the auditor with copies of the most recent Report of Condition (Call Report), report of examination, and pertinent correspondence or reports received from its regulator. This information is to be provided to the external auditor by the bank under audit, not by the FRB. In addition, banking organizations must provide the independent auditor with—

- a copy of any supervisory memorandum of understanding or written agreement between a federal or state banking agency and the bank put into effect during the period covered by the audit, and
- a report of any formal action taken by a federal or state banking agency during such period, or any civil money penalty assessed with respect to the bank or any banking organization-affiliated party.

Regulatory personnel should ascertain if the banking organization is in compliance with the requirements of section 931 of FIRREA (12 USC 1817(a)) and section 112 of FDICIA and should report instances of noncompliance in the report of examination.

Confidentiality of Supervisory Information

While the policies of the FRB regulatory authorities permit external auditors to have access to the information described above, institutions and their auditors are reminded that information contained in examination reports, inspection reports, and supervisory discussions—including any summaries or quotations—is confidential supervisory information and must not be disclosed to any party without the written permission of the FRB. Unauthorized disclosure of confidential supervisory information may lead to civil and criminal actions and fines and other penalties.
Internal Control and Audit Function, Oversight, and Outsourcing

Examination Objectives

Effective date April 2014

Section 1010.2

1. To determine whether internal and external audit functions exist.

2. To determine with reasonable assurance that the bank has an adequate internal audit function that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.

3. To ascertain, through the examination process, that the bank’s internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank’s management process—the control environment, risk assessment, control activities, information and communication, and monitoring activities.

5. To evaluate the independence and competence of those who provide the internal and external audit functions.

6. To consider the policies, processes, and personnel surrounding the bank’s external auditing program and to determine if—

   a. any engagement letter or other agreement related to external audit activities for the bank
      (1) provides any assurances of indemnification to the bank’s external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or
      (2) raises any other safety-and-soundness concerns; and
   b. the external auditors have maintained appropriate independence in their relationships with the bank, in accordance with relevant professional standards.

7. To determine the adequacy of the procedures performed by the internal and external auditors.

8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

9. To make an overall determination as to whether the internal audit function and its processes are effective or ineffective and whether examiners can potentially rely upon internal audit’s work as part of the supervisory review process.

10. For high-risk areas, to make a determination as to whether additional examination work is needed even where internal audit may be deemed effective and its work reliable.
This examination program should be used in conjunction with the audit function and audit outsourcing questionnaire section to review the bank’s internal and external audits and the audit procedures they encompass. The audit guidelines are general, and all sections or questions may not be applicable to every bank.

Before reviewing any specific audit procedures, the examiner should first determine the independence and competence of the auditors. If the examiner believes the auditors to be both competent and independent, he or she should then determine the effectiveness and adequacy of their work, and whether the auditors made an assessment as to whether the institution’s internal audit function incorporated the enhanced practices outlined in the Federal Reserve’s “Supplemental Policy Statement on Internal Audit Function and Its Outsourcing” (Supplemental Guidance) into their overall processes.

Based on the answers to the audit function questions and on the auditor’s work, the examiner must then determine the scope of the examination. The program and related supporting documentation should be completed in an organized manner and should be retained as part of the examination workpapers.

Upon completion of the program, the examiner should be able to formulate a conclusion on the effectiveness of audit processes and coverage. Conclusions about any weaknesses in the internal or external audit work performed for the bank should be summarized and included in the report of examination. Matters Requiring Immediate Attention (MRIA) or Matters Requiring Attention (MRA) to be included in the report of examination should be discussed with the audit committee, the Chief Audit Executive (CAE) and senior bank management.

INTERNAL AUDITORS

1. Organizational structure of the audit department. Review the internal audit’s organization chart for direct and indirect reporting lines of the CAE and the minutes of the board’s audit or examining committee to determine how effectively the CAE and board of directors are discharging their responsibility. If the CAE reports to someone other than the chief executive officer (CEO), determine if the audit committee has documented its rationale for the reporting structure, including any mitigating controls for situations that could adversely impact the objectivity of the CAE. Determine if the audit committee has quarterly, but at least annually, evaluated whether (1) the CAE is impartial and not unduly influenced by the administrative reporting line, and (2) any conflicts of interest for the CAE and other audit staff are accompanied by appropriate restrictions to mitigate those conflicts.

2. Independence of the audit function. Interview the CAE and observe the operation of the audit department to determine its functional responsibilities.

3. CAE’s qualifications. Review biographical data and interview the CAE to determine his or her ability to manage the institution’s internal audit function and his or her responsibility in the institution.

4. Audit staff qualifications. Review the educational background, professional certifications, and relevant banking and audit experience of staff to assess overall staff qualifications and to identify any knowledge gaps.

5. Skills gap assessments. Review how often they are performed, and how gaps in coverage are addressed (e.g., targeted staff hires, training, business-line rotation programs, and co-sourcing/outsourcing arrangements).

6. Training. Ensure there is a process in place to determine and monitor the annual training, typically 40 hours minimum, for each staff member based on their needs.

7. Content and use of the audit frequency and scope schedule. Review the methodology utilized to determine the audit universe and frequency of coverage per auditable entity.

8. Audit department participation in systems design projects. Determine through interviews and documentation reviews, internal audit’s role in assessing systems change...
9. **Internal audit charter.** Review the internal audit charter to determine its current adequacy. Determine whether the CAE periodically reviews the current adequacy of the charter and makes recommendations to the audit committee for improving internal audit function and whether outsourcing to external experts may be needed.

10. **Audit manual.** Review the audit manual to ensure that it includes all applicable audit processes, practices, and procedures, and applicable references to Institute of Internal Auditor (IIA) standards.

11. **Maintenance of audit records.** Review a sample of the audit reports and associated workpapers to determine compliance with prescribed procedures and proper documentation, including appropriate distribution to senior managers.

12. **Audit department’s formal reporting procedures.** Review CAE presentations and MIS reporting to the audit or examining committee to ensure the committee is providing effective oversight of the internal audit function.

13. **Issue tracking follow-up processes.** Review processes utilized to validate closure of internal audit findings. Review a sample of closed issues to ensure audit maintains sufficient documentation to validate issue closure.

14. **Use and effectiveness of audit computer programs.** Interview the CAE and/or the appropriate staff members regarding the use of the computer and access to the files for audit purposes. Obtain or perform a walk-through of automated auditing systems and methodologies.

**QUALITY ASSURANCE**

1. **Internal quality assurance.** Ensure process is documented in the audit manual. Review sample of work, overall results, and status of any action plans.

2. **External quality assurance.** Determine whether an independent assessment had been performed within the five-year requirement. Review results and action plan status to remediate issues.

**INTERNAL AUDIT FUNCTION ADEQUACY AND EFFECTIVENESS**

1. **Examination scope.** Adjust the scope of the examination if the bank’s internal audit function does not sufficiently meet the bank’s internal audit needs (whether or not the audit function is outsourced), does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise ineffective.

2. **Adequacy of the internal audit function’s processes.** Determine if internal audit has a well-developed understanding of the institution’s strategy and operational processes and the potential market impact of current market and macroeconomic conditions within its current operational financial environment.
   a. **Audit methodology.** Review the internal audit’s risk-assessment methodology that drives its risk-assessment process and determine if it represents the audit universe. Determine if the methodology included a documented analysis of cross-institutional risk and thematic control issues and the processes and procedures for evaluating the effectiveness of risk-management, control, and governance processes. Evaluate internal audit’s plan for continuous monitoring and in determining and evaluating risk. Assess internal audit’s process for incorporating other risk-identification techniques (i.e., risk and control self-assessment) that the institution’s management utilizes.
   b. **Audit universe.** Determine if internal audit has effective processes to identify all auditable entities within the audit universe. Review the documentation of the audit universe and verify whether it has been reviewed periodically (e.g., during the annual audit planning process) and when significant organizational changes have occurred.
   c. **Internal audit risk assessment.** Review internal audit’s documentation of its understanding of the institution’s significant business activities and their associated risks. Verify that internal audit includes, at least annually, a review of critical risk-management functions as well as changes in the system of internal control processes.
controls, infrastructure, work processes, new or changed business lines, or laws and regulations. Review the disposition of the results of the overall risk-assessment summary and determine if internal audit gave consideration to key performance or risk indicators and the most significant risks facing the institution, including how the risks are addressed within the internal audit plan.

d. Internal audit plan. Verify that internal audit develops and periodically revises its comprehensive audit plan. Determine if it verifies that the plan includes audit coverage for all identified, auditable entities within the audit universe appropriate for the size and complexity of the institution’s activities.

3. Internal audit performance and monitoring processes.
   a. Determine if the audit manual and work programs contain detailed guidance related to the performance of the audit and whether they are consistent across the audit function.
   b. Ascertain if audit planning included an analysis of the entity’s specific risks, mitigating controls, and level of residual risk.
   c. Determine if the internal audit workpapers adequately document the work program; the work performed; and workpaper standards, including documentation of any observations and analysis made, the conclusions, and audit results.
   d. Audit report.
      1) Ascertain that internal audit has effective audit reporting processes that communicate audit report issues throughout the institution and that they are addressed in a timely manner.
      2) Review the examination period’s audit reports and verify that they contain an executive summary describing the auditable area, its conclusions, rationale, key issues, and management’s documented action plans to address audit findings.
   e. Audit issues tracking and quality assurance review processes.
      1) Verify that internal audit has effective processes in place to track, monitor, and follow up on open audit issues.
      2) Determine if the institution conducts independent quality assurance reviews of internal audit work performed.
   3) Verify that the CAE implements appropriate improvements in internal audit processes or staff training through the quality assurance and improvement programs.
   4) Determine whether the institution conducts an internal quality assessment at least annually and if the CAE reports the results and status of internal assessments to senior management and the audit committee at least annually.
   5) Discuss supervisory concerns and outstanding internal-external audit report comments with the CAE or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner’s comments and concerns, bring these matters to the attention of senior management and the board of directors or the audit committee.

EXAMINATION FINDINGS AND CONCLUSIONS ON INTERNAL AUDIT FUNCTION

1. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions (including formal and informal enforcement actions) that should be taken to ensure that the bank corrects the deficiencies.

2. Incorporate conclusions about the bank’s internal audit function into the bank’s management and composite supervisory ratings.

3. Include in the report of examination comments concerning the effectiveness of the internal audit function, significant issues or concerns, and recommended corrective actions.

INDEPENDENCE OF THE OUTSOURCING VENDOR

1. If the initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, raises questions about the bank’s and its vendor’s adherence to the independence standards
EXTERNAL AUDITORS

1. Review any pending, current, or past engagement letters and agreements, if the bank has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management’s assessment of internal control, appraisals of the bank’s audit function, any internal audit, or audit function or operational review. Determine if the audit engagement letters or other agreements include unsafe and unsound provisions that—
   a. indemnify the external auditor against all claims made by third parties;
   b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the bank may assert (other than claims for punitive damages), thus providing relief from liability for the auditors’ own negligent acts, including any losses, claims, damages, or other liabilities; or
   c. limit the remedies available to the bank (other than punitive damages).

2. Verify that—
   a. the audit committee maintains ownership of the audit function;
   b. the bank’s board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign them, thus indicating the bank’s approval and financial commitment;
   c. the institution’s audit committee and CAE provide active leadership and the institution’s audit committee and CAE provide effective oversight of outsourced activities; and
   d. the external auditor has provided the board of directors, its audit committee, and senior management with an accurate report on the control environment, including any changes necessary to enhance controls.

3. Verify that the bank has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the bank’s legal rights.

4. With the cooperation of the audit committee, review and determine the effectiveness of the bank’s external auditors’ reports, letters, or correspondence, including their supporting workpapers, for the audit work performed since the previous examination.

REGULATORY EXAMINATIONS

1. Review any functional regulatory examination or supervisory examination report for work performed since the previous state member bank examination. Interview any involved auditors to determine their responsibilities and extent of involvement with the work in this area.
2. At least annually, review and make an assessment of the key elements of internal audit to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

3. For high-risk areas, consider whether additional examination work is needed even where internal audit has been deemed effective and its work is reliable.
Review the documentation as instructed in the examination procedures section to answer the following audit function and audit outsourcing questions. Where appropriate, supporting documentation and pertinent information should be retained or noted under comments. If the institution is at a Federal Reserve supervised institution with greater than $10 billion in total consolidated assets, (including state member banks, domestic bank and savings and loan holding companies, and U.S. operations of foreign banks), then the institution should comply with SR-13-1/CA-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.”

ORGANIZATIONAL STRUCTURE AND INTERNAL CONTROL ENVIRONMENT OF THE AUDIT DEPARTMENT

1. Has the board of directors delegated responsibility for the audit function? If so, to whom?
2. Has the board of directors established an audit committee? Is it composed solely of outside directors?
3. Are the members of the audit committee qualified for their particular responsibilities?
4. Does the audit committee promote the internal audit manager’s impartiality and independence by having him or her directly report audit findings to it? How often does the audit committee meet with the Chief Audit Executive (CAE) to review audit metrics and significant audit findings, including thematic issues?
5. Does the audit committee retain a portion of its meeting to meet directly with the CAE?
6. Do the minutes of the audit committee indicate an appropriate interest in the committee’s activities and findings?
7. Does the CAE report directly to the board of directors, the audit committee (or other independent board level committee)? If not, to whom does the CAE directly report?

INDEPENDENCE AND MANAGEMENT OF THE AUDIT FUNCTION

1. Is the audit department functionally segregated from operations in the organizational structure?
2. Does the audit committee review or approve the internal audit charter; budget and staffing levels; audit plan; and the CAE’s hiring, annual performance evaluation, and compensation. If not, who does?
3. Does the CAE report directly to the audit committee on internal audit matters? Are the reporting procedures of the CAE independent of operational activities and influence of any operating personnel?
4. Does the CAE report administratively to the CEO or another senior member of

---

1. See this manual’s section 1010.1 for requirements for audit committee composition.
management that is not responsible for operational activities reviewed by internal audit? If the latter, has the audit committee documented its rationale for this reporting structure, including mitigating controls available for situations that could adversely impact the objectivity of the CAE?

5. Is the internal audit function adequately managed to ensure that audit plans are accomplished and the audit results are promptly communicated to the audit committee, senior management, and the board of directors?

6. Do the responsibilities of the audit staff exclude any duties to be performed in lieu of operating personnel, such as preparation or approval of general ledger entries, official checks, daily reconciliations, dual control, etc.?

CAE’S QUALIFICATIONS

1. Are the CAE’s and senior audit officials’ academic credentials comparable to other bank officers who have major responsibilities within the organization?

2. Does the CAE and/or other senior staff have relevant business knowledge, substantive audit and industry-specific experience, educational background, and professional certifications?

3. Is the CAE’s experience in both auditing and banking comparable both in quality and in duration to that required of the officers assigned major responsibilities?

4. Does the CAE communicate and relate well with all levels of personnel?

5. Does the CAE demonstrate a commitment to continuing education and a current knowledge of the latest developments in banking and auditing technology?

6. Is the CAE dedicated to the standards and ethics of his or her profession (such as those published by the Bank Administration Institute, the Institute of Internal Auditors, and the American Institute of Certified Public Accountants)?

AUDIT STAFF QUALIFICATIONS

1. Is the audit staff sufficient in number to perform its tasks adequately?

2. Is the staff adequately experienced in auditing and banking? Does the audit staff have the requisite collective education background, industry-specific experience, professional certifications, and skill levels to audit all areas of the institution?

3. Are members of the staff experienced in specialized areas, such as information technology, foreign-exchange trading, trust, and subsidiary activities of the bank?

4. Is there a formal audit training program in effect which includes sufficient training time for staff based on their experience?

5. Is the number of unfilled vacancies on the audit staff considered reasonable?

6. Is the turnover of audit personnel acceptable?

7. Does management have plans to improve its audit capability, if needed?

ADEQUACY OF THE INTERNAL AUDIT FUNCTION’S PROCESSES

1. Does internal audit have a well-developed understanding of the institution’s strategy and operational processes as well as the potential market impact of current market and macroeconomic conditions within its current operational financial environment?

2. Does internal audit have a well-developed risk-assessment methodology that drives the risk-assessment process? Does the risk-assessment methodology effectively risk rank the audit universe? Are audit cycles or specific audit timeframes established with an emphasis on high-risk areas and are they appropriate?

   a. Audit methodology. Does internal audit’s risk-assessment methodology include—
      1) a documented analysis of cross-institutional risk and thematic control issues;
      2) the processes and procedures for evaluating the effectiveness of risk-management and control; and
      3) governance processes?

   b. Audit universe. Has internal audit documented effective processes that will identify all auditable entities within the audit universe, and are the processes reviewed periodically?

   c. Internal audit risk assessment. Has internal audit documented its understanding
of the institution’s significant business activities and associated risks? Does it perform, at least annually, a review of critical risk-management functions; changes in the system of internal controls, infrastructure, and work processes; and new or changed business lines or laws and regulations? Did internal audit give consideration to key performance or risk indicators and the most significant risks facing the institution, including how the risks are addressed within the internal audit plan?

d. Internal audit plan. Does internal audit develop and periodically revise its comprehensive audit plan? Does internal audit verify that the plan includes audit coverage for all identified, auditable entities within the audit universe appropriate for the size and complexity of the institution’s activities?

Internal Audit Performance and Monitoring Processes

1. Do the audit manual and work programs contain detailed guidance related to the performance of the audit and an evaluation as to whether they are consistent across the audit function?
2. Did the audit planning process include an analysis of the entity’s specific risks, mitigating controls, and level of residual risk?
3. Do the internal audit workpapers adequately document the work programs, the work performed, and the workpaper standards, including documentation of any observations and analysis made, the conclusions, and audit results?

Audit Report

1. Does internal audit have effective audit reporting processes that communicate audit report issues throughout the institution, and are the report issues addressed in a timely manner?
2. Do the audit reports contain an executive summary describing the auditable area, its conclusions, rationale, key issues, and management’s documented action plans to address audit findings?

Audit Issues Tracking and Retrospective Review Processes

1. Does internal audit have effective processes in place to track, monitor, and follow up on open audit issues?
2. Does the institution conduct independent quality assurance reviews of internal audit work performed, and are the results reported at least annually by the CAE to the audit committee and senior management?

Adequacy and Effectiveness of Internal Audit

1. Has the CAE and audit committee monitored and made a documented assessment of the key elements of internal audit as to—
   a. independence of internal audit;
   b. the professional competence and quality of the internal audit function;
   c. the quality and scope of the audit methodology;
   d. the adequacy of audit programs and workpaper standards; and
   e. whether there were any significant changes in the internal audit infrastructure or concerns about their adequacy?

CONTENT AND USE OF THE AUDIT FREQUENCY AND SCOPE SCHEDULE

1. Is the audit program formalized and therefore on record as a commitment that can be analyzed and reviewed?
2. Are all important bank functions and services identified as subjects of the audits? What processes are used to establish the audit universe (e.g., organizational charts, general ledger chart of accounts, new product approval process)?
3. Does the audit program include procedures necessary to ensure compliance with all applicable laws and regulations, especially Bank Secrecy Act and anti-money laundering requirements?
4. Does the internal audit department have access to all reports, records, and minutes?
5. For institutions in scope for SR-13-1/CA-13-1, are all high-risk areas audited within 12 to 18 months?
6. Are internal audit activities adjusted for significant changes in the bank’s environment, structure, new products and activities, risk exposures, or systems?

7. Does the frequency and scope schedule require approval by the audit committee, the board of directors, regulatory authorities, or others? If so, by whom, and has such approval been obtained?

8. Does the frequency and scope schedule comply with statutory requirements, if any, for internal audits, including minimum audit standards?

9. Does the CAE periodically report his or her progress in completing the frequency and scope schedule to the board’s audit committee?
   a. If not to the board’s audit committee, to whom?
   b. Does the committee approve significant deviations, if any, in the original program?

10. Does the CAE prepare a time budget? Are budgeted versus actual time analyses used as a guide in forward planning?

11. Does the depth of coverage appear to be sufficient?

12. Are different entry dates and time periods between reviews scheduled so as to frustrate reliable anticipation of entry dates by auditees?

13. Is the bank’s possession of all assets owned or managed in fiduciary capacities subjected to verification?

14. If the bank has automated systems, does the program call for the application of independently prepared computer programs that employ the computer as an audit tool?

15. Are all service-related activities not specifically manifested in general ledger accounts subject to adequate periodic review (e.g., supervisory regulations, security, vacation policy, purchases, traveler’s checks, and safekeeping)?

16. Will appraisals of administrative control be made for each function, yielding audit comments and suggestions for improvements of operational efficiency?

**AUDIT DEPARTMENT PARTICIPATION IN SYSTEMS DESIGN PROJECTS**

1. Is there a formal or informal procedure for notifying the CAE of contemplated new systems or systems modifications in the early planning stages?

2. Is the CAE a member of an executive systems planning or steering committee? If not, does the CAE or a senior member of the audit department have access to and review the minutes of such committees?

3. Does an audit representative review the activities of systems design teams for audit and internal control requirements? Is the specialized training and experience of the audit staff sufficient to support effective reviews?

4. Does the audit department avoid overparticipation in systems design, modification, and conversion?

5. Is an auditor’s “sign-off” on new or modified systems restricted to control and audit trail features?

**AUDIT MANUAL**

1. Has the responsibility for the establishment and maintenance of the audit manual been clearly assigned?

2. Does the audit manual require approval by the board of directors, the audit committee, or others? If so, has such approval been obtained?

3. Is the audit manual’s content independent from adverse influence by other interests, such as operating management or independent CPAs?

4. Is the audit manual current, and are procedures for keeping the manual current adequate?

5. Does the manual provide for valid deviations from audit procedures to be officially approved by audit management?

6. Do audit procedures provide for the follow up of issues/findings noted in previous audits?

7. Does the manual prescribe that each audit procedure be cross-referenced to the appropriate audit workpapers?

8. Must an auditor initial each program step as testimony of his or her performance?
9. Does the manual prescribe that full control be established at the time of entry over the records selected for audit?

10. Are subsidiary direct verification programs covering all forms of customer deposit, loan, safekeeping, collateral, collection, and trust accounts included?

11. Are flow charts needed for evidence of thorough analytical auditing when an end-to-end audit is performed?

12. Do the procedures employ statistical sampling techniques that have acceptable reliability and precision when such techniques are appropriate for a specific area?

13. Does the audit manual contain provisions for report format and content and an expression of the opinion, such as an audit rating system, of the auditor regarding the adequacy, effectiveness, and efficiency of internal controls?

14. Does the audit manual contain a provision for a review and update of the procedures for each audit, where required, upon the audit’s completion?

15. Does the audit manual provide for the maintenance of a permanent file for audits conducted?

16. Does the audit manual contain provisions for the formal, standardized preparation and maintenance of workpapers?

17. Are applicable statutory and regulatory requirements included in the audit procedures?

6. Do workpapers adequately document the internal audit work performed and support the audit reports?

7. Do workpapers contain a copy of the audit report, an adequate index, an internal control questionnaire, audit procedures, and other appropriate material?

8. Are workpapers numbered, indexed, and cross-referenced to audit procedures and the workpapers index?

9. Is each workpaper dated and initialed by the preparer?
   a. Are sources of data clearly shown?
   b. Are tick marks explained?

10. From the workpapers, can it be determined how various sample sizes were determined (by judgment, statistical, or other methods of sampling), including the range and confidence level?

11. Do workpapers contain evidence that supervisory personnel of the audit department have reviewed the workpapers and resultant findings?

12. Are all significant or unresolved exceptions noted in workpapers required to be included in the report?

13. Are applicable statutory and regulatory requirements being complied with?

**MAINTENANCE OF AUDIT RECORDS**

1. If automated audit workpapers are not used, are workpapers arranged and maintained for filing and reference in the current file? The permanent file?

2. Is a reasonable record-retention schedule and departmental index maintained for audit records?

3. Are audit procedures being complied with during each audit?

4. Do the workpapers contain evidence that all significant deviations from standard audit procedures are being documented and have received the approval of audit management?

5. Are the procedures for preparing and maintaining workpapers adhered to?

6. Do workpapers adequately document the internal audit work performed and support the audit reports?

7. Do workpapers contain a copy of the audit report, an adequate index, an internal control questionnaire, audit procedures, and other appropriate material?

8. Are workpapers numbered, indexed, and cross-referenced to audit procedures and the workpapers index?

9. Is each workpaper dated and initialed by the preparer?
   a. Are sources of data clearly shown?
   b. Are tick marks explained?

10. From the workpapers, can it be determined how various sample sizes were determined (by judgment, statistical, or other methods of sampling), including the range and confidence level?

11. Do workpapers contain evidence that supervisory personnel of the audit department have reviewed the workpapers and resultant findings?

12. Are all significant or unresolved exceptions noted in workpapers required to be included in the report?

13. Are applicable statutory and regulatory requirements being complied with?

**AUDIT DEPARTMENT’S FORMAL REPORTING PROCEDURES**

1. Does the CAE issue formal reports? If so, to whom?
   a. Do the reports convey to the reader the auditor’s general observation of the condition of the operation of the department or function? Do they adequately reflect the scope of the audit?
   b. Do they contain an opinion of the auditor regarding the adequacy, effectiveness, and efficiency of internal controls?
   c. Do they call for a prompt response, where appropriate?

2. With regard to audit exceptions and recommendations, is the method of resolving differences of opinion between audit and operating management effective?

3. Does the CAE maintain a formal record of all audit reports that contain unresolved recommendations and exceptions?

4. Does bank management promptly respond to significant identified internal control
weaknesses? Are exceptions and recommendations generally resolved within an appropriate timeframe agreed to by audit and the department?

5. Are audit reports issued in a timely manner?
6. Are management responses received timely?

QUALITY ASSURANCE

1. Does the audit department have an internal quality-assurance function? Does the function review a selected set of workpapers and the adequacy of other processes at least annually?
2. Does the function accumulate frequent errors and have sessions with audit to go over proper procedures?
3. For institutions in scope for SR-13-1/CA-13-1, has an external quality-assurance review been completed within at least the past five years in line with IIA recommendations?

USE AND EFFECTIVENESS OF AUDIT COMPUTER PROGRAMS

*Note: This section would be applicable to smaller audit departments that only use a limited number of computer audit programs*

1. What audit computer programs are used, and what are their purposes?
2. Is there a member of the audit staff qualified to write and appraise the quality of audit computer programs?
3. Is the auditor satisfied that he or she has sufficient “free access” to the computer files?
4. Are audit programs run on request?
5. Do direct verification programs allow the auditor flexibility in selecting the criteria to be used in determining the sample?
6. Have procedures been established for the development and maintenance of documentation for audit computer programs? Are they adhered to?
7. Are changes to audit programs controlled?

INTERNAL AUDIT OUTSOURCING ARRANGEMENTS

1. If the bank outsources its internal audit function—
   a. Does the bank have a written contract, which may take the form of an engagement letter, or a similar services agreement with the vendor?
   b. Does the audit committee maintain ownership of the internal audit function?
   c. Does the audit committee and the CAE provide active and effective oversight of outsourced activities?
   d. Does the audit committee approve all significant aspects of outsourcing arrangements and receive information on audit deficiencies in a manner consistent with that provided by the in-house audit department?
   e. Is the quality of audit work consistent with the institution’s standards of work expected to be performed by the in-house audit department?
   f. Have internal audit vendors provided accurate reports on the control environment and any changes to enhance controls?

2. Does the written contract or engagement letter include provisions that—
   a. define the expectations and responsibilities under the contract for both parties;
   b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
   c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
   d. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and contain stipulations for default and termination of the contract;
   e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
f. specify the locations of internal audit reports and the related workpapers;
g. specify the period of time (e.g., seven years) that vendors must maintain the workpapers;\(^2\)
h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence;
j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, Public Company Accounting Oversight Board (PCAOB), or regulatory independence guidance; and
k. state that workpapers and any related non-public confidential information and personal information will be held in compliance with applicable laws and regulations?

3. Does the outsourced internal audit arrangement maintain or improve the quality of the internal audit function and the bank’s internal control?

4. Do key employees of the bank and the outsourcing vendor clearly understand the lines of communication to and from the audit committee and senior management, and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed?

5. Is the scope of the outsourced work revised appropriately when the bank’s environment, structure, activities, risk exposures, or systems change significantly?

6. Have the directors ensured that the outsourced internal audit activities are effectively managed by the bank?

7. Does the arrangement with the outsourcing vendor satisfy the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserve the independence of the internal audit function?

8. Has the bank performed sufficient due diligence to satisfy itself of the vendor’s competence before entering into the outsourcing arrangement, and are there adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement?

9. Does the bank have a contingency plan to ensure continuity in audit coverage, especially for high-risk areas?

EXTERNAL AUDIT ENGAGEMENT LETTERS AND OTHER AUDIT AGREEMENTS

1. Does the bank’s board of directors, audit committee, and senior management closely review all of the provisions in audit engagement letters or other audit work agreements before agreeing to sign them?

2. Does the bank’s legal counsel carefully review audit engagement letters to ensure that those charged with engaging the external auditor make a fully informed decision?

3. Does the bank have any engagement letters for audits of financial statements, audits of internal control over financial reporting, or attestations on management’s assessment of internal control that include unsafe and unsound provisions that—
   a. indemnify the external auditor against all claims made by third parties?
   b. hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages)?
   c. limit the remedies available to the client financial institution (other than punitive damages)?

4. Has the bank agreed in any engagement letters or other audit work agreements to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, mandatory ADR) or to waive the right to a jury trial? If so—

---

\(^2\) If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

Commercial Bank Examination Manual  
April 2014  
Page 7
a. has the bank’s senior management carefully reviewed mandatory ADR and jury-trial provisions in engagement letters, as well as reviewed any agreements regarding rules of procedure, in order to fully comprehend the ramifications of any agreement to waive any available remedies?

b. has the bank’s senior management obtained written assurances that its insurance policies (e.g., the bank’s errors and omissions policies and directors’ and officers’ liability policies) will cover losses from claims that are precluded by limitation-of-liability provisions in audit engagement letters or other audit agreements?

5. Has the bank’s senior management ensured that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—
   a. apply equally to all parties;
   b. provide a fair process (e.g., neutral decisionmakers and appropriate hearing procedures); and
   c. are not imposed in a coercive manner?

6. Has the bank’s board of directors, audit committee, or senior management documented their business rationale for agreeing to any provisions that limit their legal rights?

EXTERNAL AUDIT ACTIVITIES

1. When state, federal, or supervisory regulations or stock-exchange listing require an independent CPA audit, did the bank comply?
   a. If so, was the opinion rendered by the accounting firm unqualified?
   b. If not, has the CAE taken appropriate action to resolve any deficiencies?

2. Does the bank policy prohibit loans to its external auditor or the engagement of an external auditor who is a stockholder? If not, has the board considered the materiality of any existing transactions regarding the auditor’s independence?

3. Has an external auditor been engaged to perform special reviews of specific departments or areas of the bank since the previous examination? If deficiencies were cited, have they been corrected?

4. Has the public accounting firm changed since the prior engagement? If so, obtain the rationale for change.

5. Have management letters from the external auditors or other reports from consultants been presented to management since the last examination?

6. Do deficiencies in management letters receive appropriate attention?

7. Are the notes pertaining to the financial statements reviewed for any information that may allude to significant accounting or control problems?

8. Does the management letter submitted by the public accounting firm comprehensively define the scope of the activities conducted?

REGULATORY EXAMINATION ACTIVITIES

1. Does the internal audit department have access to the examination reports?

2. Does the internal audit department review regulatory comments for comparison to similar work performed by audit to determine potential enhancements to existing work programs?

3. Does internal audit track status of corrective action to ensure timely remediation? If not, which department performs this function?
Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion

Effective date May 2019

Section 1011.1

INTRODUCTION AND APPLICABILITY

This section conveys the supervisory guidance that is attached to SR letter 16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion.” The guidance in SR-16-11 applies to all supervised institutions with total consolidated assets less than $50 billion, which includes state member banks, bank holding companies, savings and loan holding companies (including insurance and commercial savings and loan holding companies), and foreign banking organizations (FBOs) with consolidated U.S. assets of less than $50 billion. SR 16-11 also applies to insurance and commercial savings and loan holding companies with total consolidated assets less than $50 billion by providing core risk management guidance.

OVERVIEW

Managing risks is fundamental to the business of banking. Accordingly, the Federal Reserve places significant supervisory emphasis on an institution’s management of risk, including its system of internal controls, when evaluating the overall effectiveness of an institution’s risk management. An institution’s failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks of its activities has long been considered unsafe and unsound conduct. Principles of sound management should apply to the entire spectrum of risks facing an institution including, but not limited to, credit, market, liquidity, operational, compliance, and legal risk:

- **Credit risk** is the risk resulting from a borrower or counterparty defaulting on its obligations.
- **Market risk** is the risk of adverse price movements in market rates or prices, including changes in interest rates, foreign exchange rates, commodity prices, or equity prices.
- **Operational risk** is the risk resulting from inadequate or failed internal processes, people, and systems or from external events (this definition conforms to the Basel committee’s definition of operational risk).
- **Compliance risk** is the risk of regulatory sanctions, fines, penalties or losses resulting from failure to comply with laws, rules, regulations, or other supervisory requirements applicable to a financial institution.
- **Legal risk** is the potential that actions against the institution that result in unenforceable contracts, lawsuits, legal sanctions, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a financial institution.

These risks and the activities associated with them are addressed in greater detail in the Federal Reserve’s supervision manuals and other guidance documents. In practice, an institution’s business activities present various combinations, concentrations, and interrelationships of these risks depending on the nature and scope of the particular activity. This section provides guidelines for supervisory assessment of the overall effectiveness of an institution’s risk management and its formal or informal systems for identifying, measuring, monitoring, and controlling these risks.

---

ELEMENTS OF RISK MANAGEMENT

As part of the risk management evaluation of overall management effectiveness at an institution, examiners should place primary consideration on findings relating to the following elements of a sound risk management system:

- board and senior management oversight
- policies, procedures, and limits
- risk monitoring and management information systems
- internal controls

Each of these elements is described further, along with a list of considerations relevant to assessing each element. Examiners should recognize that the considerations specified in these guidelines are intended only to assist in the evaluation of risk management practices and are not a checklist of requirements for each institution.

An institution’s risk management processes are expected to evolve in sophistication, commensurate with the institution’s asset growth, complexity, and risk. At a larger or more complex organization, the institution should have more sophisticated risk management processes that address the full range of risks regardless of where the activity is conducted in the organization. Moreover, while a holding company should be able to assess the major risks of the consolidated organization, examiners should expect a parent company that centrally manages the operations and functions of its subsidiary banks to have more comprehensive, detailed, and developed risk management systems than a parent company that delegates the management of risks to relatively autonomous subsidiaries.

For a small community banking organization (CBO) engaged solely in traditional banking activities and whose senior management is actively involved in the details of day-to-day operations, relatively basic risk management systems may be adequate. In accordance with

---

2. For the purpose of this guidance, for foreign banking organizations, “board of directors” refers to the equivalent governing body of the U.S. operations of the FBO.

3. If these subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely on the conclusions drawn by relevant regulators regarding risk management to the fullest extent possible. See also, SR letter 16-4, “Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank, Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.”

4. Refer to 12 CFR 208, Appendix D-1, the Interagency Guidelines Establishing Standards for Safety and Soundness.

5. On May 24, 2018, the Economic Growth, Regulatory Relief, and Consumer Protection Act (Pub. L. No. 115-174, 132 Stat. 1296 (2018)) amended the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. No. 111-203, 124 Stat. 1376 (2010)) as well as other statutes administered by the Board of Governors of the Federal Reserve System (Board). This includes aspects of the Board’s Regulation YY discussing enhanced prudential standard requirements regarding risk management for holding companies. For more information, see the Board’s July 6, 2018, “Statement regarding the impact of the EGRRCPA.”

6. National treatment requires nondiscrimination between domestic and foreign firms, or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. The International Banking Act of 1978 generally gives foreign banks operating in the United States the same powers as domestic banking organizations and subjects them to the same restrictions and obligations.

Commercial Bank Examination Manual
adequacy. Additionally, the FBO’s U.S. senior management need to demonstrate and maintain a thorough understanding of all relevant risks affecting the U.S. operations and the associated management information systems, used to manage and monitor these risks within the U.S. operations.

The information systems at a larger institution will naturally require frequent monitoring and testing by independent control areas, and by both internal and external auditors, to ensure the integrity of the information used by the board of directors and senior management in overseeing compliance with policies and limits. Therefore, an institution’s risk oversight function needs to be sufficiently independent of the business lines to achieve an adequate separation of duties and the avoidance of conflicts of interest.

Board and Senior Management Oversight

The board of directors has the responsibility for establishing the level of risk that the institution should take. Accordingly, the board of directors should approve the institution’s overall business strategies and significant policies, including those related to managing risks. Further, the board of directors should also ensure that senior management is fully capable of implementing the institution’s business strategies and risk limits. In evaluating senior management, the board of directors should consider whether management is taking the steps necessary to identify, measure, monitor, and control these risks.

The board of directors should collectively have a balance of skills, knowledge, and experience to clearly understand the activities and risks to which the institution is exposed. The board of directors should take steps to develop an appropriate understanding of the risks the institution faces, through briefings from experts internal to their organization and potentially from external experts. The institution’s management information systems should provide the board of directors with sufficient information to identify the size and significance of the risks. Using this knowledge and information, the board of directors should provide clear guidance regarding the level of exposures acceptable to the institution and oversee senior management’s implementation of the procedures and controls necessary to comply with approved policies.

Senior management is responsible for implementing strategies set by the board of directors in a manner that controls risks and that complies with laws, rules, regulations, or other supervisory requirements on both a long-term and day-to-day basis. Accordingly, senior management should be fully involved in and possess sufficient knowledge of all activities to ensure that appropriate policies, controls, and risk monitoring systems are in place and that accountability and lines of authority are clearly delineated. Senior management is also responsible for establishing and communicating a strong awareness of the need for effective risk management, internal controls, and high ethical business practices. To fulfill these responsibilities, senior management needs to have a thorough understanding of banking and financial market activities and detailed knowledge of the institution’s activities, including the internal controls that are necessary to limit the related risks.

In assessing the quality of the oversight provided by the board of directors and senior management, examiners should consider the following:

- The board of directors has approved significant policies to establish risk tolerances for the institution’s activities and periodically reviews risk exposure limits to align with changes in the institution’s strategies, address new activities and products, and react to changes in the industry and market conditions.
- Senior management has identified and has a clear understanding and working knowledge of the risks inherent in the institution’s activities. Senior management also remains informed about these risks as the institution’s business activities evolve or expand and as changes and innovations occur in financial markets and risk management practices.
- Senior management has identified and reviewed risks associated with engaging in new activities or introducing new products to ensure that the necessary infrastructure and internal controls are in place to manage the related risks.
- Senior management has ensured that the institution’s activities are managed and staffed by personnel with the knowledge, experience, and expertise consistent with the nature and scope of the institution’s activities and risks.
- All levels of senior management provide appropriate management of the day-to-day activities of officers and employees, including oversight of senior officers or heads of business lines.
Senior management has established and maintains effective information systems to identify, measure, monitor, and control the sources of risks to the institution.

Policies, Procedures, and Limits

Although an institution’s board of directors approves an institution’s overall business strategy and policy framework, senior management develops and implements the institution’s risk management policies and procedures that address the types of risks arising from its activities. Once the risks are properly identified, the institution’s policies and procedures should provide guidance for the day-to-day implementation of business strategies, including limits designed to prevent excessive and imprudent risks. An institution should have policies and procedures that address its significant activities and risks with the appropriate level of detail to address the type and complexity of the institution’s operations. A smaller, less complex institution that has effective senior management directly involved in day-to-day operations would generally not be expected to have policies as sophisticated as larger institutions. In a larger institution, where senior managers rely on widely dispersed staffs to implement strategies for more varied and complex businesses, far more detailed policies and procedures would generally be expected. In either case, senior management is expected to ensure that policies and procedures address the institution’s material areas of risk and that policies and procedures are modified when necessary to respond to significant changes in the institution’s activities or business conditions.

The following guidelines should assist examiners in evaluating an institution’s policies, procedures, and limits:

- The institution’s policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its significant risk-taking activities.
- The policies, procedures, and limits are consistent with the institution’s stated strategy and risk profile.
- The policies and procedures establish accountability and lines of authority across the institution’s activities.
- The policies and procedures provide for the review and approval of new business lines, products, and activities, as well as material modifications to existing activities, services, and products, to ensure that the institution has the infrastructure necessary to identify, measure, monitor, and control associated risks before engaging in a new or modified business line, product, or activity.

Risk Monitoring and Management Information Systems

Institutions of all sizes are expected to have risk monitoring and management information systems in place that provide the board of directors and senior management with timely information and a clear understanding of the institution’s business activities and risk exposures. The sophistication of risk monitoring and management information systems should be commensurate with the complexity and diversity of the institution’s operations. Accordingly, a smaller and less complex institution may require less frequent management and board reports to support risk monitoring activities. For example, these reports may include, daily or weekly balance sheets and income statements, a watch list for potentially troubled loans, a report on past due loans, an interest rate risk report, and similar items. In contrast, a larger, more complex institution would be expected to have much more comprehensive reporting and monitoring systems, which includes more frequent reporting to board and senior management, tighter monitoring of high-risk activities, and the ability to aggregate risks on a fully consolidated basis across all business lines, legal entities, and activities.

In assessing an institution’s measurement and monitoring of risk and its management reports and information systems, examiners should consider whether these conditions exist:

- The institution’s risk monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, models, and procedures used in measuring and monitoring risks are appropriate and adequately documented and tested for reliability on an ongoing basis.\(^7\)
- Reports and other forms of communication address the complexity and range of an institution’s activities, monitor key exposures and compliance with established limits and strategy, and as appropriate, compare actual versus

---

\(^7\) See this manual’s section “Model Risk Management,” and SR letter 11-7, “Guidance on Model Risk Management.”
expected performance.
• Reports to the board of directors and senior management are accurate, and provide timely and sufficient information to identify any adverse trends and to evaluate the level of risks faced by the institution.

Internal Controls
An effective internal control structure is critical to the safe and sound operation of an institution. Effective internal controls promote reliable financial and regulatory reporting, safeguard assets, and help to ensure compliance with relevant laws, rules, regulations, supervisory requirements, and institutional policies. Therefore, an institution’s senior management is responsible for establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate segregation of duties.

Adequate segregation of duties is a fundamental and essential element of a sound risk management and internal control system. Failure to implement and maintain an adequate segregation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise the integrity of the institution’s internal controls. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

Internal controls should be tested by an independent party who reports either directly to the institution’s board of directors or its designated committee, which is typically the audit committee. However, small CBOs whose size and complexity do not warrant a full scale internal audit function may rely on regular reviews of essential internal controls conducted by other institution personnel. Given the importance of appropriate internal controls to institutions of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management’s responses to the findings. In addition, communication channels should allow for adverse or sensitive findings to be reported directly to the board of directors or to the relevant board committee.

In evaluating internal controls, examiners should consider whether these conditions are met:
• The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the institution’s activities.
• The institution’s organizational structure establishes clear lines of authority and responsibility for risk management and for monitoring adherence to policies, procedures, and limits.
• Internal audit or other control functions, such as loan review and compliance, provide for independence and objectivity.
• The official organizational structures reflect actual operating practices and management responsibilities and authority over a particular business line or activity.
• Financial, operational, risk management, and regulatory reports are reliable, accurate, and timely; and wherever applicable, material exceptions are noted and promptly investigated or remediated.
• Policies and procedures for control functions support compliance with applicable laws, rules, regulations, or other supervisory requirements.
• Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits, regulatory examinations, and other review tests are adequately documented; identified material weaknesses are given appropriate and timely, high-level attention; and management’s actions to address material weaknesses are objectively verified and reviewed.
• The institution’s board of directors, or audit committee, and senior management are responsible for developing and implementing an effective system of internal controls and that the internal controls are operating effectively.

Conclusions
Examiners are expected to assess risk management for an institution and assign formal ratings of “risk management” as described in the Com-
In reports of examination or inspection, and in transmittal letters to the boards of directors of state member banks, holding companies, and to the FBO officer of the U.S. operations, examination staff should specifically reference the types and nature of corrective actions that need to be taken by an institution to address noted risk management and internal control deficiencies. Where appropriate, the Federal Reserve will advise an institution that supervisory action will be initiated, if the institution fails to timely remediate risk management weaknesses when such failures create the potential for serious losses or if material deficiencies or situations threaten its safety and soundness. Such supervisory actions may include formal enforcement actions against the institution, or its responsible officers and directors, or both, and would require the immediate implementation of all necessary corrective measures.

If bank or holding company subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely to the fullest extent possible on the conclusions drawn by relevant regulators regarding risk management. See also, SR letter 16-4, “Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.”

Risk Management Processes and Internal Controls of Firms Having $50 Billion or More in Total Assets

Effective date May 2019

Section 1012.1

APPLICABILITY

The guidance in this section largely is based on SR letter 95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies.” This risk management guidance applies to the supervision of state member banks and bank holding companies with greater than $50 billion in total consolidated assets.

SR letter 95-51 instituted an explicit risk management rating requirement to be assigned for examinations commencing on or after January 2, 1996. The risk management rating applies to all state member banks, regardless of their size. For more information on this risk management rating, see the appendix to this manual’s section entitled, “Condition of the Bank: Uniform Financial Institutions Rating System.”

INTRODUCTION

The Federal Reserve places significant supervisory emphasis on the adequacy of an institution’s management of risk, including its system of internal controls, when assessing the condition of an organization. An institution’s failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Principles of sound management should apply to the entire spectrum of risks facing a banking institution, including, but not limited to, credit, market, liquidity, operational, legal, and reputational risk.

- **Credit risk** arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- **Market risk** is the risk to a financial institution’s condition resulting from adverse movements in market rates or prices, such as interest rates, foreign exchange rates, or equity prices.
- **Liquidity risk** is the potential that an institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as “funding liquidity risk”), or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as “market liquidity risk”).
- **Operational risk** arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.
- **Legal risk** arises from the potential that unenforceable contracts, lawsuits, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a banking organization.
- **Reputational risk** is the potential that negative publicity regarding an institution’s business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions.

In practice, an institution’s business activities present various combinations and concentrations of these risks, depending on the nature and scope of the particular activity. The following discussion provides guidelines for determining the quality of bank management’s formal or informal systems for identifying, measuring, and containing these risks.

ELEMENTS OF RISK MANAGEMENT

When evaluating the quality of risk management as part of the evaluation of the overall quality of management, examiners should place primary consideration on findings relating to the following elements of a sound risk management system:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk measurement, risk monitoring, and management information systems
- comprehensive internal controls

Examiners should recognize that the considerations specified in these guidelines are intended only to assist in the evaluation of risk management.
management practices, and not as a checklist of requirements for each institution. Moreover, while all bank holding companies should be able to assess the major risks of the consolidated organization, examiners should expect parent companies to centrally manage the operations and functions of their subsidiary banks to have more comprehensive, detailed, and developed risk management systems than companies that delegate the management of risks to relatively autonomous banking subsidiaries.

Adequate risk management programs can vary considerably in sophistication, depending on the size and complexity of the banking organization and the level of risk that it accepts. For smaller institutions engaged solely in traditional banking activities and whose senior managers and directors are actively involved in the details of day-to-day operations, relatively basic risk management systems may be adequate. In such institutions, these systems may consist only of written policies addressing material areas of operations, such as lending or investing, basic internal control systems, and a limited set of management and board reports. However, large, multinational organizations will require far more elaborate and formal risk management systems to address their broader and typically more complex range of financial activities, and to provide senior managers and directors with the information they need to monitor and direct day-to-day activities. In addition to the banking organization’s market and credit risks, risk management systems should encompass the organization’s trust and fiduciary activities, including investment advisory services, mutual funds, and securities lending.

The risk management processes of large banking organizations would typically contain detailed guidelines that set specific prudential limits on the principal types of risks relevant to their activities worldwide. Furthermore, because of the diversity of their activities and the geographic dispersion of their operations, these institutions will require timely and relatively more sophisticated reporting systems in order to manage their risks properly. These reporting systems, in turn, should comprise an adequate array of reports that provide the levels of detail about risk exposures that are relevant to the duties and responsibilities of individual managers and directors.

Such extensive systems of large institutions will naturally require frequent monitoring and testing by independent control areas and internal, as well as external, auditors to ensure the integrity of the information used by senior officials in overseeing compliance with policies and limits. The risk management systems or units of such institutions must also be sufficiently independent of the business lines in order to ensure an adequate separation of duties and the avoidance of conflicts of interest.

Active Board and Senior Management Oversight

Boards of directors have ultimate responsibility for the level of risk taken by their institutions. Accordingly, they should approve the overall business strategies and significant policies of their organizations, including those related to managing and taking risks, and should also ensure that senior management is fully capable of managing the activities that their institutions conduct. While all boards of directors are responsible for understanding the nature of the risks significant to their organizations and for ensuring that management is taking the steps necessary to identify, measure, monitor, and control these risks, the level of technical knowledge required of directors may vary depending on the particular circumstances at the institution.

Directors of large banking organizations that conduct a broad range of technically complex activities, for example, cannot be expected to understand the full details of their institutions’ activities or the precise ways risks are measured and controlled. They should, however, have a clear understanding of the types of risks to which their institutions are exposed and should receive reports that identify the size and significance of the risks in terms that are meaningful to them. In fulfilling this responsibility, directors should take steps to develop an appropriate understanding of the risks their institutions face, possibly through briefings from auditors and experts external to the organization. Using this knowledge and information, directors should provide clear guidance regarding the level of exposures acceptable to their institutions and have the responsibility to ensure that senior management implements the procedures and controls necessary to comply with adopted policies.

Directors of institutions that conduct more traditional and less complicated business activities may require significantly less knowledge of
complex financial transactions or capital markets.

Senior management is responsible for implementing strategies in a manner that limits risks associated with each strategy and that ensures compliance with laws and regulations on both a long-term and day-to-day basis. Accordingly, management should be fully involved in the activities of their institutions and possess sufficient knowledge of all major business lines to ensure that appropriate policies, controls, and risk monitoring systems are in place and that accountability and lines of authority are clearly delineated. Senior management is also responsible for establishing and communicating a strong awareness of and need for effective internal controls and high ethical standards. Meeting these responsibilities requires senior managers of a bank or bank holding company to have a thorough understanding of banking and financial market activities and detailed knowledge of the activities their institution conducts, including the nature of internal controls necessary to limit the related risks.

When assessing the quality of the oversight by boards of directors and senior management, examiners should consider whether the institution follows policies and practices such as those described below:

- The board and senior management have identified and have a clear understanding and working knowledge of the types of risks inherent in the institution’s activities, and they make appropriate efforts to remain informed about these risks as financial markets, risk management practices, and the institution’s activities evolve.
- The board has reviewed and approved appropriate policies to limit risks inherent in the institution’s lending, investing, trading, trust, fiduciary, and other significant activities or products.
- The board and management are sufficiently familiar with and are using adequate record-keeping and reporting systems to measure and monitor the major sources of risk to the organization.
- The board periodically reviews and approves risk-exposure limits to conform to any changes in the institution’s strategies, reviews new products, and reacts to changes in market conditions.
- Management ensures that its lines of business are managed and staffed by personnel whose knowledge, experience, and expertise is consistent with the nature and scope of the banking organization’s activities.
- Management ensures that the depth of staff resources is sufficient to operate and soundly manage the institution’s activities, and ensures that employees have the integrity, ethical values, and competence that are consistent with a prudent management philosophy and operating style.
- Management at all levels provides adequate supervision of the day-to-day activities of officers and employees, including management supervision of senior officers or heads of business lines.
- Management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
- Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activities or products and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

Adequate Policies, Procedures, and Limits

As previously stated, the board of directors is ultimately responsible for the level of risk taken by the institution. Senior management is responsible for implementing strategies in a manner that limits risks associated with each strategy. An institution’s directors and senior management should tailor their risk management policies and procedures to the types of risks that arise from the activities the institution conducts. Once the risks are properly identified, the institution’s policies and its fully articulated procedures provide detailed guidance for the day-to-day implementation of broad business strategies, and generally include limits designed to shield the organization from excessive and imprudent risks. While all banking organizations should have policies and procedures that address their significant activities and risks, the coverage and level of detail embodied in these statements will vary among institutions. A smaller, less complex banking organization that has effective management that is heavily involved in day-to-day operations generally would be expected to have only basic policies addressing the significant areas of operations and set-
ting forth a limited set of requirements and procedures. In a larger institution, where senior managers must rely on widely dispersed staffs to implement strategies in an extended range of potentially complex businesses, more detailed policies and related procedures would generally be expected. In either case, however, management is expected to ensure that policies and procedures address the material areas of risk to an institution and that they are modified when necessary to respond to significant changes in the banking organization’s activities or business conditions.

Examiners should consider the following when evaluating the adequacy of a banking organization’s policies, procedures, and limits:

- The institution’s policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, trust, fiduciary, and other significant activities.
- The policies, procedures, and limits are consistent with management’s experience level, the institution’s stated goals and objectives, and the overall financial strength of the organization.
- Policies clearly delineate accountability and lines of authority across the institution’s activities.
- Policies provide for the review of new activities to ensure that the financial institution has the necessary infrastructures to identify, monitor, and control risks associated with an activity before it is initiated.

Adequate Risk Monitoring and Management Information Systems

Effective risk monitoring requires institutions to identify and measure all material risk exposures. Consequently, risk monitoring activities must be supported by information systems that provide senior managers and directors with timely reports on the financial condition, operating performance, and risk exposure of the consolidated organization as well as with regular and sufficiently detailed reports for line managers engaged in the day-to-day management of the organization’s activities.

The sophistication of risk monitoring and management information systems should be consistent with the complexity and diversity of the institution’s operations. Accordingly, smaller and less complicated banking organizations may require only a limited set of management and board reports to support risk monitoring activities. These reports include, for example, daily or weekly balance sheets and income statements, a watch list for potentially troubled loans, a report for past due loans, a simple interest rate risk report, and similar items. Larger, more complicated institutions, however, would be expected to have much more comprehensive reporting and monitoring systems that allow, for example, for more frequent reporting, tighter monitoring of complex trading activities, and the aggregation of risks on a fully consolidated basis across all business lines and activities. Financial institutions of all sizes are expected to have risk monitoring and management information systems in place that provide directors and senior management with a clear understanding of the banking organization’s positions and risk exposures.

When assessing the adequacy of an institution’s risk measurement and monitoring, as well as its management reports and information systems, examiners should consider whether these conditions exist:

- The institution’s risk monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate and adequately documented, and are tested for reliability on an ongoing basis.
- Reports and other forms of communication are consistent with the banking organization’s activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.
- Reports to management or to the institution’s directors are accurate and timely, and contain sufficient information for decision makers to identify any adverse trends and to evaluate adequately the level of risk faced by the institution.

Adequate Internal Controls

An institution’s internal control structure is critical to the safe and sound functioning of the organization generally and to its risk management system, in particular. Establishing and maintaining an effective system of controls,
including the enforcement of official lines of authority and the appropriate separation of duties—such as trading, custodial, and back-office—is one of management’s more important responsibilities.

Appropriately segregating duties is a fundamental and essential element of a sound risk management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise the financial integrity of the institution. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting, safeguards assets, and helps to ensure compliance with relevant laws, regulations, and institutional policies. Ideally, internal controls are tested by an independent internal auditor who reports directly either to the institution’s board of directors or its designated committee, which is typically the audit committee. However, smaller institutions whose size and complexity do not warrant a full-scale internal audit function may rely on regular reviews of essential internal controls conducted by other institution personnel. Personnel performing these reviews generally should be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management’s responses to them. In addition, communication channels should exist that allow negative or sensitive findings to be reported directly to the board of directors or to the relevant board committee.

When evaluating the adequacy of a financial institution’s internal controls and audit procedures, examiners should consider whether these conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization’s activities.
- The institution’s organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
- Reporting lines for the control areas are independent from the business lines, and there is adequate separation of duties throughout the organization—such as duties relating to trading, custodial, and back-office activities.
- Official organizational structures reflect actual operating practices.
- Financial, operational, and regulatory reports are reliable, accurate, and timely, and, when applicable, exceptions are noted and promptly investigated.
- Adequate procedures exist for ensuring compliance with applicable laws and regulations.
- Internal audit or other control-review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed. The coverage of procedures for, and findings and responses to audits and review tests are adequately documented. Identified material weaknesses are given appropriate and timely high-level attention, and management’s actions to address material weaknesses are objectively verified and reviewed.
- The institution’s audit committee or board of directors reviews the effectiveness of internal audits and other control-review activities regularly.

The Risk Management Rating is to be reflected in the institution’s overall “Management” rating. The risk management rating should be consistent with the stated rating criteria of “1” through “5.” For more information see the appendix to the section entitled, “Condition of the Bank: Uniform Financial Institutions Rating System.”
WHAT’S NEW IN THIS REVISED SECTION

Effective April 2017, this section is revised to include changes resulting from the November 16, 2016, issuance of SR-16-16 / CA-16-7, “Special Post-Employment Restriction for Senior Examiners.” This letter was issued to announce an amendment to the Board’s rule on Post-Employment Restrictions for Senior Examiners (12 CFR 264a), which expands the definition of “senior examiner.” This amendment was developed to promote consistency in post-employment ethics rules across the Federal Reserve System and to address the risk associated with individuals leaving the Federal Reserve for employment with a regulated entity.

The Federal Reserve System (System) maintains a long-standing policy that compels System employees, including examiners, to avoid any action that may result in an employee (or create the appearance that an employee is)—

- using his or her Federal Reserve position for private gain,
- giving preferential treatment to any person or institution,
- losing independence or impartiality, or
- making decisions outside of official channels.

Federal Reserve examiners are also subject to conflict-of-interest rules that are designed to ensure (1) both the objectivity and integrity of bank examinations and (2) that Federal Reserve examiners comply with criminal statutory prohibitions.

The conflict-of-interest rules are set forth in section 5 of the Federal Reserve Administrative Manual (FRAM), which is a compilation of current Federal Reserve System operating policies and procedures issued by the Board of Governors, and in each Reserve Bank’s uniform codes of conduct. In addition to providing guidance related to conflicts-of-interest rules, the FRAM provides comprehensive ethics-related guidelines pertaining to Federal Reserve supervisory staff such as:

- recusal from certain supervisory matters;
- borrowing prohibitions;
- prohibiting political communications with insured depository institutions or their affiliates; and
- post-employment restrictions.

PENALTY FOR VIOLATING EXAMINER BORROWING RULES

A bank examiner is prohibited from accepting a loan or gratuity from any bank examined by the individual (18 USC 213). An officer, director, or employee of a bank is prohibited from making or granting any loan or gratuity to any examiner who examines or has authority to examine the bank (18 USC 212). These statutory provisions may also be applicable to a loan obtained by a System employee who has been issued a special, temporary, or ad hoc examiner credential. Under section 213 of title 18 of the U.S. Code (Crimes), a bank examiner found in violation of the borrowing prohibition can be—

- fined under title 18 of the U.S. Code (Crimes), imprisoned not more than one year, or both;
- further fined a sum equal to the money loaned or gratuity given; and
- disqualified from holding office as an examiner.

POST-EMPLOYMENT RESTRICTIONS FOR “SENIOR EXAMINERS”

On November 17, 2005, the federal bank regulatory agencies1 adopted a rule (effective December 17, 2005) to implement the post-employment restriction found in the Intelligence Reform and Terrorism Prevention Act of 2004 (see 12 USC 1820).2 (See the Board’s rules at 12 CFR 263, 264, 264a as well as SR-16-16 / CA-16-7, “Special Post-Employment Restriction for Senior Examiners,” and its attachment.) The restriction prohibits an examiner who served as a “senior examiner” for a depository institution or depository institution holding company for two or more months during the examiner’s final twelve

---

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.
months of employment with a Reserve Bank from knowingly accepting compensation as an employee, an officer, a director, or a consultant from that depository institution or holding company, or from certain related entities. The individual meets all of the following criteria:

- The officer or employee has been authorized by the Board to conduct examinations or inspections on behalf of the Board.
- The officer or employee has been assigned continuing, broad, and lead responsibility for examining or inspecting that depository institution or depository institution holding company.
- The officer’s or employee’s responsibilities for examining, inspecting, and supervising the depository institution or depository institution holding company—
  - represent a substantial portion of the officer’s or employee’s assigned responsibilities and
  - require the officer or employee to interact routinely with officers or employees of the depository institution or depository institution holding company.

This rule applies only to an individual serving in a leadership role who is dedicated to supervising a single depository institution (or group of affiliated depository institutions) or depository institution holding company. Specifically, the rule applies to senior supervisory officers (SSOs), deputy SSOs, enterprise risk officers (EROs), central points of contact (CPCs), deputy CPCs, and supervisory team leaders.

The rule does not cover an individual who

- is dedicated to supervising a single depository institution (or group of affiliated depository institutions) or depository institution holding company, but does not have leadership responsibilities in conjunction with this role;
- serves in a leadership role for multiple unaffiliated depository institutions or depository institution holding companies at the same time; or
- performs only periodic, short-term examinations of a depository institution or depository institution holding company, dedicating less than two months in a year to that institution.

Penalty for Violating “Senior Examiner” Restriction

The restriction applies to a covered individual for one year after the individual terminates his or her employment with the Reserve Bank. If an examiner violates the one-year restriction, the statute requires the appropriate federal banking agency to seek an order of removal and industry wide employment prohibition for up to five years, a civil money penalty of up to $250,000, or both. In special circumstances, the Chairman of the Board of Governors may waive the restriction for the “senior examiner” of the Federal Reserve by certifying in writing that granting the individual a waiver of the restric-

---

3. The Board’s rule applies to a covered examiner who leaves the Federal Reserve’s service after December 17, 2005. Because the statute has a one-year look-back provision, an examiner’s responsibilities from as far back as December 17, 2004, may subject the “senior examiner” to the post-employment restriction.

4. This is applicable to financial market utilities (FMUs), and nonbank financial companies (NFCs) that are designated by the Financial Stability Oversight Council (FSOC) for supervision by the Federal Reserve, only to the extent that they are depository institutions or depository institution holding companies.

5. SSOs, Deputy SSOs, and EROs are job titles used by the Federal Reserve Bank of New York for senior officers serving on dedicated teams for Large Institution Supervision Coordinating Committee (LISCC) firms. For comparative purposes, the SSO job title is considered equivalent to the CPC job title, while the ERO job title is equivalent to the deputy SSO/CPC job title.

6. A supervisory team leader is defined as any Reserve Bank officer or employee who serves in a leadership role as part of a dedicated supervisory team. Examples of supervisory team leaders may include risk team leaders, business line team leaders, and the chief operating officers assigned to or supporting a dedicated supervisory team. The application of this rule is determined based on the roles and responsibilities of individuals rather than their specific job title. Questions regarding applicability and interpretation should be directed to the Board’s Division of Supervision and Regulation conflicts staff.
tion would not affect the integrity of the Federal Reserve’s supervisory program.

ADMINISTRATIVE PROCEDURES FOR IMPLEMENTING THE “SENIOR EXAMINER” RESTRICTION AND ADDITIONAL GUIDELINES

At a minimum, Reserve Banks shall adopt the following procedures to ensure that the “senior examiner” rule is properly implemented:

Notification to senior examiners

To help examiners comply with the statute, Reserve Banks shall establish procedures to periodically and regularly review examiners’ duties and promptly notify examiners in writing when a change in duties would cause an examiner to be considered a “senior examiner” or cease to be considered a “senior examiner” with respect to an institution or holding company for purposes of the rule. Reserve Banks should consult with Board staff if questions arise as to whether an examiner would be considered a “senior examiner.” The attachment to SR-16-16/CA-16-7 provides a sample form for a Notice of Post-Employment Restriction that Reserve Banks can use for such notification.

Examiners’ responsibility

Examiners are responsible for becoming familiar with the rule and ensuring that they comply with the rule. Examiners should direct any questions they may have regarding the rule to the Reserve Bank’s designated ethics officers.

Monitoring of senior examiner assignments

Reserve Banks shall maintain electronic records of examiners covered by the rule. These records at a minimum shall include

- the name of each “senior examiner”;
- the name of the depository institution or depository institution holding company for which the examiner is considered a “senior examiner”;
- the duration of the examiner’s service as a “senior examiner” for the depository institution or depository institution holding company;
- the last date of Reserve Bank employment, as well as the reason for leaving, if the “senior examiner” ends employment with the Reserve Bank; and
- the name of the organization with which the senior examiner has accepted employment after ending employment with the Reserve Bank, if available.

Work Paper review

If any examiner, regardless of whether he or she is designated as a “senior examiner,” accepts employment with a depository institution or depository institution holding company that he or she examined in the twelve months prior to his or her departure from Federal Reserve employment, the Reserve Bank shall review the work papers related to his or her assignment supervising that institution. The work paper review should be performed within 60 days of the examiner’s departure and should consider whether the examiner compromised examination findings or supervisory proceedings because of pending employment with the relevant depository institution or depository institution holding company (for example, the examiner failed to bring significant findings or concerns forward to examination management, or omitted important examination processes or elements of the examination scope).

Disciplinary procedures

If a Reserve Bank becomes aware that a former examiner has violated the rule, the Reserve Bank shall promptly notify the Reserve Bank’s officer-in-charge of supervision, its ethics officer, and the Board’s designated agency ethics officer.

INTRODUCTION

The Federal Reserve System (the System) deploys algorithms in regular monitoring to identify state member banks that (1) take on positions or pursue strategies that could lead to problem situations, (2) have a weak or declining financial condition, or (3) fail to comply with regulations. The surveillance systems rely on the Call Report, other regulatory reports, and examination data, as well as external data sources, to identify institutions exhibiting increased risk profiles, financial deterioration, or compliance shortfalls. The surveillance process promotes timely supervisory attention to these cases and directs examination resources to them.

System bank surveillance algorithms focus on many areas evaluated in the supervisory process, such as capital adequacy, liquidity, credit risk, market risk, and overall safety and soundness. In addition, screens flag banks engaging in new or complex activities. The algorithmic system’s main components are the Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List, as implemented in SR-15-16, “Enhancements to the Federal Reserve System’s Surveillance Program,” December 10, 2015, and described below. The surveillance information helps identify weak or deteriorating banks and those with changing risk profiles or deviations from supervisory expectations.

In addition to regular monitoring, supervisory staff also use surveillance results in pre-examination planning. Before an on-site review, the examiner will determine a bank’s status on the System’s Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List. This information is useful in determining the type of examination to be performed (full or targeted), its scope and intensity, and the staff resources needed. The surveillance results are used to identify bank activities that may warrant a higher degree of review or focus during an on-site examination. In this manner, surveillance information helps examiners and other supervisory staff plan and schedule more forward-looking, risk-focused examinations.

Bank Surveillance Program activities generally consist of the following three phases:

1. In the first phase, data are processed by the algorithms, ranging from simple rules to financial models and machine learning results. When the algorithms detect departures from expected patterns involving banks, the results are transmitted via Performance Report Information and Surveillance Monitoring (PRISM), a web application available to Federal Reserve examiners and other supervisory staff for interactive data analysis.

2. The second phase begins as supervisory staff use additional tools and data to solidify the initial impressions presented by first-phase surveillance results. Key examples are the Focus Report—a web application available to Federal Reserve examiners and other supervisory staff for interactive risk assessment—and the Uniform Bank Performance Report. In addition, aggregate data views and reports of financial condition at the supervisory portfolio and industry levels can help place a particular bank’s status in context.

3. The third phase involves the development of supervisory responses to the information generated in the first two steps. A primary goal is to focus supervisory resources on excessive risk-taking, the risk of emerging financial difficulties, and potential compliance shortcomings. Possible actions include intensification of an on-site review or acceleration of its scheduling. When problems are identified, follow-up by examiners promotes correction and resolution. By also identifying low-risk situations, the Bank Surveillance Program promotes the application of more streamlined supervisory approaches for such cases.

OUTLIER LIST

An Outlier List highlights state member banks with elevated risk-taking and identifies those with expanded or new areas of risk-taking. It is supported by “Outlier Metrics” in the form of algorithms generating risk classifications of low, moderate, or high for individual risk and performance dimensions. The Outlier List includes banks categorized as high risk within at least one risk or performance dimension. The risk identification algorithms can be based on a
broad range of approaches and may evolve over time.

Examiners and other supervisory staff should use the Outlier List to monitor risk-taking and promote adequate risk management and mitigation, with the goal of bolstering banks’ capacity to prevent or buffer financial losses. However, no regular write-up or documentation requirement is tied to the Outlier List.

The Outlier List also assist examiners and other supervisory staff in determining the scope of a safety-and-soundness examination. The Outlier Metrics’ role in pre-examination planning is particularly strong at community and regional state member banks, where a subset of the Outlier Metrics is implemented as in SR-19-9, “Bank Exams Tailored to Risk (BETR),” June 3, 2019. BETR’s Outlier Metrics combine with examiner judgment to classify the levels of risk at a state member bank within individual risk dimensions, such as credit, liquidity, and operational risk. The bank’s examination is then tailored to reflect the levels of risk present and minimize regulatory burden for the bank.

BETR’s primary objectives are the following:

1. Identify a state member bank’s activities that are low risk and apply appropriately streamlined examination work programs to those areas, thereby conserving supervisory staff resources.
2. Identify a state member bank’s high-risk activities and target them for enhanced supervisory attention, thereby directing supervisory resources to where they are most needed.
3. For the remaining moderate-risk activities, implement examination work programs of average intensity.

BETR’s Outlier Metrics gauge the potential for a state member bank to experience adverse outcomes, such as highly unfavorable financial trends, significant performance shortfalls, severe losses, or supervisory rating downgrades, over a 12- to 24-month timeframe, and under unfavorable market conditions. As such, the metrics assist examiners in classifying the levels of risk related to a bank’s activities.

For each risk dimension considered by BETR, the Outlier Metrics classify the corresponding activity of a state member bank. Low-risk activities pose the least potential for adverse outcomes to a bank, while high-risk activities entail the greatest chance of unfavorable results. The following definitions generally apply:

- **High risk:** Under unfavorable market conditions, such activities often lead to adverse outcomes.
- **Moderate risk:** In unfavorable markets, these activities occasionally result in adverse outcomes.
- **Low risk:** The expected incidence of adverse outcomes is low, irrespective of market conditions.

The design features of the Outlier Metrics used in BETR are as follows:

1. **Data-driven:** The information content, or predictive capacity, of the metrics is confirmed via data analysis. This feature involves the estimation and back-testing of the metrics using data from previous banking cycles.
2. **Forward-looking:** The metrics gauge the risk posture of a state member bank and its susceptibility to severe losses or substantial underperformance. This feature is supported by estimating the relationship between risk indicators at a given point in time and bank performance a year or two later, particularly under unfavorable market conditions.
3. **Granular:** The metrics provide insight into individual risk dimensions. This feature is incorporated by developing the metrics separately for each risk dimension considered.

Outlier Metrics provide examiners with a data-driven starting point for determining the scope of a state member bank’s examination. In cases where examiners are aware of factors indicating that an alternative risk classification for a particular risk dimension would be more appropriate, they should exercise supervisory judgment and adjust the risk tier during the scoping process. Examiners should then record their rationale in appropriate work papers and plan the examination work program accordingly.

BETR’s Outlier Metrics should be used to allocate more examiner resources to review high-risk situations, while conserving resources in lower risk cases. The examiner should exercise prudent supervisory judgment and consider an institution’s Outlier List status and all other applicable information, including the Watch List, State Member Bank Monitoring Screen, Intercompany Transactions Exception List, and pre-
vious examination results, when determining the scope and nature of the examination work required.

When the Outlier Metrics and other applicable information indicate a specific risk is high, the examiner generally should apply the fullest force of supervisory resources. Conversely, when the Outlier Metrics and other applicable information indicate a specific risk is moderate, and especially when risk is low, the examiner may be able to complete a smaller set of procedures. However, if during the course of an examination indications point to higher risk than anticipated or significant weaknesses in risk management, the examiner is expected to increase the examination’s intensity or expand its scope, as needed.

WATCH LIST

The Watch List is a primary means for monitoring state member bank performance and condition between on-site examinations. It identifies the risk of emerging financial weaknesses among banks and includes all state member banks with composite safety-and-soundness ratings consistent with financial viability, but surveillance grades of “D” or “F,” pointing to the possibility of deterioration in examination findings going forward.

To generate the surveillance grades, the Supervision and Regulation Statistical Assessment of Bank Risk (SR-SABR) early-warning model is applied to financial and supervisory information for each bank. The SR-SABR rating consists of the composite rating most recently assigned to a bank via the examination process, coupled with a surveillance letter grade (A, B, C, D, or F) reflecting the bank’s estimated financial condition relative to others in the same rating class.¹

SR-SABR ratings are designed for use both in monitoring and in determining the scope of an examination. An accompanying Schedule of Risk Factors (SRF) highlights specific indicators leading the model to flag a particular bank as strong or weak. Through ongoing monitoring, examiners and other supervisory staff review each state member bank on the Watch List to assess its financial condition and discern whether substantial deterioration is evident or impending. In such cases, they determine whether an examination or other supervisory initiative might be needed. The Watch List, much like the Outlier List and its metrics, can also be used in pre-examination planning to target potentially deteriorating situations for the most extensive reviews.

At times, Reserve Bank staff may need to produce supporting documentation to explain the reasons for a bank’s placement on the Watch List and outline the appropriate supervisory response. For banks other than community banks, this type of information is often already contained in quarterly supervisory write-ups outside of the Watch List process. Separate surveillance write-ups are required for community banks on the Watch List when any of the following criteria are met:

1. The current SR-SABR rating is worse than the prior quarter; or
2. The SR-SABR rating is the same as the prior quarter, but the SRF identifies one or more new contributing factors; or
3. The most recent requirement for a write-up occurred four quarters earlier.

The assessments and conclusions comprising a write-up should be brief and supported by analysis. A Watch List write-up should:

1. Summarize the factors leading to Watch List placement;
2. Describe any response from the bank to those factors;
3. Assess the likelihood of further financial deterioration;
4. Judge whether assigned safety-and-soundness ratings are accurate; and
5. Determine whether the timing of the next examination should be accelerated.

Corrective action associated with newly identified problems must be initiated promptly by Reserve Banks. Follow-up action may include correspondence or meetings with a bank’s management or an on-site examination. Problem situations should be closely monitored by supervisory staff until they have been corrected or otherwise resolved.

¹ In the model, banks with satisfactory composite ratings are grouped together into a single rating class. An SR-SABR grade of “A” denotes a bank with strong indicators relative to others in the same rating class, while an “F” indicates major weaknesses. Two grades are assigned to each bank, one reflecting the estimated probability of a downgrade to a worse rating class (Adverse Change grade) and another reflecting the estimated probability of critical undercapitalization or failure (Viability grade). The overall SR-SABR rating is based on the worse of the two grades.
STATE MEMBER BANK MONITORING SCREEN

The State Member Bank Monitoring Screen identifies complex activities, monitors compliance with regulations, and more generally can be used to detect novelties or departures from expected patterns. The monitoring screen identifies banks that have failed key screening criteria. The screening criteria are updated periodically and change over time. Examiners and other supervisory staff review State Member Bank Monitoring Screen results quarterly and follow up with supervisory initiatives when appropriate.

INTERCOMPANY TRANSACTIONS EXCEPTION LIST

The Intercompany Transactions Exception List helps track compliance with section 23A of the Federal Reserve Act; it is a specialized monitoring process utilizing data from the FR Y-8, together with information from the Call Report.

For each depository institution possibly exceeding section 23A limits, supervisory staff perform the following: (1) follow up with the holding company submitting the FR Y-8 to verify the data are accurate; (2) if an error caused the exception, require an amended report; and (3) if the data are correct, and a depository institution appears to have had covered transactions exceeding section 23A limits, determine the nature and extent of the apparent violation. Reserve Bank staff produce a written review of their findings for each depository institution on the list. The review addresses any apparent violations or reporting errors, along with any corrective action taken.

---

2. See also the Board’s Regulation W at 12 CFR 223.
Federal Reserve System Bank Surveillance Program
Examination Objectives
Effective date April 2020

Section 1020.2

1. To identify major changes in the risk posture of the bank between examinations.
2. To identify major changes in the financial condition of the bank between examinations.
3. To assist in determining the scope of the examination and the priority of work to be performed.
4. To check the validity of the data being reported by the bank.
5. To investigate areas where attention or an in-depth review is indicated.
1. Obtain any surveillance results, such as the Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List, together with any other reports or analyses prepared by the Reserve Bank or Board, that have been generated for the bank.

2. Review the information obtained in step 1, and if necessary for clarification discuss those findings with surveillance staff.

3. Conduct a pre-examination analysis using the information from steps 1 and 2, together with the current Call Report, Uniform Bank Performance Report, prior examination report, and any other applicable information. This analysis should be considered when determining the scope of the examination and when making staffing decisions.

4. Follow up on any unusual aspects of the surveillance information, other reports and analyses, and newly obtained data.

5. Perform validity checks necessary to ensure the quality of reported data. This would include such normal examination procedures as validating Call Report information and confirming the accuracy and soundness of accounting practices.
INTRODUCTION

Workpapers are the written documentation of the procedures followed and the conclusions reached during the examination of a bank. Accordingly, they include, but are not necessarily limited to, examination procedures and verifications, memoranda, schedules, questionnaires, checklists, abstracts of bank documents and analyses prepared or obtained by examiners.

The definition of workpapers, their purpose, and their quality and organization are important because the workpapers as a whole should support the information and conclusions contained in the related report of examination. The primary purposes of workpapers are to—

• organize the material assembled during an examination to facilitate review and future reference.
• aid the examiner in efficiently conducting the examination.
• document the policies, practices, procedures and internal controls of the bank.
• provide written support of the examination and audit procedures performed during the examination.
• document the results of testing and formalize the examiner’s conclusions.
• substantiate the assertions of fact or opinion contained in the report of examination.

They also are useful as—

• a tool for the examiner-in-charge to use in planning, directing, and coordinating the work of the assistants.
• a means of evaluating the quality of the work performed.
• a guide in estimating future personnel and time requirements.
• a record of the procedures used by the bank to assemble data for reports to the Board of Governors of the Federal Reserve System.
• a guide to assist in the direction of subsequent examinations, inquiries and studies.

The initial step in preparing workpapers is to review, where available, the applicable sections of supporting data prepared during the prior examination. When reviewing prior workpapers, the examiner should consider the data prepared in each area for—

• information that is of a continuing or permanent nature.
• guidance in preparation of workpapers for the current examination.
• an indication of changes or inconsistencies in accounting procedures or methods of their application since the last examination.

Accumulation of relevant documentation consistent with prior examinations, however, is often insufficient. Workpapers should be prepared in a manner designed to facilitate an objective review, should be organized to support an examiner’s current findings and should document the scope of the current examination. Minimum content necessary for each section of workpapers includes:

Source of Information—This is important, not only in identifying the bank, but also in identifying the preparer. In subsequent examinations, the preparer should be able to readily determine the bank personnel from whom the information was obtained during the previous examination as well as the examiner who prepared the workpapers. Accordingly, each workpaper should include—

• bank name and subdivision thereof, either functional or financial.
• statement of title or purpose of the specific analysis or schedule.
• specific identification of dates, examination date and work performance date.
• initials of preparer and initials indicating review by the examiner designated to perform that function. Although appropriate use may be made of initials, the full names and initials of all examiners should appear on a time and planning summary or on an attachment to the file to facilitate future identification.
• name and title of person, or description of records, that provided the information needed to complete the workpaper.
• an index number identifying the workpaper and facilitating organization of the workpaper files.

Scope of Work—This includes an indication of the nature, timing and extent of testing in application of examination and audit procedures. It also includes the examiner’s evaluation of and reliance on internal and external audit
procedures and compliance testing of internal controls. To the extent that this information is contained in other workpapers, such as an examination procedure or a questionnaire, a reference to the appropriate workpaper will be sufficient.

Conclusions—The examiner should develop conclusions, in accordance with the examination objectives, with respect to the information obtained, documentation provided and the results of the examination and audit procedures performed. Such conclusions provide the basis for information contained in the report of examination.

To develop workpapers that have the qualities of clarity, completeness and conciseness, adequate planning and organization of content are essential. Therefore, before the workpaper is prepared, the examiner should determine the following:

• What examination objective will be satisfied by preparing the analysis or workpaper?
• Can preparation of the analysis be avoided by testing the bank’s records and indicating the nature and extent of testing in an examination or an audit procedure or by comment on a related schedule or another supporting document?
• Is the analysis necessary to support the information in the report of examination?

Subsequent to the determination that an analysis is required, but before initiating preparation, the examiner should decide if—

• previous examination analyses can be adapted and carried forward to the current examination.
• the analysis can be prepared by an internal auditor or other bank personnel.
• the format of the analysis may be designed in a manner to facilitate its use in future examinations.

Once it has been determined that preparation of an analysis is required, the examiner should consider the following techniques that promote clarity of workpaper preparation:

• Restrict writing to only one side of the paper.
• Use a standard size sheet of paper large enough to avoid overcrowding.
• Condense information for simplicity.

Frequently, time can be saved by carrying forward workpapers from one examination to the next. Thus, when laying out an analysis that might be repeated in future examinations, the examiner should arrange it in a manner to facilitate future use. For example, extra columns may be left blank within an account analysis displaying little activity for insertion of transaction information during future examinations. In such a situation, appropriate space (boxes and column headings) should be provided for the signature or initials of the preparer and reviewer during each examination. When a workpaper is removed from one examination file and carried forward, a notation should be made in the file from which the paper is extracted. This is important in the event workpapers applicable to a particular examination are needed several years after the completion of the examination.

INITIAL PREPARATION BY OTHERS

Although all items included in the report of examination should be supported by workpapers, their preparation may not always require original work by the examiner. Frequently, arrangements can be made for bank personnel, including internal auditors, to prepare workpapers for examination use or to make available papers prepared by them as part of their regular duties. Examples include outstanding checklists, lists of outstanding certificates of deposit, schedules of employee borrowings, and debt maturity schedules. The extent to which examiners can utilize analyses and data prepared by bank personnel increases the efficiency with which examination procedures are completed.

As part of the initial examination planning process, arrangements should be made with appropriate bank management for the timely completion of bank-prepared data and information. The coordinating bank officer(s) must understand what information is being requested and why it is being requested, in order to avoid confusion and unnecessary regulatory burden. Arrangements, however, may have to be made for the bank to supply supporting details or other schedules or items to comply with the requests. Upon receipt of bank-prepared analyses, an examiner should review the documents for over-
all completeness and note the date of receipt. This facilitates future planning and provides a ready reference as to which analyses have been received from the bank at any given point during the examination. Also, all bank-prepared workpapers should be tested and the nature and extent of testing performed by the examiner should be indicated on the papers.

INITIAL APPROACH IN WORKPAPER PREPARATION

The initial approach in preparing workpapers that support balances in the statement of condition is quantitative. In using this approach, the examiner obtains an analysis of the composition of the account balance as of the examination date. This inventory of the composition may be represented by a trial balance of loans, a listing of outstanding official checks, a listing of individual deposit accounts, or other similar items. Only after determining the composition and insure that the total agrees with the bank’s records is the examiner in a position to perform examination procedures and to arrive at a conclusion about the overall quality of the items comprising the balance.

For certain analyses, however, it is preferable to include account activity (transactions) in the workpapers. Typical examples of such analyses are those of bank premises and equipment and of reserve for possible loan losses. The format for reserve for possible loan losses should include beginning balances (prior examination ending balances), provisions for loan losses, collections, charge-offs, other transactions (transfers to/from undivided profits) and ending balances as of the examination date.

CONTROL AND REVIEW

All examiners assigned to an examination should insure that workpapers are controlled at all times while the examination is in progress. For example, when in the bank’s offices, the workpapers should be secured at night and safeguarded during the lunch hour or at other times when no examining personnel are present in the immediate vicinity. It is essential to completely control confidential information provided by the bank. In addition, information relating to the extent of tests and similar details of examination procedures should not be made available to bank employees.

In cases where customary examination practices are not practical, alternative procedures and the extent to which they are applied should be documented. The need for completeness requires that there be no open items, unfinished operations or unanswered questions in the workpapers at the conclusion of the examination.

The clarity of workpapers should be such that an examiner or Federal Reserve official unfamiliar with the work could readily understand it. Handwritten commentaries should be legible, concise and should support the examiner’s conclusions. Descriptions of work done, notations of conferences with bankers, conclusions reached and explanations of symbols used should be free from ambiguity or obscurity. Excessive use of symbols usually can be avoided by expanding a comment to include the nature and extent of work performed instead of using separate symbols for each portion of the work performed. In addition, instructions to assisting personnel concerning standards or workpaper content are necessary to ensure that they will meet the quality standards of the Federal Reserve. When workpapers have the necessary qualities of completeness, clarity, conciseness and neatness, a qualified reviewer may easily determine their relative value in support of conclusions and objectives reached. Incomplete, unclear or vague workpapers should, and usually will, lead a reviewer to the conclusion that the examination has not been adequately performed.

REVIEW PROCEDURES

Experienced personnel must review all workpapers prepared during an examination. Usually that review is performed by the examiner-in-charge, although in some cases, the examiner-in-charge may designate other experienced personnel to perform an initial review. An overall review is then performed by the examiner-in-charge. The two primary purposes of a review of workpapers by senior personnel are to determine that the work is adequate given the circumstances, and to ensure that the record is sufficient to support the conclusions reached in the report of examination. The timely review of workpapers and subsequent discussion of them with the individual who prepared them also is one of the more effective procedures for on-the-job training.
Normally, the review should be performed as soon as practicable after the completion of each work area. This review ideally occurs at the bank’s office so that if the need for obtaining additional information arises or additional work is required the matter can be promptly attended to with minimum loss of efficiency.

When the review of workpapers is completed, the reviewer should sign or initial the applicable documents. Although all workpapers should be reviewed, the depth and degree of detail depends on factors such as:

- The nature of the work and its relative importance to the overall examination objectives.
- The extent to which the reviewer has been associated with the area during the examination.
- The experience of the examiners who have carried out the various operations.

Professional judgment must be exercised throughout the review process.

**ORGANIZATION OF WORKPAPER FILES**

Administration of an examination includes—

- organizing the workpaper files.
- delegating authority for completion of all applicable workpaper sections.
- reviewing and assembling the completed workpapers.

To ensure efficiency in locating information contained in the workpapers and completion of all necessary procedures, workpapers should be filed and indexed in a standard manner.

**FILES**

The file provides the organizational vehicle to assemble workpapers applicable to specific areas of the examination. Files might include detailed workpapers related to—

- management appraisal.
- overall conclusions about the condition of the bank.
- cash accounts.
- investments.
- loans.
- reserve for possible loan losses.
- bank premises and equipment.
- other assets.
- deposits.
- other liabilities.
- capital accounts and dividends.

Each individual file would normally include—

- related examination and audit procedures.
- detailed information and other documentation necessary to indicate the specific procedures performed, the extent of such procedures and the examiner’s conclusions for the specific area.
- a summary, in comparative form, of the supporting general ledger balances with appropriate cross-references.

Judgment is required as to what the file should include on any specific examination. Lengthy documents should be summarized or highlighted (underlined) so that the examiner who is performing the work in the related area can readily locate the important provisions, without having to read the entire document. It also may be desirable to have a complete copy of the document in the file to support the summaries or answer questions of a specific legal nature.

Examples of documents that might be contained in the files are—

- a brief history and organization of the bank.
- organization charts of applicable departments within the bank.
- copies of, or excerpts from, the charter and bylaws.
- copies of capital stock certificates, debentures agreements and lease agreements.
- excerpts from minutes or contracts that are of interest beyond the current year.
- a chart of accounts and an accounting manual, if available, supplemented by descriptions of unique accounts and unusual accounting methods.
- lists of names and titles of the board of directors, important committees and relevant departmental personnel.

**Indexing and Cross-Referencing**

To promote efficiency and help ensure that all
applicable areas of an examination have been considered and documented, the use of an indexing system aids in the organization of workpaper files. A general outline or index including all examination areas provides a basis for organization to which a numbering or other sequential system can be assigned and applied to each workpaper file.

When all workpapers pertinent to a specific area of the examination have been completed, a cover sheet listing the contents of each file should be attached to the front to provide a permanent record for reference. This permits not only efficient location of a set of workpapers pertinent to a specific area of the examination (for example, cash or commercial loans), but also facilitates the location of a specific analysis (or other document) within the set.

Amounts or other pertinent information appearing in more than one place in the workpapers should be cross-referenced between the analyses. A notation on the index, including appropriate cross-referencing of those items removed or filed elsewhere, facilitates location of specific data and records and also helps to prevent inadvertent loss of documents. An example is the cross-referencing of net charge-offs obtained in the review of the reserve for possible loan losses to the amount approved in the board of director’s minutes. Proper cross-referencing is important because it—

- serves as a means of locating work performed for a particular account or group of accounts.
- identifies the source of supporting amounts in a particular analysis.
- facilitates the review of the workpapers.
- helps in following the workpapers during the succeeding examination.

WORKPAPER RETENTION

Examiners should retain on a readily available basis those workpapers from—

- the most recent full-scope Federal Reserve examination.
- the most recent general EDP examination.
- examinations of banks requiring or recommended for more than normal or special supervisory attention (composite rating of 3, 4 or 5; consumer compliance rating of 3, 4 or 5; EDP departments rated 4 or 5; or those subject to administrative action such as civil money penalties) until such banks are no longer the subject of such scrutiny.
- examinations disclosing conditions that may lead eventually to more than normal or special supervisory attention, as described above, until the supporting workpapers are no longer appropriate.
- examinations disclosing conditions that lead, or may eventually lead, to a criminal referral or criminal investigation.

These guidelines are the minimum required retention period for workpapers; longer retention periods may be set by individual Reserve Banks.
Cash Accounts
Effective date March 2011

Cash accounts include U.S. and foreign coin and currency on hand and in transit, clearings, and cash items.

CASH

Every bank maintains a certain amount of U.S. currency and some may have foreign currency on hand. To avoid having excess nonearning assets and to minimize exposure to misappropriation and robbery, each bank should establish a policy to maintain cash balances at the minimum levels necessary to serve its customers. The amount will vary from bank to bank depending on anticipated needs of customers and the availability of replenishment monies, with a reasonable allowance made for unusual demands.

Foreign currency may not be included in cash positions for management purposes when the amounts are not significant. However, the coin and currency of other countries are foreign-currency assets, as are loans or nostro accounts, and should be included in the foreign-currency positions.

CLEARINGS

Clearings are checks, drafts, notes, and other items that a bank has cashed or received for deposit that are drawn on other local banks and cleared directly with them. These items can usually be exchanged more efficiently among local banks than through correspondent banks or the Federal Reserve System. Many communities with two or more banks have formally organized clearinghouse associations, which have adopted rules governing members in the exchange of checks. Clearinghouse associations often extend their check-exchange arrangements to other nearby cities and towns. In most banks, clearings will be found in the department responsible for processing checks.

Proof and transit were once two separate functions in a bank: the proving of work (proof) and the sending of out-of-town cash items (transit) for collection. Most banks have now combined these two functions. Proof and transit may be performed by any combination of tellers or proof clerks, a separate proof and transit department, a check-processing department, an out-clearing department, or some other department that is characteristic of the area of the country where the bank operates. The functions may be centralized or decentralized, manual or automated, depending on the size of the bank and the volume of transactions. The volume of clearings may be so great that the bank’s proof operations are conducted after time deadlines for transaction posting or courier delivery. In these cases, daily clearings customarily are determined as of a specific cutoff time. Checks processed to that time are carried in one day’s totals, and checks processed after that time are carried in the following day’s totals. However, no matter who performs the function or how large the bank, the objectives of a proof and transit system are the same:

- to forward items for collection so that funds are available as soon as possible
- to distribute all incoming checks and deposits to their destinations
- to establish whether deposit totals balance with the totals shown on deposit tickets
- to prove the totals of general ledger entries and other transactions
- to collect data for computing the individual customer’s service charges and determining the availability of the customer’s funds
- to accomplish the assigned functions at the lowest possible cost

CASH ITEMS

Cash items are checks or other items in the process of collection that are payable in cash upon presentation. A separate control of all cash items is usually maintained on the bank’s general ledger and, if applicable, on the international division general ledger. The ledger is supported by a subsidiary record of individual amounts and other pertinent data. Cash items and the related records are usually in the custody of one employee at each banking office.

In their normal daily operations, banks have an internal charge, on the general ledger, to total demand deposits not charged to individual accounts because of insufficient funds, computer misreads, or other problems. Commonly known as return items or rejected or unposted debits,
these items may consist of checks received in the ordinary course of business, loan-payment debits, and other debit memos. In some banks, return items are separated by the bookkeepers and an entry is made reclassifying them to a separate asset account entitled “bookkeepers’ return items.” Other banks do not use a separate asset account; instead, the bookkeepers include the items in a subsidiary control account in the individual demand deposit ledgers. In that case, the account would have a debit balance and would be credited when the bank processes items for posting or returns the checks to their source.

Since bookkeepers’ return items are usually processed and posted to an individual account or returned to their source on the next business day, the balance of the bookkeepers’ return items account should represent the total of only one day’s returned items.

When data processing systems are used, the common practice is to post all properly encoded debit items, regardless of whether an overdraft is created. The resulting preliminary overdraft list, together with the items charged, is subsequently reviewed by bank employees, and unapproved items are reversed and separated as bookkeepers’ return items. The total of the resulting final overdraft list becomes the final overdraft figure shown on the general ledger. The examination of overdrafts is discussed in “Deposit Accounts,” section 3000.1. The examination of international overdrafts is discussed in “Due from Banks,” “Borrowed Funds,” and “International—Foreign Exchange,” sections 2010.1, 3010.1, and 7100.1, respectively.

Several types of cash items should be considered “cash items not in the process of collection” and shown in an appropriate “other assets” account. Some examples are (1) items that are payable upon presentation but which the bank has elected to accumulate and periodically forward to the payor, such as Series EE bonds or food stamps; (2) items that are not immediately payable in cash upon presentation; and (3) items that were not paid when presented and require further collection effort.

In addition to those items carried in the separate “cash items” account on the general ledger, most banks will have several sources of internal float in which irregular cash items can be concealed. Such items include any memorandum slips; checks drawn on the bank; checks returned by other banks; checks of directors, officers, employees, and their interests; checks of affiliates; debits purporting to represent currency or coin shipments; notes, usually past due; and all aged and unusual items of any nature that might involve fictitious entries, manipulations, or uncollectible accounts.

CURRENCY TRANSACTIONS

The reporting of currency and foreign transactions as covered in 31 CFR 1010 requires financial institutions to maintain records that might be useful in criminal, tax, or regulatory investigations. The regulation also seeks to identify persons who attempt to avoid payment of taxes through transfers of cash to or from foreign accounts. The examination procedures for determining compliance with the regulation require the examiner to ascertain the quality of the bank’s auditing procedures and operating standards relating to financial recordkeeping.1 Examiners also determine the adequacy of written policies and bank training programs. The Bank Secrecy Act/Anti-Money Laundering Examination Manual is to be used in checking compliance and for reporting apparent violations in the reporting of currency and foreign transactions. Any violations noted should be listed with appropriate comments in the report of examination. Inadequate compliance could result in a cease-and-desist order to effect prompt compliance with the statute.

1. Section 208.63 of Regulation H establishes procedures to ensure that state member banks establish and maintain procedures reasonably designed to ensure and monitor compliance with the regulation.
Cash Accounts
Examination Objectives
Effective date May 1996

1. To determine if the policies, practices, procedures, and internal controls regarding "cash accounts" are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
1. If selected for implementation, complete or update the cash accounts section of the internal control questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal or external auditors from the examiner assigned to that area of examination, and determine if appropriate corrections have been made.

4. Scan the general ledger cash accounts for any unusual items or abnormal fluctuations. Investigate any such items and document any apparent noncompliance with policies, practices and procedures for later review with appropriate management personnel.

5. Obtain teller settlement sheet recap or similar document as of the examination date and agree to the general ledger. Scan for reasonableness and conformity to bank policy.

6. Obtain detailed listings of cash items, including any bank items which are carried in the general ledger under "other assets," agree listings to general ledger balances and scan for propriety and conformity to bank policy.

7. Test compliance with Regulation H (12 CFR 208) by—
   a. selecting teller and banking office cash-balance sheets and determining that balances are within currency limits established;
   b. selecting bait money and agreeing serial numbers to applicable records;
   c. reviewing documentation showing training sessions held since the preceding examination;
   d. performing any visual inspections deemed appropriate;
   e. analyzing the bank’s system of security and protection against external crimes (Guidance for this analysis is provided in the internal control questionnaire in this section of the manual); and
   f. determining, through discreet corroborative inquiry of responsible bank officials and review of documentation, whether a security program that equals or exceeds the standards prescribed by Regulation H (12 CFR 208.61(c)) is in effect and that the annual compliance report and any other reports requested by the Federal Reserve System have been filed.

8. Review compliance with recordkeeping requirements and currency and foreign transaction reports. (See 31 CFR 1010.)

9. Review tellers’ over and short accounts for recurring patterns and any large or unusual items and follow up as considered necessary. Investigate differences centered in any one teller or banking office. Determine whether corrective action has been taken, if required.

10. Determine, by discreet corroborative inquiry of responsible bank officials and review of documentation, whether defalcations and/or mysterious disappearances of cash since the preceding examination have been properly reported pursuant to current requirements of the Board of Governors.

11. Review foreign-currency control ledgers and dollar book value equivalents for the following:
   a. accuracy of calculations and booking procedures
   b. unusual fluctuations
   c. concentrations
   d. unusual items

12. Review international division revaluation calculations and procedures.

13. Review the following items with appropriate management personnel (or prepare a memo to other examining personnel for their use in reviewing with management):
   a. internal-control exceptions and deficiencies in, or noncompliance with, written policies, practices and procedures
   b. uncorrected audit deficiencies
   c. violations of law
   d. inaccurate booking of U.S. dollar book value equivalents for foreign currencies
   e. inaccurate revaluation calculations and procedures performed by cash-account operations staff

14. Prepare comments on deficiencies or
violations of law noted above for inclusion in the examination report.

15. Update the workpapers with any information that will facilitate future examinations.
Cash Accounts
Internal Control Questionnaire
Effective date March 2011

Section 2000.4

Review the bank’s internal-control policies, practices, and procedures for cash accounts. The bank’s system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

CASH ON HAND

*1. Do all tellers, including relief tellers, have sole access to their own cash supply, and are all spare keys kept under dual control?

*2. Do tellers have their own vault cubicle or controlled cash drawer in which to store their cash supply?

3. When a teller is leaving for vacation or for any other extended period of time, is that teller’s total cash supply counted?

4. Is each teller’s cash verified periodically on a surprise basis by an officer or other designated official (if so, is a record of such count retained)?

*5. Are cash drawers or teller cages provided with locking devices to protect the cash during periods of the teller’s absence?

6. Is a specified limit in effect for each teller’s cash?

*7. Is each teller’s cash checked daily to an independent control from the proof or accounting control department?

8. Are teller differences cleared daily?

9. Is an individual, cumulative over and short record maintained for all persons handling cash, and is the record reviewed by management?

10. Does the teller prepare and sign a daily proof sheet detailing currency, coin, and cash items?

*11. Are large teller differences required to be reported to a responsible official for clearance?

12. Is there a policy against allowing teller “kitties”?

*13. Are teller transactions identified through use of a teller stamp?

*14. Are teller transfers made by tickets or blotter entries which are verified and initialed by both tellers?

15. Are maximum amounts established for tellers’ cashing checks or allowing withdrawal from time deposit accounts without officer approval?

16. Does the currency at each location include a supply of bait money?

17. Are tellers provided with operational guidelines on check-cashing procedures and dollar limits?

18. Is a record maintained showing amounts and denominations of reserve cash?

*19. Is reserve cash under dual custody?

*20. Are currency shipments—
   a. prepared and sent under dual control and
   b. received and counted under dual control?

*21. If the bank uses teller machines—
   a. is the master key controlled by someone independent of the teller function,
   b. is the daily proof performed by someone other than the teller, and
   c. are keys removed by the teller during any absence?

*22. Is dual control maintained over mail deposits?

23. Is the night depository box under a dual lock system?

24. Is the withdrawal of night deposits made under dual control?

25. Regarding night depository transactions—
   a. are written contracts in effect;
   b. are customers provided with lockable bags; and
   c. are the following procedures completed with two employees present:
      • opening of the bags
      • initial recording of bag numbers, envelope numbers, and depositors’ names in the register
      • counting and verification of the contents

*26. Regarding vault control—
   a. is a register maintained which is signed by the individuals opening and closing the vault;
   b. are time-clock settings checked by a second officer;
   c. is the vault under dual control; and
   d. are combinations changed periodically and every time there is a change in custodianship?
27. Are tellers prohibited from processing their own checks?
*28. Are tellers required to clear all checks from their funds daily?
*29. Are tellers prevented from having access to accounting department records?
*30. Are teller duties restricted to teller operations?

CASH-DISPENSING MACHINES

*31. Is daily access to the automated teller machine (ATM) made under dual control?
*32. When maintenance is being performed on a machine, with or without cash in it, is a representative of the bank required to be in attendance?
*33. Are combinations and keys to the machines controlled (if so, indicate controls)?
34. Do the machines and the related system have built-in controls that—
   a. limit the amount of cash and number of times dispensed during a specified period (if so, indicate detail) and
   b. capture the card if the wrong PIN (personal identification number) is consecutively used?
35. Does the machine automatically shut down after it experiences recurring errors?
36. Is lighting around the machine provided?
37. Does the machine capture cards of other banks or invalid cards?
38. If the machine is operated “off line,” does it have negative-file capability for present and future needs, which includes lists of lost, stolen, or other undesirable cards which should be captured?
39. Is use of an ATM by an individual customer in excess of that customer’s past history indicated on MIS reports reviewed for suspicious activity by bank management (for example, three uses during past three days as compared with a history of one use per month)?
40. Have safeguards been implemented at the ATM to prevent, during use, the disclosure of a customer’s PIN by others observing the PIN pad?
41. Are “fish-proof” receptacles provided for customers to dispose of printed receipts, rather than insecure trash cans, etc.?
42. Does a communication interruption between an ATM and the central processing unit trigger the alarm system?
43. Are alarm devices connected to all automated teller machines?
44. For on-line operations, are all messages to and from the central processing unit and the ATM protected from tapping, message insertion, modification of message or surveillance by message encryption (scrambling techniques)? (One recognized encryption formula is the National Bureau of Standards Algorithm.)
*45. Are PINs mailed separately from cards?
*46. Are bank personnel who have custody of cards prohibited from also having custody of PINs at any stage (issuance, verification, or reissuance)?
47. Are magnetic stripe cards encrypted (scrambled) using an adequate algorithm (formula) including a total message control?
48. Are encryption keys, i.e., scramble plugs, under dual control of personnel not associated with operations or card issuance?
*49. Are captured cards under dual control of persons not associated with bank operation card issuance or PIN issuance?
*50. Are blank plastics and magnetic stripe readers under dual control?
51. Are all cards issued with set expiration dates?
52. Are transaction journals provided that enable management to determine every transaction or attempted transaction at the ATM?

CASH ITEMS

*53. Are returned items handled by someone other than the teller who originated the transaction?
54. Does an officer or other designated individual review the disposition of all cash items over a specified dollar limit?
55. Is a daily report made of all cash items, and is it reviewed and initialed by the bank’s operations officer or other designated individual?
56. Is there a policy requiring that all cash items uncollected for a period of 30 days be charged off?
57. Do the bank’s present procedures forbid the holding of overdraft checks in the cash-item account?

58. Are all cash items reviewed at least monthly at an appropriate level of management?

*59. Are cash items recommended for charge-off reviewed and approved by the board of directors, a designated committee thereof, or an officer with no operational responsibilities?

PROOF AND TRANSIT

60. Are individuals working in the proof and transit department precluded from working in other departments of the bank?

61. Is the handling of cash letters such that—
   a. they are prepared and sent on a daily basis;
   b. they are photographed before they leave the bank;
   c. copy of proof or hand-run tape is properly identified and retained;
   d. records of cash letters sent to correspondent banks are maintained with identification of the subject bank, date, and amount; and
   e. remittances for cash letters are received by employees independent of those who send out the cash letters?

62. Are all entries to the general ledger either originated or approved by the proof department?

63. Are all entries prepared by the general ledger and/or customer accounts department reviewed by responsible supervisory personnel other than the person preparing the entry?

64. Are errors detected by the proof operator in proving deposits corrected by another employee or designated officer?

65. Are all postings to the general ledger and subsidiary ledgers supported by source documents?

66. Are returned items—
   a. handled by an independent section of the department or delivered unopened to personnel not responsible for preparing cash letters or handling cash, or
   b. reviewed periodically by responsible supervisory personnel to determine that items are being handled correctly by

   *c. scrutinized for employee items, and
   d. reviewed for large or repeat items?

67. Are holdover items—
   a. appropriately identified in the general ledger,
   b. handled by an independent section of the department, and
   c. reviewed periodically by responsible supervisory personnel to determine that items are clearing on a timely basis?

68. Does the proof and transit department maintain a procedures manual describing the key operating procedures and functions within the department?

*69. Are items reported missing from cash letter promptly traced and a copy sent for credit?

*70. Is there a formal system to ensure that work distributed to proof machine operators is formally rotated?

71. Are proof machine operators prohibited from—
   a. filing checks or deposit slips or
   b. preparing deposit account statements?

72. Are proof machine operators instructed to report unusually large deposits or withdrawals to a responsible officer (if so, over what dollar amount $__________)?

REGULATION H (12 CFR 208)—COMPLIANCE QUESTIONNAIRE

73. Has a security officer been designated by the board of directors in accordance with Regulation H (12 CFR 208.61(b))?

74. Has a security program been developed and implemented in accordance with Regulation H (12 CFR 208.61(c))?

75. Does the bank have security devices that give a general level of protection and that are at least equivalent to the minimum requirements of Regulation H?

76. Has the installation, maintenance, and operation of security devices considered the operating environment of each office and the requirements of Regulation H (12 CFR 206.61(c))?

77. Does the security officer report at least annually to the bank’s board of directors on the administration and effectiveness of
the security program in accordance with Regulation H (12 CFR 206.61(d))? *81. Are revaluation calculations, including the rates used, periodically reviewed for accuracy by someone other than the foreign-currency tellers? *82. Does the internal auditor periodically review for accuracy revaluation calculations, including the verification of rates used and the resulting general ledger entries?

**31 CFR 1010—COMPLIANCE QUESTIONNAIRE**

78. Is the bank in compliance with the financial recordkeeping and reporting regulations? **INTERNATIONAL DIVISION**

*79. Are foreign-currency control ledgers and dollar-book-value equivalents posted accurately? *80. Is each foreign currency revalued at least monthly, and are profit and loss entries passed on to the appropriate income accounts? *81. Are revaluation calculations, including the rates used, periodically reviewed for accuracy by someone other than the foreign-currency tellers? *82. Does the internal auditor periodically review for accuracy revaluation calculations, including the verification of rates used and the resulting general ledger entries?

**CONCLUSION**

83. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary. 84. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate). A separate evaluation should be made for each area, i.e., cash on hand, cash items, etc.
Due from Banks
Effective date April 2008

Commercial Bank Examination Manual
April 2008
Page 1

Section 2010.1

Banks maintain deposits in other banks to facilitate the transfer of funds. Those bank assets, known as “due from bank deposits” or “correspondent bank balances”\(^1\) are a part of the primary, uninvested funds of every bank. A transfer of funds between banks may result from the collection of cash items and cash letters, the transfer and settlement of securities transactions, the transfer of participating loan funds, the purchase or sale of federal funds, and many other causes.

In addition to deposits kept at the Federal Reserve Bank and with correspondent banks, a bank may maintain interest-bearing time deposits with international banks. Those deposits are a form of investment, and relevant examination considerations are included in “Investment Securities and End-User Activities,” section 2020.1, and “International—Due from Banks—Time,” section 7070.1.

Banks also use other banks to provide certain services that can be performed more economically or efficiently by another facility because of its size or geographic location. These services include processing of cash letters, packaging loan agreements, performing EDP services, collecting out-of-area items, providing safekeeping for bank and customer securities, exchanging foreign currency, and providing financial advice in specialized loan areas. When the service is one way, the receiving bank usually maintains a minimum balance at the providing bank to compensate in full or in part for the services received.

DEPOSITS WITH OTHER DEPOSITORY INSTITUTIONS

Section 206.3 of Regulation F (12 CFR 206) requires FDIC-insured depository institutions to adopt written policies and procedures to address the risk arising from exposure to a correspondent, and to prevent excessive exposure to any individual correspondent. These policies and procedures should take into account the financial condition of a correspondent and the size, form, and maturity of the exposure. Section 206.4(a) of Regulation F stipulates that any FDIC-insured depository institution must limit its interday credit exposure to an individual correspondent that is not “adequately capitalized”\(^2\) to 25 percent of the institution’s total capital.\(^3\) For a more detailed discussion of Regulation F, refer to sections 2015.1–.4 and SR-93-36 (“Examiner Guidelines for Regulation F—Interbank Liabilities”).

BALANCES WITH FEDERAL RESERVE BANKS

All state member banks are required by Regulation D (12 CFR 204) to keep reserves equal to specified percentages of the deposits on their books. These reserves are maintained in the form of vault cash or deposits with the Federal Reserve Bank. The Federal Reserve Bank monitors the deposits of each bank to determine that reserves are kept at required levels. The reserves provide the Federal Reserve System with a means of controlling the nation’s money supply. Changes in the level of required reserves affect the availability and cost of credit in the economy. The examiner must determine that the information supplied to the Federal Reserve Bank for computing reserves is accurate.

The Monetary Control Act of 1980 enables a nonmember financial institution to borrow from the Reserve Bank’s discount window on the same terms and conditions as member banks. For member banks, loan transactions are usually effected through their reserve account. For nonmember banks, the Reserve Bank typically requires the institution to open a special account called a clearing account. The loan transactions are then processed through the clearing account. However, in some instances, the Reserve Bank may allow a nonmember institution to process discount loan transactions through the account of a member bank. In most of these isolated

---

1. Balances due from such institutions include all interest-bearing and non-interest-bearing balances, whether in the form of demand, savings, or time balances, including certificates of deposit, but excluding certificates of deposit held in trading accounts.

2. See section 206.5(a) of Regulation F for the capital ratios necessary for a correspondent bank to be considered adequately capitalized.

3. The Board may waive this requirement if the primary federal supervisor of the insured institution advises the Board that the institution is not reasonably able to obtain necessary services, including payment-related services and placement of funds, without incurring exposure to a correspondent in excess of the otherwise applicable limit.
cases, a transaction of a nonmember institution is being processed through the account of the bank with which the nonmember institution has a correspondent relationship.

Under the reserve account charge agreements used by most Federal Reserve Banks, the member bank’s reserve account may be charged if the nonmember bank defaults on the loan processed through the member bank’s account. Since member banks may not act as the guarantor of the debts of another, member banks may only legally enter into revocable reserve account charge agreements. Revocable agreements allow the member bank, at its option, to revoke the charge and thus avoid liability for the debt of the nonmember correspondent. In contrast, irrevocable charge agreements constitute a binding guarantee of the nonmember correspondent’s debt and generally cannot be entered into by a member bank. Banks that enter into revocable charge agreements should establish written procedures to ensure their ability to make prudent, timely decisions.

DEPOSIT BROKERS

On the asset side of the balance sheet, examiners should review the activities of banks that place deposits through money brokers. These banks should have sufficient documentation to, among other things, verify the amounts and terms of individual deposits and the names of depository institutions in which the deposits are placed. Banks should also be able to demonstrate that they have exercised appropriate credit judgment with respect to each depository institution in which they have placed funds. Deficiencies in this area could constitute an unsafe or unsound banking practice. A more detailed discussion of brokered deposits is included in “Deposit Accounts,” sections 3000.1–3000.3 of this manual.

DUE FROM FOREIGN BANKS

Due from foreign banks demand or nostro accounts are handled in the same manner as due from domestic bank accounts, except that the balances due are generally denominated in foreign currency.

A bank must be prepared to make and receive payments in foreign currencies to meet the needs of its international customers. This can be accomplished by maintaining accounts (nosto balances) with banks in foreign countries in whose currencies receipts and payments are made.

Nostro balances may be compared with an inventory of goods and must be supervised in the same manner. For example, payment to import goods manufactured in Switzerland to the United States can be made through a U.S. bank’s Swiss franc account with another bank in Switzerland. Upon payment in Switzerland, the U.S. bank will credit its nostro account with the Swiss bank and charge its U.S. customer’s dollar account for the appropriate amount in dollars. Conversely, exporting U.S. goods to Switzerland results in a debit to the U.S. bank’s Swiss correspondent account. The first transaction results in an outflow of the U.S. bank’s “inventory” of Swiss francs, while the second transaction results in an inflow of Swiss francs. The U.S. bank must maintain adequate balances in its nostro accounts to meet unexpected needs and to avoid overdrawning those accounts for which interest must be paid. However, the bank should not maintain excessive idle nostro balances that do not earn interest, causing a loss of income.

The U.S. bank also runs risks by being either long or short in a particular foreign currency or by maintaining undue gaps. Losses could result if that currency appreciates or depreciates significantly or if the bank must purchase or borrow the currency at a higher rate.

Excessive nostro overages and shortages can be avoided by entering into spot and forward exchange contracts to buy or sell such nostro inventories. Those contracts are discussed in “International—Foreign Exchange,” section 7100.1. However, all foreign-currency transactions, except over-the-counter cash trades, are settled through nostro accounts. Therefore, the volume of activity in those accounts may be substantial, and the accounts must be properly controlled.

In addition, an account service known as a payable-through account is being marketed by U.S. banks, Edge corporations, and the U.S. branches and agencies of foreign banks to foreign banks that otherwise would not have the ability to offer their customers access to the U.S. banking system. This account service, referred to by other names such as pass-through accounts and pass-by accounts, involves a U.S. banking entity’s opening of a deposit account for the foreign bank. Policies and procedures should be
developed to guard against the possible improper or illegal use of payable-through account facilities by foreign banks and their customers. Examination procedures relating to this area are part of the FFIEC Bank Secrecy Act/Anti-Money Laundering Examination Manual.
1. To determine if the policies, practices, procedures, and internal controls regarding due from banks are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine that all due from accounts are reasonably stated and represent funds on deposit with other banks.
4. To evaluate the credit quality of banks with whom demand accounts are maintained.
5. To determine the scope and adequacy of the audit coverage.
6. To determine compliance with laws, rulings, and regulations.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law, rulings, or regulations have been noted.
1. If selected for implementation, complete or update the Due From Banks Internal Control Questionnaire.

2. Determine the scope of the examination, based on the evaluation of internal controls and the work performed by internal/external auditors.

3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control,” and determine if corrections have been accomplished.

4. Scan the most recent bank-prepared reconciliations for any unusual items and determine that closing balances listed on reconciliations agree with the general ledger and with the balance shown on the cut-off statement if one has been obtained.

5. If the bank’s policy for charge-off of old open items provides for exceptions in extenuating circumstances, review excepted items and determine if charge-off is appropriate.

6. If the bank has no policy for charge-off of old open items, review any items which are large or unusual or which have been outstanding for over two months, along with related correspondence, and determine if charge-off is appropriate.

7. Test the bank’s calculation of its Federal Reserve requirement and determine that reports are accurate and complete by:
   a. Performing a limited review of a sample of line items if the bank has effective operating procedures and has an audit program covering the required reports.
   b. Performing a detailed review of all line items if the bank has not established operating procedures or does not have an audit program covering the required reports.

8. Confer with the examiner assigned to check for compliance with the laws and regulations relating to insider loans at correspondent banks and loans to insiders of correspondent banks (Regulation O and 12 USC 1972(2)) and either provide a list, or verify a bank supplied list, of correspondent banks. (This effort should be coordinated with the examiner assigned to “Deposit Accounts” to avoid duplication of work.)

9. Review the maximum deposit balance established for each due from bank account and determine if the maximum balance:
   a. Is established after consideration of compensating balance requirements resulting from commitments or credit lines made available to the bank or its holding company. Coordinate this effort with examiner assigned “Bank-Related Organizations.”
   b. Appears to be related to loans of executive officers or directors or to loans which have been used to acquire stock control of the bank under examination.
      • If such due from accounts are detected, provide full details of the account to the examiner assigned to check for compliance with the law relating to loans to insiders of correspondent banks (12 USC 1972(2)).

10. Determine the existence of any concentrations of assets with other banks. Include correspondent accounts, time deposits and any federal funds sold in computation. For concentrations exceeding 25 percent of the bank’s capital structure, forward the information to examiners assigned “Concentrations of Credit” for possible inclusion in the report of examination.

Note: Procedures 11 through 21 apply to due from foreign banks—demand (nosto accounts).

11. Obtain or prepare a trial balance (including local currency book values) of due from foreign banks—demand and:
   a. Agree or reconcile balances by bank customer and:
      a. Agree or reconcile balances to department controls and the general ledger.
      b. Review reconciling items for reasonableness.
   b. Review reconciling items for reasonableness.

12. Using the appropriate sampling technique, select demand account banks for examination.

13. Prepare credit line sheets to include:
   a. Customer’s aggregate due from banks—demand liability in foreign currency
amount and local currency equivalent.

b. Amount of customer’s line designated by the bank.

c. Frequency of recent overdrawn nostro accounts.

(Overdrawn nostro accounts as they relate to foreign exchange activities are discussed in the International—Foreign Exchange section. Also, the examiner assigned “Borrowed Funds” must obtain (or prepare) a listing of overdrawn nostro accounts for inclusion in the borrowing section of the report of examination.)

d. Past compliance with customer’s line limitation as determined from review of liability ledger records.

14. Obtain from the examiner assigned “International—Loan Portfolio Management,” schedules on the following, if they are applicable to the due from foreign banks—demand:

a. Delinquencies.

b. Miscellaneous loan debit and credit suspense accounts.

c. Criticized shared national credits.

d. Interagency Country Exposure Review Committee credits.

e. Loans criticized during the previous examination.

f. Information on directors, officers and their interests, as contained in statements required under Regulation O (12 CFR 215).

g. Specific guidelines in the bank policy relating to due from banks—demand.

h. Current listing of due from foreign banks—demand approved customer lines.

i. Any useful information resulting from the review of the minutes of the loan and discount committee or any similar committee.

j. Reports furnished to the board of directors.

15. Review the information received and perform the following for:

a. Miscellaneous loan debit and credit suspense accounts:
   • Discuss with management any large or old items.
   • Perform additional procedures as deemed appropriate.

b. Interagency Country Exposure Review Committee Credits:
   • Compare the schedule to the trial balance to determine which due from foreign banks—demand deposits are portions of Interagency Country Exposure Review Committee credits.
   • For each due from foreign bank—demand deposit so identified, transcribe appropriate information to line sheets and forward the information to the examiner assigned “International—Loan Portfolio Management.”

c. Loans criticized during the previous examination (due from foreign banks—demand portion):
   • Determine the disposition of the due from foreign banks—demand so criticized by transcribing:
     — Current balance and payment status, or
     — Date the deposit was paid and the source of repayment.

16. Transcribe or compare information from the above schedules to credit line sheets, where appropriate, and indicate any cancelled bank lines.

17. Prepare credit line cards for any due from foreign banks—demand not in the sample which, based on information derived from the above schedules, requires in-depth review.

18. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts and loan areas and together decide who will review the borrowing relationship. Pass or retain completed credit line cards.

19. Obtain credit files for all due from foreign banks—demand for whom credit line cards were prepared and complete credit line cards where appropriate. To analyze the loans, perform the procedures set forth in step 14 of the International—Due From Banks—Time section.

20. By reviewing appropriate bank records, determine that:

a. Profit or losses resulting from revaluation adjustment on net open positions spot are passed properly to the respective due from foreign bank—demand (nosto) account (usually monthly).

b. At the delivery of the “swap” forward contract, proper entries are made to the respective due from foreign bank—demand (nosto) and swap adjustment accounts.
21. Determine compliance with laws, regulations and rulings pertaining to due from foreign banks—demand activities by performing the following for:
   a. Reporting of Foreign Exchange Activities:
      • Determine that Foreign Currency Forms FC-1, FC-2, FC-1a and FC-2a, as required, are submitted to the Department of the Treasury under the provisions of 31 CFR 128.
      • Check that copies of those forms are forwarded by each state member bank to the Federal Reserve at each filing time specified in 31 CFR 128.
   Note: Due from foreign banks—demand (nosto) deposits will be reviewed, discussed with appropriate bank officers, and prepared in suitable report form by the examiner assigned “International—Due From Banks–Time”, if the bank maintains international due from banks—time and/or call money deposits.

22. Forward list of due from banks accounts to the examiner assigned to “Investment Securities” and to “Loan Portfolio Management.”

23. Consult with the examiner assigned “Asset/Liability Management” and provide the following, if requested:
   a. A listing, by maturity and amount, of due from banks—time deposits.
   b. The amounts of due from banks—demand deposits that exceed the required reserve balance at the Federal Reserve Bank and that exceed the working balances at correspondent banks.

24. Discuss with appropriate officer(s) and prepare in suitable report form of:
   a. Cancelled due from foreign banks—demand deposit lines that are unpaid.
   b. Violations of laws, regulations and rulings.
   c. Internal control exceptions and deficiencies, or noncompliance with written policies, practices and procedures.
   d. Any items to be considered for charge-off.
   e. Uncorrected audit deficiencies.
   f. Due from foreign banks—demand deposits not supported by current and complete financial information.
   g. Due from foreign banks—demand deposits on which documentation is deficient.
   h. Concentrations.
   i. Criticized loans (portions applicable to due from foreign banks—demand deposits).
   j. Due from foreign banks—demand deposits which for any other reason are questionable as to quality and ultimate collection.
   k. Other matters regarding condition of the department.

25. Update the workpapers with any information that will facilitate future examinations.
Due From Banks
Internal Control Questionnaire
Effective date March 1984

Review the bank’s internal controls, policies, practices and procedures for due from bank accounts. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES FOR DUE FROM BANK DOMESTIC AND FOREIGN—DEMAND ACCOUNTS

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies for due from bank accounts that:
   a. Provide for periodic review and approval of balances maintained in each such account?
   b. Indicate person(s) responsible for monitoring balances and the application of approved procedures?
   c. Establish levels of check-signing authority?
   d. Indicate officers responsible for approval of transfers between correspondent banks and procedures for documenting such approval?
   e. Indicate the supervisor responsible for regular review of reconciliations and reconciling items?
   f. Indicate that all entries to the accounts are to be approved by an officer or appropriate supervisor and that such approval will be documented?
   g. Establish time guidelines for charge-off of old open items?

2. Are the policies for due from bank accounts reviewed at least annually by the board or the board’s designee to determine their adequacy in light of changing conditions?

3. Are bank reconciliations prepared promptly upon receipt of the statements?

4. Are bank statements examined for any sign of alteration and are payments or paid drafts compared with such statements by the persons who prepare bank reconciliations (if so, skip question 5)?

5. If the answer to question 4 is no, are bank statements and paid drafts or payments handled before reconciliation only by persons who do not also:
   a. Issue drafts or official checks and prepare, add or post the general or subsidiary ledgers?
   b. Handle cash and prepare, add or post the general ledger or subsidiary ledgers?

6. Are bank reconciliations prepared by persons who do not also:
   a. Issue drafts or official checks?
   b. Handle cash?
   c. Prepare general ledger entries?

7. Concerning bank reconciliations:
   a. Are amounts of paid drafts or repayments compared or tested to entries on the ledgers?
   b. Are entries or paid drafts examined or reviewed for any unusual features?
   c. Whenever a delay occurs in the clearance of deposits in transit, outstanding drafts and other reconciling items, are such delays investigated?
   d. Is a record maintained after an item has cleared regarding the follow-up and reason for any delay?
   e. Are follow-up and necessary adjusting entries directed to the department originating or responsible for the entry for correction with subsequent review of the resulting entries by the person responsible for reconciliation?
   f. Is a permanent record of the account reconciliation maintained?
   g. Are records of the account reconciliations safeguarded against alteration?
   h. Are all reconciling items clearly described and dated?
   i. Are details of account reconciliation reviewed and approved by an officer or supervisory employee?
   j. Does the person performing reconciliations sign and date them?
   k. Are reconciliation duties for foreign
DRAFTS

8. Are procedures in effect for the handling of drafts so that:
   a. All unissued drafts are maintained under dual control?
   b. All drafts are prenumbered?
   c. A printer’s certificate is received with each supply of new prenumbered drafts?
   d. A separate series of drafts is used for each bank?
   e. Drafts are never issued payable to cash?
   f. Voided drafts are adequately cancelled to prevent possible reuse?
   g. A record of issued and voided drafts is maintained?
   h. Drafts outstanding for an unreasonable period of time (perhaps six months or more) are placed under special controls?
   i. All drafts are signed by an authorized employee?
   j. The employees authorized to sign drafts are prohibited from doing so before a draft is completely filled out?
   k. If a check-signing machine is used, controls are maintained to prevent its unauthorized use?

FOREIGN CASH LETTERS

9. Is the handling of foreign cash letters such that:
   a. They are prepared and sent on a daily basis?
   b. They are copied or photographed prior to leaving the bank?
   c. A copy of proof or hand run tape is properly identified and retained?
   d. Records of foreign cash letters sent to correspondent banks are maintained, identifying the subject bank, date and amount?

FOREIGN RETURN ITEMS

10. Are there procedures for the handling of return items so that:
   a. They are delivered unopened and reviewed by someone who is not responsible for preparation of cash letters?
   b. All large unusual items or items on which an employee is listed as maker, payee or endorser are reported to an officer?
   c. Items reported missing from cash letters are promptly traced and a copy sent for credit?

FOREIGN EXCHANGE ACTIVITIES

11. Are persons handling and reconciling due from foreign bank—demand accounts excluded from performing foreign exchange and position clerk functions?
12. Is there a daily report of settlements made and other receipts and payments of foreign currency affecting the due from foreign bank—demand accounts?
13. Is each due from foreign bank—demand foreign currency ledger revalued monthly and are appropriate profit or loss entries passed to applicable subsidiary ledgers and the general ledger?
14. Does an officer not preparing the calculations review revaluations of due from foreign bank—demand ledgers, including the verification of rates used and the resulting general ledger entries?

OTHER—FOREIGN

15. Are separate dual currency general ledger or individual subsidiary accounts maintained for each due from foreign bank—demand account, indicating the foreign currency balance and a U.S. dollar (or local currency) equivalent balance?
16. Do the above ledger or individual subsidiary accounts clearly reflect entry and value dates?
17. Are the above ledger or individual subsidiary accounts balanced to the general ledger on a daily basis?
18. Does international division management receive a daily trial balance of due from foreign bank—demand customer balances by foreign currency and U.S. dollar (or local currency) equivalents?
OTHER

19. Is a separate general ledger account or individual subsidiary account maintained for each due from bank account?

20. Are overdrafts of domestic and foreign due from bank accounts properly recorded on the bank’s records and promptly reported to the responsible officer?

21. Are procedures for handling the Federal Reserve account established so that:
   a. The account is reconciled on a daily basis?
   b. Responsibility is assigned for assuring that the required reserve is maintained?
   c. Figures supplied to the Federal Reserve for use in computing the reserve requirement are reviewed to ensure they do not include asset items ineligible for meeting the reserve requirement, and that all liability items are properly classified as required by Regulation D and its interpretations?

22. Does the foregoing information constitute an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.

23. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Interbank Liabilities
Effective date May 2006

It is important for a federally insured depository institution (bank) to control and limit the risk exposures posed to it by another domestic bank (whether or not that institution is an insured depository institution) or foreign bank with which it does business (referred to as a correspondent). These exposures may include all extensions of credit to a correspondent; deposits or reverse repurchase agreements with a correspondent; guarantees, acceptances, or standby letters of credit on behalf of a correspondent; purchases or acceptance as collateral of correspondent-issued securities; and all similar transactions. A bank needs to develop internal procedures to evaluate and control the risk exposures to the bank from its correspondents. Such procedures would help prevent a situation whereby the failure of a single correspondent could trigger the failure of a federally insured depository institution having claims on the failed correspondent. (See SR-93-36.)

A bank’s principal sources of exposure to its correspondent tend to arise from two types of activity. First, banks may become exposed when obtaining services from (such as check-collection services), or providing services to, their correspondents. Second, exposure may arise when banks engage in transactions with correspondents in the financial markets. Each type of exposure has its own characteristics and its own risks.

Correspondent banking services are the primary source of interbank exposure for the majority of banks, particularly small and medium-sized banks. In connection with check-collection services and other trade- or payment-related correspondent services, banks often maintain balances with their correspondents in order to settle transactions and compensate the correspondents for the services provided. These balances give rise to exposure to the correspondents. Although correspondent services are in some cases provided on a fee basis, many correspondents may prefer compensating-balance arrangements, as these balances provide the correspondents with a stable source of funding. Also, some banks may prefer to pay for services with “soft charges” in the form of balances instead of “hard charges” in the form of fees.

Exposure to a correspondent may be significant, particularly when a bank uses one correspondent for all of its check collections and other payment services; loans excess reserve account balances (federal, or fed, funds) to the correspondent, or engages in other banking transactions with correspondents. This exposure may increase when interest rates fall, as higher levels of compensating balances may be required to provide adequate compensation to the correspondent.

Money-center banks and large regional banks may have significant exposure to correspondents through their activities in interbank markets, such as the securities, swap, and foreign-exchange markets. Interbank transactions that call for performance in the future (such as swaps, foreign-exchange contracts, and over-the-counter options) give rise to exposure to the correspondents that act as counterparties in such transactions. In addition to credit risk, such transactions may involve interest-rate risk, counterparty risk, or operational risk.

---

1. A federally insured depository institution refers to a bank, as defined in section 3 of the Federal Deposit Insurance Act (12 USC 1813), and includes a federally insured national bank, state bank, District bank, or savings association, and a federally insured branch of a foreign bank.

2. In the fed funds market, a loan of fed funds is often referred to as a sale. Borrowing of fed funds is referred to as a purchase.

3. Although a bank’s primary correspondent often will borrow (purchase) fed funds as principal directly from the bank, a correspondent may act as agent to place the funds with another institution. In such agency arrangements, a bank may provide its correspondent with a preapproved list of institutions with which the correspondent may place the funds. When a correspondent is acting as the bank’s agent in placing fed funds, the bank’s exposure would be to the ultimate purchaser of the funds, not to the correspondent placing the funds on its behalf.

4. Although the depository institutions that are parties to transactions in the interbank markets discussed above generally are referred to as counterparties, the term correspondent is used in this discussion to denote any domestic depository institution or a foreign bank to which a bank is exposed. The term correspondent does not include a commonly controlled correspondent, as defined in section 206.2(b) of Regulation F.

5. In other banking transactions, such as foreign-exchange, money market, and other permissible transactions, activities, or contractual arrangements, the other party to the transaction is referred to as the counterparty rather than as the correspondent.
foreign-exchange risk, and settlement risk. Settlement risk is the risk that a counterparty will fail to make a payment or delivery in a timely manner. Settlement risk may arise from unsecured transactions in the government securities, foreign-exchange, or other markets, and it may result from operational, liquidity, or credit problems.

Lending limits prohibit national banks from lending amounts equal to more than 15 percent of a national bank’s unimpaired capital and surplus to a single borrower on an unsecured basis (12 USC 84(a)(1)); these limits also prohibit a national bank from lending an additional 10 percent on a secured basis (12 USC 84(a)(2)). The national bank lending limits apply only to “loans and extensions of credit,” and the limits do not include most off-balance-sheet transactions that may provide significant sources of exposure to correspondents. Additionally, the national bank lending limits do not apply to overnight fed funds loans, a significant source of short-term exposure to correspondents. State limits generally do not apply to a broader range of transactions than the national bank limits, although some states include fed funds transactions within their limits.

State-chartered banks generally are subject to lending limits under state law. Almost all states impose lending limits on the banks they charter. Most of these limits are patterned on the national bank lending limits, although the specific percentages or transactions covered vary. The state limits generally do not apply to a broader range of off-balance-sheet transactions, although some states include fed funds transactions within their limits. A number of states, however, exclude interbank transactions from their lending limits entirely.

LIMITS ON INTERBANK LIABILITIES

Regulation F, Limitations on Interbank Liabilities (12 CFR 206), implemented section 308 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), which amended section 23 of the Federal Reserve Act (12 USC 371b-2). Section 23, as amended, requires the Board of Governors of the Federal Reserve System (the Board) to prescribe standards to limit the risks posed by exposure of banks to other domestic depository institutions and foreign banks. Regulation F sets forth these standards. All depository institutions insured by the FDIC are subject to the Federal Reserve Board’s Regulation F. Regulation F was first adopted in 1992 and has remained substantially the same, except for the technical amendments adopted by the Board on September 10, 2003. (See 68 Fed. Reg. 53,283.) Regulation F consists of two primary parts: (1) prudential standards that apply to exposures generally (section 206.3) and (2) special rules that apply to credit exposure under certain circumstances (section 206.4).

The “Prudential Standards” section requires depository institutions to develop and adopt internal policies and procedures to evaluate and control all types of exposures to correspondents with which they do business. Policies and procedures are to be established and maintained to prevent excessive exposure to any individual correspondent in relation to the condition of the correspondent. The “Prudential Standards” section requires a bank to adopt internal exposure limits when the financial condition of the correspondent and the form or maturity of the exposure create a significant risk that payments will not be made in full or on time. This section also provides that a bank shall structure the transactions of a correspondent or monitor exposures to a correspondent such that the bank’s exposure ordinarily does not exceed its internal limits.

The “Credit Exposure” section provides that a bank’s internal limit on interday credit exposure to an individual correspondent may not be more than 25 percent of the exposed bank’s total capital, unless the bank can demonstrate that its correspondent is at least “adequately capitalized,” as defined in section 206.5(a) of the rule. No limit is specified for credit exposure to correspondents that are at least adequately capitalized, but prudential standards are required for all correspondents, regardless of capital level. The term correspondent includes both domestically chartered depository institutions that are FDIC insured and foreign banks; the term does not include a commonly controlled correspondent.

6. Correspondent is defined in section 206.2(c) of Regulation F to mean a U.S. depository institution or a foreign bank to which a bank has exposure, but does not include commonly controlled correspondents.
7. Banks had to have the internal policies and procedures in place on June 19, 1993.
Prudential Standards

Standards for Selecting Correspondents

Banks are to address the risk arising from exposure to a correspondent, taking into account the financial condition of the correspondent and the size, form, and maturity of its exposure to the correspondent. Banks must adopt internal policies and procedures that evaluate the credit and liquidity risks, including operational risks, in selecting correspondents and terminating those relationships. Depository institutions are permitted to adopt flexible policies and procedures in order to permit resources to be allocated in a manner that will result in real reductions in risk. The policies and procedures must be reviewed annually by the bank’s board of directors, but individual correspondent relationships need not be approved by the board. Examiners should determine that the policies and procedures adopted by the board provide for a determination of the credit, liquidity, and operational risks of a correspondent when the relationship with the correspondent is established and as it is maintained. Additionally, if the bank has significant operational risk—such as relying on a correspondent for extensive data processing—that exposure could also lead to liquidity problems. This exposure may not be an issue for institutions that are not operationally dependent on any particular correspondent. Many banks may also address this exposure elsewhere in their operational procedures.

A bank’s policies and procedures should provide for periodic review of the financial condition of any correspondent to which the bank has significant exposure. This review should evaluate whether the size and maturity of the exposure is commensurate with the correspondent’s financial condition. Factors bearing on the financial condition of the correspondent include, but are not necessarily limited to, (1) the capital level of the correspondent, (2) the level of nonaccrual and past-due loans and leases, and (3) the level of earnings.

Examiners should determine that a bank has periodically reviewed the financial condition of any correspondent to which the bank has significant exposure. The frequency of these reviews will depend on the size and maturity of the exposure and the condition of the correspondent. For example, the policies of many banks provide for an extensive annual review of a correspondent’s financial condition; such policies may also provide for less extensive interim reviews under some circumstances, such as when exposure to a correspondent is very high or when a correspondent has experienced financial difficulty. A bank need not require periodic review of the financial condition of all correspondents. For example, periodic reviews would not be necessary for a correspondent to which the bank has only insignificant levels of exposure, such as small balances maintained for clearing purposes. Significant levels of exposure should reflect those amounts that a prudent bank believes deserve analysis for risk of loss.

A bank may base its review of the financial condition of a correspondent on publicly available information, such as bank Call Reports, financial statements or reports, Uniform Bank Performance Reports, or annual reports, or the bank may use financial information obtained from a rating service. A bank generally is not required to obtain nonpublic information to use as the basis for its analysis and review of the financial condition of a correspondent. For

8. Liquidity risk and operational risk are terms used in the definition of exposure. Liquidity risk is the risk that payment will be delayed for some period of time. For example, a bank is subject to the liquidity risk that a payment due from a failed correspondent will not be made on time; the bank’s credit risk may be a lesser amount due to later distributions from the correspondent’s receiver. Liquidity risk is included in the definition of exposure.

9. Because exposure to a Federal Reserve Bank or Federal Home Loan Bank poses minimal risk to a correspondent, Federal Reserve Banks and Federal Home Loan Banks are not included in the definition of correspondent.

10. Other forms of exposure that generally would not be considered significant include (1) a collecting bank’s risk that a check will be returned, (2) an originating bank’s risk that an automated clearinghouse (ACH) debit transfer will be returned or its settlement reversed, (3) a receiving bank’s remote deposit risk that settlement for an automated credit transfer could be reversed, or (4) a credit card transaction. In these types of transactions, the amounts involved are generally small, and the exposed bank usually has prompt recourse to other parties.

11. A bank is required to obtain nonpublic information to evaluate a correspondent’s condition for those foreign banks for which no public financial statements are available. In these limited circumstances, the bank would need to obtain financial information for its review (including information obtained directly from the correspondent).
correspondents with which a bank has a significant relationship, a bank may have considerable nonpublic information, such as information on the quality of management, general portfolio composition, and similar information, but such information is not always available and is not required.

Regardless of whether public or nonpublic sources of information are used, a bank may rely on another party, such as a bank rating agency, its bank holding company, or another correspondent, to assess the financial condition of or select a correspondent, provided that the board of directors has reviewed and approved the general assessment or selection criteria used by that party. Examiners should ascertain that the bank reviews and approves the assessment criteria used by such other parties. Additionally, when a bank relies on its bank holding company to select and monitor correspondents—or relies on a correspondent, such as a bankers’ bank, to choose other correspondents with which to place the bank’s federal funds or other deposits—examiners should ensure that the bank has reviewed and approved the selection criteria used.

Internal Limits on Exposure

When the financial condition of the correspondent and the form or maturity of the exposure represent a significant risk that payments will not be made in full or in a timely manner, a bank’s policies and procedures must limit its exposure to the correspondent, either by the establishment of internal limits or by other means. Limits are to be consistent with the risks undertaken, considering the financial condition and the form and maturity of the exposure to the correspondent. Limits may specify fixed exposure amounts, or they may be more flexible and be based on factors such as the monitoring of exposure and the financial condition of the correspondent. Different limits may be set for different forms of exposure, different products, and different maturities.

When a bank has exposure to a correspondent that has a deteriorating financial condition, examiners should determine if the bank took that deterioration into account when it evaluated the correspondent’s creditworthiness. The examiner should also evaluate if the bank’s level of exposure to the correspondent was appropriate.

Examiners need to determine that the bank’s policy and procedural limits are consistent with the risk undertaken, given the maturity of the exposure and the condition of the correspondent. Inflexible dollar limits may not be necessary in all cases. As stated earlier, limits can be flexible and be based on factors such as the level of the bank’s monitoring of its exposure and the condition of the correspondent. For example, a bank may choose not to establish a specific limit on exposure to a correspondent when the bank is able to ascertain account balances with the correspondent on a daily basis, because such balances could be reduced rapidly if necessary. In appropriate circumstances, a bank may establish limits for longer-term exposure to a correspondent, while not setting limits for interday (overnight) or intraday (within the day) exposure. Generally, banks do not need to set one overall limit on their exposure to a correspondent. Banks may prefer instead to set separate limits for different forms of exposure, products, or maturities. A bank’s evaluation of its overall facility with a correspondent should take into account utilization levels and procedures for further limiting or monitoring overall exposure.

When a bank has established internal limits for its significant exposure, examiners should ensure that the bank either (1) has procedures to monitor its exposure to remain within established limits or (2) structures transactions with the correspondent to ensure that the exposure ordinarily remains within the bank’s established internal limits. While some banks may monitor actual overall exposure, others may establish individual lines for significant sources of exposure, such as federal funds sales. For such banks, the examiner should ensure that the bank has established procedures to ensure that exposure generally remains within the established lines. In some instances, a bank may accomplish this objective by establishing limits on exposure that are monitored by a correspondent, such as for sales of federal funds through the correspondent as agent.

When a bank monitors its exposures, the appropriate level of monitoring will depend on (1) the type and volatility of the exposure, (2) the extent to which the exposure approaches the bank’s internal limits for the correspondent, and (3) the condition of the correspondent. Generally, monitoring may be conducted retrospectively. Examples of retrospective monitoring include checking close-of-business balances at a correspondent for the prior day or obtaining daily balance records from a correspondent at
the end of each month. Thus, banks are not expected to monitor exposure to correspondent on a real-time basis.

The purpose of requiring banks to monitor or structure their transactions that are subject to limits is to ensure that the bank’s exposure generally remains within established limits. However, occasional excesses over limits may result from factors such as unusual market disturbances, unusual favorable market moves, or other unusual increases in activity or operational problems. Unusual late incoming wires or unusually large foreign cash letters (international pouch) would be considered examples of activities that could lead to excesses over internal limits and that would not be considered impermissible under the rule. Examiners should verify that banks have established appropriate procedures to address any excesses over internal limits.

A bank’s internal policies and procedures must address intraday exposure. However, as with other exposure of longer maturities (i.e., interday or longer), the rule does not necessarily require that limits be established on intraday exposure. Examiners should expect to see such limits or frequent monitoring of balances only if the size of the intraday exposure and the condition of the correspondent indicate a significant risk that payments will not be made as contemplated. Examiners should keep in mind that intraday exposure may be difficult for a bank to actively monitor and limit. Consequently, like interday exposure, intraday exposure may be monitored retroactively. In addition, smaller banks may limit their focus on intraday exposure to being aware of the range of peak intraday exposure to particular institutions and the effect that exposure may have on the bank. For example, a bank may receive reports on intraday balances from a correspondent on a monthly basis and would only need to take actions to limit or more actively monitor such exposure if the bank becomes concerned about the size of the intraday exposure relative to the condition of the correspondent.

Credit Exposure

A bank’s internal policies and procedures must limit overnight credit exposure to an individual correspondent to not more than 25 percent of the exposed bank’s total capital, unless the bank can demonstrate that its correspondent is at least adequately capitalized. The credit exposure of a bank to a correspondent shall consist of the bank’s assets and off-balance-sheet items that are subject to capital requirements under the capital adequacy guidelines of the bank’s primary federal supervisor and involve claims on the correspondent or capital instruments issued by the correspondent. Credit exposure therefore includes items such as deposit balances with a correspondent, fed funds sales, and credit-equivalent amounts of interest-rate and foreign-exchange-rate contracts and other off-balance-sheet transactions. Credit exposure does not include settlement of transactions, transactions conducted in an agency or similar capacity where losses will be passed back to the principal or other party, and other sources of exposure that are not covered by the capital adequacy guidelines or that do not involve exposure to a correspondent. A bank may exclude the following from the calculation of credit exposure to a correspondent: (1) transactions, including reverse repurchase agreements, to the extent that the transactions are secured by government securities or readily marketable collateral; (2) the proceeds of checks and other cash items deposited.

12. Total capital is the total of a bank’s tier 1 and tier 2 capital calculated according to the risk-based capital guidelines of the bank’s primary federal supervisor. For a foreign bank organized under the laws of a country that subscribes to the principles of the Basel Capital Accord, total capital means total tier 1 and tier 2 capital as calculated under the standards of that country. For an insured branch of a foreign bank organized under the laws of a country that does not subscribe to the principles of the Basel Capital Accord, total capital means total tier 1 and tier 2 capital as calculated under the provisions of the accord. The limit on credit exposure of the insured branch of a foreign bank is based on the foreign bank’s total capital, as defined in this section, not on the imputed capital of the branch.

13. A bank is required to include with its own credit exposure 100 percent of the credit exposure of any subsidiary that is required to consolidate on its bank Call Report. This provision generally captures the credit exposure of any majority-owned subsidiary of the bank. Therefore, none of a minority-owned subsidiary’s exposure and all of a majority-owned subsidiary’s exposure would be included in the parent bank’s exposure calculation.

14. For example, when assets of a bank, such as securities, are held in safekeeping by a correspondent, there’s no exposure to the correspondent, even though the securities themselves may be subject to a capital charge.
inter in an account at a correspondent that are not yet available for withdrawal. (3) quality assets on which the correspondent is secondarily liable, or obligations of the correspondent on which a creditworthy obligor in addition to the correspondent is available; (4) exposure that results from the merger with or acquisition of another bank for one year after that merger or acquisition is consummated; and (5) the portion of the bank’s exposure to the correspondent that is covered by federal deposit insurance. (See section 206.4(d) for a more detailed discussion of these exclusions.) This regulatory limit on credit exposure should be implemented as part of the bank’s policies and procedures required under the “Prudential Standards” section. Regulation F does not impose regulatory limits for “credit exposure” to adequately or well-capitalized correspondents.

Quarterly monitoring of capital is only required for correspondents to which a bank’s potential credit exposure is more than 25 percent of its total capital.15 If the internal systems of a bank ordinarily limit credit exposure to a correspondent to 25 percent or less of the exposed bank’s total capital, no monitoring of the correspondent’s capital would be necessary, although periodic reviews of the correspondent’s financial condition may be required under the “Prudential Standards” section if exposure to the correspondent is significant. Every effort should be made to allow banks to use existing risk-monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits. For smaller institutions, it is relatively easy to determine how their measure of exposure compares with the definition of credit exposure in Regulation F because these institutions have relatively simple types of exposure. Examiners should remember that the regulation emphasizes appropriate levels of exposure based on the exposed bank’s analysis of the credit-worthiness of its correspondents. Accordingly, for those correspondents that the bank has not demonstrated are at least adequately capitalized, this limit should be viewed as a maximum credit-exposure level rather than as a safe-harbor level of credit exposure.

Examiners should ensure that the bank has in place policies and procedures that ensure the quarterly monitoring of the capital of its domestic correspondents. This quarterly schedule allows the bank to pick up information from the correspondent’s most recent bank Call Report, financial statement, or bank rating report. Currently, it is difficult to obtain information on the risk-based capital levels of a correspondent. Regulation F requires that a bank must be able to demonstrate only that its correspondent’s capital ratios qualify it as at least adequately capitalized.

A bank is not limited to a single source of information for capital ratios. A bank may rely on capital information obtained from a correspondent, a bank rating agency, or another reliable source of information. Further, examiners should anticipate that most banks will receive information on their correspondent’s capital ratios either directly from the correspondents or from a bank rating agency. The standard used in the rule is based solely on capital ratios and does not require disclosure of CAMELS ratings. For foreign bank correspondents, monitoring frequency should be related to the frequency with which financial statements or other regular reports are available. Although such information is available quarterly for some foreign banks, financial statements for many foreign banks are generally available only on a semiannual basis.

Information on risk-based capital ratios may not be available for many foreign bank correspondents. As with domestic correspondents, however, examiners should anticipate that in most instances the correspondent will provide the information to the banks with which it does business.

A bank’s internal policies and procedures should limit overnight credit exposure to a correspondent to not more than 25 percent of the exposed bank’s total capital, unless the bank can demonstrate that its correspondent is at least adequately capitalized, as defined by the rule. However, examiners should not necessarily expect banks to have formal limits on credit exposure to a correspondent for which the bank does not maintain quarterly capital information or that is a less than adequately capitalized correspondent if the banks’ policies and procedures effectively limit credit exposure to an amount below the 25 percent limit of total capital. Such situations include those in which

15. Because information on risk-based capital ratios for banks is generally based on the bank Call Report, a bank would be justified in relying on the most recently available reports based on Call Report data. While there may be a significant lag in such data, Call Reports are useful for monitoring trends in the condition of a correspondent—especially when a bank follows the data on a continuing basis.
only small balances are maintained with the correspondent or in which the correspondent has only been approved for a limited relationship. Although in many cases it will be necessary for a bank to establish formal internal limits to meet the regulatory limit, the provisions of section 206.3 (prudential standards) concerning excesses over internal limits also apply to limits established for the purpose of controlling credit exposure under section 206.4 of Regulation F.
Interbank Liabilities
Examination Objectives
Effective date May 2006

The following examination objectives should be considered when examiners are (1) evaluating the bank’s interbank liabilities with respect to its credit exposures to correspondents and (2) assessing the bank’s compliance with Regulation F.

1. To determine if the policies, practices, procedures, and internal controls for interbank liabilities adequately address the risks posed by the bank’s exposure to other domestic depository institutions and foreign banks.
2. To determine if bank officers and employees are operating in compliance with the policies and procedures established by the bank.
3. To determine if the financial condition of correspondents to which the bank has significant exposure—significant both in the size and maturity of the exposure and the financial condition of the correspondent—is reviewed periodically.
4. To determine if internal limits on exposure (1) have been established where necessary and (2) are consistent with the risk undertaken.
5. To determine if (1) exposure ordinarily remains within the established internal limits and (2) appropriate procedures have been established to address excesses over internal limits.
6. To determine that a bank’s credit exposure to less than adequately capitalized correspondents is not more than 25 percent of the exposed bank’s total capital. (Note that Regulation F places greater emphasis on maintaining appropriate levels of exposure based on a bank’s analysis of the creditworthiness of its correspondents as opposed to merely staying within regulatory established limits.)
7. To determine if those correspondents to which the bank has credit exposure exceeding 25 percent of total capital are monitored quarterly to ensure that such correspondents remain at least adequately capitalized.
8. To reach agreement with the board of directors and senior management to initiate corrective action when policies, procedures, or internal controls are deficient, or when there are violations of laws or regulations.
Examiners should obtain or prepare the information necessary to perform the appropriate procedural steps.

1. If selected for implementation, complete or update the “Interbank Liabilities” section of the internal control questionnaire.

2. On the basis of an evaluation of the bank’s internal controls, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures.

4. Request bank files relating to its exposure to its correspondents, as exposure is defined in Regulation F and applied and used in the “Prudential Standards” section of the regulation.
   a. Request documentation demonstrating that the bank has periodically reviewed the financial condition of any correspondent to which the depository institution has significant exposure. Factors bearing on the financial condition of the correspondent that should be addressed by the bank (depository institution) include the capital level of the correspondent, the level of nonaccrual and past-due loans and leases, the level of earnings, and other factors affecting the financial condition of the correspondent.
   b. Request that the bank provide information indicating its level of exposure to each correspondent, as measured by the bank’s internal control systems (for smaller banks, this information may include correspondent statements and a list of securities held in the investment portfolio).
   c. Determine if the frequency of the bank’s reviews of its correspondents’ financial condition is adequate for those correspondents to which the bank has very large or long maturities or for correspondents in deteriorating condition.
   d. If a bank relies on another party (such as a bank rating agency, its bank holding company, or another correspondent) to provide financial analysis of a correspondent, determine if the bank’s board of directors has reviewed and approved the assessment criteria used by the other party.
   e. When the bank relies on its bank holding company or on a correspondent, such as a bankers’ bank, to select and monitor correspondents or to choose other correspondents with which to place the depository institution’s federal funds, ensure that the bank’s board of directors has reviewed and approved the selection criteria used.
   f. If the bank is exposed to a correspondent that has experienced deterioration in its financial condition, ascertain whether the bank has taken the deterioration into account in its evaluation of the creditworthiness of the correspondent and of the appropriate level of exposure to the correspondent.
   g. When the bank has established internal limits for significant exposure, determine that the bank either monitors its exposure or structures transactions with the correspondent to ensure that exposure ordinarily remains within the bank’s internal limits for the risk undertaken.
   h. If the bank chooses to set separate limits for different forms of exposure, products, or maturities and does not set an overall internal limit on exposure to a correspondent, review information on actual interday exposure to determine if the aggregate exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is consistent with the risk undertaken.
   i. When a bank monitors its exposures, determine if the level of monitoring of significant exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is adequate, commensurate with the type and volatility of exposure, the extent to which the exposure approaches the bank’s internal limits, and the condition of the correspondent.
   j. Determine if the bank had any occasional excesses in exposure over its internal limits. If so, verify that the bank used appropriate and adequate procedures to address such excesses.
   k. If the size of intraday exposure to a
correspondent and the condition of the correspondent indicate a significant risk that payments will not be made in full or in a timely manner, verify that the bank has established intraday limits consistent with the risk undertaken and that it has monitored its intraday exposure.

5. Request and review a list of the correspondent transaction files for all domestic depositary institutions and foreign banks to which the bank regularly has credit exposure (as defined in section 206.4 of Regulation F) exceeding 25 percent of the bank’s total capital during a specified time interval. (Where appropriate, every effort should be made to allow banks to use existing risk-monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits). Review the bank’s files to—
   a. verify that the correspondent’s capital levels are monitored quarterly;
   b. verify that these correspondents are at least adequately capitalized, in compliance with Regulation F; and
   c. determine that the credit exposure to those correspondents that are at risk of dropping below the adequately capitalized capital levels could be reduced to 25 percent or less of the bank’s total capital in a timely manner.
Interbank Liabilities  
Internal Control Questionnaire  
Effective date May 2006

Review the bank’s internal controls, policies, practices, and procedures for interbank liabilities and compliance with the Board’s Regulation F. The bank’s system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. When identifying and resolving any existing deficiencies, examiners should seek the answers to the following key questions.

PRUDENTIAL STANDARDS

1. Has the bank developed written policies and procedures to evaluate and control its exposure to all of its correspondents?
2. Have the written policies and procedures been reviewed and approved by the board of directors annually?
3. Do the written policies and procedures adequately address the bank’s exposure(s) to a correspondent, including credit risk, liquidity risk, operational risk, and settlement risk?
4. Has the bank adequately evaluated its intraday exposure? Does the bank have significant exposure to its correspondent from operational risks, such as extensive reliance on a correspondent for data processing? If so, has the bank addressed these operational risks?
5. Do the bank’s written policies and procedures establish criteria for selecting a correspondent or terminating that relationship?
6. Do the bank’s written policies and procedures require a periodic review of the financial condition of a correspondent whenever the size and maturity of exposure is considered significant in relation to the financial condition of the correspondent?
7. When exposure is considered significant, is the financial condition of a correspondent periodically reviewed?
8. Does the periodic review of a correspondent’s financial condition include—
   a. the level of capital?
   b. the level of nonaccrual and past-due loans and leases?
   c. the level of earnings?
   d. other factors affecting the financial condition of the correspondent?
9. If a party other than bank management conducts the financial analysis of or selects a correspondent, has the bank’s board of directors reviewed and approved the general assessment and selection criteria used by that party?
10. If the financial condition of a correspondent, or the form or maturity of the bank’s exposure to that correspondent, creates significant risk, do the bank’s written policies and procedures establish internal limits or other procedures, such as monitoring, to control exposure?
11. Are the bank’s internal limits or controls appropriate for the level of its risk exposure to correspondents? If no internal limits have been established, is this appropriate based on the financial condition of a correspondent and the size, form, and maturity of the bank’s exposure? What are your reasons for this conclusion?
12. When internal limits for significant exposure to a correspondent have been set, has the bank established procedures and structured its transactions with the correspondent to ensure that the exposure ordinarily remains within the bank’s established internal limits?
13. If not, is actual exposure to a correspondent monitored to ensure that the exposure ordinarily remains within the bank’s established internal limits?
14. Is the level (frequency) of monitoring performed appropriate for—
   a. the type and volatility of the exposure?
   b. the extent to which the exposure approaches the bank’s internal limits?
   c. the financial condition of the correspondent?
15. Are transactions and monitoring reports on exposure reviewed for compliance with internal policies and procedures? If so, by whom and how often?
16. Do the bank’s written policies and procedures address deterioration in a correspondent’s financial condition with respect to—
   a. the periodic review of the correspondent’s financial condition?
   b. appropriate limits on exposure?
   c. the monitoring of the exposure, or the structuring of transactions with the cor-
respondent, to ensure that the exposure remains within the established internal limits?
Are these measures appropriate and realistic?

17. Do the bank’s written procedures establish guidelines to address excesses over its internal limits? (Such excesses could include unusual late incoming wires, unusually large foreign cash letters (international pouch), unusual market moves, or other unusual increases in activity or operational problems.) Are the procedures appropriate?

CREDIT-EXPOSURE LIMITS

1. Do the bank’s written policies and procedures effectively limit overnight credit exposure to 25 percent or less of the bank’s total capital, if a correspondent is less than adequately capitalized?

2. If credit exposure is not limited to 25 percent or less of the bank’s total capital, does the bank—
   a. obtain quarterly information to determine its correspondent’s capital levels (if so, determine the source of the information)?
   b. monitor its overnight credit exposure to its correspondents (if so, determine the frequency)?
This interagency guidance reminds institutions of supervisory expectations on sound practices for managing risks associated with funding and credit concentrations arising from correspondent relationships (correspondent concentration risk). The guidance highlights the need for institutions to identify, monitor, and manage correspondent concentration risk on a standalone and organization-wide basis and to take into account exposures to the correspondents’ affiliates as part of their prudent risk-management practices. Institutions also should be aware of their affiliates’ exposures to correspondents as well as the correspondents’ subsidiaries and affiliates. The guidance also reinforces the supervisory view that financial institutions should perform appropriate due diligence on all credit exposures to, and funding transactions with, other financial institutions. See SR-10-10 and its attachments. Also see 75 Fed. Reg. 23764, May 4, 2010.

INTERAGENCY GUIDANCE ON CORRESPONDENT CONCENTRATION RISKS

A financial institution’s relationship with a correspondent may result in credit (asset) and funding (liability) concentrations. On the asset side, a credit concentration represents a significant volume of credit exposure that a financial institution has advanced or committed to a correspondent. On the liability side, a funding concentration exists when an institution depends on one or a few correspondents for a disproportionate share of its total funding.

The Federal Reserve realizes some concentrations meet certain business needs or purposes, such as a concentration arising from the need to maintain large “due from” balances to facilitate account clearing activities. However, correspondent concentrations represent a lack of diversification, which adds a dimension of risk that management should consider when formulating strategic plans and internal risk limits.

The Federal Reserve considers credit exposures greater than 25 percent of total capital as concentrations. While a liability concentration threshold has not been established, the Federal Reserve has seen instances where funding exposures as low as 5 percent of an institution’s total liabilities have posed an elevated liquidity risk to the recipient institution.

These levels of credit and funding exposures are not firm limits but indicate an institution has concentration risk with a correspondent. Such relationships warrant robust risk-management practices, particularly when aggregated with other similarly sized funding concentrations, in addition to meeting the minimum regulatory requirements specified in applicable regulations. Financial institutions should identify, monitor, and manage both asset and liability correspondent concentrations and implement procedures to perform appropriate due diligence on all credit exposures to and funding transactions with correspondents, as part of their overall risk-management policies and procedures.

This guidance does not supplant or amend applicable regulations, such as the Board’s Limitations on Interbank Liabilities (Regulation F). This guidance clarifies that financial institutions should consider taking actions beyond the minimum requirements established in Regulation F to identify, monitor, and manage correspondent concentration risks in order to maintain risk-management practices consistent with safe and sound operations, especially when there are rapid changes in market conditions or in a correspondent’s financial condition.

1. See, for example, section 2015.1 or SR-93-36.
2. This guidance applies to all banks and their subsidiaries, bank holding companies and their nonbank subsidiaries, savings associations and their subsidiaries, and savings and loan holding companies and their subsidiaries that are supervised by the Board of Governors of the Federal Reserve System.
3. Unless the context indicates otherwise, references to “correspondent” include the correspondent’s holding company, subsidiaries, and affiliates. A correspondent relationship results when a financial organization provides another financial organization a variety of deposit, lending, or other services.
4. The interagency guidance references, collectively, the Agencies, meaning the Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS).
5. For purposes of this guidance, the term “total capital” means the total risk-based capital as reported for commercial banks and thrifts in the Report of Condition and the Thrift Financial Report, respectively.
6. 12 CFR 206. All depository institutions insured by the FDIC are subject to the Board’s Regulation F.
Identifying Correspondent Concentrations

Institutions should implement procedures for identifying correspondent concentrations. For prudent risk-management purposes, these procedures should encompass the totality of the institutions’ aggregate credit and funding concentrations to each correspondent on a standalone basis, as well as take into account exposures to each correspondent organization as a whole. In addition, the institution should be aware of exposures of its affiliates to the correspondent and its affiliates.

Credit Concentrations

Credit concentrations can arise from a variety of assets and activities. For example, an institution could have due from bank accounts, federal funds sold on a principal basis and direct or indirect loans to, or investments in, a correspondent. In identifying credit concentrations for risk-management purposes, institutions should aggregate all exposures, including but not limited to:

- due from bank accounts (demand deposit accounts (DDA) and certificates of deposit (CD));
- federal funds sold on a principal basis;
- the over-collateralized amount on repurchase agreements;
- the under-collateralized portion of reverse repurchase agreements;
- net current credit exposure on derivatives contracts;
- unrealized gains on unsettled securities transactions;
- direct or indirect loans to, or for the benefit of, the correspondent;
- investments, such as trust preferred securities, subordinated debt, and stock purchases, in the correspondent.

Funding Concentrations

Depending on its size and characteristics, a concentration of credit for a financial institution may be a funding exposure for the correspondent. The primary risk of a funding concentration is that an institution will have to replace those advances on short notice. This risk may be more pronounced if the funds are credit sensitive or if the financial condition of the party advancing the funds has deteriorated.

The percentage of liabilities or other measurements that may constitute a concentration of funding is likely to vary depending on the type and maturity of the funding and the structure of the recipient’s sources of funds. For example, a concentration in overnight unsecured funding from one source might raise different concentration issues and concerns than unsecured term funding, assuming compliance with covenants and diversification with short- and long-term maturities. Similarly, concerns arising from concentrations in long-term unsecured funding typically increase as these instruments near maturity.

Calculating Credit and Funding Concentrations

When identifying credit and funding concentrations for risk-management purposes, institutions should calculate both gross and net exposures to the correspondent on a standalone basis and on a correspondent organization-wide basis as part of their prudent risk-management practices. Exposures are reduced to net positions to the extent that the transactions are secured by the net realizable proceeds from readily marketable collateral or are covered by valid and enforceable netting agreements. Appendix A and appendix B contain examples, which are provided for illustrative purposes only.

Monitoring Correspondent Relationships

Prudent management of correspondent concentration risks includes establishing and maintaining written policies and procedures to prevent excessive exposure to any correspondent in relation to the correspondent’s financial condition. For risk-management purposes, institu-
tions’ procedures and frequency for monitoring correspondent relationships may be more or less aggressive depending on the nature, size, and risk of the exposure.

In monitoring correspondent relationships for risk-management purposes, institutions should specify internal parameters relative to what information, ratios, or trends will be reviewed for each correspondent on an ongoing basis. In addition to a correspondent’s capital, level of problem loans, and earnings, institutions may want to monitor other factors, which could include but are not limited to:

- deteriorating trends in capital or asset quality.
- reaching certain target ratios established by management (for example, aggregate of non-accrual and past due loans and leases as a percentage of gross loans and leases).
- increasing level of other real estate owned.
- attaining internally specified levels of volatile funding sources such as large CDs or brokered deposits.
- experiencing a downgrade in its credit rating, if publicly traded.
- being placed under a public enforcement action.

For prudent risk-management purposes, institutions should implement procedures that ensure ongoing, timely reviews of correspondent relationships. Institutions should use these reviews to conduct comprehensive assessments that consider their internal parameters and are commensurate with the nature, size, and risk of their exposure. Institutions should increase the frequency of their internal reviews when appropriate, as even well-capitalized institutions can experience rapid deterioration in their financial condition, especially in economic downturns.

Institutions’ procedures also should establish documentation requirements for the reviews conducted. In addition, the procedures should specify when relationships that meet or exceed internal criteria are to be brought to the attention of the board of directors or the appropriate management committee.

Managing Correspondent Concentrations

Institutions should establish prudent internal concentration limits, as well as ranges or tolerances for each factor being monitored for each correspondent. Institutions should develop plans for managing risk when these internal limits, ranges, or tolerances are met or exceeded, either on an individual or collective basis. Contingency plans should provide a variety of actions that could be considered relative to changes in the correspondent’s financial condition. However, contingency plans should not rely on temporary deposit insurance programs for mitigating concentration risk.

Prudent risk management of correspondent concentration risks should include procedures that provide for orderly reductions of correspondent concentrations that exceed internal parameters over a reasonable timeframe that is commensurate with the size, type, and volatility of the risk in the exposure. Such actions could include, but are not limited to:

- reducing the volume of uncollateralized/ uninsured funds.
- transferring excess funds to other correspondents after conducting appropriate reviews of their financial condition.
- requiring the correspondent to serve as agent rather than as principal for federal funds sold.
- establishing limits on asset and liability purchases from, and investments in, correspondents.
- specifying reasonable timeframes to meet targeted reduction goals for different types of exposures.

Examiners will review correspondent relationships during examinations to ascertain whether an institution’s policies and procedures appropriately identify and monitor correspondent concentrations. Examiners also will review the adequacy and reasonableness of institutions’ contingency plans to manage correspondent concentrations.

Performing Appropriate Due Diligence

Financial institutions that maintain credit exposures in, or provide funding to, other financial institutions should have effective risk-management programs for these activities. For this purpose, credit or funding exposures may include but are not limited to due from bank accounts; federal funds sold as principal; direct or indirect loans (including participations and
syndications); trust preferred securities; subordinated debt; and stock purchases of the correspondent.

An institution that maintains or contemplates entering into any credit or funding transactions with another financial institution should have written investment, lending, and funding policies and procedures, including appropriate limits, that govern these activities. In addition, these procedures should ensure that the institution conducts an independent analysis of credit transactions prior to committing to engage in the transactions. The terms for all such credit and funding transactions should strictly be on an arm's-length basis; conform to sound investment, lending, and funding practices; and avoid potential conflicts of interest.

Note: Respondent bank has $1 billion in total assets, comprising 10 percent of total assets or $100 million in total capital and 90 percent of total assets or $900 million in total liabilities. The correspondent has $1.5 billion in total assets, comprising 10 percent of total assets or $1.15 billion in total capital and 90 percent of total assets or $1.35 billion in total liabilities.

1. There are five derivative contracts with a mark-to-market fair value position as follows: Contract 1 ($100,000), Contract 2 + $400,000, Contract 3 ($50,000), Contract 4 +$150,000, and Contract 5 ($150,000), subtotal of $250,000 fair value for the derivative contracts. Subtracting the pledged collateral’s fair value of $200,000 leaves a subtotal of $50,000 or a net uncollateralized position of $50,000.

2. While temporary deposit insurance programs may provide certain transaction accounts with higher levels of federal deposit insurance coverage, institutions should not rely on such programs for mitigating concentration risk.

3. Government securities means obligations of, or obligations fully guaranteed as to principal and interest by, the U.S. government or any department, agency, bureau, board, commission, or establishment of the United States, or any corporation wholly owned, directly or indirectly, by the United States.

---

Note: Respondent bank has $1 billion in total assets, comprising 10 percent of total assets or $100 million in total capital and 90 percent of total assets or $900 million in total liabilities. The correspondent has $1.5 billion in total assets, comprising 10 percent of total assets or $1.15 million in total capital and 90 percent of total assets or $1.35 billion in total liabilities.

1. There are five derivative contracts with a mark-to-market fair value position as follows: Contract 1 ($100,000), Contract 2 + $400,000, Contract 3 ($50,000), Contract 4 +$150,000, and Contract 5 ($150,000), subtotal of $250,000 fair value. Adding the collateral’s fair value of $200,000 leaves a subtotal of $450,000 or a net uncollateralized position of $50,000.
2. While temporary deposit insurance programs may provide certain transaction accounts with higher levels of federal deposit insurance coverage, institutions should not rely on such programs for mitigating concentration risk.
3. Government securities means obligations of, or obligations fully guaranteed as to principal and interest by, the U.S. government or any department, agency, bureau, board, commission, or establishment of the United States, or any corporation wholly owned, directly or indirectly, by the United States.
This section provides guidance on the management of a depository institution’s investment and end-user activities. The guidance applies to (1) all securities in held-to-maturity and available-for-sale accounts, (2) all certificates of deposit held for investment purposes, and (3) all derivative contracts not held in trading accounts (end-user derivative contracts). The section discusses securities used for investment purposes, including money market instruments, fixed- and floating-rate notes and bonds, structured notes, mortgage pass-through and other asset-backed securities (ABS), and mortgage-derivative products.

National banks (in accordance with 12 CFR 1) and state member banks are to make assessments of a security’s creditworthiness to determine whether it’s investment-grade. The section emphasizes bank-eligible investments—securities that meet an “investment grade” test—whereby the issuer of a security has an adequate capacity to meet financial commitments under the security for the projected life of the asset or exposure. An issuer has an adequate capacity to meet financial commitments if (1) the risk of default by the obligor is low and (2) the full and timely repayment of principal and interest is expected. A bank is expected to assess credit risk in an investment security based on the bank’s risk profile and for the size and complexity of the instrument. Generally, investment securities are expected to have good to very strong credit quality. In the case of structured securities, this determination may be influenced more by the quality of the underlying collateral, the expected cash flows, and the structure of the security itself than by the condition of the issuer. While banks are no longer able to rely solely on external ratings, they can be used to support the credit risk due diligence processes of the bank. Banks are expected to conduct an appropriate level of due diligence to understand the inherent risks of a security and determine that it is a permissible investment. The extent of the due diligence should be sufficient to support the institution’s conclusion that a security meets the “investment-grade” standards. The depth of the due diligence should be a function of the security’s credit quality, the complexity of the structure, and the size of the investment. Third-party analytics may be part of this analysis. The bank’s management, however, remains responsible for the investment decision and should ensure that prospective third parties are independent, reliable, and qualified. The board of directors should oversee management to make sure that appropriate decisionmaking processes are in place.

Investments in securities and stock by state member banks are required under the Federal Reserve Act and Regulation H to comply with 12 CFR 1. They also should meet the supervisory expectations set forth in the OCC’s investment guidance, “OCC Guidance on Due Diligence Requirements in Determining Whether Securities Are Eligible for Investment” (see section 2022.1), and the guidance set forth in SR-12-15. In addition, state member banks are expected to continue to meet long-established supervisory expectations for risk-management processes to ensure that the credit risk of the bank, including the credit risk of the investment portfolio, is effectively identified, measured, monitored, and controlled. Investments by state member banks must also comply with applicable state law.

Many of these expectations are set forth in the 1998 interagency “Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities.” See SR-98-12 (“FFIEC Policy Statement on Investment Securities and End-User Derivatives Activities”), which provides risk-management standards for the securities investment activities of banks and savings associations. SR-98-12 and the policy statement emphasize the importance of an institution conducting a thorough credit-risk analysis before and periodically after the acquisition of a security. Such analysis allows an institution to understand and effectively manage the risks within its investment portfolio, including credit risk, and is an essential element of a sound investment.

---
1. Refer to Statement of FASB Accounting Standards Codification Section 320-10-35, Investments-Debt and Equity Securities-Subsequent Measurement (formerly FAS 115, “Accounting for Certain Investments in Debt and Equity Securities”).

1a. Derivatives, in general, are financial contracts whose values are derived from the value of one or more underlying assets, interest rates, exchange rates, commodities, or financial or commodity indexes.

portfolio risk-management framework. These supervisory expectations include criteria that institutions can use in meeting the requirements within 12 CFR 1. State member banks should follow these expectations when deciding whether to invest in securities.

An institution’s maintenance of timely information about market risk-measurement systems is discussed within this section, including the information on the current carrying values of its securities and derivative holdings. This includes an institution’s use of internal models and its need to validate the models. (See SR-11-7.) Swaps, futures, and options and other end-user derivative instruments used for non-trading purposes are discussed.

Institutions must ensure that their investment and end-user activities are permissible and appropriate within established limitations and restrictions on bank holdings of these instruments. Institutions should also employ sound risk-management practices consistently across these varying product categories, regardless of their legal characteristics or nomenclature. This section provides examiners with guidance on—

- the permissibility and appropriateness of securities holdings by state member banks;
- sound risk-management practices and internal controls used by banking institutions in their investment and end-user activities;
- the review of securities and derivatives acquired by the bank’s international division and overseas branches for its own account as well as the bank’s foreign equity investments that are held either directly or through Edge Act corporations;
- banking agency policies on certain high-risk mortgage-derivative products; and
- unsuitable investment practices.

LIMITATIONS AND RESTRICTIONS ON SECURITIES HOLDINGS

Many states extend the investment authority that is available to national banks to their chartered banks—often by direct reference. The security investments of national banks are governed in turn by the seventh paragraph of 12 USC 24 (12 USC 24 (Seventh)) and by the investment securities regulations of the Office of the Comptroller of the Currency (OCC), 12 CFR 1. These standards also apply to federal branches of foreign banks. If state law permits, pursuant to 12 USC 335, state member banks are subject to the same limitations and conditions for purchasing, selling, dealing in, and underwriting investment securities and stocks as national banks under 12 USC 24 (Seventh). To determine whether an obligation qualifies as a permissible investment for state member banks, and to calculate the limits with respect to the purchase of such obligations, refer to the OCC’s investment securities regulation at 12 CFR 1. (See also section 2022.1, “OCC Guidance on Due Diligence Requirements in Determining Whether Securities Are Eligible for Investment,” and section 208.21(b) of Regulation H (12 CFR 208.21(b)).)

Under 12 USC 24, “investment securities” are defined as “marketable obligations, evidencing indebtedness . . . in the form of bonds, notes and/or debentures commonly known as investment securities under such further definition of the ‘investment securities’ as may be by regulation prescribed by the Comptroller of the Currency.” Nothing contained in this provision of the statute authorizes the purchase by the association (national bank) for its own account of any shares of stock of any corporation. The OCC’s investment securities regulation (at 12 CFR 1) defines investment security as a marketable debt obligation that is investment grade and not predominately speculative in nature. Investment grade means the issuer of a security has an adequate capacity to meet financial commitments under the security for the projected life of the asset or exposure. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected.

Marketable means that the security—

- is registered under the Securities Act of 1933, 15 USC 77a et seq.;
- is a municipal revenue bond exempt from registration under the Securities Act of 1933, 15 USC 77c(a)(2);
- is offered and sold pursuant to Securities and Exchange Commission Rule 144A, 17 CFR 230.144A, and investment grade; or

References to a “bank” in this section mean a state member bank and a national bank, unless stated otherwise.
can be sold with reasonable promptness at a price that corresponds reasonably to its fair value.

Bank-Eligible Securities

The OCC’s investment securities regulation, 12 CFR 1.2, identifies five basic types of investment securities (Types I, II, III, IV, and V) and establishes limitations on a bank’s investment in those types of securities based on the percentage of capital and surplus that such holdings represent. For calculating concentration limits, the term “capital and surplus” includes a bank’s tier 1 and tier 2 capital and the balance of a bank’s allowance for loan and lease losses not included in tier 2 capital. Table 2 summarizes bank-eligible securities and their investment limitations.

Table 2—Summary of Investment-Type Categories

<table>
<thead>
<tr>
<th>Type Category</th>
<th>Characteristics</th>
<th>Limitations</th>
</tr>
</thead>
</table>
| Type I securities | • U.S. government obligations and obligations issued, insured, or guaranteed by a U.S. department or agency, if backed by the full faith and credit of the U.S. government  
• general obligations of a state of the U.S. or any political subdivision thereof  
• municipal bonds, if the bank is well capitalized,* other than Types II, III, IV, or V securities | The bank may deal in, underwrite, purchase, and sell Type I securities for its own account. The amount of Type I securities that the bank may deal in, underwrite, purchase, and sell is not limited to a specified percentage of the bank’s capital and surplus.  
With respect to all municipal securities, a member bank that is well capitalized* may deal in, underwrite, purchase, and sell any municipal bond for its own account without any limit tied to the bank’s capital and surplus. |

* subject to the statutory prompt-corrective-action standards (12 USC 1831o)
<table>

| Type IV securities | • a small business-related security as defined in section 3(a)(53)(A) of the Securities Exchange Act of 1934, 15 USC 78c(a)(53)(A), that is fully secured by interests in a pool of loans to numerous obligors  
• commercial mortgage-related security that is offered or sold pursuant to section 4(5) of the Securities Act of 1933, 15 USC 77d(5), that is investment grade, or a commercial mortgage-related security as described in section 3(a)(41) of the Securities Exchange Act of 1934 that represents ownership of a promissory note or certificate of interest or participation that is directly secured by a first lien on one or more parcels of real estate upon which one or more commercial structures are located and that is fully secured by interests in a pool of loans to numerous obligors  
• a residential mortgage-related security that is offered and sold pursuant to section 4(5) of the Securities Act of 1933, 15 USC 77d(5), that is investment grade, or a residential mortgage-related security as described in section 3(a)(41) of the Securities Exchange Act of 1934, 15 USC 78c(a)(41)) that does not otherwise qualify as a Type I security | The bank may purchase and sell Type IV securities for its own account. The amount of the Type IV securities that a bank may purchase and sell is not limited to a specified percentage of the bank’s capital and surplus.                                                                 |
| Type V securities | • a security that is—  
  — investment grade;  
  — marketable;  
  — not a Type IV security; and  
  — fully secured by interests in a pool of loans to numerous obligors and in which a national bank could invest directly | The bank may purchase and sell Type V securities for its own account provided that the aggregate par value of Type V securities issued by any one issuer held by the bank does not exceed 25 percent of the bank’s capital and surplus. In applying this limitation, a national bank shall take account of Type V securities that the bank is legally committed to purchase or to sell in addition to the bank’s existing holdings. |
Type I securities are those debt instruments that national and state member banks can deal in, underwrite, purchase, and sell for their own accounts without limitation. Type I securities are obligations of the U.S. government or its agencies; general obligations of states and political subdivisions; municipal bonds (including municipal revenue bonds) other than a Type II, III, IV, or V security by a bank that is well capitalized; and mortgage-related securities. A bank may purchase Type I securities for its own account subject to no limitations, other than the exercise of prudent banking judgment. (See 12 USC 24 (Seventh) and 15 USC 78(c)(a).)

Type II securities are those debt instruments that national and state member banks may deal in, underwrite, purchase, and sell for their own account subject to a 10 percent limitation of a bank’s capital and surplus for any one obligor. Type II investments include obligations issued by the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the Tennessee Valley Authority, and the U.S. Postal Service, as well as obligations issued by any state or political subdivision for housing, university, or dormitory purposes that do not qualify as a Type I security and other issuers specifically identified in 12 USC 24 (Seventh).

Type III securities is a residual securities category consisting of all types of investment securities not specifically designated to another security “type” category and that do not qualify as a Type I security. The bank may purchase and sell Type III securities for its own account, provided the aggregate par value of Type III securities issued by any one obligor held by the bank does not exceed 10 percent of the bank’s capital and surplus for any one obligor. In applying this limitation, the bank must take account of Type III securities that the bank is legally committed to purchase or to sell in addition to the bank’s existing holdings.

Type IV securities. A bank may purchase and sell Type IV securities for its own account. The amount of securities that a bank may purchase and sell is not limited to a specified percentage of the bank’s capital and surplus. Type IV securities include the following ABS that are fully secured by interests in pools of loans made to numerous obligors:

- investment-grade residential mortgage-related securities that are offered or sold pursuant to section 4(5) of the Securities Act of 1933 (15 USC 77d(5))
- residential mortgage-related securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are rated in one of the two highest investment-grade rating categories
- investment-grade commercial mortgage securities offered or sold pursuant to section 4(5) of the Securities Act of 1933 (15 USC 77d(5))
- commercial mortgage securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are rated in one of the two highest investment-grade rating categories

For all Type IV commercial and residential mortgage securities and for Type IV small-business-loan securities, there is no limitation on the amount a bank can purchase or sell for its own account. In addition to being able to purchase and sell Type IV securities, subject to the above limitation, a bank may deal in those Type IV securities that are fully secured by Type I securities.

Type V securities consist of all ABS that are not Type IV securities. Specifically, they are defined as marketable, investment-grade securities that are not Type IV and are “fully secured by interests in a pool of loans to numerous obligors and in which a bank could invest directly.” Type V securities include securities backed by auto loans, credit card loans, home equity loans, and other assets. Also included are residential and commercial mortgage securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are investment grade. A bank may purchase or sell Type V securities for its own account provided the aggregate par value of Type V securities issued by any one issuer held by the bank does not exceed 25 percent of the bank’s capital and surplus. In applying this limitation, the bank must take account of Type V securities that the bank is legally committed to purchase or to sell in addition to the bank’s existing holdings.
Additional Limitations

Securities Held Based on Estimates of Obligor’s Performance

Notwithstanding the definition of “investment security” and “investment grade,” a bank may treat a debt security as an investment security under the rule if it does not meet those definitions, provided that the security is marketable and the bank concludes, on the basis of estimates that the bank reasonably believes are reliable, that the obligor will be able to satisfy its obligations under that security. However, the aggregate value of such securities based on “reliable estimate” may not exceed 5 percent of the bank’s capital and surplus. This activity must conform with the safety-and-soundness practices required by 12 CFR 1.5 (discussed below).

As shown in Table 2, there are separate Type I, II, III, IV, and V limits. In the extreme, however, banks can lend 15 percent of their capital to a corporate borrower, buy the borrower’s corporate bonds amounting to another 10 percent of capital and surplus (Type III securities), and purchase the borrower’s ABS up to an additional 25 percent of capital (Type V securities), for a total exposure of 50 percent of the bank’s capital and surplus. This could be expanded even further if the borrower also issued highly rated Type IV securities, upon which there is no investment limitation. However, an exposure to any one issuer of 25 percent or more should be considered a credit concentration, and banks are expected to justify why exposures in excess of 25 percent do not entail an undue concentration.

Pooled Investments

A bank may purchase and sell for its own account investment company shares provided that—

a. the portfolio of the investment company consists exclusively of assets that the bank may purchase and sell for its own account, and
b. the bank’s holdings of investment company shares do not exceed the limitations in 12 CFR 1.4(e).

Other Issues

The OCC may determine that a national bank may invest in an entity that is exempt from registration as an investment company under section 3(c)(1) of the Investment Company Act of 1940, provided that the portfolio of the entity consists exclusively of assets that a national bank may purchase and sell for its own account and that investments made under this authority comply with safe-and-sound practices under section 1.5 of the rule and applicable published OCC precedent. These investments also must be—

a. marketable and investment grade, or
b. satisfy the requirements of 12 CFR 1.3(i) (securities held based on estimates of obligor’s performance). A bank may treat a debt security as an investment security if the security is marketable and the bank can conclude, on the basis of estimates that the bank reasonably believes are reliable, that the obligor will be able to satisfy its obligations under that security.

Safe-and-Sound Banking Practices

As set forth in section 1.5, a bank shall adhere to safe-and-sound banking practices and the specific requirements of this part when conducting the investment activities permitted under the rule. As stated in section 1.5, the bank is to consider, as appropriate, the interest rate, credit, liquidity, price, foreign exchange, transaction, compliance, strategic, and reputation risks presented by a proposed activity, and the particular activities undertaken by the bank, which must be appropriate for that bank.

When conducting these activities, the bank shall determine that there is adequate evidence that an obligor possesses resources sufficient to provide for all required payments on its obligations, or, in the case of securities deemed to be investment securities on the basis of reliable estimates of an obligor’s performance, that the bank reasonably believes that the obligor will be able to satisfy the obligation.

The bank must maintain records that are available for examination purposes and are adequate to demonstrate that it meets the requirements of this part (12 CFR 1). The bank may store the information in any manner that can be
readily retrieved and reproduced in a readable form.

Reservation of Authority

In addition to the investment securities discussed in 12 USC 24 (Seventh), the OCC may determine, on a case-by-case basis, that a national bank may acquire an investment security other than an investment security of a type set forth in this part, provided the OCC determines that the bank’s investment is consistent with 12 USC 24 (Seventh) and with safe-and-sound banking practices. (See 73 Fed. Reg. 22235, April 24, 2008, and 12 CFR 1.1 for more information.) A state member bank should consult the Board for a determination with respect to the application of 12 USC 24 (Seventh), with respect to issues not addressed in 12 CFR 1. The provisions of 12 CFR 1 do not provide authority for a state member bank to purchase securities of a type or amount that the bank is not authorized to purchase under applicable state law. (See 12 CFR 208.21(b).)

Municipal Revenue Bonds

Upon enactment of the Gramm-Leach-Bliley Act (the GLB Act), most state member banks were authorized to deal in, underwrite, purchase, and sell municipal revenue bonds (12 USC 24 (Seventh)). Effective March 13, 2000, these activities (involving Type I securities) could be conducted by well-capitalized banks, without limitation as to the level of these activities relative to the bank’s capital. As a result of the GLB Act amendment, municipal revenue bonds are the equivalent of Type I securities for well-capitalized state member banks.1b5 (See SR-01-13.)

The expanded municipal revenue bond authority under the GLB Act necessitates heightened awareness by banks, examiners, and supervisory staff of the particular risks of municipal revenue bond underwriting, dealing, and investment activities. Senior management of a state member bank has the responsibility to ensure that the bank conducts municipal securities underwriting, dealing, and investment activities in a safe and sound manner, in compliance with applicable laws and regulations. Sound risk-management practices are critical. State member banks engaged in municipal securities activities should maintain written policies and procedures governing these activities and make them available to examiners upon request.

Prudent municipal securities investment involves considering and adopting risk-management policies, including appropriate limitations, on the interest-rate, liquidity, price, credit, market, and legal risks in light of the bank’s appetite and tolerance for risk. Historically, municipal revenue bonds have had higher default rates than municipal general obligation bonds. The risks of certain industrial development revenue bonds have been akin to the risks of corporate bonds. Therefore, when bondholders are relying on a specific project or private-sector obligation for repayment, banks should conduct a credit analysis, using their normal credit standards, to identify and evaluate the source of repayment before purchasing the bonds. Banks must also perform periodic credit analyses of those securities that remain in the bank’s investment portfolio. Prudent banking practices require that management adopt appropriate exposure limits for individual credits and on credits that rely on a similar repayment source; these limits help ensure adequate risk diversification. Furthermore, examiners and other supervisory staff should be aware of the extent to which state laws place further restrictions on municipal securities activities but should defer to state banking regulators on questions of legal authority under state laws and regulations.

For underwriting and dealing activities, the nature and extent of due diligence should be commensurate with the degree of risk posed and the complexity of the proposed activity. Bank dealer activities should be conducted subject to the types of prudential limitations described above but should also be formulated in light of the reputational risk that may accompany underwriting and dealing activities. Senior management and the board of directors should establish credit-quality and position-risk guidelines, including guidelines for concentration risk.

A bank serving as a syndicate manager would be expected to conduct extensive due diligence

---

1b4. See the prompt corrective action at 12 USC 1831o and see subpart D of the Federal Reserve’s Regulation H (12 CFR 208).

1b5. The OCC published final amendments to its investment securities regulation (12 CFR 1) on July 2, 2001 (66 Fed. Reg. 34784); and further amended this regulation on June 13, 2012 (77 Fed. Reg. 35257). State member banks must comply with the requirements of 12 CFR 1 with respect to investments in municipal and other securities.

Commercial Bank Examination Manual

October 2013
Page 6.3
to mitigate its underwriting risk. Due diligence should include an assessment of the creditworthiness of the issuer and a full analysis of primary and any contingent sources of repayment. Offering documents should be reviewed for their accuracy and completeness, as well as for full disclosure of all of the offering’s relevant risks.
CLASSIFICATION AND APPRAISAL OF SECURITIES

This supervisory guidance (2013 Securities Classification Guidance) outlines principles related to the proper classification of securities without relying on ratings issued by nationally recognized statistical rating organizations (external credit ratings) and applies to state member banks and, in principle, to all institutions supervised by the Federal Reserve. Section 939A of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 requires each federal agency to remove references to, and requirements of reliance on, external credit ratings in any regulation issued by the agency that requires the assessment of the creditworthiness of a security or money market instrument. Therefore, in 2012, the OCC revised its investment security regulations (12 CFR 1) to remove reliance on external credit ratings. Investment in securities and stock by state member banks are required under the Federal Reserve Act (12 USC 335) and Regulation H (12 CFR 208.21) to comply with the OCC investment security regulations.

The OCC investment security regulations require an institution to monitor investment credit quality through an analytical review of the obligor rather than solely through external credit ratings. Credit quality monitoring provides an opportunity for management to determine whether a security continues to be investment grade or if it has deteriorated and thus requires classification. The 2013 Securities Classification Guidance clarifies the classification standards for securities held by an institution and includes illustrated examples that demonstrate when a security is investment grade and when it is not investment grade. See SR-13-18.

UNIFORM AGREEMENT ON THE CLASSIFICATION AND APPRAISAL OF SECURITIES HELD BY DEPOSITORY INSTITUTIONS (AGREEMENT)

This joint Agreement applies creditworthiness standards to the classification of securities and removes the reliance on credit ratings as a determinant of classification. Specific examples are illustrated to demonstrate the appropriate application of these standards to the classification of securities. This Agreement should be used by depository institutions to assist and facilitate the classification of investment securities.

I. The Classification of Assets in Depository Institutions

The agencies’ longstanding asset classification definitions have not changed and are provided as an attachment to the Agreement. This Agreement clarifies how the unique characteristics exhibited by investment securities are to be interpreted within these classification categories.

II. The Appraisal of Securities in Depository Institutions

Fundamental credit analysis is central to understanding the risk associated with all assets and should be applied to investment securities as part of a pre-purchase and ongoing due diligence process, as discussed in regulatory guidance. Depository institutions are expected to perform an assessment of creditworthiness that
is not solely reliant on external credit ratings provided by a Nationally Recognized Statistical Rating Organizations (NRSRO). Such an assessment may include internal-risk analyses and a risk rating framework, third-party research and analytics (which could include NRSRO credit ratings), default statistics, and other sources of data as appropriate for the particular security. The depth of analysis should be a function of the security’s risk characteristics, including its size, nature, and complexity. Individual security analysis should form the basis of any classification determination.

A. Investment Grade Debt Securities

A security is investment grade if the issuer of the security has an adequate capacity to meet financial commitments for the life of the asset. An issuer has adequate capacity to meet its financial commitments if the risk of default is low, and the full and timely repayment of principal and interest is expected. A “pass” rating may be supported by an appropriate credit analysis that documents the quality of an investment grade security, as well as ongoing analyses

5. To determine whether a security to be acquired for investment must be investment grade and the applicable definition of “investment grade,” a bank or savings association should consult the regulations of its appropriate federal banking agency, e.g., national banks should look to the OCC’s rules at 12 CFR 1. For state-chartered financial institutions, the term “investment grade” may be defined differently across laws and regulations issued by each state, and therefore may be subject to restrictions on investments that are more stringent than those in 12 CFR 1. In addition, for corporate investments, federal and state savings associations are required to determine if the security meets the investment permissibility standards under 12 CFR 362 of the FDIC Rules and Regulations. 12 CFR 362 requires that the issuer has adequate capacity to meet all financial commitments under the security for the projected life of the investment. This standard is consistent with the one adopted by the OCC for national banks defined in 12 CFR 1, which was revised to replace the previous definition of “investment grade.” State and federal savings associations had to comply with the FDIC’s final rule on January 1, 2013. See 77 Fed. Reg. 43151 (July 24, 2012). Under the Federal Reserve Act (12 USC 335) and the Federal Reserve’s Regulation H (12 CFR 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 USC 24 (Seventh)) and may only invest in securities to the extent permitted under applicable state law.

6. See, e.g., 12 CFR 1.2(d). Generally, assets that defer payments, even if allowed for in the instrument’s contracts, do not meet the “full and timely” repayment standard for investment grade and typically should be classified.

that demonstrate the obligor’s continued repayment capacity. Therefore, investment-grade securities will generally not be classified. However, examiners may use discretion to classify a security when justified by available credit-risk information.

B. Sub-investment Grade Debt Securities

Securities that do not meet the investment grade standard, as defined in applicable regulations, and for which the timely repayment of principal and interest is not certain, have investment characteristics that are distinctly or predominantly speculative and are generally subject to classification. For investment securities, the classification should be based on the instrument’s worth as an earning asset assuming it is held to maturity. Therefore, the phrase “liquidation of the debt” in the classification definitions is synonymous with “payment of the obligation in full.” Accordingly, if payment of the obligation in full is in question, it is no longer investment grade and management should classify the security.

A Doubtf ul classification is appropriate when an asset has experienced significant credit deterioration and decline in fair value, but estimation of impairment involves significant uncertainty because of various pending factors. These factors could include uncertain financial data that may not permit the accurate forecasting of future cash flows or estimating recovery value. The use of the Doubtf ul classification is an interim measure until information becomes available to substantiate a more appropriate treatment.

C. Classification and Assessment of Other Types of Debt Securities

Some securities with equity-like risk and return profiles can have highly speculative performance characteristics. When determining classification examiners should evaluate such holdings based upon an assessment of each instrument’s facts and circumstances. This Agreement does not apply to securities held in trading accounts that are measured at fair value with changes in fair value recognized in current earnings and regulatory capital.

7. For more information, please refer to the Glossary
D. Classification of Securities with Credit Deterioration

Depository institutions should continually assess whether securities meet the investment grade standard. Throughout the term of an investment security, its credit-risk profile can decline and improve as credit conditions change. Similarly, an institution’s analysis should consider how potential adverse economic conditions can negatively affect an individual security. An institution’s management expertise and the sophistication of its risk management and due diligence processes should be commensurate with the complexity of its investment portfolio holdings.

For securities already owned:

Depository institutions should classify a security to accurately reflect its credit-risk profile. For example, a security may meet the criteria for an investment grade rating at purchase and, therefore, be considered a “pass” security. However, as credit conditions deteriorate and ongoing analysis confirms a weakened repayment capacity, the security should be downgraded to Substandard or Doubtful. In situations where the credit condition subsequently improves, the facts and circumstances supported by current analysis may warrant an upgrade to “pass.” An upgrade is only appropriate following a period of sustained performance. If the security incurs credit losses, but subsequent analysis shows that all future contractual payments will be received, the security may warrant an upgrade to “pass.” Notwithstanding this possibility, securities with realized credit losses do not conform to the investment grade standard and may be subject to restrictions under the agencies’ permissible investment regulations or rules governing transfers to affiliates. In situations where credit losses are incurred and analysis does not support the full payment of future contractual amounts, the security cannot be upgraded to “pass.”

For potential purchases:

Depository institutions may not purchase investment securities that fail to meet the investment-grade standard as defined by applicable regulations. If pre-purchase analysis reveals previous credit losses in a security under consideration, regardless of its current performance or projected payment analysis, the security does not, and cannot, meet the investment-grade standard. In contrast, if a security experienced credit deterioration and downgrades in the past, but did not sustain actual credit losses, the security’s current and projected payment performance may indicate that the security could meet the investment-grade criteria once more. If it is offered for sale at this point and has a history of sustained performance, this security would be considered eligible for purchase by a depository institution.

III. Classification Approach Illustrations

Table 3 that follows outlines examples of how the agencies would apply the uniform classification approach to specific situations. Examiners may use discretion to assess credit risk and assign a classification based on current information, independent of any assigned credit rating.

8. Credit losses can occur throughout various stages of a security’s existence and will depend on a variety of factors, that is, the type of instrument, the ability of the underlying payment source (for example, issuer, underlying asset, and obligors), and the existence of guarantees or credit enhancements. For corporate and municipal obligations, credit losses may represent payment defaults that the issuer does not have the financial capacity to cure. In the case of structured finance products, if a particular class of securities or tranches is no longer fully supported by cash flows from underlying assets, credit losses represent the deficiencies between remaining available cash flow and the principal and interest requirements.

9. One exception to this rule is a security that has undergone a court-supervised legally binding restructure, which has performed for a sustained period following the restructure. This scenario is discussed further in Table 3.

</tbody>
</table>

¹. Note to the Agreement: Any upgrade in classification should follow a sustained period of performance and be based on improvement in credit condition and an analysis that supports that all future contractual payments will be received. Generally, the performance period should cover multiple payments as determined by the security’s payment structure: monthly, quarterly, annually.
CLASSIFICATION OF ASSETS IN EXAMINATIONS

Classification units are designated as Substandard, Doubtful, and Loss. The following definitions apply to assets adversely classified for supervisory purposes:

• A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

• An asset classified Doubtful has all the weaknesses inherent in one classified Substandard, with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

• Assets classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

FOREIGN DEBT SECURITIES

The Interagency Country Exposure Review Committee (ICERC) assigns transfer-risk ratings for cross-border exposures. Examiners should use the guidelines in this uniform agreement rather than ICERC transfer-risk ratings in assigning security classifications, except when the ICERC ratings result in a more-severe classification.

CREDIT-RISK-MANAGEMENT FRAMEWORK FOR SECURITIES

When an institution has developed an accurate, robust, and documented credit-risk-management framework to analyze its securities holdings, examiners may choose to depart from the general debt security classification guidelines in favor of individual asset review in determining whether to classify those holdings. A robust credit-risk-management framework entails appropriate pre-acquisition credit due diligence by qualified staff that grades a security’s credit risk based on an analysis of the repayment capacity of the issuer and the structure and features of the security. It also involves the ongoing monitoring of holdings to ensure that risk ratings are reviewed regularly and updated in a timely fashion when significant new information is received.

The credit analysis of securities should vary based on the structural complexity of the security, the type of collateral, and external ratings. The credit-risk-management framework should reflect the size, complexity, quality, and risk characteristics of the securities portfolio; the risk appetite and policies of the institution; and the quality of its credit-risk-management staff, and should reflect changes to these factors over time. Policies and procedures should identify the extent of credit analysis and documentation required to satisfy sound credit-risk-management standards.

TRANSFERS OF LOW-QUALITY SECURITIES AND ASSETS

The purchase of low-quality assets by a bank from an affiliated bank or nonbank affiliate is a violation of section 23A of the Federal Reserve Act and Regulation W. The transfer of low-quality securities from one depository institution to another may be done to avoid detection and classification during regulatory examinations; this type of transfer may be accomplished through participations, purchases or sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Broadly defined, low-quality securities include depreciated or sub-investment-quality securities. Situations in which an institution appears to be concealing low-quality securities to avoid examination scrutiny and possible classification represent an unsafe and unsound activity.

Any situations involving the transfer of low-quality or questionable securities should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary federal regulator of the other depository institution involved in the
transaction. For example, if an examiner determines that a state member bank or holding company has transferred or intends to transfer low-quality securities to another depository institution, the Reserve Bank should notify the recipient institution’s primary federal regulator of the transfer. The same notification requirement holds true if an examiner determines that a state member bank or holding company has acquired or intends to acquire low-quality securities from another depository institution. This procedure applies to transfers involving savings associations and savings banks, as well as commercial banking organizations.

Situations may arise when transfers of securities are undertaken for legitimate reasons. In these cases, the securities should be properly recorded on the books of the acquiring institution at their fair value on the date of transfer. If the transfer was with the parent holding company or a nonbank affiliate, the records of the affiliate should be reviewed as well.

PERMISSIBLE STOCK HOLDINGS

The purchase of securities convertible into stock at the option of the issuer is prohibited (12 CFR 1.6). Other than as specified in table 4, banks are prohibited from investing in stock.

</table>

*This information precedes November 2004.

1. Section 208.2(d) of Regulation H defines “capital stock and surplus” to mean tier 1 and tier 2 capital included in a member bank’s risk-based capital and the balance of a member bank’s allowance for loan and lease losses not included in its tier 2 capital for calculation of risk-based capital, based on the bank’s most recent consolidated Report of Condition and Income. Section 9 of the Federal Reserve Act (12 USC 338a) provides that the Board has the authority under this law to approve public-welfare or other such investments, up to the sum of 5 percent of paid-in and unimpaired capital stock and 5 percent of unimpaired surplus, unless the Board determines by order that the higher amount will pose no significant risk to the affected deposit insurance fund, and the bank is adequately capitalized. In no case may the aggregate of such investments exceed 10 percent of the bank’s combined capital stock and surplus.

**LIMITED EQUITY INVESTMENTS**

Investing in the equity of nonfinancial companies and lending to private-equity-financed companies (that is, companies financed by private equity) have emerged as increasingly important sources of earnings and business relationships at a number of banking organizations (BOs). In this guidance, the term **private equity** refers to shared-risk investments outside of publicly quoted securities and also covers activities such as venture capital, leveraged buyouts, mezzanine financing, and holdings of publicly quoted securities obtained through these activities. While private equity securities can contribute substantially to earnings, these activities can give rise to increased volatility of both earnings and capital. The supervisory guidance in SR-00-9 on private equity investments and merchant banking activities is concerned with a BO’s proper risk-focused management of its private equity investment activities so that these investments do not adversely affect the safety and soundness of the affiliated insured depository institutions. An institution’s board of directors and senior management are responsible for ensuring that the risks associated with private equity activities do not adversely affect the safety and soundness of the banking organization or any other affiliated insured depository institutions. To this end,
sound investment and risk-management practices and strong capital positions are critical elements in the prudent conduct of these activities.

Legal and Regulatory Authority

Depository institutions are able to make limited equity investments under the following statutory and regulatory authorities:

- Depository institutions may make equity investments through small business investment corporations (SBICs). Investments made by SBIC subsidiaries are allowed up to a total of 50 percent of a portfolio company’s outstanding shares, but can only be made in companies defined as a small business, according to SBIC rules. A bank’s aggregate investment in the stock of SBICs is limited to 5 percent of the bank’s capital and surplus.

- Under Regulation K, which implements sections 25 and 25A of the Federal Reserve Act (FRA) and section 4(c)(13) of the Bank Holding Company Act of 1956 (BHC Act), a depository institution may make portfolio investments in foreign companies, provided the investments do not in the aggregate exceed 25 percent of the tier 1 capital of the bank holding company. In addition, individual investments must not exceed 19.9 percent of a portfolio company’s voting shares or 40 percent of the portfolio company’s total equity.10

Equity investments made under the authorities listed above may be in publicly traded securities or privately held equity interests. The investment may be made as a direct investment in a specific portfolio company, or it may be made indirectly through a pooled investment vehicle, such as a private equity fund.11 In general, private equity funds are investment companies, typically organized as limited partnerships, that pool capital from third-party investors to invest in shares, assets, and ownership interests in companies for resale or other disposition. Private-equity-fund investments may provide seed or early-stage investment funds to start-up companies or may finance changes in ownership, middle-market business expansions, and mergers and acquisitions.

Oversight by the Board of Directors and Senior Management

Equity investment activities require the active oversight of the board of directors and senior management of the depository institution that is conducting the private equity investment activities. The board should approve portfolio objectives, overall investment strategies, and general investment policies that are consistent with the institution’s financial condition, risk profile, and risk tolerance. Portfolio objectives should address the types of investments, expected business returns, desired holding periods, diversification parameters, and other elements of sound investment-management oversight. Board-approved objectives, strategies, policies, and procedures should be documented and clearly communicated to all the personnel involved in their implementation. The board should actively monitor the performance and risk profile of equity investment business lines in light of the established objectives, strategies, and policies.

The board also should ensure that there is an effective management structure for conducting the institution’s equity activities, including adequate systems for measuring, monitoring, controlling, and reporting on the risks of equity investments. The board should approve policies that specify lines of authority and responsibility for both acquisitions and sales of investments. The board should also approve (1) limits on aggregate investment and exposure amounts; (2) the types of investments (for example, direct and indirect, mezzanine financing, start-ups, seed financing); and (3) appropriate diversification-related aspects of equity investments such as industry, sector, and geographic concentrations.

For its part, senior management must ensure that there are adequate policies, procedures, and management information systems for managing equity investment activities on a day-to-day and longer-term basis. Management should set clear lines of authority and responsibility for making and monitoring investments and for managing risk. Management should ensure that an institution’s equity investment activities are conducted by competent staff whose technical knowledge

---

10. Shares of a corporation held in trading or dealing accounts or under any other authority are also included in the calculation of a depository institution’s investment. Portfolio investments of $25 million or less can be made without prior notice to the Board. See Regulation K for more detailed information.
11. For additional stock holdings that state member banks are authorized to hold, see table 4.
and experience are consistent with the scope of the institution’s activities.

Management of the Investment Process

Depository institutions engaging in equity investment activities should have a sound process for executing all elements of investment management, including initial due diligence, periodic reviews of holdings, investment valuation, and realization of returns. This process requires appropriate policies, procedures, and management information systems, the formality of which should be commensurate with the scope, complexity, and nature of an institution’s equity investment activities. The supervisory review should be risk-focused, taking into account the institution’s stated tolerance for risk, the ability of senior management to govern these activities effectively, the materiality of activities in comparison to the institution’s risk profile, and the capital position of the institution.

Depository institutions engaging in equity investment activities require effective policies that (1) govern the types and amounts of investments that may be made, (2) provide guidelines on appropriate holding periods for different types of investments, and (3) establish parameters for portfolio diversification. Investment strategies and permissible types of investments should be clearly identified. Portfolio diversification policies should identify factors pertinent to the risk profile of the investments being made, such as industry, sector, geographic, and market factors. Policies establishing expected holding periods should specify the general criteria for liquidation of investments and guidelines for the divestiture of an underperforming investment. Decisions to liquidate underperforming investments are necessarily made on a case-by-case basis considering all relevant factors. Policies and procedures, however, should require more frequent review and analysis for investments that are performing poorly or that have been in a portfolio for a considerable length of time, as compared with the other investments overall.

Policies and Limits

Policies should identify the aggregate exposure that the institution is willing to accept, by type and nature of investment (for example, direct or indirect, industry sectors). The limits should include funded and unfunded commitments. Formal and clearly articulated hedging policies and strategies should identify limits on hedged exposures and permissible hedging instruments.

Procedures

Management and staff compensation play a critical role in providing incentives and controlling risks within a private equity business line. Clear policies should govern compensation arrangements, including co-investment structures and staff sales of portfolio company interests.

Institutions have different procedures for assessing, approving, and reviewing investments based on the size, nature, and risk profile of an investment. The procedures used for direct investments may be different than those used for indirect investments made through private equity funds. For example, different levels of due diligence and senior management approvals may be required. When constructing management infrastructures for conducting these investment activities, management should ensure that operating procedures and internal controls appropriately reflect the diversity of investments.

The potential diversity in investment practice should be recognized when conducting supervisory reviews of the equity investment process. The supervisory focus should be on the appropriateness of the process employed relative to the risk of the investments made and on the materiality of this business line to the overall soundness of the depository institution, as well as the potential impact on affiliated depository institutions. The procedures employed should include the following:

- Investment analysis and approvals, including well-founded analytical assessments of investment opportunities and formal investment approval processes.

The methods and types of analyses conducted should be appropriately structured to adequately assess the specific risk profile, industry dynamics, management, specific terms and conditions of the investment opportunity, and other relevant factors. All elements of the analytical and approval processes, from initial review through the formal investment decision, should be documented and clearly
understood by the staff conducting these activities.

The evaluation of existing and potential investments in private equity funds should involve an assessment of the adequacy of a fund’s structure. Consideration should be given to the (1) management fees, (2) carried interest and its computation on an aggregate portfolio basis, (3) sufficiency of capital commitments that are provided by the general partners in providing management incentives, (4) contingent liabilities of the general partner, (5) distribution policies and wind-down provisions, and (6) performance benchmarks and return-calculation methodologies.

• Investment-risk ratings.

Internal risk ratings should assign each investment a rating based on factors such as the nature of the company, strength of management, industry dynamics, financial condition, operating results, expected exit strategies, market conditions, and other pertinent factors. Different rating factors may be appropriate for indirect investments and direct investments.

• Periodic and timely investment strategy and performance (best, worst, and probable case assessment) reviews of equity investments, conducted at the individual and portfolio levels.

Management should ensure that periodic and timely review of the institution’s equity investments takes place at both individual-investment and portfolio levels. Depending on the size, complexity, and risk profile of the investment, reviews should, when appropriate, include factors such as—

— the history of the investment, including the total funds approved;
— commitment amounts, principal-cash-investment amounts, cost basis, carrying value, major-investment cash flows, and supporting information including valuation rationales and methodologies;
— the current actual percentage of ownership in the portfolio company on both a diluted and undiluted basis;
— a summary of recent events and current outlook;
— the recent financial performance of portfolio companies, including summary compilations of performance and forecasts,

12. The carried interest is the share of a partnership’s return that is received by the general partners or investment advisers.

historical financial results, current and future plans, key performance metrics, and other relevant items;
— internal investment-risk ratings and rating-change triggers;
— exit strategies, both primary and contingent, and expected internal rates of return upon exit; and
— other pertinent information for assessing the appropriateness, performance, and expected returns of investments.

Portfolios should include an aggregation of individual investment-risk and performance ratings; an analysis of appropriate industry, sector, geographic, and other pertinent concentrations; and total portfolio valuations. Portfolio reports that contain the cost basis, carrying values, estimated fair values, valuation discounts, and other factors summarizing the status of individual investments are integral tools for conducting effective portfolio reviews. Reports containing the results of all reviews should be available to supervisors for their inspection.

Given the inherent uncertainties in equity investment activities, institutions should include in their periodic reviews consideration of the best case, worst case, and probable case assessments of investment performance. These reviews should evaluate changes in market conditions and the alternative assumptions used to value investments—including expected and contingent exit strategies. Major assumptions used in valuing investments and forecasting performance should be identified. These assessments need not be confined to quantitative analyses of potential losses, but may also include qualitative analyses. The formality and sophistication of investment reviews should be appropriate for the overall level of risk the depository institution incurs from this business line.

• Assessment of the equity investment valuation and accounting policies and the procedures used, their impact on earnings, and the extent of their compliance with generally accepted accounting principles (GAAP).

Valuation and accounting policies and procedures can have a significant impact on the earnings of institutions engaged in equity investment activities. Many equity investments are made in privately held companies, for which independent price quotations are either unavailable or not available in sufficient volume to provide meaningful liquidity or a...
market valuation. Valuations of some equity investments may involve a high degree of judgment on the part of management or the skillful use of peer comparisons. Similar circumstances may exist for publicly traded securities that are thinly traded or subject to resale and holding-period restrictions, or when the institution holds a significant block of a company’s shares. It is of paramount importance that an institution’s policies and procedures on accounting and valuation methodologies for equity investments be clearly articulated.

Under GAAP, equity investments held by investment companies, held by broker-dealers, or maintained in the trading account are reported at fair value, with any unrealized appreciation or depreciation included in earnings and flowing to tier 1 capital. For some holdings, fair value may reflect adjustments for liquidity and other factors.

Equity investments that are not held in investment companies, by broker-dealers, or in the trading account and that have a readily determinable fair value (quoted market price) are generally reported as available-for-sale (AFS). They are marked to market with unrealized appreciation or depreciation recognized in GAAP-defined “comprehensive income” but not earnings. Appreciation or depreciation flows to equity, but, for regulatory capital purposes only, depreciation is included in tier 1 capital.13 Equity investments without readily determinable fair values generally are held at cost, subject to write-downs for impairments to the value of the asset. Impairments of value should be promptly and appropriately recognized and written down.

In determining fair value, the valuation methodology plays a critical role. Formal valuation and accounting policies should be established for investments in public companies; direct private investments; indirect fund investments; and, where appropriate, other types of investments with special characteristics. When establishing valuation policies, institutions should consider market conditions, taking account of lockout provisions, the restrictions of Securities and Exchange Commission Rule 144, liquidity features, the dilutive effects of warrants and options, and industry characteristics and dynamics.

Accounting and valuation of equity investments should be subject to regular periodic review. In all cases, valuation reviews should produce documented audit trails that are available to supervisors and auditors. These reviews should assess the consistency of the methodologies used in estimating fair value.

Accounting and valuation treatments should be assessed in light of their potential for abuse, such as through the inappropriate management or manipulation of reported earnings on equity investments. For example, high valuations may produce overstatements of earnings through gains and losses on investments reported at “fair value.” On the other hand, inappropriately understated valuations can provide vehicles for smoothing earnings by recognizing gains on profitable investments when an institution’s earnings are otherwise under stress. While reasonable people may disagree on valuations given to illiquid private equity investments, institutions should have rigorous valuation procedures that are applied consistently.

Increasingly, equity investments are contributing to an institution’s earnings. The potential impact of these investments on the composition, quality, and sustainability of overall earnings should be appropriately recognized and assessed by both management and supervisors.

- A review of assumed and actual equity-investment exit strategies and the extent of their impact on the returns and reported earnings.

The principal means of exiting an equity investment in a privately held company include initial public stock offerings, sales to other investors, and share repurchases. An institution’s assumptions on exit strategies can significantly affect the valuation of the investment. Management should periodically review investment exit strategies, with particular focus on larger or less-liquid investments.

- Policies and procedures governing the sale, exchange, transfer, or other disposition of equity investments.

Policies and procedures to govern the sale, exchange, transfer, or other disposition of the institution’s investments should state clearly the levels of management or board approval required for the disposition of investments.

- Internal methods for allocating capital based

---

13. Under the risk-based capital rule, supplementary (tier 2) capital may include up to 45 percent of pre-tax unrealized holding gains (that is, the excess, if any, of the fair value over historical cost) on AFS equity securities with readily determinable fair values.
on the risk inherent in the equity investment activities, including the methods for identifying all material risks and their potential impact on the safety and soundness of the institution.

Consistent with SR-99-18, depository institutions that are conducting material equity investment activities should have internal methods for allocating economic capital. These methods should be based on the risk inherent in the equity investment activities, including the identification of all material risks and their potential impact on the institution. Organizations that are substantially engaged in these investment activities should have strong capital positions supporting their equity investments. The economic capital that organizations allocate to their equity investments should be well in excess of the current regulatory minimums applied to lending activities. The amount of percentage of capital dedicated to the equity investment business line should be appropriate to the size, complexity, and financial condition of the institution. Assessments of capital adequacy should cover not only the institution’s compliance with regulatory capital requirements and the quality of regulatory capital, but should also include an institution’s methodologies for internally allocating economic capital to this business line.

**Internal Controls**

An adequate system of internal controls, with appropriate checks and balances and clear audit trails, is critical to conducting equity investment activities effectively. Appropriate internal controls should address all the elements of the investment-management process. The internal controls should focus on the appropriateness of existing policies and procedures; adherence to policies and procedures; and the integrity and adequacy of investment valuations, risk identification, regulatory compliance, and management reporting. Any departures from policies and procedures should be documented and reviewed by senior management, and this documentation should be available for examiner review.

As with other financial activities, the assessments of an organization’s compliance with both written and implied policies and procedures should be independent of line decision-making functions to the fullest extent possible. When fully independent reviews are not possible in smaller, less-complex institutions, alternative checks and balances should be established. These alternatives may include random internal audits, reviews by senior management who are independent of the function, or the use of outside third parties.

**Documentation**

Documentation of key elements of the investment process, including initial due diligence, approval reviews, valuations, and dispositions, is an integral part of any private equity investment internal control system. This documentation should be accessible to supervisors.

**Legal Compliance**

An institution’s internal controls should focus on compliance with all federal laws and regulations that are applicable to the institution’s investment activities. Regulatory compliance requirements, in particular, should be incorporated into internal controls so managers outside of the compliance or legal functions understand the parameters of permissible investment activities.

To ensure compliance with federal securities laws, institutions should establish policies, procedures, and other controls addressing insider trading. A “restricted list” of securities for which the institution has inside information is one example of a widely used method for controlling the risk of insider trading. In addition, control procedures should be in place to ensure that appropriate reports are filed with functional regulators.

The limitations in sections 23A and 23B of the FRA, which deal with transactions between a depository institution and its affiliates, are presumed by the Gramm-Leach-Bliley Act (GLB Act) to apply to certain transactions between a depository institution and any portfolio company in which an affiliate of the institution owns at least a 15 percent equity interest. This ownership threshold is lower than the ordinary definition of an affiliate, which is typically 25 percent.
Compensation

Often, key employees in the private equity investment units of banking organizations may co-invest in the direct or fund investments made by the unit. These co-investment arrangements can be an important incentive and risk-control technique, and they can help to attract and retain qualified management. However, “cherry picking,” or selecting only certain investments for employee participation while excluding others, should be discouraged.

The employees’ co-investment may be funded through loans from the depository institution or its affiliates, which, in turn, would hold a lien against the employees’ interests. The administration of the compensation plan should be appropriately governed pursuant to formal agreements, policies, and procedures. Among other matters, policies and procedures should address the terms and conditions of employee loans and the sales of participants’ interests before the release of the lien.

Disclosure of Equity Investment Activities

Given the important role that market discipline plays in controlling risk, institutions should ensure that they adequately disclose the information necessary for the markets to assess the institution’s risk profile and performance in this business line. Indeed, it is in the institution’s interest, as well as that of its creditors and shareholders, to publicly disclose information about earnings and risk profiles. Institutions are encouraged to disclose in public filings information on the type and nature of investments, portfolio concentrations, returns, and their contributions to reported earnings and capital. Supervisors should fully review and use these disclosures, as well as periodic regulatory reports filed by publicly held banking organizations, as part of the information they review routinely. The following topics are relevant for public disclosure, though disclosures on each of these topics may not be appropriate, relevant, or sufficient in every case:

- the size of the portfolio
- the types and nature of investments (for example, direct or indirect, domestic or international, public or private, equity or debt with conversion rights)
- initial cost, carrying value, and fair value of investments and, when applicable, comparisons to publicly quoted share values of portfolio companies
- the accounting techniques and valuation methodologies, including key assumptions and practices affecting valuation and changes in those practices
- the realized gains (or losses) arising from sales and unrealized gains (or losses)
- insights regarding the potential performance of equity investments under alternative market conditions

Lending to or Engaging in Other Transactions with Portfolio Companies

Additional risk-management issues may arise when a depository institution or an affiliate lends to or has other business relationships with (1) a company in which the depository institution or an affiliate has invested (that is, a portfolio company), (2) the general partner or manager of a private equity fund that has also invested in a portfolio company, or (3) a private-equity-financed company in which the banking institution does not hold a direct or indirect ownership interest but which is an investment or portfolio company of a general partner or fund manager with which the banking organization has other investments. Given the potentially higher-than-normal risk attributes of these lending relationships, institutions should devote special attention to ensuring that the terms and conditions of such relationships are at arm’s length and are consistent with the lending policies and procedures of the institution. Similar issues may arise in the context of derivatives transactions with or guaranteed by portfolio companies and general partners. Lending and other business transactions between an insured depository institution and a portfolio company that meet the definition of an affiliate must be negotiated on an arm’s-length basis, in accordance with section 23B of the FRA.

When a depository institution lends to a private-equity-financed company in which it has no equity interest but in which the borrowing company is a portfolio investment of private equity fund managers or general partners with which the institution may have other private-equity-related relationships, care must be taken...
to ensure that the extension of credit is conducted on reasonable terms. In some cases, lenders may wrongly assume that the general partners or another third party implicitly guarantees or stands behind such credits. Reliance on implicit guarantees or comfort letters should not substitute for reliance on a sound borrower that is expected to service its debt with its own resources. As with any type of credit extension, absent a written contractual guarantee, the credit quality of a private equity fund manager, general partner, or other third party should not be used to upgrade the internal credit-risk rating of the borrower company or to prevent the classification or special mention of a loan.

When an institution lends to a portfolio company in which it has a direct or an indirect interest, implications arise under sections 23A and 23B of the FRA, which govern credit-related transactions and asset purchases between a depository institution and its affiliates. Section 23A applies to transactions between a depository institution and any company in which the institution’s holding company or shareholders own at least 25 percent of the company’s voting shares. The GLB Act extends this coverage by establishing a presumption that a portfolio company is an affiliate of a depository institution if the financial holding company (FHC) uses the merchant banking authority of the GLB Act to own or control more than 15 percent of the equity of the company. Institutions should obtain the assistance of counsel in determining whether such issues exist or would exist if loans were extended to a portfolio company, general partner, or manager. Supervisors, including examiners, should ensure that the institution has conducted a proper review of these issues to avoid violations of law or regulations.

INVESTMENT SECURITIES’ RISKS

Market Risk

Market risk is the exposure of an institution’s financial condition to adverse movements in the market rates or prices of its holdings before such holdings can be liquidated or expeditiously offset. It is measured by assessing the effect of changing rates or prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution. Although many banking institutions focus on carrying values and reported earnings when assessing market risk at the institutional level, other measures focusing on total returns and changes in economic or fair values better reflect the potential market-risk exposure of institutions, portfolios, and individual instruments. Changes in fair values and total returns directly measure the effect of market movements on the economic value of an institution’s capital and provide significant insights into their ultimate effects on the institution’s long-term earnings. Institutions should manage and control their market risks using both an earnings and an economic-value approach, and at least on an economic or fair-value basis.

When evaluating capital adequacy, examiners should consider the effect of changes in market rates and prices on the economic value of the institution by evaluating any unrealized losses in an institution’s securities or derivative positions. This evaluation should assess the ability of the institution to hold its positions and function as a going concern if recognition of unrealized losses would significantly affect the institution’s capital ratios. Examiners also should consider the impact that liquidating positions with unrealized losses may have on the institution’s prompt-corrective-action capital category.

Market-risk limits should be established for both the acquisition and ongoing management of an institution’s securities and derivative holdings and, as appropriate, should address exposures for individual instruments, instrument types, and portfolios. These limits should be integrated fully with limits established for the entire institution. At the institutional level, the board of directors should approve market-risk exposure limits that specify percentage changes in the economic value of capital and, when applicable, in the projected earnings of the institution under various market scenarios. Similar and complementary limits on the volatility of prices or fair value should be established at the appropriate instrument, product-type, and portfolio levels, based on the institution’s willingness to accept market risk. Limits on the variability of effective maturities may also be desirable for certain types of instruments or portfolios.

The scenarios an institution specifies for assessing the market risk of its securities and derivative products should be sufficiently rigorous to capture all meaningful effects of any options. For example, in assessing interest-rate risk, scenarios such as 100, 200, and 300 basis points
Instruments can evaporate. When examiners do not move as expected, the demand for these defined market shifts. If market prices or rates designed to benefit from specific, narrowly instruments that are highly leveraged or that are techniques. This type of risk is particularly acute for institutions with significant holdings of highly complex instruments should ensure that they have independent means to value their positions. Institutions using internal models to measure risk should validate the models according to the standards in SR-11-7. This should include a periodic review of all elements of the modeling process, including its assumptions and risk-measurement techniques. Institutions relying on third parties for market-risk measurement systems and analyses should fully understand the assumptions and techniques used by the third party.

Institutions should evaluate the market-risk exposures of their securities and derivative positions and report this information to their boards of directors regularly, not less frequently than each quarter. These evaluations should assess trends in aggregate market-risk exposure and the performance of portfolios relative to their established objectives and risk constraints. They also should identify compliance with board-approved limits and identify any exceptions to established standards. Examiners should ensure that institutions have mechanisms to detect and adequately address exceptions to limits and guidelines. Examiners should also determine that management reporting on market risk appropriately addresses potential exposures to basis risk, yield curve changes, and other factors pertinent to the institution’s holdings. In this connection, examiners should assess an institution’s compliance with broader guidance for managing interest-rate risk in a consolidated organization.

Complex and illiquid instruments often involve greater market risk than broadly traded, more liquid securities. Often, this higher potential market risk arising from illiquidity is not captured by standardized financial-modeling techniques. This type of risk is particularly acute for instruments that are highly leveraged or that are designed to benefit from specific, narrowly defined market shifts. If market prices or rates do not move as expected, the demand for these instruments can evaporate. When examiners encounter such instruments, they should review how adequately the institution has assessed its potential market risks. If the risks from these instruments are material, the institution should have a well-documented process for stress testing their value and liquidity assumptions under a variety of market scenarios.

Liquidity Risk

Banks face two types of liquidity risk in their securities and derivative activities: risks related to specific products or markets and risks related to the general funding of their activities. The former, market-liquidity risk, is the risk that an institution cannot easily unwind or offset a particular position at or near the previous market price because of inadequate market depth or disruptions in the marketplace. The latter, funding-liquidity risk, is the risk that the bank will be unable to meet its payment obligations on settlement dates. Since neither type of liquidity risk is unique to securities and derivative activities, management should evaluate these risks in the broader context of the institution’s overall liquidity.

When specifying permissible securities and derivative instruments to accomplish established objectives, institutions should take into account the size, depth, and liquidity of the markets for specific instruments, and the effect these characteristics may have on achieving an objective. The market liquidity of certain types of instruments may make them entirely inappropriate for achieving certain objectives. Moreover, institutions should consider the effects that market risk can have on the liquidity of different types of instruments. For example, some government-agency securities may have embedded options that make them highly illiquid during periods of market volatility and stress, despite their high credit rating. Accordingly, institutions should clearly articulate the market-liquidity characteristics of instruments to be used in accomplishing institutional objectives.

Operating and Legal Risks

Operating risk is the risk that deficiencies in information systems or internal controls will result in unexpected loss. Some specific sources of operating risk include inadequate procedures,
human error, system failure, or fraud. Inaccurately assessing or controlling operating risks is one of the more likely sources of problems facing institutions involved in securities and derivative activities.

Adequate internal controls are the first line of defense in controlling the operating risks involved in an institution’s securities and derivative activities. Of particular importance are internal controls to ensure that persons executing transactions are separated from those individuals responsible for processing contracts, confirming transactions, controlling various clearing accounts, approving the accounting methodology or entries, and performing revaluations.

Institutions should have approved policies, consistent with legal requirements and internal policies, that specify documentation requirements for transactions and formal procedures for saving and safeguarding important documents. Relevant personnel should fully understand the requirements. Examiners should also consider the extent to which institutions evaluate and control operating risks through internal audits, stress testing, contingency planning, and other managerial and analytical techniques.

An institution’s operating policies should establish appropriate procedures to obtain and maintain possession or control of instruments purchased. Institutions should ensure that transactions consummated orally are confirmed as soon as possible. As noted earlier in this section, banking organizations should, to the extent possible, seek to diversify the firms used for their safekeeping arrangements to avoid concentrations of assets or other types of risk.

Legal risk is the risk that contracts are not legally enforceable or documented correctly. This risk should be limited and managed through policies developed by the institution’s legal counsel. At a minimum, guidelines and processes should be in place to ensure the enforceability of counterparty agreements. Examiners should determine whether an institution is adequately evaluating the enforceability of its agreements before individual transactions are consummated. Institutions should also ensure that the counterparty has sufficient authority to enter into the transaction and that the terms of the agreement are legally sound. Institutions should further ascertain that their netting agreements are adequately documented, have been executed properly, and are enforceable in all relevant jurisdictions. Institutions should know relevant tax laws and interpretations governing the use of netting instruments.

An institution’s policies should also provide conflict-of-interest guidelines for employees who are directly involved in purchasing securities from and selling securities to securities dealers on behalf of their institution. These guidelines should ensure that all directors, officers, and employees act in the best interest of the institution. The board of directors may wish to adopt policies prohibiting these employees from engaging in personal securities transactions with the same securities firms the institution uses without the specific prior approval of the board. The board of directors may also wish to adopt a policy applicable to directors, officers, and employees that restricts or prohibits them from receiving gifts, gratuities, or travel expenses from approved securities dealer firms and their personnel.

INTERNATIONAL DIVISION INVESTMENTS

The same types of instruments exist in international banking as in domestic banking. Securities and derivative contracts may be acquired by a bank’s international division and overseas branches for its own account, and foreign equity investments may be held by the bank directly or through Edge Act corporations. The investments held by most international divisions are predominately securities issued by various governmental entities of the countries in which the bank’s foreign branches are located. These investments are held for a variety of purposes:

• They are required by various local laws.
• They are used to meet foreign reserve requirements.
• They result in reduced tax liabilities.
• They enable the bank to use new or increased rediscount facilities or benefit from greater deposit or lending authorities.
• They are used by the bank as an expression of “goodwill” toward a country.

The examiner should be familiar with the applicable sections of Regulation K (12 CFR 211) governing a member bank’s international investment holdings, as well as other regulations discussed in this section. Because of the mandatory investment requirements of some countries, securities held cannot always be as “liq-
uid” and “readily marketable” as required in domestic banking. However, the amount of a bank’s “mandatory” holdings will normally be a relatively small amount of its total investments or capital funds.

A bank’s international division may also hold securities strictly for investment purposes; these are expected to provide a reasonable rate of return commensurate with safety considerations. As with domestic investment securities, the bank’s safety must take precedence, followed by liquidity and marketability. Securities held by international divisions are considered to be liquid if they are readily convertible into cash at their approximate carrying value. They are marketable if they can be sold in a very short time at a price commensurate with yield and quality. Speculation in marginal foreign securities to generate more favorable yields is an unsound banking practice and should be discouraged.

Banks are generally prohibited from investing in stocks. However, a number of exceptions (detailed earlier in this section) are often applicable to the international division. For example, the bank may, under section 24A of the Federal Reserve Act (12 USC 371d), hold stock in overseas corporations that hold title to foreign bank premises. Both stock and other securities holdings are permissible under certain circumstances and in limited amounts under section 211.4 of Regulation K—Permissible Activities and Investments of Foreign Branches of Member Banks (12 CFR 211). Other sections of Regulation K permit the bank to make equity investments in Edge Act and agreement corporations and in foreign banks, subject to certain limitations.

Standard & Poor’s, Moody’s, and other publications from U.S. rating-services rate Canadian and other selected foreign securities that are authorized for U.S. commercial bank investment purposes under 12 USC 24 (Seventh). However, in many other countries, securities-rating services are limited or nonexistent. When they do exist, the ratings are only indicative and should be supplemented with additional information on legality, credit soundness, marketability, and foreign-exchange and country-risk factors. The opinions of local attorneys are often the best source of determining whether a particular foreign security has the full faith and credit backing of a country’s government.

Sufficient analytical data must be provided to the bank’s board of directors and senior management so they can make informed judgments about the effectiveness of the international division’s investment policy and procedures. The institution’s international securities and derivative contracts should be included on all board and senior management reports detailing domestic securities and derivative contracts received. These reports should be timely and sufficiently detailed to allow the board of directors and senior management to understand and assess the credit, market, and liquidity risks facing the institution and its securities and derivative positions.

ACCOUNTING FOR SECURITIES PORTFOLIOS

A single class of a financial instrument that can meet trading, investment, or hedging objectives may have a different accounting treatment applied to it, depending on management’s purpose for holding it. Therefore, an examiner reviewing investment or trading activities should be familiar with the different accounting methods to ensure that the particular accounting treatment being used is appropriate for the purpose of holding a financial instrument and the economic substance of the related transaction.

The accounting principles that apply to securities portfolios, including trading accounts, and to derivative instruments are complex and have evolved over time—both with regard to authoritative standards and related banking practices. Examiners should consult the sources of generally accepted accounting principles (GAAP); FASB ASC 320, Investments—Debt and Equity Securities; and the reporting requirements in the bank Call Report (referred to in this section) for more detailed guidance in these areas.

Examiners should be aware that accounting practices in foreign countries may differ from the accounting principles followed in the United States. Nevertheless, foreign institutions are required to submit regulatory reports prepared in accordance with U.S. banking agency regulatory reporting instructions, which incorporate GAAP.

*Treatment under FASB ASC TOPIC 320, formerly FASB Statement No. 115*

In May 1993, the Financial Accounting Standards Board issued Statement of Financial...
Accounting Standards No. 115, “Accounting for Certain Investments in Debt and Equity Securities.” FASB 115 supersedes FASB 12, “Accounting for Certain Marketable Securities,” and related interpretations. It also amends other standards, including FASB 65, “Accounting for Certain Mortgage-Banking Activities,” to eliminate mortgage-backed securities from that statement’s scope. FASB 115 addresses investments in equity securities that have readily determinable fair values and all investments in debt securities. The accounting standard was effective for fiscal years beginning after December 15, 1993, for regulatory reporting and financial reporting purposes. It was to be initially applied as of the beginning of an institution’s fiscal year and cannot be applied retroactively to prior years’ financial statements. Investments subject to the standard are to be classified in three categories and accounted for as follows:

- **Held-to-maturity account.** Debt securities that the institution has the positive intent and ability to hold to maturity are classified as held-to-maturity securities and reported at amortized cost.
- **Trading account.** Debt and equity securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and reported at fair value, with unrealized gains and losses included in earnings. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price.
- **Available-for-sale account.** Debt and equity securities not classified as either held-to-maturity securities or trading securities are classified as available-for-sale securities and reported at fair value, with unrealized gains and losses excluded from earnings and reported as a net amount in a separate component of shareholders’ equity.

Under FASB 115, mortgage-backed securities that are held for sale in conjunction with mortgage-banking activities should be reported at fair value in the trading account. The standard does not apply to loans, including mortgage loans, that have not been securitized.

Upon the acquisition of a debt or equity security, an institution must place the security into one of the above three categories. At each reporting date, the institution must reassess whether the balance-sheet designation continues to be appropriate. Proper classification of securities is a key examination issue. (See SR-94-25 and SR-93-72; see also SR-96-32.)

FASB 115 recognizes that certain changes in circumstances may cause the institution to change its intent to hold a certain security to maturity without calling into question its intent to hold other debt securities to maturity in the future. Thus, the sale or transfer of a held-to-maturity security due to one of the following changes in circumstances will not be viewed as inconsistent with its original balance-sheet classification:

- evidence of a significant deterioration in the issuer’s creditworthiness
- a change in tax law that eliminates or reduces the tax-exempt status of interest on the debt security (but not a change in tax law that revises the marginal tax rates applicable to interest income)
- a major business combination or major disposition (such as the sale of a segment) that necessitates the sale or transfer of held-to-maturity securities to maintain the institution’s existing interest-rate risk position or credit-risk policy
- a change in statutory or regulatory requirements that significantly modifies either what constitutes a permissible investment or the maximum level of investments in certain kinds of securities, thereby causing an institution to
dispose of a held-to-maturity security

- a significant increase by the regulator in the industry’s capital requirements that causes the institution to downsize by selling held-to-maturity securities
- a significant increase in the risk weights of debt securities used for regulatory risk-based capital purposes

Furthermore, FASB 115 recognizes that other events that are isolated, nonrecurring, and unusual for the reporting institution and could not have been reasonably anticipated may cause the institution to sell or transfer a held-to-maturity security without necessarily calling into question its intent to hold other debt securities to maturity. However, all sales and transfers of held-to-maturity securities must be disclosed in the footnotes to the financial statements.

An institution must not designate a debt security as held-to-maturity if the institution has the intent to hold the security for only an indefinite period. Consequently, a debt security should not, for example, be designated as held-to-maturity if the banking organization or other company anticipates that the security would be available to be sold in response to—

- changes in market interest rates and related changes in the security’s prepayment risk,
- needs for liquidity (for example, due to the withdrawal of deposits, increased demand for loans, surrender of insurance policies, or payment of insurance claims),
- changes in the availability of and the yield on alternative investments,
- changes in funding sources and terms, or
- changes in foreign-currency risk.

According to FASB 115, an institution’s asset-liability management may take into consideration the maturity and repricing characteristics of all investments in debt securities, including those held to maturity or available for sale, without tainting or casting doubt on the standard’s criterion that there be a “positive intent to hold until maturity.”16 However, securities should not be designated as held-to-maturity if they may be sold. Further, liquidity can be derived from the held-to-maturity category by the use of repurchase agreements that are designated as financings, but not sales.

Transfers of a security between investment categories should be accounted for at fair value. FASB 115 requires that at the date of the transfer, the security’s unrealized holding gain or loss must be accounted for as follows:

- For a security transferred from the trading category, the unrealized holding gain or loss at the date of the transfer will have already been recognized in earnings and should not be reversed.
- For a security transferred into the trading category, the unrealized holding gain or loss at the date of the transfer should be recognized in earnings immediately.
- For a debt security transferred into the available-for-sale category from the held-to-maturity category, the unrealized holding gain or loss at the date of the transfer should be recognized in a separate component of shareholders’ equity.
- For a debt security transferred into the held-to-maturity category from the available-for-sale category, the unrealized holding gain or loss at the date of the transfer should continue to be reported in a separate component of shareholders’ equity but should be amortized over the remaining life of the security as an adjustment of its yield in a manner consistent with the amortization of any premium or discount.

Transfers from the held-to-maturity category should be rare, except for transfers due to the changes in circumstances that were discussed above. Transfers from the held-to-maturity account not meeting the exceptions indicated above may call into question management’s intent to hold other securities to maturity. According to the standard, transfers into or from the trading category should also be rare.

FASB 115 requires that institutions determine whether a decline in fair value below the amortized cost for individual securities in the available-for-sale or held-to-maturity accounts is “other than temporary” (that is, whether this

---

16. In summary, under FASB 115, sales of debt securities that meet either of the following two conditions may be considered as “maturities” for purposes of the balance-sheet classification of securities: (i) The sale of a security occurs near enough to its maturity date (or call date if exercise of the call is probable)—for example, within three months—that interest-rate risk has been substantially eliminated as a pricing factor. (ii) The sale of a security occurs after the institution has already collected at least 85 percent of the principal outstanding at acquisition from either prepayments or scheduled payments.
decline results from permanent impairment). For example, if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of a debt security that was not impaired at acquisition, an other-than-temporary impairment should be considered to have occurred. If the decline in fair value is judged to be other than temporary, the cost basis of the individual security should be written down to its fair value, and the write-down should be accounted in earnings as a realized loss. This new cost basis should not be written up if there are any subsequent recoveries in fair value.
1. To determine if policies, practices, procedures, and internal controls regarding investments are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine the overall quality of the investment portfolio and how that quality relates to the soundness of the bank.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures or internal controls are deficient or when violations of laws or regulations have been noted.
1. If used, answer the questions in section 2020.4, the “Investment Securities and End-User Activities” internal control questionnaire.

2. On the basis of an evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the following examination procedures. Also, obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors, and determine if any corrections have been accomplished. Determine the extent and effectiveness of investment-policy supervision by—
   a. reviewing the abstracted minutes of meetings of the board of directors or appropriate committees;
   b. determining that proper authorizations have been made for investment officers or committees;
   c. determining any limitations or restrictions on delegated authorities;
   d. evaluating the sufficiency of analytical data used by the board or investment committee;
   e. reviewing the reporting methods used by department supervisors and internal auditors to ensure compliance with established policy; and
   f. preparing a memo for the examiner who is assigned “Duties and Responsibilities of Directors” and the examiner who is in charge of the international examination, if applicable, stating conclusions on the effectiveness of directors’ supervision of the domestic or international division investment policy. All conclusions should be documented.

4. Obtain the following:
   a. Trial balances of investment-account holdings and money market instruments, such as commercial paper, banker’s acceptances, negotiable certificates of deposit, securities purchased under agreements to resell, and federal funds sold. Identify any depository instruments placed through money brokers.
   b. A list of any assets carried in loans, and a list of discounts on which interest is exempt from federal income taxes and which are carried in the investment account on Call Reports.
   c. A list of open purchase and sale commitments.
   d. A schedule of all securities, forward placement contracts, futures contracts, contracts on exchange-traded puts and calls, option contracts on futures puts and calls, and standby contracts purchased or sold since the last examination.
   e. A maturity schedule of securities sold under repurchase agreements.
   f. A list of pledged assets and secured liabilities.
   g. A list of the names and addresses of all securities dealers doing business with the bank.
   h. A list of the bank’s personnel authorized to trade with dealers.
   i. A list of all U.S. government–guaranteed loans that are recorded and carried as an investment-account security.
   j. For international division and overseas branches, a list of investments—
      • held to comply with various foreign governmental regulations requiring such investments;
      • used to meet foreign reserve requirements;
      • required as stock exchange guarantees or used to enable the bank to provide securities services;
      • representing investment of surplus funds;
      • used to obtain telephone and telex services;
      • representing club and school memberships;
      • acquired through debts previously contracted;
      • representing minority interests in non-affiliated companies;
      • representing trading-account securities;
      • representing equity interests in Edge Act and agreement corporations and foreign banks;
      • representing portfolio investments made
pursuant to Regulation K; and
• held for other purposes.

5. Using updated data available from reports of condition, UBPR printouts, and investment adviser and correspondent bank portfolio-analysis reports, obtain or prepare an analysis of investment and money market holdings that includes—

a. a month-by-month schedule of par, book, and market values of issues maturing in one year;

b. schedules of par, book, and market values of holdings in the investment portfolio (schedules should be indexed by maturity date, and individual schedules should be detailed by maturity dates over the following time periods: over one through five years, over five through 10 years, and over 10 years);

c. value totals of holdings by obligor or industry; related obligors or industries; geographic distribution; yield; and special characteristics, such as moral obligations, conversion, or warrant features;

d. par-value schedules of type I, II, III, and IV investment holdings, by those legally defined types; and

e. for the international division, a list of international investment holdings (foreign-currency amounts and U.S. dollar equivalents) to include—

• descriptions of securities held (par, book, and market values),

• names of issuers,

• issuers’ countries of domicile,

• interest rates, and

• pledged securities.

6. Review the reconciliation of investment and money market account (or accounts) trial balances to the general-ledger control account (or accounts).

7. Using either an appropriate sampling technique or the asset-coverage method, select from the trial balance (or balances) the international investments, municipal investments, and money market holdings for examination. If transaction volume permits, include all securities purchased since the last general examination in the population of items to be reviewed.

8. Perform the following procedures for each investment and money market holding selected in step 7:

a. Check appropriate legal opinions or published data outlining legal status.

b. If market prices are provided to the bank by an independent party (excluding affiliates and securities dealers selling investments to the bank) or if they are independently tested as a documented part of the bank’s audit program, accept those prices. If the independence of the prices cannot be established, test market values by reference to one of the following sources:

• published quotations, if available

• appraisals by outside pricing services, if performed

c. If market prices are provided by the bank and cannot be verified by reference to published quotations or other sources, test those prices by using the “comparative yield method” to calculate approximate yield to maturity:

\[
\text{approximate yield to maturity} = \frac{\text{annual interest} + \frac{\text{par value} - \text{book value}}{\text{number of years to maturity}}}{\frac{1}{2} (\text{bank-provided market price} + \text{par value})}
\]

• Compare the bank-provided market price and the examiner-calculated approximate yield to maturity with an independent publicly offered yield or market price for a similar type of investment with similar rating, trading-volume, and maturity or call characteristics.

• Investigate market-value variances in excess of 5 percent.

d. For investments and money market obligations in the sample that are rated, compare the ratings provided with the most recent published ratings.

Before continuing, refer to steps 16 through 18. They should be performed in conjunction with steps 9 through 15. International division holdings should be reviewed with domestic holdings to ensure compliance, when combined, with applicable legal requirements.

9. To the extent practical under the circumstances, perform credit analyses of—

a. the obligors on securities purchased under agreements to resell, when the readily marketable value of the securities is not sufficient to satisfy the obligation;

b. all international investments, nonrated
securities, and money market instruments selected in step 7 or acquired since the last examination;
c. all previously detailed or currently known speculative issues;
d. all defaulted issues; and
e. any issues in the current Interagency Country Exposure Review Committee credit schedule obtained from the international loan portfolio manager by—
- comparing the schedule with the foreign securities trial balance obtained in step 4 to ascertain which foreign securities are to be included in Interagency Country Exposure Review Committee credits;
- for each security so identified, transcribing the following appropriate information to a separate examiner’s line sheet or a related examiner’s credit line sheet:
  — amount (and U.S. dollar equivalent if a foreign currency) to include par, book, and fair values
  — how and when acquired
  — maturity date (or dates)
  — default date, if appropriate
  — any pertinent comments; and
- returning the schedule and the appropriate examiner’s line sheet (or sheets) to the examiner who is assigned “International—Loan Portfolio Management.”

10. Review the most recent reports of examination of the bank’s Edge Act and agreement corporation affiliates and foreign subsidiaries to determine their overall conditions. Also, compile data on Edge Act and agreement corporations and foreign subsidiaries necessary for the commercial report of examination (that is, asset criticisms, transfer risk, and other material examination findings). Review portfolio investments made by Edge and agreement corporations under Regulation K for compliance with the investment limitations in Regulation K.

11. Review the asset quality and the liquidity of all investment securities. Debt securities that have nontemporary impairments should be classified according to the October 29, 2014, interagency Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions. (See SR-13-18.) Classify speculative and defaulted issues according to the sub-investment-quality debt securities category of the agreement. No preferential treatment should be given to defaulted municipal securities. Comments to be included in the examination report are—
- a description of the issue;
- how and when each issue was acquired;
- the default date, if appropriate;
- the date up to which interest was paid;
- the credit assessment or determinations at the time of acquisition; and
- other comments supporting the classification.

12. Review the bank’s investment-security maturity program.
- Review the maturity schedules.
  - Compare the book values and the fair values and, after considering the gain or loss on year-to-date sales, determine if the costs of selling intermediate and long-term issues appear prohibitive.
  - Determine if recent acquisitions show a trend toward lengthened or shortened maturities. Discuss such trends with management, particularly with regard to investment objectives approved by the investment committee.
- Review the pledged asset and secured liability schedules and isolate pledged securities by maturity segment. Then determine the fair value of securities pledged in excess of net secured liabilities.
- Review the schedule of securities sold under repurchase agreement and determine—
  - whether financing for securities purchases is provided by repurchase agreement by the securities dealer who originally sold the security to the bank;
  - whether funds acquired through the sale of securities under agreement to repurchase are invested in money market assets, or if short-term repurchase agreements are being used to fund longer-term, fixed-rate assets;
  - the extent of matched asset repo and liability repo maturities and the overall effect on liquidity resulting from unmatched positions;
  - whether the interest rate paid on securities sold under agreement to repurchase is appropriate relative to current money market rates; and
• whether the repurchase agreement is at the option of the buying or selling bank.

d. Review the list of open purchase and sale commitments and determine the effect of their completion on maturity scheduling.

e. Submit investment portfolio information regarding the credit quality and practical liquidity of the investment portfolio to the examiner who is assigned to review the “Asset/Liability Management.”

13. Consult with the examiner responsible for the asset/liability management analysis to determine what information is needed to assess the bank’s sensitivity to interest-rate fluctuations and its ability to meet short-term funding requirements. If requested, compile the information using bank records or other appropriate sources. See section 6000.1, “Instructions for the Report of Examination,” for factors to be taken into account when compiling this information. Information which may be required to be furnished includes—
a. the fair value of unpledged government and federal-agency securities maturing within one year;
b. the fair value of other unpledged government and federal-agency securities which would be sold without loss;
c. the fair value of unpledged municipal securities maturing within one year;
d. the book value of money market instruments, such as banker’s acceptances, commercial paper, and certificates of deposit (provide amounts for each category); and

e. commitments to purchase and sell securities, including futures, forward, and standby contracts. (Provide a description of the security contract, the purchase or sales price, and the settlement or expiration date.)

14. Determine whether the bank’s investment policies and practices are satisfactorily balancing earnings and risk considerations.
a. Use UBPR or average Call Report data to calculate investments as a percentage of total assets, and use average yields on U.S. government and nontaxable investments to—

• compare results with peer-group statistics,
• determine the reasons for significant variances from the norm, and

b. Calculate current market depreciation as a percentage of gross capital funds.
c. Review the analysis of municipal and corporate issues by rating classification and—

• determine the total in each rating class and the total of nonrated issues,
• determine the total of nonrated investment securities issued by obligors located outside of the bank’s service area (exclude U.S. government–guaranteed issues), and
• review acquisitions since the prior examination and ascertain reasons for trends that may suggest a shift in the rated quality of investment holdings.

d. Review coupon rates or yields (when available) and compare those recently acquired investments and money market holdings with coupon rates or yields that appear high or low with similarly acquired instruments of analogous types, credit assessments or determinations, or maturity characteristics. (Discuss significant rate or yield variances with management.)
e. Review the schedule of securities, futures, forward, and standby contracts purchased and sold since the last examination, and determine whether the volume of trading is consistent with policy objectives. (If the bank does not have a separate trading account, determine whether such an account should be established, including appropriate recordkeeping and controls.)
f. If the majority of sales resulted in gains, determine if profit-taking is consistent with stated policy objectives or is motivated by anxiety for short-term income.
g. Determine whether the bank has discounted or has plans to discount future investment income by selling interest coupons in advance of interest-payment dates.
h. Review the list of commitments to purchase or sell investments or money market investments. (Determine the effect of completion of these contracts on future earnings.)

15. Review the bank’s federal income tax position and
a. determine, by discussion with appropri-
ate officer(s), if the bank is taking advan-
tage of procedures to minimize tax lia-
ability in view of other investment
objectives;

b. review or compute actual and budgeted—
• tax-exempt holdings as a percentage of
total assets and
• applicable income taxes as a percent-
age of net operating income before
taxes; and

c. discuss with management the tax impli-
cations of losses resulting from securities
sales.

16. Determine that proper risk diversification
exists within the portfolio by—

a. reviewing totals of holdings by single
obligor or industry, related obligors or
industries, geographic distribution, yields,
and securities that have special charac-
teristics (include individual due from
bank accounts from the list received
from the bank or from the examiner
assigned “Due from Banks” and all
money market instruments) and—
• detail, as concentrations, all holdings
equaling 25 percent or more of capital
funds and
• list all holdings equaling at least
10 percent but less than 25 percent of
capital funds and submit that informa-
tion to the examiner assigned “Loan
Portfolio Management” (These hold-
ings will be combined with any addi-
tional advances in the lending areas.)
and

b. performing a credit analysis of all non-
rated holdings determined to be a con-
centration if not performed in step 9.

17. If the bank is engaged in financial futures,
exchange-traded puts and calls, forward
placement, or standby contracts, determine
if—

a. the policy is specific enough to outline
permissible contract strategies and their
relationships to other banking activities;

b. recordkeeping systems are sufficiently
detailed to permit a determination of
whether operating personnel have
acted in accordance with authorized
objectives;

c. the board of directors or its designee has
established specific contract position
limits and reviews contract positions at
least monthly to ascertain conformance
with those limits;

d. gross and net positions are within autho-
rized positions and limits, and if trades
were executed by persons authorized to
trade futures; and

e. the bank maintains general-ledger memo-
randum accounts or commitment regis-
ters which, at a minimum, include—
• the type and amount of each contract,
• the maturity date of each contract,
• the current market price and cost of
each contract, and
• the amount held in margin accounts:
  — All futures contracts and forward
  and standby and options contracts
  are revalued on the basis of fair
  value each month-end.
  — Securities acquired as the result of
completed contracts are valued at
  fair value upon settlement.
  — Fee income received by the bank
on standby contracts is accounted
  for properly.
  — Financial reports disclose futures,
  forwards, options, and standby
  activity.
  — The bank has instituted a system
  for monitoring credit-risk exposure
  in forward and standby contract
  activity.
  — The bank’s internal controls, man-
  agement reports, and audit proce-
  dures are adequate to ensure adher-
  ence to policy.

18. If the bank is engaged in financial futures,
forward placement, options, or standby con-
tracts, determine if the contracts have a
reasonable correlation to the bank’s busi-
ness needs (including gap position) and
capacity to fulfill its obligations under the
contracts by—

a. comparing the contract commitment and
maturity dates to anticipated offset,

b. reporting significant gaps to the examiner
assigned “Asset/Liability Management”
(refer to step 13),
c. comparing the amounts of outstanding contracts to the amounts of the anticipated offset,

d. ascertaining the extent of the correlation between expected interest-rate movements on the contracts and the anticipated offset, and

e. determining the effect of the loss recognition on future earnings, and, if significant, reporting it to the examiner assigned “Analytical Review and Income and Expense.”

19. On the basis of pricings, ratings, and credit analyses performed above, and using the investments selected in step 7 or from lists previously obtained, test for compliance with applicable laws and regulations by—

   a. determining if the bank holds type II or III investments that are predominantly speculative in nature or securities that are not marketable (12 CFR 1.3(b));

   b. reviewing the recap of investment securities by legal types, as defined by 12 CFR 1, on the basis of the legal restrictions of 12 USC 24 and competent legal opinions, as follows:

      • If a type II or III security is readily marketable, and if the purchaser’s judgment was based on evidence of the obligor’s ability to perform, determine if the par value of such securities issued by a single obligor, which the bank owns or is committed to purchase, exceeds 10 percent of the bank’s capital funds (12 CFR 1.5(a) and 1.7(a)).

      • If the holding of a type II or III security was based on a reliable estimate of the obligor’s ability to perform, determine if the aggregate par value of such issues exceeds 5 percent of the bank’s capital funds (12 CFR 1.5(b) and 1.7(b));

   c. for those investment securities that are convertible into stock or which have stock purchase warrants attached—

      • determining if the book value has been written down to an amount that represents the fair value of the security, independent of the conversion or warrant provision and

      • determining if the fair values of other securities that have been ruled eligible for purchase are within specified capital limitations;

   d. reviewing pledge agreements and secured liabilities and determining that—

      • proper custodial procedures have been followed,

      • eligible securities are pledged,

      • securities pledged are sufficient to secure the liability that requires securing,

      • Treasury Tax and Loan Remittance Options and Note Options are properly secured, and

      • private deposits are not being secured;

      (Information needed to perform the above steps will be contained in the pledge agreement; Treasury circulars 92, Treasury Tax and Loan Accounts (12 CFR 203), and 176, Depositories and Fiscal Agents of the Federal Government (12 CFR 202), as amended.)

   e. reviewing accounting procedures to determine that—

      • investment premiums are being extinguished by maturity or call dates,

      • premium amortization is charged to operating income,

      • accretion of discount is included in current income for banks required to use accrual accounting for reporting purposes,

      • accretion of bond discount requires a concurrent accrual of deferred income tax payable, and

      • securities gains or losses are reported net of applicable taxes and net gains or losses are reflected in the period in which they are realized;

   f. determining if securities purchased under agreement to resell are in fact securities (not loans), are eligible for investment by the bank, and are within prescribed limits (12 USC 24 and 12 CFR 1). If not, determine whether the transaction is within applicable state legal lending limits;

   g. reviewing securities sold under agreement to repurchase and determining whether they are, in fact, deposits (Regulation D, 12 CFR 204.2(a)(1));

   h. determining that securities and money market investments held by foreign branches comply with section 211.3 of Regulation K—Foreign Branches of Member Banks (12 CFR 211.3) as to—

      • acquiring and holding securities (section 211.3(b)(3)) and
• underwriting, distributing, buying, and selling obligations of the national government of the country in which the branch is located (section 211.3(b)(4)); and

(Further considerations relating to the above are contained in other sections of Regulation K. Also review any applicable sections of Regulation T—Credit by Brokers and Dealers (12 CFR 220) and Regulation X—Borrowers of Securities Credit (12 CFR 224). Edge Act and agreement corporations are discussed in the Bank-Related Organizations section.

i. determining that the bank’s equity investments in foreign banks comply with the provisions of section 25 of the Federal Reserve Act and section 211.5 of Regulation K as to—
• investment limitations and
• investment procedures.

20. Test for compliance with other laws and regulations as follows:

a. Review lists of affiliate relationships and lists of directors and principal officers and their interests.

• Determine if the bank is an affiliate of a firm that primarily is engaged in underwriting or selling securities (12 USC 377).
• Determine if directors or officers are engaged in or employed by firms that are engaged in similar activities (12 USC 78, 377, and 378). (It is an acceptable practice for bank officers to act as directors of securities companies not doing business in the United States, the stock of which is owned by the bank as authorized by the Board of Governors of the Federal Reserve System.)

• Review the list of federal funds sold, securities purchased under agreements to resell, interest-bearing time deposits, and commercial paper, and determine if the bank is investing in money market instruments of affiliated banks or firms (section 23A, Federal Reserve Act, and 12 USC 371(c)).

• Determine if transactions involving affiliates, insiders, or their interests have terms that are less favorable to the bank than transactions involving unrelated parties (sections 23A and 22, Federal Reserve Act, and 12 USC 371c, 375, 375a, and 375b).

b. Determine if Federal Reserve stock equals 6 percent of the subject bank’s booked capital and surplus accounts (Regulation I, 12 CFR 209—Issuance and Cancellation of Federal Reserve Stock).

c. Review the nature and duration of federal-funds sales to determine if term federal funds are being sold in an amount exceeding the limit imposed by state legal lending limits.

21. With regard to potential unsafe and unsound investment practices and possible violations of the Securities Exchange Act of 1934, review the list of securities purchased and/or sold since the last examination and—

a. determine if the bank engages one securities dealer or salesperson for virtually all transactions. If so—
• evaluate the reasonableness of the relationship on the basis of the dealer’s location and reputation and
• compare purchase and sale prices to independently established market prices as of trade dates, if appropriate;

b. determine if investment-account securities have been purchased from the bank’s own trading department. If so—
• independently establish the market price as of trade date,
• review trading-account purchase and sale confirmations and determine if the security was transferred to the investment portfolio at market price, and
• review controls designed to prevent dumping; and

c. determine if the volume of trading activity in the investment portfolio appears unwarranted. If so—
• review investment-account daily ledgers and transaction invoices to determine if sales were matched by a like amount of purchases,
• determine whether the bank is financing a dealer’s inventory,
• compare purchase and sale prices with independently established market prices as of trade dates, if appropriate. The carrying value should be determined by the market value of the securities as of the trade date, and
• cross-reference descriptive details on investment ledgers and purchase confirmations to the actual bonds or safe-
keeping receipts to determine if the bonds delivered are those purchased.

22. Discuss with appropriate officer(s) and prepare report comments on—
   a. defaulted issues;
   b. speculative issues;
   c. incomplete credit information;
   d. absence of legal opinions;
   e. significant changes in maturity scheduling;
   f. shifts in the rated quality of holdings;
   g. concentrations;
   h. unbalanced earnings and risk considerations;
   i. unsafe and unsound investment practices;
   j. apparent violations of laws, rulings, and regulations and the potential personal liability of the directorate;
   k. significant variances from peer-group statistics;
   l. market-value depreciation, if significant;
   m. weaknesses in supervision;
   n. policy deficiencies; and
   o. material problems being encountered by the bank’s Edge Act and agreement corporation affiliates, and other related international concerns, that could affect the condition of the bank.

23. The following guidelines are to be implemented while reviewing securities participations, purchases/sales, swaps, or other transfers. The guidelines are designed to ensure that securities transfers involving state member banks, bank holding companies, other holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification and to determine the effect of the transfer on the condition of the institution. In addition, the guidelines are designed to ensure that the primary regulator of the other financial institution involved in the transfer is notified.
   a. Investigate any situations in which securities were transferred before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
   b. Determine whether any of the securities transferred were nonperforming at the time of transfer, classified at the previous examination, depreciated or sub-investment-grade, or for any other reason were considered to be of questionable quality.
   c. Review the bank’s policies and procedures to determine whether or not securities purchased by the bank are given an independent, complete, and adequate credit evaluation. If the bank is a holding company subsidiary or a member of a chain-banking organization, review securities purchases or participations from affiliates or other known members of the chain to determine if the securities purchases are given an arm’s-length and independent credit evaluation by the purchasing bank.
   d. Determine whether or not any bank purchases of securities from an affiliate are in conformance with section 23A of the Federal Reserve Act and Regulation W, which generally prohibits purchases of low-quality assets from an affiliate.
   e. Determine that any securities purchased by the bank are properly reflected on its books at fair market value (fair market value should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any securities sold by the bank at less than book value.
   f. Determine that transactions involving transfers of low-quality securities to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.
   g. If poor-quality securities were transferred to or from another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
      • name of originating and receiving institutions
      • type of securities involved and type of transfer (e.g., participation, purchase/sale, swap)
      • date(s) of transfer
      • total number and dollar amount of securities transferred
      • status of the securities when transferred (e.g., credit quality determina-
• any other information that would be helpful to the other regulator.

24. Reach a conclusion regarding the quality of department management. Communicate your conclusion to the examiner assigned “Management Assessment” and the examiner who is in charge of the international examination, if applicable.

25. Update the workpapers with any information that will facilitate future examination. If the bank has overseas branches, indicate those securities requiring review during the next overseas examination and the reasons for the review.
Review the bank’s internal controls, policies, practices, and procedures regarding purchases, sales, and servicing of the investment portfolio. The bank’s system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written investment securities policies, including when-issued securities, futures, and forward placement contracts, that outline—
   a. objectives,
   b. permissible types of investments,
   c. diversification guidelines to prevent undue concentration,
   d. maturity schedules,
   e. limitation on quality ratings,
   f. policies regarding exceptions to standard policy, and
   g. valuation procedures and frequency?

2. Are investment policies reviewed at least annually by the board to determine if they are compatible with changing market conditions?

3. Are securities designated at time of purchase as to whether they are investments for the portfolio or trading account?

4. Have policies been established governing the transfer of securities from the trading account to the investment-securities account?

5. Have limitations been imposed on the investment authority of officers?

6. Do security transactions require dual authorization?

7. If the bank has due from commercial banks or other depository institutions time, federal funds sold, commercial paper, securities purchased under agreements to resell, or any other money market type of investment—
   a. is purchase or sale authority clearly defined,
   b. are purchases or sales reported to the board of directors or its investment committee,
   c. are maximums established for the amount of each type of asset,
   d. are maximums established for the amount of each type of asset that may be purchased from or sold to any one bank,
   e. do money market investment policies outline acceptable maturities, and
   f. have credit standards and review procedures been established?

CUSTODY OF SECURITIES

8. Do procedures preclude the custodian of the bank securities from—
   a. having sole physical access to securities;
   b. preparing release documents without the approval of authorized persons;
   c. preparing release documents not subsequently examined or tested by a second custodian; and
   d. performing more than one of the following transactions: (1) execution of trades, (2) receipt or delivery of securities, (3) receipt and disbursement of proceeds?

9. Are securities physically safeguarded to prevent loss or unauthorized removal or use?

10. Are securities, other than bearer securities, held only in the name or nominee of the bank?

11. When a negotiable certificate of deposit is acquired, is the certificate safeguarded in the same manner as any other negotiable investment instrument?

RECORDS

12. Do subsidiary records of investment securities show all pertinent data describing the security; its location; pledged or unpledged status; changes in fair-market value; amortized cost (cost to purchase net of premium amortization or discount accretion); premium amortization; discount accretion; and interest earned, collected, and accrued? Do the subsidiary records...
confirm and verify that the investment securities are accounted for, recorded, and reported in accordance with the bank’s Call Report and its instructions?

13. Is the preparation and posting of subsidiary records performed or reviewed by persons who do not also have sole custody of securities?

14. Are subsidiary records reconciled at least monthly to the appropriate general-ledger accounts, and are reconciling items investigated by persons who do not also have sole custody of securities?

For international-division investments, are entries for U.S. dollar carrying values of foreign currency–denominated securities rechecked at inception by a second person?

**PURCHASES, SALES, AND REDEMPTIONS**

16. Is the preparation and posting of security and open contractual commitments purchase, sale, and redemption records performed or reviewed by persons who do not also have sole custody of securities or authorization to execute trades?

17. Are supporting documents, such as brokers’ confirmations and account statements for recorded purchases and sales checked or reviewed subsequently by persons who do not also have sole custody of securities or authorization to execute trades?

18. Are purchase confirmations compared to delivered securities or safekeeping receipts to determine if the securities delivered are the securities purchased?

**FUTURES CONTRACTS, FORWARD PLACEMENT CONTROLS**

19. Do futures and forward contract policies—
   a. outline specific strategies, and  
   b. relate permissible strategies to other banking activities?

20. Are the formalized procedures used by the trader—
   a. documented in a policies and procedures manual and  
   b. approved by the board or an appropriate board committee?

21. Are the bank’s futures commission merchant(s) and/or forward brokers—
   a. notified in writing to trade with only those persons authorized as traders and  
   b. notified in writing of revocation of trading authority?

22. Has the bank established futures and forward trading limits—
   a. for individual traders,  
   b. for total outstanding contracts,  
   c. which are endorsed by the board or an appropriate board committee, and  
   d. the basis of which is fully explained?

23. Does the bank obtain prior written approval detailing amount of, duration, and reason—
   a. for deviations from individual limits and  
   b. for deviations from gross trading limits?

24. Are these exceptions subsequently submitted to the board or an appropriate board committee for ratification?

25. Does the trader prepare a prenumbered electronic or paper trade ticket?

26. Does the electronic or paper trade ticket contain all of the following information:
   a. trade date  
   b. purchase or sale  
   c. contract description  
   d. quantity  
   e. price  
   f. reason for trade  
   g. reference to the position being matched (immediate or future case settlement)  
   h. signature of trader

27. Are the accounting records maintained and controlled by persons who cannot initiate trades?

28. Are accounting procedures documented in a procedures manual?

29. Are all incoming trade confirmations—
   a. received by someone independent of the trading and recordkeeping functions and  
   b. verified to the electronic or paper trade tickets by this independent party?

30. Does the bank maintain general-ledger control accounts disclosing, at a minimum—
   a. futures or forward contracts memorandum accounts,  
   b. deferred gains or losses, and  
   c. margin deposits?

31. Are futures and forward contracts activities—
32. Do periodic statements received from futures commission merchants reflect—
   a. trading activity for the period,
   b. open positions at the end of the period,
   c. market value of open positions,
   d. unrealized gains and losses, and
   e. cash balances in accounts?
33. Are all of these periodic statements—
   a. received by someone independent of both the trading and recordkeeping functions and
   b. reconciled to all of the bank’s accounting records?
34. Are the market prices reflected on the statements—
   a. verified with listed prices from a published source and
   b. used to recompute gains and losses?
35. Are daily reports of unusual increases in trading activity reviewed by senior management?
36. Are weekly reports prepared for an appropriate board committee which reflect—
   a. all trading activity for the week,
   b. open positions at the end of the week,
   c. market value of open positions,
   d. unrealized gains and losses,
   e. total trading limits outstanding for the bank, and
   f. total trading limits for each authorized trader?
37. Is the futures and forward contracts portfolio valued to market (fair market) value?
38. Are revaluation prices provided by persons or sources totally independent of the trading function?

OTHER

39. Does the board of directors receive regular reports on domestic and international-division investment securities which include—
   a. valuations,
   b. maturity distributions,
   c. average yield, and
   d. reasons for holding and benefits received (international-division and overseas holdings only)?
40. Are purchases, exchanges, and sales of securities and open contractual commitments ratified by action of the board of directors or its investment committee and thereby made a matter of record in the minutes?

CONCLUSION

41. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
42. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Investing in Securities without Reliance on Ratings of Nationally Recognized Statistical Rating Organizations

Effective date April 2013

Section 2022.1

On November 15, 2012, state member banks were advised, effective January 1, 2013, that they may no longer rely solely on credit ratings issued by nationally recognized statistical rating organizations (NRSROs) or external credit ratings to determine whether a particular security is an “investment security” that is permmissible for investment by a state member bank. Under the regulations of the Office of the Comptroller of the Currency (OCC), securities qualify for investment by national banks only if they are determined by the bank to be “investment grade” and not predominantly speculative in nature. (See SR-12-15 and its attachment.) The basic sound risk-management principles of this policy and other referenced guidance that follows also applies to bank holding companies (BHCs) and savings and loan holding companies (SLHCs). They should manage and control their risk exposures on a consolidated basis and give recognition to the legal distinctions and potential obstacles to the cash movements among their financial institution subsidiaries. Since a BHC’s structure can include national banks, state member banks, and other financial institution subsidiaries, the referenced statutory, regulatory, and supervisory guidance is provided.

Under the Federal Reserve Act (12 USC 335) and the Federal Reserve (FR)’s Regulation H (12 CFR 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 USC 24 (Seventh)). Therefore, when investing in securities, state member banks must comply with the provisions of the National Banking Act and the OCC’s regulations in 12 CFR part 1. In addition to this federal requirement, a state member bank may purchase, sell, underwrite, or hold securities and stock only to the extent permitted under applicable state law.

National banks are to assess a security’s creditworthiness to determine if it is “investment grade.” A security meets the “investment grade” test only if the issuer has an adequate capacity to meet its financial commitments under the security for the projected life of the asset or exposure. Under this definition, the issuer has an adequate capacity to meet financial commitments if (1) the risk of default by the obligor is low and (2) the full and timely repayment of principal and interest is expected. National banks are expected to consider a number of factors, to the extent appropriate in making this determination. While a national bank may continue to take into account external credit ratings and assessments as a valuable source of information, the bank is expected to supplement these ratings with a degree of due diligence processes and additional analyses appropriate for the bank’s risk profile and for the size and complexity of the instrument.

The OCC issued guidance, effective January 1, 2013 (OCC investment guidance), to clarify regulatory expectations with respect to investment purchase decisions and ongoing portfolio due diligence processes. See appendix I below. The guidance clarifies that generally, investment securities are expected to have good to very strong credit quality. In the case of structured securities, this determination may be influenced more by the quality of the underlying collateral, the cash flow rules, and the structure of the security itself than by the condition of the issuer.

The OCC also expects national banks to conduct an appropriate level of due diligence to understand the inherent risks of a security and determine that it is a permissible investment. The extent of the due diligence should be sufficient to support the institution’s conclusion that a security meets the “investment-grade” standards. The depth of the due diligence should be a function of the security’s credit quality, the complexity of the structure, and the size of the investment. Third-party analytics may be part of this analysis, although the national bank’s management remains responsible for the investment decision and should ensure that prospective third parties are independent, reliable, and qualified. The guidance also sets forth an expectation that the board of directors should oversee management to make sure appropriate decision-making processes are in place.

Investment in securities and stock by state member banks are required under the Federal Reserve Act and Regulation H to comply with the revised 12 CFR part 1 and should meet the supervisory expectations set forth in the OCC’s

investment guidance and this FR guidance. In addition, state member banks are expected to continue to meet long-established supervisory expectations for risk-management processes to ensure that the credit risk of the bank, including the credit risk of the investment portfolio, is effectively identified, measured, monitored, and controlled.

APPENDIX 1—OCC GUIDANCE ON DUE DILIGENCE REQUIREMENTS IN DETERMINING WHETHER SECURITIES ARE ELIGIBLE FOR INVESTMENT

The guidance below was issued by the Office of the Comptroller of the Currency (OCC) on June 13, 2012, and is being included for ease of reference. The official guidance was published in the Federal Register (77 Fed. Reg. 35259), and is available as an attachment to OCC Bulletin 2012-18. As discussed in SR-12-15, the Federal Reserve also expects that state member banks (SMBs) will meet the supervisory expectations set forth in the OCC guidance as this guidance provides further clarification to the OCC rule with which SMBs must comply. (See 12 CFR part 1, and 77 Fed. Reg. 35253, June 13, 2012.)

Purpose

The OCC has issued final rules to revise the definition of “investment grade,” as that term is used in 12 CFR parts 1 and 160 in order to comply with section 939A of the Dodd-Frank Act. Institutions, effective January 1, 2013, are to ensure that existing investments comply with the revised “investment grade” standard, as applicable based on investment type, and safety and soundness practices described in 12 CFR 1.5 and this guidance. This implementation period also will provide management with time to evaluate and amend existing policies and practices to ensure new purchases comply with the final rules and guidance. National banks that have established due diligence review processes, and that have not relied exclusively on external credit ratings, should not have difficulty establishing compliance with the new standard. The OCC is issuing this guidance (Guidance) to clarify steps national banks ordinarily are expected to take to demonstrate they have properly verified their investments meet the newly established credit-quality standards under 12 CFR part 1 and steps national banks are expected to take to demonstrate they are in compliance with due diligence requirements when purchasing investment securities and conducting ongoing reviews of their investment portfolios. The standards below describe how national banks may purchase, sell, deal in, underwrite, and hold securities consistent with the authority contained in 12 USC 24 (Seventh). The activities of national banks must be consistent with safe and sound banking practices, and this Guidance reminds national banks of the supervisory risk-management expectations associated with permissible investment portfolio holdings under parts 1 and 160.

Background

Parts 1 and 160 provide standards for determining whether securities have appropriate credit quality and marketability characteristics to be purchased and held by national banks. These requirements also establish limits on the amount of investment securities an institution may hold for its own account. As defined in 12 CFR part 1, an “investment security” must be “investment grade.” For the purpose of part 1, “investment grade” securities are those where the issuer has an adequate capacity to meet the financial commitments under the security for the projected life of the investment. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected. Generally, securities with good to very strong credit quality will meet this standard. In the case of a structured security (that is, a security that relies primarily on the cash flows and performance of underlying collateral for repayment, rather than the credit of the entity that is the issuer), the determination that full and timely repayment of principal and interest is expected may be influenced more by the quality of the underlying collateral, the cash flow rules, and the structure of the security itself than by the condition of the issuer.

National banks must be able to demonstrate that their investment securities meet applicable credit-quality standards. This Guidance pro-
vides criteria that national banks can use in meeting part 1 credit-quality standards and that national banks can use in meeting due diligence requirements.

**Determining Whether Securities Are Permissible Prior to Purchase**

The OCC’s elimination of references to credit ratings in its regulations, in accordance with the Dodd-Frank Act, does not substantively change the standards institutions should use when deciding whether securities are eligible for purchase under part 1. The OCC’s investment securities regulations generally require a national bank to determine whether or not a security is “investment grade” in order to determine whether purchasing the security is permissible. Investments are considered “investment grade” if they meet the regulatory standard for credit quality. To meet this standard, a national bank must be able to determine that the security has (1) low risk of default by the obligor and (2) the expectation of full and timely repayment of principal and interest over the expected life of the investment.

For national banks, Type I securities, as defined in part 1, generally are government obligations and are not subject to investment grade criteria for determining eligibility to purchase. Typical Type I obligations include U.S. Treasuries, agencies, municipal government general obligations, and for well-capitalized institutions, municipal revenue bonds. While Type I obligations do not have to meet the investment grade criteria to be eligible for purchase, all investment activities should comply with safe and sound banking practices as stated in 12 CFR 1.5 and in previous regulatory guidance. Under OCC rules, Treasury and agency obligations do not require individual credit analysis, but bank management should consider how those securities fit into the overall purpose, plans, and risk and concentration limitations of the investment policies established by the board of directors. Municipal bonds should be subject to an initial credit assessment and then ongoing review consistent with the risk characteristics of the bonds and the overall risk of the portfolio.

Financial institutions should be well acquainted with fundamental credit analysis, as this is central to a well-managed loan portfolio. The foundation of a fundamental credit analysis—character, capacity, collateral, and covenants—applies to investment securities just as it does to the loan portfolio. Accordingly, the OCC expects national banks to conduct an appropriate level of due diligence to understand the inherent risks and determine that a security is a permissible investment. The extent of the due diligence should be sufficient to support the institution’s conclusion that a security meets the investment grade standards. This may include consideration of internal analyses, third party research and analytics including external credit ratings, internal risk ratings, default statistics, and other sources of information as appropriate for the particular security. Some institutions may have the resources to do most or all of the analytical work internally. Some, however, may choose to rely on third parties for much of the analytical work. While analytical support may be delegated to third parties, management may not delegate its responsibility for decisionmaking and should ensure that prospective third parties are independent, reliable, and qualified. The board of directors should oversee management to assure that an appropriate decisionmaking process is in place.

The depth of the due diligence should be a function of the security’s credit quality, the complexity of the structure, and the size of the investment. The more complex a security’s structure, the more credit-related due diligence an institution should perform, even when the credit quality is perceived to be very high. Management should ensure it understands the security’s structure and how the security may perform in different default environments, and should be particularly diligent when purchasing structured securities. The OCC expects national banks to consider a variety of factors relevant to the particular security when determining whether a security is a permissible and sound investment. The range and type of specific factors an institution should consider will vary depending on the particular type and nature of the securities. As a general matter, a national bank will have a greater burden to support its determination if one factor is contradicted by a finding under another factor.

The following matrix provides examples of factors for national banks to consider as part of

---

4. For example, a national bank should be able to demonstrate an understanding of the effects on cash flows of a structured security assuming varying default levels in the underlying assets.
a robust credit-risk assessment framework for designated types of instruments. The types of securities included in the matrix require a credit-focused pre-purchase analysis to meet the investment grade standard or safety and soundness standards. Again, the matrix is provided as a guide to better inform the credit-risk assessment process. Individual purchases may require more or less analysis dependent on the security’s risk characteristics, as previously described.

Additional Guidance on Structured Securities Analysis

The creditworthiness assessment for an investment security that relies on the cash flows and collateral of the underlying assets for repayment (i.e., a structured security) is inherently different from a security that relies on the financial capacity of the issuer for repayment. Therefore, a financial institution should demonstrate an understanding of the features of a structured security that would materially affect its performance and that its risk of loss is low even under adverse economic conditions. Management’s assessment of key factors, such as those provided in this guidance, will be considered a critical component of any structured security evaluation. Existing OCC guidance, including OCC Bulletin 2002-19, “Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices,” states that it is unsafe and unsound to purchase a complex high-yield security without an understanding of the security’s structure and performing a scenario analysis that evaluates how the security will perform in different default environments. Policies that specifically permit this type of investment should establish appropriate limits, and prepurchase due diligence processes should consider the impact of such purchases on capital and earnings under a variety of possible scenarios. The OCC expects institutions to understand the effect economic stresses may have on an investment’s cash flows. Various factors can be used to define the stress scenarios. For example, an institution could evaluate the potential impact of changes in economic growth, stock market movements, unemployment, and home values on default and recovery rates. Some institutions have the resources to perform this type of analytical work internally. Generally, analyses of the application of various stress scenarios to a structured security’s cash flow are widely available from third parties. Many of these analyses evaluate the performance of the security in a base case and a moderate and severe stress case environment. Even under severe stress conditions, the stress scenario analysis should determine that the risk of loss is low and full and timely repayment of principal and interest is expected.

Maintaining an Appropriate and Effective Portfolio Risk-Management Framework

The OCC has had a long-standing expectation that national banks implement a risk-management process to ensure credit risk, including credit risk in the investment portfolio, is effectively identified, measured, monitored, and controlled. The 1998 Interagency Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities (Policy Statement) contains risk-management standards for the investment activities of banks and savings associations. The Policy Statement emphasizes the importance of establishing and maintaining risk processes to manage the market, credit, liquidity, legal, operational, and other risks of investment securities. Other previously issued guidance that supplements OCC investment standards are OCC 2009-15, “Risk Management and Lessons Learned” (which highlights lessons learned during the market disruption and re-emphasizes the key principles discussed in previously issued OCC guidance on portfolio risk management); OCC 2004-25, “Uniform Agreement on the Classification of Securities” (which describes

---

5. On April 23, 1998, the FRB, FDIC, NCUA, and OCC issued the “Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities.”
the importance of management’s credit-risk analysis and its use in examiner decisions concerning investment security risk ratings and classifications; and OCC 2002-19, “Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices” (which alerts banks to the potential risk to future earnings and capital from poor investment decisions made during periods of low levels of interest rates and emphasizes the importance of maintaining prudent credit, interest rate, and liquidity risk-management practices to control risk in the investment portfolio).

National banks must have in place an appropriate risk-management framework for the level of risk in their investment portfolios. Failure to maintain an adequate investment portfolio risk-management process, which includes understanding key portfolio risks, is considered an unsafe and unsound practice.

Having a strong and robust risk-management framework appropriate for the level of risk in an institution’s investment portfolio is particularly critical for managing portfolio credit risk. A key role for management in the oversight process is to translate the board of directors’ tolerance for risk into a set of internal operating policies and procedures that govern the institution’s investment activities. Policies should be consistent with the organization’s broader business strategies, capital adequacy, technical expertise, and risk tolerance. Institutions should ensure that they identify and measure the risks associated with individual transactions prior to acquisition and periodically after purchase. This can be done at the institutional, portfolio, or individual instrument level. Investment policies also should provide credit-risk concentration limits. Such limits may apply to concentrations relating to a single or related issuer, a geographical area, and obligations with similar characteristics. Safety-and-soundness principles warrant effective concentration risk-management programs to ensure that credit exposures do not reach an excessive level.

The aforementioned risk-management policies, principles, and due diligence processes should be commensurate with the complexity of the investment portfolio and the materiality of the portfolio to the financial performance and capital position of the institution. Investment review processes, following the pre-purchase analysis, may vary from institution to institution based on the individual characteristics of the portfolio, the nature and level of risk involved, and how that risk fits into the overall risk profile and operation of the institution. Investment portfolio reviews may be risk-based and focus on material positions or specific groups of investments or stratifications to enable analysis and review of similar risk positions.

As with pre-purchase analytics, some institutions may have the resources necessary to do most or all of their portfolio reviews internally. However, some may choose to rely on third parties for much of the analytical work. Third-party vendors offer risk analysis and data benchmarks that could be periodically reviewed against existing portfolio holdings to assess credit-quality changes over time. Holdings where current financial information or other key analytical data is unavailable should warrant more frequent analysis. High-quality investments generally will not require the same level of review as investments further down the credit-quality spectrum. However, any material positions or concentrations should be identified and assessed in more depth and more frequently, and any system should ensure an accurate and timely risk assessment and reporting process that informs the board of material changes to the risk profile and prompts action when needed. National banks should have investment portfolio review processes that effectively assess and manage the risks in the portfolio and ensure compliance with policies and risk limits. Institutions should reference existing regulatory guidance for additional supervisory expectations for investment portfolio risk-management practices.

1. 12 USC, unless specifically stated otherwise.
2. 12 CFR, unless specifically stated otherwise.
INTRODUCTION

The Securities Act of 1933 requires that adequate and reliable information be made available about securities originally offered for sale to the public. The act requires registration of any securities sale with the Securities and Exchange Commission (SEC) unless it is specifically exempted. Section 4(2) of the act exempts “transactions by an issuer not involving any public offering” (referred to as a “private placement”). A private placement, also known as an unregistered offering, raises capital through the sale of securities to a single, or small number of, select investors.

Common participants in arranging a private placement include banks, mutual funds, insurance companies, pension funds, and hedge funds. The matching of a security issuer with investors is usually done by an individual, or firm, acting as either an agent or an adviser. In the agent relationship, the firm has authority to commit the security issuer. An adviser has no such power. Agents, usually investment bankers, participate in negotiations between the security issuer and investors, and their fee is dependent on their involvement. Agreements between the firm and all other parties to the transaction should specifically state with whom the firm is representing as an agent.

Regardless of whether the firm is agent or adviser, the firm should be aware of the SEC’s Regulation D, “Rules Governing the Limited Offer and Sale of Securities Without Registration Under the Securities Act of 1933,” (17 CFR 230.500). While the bank does not have to register private placement investments with the SEC, bank policies should address measures to comply with relevant SEC regulations, including Regulation D, which exempts certain transactions from the registration requirements of section 5 of the Securities Act of 1933.1 Regulation D states

Such transactions are not exempt from the antifraud, civil liability, or other provisions of the federal securities laws. Issuers are reminded of their obligation to provide such further material information, if any, as may be necessary to make the information required under Regulation D, in light of the circumstances under which it is furnished, not misleading.2

In addition, a bank’s private placements policy should address any applicable state laws relating to the offer and sale of securities.

PRIVATE-PLACEMENT ACTIVITIES BY BANKS

Private placements have certain advantages and disadvantages for both investors and issuers. Compared to public offerings, private placements have fewer regulatory requirements. While private placements raise capital through the sale of securities, the issuer does not have to register the investment with the SEC. Therefore, the time and expense of registering a security with the SEC does not apply to private placements.

In a private placement, both investor and issuer can complete the transaction without being subject to regulatory and public scrutiny. Further, the process of underwriting the private placement is generally faster than a public offering, which allows the issuer to receive proceeds from the sale in less time. If an issuer is selling a bond, the issuer can bypass the expenses associated with obtaining a credit rating from a rating agency. Private placements are flexible, and investments can be tailored to meet the specific needs of the relevant parties. For example, an investor can make an investment for a specified length of time at a stated rate of return.

The major disadvantage of private placements to the investor is the general lack of a secondary market. Thus, the investor may be unable to liquidate the holding until maturity. Additionally, unlike registered offerings in which certain information is required to be disclosed, investors in private placements are generally on their own in obtaining the information they need to make an informed investment decision. Further, the SEC does not review private placements. For instance, a private placement does not require a prospectus and, in some cases, detailed financial information is not disclosed. Instead of a prospectus, a private placement memorandum can accompany a private placement. In general, the private placement memorandum is not publicly

2. 17 CFR 230.500(a).
RISK MANAGEMENT OF PRIVATE PLACEMENTS

A bank that offers private-placement services should establish risk management policies and procedures that address the types of risks arising from private placements. Like any other banking activity or function, a bank’s board of directors has the responsibility for establishing the level of risk that the bank should take in engaging in private placements. Accordingly, the board of directors should approve the bank’s overall business strategies and significant policies, including those related to managing risks. In turn, senior management is responsible for implementing strategies set by the board of directors in a manner that controls risks and that complies with statutes, and regulations on both a long-term and day-to-day basis. Once the risks are properly identified, the bank’s policies and procedures should provide guidance on the day-to-day implementation of business strategies for private placement activity, including limits designed to prevent excessive and imprudent risks.

A bank’s policy on private placements should cover the establishment of procedures, processes, and controls to mitigate fraudulent activities, self-dealing practices, or conflicts-of-interest. For example, a bank acting as adviser or agent assumes the risk of a potential conflict-of-interest charge whenever the proceeds from the placement are used to reduce a classified loan at the bank. Under this scenario, the bank should disclose relevant information about its business dealings with the issuer and financial condition of the issuer, especially if the issuer is borrowing from the bank and is experiencing financial difficulty. Although the bank may not commit funds in a private-placement transaction, the potential for financial loss or damage to its reputation does exist if the bank does not prudently deal with all parties to the transaction and fairly disclose all relevant information.

Banks engaged in private placement activities should establish procedures for conducting prudent pre-purchase analysis of securities. More information on conducting appropriate due diligence and pre-purchase analysis for investments to meet credit quality standards under 12 CFR part 1 are found in SR-12-15, “Investing in Securities without Reliance on Nationally Recognized Statistical Rating Organization Ratings.” Banks should develop procedures to provide timely ongoing monitoring of private-placement activities. Moreover, procedures should be established to detect any transactions that could have an adverse effect on the bank’s other functions, such as loan or trust department activities.

SUPERVISORY CONSIDERATIONS

Examiners should understand the bank’s involvement in private placement activities, determin-
ing whether the bank acts as an investor, agent, or adviser. During the examination process, examiners should review and assess the adequacy of the bank’s policies, practices, and procedures to manage private-placement activities. In reviewing the bank’s private placement activities, examiners should assess bank staff’s knowledge and expertise in this area. Examiners should also assess the bank’s ability to comply with applicable statutes and regulations. In addition, examiners should determine whether the bank has incurred significant losses or has significant risk exposure as a result of participating in private placement activities.
Private Placements
Examination Objectives
Effective date November 2020

1. To determine whether policies, procedures, and internal controls for private placement activities are appropriate.
2. To determine whether bank management implements the bank’s policies and procedures.
3. To assess the adequacy of the bank’s policies and procedures for pre-purchase and ongoing analysis of private placement activities.
4. To evaluate the overall effectiveness and quality of bank management in advising and completing private placements in compliance with statutes and regulations.
5. To initiate corrective action if policies, practices, procedures, or internal controls are deficient.

Section 2024.2
Private Placements
Examination Procedures
Effective date November 2020

Section 2024.3

PRELIMINARY REVIEW

1. Based upon the evaluation of investment volume in private placements, or agent and advisory services, determine the scope of the examination.

2. Review prior examination reports, pre-examination memorandum, and file correspondence for an overview of any previously identified deficiencies.

3. Obtain a listing of any deficiencies noted in the latest review done by internal auditor, external auditors, other third parties, or regulators, and determine if corrections have been accomplished.

4. Obtain and review the following information from appropriate bank staff:
   • a list of the staff performing private placement agent or advisory services and their previous experience.
   • a list of investors that the bank normally deals with in placing private offerings and their stated investment requirements.
   • a copy of the bank’s standard form agreements used in private placement transactions.
   • a list of private placements invested in, or served as agent or adviser for, by the bank since the last examination. Additional information includes
     — name of issuer;
     — name of investor(s), including banks;
     — fee and how it was determined; and
     — amount, rate, and maturity of issue.
   • a list of any funds managed by the bank or its trust department, subsidiaries or affiliates that have been used to purchase private placements advised by the bank or an affiliate.
   • a list of any borrowers whose loans were partially or fully repaid from the sale of private placements advised by the bank since the last examination.
   • a list of participations purchased or sold in loans that used funds from private placements advised by the bank.

5. Review the pertinent information obtained from the previous procedure and compare the information to the list of classified assets from the previous examination.

6. Review and assess the adequacy of applicable policies and procedures for private placement activities. Consider whether the policies and procedures
   • define objectives;
   • provide guidelines for fee determinations based on size and complexity of the transaction;
   • discuss payment of negotiated fees at various stages of the transaction;
   • define the capacity in which bank officers can act in negotiations (Note: An adviser will advise and assist a client, an agent has the authority to commit a client.)
   • recognize possible conflicts of interest and establish appropriate procedures regarding
     — the purchase of bank-advised private placements with funds managed by the bank or an advisory affiliate;
     — loans to investors to purchase private placements;
     — use of proceeds of an advised placement to repay the issuer’s debts to the bank; and
     — dealings with unsophisticated investors who have other business relationships with the bank;
   • discuss bank management’s level of review of each placement prior to completion;
   • direct officers to obtain certified financial statements from the seller and require distribution of certified financial statements to interested investors;
   • require officers to request a written statement of investment objectives or requirements from interested investors;
   • outline the need for management review to determine whether a placement is suitable for the investor; and
   • include appropriate pre-purchase and ongoing analysis of private placement securities purchased.

7. Assess the adequacy of pre-purchase and ongoing analysis conducted on private placement securities purchased.

8. Distribute the list of placements to the examiner assigned loan portfolio management to determine whether any loans were made to fund the investment in the private placement.
9. Review files related to a representative sample of all placement transactions and determine if the bank evaluates both the issuer and investor in a private placement transaction, including the suitability of the investment to the stated investment requirements of the investor.

10. Determine whether potential conflicts of interest exist between bank-advised placements and interests of directors and principal officers. Consider whether former banking relationships exist for both issuer and investor and whether fees charged for loans or paid on deposits are within normal bank policy.

11. As appropriate, discuss with bank management and prepare summaries in appropriate report form of
   • deficiencies in policies, practices, and internal controls.
   • any placement activities that do not comply with statutes and regulations or compromise the bank’s safety and soundness.
   • recommended corrective action.

12. Update examination work papers with any information that will facilitate future examinations.
Counterparty Credit-Risk Management

This section sets forth the June 29, 2011, “Interagency Supervisory Guidance of Counterparty Credit Risk Management” issued by the federal banking agencies.1 The guidance discusses the critical aspects of effective management of counterparty credit risk (CCR), and it sets forth sound practices and supervisory expectations for the development of an effective CCR-management framework. CCR is the risk that the counterparty to a transaction could default or deteriorate in creditworthiness before the final settlement of a transaction’s cash flows. Unlike the credit risk for a loan, when only the lending banking organization faces the risk of loss, CCR creates a bilateral risk of loss because the market value of a transaction can be positive or negative to either counterparty. The future market value of the exposure and the counterparty’s credit quality are uncertain and may vary over time as underlying market factors change.

This CCR guidance is intended for use by banking organizations,2 especially those with large derivatives portfolios, in setting their risk-management practices as well as by supervisors as they assess and examine such institutions’ management of CCR. For other banking organizations without large derivatives portfolios, risk managers and supervisors should apply this guidance as appropriate, given the size, nature, and complexity of the CCR risk profile of the banking organization, although this guidance would generally not apply to community banking organizations.

CCR is a multidimensional form of risk, affected by both the exposure to a counterparty and the credit quality of the counterparty, both of which are sensitive to market-induced changes. It is also affected by the interaction of these risks—for example, the correlation3 between an exposure and the credit spread of the counterparty, or the correlation of exposures among the banking organization’s counterparties. Constructing an effective CCR-management framework requires a combination of risk-management techniques from the credit-, market-, and operational-risk disciplines.

This guidance reinforces sound governance of CCR-management practices, through prudent board and senior management oversight, management reporting, and risk-management functions. The guidance also elaborates on the sound practices for an effective CCR-management framework and associated characteristics of adequate systems infrastructure. It also covers risk-control functions, such as counterparty limits, margin practices, validating and backtesting models and systems, managing close-outs,4 managing central counterparty exposures, and controlling legal and operational risks arising from derivatives activities.

CCR-management guidelines and supervisory expectations are delineated in various individual and interagency policy statements and guidance,5 which remain relevant and applicable. This guidance offers further explanation and clarification, particularly in light of developments in CCR management. However, this guidance is not all-inclusive, and banking organizations should reference sound practices for CCR management, such as those advanced by industry, policymaking, and supervisory forums.6 (See SR 11-10.)

---

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC). The former Office of Thrift Supervision (OTS) also participated in developing this guidance.

2. For the purposes of this CCR guidance, unless otherwise indicated, the term banking organizations is intended to refer to state member banks, state nonmember banks, national banks, federal savings associations, state-chartered savings associations, bank holding companies, and savings and loan holding companies. The U.S. branches and agencies of foreign banks are also considered to be banking organizations for purposes of this guidance.

3. In this guidance, “correlation” refers to any form of linear or nonlinear interrelationship or dependence between factors.

4. A close-out is the process undertaken by a banking organization following default of a counterparty to fully collect on all items due from that counterparty.

6. Industry, policymaking, and supervisory groups include, but are not limited to, the Counterparty Risk Management Policy Group (CRMPG), Committee on Payment and Settlement Systems (CPSS), International Swaps and Derivatives Association (ISDA), Institute of International Finance (IIF), Group of Thirty (G30), Group of Twenty Finance Ministers and Central Bank Governors (G-20), International Organization of Securities Commissions (IOSCO), Senior Supervisors Group (SSG), and Basel Committee on Banking Supervision (BCBS). Documents produced by all of these groups were drawn upon in developing this guidance.
GOVERNANCE

Board and Senior Management Responsibilities

The board of directors or a designated board-level committee (board) should clearly articulate the banking organization’s risk tolerance for CCR by approving relevant policies, including a framework for establishing limits on individual counterparty exposures and concentrations of exposures. Senior management should establish and implement a comprehensive risk-measurement and management framework consistent with this risk tolerance that provides for the ongoing monitoring, reporting, and control of CCR exposures.

Senior management should adhere to the board’s established risk tolerance and should establish policies and risk-management guidelines appropriately. At a minimum, policies should outline CCR-management standards that are in conformance with this guidance. More specifically, they should address the subjects discussed in this document, such as risk measurement and reporting, risk-management tools, and processes to manage legal and operational risk. Policies should be detailed and contain a clear escalation process for review and approval of policy exceptions, especially those pertaining to transaction terms and limits.

Management Reporting

Banking organizations should report counterparty exposures to the board and senior management at a frequency commensurate with the materiality of exposures and the complexity of transactions. Reporting should include concentration analysis and CCR stress-testing results to allow for an understanding of exposures and potential losses under severe market conditions. Reports should also include an explanation of any measurement weaknesses or limitations that may influence the accuracy and reliability of the CCR risk measures.

Senior management should have access to timely, accurate, and comprehensive CCR reporting metrics, including an assessment of significant issues related to the risk-management aspects discussed in this guidance. They should review CCR reports at least monthly, with data that are no more than three weeks old. It is general practice for institutions to report the following:

- total counterparty credit risk aggregated on a firm-wide basis and at significant legal entities
- counterparties with the largest exposures, along with detail on their exposure amounts
- exposures to central counterparties (CCPs)
- significant concentrations, as outlined in this guidance
- exposures to weak or problem counterparties
- growth in exposures over time; as a sound practice, metrics should capture quarterly or monthly changes, supplemented (where relevant) by year-over-year trend data
- exposures from over-the-counter (OTC) derivatives; when they are material, additional product-class breakouts (for example, traditional lending, securities lending) should be included
- a sufficiently comprehensive range of CCR metrics, as discussed in the CCR metrics section
- a qualitative discussion of key risk drivers of exposures or conditions or factors that would fundamentally change the risk profile of CCR; an example would be assessment of changes in credit underwriting terms and whether they remain prudent

Risk-Management Function and Internal Audit

Risk Management

A banking organization’s board and senior management should clearly delineate the respective roles of business lines versus risk management, both in terms of initiating transactions that have CCR and of ongoing CCR management. The board and senior management should ensure that the risk-management functions have adequate resources, are fully independent from CCR-related trading operations (in both activity and reporting), and have sufficient authority to enforce policies and to escalate issues to senior management and the board (independent of the business line).

Internal Audit

The board should direct internal audit to regularly assess the adequacy of the CCR-
management framework as part of the regular audit plan. Such assessments should include credit-line approval processes, credit ratings, and credit monitoring. Such an assessment should opine on the adequacy of the CCR infrastructure and processes, drawing where appropriate from individual business line reviews or other internal and external audit work. (See the relevant section of this guidance regarding the role of CCR model validation or review.) The board should review annual reports from internal audit and model validation or review, assessing the findings and confirming that management has taken appropriate corrective actions.

RISK MEASUREMENT

CCR Metrics

Given the complexity of CCR exposures (particularly regarding OTC derivatives), banking organizations should employ a range of risk-measurement metrics to promote a comprehensive understanding of CCR and how it changes in varying environments. Metrics should be commensurate with the size, complexity, liquidity, and risk profile of the CCR portfolio. Banking organizations typically rely on certain metrics as a primary means of monitoring, with secondary metrics used to create a more robust view of CCR exposures. Banking organizations should apply these metrics to single counterparty exposures, groups of counterparties (for example, by internal rating, industry, geographical region), and the consolidated CCR portfolio. Banking organizations should assess their largest exposures, for instance their top 20 exposures, using each primary metric.

Major dealers and large, sophisticated banking organizations with substantial CCR exposure should measure and assess

• current exposure (both gross and net of collateral);
• forward-looking exposure (that is, potential exposure);
• stressed exposure (broken out by market-risk factors and/or by scenario);
• aggregate and stressed credit valuation adjustment (CVA) as well as CVA factor sensitivities;
• additional relevant risk measures, such as (for credit derivatives) jump-to-default risk on the reference obligor, and economic capital usage;
• the largest exposures by individual business line and product types; and
• correlation risks, such as wrong-way risk, as well as the credit quality of collateral.

Refer to this section’s Appendix A for definitions of basic metrics and descriptions of their purposes.

Aggregation of Exposures

Banking organizations should have the capacity to measure their exposure at various levels of aggregation (for example, by business line, legal entity, or consolidated by industry). Systems should be sufficiently flexible to allow for timely aggregation of all CCR exposures (that is, OTC derivatives, securities financing transactions (SFTs), and other presettlement exposures), as well as aggregation of other forms of credit risk to the same counterparty (for example, loans, bonds, and other credit risks). The following are sound CCR-aggregation principles:

• Counterparty-level current exposure and potential exposure should be calculated daily, based on the previous day’s position data and any exchange of collateral.
• For each organizational level of aggregation, all trades should be included.
• There should be sufficient flexibility to aggregate exposure at varying levels of granularity, including industries, regions, families of products (for example, OTC derivatives, SFTs), or other groupings to identify concentrations.
• While banking organizations are not required to express all forms of risk in a common metric or basis, management should be able to view the various forms of exposures to a given counterparty in a single report and/or system. Specifically, this could include current outstanding exposure across different categories (e.g., current exposure for OTC derivatives and drawn-down lines of commitment for loans). Exposure reports should also include the size of settlement and clearing lines.
• Banking organizations should be consistent in their choice of currency and exchange rate, and take into account the validity and legal enforceability of any netting agreements they may have with a counterparty.
• Management should understand the specific approach used to aggregate exposures for any
given risk measure, in order to properly assess the results. For instance, some measures of risk (such as current exposure) may be readily added together, while others (such as potential exposure) are less meaningful when they are added to form an aggregate view of risk.

- Internal capital adequacy models should incorporate CCR.

## Concentrations

Concentrated exposures are a significant concern, as CCR can contribute to sudden increases in credit exposure, which in turn can result in unexpectedly large losses in the event of counterparty default. Accordingly, banking organizations should have enterprise-wide processes to effectively identify, measure, monitor, and control concentrated exposures on both a legal entity and enterprise-wide basis.

Concentrations should be identified using both quantitative and qualitative means. An exposure or group of related exposures (for example, firms in the same industry) should be considered a concentration in the following circumstances: exposures (individually or collectively) exceed risk-tolerance levels established to ensure appropriate diversification; deterioration of the exposure could result in material loss; or deterioration could result in circumstances that are detrimental to the banking organization’s reputation. All credit exposures should be considered as part of concentration management, including loans, OTC derivatives, names in bespoke and index CDO credit tranches, securities settlements, and money market transactions such as fed funds sold. Total credit exposures should include the size of settlement and clearing lines or other committed lines.

CCR-concentration management should identify, quantify, and monitor the following:

- Individual counterparties with large potential exposures, when those exposures are driven by a single market factor or transaction type. In these circumstances, banking organizations should supplement statistical measures of potential exposure with other measures, such as stress tests, that identify such concentrations and provide an alternative view of risks associated with close-outs.
- Concentrations of exposures to individual legal entities, as well as concentrations across affiliated legal entities at the parent entity level, or in the aggregate for all related entities.
- Concentrations of exposures to industries or other obligor groupings.
- Concentrations of exposures to geographic regions or country-specific groupings sensitive to similar macroeconomic shocks.
- Concentrations across counterparties when potential exposure is driven by the same or similar risk factors. For both derivatives and SFTs, banking organizations should understand the risks associated with crowded trades, where close-out risk may be heightened under stressed market conditions.
- Collateral concentrations, including both risk concentrations with a single counterparty and risks associated with portfolios of counterparties. Banking organizations should consider concentrations of noncash collateral for all product lines covered by collateral agreements, including collateral that covers a single counterparty exposure and portfolios of counterparties.
- Collateral concentrations involving special purpose entities (SPEs). Collateral-concentration risk is particularly important for SPEs, because the collateral typically represents an SPE’s paying capacity.
- Banking organizations should consider the full range of credit risks in combination with CCR to manage concentration risk, including risks from on- and off-balance-sheet activities, contractual and noncontractual risks, contingent and noncontingent risks, as well as underwriting and pipeline risks.

### Stress Testing

Banking organizations with significant CCR exposures should maintain a comprehensive stress-testing framework, which is integrated

---

7. For purposes of this guidance, a “crowded trade” is a large balance of open trading positions in a given asset or group of assets relative to its daily trading volume, when other market participants have similar positions that would need to be liquidated should any adverse price change occur. Coincident sale of these assets by a large number of market participants could lead to significant price declines and dramatic increases in uncollateralized exposures.

8. Banking organizations should also track concentrations in volatile currencies.

9. This analysis is particularly important with repo-style transactions and other forms of SFTs for which the ability of market participants to liquidate large collateral positions may be difficult during periods of market turbulence.
into the banking organization’s CCR management. The framework should inform the banking organization’s day-to-day exposure and concentration management, and it should identify extreme market conditions that could excessively strain the financial resources of the banking organization. Regularly, but no less than quarterly, senior management should evaluate stress-test results for evidence of potentially excessive risk and take risk-reduction strategies as appropriate.

The severity of factor shocks should be consistent with the purpose of the stress test. When evaluating solvency under stress, factor shocks should be severe enough to capture historical extreme market environments and/or extreme but plausible stressed market conditions. The impact of such shocks on capital resources and earnings should be evaluated. For day-to-day portfolio monitoring, hedging, and management of concentrations, banking organizations should also consider scenarios of lesser severity and higher probability. When conducting stress testing, risk managers should challenge the strength of assumptions made about the legal enforceability of netting and the ability to collect and liquidate collateral.

A sound stress-testing framework should include the following:

- Measurement of the largest counterparty-level impacts across portfolios, material concentrations within segments of a portfolio (such as industries or regions), and relevant portfolio- and counterparty-specific trends.

- Complete trade capture and exposure aggregation across all forms of trading (not just OTC derivatives) at the counterparty-specific level, including transactions that fall outside of the main credit system. The time frame selected for trade capture should be commensurate with the frequency with which stress tests are conducted.

- Stress tests, at least quarterly, of principal market-risk factors on an individual basis (for example, interest rates, foreign exchange, equities, credit spreads, and commodity prices) for all material counterparties. Banking organizations should be aware that some counterparties may be material on a consolidated basis, even though they may not be material on an individual legal-entity basis.

- Assessment of nondirectional risks (for example, yield-curve exposures and basis risks) from multifactor stress-testing scenarios. Multifactor stress tests should, at a minimum, aim to address separate scenarios: severe economic or market events; significant decrease in broad market liquidity; and the liquidation of a large financial intermediary of the banking organization, factoring in direct and indirect consequences.

- Consideration, at least quarterly, of stressed exposures resulting from the joint movement of exposures and related counterparty creditworthiness. This should be done at the counterparty-specific and counterparty-group (for example, industry and region) level, and in aggregate for the banking organization. When CVA methodologies are used, banking organizations should ensure that stress testing sufficiently captures additional losses from potential defaults.\(^{10}\)

- Basic stress testing of CVA to assess performance under adverse scenarios, incorporating any hedging mismatches.

- Concurrent stress testing of exposure and noncash collateral for assessing wrong-way risk.

- Identification and assessment of exposure levels for certain counterparties (for example, sovereigns and municipalities), above which the banking organization may be concerned about willingness to pay.

- Integration of CCR stress tests into firm-wide stress tests.\(^{11}\)

Credit Valuation Adjustments

CVA refers to adjustments to transaction valuation to reflect the counterparty’s credit quality. CVA is the fair-value adjustment to reflect CCR in valuation of derivatives. As such, CVA is the market value of CCR and provides a market-based framework for understanding and valuing the counterparty credit risk embedded in derivative contracts. CVA may include only the adjustment to reflect the counterparty’s credit quality (a one-sided CVA or just CVA), or it may include an adjustment to reflect the banking organization’s own credit quality. The latter is a two-sided CVA, or CVA plus a debt valuation

\(^{10}\) Exposure testing should include single-factor, multifactor, and material nondirectional risks.

\(^{11}\) CCR stress testing should be consistent with overall banking-organization-wide stress testing and follow the principles set forth in the “Principles for Sound Stress Testing Practices and Supervision” issued by the Risk Management and Modeling Group of the Basel Committee in May 2009.
adjustment (DVA). For the evaluation of the credit risk due to probability of default of counterparties, a one-sided CVA is typically used. For the evaluation of the value of derivatives transactions with a counterparty or the market risk of derivatives transactions, a two-sided CVA should be used.

Although CVA is not a new concept, its importance has grown, partly because of a change in accounting rules that requires banking organizations to recognize the earnings impact of changes in CVA. During the 2007–2009 financial crisis, a large portion of CCR losses were because of CVA losses rather than actual counterparty defaults. As such, CVA has become more important in risk management, as a mechanism to value, manage, and make appropriate hedging decisions, to mitigate banking organizations’ exposure to the mark-to-market (MTM) impact of CCR. The following are general standards for CVA measurement and use of CVA for risk-management purposes:

- CVA calculations should include all products and counterparties, including margined counterparties.
- The method for incorporating counterparty credit quality into CVA should be reasonable and subject to ongoing evaluation. CVA should reflect the fair value of the counterparty credit risk for OTC derivatives, and inputs should be based on current market prices when possible. Credit spreads should be reflected in the calculation where available, and banking organizations should not overly rely on non-market-based probability of default estimates when calculating CVA.
- Banking organizations should attempt to map credit quality to name-specific spreads rather than spreads associated with broad credit categories. Any proxy spreads should reasonably capture the idiosyncratic nature of the counterparty and the liquidity profile.
- The term structure of credit spreads should be reflected in the CVA calculation.
- The CVA calculation should incorporate counterparty-specific master netting agreements and margin terms; for example, the CVA calculation should reflect margin thresholds or minimum transfer amounts stated in legal documents.
- Banking organizations should identify the correlation between a counterparty’s creditworthiness and its exposure to the counterparty, and seek to incorporate the correlation into their respective CVA calculation.

**Management of CVA**

CVA management should be consistent with sound risk-management practices for other material MTM risks. These practices should include the following:

- Business units engaged in trades related to CVA management should have independent risk-management functions overseeing their activities.
- Systems that produce CVA risk metrics should be subject to the same controls as used for other MTM risks, including independent validation or review of all risk models, including alternative methodologies.
- Upon transaction execution, CVA costs should be allocated to the business unit that originates the transaction. As a sound practice, the risk of CVA should be incorporated into the risk-adjusted return calculation of a given business.
- CVA cost allocation provides incentive for certain parties to make prudent risk-taking decisions and motivates risk-takers to support risk mitigation, such as requiring strong collateral terms.
- Banking organizations should measure sensitivities to changes in credit- and market-risk factors to determine the material drivers of MTM changes. On a regular basis, but no less

---

**Notes**

12. See the Financial Accounting Standards Board’s accounting literature pertinent to CVA in Accounting Standards Codification (ASC) Topic 820 (formerly FAS Statement 157). In addition, other transaction fair-value adjustments should be conducted—for example, those involving a banking organization’s own credit risk or differences in funding costs based on whether transactions are collateralized or not.

14. An accurate measure of CVA is critical to prudent risk-taking, as part of effectively understanding the risk-reward tradeoff in a given derivatives transaction. The more comprehensively CVA is measured, the more transparent the economics of a given transaction.

15. Liquidity in credit markets has varied significantly over time. As liquidity conditions change, banking organizations should calculate CVA using methodologies appropriate to the market pricing information available for each counterparty and transaction type.
frequently than quarterly, banking organizations should ensure that CVA MTM changes are sufficiently explained by these risk factors (for example, through profit and loss attribution for sensitivities and backtesting for value at risk (VaR)).

- Banking organizations hedging CVA MTM should gauge the effectiveness of hedges through measurements of basis risk or other types of mismatches. In this regard, it is particularly important to capture nonlinearities, such as the correlation between market and credit risk, and other residual risks that may not be fully offset by hedging.

CVA VaR

Banking organizations with material CVA should measure the risk of associated loss on an ongoing basis. In addition to stress tests of the CVA, banking organizations may develop VaR models that include CVA to measure potential losses. While these models are currently in the early stages of development, they may prove to be effective tools for risk-management purposes. An advantage of CVA VaR over more traditional CCR risk measures is that it captures the variability of the CCR exposure, the variability of the counterparty’s credit spread, and the dependency between them.

Developing VaR models for CVA is significantly more complicated than developing VaR models for a banking organization’s market-risk positions. In developing a CVA VaR model, a banking organization should match the percentile and time horizon for the VaR model to those appropriate for the management of this risk, and include all significant risks associated with changes in the CVA. For example, banking organizations may use the same percentile for CVA VaR as they use for market-risk VaR (for example, the 95th or 99th percentile). However, the time horizon for CVA VaR may need to be longer than for market risk (for example, one quarter or one year) because of the potentially illiquid nature of CVA. The following are important considerations in developing a CVA VaR model:

- All material counterparties covered by CVA valuation should be included in the VaR model.
- A CVA VaR calculation that keeps the exposure or the counterparty probability of default static is not adequate. It will not only omit the dependence between the two variables, but also the risk arising from the uncertainty of the fixed variable.
- CVA VaR should incorporate all forms of CVA hedging. Banking organizations and examiners should assess the ability of the VaR measure to accurately capture the types of hedging used by the banking organization.

Wrong-Way Risk

Wrong-way risk occurs when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty itself. Specific wrong-way risk arises when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty itself because of the nature of the transactions with the counterparty. General wrong-way risk arises when the probability of default of counterparties is positively correlated with general market-risk factors. Wrong-way risk is an important aspect of CCR that has caused major losses at banking organizations. Accordingly, a banking organization should have a process to systematically identify, quantify, and control both specific and general wrong-way risk across its OTC derivative and SFT portfolios. To prudently manage wrong-way risk, banking organizations should

- maintain policies that formally articulate tolerance limits for both specific and general wrong-way risk, an ongoing wrong-way risk identification process, and the requirements for escalation of wrong-way risk analysis to senior management;
- maintain policies for identifying, approving, and otherwise managing situations when there is a legal connection between the counterparty and the underlying exposure or the associated collateral (banking organizations should generate

---

16. A standard way of quantifying general wrong-way risk is to design and apply stress scenarios that detect wrong-way risk in the portfolio, record counterparty exposures most affected by the scenarios, and assess whether the creditworthiness of such counterparties is also negatively affected by the scenario.

17. Examples of this situation are single-name credit derivatives when there is a legal relationship between the counterparty and the reference entity underlying the transaction, and financing transactions when the counterparty pledges an affiliate’s security as collateral.
erally avoid such transactions because of their increased risk;
• perform wrong-way risk analysis for OTC derivatives, at least at the industry and regional levels; and
• conduct wrong-way risk analysis for SFTs on broad asset classes of securities (for example, government bonds, and corporate bonds).

SYSTEMS INFRASTRUCTURE CONSIDERATIONS

Banking organizations should ensure that systems infrastructure keeps up with changes in the size and complexity of their CCR exposures, and the OTC derivatives market in general. Systems should capture and measure the risk of transactions that may be subject to CCR as a fundamental part of the CCR-management framework.

Banking organizations should have strong operational processes across all derivatives markets, consistent with supervisory and industry recommendations. Management should strive for a single comprehensive CCR-exposure measurement platform. If not currently possible, banking organizations should minimize the number of system platforms and methodologies, as well as manual adjustments to exposure calculations. When using multiple exposure measurement systems, management should ensure that transactions whose future values are measured by different systems are aggregated conservatively.

To maintain a systems infrastructure that supports adequate CCR management, banking organizations should take the following actions:

Data Integrity and Reconciliation

• Deploy adequate operational resources to support reconciliations and related analytical and remediation processes.
• Reconcile positions and valuations with counterparties.
  — Large counterparties should perform frequent reconciliations of positions and valuations (daily if appropriate).
  — For smaller portfolios with nondealer counterparties where there are infrequent trades, large dealers should ensure the data integrity of trade and collateral information on a regular (but not necessarily daily) basis, reconciling their portfolios according to prevailing industry standards.
• Reconcile exposure data in CCR systems with the official books and records of the financial institution.
• Maintain controls around obligor names at the point of trade entry, as well as reviews of warehoused credit data, to ensure that all exposures to an obligor are captured under the proper name and can be aggregated accordingly.
• Maintain quality control over transfer of transaction information between trade capture systems and exposure measurement systems.
• Harmonize netting and collateral data across systems to ensure accurate collateral calls and reflection of collateral in all internal systems. Banking organizations should maintain a robust reconciliation process to ensure that internal systems have terms that are consistent with those formally documented in agreements and credit files.
• Remediate promptly any systems weaknesses that raise questions about the appropriateness of the limits structure. If there are a significant number of limit excesses, this may be a symptom of system weaknesses, which should be identified and promptly remediated.
• Eliminate or minimize backlogs of unconfirmed trades.

Automation and Tracking

• Automate legal and operational information, such as netting and collateral terms. Banking organizations should be able to adjust exposure measurements, taking into account the enforceability of legal agreements.

---

18. Examples are recommendations made by the Senior Supervisors Group (a group comprised of senior financial supervisors from ten countries) and the Counterparty Risk Management Policy Group (a group that consists of major, internationally active commercial and investment banks, which works to promote enhanced practices in counterparty credit and market-risk management).

19. A single platform may, in practice, contain a number of separate systems and models. These would be considered a cohesive framework if they are operationally stable and accurate in risk estimation, particularly with regard to proper reflection of collateral and netting. A common programming language for these systems facilitates an effective measurement framework.

20. Large dealer counterparties should perform portfolio reconciliation on a daily basis, as set forth in relevant industry standards, such as the ISDA’s “Collateralised Portfolio Reconciliation Best Operational Practices” (January 2010).
Automate processes to track and manage legal documentation, especially when there is a large volume of legal agreements.

Increase automation of margin processes and continue efforts to expand automation of OTC derivatives post-trade processing. This should include automation of trade confirmations to reduce the lag between trade execution and legal execution.

Maintain systems that track and monitor changes in credit terms and have triggers for relevant factors, such as net asset value, credit rating, and cross-default.

Maintain default monitoring processes and systems.

Add-Ons

For large derivatives market participants, certain trades may be difficult to capture in exposure-measurement systems, and are therefore modeled outside of the main measurement system(s). The resulting exposures, commonly referred to as add-ons, are then added to the portfolio potential-exposure measure. In limited cases, the use of conservative add-on methodologies may be suitable, if the central system cannot reflect the risk of complex financial products. However, overreliance on add-on methodologies may distort exposure measures. To mitigate measurement distortions, banking organizations should take the following steps:

- Review the use of add-on methodologies at least annually. Current or planned significant trading activity should trigger efforts to develop appropriate modeling and systems, prior to or concurrent with these growth plans.
- Establish growth limits for products with material activities that continue to rely on add-ons. Once systems are improved to meet a generally accepted industry standard of trade capture, these limits can be removed.

RISK MANAGEMENT

Counterparty Limits

Meaningful limits on exposures are an integral part of a CCR-management framework, and these limits should be formalized in CCR policies and procedures. For limits to be effective, a banking organization should incorporate these limits into an exposure monitoring system independent of relevant business lines. It should perform ongoing monitoring of exposures against such limits, to ascertain conformance with these limits, and have adequate risk controls that require action to mitigate limit exceptions. Review of exceptions should include escalation to a managerial level that is commensurate with the size of the excess or nature of mitigation required. A sound limit system should include the following:

- Establishment and regular review of counterparty limits by a designated committee. Further, a banking organization should have a process to escalate limit approvals to higher levels of authority, depending on the size of counterparty exposures, credit quality, and tenor.
- Establishment of potential future exposure limits, as well as limits based on other metrics. It is a sound practice to limit the market risk arising through CVA, with a limit on CVA or CVA VaR. However, such limits do not eliminate the need to limit counterparty credit exposure with a measure of potential future exposure.
- Individual CCR limits should be based on peak exposures rather than expected exposures.
- Consideration of risk factors such as the credit quality of the counterparty, tenor of the transactions, and the liquidity of the positions or hedges.
- Sufficiently automated monitoring processes to provide updated exposure measures at least daily.
- Monitoring of intraday trading activity for

21. Banking organizations should consider the recommendations in the “Standards of Electronic Exchange of OTC Derivative Margin Calls,” issued by the ISDA’s Collateral Committee on November 12, 2009.
conformance with exposure limits and exception policies. Such controls and procedures can include intraday-limit monitoring, trade procedures and systems that assess a trade’s impact on limit utilization prior to execution, limit warning triggers at specific utilization levels, and restrictions by credit-risk management on allocation of full limits to the business lines.

Margin Policies and Practices

Collateral is a fundamental CCR mitigant. Indeed, significant stress events have highlighted the importance of sound margining practices. With this in mind, banking organizations should ensure that they have adequate margin and collateral “haircut” guidelines for all products with CCR. Accordingly, banking organizations should take the following actions:

- Maintain CCR policies that address margin practices and collateral terms, including, but not limited to
  - processes to establish and periodically review minimum haircuts;
  - processes to evaluate the volatility and liquidity of the underlying collateral. Banks should strive to ensure that haircuts on collateral do not decline during periods of low volatility; and
  - controls to mitigate the potential for a weakening of credit standards from competitive pressure.

- Set guidelines for cross-product margining. Banking organizations offer cross-product-margining arrangements to clients to reduce required margin amounts. Guidelines to control risks associated with cross-product margining would include limiting the set of eligible transactions to liquid exposures and having procedures to resolve margin disputes.

- Maintain collateral-management policies and procedures to control, monitor, and report
  - the extent to which collateral agreements expose a banking organization to collateral risks, such as the volatility and liquidity of the securities held as collateral;
  - concentrations of less liquid or less marketable collateral asset classes;
  - the risks of re-hypothecation or other reinvestment of collateral (both cash and non-cash) received from counterparties, including the potential liquidity shortfalls resulting from the reuse of such collateral; and
  - the CCR associated with the decision whether to require posted margin to be segregated. Organizations should perform a legal analysis concerning the risks of agreeing to allow cash to be commingled with a counterparty’s own cash and of allowing a counterparty to rehypothecate securities pledged as margin.

- Maintain policies and processes for monitoring margin agreements involving third-party custodians. As with bilateral counterparties, banking organizations should
  - identify the location of the account to which collateral is posted or from which it is received;
  - obtain periodic account statements or other assurances that confirm the custodian is holding the collateral in conformance with the agreement; and
  - understand the characteristics of the account where the collateral is held (for example, whether it is in a segregated account) and the legal risks of the counterparty or any third-party custodian regarding this collateral.

Validation of Models and Systems

A banking organization should validate its CCR models initially and on an ongoing basis. Validation of models should include an evaluation of the conceptual soundness and developmental evidence supporting a given model; an ongoing monitoring process that includes verification of processes and benchmarking; and an outcomes-analysis process that includes backtesting. Validation should identify key assumptions and potential limitations, and it should assess their possible impact on risk metrics. All components of models should be subject to validation along with their combination in the CCR system.

---

22. A haircut is the difference between the market value of an asset being used as collateral for a loan and the amount of money that a lender will advance against the asset.

23. See the guidelines issued by ISDA, the Securities Industry and Financial Markets Association (SIFMA), and the Managed Funds Association (MFA), including the “Market Review of OTC Derivative Bilateral Collateralization Practices (Release 2.0)” (March 2010), and “Best Practices for Collateral Management” (June 30, 2010).
Evaluating the conceptual soundness involves assessing the quality of the design and construction of the CCR models and systems, including documentation and empirical evidence that supports the theory, data, and methods used. Ongoing monitoring confirms that CCR systems continue to perform as intended. This generally involves process verification, an assessment of model data integrity and systems operation, and benchmarking to assess the quality of a given model. Benchmarking is a valuable diagnostic tool in identifying potential weaknesses. Specifically, it is the comparison of a banking organization’s CCR model estimates with those derived using alternative data, methods, or techniques. Benchmarking can also be applied to particular CCR model components, such as parameter-estimation methods or pricing models. Management should investigate the source of any differences in output, and determine whether benchmarking gaps indicate weakness in the banking organization’s models.

Outcomes analysis compares model outputs to actual results during a sample period not used in model development. This is generally accomplished using backtesting. It should be applied to components of CCR models (for example, the risk-factor distribution and pricing model), the risk measures, and projected exposures. While there are limitations to backtesting, especially for testing the longer time-horizon predictions of a given CCR model, it is an essential component of model validation. Banking organizations should have a process for the resolution of observed model deficiencies detected by backtesting. This should include further investigation to determine the problem and appropriate course of action, including changing a given CCR model.

If the validation of CCR models and infrastructure systems is not performed by staff that is independent from the developers of the models, then an independent review should be conducted by technically competent personnel to ensure the adequacy and effectiveness of the validation. The scope of the independent review should include validation procedures for all components, the role of relevant parties, and documentation of the model and validation processes. This review should document its results, what action was taken to resolve findings, and its relative timeliness.

Senior management should be notified of validation and review results and should take appropriate and timely corrective actions to address deficiencies. The board should be apprised of summary results, especially unresolved deficiencies. In support of validation activities, internal audit should review and test models and systems validation as well as overall systems infrastructure as part of their regular audit cycle.

For more information on validation, please see this section’s Appendix B.

Close-Out Policies and Practices

Banking organizations should have the ability to effectively manage counterparties in distress, including execution of a close-out. Policies and procedures outlining sound practices for managing a close-out should include the following:

- Requirements for hypothetical close-out simulations at least once every two years for one of the banking organization’s most complex counterparties.
- Standards for the speed and accuracy with which the banking organization can compile comprehensive counterparty exposure data and net cash outflows. Operational capacity to aggregate exposures within four hours is a reasonable standard.
- The sequence of critical tasks, and decision-making responsibilities, needed to execute a close-out.
- Requirements for periodic review of documentation related to counterparty terminations, and confirmation that appropriate and current agreements that specify the definition of events of default and the termination methodology that will be used are in place.
  - Banking organizations should take corrective action if documents are not current, active, and enforceable.
  - Management should document their decision to trade with counterparties that are either unwilling or unable to maintain appropriate and current documentation.
- Established close-out methodologies that are practical to implement, particularly with large and potentially illiquid portfolios. Dealers should consider using the “close-out amount” approach for early termination upon default in interdealer relationships.24

---

24. Only for a definition of close-out amount approach, see the Counterparty Risk Management Policy Group III’s report, “Containing Systemic Risk: Road to Reform” (August 6,
A requirement that the banking organization transmit immediate instructions to its appropriate transfer agent(s) to deactivate collateral transfers, contractual payments, or other automated transfers contained in “standard settlement instructions” for counterparties or prime brokers that have defaulted on the contract or for counterparties or prime brokers that have declared bankruptcy.

MANAGING CENTRAL COUNTERPARTY EXPOSURES

A central credit counterparty (CCP) facilitates trades between counterparties in one or more financial markets by either guaranteeing trades or novating contracts, and typically requires all participants to be fully collateralized on a daily basis. The CCP thus effectively bears most of the counterparty credit risk in transactions, becoming the buyer for every seller and the seller to every buyer. Well-regulated and soundly managed CCPs can be an important means of reducing bilateral counterparty exposure in the OTC derivatives market. However, CCPs also concentrate risk within a single entity. Therefore, it is important that banking organizations centrally clear through regulated CCPs with sound risk-management processes and strong financial resources sufficient to meet their obligations under extreme stress conditions.

To manage CCP exposures, banking organizations should regularly, but no less frequently than annually, review the individual CCPs to which they have exposures. This review should include performing and documenting due diligence on each CCP, applying current supervisory or industry standards (and any subsequent standards) as a baseline to assess the CCP’s risk-management practices.

- For each CCP, an evaluation of its risk-management framework should, at a minimum, include membership requirements, guarantee fund contributions, margining practices, default-sharing protocols, and limits of liability.
- Banking organizations should also consider the soundness of the CCP’s policies and procedures, including procedures for handling the default of a clearing member, obligations at post-default auctions, and post-default assignment of positions.
- Banking organizations should also maintain compliance with applicable regulatory requirements, such as ensuring contingent loss exposure remains within a banking organization’s legal lending limit.

LEGAL AND OPERATIONAL RISK MANAGEMENT

Banking organizations should ensure proper control of, and access to, legal documentation and agreements. In addition, it is important that systems used to measure CCR incorporate accurate legal terms and provisions. The accessibility and accuracy of legal terms is particularly critical in close-outs, when there is limited time to review the collateral and netting agreements. Accordingly, banking organizations should

- Have a formal process for negotiating legal agreements. As a best practice, the process would include approval steps and responsibilities of applicable departments.
- At least annually, conduct a review of the legal enforceability of collateral and netting agreements for all relevant jurisdictions.
- Maintain policies on when it is acceptable to trade without a master agreement, using metrics such as trading volume or the counterparty’s risk profile.

— Trading without a master agreement may be acceptable in cases of minimal volume or when trading in jurisdictions where master agreements are unenforceable. As applicable, policies should outline required actions to undertake and monitor transactions without an executed master agreement.

2008), pp. 122–125. Also, ISDA has published a closeout amount protocol to aid in the adoption of the close-out amount approach.

25. For instance, see “Recommendations for Central Counterparties,” a consultative report issued by the Committee on Payment and Settlement Systems and the Technical Committee of the International Organization of Securities Commissions under the auspices of the Bank for International Settlements (March 2004).

• Use commonly recognized dispute-resolution procedures. — Banking organizations should seek to resolve collateral disputes within recommended time frames. — Senior management should receive reports listing material and aged disputes, as these pose significant risk.
• Include netting of positions in risk-management systems, only if there is a written legal review (either internally or externally) that expresses a high level of confidence that netting agreements are legally enforceable.
• Maintain ongoing participation in both bilateral and multilateral portfolio-compression efforts. Where feasible, banking organizations are encouraged to elect compression tolerances (such as post-termination factor sensitivity changes and cash payments) that allow the widest possible portfolio of trades to be terminated.
• Adopt and implement appropriate novation protocols.

Legal Risk Arising from Counterparty Appropriateness

While a counterparty’s ability to pay should be evaluated when assessing credit risk, credit losses can also occur when a counterparty is unwilling to pay, which most commonly occurs when a counterparty questions the appropriateness of a contract. These types of disputes pose not only risk of a direct credit loss, but also risk of litigation costs and/or reputational damage. Banking organizations should maintain policies and procedures to assess client and deal appropriateness. In addition, banking organizations should

• Conduct initial and ongoing due diligence, evaluating whether a client is able to understand and utilize transactions with CCR as part of assessing the client’s sophistication, investment objectives, and financial condition. — For example, although some clients may be sophisticated enough to enter into a standardized swap, they may lack the sophistication to fully analyze the risks of a complex OTC deal. — Banking organizations should be particularly careful to assess appropriateness of complex, long-dated, off-market, illiquid, or other transactions with higher reputational risk.
• Include appropriateness assessments in the new-product approval process. Such assessments should determine the types of counterparties acceptable for a new product, and what level of counterparty sophistication is required for any given product.
• Maintain disclosure policies for OTC derivative and other complex transactions to ensure that risks are accurately and completely communicated to counterparties.
• Maintain guidelines for determination of acceptable counterparties for complex derivatives transactions.

CONCLUSION ON COUNTERPARTY CREDIT-RISK MANAGEMENT

For relevant banking organizations, CCR management should be an integral component of the risk-management framework. When considering the applicability of specific guidelines and best practices set forth in this guidance, a banking organization’s senior management and supervisors should consider the size and complexity of its securities and trading activities. Banking organizations should comprehensively evaluate existing practices against the standards in this guidance and implement remedial action as appropriate. A banking organization’s CCR exposure levels and the effectiveness of its CCR management are important factors for a supervisor to consider when evaluating a banking organization’s overall management, risk management, and credit- and market-risk profile.

APPENDIX A: GLOSSARY

This glossary describes commonly used CCR metrics. As discussed above, banking organizations should employ a suite of metrics commensurate with the size, complexity, liquidity, and
risk profile of the organization’s CCR portfolio. Major broker-dealer banking organizations should employ the full range of risk-measurement metrics to enable a comprehensive understanding of CCR and how it changes in varying environments. Banking organizations of lesser size and complexity should carefully consider which of these metrics they need to track as part of their exposure risk-management processes. At a minimum, all banking organizations should calculate current exposure and stress test their CCR exposures. Definitions marked with an asterisk (*) are from the Bank for International Settlements.

Exposure Metrics

Current exposure is the larger of zero, or the market value of a transaction or a portfolio of transactions within a netting set with a counterparty that would be lost upon the default of the counterparty, assuming no recovery on the value of those transactions in bankruptcy. Current exposure is often also called replacement cost. Current exposure may be reported gross or net of collateral. Current exposure allows banking organizations to assess their CCR exposure at any given time—that is, the amount currently at risk.

Jump-to-default (JTD) exposure is the change in the value of counterparty transactions upon the default of a reference name in CDS positions. This allows banking organizations to assess the risk of a sudden, unanticipated default before the market can adjust.

Expected exposure is calculated as average exposure to a counterparty at a date in the future. This is often an intermediate calculation for expected positive exposure or CVA. It can also be used as a measure of exposure at a common time in the future.

Expected positive exposure (EPE) is the weighted average over time of expected exposures when the weights are the proportion that an individual expected exposure represents of the entire time interval. Expected positive exposure is an appropriate measure of CCR exposure when measured in a portfolio credit-risk model.*

Peak exposure is a high percentile (typically 95 percent or 99 percent) of the distribution of exposures at any particular future date before the maturity date of the longest transaction in the netting set. A peak exposure value is typically generated for many future dates up until the longest maturity date of transactions in the netting set. Peak exposure allows banking organizations to estimate their maximum potential exposure at a specified future date, or over a given time horizon, with a high level of confidence. For collateralized counterparties, this metric should be based on a realistic close-out period, considering both the size and liquidity of the portfolio. Banking organizations should consider peak potential exposure when setting counterparty credit limits.*

Expected shortfall exposure is similar to peak exposure, but is the expected exposure conditional on the exposure being greater than some specified peak percentile. For transactions with very low probability of high exposure, the expected shortfall accounts for large losses that may be associated with transactions with high-tail risk.

Sensitivity to market risk factors is the change in exposure because of a given market-risk-factor change (for example, a position’s change in price resulting from a 1 basis point change in interest rates). It provides information on the key drivers of exposure to specific counterparties and on hedging.

Stressed exposure is a forward-looking measure of exposure based on predefined market-factor movements (nonstatistically generated). These can include single-factor market shocks, historical scenarios, and hypothetical scenarios. Stressed exposure allows banking organizations to consider their counterparty exposure under a severe or stressed scenario. This serves as a supplemental view of potential exposure, and provides banking organizations with additional information on risk drivers. The best practice is to compare stressed exposure to counterparty credit limits.

CVA-Related Metrics

Credit valuation adjustment (CVA) is an adjustment to the mid-market valuation (average of the bid and asked price) of the portfolio of
trades with a counterparty. This adjustment reflects the market value of the credit risk resulting from any failure to perform on contractual agreements with a counterparty. This adjustment may reflect the market value of the credit risk of the counterparty or the market value of the credit risk of both the banking organization and the counterparty. CVA is a measure of the market value of CCR, incorporating both counterparty creditworthiness and the variability of exposure.*

CVA VaR is a measure of the variability of the CVA mark-to-market value and is based on the projected distributions of both exposures and counterparty creditworthiness. CVA VaR provides banking organizations with an estimate of the potential CVA mark-to-market loss, at a certain confidence interval and over a given time horizon.

*CVA factor sensitivities is the mark-to-market change in CVA resulting from a given market-risk-factor change (for example, a position’s change in price resulting from a 1 basis point change in credit spreads). CVA factor sensitivities allow banking organizations to assess and hedge the market value of the credit or market risks to single names and portfolios and permit banking organizations to monitor excessive build ups in counterparty concentrations.

Stressed CVA is a forward-looking measure of CVA mark-to-market value based on predefined credit- or market-factor movements (nonstatistically generated). These can include single-market-factor shocks, historical scenarios, and hypothetical scenarios. Stressed CVA serves as an informational tool and allows banking organizations to assess the sensitivity of their CVA to a potential mark-to-market loss under defined scenarios.

APPENDIX B: DETAIL ON MODEL VALIDATION AND SYSTEMS EVALUATION

A banking organization should validate its CCR models, initially and on an ongoing basis. Validation should include three components: (1) an evaluation of the conceptual soundness of relevant models (including developmental evidence); (2) an ongoing monitoring process that includes verification of processes and benchmarking; and (3) an outcomes-analysis process that includes backtesting. The validation should either be independent or subject to independent review.

Validation is the set of activities designed to give the greatest possible assurances of CCR models’ accuracy and systems’ integrity. Validation should also identify key assumptions and potential limitations and assess their possible impact on risk metrics. CCR models have several components:

- statistical models to estimate parameters, including the volatility of risk factors and their correlations
- simulation models to convert those parameters into future distributions of risk factors
- pricing models that estimate value in simulated scenarios
- calculations that summarize the simulation results into various risk metrics

All components of each model should be subject to validation, along with analysis of their interaction in the CCR system. Validation should be performed initially when a model first goes into production. Ongoing validation is a means of addressing situations where models have known weaknesses and ensuring that changes in markets, products, or counterparties do not create new weaknesses. Senior management should be notified of the validation results and should take corrective actions in a timely manner when appropriate.

A banking organization’s validation process should be independent of the CCR model and systems development, implementation, and operation. Alternately, the validation should be subject to independent review, whereby the individuals who perform the review are not biased in their assessment because of involvement in the development, implementation, or operation of the processes or products. Individuals performing the reviews should possess the requisite technical skills and expertise to provide critical analysis, effective challenge, and appropriate recommendations. The extent of such reviews should be fully documented, sufficiently thorough to cover all significant model elements, and include additional testing of models or systems as appropriate. In addition, reviewers should have the authority to effectively challenge developers and model users, elevate concerns or findings as necessary, and either
have issues addressed in a prompt and substantial manner or reject a model for use by the banking organization.

Conceptual Soundness and Developmental Evidence

The first component of validation is evaluating conceptual soundness, which involves assessing the quality of the design and construction of CCR models. The evaluation of conceptual soundness includes documentation and empirical evidence supporting the theory, data, and methods used. The documentation should also identify key assumptions and potential limitations and assess their possible impact. A comparison to industry practice should be done to identify areas where substantial and warranted improvements can be made. All model components are subject to evaluation, including simplifying assumptions, parameter calibrations, risk-factor diffusion processes, pricing models, and risk metrics. Developmental evidence should be reviewed whenever the banking organization makes material changes in CCR models. Evaluating conceptual soundness includes independent evaluation of whether a model is appropriate for its purpose and whether all underlying assumptions, limitations, and shortcomings have been identified and their potential impact assessed.

Ongoing Monitoring, Process Verification, and Benchmarking

The second component of model validation is ongoing monitoring to confirm that the models were implemented appropriately and continue to perform as intended. This involves process verification, an assessment of models, and benchmarking to assess the quality of the model. Deficiencies uncovered through these activities should be remediated promptly.

Process verification includes evaluating data integrity and operational performance of the systems supporting CCR measurement and reporting. This should be performed on an ongoing basis and includes

- the completeness and accuracy of the transaction and counterparty data flowing through the counterparty exposure systems;
- reliance on up-to-date reviews of the legal enforceability of contracts and master netting agreements that govern the use of netting and collateral in systems measuring net exposures and the accuracy of their representations in the banking organization’s systems;
- the integrity of the market data used within the banking organization’s models, both as current values for risk factors and as sources for parameter calibrations; and
- the operational performance of the banking organization’s counterparty exposure calculation systems, including the timeliness of the batch-run calculations, the consistent integration of data coming from different internal or external sources, and the synchronization of exposure, collateral management, and finance systems.

“Benchmarking” means comparing a banking organization’s CCR measures with those derived using alternative data, methods, or techniques. It can also be applied to particular model components, such as parameter estimation methods or pricing models. It is an important complement to backtesting and is a valuable diagnostic tool in identifying potential weaknesses. Differences between the model and the benchmark do not necessarily indicate that the model is in error because the benchmark itself is an alternative prediction. It is important that a banking organization use appropriate benchmarks, or the exercise will be compromised. As part of the benchmarking exercise, the banking organization should investigate the source of the differences and whether the extent of the differences is appropriate.

Outcomes Analysis Including Backtesting

The third component of validation is outcomes analysis, which is the comparison of model outputs to actual results during a sample period not used in model development. Backtesting is one form of out-of-sample testing. Backtesting should be applied to components of a CCR model, for example the risk factor distribution and pricing model, as well as the risk measures and projected exposures. Outcomes analysis includes an independent evaluation of the design and results of backtesting to determine whether all material risk factors are captured and to
assess the accuracy of the diffusion of risk factors and the projection of exposures. While there are limitations to backtesting, especially for testing the longer horizon predictions of a CCR model, banking organizations should incorporate it as an essential component of model validation.

Typical examples of CCR models that require backtesting are expected exposure, peak exposure, and CVA VaR models. Backtesting of models used for measurement of CCR is substantially different than backtesting VaR models for market risk. Notably, CCR models are applied to each counterparty facing the banking organization, rather than an aggregate portfolio. Furthermore, CCR models should project the distribution over multiple dates and over long time horizons for each counterparty. These complications make the interpretation of CCR backtesting results more difficult than that for market risk. Because backtesting is critical to providing feedback on the accuracy of CCR models, it is particularly important that banking organizations exert considerable effort to ensure that backtesting provides effective feedback on the accuracy of these models.

Key elements of backtesting include the following activities:

- Backtesting programs should be designed to evaluate the effectiveness of the models for typical counterparties, key risk factors, key correlations, and pricing models. Backtesting results should be evaluated for reasonableness as well as for statistical significance. This may serve as a useful check for programming errors or cases in which models have been incorrectly calibrated.

- Backtesting should be performed over different time horizons. For instance, the inclusion of mean reversion parameters or similar time varying features of a model can cause a model to perform adequately over one time horizon, but perform very differently over a different time horizon. A typical large dealer should, at a minimum, perform backtesting over one day, one week, two weeks, one month, and every quarter out to a year. Shorter time periods may be appropriate for transactions under a collateral agreement when variation margin is exchanged frequently, even daily, or for portfolios that contain transactions that expire or mature in a short time frame.

- It may be appropriate to use backtesting methods that compare forecast distributions of exposures with actual distributions. Some CCR measures depend on the whole distribution of future exposures rather than a single exposure percentile—for example, expected exposure (EE) and expected positive exposure (EPE). For this reason, sole reliance on backtesting methods that count the number of times an exposure exceeds a unique percentile threshold may not be appropriate.

Exception counting remains useful, especially for evaluating peak or percentile measures of CCR, but these measures will not provide sufficient insight for expected exposure measures. Hence, banking organizations should test the entire distribution of future exposure estimates and not just a single percentile prediction.

Banking organizations should have policies and procedures in place that describe when backtesting results will generate an investigation into the source of observed backtesting deficiencies and when model changes should be initiated as a result of backtesting.

Documentation

Adequate validation and review are contingent on complete documentation of all material aspects of CCR models and systems. This should include all model components and parameter estimation or calibration processes. Documentation should also include the rationale for all material assumptions underpinning its chosen analytical frameworks, including the
choice of inputs; distributional assumptions; and weighting of quantitative and qualitative elements. Any subsequent changes to these assumptions should also be documented and justified.

The validation or independent review should be fully documented. Specifically, this would include results, the scope of work, conclusions and recommendations, and responses to those recommendations. This includes documentation of each of the three components of model validation, discussed above. Complete documentation should be done initially and updated over time to reflect ongoing changes and model performance. Ability of the validation (or review) to provide effective challenge should also be documented.

Internal Audit

A banking organization should have an internal audit function, independent of business-line management, which assesses the effectiveness of the model validation process. This assessment should ensure the following: proper validation procedures were followed for all components of the CCR model and infrastructure systems; required independence was maintained by validators or reviewers; documentation was adequate for the model and validation processes; and results of validation procedures are elevated, with timely responses to findings. Internal audit should also evaluate systems and operations that support CCR. While internal audit may not have the same level of expertise as quantitative experts involved in the development and validation of the model, they are particularly well suited to evaluate process verification procedures. If any validation or review work is outsourced, internal audit should evaluate whether that work meets the standards discussed in this section.
A bank operates as a securities dealer when it underwrites, trades, or deals in securities. These activities may be administered in a separately identifiable trading department or incorporated within the overall treasury department. The organizational structure will generally be a function of the level of activity and the importance of the activity as a product line. If a repetitive pattern of short-term purchases and sales demonstrates that the bank holds itself out to other dealers or investors as a securities dealer, the bank is trading, regardless of what department or section of the bank is engaged in the activity.

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 USC 24 (seventh)). That authority is restricted by limitations on the percentage holding of classes of securities as found in 12 CFR 1.3. This regulation allows banks to deal, underwrite, purchase, and sell (1) type I securities without limit and (2) type II securities subject to a limit of 10 percent of capital and unimpaired surplus per issue. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. See section 2020.1, “Investment Securities and End-User Activities,” for further information on types I, II, and III securities.

Banks are involved in three major types of securities transactions. First, the bank, acting as broker, buys and sells securities on behalf of a customer. These are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. A second type of securities transaction banks frequently execute is a “riskless-principal” trade. Upon the order of an investor, the dealer buys (or sells) securities through its own account, with the purchase and sale originating almost simultaneously. Because of the brief amount of time the security is held in the dealer’s own account, exposure to market risks is limited. Profits result from dealer-initiated markup (the difference between the purchase and sale prices). Finally, as a dealer, the bank buys and sells securities for its own account. This is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction.

The volume of bank dealer activity and the dealer’s capacity in the transaction are critical to an examiner’s assessment regarding the examination scope and the required examiner resources and expertise. Dealers engaging primarily in agency or riskless-principal transactions are merely accommodating customers’ investment needs. Market risk will be nominal, and the key examination concern will be operational risk and efficiency. Active dealers generally carry larger inventory positions and may engage in some degree of proprietary trading. Their market-risk profile may be moderate to high.

Bank dealers’ securities transactions involve customers and other securities dealers. The word “customer,” as used in this section, means an investor. Correspondent banks purchasing securities for an investment account would also be considered a customer. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes.

The following subsections include general descriptions of significant areas of bank trading and underwriting activities. Foreign exchange is covered in detail in the “International” sections of this manual. Additional bank dealer activities, particularly in derivative products, are extensively covered in the Trading and Capital-Markets Activities Manual. In addition, many money-center banks and larger regional banks have transferred dealing activities to separately capitalized holding company subsidiaries (known as underwriting affiliates). The Bank Holding Company Supervision Manual contains a separate section on nonbank subsidiaries engaged in underwriting and dealing in bank-ineligible securities.

OVERVIEW OF RISK

For bank dealer activities, risk is generally defined as the potential for loss on an instrument or portfolio. Significant risk can also arise from operational weakness and inadequate controls. Risk management is the process by which managers identify, assess, and control all risks associated with a financial institution’s activities. The increasing complexity of the financial industry and the range of financial instruments banks use have made risk management more difficult to accomplish and evaluate.
The four fundamental elements for evaluating the risk-management process for bank dealer activities are—

• active board and management oversight,
• adequate risk-management policies and limits,
• appropriate risk measurement and management information systems, and
• comprehensive internal controls and audit procedures.

For risk management to be effective, an institution’s board and senior management must be active participants in the process. They must ensure that adequate policies and risk-tolerance limits are developed for managing the risk in bank dealer activities, and they must understand, review, and approve these limits across all established product lines. For policies and limits to be effective and meaningful, risk measures, reports, and management information systems must provide management and the board with the information and analysis necessary to make timely and appropriate responses to changing conditions. Risk management must also be supported by comprehensive internal controls and audit procedures that provide appropriate checks and balances to maintain an ongoing process of identifying any emerging weaknesses in an institution’s management of risk. At a minimum, the effectiveness of the institution’s policies, limits, reporting systems, and internal controls must be reviewed annually.

In assessing the adequacy of the above elements at individual institutions, examiners should consider the nature and volume of a bank’s dealer activities and its overall approach toward managing the various types of risks involved. The sophistication or complexity of policies and procedures used to manage risk depends on the bank dealer’s chosen products, activities, and lines of business. Accordingly, examiners should expect risk-management activities to differ among institutions.

As a financial institution’s product offerings and geographic scope expand, examiners must review the risk-management process not only by business line, but on a global, consolidated basis. In more sophisticated institutions, the role of risk management is to identify the risks associated with particular business activities and to aggregate summary data into generic components, ultimately allowing exposures to be evaluated on a common basis. This methodology enables institutions to manage risks by portfolio and to consider exposures in relationship to the institution’s global strategy and risk tolerance.

A review of the global organization may reveal risk concentrations that are not readily identifiable from a limited, stand-alone evaluation of a branch, agency, Edge Act institution, nonbank subsidiary, or head office. Consolidated risk management also allows the institution to identify, measure, and control its risks, while giving necessary consideration to the breakdown of exposure by legal entity. Sometimes, if applicable rules and laws allow, identified risks at a branch or subsidiary may be offset by exposures at another related institution. However, risk management across separate entities must be done in a way that is consistent with the authorities granted to each entity. Some financial institutions and their subsidiaries may not be permitted to hold, trade, deal, or underwrite certain types of financial instruments unless they have received special regulatory approval. Examiners should ensure that a financial institution only engages in those activities for which it has received regulatory approval. Furthermore, examiners should verify that the activities are conducted in accordance with any Board conditions or commitments attached to the regulatory approval.

Ideally, an institution should be able to identify its relevant generic risks and should have measurement systems in place to quantify and control these risks. While it is recognized that not all institutions have an integrated risk-management system that aggregates all business activities, the ideal management tool would incorporate a common measurement denominator. Risk-management methodologies in the marketplace and an institution’s scope of business are continually evolving, making risk management a dynamic process. Nonetheless, an institution’s risk-management system should always be able to identify, aggregate, and control all risks posed by underwriting, trading, or dealing in securities that could have a significant impact on capital or equity.

Trading and market-risk limits should be customized to address the nature of the products.

1. Existing policies and examiner guidance on various topics applicable to the evaluation of risk-management systems can be found in SR-93-69, “Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations.” Many of the managerial and examiner practices contained in this document are fundamental and are generally accepted as sound practices for trading activities.
and any unique risk characteristics. Common types of limits include earnings-at-risk limits, stop-loss limits, limits on notional amounts (both gross and duration-weighted), maturity limits, and maturity-gap limits. The level of sophistication needed within the limit matrix will depend on the type of instrument involved and the relative level of trading activity. Straight-forward notional and tenor limits may be adequate for most dealers; however, dealers involved in a wide array of products and more complex transactions will need stronger tools to measure and aggregate risk across products.

In general, risk from trading and dealing activities can be broken down into the following categories:

- **Market or price risk** is the exposure of an institution’s financial condition to adverse movements in the market rates or prices of its holdings before such holdings can be liquidated or expeditiously offset. It is measured by assessing the effect of changing rates or prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution.

- **Funding-liquidity risk** refers to the ability to meet investment and funding requirements arising from cash-flow mismatches.

- **Market-liquidity risk** refers to the risk of being unable to close out open positions quickly enough in sufficient quantities at a reasonable price.

- **Credit risk** is the risk that a counterparty to a transaction will fail to perform according to the terms and conditions of the contract, thus causing the security to suffer a loss in cash-flow or market value. Because securities settlements are typically “delivery vs. payment” and settlement periods are relatively short, securities transactions do not involve a significant level of counterparty credit risk. Repurchase transactions, securities lending, and money market transactions, however, involve significantly higher levels of credit risk if not properly controlled. As a result, credit risk is discussed in greater detail in the subsections addressing these products. Credit risk can also arise from positions held in trading inventory. Although U.S. government and agency securities do not generally involve credit risk, other securities (for example, municipal and corporate securities) carried in inventory can decline in price due to a deterioration in credit quality.

- **Clearing or settlement risk** is (1) the risk that a counterparty who has received a payment or delivery of assets defaults before delivery of the asset or payment or (2) the risk that technical difficulties interrupt delivery or settlement despite the counterparty’s ability or willingness to perform.

- **Operations and systems risk** is the risk of human error or fraud, or the risk that systems will fail to adequately record, monitor, and account for transactions or positions.

- **Legal risk** is the risk that a transaction cannot be consummated as a result of some legal barrier, such as inadequate documentation, a regulatory prohibition on a specific counterparty, non-enforceability of bilateral and multilateral close-out netting, or collateral arrangements in bankruptcy.

The Trading and Capital-Markets Activities Manual contains a comprehensive discussion of these risks, including examination objectives, procedures, and internal control questionnaires by risk category.

**GOVERNMENT AND AGENCY SECURITIES**

The government securities market is dominated by a number of investment banks, broker-dealers, and commercial banks known as primary dealers in government securities. These dealers make an over-the-counter market in most government and federal-agency securities. Primary dealers are authorized to deal directly with the Open Market Desk of the Federal Reserve Bank of New York. As market makers, primary dealers quote bid-ask prices on a wide range of instruments, and many publish daily quotation sheets or provide live electronic data feeds to larger customers or other dealers.

Government securities trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. Common factors that affect the markup differential include the size of a transaction, the dealer efforts extended, the type of customer (active or inactive), and the nature of the security. Markups on government securities generally range between \( \frac{1}{32} \) and \( \frac{4}{32} \) of a point. Long-maturity issues or derivative products may have higher markups due to the higher risk and potentially larger volatility that may be
inherent in these products.

According to industry standards, payments for and deliveries of U.S. government and most agency securities are settled one business day following the trade date, although government dealers and customers can negotiate same-day or delayed settlement for special situations.

**When-Issued Trading**

A significant potential source of risk to dealers involves “when-issued” (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security auction and settlement. Although the vast majority of transactions settle on the next business day, WI trading results in a prolonged settlement period. This could increase both the market risk and counterparty credit risk associated with trading these instruments. The prolonged settlement period also provides an opportunity for a dealer to engage in a large volume of off-balance-sheet trading without having to fund the assets or cover the short positions. In essence, WI trading allows the dealers to create securities. If the overall level of WI trading is significant in relation to the size of the issue, the resulting squeeze on the market could increase volatility and risk. Given these potential risk characteristics, WI trading should be subject to separate sublimits to cap the potential exposure.

**Short Sales**

Another area of U.S. government securities activity involves short-sale transactions. A short sale is the sale of a security that the seller does not own at the time of the sale. Delivery may be accomplished by buying the security or by borrowing the security. When the security delivered is borrowed, the short seller likely will ultimately have to acquire the security in order to satisfy its repayment obligation. The borrowing transaction is collateralized by a security (or securities) of similar value or cash (most likely the proceeds of the short sale). Reverse purchase transactions are also used to obtain the security needed to make delivery on the security sold short. Carrying charges on borrowed government securities should be deducted from the short sale and purchase spread to determine net profit. Short sales are conducted to (1) accommodate customer orders, (2) obtain funds by leveraging existing assets, (3) hedge the market risk of other assets, or (4) allow a dealer to profit from a possible future decline in market price by purchasing an equivalent security at a later date at a lower price.

**Government Securities Clearing**

Securities-clearing services for the bulk of U.S. government securities transactions and many federal-agency securities transactions are provided by the Federal Reserve as part of its electronic securities-transfer system. The various Federal Reserve Banks will wire-transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve’s systems are also used to facilitate security borrowings, loans, and pledges.

**Government Securities Act**

In response to the failures of a number of unregulated government securities dealers between 1975 and 1985, Congress passed the Government Securities Act of 1986 (GSA). GSA established, for the first time, a federal system for the regulation of the entire government securities market, including previously unregulated brokers and dealers. The primary goal of GSA was to protect investors and ensure the maintenance of a fair, honest, and liquid market.

The GSA granted the Department of the Treasury (Treasury) authority to develop and implement rules for transactions in government and agency securities effected by government securities brokers or dealers (that is, securities firms as well as other financial institutions), and to develop and implement regulations relating to the custody of government securities held by depository institutions. The rules were intended to prevent fraudulent and manipulative acts and practices and to protect the integrity, liquidity, and efficiency of the government securities market. At the same time, the rules were designed to preclude unfair discrimination among brokers, dealers, and customers. Enforcement of the rules for the GSA is generally carried out by an institution’s primary regulatory organization.
The rules for the GSA had the most significant effect on those entities that were not previously subject to any form of federal registration and regulation. These entities included not only firms registered as government securities brokers or dealers but also firms registered as brokers or dealers trading in other securities and financial products. For the first time, the government securities activities of these entities were subject to the discipline of financial responsibility, customer protection, recordkeeping, and advertising requirements. For nonbank dealers, this regulation is enforced by a self-regulatory organization, the Financial Industry Regulatory Authority (FINRA), which conducts routine examinations under the oversight of the Securities and Exchange Commission (SEC).

The provisions of the GSA that had the most significant effect on government securities brokers and dealers (both bank and nonbank broker-dealers) relate to hold-in-custody repurchase agreement rules. Congress targeted this area because of abuses that had resulted in customer losses. Several requirements to strengthen customer protection were imposed: (1) written repurchase agreements must be in place, (2) the risks of the transactions must be disclosed to the customer, (3) specific repurchase securities must be allocated to and segregated for the customer, and (4) confirmations must be made and provided to the customer by the end of the day on which a transaction is initiated and on any day on which a substitution of securities occurs. For a more detailed description of the rules for the GSA requirements, see the procedures for the examination of government securities activities issued by the Board of Governors of the Federal Reserve System, or 17 CFR 400–450 for the actual text of the regulations.

MUNICIPAL SECURITIES

Municipal securities are debt obligations issued by state and local governments and certain agencies and authorities. There are two broad categories of municipal bonds: general obligation bonds and revenue bonds. General obligation bonds (GOs) are backed by the full faith and credit and taxing authority of the government issuer. General obligation bonds are either limited or unlimited tax bonds. Limited tax bonds are issued by government entities whose taxing authority is limited to some extent by law or statute. For instance, a local government may face restrictions on the level of property taxes it can levy on property owners. State and local entities may also issue special tax bonds, which are supported by a specific tax. For instance, a highway project may be financed by a special gasoline tax levied to pay for the bonds. Unlimited tax bonds are issued by government entities without restrictions on the amount of taxes they can levy.
entities that are not restricted by law or statute in the amount of taxes they can levy; however, there may be some political limitations.

Municipal revenue bonds are backed by a specific project or government authority, and they are serviced by fees and revenues paid by users of the government entity. Revenue bonds are backed by public power authorities, non-profit hospitals, housing authorities, transportation authorities, and other public and quasi-public entities.

Effective March 13, 2000, well-capitalized state member banks were authorized by the Gramm-Leach-Bliley Act (GLB Act) to deal in, underwrite, purchase, and sell municipal revenue bonds without any limitations based on the bank’s capital. (See 12 USC 24 (seventh).) Previously, banks were limited to only underwriting, dealing in, or investing in, without limitation, general obligation municipal bonds backed by the full faith and credit of an issuer with general powers of taxation. Member banks could invest in, but not underwrite or deal in, municipal revenue bonds, but the purchases and sales of such investment securities for any obligor were limited to 10 percent of a member bank’s capital and surplus. As a result of the GLB Act amendment, municipal revenue bonds are the equivalent of type I securities for well-capitalized state member banks. (See SR-01-13.) Banks that are not well capitalized may engage in more limited municipal securities activities relating to type II and type III securities. For example, banks may also deal in, underwrite, or invest in revenue bonds that are backed by housing, university, or dormitory projects.

In addition to municipal bonds, state and local governments issue obligations to meet short-term funding needs. These obligations are normally issued in anticipation of some specific revenue. The types of debt issued include tax-anticipation notes (TANs), revenue-anticipation notes (TRANs), grants-anticipation notes (GANs), bond-anticipation notes (BANs), commercial paper, and others.

Because of the large number and diverse funding needs of state and local governments (over 50,000 state and local governments have issued debt in the United States), there is a wide variety of municipal securities. Some municipal security issues have complex structures that require an increased level of technical expertise to evaluate. As with all areas of banking, dealers who invest in complex instruments are expected to understand the characteristics of the instruments and how these instruments might affect their overall risk profile. While there are some large issuers, like the states of New York and California, most issuers are small government entities that place modest amounts of debt. Many of these issues are exempt from federal, state, and local income taxes; these exemptions, in part, determine the investor base for municipal bonds.

The customer base for tax-exempt municipal securities is investors who benefit from income that is exempt from federal income tax. This group includes institutional investors, such as insurance companies, mutual funds, and retail investors, especially individuals in high income-tax brackets.

Credit Risk

Municipal securities activities involve differing degrees of credit risk depending on the financial capacity of the issuer. Larger issuers of municipal securities are rated by nationally recognized rating agencies (Moody’s, S&P, etc.). Other municipalities achieve an investment-grade rating through the use of credit enhancements, usually in the form of a standby letter of credit issued by a financial institution. Banks are also involved in underwriting and placing nonrated municipal securities. Nonrated issues are typically small and are placed with a limited number of investors. Liquidity in the secondary market is limited, and bank dealers rarely carry nonrated issues in trading inventory.

Management should take steps to limit undue concentrations of credit risk arising from municipal-security underwriting and dealing. Exposure to nonrated issuers should be approved through the bank’s credit-approval process with appropriate documentation to support the issuer’s financial capacity. Activity in nonrated issues outside the bank’s target or geographic market should also be avoided. In addition,

exposure should be aggregated on a consolidated basis, taking into account additional credit risk arising from traditional banking products (loans, letters of credit, etc.).

Municipal Securities Rulemaking Board

The Securities Act Amendments of 1975 (15 USC 78o-4) extended a comprehensive network of federal regulation to the municipal securities markets. Pursuant to the act, municipal securities brokers and dealers are required to register with the SEC. The act also created a separate, self-regulatory body, the Municipal Securities Rulemaking Board (MSRB), to formulate working rules for the regulation of the municipal securities industry. The Federal Reserve is required to ensure compliance with those rules as they apply to state member banks.

A bank engaged in the business of buying and selling municipal securities must register with the SEC as a municipal securities dealer if it is involved in—

• underwriting or participating in a syndicate or joint account for the purpose of purchasing securities;
• maintaining a trading account or carrying dealer inventory; or
• advertising or listing itself as a dealer in trade publications, or otherwise holding itself out to other dealers or investors as a dealer.

Generally, a bank that buys and sells municipal securities for its investment portfolio or in a fiduciary capacity is not considered a dealer.

If a bank meets the SEC’s criteria for registering as a municipal securities dealer, it must maintain a separately identifiable department or division involved in municipal securities dealing that is under the supervision of officers designated by the bank’s board of directors. These designated officers are responsible for municipal securities dealer activities and should maintain separate records.

The Federal Reserve conducts a separate examination of the municipal securities dealer activities in banks that engage in such activities. This examination is designed to ensure compliance with the rules and standards formulated by the MSRB. For a complete description of the activities of a municipal securities dealer and detailed procedures performed by the Federal Reserve examiners, see the Municipal Securities Dealer Bank Examination Manual issued by the Board of Governors of the Federal Reserve System.

REPURCHASE AGREEMENTS AND SECURITIES LENDING

Repurchase agreements (repos) play an important role in the securities markets. A repo is the simultaneous agreement to sell a security and repurchase it at a later date. Reverse repos are the opposite side of the transaction, securities purchased with a later agreement to resell. From the dealer’s perspective, a repo is a financing transaction (liability), and a reverse repo is a lending transaction (asset). Overnight repos are a one-day transaction; anything else is referred to as a “term repo.” Approximately 80 percent of the repo market is overnight. Although any security can be used in a repurchase transaction, the overwhelming majority of transactions involve government securities.

Securities dealers use repos as an important source of liquidity. The majority of government securities trading inventory will typically be financed with repos. Reverse repos are used to obtain securities to meet delivery obligations arising from short positions or from the failure to receive the security from another dealer. Reverse repos also are an effective and low-risk means to invest excess cash on a short-term basis.

The repo rate is a money market rate that is lower than the federal funds rate due to the collateralized nature of the transaction. Opportunities also arise to obtain below-market-rate financing. This situation arises when demand exceeds supply for a specific bond issue and it goes on “special.” Dealers who own the bond or control it under a reverse repo transaction can earn a premium by lending the security. This premium comes in the form of a below-market-rate financing cost on a repo transaction.

Many of the larger dealers also engage in proprietary trading of a matched book, which consists of a moderate to large volume of offsetting repos and reverse repos. The term “matched book” is misleading as the book is rarely perfectly matched. Although profit may be derived from the capture of a bid/ask spread on matched transactions, profit is more often
derived from maturity mismatches. In a falling-rate environment, traders lend long (reverse repos) and borrow short (repos). It is more difficult to profit in rising-rate environments because of the shape of the yield curve, which is usually upward-sloping. The overall size of the matched book and the length of the maturity mismatches will generally decline in a rising environment. Matched books are also used to create opportunities to control securities that may go on special, resulting in potential profit opportunities. Dealers engaging in matched-book trading provide important liquidity to the repo market.

Risk in a matched book should be minimized by establishing prudent limits on the overall size of the book, size of maturity mismatches, and restrictions on the maximum tenor of instruments. The overall risk of a matched book is usually small in relation to other trading portfolios. Maturity mismatches are generally short-term, usually 30 to 60 days, but may extend up to one year. Risk can be quickly neutralized by extending the maturity of assets or liabilities. Financial instruments (futures and forward rate agreements) can also be used to reduce risk.

Securities dealers may also engage in “dollar-roll” transactions involving mortgage-backed securities, which are treated as secured financings for accounting purposes. The “seller” of the security agrees to repurchase a “substantially identical” security from the “buyer,” rather than the same security. Many of the supervisory considerations noted above for repurchase agreements also apply to dollar-roll transactions. However, if the security to be repurchased is not substantially identical to the security sold, the transaction generally should be accounted for as a sale and not as a financing arrangement. The accounting guidance for “substantially identical” is described in American Institute of Certified Public Accountants (AICPA) Statement of Position 90-3, which generally requires debt instruments to have the same primary obligor or guarantor, the same form and type, the identical contractual interest rate, the same maturity or weighted average maturity, and other factors.

In addition, securities dealers may engage in securities lending or borrowing transactions. In substance, these transactions are very similar to repo transactions except the transactions have no stated maturity. The transactions are conducted through open-ended “loan” agreements that may be terminated on short notice by the lender or borrower. Although lending transactions have historically been centered in corporate debt and equity obligations, the market increasingly involves loans of large blocks of U.S. government and federal-agency securities. To participate in this market, a bank may lend securities held in its investment account or trading account. Like repos, securities are lent to cover fails (securities sold but not available for delivery) and short sales. Collateral for the transactions can consist of other marketable securities or standby letters of credit; however, the large majority of transactions are secured by cash. Investors are willing to lend securities due to the additional investment income that can be earned by investing the cash collateral. When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower.

Credit Risk

Since repurchase agreements and securities lending transactions are collateralized, credit risk is relatively minor if properly controlled. Some dealers have underestimated the credit risk associated with the performance of the counterparty and have not taken adequate steps to ensure their control of the securities serving as collateral. The market volatility of the securities held as collateral can also add to the potential credit risk associated with the transaction.

As an added measure of protection, dealers require customers to provide excess collateral. This excess is referred to as “margin.” The size of the margin will be a function of the volatility of the instrument serving as collateral and the length of the transaction. In addition to initial margin, term repos and security lending arrangements require additional margin if the value of the collateral declines below a specified level. Excess margin is usually returned to the counterparty if the value of the collateral increases. A daily “mark-to-market” or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should be independent of the trader and take into account the value of accrued interest on debt securities. It is important to point out that credit risk can arise from both asset transactions (reverse repos and securities borrowed) and liability transactions (repos and securities lent) because of market fluctua-
tions in collateral provided and received. Dealers should take steps to ensure that collateral provided is not excessive.

Policies and procedures should be in place to ensure transactions are conducted only with approved counterparties. Credit-limit approvals should be based on a credit analysis of the borrower. An initial review should be performed before establishing a relationship, with periodic reviews thereafter. Credit reviews should include an analysis of the borrower’s financial statement, capital, management, earnings, business reputation, and any other relevant factors. Analyses should be performed in an independent department of the lender institution, by persons who routinely perform credit analyses. Analyses performed solely by the person managing the repo or securities lending programs are not sufficient. Credit and concentration limits should take into account other extensions of credit by other departments of the bank or affiliates. Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

Other Uses and Implications of Securities Lending

In addition to lending their own securities, financial institutions have become increasingly involved in lending customers’ securities held in custody, safekeeping, trust, or pension accounts. These activities are typically organized within the bank’s trust department. Not all institutions that lend securities or plan to do so have relevant experience. Because the securities available for lending often greatly exceed the demand, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers have heightened regulatory sensitivity to the potential for problems in this area.

Fees received on securities loans are divided between the custodial institution and the customer account that owns the securities. In situations involving cash collateral, part of the interest earned on the temporary investment of cash is returned to the borrower and the remainder is divided between the lender institution and the customer account that owns the securities.

In addition to a review of controls, examiners should take steps to ensure that cash collateral is invested in appropriate instruments. Cash should be invested in high-quality, short-term money market instruments. Longer-term floating-rate instruments may also be appropriate; however, illiquid investments and products with customized features (for example, structured notes with embedded options) should be avoided. Several banks have reported significant losses associated with inappropriate investments in securities lending areas.

Securities-Lending Capacity

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender institution is acting. The relevant capacities are described below.

Principal

A lender institution offering securities from its own account is acting as principal. A lender institution offering customers’ securities on an undisclosed basis is also considered to be acting as principal.

Agent

A lender institution offering securities on behalf of a customer-owner is acting as an agent. To be considered a bona fide or “fully disclosed” agent, the lending institution must disclose the names of the borrowers to the customer-owners and the names of the customer-owners to the borrowers (or give notice that names are available upon request). In all cases, the agent’s compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, that is, “blind brokerage” transactions in which participants cannot determine the identity of the contra party, are treated as if the lender institution were the principal.

Directed Agent

A lender institution that lends securities at the
direction of the customer-owner is acting as a directed agent. The customer directs the lender institution in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.

**Fiduciary**

A lender institution that exercises discretion in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For supervisory purposes, the underlying relationship may be as agent, trustee, or custodian.

**Finder**

A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Delivery of securities and collateral is directly between the borrower and the lender, and the finder does not become involved. The finder is simply a fully disclosed intermediary.

**MONEY MARKET INSTRUMENTS**

In addition to bank-eligible securities activities, banks may engage in a substantial volume of trading in money market instruments. Federal funds, banker’s acceptances, commercial paper, and certificates of deposit are forms of money market instruments. While these instruments may be used as part of the overall funding strategy, many firms actively engage in discretionary or proprietary trading in these instruments. As in matched-book repo activities, profits from trading money market instruments are derived from the bid/ask spread on matched transactions and the net interest spread from maturity mismatches.

This activity may result in overall money market arbitrage. Arbitrage is the coordinated purchase and sale of the same security or its equivalent, for which there is a relative price imbalance in the market. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage can occur with items such as Eurodollar CDs, banker’s acceptances, and federal funds, and with financial instruments such as futures and forwards.

Although the risk of money market trading is relatively straightforward, the potential risk can be significant based on the volume of trading and size of the mismatches. Despite the potential risk, these activities may offer attractive profit opportunities if effectively controlled. Short-term interest-rate markets are very liquid, and risk can be quickly neutralized by changing the maturity profile of either assets or liabilities. Financial instruments (such as futures and forward rate agreements) can also be an effective tool to manage risk. Money market trading may be managed as a separate product line or may be integrated with trading in other interest-rate products (such as swaps, caps, or floors). Examiners should take steps to ensure that appropriate limits are in place for money market trading, including restrictions on aggregate notional size, the size of maturity mismatches, and the maximum tenor of instruments.

**Federal Funds**

Commercial banks actively use the federal funds market as a mechanism to manage fluctuations in the size and composition of their balance sheet. Federal funds are also an efficient means to manage reserve positions and invest excess cash on a short-term basis. Although transactions are generally unsecured, they can also be secured. The majority of transactions are conducted overnight; however, term transactions are also common. Federal funds trading will often involve term transactions in an attempt to generate positive net interest spread by varying the maturities of assets and liabilities.

Banks have traditionally engaged in federal funds transactions as principal, but an increasing number of banks are conducting business as agent. These agency-based federal funds transactions are not reported on the agent’s balance sheet. Dealer banks may also provide federal funds clearing services to their correspondent banks.

**Banker’s Acceptances**

Banker’s acceptances are time drafts drawn on
and accepted by a bank. They are the customary means of effecting payment for merchandise sold in import-export transactions, as well as a source of financing used extensively in international trade. Banker’s acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year. The bank can market acceptances to the general public but must guarantee their performance.

Commercial Paper

Commercial paper is a generic term that is used to describe short-term, unsecured promissory notes issued by well-recognized and generally sound corporations. The largest issuers of commercial paper are corporations, bank holding companies, and finance companies, which use the borrowings as a low-cost alternative to bank financing. Commercial paper is exempt from registration under the Securities Act of 1933 if it meets the following conditions:

- prime quality and negotiable
- not ordinarily purchased by the general public
- issued to facilitate current operational business requirements
- eligible for discounting by a Federal Reserve Bank
- maturity does not exceed nine months

Actively traded commercial paper is ordinarily issued in denominations of at least $100,000 and often in excess of $1 million. Commercial paper issuers usually maintain unused bank credit lines to serve as a source of back-up liquidity or contingency financing, principally in the form of standby letters of credit. Major commercial paper issuers are rated by nationally recognized rating agencies (Moody’s, S&P, and others). Other issuers achieve higher ratings through the use of a credit enhancement, usually in the form of a standby letter of credit issued by a financial institution.

Based on Supreme Court rulings, commercial paper was considered a security for purposes of the former Glass-Steagall Act. As a result, banks were generally prohibited from underwriting and dealing in commercial paper. Despite this restriction, banks participated in this market in an “agency capacity.” When establishing a commercial paper dealership, many of the larger banks pursued business through an aggressive interpretation of an agency-transaction role. In practice, bank dealers engage in riskless-principal or best-efforts placement of commercial paper. Taking this logic a step further, others actively engage in competitive bidding and intraday distribution of newly issued paper. Because the paper settles on a same-day basis, the transactions are never part of the official end-of-day records of the bank. Although this technical point has been the subject of discussion, the practice has not been subject to regulatory challenge.

Commercial paper may be issued as an interest-bearing instrument or at a discount. Market trades are priced at a current yield, net of accrued interest due the seller or, if the commercial paper was issued at a discount, at a discount figured for the actual number of days to maturity based on a 360-day year.

The sale of commercial paper issued by bank affiliates must conform to legal restrictions and avoid conflicts of interest. Each certificate and confirmation should disclose the facts that the commercial paper is not a deposit and is not insured by the Federal Deposit Insurance Corporation.

Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of $100,000 to $1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary-market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities are often longer.

Credit-Risk and Funding Concentrations

In addition to market risk, money market policies and guidelines should recognize the credit risk...
inherent in these products. Federal funds sold and deposit placements are essentially unsecured advances. To avoid undue concentrations of credit risk, activity with these products should be limited to approved counterparties. Limits should be established for each prospective counterparty. Tenor limits should also be considered to reduce the potential for credit deterioration over the life of the transaction. The size of limits should be based on both anticipated activity and the counterparty’s financial capacity to perform. The credit analysis should be performed by qualified individuals in a credit department that is independent from the money market dealing function. In assessing the creditworthiness of other organizations, institutions should not rely solely on outside sources, such as standardized ratings provided by independent rating agencies, but should perform their own analysis of a counterparty’s or issuer’s financial strength. At a minimum, limits should be reassessed and credit analyses updated annually. Once established, limits should be monitored with exceptions documented and approved by the appropriate level of senior management. Exposure should also be aggregated on a consolidated basis with any other credit exposure arising from other product areas. Exposure to foreign bank counterparties should also be aggregated by country of domicile to avoid country-risk concentrations. The limit structure should be reviewed to ensure compliance with the requirements of Regulation F, Limitations on Interbank Liabilities, which places prudent limits on credit exposure to correspondent banks.

Maintaining a presence in the wholesale funding markets requires a strong reputation and increases potential liquidity risk. The prolonged use of a large volume of purchased funds to support a money market trading operation could also reduce the capacity to tap this market, if needed, for core funding. Guidelines should be in place to diversify sources of funding. Contingency plans should include strategies to exit or reduce the profile in these markets if the situation warrants.

OPERATIONS AND INTERNAL CONTROLS

A bank dealer’s operational functions should be designed to regulate the custody and movement of securities and to adequately account for trading transactions. Because of the dollar volume and speed of trading activities, operational inefficiencies can quickly result in major problems.

Sound Practices for Front- and Back-Office Operations

Bank dealer activities vary significantly among financial institutions, depending on the size and complexity of the trading products: trading, back-office, and management expertise; and the sophistication of systems. As a result, practices, policies, and procedures in place in one institution may not be necessary in another. The adequacy of internal controls requires sound judgment on the part of the examiner. The following is a list of policies and procedures that should be reviewed:

- Every organization should have comprehensive policies and procedures in place that describe the full range of bank dealer activities performed. These documents, typically organized into manuals, should at a minimum address front- and back-office operations; reconciliation guidelines and frequency; revaluation and accounting guidelines; descriptions of accounts; broker policies; a code of ethics; and the risk-measurement and -management methods, including a comprehensive limit structure.
- Every institution should have existing policies and procedures to ensure the segregation of duties among the trading, control, and payment functions.
- Revaluation sources should be independent from the traders for accounting purposes, risk oversight, and senior management reporting, although revaluation of positions may be conducted by traders to monitor positions.
- Trader and dealer telephone conversations should be taped to facilitate the resolution of disputes and to serve as a valuable source of information to auditors, managers, and examiners.
- Trade tickets and blotters (or their electronic equivalents) should be timely and complete to allow for easy reconciliation and for appropriate position and exposure monitoring. The volume and pace of trading may warrant virtually simultaneous creation of these records in some cases.
• Computer hardware and software applications must have the capacity to accommodate the current and projected level of trading activity. Appropriate disaster-recovery plans should be tested regularly.

• Every institution should have a methodology to identify and justify any off-market transactions. Ideally, off-market transactions would be forbidden.

• A clear institutional policy should exist for personal trading. If such trading is permitted at all, procedures should be established to avoid even the appearance of conflicts of interest.

• Every institution should ensure that the management of after-hours and off-premises trading, if permitted at all, is well documented so that transactions are not omitted from the automated blotter or the bank’s records.

• Every institution should ensure that staff is both aware of and complies with internal policies governing the trader-broker relationship.

• Every institution that uses brokers should monitor the patterns of broker usage, be alert to possible undue concentrations of business, and review the list of approved brokers at least annually.

• Every institution that uses brokers should establish a policy that minimizes name substitutions of brokered transactions. All such transactions should be clearly designated as switches, and relevant credit authorities should be involved.

• Every institution that uses brokers for foreign-exchange transactions should establish a clear statement forbidding the lending or borrowing of brokers’ points as a method to resolve discrepancies.

• Every organization should have explicit compensation policies to resolve disputed trades for all traded products. Under no circumstances should “soft-dollar” (the exchange of services in lieu of dollar compensation) or off-the-books compensation be permitted for dispute resolution.

• Every institution should have know-your-customer policies, and they should be understood and acknowledged by trading and sales staff.

• The designated compliance officer should perform a review of trading practices at least annually. In institutions with a high level of trading activity, interim reviews may be warranted.

• The organization should have an efficient confirmation-matching process that is fully independent from the dealing function. Documentation should be completed and exchanged as close to completion of a transaction as possible.

• Auditors should review trade integrity and monitoring on a schedule in accordance with its appropriate operational-risk designation.

• Organizations that have customers who trade on margin should establish procedures for collateral valuation and segregated custody accounts.

Fails

In some cases, a bank may not receive or deliver a security by settlement date. “Fails” to deliver for an extended time or a substantial number of cancellations are sometimes characteristic of poor operational control or questionable trading activities.

Fails should be controlled by prompt reporting and follow-up procedures. The use of multi-copy confirmation forms enables operational personnel to retain and file a copy by settlement date and should allow for prompt fail reporting and resolution.

Revaluation

The frequency of independent revaluation should be driven by the level of an institution’s trading activity. Trading operations with high levels of activity may need to perform daily revaluation; however, it is important to note that independent revaluations are less critical when inventory is turning over quickly or end-of-day positions are small. In these situations, the majority of profit and loss is realized rather than unrealized. Only unrealized profit and loss on positions carried in inventory are affected by a revaluation. At a minimum, every institution should conduct an independent revaluation at the end of each standard accounting period (monthly or quarterly). There will be situations when certain securities will be difficult to price due to lack of liquidity or recent trading activity. If management relies on trader estimates in these situa-
tions, a reasonableness test should be performed by personnel who are independent from the trading function. A matrix-pricing approach may also be employed. This involves the use of prices on similar securities (coupon, credit quality, and tenor) to establish market prices.

Control of Securities

Depository institutions need to adopt procedures to ensure that ownership of securities is adequately documented and controlled. While this documentation and control once involved taking physical possession of the securities either directly or through a third-party custodian, the securities markets are quickly moving to a book-entry system. In this context, safekeeping is more of a concept than a reality. As the markets change, documenting the chain of ownership becomes the primary mechanism to prevent losses arising from a counterparty default. This documentation involves the matching of incoming and outgoing confirmations and frequent reconciliations of all accounts holding securities (Federal Reserve, customer, custodian, and other dealers). When the dealer holds securities on behalf of its customers, similar safeguards also need to be in place. Although this documentation process can be burdensome, it is necessary to protect a dealer’s interest in securities owned or controlled. Many active dealers have automated the reconciliation and matching process. This reduces the potential for human error and increases the likelihood that exceptions can be uncovered and resolved quickly.

Because of the relatively short periods of actual ownership associated with repurchase agreements, potential losses could be significant if prudent safeguards are not followed. Significant repo volume or matched-book trading activities only heighten this concern. To further protect their interests, dealers should enter into written agreements with each prospective repurchase-agreement counterparty. Although the industry is moving toward standardized master agreements, some degree of customization may occur. The agreements should be reviewed by legal counsel for their content and compliance with established minimum documentation standards. In general, these agreements should specify the terms of the transaction and the duties of both the buyer and seller. At a minimum, provisions should cover the following issues:

- acceptable types and maturities of collateral securities
- initial acceptable margin for collateral securities of various types and maturities
- margin maintenance, call, default, and sellout provisions
- rights to interest and principal payments
- rights to substitute collateral
- individuals authorized to transact business on behalf of the depository institution and its counterparty

Written agreements should be in place before commencing activities.

TRADING AND CAPITAL-MARKETS ACTIVITIES MANUAL

The Trading and Capital-Markets Activities Manual, developed by the Federal Reserve System, is a valuable tool to help examiners understand the complex and often interrelated risks arising from capital-markets activities. The products addressed in the previous subsections and their associated risks are covered in greater detail in the manual.

As noted in the preceding sections, and further addressed in the Trading and Capital-Markets Activities Manual, other trading instruments could be included in the bank dealer or money market trading operation. Financial instruments such as futures and forward rate agreements are often used to modify or hedge the risk associated with cash instruments (dealer inventory and money market positions). The bank dealer may also be involved in other instruments including asset-backed securities (mortgage-backed and consumer-receivable-backed). Other departments of the bank may also use securities products as part of an unrelated trading activity. For example, interest-rate swap traders often use cash bonds to hedge or modify market-risk exposure. In this capacity, the swap desk would be a customer of the government securities dealer. These overlaps in product focus and usage make it critical for examiners to understand the organizational structure and business strategies before establishing examination scope.
OTHER ISSUES

Intercompany Transactions

Examiners should review securities and repurchase-agreement transactions with affiliates to determine compliance with sections 23A and 23B of the Federal Reserve Act. Money market transactions may also be subject to limitations under section 23A; however, these restrictions generally do not apply to transactions between bank subsidiaries that are 80 percent or more commonly owned by a bank holding company. Intercompany transactions between securities underwriting affiliates and their bank affiliates should be carefully reviewed to ensure compliance with Board operating standards and sections 23A and 23B.

Agency Relationships

Many dealer banks engage in securities transactions only in an agency capacity. Acting as an agent means meeting customers’ investment needs without exposing the firm to the price risk associated with dealing as principal. Risk is relatively low as long as appropriate disclosures are made and the bank does not misrepresent the nature or risk of the security.

Agency-based federal funds transactions are also becoming more common. By serving only as an agent to facilitate the transaction, a bank can meet its correspondent’s federal funds needs without inflating the balance sheet and using capital. Examiners should review agency-based
money market transactions to ensure that the transactions are structured in a manner that insulates the bank from potential recourse, either moral or contractual. If legal agreements are not structured properly, the courts could conclude that the agent bank was acting a principal. In this situation, the loss could be recognized by the agent bank, not its customer.

Although no single feature can determine whether an agency relationship really exists, the courts have recognized a variety of factors in distinguishing whether the persons to whom “goods” were transferred were buyers or merely agents of the transferor. Although some of these distinguishing factors may not apply to federal-funds transactions because they involve the transfer of funds rather than material goods, some parallels can be drawn. An agency relationship would appear to encompass, although not necessarily be limited to, the following elements:

• The agent bank must agree to act on behalf of the seller of the federal funds (“seller”) and not on its own behalf.
• The agent should fully disclose to all parties to the transaction that it is acting as agent on behalf of the seller and not on its own behalf.
• The seller, not the agent bank, must retain title to the federal funds before their sale to a purchasing institution.
• The seller, not the agent bank, must bear the risk of loss associated with the federal-funds sale.
• The agent bank’s authority in selling federal funds and accounting for these sales to the seller should be controlled by the seller or by some guidelines to which the seller has agreed. The agent bank should sell only to those banks stipulated on a list of banks approved, reviewed, and confirmed periodically by the seller bank.
• The agent bank should be able to identify the specific parties (sellers and purchasers) to a federal-funds sale and the amount of each transaction for which the agent has acted.
• The agent bank’s compensation should generally be based on a predetermined fee schedule or percentage rate (for example, a percentage based on the number or size of transactions). The agent should generally not receive compensation in the form of a spread over a predetermined rate that it pays to the seller. (If the agent bank’s compensation is in the form of a spread over the rate it pays to the seller, this situation would appear to be more analogous to acting as a principal and suggests that the transactions should be reported on the “agent’s” balance sheet.)

By structuring agency agreements to include provisions that encompass these factors and by conducting agency activities accordingly, agent banks can lower the possibility that they would be considered a principal in the event of a failure of a financial institution that had purchased funds through the agent. Generally, as a matter of prudent practice, each bank acting as an agent should have written agreements with principals encompassing the above elements and have a written opinion from legal counsel as to the bona fide nature of the agency relationships.

Selling through an agent should not cause a bank to neglect a credit evaluation of the ultimate purchasers of these funds. Under the more traditional mode of conducting federal-funds transactions, banks sell their federal funds to other banks, which in many instances are larger regional correspondents. These correspondent banks in turn may resell the federal funds to other institutions. Since the correspondent is acting as a principal in these sales, the banks selling the funds to the correspondent are generally not concerned about the creditworthiness of those purchasing the federal funds from the correspondent/principal. Rather, the original selling banks need to focus solely on the creditworthiness of their correspondent banks, with which they should be quite familiar.

However, when conducting federal-funds sales through an agent, selling banks, in addition to considering the financial condition of their agent, should also subject the ultimate purchasing banks to the same type of credit analysis that would be considered reasonable and prudent if the seller banks were lending directly to the ultimate borrowers rather than through agents. Banks selling federal funds through agents should not relinquish their credit-evaluation responsibilities to their agent banks.

REPORTING

Securities held for trading purposes and the income and expense that results from trading activities should be isolated by specific general ledger or journal accounts. The balances in those accounts should be included in the
appropriate reporting categories for regulatory reporting.

Instructions for the Consolidated Report of Condition and Income (call report) require that securities, derivative contracts, and other items held in trading accounts be reported consistently at market value, or at the lower of cost or market value, with unrealized gains and losses recognized in current income. For further detail, refer to the glossary section of the call report instructions under “trading account.” With either method, the carrying values of trading-security inventories should be evaluated periodically (monthly or quarterly), based on current market prices. The increase or decrease in unrealized appreciation or depreciation resulting from that revaluation should be credited or charged to income. Periodic independent revaluation is the most effective means of measuring the trading decisions of bank management.

For reporting purposes, the trading department’s income should include not only revaluation adjustments, but also profits and losses from the sale of securities, and other items related to the purchase and sale of trading securities. Interest income from trading assets, salaries, commissions, and other expenses should be excluded from trading income for reporting purposes; however, these items should be considered by management when evaluating the overall profitability of the business.

When the lender institution is acting as a fully disclosed agent, securities-lending activities need not be reported on the call report. However, lending institutions offering indemnification against loss to their customer-owners should report the associated contingent liability gross in Schedule RC-L as “other significant commitments and contingencies.”

Due Bills

A “due bill” is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and alternatively, due bills received should be considered as lending transactions. Dealers should not issue due bills as a means of obtaining operating funds or when the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe any collateral securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

Due bills that are outstanding for more than three days and are unsecured could be construed as funding and should be reported as “liabilities for borrowed monies” on the call report. These balances are subject to reserve requirements imposed by Regulation D.

ESTABLISHING SCOPE

Obtaining an overview of the organization, management structure, products offered, and control
environment is a critical step in the examination process. Based on this assessment, an examiner should determine the appropriate resources and skill level. In situations where an institution is active in either the government or municipal securities markets, it is essential to allocate additional resources for GSA and MSRB compliance. The assigned examiners should be familiar with the provisions of GSA and MSRB as well as with the related examination procedures. For active proprietary trading units, it is important to assign examiners who have a reasonable working knowledge of the concepts outlined in the Trading Activities Manual.
Bank Dealer Activities

Examination Objectives

Effective date November 1995

Section 2030.2

1. To determine if the policies, practices, procedures, and internal controls regarding bank dealer activities are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit compliance functions.
5. To determine compliance with applicable laws and regulations.
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.
1. If selected for implementation, complete or update the Bank Dealer Activities section of the Internal Control Questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal/external auditors determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control,” and determine if corrections have been accomplished.

4. Request that the bank provide the following schedules:
   a. An aged schedule of securities that have been acquired as a result of underwriting activities.
   b. An aged schedule of trading account securities and money market instruments held for trading or arbitrage purposes. Reflect commitments to purchase and sell securities and all joint account interests.
   c. A schedule of short-sale transactions.
   d. An aged schedule of due bills.
   e. A list of bonds borrowed.
   f. An aged schedule of “fails” to receive or deliver securities on unsettled contracts.
   g. A schedule of approved securities borrowers and approved limits.
   h. A schedule of loaned securities.
   i. A schedule detailing account names and/or account numbers of the following customer accounts:
      • Own bank trust accounts.
      • Own bank permanent portfolio.
      • Affiliated banks’ permanent portfolio accounts.
      • Personal accounts of employees of other banks.
      • Accounts of brokers or other dealers.
      • Personal accounts of employees of other brokers or dealers.
   j. A list of all joint accounts entered into since the last examination.
   k. A list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid.
   l. A list of all financial advisory relationships.

5. Agree balances of appropriate schedules to general ledger and review reconciling items for reasonableness.

6. Determine the extent and effectiveness of trading policy supervision by:
   a. Reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee.
   b. Determining that proper authorization for the trading officer or committee has been made.
   c. Ascertaining the limitations or restrictions on delegated authorities.
   d. Evaluating the sufficiency of analytical data used in the most recent board or committee trading department review.
   e. Reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law.
   f. Reaching a conclusion about the effectiveness of director supervision of the bank’s trading policy. Prepare a memo for the examiner assigned “Duties and Responsibilities of Directors” stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)

7. Ascertain the general character of underwriting and direct placement activities and the effectiveness of department management by reviewing underwriter files and ledgers, committee reports and offering statements to determine:
   a. The significance of underwriting activities and direct placements of type III securities as reflected by the volume of sales and profit or loss on operations. Compare current data to comparable prior periods.
   b. Whether there is a recognizable pattern in:
      • The extent of analysis of material
information relating to the ability of the issuer to service the obligation.
• Rated quality of offerings.
• Point spread of profit margin for unrated issues.
• Geographic distribution of issuers.
• Syndicate participants.
• Bank’s trust department serving as corporate trustee, paying agent and transfer agent for issuers.
• Trustee, paying agent and transfer agent business being placed with institutions that purchase a significant percentage of the underwriter or private placement offering.

c. The volume of outstanding bids. Compare current data to comparable prior periods.
d. The maturity, rated quality and geographic distribution of takedowns from syndicate participations.
e. The extent of transfer to the bank’s own or affiliated investment or trading portfolios or to trust accounts and any policies relating to this practice.

8. Determine the general character of trading account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets and position records for various categories of trading activity and determining:
   a. The significance of present sales volume compared to comparable prior periods and departmental budgets.
   b. Whether the bank’s objectives are compatible with the volume of trading activity.

9. Review customer ledgers, securities position ledgers, transaction or purchase and sales journals and analyze the soundness of the bank’s trading practices by:
   a. Reviewing a representative sample of agency and contemporaneous principal trades and determining the commission and price mark-up parameters for various sizes and types of transactions.
   b. Selecting principal transactions that have resulted in large profits and determining if the transaction involved:
      • “Buy-backs” of previously traded securities.
      • Own bank or affiliated bank portfolios.
      • A security that has unusual quality and maturity characteristics.
   c. Reviewing significant inventory positions taken since the prior examination and determining if:
      • The quality and maturity of the inventory position was compatible with prudent banking practices.
      • The size of the position was within prescribed limits and compatible with a sound trading strategy.

10. Determine the extent of risk inherent in trading account securities which have been in inventory in excess of 30 days and:
   a. Determine the dollar volume in extended holdings.
   b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
   c. Determine the current market value for individual issues which show an internal valuation mark-down of 10 percent or more.
   d. Perform credit analyses on the issuers of non-rated holdings identified as significant positions.
   e. Perform credit analyses on those issues with valuation write-downs considered significant relative to the scope of trading operations.
   f. Discuss plans for disposal of slow moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.

11. Using an appropriate technique, select issues
from the schedule of trading account inventory. Test valuation procedures by:
   a. Reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed.
   b. Comparing bank prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date “bid” prices).
   c. Investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine:
   a. The degree of speculation reflected by basis point spreads.
   b. Present exposure shown by computing the cost to cover short sales.
   c. If transactions are reversed in a reasonable period of time.
   d. If the bank makes significant use of due-bill transactions to obtain funds for its banking business:
      • Coordinate with the examiner assigned “Review of Regulatory Reports” to determine if the bank’s reports of condition reflect due bill transactions as “liabilities for borrowed money.”
      • Report amounts, duration, seasonal patterns and budgeted projections for due bills to the examiner assigned “Funds Management.”
13. If the bank is involved in agency-based federal funds activity:
   a. At the beginning or in advance of each examination of a banking organization which has been acting as an agent in the purchase and sale of federal funds for other institutions, examiners should obtain certain information which will help them determine the nature and extent of this activity. The information should include:
      • A brief description of the various types of agency relationships (i.e., involving federal funds or other money market activities) and the related transactions.
      • For each type of agency relationship, copies of associated forms, agency agreements, documents, reports and legal opinions. In addition, if the banking organization has documented its analysis of the risks associated with the activity, a copy of the analysis should be requested by the examiner.
      • For each type of agency relationship, a summary of the extent of the activity including:
         — The number of institutions serviced as principals.
         — The size range of the institutions (i.e., institutions serviced have total assets ranging from $_____ to $______).
         — General location of sellers and purchasers serviced under agency relationships (i.e., New York State, Midwest, etc.)
         — Estimate of average daily volume of federal funds or money market instruments purchased and sold under agency relationships and the high and low volume over the period since the last examination inquiry (or since activity was begun, if more recent).
         — Names of individuals in the bank that are responsible for these agency relationships.
      • A historical file of this information should be maintained in order to determine the nature, extent and growth of these activities over time.
   b. Once the examination work in this area has been started, the examiner should attempt to discern any situation, activity or deficiency in this area that might suggest that an agency relationship does not actually exist. A negative response to the following examination guidelines section dealing with agency agreements may signal such a deficiency. In addition, any other money market agency relationships that involve new or unusual financial transactions should be evaluated to determine the nature of the risks involved and compliance, to the extent applicable, with the guidelines.
   c. The examiner should determine that the banking organization’s written policies, procedures, and other documentation associated with this activity are consistent with the Federal Reserve System’s Examination Guidelines. If the bank does not have written policies the examiner should strongly advise that they be developed due to the complex nature of this activity and the potential risks associated with it.
   d. After reviewing the policies, procedures,
and appropriate documentation, the examiner should be able to respond positively to the following questions:

- Banking organizations acting as agents in the sale of federal funds
  - Has this form of activity been approved by the board of directors?
  - Are the bank’s individual agency arrangements and transactions:
    - supported by written agency agreements, and
    - reviewed and approved by appropriate officers?
  - Do the written agency agreements that support this activity include provisions indicating that (a negative answer may indicate that the bank is not in fact an agent):
    - the agent bank will be acting on behalf of the original or principal seller of federal funds (“seller”) in conducting these activities and not on the agent bank’s own behalf?
    - the agency relationship will be fully disclosed to all banks involved in the transactions?
    - the seller, and not the agent bank, must retain legal title to the federal funds before they are sold to a third party bank?
    - the seller, and not the agent bank, bears the risk of loss?
    - the agent bank’s authority in selling federal funds and in accounting for this activity to the seller should be controlled by the seller or by standards to which it has agreed? To implement this, does the agreement or its attachments include the following seller-approved items:
      1. lists of banks to whom the agent may sell federal funds,
      2. limits on the amounts that can be sold to these banks?
  - Does the agent have a written opinion from its legal counsel as to the bona fide nature of the agency relationship?
  - Does the accounting and reporting system of the agent bank enable it to account for the federal funds transactions on a period basis (i.e., at least weekly) to the sellers? (Although more frequent accounting may not be required by the sellers, the agent on any day should have the capacity to identify for the seller the banks to whom the seller’s funds have been sold.)
  - Does the agent’s accounting system identify each bank which has purchased federal funds from a particular seller bank and include (at least) the following information for each bank in which the funds are being invested?
    - information to clearly identify the name and location of the bank (or other entity)
    - amount of federal funds sold and amount of interest earned
    - terms of transaction, and maturity date
    - lending limits agreed to
  - Does the agent bank actually disclose to banks or other organizations that are part of these agency-based transactions that it is acting as agent?
  - Is the agent bank’s compensation in the form of a predetermined fee schedule or percentage rate based, for example, on the size of transactions, as opposed to compensation in the form of a spread over the rate that it pays to the seller bank? (If the agent bank’s compensation is in the form of a spread over the rate it pays to the selling bank, this situation would appear to be more akin to acting as an intermediary and suggests that the

---

1. Although it is conceivable that a purchaser could engage an agent to obtain federal funds on its behalf, these guidelines focus primarily on situations where the seller has engaged an agent to sell federal funds on its behalf because the associated risks of such transactions are borne by the sellers and their agents.

2. Seller banks could conceivably design their lists of approved banks to encompass a large number of financially sound institutions and still be considered to be fulfilling this supervisory requirement.

---

3. The entities referred to as “ultimate purchasers” or “ultimate borrowers” are those that have the responsibility to repay the original seller bank, and not any intervening agents that may pass on the federal funds to these purchasers.
transactions should be reported on its balance sheet.)

- Banking organizations that are involved in agency-based federal funds relationships as sellers
  - Does the bank support its transactions with written agency agreements?
  - Does the seller bank evaluate the credit worthiness of the ultimate borrowers of federal funds and establish limits for each and are these limits periodically reviewed at least every six months?4
  - Does the bank periodically (i.e., at least weekly) receive an accounting from the agent which includes the following information for each bank to whom the seller bank’s federal funds were sold?
    - Information to identify name and location of bank
    - Amount of federal funds sold and interest earned
    - Federal funds sales limits agreed to (if the seller bank is a principal)
  - Is the bank’s management and board of directors aware of and have they approved the agency relationship?

- Do internal and/or external auditors periodically review the policies, procedures, and internal controls associated with this activity and the activity’s impact on the earnings and financial condition of the banking organization? Is their evaluation reported to management? (Applies to banks acting as agents in the sale of federal funds, and those banks involved as sellers of federal funds.)

- In addition to the items considered above, the examiner should determine what the impact of these transactions has been on the bank’s earnings and financial condition. If the impact has been negative, or if the answer to any of the above questions is negative, the examiner should discuss these matters with bank management and seek remedial action.

14. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items that are a week or more beyond settlement date and determine:
   a. The amount of extended fails.
   b. The planned disposition of extended fails.
   c. If the control system allows a timely, productive follow-up on unresolved fails.
   d. The reasons for cancellations.
   e. The planned disposition of securities that have been inventoried prior to the recognition of a fail or a cancellation.

15. Determine compliance with applicable laws, rulings, and regulations by performing the following for:
   a. 12 CFR 1.3—Eligible Securities:
      - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the bank’s capital and unimpaired surplus are type I securities.
      - Determine that the total par value of type II investments does not exceed 10 percent of the bank’s capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
      - Elicit management’s comments and review underwriting records on direct placement of type III securities, and determine if the bank is dealing in type III securities for its own account by ascertaining if direct placement issues have been placed in own bank or affiliated investment portfolios or if underwriting proceeds were used to reduce affiliate loans.
   b. Section 23A of the Federal Reserve Act (12 USC 371(c) and 375)—Preferential Treatment: Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, include securities clearance services, involving affiliates, insiders or their interests are on terms less favorable to the bank than those transactions involving unrelated parties.
   c. Regulation D (12 CFR 204.2)—Due Bills:

---

4. This requirement is intended to mean that seller banks should conduct the type of credit analysis that would be considered reasonable and prudent for a direct federal funds activity (i.e., those federal funds activities not conducted through agents).
• Review outstanding due bills and determine if:
  — The customer was informed that a due bill would be issued instead of the purchased security.
  — Safekeeping receipts are sent to safekeeping customers only after the purchased security has been delivered.
• Review due bills outstanding over three business days and determine if they are collateralized or properly reserved.
• Review collateralized due bills and determine if the liability is secured by securities of the same type and of comparable maturity and with a market value at least equal to that of the security that is the subject of the due bill.

d. Regulation H (12 CFR 208.8(k))—Recordkeeping and Confirmation Requirements: If the bank effects securities transactions at the direction and for the account of customers, determine if it is in compliance with this regulation by substantiating Internal Control questions 24–35.

16. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by:

a. Reviewing customer account schedules of own bank and affiliated bank permanent portfolios, trusts, other broker-dealers, employees of own or other banks and other broker-dealers. Use an appropriate technique to select transactions and compare trade prices to independently established market prices as of the date of trade.
b. Reviewing transactions, including U.S. government tender offer subscription files, involving employees and directors of own or other banks and determine if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans.
c. Reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an additional mark-up and that gains were not recognized a second time.
d. Reviewing commercial paper sales journals or confirmations to determine if the bank sells affiliate commercial paper. If so, determine if:
  • The bank sells affiliate-issued commercial paper to institutions and financially sophisticated individuals only.
  • Sales are generally denominated in amounts of $25,000 or more.
  • Each sale confirmation discloses that the affiliate-issued commercial paper is not an insured bank deposit.
e. Reviewing securities position records and customer ledgers with respect to large volume repetitive purchase and sales transactions and:
  • Independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties.
  • Investigating the purchase of large blocks of securities from dealer firms just prior to month end and their subsequent resale to the same firm just after the beginning of the next month.
f. Reviewing lists of approved dealer firms and determining that the approval of any firm that handles a significant volume of agency transactions is based on competitive factors rather than deposit relationships.
g. Reviewing customer complaint files and determining the reasons for such complaints.

17. Discuss with an appropriate officer and prepare report comments concerning:

a. The soundness of trading objectives, policies and practices.
b. The degree of legal and market risk assumed by trading operations.
c. The effectiveness of analytical, reporting and control systems.
d. Violations of law.
e. Internal control deficiencies.
f. Apparent or potential conflicts of interest.
g. Other matters of significance.

18. Reach a conclusion regarding the quality of department management and state your conclusions on the management brief provided by the examiner assigned “Management Assessment.”

19. Update workpapers with any information that will facilitate future examinations.
Bank Dealer Activities  
Internal Control Questionnaire  
Effective date December 1985  
Section 2030.4

Review the bank’s internal controls, policies, practices and procedures regarding bank dealer activities. The bank’s system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

This section applies to all bank dealer activities except those involving municipal securities, which are reviewed as part of a separate and distinct Municipal Bond Dealer Examination.

SECURITIES UNDERWRITING TRADING POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that:
   a. Outline objectives?
   b. Establish limits and/or guidelines for:
      • Price mark-ups?
      • Quality of issues?
      • Maturity of issues?
      • Inventory positions (including when issued (WI) positions)?
      • Amounts of unrealized loss on inventory positions?
      • Length of time an issue will be carried in inventory?
      • Amounts of individual trades or underwriter interests?
      • Acceptability of brokers and syndicate partners?
   c. Recognize possible conflicts of interest and establish appropriate procedures regarding:
      • Deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
      • Deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
      • Transfers made between trading account inventory and investment portfolio(s)?

2. Are the underwriting/trading policies reviewed at least quarterly by the board to determine their adequacy in light of changing conditions?

3. Is there a periodic review by the board to assure that the underwriting/trading department is in compliance with its policies?
OFFSETTING RESALE AND REPURCHASE TRANSACTIONS

4. Has the board of directors, consistent with its duties and responsibilities, adopted written offsetting repurchase transaction policies that:
   a. Limit the aggregate amount of offsetting repurchase transactions?
   b. Limit the amounts in unmatched or extended (over 30 days) maturity transactions?
   c. Determine maximum time gaps for unmatched maturity transactions?
   d. Determine minimumly acceptable interest rate spreads for various maturity transactions.
   e. Determine the maximum amount of funds to be extended to any single or related firms through reverse re-po transactions, involving unsold (through forward sales) securities?
   f. Require firms involved in reverse re-po transactions to submit corporate resolutions stating the names and limits of individuals, who are authorized to commit the firm?
   g. Require submission of current financial information by firms involved in reverse re-po transactions?
   h. Provide for periodic credit reviews and approvals for firms involved in reverse re-po transactions?
   i. Specify types of acceptable offsetting repurchase transaction collateral (if so, indicate type __________).

5. Are written collateral control procedures designed so that:
   a. Collateral assignment forms are used?
   b. Collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner?
      • Registered securities are registered in bank or bank’s nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse re-po transactions?
   c. Funds are not disbursed until reverse re-po collateral is delivered into the physical custody of the bank or an independent safekeeping agent?
   d. Funds are only advanced against predetermined collateral margins or discounts?
      • If so, indicate margin or discount percentage __________
   e. Collateral margins or discounts are predicated upon:
      • The type of security pledged as collateral?
      • Maturity of collateral?
      • Historic and anticipated price volatility of the collateral?
      • Maturity of the reverse re-po agreements?
   f. Maintenance agreements are required to support predetermined collateral margin or discount?
   g. Maintenance agreements are structured to allow margin calls in the event of collateral price declines?
   h. Collateral market value is frequently checked to determine compliance with margin and maintenance requirements (if so, indicate frequency __________)?

CUSTODY AND MOVEMENT OF SECURITIES

*6. Are the bank’s procedures such that persons do not have sole custody of securities in that:
   a. They do not have sole physical access to securities?
   b. They do not prepare disposal documents that are not also approved by authorized persons?
   c. For the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
   d. No person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?

7. Are securities physically safeguarded to prevent loss, unauthorized disposal or use? And:
   a. Are negotiable securities kept under dual control?
   b. Are securities counted frequently, on a surprise basis, reconciled to the securities record, and the results of such counts reported to management?
c. Does the bank periodically test for compliance with provisions of its insurance policies regarding custody of securities?

d. For securities in the custody of others:
   • Are custody statements agreed periodically to position ledgers and any differences followed up to a conclusion?
   • Are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
   • Are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?

8. Are trading account securities segregated from other bank owned securities or securities held in safekeeping for customers?

9. Is access to the trading securities vault restricted to authorized employees?

10. Do withdrawal authorizations require countersignature to indicate security count verifications?

11. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?

12. Are prenumbered forms used to control securities trades, movements and payments?

13. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?

14. Do alterations to forms governing the trade, movement, and payment of securities require:
   *a. Signature of the authorizing party?
   b. Use of a change of instruction form?

15. With respect to negotiability of registered securities:
   a. Are securities kept in non-negotiable form whenever possible?
   b. Are all securities received, and not immediately delivered, transferred to the name of the bank or its nominee and kept in non-negotiable form whenever possible?
   c. Are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

16. Does the bank maintain:
   a. Order tickets which include:
      • Capacity as principal or agent?
      • If order is firm or conditional?
      • Terms, conditions or instructions and modifications?
      • Type of transaction (purchase or sale)?
      • Execution price?
      • Description of security?
      • Date and time of order receipt?
      • Date and time of execution?
      • Dealer’s or customer’s name?
      • Delivery and payment instructions?
      • Terms, conditions, date and time of cancellation of an agency order?
   b. Customer confirmations:
      • Bank dealer’s name, address and phone number?
      • Customer’s name?
      • Designation of whether transaction was a purchase from or sale to the customer?
      • Par value of securities?
      • Description of securities, including at a minimum:
         — Name of issuer?
         — Interest rate?
         — Maturity date?
         — Designation, if securities are subject to limited tax?
         — Subject to redemption prior to maturity (callable)?
         — Designation, if revenue bonds and the type of revenue?
         — The name of any company or person in addition to the issuer who is obligated, directly or indirectly, to pay debt service on revenue bonds? (In the case of more than one such obligor, the phrase “multiple obligors” will suffice.)
         — Dated date, if it affects price or interest calculations?
         — First interest payment date, if other than semi-annual?
         — Designation, if securities are “fully registered” or “registered as principal”?
         — Designation, if securities are “pre-refunded”?

RECORDS MAINTENANCE

Bank Dealer Activities: Internal Control Questionnaire 2030.4
Commercial Bank Examination Manual March 1994 Page 3
— Designation, if securities have been “called,” maturity date fixed by call notice and amount of call price?
— Denominations of bearer bonds, if other than denominations of $1,000 and $5,000 par value?
— Denominations of registered bonds, if other than multiples of $1,000 par value up to $100,000 par value?
— Denominations of municipal notes?
• Trade date and time of execution, or a statement that time of execution will be furnished upon written request of the customer?
• Settlement date?
• Yield and dollar price? Only the dollar price need to be shown for securities traded at par.
— For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity, and if priced to premium call or par option, a statement to that effect and the call or option date and price used in the calculation?
• Amount of accrued interest?
• Extended principal amount?
• Total dollar amount of transaction?
• The capacity in which the bank dealer effected the transaction:
  — As principal for own account?
  — As agent for customer?
  — As agent for a person other than the customer?
  — As agent for both the customer and another person (dual agent)?
• If a transaction is effected as agent for the customer or as dual agent:
  — Either the name of the contra-party or a statement that the information will be furnished upon request?
  — The source and amount of any commission or other remuneration to the bank dealer?
• Payment and delivery instructions?
• Special instructions, such as:
  — “Ex-legal” (traded without legal opinion)?
  — “Flat” (traded without interest)?
  — “In default” as to principal or interest?

### c. Dealer confirmations:
- Bank dealer’s name, address and telephone number?
- Contra-party identification?
- Designation of purchase from or sale to?
- Par value of securities?
- Description of securities, including at a minimum:
  — Name of issuer?
  — Interest rate?
  — Maturity date?
  — Designation, if securities are limited tax?
  — Subject to redemption prior to maturity (callable)?
  — Designation, if revenue bonds and the type of revenue?
  — Dated date, if it affects price or interest calculations?
  — First interest payment date, if other than semi-annual?
  — Designation, if securities are “fully registered” or “registered as principal”?
  — Designation, if securities are “pre-refunded”?
  — Designation, if securities have been “called,” maturity date fixed by call notice and amount of call price?
— Denominations of bearer bonds, if other than denominations of $1,000 and $5,000 par value?
— Denominations of registered bonds, if other than multiples of $1,000 par value up to $100,000 par value?
• CUSIP number, if assigned (effective January 1, 1979)?
• Trade date?
• Settlement date?
• Yield to maturity and resulting dollar price? Only the dollar price need be shown for securities traded at par or on a dollar basis.
— For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity?
— If applicable, the fact that securities are priced to premium call or par option and the call or option date and price used in the calculation?
• Amount of accrued interest?
• Extended principal amount?
• Total dollar amount of transaction?
• Payment and delivery instructions?
• Special instructions, such as:
  — “Ex-legal” (traded without legal opinion)?
  — “Flat” (traded without interest)?
  — “In default” as to principal or interest?

d. Purchase and sale journals or blotters which include:
• Trade date?
• Description of securities?
• Aggregate par value?
• Unit dollar price or yield?
• Aggregate trade price?
• Accrued interest?
• Name of buyer or seller?
• Name of party received from or delivered to?
• Bond or note numbers?
• Indication if securities are in registered form?
• Receipts or disbursements of cash?
• Specific designation of “when issued” transactions?
• Transaction or confirmation numbers recorded in consecutive sequence to insure that transactions are not omitted?
• Other references to documents of original entry?

e. Short sale ledgers which include:
• Sale price?
• Settlement date?
• Present market value?
• Basis point spread?
• Description of collateral?
• Cost of collateral or cost to acquire collateral?
• Carrying charges?

f. Security position ledgers, showing separately for each security positioned for the bank’s own account:
• Description of the security?
• Posting date (either trade or settlement date, provided posting date is consistent with other records of original entry)?
• Aggregate par value?
• Cost?
• Average cost?
• Location?
• Count differences classified by the date on which they were discovered?
g. Securities transfer or validation ledgers which include:
• Address where securities were sent?
• Date sent?
• Description of security?
• Aggregate par value?
• If registered securities:
  — Present name of record?
  — New name to be registered?
• Old certificate or note numbers?
• New certificate or note numbers?
• Date returned?

h. Securities received and delivered journals or tickets which include:
• Date of receipt or delivery?
• Name of sender and receiver?
• Description of security?
• Aggregate par value?
• Trade and settlement dates?
• Certificate numbers?

i. Cash or wire transfer receipt and disbursement tickets which include:
• Draft or check numbers?
• Customer accounts debited or credited?
• Notation of the original entry item that initiated the transaction?

j. Cash or wire transfer journals which additionally include:
• Draft or check reconciliations?
• Daily totals of cash debits and credits?
• Daily proofs?

k. Fail ledgers which include:
• Description of security?
• Aggregate par value?
• Price?
• Fail date?
• Date included on fail ledger?
• Customer or dealer name?
• Resolution date?
• A distinction between a customer and a dealer fail?
• Follow-up detail regarding efforts to resolve the fail?

l. Securities borrowed and loaned ledgers which include:
• Date of transaction?
• Description of securities?
• Aggregate par value?
• Market value of securities?
• Contra-party name?
• Value at which security was loaned?
• Date returned?
• Description of collateral?
• Aggregate par value of collateral?
• Market value of collateral?
• Collateral safekeeping location?
• Dates of periodic valuations?

m. Records concerning written or oral put options, guarantee and repurchase agreements which include:
• Description of the securities?
• Aggregate par value?
• Terms and conditions of the option, agreement or guarantee?

n. Customer account information which includes:
• Customer’s name and residence or principal business address?
• Whether customer is of legal age?
• Occupation?
• Name and address of employer? And:
  — Whether customer is employed by a securities broker or dealer or by a municipal securities dealer?
• Name and address of beneficial owner or owners of the account if other than customer? And:
  — Whether transactions are confirmed with such owner or owners?
• Name and address of person(s) authorized to transact business for a corporate, partnership or trusteed account?
  And:
  — Copy of powers of attorney, resolutions or other evidence of authority to effect transactions for such an account?
• With respect to borrowing or pledging securities held for the accounts of customers:
  — Written authorization from the customer authorizing such activities?
• Customer complaints including:
  — Records of all written customer complaints?
  — Record of actions taken concerning those complaints?

o. Customer and the bank dealer’s own account ledgers which include:
• All purchases and sales of securities?
• All receipts and deliveries of securities?
• All receipts and disbursements of cash?
• All other charges or credits?

p. Records of syndicates’ joint accounts or similar accounts formed for the purchase of municipal securities which include:
• Underwriter agreements? And:
  — Description of the security?
  — Aggregate par value of the issue?
• Syndicate or selling group agreements? And:
  — Participants’ names and percentages of interest?
  — Terms and conditions governing the formation and operation of the syndicate?
  — Date of closing of the syndicate account?
  — Reconciliation of syndicate profits and expenses?
• Additional requirements for syndicate or underwriting managers which include:
  — All orders received for the purchase of securities from the syndicate or account, except bids at other than the syndicate price?
  — All allotments of securities and the price at which sold?
  — Date of settlement with the issuer?
  — Date and amount of any good faith deposit made with the issuer?

q. Files which include:
• Advertising and sales literature
• Prospectus delivery information?

r. Internal supervisory records which include:
• Account reconciliation and follow-up?
• Profit analysis by trader?
• Sales production reports?
• Periodic open position reports computed on a trade date or when issued basis?
• Reports of own bank credit extensions used to finance the sale of trading account securities?
PURCHASE AND SALES TRANSACTIONS

17. Are all transactions promptly confirmed in writing to the actual customers or dealers?
18. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including approval by a designated responsible employee)?
   a. Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?
19. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated?
   a. Are comparisons approved by a designated individual (if so, give name _________)?

CUSTOMER AND DEALER ACCOUNTS

20. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
21. Are letters mailed to customers requesting confirmation of changes of address?
22. Are separate customer account ledgers maintained for:
   • Employees?
   • Affiliates?
   • Own bank’s trust accounts?
23. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?

RECORDKEEPING AND CONFIRMATION REQUIREMENTS FOR CUSTOMER SECURITIES TRANSACTIONS (REGULATION H)

24. Are chronological records of original entry containing an itemized daily record of all purchases and sales of securities maintained?
25. Do the original entry records reflect:
   a. The account or customer for which each such transaction was effected?
   b. The description of the securities?
   c. The unit and aggregate purchase or sale price (if any)?
   d. The trade date?
   e. The name or other designation of the broker-dealer or other person from whom purchased or to whom sold?

If the bank has had an average of 200 or more securities transactions per year for customers over the prior three-calendar-year period, exclusive of transactions in U.S. government and federal agency obligations, answer questions 26, 27 and 28.

26. Does the bank maintain account records for each customer which reflect:
   a. All purchases and sales of securities?
   b. All receipts and deliveries of securities?
   c. All receipts and disbursements of cash for transactions in securities for such account?
   d. All other debits and credits pertaining to transactions in securities?
27. Does the bank maintain a separate memorandum (order ticket) of each order to purchase or sell securities (whether executed or cancelled) which includes:
   a. The account(s) for which the transaction was effected?
   b. Whether the transaction was a market order, limit order, or subject to special instructions?
   c. The time the order was received by the trader or other bank employee responsible for affecting the transaction?
   d. The time the order was placed with the broker-dealer, or if there was no broker-dealer, the time the order was executed or cancelled?
   e. The price at which the order was executed?
   f. The broker-dealer used?
28. Does the bank maintain a record of all broker-dealers selected by the bank to effect securities transactions and the amount of commissions paid or allocated to each such broker during the calendar year?
29. Does the bank, subsequent to effecting a securities transaction for a customer, mail or otherwise furnish to such customer either a copy of the confirmation of a broker-dealer relating to the securities transaction or a written trade confirmation?
of a broker-dealer relating to the securities transaction or a written trade confirmation prepared by the bank?

30. If customer notification is provided by furnishing the customer with a copy of the confirmation of a broker-dealer relating to the transaction, and if the bank is to receive remuneration from the customer or any other source in connection with the transaction, and the remuneration is not determined pursuant to a written agreement between the bank and the customer, does the bank also provide a statement of the source and amount of any remuneration to be received?

31. If customer notification is provided by furnishing the customer with a trade confirmation prepared by the bank, does the confirmation disclose:
   a. The name of the bank?
   b. The name of the customer?
   c. Whether the bank is acting as agent for such customer, as principal for its own account, or in any other capacity?
   d. The date of execution and a statement that the time of execution will be furnished within a reasonable time upon written request of such customer?
   e. The identity, price and number of shares of units (or principal amount in the case of debt securities) of such securities purchased or sold by such customer?

32. For transactions which the bank effects in the capacity of agent, does the bank, in addition to the above, disclose:
   a. The amount of any remuneration received or to be received, directly or indirectly, by any broker-dealer from such customer in connection with the transaction?
   b. The amount of any remuneration received or to be received by the bank from the customer and the source and amount of any other remuneration to be received by the bank in connection with the transaction, unless remuneration is determined pursuant to a written agreement between the bank and the customer?
   c. The name of the broker-dealer used. Where there is no broker-dealer, the name of the person from whom the security was purchased or to whom it was sold, or the fact that such information will be furnished within a reasonable time upon written request?

33. Does the bank maintain the above records and evidence of proper notification for a period of at least three years?

34. Does the bank furnish the written notification described above within five business days from the date of the transaction, or if a broker-dealer is used, within five business days from the receipt by the bank of the broker-dealer’s confirmation? If not, does the bank use one of the alternative procedures described in Regulation H?

35. Unless specifically exempted in Regulation H, does the bank have established written policies and procedures ensuring:
   a. That bank officers and employees who make investment recommendations or decisions for the accounts of customers, who participate in the determination of such recommendations or decisions, or who, in connection with their duties, obtain information concerning which securities are being purchased or sold or recommended for such action, report to the bank, within 10 days after the end of the calendar quarter, all transactions in securities made by them or on their behalf, either at the bank or elsewhere in which they have a beneficial interest (subject to certain exemptions)?
   b. That in the above required report the bank officers and employees identify the securities purchased or sold and indicate the dates of the transactions and whether the transactions were purchases or sales?
   c. The assignment of responsibility for supervision of all officers or employees who (1) transmit orders to or place orders with broker-dealers, or (2) execute transactions in securities for customers?
   d. The fair and equitable allocation of securities and prices to accounts when orders for the same security are received at approximately the same time and are placed for execution either individually or in combination?
   e. Where applicable, and where permissible under local law, the crossing of buy and sell orders on a fair and equitable basis to the parties to the transaction?
OTHER

36. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?

37. Are subsidiary records reconciled, at least monthly, to the appropriate general ledger accounts and are reconciling items adequately investigated by persons who do not also have sole custody of securities?

38. Are fails to receive and deliver under a separate general ledger control?
   a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?
   b. Are periodic aging schedules prepared (if so, indicate frequency __________)?
   c. Are stale fail items confirmed and followed up to a conclusion?
   d. Are stale items valued periodically and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?

39. With respect to securities loaned and borrowed positions:
   a. Are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
   b. Are positions confirmed periodically (if so, indicate frequency __________)?

40. Is the compensation of all department employees limited to salary and a non-departmentalized bonus or incentive plan?
   a. Are sales representatives’ incentive programs based on sales volume and not department income?

CONCLUSION

41. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

42. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
OVERVIEW

This section will help the examiner perform two separate, but related, functions:

- evaluate the depth and scope of the formalized policies and procedures the bank uses to manage and control its loan portfolio
- form an overview of the performance of the entire lending operation by consolidating the results of the examination programs from the various lending departments

BANK LOAN POLICY

The purpose of a bank’s lending policy is to establish the authority, rules, and framework to operate and administer its loan portfolio effectively, that is, to ensure profitability while managing risk. The policy serves as a framework to set basic standards and procedures in a clear and concise manner. The policy’s guidelines should be derived from a careful review of internal and external factors that affect the institution, such as the bank’s market position, historical experience, present and prospective trade area, probable future loan and funding trends, facilities, staff capabilities, and technology. Such guidelines, however, must be void of any discriminatory policies or practices.

The complexity and scope of the lending policy and procedures should be appropriate to the size of the institution and the nature of its activities and should be consistent with prudent banking practices and relevant regulatory requirements. Examiners should keep in mind that a loan policy that is appropriate for one bank is not necessarily suitable for another bank. Each bank’s policy will differ, given the institution’s strategic goals and objectives, coupled with factors such as economic conditions, the experience and ability of the lending personnel, and competition. The policy should be reviewed at least annually to ensure that it is not outdated or ineffective, remains flexible, and continues to meet the needs of the community. Changes in federal and other regulatory requirements, including limitations involving insider transactions, also must be incorporated into the policy.

The policy should be broad and not overly restrictive. If carefully formulated and administered by senior management, and clearly communicated and understood through each level of the organization, it greatly helps bank management (1) maintain sound credit-underwriting standards; (2) control and manage risk; (3) evaluate new business opportunities; and (4) identify, administer, and collect problem loans.

The lending policy must clearly state the philosophies and principles that govern safe and sound banking practices and procedures, as well as the mission and objectives of the particular institution. Throughout this manual, considerable emphasis is placed on formal written policies established by the board of directors that management can implement, administer, and amplify. The board of directors, in discharging its duty to both depositors and shareholders, must ensure that loans in the bank’s portfolio are made based on the following three objectives:

- to grant loans on a sound and collectible basis
- to invest the bank’s funds profitably for the benefit of shareholders and the protection of depositors
- to serve the legitimate credit needs of the bank’s community

The written loan policy is the cornerstone for sound lending and loan administration. An adequate loan policy promotes—

- a bank’s business and lending philosophy, despite changes in management;
- stability, as it provides a reference for lenders;
- clarity, to minimize confusion concerning lending guidelines; and
- sound objectives for evaluating new business opportunities.

The loan policy should define who will receive credit, what type, and at what price, as well as what credit documentation will be permitted or required. Other internal factors to be addressed include who will grant the credit and in what amount, as well as what organizational structure will ensure compliance with the bank’s guidelines and procedures. Because loan authority is spread throughout the organization, the bank must have an efficient internal review and
reporting system to monitor adherence to established guidelines. This system should adequately inform the directorate and senior management of how policies are being carried out and should provide them with sufficient information to evaluate the performance of lending officers and the condition of the loan portfolio.

The loan policy should establish (1) what information will be required from the borrower during the application process, (2) what information the borrower will be required to submit while the credit remains outstanding, and (3) which bank personnel are responsible for obtaining the information. In addition, the policy should specify who is responsible for reviewing the adequacy of loan documentation and for citing and correcting documentation exceptions. A high level of documentation exceptions indicates a deficiency in the bank’s policy, procedures, monitoring, or enforcement.

A loan policy will differ from loan procedures. A policy represents a plan, guiding principle, or course of action designed to establish a framework for handling decisions, actions, and other matters, thereby influencing them. A procedure is a set of established methods or steps for performing a task. The lending policy should include issues relevant to all departments of the bank. Written procedures approved and enforced in various departments should be referenced in the bank’s general lending policy. The policy must be flexible enough to allow for fast adaptation to changing conditions in the bank’s earning assets mix and trade area.

Components of a Sound Lending Policy

As mentioned previously, a bank’s loan policy should be appropriate to its size and complexity. Sound loan policy generally is based on the components described below.

Allowance for loan and lease losses. A sound lending policy establishes a systematic loan-review program to detect and identify problem loans and other portfolio weaknesses. (See the “Credit Risk Review” subsection for more information.) Guidelines and methodologies need to be established to determine the adequacy of the bank’s allowance for loan and lease losses (ALLL), and they should be based on a conservative analysis of the risk in the loan portfolio. This analysis should ensure that an appropriate ALLL is maintained. The 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses stipulates that federally insured depository institutions (IDIs) must maintain an ALLL at an appropriate level to absorb estimated credit losses associated with the loan and lease portfolio.

Examiners must evaluate management’s estimate of losses existing in the bank’s loan portfolio as well as the methodologies and procedures used in making and documenting the estimate. That evaluation provides the basis for determining the appropriateness and reasonableness of a bank’s ALLL.

Collections and charge-offs. The lending policy should define the criteria and procedures for reporting relevant information concerning delinquent obligations to the board of directors. The policy should establish the mechanism for presenting problem loans to the directorate. Reports submitted to the board of directors should include sufficient detail for it to determine the risk factor, loss potential, and alternative courses of action. The policy should outline a follow-up collection notice procedure that is systematic and progressively stronger. Guidelines should be established to ensure that all accounts are presented to and reviewed by the board of directors or a board committee for charge-off.

Concentrations of credit. The lending policy should encourage both diversification within the portfolio and a balance between maximum yield and minimum risk. Concentrations of credit depend heavily on a key factor, and when weaknesses develop in that key factor, every individual loan within the concentration is affected. The directorate should evaluate the additional risk involved in various concentrations and determine which concentrations should be avoided or limited. The lending policy also should establish thresholds for acceptable concentrations of credit and require that all concentrations be reviewed and reported to the board on a periodic basis.

Institutions that have effective controls to manage and reduce undue concentrations over time need not refuse credit to sound borrowers simply because of the borrower’s industry or geographic location. This principle applies to prudent loan renewals and rollovers, as well as

---

1. See SR-06-17 and SR-01-17. See also, SR-20-12, for more information on the allowance for credit losses.
to new extensions of credit that are underwritten in a sound manner. (See the “Concentrations of Credit” section for further details.)

Consumer and equal credit opportunity laws. Compliance with the many consumer-related statutes and regulations requires complex and detailed policies and procedures that should be addressed in a separate policy. However, the loan policy should require adherence to the Federal Reserve’s Regulation B, 12 CFR 202, which implements the Equal Credit Opportunity Act. This regulation prohibits creditors from discriminating against loan applicants on the basis of age, race, color, religion, national origin, sex, marital status, or receipt of income from public assistance programs. As additional prohibitions are added under the regulation, they should be incorporated into the policy. Also, the loan policy should include a requirement that the bank give applicants a written notification of rejection of a loan application, a statement of the applicant’s rights under the Equal Credit Opportunity Act, and a statement either of the reasons for rejection or of the applicant’s right to such information.

Credit files. Obtaining and maintaining complete and accurate information on every relevant detail of a borrower’s financial condition is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowing relationships, regardless of size, with the exception of the latitude provided by the Interagency Policy Statement on Documentation of Loans. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to analyze the credit before it is granted and to monitor and evaluate the credit during its life. Such information should (1) identify the borrower’s business or occupation; (2) document the borrower’s past and current financial condition; (3) state the purposes of all loans granted to the borrower, the sources of repayment, and the repayment programs; and (4) identify the collateral and state its value and the source of the valuation.

Credit files should include all financial statements, credit reports, collateral-inspection documentation, reference letters, past loan applications, memoranda, correspondence, and appraisals. In many cases, particularly those involving real estate loans, appraisals and other collateral documentation may be maintained in a separate collateral file.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, a bank may not require financial statements from borrowers whose loans are fully secured by certificates of deposit it issues. In a more general sense, information requirements between amortizing consumer loans and commercial or real estate loans vary greatly. More specific examples of the types and frequency of financial information often obtained for various types of credit are detailed in the following paragraphs.

For many consumer installment and residential mortgage loan borrowers, the borrowers’ financial information generally is collected only at the time of loan application. The underwriting process for these types of loans emphasizes factors such as the borrower’s income and job stability, credit history, and debt load, as well as the loan-to-value requirements for obtained collateral.

In factoring and other asset-backed lending activities, while financial information is a significant part of the underwriting process, collateral is the key component of the lending decision. Close monitoring of the collateral’s existence, value, and marketability are essential to sound underwriting of these types of loans.

For typical commercial, commercial real estate, and agricultural loans, significant emphasis is placed on the financial strength, profitability, and cash flow of the core business for loan repayment. Close monitoring of the business’s financial condition and profitability throughout the life of the loan is key to the sound administration of these types of credits. Other pertinent information requirements, such as collateral-inspection documentation for agricultural credits or lease/rental information for income-producing commercial real estate credits, may also be necessary to properly administer these loans. As part of the sound underwriting process for these loans, a bank may include loan covenants requiring the business to maintain financial soundness, submit periodic financial statements, and provide other needed information.

As a practice, a bank should not ask for information it does not need to adequately

November 2020
Page 3
underwrite and monitor the quality of its loans. With proper use of loan covenants, a bank can protect its right to receive additional or more frequent information if a borrower’s financial condition deteriorates or collateral values decline. When determining the financial and other information to request from the borrower, bankers should consider the requirements of the underwriting process for particular types of loans and the repayment risks. A bank’s loan policy should clearly delineate the type and frequency of such information requirements.

The lending policy also should define the financial-statement requirements for businesses and individuals at various borrowing levels. Specifically, requirements for audited, unaudited, annual, or interim balance sheets; income and cash-flow statements; statements of changes in capital accounts; and supporting notes and schedules should be included, as appropriate. In addition, the lending policy should require external credit checks as appropriate, at the inception of the loan and during periodic updates. The loan policy should be written so that credit-data exceptions would be a violation of the policy.

**Distribution by category.** Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, or other categories are common. Aggregate percentages for loans to deposits, assets, and capital (with regard to concentrations of credit) would provide guidance for effective portfolio management. Such policies are beneficial but should allow for deviations, with the approval by the board or a board committee. This allows credit to be distributed in response to the community’s changing needs. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another.

**Exceptions to the loan policy.** A lending policy should require loan officers to present credits they believe are fundamentally sound and worthy of consideration, even though they may not conform with the bank’s written lending policy or procedures. The reason for the exception should be detailed in writing and submitted for approval to a designated authority. The directors’ loan committee or a similar body should review and approve all exceptions at reasonable intervals. The frequency of exceptions granted may indicate a lessening of underwriting standards on the one hand, or a need to adjust the policy to allow flexibility within safe and sound parameters on the other. The underlying reasons behind frequently granted exceptions should be assessed, and appropriate recommendations should be made accordingly.

**Financing other real estate.** If the bank wants to finance a parcel of other real estate that it owns, special accounting rules may apply. Consequently, the lending policy should include an outline of certain provisions of Financial Accounting Standards Board (FASB) Statement No. 66, “Accounting for Sales of Other Real Estate.”

**Geographic limits.** A bank’s trade area should be clearly delineated and consistent with defined Community Reinvestment Act (CRA) criteria. Loan officers and directors should be fully aware of specific geographic limitations for lending purposes. The bank’s defined trade area should not be so large that, given its resources, the bank cannot properly and adequately monitor and administer its credits. A sound loan policy restricts or discourages loan approval for customers outside the trade area. The bank’s primary trade area should be distinguished from any secondary trade area, which is especially important for new banks. Specific restrictions or exceptions should be listed separately.

**Lender liability.** Banking organizations must be careful that their actions to make, administer, and collect loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of the borrower’s business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). (See the “Environmental Liability” subsection.)

**Limitation on aggregate outstanding loans.** Banks should establish guidelines limiting the total amount of loans outstanding in relation to other balance-sheet accounts. This type of control over the loan portfolio usually is expressed relative to deposits and total assets. In setting such limitations, various factors, such as the credit demands of the community, the volatility of deposits, and the credit risks involved, must be considered.
**Loan authority.** The lending policy should establish limits for all lending officers and ensure controls are in place to monitor compliance with the bank’s legal lending limit. An individual officer’s lending limit is usually based on his or her experience, tenure, and past adherence to the bank’s loan policy. Lending limits also should be set for group authority, thereby allowing a combination of officers or a committee to approve larger loans than the members would be permitted to approve individually. The loan policy should describe the manner in which loans will be approved and ultimately reported to the board of directors, as well as the frequency of any loan committee meetings, as applicable.

**Loan pricing.** Interest rates on loans should be sufficient to cover (1) the cost of the funds loaned, (2) the bank’s loan services (including general overhead), and (3) probable losses—while providing for a reasonable profit margin. In setting interest rates a bank considers the costs for its various loan products. Periodic review allows rates to be adjusted in response to changes in costs, competitive factors, or risks of a particular type of extension of credit. Specific guidelines for other relevant factors, such as compensating-balance requirements and fees on commitments, are also germane to pricing credit.

**Loan purchases and sales.** If sufficient loan demand exists, lending within the bank’s trade area is safer and less expensive than purchasing paper from a dealer or a correspondent bank. Direct lending promotes customer relationships, serves the credit needs of customers, and develops additional business. Occasionally, a bank may not be able to advance a loan to a customer for the full amount requested because of individual state lending limitations or other reasons. In such situations, the bank may extend credit to a customer up to its internal or legal lending limit and sell a participation to a correspondent bank for the amount exceeding the bank’s lending limit or the amount it wishes to extend on its own. Generally, such sales arrangements are established before the credit is ultimately approved. These sales should be on a nonrecourse basis by the bank, and the originating and purchasing banks should share in the risks and contractual payments on a pro rata basis. Selling or participating out portions of loans to accommodate the credit needs of customers promotes goodwill and enables a bank to retain customers who might otherwise seek credit elsewhere.

Conversely, many banks purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with affiliates or members of a chain-banking organization, with the goal of benefiting the whole organization. A purchasing bank may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a bank may purchase or participate in a loan to accommodate an unrelated originating bank with which it has an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a bank’s overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a bank diversify its risks and improve its liquidity.

Banks should avoid purchases of loans that generate unacceptable concentrations of credit. Such concentrations may arise solely from the bank’s purchases, or they may arise when loans or participations purchased are aggregated with loans originated and retained by the purchasing bank. The policy should state the limits (1) for the aggregate amount of loans purchased from and sold to any one outside source and (2) of all loans purchased and sold. It should also establish limits for the aggregate amount of loans to particular types of industries. The extent of contingent liability, holdback and reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, the policy should require that loans purchased from another source be evaluated in the same manner as loans originated by the bank itself. Guidelines should be established for the type and frequency of credit and other information the bank needs to obtain from the originating institution to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the bank.

**Prohibition on asset purchases or sales.** The Dodd-Frank Act amended the Federal Deposit Insurance Act (FDIA) to impose a prohibition on asset purchases and between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market
terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI’s capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 18(z) of the FDIA, as amended by the Dodd-Frank Act, section 615(a).

Loans to employees, officers, directors, principal shareholders, and their related interests. Loans to insiders are strictly defined in federal statutes and require close supervision to ensure compliance. Federal and state statutes provide the basis for defining insider loans, and they specify requirements and limitations that should be incorporated in the policy. (See the Federal Reserve’s Regulation O, 12 CFR 215.)

The policy should ensure, through a system of controls over authority and funding, that transactions and extensions of credit to insiders are legally permissible and that they are made on substantially the same terms and conditions as those prevailing at the time for comparable transactions with other borrowers. Furthermore, the policy should contain guidelines for loans to employees who are not subject to the provisions of Regulation O.

Maximum maturities. Loans should be granted with realistic repayment plans, with the maturity related to the anticipated source of repayment, the purpose of the loan, and the useful life of the collateral. For term loans, a lending policy should state the maximum number of months over which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and modification of original loan terms. If the bank requires a cleanup (out-of-debt) period for lines of credit, it should be stated explicitly.

Maximum ratio of loan amount to collateral value. The loan policy should set forth procedures for ordering, preparing, and reviewing appraisals for real or personal property pledged as collateral. The bank’s lending policy should outline guidelines for appraisals or internal evaluations, including regulatory requirements, and, in the case of renewals or extensions, procedures for possible reappraisals or re-evaluations. Acceptable types of appraisals or evaluations should be outlined. Circumstances requiring the use of in-house staff appraisers instead of fee appraisers should be identified. Maximum loan-to-value ratios and the methods of valuation to be used for various types of collateral should be detailed. (See the “Real Estate Loans” and “Real Estate Construction Loans” sections for further details.)

The maximum ratio of loan amount to the market value of pledged securities is restricted by the Federal Reserve’s Regulation U, 12 CFR 221. The lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security, that is, whether it is actively traded, over the counter, or closely held. The policy also should assign responsibility and set a frequency for periodic pricing of the collateral.

Prohibitions against tying arrangements. The most common types of tying arrangements are those where a bank product or consideration for a bank product is conditioned upon obtaining another product from the bank or an affiliate. Section 106 of the Bank Holding Company Act Amendments of 1970 generally prohibits a bank from tying a product or service to any of its other products or services, including those offered by its affiliates.2 Examiners should ascertain that member banks have not extended credit voluntarily or involuntarily based on impermissible tying arrangements.

Types of loans. The lending policy should state the types of loans management considers desirable or prohibited. It also should set forth guidelines for extensions-of-credit types such as commercial loans; real estate loans; secured and unsecured loans; and off-balance-sheet activities, such as letters of credit and loan commitments. The decision about the types of loans granted should be based on the expertise of the lending officers, the deposit structure of the bank, and the community’s anticipated credit demands. Credits involving complex structures or repayment arrangements, or loans secured by collateral that requires more-than-normal monitoring, should be avoided unless the bank has the personnel, policies, controls, and systems necessary to administer such advances properly. Types of credits that have caused an abnormal loss to the bank should be identified, scrutinized, and controlled within the framework of stated policy. A bank also should consider its overall

exposure to term lending relative to its stable funds.

*Continued rigorous credit-risk assessment during favorable economic conditions.* Internal processes and requirements for loan-underwriting decisions should be consistent with the nature, size, and complexity of the banking organization’s activities and with the institution’s lending policies. Any departures therefrom can have serious consequences for institutions of all sizes. Departures can be evident in three pivotal and related areas:

1. **An undue reliance on optimistic outlooks for prospective borrowers and for continued favorable economic and financial market conditions.** A long and continuing economic expansion can lead banks to more frequently base their decision to lend on a very optimistic assessment of the borrower’s operating prospects. Timely principal repayment may often be based on the assumption that the borrower will have ready access to financial markets in the future. Such reliance, especially if across a significant volume of loans, is not consistent with sound credit-risk management. Undue reliance on continued favorable economic conditions can be demonstrated by—
   - dependence on very rapid growth in a borrower’s revenue as the “most likely” case;
   - heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term;
   - greater willingness to make loans without scheduled amortization before the loan’s final maturity; or
   - ready willingness to waive violations of key covenants, release collateral, or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower on the assumption that a favorable environment will allow the borrower to recover quickly.

Among the adverse effects of undue reliance on a favorable economy is the possibility of delay in properly identifying problem loans. Timely identification of problem loans is critical for providing a full awareness of the institution’s risk position, informing management and directors of that position, taking steps to mitigate risk, and properly assessing the adequacy of the allowance for credit losses and capital.3

Underlying a banking organization’s (BO) overly optimistic assessment of a borrower’s prospects may be an overreliance on its continued ready access to financial markets on favorable terms. Examples of overreliance include the following:

- explicit reliance on future, public market debt or equity offerings or on other sources of refinancing as the ultimate source of principal repayment, which presumes that market liquidity and the appetite for such instruments will be favorable at the time that the facility is to be repaid
- ambiguous or poorly supported BO analysis of the repayment sources of the loan’s principal (This results in an implicit reliance, for repayment, on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion) and presumes, as above, that markets will be receptive to such transactions at the time that the facility is to be repaid.)
- measuring a borrower’s leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to “book” equity, and thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed
- more generally, extending bank loans with a risk profile that more closely resembles that of an equity investment and under circumstances in which additional bank credit or default are the borrower’s only resort if favorable expectations are not met

As a result of this overreliance, some banking organizations may find themselves with a potentially significant concentration of credit exposure that is at risk to a possible reversal in financial markets. Turmoil in financial markets, however, may contribute to signifi-

---

3. With respect to these issues, see SR-98-25, “Sound Credit Risk Management and the Use of Internal Credit Risk Rating Systems at Large Banking Organizations.” As discussed therein, the Federal Reserve’s guidance on credit-risk management and mitigation covers both loans and other forms of on- and off-balance-sheet credit exposure.
cantly liquidity pressures in some sectors of the economy and prevent ready access to financial markets by certain borrowers. Moreover, there is no assurance that any such market turmoil will quickly resolve itself. Under these circumstances, a borrower’s ability to raise new funds in public debt or equity markets to repay maturing bank loans is far from guaranteed.

2. Insufficient consideration of stress testing. An institution’s lending policies should prescribe meaningful stress testing of the prospective borrower’s ability to meet its obligations. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

Mechanical reliance on threshold financial ratios (and the “cushion” they imply) is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such analysis should have a significant influence on both the decision to extend credit at all and, if credit is extended, on decisions on appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan’s structure.

When properly conducted, meaningful stress testing includes assessing the effect on the borrower when the following situations or events occur:

- unexpected reductions or reversals in revenue growth, including shocks to revenue of the type (or types) and magnitude that would normally be experienced during a recession
- unfavorable movements in market interest rates, especially for firms with high debt burdens
- unplanned increases in capital expenditures due to technological obsolescence or competitive factors
- deterioration in the value of collateral, guarantees, or other potential sources of principal repayment
- adverse developments in key product or input markets
- reversals in or reduced access by the borrower to public debt and equity markets

Proper stress testing typically incorporates an evaluation of the borrower’s alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability to raise new equity. In particular, the evaluation should focus not only on the borrower’s ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation.

3. Weakening of key internal controls in the lending process. An institution’s lending policy should require the use of adequate internal controls within the lending process. Internal controls such as loan review or credit audit are critical for maintaining proper incentives for bank staff to be rigorous and disciplined in their credit analysis and lending decisions. A bank’s credit analyses, loan terms and structures, credit decisions, and internal rating assignments should be reviewed in detail by experienced and independent loan-review staff. These reviews provide both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and the institution continues to adhere to sound lending practice.

Economic prosperity and relatively low levels of problem loans and credit losses should not encourage institutions to dramatically or suddenly reduce staff resources or portfolio coverage for the loan-review function. Likewise, thorough reviews of individual loans should continue. When economic prosperity and relatively low levels of problem loans and credit losses exist, there may be increasing internal pressure within the institution to reduce loan-review staff, to conduct more limited loan portfolio reviews, and to perform less thorough reviews of individual loans. Although some useful efficiencies may be desired, the danger is that the scope and depth of loan-review activities may be reduced beyond prudent levels over a
longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate, particularly as a result of a downturn in a credit cycle.

Other. Management should establish appropriate policies, procedures, and information systems to ensure that the impact of the bank’s lending activities on its interest-rate exposure is carefully analyzed, monitored, and managed. In this regard, consideration should also be given to off-balance-sheet instruments that may be associated with lending arrangements, including commitments, letters of credit, or swaps. (See this manual’s section on “Contingent Claims from Off-Balance-Sheet Credit Activities” for further details.)

Under the provisions of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), a financial institution is required to develop, adopt, and maintain policies, procedures, and guidelines consistent with safe and sound banking practices. The federal banking agencies have issued interagency guidelines based on the provisions. Taken together, these guidelines should strengthen supervision of financial institutions and provide guidance in developing and maintaining policies:

- Regulation H—subpart E, 12 CFR 208.50–51
- Regulation Y—subpart G, 12 CFR 225.61–67
- Uniform Standards of Professional Appraisal Practice promulgated by the Appraisal Standards Board of the Appraisal Foundation
- Interagency Appraisal and Evaluation Guidelines (See SR-10-16.)
- Interagency Policy Statement for Loan and Lease Losses (See SR-06-17.)
- Interagency Policy Statement on Supervisory Initiatives/Credit Availability (See SR-93-30.)
- Interagency Policy Statement on Documentation of Loans (See SR-93-26.)
- Regulation Y, section 225.7 “Tying Restrictions” (12 CFR 225.7.)

An institution’s policies and procedures as they relate to interagency statements should be reviewed as part of the examination of the institution’s overall lending activities.

GUIDANCE ON PRIVATE STUDENT LOANS WITH GRADUATED REPAYMENT TERMS AT ORIGINATION

Interagency4 guidance5 was issued on January 29, 2015, to provide financial institutions with principles applicable to private student loans that have graduated repayment terms. Financial institutions that originate private student loans may offer borrowers graduated repayment terms in addition to fixed amortizing terms at the time of loan origination. Graduated repayment terms are structured to provide for lower initial monthly payments that gradually increase. Refer to SR-15-2/CA-15-1 and its attachment.

Loan agreements include a grace period6 to help with the post-education transition, the agencies and the State Liaison Committee recognize that students leaving higher education programs may prefer more flexibility to transition into the labor market because of a number of factors, such as competitive job markets, traditionally low entry-level salaries, and higher student debt loads. Graduated repayment terms may align borrowers’ income levels with loan repayment requirements, provide flexibility to repay the debt sooner if borrowers’ incomes increase more quickly than projected, and help long-term probability of full repayment.

Financial institutions that originate private student loans with graduated repayment terms should prudently underwrite the loans in a manner consistent with safe and sound lending practices. Financial institutions should provide disclosures that clearly communicate the timing and the amount of payments to facilitate a borrower’s understanding of the loan’s terms and features.

4. The agencies consist of the Board of Governors of the Federal Reserve System, Consumer Financial Protection Bureau, Federal Deposit Insurance Corporation, National Credit Union Administration, and Office of the Comptroller of the Currency.
5. In implementing this guidance, the agencies will examine financial institutions consistent with their respective authorities.
6. A grace period is the allotted amount of time during which borrowers are not expected to make payments on student loans after initially leaving higher education programs or dropping below half-time enrollment status.
PROHIBITIONS AGAINST TYING ARRANGEMENTS

Among other things, section 106 of the Bank Holding Company Act Amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute’s prohibitions by regulation or order. For more information on section 106, see this manual’s section, “Regulation Y: Prohibitions Against Tying Arrangements.”

LOAN ADMINISTRATION

Loan administration is a term that refers to several aspects of lending. It can be used to describe the entire credit-granting process, as well as the monitoring of various lending activities, such as ensuring that loans remain adequately collateralized, properly graded, and appropriately serviced (administered). The servicing of an extension of credit involves tasks ranging from obtaining current financial information to sending out renewal notices and preparing loan agreements. In addition to facilitating the entire lending process, the individual tasks also serve as controls (checks and balances) over the lending activities. Given the wide breadth of responsibilities that the loan-administration function encompasses, its organizational structure varies with the size and sophistication of the bank. In larger banks, responsibilities for the various components of loan administration are usually assigned to different departments, while in smaller institutions, a few individuals might handle several of the functional areas. For example, a large bank’s independent credit department may be responsible for analyzing borrowers’ financial information, making a determination or recommendation as to the quality of the loan (its risk rating or grade), or obtaining/following up on credit-related information and documentation. On the other hand, smaller banks may assign each of these tasks to individual loan officers.

Examiners will encounter many different organizational structures for loan administration. Therefore, when considering the safety and soundness of a bank, they should determine whether it has effective and appropriate internal controls in place. The assessment of loan administration and related internal controls involves evaluating the bank’s operations by reviewing the—

- efficiency and effectiveness of loan-administration operations;
- ability of the different components to safeguard assets, primarily loans and leases;
- adequacy of the management information systems and the accuracy of their reporting;
- adequacy and accuracy of its loan-review function (discussed in the next subsection); and
- compliance with prescribed management policies and procedures as well as applicable statutes and regulations.

For the components of loan administration to function appropriately, management must understand and demonstrate that it recognizes the importance of controls. This includes not only establishing appropriate policies and procedures but also enforcing them and ensuring that the bank’s organizational structure is suitable for its size and complexity. Managers should emphasize integrity and ethical values, as well as hire competent staff. In addition, the following factors positively influence loan-administration control:

- a board of directors and/or senior management that takes an active role in monitoring lending policies and practices
- a reporting system that provides the bank with the information needed to manage the lending function and make sound credit decisions
- a well-defined lending-approval and -review system that includes established credit limits; limits and controls over the types of loans made and their minimum collateral requirements (for example, loan-to-collateral-value ratios); limits on maturities of loans; and policies on interest rates, pricing, and fee charges

---

• an independent loan-review function that identifies and evaluates existing and potential problem loans in a timely manner
• an independent reporting system that notifies appropriate personnel when financial information, insurance policies, or other loan documentation needs to be obtained
• a system of procedures that correct documentation exceptions

Loan administration is responsible for mitigating the operational risks associated with loan-related transactions, such as approving credit, disbursing loan proceeds, receiving loan payments, recording accrued interest and fee income, posting to subsidiary ledgers, and reconciling subsidiary and general ledgers. Typically, employees working with these types of activities have the capability to transfer funds between accounts on the bank’s and the customer’s behalf, which opens up an area of potential abuse. Additional potential areas for unethical employee behavior include the maintenance of loan notes and related documentation, as well as the credit and collateral files on borrowers. The bank must ensure it has adequate controls in place to avoid any improprieties; controls might include having separate departments for loan activities within a large organizational structure or rotating and/or segregating loan duties in smaller community banks. Some specific issues related to these responsibilities are described below.

Applications and Loan-Approval Process

The bank should have written policies and procedures for obtaining and reviewing loan applications and for ensuring sufficient borrower information (both financial and collateral-related) is required and analyzed in support of the loan approval. Approvals should be made in accordance with the bank’s written guidelines and should also address the disbursement of loan proceeds. Additional issues that bank policies and procedures should address include—

• the requirement that loan commitments be in writing;
• requirements for letters of credit;
• the requirement for an annual review of borrowers, including a reassessment of the appropriateness of credit lines; and
• the requirement for a process for extending or renewing loans and credit lines.

Exceptions to the bank’s written policies and procedures should reflect the appropriate level of approval and should be documented in writing.

Account Records

Bank staff should compare the approved terms for new and renewed extensions of credit (amount, maturity, interest rate, payment schedule) to the note or loan agreement for accuracy. The former should then be compared with the trial balance, if it is automated. If a manual system is used, the approved amount of the extension of credit should be checked against deposit tickets to ensure the correct amount was transferred to the borrower’s account. Adjustments to loan accounts or accrued interest receivable accounts should be checked and tested by an individual independent of the loan-processing area. Subsidiary records should be routinely reconciled with the appropriate general ledger accounts.

Payments

Regardless of the type of payment, principal, interest, or fee, certain controls are necessary to ensure the effectiveness of operations, as well as the safeguarding of bank assets. An individual who cannot originate loan entries should perform an independent test of interest, commissions, and fee computations to confirm their accuracy. Payment notices should be prepared by someone other than a loan teller. In addition, loan officers should be prohibited from processing loan payments. Payments received by mail, tellers, or other departments should be separate from the loan-recording function. Supervisory approvals should be required for processing payments that are less than the amount contractually due, pertain to delinquent loans, are received irregularly, or involve waiving late fees. Collection notices should also be handled by someone not associated with loan processing.
Credit File Documentation

The bank should establish and maintain credit files for all borrowers. The bank’s written loan policy should detail the minimum acceptable amount of information to be included in a borrower’s credit file. The credit file should contain information on the extension of credit that identifies its purpose, source of repayment, repayment terms, and disposition of loan proceeds. Additionally, information should be on file relating to and/or analyzing the borrower’s financial condition, including tax returns as appropriate; collateral, its valuation and related hazard insurance; the loan officer’s contact with the borrower; and other pertinent documents, such as guarantor information, loan agreements, and loan covenant check sheets. Banks should maintain this information to support their evaluation of the borrower’s creditworthiness and to leave a paper trail for auditors. The bank should also implement a file documentation tickler system to help bank personnel obtain updated information on borrowers, thereby facilitating continuous assessment and monitoring of credit risk.

Collateral Records

Banks should maintain appropriate documentation on collateral received from and released to borrowers, which should be consistent with the underlying loan agreements. Negotiable collateral, such as stock certificates, should be maintained under dual control in a fireproof vault. The receiving and releasing of collateral to customers should be handled by individuals other than those who make entries in the collateral register. The bank should issue a receipt to customers for each item of collateral it is holding in safekeeping. Signed customer receipts should be obtained and filed after the collateral is released.

Management Information Systems

Management information systems, an increasingly important component of the loan administration function, allow a bank to manage its lending decisions more efficiently and effectively. Whether the bank uses a computerized or manual system to manage its loan portfolio, the following types of information should be readily available and routinely reviewed by management:

- total loans and commitments
- loans in excess of existing credit limits
- new extensions of credit, credit renewals, and restructured credits
- a listing of all delinquent and/or nonaccrual loans
- credits adversely graded or requiring special attention
- credits to insiders and their related interests
- credits not in compliance with bank policies as well as applicable statutes and regulations
- specific lending activity aspects, including automated financial statement spreads of borrowers and analyses of the bank’s credit exposure by type, geographic areas, collateral, and large employers

CREDIT RISK REVIEW SYSTEMS

An effective credit risk review function is integral to the safe and sound operation of every insured depository institution. The internal credit risk review function should not be merely an after-the-fact, loan-by-loan review, but a process to detect weaknesses in the various levels of an institution’s credit approval and monitoring system. This manual’s section, “Credit Risk Review Systems,” provides more information on practices and principles for developing and maintaining a credit risk review function consistent with safe and sound credit risk management practice. See also SR-20-13.

Examination Scope Guidance

An effective loan review function can greatly assist examiners in their review of the bank’s loan portfolio. The examination process should evaluate the internal loan-review function by assessing the scope and depth of the review and the quality of the output. While examiners should not rely entirely on the bank’s findings, they can limit the scope of their loan examination by developing a comfort level with the bank’s internal loan-review function. To determine the reliability, if any, of the internal loan-review function, examiners should assess the adequacy of management’s ability to identify problem loans. Two issues should be evaluated in this regard: timeliness and accuracy.
first issue deals with the ability of loan review to distinguish a problem loan and/or borrower from a nonproblem one when it initially becomes a problem. The second issue deals with the accuracy of loan review in identifying the severity of the problem. The Extent that examiners rely on an internal loan-review function depends upon their comfort level with the bank in the aforementioned regard.

The examiner will be able to determine the degree to which the bank’s loan review function can be relied upon by reviewing prior examination criticisms, as well as management’s response to them, and a sufficient sample of the bank’s portfolio. Whether the borrower being reviewed as a part of the sampling process is a pass or nonpass credit, examiners should consider narrowing the scope of the pass credits included in the loan examination if they concur with the bank’s risk ratings. However, examiners still should continue their analysis of all “nonpass” credits due to their importance to the adequacy of the ALLL.

NONACCRUAL LOANS

Loans and lease-financing receivables are to be placed on nonaccrual status if (1) principal or interest has been in default for 90 days or more, unless the loan is both well secured and in the process of collection; (2) payment in full of principal or interest is not expected; or (3) they are maintained on a cash basis because the financial condition of the borrower has deteriorated.

Definition of “well secured” and “in the process of collection”—An asset is “well secured” if it is secured (1) by collateral in the form of liens on or pledges of real or personal property, including securities, that have a realizable value sufficient to discharge the debt (including accrued interest) in full or (2) by the guarantee of a financially responsible party. An asset is “in the process of collection” if collection of the asset is proceeding in due course either (1) through legal action, including judgment enforcement procedures, or (2) in appropriate circumstances, through collection efforts not involving legal action, which are reasonably expected to result in repayment of the debt or in its restoration to a current status in the near future. For the purposes of applying the above third test for nonaccrual status, the date on which an asset reaches nonaccrual status is determined by its contractual terms that principal or interest has been in default for a period of 90 days or more, unless the asset is both well secured and in the process of collection. If the principal or interest on an asset becomes due and remains unpaid for 90 days or more on a date that falls between report dates, the asset should be placed in nonaccrual status as of the date it becomes 90 days past due. It should remain in nonaccrual status until it meets the following exception criteria for restoration to accrual status described below. (Any state statute, regulation, or rule that imposes more stringent standards for nonaccrual of interest should take precedence over this instruction.)

Exceptions—A loan does not need to be placed on nonaccrual status if (1) the criteria for accrual of income under the interest method specified in Accounting Standards Council (ASC) Subtopic 310-30, Receivables—Loans and Debt Securities Acquired with Deteriorated Credit Quality (formerly AICPA Statement of Position 03-3, “Accounting for Certain Loans or Debt Securities Acquired in a Transfer”), are met with respect to a loan or other debt security accounted for in accordance with that subtopic, regardless of whether the loan or debt security had been maintained in nonaccrual status by its seller; (2) the criteria for amortization specified in AICPA Practice Bulletin No. 6 are met with respect to a loan or other debt instrument accounted for in accordance with that Practice Bulletin that was acquired at a discount from an unaffiliated third party, including those that the seller has maintained on nonaccrual status; or (3) the loan is a consumer loan or secured by a one- to four-family residential property. However, the bank may elect to carry these loans on a nonaccrual status. Also, if a bank has a significant consumer or residential mortgage loan portfolio in relation to its total loans and tier 1 capital, a thorough review of the delinquency status should be performed to ensure that the bank has not materially misstated its financial condition and earnings.

Treatment of Cash Payments and Criteria for the Cash-Basis Treatment of Income—When a bank places a loan on nonaccrual status, it must consider how to account for subsequent payments. When the collectibility of the remaining book balance of a loan on nonaccrual status is uncertain, any payments received must be
applied to reduce the recorded investment in the asset or principal to the extent necessary to eliminate such doubt. Placing an asset on nonaccrual status does not require a charge-off, in whole or in part, of the asset’s principal. However, any identified losses must be charged off.

When a loan is on nonaccrual status, some or all of the cash interest payments received may be treated as interest income on a cash basis, as long as the remaining recorded balance of the asset after the charge-off, if any, is deemed fully collectible. A bank’s determination of the collectibility of an asset’s remaining book balance must be supported by a current, well-documented credit evaluation of the borrower’s financial condition and repayment prospects.

When recognition of interest income on a cash basis is appropriate, the amount of income recognized should be limited to what would have been accrued on the loan’s remaining book balance at the contractual rate. Any cash interest payments received over this limit (and not applied to reduce the loan’s remaining book balance) should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered. (A bank should have a well-defined policy governing the treatment of interest income and the charge-off of accrued interest receivables.)

Treatment of Previously Accrued But Uncollected Interest—When a bank places a loan on nonaccrual status, its policy should address an appropriate treatment of previously accrued but uncollected interest. One method is to reverse all previously accrued but uncollected interest against appropriate income and balance-sheet accounts. For interest accrued in the current accounting period, the entry is made directly against the interest income account. For prior accounting periods, if accrued-interest provisions to the ALLL were not made, the amount of accrued but uncollected interest should be charged against current earnings. Also for prior accounting periods when provisions to the ALLL for possible loss of interest had been made, the bank generally reverses the accrued but uncollected interest by charging the ALLL to the extent of those specific provisions. Generally accepted accounting principles do not require the write-off of previously accrued interest if principal and interest are ultimately protected by sound collateral values. A bank is expected to have a well-defined policy, subject to examiner review, governing the write-off of accrued interest.

8. An asset in nonaccrual status that is subject to the cost recovery method required by former AICPA Practice Bulletin No. 6 or ASC Subtopic 325-40, Investments—Other—Beneficial Interests in Securitized Financial Assets (formerly Emerging Issues Task Force Issue No. 99-20, “Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests That Continue to Be Held by a Transferor in Securitized Financial Assets”), should follow that method for reporting purposes. In addition, when a purchased impaired loan or debt security is accounted for in accordance with ASC Subtopic 310-30 and it meets the criteria for accrual of income under the interest method specified therein; or (3) the asset has been acquired at a discount (due to uncertainty about the amounts or timing of future cash flows) from an unaffiliated third party and meets the amortization criteria (that is, accretion of discount) specified in AICPA Practice Bulletin No. 6 or the borrower has resumed

Treatment of Multiple Extensions of Credit to One Borrower—As a general rule, nonaccrual status for an asset should be determined by assessing its collectibility, repayment ability, and performance. Thus, when one loan to a borrower is placed in nonaccrual status, a bank does not automatically have to place all of that borrower’s other extensions of credit in non-accrual status. The bank should evaluate its other extensions of credit to that borrower to determine if one or more of them also should be placed in nonaccrual status.

Restoration to Accrual Status—As a general rule, a nonaccrual loan may be restored to accrual status when (1) its principal and interest are no longer past due and unpaid, and the bank expects repayment of the remaining principal and interest, or (2) when it otherwise becomes well secured and in the process of collection. Before restoring a loan to accrual status, the bank should consider the borrower’s prospects for continuing future contractual payments. If reasonable doubt exists, reinstatement may not be appropriate.

To meet the first test, the bank must have received payment of the past-due principal and interest, unless (1) the loan has been formally restructured and qualifies for accrual status under the restructured terms; (2) the asset is a purchased impaired loan or debt security accounted for in accordance with ASC Subtopic 310-30 and it meets the criteria for accrual of income under the interest method specified therein; or
paying contractual interest and principal payments on the loan, even if the past-due amount has not been brought fully current. These loans may be returned to accrual status provided two criteria are met: (1) all principal and interest amounts contractually due (including arrearages) are reasonably assured of repayment within a reasonable period, and (2) the borrower has a sustained period of repayment performance (generally a minimum of six months) in accordance with the contractual terms.

Until the loan is restored to accrual status, cash payments received must be treated according to the criteria stated above. In addition, after a formal restructuring, if the loan that has been returned to accrual status later meets the criteria for placement in nonaccrual status (as a result of past-due status based on its modified terms or for any other reason), the asset must be placed on nonaccrual status.

Treatment of Nonaccrual Loans with Partial Charge-Offs—GAAP and regulatory reporting requirements do not explicitly address whether partial charge-offs associated with a nonaccrual loan (that has not been formally restructured) must be fully recovered before a loan can be restored to accrual status.

According to Call Report instructions, restoration to accrual status is permitted when (1) the loan has been brought fully current with respect to principal and interest and (2) the bank expects the loan’s full contractual balance (including any amounts charged off), plus interest, will be fully collectible under the terms of the loan. Thus, to return a partially charged-off loan that has been brought fully current to accrual status, the bank should determine if it expects to receive the full amount of principal and interest called for by the loan’s terms.

When the contractual principal and interest of a loan have been brought fully current, and the borrower’s financial condition and repayment prospects have improved so that the full contractual principal (including any amounts charged off) and interest is expected to be repaid, the loan may be restored to accrual status without having to first recover the charge-off. Conversely, this treatment would be inappropriate when the charge-off indicates continuing doubt about the collectibility of principal or interest.

The reasons for restoring a partially charged-off loan to accrual status must be documented. These actions should be supported by a current, well-documented credit evaluation of the borrower’s financial condition and prospects for full repayment of contractual principal (including any amounts charged off) and interest. This documentation will be subject to review by examiners.

Examiner Review—Some states have promulgated regulations or adopted policies for nonaccrual of interest on delinquent loans that may differ from the above procedures. In these cases, the bank should comply with the more restrictive policy. The examiner should ensure that the bank is complying with such guidelines. In all cases, each bank should formulate its own policies to ensure that net income is not being overstated. These policies are subject to examiner review.

RESTRUCTURED OR RENEGOTIATED “TROUBLED” DEBT

In a “troubled-debt restructuring,” a bank grants a borrower concessions for economic or legal reasons related to a borrower’s financial difficulties that it would not otherwise consider. Renegotiated “troubled” debt includes (1) the transfer from the borrower to the bank of real estate, receivables from third parties, other assets, or an equity interest in the borrower in full or partial satisfaction of the loan; (2) modification of loan terms, such as a reduction of the stated interest rate, principal, or accrued interest, or an extension of the maturity date for new debt with similar risk; or (3) a combination of the above. A loan extended or renewed at a stated rate equal to the current interest rate for new debt with similar risk is not considered renegotiated debt. For further information, see the instructions for the Reports of Condition and Income; and ASC Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, “Accounting by Debtors and Creditors for Troubled Debt Restructurings,” as amended by FASB Statement No. 114, “Accounting by Creditors for Impairment of a Loan”). All loans whose terms have been modified in a troubled debt restructuring must be evaluated for impairment under ASC topic 310, “Receivables.” Under ASC Topic 310, a measuring of impairment on a troubled loan using the present value of future cash flows should be discounted at the effective interest rate
of the original loan (that is, before the restructuring).  

A bank should develop a policy for renegotiated troubled debt to ensure that such items are identified, monitored, and properly accounted for and controlled. These restructurings should occur infrequently. If not, the bank is probably experiencing significant problems. Before troubled-debt concessions are made to a borrower, it is a good practice to have the transactions receive prior approval of the board of directors or a board committee. All these transactions should be reported to the board of directors upon enactment.

Bankers may be involved in formally restructuring loans when borrowers experience financial difficulties or in light of the borrower’s condition and repayment prospects. These actions, if consistent with prudent lending principles and supervisory practices, can improve a bank’s collection prospects. GAAP and regulatory reporting requirements provide a reporting framework that may alleviate some of the lender’s concerns about working constructively with borrowers experiencing financial difficulties.

The interagency policy statement on credit availability, issued March 1, 1991, clarifies a number of supervisory policies on restructured-loan issues. Two of these clarifications indicate that when certain criteria are met, (1) nonaccrual assets can be restored to accrual status when subject to formal restructurings in accordance with ASC Subtopic 310-40 and (2) restructurings that yield a market rate of interest would not have to be included in restructured loan amounts reported in the years following the restructuring. These clarifications, which are consistent with GAAP, have been fully incorporated into the instructions for the Reports of Condition and Income (Call Reports).

### Restructurings

A loan or other debt instrument that has been formally restructured to ensure repayment and performance need not be maintained in nonaccrual status. In deciding whether to return an asset to accruing status, payment performance that had been sustained for a reasonable time before the restructuring may be considered. For example, a loan may have been restructured, in part, to reduce the amount of the borrower’s contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

A period of sustained performance, whether before or after the date of the restructuring, is very important in determining whether there is reasonable assurance of repayment and performance. In certain circumstances, other information may be sufficient to demonstrate an improvement in the borrower’s condition or in economic conditions that may affect the borrower’s ability to repay. This information may reduce the need to rely on the borrower’s performance to date in assessing repayment prospects. For example, if the borrower has obtained substantial and reliable sales, lease, or rental contracts or if other important developments are expected to significantly increase the borrower’s cash flow and debt-service capacity and strength, then the borrower’s commitment to repay may be sufficient. A preponderance of such evidence may be sufficient to warrant returning a restructured loan to accrual status. The restructured terms must reasonably ensure performance and full repayment.

It is imperative that the reasons for restoring restructured debt to accrual status be documented. A restoration should be supported by a current, well-documented evaluation of the bor-
The formal restructuring of a loan or other debt instrument should be undertaken in ways that will improve the likelihood that the credit will be repaid in full in accordance with reasonably restructured repayment terms. A restructured loan may not be restored to accrual status unless there is reasonable assurance of repayment and performance under its modified terms in accordance with a reasonable repayment schedule. Regulatory reporting requirements and GAAP do not require a banking organization that restructures a loan to grant excessive concessions, forgive principle, or take other steps not commensurate with the borrower’s ability to repay to use the reporting treatment specified in ASC Subtopic 310-40 (formerly FASB Statement No. 15). Furthermore, the restructured terms may include prudent contingent payment provisions that permit an institution to obtain appropriate recovery of concessions granted in the restructuring, if the borrower’s condition substantially improves.

Moreover, while restructured debt that qualifies for accrual status and yields a market rate of interest must be disclosed as a troubled debt in the year of the restructuring, it need not be disclosed in subsequent years.

Reporting Guidance on Loan Fees and Interest

The accounting standards for nonrefundable fees and costs associated with lending, committing to lend, and purchasing a loan or group of loans are set forth in ASC Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs (formerly FASB Statement No. 91, “Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Cost of Leases”). In general, this statement says loan-origination fees should be deferred and recognized over the life of the related loan as an adjustment of yield. The statement applies to all types of loans, as well as to debt securities (but not to loans or securities carried at fair value if the changes in fair value are included in earnings), and to all types of lenders. For further information, see the instructions for preparing the Call Report.

PROBLEM ASSET DISPOSAL THROUGH EXCHANGES

Financial institutions explore strategies to dispose of or reduce nonperforming assets and other real estate owned (OREO). Some of these strategies include so-called “asset exchanges,” whereby third parties or marketing agents have offered to purchase problem assets from institutions and replace them with performing assets. Such transactions, if properly executed with reputable counterparties and when they are subjected to the appropriate level of due diligence, may achieve the objective of reducing nonperforming assets on financial institutions’ balance sheets. Other less structured transactions may present significant risk to institutions and could compromise their safety and soundness.

The guidance in this section highlights the potential risks associated specifically with transactions which may reduce problem assets in the short term, but where a lack of appropriate, up-front due diligence may result in heightened risks over the longer term. In addition, inappropriate assumptions used in determining the fair value of the purchased assets may result in institutions being required to recognize losses shortly after inception of the transaction.

Third parties or marketing agents may offer to purchase problem assets from institutions and replace them with performing assets to help institutions diversify their loan portfolios. Institutions may perceive that asset exchange transactions offer the potential to increase interest income, reduce the level of real estate concentrations, enhance liquidity, and reduce the stress on capital. Nevertheless, these transactions may pose significant risks. Sellers could be exchanging problem assets for purportedly performing assets (acquired assets) that were recorded at values in excess of fair value. See SR-11-15.

Risk-Management Considerations

Asset exchanges may expose institutions to significant risks, which management should assess before entering into such transactions. Management should focus not only on the immediate or short-term benefits of a transaction, but should determine its long-term effect on the institution’s balance sheet and loss exposure. Management should also determine how these
risks align with the institution’s overall risk-management strategy.

In undertaking due diligence on these types of transactions, management should assess the risks and provide evidence of its analysis, taking into account—

- the reported benefits to the institution from the transfer. This assessment should address whether the transaction would actually enable the institution to transfer significant risk associated with the problem assets.
- the economic costs and benefits of the transaction. This should include the economic benefits accruing to the marketing agent; the marketing agent’s responsibilities and liabilities; and the loss position, including recourse, of each participant if either the ceded assets or acquired assets do not perform as anticipated.
- the servicing responsibilities attached to the acquired assets. If the institution assumes servicing responsibilities for the acquired assets, the institution should evaluate and show evidence that it has the capacity and infrastructure in place, as well as appropriate risk controls, to service the acquired assets.
- the transaction’s compliance with the risk-tolerance and risk-mitigation policies established by the institution’s board of directors, including the overall strategy for managing or reducing problem assets.
- the appropriate accounting treatment in accordance with U.S. generally accepted accounting principles (GAAP). Specific issues with regard to the appropriate accounting treatment include, but are not limited to, the following:
  - When specific loans are identified for inclusion in exchange transactions and the institution decides to sell the loans, they should be transferred to a “held-for-sale” account at the lower of cost or fair value with losses recognized through earnings. Any reduction in value should be reflected as a write-down of the recorded investment resulting in a new cost basis. The sale of these loans should occur at an appropriate fair value.
  - Newly acquired assets should be recorded at an appropriate fair value.
- a review of the marketing agent. This should include, but not be limited to, an assessment of the agent’s financial strength, including its ability to provide credit enhancement if it is required in the transaction.
- the relationship between the marketing agent and any entity providing services for the transaction, with particular attention paid to possible cross-ownership or other related-party relationships.
- an independent valuation by a reputable and experienced third-party valuation expert of the assets being acquired. The party that performs the valuation should be independent of the marketing agent and the institution selling the performing assets. The use of outside resources does not relieve management of its responsibility to ensure that fair-value estimates are measured in accordance with GAAP.11 Management should sufficiently understand the bases for the measurement and valuation techniques used by outside parties to determine the appropriateness of these techniques, the underlying inputs and assumptions, and the resulting fair-value measurements.12
- the acquiring institution’s experience, skills, personnel, and risk-management capabilities to manage the newly acquired assets, especially if the assets are in business segments or geographical areas that are different from the institution’s own.

Supervisory Responsibilities

It is not necessary to scope a specific review of these transactions into routine examination activities, particularly when there is no evidence that a bank has engaged in such transactions. Reserve Banks nevertheless should be aware of indications of possible asset exchange transactions as part of their routine monitoring of financial institutions between examinations. Examiners should hold ongoing discussions with an institution’s management as part of the supervision process if examiners become aware that the institution is considering these types of transactions. Monitoring activities should focus on financial statement changes commonly associated with asset exchanges, internal risk-management reports, and other documents received on a routine basis. Indicators that asset exchanges might have taken place include—

11. Fair-value measurements are determined based on assumptions that market participants would use in valuing the assets. This should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows.
12. Examples of significant inputs and assumptions include, but are not limited to, default probabilities, current loan-to-value ratios, loss severities, and prepayment speeds.
• asset sales at (or very near) book values, with either no loss recognized or a gain on recovery of a prior write-down recognized. It is unusual for a third party to buy problem assets at higher than the selling institution’s book value at the time of the sale.

• board minutes showing discussion of strategies designed to achieve material reductions in problem assets.

• material loan sales and purchases involving the same counterparty, on or around the same date.

• significant reductions in the institution’s non-performing loan totals without attendant losses. The motivation for asset exchanges is to reduce problem assets, but this may be difficult to do in the current economic environment without realizing significant losses.

• purchase of a large portfolio of loans that are outside the institution’s traditional markets and/or inconsistent with the institution’s business strategies or lending and investment policies.

• purchase at (or near) par of a large portfolio of loans that, while currently performing, have high-risk characteristics (e.g., are outside generally accepted underwriting standards for this type of credit) that indicate they may not continue to perform in accordance with their contractual terms.

• large net loan or asset growth during a short period. Because asset exchanges nearly always involve an institution purchasing more assets than it is selling, it is common for the balance sheet to grow rapidly as a result of the asset exchange transaction.

Supervisory Actions

If examiners observe an institution engaging in asset exchanges, they should determine whether the appropriate risk-management measures have been considered and if management has used appropriate valuations in accordance with GAAP. Important findings should be noted in the examination report and, as appropriate, plans for remedial action discussed with management. Given the concern regarding both safety-and-soundness issues as well as the appropriate valuation practices, Reserve Banks should contact the appropriate Board staff analyst to discuss the asset exchange transaction.

TRANSFER OF LOW-QUALITY LOANS OR OTHER ASSETS

Section 23A of the Federal Reserve Act (FRA), 12 U.S.C. 371c, prohibits bank purchases of low-quality assets from an affiliate. In addition to the statutory provisions of section 23A, the Board approved the issuance of Regulation W, which became effective April 1, 2003, implementing changes to sections 23A and 23B of the FRA.

Low-quality loans include those classified or specially mentioned at the most recent examination or loans that would most likely be classified or specially mentioned if subjected to a review. In addition, low-quality loans include 30-day past-due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower’s poor financial condition, and any other loans the examiner believes are questionable. Other assets of questionable quality include depreciated or subinvestment-grade securities and other real estate. A low-quality asset shall not be acceptable as collateral for a loan or extension of credit to, or guarantee, acceptance, or letter of credit issued on behalf of an affiliate. Furthermore, a low-quality asset cannot be involved in a loan participation or an asset swap.

The transfer of low-quality loans or other assets from one depository institution to another may raise supervisory concerns. These transfers may be made to avoid detection and classification during regulatory examinations and may be accomplished through participation, purchases/sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Examiners should be alert to situations in which an institution’s intention appears to be concealing low-quality assets to avoid examiners’ scrutiny and possible classification.

During bank examinations, examiners are requested to identify situations when low-quality assets have been transferred between the institution being examined and another depository institution. The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and, if an affiliate is involved, is a violation of section 23A of the Federal Reserve Act. If necessary, it should be addressed through formal supervisory enforcement action.

Any transfers of low-quality or questionable assets should be brought to the attention of
Reserve Bank supervisory personnel. In turn, these individuals should notify the local offices of primary federal and state regulators (if applicable) of the other depository institutions involved in the transaction. For example, Reserve Banks should notify the primary federal and state regulators (if applicable) of any depository institution to which a state member bank or holding company is transferring or has transferred low-quality loans. Reserve Banks should also notify the primary federal and state regulators (if applicable) of any depository institution from which a state member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations, savings banks, and commercial banking organizations.

If the examiner determines a permissible transfer of assets was undertaken, he or she should ensure the assets have been properly recorded at fair market value on the books of the acquiring institution. If the transfer involved the parent holding company or a nonbank affiliate, the examiner should determine if the transaction also was recorded properly on the affiliate’s books.13

Whenever asset transfers occur, examiners should determine whether the assets in question were independently and completely evaluated for conformance with bank policy and procedures. Examiners should be guided by the inspection procedures outlined in section 2020.7.2 of the Bank Holding Company Supervision Manual and the examination procedures in section 6070.3 of this manual.

ENVIRONMENTAL LIABILITY

Banks may be liable for cleaning up hazardous substance contamination under both federal and state environmental liability statutes. This liability can arise through a bank’s ownership or acquisition of real estate, in its role as a creditor, or in a fiduciary role. Banks may also be exposed to environmental liability indirectly through the increased possibility that a borrower’s creditworthiness may be impaired by a liability to pay for cleanup of contaminated property, even if the property does not secure bank debt. The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the federal superfund statute, authorizes the Environmental Protection Agency (EPA) to clean up hazardous waste sites and to recover costs associated with the cleanup from entities specified in the statute. While the superfund statute is the primary federal law dealing with hazardous substance contamination, numerous other federal and state statutes establish environmental liability that could place banks at risk.

CERCLA defines who is subject to liability for the costs of cleaning up hazardous substance contamination. The definition includes “. . . the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of. . . .”14 Under the statute, a person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning up contamination.

The superfund statute imposes a standard of strict liability, which means the government does not have to prove that the owners or operators knew about or caused the hazardous substance contamination in order for them to be liable for the cleanup costs. Moreover, liability under the statute is joint and several, which allows the government to seek recovery of the entire cost from any individual party that is liable for those costs under CERCLA.

CERCLA provides an exemption for secured creditors in the definition of “owner and operator” by stating that these terms do not include “. . . a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility.”15 However, this exception has not provided banks with an effective defense from liability because courts have limited its applicability. Specifically, courts have held that some lenders’ actions to protect their security interests have resulted in the bank “participating in the management of a vessel or facility,” thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the bank, some courts have held that the exemption no longer applies and that the bank is liable under the superfund statute as an “owner” of the property. Under some circumstances, CERCLA may exempt landowners who acquire property without knowing about existing conditions (the “innocent landowner

13. See section 6070.1 of this manual.
14. CERCLA, section 107(a).
15. CERCLA, section 101(20)(A).
defense”). However, the courts have applied a stringent standard to qualify for this defense. Since the statute provides little guidance as to what constitutes the appropriate timing and degree of due diligence to successfully employ this exemption, banks should exercise caution before relying on it.

Overview of Environmental Hazards

Environmental risk can be characterized as adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals as ingredients or waste products. For years, these types of hazardous substances were frequently disposed of in landfills or dumped on industrial sites. However, hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of hazardous substances, but by no means cover them all:

- farmers and ranchers (fuel, fertilizers, herbicides, insecticides, and feedlot runoff)
- dry cleaners (various cleaning solvents)
- service station and convenience store operators (underground storage tanks)
- fertilizer and chemical dealers and applicators (storage and transportation of chemicals)
- lawn care businesses (application of lawn chemicals)
- trucking firms (transportation of substances such as fuel or chemicals)

Environmental liability has had the greatest impact on the real estate industry. Not only has land itself been contaminated with toxic substances, construction methods for projects such as commercial buildings have used materials that have been subsequently determined to be hazardous—resulting in significant declines in project values. For example, asbestos was commonly used in commercial construction from the 1950s to the late 1970s. Asbestos has since been found to be a health hazard and now, in many cases, must be removed or its effects abated by enclosing or otherwise sealing off the contaminated areas.

Another common source of hazardous substance contamination is underground storage tanks. Leaks from these tanks not only contaminate the surrounding ground, but often flow into ground water and travel a significant distance from the original contamination site. As contamination spreads to other sites, cleanup costs escalate.

Effect on Banks—A bank may encounter losses from environmental liability through direct ownership, lending and trust activities, or mergers or acquisitions of borrowers. The greatest risk to a bank is the possibility of being held solely liable for costly environmental cleanups. Under the doctrine of joint and several liability, a bank may find itself solely responsible for cleaning up a contaminated site at a cost that exceeds any outstanding loan balance or property value.

Direct Ownership

A bank may be held liable for the cleanup of hazardous substance contamination in situations when it—

- takes title to property through foreclosure or acquires property to satisfy debts previously contracted;
- owns or acquires for future expansion premises that have been contaminated by hazardous substances; or
- owns, acquires, or merges with another entity involved in activities that might result in a finding of environmental liability.

Lending Activity—While real estate loans present the greatest risk, almost any type of loan, unsecured or secured, can expose a bank to the effects of environmental liability. A borrower who is required to pay for the cleanup of a contaminated property may be unable to provide the necessary funds both to remove contaminated materials and to service the debt. Even if the bank does not have a security interest in the borrower’s real estate, it must be aware that significant cleanup costs could threaten the borrower’s solvency and net worth (and jeopardize the collection of working-capital or equipment loans). If the loan is secured by the contaminated real estate, the bank may find that the property value has declined dramatically, depending on the degree of contamination. In determining whether to foreclose, the bank must
compare the estimated cleanup costs against the value of the collateral. In many cases, this estimated cost has been well in excess of the outstanding loan balance, and the bank has elected to abandon its security interest in the property and charge off the loan. This situation occurs because some courts have not allowed banks that have foreclosed on a property to avail themselves of the secured-creditor exemption. These rulings have been based on a strict reading of the superfund statute that provides the exemption to “security interests” only.

A bank may also expose itself to environmental liability in its role as a secured or unsecured creditor if it involves bank personnel or contractors engaged by the bank in day-to-day management of the facility or takes actions designed to make the contaminated property salable, possibly resulting in further contamination.

Bank Premises—Banks may also be exposed to environmental liability for property held as bank premises. A review of historical uses of properties to be acquired for relocation or future expansion should provide insight into the likelihood that contamination may have occurred and whether additional steps may be warranted.

Mergers and Acquisitions of Borrowers—Borrowers may face environmental risk through the activities of subsidiaries or by merging with or acquiring other companies whose activities result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court-imposed cleanup costs. Additionally, borrowers and, ultimately, banks can be held liable for contamination that occurred before they owned or used the real estate.

Protection Against Environmental Liability

Banks may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess, and control environmental liability. The following discussion briefly describes methods that banks may employ to minimize potential environmental liability.

Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be investigated morestringently than borrowers in low-risk industries or localities.

After a loan is granted, periodic credit analysis of the borrower’s ability to repay should include an assessment of environmental risk. If the credit is secured by real property collateral, the bank should remain aware of the property’s uses and the potential environmental risk associated with those uses. Even if the credit is not secured by real property, periodic credit reviews should determine whether repayment prospects may be jeopardized by any activities that might expose the borrower to environmental liability.

The first step in identifying environmental risk is an environmental review. These reviews may be performed by loan officers or others. They typically identify past uses of the property; evaluate regulatory compliance, if applicable; and identify potential problems. The reviewer should interview persons familiar with present and past uses of the facility and property, review relevant records and documents, and inspect the site.

When the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough inspection of the facility and property. Environmental audits differ markedly from environmental assessments because independent environmental engineers are employed to investigate the property in great detail. Engineers test for hazardous substance contamination, which might require collecting and analyzing air samples, surface soil samples, or subsurface soil samples or drilling wells to sample ground water.

Other measures some banks use to help identify and minimize environmental liability to the bank include obtaining indemnities from borrowers for any cleanup costs incurred by the bank and writing affirmative covenants into loan agreements (and attendant default provisions) that require the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identifi-
fying and minimizing potential environmental liability, their effectiveness depends on the financial strength of the borrower and does not represent a substitute for environmental reviews, assessments, and audits.

Banks must be careful that any policies and procedures undertaken to assess and control environmental liability cannot be construed as taking an active role in the management or day-to-day operations of the borrower’s business. Some activities that courts could consider active participation in the management of the borrower’s business and that could subject the bank to potential liability include—

- having bank employees serve as members of the borrower’s board of directors or actively participate in board decisions,
- assisting in day-to-day management and operating decisions, and
- actively determining management changes.

These considerations are especially important when the bank is actively involved in loan workouts or debt restructuring.

**LOAN PROBLEMS**

The failure of directors to establish a sound lending policy, require management to establish adequate written procedures, and monitor and administer the lending function within established guidelines has resulted in substantial problems for many institutions. Loan problems may be caused by a number of factors affecting the bank or its borrowers. For a discussion of the indicators of troubled commercial real estate loans, see the real estate loan sections of this manual. The major sources and causes of problem credits are explained below.

**Competition**—Competition among banks for size and community influence may result in compromising credit principles and making or acquiring unsound loans. The ultimate cost of unsound loans always outweighs temporary gains in growth and influence.

**Complacency**—The following items manifest complacency and should always be guarded against:

- lack of adequate supervision of long-term and familiar borrowers
- dependence on oral information the borrower furnished in lieu of reliable and verifiable financial data
- optimistic interpretation of known credit weaknesses based on past survival of recurrent hazards and distress
- ignorance or disregard of warning signs about the borrower, economy, region, industry, or other related factors

**Compromise of credit principles.** For various reasons, bank management may grant loans carrying undue risks or unsatisfactory terms, with full knowledge of the violation of sound credit principles. The reasons management may compromise basic credit principles include timidity in dealing with individuals with dominating personalities or influential connections, friendships, or personal conflicts of interest. Self-dealing, salary incentives, and bonuses based on loan portfolio growth, as well as competitive pressures, may also lead to a compromise of credit principles.

**Failure to obtain or enforce repayment agreements.** Loans granted without a clear repayment agreement are, at the very least, a departure from fundamental banking principles. These loans are likely to become significant problems. A more common problem, but just as undesirable, occurs when the bank and borrower agree on repayment or progressive liquidation of a loan, but the bank fails to collect the principal payments when and how it should. A study of loan losses will show that, in many cases, amortization never equaled the principal payments the borrower agreed to make. Good lending and good borrowing both require consistent liquidation.

**Incomplete credit information.** Complete credit information is necessary to make a reasonable and accurate determination of a borrower’s financial condition and repayment capacity. Adequate and comparative financial statements, operating statements, and other pertinent statistical data should be available. Other essential information, such as the purpose of the borrowing and the intended plan and repayment source, progress reports, inspections, and memoranda of outside information and loan conferences, should be contained in the bank’s credit files. The lack of adequate credit information can limit management’s ability to react quickly and effectively when problems develop.
Lack of supervision. Many loans that are sound at their inception develop into problems and losses because of ineffective supervision. This lack of supervision usually results from a lack of knowledge about the borrower’s affairs over the lifetime of the loan.

Overlending. In one sense, overlending could come under the heading of technical incompetence. However, overlending is a weakness found in some lenders that are otherwise competent. Loans beyond the borrower’s reasonable capacity to repay are unsound. Nowhere are technical competence and credit judgment more important than in determining a sound borrower’s safe, maximum loan level.

Poor selection of risks. When banks are willing to assume more-than-normal risk levels, they often experience serious loan problems. The following general loan types may fall within the category of poor risk selection:

- loans in which the bank advances an excessive proportion of the required capital relative to the borrower’s equity investment
- loans based more on the expectation of successfully completing a business transaction than on the existing net worth and repayment capacity
- loans for the speculative purchase of securities or goods
- loans collateralized by marketable assets carried without adequate margins of security
- loans made for other benefits, such as control of large deposit balances in the bank, instead of sound net worth, collateral, or repayment capacity
- loans secured solely by the nonmarketable stock of a local corporation, made in conjunction with loans directly to that corporation (The bank may consider itself forced to finance the corporation far beyond warranted limits to avoid loss on a loan that relies on the corporation’s stock.)
- loans predicated on collateral of uncertain liquidation value (A moderate amount of these loans, when recognized by bank management as subject to inherent weakness, may cause few problems. However, the bank can encounter trouble if this practice becomes the rule.)

Revenue-driven lending. The loan portfolio is usually a bank’s most important revenue-producing asset. The earnings factor, however, must never compromise sound credit judgment and allow credits carrying undue risks or unsatisfactory repayment terms to be granted. Unsound loans usually cost far more than the revenue they produce.

Self-Dealing. Self-dealing is found in many serious problem banks. Self-dealing often takes the form of an overextension of credit on an unsound basis to directors or principal shareholders, or to their related interests, who have improperly used their positions to obtain funds in the form of unjustified loans (or sometimes as fees, salaries, or payments for goods or services). Officers, who hold their positions at the pleasure of the board, may be pressured to approve loan requests by insiders that, coming from customers, would have been rejected. In that situation, management may attempt to defend unsound loans or other self-dealing practices by bank insiders.

Technical incompetence. All able and experienced bankers should possess the technical ability to analyze financial statements and to obtain and evaluate other credit information. When this ability is absent, unwarranted losses are certain to develop. Credit incompetence of management should be discussed promptly with the board of directors.

INSIDER LENDING

The Federal Reserve Board’s Regulation O (12 CFR 215) implements many of the laws pertaining to extensions of credit by banks to their insiders. Regulation O was issued pursuant to sections 22(g) and 22(h) of the Federal Reserve Act. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank’s lending decisions. For more information, see this manual’s section, “Regulation O: Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks.”

EXAMINATION OF THE LENDING FUNCTION

Banks are expected to clearly delineate their lending objectives, policies, and procedures in writing. Lending practices are then expected to
adhere to policies and procedures, with exceptions properly justified and documented. The complexity and scope of a bank’s lending policy and procedures should be appropriate to the bank’s size and the nature of its activities, and they should be consistent with prudent banking practices and relevant regulatory requirements.

Historically, examiners have primarily identified loan-portfolio-management concerns through a detailed review of credits and credit documentation. This approach remains valid, but it must be combined with a full evaluation of a bank’s lending objectives, policy, and procedures. Therefore, the scope of each examination should encompass a review of the bank’s lending policy and procedures and an assessment of how lending practices adhere to the policy and procedures.

When conducting a review of loan portfolio management, examiners should pay particular attention to management’s approach to and handling of the following:

- monitoring of lending practices by individual lending officers
- identification of concentrations of credit
- documentation of credit and collateral exceptions
- identification of problem credits
- accounting for nonaccrual loans and for renegotiated and restructured loans
- collection of past-due loans

In addition, examiners should be aware of any evidence of self-dealing in lending transactions.

An examiner’s final assessment of a bank’s lending function should consider the adequacy of internal policy and procedures, the effectiveness of management oversight and control, and the overall quality of the loan portfolio. Moreover, consideration should be given to all pertinent internal and external factors, including the continuity of management; bank’s historical lending experience; and current and projected economic condition for the bank’s market area, particularly for any industries in which the bank has concentrations of credit.

Supervisors and examiners should watch for indications of insufficiently rigorous risk assessment. In particular, examiners should be alert to circumstances indicating excessive reliance on strong economic conditions and robust financial markets, such as (1) borrowers whose financial capacity is inadequate to service their debts or (2) inadequate stress testing. Examiners also should be attentive when reviewing an institution’s assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead the institution to delay recognition of emerging weaknesses in some loans.16

If examiners observe significant and undue reliance on favorable assumptions about borrowers or the economy and about financial markets more generally—or observe that this reliance has slowed the institution’s recognition of loan problems—they should carefully consider downgrading, under the applicable supervisory rating framework, an institution’s risk-management, management, or asset-quality ratings (or all three). If those assumptions are deemed sufficiently significant to the institution, examiners should also consider downgrading its capital adequacy rating. Similarly, if supervisors or examiners find that loan-review activities or other internal-control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, or inadequate training, such findings should be considered in supervisory ratings as well.

When developing their findings, examiners should review internal risk-management loan-review systems, conduct sufficient loan reviews, and perform transaction testing of the lending function to determine accurately the quality of bank loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the pre-examination risk assessment or of performing the examination, sufficient supervisory resources should be committed to in-depth reviews, including transaction testing. Adequate, in-depth reviews and transaction testing should be performed to ensure that the Reserve Bank achieves a full understanding of the nature, scope, and implications of the deficiencies.

Important findings should be noted in the examination or report. Plans for remedial actions should be discussed with bank management and the boards of directors, as appropriate. In addition, any identified weaknesses or deficiencies that could adversely affect affiliated insured depository institutions should be conveyed to the insured institution’s primary federal or state supervisor.

---

16. Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of such increases and surrounding circumstances as they reach their conclusions about the asset quality and risk management of an institution.
1. Is the audit or independent review function adequate?
2. Are information and communication systems adequate and accurate?
3. Does management accurately identify, monitor, and reserve for credit risk?
4. Is portfolio quality satisfactory, considering trends in past dues, nonaccruals, charge-offs, adverse classifications, and the overall risk profile?
5. Is the volume of other real estate (ORE) and repossessed assets manageable and the ORE portfolio adequately administered and controlled?
6. Do the board and senior management effectively supervise this area?
PRELIMINARY REVIEW

1. Review prior examination reports, prior examination work papers, the examination planning memorandum, audit reports, and file correspondence for an overview of any previously identified lending concerns. In addition, determine whether there were any prior concerns related to the allowance for loan and lease losses (ALLL) or allowance for credit losses (ACL) for loans and leases, repossessed assets, or ORE.

2. Review internal and external audit reports, and assess the audit scope.

3. Review internal and external loan review reports, as well as other reports provided by third parties.

4. Discuss with management any planned changes, such as changes in lending philosophy, portfolio composition, new products, pricing strategies. Determine whether current and planned lending strategies are consistent with the strategic plan.

5. Review and assess presentations to the loan committee and the board as well as information in the loan committee and board meeting minutes.

6. Obtain and analyze information used by management to supervise the loan portfolio. This information may include
   • organizational charts;
   • written policies and procedures;
   • problem loan and watch list reports;
   • delinquency and nonperforming asset reports;
   • concentration reports;
   • ALLL analysis or ACL analysis for loans and leases;
   • modified or restructured loan reports;
   • significant charge-offs or concentrations of charge-offs (by industry or types of borrowers) since the prior examination; and
   • portfolio stress test reports and documentation, if applicable.

7. Review the composition of the loan portfolio by type, dollar volume, and percentage of capital. Determine whether specialty-lending areas exist, including any new loan types, and assign responsibility for completing appropriate reviews. Refer to individual loan reference modules for additional procedures.

8. Based on the findings and risk identified in the preliminary assessment of the loan review program, select an appropriate loan sample.

9. Determine the volume of other real estate and the change in volume since the prior examination.

10. Determine the volume of repossessed assets and the change in volume since the prior examination.

AUDIT OR INDEPENDENT REVIEW

11. Determine whether the audit program is sufficient to obtain reasonable assurance that
   • the ALLL or ACL for loans and leases is appropriate and is determined in accordance with generally accepted accounting principles (GAAP);
   • loan review practices reasonably identify portfolio risk;
   • loan portfolio quality is properly monitored and reported;
   • nonperforming loans are appropriately placed on nonaccrual status;
   • loan modifications are properly identified as troubled debt restructurings, when applicable; and
   • management complies with applicable laws and regulations, such as state legal lending limits and the Federal Reserve Board’s Regulation O.

12. Determine whether the audit or independent review program provides sufficient coverage relative to the institution’s size, scope of lending activities, and risk profile. Appropriate programs generally
   • recommend corrective action when warranted;
   • verify that corrective action commitments are implemented;
   • assess separation of duties, internal controls, and supervision of lending activities;

1. Coordinate with the examiners who review the internal audit function.
• determine compliance with policies, procedures, and regulatory requirements; and
• assess the adequacy, accuracy, and timeliness of reports to senior management and the board.

INFORMATION AND COMMUNICATION SYSTEMS

13. Determine whether managerial reports provide sufficient information relative to the size and risk profile of the organization, and evaluate the accuracy and timeliness of reports produced for the board and senior management. Reports may include the following types of information:
• analysis of the appropriateness of the ALLL or ACL for loans and leases;
• level and trends of classified loans;
• level and trends of past due and nonaccrual loans;
• watch list;
• foreclosures and repossessions;
• insider borrowings;
• kiting suspects;
• overdrafts;
• participations;
• internal and external audit results;
• loan review results;
• portfolio composition; and
• unfunded commitments.

14. Review the effectiveness and accuracy of the system for aggregating related credit exposures.

15. Analyze growth trends by volume and loan type, and determine whether actual data mirrors budgeted growth or strategic plans.

17. Determine whether procedures and practices for placing loans on nonaccrual status agree with Call Report instructions.

18. Determine whether procedures and practices regarding troubled debt restructurings (TDR) agree with Call Report instructions.

19. Validate the accuracy of the Call Report where necessary.

IDENTIFYING, MONITORING, AND RESERVING FOR CREDIT RISK

Loan Review

20. Consider whether loan review practices are appropriate for the size and complexity of the bank and whether loan reviews are conducted by individuals independent from loan origination, approval, and servicing. An effective loan review system generally accomplishes the following objectives:
• promptly identifies loans with actual and potential credit weaknesses so that timely action can be taken to strengthen credit quality and minimize losses;
• appropriately validates and, if necessary, adjusts risk ratings, especially for those loans with potential or well-defined credit weaknesses that may jeopardize repayment;
• identifies relevant trends that affect the quality of the loan portfolio and highlights segments of the loan portfolio that are potential problem areas;
• assesses the adequacy of and adherence to internal credit policies and loan administration procedures and monitors compliance with applicable laws and regulations;
• evaluates the activities of lending personnel and management, including their compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment;
• provides management and the board with an objective, independent, and timely assessment of the quality of the loan portfolio; and
• provides management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of appropriate ACL for loans and leases or ALLL, as applicable.

21. Determine whether the watch list is regularly updated by management and reviewed by the board.

22. Assess the accuracy of the loan review system and internal risk ratings. Also, review any documentation exception reports and written classification summaries, and evaluate the scope, frequency, and timeliness of reviews and updates to the board.
ALLOWANCE FOR CREDIT LOSSES
ON LOANS AND LEASES

Methodology

23. Determine the methodology or methodologies used to measure the expected collectability of loans, and consider whether management maintains supporting documentation for the assumptions and estimates used. Methodologies include:
• loss-rate;
• weighted-average-remaining-maturity (WARM);
• probability of default/loss given default (PD/LGD);
• roll-rate;
• discounted cash flow;
• a method that uses aging schedules;
• fair value of the collateral (required for all collateral-dependent loans); and
• another reasonable method to estimate expected credit losses.

24. Assess the methodology or methodologies used in determining an appropriate ACL for loans and leases. Determine whether the complexity and scope of the ACL evaluation process for loans and leases and the loan review system are appropriate given the institution’s risk profile and complexity of lending activities. Consider whether management provides for the following:
• an effective loan review system and controls;
• data-capture and loan-reporting systems that provide meaningful information regarding portfolio risks to support and document the estimates of an appropriate ACL for loans and leases for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
• resources to appropriately evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed;
• processes that support the determination and maintenance of an appropriate level for the ACL for loans and leases that are based on a comprehensive, well-documented, and consistently applied analysis of the loan and lease portfolio and off-balance-sheet credit exposures;
• procedures for an independent third party to review and validate the ACL methodology for loans and leases;
• processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in loan specific characteristics as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
• procedures to incorporate relevant internal and external factors that significantly affect collectability over reasonable and supportable forecast periods as well as to apply appropriate reversion techniques to periods beyond reasonable and supportable forecast periods;
• processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of loans and leases or off-balance-sheet credit exposures extends beyond the reasonable and supportable forecast period(s);
• processes for segmenting the loan and lease portfolio for estimating expected credit losses and periodically evaluating the segments to determine whether the loans and leases continue to share similar risk characteristics; and
• policies and procedures for the prompt write-off of loans and leases, or portions of loans and leases, when available information confirms the loans and leases to be uncollectible, consistent with regulatory reporting requirements.

25. Evaluate the criteria management uses to segment loans by similar risk characteristics. GAAP requires expected losses to be evaluated collectively when loans share similar risk characteristics. If a loan does not share similar risk characteristics with other loans, expected credit losses for that loan should be evaluated individually. Examples of risk characteristics include but are not limited to:
• internal or external credit scores or credit ratings;

2. Use procedures 23-34 to assess the ACL for loans and leases methodology for institutions that have adopted ASU 2016-013, and use procedures 23a-34a to assess the ALLL methodology for institutions that have not adopted ASU 2016-013.
26. Evaluate the policies and procedures for the ACL for loans and leases, and assess the loss estimation method(s) used to arrive at estimates of the ACL for loans and leases, including the documentation supporting management’s assumptions, valuations, and judgments. Determine whether management appropriately considers historical loss information, current conditions, and reasonable and supportable forecasts that are relevant to assessing the collectability of cash flows, including significant qualitative factors that affect the collectability of the loan and lease portfolio.

27. Determine the basis for evaluating groups of loans under ASC Subtopic 326-20 (CECL).³

3. Adjustments to historical loss information may be positive or negative, quantitative or qualitative, and are supported by relevant data (e.g., changes in unemployment rates, delinquency, or other factors associated with the loans).

4. The granularity of segmentation and the method used to calculate loss rates affects the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.

5. Historical loss information may be based on internal information, external information, or a combination of both.

28. Determine whether management considered all significant factors relevant to the expected collectability of the loan and lease portfolio as of the reporting date and maintains documentation sufficient to support all material adjustments. Appropriate documentation generally addresses all material factors that are relevant to the institution at the reporting date.⁸ Qualitative or environmental factors may include

- the nature and volume of the loans and leases;
- the existence, growth, and effect of concentrations of credit;
- the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;
- the value of the underlying collateral for loans that are not collateral-dependent;
- the institution’s lending policies and procedures, including changes in underwriting standards and collections, charge-off, and recovery practices;
- the quality of the institution’s credit review system;
- the experience, ability, and depth of the lending, collection, and other relevant

November 2020
Page 4

Commercial Bank Examination Manual
management and staff;
• the effect of other external factors, such as the regulatory, legal, and technological environments; competition; and events, such as natural disasters; and
• actual and expected changes in international, national, regional, and local economic and business conditions and developments in which the institution operates that affect the collectability of the loan and lease portfolio.

29. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have loss experience of its own for such a loan group.9

30. Confirm that loans evaluated individually are not included in a collective assessment of expected credit losses.

31. When the contractual term of a loan or lease extends beyond the reasonable and supportable period, determine whether management reverts to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period).

32. If the ACL for loans and leases includes an unallocated amount, determine whether it conforms to GAAP and is properly documented and supported.

33. Where appropriate, determine whether the assessment of an appropriate level for the ACL for loans and leases includes an estimate of losses from transfer risk associated with cross-border lending activities.

34. Determine whether the ACL evaluation process for loans and leases is completed at least quarterly, and evaluate the documentation maintained to support management’s assumptions, valuations, and judgments.

Methodology

23a. Assess the methodology used in determining the appropriate ALLL and consider whether it includes portfolio segmentation and impairment analysis for individually evaluated loans. (Refer to ASC Subtopic 450-20 and ASC Topic 310.) Determine whether the complexity and scope of the ALLL evaluation process and loan review system are appropriate given the institution’s risk profile and complexity of lending activities. Consider the following:
• the effectiveness of the loan review system and controls;
• the ability of internal data-capture and loan-reporting systems to provide robust and meaningful information regarding portfolio risks;
• management’s ability to evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed;
• the methodology is based on a comprehensive, adequately documented, and consistently applied analysis of the loan and lease portfolio;
• management promptly charges off loans, or portions of loans, that are uncollectible; and
• an independent third party periodically reviews and validates the ALLL methodology.

24a. Evaluate the criteria management uses to select loans for individual evaluation under ASC Topic 310, such as
• Loans or relationships above a dollar threshold. If management uses a dollar threshold, assess the threshold in relation to average loan balances, concentrations, or other factors that would cause the loans to be more significant to the institution;
• Loans or relationships on the Watch List or adversely classified Substandard or Doubtful. If selection criteria do not include loans rated Substandard or Doubtful, assess the rationale for the decision; and
• Loans or relationships past due or on nonaccrual status.

25a. Determine the methodology used by management to measure impairment on loans (within the scope of ASC Topic 310) that are individually evaluated and determined to be impaired, and consider whether management maintains supporting documentation for the assumptions and estimates used. Consider whether the methodology used is based on
• the present value of expected future cash flows for individually evaluated impaired loans that are not collateral dependent;
• observable market price for individually evaluated impaired loans that are not

9. An institution may not have a loss history if the product is new or the institution is a de novo organization.
collateral dependent; or
• the fair value of collateral method.10

26a. Evaluate the reasonableness of and support for management’s assumptions, valuations, and judgments used in the analysis of those loans individually evaluated for impairment under ASC Topic 310 and determined to be impaired.

27a. Determine how management treats11
• loans individually evaluated for impairment under ASC Topic 310 that are determined not to be impaired; and
• individually evaluated loans determined to be impaired that are measured with zero impairment (i.e., no allowance is established when measured for impairment under ASC Topic 310).

28a. Determine the basis for evaluating groups of loans under ASC Subtopic 450-20,12
• Ensure that assets are adequately stratified into groups based on one or more risk characteristics.
• Evaluate the historical loss-rate calculation for each segment.
• Review the time period and the calculation method (e.g., simple average, weighted average) for reasonableness and consistency.
• Consider the effect of new loan products or newly expanded markets.13
• Consider how segmentation methods and historical loss-rate calculations reflect qualitative or environmental factors necessary to reflect current conditions and expectations.

29a. Determine whether management considers relevant qualitative and environmental factors and maintains documentation sufficient to support material adjustments. Appropriate documentation generally addresses material factors that are likely to cause estimated losses to differ from historical losses. Qualitative or environmental factors may include, but are not limited to
• changes in lending policies and procedures, such as underwriting standards and collection, charge-off, and recovery practices;
• changes in national and local economic business conditions and developments, including the condition of various market segments;14
• changes in the nature and volume of the portfolio and in the terms of loans;
• changes in the experience, ability, and depth of lending management and staff;
• changes in the volume and severity of past due and adversely classified loans and in the volume of nonaccrual loans;
• changes in the quality of the loan review system;
• changes in the value of underlying collateral for collateral-dependent loans;
• the existence, level, and effect of concentrations of credit; and
• the effect of external factors, such as competition or legal and regulatory requirements.

30a. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have any loss experience of its own for such a loan group.15

31a. Confirm that management does not include loans measured for impairment under ASC 310 in the estimated credit losses under ASC Subtopic 450-20, even if the ASC Topic 310 impairment measurement was zero.

32a. If the ALLL includes an unallocated amount, determine whether it conforms to

---

10. For Call Report purposes, the impairment of an impaired collateral-dependent loan must be measured using the fair value of collateral method.

11. Examiners should determine that management is appropriately defining impaired loans (i.e., where collection of the full principal and interest is not expected per original contractual terms). If a loan is evaluated under ASC Topic 310 but is not impaired by definition, it should be included in the ASC Subtopic 450-20 evaluation. Once a loan is determined to be impaired and is measured for impairment under ASC Topic 310, it cannot be included in a group of loans collectively assessed for impairment under ASC Subtopic 450-20, even if no ASC Topic 310 allowance is established.

12. Adjustments for qualitative or environmental factors, which may be positive or negative, are typically made to reflect current conditions and expectations as of the balance sheet date if not otherwise captured in historical loss analysis. The granularity of segmentation and the method used to calculate loss rates would affect the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.

13. Historical loss rates for a general segment may not be accurate for new products or loans in a new market that are included in the general segment.

14. Credit loss and recovery experience may vary significantly depending on the business cycle.

15. An institution may not have a loss history if the product is new or the institution is a de novo organization.
GAAP and is properly documented and supported.

33a. Where appropriate, determine whether the assessment of an appropriate level for the ALLL includes an estimate of losses from transfer risk associated with cross-border lending activities.

34a. Determine whether the ALLL evaluation process is completed at least quarterly and evaluate the documentation maintained to support management’s assumptions, valuations, and judgments.\(^1\)

LEVEL OF THE ALLL OR ACL FOR LOANS AND LEASES

35. Evaluate the level of the ALLL or ACL for loans and leases.
   - Determine whether the ALLL or ACL for loans and leases is appropriate based on a review of the institution’s methodology coupled with examination findings as they relate to
     — loan classifications and internal watch list ratings;
     — effectiveness and reliability of the loan review system;
     — level and trend of past due and non-accrual loans;
     — historical recovery of loan charge-offs;
     — lending policies and procedures, such as underwriting, collection, and charge-off and recovery practices; and
     — changes in the business cycle that necessitate qualitative or environmental factor adjustments to historical loss rates.
   - Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL or ACL for loans and leases.\(^2\)
     — Evaluate trends compared to historical experience (e.g., the relationship of the ALLL or ACL for loans and leases to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs).
     — Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL or ACL for loans and leases in relation to these changes, and assess the appropriateness and reasonableness of the ALLL or ACL for loans and leases based on the collectability of the institution’s loan portfolio in the current environment.
   - If the institution’s loan review system is effective and the methodology for determining an appropriate ALLL or ACL for loans and leases is acceptable, compare the result of the institution’s methodology to the actual ALLL or ACL for loans and leases balance. Ensure that the ALLL or ACL amount for loans and leases reported in the institution’s regulatory reports and financial statements reconciles to the ALLL or ACL analysis for loans and leases. Assess the reasons for material differences.
   - Assess management’s estimated credit losses, and, if necessary, consider the need for additional provision expenses based on examination findings. Consider whether
     — the loan review system is substantially inaccurate;
     — the bank is lending in stressed market conditions;
     — credit administration and underwriting weaknesses have not been timely identified or addressed; or
     — examination results reflect significant loan quality deterioration.

---

\(^1\) Refer to the 2001 Final Interagency Policy Statement on ALLL Methodologies and Documentation for Banks and Savings Institutions as well as the 2006 Interagency Policy Statement on ALLL. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.

\(^2\) Ratio analysis can be a supplemental check on the reasonableness of management’s assumptions and analysis. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.

PORTFOLIO QUALITY

36. Evaluate loan commitments, letters of credit, and other contingent liabilities for creditworthiness.

37. Review overdraft protection, large items, uncollected funds, and check kiting reports for irregular activity. Pay particular atten-
tion to overdrafts of bank insiders and insiders of other banks.

38. Evaluate the level and trend of past due ratios for each type of credit, and determine which loan categories pose elevated risk.

39. Review and analyze purchased loan participations for appropriate accounting treatment, due diligence, creditworthiness, underwriting quality, and recourse provisions. Consider
• whether these credits are internally classified at the originating institution or other participation holders (when the information is available); and
• whether these credits are adversely classified in regulatory examination reports at the originating institution and other participation holders (this information cannot be shared with management).

40. If the institution has acquired other institutions or loan portfolios, analyze the effect these purchases have had on the bank’s portfolio composition and risk profile.

41. Determine whether it appears any loans were sold prior to the examination to another institution or to the holding company to avoid criticism by examiners.

42. Determine whether the institution has any borrowing relationships that qualify as Shared National Credits and assign classifications accordingly.

43. Evaluate the level and trend of classified loans and the effect on the institution’s credit risk profile.

MANAGERIAL EFFECTIVENESS

Procedures and Practices

44. Determine whether loan and executive officers consistently follow the institution’s lending policies and practices.

45. Review the loan approval process and determine whether loan presentations include adequate analysis of the following items:
• loan purpose;
• repayment sources (primary and secondary) and cash flows;
• collateral;
• background of borrower;
• principals and management;
• financial information, including balance sheet and income statement;
• financial projections;
• industry and economic outlooks, including real estate trends;
• borrowing and deposit histories;
• loan structure, terms, and covenants; and
• justification for policy exceptions.

46. Determine whether the financial analysis of borrowers is adequate in relation to the size and complexity of the debt.

• Review financial analysis for appropriate financial ratios, trends, cash flow history, and projections sufficient to determine the financing needs and repayment capacity of the borrower.

• Assess whether the credit assessment includes a review of credit reports to identify other outstanding debts or contingent liabilities.

• Assess whether the review evaluates important items, such as salaries, fees, dividends, notes and accounts receivable, and notes and accounts payable, including those to insiders.

• Determine whether significant balance sheet and income statement changes are properly explained and whether management identifies and reviews contingent liabilities.

• Evaluate the comparison of actual results to projected performance.

• Consider the prospects for support from any financially responsible guarantors, with emphasis on excess liquidity, cash flow, and demonstrated willingness to honor guaranty agreements.

• Determine whether the global cash flow analysis considers all relevant parties to the transaction.

47. Determine whether management uses financial and reporting covenants. If so, evaluate how covenants are tracked and monitored, and whether management enforces them or regularly waives them.

Applicable Statutes and Regulation

48. Determine the institution’s regulatory and internal lending limits, and assess management’s compliance with the limits.

18. Refer to the definition of Transfers of Financial Assets in the Call Report glossary for additional information.
49. Review transactions with affiliates for compliance with section 23A of the Federal Reserve Act.\(^{19}\)

50. Review extensions of credit to insiders for compliance with the Federal Reserve Board’s Regulation O.

51. Review management’s compliance with the anti-tying provisions of section 106 of the Bank Holding Company Act Amendments of 1970 (12 U.S.C. 1972), which prohibits extensions of credit conditioned on the borrower obtaining or providing any additional credit, property, or service to or from the institution or its holding company.

52. Determine whether management complies with applicable laws and regulations for loans secured by stock. Items to consider include:
   - loans secured by the bank’s own stock;\(^{20}\)
   - loans to purchase or carry margin stock;\(^{21}\)
   - and management’s familiarity with the Lost and Stolen Securities program (SEC Rule 240.17f1) and measures it has taken to minimize exposure on loans secured by stock. Refer to the securities information center webpage for further guidance.

53. Review and assess the management’s compliance with applicable real estate lending and appraisal regulations.

CREDIT ADMINISTRATION

54. Assess management’s actions to correct criticisms noted in prior examination reports, recent loan review reports, and recent internal and external audits.

55. Evaluate management’s effectiveness at reacting to changing economic, industry, and regulatory environments.

56. Evaluate the composition of the loan committee. Determine whether members are independent and qualified.

OTHER LOAN RELATED ITEMS

Other Real Estate

57. Determine whether ORE files are adequately documented. Consider the following:
   - evidence of ownership;
   - book value (current and at the time of acquisition);
   - appropriateness of capitalized costs, if any;
   - current outside appraisal or internal valuation;
   - analysis of cost to carry (break-even analysis);
   - formal purchase offers (if applicable);
   - sales efforts or listing agreements;
   - current hazard and liability insurance;
   - receipt evidencing payment of real estate taxes; and
   - disposal of the parcel (who, when, how), if applicable.

58. Determine the appropriateness of ORE accounting procedures, carrying values, and dispositions. Consider the following:
   - appropriateness of initial recording of ORE at fair value less cost to sell, which becomes the cost basis of the ORE;
   - prior liens, including recording such liens as liabilities;
   - appropriateness of accounting for ORE after acquisition at lower of cost or fair value less cost to sell, including the use of a property-specific valuation allowance for any decline in fair value less cost to sell below cost;
   - appropriateness of rental income and expense entries;
   - appropriate review of expenses;
   - adequacy of appraisal or evaluation;
   - environmental concerns; and
   - holding period in compliance with state laws.

59. Evaluate the quality of the portfolio and classify parcels accordingly.

Repossessed Assets

60. Determine the appropriateness of repossessed asset accounting policies, carrying values, holding periods, and dispositions. Classify as necessary.

\(^{19}\) 12 U.S.C. 371 (c) defines covered transactions; sets quality, terms, and collateral requirements; and places aggregate limits on such activities.

\(^{21}\) If secured directly or indirectly by margin stock, Federal Reserve Board’s Regulation U is applicable.
Non-Ledger Assets

61. Determine whether appropriate approval authorities and levels of review are in place given the volume and magnitude of charge-offs.

62. Ascertain whether audit practices are sufficient given the volume and magnitude of charge-offs.22
   • Auditors typically determine the validity of charged-off assets by physical inspection of items held at the bank or by direct confirmation with persons who have possession of them outside of the bank (e.g., attorneys or collection agents).
   • The validity of charged-off items is typically tested, with particular attention given to possibly fictitious loans that were charged-off. Methods of authenticating the validity of charged-off items include:
     — direct confirmation with borrowers;
     — evidence of personal contact with the borrower by persons other than the loan officer responsible for the borrowing relationship;
     — verification through bank records that the borrower received the loan proceeds; and
     — verification through non-bank records, such as telephone and city directories that the borrower may exist.
   • The auditor may choose to confirm all charge-offs of more than a certain size or may prefer to confirm a statistical sample of all charge-offs over a certain amount.

63. Determine that appropriate efforts are made to collect charged-off assets.

22. Coordinate with the examiners who review the internal audit function.
An effective credit risk review function is integral to the safe and sound operation of every insured depository institution. In May 2020, the Office of the Comptroller of the Currency, the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) issued guidance for credit risk review. See 85 Federal Register 33,278 (June 1, 2020) and SR-20-13, “Interagency Guidance on Credit Risk Review Systems.” To assist institutions in the creation and operation of such functions, the guidance for credit risk review describes a broad set of practices and principles for developing and maintaining a credit risk review function consistent with safe and sound credit risk-management practices and the Interagency Guidelines Establishing Standards for Safety and Soundness (safety and soundness guidelines). However, the guidance for credit risk review does not establish any requirements or rules, nor does it mandate implementation of a specific system or prescribe specific actions with which institutions must comply.

The guidance discusses sound management of credit risk, a system of independent, ongoing credit review, and appropriate communication regarding the performance of the institution’s loan portfolio to its management and board of directors. This guidance for credit risk review is relevant to all institutions supervised by the agencies and replaces attachment 1 of the 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses. The nature of credit risk review systems typically varies based on an institution’s size, complexity, loan types, risk profile, and risk-management practices.

The remainder of this section conveys the Interagency Guidance on Credit Risk Review Systems with the exception of some references that were removed because they do not pertain to institutions for which the Federal Reserve is the primary regulator.

1. For state member banks, see 12 CFR part 208, appendix D-1.

2. For foreign banking organization branches, agencies, or subsidiaries not operating under single governance in the United States, the U.S. risk committee would serve in the role of the board of directors for purposes of this guidance.

3. For purposes of this guidance, regulated institutions are those supervised by the following agencies: The Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), and the Office of the Comptroller of the Currency (OCC).

4. The credit risk review function is not intended to be performed by an institution’s internal audit function. However, as discussed in the agencies’ March 2003 Interagency Policy Statement on the Internal Audit Function and its Outsourcing (2003 policy statement), some institutions coordinate the internal audit function with several risk monitoring functions, such as the credit risk review function. The 2003 policy statement states that coordination of credit risk review with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the institution’s ability to comprehensively manage risk.
Credit Risk Review Systems

A credit risk review system may include components of a dedicated credit risk review function that are independent of the institution’s lending function. A credit risk review system may also include various responsibilities assigned to credit underwriting, loan administration, a problem loan workout group, or other organizational units of an institution. Among other responsibilities, these groups may administer the internal problem loan reporting process, maintain the integrity of the credit risk rating process, confirm that timely and appropriate changes are made to risk ratings, and support the quality of information used to estimate the allowance for credit losses (ACL) or the allowance for loan and lease losses (ALLL), as applicable. Additionally, some or all of the credit risk review function may be performed by a qualified third party.

Regardless of the structure, an effective credit risk review system accomplishes the following objectives:

- Promptly identifies loans with actual and potential credit weaknesses so that timely action can be taken to strengthen credit quality and minimize losses.
- Appropriately validates and, if necessary, adjusts risk ratings, especially for those loans with potential or well-defined credit weaknesses that may jeopardize repayment.
- Identifies relevant trends that affect the quality of the loan portfolio and highlights segments of those portfolios that are potential problem areas.
- Assesses the adequacy of and adherence to internal credit policies and loan administration procedures and monitors compliance with applicable laws and regulations.
- Evaluates the activities of lending personnel and management, including compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment.
- Provides management and the board of directors with an objective, independent, and timely assessment of the overall quality of the loan portfolio.
- Provides management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of an appropriate ACL or ALLL, as applicable.

Credit Risk Rating (or Grading) Framework

The foundation for any effective credit risk review system is accurate and timely risk ratings to assess credit quality and identify or confirm problem loans. An effective credit risk rating framework includes the monitoring of individual loans and retail credit portfolios, or segments thereof, with similar risk characteristics. An effective framework also provides important information on the collectability of each portfolio for use in the determination of an appropriate ACL or ALLL, as applicable. Further, an effective framework generally places primary reliance on the lending staff to assign accurate and timely risk ratings and identify emerging loan problems. However, given the importance of the credit risk rating framework, the lending personnel’s assignment of risk ratings is typically subject to review by qualified and independent: (1) peers, managers, or loan committee(s); (2) part-time or full-time employees(s); (3) internal departments staffed with credit review specialists; or (4) external credit review consultants. A risk rating review that is independent of the lending function and approval process can provide a more objective assessment of credit quality.

---

6. Small or rural institutions that have few resources or
An effective credit risk rating framework includes the following attributes:

- a formal credit risk rating system in which the ratings reflect the risk of default and credit losses, and for which a written description of the credit risk framework is maintained, including a discussion of the factors used to assign appropriate risk ratings to individual loans and retail credit portfolios, or segments thereof, with similar risk characteristics;7
- identification or grouping of loans that warrant the special attention of management or approval by the institution’s board of directors or appropriate board committee on the status of loans identified as warranting special attention or adverse classification, and the actions taken by management to strengthen the credit quality of those loans; and
- evaluation of the institution’s historical loss experience for each of the groups of loans.

Elements of an Effective Credit Risk Review System

An effective credit risk review system starts with a written credit risk review policy that is reviewed and typically approved at least annually by the institution’s board of directors or appropriate board committee to evidence its support of, and commitment to, maintaining an effective system.10 Effective policies include a description of the overall risk rating framework and establish responsibilities for loan review based on the portfolio being assessed. An effective credit risk review policy addresses the following elements, described in more detail below: the qualifications and independence of credit risk review personnel; the frequency, scope, and depth of reviews; the review of findings and follow-up; and communication and distribution of results.

Qualifications of Credit Risk Review Personnel

An effective credit risk review function is staffed with personnel who are qualified based on their level of education, experience, and extent of formal credit training. Qualified personnel are knowledgeable in both sound lending practices and the institution’s lending guidelines for the types of loans offered by the institution. The level of experience and expertise for all personnel involved in the credit risk review process is expected to be commensurate with the nature of the risk and complexity of the portfolios. In addition, qualified credit risk review personnel possess knowledge of relevant laws, regulations, and supervisory guidance.

7. A bank or savings association may have a credit risk rating framework that differs from the framework for loan classifications used by the federal banking agencies. Such banks and savings associations should maintain documentation that translates their risk ratings into the regulatory classification framework used by the federal banking agencies. This documentation will enable examiners to reconcile the totals for the various loan classifications or risk ratings under the institution’s system to the federal banking agencies’ categories contained in the Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions Attachment 1 - Classification Definitions (SR-13-18).
8. In addition to loans designated as “watch list,” this identification typically includes loans rated special mention, substandard, doubtful, or loss.
9. In particular, institutions with large and complex loan portfolios typically maintain records of their historical loss experience for credits in each of the categories in their risk rating framework. For banks and savings associations, these categories are either those used by, or those that can be translated into those used by, the federal banking agencies.
10. See 12 CFR part 208, appendix D-1 (Board).
Independence of Credit Risk Review Personnel

An effective credit risk review system incorporates both the initial identification of emerging problem loans by loan officers and other line staff, and an assessment of loans by personnel independent of the credit approval process. Placing primary responsibility on loan officers, risk officers, and line staff is important for continuous portfolio analysis and prompt identification and reporting of problem loans. Because of frequent contact with borrowers, loan officers and line staff can usually identify potential problems before they become apparent to others. However, institutions should be careful to avoid over-reliance on loan officers and line staff for identification of problem loans. An independent assessment of risk is achieved when personnel who perform the loan review do not have control over the loan and are not part of or influenced by individuals associated with the loan approval process.

While a larger institution may establish a separate department staffed with credit review specialists, cost and volume considerations may not justify such a system in a smaller institution. For example, in the review process, smaller institutions may use an independent committee of outside directors or qualified members of the staff, including loan officers, other officers, or directors, who are not involved with originating or approving the specific credits being assessed and whose compensation is not influenced by the assigned risk ratings. Whether or not the institution has a dedicated credit risk review department, it is prudent for the credit risk review function to report directly to the institution’s board of directors or a committee thereof, consistent with safety and soundness standards. Senior management may be responsible for appropriate administrative functions provided such an arrangement does not compromise the independence of the credit risk review function.

The institution’s board of directors, or a committee thereof, may outsource the credit risk review function to an independent third party. However, the responsibility for maintaining a sound credit risk review system remains with the institution’s board of directors. In any case, institution personnel who are independent from the lending function typically assess risks, develop the credit risk review plan, and verify appropriate follow-up of findings. Outsourcing of the credit risk review function to the institution’s external auditor may raise additional independence considerations.12

Frequency of Reviews

An effective credit risk review system provides for review and evaluation of an institution’s significant loans, loan products, or groups of loans typically annually, on renewal, or more frequently when internal or external factors indicate a potential for deteriorating credit quality or the existence of one or more other risk factors. The credit risk review function can also provide useful continual feedback on the effectiveness of the lending process in order to identify any emerging problems. Ongoing or periodic review of an institution’s loan portfolio is particularly important to the estimation of ACLs or the ALLL because loss expectations may change as the credit quality of a loan changes. Use of key risk indicators or performance metrics by credit risk review management can support adjustments to the frequency and scope of reviews.

Scope of Reviews

Comprehensive and effective reviews cover all segments of the loan portfolio that pose significant credit risk or concentrations, and other loans that meet certain institution-specific criteria. A properly designed scope considers the current market conditions or other external factors that may affect a borrower’s current or future ability to repay the loan. Establishment of an appropriate review scope also helps ensure that the sample of loans selected for review, or portfolio segments selected for review, is representative of the portfolio as a whole and provides reasonable assurance that any credit quality deterioration or unfavorable trends are identified. An effective credit risk review function also considers industry standards for credit risk review coverage consistent with the institution’s size, complexity, loan types, risk profile, and risk-management practices and helps to

---

verify whether the review scope is appropriate. The institution’s board of directors or appropriate board committee typically approves the scope of the credit risk review on an annual basis or whenever significant interim changes are made in order to adequately assess the quality of the current portfolio. An effective scope of credit risk review is risk-based and typically includes:

- loans over a predetermined size;
- a sufficient sample of smaller loans, new loans, and new loan products;
- loans with higher risk indicators, such as low credit scores, high credit lines, or those credits approved as exceptions to policy;
- segments of loan portfolios, including retail, with similar risk characteristics, such as those related to borrower risk (e.g., credit history), transaction risk (e.g., product and/or collateral type), or other risk factors as appropriate;
- segments of the loan portfolio experiencing rapid growth;
- exposures from non-lending activities that also pose credit risk;
- past due, nonaccrual, renewed, and restructured loans;
- loans previously adversely classified and loans designated as warranting the special attention of the institution’s management;13
- loans to insiders or related parties (for more information see Regulation O, 12 CFR 215 and this manual’s section on Regulation O);
- loans to affiliates (for more information see Regulation W, 12 CFR 223 and this manual’s sections on Regulation W); and
- loans constituting concentrations of credit risk and other loans affected by common repayment factors.

**Depth of Transaction or Portfolio Reviews**

Loans and portfolio segments selected for review are typically evaluated for:

- credit quality, soundness of underwriting and risk identification, borrower performance, and adequacy of the sources of repayment;
  - when applicable, this evaluation includes the appropriateness of automated underwriting and credit scoring, including prudent use of overrides as well as the effectiveness of account management strategies, collections, and portfolio management activities in managing credit risk;
  - reasonableness of assumptions;
  - creditworthiness of guarantors or sponsors;
  - sufficiency of credit and collateral documentation;
  - proper lien perfection;
  - proper approvals consistent with internal policies;
  - adherence to loan agreement covenants;
  - adequacy of, and compliance with, internal policies and procedures (such as those related to nonaccrual and classification or risk rating policies), laws, and regulations;
  - the appropriateness of credit loss estimation for those credits with significant weaknesses, including the reasonableness of assumptions used, and the timeliness of charge-offs; and
  - the accuracy of risk ratings and the appropriateness and timeliness of the identification of problem loans by loan officers.

**Review of Findings and Follow-Up**

An important activity of an effective credit risk review system is the discussion of the review findings, including all noted deficiencies, identified weaknesses, and any existing or planned corrective actions (including time frames for correction) with appropriate loan officers, department managers, and senior management. An effective system includes processes for all noted deficiencies and weaknesses that remain unresolved beyond the scheduled time frames for correction to be promptly reported to senior management and the board of directors or appropriate board committee.

It is important to resolve risk rating differences between loan officers and loan review personnel according to a pre-arranged process. That process may include formal appeals procedures and arbitration by an independent party or may require default to the assigned classification or risk rating that indicates lower credit quality. If credit risk review personnel conclude that a loan or loan portfolio is of a lower credit quality than is perceived by the portfolio management staff, the lower classification or risk rating typically prevails unless internal parties identify additional information sufficient to obtain the concurrence of the independent reviewer or arbiter on the higher credit quality classification or risk rating.

---

13. See note 8.
Communication and Distribution of Results

Personnel involved in the credit risk review process typically prepare a list of all loans (and portfolio segments) reviewed, the date of review, and a summary analysis that substantiates the risk ratings assigned to the loans reviewed. Effective communication also typically involves providing results of the credit risk reviews to the board of directors or appropriate board committee quarterly.\footnote{14} Comprehensive reporting includes comparative trends that identify significant changes in the overall quality of the loan portfolio, the adequacy of, and adherence to, internal policies and procedures, the quality of underwriting and risk identification, compliance with laws and regulations, and management’s response to substantive criticisms or recommendations. Such comprehensive reporting provides the board of directors or appropriate board committee with insight into the portfolio and the responsiveness of management and facilitates timely corrective action of deficiencies.

\footnotetext{14}{An effective credit risk review system provides for informing the board of directors or appropriate board committee more frequently than quarterly when material adverse trends are noted. When an institution conducts loan file reviews less frequently than quarterly, the board or appropriate board committee will typically receive results on other credit risk review activities quarterly.}
Nontraditional Mortgages—Associated Risks

The Federal Reserve and the other federal banking and thrift regulatory agencies (the agencies)1 issued the Interagency Guidance on Nontraditional Mortgage Product Risks on September 29, 2006. The guidance addresses both risk-management and consumer disclosure practices that institutions2 should employ to effectively manage the risks associated with closed-end residential mortgage products that allow borrowers to defer repayment of principal and, sometimes, interest (referred to as nontraditional mortgage loans). (See SR-06-15.)

Residential mortgage lending has traditionally been a conservatively managed business with low delinquencies and losses and reasonably stable underwriting standards. However, during the past few years consumer demand has been growing, particularly in high-priced real estate markets, for nontraditional mortgage loans. These mortgage products include such products as “interest-only” mortgages, where a borrower pays no loan principal for the first few years of the loan, and “payment-option” adjustable-rate mortgages (ARMs), where a borrower has flexible payment options with the potential for negative amortization.3

While some institutions have offered nontraditional mortgages for many years with appropriate risk management and sound portfolio performance, the market for these products and the number of institutions offering them has expanded rapidly. Nontraditional mortgage loan products are now offered by more lenders to a wider spectrum of borrowers; these borrowers may not otherwise qualify for more traditional mortgage loans and may not fully understand the risks associated with nontraditional mortgage loans.

Many of these nontraditional mortgage loans are underwritten with less stringent income and asset verification requirements (reduced documentation) and are increasingly combined with simultaneous second-lien loans.4 Such risk layering, combined with the broader marketing of nontraditional mortgage loans, exposes financial institutions to increased risk relative to traditional mortgage loans.

Given the potential for heightened risk levels, management should carefully consider and appropriately mitigate exposures created by these loans. To manage the risks associated with nontraditional mortgage loans, management should—

- ensure that loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower’s repayment capacity;
- ensure that consumers have sufficient information to clearly understand loan terms and associated risks prior to making a product choice; and
- recognize that many nontraditional mortgage loans, particularly when they have risk-layering features, are untested in a stressed environment. As evidenced by experienced institutions, these products warrant strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio. The Federal Reserve expects institutions to effectively assess and manage the risks associated with nontraditional mortgage loan products.5

Institutions should use the guidance to ensure that risk-management practices adequately address these risks. Risk-management processes, policies, and procedures in this area will be carefully scrutinized. Institutions that do not adequately manage these risks will be asked to take remedial action.

This guidance focuses on the higher risk elements of certain nontraditional mortgage products, not the product type itself. Institutions with sound underwriting, adequate risk management,

---

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.
2. The term institution(s) is used in the interagency guidance. As used in this section, institutions applies to Federal Reserve-supervised state member banks and their subsidiaries, and bank holding companies and their nonbank subsidiaries.
3. Interest-only and payment-option ARMs are variations of conventional ARMs, hybrid ARMs, and fixed-rate products. Refer to the appendix for additional information on interest-only and payment-option ARM loans. This guidance does not apply to reverse mortgages; home equity lines of credit (HELOCs), other than as discussed in the Simultaneous Second-Lien Loans section; or fully amortizing residential mortgage loan products.
4. Refer to the appendix for additional information on reduced documentation and simultaneous second-lien loans.
and acceptable portfolio performance will not be subject to criticism merely for offering such products.

### NONTRADITIONAL MORTGAGE LOAN TERMS AND UNDERWRITING STANDARDS

When an institution offers nontraditional mortgage loan products, underwriting standards should address the effect of a substantial payment increase on the borrower’s capacity to repay when loan amortization begins. Underwriting standards should also comply with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines.

Central to prudent lending is the internal discipline to maintain sound loan terms and underwriting standards despite competitive pressures. Institutions are strongly cautioned against ceding underwriting standards to third parties that have different business objectives, risk tolerances, and core competencies. Loan terms should be based on a disciplined analysis of potential exposures and compensating factors to ensure that risk levels remain manageable.

#### Qualifying Borrowers for Nontraditional Loans

Payments on nontraditional loans can increase significantly when the loans begin to amortize. Commonly referred to as payment shock, this increase is of particular concern for payment-option ARMs where the borrower makes minimum payments that may result in negative amortization. Some institutions manage the potential for excessive negative amortization and payment shock by structuring the initial terms to limit the spread between the introductory interest rate and the fully indexed rate. Nevertheless, an institution’s qualifying standards should recognize the potential impact of payment shock, especially for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores. Recognizing that an institution’s underwriting criteria are based on multiple factors, an institution should consider these factors jointly in the qualification process and potentially it may develop a range of reasonable tolerances for each factor. However, the criteria should be based upon prudent and appropriate underwriting standards, considering both the borrower’s characteristics and the product’s attributes.

For all nontraditional mortgage loan products, an institution’s analysis of a borrower’s repayment capacity should include an evaluation of the borrower’s ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule. In addition, for products that permit negative amortization, the repayment analysis should be based upon the initial loan amount plus any balance increase that may accrue from the negative amortization provision.

Furthermore, the analysis of repayment capacity should avoid overrelaxation on credit scores as a substitute for income verification in the underwriting process. The higher a loan’s credit risk, either from loan features or borrower characteristics, the more important it is to verify

---

6. Refer to 12 CFR 208.51 subpart E and appendix C and 12 CFR 225 subpart G.

7. The fully indexed rate equals the index rate prevailing at origination plus the margin that will apply after the expiration of an introductory interest rate. The index rate is a published interest rate to which the interest rate on an ARM is tied. Some commonly used indices include the 1-Year Constant Maturity Treasury Rate (CMT), the 6-Month London Interbank Offered Rate (LIBOR), the 11th District Cost of Funds (COFI), and the Moving Treasury Average (MTA), a 12-month moving average of the monthly average yields of U.S. Treasury securities adjusted to a constant maturity of one year. The margin is the number of percentage points a lender adds to the index value to calculate the ARM interest rate at each adjustment period. In different interest-rate scenarios, the fully indexed rate for an ARM loan based on a lagging index (for example, the MTA rate) may be significantly different from the rate on a comparable 30-year fixed-rate product.

8. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a loan with a 5-year interest-only period and a 30-year term would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

9. The balance that may accrue from the negative amortization provision does not necessarily equate to the full negative amortization cap for a particular loan. The spread between the introductory or “teaser” rate and the accrual rate will determine whether a loan balance has the potential to reach the negative amortization cap before the end of the initial payment-option period (usually five years). For example, a loan with a 115 percent negative amortization cap but only a small spread between the introductory rate and the accrual rate may reach a 109 percent maximum loan balance before the end of the initial payment-option period, even if only minimum payments are made. The borrower could be qualified based on this lower maximum loan balance.
the borrower’s income, assets, and outstanding liabilities.

Collateral-Dependent Loans

Institutions should avoid the use of loan terms and underwriting practices that may heighten the need for a borrower to rely on the sale or refinancing of the property once amortization begins. Loans to individuals who do not demonstrate the capacity to repay, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Institutions that originate collateral-dependent mortgage loans may be subject to criticism, corrective action, and higher capital requirements.

Risk Layering

Institutions that originate or purchase mortgage loans that combine nontraditional features, such as interest-only loans with reduced documentation or a simultaneous second-lien loan, face increased risk. When features are layered, an institution should demonstrate that mitigating factors support the underwriting decision and the borrower’s repayment capacity. Mitigating factors could include higher credit scores, lower LTV and DTI ratios, significant liquid assets, mortgage insurance, and other credit enhancements. While higher pricing is often used to address elevated risk levels, it does not replace the need for sound underwriting.

Reduced Documentation

Institutions increasingly rely on reduced documentation, particularly unverified income, to qualify borrowers for nontraditional mortgage loans. Because these practices essentially substitute assumptions and unverified information for analysis of a borrower’s repayment capacity and general creditworthiness, they should be used with caution. As the level of credit risk increases, the Federal Reserve expects an institution to more diligently verify and document a borrower’s income and debt-reduction capacity.

Clear policies should govern the use of reduced documentation. For example, stated income should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. For many borrowers, institutions generally should be able to readily document income using recent W-2 statements, pay stubs, or tax returns.

Simultaneous Second-Lien Loans

Simultaneous second-lien loans reduce owner equity and increase credit risk. Historically, as combined loan-to-value ratios rise, so do defaults. A delinquent borrower with minimal or no equity in a property may have little incentive to work with a lender to bring the loan current and avoid foreclosure. In addition, second-lien HELOCs typically increase borrower exposure to increasing interest rates and monthly payment burdens. Loans with minimal or no owner equity generally should not have a payment structure that allows for delayed or negative amortization without other significant risk-mitigating factors.

Introductory Interest Rates

As a marketing tool for payment-option ARM products, many institutions offer introductory interest rates set well below the fully indexed rate. When developing nontraditional mortgage product terms, an institution should consider the spread between the introductory rate and the fully indexed rate. Since initial and subsequent monthly payments are based on these low introductory rates, a wide initial spread means that borrowers are more likely to experience negative amortization, severe payment shock, and an earlier-than-scheduled recasting of monthly payments. Institutions should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates.

Lending to Subprime Borrowers

Mortgage programs that target subprime borrowers through tailored marketing, underwriting standards, and risk selection should follow the applicable interagency guidance on subprime

10. A loan will not be determined to be “collateral-dependent” solely through the use of reduced documentation.
lending.\footnote{11} Among other things, the subprime guidance discusses circumstances under which subprime lending can become predatory or abusive. Institutions designing nontraditional mortgage loans for subprime borrowers should pay particular attention to this guidance. They should also recognize that risk-layering features in loans to subprime borrowers may significantly increase risks for the institution and the borrower.

**Non-Owner-Occupied Investor Loans**

Borrowers financing non-owner-occupied investment properties should qualify for loans based on their ability to service the debt over the life of the loan. Loan terms should reflect an appropriate combined LTV ratio that considers the potential for negative amortization and maintains sufficient borrower equity over the life of the loan. Further, underwriting standards should require evidence that the borrower has sufficient cash reserves to service the loan, considering the possibility of extended periods of property vacancy and the variability of debt service requirements associated with nontraditional mortgage loan products.

**PORTFOLIO AND RISK-MANAGEMENT PRACTICES**

Institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of their nontraditional mortgage loan portfolios and changes in the market. Active portfolio management is especially important for institutions that project or have already experienced significant growth or concentration levels. Institutions that originate or invest in nontraditional mortgage loans should adopt more robust risk-management practices and manage these exposures in a thoughtful, systematic manner. To meet these expectations, institutions should—

- develop written policies that specify acceptable product attributes, production and portfolio limits, sales and securitization practices, and risk-management expectations;
- design enhanced performance measures and management reporting that provide early warning for increasing risk;
- establish appropriate ALLL levels that consider the credit quality of the portfolio and conditions that affect collectibility; and
- maintain capital at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility. Institutions should hold capital commensurate with the risk characteristics of their nontraditional mortgage loan portfolios.

**Nontraditional Mortgage Loan Policies**

An institution’s policies for nontraditional mortgage lending activity should set acceptable levels of risk through its operating practices, accounting procedures, and policy exception tolerances. Policies should reflect appropriate limits on risk layering and should include risk-management tools for risk-mitigation purposes. Further, an institution should set growth and volume limits by loan type, with special attention for products and product combinations in need of heightened attention due to easing terms or rapid growth.

**Concentrations in Nontraditional Mortgage Products**

Institutions with concentrations in nontraditional mortgage products should have well-developed monitoring systems and risk-management practices. Monitoring systems should keep track of concentrations in key portfolio segments such as loan types, third-party originations, geographic area, and property occupancy status. Concentrations also should be monitored by key portfolio characteristics such as non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers below established thresholds, and (5) risk-layered features. Further, institutions should consider the effect of employee incentive programs that could produce higher concentrations of nontraditional mortgage loans. Concentrations that are not effectively managed will be subject

to elevated supervisory attention and potential examiner criticism to ensure timely remedial action.

Controls

An institution’s quality control, compliance, and audit procedures should focus on mortgage lending activities posing high risk. Controls to monitor compliance with underwriting standards and exceptions to those standards are especially important for nontraditional loan products. The quality control function should regularly review a sample of nontraditional mortgage loans from all origination channels and a representative sample of underwriters to confirm that policies are being followed. When control systems or operating practices are found deficient, business-line managers should be held accountable for correcting deficiencies in a timely manner.

Since many nontraditional mortgage loans permit a borrower to defer principal and, in some cases, interest payments for extended periods, institutions should have strong controls over accruals, customer service, and collections. Policy exceptions made by servicing and collections personnel should be carefully monitored to confirm that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk. Customer service and collections personnel should receive productspecific training on the features and potential customer issues with these products.

Third-Party Originations

Institutions often use third parties, such as mortgage brokers or correspondents, to originate nontraditional mortgage loans. Institutions should have strong systems and controls in place for establishing and maintaining relationships with third parties, including procedures for performing due diligence. Oversight of third parties should involve monitoring the quality of originations so that they reflect the institution’s lending standards and compliance with applicable laws and regulations.

Monitoring procedures should track the quality of loans by both origination source and key borrower characteristics. This will help institutions identify problems such as early payment defaults, incomplete documentation, and fraud. If problems involving appraisals, loan documentation, credit, or consumer complaints are discovered, the institution should take immediate action. Remedial action could include more thorough application reviews, more frequent re-underwriting, and even termination of the third-party relationship.

Risk Management of Secondary-Market Activity

The sophistication of an institution’s secondary-market risk-management practices should be commensurate with the nature and volume of activity. Institutions with significant secondary-market activities should have comprehensive, formal strategies for managing risks. Contingency planning should include how the institution will respond to reduced demand in the secondary market.

While third-party loan sales can transfer a portion of the credit risk, an institution remains exposed to reputation risk when credit losses on sold mortgage loans or securitization transactions exceed expectations. As a result, an institution may determine that it is necessary to repurchase defaulted mortgages to protect its reputation and maintain access to the markets. In the Federal Reserve’s view, the repurchase of mortgage loans beyond the selling institution’s contractual obligation is implicit recourse. Under the risk-based capital rules, a repurchasing institution would be required to maintain risk-based capital against the entire pool or securitization. Institutions should familiarize themselves with these guidelines before deciding to support mortgage loan pools or buying back loans in default.

Management Information and Reporting

Reporting systems should allow management to detect changes in the risk profile of its nontraditional mortgage loan portfolio. The structure and content should allow the isolation of key

---

loan products, risk-layering loan features, and borrower characteristics. Reporting should also allow management to recognize deteriorating performance in any of these areas before it has progressed too far. At a minimum, information should be available by (1) loan type (for example, interest-only mortgage loans and payment-option ARMs); (2) risk-layering features (for example, payment-option ARMs with stated income and interest-only mortgage loans with simultaneous second-lien mortgages); (3) underwriting characteristics (for example, LTV, DTI, and credit score); and (4) borrower performance (for example, payment patterns, delinquencies, interest accruals, and negative amortization).

Portfolio volume and performance should be tracked against expectations, internal lending standards, and policy limits. Volume and performance expectations should be established at the subportfolio and aggregate portfolio levels. Variance analyses should be performed regularly to identify exceptions to policies and prescribed thresholds. Qualitative analysis should occur when actual performance deviates from established policies and thresholds. Variance analysis is critical to the monitoring of a portfolio’s risk characteristics and should be an integral part of establishing and adjusting risk-tolerance levels.

Stress Testing

Based on the size and complexity of their lending operations, institutions should perform sensitivity analysis on key portfolio segments to identify and quantify events that may increase risks in a segment or the entire portfolio. The scope of the analysis should generally include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the institution’s immediate control. Stress tests typically assume rapid deterioration in one or more factors and attempt to estimate the potential influence on default rates and loss severity. Stress testing should aid an institution in identifying, monitoring, and managing risk, as well as developing appropriate and cost-effective loss-mitigation strategies. The stress testing results should provide direct feedback in determining underwriting standards, product terms, portfolio concentration limits, and capital levels.

Capital and the Allowance for Loan and Lease Losses

Institutions should establish an appropriate ALLL for the estimated credit losses inherent in their nontraditional mortgage loan portfolios. They should also consider the higher risk of loss posed by layered risks when establishing their ALLL.

Moreover, institutions should recognize that their limited performance history with these products, particularly in a stressed environment, increases performance uncertainty. Capital levels should be commensurate with the risk characteristics of the nontraditional mortgage loan portfolios. Lax underwriting standards or poor portfolio performance may warrant higher capital levels.

When establishing an appropriate ALLL and considering the adequacy of capital, institutions should segment their nontraditional mortgage loan portfolios into pools with similar credit-risk characteristics. The basic segments typically include collateral and loan characteristics, geographic concentrations, and borrower qualifying attributes. Segments could also differentiate loans by payment and portfolio characteristics, such as loans on which borrowers usually make only minimum payments, mortgages with existing balances above original balances, and mortgages subject to sizable payment shock. The objective is to identify credit quality indicators that affect collectibility for ALLL measurement purposes. In addition, understanding characteristics that influence expected performance also provides meaningful information about future loss exposure that would aid in determining adequate capital levels.

Institutions with material mortgage banking activities and mortgage servicing assets should apply sound practices in valuing the mortgage servicing rights for nontraditional mortgages. The valuation process should follow generally accepted accounting principles and use reasonable and supportable assumptions.14

CONSUMER PROTECTION ISSUES

While nontraditional mortgage loans provide flexibility for consumers, the Federal Reserve is

concerned that consumers may enter into these transactions without fully understanding the product terms. Nontraditional mortgage products have been advertised and promoted based on their affordability in the near term; that is, their lower initial monthly payments compared with traditional types of mortgages. In addition to apprising consumers of the benefits of nontraditional mortgage products, institutions should take appropriate steps to alert consumers to the risks of these products, including the likelihood of increased future payment obligations. This information should be provided in a timely manner—before disclosures may be required under the Truth in Lending Act or other laws—to assist the consumer in the product selection process.

Concerns and Objectives

More than traditional ARMs, mortgage products such as payment-option ARMs and interest-only mortgages can carry a significant risk of payment shock and negative amortization, neither of which may be fully understood by consumers. For example, consumer payment obligations may increase substantially at the end of an interest-only period or upon the "recast" of a payment-option ARM. The magnitude of these payment increases may be affected by factors such as the expiration of promotional interest rates, increases in the interest-rate index, and negative amortization. Negative amortization also results in lower levels of home equity as compared with a traditional amortizing mortgage product. When borrowers go to sell or refinance the property, they may find that negative amortization has substantially reduced or eliminated their equity in the property—even when the property has appreciated. The concern that consumers may not fully understand these products is exacerbated by marketing and promotional practices that emphasize potential benefits without also providing clear and balanced information about material risks.

In light of these considerations, communications with consumers, including advertisements, oral statements, promotional materials, and monthly statements, should provide clear and balanced information about the relative benefits and risks of these products, including the risks of payment shock and of negative amortization. Clear, balanced, and timely communication to consumers of the risks of these products will provide consumers with useful information at crucial decision-making points, such as when they are shopping for loans or deciding which monthly payment amount to make. Such communication should help minimize potential consumer confusion and complaints, foster good customer relations, and reduce legal and other risks to the institution.

Legal Risks

Institutions that offer nontraditional mortgage products must ensure that they do so in a manner that complies with all applicable laws and regulations. With respect to the disclosures and other information provided to consumers, applicable laws and regulations include the following:

- Truth in Lending Act (TILA) and its implementing regulation, Regulation Z
- Section 5 of the Federal Trade Commission Act (FTC Act)

TILA and Regulation Z contain rules governing disclosures that institutions must provide for closed-end mortgages (1) in advertisements, (2) with an application, (3) before loan consummation, and (4) when interest rates change. Section 5 of the FTC Act prohibits unfair or deceptive acts or practices. Other federal laws, including the fair-lending laws and the Real Estate Settlement Procedures Act (RESPA), also apply to these transactions. Moreover, the Federal Reserve notes that the sale or securitization of a loan may not affect an institution’s potential liability for violations of TILA, RESPA, the FTC Act, or other laws in connection with its origination of the loan. State laws, including laws regarding unfair or deceptive acts or practices, also may apply.

Recommended Practices

Recommended practices for addressing the risks

---

15. These program disclosures apply to ARM products and must be provided at the time an application is provided or before the consumer pays a nonrefundable fee, whichever is earlier.

16. The Board of Governors enforces this provision under the FTC Act and section 8 of the Federal Deposit Insurance Act. See the joint Board and FDIC guidance titled Unfair or Deceptive Acts or Practices by State-Chartered Banks, March 11, 2004.
raised by nontraditional mortgage products include the following:17

Communications with Consumers

When promoting or describing nontraditional mortgage products, institutions should provide consumers with information that is designed to help them make informed decisions when selecting and using these products. Meeting this objective requires appropriate attention to the timing, content, and clarity of information presented to consumers. Thus, institutions should provide consumers with information at a time that will help consumers select products and choose among payment options. For example, institutions should offer clear and balanced product descriptions when (1) a consumer is shopping for a mortgage (such as when the consumer makes an inquiry to the institution about a mortgage product and receives information about nontraditional mortgage products) or (2) when marketing relating to nontraditional mortgage products is provided by the institution to the consumer. Clear and balanced information should not be offered by the institution only upon the submission of an application or at consummation.18 The provision of such information would serve as an important supplement to the disclosures currently required under TILA and Regulation Z as well as other laws.19

Promotional Materials and Product Descriptions

To assist other consumers in their product selec-

17. Institutions should review the recommendations relating to mortgage lending practices set forth in other supervisory guidance from their respective primary regulators, as applicable, including guidance on abusive lending practices.

18. Institutions also should strive to (1) focus on information important to consumer decision making; (2) highlight key information to make it more prominent; (3) employ a user-friendly and readily navigable format for presenting the information; and (4) use plain language, with concrete and realistic examples. Comparative tables and information describing key features of available loan products, including reduced documentation programs, also may be useful for consumers who are considering the nontraditional mortgage products and other loan features described in this guidance.

19. Institutions may not be able to incorporate all of the practices recommended in this guidance when advertising nontraditional mortgages through certain forms of media, such as radio, television, or billboards. Nevertheless, institutions should provide clear and balanced information about the risks of these products in all forms of advertising.

20. Consumers also should be apprised of other material changes in payment obligations, such as balloon payments.

Nontraditional Mortgages—Associated Risks

...
tation loan programs and there is a pricing premium attached to the reduced documentation program, consumers should be alerted to this fact.

**Monthly Statements on Payment-Option ARMs.** Monthly statements that are provided to consumers on payment-option ARMs should provide information that enables consumers to make informed payment choices, including an explanation of each payment option available and the impact of that choice on loan balances. For example, the monthly payment statement should contain an explanation, as applicable, next to the minimum payment amount that making this payment would result in an increase to the consumer’s outstanding loan balance. Payment statements also could provide the consumer’s current loan balance, what portion of the consumer’s previous payment was allocated to principal and to interest, and, if applicable, the amount by which the principal balance increased.

Institutions should avoid leading payment-option ARM borrowers to select a nonamortizing or negatively amortizing payment (for example, through the format or content of monthly statements).

**Practices to Avoid.** Institutions also should avoid practices that obscure significant risks to the consumer. For example, if an institution advertises or promotes a nontraditional mortgage by emphasizing the comparatively lower initial payments permitted for these loans, the institution also should provide clear and comparably prominent information alerting the consumer to the risks. Such information should explain, as relevant, that these payment amounts will increase, that a balloon payment may be due, and that the loan balance will not decrease and may even increase due to the deferral of interest or principal payments. Similarly, institutions should avoid promoting payment patterns that are structurally unlikely to occur.21 Such practices could raise legal and other risks for institutions, as described more fully above.

Institutions also should avoid such practices as (1) giving consumers unwarranted assurances or predictions about the future direction of interest rates (and, consequently, the borrower’s future obligations); (2) making one-sided representations about the cash savings or expanded buying power to be realized from nontraditional mortgage products in comparison with amortizing mortgages; (3) suggesting that initial minimum payments in a payment-option ARM will cover accrued interest (or principal and interest) charges; and (4) making misleading claims that interest rates or payment obligations for these products are “fixed.”

**Control Systems**

Institutions should develop and use strong control systems to monitor whether actual practices are consistent with their policies and procedures relating to nontraditional mortgage products. Institutions should design control systems to address compliance and consumer information concerns as well as the safety and soundness considerations discussed in this guidance. Lending personnel should be trained so that they are able to convey information to consumers about product terms and risks in a timely, accurate, and balanced manner. As products evolve and new products are introduced, lending personnel should receive additional training, as necessary. Lending personnel should be monitored to determine whether they are following these policies and procedures. Institutions should review consumer complaints to identify potential compliance, reputation, and other risks. Attention should be paid to appropriate legal review and to using compensation programs that do not improperly encourage lending personnel to direct consumers to particular products.

With respect to nontraditional mortgage loans that an institution makes, purchases, or services using a third party, such as a mortgage broker, correspondent, or other intermediary, the institution should take appropriate steps to mitigate risks relating to compliance and consumer information concerns discussed in this guidance. These steps would ordinarily include, among other things, (1) conducting due diligence and establishing other criteria for entering into and maintaining relationships with such third parties, (2) establishing criteria for third-party compensation designed to avoid providing incentives for originations inconsistent with this guidance, (3) setting requirements for agree-

---

21. For example, marketing materials for payment-option ARMs may promote low predictable payments until the recast date. Such marketing should be avoided in circumstances in which the minimum payments are so low that negative amortization caps would be reached and higher payment obligations would be triggered before the scheduled recast, even if interest rates remain constant.
ments with such third parties, (4) establishing procedures and systems to monitor compliance with applicable agreements, bank policies, and laws, and (5) implementing appropriate corrective actions in the event that the third party fails to comply with applicable agreements, bank policies, or laws.

APPENDIX
(Terms Used in This Document)

Interest-Only Mortgage Loan. An interest-only mortgage loan refers to a nontraditional mortgage in which, for a specified number of years (for example, three or five years), the borrower is required to pay only the interest due on the loan, during which time the rate may fluctuate or may be fixed. After the interest-only period, the rate may be fixed or it may fluctuate based on the prescribed index and payments, including both principal and interest.

Payment-Option ARM. A payment-option ARM is a nontraditional adjustable-rate mortgage that allows the borrower to choose from a number of different payment options. For example, each month, the borrower may choose a minimum payment option based on a “start” or introductory interest rate, an interest-only payment option based on the fully indexed interest rate, or a fully amortizing principal and interest payment option based on a 15- or 30-year loan term, plus any required escrow payments. The minimum payment option can be less than the interest accruing on the loan, resulting in negative amortization. The interest-only option avoids negative amortization but does not provide for principal amortization. After a specified number of years, or if the loan reaches a certain negative amortization cap, the required monthly payment amount is recast to require payments that will fully amortize the outstanding balance over the remaining loan term.

Reduced Documentation. Reduced documentation is a loan feature that is commonly referred to as “low doc/no doc,” “no income/no asset,” “stated income,” or “stated assets.” For mortgage loans with this feature, an institution sets reduced or minimal documentation standards to substantiate the borrower’s income and assets.

Simultaneous Second-Lien Loan. A simultaneous second-lien loan is a lending arrangement where either a closed-end second lien or a home equity line of credit is originated simultaneously with the first-lien mortgage loan, typically in lieu of a higher down payment.
1. To ascertain if the bank has adequate risk-management processes, policies, and procedures to address the risk associated with its nontraditional mortgage loans.

2. To evaluate whether the bank’s nontraditional mortgage loan terms are supported by a disciplined analysis of its potential exposures versus the mitigating factors that ensure that risk levels are adequately managed.

3. To determine if the underwriting standards for nontraditional mortgage loans comply with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines.

4. To evaluate whether the bank’s management carefully considers and appropriately assesses and mitigates the risk exposures created by the nontraditional mortgage loans by ensuring that—
   a. its loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower’s repayment capacity;
   b. its nontraditional mortgage loan products have strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
   c. its consumers have sufficient information to clearly understand the loan terms and associated risks prior to making a nontraditional mortgage loan product choice.

5. To determine if the bank has borrower qualification criteria that include an evaluation of a borrower’s repayment capacity and ability to repay the debt—the full amount of the credit extended, including any balance increase that may accrue from negative amortization—by the final maturity date at the fully indexed rate.
RISK MITIGATION

1. Assess the bank’s management procedures to mitigate the risk created by nontraditional mortgage products. Determine that—
   a. underwriting standards and terms are consistent with prudent lending practices, including consideration of each borrower’s repayment capacity;
   b. products are supported by strong risk-management standards, capital levels that are commensurate with their risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
   c. borrowers have sufficient information to clearly understand the terms of their loans and their associates risks.

UNDERWRITING STANDARDS

1. Determine if the bank’s underwriting standards—
   a. address the effect of a substantial payment increase on the borrower’s capacity to repay when loan amortization begins,
   b. comply with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines, and
   c. require that loan terms are based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels remain manageable.

2. Verify that the bank’s nontraditional mortgage loan qualification standards recognize the potential impact of payment shock (particularly for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores).

3. Ascertain that the analysis of a borrower’s repayment capacity includes—
   a. an evaluation of the borrower’s ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule,
   b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision, and
   c. avoiding an overreliance on credit scores as a substitute for income verification or a reliance on the sale or refinancing of the property (pledged as collateral) when amortization begins.

4. Determine whether originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower’s repayment capacities.

5. Verify that the bank has clear loan underwriting policies governing the use of—
   a. reduced documentation of the borrower’s financial capacity (for example, non-verification of reported income when the borrower’s income can be documented based on recent W-2 statements, pay stubs, or tax returns);
   b. minimal or no owner’s equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors);
   c. introductory interest rates (banks should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates);
   d. subprime lending (adherence to the interagency guidance on subprime lending); and
   e. non-owner-occupied investor loans (qualifications should be based on the borrower’s ability to service the debt over the life of the loan, which would include a combined LTV ratio that considers negative amortization and sufficient borrower equity, and continuing cash reserves).

PORTFOLIO AND RISK-MANAGEMENT PRACTICES

1. If the bank originates or invests in nontraditional mortgage loans, determine if more

---

robust risk-management practices have been adopted to manage the exposures.
a. Verify that there are appropriate written lending policies that have been adopted and are being used and monitored, specifying acceptable product attributes, production and portfolio limits (growth and volume limits by loan type), sales and securitization practices, and risk-management expectations (acceptable levels of risk).
b. Determine if enhanced performance measures have been designed and if there is management reporting that provides an early warning for increasing risk.
c. Find out if the appropriate levels for the allowance for loan and lease losses (ALLL) have been established that consider the credit quality of the portfolio and the conditions that affect collectibility.
d. Evaluate whether adequate capital is maintained at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility.
e. Determine if capital is held commensurate with the risk characteristics of the bank’s nontraditional mortgage loan portfolios.

2. If the bank has concentrations in nontraditional mortgage products, determine if there are—
a. well-developed monitoring systems and risk-management practices that monitor and keep track of concentrations in key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status, and
b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features.

3. Determine if the bank has adequate quality controls as well as compliance and audit procedures that focus on mortgage lending activities posing high risk.
a. Determine if the bank has strong internal controls over accruals, customer service, and collections.
b. Verify that policy exceptions made by servicing and collections personnel are carefully monitored and that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk.
c. Find out if the quality control function regularly reviews (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters confirming that underwriting policies are followed.

4. Bank oversight of third-party originators—
a. determine if the bank has strong systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence, and
b. find out if the oversight of third-party mortgage loan origination lending practices includes monitoring the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) so that they are reflective of the bank’s lending standards and in compliance with applicable laws and regulations.

5. Determine if the bank’s risk-management practices are commensurate with the nature, volume, and risk of its secondary-market activities.
a. Find out if there are comprehensive formal strategies for managing the risks arising from significant secondary-market activities.
b. Ascertain if contingency planning includes how the bank will respond to a decline in loan demand in the secondary market.
c. Determine if there were any repurchases of defaulted mortgages and if the bank complies with its risk-based capital guidelines.

6. Evaluate the appropriateness of management information and reporting systems for the level and nature of the bank’s mortgage lending activity.
a. Verify that the reporting allows management to detect changes in the risk profile, or deteriorating performance, of its nontraditional mortgage loan portfolio.
b. Determine if management information is reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance.
c. Find out if—
  1) portfolio volume and performance are
tracked against expectations, internal lending standards, and policy limits;
2) volume and performance expectations are established at the subportfolio and aggregate portfolio levels;
3) variance analyses are regularly performed to identify exceptions to policies and prescribed thresholds; and
4) qualitative analyses are performed when actual performance deviates from established policies and thresholds.
d. Determine if the bank, based on the size and complexity of its lending operations, performs sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio.
e. Verify that the scope of the sensitivity analysis includes stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the bank’s immediate control.
f. Find out if the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels.
g. Determine if the bank has established an appropriate ALLL for the estimated credit losses and commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks).
h. If the bank has material mortgage banking activities and mortgage servicing assets—
a. evaluate whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages and
b. ascertain if the valuation process followed the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and whether reasonable and supportable assumptions were used.
Review the bank’s internal controls, policies, procedures, and practices for making and servicing nontraditional mortgage loans. The bank’s internal control system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

RISK MANAGEMENT AND RISK MITIGATION

1. Are there procedures established to control, limit, and monitor the authorization of nontraditional mortgage loan transactions and to establish the appropriate supervision and preliminary review of nontraditional mortgage loan decisions?
2. For nontraditional mortgage loans, is there an appropriate separation of the employees’ duties involving (1) the authorizing, executing, recording, and adjusting of loans, (2) receiving payments, (3) reconciling the accounts, and (4) maintaining clear title to, and custody of, pledged collateral—all to safeguard against the possible misappropriation of the bank’s funds?
3. Has the bank’s management developed risk-mitigation procedures for nontraditional mortgage products? If so, do the risk-mitigation procedures—
   a. set forth underwriting standards and terms that are consistent with prudent lending practices, including the consideration of each borrower’s repayment capacity, third-party credit reports, pledged collateral valuations, and regularly timed follow-up reviews thereon?
   b. require that nontraditional mortgage products be supported by appropriate supervisory oversight and review, strong risk-management standards, capital levels that are commensurate with their risk, and an adequate allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio?
   c. require that borrowers be provided with sufficient information so they can clearly understand the terms of their loans and their associated risks?

UNDERWRITING STANDARDS

1. Do the bank’s underwriting standards—
   a. appropriately address and assess the effect of a substantial payment increase in the borrower’s capacity to repay when loan amortization begins?
   b. establish practices consistent with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines?
   c. require that loan terms be based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels will remain manageable?
2. Does the bank’s nontraditional mortgage loan qualification standards recognize the potential impact of payment shock, particularly for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores?
3. Does the analysis of a borrower’s repayment capacity include—
   a. an evaluation of the borrower’s ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule?
   b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision?
   c. an avoidance of overreliance on credit scores as a substitute for income verification or reliance on the sale or refinancing of the property when amortization begins?
4. Do originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower’s repayment capacities?
5. Are there clear bank loan underwriting policies governing the use of—
   a. reduced documentation of the borrower’s financial capacity (for example, non-
verification of reported income when the borrower’s income can be documented based on recent W-2 statements, pay stubs, or tax returns)?

b. minimal or no owner’s equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors)?

c. introductory interest rates (banks should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates)?

d. subprime lending (including underwriting policies that are consistent with the interagency guidance on subprime lending)?

e. non-owner-occupied investor loans (the qualifications should be based on the borrower’s ability to service the debt over the life of the loan, which would include a combined LTV ratio that would consider negative amortization and sufficient borrower equity, and continuing cash reserves)?

PORTFOLIO AND RISK-MANAGEMENT PRACTICES

1. If the bank originates or invests in nontraditional mortgage loans—
   a. has the bank adopted risk-management practices to keep pace with the growth and changing risk profile of its nontraditional loan portfolio?
   b. are there appropriate bank-adopted (and monitored) written lending policies in use that specify—
      • acceptable product attributes?
      • production and portfolio limits (growth and volume limits by loan type)?
      • sales and securitization practices?
      • risk-management expectations (acceptable levels of risk)?
   c. have enhanced performance measures been designed and is there management reporting that will provide an early warning of increasing risk?
   d. are there appropriate ALLL levels established that consider the credit quality of the portfolio and the conditions that affect collectibility?
   e. is the bank’s capital maintained at a level that is adequate and commensurate with the characteristics of its nontraditional mortgage loan portfolio, including the effect of stressed economic conditions on the collectibility of such loans?

2. If the bank has concentrations in nontraditional mortgage products, are there—
   a. well-developed monitoring systems and risk-management practices that monitor and keep track of concentrations in key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status?
   b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features?

3. Does the bank have adequate quality controls, including an independent internal loan review staff, that will consider and review loan documentation and other compliance and audit procedures that focus on mortgage lending activities posing high risk? Are there—
   a. strong internal controls over accruals, customer service, and collections?
   b. reviews of policy exceptions, conducted by servicing and collections personnel, which are carefully monitored, and are practices such as re-aging, payment deferrals, and loan modifications regularly reviewed to ensure that they are not inadvertently increasing risk?
   c. regular reviews conducted by the quality control function that focus on (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters to confirm that underwriting policies are followed?

4. Bank oversight of third-party originators—
   a. Does the bank have strong internal systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence?

---

b. Are there staff designated to provide bank oversight of third-party mortgage loan origination lending practices, which include the monitoring of the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) to ensure that the originations (1) reflect adherence to the bank’s lending standards and (2) compliance with applicable laws and regulations?

5. Are the bank’s risk-management practices for nontraditional mortgage loans commensurate with the nature, volume, and risk of its secondary-market activities? If so, are there—
   a. comprehensive formal strategies for managing the risks arising from significant secondary-market activities?
   b. bank contingency plans that include how the bank will respond to a decline in loan demand in the secondary market?
   c. repurchases of defaulted mortgages and, if so, is the bank in compliance with its risk-based capital guidelines?

MANAGEMENT INFORMATION SYSTEM

1. Are the bank’s management information system (MIS) and reports appropriate for the level and nature of the bank’s nontraditional mortgage lending activity?

2. Do the systems and reports allow management to detect changes in the risk profile of, or deteriorating performance in, its nontraditional mortgage loan portfolio?

3. For the bank’s nontraditional loan portfolio, is management information reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance?

4. Is the bank’s nontraditional mortgage portfolio’s—
   a. volume and performance tracked against expectations, internal lending standards, and policy limits?
   b. volume and performance expectations established at the sub portfolio and aggregate portfolio levels?
   c. variance analyses regularly performed to identify exceptions to policies and prescribed thresholds?
   d. qualitative analyses performed when actual performance deviates from established policies and thresholds?

5. Does the bank’s MIS provide reports consisting of a trial balance of the borrower’s loan balances, and an aged trial balance (based on the borrower’s loan repayment terms), for the entire loan portfolio (the totals of which agree with the bank’s respective general ledger balance[s]), but with nontraditional mortgage loan balances segregated and subtotaled (or totaled)?

6. Does the bank, based on the size and complexity of its lending operations, perform sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio?

7. Does the scope of the sensitivity analysis include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the bank’s immediate control?

8. Do the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels?

9. Has the bank established and maintained an appropriate ALLL for the estimated credit losses on nontraditional mortgage loans?

10. Do designated supervisory personnel periodically review adjustments to, and of, past due and charged-off nontraditional mortgage loans to confirm that appropriate actions have been taken, including collections and recoveries?

11. Does the bank have commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks)?

12. If the bank has material mortgage banking activities and mortgage servicing assets—
   a. has it evaluated whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages?
   b. does the bank’s valuation process follow the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and have reasonable and supportable assumptions been used?
CONCLUSION

1. With respect to the bank’s management of its nontraditional mortgage loan portfolio, is there adequate separation of duties, proper authorization of transactions and activities, adequate documents and records, physical control over assets and records, and independent checks on performance?

2. Have any responses to the foregoing information revealed any significant deficiencies and weaknesses in the bank management’s system of internal controls over its nontraditional mortgage loan portfolio—weaknesses that effect controls over risk management and assessment, the reliability of financial reporting, the accounting information and communication system, efficiency and effectiveness of operations, compliance with laws and regulations, and monitoring of internal control performance?

3. Are there any internal control deficiencies in areas that are not covered within this questionnaire that impair any controls? Explain any additional examination procedures that are, or would be, necessary to draw conclusions about the adequacy of the internal controls over the bank’s nontraditional mortgage loans.

4. Based on an overall evaluation, as evidenced by your answers to the foregoing questions, are internal controls over the bank’s nontraditional mortgage loans adequate or inadequate?
LOAN-BROKERAGE AND -SERVICING ACTIVITIES

Loan-brokerage and -servicing activities are undertaken by mortgage banking enterprises and the mortgage banking operations of commercial banks. Mortgage banking activities consist primarily of two separate but related activities: (1) the origination or acquisition of mortgage loans and the sale of the loans to permanent investors and/or (2) the subsequent long-term servicing of the loans. A mortgage banking enterprise usually retains the right to service mortgage loans it sells to permanent investors. An enterprise’s right to service mortgage loans other than its own is an intangible asset that may be acquired separately. The rights to service mortgage loans are purchased and sold frequently. Mortgage loans are acquired to sell to permanent investors from a variety of sources, including applications received directly from borrowers (in-house originations), purchases from brokers, purchases from investors, and conversions of various forms of interim financing to permanent financing. A service fee, usually based on a percentage of the outstanding principal balance of the mortgage loan, is received for performing loan-administration functions. When servicing fees exceed the cost of performing servicing functions, the existing contractual right to service mortgage loans has economic value.

A number of bank services may result in assets and liabilities that do not have to be entered on the general ledger. These services are considered off-balance-sheet activities and may include the origination, sale, and servicing of various loans. Servicing and accounting activities cover functions related initially to recording the loan, collecting and recording payments, and reporting loan transactions and balances (including reporting past due loans). Unlike the other activities in this section, servicing and accounting activities are not directly related to credit risk. However, some aspects of accounting and servicing activities, such as the accounting system’s ability to produce accurate past due loan reports, indirectly contribute to controlling credit risk. Also, poorly designed or ineffective servicing and accounting activities can contribute to increased risk in areas besides credit, such as fraud and insider abuse.

The origination, sale, and servicing of various types of loans usually have been associated with mortgage loans. But increasingly, origination and servicing activities have also been observed in government-guaranteed loans (or portions thereof), consumer loans, and commercial loans. Improper management and control of these activities by the servicer presents certain supervisory concerns. If the bank servicer is continually originating additional loans to be serviced, the bank may find itself responsible for servicing more loans than it can prudently manage. Failure to properly administer loans may lead to legal or financial liabilities that could adversely affect the bank’s capital.

ACCOUNTING GUIDANCE

The following accounting pronouncements issued by the Financial Accounting Standards Board (FASB) apply to mortgage banking activities:

• FAS 5, Accounting for Contingencies
• FAS 65, Accounting for Certain Mortgage Banking Activities
• FAS 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases
• FAS 115, Accounting for Certain Investments in Debt and Equity Securities (paragraph 7 was amended by FAS 140)
• FAS 133, Accounting for Derivative Instruments and Hedging Activities (amended by FAS 140)
• FAS 134, Accounting for Mortgage-Backed Securities Retained After the Securitization of Mortgage Loans Held for Sale by a Mortgage Banking Enterprise
• FAS 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities
• FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
• FAS 149, Amendment of Statement 133 on Derivative Instruments and Hedging Activities
• FAS 154, Accounting Changes and Error Corrections
The accounting standards for nonrefundable fees and costs associated with lending, committing to lend, and purchasing a loan or group of loans are set forth in FASB Statement No. 91, “Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases,” (FAS 91). A summary of the statement follows. The statement applies to all types of loans as well as to debt securities (but not to loans or debt securities carried at market value if the changes in market value are included in earnings) and all types of lenders.

Nonrefundable loan fees paid by the borrower to the lender may have many different names, such as origination fees, points, placement fees, commitment fees, application fees, management fees, restructuring fees, and syndication fees. FAS 91 applies to both a lender and a purchaser and should be applied to individual loan contracts. Aggregation of similar loans for purposes of recognizing net fees or costs, purchase premiums, or discounts is permitted under certain circumstances specified in FAS 91, or if the result does not differ materially from the amount that would have been recognized on an individual loan-by-loan basis. In general, FAS 91 specifies the following:

- Loan-origination fees should be deferred and recognized over the life of the related loan as an adjustment of yield (interest income). Once a bank adopts FAS 91, recognizing a portion of loan fees as revenue to offset all or part of origination costs in the reporting period in which a loan is originated is no longer acceptable.

- Certain direct loan-origination costs specified in FAS 91 should be deferred and recognized over the life of the related loan as a reduction of the loan’s yield. Loan-origination fees and related direct loan-origination costs for a given loan should be offset and only the net amount deferred and amortized.

- Direct loan-origination costs should be offset against related commitment fees, and the net amounts should be deferred except for:
  - commitment fees (net of costs) when the likelihood that the commitment will be exercised is remote; in these cases, the fees should generally be recognized as service-fee income on a straight-line basis over the loan-commitment period, and
  - retrospectively determined fees, which are recognized as service-fee income when the amount of the fees are determined.

All other commitment fees (net of costs) are to be deferred over the entire commitment period and recognized as an adjustment of yield over the related loan’s life or, if the commitment expires unexercised, recognized in income upon expiration of the commitment.

- Loan-syndication fees should be recognized by the bank managing a loan syndication (the syndicator) when the syndication is complete unless a portion of the syndication loan is retained. If the yield on the portion of the loan retained by the syndicator is less than the average yield to the other syndication participants after considering the fees passed through by the syndicator, the syndicator should defer a portion of the syndication fee to produce a yield on the portion of the loan retained that is not less than the average yield on the loans held by the other syndication participants.

- Loan fees, certain direct loan-origination costs, and purchase premiums and discounts on loans are to be recognized as an adjustment of yield generally by the interest method based on the contractual term of the loan. However, if the bank holds a large number of similar loans for which prepayments are probable and if the timing and amount of prepayments can be reasonably estimated, the bank may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. Fees should not be recognized over the estimated average life of a group of loans.

Examiners should review the extent and nature of servicing activities to ensure that they are conducted in a safe and sound manner. Loan-origination fees and related direct loan-origination costs of loans held for sale should be accounted for in accordance with FAS 91, as discussed above. Improper practices should be criticized.
RISK MANAGEMENT AND THE VALUATION AND HEDGING OF MORTGAGE-SERVICING ASSETS ARISING FROM MORTGAGE BANKING ACTIVITIES

A bank’s board of directors and senior management are expected to take into account the potential exposure of both earnings and capital to changes in a bank’s mortgage banking assets and operations under expected and stressed market conditions. Banks are expected to have comprehensive documentation that adequately substantiates and validates the carrying values of its mortgage-servicing assets (MSAs) and the underlying assumptions used to derive those values. The analyses and processes should be fully documented to support the amortization and timely recognition of impairment of the bank’s MSAs. (See SR-03-4.)

The guidance that follows focuses on the risks associated with these aspects of mortgage banking: valuation and modeling processes, hedging activities, management information systems, and internal audit processes. When banks originate mortgage loans, they often sell the loans into the secondary market. Yet banks often retain and recognize the servicing of those MSAs, which are complex and volatile assets that are subject to interest-rate risk. MSAs can become impaired as interest rates fall and borrowers refinance or prepay their mortgage loans. This impairment can lead to earnings volatility and the erosion of capital, if the risks inherent in the MSAs are not properly hedged.

When accounting for MSAs, banks are expected to follow FAS 140, which requires the following accounting treatment for servicing assets (including MSAs):  

1. initially record servicing assets at fair value, presumably the price paid if purchased, or at their allocated carrying amount based on relative fair values if retained in a sale or securitization;  
2. amortize servicing assets in proportion to, and over the period of, estimated net servicing income; and  
3. stratify servicing assets based on one or more of the predominant risk characteristics of the underlying financial assets, assess the strata for impairment based on fair value, and report them on the balance sheet at the lower of unamortized cost or fair value through the use of valuation allowances.

Fair value is defined in FAS 140 as the amount at which an asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets for similar assets provide the best evidence of fair value and must be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value must be based on the best information available. The estimate of fair value must consider prices for similar assets and the results of valuation techniques to the extent available.

Examination Concerns on the Valuation of Mortgage-Servicing Assets

Banks involved in mortgage-servicing operations should use market-based assumptions that are reasonable and supportable in estimating the fair value of servicing assets. Specifically, bulk, flow, and daily MSA/loan pricing activities observed in the market should be evaluated to ensure that a bank’s MSA valuation assumptions are reasonable and consistent with market activity for similar assets. Many banks also use models to estimate the fair value of their MSAs and substantiate their modeled estimate of MSA fair value by comparing the model output with general or high-level peer surveys. Such a comparison, however, is often performed without adequate consideration of the specific attributes of the bank’s own MSAs.

Examiners should consider the following concerns as an indication that additional scrutiny is necessary:

1. Further guidance on the accounting for servicing assets and liabilities can be found in the instructions for the Reports of Condition and Income (Call Report); FAS 140 FASB Staff Implementation Guide; and the AICPA Statement on Auditing Standards 101, “Auditing Fair Value Measurements and Disclosures.”
2. FAS 140 indicates, “Typically, the benefits of servicing are expected to be more than adequate compensation to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability.”

Commercial Bank Examination Manual

November 2020
Page 3
The Federal Reserve expects state member banks to perform mortgage banking operations in a safe and sound manner. Management should ensure that detailed policies and procedures are in place to monitor and control mortgage banking activities, including loan production, pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market transactions, servicing operations, and management risk characteristics of the underlying mortgage loans. Such characteristics may include financial asset type, size, interest rate, origination date, term, and geographic location. Banks are expected to identify a sufficient number of risk characteristics to adequately stratify each MSA and provide for a reasonable and valid impairment assessment. Stratification practices that ignore predominant risk characteristics are a supervisory concern.

- Continued use of a valuation allowance for the impairment of a stratum of MSAs when repayment of the underlying loans at a rate faster than originally projected indicates the existence of an impairment for which a direct write-down should be recorded.
- Failure to assess actual cash-flow performance. (The actual cash flows received from the serviced portfolio must be established in order to determine the benefit of MSAs to the bank.)
- Failure to validate or update models for new information.
  — Inaccuracies in valuation models can result in erroneous MSA values and affect future hedging performance. Models should be inventoried and periodically revalidated, including an independent assessment of all key assumptions.

**RISK MANAGEMENT OF MORTGAGE BANKING ACTIVITIES**

The Federal Reserve expects state member banks to perform mortgage banking operations in a safe and sound manner. Management should ensure that detailed policies and procedures are in place to monitor and control mortgage banking activities, including loan production, pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market transactions, servicing operations, and management
(including hedging) of mortgage-servicing assets. Reports and limits should focus on key risks, profitability, and proper accounting practices. MSAs possess interest rate-related option characteristics that may weaken a bank’s earnings and capital strength when interest rates change. Accordingly, banks engaged in mortgage banking activities should consider all aspects of the federal banking agencies’ policy on interest-rate risk. In addition, banks with significant mortgage banking operations or mortgage-servicing assets should incorporate these activities into their critical planning processes and risk-management oversight. The planning process should include careful consideration of how the mortgage banking activities affect the bank’s overall strategic, business, and asset-liability plans. Risk-management considerations include the potential exposure of both earnings and capital to changes in the value and performance of mortgage banking assets under expected and stressed market conditions. Furthermore, a bank’s board of directors should establish limits on investments in mortgage banking assets and evaluate and monitor such investment concentrations (on the basis of both asset and capital levels) on a regular basis.

During examinations of mortgage banking activities, examiners should review mortgage banking policies, procedures, and management information systems to ensure that the directors, managers, and auditors are adequately addressing the following matters.

Valuation and Modeling Processes

- Comprehensive documentation standards for all aspects of mortgage banking, including mortgage-servicing assets.
  - In particular, management should substantiate and validate the initial carrying amounts assigned to each pool of MSAs and the underlying assumptions as well as the results of periodic reviews of each asset’s subsequent carrying amount and fair value. The validation process should compare actual performance with predicted performance. Management should ensure proper accounting treatment for MSAs on a continuing basis.
  - MSA impairment analyses that use reasonable and supportable assumptions.
    - Analyses should employ realistic estimates of adequate compensation, future revenues, prepayment speeds, servicing costs, mortgage-default rates, and discount rates. Fair values should be based on market prices and underlying valuation assumptions for transactions in the marketplace involving similar MSAs. Management should avoid relying solely on peer-group surveys or the use of unsupportable assumptions. The Federal Reserve encourages banks to obtain periodic third-party valuations by qualified market professionals to support the fair values of their MSAs and to update internal models.
  - Comparison of assumptions used in valuation models to the bank’s actual experience in order to substantiate the value of MSAs.
    - Management should measure the actual performance of MSAs by analyzing gross monthly cash flows of servicing assets relative to the assumptions and projections used in each quarterly valuation. In addition, a comparison of the first month’s actual cash received on new MSAs with the projected gross cash flows can help validate the reasonableness of initial MSA values prior to the impact of prepayments and discount rates. This analysis is a critical tool in understanding the profitability of mortgage servicing to a bank; however, it is not a substitute for the estimation of the fair value of MSAs under GAAP.
  - Review and approval of results and assumptions by management.
    - Given the sensitivity of the MSA valuation to changes in assumptions and valuation policy, any such changes should be reviewed and approved by management and, where appropriate, by the board of directors.
  - Comparison of models used throughout the company including valuation, hedging, pricing, and bulk acquisition.
    - Companies often use multiple models and assumption sets in determining the values

---

4. See SR-96-13, Joint Agency Policy Statement on Interest Rate Risk (June 26, 1996), and the Interest Rate Risk Management section.

5. As defined in FAS 140, “adequate compensation” is “the amount of benefits of servicing (i.e., revenues from contractually specified servicing fees, late charges, and other ancillary sources) that would fairly compensate a substitute servicer should one be required, which includes the profit that would be demanded in the marketplace.”
for MSAs depending on their purpose—pricing versus valuation. Any inconsistencies between these values should be identified, supported, and reconciled.

- Appropriate amortization practices.
  - Amortization of the remaining cost basis of MSAs should reflect actual prepayment experience. Amortization speeds should correspond to and be adjusted to reflect changes in the estimated remaining net servicing income period.
- Timely recognition of impairment.
  - Banks must evaluate MSAs for impairment at least quarterly to ensure amounts reported in the call report are accurately stated. Banks will generally be expected to record a direct write-down of MSAs when, and for the amount by which, any portion of the unamortized cost of a mortgage-servicing asset is not likely to be recovered in the future.

### Mortgage Banking Hedging Activities

- Systems to measure and control interest-rate risk.
  - Hedging activities should be well developed and communicated to responsible personnel. Successful hedging systems will mitigate the impact of prepayments on MSA values and the effects of interest-rate risk in the mortgage pipeline and warehouse.
- Approved hedging products and strategies.
  - Management should ensure appropriate systems and internal controls are in place to oversee hedging activities, including monitoring the effectiveness of hedging strategies and reviewing concentrations of hedge instruments and counterparties.
- Hedge accounting policies and procedures.
  - Banks should ensure their hedge accounting methods are adequately documented and consistent with GAAP.

### Management Information Systems

- Accurate financial reporting systems, controls, and limits.
  - At a minimum, the board should receive information on hedged and unhedged positions, mark-to-market analyses, warehouse aging, the valuation of MSAs, various rate shock-scenario and risk exposures, the creation of economic value, and policy exceptions whenever material exposure to MSAs exists.
- Systems that track quality-control exceptions.
  - Quality-control reports should be analyzed to determine credit quality, loan characteristics and demographics, trends, and sources of problems. Sound quality-control programs are also beneficial in the early detection of deteriorating production quality and salability as well as in the prevention and detection of fraudulent activities.
- Systems that track and collect required mortgage loan documents.
  - Management should ensure adequate control processes are in place for both front-end-closing and post-closing loan documents. If mortgages are not properly documented, a bank may be forced to hold unsold mortgages for extended periods or repurchase mortgages that have been sold. Further, management should ensure that adequate analyses are performed and allowances are established for estimated probable losses arising from documentation deficiencies on closed loans.
- Systems that monitor and manage the risks associated with third-party originated loans.
  - Banks often originate loans through broker and correspondent channels. Management should ensure that prudent risk-management systems are in place for broker and correspondent approvals and ongoing monitoring, including controls on the appraisal and credit-underwriting process of third-party originated loans. Adequate due diligence of third-party relationships is necessary to help prevent the origination of loans that are of poor credit quality or are fraudulent. Delegated underwriting to brokers or correspondents warrants close supervision from senior management.

### Internal Audit

- Adequate internal audit coverage.
  - Because of the variety of risks inherent in mortgage banking activities, internal audi-
tors should evaluate the risks of and controls over their bank’s mortgage banking operations. They should report audit findings, including identified control weaknesses, directly to the audit committee of the board or to the board itself. Board and management should ensure that internal audit staff possess the necessary qualifications and expertise to review mortgage banking activities or obtain assistance from qualified external sources.

INTERAGENCY ADVISORY ON ACCOUNTING AND REPORTING FOR COMMITMENTS TO ORIGINATE AND SELL MORTGAGE LOANS

On May 3, 2005, the Federal Reserve, Federal Deposit Insurance Corporation, National Credit Union Administration, Office of the Comptroller of the Currency, and the former Office of Thrift Supervision issued an “Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.” The advisory provides guidance on the appropriate accounting and reporting for commitments to

- originate mortgage loans that will be held for resale, and
- sell mortgage loans under mandatory-delivery and best-efforts contracts.

The advisory discusses the characteristics that should be considered in determining whether mandatory-delivery and best-efforts contracts are derivatives and the accounting and regulatory reporting treatment for both commitments to originate mortgage loans that will be held for resale and those loan-sales agreements that meet the definition of a derivative. The advisory also addresses the guidance that should be considered in determining the fair value of derivatives.

A financial institution is expected to account for and report derivative loan commitments and forward loan-sales commitments as derivatives in accordance with GAAP, which includes the use of valuation techniques that are reasonable and supportable in the determination of fair value. An institution’s failure to account for and report derivative loan commitments and forward loan-sales commitments in regulatory reports in accordance with GAAP may be an unsafe and unsound practice. To view the entire contents of the advisory, see SR-05-10, “Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.”
The following comprehensive examination procedures address the examination and supervisory concerns discussed in the February 25, 2003, Interagency Advisory on Mortgage Banking and in SR-03-4. The procedures incorporate and consolidate that supervisory and examination guidance, examination modules, and the Federal Reserve’s mortgage banking inspection procedures found in section 3070.0 of the Bank Holding Company Supervision Manual. See SR-97-21, “Risk Management and Capital Adequacy of Exposures Arising from Secondary Market Credit Activities.” See this manual’s section on the “Allowance for Loan and Lease Losses,” with particular reference to the subsections on “Estimated Credit Losses in Credit Related Accounts” and the “Interagency Policy Statement on the Allowance for Loan and Lease Losses.” In addition, see SR-05-10, “Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.” Collectively, this guidance focuses on determining the level of risk associated with banks that originate and sell loans, and the appropriate risk-management practices that may be used to mitigate those risks. The following comprehensive procedures are organized according to the typical structure of a banking organization and its primary activities.

PRELIMINARY REVIEW AND ASSESSMENT

1. Perform the following preliminary examination review procedures.
   a. Review the following reports and documentation:
      • internal auditors’ reports
      • the most recent external audit report and management letter, and management’s response to criticisms and recommendations
      • government-sponsored agencies’ reports and significant private investors’ reports, if available
      • internal memoranda and management reports on the mortgage banking unit prepared since the previous examination
   b. Briefly review information about the mortgage banking entity’s financial performance to gain a basic understanding of its assets, liabilities, and profitability.

2. Review the types of products offered and markets targeted by the bank’s mortgage banking entity.
   a. Ascertain whether the entity has an over-reliance on one product type or if it relies on a few large geographic concentrations.
   b. Determine if the entity has made any material changes in its types of products, underwriting criteria, production and servicing volumes, and market focus.

3. Review the findings of the external and internal auditors, the quality-control unit, and any other reviews, including any reviews conducted by independent investors, other governmental agencies, and quasi-governmental investor or guarantor agencies (all those audits and reviews conducted since the previous examination). Note the level of compliance with various internal controls and quality controls as well as compliance with established limits and controls on lending, securitization, and hedging activities.
   a. On the basis of this examination review, make a preliminary determination about the current volume and level of risk (that is, credit risk (borrower and counterparty risk), market risk (pipeline, interest-rate, trading, price, prepayment, hedging, and foreign-exchange risks), liquidity—funding, operational, and legal risk (compliance, strategic, and contingency risks), and reputational risk.
   b. Assess the adequacy of risk management and the level and direction of composite risk for significant activities.
   c. Determine the scope and focus of the examination of mortgage banking operations, transactions, and activities.

4. Develop a preliminary assessment of the financial impact of the mortgage banking entity’s operations, transactions, activities, and most significant risks on the bank’s current financial condition, liquidity, earnings, and capital.
BOARD AND SENIOR MANAGEMENT OVERSIGHT

Board of Directors

1. Review the biographies of the members of the board of directors and review the board’s and board committees’ meeting minutes. Determine whether the directors have the necessary education and experience to fulfill their fiduciary responsibilities.

2. Assemble and review several of the most recent informational packages that were provided to the directors before their scheduled meetings. Find out if the directors receive sufficient detailed information to make informed judgments about the financial condition, internal controls, and risk-management controls and procedures of the mortgage banking entity.

3. Ascertain whether the board of directors is fulfilling its fiduciary responsibilities in business planning, approving operating policies, hiring competent management, and overseeing business performance.

Management

4. With respect to senior management, determine—
   a. if detailed policies and procedures are in place to monitor and control mortgage banking activities involving loan production (including origination, underwriting, closing, and wholesale and correspondent lending activities), pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market (selling, recourse, and servicing) transactions, servicing operations, and management (including hedging) of mortgage-servicing assets; and
   b. if the reports and limits focus on key risks, profitability, and proper accounting practices.

5. Review the biographies of executive management.
   a. Determine if the level of experience, education, technical knowledge, leadership skills, expertise, and administrative capabilities of management is sufficient for overseeing the mortgage banking operations.
   b. Determine whether senior management’s salaries are commensurate with the biographical information provided.
   c. Determine if management’s depth and succession plans are adequate.

6. Determine if a separate board committee for mortgage banking activities exists. If so, review the committee’s minutes for significant approvals for transactions, activities, and other authorized actions.

7. Determine if the directors, management, and auditors are adequately evaluating, monitoring, and maintaining internal controls over the valuation and modeling processes, the most significant risks and their respective hedging activities, management information systems, and the internal audit function.

8. Review the mortgage banking strategic plan and planning process. Determine if the goals are reasonable, attainable, and complement the bank’s overall business plan.

9. Evaluate the documentation of the planning process, including the most recent operating budget, the business plan, and the related performance measurement system reports. Determine whether the objectives, goals, and growth targets are reasonable and properly aligned with achievable performance levels.

10. Determine if adequate disaster-recovery and contingency plans exist to address the mortgage banking entity’s primary risks.

Policies and Procedures

11. Review and evaluate the quality and effectiveness of the bank’s mortgage banking policies and procedures within each of the functional internal control areas. Also evaluate the extent to which compliance is achieved, monitored, and reported in the following areas, among others:
   a. defined permissible mortgage banking activities
   b. the responsibilities designated to individual officers and employees
   c. lending limits
   d. segregation of duties

12. Determine if the bank’s policies, procedures, and strategies within other functional
areas consider mortgage banking activities. Consult with those examiners reviewing the other functional areas and coordinate your findings with them.

13. Investigate why any identified policy and procedure deficiencies exist. Discuss with management any recommendations for correcting deficiencies. Ascertain whether—
   a. management overlooked the needed policies and procedures,
   b. management is unfamiliar with prudent mortgage banking guidelines and procedures, or
   c. management is unwilling to create or enhance policies and procedures.

14. If there is lack of compliance with policies and procedures, determine whether the reasons are the result of a—
   a. lack of awareness of the existence of the policies,
   b. disregard for the established policies,
   c. misunderstanding of the intent of policy guidelines, or
   d. a poor internal process for communicating any revisions to the policies and procedures.

15. Determine if management commits to and supports proper controls and monitoring to ensure that policy guidelines will be adhered to in the future.

INTERNAL AUDIT OR INDEPENDENT REVIEW, EXTERNAL AUDIT, INTERNAL CONTROLS, AND QUALITY CONTROL

1. Review the findings of the internal and external audits, quality-control reports, and investor audits to find out if the internal controls are functioning effectively.

Internal Audit or Independent Review

2. Determine whether a separate and independent internal audit function exists and if each internal auditor is independent.

3. Review and assess the qualifications of the internal audit manager and the internal audit staff for mortgage banking, including their accounting and auditing expertise. When making the assessment, consider the department’s size; the complexity of its operations and activities; the quality of ongoing staff training programs; and the staff’s experience, education, and certification levels in relation to the volume of existing risk exposures.

4. Determine if, since the previous examination—
   a. the scope and frequency of the most recent audits and independent reviews were adequate to identify policy, reporting, and internal control deficiencies and all areas of high or significant risk; and
   b. the audit schedule or plan and coverage included a review of the underwriting practices and other high-risk areas of the mortgage unit or entity.

5. Review all internal audits, internal audit follow-up reports, and management responses to the auditors’ findings that were issued since the previous examination.
   a. Select a significant sample of the workpapers from the audits for the bank’s high-risk mortgage banking operations and activities. Conduct an intensive review of those phases of the internal audits.
   b. Ascertain whether all significant issues and exceptions were brought forward to the final audit report, that the report was promptly presented to the board of directors or its designated audit committee, and whether the cited significant problems or control weaknesses received appropriate and prompt management attention and correction.
   c. Evaluate the system internal audit uses to follow up on unresolved issues or problems.

6. Assess the adequacy of the reviews of mortgage-servicing assets that were conducted by internal audit or quality control or by independent reviews.

7. Determine if the internal audit or quality-control programs cover compliance with state and federal laws, generally accepted accounting principles, and investor requirements (including minimum capital requirements).
   a. Interview those responsible for monitoring compliance and find out the nature of outstanding problems and issues.
   b. Assess the adequacy and extent of the correction of the problems and issues.

8. Review any high-risk transactions or activities conducted since the previous examina-
tion that were not adequately addressed during the internal audit or independent review.

9. Investigate any remaining identified internal audit or independent-review deficiencies that have occurred since the previous examination.

External Audit

11. Review the engagement letters for the external audits performed since the previous examination.
   a. Determine the extent of the external auditor’s scope and responsibilities and the extent to which the external auditors relied on the findings of the internal auditors.
   b. Verify that the external auditor’s report included an unqualified opinion on the bank’s (and also the mortgage banking entity’s) financial condition and on the results of the bank’s (or mortgage banking entity’s) operations. If a qualified opinion was issued, review and investigate any cited internal control or other significant weaknesses or risks.
   c. Review the notes to the financial statements and determine if all required disclosures were made.

12. Review and determine the adequacy of the workpapers supporting the external audits performed since the previous examination.
   a. On the basis of the nature and extent of the audit work performed, management’s representations and responses to management letters, and the results of the audit, determine if there were any audit weaknesses or any cited unusual items, practices, or weaknesses in internal control and other areas of concern.
   b. Investigate the nature and status of any of the uncorrected items (and the respective management responses) with the external auditor and the audit committee.

In particular, review and discuss any items that were considered to be material or high risk in relation to the mortgage banking entity’s size and complexity of operations.

c. Determine whether the scope of any phase of the external audits conducted since the previous examination needs additional examination scrutiny or needs to be expanded to address unresolved significant concerns, problems, or risks (in particular, for the examination and other concerns listed in this manual’s section on Loan Portfolio Management).

13. Find out and investigate the reasons for any recent or frequent changes in the external auditors who perform audits of the bank, including the mortgage banking entity. If significant, discuss those reasons with the audit committee and the lead or managing external auditor.

Internal Controls

14. Determine if management establishes and implements an effective, high-quality internal control program that identifies, controls, and minimizes significant risks. Verify that the internal control program includes internal and external audits, accounting controls, loan-quality controls, and internal control procedures for all activities of the mortgage banking entity’s operations; insurance coverage; and fraud detection. Determine if the program is reviewed annually.

15. Determine and evaluate the nature of the internal control environment and how risk parameters (limits) are communicated to employees within the mortgage banking entity.

16. Evaluate the internal control process for granting exceptions to the bank’s policies and procedures.

17. Find out if internal control procedures exist to—
   a. control legal risk (guarding against material insurance claims, class-action lawsuits, etc.);
   b. detect fraud, investigate suspected fraudulent activity, and ensure the filing of criminal referrals; and
   c. ensure the issuance of appropriate management reports.
Quality Control

Quality control implements a system of internal controls that provides management with an opportunity to examine and, if necessary, adjust its policies and procedures. It comprises a system of internal controls that sets standards, measures performance, and determines compliance with applicable legal, federal-agency, and investor requirements. Quality control also provides for the timely correction of deficiencies when they are identified.

18. Ascertain whether the bank’s mortgage banking entity has a quality-control unit that is independent of the production function.
   a. Determine if the quality-control unit is organized to (1) promote efficiency, (2) prevent costly errors that could drain profits, (3) ensure that standardized policies and procedures are known and adhered to, (4) verify that policies and procedures are revised on a timely basis, (5) ensure that employees are held accountable for failures, and (6) ensure that procedures exist to facilitate the expansion of the internal audit function when needed.
   b. Ascertain whether quality control evaluates the quality of loans originated or purchased (this evaluation is usually required by investors). Verify that the quality-control program ensures that all loans are originated, processed, underwritten, closed, and serviced according to the bank’s internal lending policy and investors’ standards and criteria.

19. Determine if the quality-control program meets varying investor guidelines.
   a. Verify that the quality-control program covers both retail and wholesale loan production.
   b. If certain investors require 10 percent of closed loans to be reviewed, find out if the reviews are conducted within 90 days of closing.

20. Find out if any of the quality-control-review activities are outsourced and if they are outsourced in compliance with the bank’s quality-control standards.

21. Review a sample of reports the quality-control unit has issued since the previous examination. Determine if the review coverage was adequate and if the unit’s findings were correct and appropriate.

22. Determine if the quality-control findings are clearly documented and promptly presented to the board of directors and senior management. Determine whether the directors and senior management follow up on the findings and oversee their timely resolution.

23. If any of the quality-control loan reviews disclosed significant risk, deficiencies, and areas of concern that have arisen since the previous examination, determine (1) if management’s responses were reasonable and appropriate and (2) if the problems cited were promptly corrected or resolved.

24. Determine if any of the quality-control findings or areas of concern were addressed by the internal or external auditors. Review the auditors’ workpapers pertaining to any reported significant and persistent problems or areas of concern.

ACCOUNTING

Held for Sale

1. Determine if, at the time a loan is transferred to the held-for-sale account, there was (1) any reduction recorded for the loan’s cost in excess of its fair value, resulting in a new cost basis, and (2) a corresponding reduction in the allowance for loan and lease losses (ALLL). If a reduction was not recorded for a loan’s cost in excess of its fair value in the ALLL, determine whether there was an additional loan-loss provision recorded to maintain the ALLL at an adequate level.

2. Determine if assets held for sale are segregated from portfolio loans, revalued at each subsequent reporting date until sold, and then reported at the lower of cost or fair value, as required by Statement of Financial Accounting Standards No. 115 (FAS 115), as amended by Statement of Financial Accounting Standards No. 140 (FAS 140).

3. Determine if loans and other assets that are transferred to the held-for-sale account are being revalued at each subsequent reporting date until sold and whether they are reported at the lower of cost or fair value.

4. Determine if warehoused assets held for
sale are segregated from portfolio mortgages. Determine if assets held for sale are recorded on the books at the lower of cost or fair value in accordance with FAS 115 (as amended by FAS 140). If the cost of the assets exceeds fair value, determine if the excess is accounted for as a valuation allowance and that there is no ALLL for assets held for sale.

a. Verify that assets transferred from the warehouse to the permanent portfolio are being revalued at each subsequent reporting date until sold. Verify that the asset transfers are reported at the lower of cost or fair value.

b. Determine if warehouse loans are accurately recorded in the general ledger and in the bank’s financial statements and reports of condition.

5. Determine if any declines in loan value (including those attributable to changes in credit quality) and loan recoveries on such declines in value occur after the loans are transferred to the held-for-sale account. Find out if declines or recoveries are accounted for as increases or decreases in a valuation allowance for loans held for sale and not as adjustments to the ALLL.

a. Confirm that changes in the valuation allowance are being reported in current earnings and that the valuation allowance for held-for-sale loans is not being reduced below zero (that is, the allowance cannot have a debit balance).

b. Verify that valuation allowances are not being reported as part of the ALLL and that the valuation allowances are not included in tier 2 capital for risk-based capital purposes.

6. When the income or expense amounts relating to increases or decreases in the valuation allowance are material, ascertain, for financial reporting purposes, that the income and expense amounts are separately disclosed and appropriately described either on the face of the income statement or in the notes to financial statements.

Held to Maturity

7. Determine if held-to-maturity debt securities are reported at amortized cost (paragraph 7 of FAS 115, as amended by FAS 140) in the statement of financial position only when the bank ensures its positive intent and ability to hold those securities to maturity.

8. Ascertain that the carrying value of assets held to maturity is adjusted to reflect the use of futures or forwards as bona fide hedges according to Statement of Financial Accounting Standards No. 133 (FAS 133), “Accounting for Derivative Instruments and Hedging Activities,” as amended by Statement of Financial Accounting Standards No. 138 (FAS 138), “Accounting for Certain Derivative Instruments and Certain Hedging Activities.” Determine if there is similar accounting treatment for firm commitments.

9. Determine if transfers from the warehouse to the permanent portfolio are accounted for at fair value.

Mortgage-Servicing Assets

10. Determine whether purchased or assumed mortgage-servicing assets and liabilities are initially measured at fair value (presumably, the price paid).

11. Find out if mortgage-servicing assets or liabilities are amortized in proportion to and over the period of estimated net servicing income (servicing revenue in excess of servicing costs) or net servicing loss (servicing costs in excess of servicing revenue).

12. Determine if the notes to the financial statements disclose the following information on mortgage-servicing assets and liabilities:

a. the amounts of servicing assets and liabilities recognized during the period (including the amount of mortgage-servicing assets (MSAs) purchased)

b. the lower of the amortized cost or fair value of the recognized servicing assets and liabilities and the method and significant assumptions used

c. the method and amount of amortization for the reporting period

d. reasons for not estimating the fair value of MSAs and mortgage loans without MSAs

e. the risk characteristics of the underlying financial assets used to stratify recognized servicing assets for the purposes of measuring impairment
f. the activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate write-downs charged against the allowances—for each period for which results of operations are present.

Loan-Origination, Loan-Commitment, and Other Fees

13. Determine if management defers loan-origination fees (also points, placement fees, commitment fees, application fees, management fees, restructuring fees, and syndication fees), net of their costs over the remaining lives of their related loans or group of loans, as an adjustment of yield in accordance with Statement of Financial Accounting Standards No. 91 (FAS 91), generally using the interest method, which is based on the loans’ contractual terms.

14. If a commitment expires unexercised, determine if the commitment fees are recognized as income upon the expiration of the commitment.

MANAGEMENT INFORMATION AND COMMUNICATION SYSTEMS

1. Assess whether the management information system (MIS) has the capacity to handle existing volume and activities as well as projected strategies and objectives.

2. Determine if the MIS is capable of producing all necessary reports. Ascertain whether the reports—
   a. identify closed loans as either held-to-maturity or held-for-sale;
   b. segregate loans by product type and identify the dollar amount and percentage of total loans for each type;
   c. monitor the volume of loan applications throughout the origination process;
   d. identify the applications accepted, outstanding commitments and their delivery status, the effectiveness of hedges, and the historical fallout rates for specific loan categories;
   e. monitor the status of the delivery of commitments to investors and the effectiveness of hedges; and
   f. reflect the mortgage banking entity’s daily position, including pipeline commitments, warehouse inventory, and forward sales contracts.

3. Assess the quality of reports that are presented to the board of directors. Determine whether the reports include or convey the following information in sufficient detail, given the size and complexity of the department:
   a. liquidity and capital needs
   b. various rate-shock scenarios and risk exposures
   c. hedging activities, including products, results, and strategies
   d. analyses of fair (mark-to-market) values, including the assumptions and documentation supporting those values
   e. operating results, including profitability, efficiency, and cost information
   f. asset-quality trends, including delinquencies, charge-offs, foreclosures, and collection accounts
   g. production volume
   h. inventory or warehouse aging (how long loans are in the warehouse or their turnover rate)
   i. industry and peer-group performance statistics
   j. policy, operating-procedure, and credit-quality exception reports
   k. quality-control reports that discuss the analytical review of credit quality, loan characteristics and demographics, trends, and sources of problems (such as a deterioration in production quality and salability or weaknesses in internal controls that may not detect fraudulent activities)
   l. processing backlogs
   m. internal and external audit assessments of the effectiveness of the control procedures

4. Determine why management and board reports are deficient. Obtain management’s responses to and the corrective actions taken for the deficiencies. Determine the causes for the deficient reports and whether any of the deficiencies stem from the following circumstances:
   a. The reports contain inaccurate information, and the input and output of information has not been tested.
   b. The necessary reports cannot be or are not generated.
   c. Management is unfamiliar with the infor-
mation system’s capabilities.

d. Management is unfamiliar with the necessary monitoring of the reports.

5. Review investor-reporting requirements and determine the quality and extent of compliance with those reporting requirements. Investor reporting may vary depending on the servicing contracts in place, but typically the servicing bank is responsible for the following information:

a. detailed account reconciliations
b. information on the mortgagor’s name, principal balance outstanding, and escrow balance
c. payment status and any foreclosure activity or transfers to the servicer’s other real estate owned (OREO) account

PRODUCTION

1. Review the guidelines for the loan-production area and determine if the guidelines address the following areas:
   a. types of loans that will be originated or purchased
   b. sources from which the loans will be acquired, including sources from the Internet
   c. underwriting standards, concentrations of credit, production channels, and production strategies
   d. documentation requirements

2. Review organization charts to determine the structure of the production function. Verify that the functional units such as pipeline entry, processing, underwriting, closing, and funding are independent from one another.

3. Find out the types of mortgage products offered, the actual product mix, and the nature of the bank’s targeted markets. Evaluate portfolio trends with respect to any product, geographical income, or demographic or other higher-risk concentration.

4. Ascertain whether operations risk has increased because of high management and staff turnover, an inability to meet investor-documentation requirements, an increase in the number of pools that have not received final certification, an unusually high cost structure, workloads that exceed capacity, and an increased loan delinquency.

5. Find out whether the board has approved and management uses predetermined risk-tolerance levels. Evaluate whether credit risk (recourse and nonrecourse), interest-rate risk, or liquidity risk has increased because of operational inefficiencies and an inability to sell loans in the secondary market.

6. Ascertain the nature of the mortgage banking entity’s credit culture, compensation methods, and growth targets. Determine whether credit quality is weakened by an emphasis on income compensation versus loan volumes, aggressive or inappropriate lending strategies, relaxed credit standards, low documentation requirements, limited production channels, or geographic concentrations.

7. Determine the level of and the reasons for nonconforming or unsalable loans and whether they present an undue level of risk. Determine whether the delinquency trends of such loans are being adequately monitored.

   a. Ascertain how prices are determined.
   b. Determine if the pricing strategy is typically at, above, or below fair (market) value.
   c. Assess the impact that pricing strategies have on current and future profitability.

8. Determine the frequency of price changes for retail, wholesale, and broker channels by reviewing historical price sheets. Evaluate the timing of changes relative to significant market interest-rate movements.

9. Find out if the secondary marketing manager determines any new product’s marketability and pricing strategy. Determine if the marketing manager overly influences the bank’s ability to price, deliver, and service the product.

Origination and Underwriting

10. Review the policies and procedures for loan originations.

   a. Determine if the originators’ compensation is highly dependent on loan volume and if that sacrifices loan quality.
   b. Find out if originators can alter established pricing parameters set by the secondary marketing unit.
   c. To ensure objectivity, verify that the underwriting unit does not report to production-function management.

11. Review the qualification levels of underwrit-
ers (their education, experience, training, and certification credentials).

12. Determine the methods used to evaluate loan originations.
   a. Review the compensation programs of the bank’s mortgage banking entity. Determine if the compensation program is based on normal loan-origination volumes and on qualitative factors such as loan quality and fully completed applications (including the documentation on liens, adequate values of collateral, and thorough documentation of the applicant’s financial information that supports the originator’s determination that the potential borrower has the financial capacity to repay the loan).
   b. Find out if management holds originators accountable for weak loan quality and credit risk.

13. Determine if adequate control processes are in place for front-end and post-closing loan documents. Find out if the processing activities are controlled through the use of standardized procedures, checklists, and systems.

14. Review a representative sample (that is, a statistical sample) of current loans to test the underwriting policies and procedures. Determine the validity and adequacy of documentation supporting loans held for sale or investment.

15. Determine whether notifications to management on withdrawn mortgage applications are sufficient to allow for proper hedging strategies.

16. Determine how management monitors originators’ adherence to underwriting and investor guidelines.

17. If underwriting is performed in-house, determine if management establishes, reviews, and monitors approval limits, exception standards, and documentation procedures for loans that are rejected or suspended. Find out if management receives and reviews adequate current reports tracking the quality of loans for each underwriter.

18. If a scoring underwriting system is used, review the credit scoring methodology and determine if the system can be overridden and by whom.

Overages
An overage exists when a lender permits an originator or a broker to impose a higher number of points (or a higher interest rate) on a loan to certain borrowers than is imposed for the same product offered to other borrowers at a given point in time. The amount of overage that is received is usually shared between the mortgage banking entity (the originator) and the broker. Overages are often referred to as yield-spread premiums (YSPs).

19. If the bank’s mortgage banking entity is involved in overage activities, determine if management has developed comprehensive policies and procedures, detailed documentation and tracking reports, accurate financial reporting systems and controls, and comprehensive customer complaint tracking systems to adequately monitor and supervise overage activities.

20. Since the previous examination, determine if overage activities are an essential component of the mortgage banking entity’s earnings. Find out the percentage of originations that resulted in overages and the average overage per loan.

21. Ascertain whether overages are a major component of loan officer or broker compensation.

22. Determine whether overages were reviewed during the last consumer compliance fair lending examination and whether any recommendations were made regarding overage activities.

Closing

23. Evaluate procedures for closing loans. Ascertain whether adequate analyses are prepared and if any allowances are established for estimated probable losses arising from documentation deficiencies on closed loans.

24. Determine if management requires that necessary and required documents be obtained and properly signed before funds are released.

25. Evaluate management’s controls over the loan-funding process.

26. Assess management’s plans for funding originations during peak volume periods.

27. Determine if a post-closing documentation-
review process exists to differentiate, track, and obtain both trailing and missing documents.

Wholesale and Correspondent Loan Production

28. Determine if the bank has adequate control processes in place to monitor and manage the risks associated with purchasing third-party-originated loans and approvals (controls include management’s close supervision of underwriting that is delegated to brokers or correspondents).
   a. Find out if the bank’s reporting systems monitor and manage—
      • the quality of mortgages purchased from wholesale and other third-party sources and
      • the methods used to evaluate the loans on an ongoing basis.
   b. Determine if controls over the independent appraisal and underwriting process are adequate and if due diligence over third-party relationships is adequate to prevent poor-credit-quality loan originations, including fraudulent originations.

29. Review the policies and procedures for wholesale and hybrid purchases.
   a. Find out the production channels that are used and how they perform. (The channels may include whole loan purchases (production flow) or hybrid purchases such as table funding, assignment of trade, or co-issuances (bulk purchases of servicing assets).)
   b. Determine the nature and extent of the compensation of brokers and correspondents for each production channel.

30. Review the bank’s approved list of wholesale sources of loans. Determine the types and dollar volume of loans purchased from each wholesale source. Investigate any purchases from sources not on the approved list.

31. Determine management’s process for evaluating and monitoring the quality of loans purchased from wholesalers. Ascertain whether the process considers the following:
   a. historical default and foreclosure levels
   b. nondelivery history
   c. HUD, Fannie Mae, FHLMC (Freddie Mac), or GNMA investor status (when applicable)
   d. documentation deficiencies
   e. financial statements

32. Determine if the bank underwrites mortgages purchased from wholesale sources.
   a. If the bank delegates underwriting responsibilities to a correspondent or a third party, determine and evaluate the adequacy of the process for reviewing and monitoring the quality of mortgages purchased.
   b. Find out if—
      • post-purchase reviews adequately assess the loan quality and completeness of the documents;
      • the bank maintains records of post-loan-purchase reviews, including the volume of loan rejections from each source; and
      • the bank frequently returns to the seller noncompliant loans (loans not meeting contractual requirements) purchased from wholesale sources.

33. Ascertain what methods are used for reviewing and approving brokers and correspondents and what the specific programs are. Determine which loans are purchased.
   a. Determine if there is an approved list of correspondents and how the list is updated.
   b. If there are deviations from the list, determine who authorized them and if there are controls to prevent unauthorized purchases.

34. Find out if financial reviews of the correspondents are conducted, who conducts the analysis, and how frequently analyses are conducted. Determine whether adequate controls are in place to detect changes in the financial condition of a correspondent, test and monitor the quality of loans purchased, and evaluate the correspondent’s financial capacity to perform under contractual repurchase agreements.

35. Ascertain how the bank manages funding and liquidity risk for wholesaling mortgages.
   a. Determine if the collateral is received before payment.
   b. Determine what controls are in place to prevent unnecessary loss exposures.
PIPELINE, WAREHOUSE, AND HEDGING ACTIVITIES

1. Review the written policies and procedures for pipeline, warehouse, and hedging activities.
   a. Determine the process for granting exceptions (including the prior-approval requirements and whether the policy exceptions are reported to the asset/liability committee) that are contrary to the established lending policies and limits.
   b. Find out if the policies define the following criteria:
      • position and earnings-at-risk limits
      • permissible hedging activities
      • individuals authorized to engage in hedging activities
      • fair (market) values

2. Evaluate the effectiveness of the lending limits, approval requirements, MIS reports, and pipeline or warehouse hedging strategies to identify, monitor, measure, and control risks.

3. Determine if an appropriate separation of duties exists for the pipeline, warehouse, and hedging process. Ascertain whether there are proper controls in place for the various phases of each process.

4. Ascertain whether the control systems exist to ensure that the fair (market) value determinations are performed by a person who is not directly responsible for pipeline and warehouse hedging activities.

Pipeline Management

The pipeline consists of applications approved but not yet funded. Typically, two types of loans are in the pipeline: rate-locked and floating-rate. The key to effective hedging of pipeline loans is predicting the fallout rates of rate-locked loans (the rate at which approved, rate-locked loans will not be funded).

5. Review the methodology used and the adequacy of its documentation to predict the volume of loan applications that are expected to “fall out” of the mortgage pipeline.

6. Find out how management tracks the bank’s loan-fallout activity and how the tracking process and information are used to control and lessen the risks associated with its hedging activities.

7. Review the reports on pipeline management that provide the pipeline-fallout ratios for each type of loan product. Assess the effect of unanticipated fallouts on the results of hedging activities.

8. Review the frequency and accuracy of pipeline-commitment reporting. Find out how pipeline commitments are identified (including by their product type and interest rate, and the separate identification of the locked-rate and floating-rate commitments) and reported on MIS reports.

9. Review the signed pipeline-commitment reconciliations and verify that they are prepared monthly. Compare them against the pipeline position reports.
   a. Determine if commitments are specifically identified by product type and interest rate.
   b. Determine if rate-locked commitments and floating-rate commitments are separately identified and tracked.
   c. Determine what management’s process is for handling expired rate-lock commitments.

10. Determine if pipeline commitments are accurately disclosed in the notes to the financial statements and in reports of condition.

11. Review management’s procedures for monitoring and projecting the volume of applications that are expected to fall out of the mortgage pipeline.
   a. Determine how the fallout rates correspond to hedging practices.
   b. Determine whether management assumptions relative to loans that will not close equate to the hedging practices in place.
   c. Ascertain if the bank uses simulation models to predict fallout percentages and to determine hedging strategies, which are dependent on the interest-rate environment.

12. If the bank has been unable to meet mandatory commitments, determine if management purchased loans from other sources or paid investors a pair-off fee.
   a. Determine if the situation was reported to the board of directors or a board committee.
   b. Ascertain the reasons why the bank was unable to meet mandatory commitments.
Warehouse Management

Warehouse loans are funded loans waiting to be delivered to the secondary market.

13. Review internal warehouse-reconciliation reports, which should be prepared at least monthly.
   a. Assess the adequacy of controls over the warehouse account.
   b. Determine if errors are promptly corrected (errors such as mortgages that are funded more than once or mortgages that are funded but not closed).

14. Review warehouse-turnover and -aging reports, which should be prepared at least monthly.
   a. Determine if mortgage loans are removed from the warehouse within a reasonable period of time (usually 90 days or less).
   b. Find out why loans are remaining in the warehouse for a longer period.

15. Ascertain whether any warehouse loans are being held beyond the bank’s normal time frames in anticipation of improved market conditions. If the bank is taking speculative positions with warehouse inventory, determine if the positions are within the approved dollar limits. (Loans held for sale are typically newly originated credits and are normally held in the warehouse only for a short period of time; therefore, delinquencies and protracted holding periods are not normal.)

16. Review management’s methods for handling warehouse loans that are ineligible for sale. Find out if a significant volume of ineligible loans is being placed in the bank’s held-for-investment loan portfolio because they are delinquent, have documentation problems, or have other weaknesses. If the volume of ineligible loans is significant, determine the methods used for handling the resolution of such loans.

Hedging Management and Practices

17. Assess management’s strategies for hedging pipeline or warehouse loans, the characteristics of these loans (such as adjustable-rate-mortgages (ARMs) or loans with interest-rate caps and floors), and the types of hedging instruments used.
   a. Review actual hedging practices and ascertain if they conform with established policy limitations and guidelines.
   b. Obtain and review the hedging information provided to executive management and the board of directors.
      • Evaluate whether hedging practices are properly approved and adequately supervised.
      • Determine if the board of directors approves all hedging strategies and the individuals who perform them.

18. Review the effectiveness and financial results of hedging strategies, such as the use of forward sales or options, to hedge risks associated with rate-locked commitments in the pipeline. (Some banks may not hedge interest-rate risk associated with rate-locked loans.)
   a. Determine management’s strategies for hedging loans with special risks (such as ARMs or loans with interest-rate caps or floors).
   b. Find out if the bank is assuming excessive basis risk for any hedging product.
   c. Determine if correlation is used to analyze the bank’s hedging strategies (to measure the degree of correlation between the hedge product and the underlying position being hedged, and the degree of risk each strategy or position entails).

19. Find out if call options are written to enhance inventory levels. If so, verify that they are written against covered positions. Ascertain whether management is speculating in any way and whether this activity subjects the bank and its mortgage banking entity to undue risk.

20. Review recent profit or loss reports for mortgage banking hedging activities. Assess the effectiveness of the hedging strategies on mortgage banking operations, including the use of such strategies to offset the risk inherent in funded but unsold loans.

21. Review management reports relating to pipeline and closed-loan hedging operations.
   a. Determine whether the reports are complete, accurate, and timely.
   b. Analyze whether the reports are effective in adequately limiting excesses, recording exception approvals, and detailing the risk exposures.

22. Find out if the bank uses any simulation models to establish risk limits and hedging strategies.
   a. Determine if the simulation assump-
tions are reasonable and if the volatility assumptions are consistent with the market.
b. Find out how frequently the assumptions and other model inputs are reviewed, tested, and updated.
c. Ascertain if budget and management decisions are included in the model’s assumptions and the extent to which they are incorporated.

23. Determine if management adequately assesses counterparty risk and establishes appropriate limits.

24. Determine if hedging instruments are accurately and properly disclosed in the notes to the bank’s financial statements and in its reports of condition.

25. Find out from discussions with management what systems the board of directors has authorized for use in—
a. measuring, controlling, and hedging interest-rate risk;
b. defining the level of interest-rate risk the bank’s board is willing to accept; and
c. specifying the hedging and other current or future strategies for achieving and maintaining the bank’s desired goals. (Depending on the current and forecasted interest-rate environment and projected fallout rates, management may be either over- or underhedging pipeline and warehouse loans.)

26. Determine and evaluate the adequacy of the internal controls in place to oversee hedging activities (controls include monitoring the effectiveness of the authorized hedging strategies and reviewing hedged-instrument concentrations and counterparties).

27. Review MIS reports relating to hedging strategies. Verify that the reports are accurate, adequate, current, and complete and are prepared regularly.
a. Verify that the reports sufficiently detail risk exposures.
b. Review reconciliations of outstanding trades to the daily position report.

28. If hedging strategies are ineffective, determine if the following situations are the cause:
a. poor correlation of data
b. unreliable data
c. speculation

29. Determine if the following controls over forward sales activities exist:
a. Traders are prohibited from entering forward sales data into the system, and individual trade tickets are required to be prepared and submitted to an independent unit for processing.
b. Third-party trade confirmations are received and reviewed by a separate, independent unit.
c. The bank has established prudent follow-up procedures for unconfirmed trades and confirmation discrepancies. Management uses the follow-up procedures to resolve or correct any unconfirmed trades or discrepancies.

SECONDARY MARKETING

Mortgage Pricing

1. Review the mortgage-pricing methods and procedures to find out how the prices for mortgages are established.
a. Determine if the secondary-market unit is responsible for setting mortgage prices and if the mortgage originators are prevented from overly influencing or dominating pricing decisions.
b. Review the current list of mortgage-product offerings and the daily price sheet. Find out if the prices are determined centrally and are uniform.
c. Ascertain whether the pricing methods and procedures used are consistent with the bank’s strategic plans.
d. Find out from management what pricing strategies it uses; whether mortgages are priced using comparative security-price screens; and if the mortgages are priced neutrally or above, below, or at their fair (market) values.
e. Using management’s pricing analysis, ascertain whether management makes its pricing decisions on the basis of the bank’s competitors, the overall costs of loan production and secondary marketing, and the value of servicing assets that are generated. Evaluate the current and future profitability impact of the bank’s pricing decisions.

2. Find out the change in pricing frequencies for retail, wholesale, and broker channels. Evaluate the timing of pricing changes...
relative to significant market interest-rate movements.

3. Determine what procedures are in place to ensure that deviations from the approved pricing policies receive the proper degree of scrutiny and approval by senior management.
   a. If deviations are common, determine why they are occurring. (For example, are they occurring because of competition, compensation schemes, or departmental profitability considerations or targeted goals?)
   b. Ascertain what impact the deviations have had on the mortgage banking entity’s production volumes and profitability.

4. Find out what policies are in effect for governing customer rate locks.
   a. Determine if rate locks expire, automatically renew, or are renegotiated at current interest rates.
   b. Ascertain whether the number and dollar volume of loans with expired rate locks are adequately monitored, tracked, and controlled.

Selling Mortgages

5. Find out what marketing programs are used to sell mortgages to investors. Review and assess the financial impact of these programs on sales volume.

6. Sample and review the larger-investor master sales commitments:
   a. Review investors’ requirements for underwriting, delivery, documentation, and servicing.
   b. Determine the amount, maturity, and terms of the commitments.
   c. Determine whether the bank has been able to meet investors’ requirements and the mandatory sales commitments. If not, determine the potential financial exposure to the bank.

7. Determine the number of sold loan pools that lack final pool certification, the reasons why, and if the mortgage banking group was required to post a letter of credit.

8. Determine if the bank participates in a mortgage-backed security swap program. Review the terms of the swap agreements and determine if any of the terms are financially detrimental to the bank.

Recourse Transactions and Obligations

9. Review a sample of sales contracts and servicing agreements to determine if the bank has any continuing recourse obligations to the purchaser beyond normal representations and warranties.

10. When loans are sold with recourse, determine if—
    a. the bank has adequate MIS to track all recourse obligations;
    b. management is adequately identifying and managing the risk associated with recourse obligations;
    c. the bank is negotiating the assumption of excess risk in exchange for lower guarantee fees;
    d. reserve levels are adequate for loans sold with recourse (see FAS 140); and
    e. management properly accounts for all loans sold with recourse in the bank’s reports of condition.

MORTGAGE SERVICING

Portfolio Supervision

1. Review the written policies and procedures for mortgage loan servicing and determine if they adequately cover all facets or functional areas of the servicing operations.
   a. Determine whether reports to management adequately monitor compliance with the established policies and procedures.
   b. Determine how exceptions to the policies and procedures are identified and addressed.

2. Review a sample of investor-account reconciliations and determine if—
   a. each investor account is reconciled at least monthly,
   b. outstanding items are resolved in a timely manner,
   c. management regularly charges off stale, unreconciled items, and
   d. a supervisor reviews and approves the reconciliations.

3. Review and determine the accuracy and adequacy of the most recent management reports that state operating results for the
servicing unit. Determine if the details provided are adequate to supervise the servicing function.

4. Review the most recent analysis of servicing revenues and costs for the primary product types. Ascertain whether costs are estimated and prepared on an average or incremental basis.
   a. Determine if management’s analysis of revenue considers all sources of revenue, including contractual servicing fees, ancillary fees, and the benefits derived from compensating balances from custodial funds.
   b. Assess the adequacy of the servicing unit’s current and projected profitability. Determine if management analyzes profitability on a product-by-product basis and how this analysis is factored into strategic decisions.
   c. Determine if management’s cost analysis includes all direct and indirect servicing expenses.

5. Review the list of outside vendors and subservicers the bank employs to perform servicing functions.
   a. Determine how management assesses (at least annually) the quality of work performed by outsiders.
   b. Find out if management regularly reviews and evaluates the financial condition of each vendor or subservicer.
   c. Ascertain whether the bank has a contingency plan to ensure it fulfills servicing responsibilities if a vendor or subservicer fails to perform.

6. Evaluate the asset quality of the servicing portfolio.
   a. Review the reports on the volume of delinquencies, foreclosures, bankruptcies, losses, and other real estate owned that have been prepared since the previous examination. Assess the extent and impact of those reported results on profitability and financial performance.
   b. Determine the extent and impact any geographical credit concentrations have had on profitability and financial performance.

7. Determine if complaints are appropriately resolved. Review significant complaints to ascertain if there are any possible internal control deficiencies or substantial legal risks.

8. Determine if the bank has purchased loans from the servicing portfolio.
   a. Determine if appropriate policies and procedures governing the purchases are in place.
   b. Determine the reasons for the purchases.
   c. Analyze the volume and trend of purchases.

9. Review the procedures for receiving payments from borrowers, depositing funds into segregated custodial accounts, and remitting funds to investors.
   a. Assess the bank’s system for ensuring borrowers’ payments are accurately applied and ensuring investors receive payments on schedule.
   b. Determine if adequate controls exist over custodial accounts (controls include daily balancing, monthly reconciliations, authority for disbursements, and segregation of administrative duties).

10. Review written servicing agreements to determine investor-servicing requirements, funds remittance schedules, contractual servicing fees, guarantee fees, and servicer representations and warranties.
    a. Determine if loan delinquencies have prompted the use of bank funds to meet remittance requirements.
    b. Track the timeliness of the flow of funds at the investors’ cutoff dates, the dates of remittance of funds to investors and security holders, and the recognition dates of servicing revenue.

11. Assess the adequacy of the system for ensuring the timely payment of taxes, insurance, and other obligations of the borrower.

12. Find out what methods are used for correcting shortages and surpluses in escrow accounts.

13. Review the procedures for ensuring that tax and insurance payments are made on delinquent loans.

14. Assess the methods used to evaluate the financial condition of subservicers.

15. Evaluate the servicer’s and subservicer’s agreements as to their responsibilities, reporting requirements, performance, and fees. Verify that management confirms that no additional liabilities, real or contingent, are being (or can be) imposed on the bank’s mortgage banking entity beyond its responsibilities as a servicing agent.
Mortgage-Servicing Assets

16. Determine if and the extent to which mortgage-servicing assets (MSAs) are reviewed by the external auditors.

17. Review management’s procedures for initially recording, amortizing, and periodically re-evaluating MSAs. Verify that reports of condition and income reflect quarterly revaluations of MSAs. Determine if the procedures require MSA documentation of—
   a. the methods employed for assigning a relative fair value to each MSA asset, specifically, the assumptions and procedures used (which should incorporate assumptions that market participants would use) to derive fair value;
   b. the recording of the fair value of MSAs and their amortization in proportion to and over the period of their estimated net servicing income or loss (a valuation allowance must be established if costs exceed the fair value);
   c. the systems for recordkeeping and impairment testing;
   d. the policies, procedures, and operating requirements for the ongoing supervision of MSAs;
   e. at least quarterly reviews of the book values of MSAs to determine if they are recorded at their fair values;
   f. the procedures to ensure compliance with other accounting and regulatory requirements, investor criteria, and internal policies;
   g. the stratification of MSAs into groups based on one or more of the predominant risk characteristics of the underlying financial assets to determine the fair value of the MSAs;
   h. the recognition of an impairment when the book value of a stratum of a servicing asset exceeds the asset’s fair value, and the adherence to the accounting requirement that the book value be reduced to fair value through a valuation allowance for that stratum;
   i. the validation process to ensure that the actual performance of MSAs is compared with their predicted performance;
   j. the procedures to ensure that the fair (market) value or valuation assumptions used for the impairment analysis are current and reasonable and that they reflect the expected levels of mortgage prepayments and market discount rates (When checking impairment, ensure that the bank’s test uses the current (not the original) level of servicing fees (prepayments on the underlying loans cause the weighted average coupon (WAC) to change, which changes the level of servicing over time.);
   k. management’s review and approval of the results and assumptions employed; and
   l. the process to determine when and how adjustments should be made to the respective valuation allowance on the basis of the results of impairment analyses.

18. Evaluate the due-diligence process for bulk acquisitions of purchased MSAs, if applicable.
   a. Determine if the bank performs a comprehensive due-diligence review before purchasing a servicing portfolio.
   b. Determine if management applies and documents reasonable valuation assumptions (documentation includes data on the underlying mortgages, servicing revenues and costs, prepayment speeds, and discount rates as well as explanations of how the particular valuation assumptions used were determined).
   c. Verify that management is properly reporting MSAs in Schedule RC-M of the bank’s report of condition and is reporting the results of the MSA transactions in its report of income.

19. Determine if management separately identifies servicing assets and any related interest-only strips receivables.

20. Review MSAs recorded as a result of retail production (originated) or purchased activities.
   a. Determine if the bank obtains commitments to resell the mortgages before or within 30 days of their purchase.
   b. Confirm that the purchase or origination cost of the loans and their MSAs are based on quoted market prices or the best available information, considering the prices for similar assets and asset-valuation techniques (such as estimating the future cash flows using a discount rate that is commensurate with the risks involved). Other valuation techniques
include option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analyses.

c. If other valuation techniques are used, determine if they are consistent with the objective of measuring fair value and if they incorporate assumptions that market participants would use when estimating future servicing income, including assumptions about prepayment, default, and interest rates.

d. Find out if the mortgage banking entity is allocating costs to mortgage-servicing rights when it is practicable to estimate the fair value of those rights and the related mortgage loans. If not, determine that the MSAs are recorded at zero and if they are disclosed in the bank’s financial statements. (The reasons why it was not practicable to estimate their fair values should also be disclosed.)

21. Complete an in-depth review of the valuations that are based on the fair (market) values for MSAs.

a. Determine if management identifies the characteristics of the servicing portfolio, specifically the following items:
   • investors
   • types of products
   • transactions made with or without recourse
   • geographic dispersion of borrowers
   • average loan size
   • range of interest rates
   • projected life and average age of loans
   • delinquency, foreclosure, OREO, and bankruptcy levels
   • loss experience

b. Review prepayment-speed assumptions to determine if they are realistic and conform to acceptable industry standards.

c. Determine if the discount-rate valuation assumptions used to estimate future cash flows are realistic and in line with industry practices.

22. Request that management recalculate the fair value of any MSAs if the assumptions used are unrealistic and examiners believe the reported MSA values are materially overstated (if the bank’s internal model is considered reliable, it may be used to recalculate the MSA’s value, after substituting more realistic assumptions). Following the recalculation of these fair values, review the assumptions used. Evaluate and verify the results.

Collections

23. Review policies and procedures for collecting delinquent loans.

a. Determine if collection efforts follow investor guidelines.

b. Determine if the bank documents all attempts to collect past-due payments.

c. Determine if the bank charges off uncollectible balances in a timely manner.

24. Review loan-delinquency reports. Select and review a sample of files for severely delinquent borrowers (particularly those borrowers over 120 days delinquent).

a. Determine if the bank initiates foreclosure proceedings in a timely manner and properly notifies borrowers and investors.

b. Review a sample of loans in which the foreclosure action is delayed due to forbearance agreements. Determine if the agreements are within investors’ guidelines.

25. Review a sample of investor-owned OREO properties to determine if administrative and marketing practices comply with investor guidelines.

26. Determine if there are any contingencies resulting from the improper administration of foreclosed properties.

FINANCIAL ANALYSIS

Financial-Statement Level and Trends

1. If separate-unit or subsidiary financial statements are prepared for the mortgage banking entity, perform a volume and trend analysis of the entity’s financial condition and performance for the current and previous two-year period. Pay particular attention to any comparative disparities that fall within the current examination period.

2. Review any of the mortgage banking entity’s primary or large balance-sheet and income-statement categories or items that may represent or pose significant financial or other risk concentrations. Investigate any
items or categories that pose undue financial or other risks. Discuss these categories or items with management and the internal and external auditors.

3. Determine whether the analyzed financial trends are consistent with the economic environment, interest-rate movements, the bank’s business orientation, and management’s intended growth strategy.

4. Determine whether reports filed with the Federal Reserve (or other federal regulatory departments, agencies, or government-sponsored agencies that are directly involved with mortgage banking or asset securitizations involving real estate) are prepared accurately and submitted in a timely manner. Pay particular attention to the reporting for mortgage-servicing assets and recourse obligations retained by the mortgage banking entity.

Earnings Performance and Profitability

5. Using ratios and industry comparisons, analyze and evaluate the mortgage banking entity’s earnings performance in terms of the level, composition, and trend of net income. Consider internal factors such as the entity’s business orientation and management’s growth plans. Also consider external factors such as interest rates, the economic environment, and industry performance trends. (Ratios that compare earnings to total assets or equity are of limited use unless the examiner also considers the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company’s use of financial leverage.)

6. Review and discuss with management and internal or external auditors any unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, reserves, write-downs or adjustments in MSA amortization, salaries and overhead items, or income taxes.

7. Evaluate officer-compensation arrangements that are tied to the department’s or bank’s profitability. Ascertain whether any of the compensation or incentive programs pose significant financial burdens or risks to the extent that they materially affect the institution’s profitability or that they promote unsafe or unsound practices.

8. Investigate the causes for operating losses in the mortgage banking entity’s operations and evaluate the prospects for profitability.
   a. Determine if elevated operating costs or other inefficiencies are impairing profitability.
   b. Establish whether excessive borrowing activities have led to adverse changes in the cost of funds. Ascertain what impact a change in the cost of funds would have on the net interest margin.
   c. Determine why hedging strategies have not appropriately controlled interest-rate risk.

Analysis of Risk, Liquidity, and Funding

9. Determine which risks associated with mortgage banking, such as credit risk, interest-rate risk, price risk, transaction risk, liquidity risk, compliance risk, and strategic risk, pose the most material threat to earnings, capital, and liquidity. Consider the guidance in SR-96-13 and the June 26, 1996, Joint Agency Policy Statement on Interest Rate Risk.

10. Evaluate management’s process for meeting the liquidity needs of the mortgage banking department, considering the size of loans in the pipeline and the warehouse as well as the nature and extent of other longer-term assets.

11. Determine whether liquidity sources are adequate for current conditions and projected funding needs.
   a. Evaluate the methods used to fund mortgage operations. Funding methods may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and long-term debt.
   b. Review asset and liability management practices to determine if funding maturities approximate the maturities of underlying assets.

12. Determine whether sources of liquidity are adequate under both current conditions and economic duress. Consider earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, the maintenance of debt...
covenants, and contingent liquidity-planning capabilities.

13. Evaluate the financial instruments used to fund mortgage operations. Financial instruments may include repurchase agreements, commercial paper, revolving warehouse lines of credit, or long-term debt (or a combination of these instruments). Review related credit agreements and the systems used to monitor compliance with debt covenants.

14. Evaluate whether excessive borrowing activities have led to a highly leveraged financial position that exposes the company to money market changes in the cost of funds. Assess what the impact would be if there were a change in the bank’s and the mortgage banking entity’s cost of funds.

15. Determine the degree of financial flexibility the bank and mortgage banking entity maintain. Ascertain whether the bank and mortgage banking entity possess adequate financial strength and whether they have sufficient access to lines of credit or assets (or both) that can be easily collateralized to readily obtain borrowed funds.

16. Review the net current items on the cash-flow statement pertaining to cash flow from operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. From the level of current transactions, determine whether sufficient positive cash flow exists. (The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity.)

17. Review asset and liability management practices to determine whether funding maturities closely approximate the maturities of underlying assets or whether any funding mismatches exist. Determine if the bank and its mortgage banking entity are exposed to short-term interest-rate fluctuations that may result in significant earnings volatility if interest rates change rapidly.

INTERCOMPANY TRANSACTIONS

Follow the examination guidance, instructions, and procedures in this manual that cover the Federal Reserve Act sections 23A and 23B and Regulation W.

1. Review the following transactions between the bank and its affiliates. Determine if there is compliance with the applicable determinants of control, quantitative and other limitations, and collateral and valuation requirements of Federal Reserve Act section 23A and Regulation W:
   a. loans or extensions of credit
   b. purchases of securities or assets
   c. the bank’s issuance of a guarantee (credit enhancements, cross guarantees, and keepwell agreements), an acceptance, or a letter of credit on behalf of the mortgage banking entity or its affiliate
   d. the acceptance from a third party of securities issued by an affiliate (including mortgage-backed securities) as collateral for a loan
   e. purchases of low-quality assets by the bank
   f. merger and acquisition transactions
   g. transactions with third parties when the proceeds are transferred to or used for the benefit of an affiliate

2. Review the following intercompany and affiliate transactions. Ascertain whether there are any underlying reasons (for example, non-independent credit reviews, transfers being classified as purchases, blanket advance-purchase commitments, no evidence of providing consideration, absence of safe and sound banking practices) why the following mortgage bank and intercompany or affiliate transactions do not qualify for the applicable exemptions found in section 23A or Regulation W:
   a. transactions involving sister bank
   b. transactions giving immediate credit for uncollected items in the ordinary course of business
   c. loans, guarantees, acceptances, or lines of credit secured by segregated, earmarked deposits or U.S. or U.S.-guaranteed obligations
   d. asset purchases that have a readily identifiable and publicly available market quotation
   e. transfers of subsidiaries to the bank
   f. asset purchases on a nonrecourse basis if—
      • the extension of credit was originated by the affiliate;

1. Financial flexibility is the ability to obtain the cash required to make payments as needed.
the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;

• the member bank commits to purchase an extension of credit before the affiliate makes or commits to make the extension of credit;

• the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate; and

• the dollar amount of the extension of credit, when aggregated with the dollar amount of all other extensions of credit purchased from the affiliate during the preceding 12 calendar months by the member bank and its depository institution affiliates, does not represent more than 50 percent (or such lower percent as imposed by the member bank’s appropriate federal banking agency) of the dollar amount of extensions of credit originated by the affiliate during the preceding 12 calendar months.

3. Review the following intercompany, affiliate, or covered transactions for compliance with section 23B of the Federal Reserve Act, including its competitive terms and conditions requirement.

   a. all transactions subject to section 23A
   b. any transaction in which the proceeds are used to benefit the mortgage banking nonbank subsidiary or entity
   c. sales of securities or assets to another affiliate, including those sales subject to an agreement to repurchase
   d. payments of money or the furnishing of services to an affiliate under contract, lease, or otherwise
   e. transactions in which the mortgage banking nonbank subsidiary or entity acts as agent or broker or receives a fee for providing services to the bank
   f. transactions with a third party if the mortgage banking subsidiary or entity has a financial interest in the third party or participates in the transaction
   g. purchases of assets as a fiduciary
   h. purchases of securities underwritten by the bank as the principal underwriter
   i. transactions or advertisements whereby the bank assumes responsibility for an affiliate’s obligations

CAPITAL ADEQUACY

1. Ascertain whether management has periodically verified that the mortgage banking entity meets the nominal capital levels required by investors (Fannie Mae, Freddie Mac, etc.) and meets any additional required capital for loans serviced for investors, on the basis of the bank’s financial reporting under generally accepted accounting principles.

2. Review the bank’s computation and analysis of its capital adequacy. Ascertain how the bank’s analysis relates to the determination of its risk-weighted assets and the levels of risk attributable to the mortgage banking entity, compared with the entity’s accumulated earnings and other contributions to the bank’s capital. Determine if the mortgage banking entity is providing sufficient capital resources to support the overall level of risk arising from its operations, without having a negative impact on the bank’s level of capital attributable to its other operations.

3. Determine if the mortgage banking entity’s assets (including MSAs) and risks (on- and off-balance-sheet) are correctly computed and quantified as part of the bank’s overall determination of compliance with the capital rules. Follow and apply the applicable guidance and procedures in this manual’s section on “Assessment of Capital Adequacy” and “Asset Securitization.”

4. Determine whether a written capital-generation plan or policy has been developed, approved, and reviewed at least annually by the board of directors. The plan should specify what capital-generation levels are needed to support the mortgage banking entity’s current operations and projected future growth, given the prescribed risk-tolerance levels that arise from the bank’s mortgage banking transactions and activities.
This section provides supervisory and accounting guidance for examiners to use in their examination and review of a bank’s creation and use of loan participation agreements. Additional guidance, research, and information on loan participations and loan participation agreements will be developed and considered for future issuance and implementation.

A loan participation is an agreement that transfers a stated ownership interest in a loan to one or more other banks, groups of banks, or other entities. The transfer represents an ownership interest in an individual financial asset. The lead bank retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. Banks should ensure that comprehensive participation agreements with originating institutions are in place for each loan facility before they consider purchasing any participating interest. Many banks purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with affiliates, groups of banks, or members of a chain-banking organization. Alternatively, a purchasing bank may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a bank may purchase or participate in a loan to accommodate another unrelated bank with which it has established an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a bank’s overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a bank diversify its risks and improve its liquidity.

BOARD POLICIES ON LOAN PARTICIPATIONS

Banks should have sufficient board-approved policies in place that govern their loan participation activities. At a minimum, the policy should include (1) the requirements for entering into a loan participation agreement, (2) limits for the aggregate amount of loans purchased from and sold to an outside source, (3) limits on the aggregate amount of loans purchased and sold, (4) limits for the aggregate amount of loans to particular industries, (5) comprehensive participation agreements with originating banks, (6) complete analysis and documentation of the credit quality of obligations purchased, (7) an analysis of the value and lien status of the collateral, (8) appraisal guidelines, (9) the maintenance of full independent credit information on the borrower throughout the term of the loan, (10) guidelines for the timely transfer of all financial and nonfinancial credit information to participant banks, and (11) collection procedures.

LOAN PARTICIPATION AGREEMENT

A loan participation agreement may enable a smaller bank (the lead bank or transferor) to originate a large loan in excess of its legal lending limit. Participating banks that have an ownership interest are able to offset low local loan demand or invest in large loans without the burden of servicing the loan or incurring origination costs. A loan participation agreement may also allow the originating bank to facilitate and grant a larger loan without causing it to have a concentration of credit (i.e., enabling risk diversification) or an impairment of its liquidity position. The participation agreement should contain provisions that require the originating bank to transfer, in a timely manner, all financial and nonfinancial credit information to the participant banks upon the loan’s origination and throughout the term of the loan. The agreement should specify the allocation of payments, losses, and expenses. It should also state that a participating bank has the right to perform its own independent review of the transaction. The agreement should contain no language indicating that the lead bank is a “lender” or that a participating bank is a “borrower.” The purchase of loan participations without a comprehensive agreement could be viewed as an unsafe and unsound banking practice.

ACCOUNTING FOR LOAN PARTICIPATIONS

A loan participation agreement is usually structured to allow the participation transaction to receive sale treatment of a portion of the loan by the originating bank even though the
participation agreement may restrict the purchaser when reselling its interest in the loan, subject to certain conditions.\(^1\) Sale treatment is achieved by structuring the loan participation agreement so that interests sold to a purchaser meet the definition of a “participating interest” and the transaction satisfies all conditions for transfer of control over the interests. In general, FAS 166 (paragraph 8B) briefly defines a participating interest as a portion of a financial asset that

1. conveys proportionate ownership rights with equal priority to each participating interest holder.
2. involves no recourse (other than standard representations and warranties) to, or subordination by, any participating interest holder.
3. does not entitle any participating interest holder to receive cash before any other participating interest holder.

A transfer of a participating interest in an entire financial asset in which the transferor surrenders control over those interests is to be accounted for as a sale if and only if all the following conditions are met:

1. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.\(^2\)
2. Each purchaser has the right to pledge or exchange the interests it received, and no condition both constrains the purchaser from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor.
3. The transferor does not maintain effective control over the interests.\(^3\)

**STRUCTURING THE LOAN PARTICIPATION AGREEMENT**

The written participation agreement should consider contingent events such as a defaulting borrower, the lead bank becoming insolvent, or a party to the participant arrangement that is not performing as expected. The agreement should clearly state the limitations the originator or participants impose on each other and any rights that the parties retain. The participation agreement should clearly include:

- the obligation of the lead bank to furnish timely credit information and to notify the parties of significant changes in the borrower’s status;
- a requirement that the lead bank consult with the participants prior to any proposed change to the loan, guarantee, or security agreements, or taking any action when the borrower defaults;
- the lead bank’s and participants’ specific rights if the borrower defaults;
- the resolution procedures to be followed when the lead bank or participants
  - do not agree on the procedures to be taken when the borrower defaults and/or;
  - have potential conflicts when the borrower defaults on more than one loan;
- provisions for terminating the agency relationship between the lead bank and the participants upon events such as insolvency, breach of duty, negligence, or misappropriation by one of the parties to the agreement.

Some participation agreements may allocate

---

1. Three sale recognition conditions denote the transferor’s surrender of control under Financial Accounting Standards (FAS) 166, “Accounting for Transfers of Financial Assets” (an amendment of FAS 140). Those conditions must be met in order for the originator (transferor) to account for the transfer of the financial assets to the participating transferee as a sale. When a loan participation is accounted for as a sale, the seller (transferor) removes the participated interest in the loan from its financial statements. FAS 166 applies to both the transferor (seller) of the participated assets and the transferee (purchaser). See the complete text of FAS 166 (paragraphs 8B and 9) that defines a “participating interest” and the conditions for sale recognition. See also the reporting instructions for the FFIEC Consolidated Reports of Condition and Income (FFIEC 031) (bank Call Report).

2. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its consolidated affiliates included in the financial statements being presented.

3. Examples of a transferor’s effective control over the transferred financial assets include (a) an agreement that both entitles and obligates the transferee to repurchase or redeem the financial asset (or its third-party beneficial interests) before its maturity, (b) an agreement that provides the transferee with both the unilateral ability to cause the holder to return specific financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call, or (c) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them.
payments using a method other than a pro rata sharing based on each participant’s ownership interest. The first principal payment could be applied based on the participant’s ownership interest while the remaining payments would be applied according to the lead bank’s ownership interest. In this situation, the participation agreement should specify that if a borrower defaults, the participants would share subsequent payments and collections in proportion to their ownership interest at the time of default.4

A participation agreement may provide that the lead bank, as the originating lender, allow a participating bank to resell, but the lead bank reserves the right to call at any time from whoever holds the ownership interest. The lead bank can then enforce the call option by cutting off or restricting the flow of interest at the call date. In this situation, the lead bank, as originating lender, has retained effective control over the participation; such a call option precludes sale accounting treatment by the transferor. The transaction, therefore, should be accounted for as a secured borrowing.

SALES OF LOAN PARTICIPATIONS IN THE SECONDARY MARKET

If a bank has a concentration in loan participations, it may be possible for it to sell its participating interests in the secondary market to reduce its dependence on an asset group. If the bank is not large enough to participate in the secondary market, an alternative might be to sell loans without recourse to a correspondent bank that also desires to diversify its loan portfolio.

SALES OF LOAN PARTICIPATIONS WITH OR WITHOUT THE RIGHT OF RECOUSE

The parties to a participation agreement (those having a participating ownership interest) generally may have no recourse to the transferor or to each other even though the transferor (e.g., the originating lender) continues to service the loan. No participant’s interest should be subordinate to another. Some loan participation agreements, however, may give the seller a contractual right to repurchase the participated loan interest for purposes of working out or modifying the sale. When the seller has the right to repurchase the participation, it may provide the seller with a call option on a specific loan participation asset. If the seller’s right to repurchase precludes the seller from recognizing the transaction as a sale, the transaction should be accounted for as a secured borrowing.

SALES OF 100 PERCENT PARTICIPATIONS

Some loan participation agreements may be structured so that the transferor (lead bank) sells

---

4. This is not a participating interest—no sale.
5. The cash flows from a loan participation agreement, except servicing fees, should be divided in proportion to the third parties’ participating interests.
the entire underlying loan amount (100 percent) to the agreement’s participants. If participation agreements are not structured properly they can pose unnecessary and increased risks (for example, legal, compliance, or reputational risks) to the originator and the participants. The lead bank, as originator, would have no ownership in the loan. Such agreements should therefore clearly state that the loan participants are participating in the loan and that they are not investing in a business enterprise. The policies of a bank engaged in such loan participation agreements should focus on safety and soundness concerns that include:

- the program’s objectives
- the plan of distribution
- the credit requirements that pertain to the borrower—the originating bank should structure 100 percent loan participation programs only for borrowers who meet the originating institution’s credit requirements
- the program participant’s accessibility to the borrower’s financial information (as authorized by the borrower)—the originating bank should allow potential loan participants to obtain and review appropriate credit and other information that would enable them to make an informed credit decision.

PARTICIPATION TRANSACTIONS BETWEEN AFFILIATES

Banks should not relax their credit standards when participation agreements involve affiliated insured depository institutions. Such agreements must be structured to comply with sections 23A and 23B of the Federal Reserve Act (FRA) and the Board’s Regulation W. The Federal Reserve has determined that in certain very limited circumstances the purchase or sale of a participation agreement may be exempt from these provisions.

Transfer of Low-Quality Assets

In general, a bank cannot purchase a low-quality asset, including a loan participation from an affiliate. Section 23A of the FRA provides a limited exception to the general rule prohibiting purchase of low-quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset. Section 223.15 of the Board’s Regulation W provides an exception from the prohibition on the purchase of a low-quality asset by a member bank from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would not increase the member bank’s proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegees) and it must give a 20-day post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank’s appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

CONCENTRATIONS OF CREDIT INVOLVING LOAN PARTICIPATIONS

Banks should avoid purchasing loans that generate unacceptable credit concentrations. Such concentrations may arise solely from the bank’s purchases, or they may arise when loans or purchased participations are aggregated with loans originated and retained by the purchasing bank. The extent of contingent liabilities, holdbacks, reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, loans purchased from another source should be evaluated in the same manner as loans originated by the bank itself. Guidelines should be established for the

6. 12 USC 371c(a)(3).
type and frequency of credit and other information the bank needs to obtain from the originating institution to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the bank.

LOAN PARTICIPATIONS AND ENVIRONMENTAL LIABILITY

Environmental risk represents the adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination. Banks may be indirectly liable via their lending activities for the costs resulting from cleaning up hazardous substance contamination. Banks need to be careful that their actions making, administering, and collecting loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of a borrower’s business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Banks that originate loans to borrowers through loan participation agreements could be transferring environmental risk and liability to the holders of participations, thus making them susceptible to such losses. The originating banks should establish and follow policies and procedures designed to control environmental risks. See section 2140.1 (the “Environmental Liability” subsection) for a more detailed discussion on ways banks can protect themselves as lenders, and their loan participation agreement holders, from environmental liability.

RED FLAG WARNING SIGNALS

The following conditions may indicate that there are significant problems with the management of the bank’s loan participation portfolio:

1. the absence of formal loan participation policies.
2. the absence of any formal participation agreement.
3. the absence of credit evaluations and independent credit analysis.
4. the absence of complete loan documentation.
5. a higher volume of loan participations when compared to the volume of other loans in the bank’s loan portfolio.
6. missing loan participation agreements and documentation which should denote the rights and responsibilities of all participants.
7. the existence of numerous disputes or disagreements among the participants regarding a. the receipt of payment(s) in accordance with the participation agreements,
   b. documentation requirements, or
   c. any other significant aspects of the bank’s loan participation transactions.
8. the originating bank is making loan payments to loan participation acquirers without receiving reimbursement by the original borrower.
Loan Participations
Examination Objectives
Effective date October 2009

1. To ascertain if the bank engages in the purchase or sale of loans via loan participation agreements.

2. To determine if the bank’s lending policy
   a. places limits on the amount of loan participations originated, purchased, or sold based on any one source or in the aggregate;
   b. has set credit standards for the bank’s borrowers requesting loans as well as third parties acquiring loan participations from the bank as originator;
   c. requires the same credit standards for loan participations as it does for other loans;
   d. sets the amount of contingent liability, holdback (retained ownership), and the manner in which the loan should be serviced; or
   e. requires complete loan documentation for loan participations.

3. To assess the impact of any concentrations of credit to a borrower, or in the aggregate, that arise from loans involved in loan participation agreements.

4. To determine if there are any informal repurchase agreements that exist between loan participation acquirers that are designed to circumvent the originating bank’s legal lending limits, disguise delinquencies, and avoid adverse classifications.

5. To determine whether the bank’s financial condition is compromised by assessing the impact of the bank’s loan participations with its affiliates.

6. To ascertain whether the bank’s loan participation transactions with affiliates are in compliance with sections 23A and 23B of the Federal Reserve Act and the Board’s Regulation W.

7. To determine if there are disputes between the bank as originator of loan participations and its participants. To determine, if possible, if any loan participations have been adversely classified by examiners, including examiners from other supervisory agencies (includes loan participations held by the other institutions).
These examination procedures are designed to ensure that originated loans that were transferred via loan participation agreements or certificates to state member banks, bank holding companies, nonbank affiliates, or other third parties were carefully evaluated. The examination procedures also instruct examiners to determine if the asset transfers were carried out to avoid or circumvent classification and to determine the effect of the transfers on the bank’s financial condition. In addition, the procedures are designed to ensure that the primary regulator of another financial institution involved in the asset transfer is notified.

1. Review the board of directors’ or their designated committees’ policies and procedures governing how loan participation agreements and activities are created, transacted, and administered. Refer to section 2045.1 for the minimum items that should be included in board-approved policies on loan participation activities.

2. Determine if managerial reports provide sufficient information relative to the size and risk profile of the loan participation portfolio and evaluate the accuracy and timeliness of reports produced for the board and senior management.

3. For loan participations held (either in whole or in part) with another lending institution, review, if applicable,
   • participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
   • loan documentation to determine if it meets the bank’s underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for other loans the bank originates);
   • the transfer of loans immediately before the date of the examination to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current examination; and
   • losses to determine if they are shared on a pro rata or other basis according to the terms of the participation agreement.

4. Check participation certificates or agreements and records to determine whether the parties share in the risks and contractual payments on a pro rata or other basis.

5. Determine if loans are purchased on a recourse basis and that loans are sold on a nonrecourse basis.

6. Ascertain that the bank does not buy back or pay interest on defaulted loans in contradiction of the underlying participation agreement.

7. Compare the volume of outstanding originated or purchased loans that were issued in the form of loan participations with the total outstanding loan portfolio.

8. Determine if the bank has sufficient expertise to properly evaluate the volume of loans originated or purchased and sold as loan participations.

9. Based on the terms of the loan participation agreements, review the originator’s distribution of the borrower’s payments received to those entities or persons owning interests in the loan participations.Ascertain if the agreement’s recourse provisions may require accounting for the transactions as a secured borrowing rather than as a sale.

10. Determine if loans are sold primarily to accommodate credit overline needs of customers or to generate fee income.

11. Determine if loans are purchased or sold to affiliates or other companies in a chainbanking organization or a commonly owned group of banks; if so, determine whether the purchasing companies are given sufficient information to properly evaluate the credit. (Section 23A of the Federal Reserve Act and the Board’s Regulation W prohibit transfers of low-quality assets between affiliates. See section 4050.1, “Bank-Related Organizations.”)

12. Investigate any situations in which assets were transferred before the date of examination:
   a. Determine if any were transferred to avoid possible criticism during the examination.
   b. Determine whether any of the loan participations transferred were nonperforming at the time of transfer, classified during the previous examination, or transferred for any other reason that may
cause the loans to be considered of questionable quality.

13. Review the bank’s policies and procedures to determine whether loan participations purchased by the bank are required to be given an independent, complete, and adequate credit evaluation. If the bank is a holding company subsidiary or a member of a chain-banking organization or commonly owned group of banks, review asset participations sold to affiliates or other known members of the chain or group of banks to determine if the asset purchases were supported by an arm’s-length and independent credit evaluation.

14. Determine that any assets purchased by the bank were properly reflected on its books at fair market value at the time of purchase.

15. Determine that transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.

16. If poor-quality assets were transferred to another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank’s appropriate staff will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

- name of originating and receiving institutions;
- type of assets involved;
- date (or dates) of transfer;
- total number and dollar amount of assets transferred;
- status of the assets when transferred (e.g., nonperforming, classified, etc.); and
- any other information that would be helpful to the other regulator. Ascertain whether the bank manages not only the risk from individual participation loans but also portfolio risk.

17. Find out if management develops appropriate strategies for managing concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse market conditions (such a plan may include strategies involving not only loan participations, but also whole loan sales). Find out if the bank’s contingency plan includes selling loans as loan participations.

18. Ascertain if management periodically assesses the marketability of its loan participation portfolio and evaluates the bank’s ability to access the secondary market.

19. Verify whether the bank compares its underwriting standards for loan participations with those that exist in the secondary market.
1. Under what circumstances are loans participated?
2. Who determines the type of loans that may be participated? Does the bank have policies in that regard? Are credit standards included in the lending policy for purchased loan participations, and does the policy require complete loan documentation and independent credit and collateral evaluation or appraisal?
3. Does the lending policy place lending limits on the amount of loan participations purchased from any one source, and does it place an aggregate limit on such loans?
4. Are low-quality loans allowed to be participated?
5. What is the volume and frequency of inter-institution transactions involving loan participations?
6. Does the bank have accounting policies to ensure the appropriate treatment of loan participations as either sales or secured borrowings?
Interagency Guidance on Bargain Purchases
Effective date October 2011

The guidance discussed below highlights generally the accounting and reporting requirements unique to business combinations resulting in bargain purchase gains. The guidance does not provide a comprehensive discussion on all aspects of accounting for business combinations. (See SR-10-12 and its attachment.)

SUPERVISORY CONSIDERATIONS
Compliance with GAAP and Regulatory Reporting Requirements

Accurate regulatory reports are critical for effective supervision and, because of their public availability, for enhancing the transparency of an institution’s risk profile and financial position. Business combinations, including bargain purchase transactions and assisted transactions, should be accounted for in accordance with the Financial Accounting Standards Board’s Accounting Standards Codification (ASC) Topic 805, “Business Combinations.” The management of an acquiring institution is responsible for preparing regulatory reports in accordance with generally accepted accounting principles (GAAP), regulatory reporting requirements, and relevant supervisory guidance. The complexity of the accounting requirements related to a business combination does not relieve management of this responsibility and should be factored into management’s overall analysis of the practicability of a potential acquisition. The management of each institution is responsible for establishing and maintaining appropriate governance and an effective internal control structure over the preparation of regulatory reports commensurate with the institution’s size, complexity, and risk profile. This structure should include written policies and procedures that provide clear guidelines on accounting and reporting matters related to business combinations. Management is encouraged to discuss applicable regulatory reporting requirements and supervisory considerations with its primary federal regulator prior to consummating a business combination.

Fair-Value Measurements

The valuation of the assets acquired and liabilities assumed in a business combination presents accounting and supervisory challenges. For example, many of these assets and liabilities are illiquid and lack quoted market prices, which complicates the estimation of their acquisition-date fair values. Thus, a key issue underlying fair-value estimates is the appropriateness of inputs and the appropriate selection and use of valuation techniques. Some valuation techniques employ complex models and, therefore, warrant further supervisory review. For example, reliability concerns may arise when the institution does not use clear and rigorous valuation techniques or where one or more significant inputs to a valuation estimate are not observable, even indirectly, from active markets. This is especially true when estimating the fair value of illiquid financial instruments, indemnification assets, and identifiable intangible assets that are acquired in a business combination.

It is management’s responsibility to report fair values in accordance with ASC Topic 820, “Fair Value Measurement.” Because of the significant impact fair-value measurements and any resultant goodwill or bargain purchase gain have on the financial statements, management should have appropriate written fair-value measurement policies, procedures, and controls in place. These policies, procedures, and controls should be executed by experienced and qualified individuals knowledgeable in both GAAP and regulatory reporting requirements for business combinations. Furthermore, management’s fair-value measurements should be well supported and are subject to review by examiners.

If management does not possess the expertise to identify and measure the identifiable assets acquired and the liabilities assumed in a business combination (and the equity or member interests in the acquiree in a combination of mutual institutions), management should engage a qualified third-party expert to provide professional guidance and support for the preparation

1. Part III of the June 7, 2010, “Interagency Supervisory Guidance on Bargain Purchases and FDIC- and NCUA-Assisted Acquisitions” was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the former Office of Thrift Supervision.
of fair-value measurements required by ASC Topic 805 and determined in accordance with ASC Topic 820. For example, management may use a third party to estimate the expected cash flows and the fair value of a loan portfolio acquired in an assisted acquisition (and the related expected cash flows and fair value of an FDIC loss-sharing indemnification asset). The use of outside resources, however, does not relieve management of its responsibility to ensure that fair-value estimates are measured in accordance with GAAP. Management must sufficiently understand the bases for the measurement and valuation techniques used by outside parties to determine the appropriateness of these techniques, the underlying inputs and assumptions, and the resulting fair-value measurements.

Retrospective Adjustments of Fair-Value Measurements during the Measurement Period

During the measurement period, management should finalize its fair-value measurement estimates and retrospectively adjust the provisionally recorded amounts to reflect the information it was seeking about the acquisition-date facts and circumstances promptly after receipt of this information. The existence of a measurement period does not permit management to delay completion of comprehensive fair-value measurements that conform to the requirements of ASC Topic 820. Rather, at the earliest possible reporting date, management should establish and report appropriate fair-value estimates for the identifiable assets acquired and liabilities assumed in a business combination (and the equity or member interests in the acquiree in a combination of mutual institutions).

An acquiring institution’s regulatory capital is subject to retrospective adjustments made during the measurement period. Although bargain purchase gains are reported in earnings and included in the computation of regulatory capital under the agencies’ capital standards, the acquiring institution’s primary federal regulator may determine an estimated bargain purchase gain lacks sufficient necessary permanence to rely on the estimate as a component of regulatory capital.
INTRODUCTION

A concentration exists when extensions of credit or other obligations possess similar risk characteristics. Typically, loans to related groups of borrowers, loans collateralized by a single security or securities with common characteristics, and loans to borrowers with common characteristics within an industry have been included in homogeneous risk groupings when assessing asset concentrations. Furthermore, a concentration may include the aggregate of all types of credit (e.g., loan product) to or investment in a particular homogeneous risk grouping.

While the size of a concentration does not necessarily determine the risk, a bank’s asset quality, earnings, or capital can be disproportionately affected by a single or localized economic event or market conditions if the bank holds significant asset concentrations. Therefore, a bank’s risk-management system needs to identify, measure, monitor, and control concentrations in a bank’s loan portfolios and investments.

LEGAL LENDING LIMITS AND REGULATORY CONSIDERATIONS

Limitations imposed by the various state and federal legal lending limits are intended to prevent an individual or a relatively small group from borrowing an undue amount of the bank’s resources and to safeguard the bank’s depositors by spreading the loans among a relatively large number of persons engaged in different businesses. However, lending limits alone are not sufficient to prevent and control concentrations of credit.

The Interagency Guidelines Establishing Standards for Safety and Soundness (12 CFR 208 appendix D-1 for state member banks) state that a depository institution should establish and maintain prudent credit underwriting practices that take adequate account of concentration of credit risk. Further, an insured depository institution should establish and maintain a risk-management system that is commensurate with the institution’s size and the nature and scope of its operations to identify problem assets and prevent deterioration in those assets. In establishing and maintaining its risk-management system, the institution should, among other things, consider the size and potential risks of material asset concentrations.

The real estate lending standards in the Board’s Regulation H require each state member bank to adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate. In terms of governance, a bank’s real estate lending policies must be consistent with safe and sound banking practices; appropriate to the size of the institution and the nature and scope of its operations; and reviewed and approved by the bank’s board of directors at least annually. The real estate lending policies outlined in 12 CFR 208.51 should consider the Interagency Guidelines for Real Estate Lending Policies (12 CFR 208, appendix C). The Interagency Guidelines for Real Estate Lending Policies state that in managing its loan portfolio, the institution should consider both internal and external factors in the formulation of its loan policies and strategic plan. This includes the need to avoid undue concentrations in risk.

In addition, the Board’s Regulation F (12 CFR 206) addresses exposure that may arise from a bank’s relationship with its correspondents. Regulation F states that a bank must establish policies and procedures that take into account credit and liquidity risks, including operational risks, in selecting correspondents and in terminating those relationships. At least annually, these policies and procedures should be reviewed and approved by the bank’s board of directors. For more information, see this manual’s sections on “Interbank Liabilities” and “Correspondent Concentration Risks.”

TYPES OF CREDIT CONCENTRATIONS

There are numerous approaches for determining concentrations within a loan portfolio. In evaluating a potential concentration, a bank needs to determine the key factors germane to the credit portfolios.

1. 12 CFR 208.51.
Commercial Real Estate (CRE) Credit Concentrations

Concentrations in commercial real estate (CRE) loans are particularly noteworthy given its historical volatility and role in bank failures. Banks may view a CRE loan as a product, which would include all transactions secured by commercial real estate. Alternatively, banks may also take an “industry” view, which would include only those CRE loans where the primary source of repayment is sale or refinancing of commercial real estate or collection of lease and rental payments of the property. A CRE loan pool may be further segmented by other factors such as geography, property use, tenant concentrations, risk rating, or credit structure (for instance, fixed or variable interest rate).

Banks with weak risk management and high CRE credit concentrations are exposed to a greater risk of loss and failure. Therefore, banks with CRE credit concentration should have appropriate risk-management practices in place to manage their risk exposure.

Other Common Loan Portfolio Concentrations

Other concentrations that are commonly identified in a loan portfolio include the following:

- Loans to a group of borrowers, perhaps unrelated, predicated on the collateral support afforded by a debt or equity issue of a corporation. Regardless of whether the issuing entity is a publicly traded company or a closely held enterprise, a concentration may exist in the underlying collateral.
- Loans that are dependent on a particular agricultural crop or livestock herd. Banking institutions located in farming, dairying, or livestock areas may grant substantially all their loans to individuals or concerns engaged in and dependent on the agricultural industry. Concentrations of agricultural lending activity are commonplace and may be necessary if these banks are to adequately serve the needs of their communities.
- Reserve-based lending, which is a type of financing where a loan is secured by the reserves of oil and gas of a borrower and repaid primarily using the proceeds from the future sale of encumbered oil or gas reserves. Concentrations can occur in any one well, reservoir, field, or producing area. For more information on the management of concentrations in energy lending, see this manual’s section, “Energy Lending—Reserve-Based Loans.”
- The aggregate amount of interim construction loans that do not have firm, permanent takeout commitments. In the event that permanent financing is not obtainable, the bank will have to continue financing the real estate property until the borrower sells the property or obtains permanent financing from another lender. This longer term financing subjects the bank to additional liquidity and possibly interest rate risks as well as to market and economic risks associated with the real estate property.
- Loans to groups of borrowers who handle a product from the same industry or economic sector. Although the borrowers may appear to be independent from one another, their financial conditions may be affected similarly if a slowdown occurs in their economic sector.
- Loans that are originated in geographic areas that are economically driven by a certain industry or dominated by one or only a few business enterprises. In these situations, banks may extend a substantial amount of credit to these companies and to a large percentage of the companies’ employees. If economic or other events cause the enterprise’s operations to slow down or stop, heavy unemployment may result as there may be limited job opportunities in the area.
- Loans that are extended to other financial institutions, including, but not limited to, due from accounts, federal funds sold, investments, net current exposure of derivatives contracts, and direct or indirect loans. For more information, see SR-10-10, “Interagency Guidance on Correspondent Concentration Risk,” and this manual’s section, “Correspondent Concentration Risks.”
- Retail loan products, including, but not limited to, credit cards, home equity lines of credit, home equity loans, residential first mortgages, auto loans, boat loans, and manu-

---

2. For more information, see SR-15-17, “Interagency Statement on Prudent Risk Management for Commercial Real Estate Lending.”
3. See also this manual’s section, “Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices.”
4. See also this manual’s section, “Agricultural Loans.”
factured housing loans. In these cases, loan product features (e.g., target market, purpose, documentation, underwriting criteria, or repayment expectations) constitute the common characteristics and sensitivities of the loans. These pools may be further segmented by other factors, such as direct or indirect loans, vintage, credit scores, or loan-to-value ratios.

RISK MANAGEMENT OF ASSET CONCENTRATIONS

The key risk-management objective for credit concentrations is to identify pools of transactions that may act like a single, correlated exposure. The sophistication of a bank’s risk-management processes should be appropriate to the size as well as the level and nature of concentrations and the associated risk to the bank. A bank’s risk-management framework should effectively identify, monitor, and control concentration risk.

The board of directors is responsible for establishing the bank’s strategic plan, including the level of assumed risk. If the bank has significant credit concentration risk, its strategic plan should address the rationale for such a concentration in relation to its overall growth objectives, financial targets, and capital plan. A bank’s lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the institution’s lending staff to evaluate relevant credit factors. When a bank has a credit concentration, the establishment of sound lending policies becomes even more critical to promote credit quality in its credit portfolio.

A strong management information system (MIS) is key to effective portfolio management. The sophistication of MIS will necessarily vary with the size and complexity of the credit portfolio and level and nature of existing or planned concentrations. Effective MIS produces timely, comprehensive, and accurate data. MIS should provide management with sufficient information to identify, measure, monitor, and manage concentration risk. This includes meaningful information on portfolio characteristics that is relevant to the bank’s lending strategy, underwriting standards, and risk tolerances. A bank should assess periodically the adequacy of MIS in light of changes in its credit portfolio’s size, risk profile, and complexity.

Banks that have effective internal controls to manage and reduce excessive concentrations over a reasonable period of time need not automatically refuse credit to sound borrowers because of their particular industry or geographic location. Banks should appropriately incorporate analytical information (such as scenario analysis results, if conducted) in establishing concentration limits and managing concentration risks.

Furthermore, a bank may be able to reduce the risks associated with concentrations through strengthening the loan terms in an individual credit. For example, the bank may be able to obtain additional collateral, government guarantees, crop insurance backed by government agencies, or private insurance arrangements for loans or asset pledging. In the event of deterioration, the bank’s position would be strengthened because the additional collateral or guarantees provide a cushion against any losses.

When concentration levels have been built up over an extended period, a bank needs time, in some cases several years, to achieve a more balanced and diversified portfolio mix. Given the bank’s trade area, lack of economic diversity, or geographic location, reducing the existing concentration in the near term may be impossible. If a concentration does exist, the bank should have adequate systems and controls for reducing undue or excessive concentrations in accordance with a prudent plan. Strong credit policies and loan administration standards should provide adequate control for the risks associated with new loans in a loan portfolio with a high risk concentration. The bank should also maintain adequate capital to protect the bank while its portfolio is being restructured. For identified asset concentrations, bank management should be aware of not only the current market and economic trends for a particular asset concentration as well as future prospects.

Concentrations that involve excessive or undue risks require close scrutiny by the bank and should be reduced over a reasonable period of time. If the concentrations compromise the safety and soundness of the institution, management is normally expected to develop a plan to reduce the asset concentration that is realistic, prudent, and achievable in view of the particular circumstances and market conditions.
Alternatives for Reducing Credit or Asset Concentrations

As noted above, sometimes credit concentration can become so significant that, if the common factor influencing the credit portfolio deteriorates sufficiently, even a portfolio of well-underwritten loans can suffer losses and reduce an institution’s capital. This possibility underscores why the control and management of concentration risk is so important. To manage a credit or asset concentration, a bank may consider the following actions.

Increased holdings of capital. To compensate for the additional risk that may be associated with an asset concentration, a bank may elect to maintain a higher capital ratio than would be required under the appropriate capital regulations. This additional capital would provide support in the event the concentration adversely affects the organization’s financial position.

Increased allowance for credit losses. The bank may choose to factor credit concentrations into its determination of an adequate allowance for credit losses. Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. As part of the loss estimation process, management should consider, among other things, the existence, growth, and effect of any concentrations of credit.

Loan participations. If a bank has a concentration, the bank may sell a portion of its loan portfolio in the secondary market to reduce its dependency on an asset group. If the bank is not large enough to participate in the secondary market, the bank might be able to sell loans, without recourse, to a correspondent bank that is also attempting to diversify its loan portfolio. For more information on loan participations, see this manual’s section entitled, “Loan Participations, the Agreements and Participants.”

Government guarantee programs. Another possible solution to reduce the risk associated with a loan concentration is for the bank to participate in loan programs that provide a government guarantee or insurance in the event the borrower defaults on a loan. Such programs provide the bank with the ability to offset a portion of its credit risk.

Modifying underwriting standards. Modifying underwriting standards to increase exposure to higher quality transactions or to diminish exposure to weaker borrowers. Concurrently, management can increase the level of oversight over credit underwriting while executing exit strategies from lower-quality relationships (e.g., increasing pricing or tightening terms and conditions).

Diversification of the loan portfolio. Banks can engage in activities or markets that are not likely to perform in a similar manner with its existing loan portfolios, considering its expertise in a market and loan products.

Modifying exposure limits or credit risk benchmarks. This can be accomplished by adjusting limits on loan commitments or outstanding balance on a line of credit, or tightening constraints on distribution by the bank’s internal loan ratings/grades.

Buying credit derivative protection. For some banks, it may be appropriate to engage in default or total return swaps on an individual credit transaction or a loan pool.

SUPERVISORY CONSIDERATIONS FOR ASSESSING CONCENTRATIONS

Quantitative Considerations

Examiners should determine the existence of any credit concentrations at the bank and assess whether any concentrations of credit represent a hazard to the safety and soundness of the bank or violate applicable laws and regulations. Examiners should understand the activities that may heighten concentration risk, such as acute asset growth; increases in nonperforming assets; or changes to the bank’s loan portfolio. As described in the this manual’s section, “Earnings—Analytical Review of Income and Expense,” examiners should reference the Uniform Bank Performance Report (UBPR) as well as the most recent financial statements and other related financial information in performing the analytical review of a bank. UBPR page 7B entitled, “Analysis of Concentrations of Credit” and provides percentages of certain bank assets by its capital. More specifically, the UBPR provides concentration information on residential and commercial real estate loans, construction and development lending, agricultural loans, commercial and industrial loans, and different types of leases.

For supervisory processes, examiners should evaluate a bank’s credit concentration ratios to
assess the size and potential risks of material credit concentrations posed to the bank’s capital. In March 2020, the Federal Reserve, Federal Deposit Insurance Corporation, and Office of the Comptroller of the Currency (agencies) adopted a common approach for defining credit concentration ratios. As of March 31, 2020, for banks that have adopted the Financial Accounting Standards Board’s Accounting Standards Codification Topic 326, Financial Instruments—Credit Losses that implements the current expected credit losses (CECL) methodology, the agencies’ examiners will calculate credit concentration ratios using:

- tier 1 capital plus the allowance for credit losses attributed to loans and leases as the denominator.\(^5\)

For institutions that have not adopted CECL, the agencies’ examiners calculate credit concentration ratios using:

- tier 1 capital plus the entire allowance for loan and lease losses as the denominator.

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. This includes all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances, advances, letters of credit, and all other items due to the bank as well as loans endorsed, guaranteed, or cosigned by related individuals and their related interests. A concentration of credit generally exists when an institution advances or commits economically related direct or indirect extensions of credit and contingent obligations to a person, entity, or affiliated group that, when aggregated, exceed 25 percent of the bank’s capital, as defined above.

### Qualitative Considerations

In addition to the quantitative assessment of bank concentration ratios, examiners should understand and evaluate the effectiveness of the internal policies, systems, and controls that a bank uses to monitor and manage the risk associated with asset concentrations. Examiners should determine whether the bank’s MIS reports on credit concentrations are adequate and allow management to make informed decisions. Further, examiners should determine whether management followed established guidelines for concentrations, and if those guidelines align with the bank’s risk appetite or strategic plan. If the

---

6. The agencies have adopted final rules providing banks the option to phase in the day-one adverse effects on regulatory capital that may result from the adoption of the CECL accounting standard. See 84 Fed. Reg. 4222, February 14, 2019 and 85 Fed. Reg. 17,723, March 31, 2020. For banks that are phasing in the capital impact of implementing the CECL accounting standard, the denominator for concentration calculations is tier 1 capital plus allowance for loan and lease losses or allowance for credit losses adjusted for the amount of CECL phase in capital included in both allowance and tier 1 capital. As noted in 84 Fed. Reg. 4222, for purposes of determining whether a bank phasing in the capital impact of implementing the CECL methodology is in compliance with its regulatory capital requirements (including capital buffer and prompt corrective action requirements), the agencies will use the bank’s regulatory capital ratios as adjusted by the CECL transition provision. Through the supervisory process, the agencies will continue to examine banks’ credit loss estimates and allowance balances regardless of whether the bank has elected to use the CECL transition provision. In addition, the agencies may examine whether electing bank will have adequate amounts of capital at the expiration of their CECL transition provision period. After all banks have adopted the CECL methodology and have exited their CECL transition provision periods, it will no longer be necessary to adjust for the amount of CECL phase in capital included in both the allowance and tier 1 capital.

---

For the purposes of measuring concentrations at banks that are phasing in the adoption of the CECL accounting standard, examiners should evaluate the appropriateness of the amounts included in the denominator for the tier 1 capital calculation and confirm that the CECL transitioned amounts, if elected, plus the allowance for credit losses related to loans and leases have been excluded. To calculate the amount to be excluded from tier 1 capital, examiners should use the difference between “retained earnings” as reported on item 26.a of Schedule RC to the Call Report and “retained earnings” as reported on item 2 Schedule RC-R, Part I, to the Call Report. This resulting difference is the amount of retained earnings that should have been used to calculate tier 1 capital for purposes of measuring lending-related concentrations and should equal the retained earnings on the institution’s balance sheet.
bank modified its strategic plans in a way that could increase concentration risk at the bank, examiners should assess whether the bank made the necessary modifications to concentration risk-management systems.

A bank should maintain adequate records that may be used to identify asset concentrations. The degree of sophistication of the reporting records will vary by the asset size of a bank. Regardless of the identification system used by the bank, examiners should verify the accuracy of listed concentrations in such reporting records, as well as the appropriateness of concentrations, during the examination.

**Reporting Concentrations in the Report of Examination**

As noted in the “Community Bank Supervision Process” section of this manual, examiners are to include a discussion on concentrations in the report of examination if the bank has materially deficient practices in managing concentrations. The report of examination should include a discussion of the appropriateness of risk-management practices regarding any materially significant concentrations of assets, liabilities, specific industries, and other categories, as applicable. If the bank has materially deficient practices in managing concentrations or has concentrations that compromise safety and soundness, the report of examination should address the bank’s alternatives or plans for reducing concentrations. Further, examiners should comment on the ability to leverage the bank’s internal concentration reporting when conducting the review and assessment of concentrations.
Classification of Credits
Effective date June 2004

The criteria used to assign quality ratings to extensions of credit that exhibit potential problems or well-defined weaknesses are primarily based upon the degree of risk and the likelihood of orderly repayment, and their effect on a bank’s safety and soundness. Extensions of credit that exhibit potential weaknesses are categorized as “special mention,” while those that exhibit well-defined weaknesses and a distinct possibility of loss are assigned to the more general category of “classified.” The term “classified” is subdivided into more specific subcategories ranging from least to most severe: “substandard,” “doubtful,” and “loss.” The amount of classified extensions of credit as a percent of capital represents the standard measure of expressing the overall quality of a bank’s loan portfolio.

These classification guidelines are only applied to individual credits, even if entire portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each extension of credit should be based upon the fundamental characteristics affecting the collectibility of that particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits in the same industry that are not affected by the problems of the troubled sector(s).

ASSESSMENT OF CREDIT QUALITY

The evaluation of each credit should be based upon the fundamentals of the particular credit, including, at a minimum—

- the overall financial condition and resources of the borrower, including the current and stabilized cash flow (capacity);
- the credit history of the borrower;
- the borrower’s or principal’s character;
- the purpose of the credit relative to the source of repayment; and
- the types of secondary sources of repayment available, such as guarantor support and the collateral’s value and cash flow, when they are not a primary source of repayment. (Undue reliance on secondary sources of repayment should be questioned, and the bank’s policy about permitting such a practice should be reviewed.)

The longer the tenure of the borrower’s extension of credit or contractual right to obtain funds, the greater the risk of some adverse development in the borrower’s ability to repay the funds. This is because confidence in the borrower’s repayment ability is based upon the borrower’s past financial performance as well as projections of future performance. Failure of the borrower to meet its financial projections is a credit weakness, but does not necessarily mean the extension of credit should be considered as special mention or be classified. On the other hand, the inability to generate sufficient cash flow to service the debt is a well-defined weakness that jeopardizes the repayment of the debt and, in most cases, merits classification. When determining which credit-quality rating category is appropriate, the examiner should consider the extent of the shortfall in the operating figures, the support provided by any pledged collateral, and/or the support provided by cosigners, endorsers, or guarantors.

Delinquent Extensions of Credit

One of the key indicators of a problem credit is a borrower’s inability to meet the contractual repayment terms of an extension of credit. When this occurs, the extension of credit is identified as past due or delinquent. An extension of credit that is not delinquent may be identified as special mention or classified. Nondelinquent extensions of credit (also referred to as “performing” or “current”) should be classified when well-defined weaknesses exist that jeopardize repayment. Examples of well-defined weaknesses include the lack of credible support for full repayment from reliable sources, or a significant departure from the intended source of repayment. This latter weakness warrants concern because a delinquent credit may have been brought current through loan or credit modifications, refinancing, or additional advances.
SPECIAL MENTION CATEGORY

A special mention extension of credit is defined as having potential weaknesses that deserve management’s close attention. If left uncorrected, these potential weaknesses may, at some future date, result in the deterioration of the repayment prospects for the credit or the institution’s credit position. Special mention credits are not considered as part of the classified extensions of credit category and do not expose an institution to sufficient risk to warrant classification.

Extensions of credit that might be detailed in this category include those in which—

• the lending officer may be unable to properly supervise the credit because of an inadequate loan or credit agreement;
• questions exist regarding the condition of and/or control over collateral;
• economic or market conditions may unfavorably affect the obligor in the future;
• a declining trend in the obligor’s operations or an imbalanced position in the balance sheet exists, but not to the point that repayment is jeopardized; and
• other deviations from prudent lending practices are present.

The special mention category should not be used to identify an extension of credit that has as its sole weakness credit-data or documentation exceptions not material to the repayment of the credit. It should also not be used to list extensions of credit that contain risks usually associated with that particular type of lending. Any extension of credit involves certain risks, regardless of the collateral or the borrower’s capacity and willingness to repay the debt.

For example, an extension of credit secured by accounts receivable has a certain degree of risk, but the risk must have increased beyond that which existed at origination to categorize the credit as special mention. Other characteristics of accounts receivable warranting identification as special mention include a rapid increase in receivables without bank knowledge of the causative factors, concentrations in receivables lacking proper credit support, or lack of off-site audits of the bank’s borrower.

CLASSIFICATION CATEGORIES

Split Classifications

When classifying a particular credit, it may not be appropriate to list the entire balance under one credit-quality category. This situation is commonly referred to as a “split classification” and may be appropriate in certain instances, especially when there is more certainty regarding the collectibility of one portion of an extension of credit than another. Split classifications may also involve special mention as well as “pass” credits, those that are neither special mention nor classified. Extensions of credit that exhibit well-defined credit weaknesses may warrant classification based on the description of the following three classification categories.¹

Substandard Extensions of Credit

A “substandard” extension of credit is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Extensions of credit so classified must have a well-defined weakness or

¹. Guidelines for the uniform classification of consumer-installment extensions of credit and credit card plans, as well as classification guidelines for troubled commercial real estate credits, are discussed in detail in sections 2130.1 and 2090.1, respectively.
weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected. Loss potential, while existing in the aggregate amount of substandard credits, does not have to exist in individual extensions of credit classified substandard.

### Doubtful Extensions of Credit

An extension of credit classified “doubtful” has all the weaknesses inherent in one classified substandard, with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. The possibility of loss is extremely high, but because of certain important and reasonably specific pending factors that may work to the advantage of and strengthen the credit, its classification as an estimated loss is deferred until its more exact status may be determined. Pending factors may include a proposed merger or acquisition, liquidation proceedings, capital injection, perfecting liens on additional collateral, or refinancing plans.

Examiners should avoid classifying an entire credit as doubtful when collection of a specific portion appears highly probable. An example of proper use of the doubtful category is the case of a company being liquidated, with the trustee-in-bankruptcy indicating a minimum disbursement of 40 percent and a maximum of 65 percent to unsecured creditors, including the bank. In this situation, estimates are based on liquidation-value appraisals with actual values yet to be realized. By definition, the only portion of the credit that is doubtful is the 25 percent difference between 40 and 65 percent. A proper classification of such a credit would show 40 percent substandard, 25 percent doubtful, and 35 percent loss.

Examiners should generally avoid repeating a doubtful classification at subsequent examinations, as the time between examinations should be sufficient to resolve pending factors. This is not to say that situations do not occur when continuation of the doubtful classification is warranted. However, the examiner should avoid undue continuation if repeatedly, over the course of time, pending events do not occur and repayment is again deferred awaiting new developments.

### Loss Extensions of Credit

Extensions of credit classified “loss” are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the credit has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified loss should be promptly charged off. (See SR-04-9 and its attachment.)

Banks should not be allowed to attempt long-term recoveries while the credit remains on the bank’s books. Losses should be taken in the period in which they surface as uncollectible.

In some cases, examiners should determine a reasonable carrying value for a distressed extension of credit and require a write-down through a charge to the allowance for loan and lease losses, or to other operating expenses in the case of an “other asset.” Such a determination should be based on tangible facts recorded in the bank’s credit file and contained in reports on problem credits submitted to the board of directors or its committee, and not solely on verbal assurances from a bank officer.

### SITUATIONS NOT REQUIRING CLASSIFICATION

It is generally not necessary to classify extensions of credit and contingent liabilities that are adequately protected by the current sound worth and debt-service capacity of the borrower, guarantor, or the underlying collateral. Further, a performing extension of credit should not automatically be identified as special mention, classified, or charged off solely because the value of the underlying collateral has declined to an amount that is less than the balance outstanding. Extensions of credit to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards should not be cat-

---

2. This terminology is used in the original classification definitions as set forth in the 1938 accord and its amendments. The term “liquidation” refers to the orderly repayment of the debt and not to a forced sale of the loan or its underlying collateral.
Partially Charged-Off Extensions of Credit

When an institution has charged off a portion of a credit and the remaining recorded balance of the credit (1) is being serviced (based upon reliable sources) and (2) is reasonably assured of collection, categorization of the remaining recorded balance as special mention or classified may not be appropriate.3 For example, when the remaining recorded balance of an extension of credit is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be identified as special mention or classified. This would be appropriate, however, if potential or well-defined weaknesses, respectively, continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally receive a credit rating no more severe than substandard.

A more severe credit rating than substandard for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, for example, when significant risk exposures are perceived, such as might be the case in bankruptcy or for credits collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

Formally Restructured Extensions of Credit

Restructured troubled debt should be identified in the institution’s internal credit-review system and closely monitored by management. When analyzing a formally restructured extension of credit, the examiner should focus on the ability of the borrower to repay the credit in accordance with its modified terms.4 With formally restructured credits, it is frequently necessary to charge off a portion of the principal, due to the borrower’s difficulties in meeting the contractual payments. In these circumstances, the same credit-risk assessment given to nonrestructured credits with partial charge-offs (see the previous subsection) would also generally be appropriate for a formally restructured credit. This includes not identifying the remaining recorded balance as special mention or classified if unwarranted.

The assignment of special mention status to a formally restructured credit would be appropriate, if, after the restructuring, potential weaknesses remained. It would also be appropriate to classify a formally restructured extension of credit when well-defined weaknesses exist that jeopardize the orderly repayment of the credit, based upon its reasonable modified terms. For a further discussion of troubled debt restructurings, see the glossary section of the Instructions for the Consolidated Reports of Condition and Income and “Loan Portfolio Management,” section 2040.1.

ROLE OF GUARANTEES

The primary focus of a review of an extension of credit’s quality is the original source of repayment and the borrower’s ability and intent to fulfill the obligation without reliance on guarantors.5 In situations involving troubled credits, however, the assessment of credit quality should also be based upon the support provided by guarantees. As a result, the lending institution

---

3. The accrual/nonaccrual status of the credit must continue to be determined in accordance with the glossary section of the Instructions for the Consolidated Reports of Condition and Income (Call Report). Thus, while these partially charged-off credits may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the Call Report guidance are met.

4. An example of a restructured commercial real estate credit that does not have reasonable modified terms would be a mortgage that requires interest payments only, but no principal payments, despite the fact that the underlying collateral generates sufficient cash flow to pay both.

5. Some credits are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the credit based upon the guarantor’s ability to repay the credit.
must have sufficient information concerning the guarantor’s financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor’s financial capacity to fulfill the obligation.

Examiner Treatment of Guarantees

A guarantee should provide support for repayment of indebtedness, in whole or in part, and be legally enforceable. It is predicated upon both the guarantor’s financial capacity and willingness to provide support for a credit.

To assess the financial capacity of a guarantor and determine whether the guarantor can honor its contingent liabilities in the event required, examiners normally rely on their own analysis of a guarantor’s financial strength. This includes an evaluation of the financial statements and the number and amount of guarantees currently committed to.

A guarantor’s willingness to perform is assumed, unless there is evidence to the contrary. Since a guarantee is obtained with the intent of improving the repayment prospects of a credit, a guarantor may add sufficient strength to preclude or reduce the severity of the risk assessment.

Examiners should consider and analyze the following guarantee-related factors during the course of their review of extensions of credit:

- The degree to which the guarantors have demonstrated their ability and willingness to fulfill previous guarantees.
- Whether previously required performance under guarantees was voluntary or was the result of legal or other actions by the lender. Examiners should give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee under review.
- The economic incentives for performance by guarantors. This includes—
  - guarantors who have already partially performed under the guarantee;
  - guarantors who have other significant investments in the project;
  - guarantors whose other sound projects are cross-collateralized or otherwise intertwined with the credit; or
  - guarantees collateralized by readily marketable assets that are under the control of a third party.
- The extent to which guarantees are legally enforceable, although in general this is the only type of guarantee that should be relied upon.
  - Collection of funds under a guarantee should not be subject to significant delays or undue complexities or uncertainties that might render legal enforceability questionable.
  - Although the bank may have a legally enforceable guarantee, it may decide not to enforce it. The examiner’s judgment should be favorably affected by previous extensions of credit evidencing the timely enforcement and successful collection of guarantees.
- The type of the guarantee. Some guarantees for real estate projects are limited in that they only pertain to the development and construction phases of a project. As such, these limited guarantees cannot be relied upon to support a troubled credit after the completion of these phases.

OFF-BALANCE-SHEET ITEMS

The principal off-balance-sheet credit-related transactions likely to be encountered during loan reviews are loan commitments, commercial letters of credit, and standby letters of credit. When evaluating off-balance-sheet credit transactions for the purpose of assigning a credit-quality rating, the examiner should carefully consider whether the bank is irrevocably committed to advance additional funds under the credit agreement. If the bank must continue to fund the commitment and a potential weakness exists that, if left uncorrected, may at some future date result in the deterioration of repayment prospects or the bank’s credit position, the amount of the commitment may be categorized as special mention. If there is a well-defined weakness that jeopardizes repayment of a commitment, classification may be warranted. If an amount is classified, it should be separated into two components: the direct amount (the amount that has already been advanced) and the indirect amount...
Loan Commitments

Loan commitments are defined as legally binding obligations to extend credit (other than in the form of retail credit cards, check credit, and related plans) for which a fee or other compensation is typically received. Different types of loan commitments vary based upon the nature of the credit granted. Loan-commitment credit risk stems from the possibility that the creditworthiness of the customer will deteriorate between the time the commitment is made and the funds are advanced. (See “Contingent Claims from Off-Balance-Sheet Activities,” section 4110.1.)

Commercial Letters of Credit

Commercial letters of credit involve a buyer of goods and a seller of goods and are instruments issued by a bank serving as an intermediary between the two for the resultant payment for the goods. Commercial letters of credit are customarily used to facilitate international trade due to the distances involved, as well as differences in legal, political, and business practices. Additionally, there may be a lack of familiarity between the buyer and seller. As a result, the bank substitutes its credit in place of the buyer’s credit and promises on behalf of its customer to pay predetermined amounts of money to the seller against the delivery of documents indicating shipment of goods and representing title to those goods. If the shipping documents are in order, the bank is obligated to pay the seller through the issuance of a sight or time draft. The bank is then reimbursed by its customer for the amount of the shipment plus a fee for conducting the transaction.

Given the nature of the bank’s commitment to pay for the goods on behalf of its customer, a commercial letter of credit is typically irrevocable. This means that it cannot be cancelled or revoked without the consent of all parties concerned. As a result, there is added credit risk for the issuing bank since it cannot cancel its commitment in the event the credit standing of its customer deteriorates, even if the deterioration occurs before the shipment of the goods.

Standby Letters of Credit

Most standby letters of credit (SLCs) are unsecured and involve substituting the bank’s credit standing for that of the bank’s customer on behalf of a beneficiary. This occurs when the beneficiary needs to ensure that the bank’s customer is able to honor its commitment to deliver the goods or services by the agreed-upon time and with the agreed-upon quality. For credit-analysis purposes, SLCs are to be treated like loans and represent just one type of extension of credit relative to the overall exposure extended by the bank to the borrower. SLCs can be divided into two main groups: “financial SLCs” and “nonfinancial SLCs.” Financial SLCs essentially guarantee repayment of financial instruments and are commonly used to “guarantee” payment on behalf of customers, issuers of commercial paper, or municipalities (relative to tax-exempt securities). Nonfinancial SLCs are essentially used as bid and performance bonds to “guarantee” completion of projects, such as building or road construction, or to guarantee penalty payment in case a supplier is unable to deliver goods or services under a contract.

REQUIRED LOAN WRITE-UPS

A full loan write-up (see criteria below) is required for all significant or material classified or specially mentioned assets if (1) management disagrees with the disposition accorded by the examiner, or (2) the institution will be rated composite 3, 4, or 5. The write-ups will be used to support the classifications to management and, in the case of problem banks, to support any necessary follow-up supervisory actions.

An abbreviated write-up may be appropriate for other loans to illustrate a credit-administration weakness or to formalize certain decisions, document agreements, and clarify action plans for management. For example, bank management may have agreed to either collect or charge off a loan classified doubtful by the next call report date or to reverse interest accruals and place the loan on nonaccrual status. These agreements may be expressed in the report through a brief comment under the classification write-up.

The examiner may find it beneficial to list extensions of credit alphabetically by depart-
ment and/or branch. When more than one borrower is relevant to a single write-up, the alphabetization of the prime borrower or the parent corporation should determine the credit’s position in the list. All other parties to the credit, including cosigners, endorsers, and guarantors, should be indicated directly under the maker of the notes or embodied within the write-up.

Although classifications and items listed for special mention may be listed alphabetically on the report page, examiners may elect to format the listing or write-ups in other ways to illustrate examination findings or conclusions. For example, examiners may wish to group classifications into categories of weakness and to use these listings to support loan-administration comments without providing a write-up for each classified item.

Notwithstanding this guidance, examiners have the flexibility of writing up more than the criticized assets, including any special mention credits, if deemed necessary. The decision to increase the number of write-ups should be based on factors such as the overall financial condition of the bank, quality of the loan portfolio, or adequacy of loan portfolio administration.

It is important that a sufficient number of write-ups with appropriate content be provided to support the examiner’s assessment of the bank’s problem loans, leases, and other extensions of credit. The write-ups should also support any comments pertaining to credit-administration policies and practices as they relate to this component of the bank’s loan portfolio.

General Guidelines for Write-Ups of Special Mention and Classified Extensions of Credit

Extension of credit write-ups may be in a narrative or bullet format, similar to the write-ups of shared national credits, where appropriate. When the special mention or classified credit consists of numerous extensions of credit to one borrower, or when multiple borrowers are discussed in one write-up, the write-up should be structured to clearly identify the credit facilities being discussed. For example, each extension of credit could be numbered when multiple credits are involved.

Before a write-up is prepared, the examiner should recheck central information files or other sources in the bank to determine that all of the obligor’s debt, including related debt, has been noted and included. The examiner should consider identifying accrued interest receivable as special mention or classified, especially when the cumulative effect on classified percentages is significant or the accrued interest is appropriately classified loss.

Even though the length of a write-up may be limited, the information and observations contained in the write-up must substantiate the credit’s treatment as a special mention or classified credit. To prepare a write-up that brings out pertinent and fundamental facts, an examiner needs to have a thorough understanding of all the factors relative to the extension of credit. An ineffective presentation of the facts weakens a write-up and frequently casts doubt on the accuracy of the risk assessment. The examiner might consider emphasizing deviations from prudent banking practices as well as loan policy and procedure deficiencies that are pertinent to the credit’s problems. When portions of a borrower’s indebtedness are assigned to different risk categories, including portions identified as “pass,” the examiner’s comments should clearly set forth the reason for the split-rating treatment. A full write-up on items adversely classified or listed as special mention must provide sufficient detail to support the examiner’s judgment concerning the rating assigned. To ensure that the write-ups provide a clear, concise, and logical discussion of material credit weaknesses, the following minimum categories of information should be presented, preferably in the order listed (see SR-99-24):

1. A general description of the obligation.
   • Amount of exposure (both outstanding and contingent or undrawn) as follows:
     — Summarize total related and contingent borrowings, including amounts previously charged off and recovered.
     — List the borrower’s total related liabilities outstanding. Amounts making up this total refer to credits in which the borrower may have a related interest and is directly or indirectly obligated to repay, such as partnerships and joint ventures. The rule for determining what

6. The term “related” refers to direct and indirect obligations.
is included in related debt (aggregating debt), which ultimately has to do with ascertaining compliance with legal lending limits, is governed by state law.

— List and identify the obligor’s contingent liabilities to the bank under examination. Contingent liabilities include items such as unadvanced portions of a line of credit or extension of credit (commitments), guarantees or endorsements, and commercial and standby letters of credit. Although contingent liabilities to other lenders represent an important component of the financial analysis of the obligor, they should not be listed in the write-up unless they are particularly relevant to the situation, or are portions of both related and contingent liabilities that represent participations purchased from and sold to other lenders. The latter example should be listed even though the entire relationship may not have been identified as special mention or classified. Additionally, only the classified portion of extensions of credit or contingent liabilities of the bank under examination should be listed in the appropriate column(s) of the classified asset page.

• **The obligor and the obligor’s location and type of business or occupation.** For the type of business or occupation of the obligor, indicate whether the business is a proprietorship, partnership, joint venture, or corporation. This information can be used to compare the purpose of the credit with the source(s) of repayment, and to compare the credit’s structure with the obligor’s repayment ability. The general identification of occupation, such as professional or wage earner, may not be definitive enough, so it may be necessary to indicate that, for example, the extension of credit is to a medical doctor.

Types of businesses may be clearly indicated in the borrower’s business name and may not require additional comment. For example, Apex Supermarket and Ajax Sporting Goods Store imply a retail supermarket and a retail sporting goods store. However, examiners should not be misled in their analysis of the credit; likewise, the write-up reviewer should not be misled by assuming that a borrower is necessarily in the same line of business indicated by the borrower’s business name. In the preceding example, if the borrower is primarily a wholesale grocery or sporting goods supplier, or if it radically deviates from the type of business indicated in its business name, the situation should be clarified. It is important to state the borrower’s position in the marketing process—manufacturer, wholesaler, or retailer—and to indicate the types of goods or services.

• **Description and value of collateral.** The type of lien, collateral description and its condition and marketability, as well as the collateral’s current value, date of valuation, and basis for the valuation, should be included. If values are estimated, the write-up should indicate the source of the valuation, such as the obligor’s recent financial statement, an independent appraisal, or an internal management report. If valuations are not available, a statement to that effect should be included. A bank’s failure to obtain collateral valuations, when available, is cause for criticism. Also include any other pertinent information that might impede or facilitate the possible sale of the collateral to repay the extension of credit.

When problem borrowers are involved, the sale of the collateral often becomes the sole or primary source of repayment. As a result, the valuation of the collateral becomes especially important when describing the credit, as described in the specific examples below.

If real estate is pledged to secure the credit, the write-up should provide a description of the property, the lien status, the amount of any prior lien, and the appraised value. If multiple parcels are securing the credit, appraised values should be listed for each parcel, including the date of the appraisal and the basis for the value. When bank staff or examiners’ challenges to appraisal assumptions are supported, the resulting adjustment in value for credit-analysis purposes should be indicated. If the property held as collateral has tenants, its cash flow should be noted and the financial strength of the major lessees commented upon, if appropriate.

If the collateral represents shares of or an interest in a closely held company, the
shares or ownership interest held should be indicated in relation to the total shares outstanding, and the financial condition of the closely held company should be summarized in the write-up. Additionally, the approximate value of the closely held company, as indicated by its financial statements, should be compared for consistency with the value of the company as indicated on the principal’s or partner’s personal financial statement. The values often do not correlate to the extent they should, which typically indicates overvaluation of the asset owning the shares or ownership interest.

If a blanket lien on assets, such as receivables, inventory, or equipment, is pledged as collateral, the current estimated value of each asset type should be shown separately. The basis for these values can come from various sources, which should be indicated:

- If receivables are pledged as collateral for an asset-based extension of credit, a current aging report and an assessment of the appropriateness of the advance ratio is usually necessary to determine their collectibility and value.
- If inventory is pledged as collateral for an asset-based extension of credit, an assessment of the appropriateness of the advance ratio is necessary. Additionally, the value varies with the condition and marketability of the inventory.
- If listed securities or commodities are pledged as collateral, the market value and date of valuation should be noted.

- **Notation if borrower is an insider or a related interest of an insider.**
- **Guarantors and a brief description of their ability to act as a source of repayment.** If the financial strength of guarantors has changed significantly since the initial guarantee of the credit facility, this should be noted. The relationship of the guarantors to the borrower should be identified, including a brief description of the guarantors’ ability (financial strength) to serve as a source of repayment independent of the borrower. Any collateral supporting the guarantees should also be stated. See the previous subsection, “Role of Guarantees,” for further guidance on considering guarantees for credit-analysis purposes.

- **Amounts previously classified.**
- **Repayment terms and historical performance, including prior charge-offs, and current delinquency status (with notation if the credit is currently on nonaccrual status).** Any changes to the original repayment terms, whether initiated by bank management or the obligor, should be detailed with an appropriate analysis of the changes included in the write-up. Renewals, extensions, and rewritten notes that deviate from the stated purpose and repayment expectations, as approved by management, should be discussed in light of their effect on the quality of the credit. Restructurings should be discussed in terms of their reasonable objectives, focusing on the prospects for full repayment in accordance with the modified terms.

It may be prudent to state the purpose of the credit. The purpose can be compared with the intended source of repayment for appropriateness. For example, a working capital extension of credit generally should not depend on the sale of real estate for repayment. Additionally, the obligor’s prior business experience should correlate to the credit’s purpose.

2. **A summary listing of weaknesses resulting in classification or special mention treatment.**

3. **A reference to any identified deficiencies in the item that will support loan-administration or violation comments elsewhere in the report.** This information may consist of deficiencies in credit and collateral documentation or violations of law that have a material impact on credit quality. Loan-portfolio administration performance includes, but is not limited to—

- changes in asset quality since the last examination;
- the appropriateness of loan-underwriting standards;
- the adequacy of—
  - loan documentation;
  - management information systems;
  - internal control systems; and
  - loan-loss reserves;
- the accuracy of internal loan-rating systems;
- the ability and experience of lending officers, as well as other personnel managing the lending function; and
- changes in lending policies or procedures since the last examination.
4. If management disagrees with the classification, a statement to that effect along with management’s rationale. Information could include selected data from the most recent fiscal and interim financial statements (discussion of items such as leverage, liquidity, and cash flow) when the primary reason for the write-up relates to the borrower’s financial condition or operating performance. Cost of goods sold, nonrecurring expenses, dividends, or other items indicating deterioration in the credit quality may also be highlighted. Any stated value of the borrower’s encumbered assets should be set off against specific debt to arrive at the unprotected balance, if applicable. In addition, the examiner should identify encumbered assets that are pledged elsewhere.

5. A concise description of any management action taken or planned to address the weakness in the asset. The action plan should focus on a concise description of management’s workout or action plan to improve the credit’s collectibility or to liquidate the debt. Review of the bank’s documented workout plan should give an examiner a clear idea of past efforts to improve the prospect of collectibility and management’s current efforts and future strategy. The plan should clearly state the bank’s goals and corresponding timetable as they appear at that point, including items such as the degree of repayment envisioned and the proceeds anticipated from the sale of the collateral. Based on this information, the examiner should succinctly summarize in the write-up the bank’s collection efforts to date and its ongoing plans to address the situation.

Optional Information for Write-ups

At the examiner’s discretion, other information may be included in loan write-ups. For example the examiner may want to include current financial information on the borrower, cosigners, and guarantors. The additional information may consist of discussions regarding current balance sheets and operating statements. If discussed, the examiner should indicate whether the financial statements have been audited, reviewed, compiled, or prepared by the borrower, and whether they are fiscal or interim statements. If the statements are audited, the examiner should indicate the type of opinion expressed—unqualified, qualified, disclaimer, or adverse—and whether the auditor is a certified public accountant. If the opinion is qualified, note the reason(s) given by the auditor.

When the examiner includes comments regarding the borrower’s financial condition, the comments should always highlight credit weaknesses in a manner that supports the risk assessment. It is important that sufficient detail is provided to identify unfavorable factors. A trend analysis or details of balance-sheet, income-statement, or cash-flow items can be included. The examiner may also include comments when special mention or classified credits may exhibit favorable as well as unfavorable financial characteristics. Both types of pertinent factors may be included in the write-up as long as they are placed in the proper perspective to demonstrate the credit’s inherent weaknesses.
Allowance for Loan and Lease Losses

Effective date November 2020

Section 2070.1

The allowance for loan and lease losses (ALLL) is presented on the balance sheet as a contra-asset account that reduces the amount of the loan portfolio reported on the balance sheet. The purpose of the ALLL is to reflect estimated credit losses within a bank’s portfolio of loans and leases. Estimated credit losses are estimates of the current amount of loans that are probable that the bank will be unable to collect given the facts and circumstances since the evaluation date (generally the balance sheet date). That is, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans as of the evaluation date.

All federally insured depository institutions must maintain an ALLL, except for federally insured branches and agencies of foreign banks. A bank determines the appropriate balance or level of the ALLL at least each quarter, periodically validating its methodology for estimating the ALLL (see SR-11-7), and by evaluating the collectibility of its loan and lease portfolio, including any accrued and unpaid interest. Increases or decreases to the ALLL are to be made through charges (debits) or credits to the “provision for loan and lease losses” (provision), an expense account on the bank’s Consolidated Report of Income or income statement, and not through transfers from retained earnings or any segregation of retained earnings or other components of equity capital.

When there is information available to confirm that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. Under no circumstances can loan or lease losses be charged directly to “retained earnings” and capital. Any subsequent recoveries on loans or leases previously charged off must be credited to the ALLL, provided, however, that the total amount credited to the allowance as recoveries of an individual loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

To illustrate these concepts, assume that Bank A has a loan and lease portfolio totaling $100 million at the end of year 1 and an ALLL of $1.25 million; thus, its net carrying amount for the loan portfolio on the balance sheet is $98.75 million. Based on its most recent analysis, Bank A has determined that an ALLL of $1.5 million is necessary to cover its estimated credit losses as of the end of the fourth quarter. Therefore, in the fourth quarter of year 1, Bank A should record a provision for $250,000, debiting this expense and crediting the ALLL for this amount to bring the ALLL to the appropriate level of $1.5 million. Assume further that during the first quarter of year 2, Bank A identifies $750,000 in uncollectible loans. It must charge off this amount against the ALLL by debiting the ALLL and crediting the individual loans for a total of $750,000. Also assume that in the same first quarter of year 2, Bank A receives $100,000 in cash recoveries on previously charged-off loans. These recoveries must be credited to the ALLL in that quarter. Thus, in the first quarter of year 2, Bank A’s ALLL, which began the year at $1.5 million, will have been reduced $850,000 ($1,500,000 – $750,000 + $100,000 = $850,000). However, management’s ALLL analysis for the first quarter of year 2 indicates that an ALLL of $1.2 million is appropriate. To bring the recorded ALLL to this level, Bank A must make a debit to the provision for loan and lease losses of $350,000 ($850,000 + $350,000 = $1.2 million).

While the overall responsibility for maintaining the ALLL at an appropriate level rests with the bank’s senior management and board of directors, the appropriateness of the ALLL and management’s analysis of it are subject to examiner review. The examiner should make every effort to fully understand a bank’s methods for determining the needed balance of its ALLL. During the process of conducting the examination, the examiner should take these methods into account when making a final determination on the appropriateness (adequacy) of the balance of the ALLL. The examiner may confer with bank management and any outside accountant or auditor that has advised management on its ALLL-review policies or practices.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner’s comments should cite any departures from generally accepted commercial banking principles.
accounting principles (GAAP) and any con-
ventions of the following 2006 Interagency
Policy Statement on the Allowance for Loan and
Lease Losses as well as the 2001 policy state-
ment (see “ALLL Methodologies and Docu-
mentation”). Additional supervisory action may also
be taken based on the magnitude of the observed
shortcomings in the ALLL process, including
the materiality of any error in the reported
amount of the ALLL.

INTERAGENCY POLICY STATEMENT
ON THE ALLOWANCE FOR LOAN
AND LEASE LOSSES

This 2006 policy statement revises and replaces
the 1993 policy statement on the ALLL. It
reiterates key concepts and requirements included
in generally accepted accounting principles
(GAAP) and existing ALLL supervisory guid-
ance. The principal sources of guidance on
accounting for impairment in a loan portfolio
under GAAP are Statement of Financial
Accounting Standards No. 5, “Accounting for
Contingencies” (FAS 5), and Statement of Financial
Accounting Standards No. 114, “Account-
ing by Creditors for Impairment of a Loan”
(FAS 114). In addition, the Financial Account-
ing Standards Board Viewpoints article that is
included in Emerging Issues Task Force Topic
D-80 (EITF D-80), “Application of FASB State-
ments No. 5 and No. 114 to a Loan Portfolio,”
presents questions and answers that provide
specific guidance on the interaction between
these two FASB statements and may be helpful
in applying them.

In July 1999, the banking agencies and the
Securities and Exchange Commission (SEC)
issued a Joint Interagency Letter to Financial
Institutions. The letter stated that the banking
agencies and the SEC agreed on the following
important aspects of loan loss allowance practices:

- Arriving at an appropriate allowance involves
  a high degree of management judgment and
  results in a range of estimated losses.
- Prudent, conservative—but not excessive—
  loan loss allowances that fall within an accept-
  able range of estimated losses are appropriate.
  In accordance with GAAP, an institution
  should record its best estimate within the
  range of credit losses, including when man-
  agement’s best estimate is at the high end of
  the range.
- Determining the allowance for loan losses is
  inevitably imprecise, and an appropriate
  allowance falls within a range of estimated
  losses.
- An “unallocated” loan loss allowance is
  appropriate when it reflects an estimate of
  probable losses, determined in accordance
  with GAAP, and is properly supported.
- Allowance estimates should be based on a
  comprehensive, well-documented, and consis-
tently applied analysis of the loan portfolio.
- The loan loss allowance should take into
  consideration all available information exist-
ing as of the financial statement date, includ-
ing environmental factors such as industry,
geographical, economic, and political factors.

In July 2001, the banking agencies issued the
Policy Statement on Allowance for Loan and
Lease Losses Methodologies and Documenta-
tion for Banks and Savings Institutions (2001
Policy Statement). The policy statement is
designed to assist institutions in establishing a
sound process for determining an appropriate
ALLL and documenting that process in accor-
dance with GAAP. (See “ALLL Methodologies
and Documentation.”)

In March 2004, the agencies also issued the
Update on Accounting for Loan and Lease
Losses. This guidance provided reminders of
longstanding supervisory guidance as well as a
listing of the existing allowance guidance that
institutions should continue to apply.

1. This policy statement was adopted on December 13,
2. As discussed more fully below in the “Nature and
3. See “ALLL Methodologies and Documentation” for the
   2001 Policy Statement. The SEC staff issued parallel guidance
   in July 2001, which is found in Staff Accounting Bulletin No.
   102, “Selected Loan Loss Allowance Methodology and Docu-
   mentation Issues” (SAB 102), which has been codified as
   Topic 6.L. in the SEC’s Codification of Staff Accounting
   Bulletins. Both SAB 102 and the codification are available on
   the SEC’s website.
Nature and Purpose of the ALLL

The ALLL represents one of the most significant estimates in an institution’s financial statements and regulatory reports. Because of its significance, each institution has a responsibility for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses (PLLs). To fulfill this responsibility, each institution should ensure controls are in place to consistently determine the ALLL in accordance with GAAP, the institution’s stated policies and procedures, management’s best judgment, and relevant supervisory guidance. As of the end of each quarter, or more frequently if warranted, each institution must analyze the collectibility of its loans and leases held for investment (hereafter referred to as “loans”) and maintain an ALLL at a level that is appropriate and determined in accordance with GAAP. An appropriate ALLL covers estimated credit losses on individually evaluated loans that are determined to be impaired as well as estimated credit losses inherent in the remainder of the loan and lease portfolio. The ALLL does not apply, however, to loans carried at fair value, loans held for sale, off-balance-sheet credit exposures (for example, financial instruments such as off-balance-sheet loan commitments, standby letters of credit, and guarantees), or general or unspecified business risks.

For purposes of this policy statement, the term estimated credit losses means an estimate of the current amount of loans that it is probable the institution will be unable to collect given facts and circumstances since the evaluation date. Thus, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans. These estimated credit losses should meet the criteria for accrual of a loss contingency (that is, through a provision to the ALLL) set forth in GAAP. When available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. For “purchased impaired loans,” GAAP prohibits “carrying over” or creating an ALLL in the initial recording of these loans. However, if, upon evaluation subsequent to acquisition, it is probable that the institution will be unable to collect all cash flows expected at acquisition on a purchased impaired loan (an estimate that considers both timing and amount), the loan should be considered impaired for purposes of applying the measurement and other provisions of FAS 5 or, if applicable, FAS 114.

Estimates of credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. For loans within the scope of FAS 114 that

4. Consistent with the American Institute of Certified Public Accountants’ (AICPA) Statement of Position 01-6, “Accounting by Certain Entities (Including Entities With Trade Receivables) That Lend to or Finance the Activities of Others,” loans and leases held for investment are those loans and leases that the institution has the intent and ability to hold for the foreseeable future or until maturity or payoff.

5. See “Interagency Guidance on Certain Loans Held for Sale” (March 26, 2001) for the appropriate accounting and reporting treatment for certain loans that are sold directly from the loan portfolio or transferred to a held-for-sale account. Loans held for sale are reported at the lower of cost or fair value. Declines in value occurring after the transfer of a loan to the held-for-sale portfolio are accounted for as adjustments to a valuation allowance for held-for-sale loans and not as adjustments to the ALLL.

6. Credit losses on off-balance-sheet credit exposures should be estimated in accordance with FAS 5. Any allowance for credit losses on off-balance-sheet exposures should be reported on the balance sheet as an “other liability,” and not as part of the ALLL.

7. FAS 5 requires the accrual of a loss contingency when information available prior to the issuance of the financial statements indicates it is probable that an asset has been impaired at the date of the financial statements and the amount of loss can be reasonably estimated. These conditions may be considered in relation to individual loans or in relation to groups of similar types of loans. If the conditions are met, accrual should be made even though the particular loans that are uncollectible may not be identifiable. Under FAS 114, an individual loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. It is implicit in these conditions that it must be probable that one or more future events will occur confirming the fact of the loss. Thus, under GAAP, the purpose of the ALLL is not to absorb all of the risk in the loan portfolio, but to cover probable credit losses that have already been incurred.

8. A purchased impaired loan is defined as a loan that an institution has purchased, including a loan acquired in a purchase business combination, that has evidence of deterioration of credit quality since its origination and for which it is probable, at the purchase date, that the institution will be unable to collect all contractually required payments. When reviewing the appropriateness of the reported ALLL of an institution with purchased impaired loans, examiners should consider the credit losses factored into the initial investment in these loans when determining whether further deterioration—for example, decreases in cash flows expected to be collected—has occurred since the loans were purchased. The bank’s consolidated reports of condition and income and the disclosures in the bank’s financial statements may provide useful information for examiners in reviewing these loans. Refer to the AICPA’s Statement of Position 03-3, “Accounting for Certain Loans or Debt Securities Acquired in a Transfer,” for further guidance on the appropriate accounting.
are individually evaluated and determined to be impaired, these estimates should reflect consideration of one of the standard’s three impairment measurement methods as of the evaluation date: (1) the present value of expected future cash flows discounted at the loan’s effective interest rate, (2) the loan’s observable market price, or (3) the fair value of the collateral if the loan is collateral dependent.

An institution may choose the appropriate FAS 114 measurement method on a loan-by-loan basis for an individually impaired loan, except for an impaired collateral-dependent loan. The agencies require impairment of a collateral-dependent loan to be measured using the fair value of collateral method. As defined in FAS 114, a loan is collateral dependent if repayment of the loan is expected to be provided solely by the underlying collateral. In general, any portion of the recorded investment in a collateral-dependent loan (including any capitalized accrued interest, net deferred loan fees or costs, and unamortized premium or discount) in excess of the fair value of the collateral that can be identified as uncollectible, and is therefore deemed a confirmed loss, should be promptly charged off against the ALLL.

All other loans, including individually evaluated loans determined not to be impaired under FAS 114, should be included in a group of loans that is evaluated for impairment under FAS 5. While an institution may segment its loan portfolio into groups of loans based on a variety of factors, the loans within each group should have similar risk characteristics. For example, a loan that is fully collateralized with risk-free assets should not be grouped with uncollateralized

loans. When estimating credit losses on each group of loans with similar risk characteristics, an institution should consider its historical loss experience on the group, adjusted for changes in trends, conditions, and other relevant factors that affect repayment of the loans as of the evaluation date.

For analytical purposes, an institution should attribute portions of the ALLL to loans that it evaluates and determines to be impaired under FAS 114 and to groups of loans that it evaluates collectively under FAS 5. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Responsibilities of the Board of Directors and Management

Appropriate ALLL Level

Each institution’s management is responsible for maintaining the ALLL at an appropriate level and for documenting its analysis according to the standards set forth in the 2001 policy statement. Thus, management should evaluate the ALLL reported on the balance sheet as of the end of each quarter or more frequently if warranted, and charge or credit the PLLL to bring the ALLL to an appropriate level as of each evaluation date. The determination of the amounts of the ALLL and the PLLL should be based on management’s current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the evaluation date. Management’s evaluation is subject to review by examiners. An institution’s failure to analyze the collectibility of the loan portfolio and maintain and support an appropriate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound practice.

In carrying out its responsibility for maintaining an appropriate ALLL, management is expected to adopt and adhere to written policies and procedures that are appropriate to the size of the institution and the nature, scope, and risk of its lending activities. At a minimum, these policies and procedures should ensure that—

- the institution’s process for determining an appropriate level for the ALLL is based on a comprehensive, well-documented, and consis-
The analysis should consider all significant factors that affect the collectibility of the portfolio and should support the credit losses estimated by this process.

- The institution maintains an effective loan review system and controls (including an effective loan classification or credit grading system) that identify, monitor, and address asset quality problems in an accurate and timely manner. To be effective, the institution’s loan review system and controls must be responsive to changes in internal and external factors affecting the level of credit risk in the portfolio.
- The institution has adequate data capture and reporting systems to supply the information necessary to support and document its estimate of an appropriate ALLL.
- The institution evaluates any loss estimation models before they are employed and modifies the models’ assumptions, as needed, to ensure that the resulting loss estimates are consistent with GAAP. To demonstrate this consistency, the institution should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with the models or other estimation tools. The institution should also document and support any adjustments made to the models or to the output of the models in determining the estimated credit losses.
- The institution promptly charges off loans, or portions of loans, that available information confirms to be uncollectible.
- The institution periodically validates the ALLL methodology. This validation process should be done by a party who is independent of the institution’s credit approval and ALLL estimation processes, of the ALLL methodology and its application in order to confirm its effectiveness. See SR 11-7 for more information. A party who is independent of these processes could be the internal audit staff, a risk management unit of the institution, an external auditor (subject to applicable auditor independence standards), or another contracted third party from outside the institution. One party need not perform the entire analysis as the validation can be divided among various independent parties.

The board of directors is responsible for overseeing management’s significant judgments and estimates pertaining to the determination of an appropriate ALLL. This oversight should include but is not limited to—

- reviewing and approving the institution’s written ALLL policies and procedures at least annually;
- reviewing management’s assessment and justification that the loan review system is sound and appropriate for the size and complexity of the institution;
- reviewing management’s assessment and justification for the amounts estimated and reported each period for the PLLL and the ALLL; and
- requiring management to periodically validate and, when appropriate, revise the ALLL methodology.

For purposes of the Consolidated Reports of Condition and Income for a Bank (Call Report), an appropriate ALLL (after deducting all loans and portions of loans confirmed loss) should consist only of the following components (as applicable), the amounts of which take into account all relevant facts and circumstances as of the evaluation date:

- For loans within the scope of ASC Topic 310, Receivables (formerly FAS 114, “Accounting by Creditors for Impairment of a Loan”) that are individually evaluated and found to be impaired, the associated ALLL should be based upon one of the three impairment measurement methods specified in FAS 114.

---

13. As noted in the 2001 Policy Statement, an institution with less complex lending activities and products may find it more efficient to combine a number of procedures while continuing to ensure that the institution has a consistent and appropriate ALLL methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios.

14. Loan review and loan classification or credit grading systems are discussed in this manual’s section, “Credit Risk Review Systems.” In addition, state member banks should refer to the asset quality standards in the Interagency Guidelines Establishing Standards for Safety and Soundness, which were adopted by the Federal Reserve Board (see Appendix D-1, 12 CFR 208).

15. A component of the ALLL that is labeled “unallocated” is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported and documented.

16. As previously noted, the use of the fair value of collateral method is required for an individually evaluated loan that is impaired if the loan is collateral dependent.
• For all other loans, including individually evaluated loans determined not to be impaired under FAS 114, the associated ALLL should be measured under ASC Subtopic 450-20, Contingencies—Loss Contingencies (formerly FAS 5, “Accounting for Contingencies”) and should provide for all estimated credit losses that have been incurred on groups of loans with similar risk characteristics.

• For estimated credit losses from transfer risk on cross-border loans, the impact to the ALLL should be evaluated individually for impaired loans under FAS 114 or evaluated on a group basis under FAS 5. See this policy statement’s attachment for further guidance on considerations of transfer risk on cross-border loans.

• For estimated credit losses on accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution’s balance sheet, the associated ALLL should be evaluated under FAS 114 or FAS 5 as appropriate, if not already included in one of the preceding components.

Because deposit accounts that are overdrawn (that is, overdrafts) must be reclassified as loans on the balance sheet, overdrawn accounts should be included in one of the first two components above, as appropriate, and evaluated for estimated credit losses.

Determining the appropriate level for the ALLL is inevitably imprecise and requires a high degree of management judgment. Management’s analysis should reflect a prudent, conservative, but not excessive ALLL that falls within an acceptable range of estimated credit losses. When a range of losses is determined, institutions should maintain appropriate documentation to support the identified range and the rationale used for determining the best estimate from within the range of loan losses.

It is essential that institutions maintain effective loan review systems. An effective loan review system should work to ensure the accuracy of internal credit classification or grading systems and, thus, the quality of the information used to assess the appropriateness of the ALLL. The complexity and scope of an institution’s ALLL evaluation process, loan review system, and other relevant controls should be appropriate for the size of the institution and the nature of its lending activities. The evaluation process should also provide for sufficient flexibility to respond to changes in the factors that affect the collectibility of the portfolio.

Credit losses that arise from the transfer risk associated with an institution’s cross-border lending activities require special consideration. In particular, for banks with cross-border lending exposure, management should determine that the ALLL is appropriate to cover estimated losses from transfer risk associated with this exposure over and above any minimum amount that the Interagency Country Exposure Review Committee requires to be provided in the Allocated Transfer Risk Reserve (or charged off against the ALLL). These estimated losses should meet the criteria for accrual of a loss contingency set forth in GAAP. (See the attachment for factors to consider.)

Factors to Consider in the Estimation of Credit Losses

Estimated credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. Normally, an institution should determine the historical loss rate for each group of loans with similar risk characteristics in its portfolio based on its own loss experience for loans in that group. While historical loss experience provides a reasonable starting point for the institution’s analysis, historical losses—or even recent trends in losses—do not by themselves form a sufficient basis to determine the appropriate level for the ALLL. Management also should consider those qualitative or environmental factors that are likely to cause estimated credit losses associated with the institution’s existing portfolio to differ from historical loss experience, including but not limited to—

• changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery practices not considered elsewhere in estimating credit losses;

• changes in international, national, regional, and local economic and business conditions and developments that affect the collectibility of the portfolio, including the condition of various market segments;\footnote{Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an over reliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses associated with the institution’s cross-border lending activities.}

17. See note 12.

18. Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an over reliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses associated with the institution’s cross-border lending activities.
Allowance for Loan and Lease Losses

2070.1

- changes in the nature and volume of the portfolio and in the terms of loans;
- changes in the experience, ability, and depth of lending management and other relevant staff;
- changes in the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;¹⁹
- changes in the quality of the institution’s loan review system;
- changes in the value of underlying collateral for collateral-dependent loans;
- the existence and effect of any concentrations of credit, and changes in the level of such concentrations; and
- the effect of other external factors such as competition and legal and regulatory requirements on the level of estimated credit losses in the institution’s existing portfolio.

In addition, changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses, keeping in mind the characteristics of an institution’s loan portfolio. For example, if declining credit quality trends relevant to the types of loans in an institution’s portfolio are evident, the ALLL level as a percentage of the portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the portfolio should generally decrease.

Measurement of Estimated Credit Losses

FAS 5. When measuring estimated credit losses on groups of loans with similar risk characteristics in accordance with FAS 5, a widely used method is based on each group’s historical net charge-off rate adjusted for the effects of the qualitative or environmental factors discussed previously. As the first step in applying this method, management generally bases the historical net charge-off rates on the “annualized” historical gross loan charge-offs, less recoveries, recorded by the institution on loans in each group.

Methodologies for determining the historical net charge-off rate on a group of loans with similar risk characteristics under FAS 5 can range from the simple average of, or a determination of the range of, an institution’s annual net charge-off experience to more complex techniques, such as migration analysis and models that estimate credit losses. ¹⁹ Generally, institutions should use at least an “annualized” or twelve-month average net charge-off rate that will be applied to the groups of loans when estimating credit losses. However, this rate could vary. For example, loans with effective lives longer than twelve months often have worse net charge-off periods over an extended period of time, which may indicate that the estimated credit losses should be greater than that calculated based solely on the annualized net charge-off rate for such loans. These groups may include certain commercial loans as well as groups of adversely classified loans. Other groups of loans may have effective lives shorter than twelve months, which may indicate that the estimated credit losses should be less than that calculated based on the annualized net charge-off rate.

Regardless of the method used, institutions should maintain supporting documentation for the techniques used to develop the historical loss rate for each group of loans. If a range of historical loss rates is developed instead for a group of loans, institutions should maintain documentation to support the identified range and the rationale for determining which rate is the best estimate within the range of loss rates. The rationale should be based on management’s assessment of which rate is most reflective of the estimated credit losses in the current loan portfolio.

¹⁹. Annual charge-off rates are calculated over a specified time period (for example, three years or five years), which can vary based on a number of factors including the relevance of past periods’ experience to the current period or point in the credit cycle. Also, some institutions remove loans that become adversely classified or graded from a group of nonclassified or nongraded loans with similar risk characteristics in order to evaluate the removed loans individually under FAS 114 (if deemed impaired) or collectively in a group of adversely classified or graded loans with similar risk characteristics under FAS 5. In this situation, the net charge-off experience on the adversely classified or graded loans that have been removed from the group of nonclassified or nongraded loans should be included in the historical loss rates for that group of loans. Even though the net charge-off experience on adversely classified or graded loans is included in the estimation of the historical loss rates that will be applied to the group of nonclassified or nongraded loans, the adversely classified or graded loans themselves are no longer included in that group for purposes of estimating credit losses on the group.
After determining the appropriate historical loss rate for each group of loans with similar risk characteristics, management should consider those current qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group’s historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the FAS 5 component of the ALLL.21 Both methods are consistent with GAAP, provided the adjustments for qualitative or environmental factors are reasonably and consistently determined, are adequately documented, and represent estimated credit losses. For each group of loans, an institution should apply its adjusted historical loss rate, or its historical loss rate and separate standalone adjustments, to the recorded investment in the group when determining its estimated credit losses.

Management must exercise significant judgment when evaluating the effect of qualitative factors on the amount of the ALLL because data may not be reasonably available or directly applicable for management to determine the precise impact of a factor on the collectibility of the institution’s loan portfolio as of the evaluation date. Accordingly, institutions should support adjustments to historical loss rates and explain how the adjustments reflect current information, events, circumstances, and conditions in the loss measurements. Management should maintain reasonable documentation to support which factors affected the analysis and the impact of those factors on the loss measurement. Support and documentation includes descriptions of each factor, management’s analysis of how each factor has changed over time, which loan groups’ loss rates have been adjusted, the amount by which loss estimates have been adjusted for changes in conditions, an explanation of how management estimated the impact, and other available data that supports the reasonableness of the adjustments. Examples of underlying supporting evidence could include, but are not limited to, relevant articles from newspapers and other publications that describe economic events affecting a particular geographic area, economic reports and data, and notes from discussions with borrowers.

There may be times when an institution does not have its own historical loss experience upon which to base its estimate of the credit losses in a group of loans with similar risk characteristics. This may occur when an institution offers a new loan product or when it is a newly established (that is, de novo) institution. If an institution has no experience of its own for a loan group, reference to the experience of other enterprises in the same lending business may be appropriate, provided the institution demonstrates that the attributes of the group of loans in its portfolio are similar to those of the loan group in the portfolio providing the loss experience. An institution should only use another enterprise’s experience on a short-term basis until it has developed its own loss experience for a particular group of loans.

_FAS 114_. When determining the FAS 114 component of the ALLL for an individually impaired loan,22 an institution should consider estimated costs to sell the loan’s collateral, if any, on a discounted basis, in the measurement of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the institution bases its measure of loan impairment on the present value of expected future cash flows discounted at the loan’s effective interest rate, the estimates of these cash flows should be the institution’s best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. The likelihood of the possible outcomes should be con-

---

21. An overall adjustment to a portion of the ALLL that is not attributed to specific segments of the loan portfolio is often labeled “unallocated.” Regardless of what a component of the ALLL is labeled, it is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported.

22. As noted in FAS 114, some individually impaired loans have risk characteristics that are unique to an individual borrower and the institution will apply the measurement methods on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. An institution may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring impairment of those loans.
sidered in determining the best estimate of expected future cash flows.

**Analyzing the Overall Measurement of the ALLL**

Institutions also are encouraged to use ratio analysis as a supplemental tool for evaluating the overall reasonableness of the ALLL. Ratio analysis can be useful in identifying divergent trends (compared with an institution’s peer group and its own historical experience) in the relationship of the ALLL to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs. Based on such analysis, an institution may identify additional issues or factors that previously had not been considered in the ALLL estimation process, which may warrant adjustments to estimated credit losses. Such adjustments should be appropriately supported and documented.

While ratio analysis, when used prudently, can be helpful as a supplemental check on the reasonableness of management’s assumptions and analyses, it is not a sufficient basis for determining the appropriate amount for the ALLL. In particular, because an appropriate ALLL is an institution-specific amount, such comparisons do not obviate the need for a comprehensive analysis of the loan portfolio and the factors affecting its collectibility. Furthermore, it is inappropriate for the board of directors or management to make adjustments to the ALLL when it has been properly computed and supported under the institution’s methodology for the sole purpose of reporting an ALLL that corresponds to the peer group median, a target ratio, or a budgeted amount. Institutions that have high levels of risk in the loan portfolio or are uncertain about the effect of possible future events on the collectibility of the portfolio should address these concerns by maintaining higher equity capital and not by arbitrarily increasing the ALLL in excess of amounts supported under GAAP.23

**Estimated Credit Losses in Credit Related Accounts**

Typically, institutions evaluate and estimate credit losses for off-balance-sheet credit exposures at the same time that they estimate credit losses for loans. While a similar process should be followed to support loss estimates related to off-balance-sheet exposures, these estimated credit losses are not recorded as part of the ALLL. When the conditions for accrual of a loss under FAS 5 are met, an institution should maintain and report as a separate liability account, an allowance that is appropriate to cover estimated credit losses on off-balance-sheet loan commitments, standby letters of credit, and guarantees. In addition, recourse liability accounts (that arise from recourse obligations on any transfers of loans that are reported as sales in accordance with GAAP) should be reported in regulatory reports as liabilities that are separate and distinct from both the ALLL and the allowance for credit losses on off-balance-sheet credit exposures.

When accrued interest and fees are reported separately on an institution’s balance sheet from the related loan balances (that is, as other assets), the institution should maintain an appropriate valuation allowance, determined in accordance with GAAP, for amounts that are not likely to be collected unless management has placed the underlying loans in nonaccrual status and reversed previously accrued interest and fees.24

**Responsibilities of Examiners**

Examiners should assess the credit quality of an institution’s loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of the reported ALLL in the institution’s regulatory reports. In their review and classification or grading of the loan portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio, including the value of any collateral.

23. It is inappropriate to use a “standard percentage” as the sole determinant for the amount to be reported as the ALLL on the balance sheet. Moreover, an institution should not simply default to a peer ratio or a “standard percentage” after determining an appropriate level of ALLL under its methodology. However, there may be circumstances when an institution’s ALLL methodology and credit risk identification systems are not reliable. Absent reliable data of its own, management may seek data that could be used as a short-term proxy for the unavailable information (for example, an industry average loss rate for loans with similar risk characteristics). This is only appropriate as a short-term remedy until the institution creates a viable system for estimating credit losses within its loan portfolio.

24. See the Call Report instructions for further guidance on placing a loan in nonaccrual status.
In reviewing the appropriateness of the ALLL, examiners should do the following:

- Consider the effectiveness of board oversight as well as the quality of the institution’s loan review system and management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution’s loan review function and credit grading system. Typically, this will involve testing a sample of the institution’s loans. The sample size generally varies and will depend on the nature or purpose of the examination.
- Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management’s assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management’s best estimate within the range. In making these evaluations, examiners should ensure that the institution’s historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution’s loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP, including FAS 114 and FAS 5.
- Review management’s use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review the appropriateness and reasonableness of the overall level of the ALLL. In some instances this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner’s knowledge of the collectibility of loans at the institution and its current environment.
- Review the ALLL amount reported in the institution’s regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance reported in the financial statements. Inquire about reasons for any material differences between the results of the institution’s ALLL analyses and the institution’s reported ALLL to determine whether the differences can be satisfactorily explained.
- Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.
- Review the interest and fee income accounts associated with the lending process to ensure that the institution’s net income is not materially misstated.

As noted in the “Responsibilities of the Board of Directors and Management” section of this policy statement, when assessing the appropriateness of the ALLL, it is important to recognize that the related process, methodology, and underlying assumptions require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, its estimate of credit losses is not a single precise amount due to the wide range of qualitative or environmental factors that must be considered.

An institution’s ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management’s estimates when assessing the appropriateness of the institution’s reported ALLL, and not seek adjustments to the ALLL, when management has—

25. In an examiner’s review of an institution’s loan review system, the examiner’s loan classifications or credit grades may differ from those of the institution’s loan review system. If the examiner’s evaluation of these differences indicates problems with the loan review system, especially when the loan classification or credit grades assigned by the institution are more liberal than those assigned by the examiner, the institution would be expected to make appropriate adjustments to the assignment of its loan classifications or credit grades to the loan portfolio and to its estimated credit losses. Furthermore, the institution would be expected to improve its loan review system.

26. As noted previously, accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution’s balance sheet should be evaluated for estimated credit losses. The accrual of the interest and fee income should also be considered. Refer to GAAP and the Call Report instructions for further guidance on income recognition.
• maintained effective loan review systems and controls for identifying, monitoring, and addressing asset quality problems in a timely manner;
• analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner;
• established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL; and
• incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner’s comments should cite any departures from GAAP and any contraventions of this policy statement and the 2001 policy statement, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

Attachment to the Policy Statement—International Transfer Risk Considerations

With respect to international transfer risk, an institution with cross-border exposures should support its determination of the appropriateness of its ALLL by performing an analysis of the transfer risk, commensurate with the size and composition of the institution’s exposure to each country. Such analyses should take into consideration the following factors, as appropriate:

• the institution’s loan portfolio mix for each country (for example, types of borrowers, loan maturities, collateral, guarantees, special credit facilities, and other distinguishing factors);
• the institution’s business strategy and its debt management plans for each country;
• each country’s balance of payments position;
• each country’s level of international reserves;
• each country’s established payment performance record and its future debt servicing prospects;
• each country’s socio-political situation and its effect on the adoption or implementation of economic reforms, in particular those affecting debt servicing capacity;
• each country’s current standing with multilateral and official creditors;
• the status of each country’s relationships with other creditors, including institutions; and
• the most recent evaluations distributed by the banking agencies’ Interagency Country Exposure Review Committee.

ALLL Level Reflected in Regulatory Reports

The agencies believe that an ALLL established in accordance with this policy statement and the 2001 policy statement, as applicable, falls within the range of acceptable estimates determined in accordance with GAAP. When the reported amount of an institution’s ALLL is not appropriate, the institution will be required to adjust its ALLL by an amount sufficient to bring the ALLL reported on its Call Report to an appropriate level as of the evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.
METHODOLOGY

1. Assess the methodology used in determining the appropriate allowance for loan and lease losses (ALLL) and consider whether it includes portfolio segmentation and impairment analysis for individually evaluated loans. (Refer to ASC Subtopic 450-20 and ASC Topic 310.) Determine whether the complexity and scope of the ALLL evaluation process and loan review system are appropriate given the institution’s risk profile and complexity of lending activities. Consider the following:
   - the effectiveness of the loan review system and controls
   - the ability of internal data-capture and loan-reporting systems to provide robust and meaningful information regarding portfolio risks
   - management’s ability to evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed
   - the methodology is based on a comprehensive, adequately documented, and consistently applied analysis of the loan and lease portfolio
   - management promptly charges off loans, or portions of loans, that are uncollectible
   - an independent third party periodically reviews and validates the ALLL methodology

2. Evaluate the criteria management uses to select loans for individual evaluation under ASC Topic 310, such as
   - loans or relationships above a dollar threshold. If management uses a dollar threshold, assess the threshold in relation to average loan balances, concentrations, or other factors that would cause the loans to be more significant to the institution;
   - loans or relationships on the Watch List or adversely classified Substandard or Doubtful. If selection criteria do not include loans rated Substandard or Doubtful, assess the rationale for the decision; and
   - loans or relationships past due or on nonaccrual status.

3. Determine the methodology used by management to measure impairment on loans (within the scope of ASC Topic 310) that are individually evaluated and determined to be impaired, and consider whether management maintains supporting documentation for the assumptions and estimates used. Consider whether the methodology used is based on
   - the present value of expected future cash flows for individually evaluated impaired loans that are not collateral dependent;
   - observable market price for individually evaluated impaired loans that are not collateral dependent; or
   - the fair value of collateral method.¹

4. Evaluate the reasonableness of and support for management’s assumptions, valuations, and judgments used in the analysis of those loans individually evaluated for impairment under ASC Topic 310 and determined to be impaired.

5. Determine how management treats
   - loans individually evaluated for impairment under ASC Topic 310 that are determined not to be impaired; and
   - individually evaluated loans determined to be impaired that are measured with zero impairment (i.e., no allowance is established when measured for impairment under ASC Topic 310).

6. Determine the basis for evaluating groups of loans under ASC Subtopic 450-20.²

---

¹ For Call Report purposes, the impairment of an impaired collateral-dependent loan must be measured using the fair value of collateral method.
² Examiners should determine that management is appropriately defining impaired loans (i.e., where collection of the full principal and interest is not expected per original contractual terms). If a loan is evaluated under ASC Topic 310 but is not impaired by definition, it should be included in the ASC Subtopic 450-20 evaluation. Once a loan is determined to be impaired and is measured for impairment under ASC Topic 310, it cannot be included in a group of loans collectively assessed for impairment under ASC Subtopic 450-20, even if no ASC Topic 310 allowance is established.
³ Adjustments for qualitative or environmental factors, which may be positive or negative, are typically made to reflect current conditions and expectations as of the balance sheet date if not otherwise captured in historical loss analysis. The granularity of segmentation and the method used to calculate loss rates would affect the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a

---

Commercial Bank Examination Manual

November 2020

Page 1
• Ensure that assets are adequately stratified into groups based on one or more risk characteristics.
• Evaluate the historical loss-rate calculation for each segment.
• Review the time period and the calculation method (e.g., simple average, weighted average) for reasonableness and consistency.
• Consider the effect of new loan products or newly expanded markets.4
• Consider how segmentation methods and historical loss-rate calculations reflect qualitative or environmental factors necessary to reflect current conditions and expectations.

7. Determine whether management considers relevant qualitative and environmental factors and maintains documentation sufficient to support material adjustments. Appropriate documentation generally addresses material factors that are likely to cause estimated losses to differ from historical losses. Qualitative or environmental factors may include, but are not limited to
• changes in lending policies and procedures, such as underwriting standards and collection, charge-off, and recovery practices;
• changes in national and local economic business conditions and developments, including the condition of various market segments;5
• changes in the nature and volume of the portfolio and in the terms of loans;
• changes in the experience, ability, and depth of lending management and staff;
• changes in the volume and severity of past due and adversely classified loans and in the volume of nonaccrual loans;
• changes in the quality of the loan review system;
• changes in the value of underlying collateral for collateral-dependent loans;
• the existence, level, and effect of concentrations of credit; and
• the effect of external factors, such as competition or legal and regulatory requirements.

8. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have any loss experience of its own for such a loan group.6

9. Confirm that management does not include loans measured for impairment under ASC 310 in the estimated credit losses under ASC Subtopic 450-20, even if the ASC Topic 310 impairment measurement was zero.

10. If the ALLL includes an unallocated amount, determine whether it conforms to generally accepted accounting principles and is properly documented and supported.

11. Where appropriate, determine whether the assessment of an appropriate level for the ALLL includes an estimate of losses from transfer risk associated with cross-border lending activities.

12. Determine whether the ALLL evaluation process is completed at least quarterly and evaluate the documentation maintained to support management’s assumptions, valuations, and judgments.7

LEVEL OF THE ALLL

13. Evaluate the level of the ALLL or allowances for credit loss (ACL) for loans and leases.

14. Determine whether the ALLL or ACL for loans and leases is appropriate based on a review of the institution’s methodology coupled with examination findings as they relate to
• loan classifications and internal watch list ratings;
• effectiveness and reliability of the loan review system;
• level and trend of past due and nonaccrual loans;
• historical recovery of loan charge-offs;
• lending policies and procedures, such as underwriting, collection, and charge-off and recovery practices; and

   larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.

4. Historical loss rates for a general segment may not be accurate for new products or loans in a new market that are included in the general segment.

5. Credit loss and recovery experience may vary significantly depending on the business cycle.

6. An institution may not have a loss history if the product is new or the institution is a de novo organization.

7. Refer to the 2001 Final Interagency Policy Statement on ALLL Methodologies and Documentation for Banks and Savings Institutions; and the 2006 Interagency Policy Statement on ALLL.

Commercial Bank Examination Manual

November 2020

Page 2
• changes in the business cycle that necessitate qualitative or environmental factor adjustments to historical loss rates.

15. Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL or ACL for loans and leases.\(^8\)

• Evaluate trends compared to historical experience (e.g., the relationship of the ALLL or ACL) for loans and leases to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs.

• Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL or ACL for loans and leases in relation to these changes, and assess the appropriateness and reasonableness of the ALLL or ACL for loans and leases based on the collectability of the institution’s loan portfolio in the current environment.

16. If the institution’s loan review system is effective and the methodology for determining an appropriate ALLL or ACL for loans and leases is acceptable, compare the result of the institution’s methodology to the actual ALLL or ACL for loans and leases balance. Ensure that the ALLL or ACL amount for loans and leases reported in the institution’s regulatory reports and financial statements reconciles to the ALLL or ACL analysis for loans and leases. Assess the reasons for material differences.

17. Assess management’s estimated credit losses, and, if necessary, consider the need for additional provision expenses based on examination findings. Consider whether

• the loan review system is substantially inaccurate;
• the institution is lending in stressed market conditions;
• credit administration and underwriting weaknesses have not been timely identified or addressed; or
• examination results reflect significant loan quality deterioration.

---

8. Ratio analysis can be a supplemental check on the reasonableness of management’s assumptions and analysis. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.
Allowance for Credit Losses
Effective date November 2020

Section 2071.1

OVERVIEW AND APPLICABILITY

In June 2020, the Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) issued an interagency policy statement on allowances for credit losses (ACLs) (hereafter “policy statement”). The agencies issued the policy statement in response to changes to U.S. generally accepted accounting principles (GAAP) as promulgated by the Financial Accounting Standards Board (FASB) in Accounting Standards Update (ASU) 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments and subsequent amendments issued since June 2016. These updates are codified in Accounting Standards Codification (ASC) Topic 326, Financial Instruments—Credit Losses (FASB ASC Topic 326).

The policy statement on ACLs describes the measurement of expected credit losses under the current expected credit losses (CECL) methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB ASC Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate ACLs; the responsibilities of boards of directors and management; and examiner reviews of ACLs.

FASB ASC Topic 326 replaces the incurred loss methodology for financial assets measured at amortized cost, net investments in leases, and certain off-balance-sheet credit exposures, and modifies the accounting for impairment on available-for-sale debt securities. FASB ASC Topic 326 applies to all banks, savings associations, credit unions, and financial institution holding companies (collectively, institutions), regardless of size, that file regulatory reports for which the reporting requirements conform to GAAP. The agencies are maintaining conformance with GAAP and consistency with FASB ASC Topic 326 through the issuance of the policy statement on ACLs.

The agencies have issued guidelines establishing standards for safety and soundness, including operational and managerial standards that address such matters as internal controls and information systems, an internal audit system, loan documentation, credit underwriting, asset quality, and earnings that should be appropriate for an institution’s size, complexity, and risk profile. The principles described in the policy statement are consistent with these guidelines.

The policy statement becomes applicable to an institution upon that institution’s adoption of FASB ASC Topic 326. The following policy statements are no longer effective for an institution upon its adoption of FASB ASC Topic 326: the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses, the July 2001 Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.

The agencies will rescind the policy statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.

1. See 85 Fed. Reg. 32,991 (June 1, 2020) and SR-20-12, “Interagency Policy Statement on Allowances for Credit Losses.”
2. See section 37(a) of the Federal Deposit Insurance Act. Under these statutory provisions, the accounting principles applicable to reports or statements required to be filed by all insured depository institutions with the federal banking agencies (the Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC)).
3. If the agencies determine that a particular accounting principle within GAAP, including a private company accounting alternative, is inconsistent with the statutorily specified supervisory objectives, those agencies may prescribe an accounting principle for regulatory reporting purposes that is no less stringent than GAAP. In such a situation, an institution would not be permitted to use that particular private company accounting alternative or other accounting principle within GAAP for regulatory reporting purposes.
4. See Appendix D to 12 CFR part 208 which was adopted by the Board for depository institutions pursuant to section 39 of the Federal Deposit Insurance Act. See 12 U.S.C. 1831p-1.
5. As noted in ASU 2019-10, FASB ASC Topic 326 is effective for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years, for public business entities that meet the definition of a Securities Exchange Commission (SEC) filer, excluding entities eligible to be small reporting companies as defined by the SEC.
6. See SR-06-17. The final policy statement does not affect Attachment 1 to the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses. Attachment 1 has been revised through a separate interagency notice published in 85 Fed. Reg. 33,278 (June 1, 2020).
7. See SR-01-17.
ALLL Policy Statements once FASB ASC Topic 326 is effective for all institutions. The agencies issued this Interagency Policy Statement on Allowances for Credit Losses to promote consistency in the interpretation and application of FASB Accounting Standards Update 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments as well as the amendments issued since June 2016. These updates are codified in ASC Topic 326, Financial Instruments—Credit Losses (FASB ASC Topic 326). FASB ASC Topic 326 applies to all institutions, regardless of size, that file regulatory reports for which the reporting requirements conform to U.S. GAAP.

INTERAGENCY POLICY STATEMENT ON ALLOWANCES FOR CREDIT LOSSES

Purpose

The principles described in this policy statement are consistent with GAAP, applicable regulatory reporting requirements, safe and sound banking practices, and the agencies’ codified guidelines establishing standards for safety and soundness. The operational and managerial standards included in those guidelines, which address such matters as internal controls and information systems, an internal audit system, loan documentation, credit underwriting, asset quality, and earnings, should be appropriate for an institution’s size and the nature, scope, and risk of its activities.

SCOPE

This policy statement describes the CECL methodology for determining the ACLs applicable to loans held-for-investment, net investments in leases, and held-to-maturity debt securities accounted for at amortized cost. It also describes the estimation of the ACL for an available-for-sale debt security in accordance with FASB ASC Subtopic 326-30. This policy statement does not address or supersede existing agency requirements or guidance regarding appropriate due diligence in connection with the purchase or sale of assets or determining whether assets are permissible to be purchased or held by institutions.

The CECL methodology described in FASB ASC Topic 326 applies to financial assets measured at amortized cost. This methodology states that, in general, the accounting principles applicable to the Consolidated Reports of Condition and Income (Call Report) “shall be uniform and consistent with generally accepted accounting principles.”

11. FDIC-insured depository institutions should refer to the Interagency Guidelines Establishing Standards for Safety and Soundness adopted by their primary federal regulator pursuant to section 39 of the Federal Deposit Insurance Act (12 U.S.C. 1831p-1). For state member banks, see Appendix D to 12 CFR part 208.

12. FASB ASC Topic 326 defines the amortized cost basis as the amount at which a financing receivable or investment is originated or acquired, adjusted for applicable accrued interest, accretion, or amortization of premium, discount, and net deferred fees or costs, collection of cash, write-offs, foreign exchange, and fair value hedge accounting adjustments.

13. See the final guidance attached to SR-12-15, “Investing in Securities without Reliance on Nationally Recognized Statistical Rating Organization Ratings.” Under the Federal Reserve Act (12 U.S.C. 335) and the Federal Reserve’s Regulation H (12 CFR 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 U.S.C. 24 (Seventh)). Therefore, when investing in securities, state member banks must comply with the provisions of the National Banking Act and the OCC regulations in 12 CFR part 1.
sured at amortized cost, net investments in leases, and off-balance-sheet credit exposures (collectively, financial assets) including

- financing receivables, such as loans held-for-investment;
- overdrawn deposit accounts (i.e., overdrafts) that are reclassified as held-for-investment loans;
- held-to-maturity debt securities;
- receivables that result from revenue transactions within the scope of Topic 606 on revenue from contracts with customers and Topic 610 on other income, which applies, for example, to the sale of foreclosed real estate;
- reinsurance recoverables that result from insurance transactions within the scope of Topic 944 on insurance;
- receivables related to repurchase agreements and securities lending agreements within the scope of Topic 860 on transfers and servicing;
- net investments in leases recognized by a lessor in accordance with Topic 842 on leases; and
- off-balance-sheet credit exposures, including off-balance-sheet loan commitments, standby letters of credit, and financial guarantees not accounted for as insurance, and other similar instruments except for those within the scope of Topic 815 on derivatives and hedging.

The CECL methodology does not apply to the following financial assets:

- financial assets measured at fair value through net income, including those assets for which the fair value option has been elected;
- available-for-sale debt securities;\(^\text{14}\)
- loans held-for-sale;
- policy loan receivables of an insurance entity;
- loans and receivables between entities under common control; and
- receivables arising from operating leases.

**MEASUREMENT OF ACLs FOR LOANS, LEASES, HELD-TO-MATURITY DEBT SECURITIES, AND OFF-BALANCE-SHEET CREDIT EXPOSURES**

**Overview of ACLs**

An ACL is a valuation account that is deducted from, or added to, the amortized cost basis of financial assets to present the net amount expected to be collected over the contractual term of the assets.\(^\text{15}\) In estimating the net amount expected to be collected, management should consider the effects of past events, current conditions, and reasonable and supportable forecasts on the collectibility of the institution’s financial assets.\(^\text{16}\) FASB ASC Topic 326 requires management to use relevant forward-looking information and expectations drawn from reasonable and supportable forecasts when estimating expected credit losses.

ACLs are evaluated as of the end of each reporting period. The methods used to determine ACLs generally should be applied consistently over time and reflect management’s current expectations of credit losses. Changes to ACLs resulting from these periodic evaluations are recorded through increases or decreases to the related provisions for credit losses (PCLs). When available information confirms that specific loans, securities, other assets, or portions thereof, are uncollectible, these amounts should be promptly written off against the related ACLs.\(^\text{17}\)

---

\(^{14}\) Refer to FASB ASC Subtopic 326-30, Financial Instruments—Credit Losses—Available-for-Sale Debt Securities (FASB ASC Subtopic 326-30).

\(^{15}\) Consistent with FASB ASC Topic 326, an institution’s determination of the contractual term should reflect the financial asset’s contractual life adjusted for prepayments, renewal and extension options that are not unconditionally cancellable by the institution, and reasonably expected troubled debt restructurings. For more information, see the “Contractual Term of a Financial Asset” section in this policy statement.

\(^{16}\) Recoveries are a component of management’s estimation of the net amount expected to be collected for a financial asset. Expected recoveries of amounts previously written off or expected to be written off that are included in ACLs may not exceed the aggregate amounts previously written off or expected to be written off. In some circumstances, the ACL for a specific portfolio or loan may be negative because the amount expected to be collected, including expected recoveries, exceeds the financial asset’s amortized cost basis.

\(^{17}\) Consistent with FASB ASC Topic 326, this policy statement uses the verbs “write off” and “written off” and the noun “write-off.” These terms are used interchangeably with “charge off,” “charged off,” and “charge-off,” respectively, in...
Estimating appropriate ACLs involves a high degree of management judgment and is inherently imprecise. An institution’s process for determining appropriate ACLs may result in a range of estimates for expected credit losses. An institution should support and record its best estimate within the range of expected credit losses.

Collective Evaluation of Expected Losses

FASB ASC Topic 326 requires expected losses to be evaluated on a collective, or pool, basis when financial assets share similar risk characteristics. Financial assets may be segmented based on one characteristic, or a combination of characteristics. Examples of risk characteristics relevant to this evaluation include, but are not limited to:

- internal or external credit scores or credit ratings;
- risk ratings or classifications;
- financial asset type;
- collateral type;
- size;
- effective interest rate;
- term;
- geographical location;
- industry of the borrower; and
- vintage.

Other risk characteristics that may be relevant for segmenting held-to-maturity debt securities include issuer, maturity, coupon rate, yield, payment frequency, source of repayment, bond payment structure, and embedded options.

FASB ASC Topic 326 does not prescribe a process for segmenting financial assets for collective evaluation. Therefore, management should exercise judgment when establishing appropriate segments or pools. Management should evaluate financial asset segmentation on an ongoing basis to determine whether the financial assets in the pool continue to share similar risk characteristics. If a financial asset ceases to share risk characteristics with other assets in its segment, it should be moved to a different segment with assets sharing similar risk characteristics if such a segment exists.

If a financial asset does not share similar risk characteristics with other assets, expected credit losses for that asset should be evaluated individually. Individually evaluated assets should not be included in a collective assessment of expected credit losses.

Estimation Methods for Expected Credit Losses

FASB ASC Topic 326 does not require the use of a specific loss estimation method for purposes of determining ACLs. Various methods may be used to estimate the expected collectibility of financial assets, with those methods generally applied consistently over time. The same loss estimation method does not need to be applied to all financial assets. Management is not precluded from selecting a different method when it determines the method will result in a better estimate of ACLs.

Management may use a loss-rate method, probability of default/loss given default (PD/LGD) method, roll-rate method, discounted cash flow method, a method that uses aging schedules, or another reasonable method to estimate expected credit losses. The selected method(s) should be appropriate for the financial assets being evaluated, consistent with the institution’s size and complexity.

Contractual Term of a Financial Asset

FASB ASC Topic 326 requires an institution to measure estimated expected credit losses over the contractual term of its financial assets, considering expected prepayments. Renewals, extensions, and modifications are excluded from the contractual term of a financial asset for purposes of estimating the ACL unless there is a reasonable expectation of executing a troubled debt restructuring (TDR) or the renewal and extension options are part of the original or modified contract and are not unconditionally cancellable by the institution. If such renewal or extension options are present, management must evaluate

---

18. Various loss-rate methods may be used to estimate expected credit losses under the current expected credit loss methodology. These include the weighted-average-remaining-maturity method, vintage analysis, and the snapshot or open pool method.
the likelihood of a borrower exercising those options when determining the contractual term.

Historical Loss Information

Historical loss information generally provides a basis for an institution’s assessment of expected credit losses. Historical loss information may be based on internal information, external information, or a combination of both. Management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Management should then consider whether further adjustments to historical loss information are needed to reflect the extent to which current conditions and reasonable and supportable forecasts differ from the conditions that existed during the historical loss period. Adjustments to historical loss information may be quantitative or qualitative in nature and should reflect changes to relevant data (such as changes in unemployment rates, delinquency, or other factors associated with the financial assets).

Reasonable and Supportable Forecasts

When estimating expected credit losses, FASB ASC Topic 326 requires management to consider forward-looking information that is both reasonable and supportable and relevant to assessing the collectibility of cash flows. Reasonable and supportable forecasts may extend over the entire contractual term of a financial asset or a period shorter than the contractual term. FASB ASC Topic 326 does not prescribe a specific method for determining reasonable and supportable forecasts nor does it include bright lines for establishing a minimum or maximum length of time for reasonable and supportable forecast period(s). Judgment is necessary in determining an appropriate period(s) for each institution. Reasonable and supportable forecasts may vary by portfolio segment or individual forecast input. These forecasts may include data from internal sources, external sources, or a combination of both. Management is not required to search for all possible information nor incur undue cost and effort to collect data for its forecasts. However, reasonably available and relevant information should not be ignored in assessing the collectibility of cash flows. Management should evaluate the appropriateness of the reasonable and supportable forecast period(s) each reporting period, consistent with other inputs used in the estimation of expected credit losses.

Institutions may develop reasonable and supportable forecasts by using one or more economic scenarios. FASB ASC Topic 326 does not require the use of multiple economic scenarios; however, institutions are not precluded from considering multiple economic scenarios when estimating expected credit losses.

Reversion

When the contractual term of a financial asset extends beyond the reasonable and supportable period, FASB ASC Topic 326 requires reversion to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period). Management may revert to historical loss information for each individual forecast input or based on the entire estimate of loss.

FASB ASC Topic 326 does not require the application of a specific reversion technique or use of a specific reversion period. Reversion to historical loss information may be immediate, occur on a straight-line basis, or use any systematic, rational method. Management may apply different reversion techniques depending on the economic environment or the financial asset portfolio. Reversion techniques are not accounting policy elections and should be evaluated for appropriateness each reporting period, consistent with other inputs used in the estimation of expected credit losses.

FASB ASC Topic 326 does not specify the historical loss information that is used in the reversion period. This historical loss information may be based on long-term average losses or on losses that occurred during a particular historical period(s). Management may use multiple historical periods that are not sequential. Management should not adjust historical loss information for existing economic conditions or expectations of future economic conditions for periods beyond the reasonable and supportable
period. However, management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics, such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Qualitative Factor Adjustments

The estimation of ACLs should reflect consideration of all significant factors relevant to the expected collectibility of the institution’s financial assets as of the reporting date. Management may begin the expected credit loss estimation process by determining its historical loss information or obtaining reliable and relevant historical loss proxy data for each segment of financial assets with similar risk characteristics. Historical credit losses (or even recent trends in losses) generally do not, by themselves, form a sufficient basis to determine the appropriate levels for ACLs.

Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. These qualitative factor adjustments may increase or decrease management’s estimate of expected credit losses. Adjustments should not be made for information that has already been considered and included in the loss estimation process.

Management should consider the qualitative factors that are relevant to the institution as of the reporting date, which may include, but are not limited to

- the nature and volume of the institution’s financial assets;
- the existence, growth, and effect of any concentrations of credit;
- the volume and severity of past due financial assets, the volume of nonaccrual assets, and the volume and severity of adversely classified or graded assets;\(^\text{19}\)
- the value of the underlying collateral for loans that are not collateral-dependent;\(^\text{20}\)
- the institution’s lending policies and procedures, including changes in underwriting standards and practices for collections, write-offs, and recoveries;
- the quality of the institution’s credit review function;
- the experience, ability, and depth of the institution’s lending, investment, collection, and other relevant management and staff;
- the effect of other external factors, such as the regulatory, legal, and technological environments; competition; and events, such as natural disasters; and
- actual and expected changes in international, national, regional, and local economic and business conditions and developments in which the institution operates that affect the collectibility of financial assets.\(^\text{21}\)

Management may consider the following additional qualitative factors specific to held-to-maturity debt securities as of the reporting date:\(^\text{22}\)

- the effect of recent changes in investment strategies and policies;
- the existence and effect of loss allocation methods, the definition of default, the impact of performance and market value triggers, and credit and liquidity enhancements associated with debt securities;
- the effect of structural subordination and collateral deterioration on tranche performance of debt securities;
- the quality of underwriting for any collateral backing debt securities; and

\(^{19}\)For banks and savings associations, adversely classified or graded loans are loans rated “substandard” (or its equivalent) or worse under the institution’s loan classification system. For credit unions, adversely graded loans are loans included in the more severely graded categories under the institution’s credit grading system, i.e., those loans that tend to be included in the credit union’s “watch lists.” Criteria related to the classification of an investment security may be found in the interagency policy statement Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions issued by the FDIC, Board, and OCC in October 2013. See SR-13-18.

\(^{20}\)See the “Collateral-Dependent Financial Assets” section of this policy statement for more information on collateral-dependent loans.

\(^{21}\)Changes in economic and business conditions and developments included in qualitative factor adjustments are limited to those that affect the collectibility of an institution’s financial assets and are relevant to the institution’s financial asset portfolio. For example, an economic factor for current or forecasted unemployment at the national or state level may indicate a strong job market based on low national or state unemployment rates, but a local unemployment rate, which may be significantly higher, for example, because of the actual or forecasted loss of a major local employer may be more relevant to the collectibility of an institution’s financial assets.

\(^{22}\)This list is not all-inclusive, and all of the factors listed may not be relevant to all institutions.
• the effect of legal covenants associated with debt securities.

Changes in the level of an institution’s ACLs may not always be directionally consistent with changes in the level of qualitative factor adjustments due to the incorporation of reasonable and supportable forecasts in estimating expected losses. For example, if improving credit quality trends are evident throughout an institution’s portfolio in recent years, but management’s evaluation of reasonable and supportable forecasts indicates expected deterioration in credit quality of the institution’s financial assets during the forecast period, the ACL as a percentage of the portfolio may increase.

Collateral-Dependent Financial Assets

FASB ASC Topic 326 describes a collateral-dependent asset as a financial asset for which the repayment is expected to be provided substantially through the operation or sale of the collateral when the borrower, based on management’s assessment, is experiencing financial difficulty as of the reporting date. For regulatory reporting purposes, the ACL for a collateral-dependent loan is measured using the fair value of collateral, regardless of whether foreclosure is probable.

When estimating the ACL for a collateral-dependent loan, FASB ASC Topic 326 requires the fair value of collateral to be adjusted to consider estimated costs to sell if repayment or satisfaction of the loan depends on the sale of the collateral. ACL adjustments for estimated costs to sell are not appropriate when the repayment of a collateral-dependent loan is expected from the operation of the collateral.

The fair value of collateral securing a collateral-dependent loan may change over time. If the fair value of the collateral as of the ACL evaluation date has decreased since the previous ACL evaluation date, the ACL should be increased to reflect the additional decrease in the fair value of the collateral. Likewise, if the fair value of the collateral has increased as of the ACL evaluation date, the increase in the fair value of the collateral is reflected through a reduction in the ACL. Any negative ACL that results is capped at the amount previously written off. Changes in the fair value of collateral described herein should be supported and documented through recent appraisals or evaluations.

Troubled Debt Restructurings (TDRs)

Expected credit losses on financial assets modified in TDRs or reasonably expected to be modified in TDRs (collectively, TDRs) are estimated under the same CECL methodology that is applied to other financial assets measured at amortized cost. Expected credit losses are evaluated on a collective basis, or, if a TDR does not share similar risk characteristics with other financial assets, on an individual basis.

FASB ASC Topic 326 allows an institution to use any appropriate loss estimation method to estimate ACLs for TDRs. However, there are circumstances when specific measurement methods are required. If a TDR, or a financial asset for which a TDR is reasonably expected, is collateral-dependent, the ACL is estimated using the fair value of collateral.

23. The agencies, at times, have prescribed specific regulatory reporting requirements that fall within a range of acceptable practice under GAAP. These specific reporting requirements, such as the requirement for institutions to apply the practical expedient in ASC 326-20-35-5 for collateral-dependent loans, regardless of whether foreclosure is probable, have been adopted to achieve safety and soundness and other public policy objectives and to ensure comparability among institutions. The regulatory reporting requirement to apply the practical expedient for collateral-dependent financial assets is consistent with the agencies’ long-standing practice for collateral-dependent loans, and it continues to be limited to collateral-dependent loans. It does not apply to other financial assets such as held-to-maturity debt securities that are collateral-dependent.

24. For more information on regulatory expectations related to the use of appraisals and evaluations, see the “Interagency Appraisal and Evaluation Guidelines” (SR-10-16) published on December 10, 2010. Insured depository institutions should also refer to the interagency regulations on appraisals adopted by their primary federal regulator. For state member banks, see 12 CFR parts 208 and 225.

25. A troubled debt restructuring is defined in ASC Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors. The October 24, 2013, “Interagency Supervisory Guidance Addressing Certain Issues Related to Troubled Debt Restructurings” (SR-13-17) provides more information on troubled debt restructurings (TDRs), including, but not limited to, accrual status, regulatory credit risk grade, classification and write-off treatment, and capitalized costs. This interagency supervisory guidance remains applicable, unless affected by FASB ASC Topic 326. Information on the reporting of a subsequent restructuring of a TDR may be found in the instructions for the Call Report.
In addition, when management has a reasonable expectation of executing a TDR or if a TDR has been executed, the expected effect of the modification (e.g., term extension or interest rate concession) is included in the estimate of the ACLs. Management should determine, support, and document how it identifies and estimates the effect of a reasonably expected TDR and estimates the related ACL. The estimated effect of reasonably expected TDRs may be included in an institution’s qualitative factor adjustments.

Purchased Credit-Deteriorated Assets

FASB ASC Topic 326 introduces the concept of purchased credit-deteriorated (PCD) assets. PCD assets are acquired financial assets that, at acquisition, have experienced more-than-insignificant deterioration in credit quality since origination. FASB ASC Topic 326 does not provide a prescriptive definition of more-than-insignificant credit deterioration. The acquiring institution’s management should establish and document a reasonable process to consistently determine what constitutes a more-than-insignificant deterioration in credit quality.

When recording the acquisition of PCD assets, the amount of expected credit losses as of the acquisition date is added to the purchase price of the financial assets rather than recording these losses through PCLs. This establishes the amortized cost basis of the PCD assets. Any difference between the unpaid principal balance of the PCD assets and the amortized cost basis of the assets as of the acquisition date is the non-credit discount or premium. The initial ACL and non-credit discount or premium determined on a collective basis at the acquisition date are allocated to the individual PCD assets.

After acquisition, ACLs for PCD assets should be adjusted at each reporting date with a corresponding debit or credit to the PCLs to reflect management’s current estimate of expected credit losses. The non-credit discount recorded at acquisition will be accreted into interest income over the remaining life of the PCD assets on a level-yield basis.

Financial Assets with Collateral Maintenance Agreements

Institutions may have financial assets that are secured by collateral (such as debt securities) and are subject to collateral maintenance agreements requiring the borrower to continuously replenish the amount of collateral securing the asset. If the fair value of the collateral declines, the borrower is required to provide additional collateral as specified by the agreement.

FASB ASC Topic 326 includes a practical expedient for financial assets with collateral maintenance agreements where the borrower is required to provide collateral greater than or equal to the amortized cost basis of the asset and is expected to continuously replenish the collateral. In those cases, management may elect the collateral maintenance practical expedient and measure expected credit losses for these qualifying assets based on the fair value of the collateral. If the fair value of the collateral is greater than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, management may record an ACL of zero for the financial asset when the collateral maintenance practical expedient is applied. Similarly, if the fair value of the collateral is less than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, the ACL is limited to the difference between the fair value of the collateral and the amortized cost basis of the asset as of the reporting date when applying the collateral maintenance practical expedient.

Accrued Interest Receivable

FASB ASC Topic 326 includes accrued interest receivable in the amortized cost basis of a financial asset. As a result, accrued interest receivable is included in the amounts for which ACLs are estimated. Generally, any accrued interest receivable that is not collectible is written off against the related ACL.

26. For example, an institution enters into a reverse repurchase agreement with a collateral maintenance agreement. Management may not need to record the expected credit losses at each reporting date as long as the fair value of the security collateral is greater than the amortized cost basis of the reverse repurchase agreement. Refer to ASC 326-20-55-46 for more information.
FASB ASC Topic 326 permits a series of independent accounting policy elections related to accrued interest receivable that alter the accounting treatment described in the preceding paragraph. These elections are made upon adoption of FASB ASC Topic 326 and may differ by class of financing receivable or major security-type level. The available accounting policy elections are:

- Management may elect not to measure ACLs for accrued interest receivable if uncollectible accrued interest is written off in a timely manner. Management should define and document its definition of a timely write-off.
- Management may elect to write off accrued interest receivable by either reversing interest income, recognizing the loss through PCLs, or through a combination of both methods.
- Management may elect to separately present accrued interest receivable from the associated financial asset in its regulatory reports and financial statements, if applicable. The accrued interest receivable is presented net of ACLs (if any).

Financial Assets with Zero Credit Loss Expectations

There may be certain financial assets for which the expectation of credit loss is zero after evaluating historical loss information, making necessary adjustments for current conditions and reasonable and supportable forecasts, and considering any collateral or guarantee arrangements that are not free-standing contracts. Factors to consider when evaluating whether expectations of zero credit loss are appropriate may include, but are not limited to:

- A long history of zero credit loss;
- A financial asset that is fully secured by cash or cash equivalents;
- High credit ratings from rating agencies with no expected future downgrade; and
- Principal and interest payments that are guaranteed by the U.S. government;
- The issuer, guarantor, or sponsor can print its own currency and the currency is held by other central banks as reserve currency; and
- The interest rate on the security is recognized as a risk-free rate.

A loan that is fully secured by cash or cash equivalents, such as certificates of deposit issued by the lending institution, would likely have zero credit loss expectations. Similarly, the guaranteed portion of a U.S. Small Business Administration (SBA) loan or security purchased on the secondary market through the SBA’s fiscal and transfer agent would likely have zero credit loss expectations if these financial assets are unconditionally guaranteed by the U.S. government. Examples of held-to-maturity debt securities that may result in expectations of zero credit loss include U.S. Treasury securities as well as mortgage-backed securities issued and guaranteed by the Government National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Federal National Mortgage Association. Assumptions related to zero credit loss expectations should be included in the institution’s ACL documentation.

Estimated Credit Losses for Off-Balance-Sheet Credit Exposures

FASB ASC Topic 326 requires that an institution estimate expected credit losses for off-balance-sheet credit exposures within the scope of FASB ASC Topic 326 over the contractual period during which the institution is exposed to credit risk. The estimate of expected credit losses should take into consideration the likelihood that funding will occur as well as the amount expected to be funded over the estimated remaining contractual term of the off-balance-sheet credit exposures. Management should not record an estimate of expected credit losses for off-balance-sheet exposures that are unconditionally cancellable by the issuer.

Management must evaluate expected credit losses for off-balance-sheet credit exposures as of each reporting date. While the process for estimating expected credit losses for these exposures is similar to the one used for on-balance-sheet financial assets, these estimated credit losses are not recorded as part of the ACLs.
because cash has not yet been disbursed to fund the contractual obligation to extend credit. Instead, these loss estimates are recorded as a liability, separate and distinct from the ACLs.29 The amount needed to adjust the liability for expected credit losses for off-balance-sheet credit exposures as of each reporting date is reported in net income.

MEASUREMENT OF THE ACL FOR AVAILABLE-FOR-SALE DEBT SECURITIES

FASB ASC Subtopic 326-30, Financial Instruments—Credit Losses—Available-for-Sale Debt Securities (FASB ASC Subtopic 326-30) describes the accounting for expected credit losses associated with available-for-sale debt securities. Credit losses for available-for-sale debt securities are evaluated as of each reporting date when the fair value is less than amortized cost. FASB ASC Subtopic 326-30 requires credit losses to be calculated individually, rather than collectively, using a discounted cash flow method, through which management compares the present value of expected cash flows with the amortized cost basis of the security. An ACL is established, with a charge to the PCL, to reflect the credit loss component of the decline in fair value below amortized cost. If the fair value of the security increases over time, any ACL that has not been written off may be reversed through a credit to the PCL. The ACL for an available-for-sale debt security is limited by the amount that the fair value is less than the amortized cost, which is referred to as the fair value floor.

If management intends to sell an available-for-sale debt security or will more likely than not be required to sell the security before recovery of the amortized cost basis, the security’s ACL should be written off and the amortized cost basis of the security should be written down to its fair value at the reporting date with any incremental impairment reported in income.

A change during the reporting period in the non-credit component of any decline in fair value below amortized cost on an available-for-sale debt security is reported in other comprehensive income, net of applicable income taxes.30 When evaluating impairment for available-for-sale debt securities, management may evaluate the amortized cost basis including accrued interest receivable, or may evaluate the accrued interest receivable separately from the remaining amortized cost basis. If evaluated separately, accrued interest receivable is excluded from both the fair value of the available-for-sale debt security and its amortized cost basis.31

DOCUMENTATION STANDARDS

For financial and regulatory reporting purposes, ACLs and PCLs must be determined in accordance with GAAP. ACLs and PCLs should be well documented, with clear explanations of the supporting analyses and rationale. Sound policies, procedures, and control systems should be appropriately tailored to an institution’s size and complexity, organizational structure, business environment and strategy, risk appetite, financial asset characteristics, loan administration procedures, investment strategy, and management information systems.32 Maintaining, analyzing, supporting, and documenting appropriate ACLs and PCLs in accordance with GAAP is consistent with safe and sound banking practices.

The policies and procedures governing an institution’s ACL processes and the controls over these processes should be designed, implemented, and maintained to reasonably estimate expected credit losses for financial assets and off-balance-sheet credit exposures as of the reporting date. The policies and procedures should describe management’s processes for evaluating the credit quality and collectibility of financial asset portfolios, including reasonable and supportable forecasts about changes in the credit quality of these portfolios, through a disciplined and consistently applied process that

29. The ACL associated with off-balance-sheet credit exposures is included in the “Allowance for credit losses on off-balance-sheet credit exposures” in Schedule RC-G—Other Liabilities in the Call Report.

30. Non-credit impairment on an available-for-sale debt security that is not required to be recorded through the ACL should be reported in other comprehensive income as described inASC 326-30-35-2.

31. The accounting policy elections described in the “Accrued Interest Receivable” section of this policy statement apply to accrued interest receivable recorded for an available-for-sale debt security if an institution excludes applicable accrued interest receivable from both the fair value and amortized cost basis of the security for purposes of identifying and measuring impairment.

32. Management often documents policies, procedures, and controls related to ACLs in accounting or credit risk management policies, or a combination thereof.
results in an appropriate estimate of the ACLs. Management should review and, as needed, revise the institution’s ACL policies and procedures at least annually, or more frequently if necessary.

An institution’s policies and procedures for the systems, processes, and controls necessary to maintain appropriate ACLs should address, but not be limited to

- processes that support the determination and maintenance of appropriate levels for ACLs that are based on a comprehensive, well-documented, and consistently applied analysis of an institution’s financial asset portfolios and off-balance-sheet credit exposures. The analyses and loss estimation processes used should consider all significant factors that affect the credit risk and collectibility of the financial asset portfolios;
- the roles, responsibilities, and segregation of duties of the institution’s senior management and other personnel who provide input into ACL processes, determine ACLs, or review ACLs. These departments and individuals may include accounting, financial reporting, treasury, investment management, lending, special asset or problem loan workout teams, retail collections and foreclosure groups, credit review, model risk management, internal audit, and others, as applicable. Individuals with responsibilities related to the estimation of ACLs should be competent and well-trained, with the ability to escalate material issues;
- processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in asset specific characteristics as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
- processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of a financial asset or off-balance-sheet credit exposure extends beyond the reasonable and supportable forecast period(s);
- processes for segmenting financial assets for estimating expected credit losses and periodically evaluating the segments to determine whether the assets continue to share similar risk characteristics;
- data capture and reporting systems that supply the quality and breadth of relevant and reliable information necessary, whether obtained internally or externally, to support and document the estimates of appropriate ACLs for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
- the description of the institution’s systematic and logical loss estimation process(es) for determining and consolidating expected credit losses to ensure that the ACLs are recorded in accordance with GAAP and regulatory reporting requirements. This may include, but is not limited to
  — management’s judgments, accounting policy elections, and application of practical expedients in determining the amount of expected credit losses;
  — the process for determining when a loan is collateral-dependent;
  — the process for determining the fair value of collateral, if any, used as an input when estimating the ACL, including the basis for making any adjustments to the market value conclusion and how costs to sell, if applicable, are calculated;
  — the process for determining when a financial asset has zero credit loss expectations;
  — the process for determining expected credit losses when a financial asset has a collateral maintenance provision; and
  — a description of and support for qualitative factors that affect collectibility of financial assets;
- procedures for validating and independently reviewing the loss estimation process as well as any changes to the process from prior periods;
- policies and procedures for the prompt write-off of financial assets, or portions of financial assets, when available information confirms the assets to be uncollectible, consistent with regulatory reporting requirements; and
- the systems of internal controls used to confirm that the ACL processes are maintained and periodically adjusted in accordance with GAAP and interagency guidelines establishing standards for safety and soundness.

Internal control systems for the ACL estimation processes should

- provide reasonable assurance regarding the relevance, reliability, and integrity of data and
other information used in estimating expected credit losses;
• provide reasonable assurance of compliance with laws, regulations, and the institution’s policies and procedures;
• provide reasonable assurance that the institution’s financial statements are prepared in accordance with GAAP, and the institution’s regulatory reports are prepared in accordance with the applicable instructions;
• include a well-defined and effective loan review and grading process that is consistently applied and identifies, measures, monitors, and reports asset quality problems in an accurate, sound and timely manner. The loan review process should respond to changes in internal and external factors affecting the level of credit risk in the portfolio; and
• include a well-defined and effective process for monitoring credit quality in the debt securities portfolio.

ANALYZING AND VALIDATING THE OVERALL MEASUREMENT OF ACLs

To ensure that ACLs are presented fairly, in accordance with GAAP and regulatory reporting requirements, and are transparent for regulatory examinations, management should document its measurements of the amounts of ACLs reported in regulatory reports and financial statements, if applicable, for each type of financial asset (e.g., loans, held-to-maturity debt securities, and available-for-sale debt securities) and for off-balance-sheet credit exposures. This documentation should include ACL calculations, qualitative adjustments, and any adjustments to the ACLs that are required as part of the internal review and challenge process. The board of directors, or a committee thereof, should review management’s assessments of and justifications for the reported amounts of ACLs.

Various techniques are available to assist management in analyzing and evaluating the ACLs. For example, comparing estimates of expected credit losses to actual write-offs in aggregate, and by portfolio, may enable management to assess whether the institution’s loss estimation process is sufficiently designed. Further, comparing the estimate of ACLs to actual write-offs at the financial asset portfolio level allows management to analyze changing portfolio characteristics, such as the volume of assets or increases in write-off rates, which may affect future forecast adjustments. Techniques applied in these instances do not have to be complex to be effective but, if used, should be commensurate with the institution’s size and complexity.

Ratio analysis may also be useful for evaluating the overall reasonableness of ACLs. Ratio analysis assists in identifying divergent or emerging trends in the relationship of ACLs to other factors, such as adversely classified or graded loans, past due and nonaccrual loans, total loans, historical gross write-offs, net write-offs, and historic delinquency and default trends for securities.

Comparing the institution’s ACLs to those of peer institutions may provide management with limited insight into management’s own ACL estimates. Management should apply caution when performing peer comparisons as there may be significant differences among peer institutions in the mix of financial asset portfolios, reasonable and supportable forecast period assumptions, reversion techniques, the data used for historical loss information, and other factors.

When used prudently, comparisons of estimated expected losses to actual write-offs, ratio analysis, and peer comparisons can be helpful as a supplemental check on the reasonableness of management’s assumptions and analyses. Because appropriate ACLs are institution-specific estimates, the use of comparisons does not eliminate the need for a comprehensive analysis of financial asset portfolios and the factors affecting their collectibility.

When an appropriate expected credit loss framework has been used to estimate expected credit losses, it is inappropriate for the board of directors or management to make further adjustments to ACLs for the sole purpose of reporting ACLs that correspond to a peer group median, a target ratio, or a budgeted amount. Additionally, neither the board of directors nor management should further adjust ACLs beyond what has been appropriately measured and documented in accordance with FASB ASC Topic 326.

33. Institutions using models in the loss estimation process may incorporate a qualitative factor adjustment in the estimate of expected credit losses to capture the variance between modeled credit loss expectations and actual historical losses when the model is still considered predictive and fit for use. Institutions should monitor this variance, as well as changes to the variance, to determine if the variance is significant or material enough to warrant further changes to the model.
After analyzing ACLs, management should periodically validate the loss estimation process, and any changes to the process, to confirm that the process remains appropriate for the institution’s size, complexity, and risk profile. The validation process should include procedures for review by a party with appropriate knowledge, technical expertise, and experience who is independent of the institution’s credit approval and ACL estimation processes. A party who is independent of these processes could be from internal audit staff, a risk management unit of the institution independent of management supervising these processes, or a contracted third-party. One party need not perform the entire analysis as the validation may be divided among various independent parties.  

RESPONSIBILITIES OF THE BOARD OF DIRECTORS

The board of directors, or a committee thereof, is responsible for overseeing management’s significant judgments and estimates used in determining appropriate ACLs. Evidence of the board of directors’ oversight activities is subject to review by examiners. These activities should include, but are not limited to:

- retaining experienced and qualified management to oversee all ACL and PCL activities;
- reviewing and approving the institution’s written loss estimation policies, including any revisions thereto, at least annually;
- reviewing management’s assessment of the loan review system and management’s conclusion and support for whether the system is sound and appropriate for the institution’s size and complexity;
- reviewing management’s assessment of the effectiveness of processes and controls for monitoring the credit quality of the investment portfolio;
- reviewing management’s assessments of and justifications for the estimated amounts reported each period for the ACLs and the PCLs;
- requiring management to validate, and, when

appropriate, revise loss estimation methods periodically:
- approving the internal and external audit plans for the ACLs, as applicable; and
- reviewing any identified audit findings and monitoring resolution of those items.

RESPONSIBILITIES OF MANAGEMENT

Management is responsible for maintaining ACLs at appropriate levels and for documenting its analyses in accordance with the concepts and requirements set forth in GAAP, regulatory reporting requirements, and this policy statement. Management should evaluate the ACLs reported on the balance sheet as of the end of each period, and debit or credit the related PCLs to bring the ACLs to an appropriate level as of each reporting date. The determination of the amounts of the ACLs and the PCLs should be based on management’s current judgments about the credit quality of the institution’s financial assets and should consider known and expected relevant internal and external factors that significantly affect collectibility over reasonable and supportable forecast periods for the institution’s financial assets as well as appropriate reversion techniques applied to periods beyond the reasonable and supportable forecast periods. Management’s evaluations are subject to review by examiners.

In carrying out its responsibility for maintaining appropriate ACLs, management should adopt and adhere to written policies and procedures that are appropriate to the institution’s size and the nature, scope, and risk of its lending and investing activities. These policies and procedures should address the processes and activities described in the “Documentation Standards” section of this policy statement.

Management fulfills other responsibilities that aid in the maintenance of appropriate ACLs. These activities include, but are not limited to:

- establishing and maintaining appropriate governance activities for the loss estimation processes. These activities may include reviewing and challenging the assumptions used in estimating expected credit losses and designing and executing effective internal controls over the credit loss estimation method(s);
- periodically performing procedures that compare credit loss estimates to actual write-offs,
at the portfolio level and in aggregate, to confirm that amounts recorded in the ACLs were sufficient to cover actual credit losses. This analysis supports that appropriate ACLs were recorded and provides insight into the loss estimation process’s ability to estimate expected credit losses. This analysis is not intended to reflect the accuracy of management’s economic forecasts;

- periodically validating the loss estimation process(es), including changes, if any, to confirm it is appropriate for the institution; and
- engaging in sound risk management of third parties involved in ACL estimation process(es), if applicable, to ensure that the loss estimation processes are commensurate with the level of risk, the complexity of the third-party relationship and the institution’s organizational structure.35

Additionally, if an institution uses loss estimation models in determining expected credit losses, management should evaluate the models before they are employed and modify the model logic and assumptions, as needed, to help ensure that the resulting loss estimates are consistent with GAAP and regulatory reporting requirements.36 To demonstrate such consistency, management should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with models. When used for multiple purposes within an institution, models should be specifically adjusted and validated for use in ACL loss estimation processes. Management should document and support any adjustments made to the models, the outputs of the models, and compensating controls applied in determining the estimated expected credit losses.

EXAMINER REVIEW OF ACLs

Examiners are expected to assess the appropriateness of management’s loss estimation processes and the appropriateness of the institution’s ACL balances as part of their supervisory activities. The review of ACLs, including the depth of the examiner’s assessment, should be commensurate with the institution’s size, complexity, and risk profile. As part of their supervisory activities, examiners generally assess the credit quality and credit risk of an institution’s financial asset portfolios, the adequacy of the institution’s credit loss estimation processes, the adequacy of supporting documentation, and the appropriateness of the reported ACLs and PCLs in the institution’s regulatory reports and financial statements, if applicable. Examiners may consider the significant factors that affect collectibility, including the value of collateral securing financial assets and any other repayment sources. Supervisory activities may include evaluating management’s effectiveness in assessing credit risk for debt securities (both prior to purchase and on an on-going basis). In reviewing the appropriateness of an institution’s ACLs, examiners may

- evaluate the institution’s ACL policies and procedures and assess the loss estimation method(s) used to arrive at overall estimates of ACLs, including the documentation supporting the reasonableness of management’s assumptions, valuations, and judgments. Supporting activities may include, but are not limited to
  — evaluating whether management has appropriately considered historical loss information, current conditions, and reasonable and supportable forecasts, including significant qualitative factors that affect the collectibility of the financial asset portfolios;
  — assessing loss estimation techniques, including loss estimation models, if applicable, as well as the incorporation of qualitative adjustments to determine whether the resulting estimates of expected credit losses are in conformity with GAAP and regulatory reporting requirements; and
  — evaluating the adequacy of the documentation and the effectiveness of the controls used to support the measurement of the ACLs;
- assess the effectiveness of board oversight as well as management’s effectiveness in identifying, measuring, monitoring, and controlling credit risk. This may include, but is not limited to, a review of underwriting standards and practices, portfolio composition and trends, credit risk review functions, risk rating

35. Guidance on third party service providers may be found in SR-13-19/CA-13-21, “Guidance on Managing Outsourcing Risk.”
36. See the interagency statement titled, “Guidance on Model Risk Management,” (SR-11-7). The statement also addresses the incorporation of vendor products into an institution’s model risk management framework following the same principles relevant to in-house models.
systems, credit administration practices, investment securities management practices, and related management information systems and reports;

- review the appropriateness and reasonableness of the overall level of the ACLs relative to the level of credit risk, the complexity of the institution’s financial asset portfolios, and available information relevant to assessing collectibility, including consideration of current conditions and reasonable and supportable forecasts. Examiners may include a quantitative analysis (e.g., using management’s results comparing expected write-offs to actual write-offs as well as ratio analysis) to assess the appropriateness of the ACLs. This quantitative analysis may be used to determine the reasonableness of management’s assumptions, valuations, and judgments and understand variances between actual and estimated credit losses. Loss estimates that are consistently and materially over or under predicting actual losses may indicate a weakness in the loss forecasting process;

- review the ACLs reported in the institution’s regulatory reports and in any financial statements and other key financial reports to determine whether the reported amounts reconcile to the institution’s estimate of the ACLs. The consolidated loss estimates determined by the institution’s loss estimation method(s) should be consistent with the final ACLs reported in its regulatory reports and financial statements, if applicable;

- verify that models used in the loss estimation process, if any, are subject to initial and ongoing validation activities. Validation activities include evaluating and concluding on the conceptual soundness of the model, including developmental evidence, performing ongoing monitoring activities, including process verification and benchmarking, and analyzing model output. Examiners may review model validation findings, management’s response to those findings, and applicable action plans to remediate any concerns, if applicable. Examiners may also assess the adequacy of the institution’s processes to implement changes in a timely manner; and

- review the effectiveness of the institution’s third-party risk management framework associated with the estimation of ACLs, if applicable, to assess whether the processes are commensurate with the level of risk, the complexity and nature of the relationship, and the institution’s organizational structure. Examiners may determine whether management monitors material risks and deficiencies in third-party relationships, and takes appropriate action as needed.38

When assessing the appropriateness of ACLs, examiners should recognize that the processes, loss estimation methods, and underlying assumptions an institution uses to calculate ACLs require the exercise of a substantial degree of management judgment. Even when an institution maintains sound procedures, controls, and monitoring activities, an estimate of expected credit losses is not a single precise amount and may result in a range of acceptable outcomes for these estimates. This is a result of the flexibility FASB ASC Topic 326 provides institutions in selecting loss estimation methods and the wide range of qualitative and forecasting factors that are considered.

Management’s ability to estimate expected credit losses should improve over the contractual term of financial assets as substantive information accumulates regarding the factors affecting repayment prospects. Examiners generally should accept an institution’s ACL estimates and not seek adjustments to the ACLs, when management has provided adequate support for the loss estimation process employed, and the ACL balances and the assumptions used in the ACL estimates are in accordance with GAAP and regulatory reporting requirements. It is inappropriate for examiners to seek adjustments to ACLs for the sole purpose of achieving ACL levels that correspond to a peer group median, a target ratio, or a benchmark amount when management has used an appropriate expected credit loss framework to estimate expected credit losses.

If the examiner concludes that an institution’s reported ACLs are not appropriate or determines that its ACL evaluation processes or loss estimation method(s) are otherwise deficient, these concerns should be noted in the report of examination and communicated to the board of directors and senior management.39 Additional super-

37. See SR-11-7.
39. Each agency has formal and informal communication channels for sharing supervisory information with the board of directors and management depending on agency practices and the nature of the information being shared. These chan-
visory action may be taken based on the magnitude of the shortcomings in ACLs, including the materiality of any errors in the reported amounts of ACLs.

Visitation findings summary letters, targeted review conclusion letters, or official examination or inspection reports.
METHODOLOGY

1. Determine the methodology or methodologies used to measure the expected collectability of loans, and consider whether management maintains supporting documentation for the assumptions and estimates used. Methodologies include
   • loss-rate;
   • weighted-average-remaining-maturity (WARM);
   • probability of default/loss given default (PD/LGD);
   • roll-rate;
   • discounted cash flow;
   • a method that uses aging schedules;
   • fair value of the collateral (required for all collateral-dependent loans); and
   • another reasonable method to estimate expected credit losses.

2. Assess the methodology or methodologies used in determining an appropriate allowance for credit loss (ACL) for loans and leases. Determine whether the complexity and scope of the ACL evaluation process for loans and leases and the loan review system are appropriate given the institution’s risk profile and complexity of lending activities. Consider whether management provides for the following:
   • an effective loan review system and controls;
   • data-capture and loan-reporting systems that provide meaningful information regarding portfolio risks to support and document the estimates of an appropriate ACL for loans and leases for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
   • resources to appropriately evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed;
   • processes that support the determination and maintenance of an appropriate level for the ACL for loans and leases that are based on a comprehensive, well-documented, and consistently applied analysis of the loan and lease portfolio and off-balance-sheet credit exposures;
   • procedures for an independent third party to review and validate the ACL methodology for loans and leases;
   • processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in loan specific characteristics, as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
   • procedures to incorporate relevant internal and external factors that significantly affect collectability over reasonable and supportable forecast periods as well as to apply appropriate reversion techniques to periods beyond reasonable and supportable forecast periods;
   • processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of loans and leases or off-balance-sheet credit exposures extends beyond the reasonable and supportable forecast period(s);
   • processes for segmenting the loan and lease portfolio for estimating expected credit losses and periodically evaluating the segments to determine whether the loans and leases continue to share similar risk characteristics; and
   • policies and procedures for the prompt write-off of loans and leases, or portions of loans and leases, when available information confirms the loans and leases to be uncollectible, consistent with regulatory reporting requirements.

3. Evaluate the criteria management uses to segment loans by similar risk characteristics. Generally accepted accounting principles (GAAP) require expected losses to be evaluated collectively when loans share similar risk characteristics. If a loan does not share similar risk characteristics with other loans, expected credit losses for that loan should be evaluated individually. Examples of risk characteristics include but are not limited to...
4. Evaluate the policies and procedures for the ACL for loans and leases, and assess the loss estimation method(s) used to arrive at estimates of the ACL for loans and leases, including the documentation supporting management’s assumptions, valuations, and judgments. Determine whether management appropriately considers historical loss information, current conditions, and reasonable and supportable forecasts that are relevant to assessing the collectability of cash flows, including significant qualitative factors that affect the collectability of the loan and lease portfolio.

5. Determine the basis for evaluating groups of loans under ASC Subtopic 326-20 (CECL).1
   • Evaluate the calculation of historical loss rates for each segment.2
   • Review the time period and the method of calculation (e.g., simple average, weighted average) for reasonableness and consistency.3
   • Consider whether the historical loss information may need to be adjusted for differences in current loan specific characteristics, such as differences in underwriting standards, portfolio mix, or when historical credit terms do not reflect the contractual terms of the loans being evaluated as of the reporting date.

6. Determine whether management considered all significant factors relevant to the expected collectability of the loan and lease portfolio as of the reporting date and maintains documentation sufficient to support all material adjustments. Appropriate documentation generally addresses all material factors that are relevant to the institution at the reporting date.4 Qualitative or environmental factors may include
   • the nature and volume of the loans and leases;
   • the existence, growth, and effect of concentrations of credit;
   • the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;
   • the value of the underlying collateral for loans that are not collateral-dependent;
   • the institution’s lending policies and procedures, including changes in underwriting standards and collections, charge-off, and recovery practices;
   • the quality of the institution’s credit review system;
   • consider the effect of new loan products or newly expanded markets.4
   • consider how segmentation methods and historical loss-rate calculations reflect the extent to which current conditions and reasonable and supportable forecasts differ from the conditions that existed during the historical loss period.
   • consider management’s process for evaluating contractual terms of loans, considering expected prepayments.5

1. Adjustments to historical loss information may be positive or negative, quantitative or qualitative, and are supported by relevant data (e.g., changes in unemployment rates, delinquency, or other factors associated with the loans).
2. The granularity of segmentation and the method used to calculate loss rates affects the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.
3. Historical loss information may be based on internal information, external information, or a combination of both.

November 2020
Page 2

Commercial Bank Examination Manual
• the experience, ability, and depth of the lending, collection, and other relevant management and staff;
• the effect of other external factors, such as the regulatory, legal, and technological environments; competition; and events, such as natural disasters; and
• actual and expected changes in international, national, regional, and local economic and business conditions and developments in which the institution operates that affect the collectability of the loan and lease portfolio.

7. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have loss experience of its own for such a loan group.7

8. Confirm that loans evaluated individually are not included in a collective assessment of expected credit losses.

9. When the contractual term of a loan or lease extends beyond the reasonable and supportable period, determine whether management reverts to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period).

10. If the ACL for loans and leases includes an unallocated amount, determine whether it conforms to GAAP and is properly documented and supported.

11. Where appropriate, determine whether the assessment of an appropriate level for the ACL for loans and leases includes an estimate of losses from transfer risk associated with cross-border lending activities.

12. Determine whether the ACL evaluation process for loans and leases is completed at least quarterly, and evaluate the documentation maintained to support management’s assumptions, valuations, and judgments.

LEVEL OF THE ACL

13. Evaluate the level of the ALLL or ACL for loans and leases.

14. Determine whether the ALLL or ACL for loans and leases is appropriate based on a review of the institution’s methodology coupled with examination findings as they relate to
• loan classifications and internal watch list ratings;
• effectiveness and reliability of the loan review system;
• level and trend of past due and nonaccrual loans;
• historical recovery of loan charge-offs;
• lending policies and procedures, such as underwriting, collection, and charge-off and recovery practices; and
• changes in the business cycle that necessitate qualitative or environmental factor adjustments to historical loss rates.

15. Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL or ACL for loans and leases.8

• Evaluate trends compared to historical experience (e.g., the relationship of the ALLL or ACL) for loans and leases to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs.
• Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL or ACL for loans and leases in relation to these changes, and assess the appropriateness and reasonableness of the ALLL or ACL for loans and leases based on the collectability of the institution’s loan portfolio in the current environment.

16. If the institution’s loan review system is effective and the methodology for determining an appropriate ALLL or ACL for loans and leases is acceptable, compare the result of the institution’s methodology to the actual ALLL or ACL for loans and leases balance. Ensure that the ALLL or ACL amount for loans and leases reported in the institution’s regulatory reports and financial statements reconciles to the ALLL or ACL analysis for loans and leases. Assess the reasons for material differences.

17. Assess management’s estimated credit losses, and, if necessary, consider the need for additional provision expenses based on examination findings. Consider whether
• the loan review system is substan-

7. An institution may not have a loss history if the product is new or the institution is a de novo organization.

8. Ratio analysis can be a supplemental check on the reasonableness of management’s assumptions and analysis. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.
• the bank is lending in stressed market conditions; 
• credit administration and underwriting weaknesses have not been timely identified or addressed; or 
• examination results reflect significant loan quality deterioration.
OVERVIEW

A supplemental interagency Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions was issued by the Federal Financial Institutions Examination Council (FFIEC) on July 2, 2001. The policy statement clarifies the agencies’ expectations for documentation that supports the ALLL methodology. Additionally, the statement emphasizes the need for appropriate ALLL policies and procedures, which should include an effective loan-review system. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance. The policy statement, by its terms, applies only to depository institutions insured by the Federal Deposit Insurance Corporation. Examiners should apply the policy during the examination of state member banks and their subsidiaries. (See SR-01-17.)

The policy statement is consistent with the Federal Reserve’s long-standing policy to promote strong internal controls over an institution’s ALLL process. In this regard, the new policy statement recognizes that determining an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses.

The policy statement is provided below. Some wording has been slightly modified for this manual, as indicated by asterisks or text enclosed in brackets. Some footnotes have also been renumbered.

2001 POLICY STATEMENT ON ALLL METHODOLOGIES AND DOCUMENTATION

Boards of directors of banks are responsible for ensuring that their institutions have controls in place to consistently determine the allowance for loan and lease losses (ALLL) in accordance with the institutions’ stated policies and procedures, generally accepted accounting principles (GAAP), and ALLL supervisory guidance. To fulfill this responsibility, boards of directors instruct management to develop and maintain an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provisions for loan losses. Management should create and implement suitable policies and procedures to communicate the ALLL process internally to all applicable personnel. Regardless of who develops and implements these policies, procedures, and underlying controls, the board of directors should assure themselves that the policies specifically address the institution’s unique goals, systems, risk profile, personnel, and other resources before approving them. Additionally, by creating an environment that encourages personnel to fol-

2. The guidance was developed in consultation with Securities and Exchange Commission staff, who are issuing parallel guidance in the form of Staff Accounting Bulletin No. 102.
3. The actual policy statement includes a bibliography that lists applicable ALLL GAAP guidance, interagency statements, and other reference materials that may assist in understanding and implementing an ALLL in accordance with GAAP. See the appendix for additional information on applying GAAP to determine the ALLL.
low these policies and procedures, management improves procedural discipline and compliance.

The determination of the amounts of the ALLL and provisions for loan and lease losses should be based on management’s current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the reporting date. The amounts reported each period for the provision for loan and lease losses and the ALLL should be reviewed and approved by the board of directors. To ensure the methodology remains appropriate for the institution, the board of directors should have the methodology periodically validated and, if appropriate, revised. Further, the audit committee should oversee and monitor the internal controls over the ALLL-determination process.5

The [Federal Reserve and other] banking agencies6 have long-standing examination policies that call for examiners to review an institution’s lending and loan-review functions and recommend improvements, if needed. Additionally, in 1995 and 1996, the banking agencies adopted interagency guidelines establishing standards for safety and soundness, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act).7 The interagency asset-quality guidelines and [this guidance will assist] an institution in estimating and establishing a sufficient ALLL supported by adequate documentation, as required under the FDI Act. Additionally, the guidelines require operational and managerial standards that are appropriate for an institution’s size and the nature and scope of its activities.

For financial-reporting purposes, including regulatory reporting, the provision for loan and lease losses and the ALLL must be determined in accordance with GAAP. GAAP requires that allowances be well documented, with clear explanations of the supporting analyses and rationale.8 This [2001] policy statement describes but does not increase the documentation requirements already existing within GAAP. Failure to maintain, analyze, or support an adequate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound banking practice.9

This guidance [the 2001 policy statement] applies equally to all institutions, regardless of the size. However, institutions with less complex lending activities and products may find it more efficient to combine a number of procedures (e.g., information gathering, documentation, and internal-approval processes) while continuing to ensure the institution has a consistent and appropriate methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios. For example, simplified documentation can include spreadsheets, checklists, and other summary documents that many institutions currently use. Illustrations A and C provide specific examples of how less complex institutions may determine and document portions of their loan-loss allowance.

**Documentation Standards**

Appropriate written supporting documentation for the loan-loss provision and allowance facili-

---

4. All institutions are encouraged to establish audit committees; however, at small institutions without audit committees, the board of directors retains this responsibility.
5. Institutions and their auditors should refer to Statement on Auditing Standards No. 61, “Communication with Audit Committees” (as amended by Statement on Auditing Standards No. 90, “Audit Committee Communications”), which requires certain discussions between the auditor and the audit committee. These discussions should include items, such as accounting policies and estimates, judgments, and uncertainties that have a significant impact on the accounting information included in the financial statements.
6. The [other] banking agencies are the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.
7. Institutions should refer to the guidelines *** for state member banks, appendix D to part 208***.
8. The documentation guidance within this [2001] policy statement is predominantly based upon the GAAP guidance from Financial Accounting Standards Board (FASB) Statement No. 5 and No. 114 (FAS 5 and FAS 114, respectively); Emerging Issues Task Force Topic No. D-80 (EITF Topic D-80 and attachments), “Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio” (which includes the Viewpoints article—an article issued in 1999 by FASB staff providing guidance on certain issues regarding the ALLL, particularly on the application of FAS 5 and FAS 114 and how these statements interrelate); Chapter 7, “Credit Losses,” the American Institute of Certified Public Accountants’ (AICPA) Audit and Accounting Guide, Banks and Savings Institutions, 2000 edition (AICPA Audit Guide); and the Securities and Exchange Commission’s (SEC) Financial Reporting Release No. 28 (FRR 28).
9. Failure to maintain adequate supporting documentation does not relieve an institution of its obligation to record an appropriate ALLL.
tates review of the ALLL process and reported amounts, builds discipline and consistency into the ALLL-determination process, and improves the process for estimating loan and lease losses by helping to ensure that all relevant factors are appropriately considered in the ALLL analysis. An institution should document the relationship between the findings of its detailed review of the loan portfolio and the amount of the ALLL and the provision for loan and lease losses reported in each period.  

At a minimum, institutions should maintain written supporting documentation for the following decisions, strategies, and processes:

- policies and procedures—
  - over the systems and controls that maintain an appropriate ALLL and
  - over the ALLL methodology
- loan-grading system or process
- summary or consolidation of the ALLL balance
- validation of the ALLL methodology
- periodic adjustments to the ALLL process

Policies and Procedures

Financial institutions utilize a wide range of policies, procedures, and control systems in their ALLL process. Sound policies should be appropriately tailored to the size and complexity of the institution and its loan portfolio.

In order for an institution’s ALLL methodology to be effective, the institution’s written policies and procedures for the systems and controls that maintain an appropriate ALLL should address but not be limited to—

- the roles and responsibilities of the institution’s departments and personnel (including the lending function, credit review, financial reporting, internal audit, senior management, audit committee, board of directors, and others, as applicable) who determine, or review, as applicable, the ALLL to be reported in the financial statements;
- the institution’s accounting policies for loans, [leases, and their loan losses], including the policies for charge-offs and recoveries and for estimating the fair value of collateral, where applicable;
- the description of the institution’s systematic methodology, which should be consistent with the institution’s accounting policies for determining its ALLL;  
- the system of internal controls used to ensure that the ALLL process is maintained in accordance with GAAP and supervisory guidance.

An internal-control system for the ALLL-estimation process should—

- include measures to provide assurance regarding the reliability and integrity of information and compliance with laws, regulations, and internal policies and procedures;
- reasonably assure that the institution’s financial statements (including regulatory reports) are prepared in accordance with GAAP and ALLL supervisory guidance;  
- include a well-defined loan-review process containing—
  - an effective loan-grading system that is consistently applied, identifies differing risk characteristics and loan-quality problems accurately and in a timely manner, and prompts appropriate administrative actions;
  - sufficient internal controls to ensure that all relevant loan-review information is appropriately considered in estimating losses. This includes maintaining appropriate reports, details of reviews performed, and identification of personnel involved; and
  - clear formal communication and coordination between an institution’s credit-administration function, financial-reporting group, management, board of directors,

10. This position is fully described in the SEC’s FRR 28, in which the SEC indicates that the books and records of public companies engaged in lending activities should include documentation of the rationale supporting each period’s determination that the ALLL and provision amounts reported were adequate.

11. Further explanation is presented in the “Methodology” section that appears below.

12. In addition to the supporting documentation requirements for financial institutions, as described in interagency asset-quality guidelines, public companies are required to comply with the books and records provisions of the Securities Exchange Act of 1934 (Exchange Act). Under sections 13(b)(2)–(7) of the Exchange Act, registrants must make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of assets of the registrant. Registrants also must maintain internal accounting controls that are sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with GAAP. See also SEC Staff Accounting Bulletin No. 99, Materiality.
and others who are involved in the ALLL-determination or -review process, as applicable (e.g., written policies and procedures, management reports, audit programs, and committee minutes).

Methodology

An ALLL methodology is a system that an institution designs and implements to reasonably estimate loan and lease losses as of the financial statement date. It is critical that ALLL methodologies incorporate management’s current judgments about the credit quality of the loan portfolio through a disciplined and consistently applied process.

An institution’s ALLL methodology is influenced by institution-specific factors, such as an institution’s size, organizational structure, business environment and strategy, management style, loan-portfolio characteristics, loan-administration procedures, and management information systems. However, there are certain common elements an institution should incorporate in its ALLL methodology. A summary of common elements is provided in [the appendix].

Documentation of ALLL Methodology in Written Policies and Procedures

An institution’s written policies and procedures should describe the primary elements of the institution’s ALLL methodology, including portfolio segmentation and impairment measurement. In order for an institution’s ALLL methodology to be effective, the institution’s written policies and procedures should describe the methodology—

- for segmenting the portfolio:
  - how the segmentation process is performed (i.e., by loan type, industry, risk rates, etc.),
  - when a loan-grading system is used to segment the portfolio:
    - the definitions of each loan grade,
    - a reconciliation of the internal loan grades to supervisory loan grades, and
    - the delineation of responsibilities for the loan-grading system.

- for determining and measuring impairment under FAS 114:
  - the methods used to identify loans to be analyzed individually;
  - for individually reviewed loans that are impaired, how the amount of any impairment is determined and measured, including—
    - procedures describing the impairment-measurement techniques available and
    - steps performed to determine which technique is most appropriate in a given situation.
  - the methods used to determine whether and how loans individually evaluated under FAS 114, but not considered to be individually impaired, should be grouped with other loans that share common characteristics for impairment evaluation under FAS 5.

- for determining and measuring impairment under FAS 5—
  - how loans with similar characteristics are grouped to be evaluated for loan collectibility (such as loan type, past-due status, and risk);
  - how loss rates are determined (e.g., historical loss rates adjusted for environmental factors or migration analysis) and what factors are considered when establishing appropriate time frames over which to evaluate loss experience; and
  - descriptions of qualitative factors (e.g., industry, geographical, economic, and political factors) that may affect loss rates or other loss measurements.

The supporting documents for the ALLL may be integrated in an institution’s credit files, loan-review reports or worksheets, board of directors’ and committee meeting minutes, computer reports, or other appropriate documents and files.

ALLL Under FAS 114

An institution’s ALLL methodology related to FAS 114 loans begins with the use of its normal loan-review procedures to identify whether a loan is impaired as defined by the accounting standard. Institutions should document—

- the method and process for identifying loans to be evaluated under FAS 114 and

13. Also, refer to paragraph 7.05 of the AICPA Audit Guide.
• the analysis that resulted in an impairment
decision for each loan and the determination
of the impairment-measurement method to be
used (i.e., present value of expected future
cash flows, fair value of collateral less costs to
sell, or the loan’s observable market price).

Once an institution has determined which of
the three available measurement methods to use
for an impaired loan under FAS 114, it should
maintain supporting documentation as follows:

• When using the present-value-of-expected-
  future-cash-flows method—
  — the amount and timing of cash flows,
  — the effective interest rate used to discount
    the cash flows, and
  — the basis for the determination of cash
    flows, including consideration of current
    environmental factors and other informa-
    tion reflecting past events and current
    conditions.
• When using the fair-value-of-collateral
  method—
  — how fair value was determined, including
    the use of appraisals, valuation assump-
    tions, and calculations,
  — the supporting rationale for adjustments to
    appraised values, if any,
  — the determination of costs to sell, if appli-
    cable, and
  — appraisal quality, and the expertise and
    independence of the appraiser.
• When using the observable-market-price-of-a-
  loan method—
  — the amount, source, and date of the
    observable market price.

Illustration A describes a practice used by a
small financial institution to document its FAS
114 measurement of impairment using a com-
prehensive worksheet.14 [Examples 1 and 2
provide examples of applying and documenting
impairment-measurement methods under FAS
114. Some loans that are evaluated individu-
ally for impairment under FAS 114 may be fully
collateralized and therefore require no ALLL.
Example 3 presents an institution whose loan
portfolio includes fully collateralized loans. It
describes the documentation maintained by that
institution to support its conclusion that no
ALLL was needed for those loans.]

14. The [referenced] illustrations are presented to assist
institutions in evaluating how to implement the guidance
provided in this document. The methods described in the
illustrations may not be suitable for all institutions and are not
considered required processes or actions. For additional
descriptions of key aspects of ALLL guidance, a series of
[numbered examples is provided. These examples were
included in appendix A of the policy statement as questions
and answers. The wording of the examples has been slightly
modified for this format.]

Illustration A
Documenting an ALLL Under
FAS 114

Comprehensive worksheet for the impairment-
measurement process

A small institution utilizes a comprehensive
worksheet for each loan being reviewed indi-
vidually under FAS 114. Each worksheet
includes a description of why the loan was
selected for individual review, the impairment-
measurement technique used, the measurement
calculation, a comparison to the current loan
balance, and the amount of the ALLL for that
loan. The rationale for the impairment-
measurement technique used (e.g., present value
of expected future cash flows, observable mar-
ket price of the loan, fair value of the collateral)
is also described on the worksheet.

Example 1: ALLL Under FAS 114—
Measuring and Documenting Impairment

Facts. Approximately one-third of Institution
A’s commercial loan portfolio consists of large-
balance, nonhomogeneous loans. Due to their
large individual balances, these loans meet the
criteria under Institution A’s policies and proce-
dures for individual review for impairment under
FAS 114. Upon review of the large-balance
loans, Institution A determines that certain of
the loans are impaired as defined by FAS 114.

Analysis. For the commercial loans reviewed
under FAS 114 that are individually impaired,
Institution A should measure and document the
impairment on those loans. For those loans that
are reviewed individually under FAS 114 and
considered individually impaired, Institution A
must use one of the methods for measuring
impairment that is specified by FAS 114 (that is,
the present value of expected future cash flows,
the loan’s observable market price, or the fair value of collateral).

An impairment-measurement method other than the methods allowed by FAS 114 cannot be used. For the loans considered individually impaired under FAS 114, under the circumstances described above, it would not be appropriate for Institution A to choose a measurement method not prescribed by FAS 114. For example, it would not be appropriate to measure loan impairment by applying a loss rate to each loan based on the average historical loss percentage for all of its commercial loans for the past five years.

Institution A should maintain, as sufficient, objective evidence, written documentation to support its measurement of loan impairment under FAS 114. If it uses the present value of expected future cash flows to measure impairment of a loan, it should document (1) the amount and timing of cash flows, (2) the effective interest rate used to discount the cash flows, and (3) the basis for the determination of cash flows, including consideration of current environmental factors15 and other information reflecting past events and current conditions. If Institution A uses the fair value of collateral to measure impairment, it should document (1) how it determined the fair value, including the use of appraisals, valuation assumptions and calculations; (2) the supporting rationale for adjustments to appraised values, if any, and the determination of costs to sell, if applicable; (3) appraisal quality; and (4) the expertise and independence of the appraiser. Similarly, Institution A should document the amount, source, and date of the observable market price of a loan, if that method of measuring loan impairment is used.

Example 2: ALLL Under FAS 114—
Measuring Impairment for a Collateral-Dependent Loan

Facts. Institution B has a $10 million loan outstanding to Company X that is secured by real estate, which Institution B individually evaluates under FAS 114 due to the loan’s size. Company X is delinquent in its loan payments. The collateral is real estate, which Institution B individually evaluated under the terms of the loan agreement. Accordingly, Institution B determines that its loan to Company X is impaired, as defined by FAS 114. Because the loan is collateral dependent, Institution B measures impairment of the loan based on the fair value of the collateral. Institution B determines that the most recent valuation of the collateral was performed by an appraiser 18 months ago and, at that time, the estimated value of the collateral (fair value less costs to sell) was $12 million.

Institution B believes that certain of the assumptions that were used to value the collateral 18 months ago do not reflect current market conditions and, therefore, the appraiser’s valuation does not approximate current fair value of the collateral. Several buildings, which are comparable to the real estate collateral, were recently completed in the area, increasing vacancy rates, decreasing lease rates, and attracting several tenants away from the borrower. Accordingly, credit-review personnel at Institution B adjust certain of the valuation assumptions to better reflect the current market conditions as they relate to the loan’s collateral.16 After adjusting the collateral-valuation assumptions, the credit-review department determines that the current estimated fair value of the collateral, less costs to sell, is $8 million. Given that the recorded investment in the loan is $10 million, Institution B concludes that the loan is impaired by $2 million and records an allowance for loan losses of $2 million.

Analysis. Institution B should maintain documentation to support its determination of the allowance for loan losses of $2 million for the loan to Company X. It should document that it measured impairment of the loan to Company X by using the fair value of the loan’s collateral, less costs to sell, which it estimated to be $8 million. This documentation should include (1) the institution’s rationale and basis for the $8 million valuation, including the revised valuation assumptions it used; (2) the valuation calculation; and (3) the determination of costs to sell, if applicable. Because Institution B arrived at the valuation of $8 million by modifying an earlier appraisal, it should document its rationale and basis for the changes it made to the valuation assumptions that resulted in the collateral value declining from $12 million.

15. Question 16 in Exhibit D-80A of EITF Topic D-80 and [its] attachments indicates that environmental factors include existing industry, geographical, economic, and political factors.

16. When reviewing collateral-dependent loans, Institution B may often find it more appropriate to obtain an updated appraisal to estimate the effect of current market conditions on the appraised value instead of internally estimating an adjustment.
months ago to $8 million in the current period.17

**Example 3: ALLL Under FAS 114—Fully Collateralized Loans**

**Facts.** Institution C has $10 million in loans that are fully collateralized by highly rated debt securities with readily determinable market values. The loan agreement for each of these loans requires the borrower to provide qualifying collateral sufficient to maintain a loan-to-value ratio with sufficient margin to absorb volatility in the securities’ market prices. Institution C’s collateral department has physical control of the debt securities through safekeeping arrangements. In addition, Institution C perfected its security interest in the collateral when the funds were originally distributed. On a quarterly basis, Institution C’s credit-administration function determines the market value of the collateral for each loan using two independent market quotes and compares the collateral value to the loan carrying value. If there are any collateral deficiencies, Institution C notifies the borrower and requests that the borrower immediately remedy the deficiency. Due in part to its efficient operation, Institution C has historically not incurred any material losses on these loans. Institution C believes these loans are fully collateralized and therefore does not maintain any ALLL balance for these loans.

**Analysis.** To adequately support its determina-

17. In accordance with the FFIEC’s Federal Register notice, Implementation Issues Arising from FASB No. 114, “Accounting by Creditors for Impairment of a Loan,” published February 10, 1995 (60 Fed. Reg. 7966, February 10, 1995), impaired, collateral-dependent loans must be reported at the fair value of collateral, less costs to sell, in regulatory reports. This treatment is to be applied to all collateral-dependent loans, regardless of type of collateral.

**ALLL Under FAS 5**

**Segmenting the Portfolio**

For loans evaluated on a group basis under FAS 5, management should segment the loan portfolio by identifying risk characteristics that are common to groups of loans. Institutions typically decide how to segment their loan portfolios based on many factors, which vary with their business strategies as well as their information system capabilities. Smaller institutions that are involved in less complex activities often segment the portfolio into broad loan categories. This method of segmenting the portfolio is likely to be appropriate in only small institutions offering a narrow range of loan products. Larger institutions typically offer a more diverse and complex mix of loan products. Such institutions may start by segmenting the portfolio into major loan types but typically have more detailed information available that allows them to further segregate the portfolio into product-line segments based on the risk characteristics of each
portfolio segment. Regardless of the segmentation method used, an institution should maintain documentation to support its conclusion that the loans in each segment have similar attributes or characteristics.

As economic and other business conditions change, institutions often modify their business strategies, which may result in adjustments to the way in which they segment their loan portfolio for purposes of estimating loan losses. Illustration B presents an example in which an institution refined its segmentation method to more effectively consider risk factors and maintains documentation to support this change.

Illustration B
Documenting Segmenting Practices

An institution with a significant portfolio of consumer loans performed a review of its ALLL methodology. The institution had determined its ALLL based upon historical loss rates in the overall consumer portfolio. The ALLL methodology was validated by comparing actual loss rates (charge-offs) for the past two years to the estimated loss rates. During this process, the institution decided to evaluate loss rates on an individual-product basis (e.g., auto loans, unsecured loans, or home equity loans). This analysis disclosed significant differences in the loss rates on different products. With this additional information, the methodology was amended in the current period to segment the portfolio by product, resulting in a better estimation of the loan losses associated with the portfolio. To support this change in segmentation practice, the credit-review committee records contain the analysis that was used as a basis for the change and the written report describing the need for the change.

Institutions use a variety of documents to support the segmentation of their portfolios. Some of these documents include—

- loan trial balances by categories and types of loans,
- management reports about the mix of loans in the portfolio,
- delinquency and nonaccrual reports, and
- a summary presentation of the results of an internal or external loan-grading review.

Reports generated to assess the profitability of a loan-product line may be useful in identifying areas in which to further segment the portfolio.

Estimating Loss on Groups of Loans

Based on the segmentation of the loan portfolio, an institution should estimate the FAS 5 portion of its ALLL. For those segments that require an ALLL,18 the institution should estimate the loan and lease losses, on at least a quarterly basis, based upon its ongoing loan-review process and analysis of loan performance. The institution should follow a systematic and consistently applied approach to select the most appropriate loss-measurement methods and support its conclusions and rationale with written documentation. Regardless of the methods used to measure losses, an institution should demonstrate and document that the loss-measurement methods used to estimate the ALLL for each segment are determined in accordance with GAAP as of the financial statement date.19

One method of estimating loan losses for groups of loans is through the application of loss rates to the groups’ aggregate loan balances. Such loss rates typically reflect the institution’s historical loan-loss experience for each group of loans, adjusted for relevant environmental factors (e.g., industry, geographical, economic, and political factors) over a defined period of time. If an institution does not have loss experience of its own, it may be appropriate to reference the loss experience of other institutions, provided that the institution demonstrates that the attributes of the loans in its portfolio segment are similar to those of the loans included in the portfolio of the institution providing the loss experience.20

Institutions should maintain supporting docu-

18. An example of a loan segment that does not generally require an ALLL is loans that are fully secured by deposits maintained at the lending institution.

19. Refer to paragraph 8(b) of FAS 5***.

20. Refer to paragraph 23 of FAS 5.
mentation for the technique used to develop their loss rates, including the period of time over which the losses were incurred. If a range of loss is determined, institutions should maintain documentation to support the identified range and the rationale used for determining which estimate is the best estimate within the range of loan losses. An example of how a small institution performs a comprehensive historical loss analysis is provided as the first item in Illustration C.

Before employing a loss-estimation model, an institution should evaluate and modify, as needed, the model’s assumptions to ensure that the resulting loss estimate is consistent with GAAP. In order to demonstrate consistency with GAAP, institutions that use loss-estimation models typically document the evaluation, the conclusions regarding the appropriateness of estimating loan losses with a model or other loss-estimation tool, and the support for adjustments to the model or its results.

In developing loss measurements, institutions should consider the impact of current environmental factors and then document which factors were used in the analysis and how those factors affected the loss measurements. Factors that should be considered in developing loss measurements include the following:

- levels of and trends in delinquencies and impaired loans
- levels of and trends in charge-offs and recoveries
- trends in volume and terms of loans
- effects of any changes in risk-selection and underwriting standards, and other changes in lending policies, procedures, and practices
- experience, ability, and depth of lending management and other relevant staff
- national and local economic trends and conditions
- industry conditions
- effects of changes in credit concentrations

For any adjustment of loss measurements for environmental factors, the institution should maintain sufficient, objective evidence to support the amount of the adjustment and to explain why the adjustment is necessary to reflect current information, events, circumstances, and conditions in the loss measurements.

The second item in illustration C provides an example of how an institution adjusts its commercial real estate historical loss rates for changes in local economic conditions. Example 4 provides an example of maintaining supporting documentation for adjustments to portfolio-segment loss rates for an environmental factor related to an economic downturn in the borrower’s primary industry. Example 5 describes one institution’s process for determining and documenting an ALLL for loans that are not individually impaired but have characteristics indicating there are loan losses on a group basis.

**Illustration C**

**Documenting the Setting of Loss Rates**

**Comprehensive loss analysis in a small institution**

A small institution determines its loss rates based on loss rates over a three-year historical period. The analysis is conducted by type of loan and is further segmented by originating branch office. The analysis considers charge-offs and recoveries in determining the loss rate. The institution also considers the loss rates for each loan grade and compares them to historical losses on similarly rated loans in arriving at the historical loss factor. The institution maintains supporting documentation for its loss-factor analysis, including historical losses by type of loan, originating branch office, and loan grade for the three-year period.

**Adjustment of loss rates for changes in local economic conditions**

An institution develops a factor to adjust loss rates for its assessment of the impact of changes in the local economy. For example, when analyzing the loss rate on commercial real estate loans, the assessment identifies changes in recent commercial building occupancy rates. The institution generally finds the occupancy statistics to be a good indicator of probable losses on these types of loans. The institution maintains documentation that summarizes the relationship between current occupancy rates and its loss experience.

---

21. Refer to paragraph 7.13 in the AICPA Audit Guide.
Example 4: ALLL Under FAS 5—
Adjusting Loss Rates

Facts. Institution D’s lending area includes a metropolitan area that is financially dependent upon the profitability of a number of manufacturing businesses. These businesses use highly specialized equipment and significant quantities of rare metals in the manufacturing process. Due to increased low-cost foreign competition, several of the parts suppliers servicing these manufacturing firms declared bankruptcy. The foreign suppliers have subsequently increased prices, and the manufacturing firms have suffered from increased equipment maintenance costs and smaller profit margins. Additionally, the cost of the rare metals used in the manufacturing process increased and has now stabilized at double last year’s price. Due to these events, the manufacturing businesses are experiencing financial difficulties and have recently announced downsizing plans.

Although Institution D has yet to confirm an increase in its loss experience as a result of these events, management knows that it lends to a significant number of businesses and individuals whose repayment ability depends upon the long-term viability of the manufacturing businesses. Institution D’s management has identified particular segments of its commercial and consumer customer bases that include borrowers highly dependent upon sales or salary from the manufacturing businesses. Institution D’s management performs an analysis of the affected portfolio segments to adjust its historical loss rates used to determine the ALLL. In this particular case, Institution D has experienced similar business and lending conditions in the past that it can compare to current conditions.

Analysis. Institution D should document its support for the loss-rate adjustments that result from considering these manufacturing firms’ financial downturns. It should document its identification of the particular segments of its commercial and consumer loan portfolio for which it is probable that the manufacturing business’ financial downturn has resulted in loan losses. In addition, it should document its analysis that resulted in the adjustments to the loss rates for the affected portfolio segments. As part of its documentation, Institution D should maintain copies of the documents supporting the analysis, including relevant newspaper articles, economic reports, economic data, and notes from discussions with individual borrowers.

Since Institution D has had similar situations in the past, its supporting documentation should also include an analysis of how the current conditions compare to its previous loss experiences in similar circumstances. As part of its effective ALLL methodology, a summary should be created of the amount and rationale for the adjustment factor, which management presents to the audit committee and board for their review and approval prior to the issuance of the financial statements.

Example 5: ALLL Under FAS 5—
Estimating Losses on Loans Individually Reviewed for Impairment but Not Considered Individually Impaired

Facts. Institution E has outstanding loans of $2 million to Company Y and $1 million to Company Z, both of which are paying as agreed upon in the loan documents. The institution’s ALLL policy specifies that all loans greater than $750,000 must be individually reviewed for impairment under FAS 114. Company Y’s financial statements reflect a strong net worth, good profits, and ongoing ability to meet debt-service requirements. In contrast, recent information indicates Company Z’s profitability is declining and its cash flow is tight. Accordingly, this loan is rated substandard under the institution’s loan-grading system. Despite its concern, management believes Company Z will resolve its problems and determines that neither loan is individually impaired as defined by FAS 114.

Institution E segments its loan portfolio to estimate loan losses under FAS 5. Two of its loan portfolio segments are Segment 1 and Segment 2. The loan to Company Y has risk characteristics similar to the loans included in Segment 1, and the loan to Company Z has risk characteristics similar to the loans included in Segment 2.22

In its determination of the ALLL under FAS 5, Institution E includes its loans to Company Y

22. These groups of loans do not include any loans that have been individually reviewed for impairment under FAS 114 and determined to be impaired as defined by FAS 114.
and Company Z in the groups of loans with similar characteristics (i.e., Segment 1 for Company Y’s loan and Segment 2 for Company Z’s loan). Management’s analyses of Segment 1 and Segment 2 indicate that it is probable that each segment includes some losses, even though the losses cannot be identified to one or more specific loans. Management estimates that the use of its historical loss rates for these two segments, with adjustments for changes in environmental factors, provides a reasonable estimate of the institution’s probable loan losses in these segments.

**Analysis.** Institution E should adequately document an ALLL under FAS 5 for these loans that were individually reviewed for impairment but are not considered individually impaired. As part of its effective ALLL methodology, Institution E documents the decision to include its loans to Company Y and Company Z in its determination of its ALLL under FAS 5. It should also document the specific characteristics of the loans that were the basis for grouping these loans with other loans in Segment 1 and Segment 2, respectively. Institution E maintains documentation to support its method of estimating loan losses for Segment 1 and Segment 2, including the average loss rate used, the analysis of historical losses by loan type and by internal risk rating, and support for any adjustments to its historical loss rates. The institution also maintains copies of the economic and other reports that provided source data.

**Consolidating the Loss Estimates**

To verify that ALLL balances are presented fairly in accordance with GAAP and are auditable, management should prepare a document that summarizes the amount to be reported in the financial statements for the ALLL. The board of directors should review and approve this summary.

Common elements in such summaries include—

- the estimate of the probable loss or range of loss incurred for each category evaluated (e.g., individually evaluated impaired loans, homogeneous pools, and other groups of loans that are collectively evaluated for impairment);
- the aggregate probable loss estimated using the institution’s methodology;
- a summary of the current ALLL balance;
- the amount, if any, by which the ALLL is to be adjusted;\(^23\) and
- depending on the level of detail that supports the ALLL analysis, detailed subschedules of loss estimates that reconcile to the summary schedule.

\(^23\) Subsequent to adjustments, there should be no material differences between the consolidated loss estimate, as determined by the methodology, and the final ALLL balance reported in the financial statements.

Ilustration D describes how an institution documents its estimated ALLL by adding comprehensive explanations to its summary schedule.

Generally, an institution’s review and approval process for the ALLL relies upon the data provided in these consolidated summaries. There may be instances in which individuals or committees that review the ALLL methodology and resulting allowance balance identify adjustments that need to be made to the loss estimates to provide a better estimate of loan losses. These changes may be due to information not known at the time of the initial loss estimate (e.g., information that surfaces after determining and adjusting, as necessary, historical loss rates, or a recent decline in the marketability of property after conducting a FAS 114 valuation based upon the fair value of collateral). It is important that these adjustments are consistent with GAAP and are reviewed and approved by appropriate personnel. Additionally, the summary should provide each subsequent reviewer with an understanding of the support behind these adjustments. Therefore, management should document the nature of any adjustments and the underlying rationale for making the changes. This documentation should be provided to those making the final determination of the ALLL amount. Example 6 addresses the documentation of the final amount of the ALLL.
Illustration D

Summarizing Loss Estimates

Descriptive comments added to the consolidated ALLL summary schedule

To simplify the supporting documentation process and to eliminate redundancy, an institution adds detailed supporting information to its summary schedule. For example, this institution’s board of directors receives, within the body of the ALLL summary schedule, a brief description of the institution’s policy for selecting loans for evaluation under FAS 114. Additionally, the institution identifies which FAS 114 impairment-measurement method was used for each individually reviewed impaired loan. Other items on the schedule include a brief description of the loss factors for each segment of the loan portfolio, the basis for adjustments to loss rates, and explanations of changes in ALLL amounts from period to period, including cross-references to more detailed supporting documents.

Example 6: Consolidating the Loss Estimates—Documenting the Reported ALLL

Facts. Institution F determines its ALLL using an established systematic process. At the end of each period, the accounting department prepares a summary schedule that includes the amount of each of the components of the ALLL, as well as the total ALLL amount, for review by senior management, the credit committee, and, ultimately, the board of directors. Members of senior management and the credit committee meet to discuss the ALLL. During these discussions, they identify changes that are required by GAAP to be made to certain of the ALLL estimates. As a result of the adjustments made by senior management, the total amount of the ALLL changes. However, senior management (or its designee) does not update the ALLL summary schedule to reflect the adjustments or reasons for the adjustments. When performing their audit of the financial statements, the independent accountants are provided with the original ALLL summary schedule that was reviewed by senior management and the credit committee, as well as a verbal explanation of the changes made by senior management and the credit committee when they met to discuss the loan-loss allowance.

Analysis. Institution F’s documentation practices supporting the balance of its loan-loss allowance, as reported in its financial statements, are not in compliance with existing documentation guidance. An institution must maintain supporting documentation for the loan-loss allowance amount reported in its financial statements. As illustrated above, there may be instances in which ALLL reviewers identify adjustments that need to be made to the loan-loss estimates. The nature of the adjustments, how they were measured or determined, and the underlying rationale for making the changes to the ALLL balance should be documented. Appropriate documentation of the adjustments should be provided to the board of directors (or its designee) for review of the final ALLL amount to be reported in the financial statements. For institutions subject to external audit, this documentation should also be made available to the independent accountants. If changes frequently occur during management or credit committee reviews of the ALLL, management may find it appropriate to analyze the reasons for the frequent changes and to reassess the methodology the institution uses.

Validating the ALLL Methodology

An institution’s ALLL methodology is considered valid when it accurately estimates the amount of loss contained in the portfolio. Thus, the institution’s methodology should include procedures that adjust loss-estimation methods to reduce differences between estimated losses and actual subsequent charge-offs, as necessary.

To verify that the ALLL methodology is valid and conforms to GAAP and supervisory guidance, an institution’s directors should establish internal-control policies, appropriate for the size of the institution and the type and complexity of its loan products. These policies should include procedures for a review, by a party who is independent of the ALLL-estimation process, of the ALLL methodology and its application in order to confirm its effectiveness.

In practice, financial institutions employ numerous procedures when validating the reasonableness of their ALLL methodology and
determining whether there may be deficiencies in their overall methodology or loan-grading process. Examples are—

• a review of trends in loan volume, delinquencies, restructurings, and concentrations;
• a review of previous charge-off and recovery history, including an evaluation of the timeliness of the entries to record both the charge-offs and the recoveries;
• a review by a party that is independent of the ALLL-estimation process (this often involves the independent party reviewing, on a test basis, source documents and underlying assumptions to determine that the established methodology develops reasonable loss estimates); and
• an evaluation of the appraisal process of the underlying collateral. (This may be accomplished by periodically comparing the appraised value to the actual sales price on selected properties sold.)

Supporting Documentation for the Validation Process

Management usually supports the validation process with the workpapers from the ALLL-review function. Additional documentation often includes the summary findings of the independent reviewer. The institution’s board of directors, or its designee, reviews the findings and acknowledges its review in its meeting minutes. If the methodology is changed based upon the findings of the validation process, documentation that describes and supports the changes should be maintained.

Appendix—Application of GAAP

[This appendix was designated appendix B in the policy statement.] An ALLL recorded pursuant to GAAP is an institution’s best estimate of the probable amount of loans and lease-financing receivables that it will be unable to collect based on current information and events.24

A creditor should record an ALLL when the criteria for accrual of a loss contingency as set forth in GAAP have been met. Estimating the amount of an ALLL involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. An institution should record its best estimate within the range of loan losses.25

Under GAAP, Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies” (FAS 5), provides the basic guidance for recognition of a loss contingency, such as the collectibility of loans (receivables), when it is probable that a loss has been incurred and the amount can be reasonably estimated. Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114) provides more specific guidance about the measurement and disclosure of impairment for certain types of loans.26 Specifically, FAS 114 applies to loans that are identified for evaluation on an individual basis. Loans are considered impaired when, based on current information and events, it is probable that the creditor will be unable to collect all interest and principal payments due according to the contractual terms of the loan agreement.

For individually impaired loans, FAS 114 provides guidance on the acceptable methods to measure impairment. Specifically, FAS 114 states that when a loan is impaired, a creditor should measure impairment based on the present value of expected future principal and interest cash flows discounted at the loan’s effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan’s observable market price or the fair value of collateral, if the loan is collateral dependent. When developing the estimate of expected future cash flows for a loan, an institution should

---

24. This appendix provides guidance on the ALLL and does not address allowances for credit losses for off-balance-sheet instruments (e.g., loan commitments, guarantees, and standby letters of credit). Institutions should record liabilities for these exposures in accordance with GAAP. Further guidance on this topic is presented in the American Institute of Certified Public Accountants’ Audit and Accounting Guide.

26. EITF Topic D-80 includes additional guidance on the requirements of FAS 5 and FAS 114 and how they relate to each other.***
consider all available information reflecting past events and current conditions, including the effect of existing environmental factors. The following illustration provides an example of an institution estimating a loan’s impairment when the loan has been partially charged off.

**Illustration**

Interaction of FAS 114 with an Adversely Classified Loan, Partial Charge-Off, and the Overall ALLL

An institution determined that a collateral-dependent loan, which it identified for evaluation, was impaired. In accordance with FAS 114, the institution established an ALLL for the amount that the recorded investment in the loan exceeded the fair value of the underlying collateral, less costs to sell.

Consistent with relevant regulatory guidance, the institution classified as “Loss,” the portion of the recorded investment deemed to be the confirmed loss and classified the remaining recorded investment as “Substandard.” For this loan, the amount classified “Loss” was less than the impairment amount (as determined under FAS 114). The institution charged off the “Loss” portion of the loan. After the charge-off, the portion of the ALLL related to this “Substandard” loan (1) reflects an appropriate measure of impairment under FAS 114, and (2) is included in the aggregate FAS 114 ALLL for all loans that were identified for evaluation and individually considered impaired. The aggregate FAS 114 ALLL is included in the institution’s overall ALLL.

Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment are not included in the scope of FAS 114.27 Such groups of loans may include, but are not limited to, credit card, residential mortgage, and consumer installment loans. FAS 5 addresses the accounting for impairment of these loans. Also, FAS 5 provides the accounting guidance for impairment of loans that are not identified for evaluation on an individual basis and loans that are individually evaluated but are not individually considered impaired. Institutions should ensure that they do not layer their loan-loss allowances. Layering is the inappropriate practice of recording in the ALLL more than one amount for the same probable loan loss. Layering can happen when an institution includes a loan in one segment, determines its best estimate of loss for that loan either individually or on a group basis (after taking into account all appropriate environmental factors, conditions, and events), and then includes the loan in another group, which receives an additional ALLL amount.28

While different institutions may use different methods, there are certain common elements that should be included in any loan-loss allowance methodology. Generally, an institution’s methodology should—

- include a detailed analysis of the loan portfolio, performed on a regular basis;
- consider all loans (whether on an individual or group basis);
- identify loans to be evaluated for impairment on an individual basis under FAS 114 and segment the remainder of the portfolio into groups of loans with similar risk characteristics for evaluation and analysis under FAS 5;
- consider all known relevant internal and external factors that may affect loan collectibility;
- be applied consistently but, when appropriate, be modified for new factors affecting collectibility;
- consider the particular risks inherent in different kinds of lending;
- consider current collateral values (less costs to sell), where applicable;
- require that analyses, estimates, reviews, and other ALLL methodology functions be performed by competent and well-trained personnel;
- be based on current and reliable data;

27. In addition, FAS 114 does not apply to loans measured at fair value or at the lower of cost or fair value, leases, or debt securities.

28. According to the Federal Financial Institutions Examination Council’s Federal Register notice, Implementation Issues Arising from FASB Statement No. 114, “Accounting by Creditors for Impairment of a Loan,” published February 10, 1995, institution-specific issues should be reviewed when estimating loan losses under FAS 114. This analysis should be conducted as part of the evaluation of each individual loan reviewed under FAS 114 to avoid potential ALLL layering.
be well documented, in writing, with clear explanations of the supporting analyses and rationale; and

• include a systematic and logical method to consolidate the loss estimates and ensure the ALLL balance is recorded in accordance with GAAP.\(^9\)

A systematic methodology that is properly designed and implemented should result in an institution’s best estimate of the ALLL. Accordingly, institutions should adjust their ALLL balance, either upward or downward, in each period for differences between the results of the systematic determination process and the unadjusted ALLL balance in the general ledger.\(^0\)

\(^9\) Refer to paragraph 7.05 of the AICPA Audit Guide.

\(^0\) Institutions should refer to the guidance on materiality in SEC Staff Accounting Bulletin No. 99, Materiality.
The federal banking agencies issued, in January 2012, “Interagency Supervisory Guidance on Allowance for Loan and Lease Losses Estimation Practices for Loans and Lines of Credit Secured by Junior Liens on 1–4 Family Residential Properties.” The guidance was issued to address the allowance for loan and lease losses (ALLL) estimation practices for junior-lien loans and lines of credit (collectively, junior liens). (See SR-12-3.)

Domestic banking organizations that are supervised by the Federal Reserve are reminded to consider all credit quality indicators relevant to their junior liens. Generally, this information should include the delinquency status of senior liens associated with the institution’s junior liens and whether the senior lien has been modified. Institutions should ensure that during the ALLL estimation process, sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios.

Based on the rapid growth in home equity lending during the 2003–2007 timeframe, a significant volume of home equity lines of credit (HELOCs) will be approaching the end of their draw periods within the next several years and will either convert to amortized loans or will start having principal due as a balloon payment. An institution with a significant number of HELOCs should ensure that its ALLL methodology appropriately captures the elevated borrower default risk associated with any upcoming payment shocks.

This 2012 ALLL guidance applies to institutions of all sizes. The guidance states that an institution should use reasonably available tools to determine the payment status of senior liens associated with its junior liens, such as credit reports, third-party services, or, in certain cases, a proxy. It is expected that large, complex institutions would find most tools reasonably available and would use proxies in limited circumstances.

The guidance does not add or modify existing regulatory reporting requirements issued by the agencies or current generally accepted accounting principles (GAAP). This guidance reiterates key concepts included in GAAP and existing supervisory guidance related to the ALLL. (See, for example, SR-01-17 and SR-06-17 and their attachments. See also sections 2070.1 and 2072.1.) Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including the May 2005 “Interagency Credit Risk Management Guidance for Home Equity Lending.” (See SR-05-11 and section 2090.1.)

ALLL ESTIMATION PRACTICES FOR LOANS AND LINES OF CREDIT SECURED BY JUNIOR LIENS ON 1–4 FAMILY RESIDENTIAL PROPERTIES

Amidst continued uncertainty in the economy and the housing market, federally regulated financial institutions are reminded to monitor all credit quality indicators relevant to credit portfolios, including junior liens. While the following guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for all types of loans. Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including those in the May 2005 “Interagency Credit Risk Management Guidance for Home Equity Lending.”

The December 2006 “Interagency Policy Statement on the Allowance for Loan and Lease Losses” (IPS) states: “Estimates of credit losses should reflect consideration of the significant factors that affect the collectibility of the portfolio as of the evaluation date.”

The “Interagency Credit Risk Management Guidance for Home Equity Lending” states: “Financial institutions should establish an appropriate ALLL and hold capital commensurate with the riskiness of portfolios. In determining the ALLL adequacy, an institution should consider how the interest-only and draw features of HELOCs during the lines’ revolving period could affect the loss curves for the HELOC portfolio. Those institutions engaging in programmatic subprime home equity lending or institutions that have higher risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.”

---

1. The federal banking agencies are the Board of Governors of the Federal Reserve System (Federal Reserve Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the National Credit Union Administration (NCUA).
While the 2012 ALLL guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for all types of loans.

Responsibilities of Management

Consideration of All Significant Factors

Institutions should ensure that during the ALLL estimation process sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios. Generally, this information should include the delinquency status of senior liens associated with the institution’s junior liens and whether the senior lien loan has been modified. Institutions with significant holdings of junior liens should gather and analyze data on the associated senior-lien loans it owns or services. When an institution does not own or service the associated senior-lien loans, it should use reasonably available tools to determine the payment status of the senior-lien loans. Such tools include obtaining credit reports or data from third-party services to assist in matching an institution’s junior liens with its associated senior liens. Additionally, an institution may, as a proxy, use the relevant performance data on similar senior liens it owns or services. An institution with an insignificant volume of junior-lien loans and lines of credit may use judgment when determining what information about associated senior liens not owned or serviced is reasonably available.

Institutions with significant holdings of junior liens should also periodically refresh other credit quality indicators the organization has deemed relevant about the collectibility of its junior liens, such as borrower credit scores and combined loan-to-value ratios (CLTVs), which include both the senior and junior liens. An institution should refresh relevant credit quality indicators as often as necessary considering economic and housing market conditions that affect the institution’s junior-lien portfolio. As noted in SR-06-17, “changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses.” For example, if declining credit quality trends in the factors relevant to either junior liens or their associated senior-lien loans are evident, the ALLL level as a percentage of the junior-lien portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the junior-lien portfolio should generally decrease.

Institutions routinely gather information for credit-risk management purposes, but some may not fully use that information in the allowance estimation process. Institutions should consider all reasonably available and relevant information in the allowance estimation process, including information obtained for credit-risk management purposes. Financial Accounting Standards Board Accounting Standards Codification (ASC) Topic 450 states that losses should be accrued by a charge to income if information available prior to issuance of the financial statements indicates that it is probable that an asset has been impaired. The 2006 IPS states, “...estimates of credit losses should reflect consideration of all significant factors.” (See SR-06-17 and its attachment.) Consequently, it is considered inconsistent with both GAAP and supervisory guidance to fail to gather and consider reasonably available and relevant information that would significantly affect management’s judgment about the collectibility of the portfolio.2

Adequate Segmentation

Institutions normally segment their loan portfolio into groups of loans based on risk characteristics as part of the ALLL estimation process. Institutions with significant holdings of junior liens should ensure adequate segmentation within their junior-lien portfolio to appropriately estimate the allowance for high-risk segments within this portfolio. A lack of segmentation can result in an allowance established for the entire junior-lien portfolio that is lower than what the allowance would be if high-risk loans were segregated and grouped together for evaluation in one or more separate segments. The following credit quality indicators may be appropriate for use in identifying high-risk junior-lien portfolio segments:

2. “Portfolio” refers to loans collectively evaluated for impairment under ASC Topic 450; this supervisory guidance may also be applicable to junior-lien loans that are subject to measurement for impairment under ASC Subtopic 310-10, Receivables - Overall (formerly Statement of Financial Accounting Standards No. 114, Accounting by Creditors for Impairment of a Loan) and ASC Subtopic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality (formerly AICPA Statement of Position 03-3, Accounting for Certain Loans or Debt Securities Acquired in a Transfer).
In particular, institutions should ensure their ALLL methodology adequately incorporates the elevated borrower default risk associated with payment shocks due to (1) rising interest rates for adjustable rate junior liens, including HELOCs, or (2) HELOCs converting from interest-only to amortizing loans. If the default rate of junior liens that have experienced payment shock is higher than the default rate of junior liens that have not experienced payment shock, an institution should determine whether it has a significant number of junior liens approaching their conversion to amortizing loans or approaching an interest rate adjustment date. If so, to ensure the institution’s estimate of credit losses is not understated, it would be necessary to adjust historical default rates on these junior liens to incorporate the effect of payment shocks that, based on current information and conditions, are likely to occur.

Adequate segmentation of the junior-lien portfolio by risk factors should facilitate an institution’s ability to track default rates and loss severity for high-risk segments and its ability to appropriately incorporate these data into the allowance estimation process.

Qualitative or Environmental Factor Adjustments

As noted in SR-06-17, institutions should adjust a loan group’s historical loss rate for the effect of qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group’s historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the ASC Subtopic 450-20 component of the ALLL.

When an institution uses qualitative or environmental factors to estimate probable losses related to individual high-risk segments within the junior-lien portfolio, any adjustment to the historical loss rate or any separate standalone adjustment should be supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments. In addition, changes in the allowance allocation for junior liens should be directionally consistent with changes in the factors taken as a whole that evidence credit losses on junior liens, keeping in mind the characteristics of the institution’s junior-lien portfolio.

Charge-Off and Nonaccrual Policies

Banking institutions should ensure that their charge-off policy on junior liens is in accordance with the June 2000 Uniform Retail Credit Classification and Account Management Policy. (See SR-00-8 and the appendix of section 2130.1.) As stated in SR-06-17, “when available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL.”

Institutions also should ensure that income-recognition practices related to junior liens are appropriate. Consistent with GAAP and regulatory guidance, institutions are expected to have revenue recognition practices that do not result in overstating income. Placing a junior lien on nonaccrual, including a current junior lien, when payment of principal or interest in full is not expected is one appropriate method to ensure that income is not overstated. An institution’s income-recognition policy should incorporate

3. Forecasts of future interest rate increases should not be included in the determination of the ALLL. However, if rates have risen since the last rate adjustment, the effect of the increase on the amount of the payment at the next rate adjustment should be considered.
management’s consideration of all reasonably available information including, for junior liens, the performance of the associated senior liens as well as trends in other credit quality indicators. The policy should require that consideration of these factors takes place before foreclosure on the senior lien or delinquency of the junior lien. The policy should also explain how management’s consideration of these factors affects income recognition prior to foreclosure on the senior lien or delinquency of the junior lien to ensure income is not overstated.

Responsibilities of Examiners

To the extent an institution has significant holdings of junior liens, examiners should assess the appropriateness of the institution’s ALLL methodology and documentation related to these loans, and the appropriateness of the level of the ALLL established for this portfolio. As noted in SR-06-17, for analytical purposes, an institution should attribute portions of the ALLL to loans that it individually evaluates and determines to be impaired under ASC Subtopic 310-10 and to groups of loans that it evaluates collectively under ASC Subtopic 450-20. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Consistent with SR-06-17, in their review of the junior-lien portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio. Examiners should take the following steps when reviewing the appropriateness of an institution’s allowance that is established for junior liens:

- Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens. This should include whether all significant qualitative or environmental factors that affect the collectibility of the portfolio (including those factors previously discussed) have been appropriately considered in accordance with GAAP.
- Review management’s use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review management’s support for any qualitative or environmental factor adjustments to the allowance related to junior liens. Examiners should ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments.
- Review the interest income accounts associated with junior liens to ensure that the institution’s net income is not overstated.

If the examiner concludes that the reported ALLL for junior liens is not appropriate or determines that the ALLL evaluation process is deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. Examiners should cite any departures from GAAP and regulatory guidance, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process.
The examination objectives for an institution that has significant holdings of loans secured by junior liens are as follows:

1. To evaluate the appropriateness of the institution’s methodology and documentation of the allowance for loan and lease losses (ALLL) related to these loans.
2. To ascertain whether the institution’s policies, practices, procedures, and internal controls regarding the ALLL estimation practices for loans secured by junior liens are sufficient.
3. To determine whether the level of the ALLL is reasonable and adequate for the institution’s volume of such loans outstanding.
4. To evaluate if the institution has fully considered and accounted for all significant qualitative or environmental factors that affect the collectability of such loans.
5. To ascertain whether the portfolio has been properly accounted in accordance with generally accepted accounting principles and whether all applicable supervisory and regulatory guidance, as well as statutory and regulatory requirements, have been adhered to.
1. To the extent an institution has significant holdings of loans secured by junior liens, assess the appropriateness of the institution’s a. allowance for loan and lease loss (ALLL) methodology and documentation related to these loans, and
b. ALLL level established for this portfolio.
2. During the examination’s review of the junior-lien portfolio, consider all significant qualitative or environmental factors that affect the collectibility of the junior-lien portfolio and whether they have been appropriately considered in accordance with generally accepted accounting principles (GAAP).
3. Perform the following steps when reviewing the appropriateness of the institution’s ALLL that is established for junior liens:
   a. Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens.
   b. Review management’s use of loss-estimation models or other loss-estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
   c. Review management’s support for any qualitative or environmental factor adjustments to the ALLL related to junior liens. Ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments.
   d. Review the interest income accounts associated with junior liens to ensure that the institution’s net income is not overstated.
4. Provide comments in the examination report when the ALLL for junior liens is not appropriate or if the ALLL evaluation process is deficient. Include recommendations for correcting these deficiencies and any concerns regarding an appropriate level for the ALLL.
5. Cite in the examination report any departures from GAAP and regulatory guidance, as applicable.
INTRODUCTION

This section will provide examiners with a fundamental understanding of secured and unsecured commercial and industrial loans, loan evaluation and coverage techniques, the key principles for assessing credit quality, minimum documentation standards for loan line sheets, and basic bankruptcy law, as well as an overview of sections 23A and 23B of the Federal Reserve Act and tie-in arrangements. Other sections of this manual discuss more specific types of lending.

The term “commercial and industrial loan” is commonly used to designate loans to a corporation, commercial enterprise, or joint venture that are not ordinarily maintained in either the real estate or consumer installment loan portfolios. Generally, commercial loans are the largest asset concentration of a state member bank, offer the most complexity, and require the greatest commitment from bank management to monitor and control risks. Proper management of these assets requires a clearly articulated credit policy that imposes discipline and sound loan administration. Since lenders are subject to pressures related to productivity and competition, they may be tempted to relax prudent credit-underwriting standards to remain competitive in the marketplace, thus increasing the potential for risk. Examiners need to understand the unique characteristics of the varying types of commercial and industrial loans, as well as how to properly analyze their quality.

Commercial loans are extended on a secured or unsecured basis with a wide range of purposes, terms, and maturities. While the types of commercial and industrial loans can vary widely depending on the purpose of loans made and market characteristics where the bank operates, most commercial and industrial loans will primarily be made in the form of a seasonal or working-capital loan, term business loan, or loan to an individual for a business purpose.

PRIMARY TYPES OF COMMERCIAL AND INDUSTRIAL LOANS

Seasonal or Working-Capital Loans

Seasonal or working-capital loans provide a business with short-term financing for inventory, receivables, the purchase of supplies, or other operating needs during the business cycle. These types of loans are often appropriate for businesses that experience seasonal or short-term peaks in current assets and current liabilities, such as a retailer who relies heavily on a holiday season for sales or a manufacturing company that specializes in summer clothing. These types of loans are often structured in the form of an advised line of credit or a revolving credit. An advised revocable line of credit is a revocable commitment by the bank to lend funds up to a specified period of time, usually one year. Lines of credit are generally reviewed annually by the bank, do not have a fixed repayment schedule, and may not require fees or compensating balances. In the case of unadvised lines of credit, the bank has more control over advances and may terminate the facility at any time, depending on state law or legal precedents.

A revolving credit is valid for a stated period of time and does not have a fixed repayment schedule, but usually it has a required fee. The lender has less control over a revolving credit since there is an embedded guarantee to make advances within the prescribed limits of the loan agreement. The borrower may receive periodic advances under the line of credit or the revolving credit. Repayment of the loans is generally accomplished through conversion or turnover of short-term assets. Interest payments on seasonal loans are usually paid throughout the term of the loan, such as monthly or quarterly.

Seasonal or working-capital loans are intended to be repaid through the cash flow derived from converting the financed assets to cash. The structure of the loans can vary, but they should be closely tied to the timing of the conversion of the financed assets. In most cases, seasonal or working-capital facilities are renewable at maturity, are for a one-year term, and include a clean-up requirement for a period sometime during the low point or contraction phase of the business cycle. The clean-up period is a specified period (usually 30 days) during the term of
the loan in which the borrower is required to pay off the loan. While this requirement is becoming less common, it provides the bank with proof that the borrower is not dependent on the lender for permanent financing. It is important to note, however, that an expanding business may not be able to clean up its facility since it may be increasing its current assets.

**Analysis of Seasonal and Working-Capital Loans**

The analysis of a seasonal loan is best accomplished by a monthly or quarterly review of a company’s balance sheet and income statements to identify the peak and contraction phases of the business cycle. The lender should know when the peak and contraction phases are, and the loan should be structured accordingly. The lender’s primary objective is to determine whether the advances are being used for the intended purposes (inventories or payables) and not for the acquisition of fixed assets or payments on other debts. Repayments on the facility should also be consistent with the conversion of assets. If the borrower has other loan facilities at the bank, all credit facilities should be reviewed at the same time to ensure that the activity with the seasonal or working-capital facility is not linked to other loans in the bank. Projections of sources and uses of funds are also a valuable tool for reviewing a seasonal or working-capital line of credit and determining the sales cycle.

Quarterly balance-sheet and income statements are very helpful when a comparison is made with the original projections. Other helpful information can be obtained from a review of an aging of accounts receivable for delinquencies and concentrations, a current list of inventory, an accounts-payable aging, and accruals made during the quarter. This information can be compared with the outstanding balance of the facility to ensure that the loan is not overextended and that the collateral margins are consistent with borrowing-base parameters. A borrowing base is the amount the lender is willing to advance against a dollar value of pledged collateral; for example, a bank will only lend up to a predetermined specified percentage of total outstanding receivables less all past-due accounts more than a certain number of days delinquent. A borrowing-base certificate should be compiled at least monthly or more often during peak activity in the facility. When reviewing seasonal loans, examiners should remember that a bank relies heavily on inventory as collateral in the beginning of a company’s business cycle and on receivables toward the end of the business cycle. However, in traditional working-capital loans, greater emphasis is usually placed on accounts receivable as collateral throughout the loan’s tenure.

Normally, a bank is secured by a perfected blanket security interest on accounts receivable, inventory, and equipment and on the proceeds from the turnover of these assets. Well-capitalized companies with a good history of seasonal payout or cleanup may be exceptions. An annual lien search, however, would be prudent under this type of lending relationship to detect any purchase-money security interest that may have occurred during the business cycle.

The following are potential problems associated with working-capital and seasonal loans:

- **Working-capital advances used for funding losses.** A business uses advances from a revolving line of credit to fund business losses, including the funding of wages, business expenses, debt service, or any other cost not specifically associated with the intended purpose of the facility.
- **Working-capital advances funding long-term assets.** A business will use working-capital funds to purchase capital assets that are normally associated with term business loans.
- **Trade creditors not paid out at end of business cycle.** While the bank may be paid out, some trade creditors may not get full repayment. This can cause a strained relationship as unpaid trade creditors may be less willing to provide financing or offer favorable credit terms in the future. In turn, the business will become more reliant on the bank to support funding needs that were previously financed by trade creditors.
- **Overextension of collateral.** The business does not have the collateral to support the extension of credit, causing an out-of-borrowing-base situation. Examiners should review borrowing-base certificates to verify that coverage meets the prescribed limitations established by the bank’s credit policy for the specific asset being financed.
- **Value of inventory declines.** If a business does not pay back the bank after inventory is...
converted to cash or accounts receivable, the value of the inventory declines. Other causes of inventory devaluation include obsolescence; a general economic downturn; or, in the case of a commodity, market volatility. Declines in inventory value will commonly put a working-capital facility in an out-of-borrowing-base situation and require the excess debt to be amortized and repaid through future profits of the business.

- **Collectibility of accounts receivable declines.** The increasingly past-due status of accounts receivable or deteriorating credit quality of account customers both result in the noncollection of receivables. This can also cause an out-of-borrowing-base situation for the lending institution.

- **Working-capital advances used to fund long-term capital.** Funds may be inappropriately used to repurchase company stock, pay off subordinated debt holders, or even pay dividends on capital stock.

These situations may cause a loan balance to be remaining at the end of the business cycle. If this should occur, the bank generally has one of three options: (1) Require the unpaid balance to be amortized. This option is, however, dependent on the ability of the business to repay the debt through future profits. (2) Request the borrower to find another lender or require an infusion of capital by the borrower. This is not always a feasible option because of the probable weakened financial condition of the business and ownership under these circumstances. (3) Liquidate the collateral. Foreclosing on the collateral should only be executed when it becomes obvious that the business can no longer function as a going concern. The problem with this option is that once the bank discovers that the business is no longer a viable concern, realizing the full value of the collateral is in jeopardy. The need to resort to any of these options may prompt criticism of the credit.

**Term Business Loans**

Term business loans are generally granted at a fixed or variable rate of interest, have a maturity in excess of one year, and are intended to provide an organization with the funds needed to acquire long-term assets, such as physical plants and equipment, or finance the residual balance on lines of credit or long-term working capital. Term loans are repaid through the business’s cash flow, according to a fixed-amortization schedule, which can vary based on the cash-flow expectations of the underlying asset financed or the anticipated profitability or cash flow of the business. Term business loans involve greater risk than short-term advances because of the length of time the credit is extended. As a result of this greater risk, term loans are often secured. Loan interest may be payable monthly, quarterly, semiannually, or annually.

In most cases, the terms of these loans are detailed in formal loan agreements with affirmative and negative covenants that place certain conditions on the borrower throughout the term of the loan. Generally, loan agreements substantially enhance a borrower/banker relationship because they encourage and promote more frequent communication between the parties. In affirmative covenants, the borrower pledges to fulfill certain requirements, such as maintain adequate insurance coverage, make timely loan repayments, or ensure the financial stability of the business. Negative or restrictive covenants prohibit or require the borrower to refrain from certain practices, such as selling or transferring assets, defaulting, falling below a minimum debt coverage ratio, exceeding a maximum debt-to-equity ratio, or taking any action that may diminish the value of collateral or impair the collectibility of the loan. Covenants should not be written so restrictively that the borrower is constantly in default over trivial issues; however, violations should be dealt with immediately to give credibility to the agreement. Violations of these covenants can often result in acceleration of the debt maturity. A formal loan agreement is most often associated with longer-term loans. If a formal agreement does not exist, the term loans should be written with shorter maturities and balloon payments to allow more frequent review by bank management.

**Analysis of Term Business Loans**

While a seasonal or working-capital loan analysis emphasizes the balance sheet, the analysis of term loans will focus on both the balance sheet and the income statement. Because a term loan is repaid from excess cash flow, the long-term viability of the business is critical in determining the overall quality of the credit. In evalu-
ing long-term earnings, the examiner must develop a fundamental understanding of the company’s industry and competitive position in the marketplace. Most of the analysis will be conducted based on the historical performance of the business and its history of making payments on its debt. Any historical record of inconsistencies or inability to perform on existing debt should prompt an in-depth review to determine the ability of the borrower to meet the loan’s contractual agreements. One of the most critical determinations that should be made when evaluating term debt is whether the term of the debt exceeds the useful life of the underlying asset being financed.

While cash flow of the business is the primary source of repayment for a term loan, a secondary source would be the sale of the underlying collateral. Often, if circumstances warrant a collateral sale, the bank may face steep discounts and significant expenses related to the sale. Examiners should carefully consider these issues when evaluating the underlying value of collateral under a liquidation scenario.

The following are potential problems associated with term business loans:

• The term of the loan is not consistent with the useful life of collateral.
• Cash flow from operations does not allow for adequate debt amortization, a fundamental problem that can only be solved by improved performance.
• The gross margin of the business is narrowing, which requires the business to sell more product to produce the same gross profit. Higher sales volume could require more cash for expansion of current assets, leaving less cash for debt amortization. This situation is a common by-product of increased competition.
• Sales are lower than expected. In the face of lower sales, management is unable or unwilling to cut overhead expenses, straining cash flow and resulting in diminished debt servicing ability.
• Fixed assets that are financed by term loans become obsolete before the loans are retired, likely causing the value of underlying collateral to deteriorate.
• The business’s excess cash is spent on higher salaries or other unnecessary expenses.
• The payments on term debt have put a strain on cash flow, and the business is unable to adequately operate or allow natural expansion.
• The balance sheet of the business is weakening. The overall financial condition of the business is deteriorating because of poor performance or unforeseen occurrences in the industry.

SECURED AND UNSECURED TRANSACTIONS

This subsection is intended to be a general reference for an examiner’s review of a credit file to determine whether the bank’s collateral position is properly documented. Examiners should be aware that secured transactions encompass an extensive body of law that is rather technical in nature. The following discussion contains general information for examiners on the basic laws that govern a bank’s security interest in property and on the documentation that needs to be in a loan file to properly document a perfected security interest in a borrower’s assets.

Secured Transactions

Most secured transactions in personal property and fixtures are governed by article 9 of the Uniform Commercial Code (UCC). The UCC has been adopted by all 50 states, the District of Columbia, and the Virgin Islands. Timing differences as well as filing locations differ from state to state. Failure to file a financing statement in a timely manner or in the proper location will compromise a lender’s security interest in the collateral.

Article 9 of the UCC applies to any transaction that is intended to create a security interest in personal property. Mortgage transactions are not covered, marine mortgages are filed with the Coast Guard, and aircraft liens are filed with the Federal Aviation Administration. A “security interest” is defined in the UCC as “an interest in personal property or fixtures which secures payment or performance of an obligation.” A secured transaction requires that there be an agreement between the parties indicating the parties’ intention to create a security interest for the benefit of the creditor or secured party. This agreement is commonly referred to as a security agreement.

Article 9 of the UCC refers to two different concepts related to security interests: attachment and perfection. Attachment is the point in time
at which the security interest is created and becomes enforceable against the debtor. Perfection refers to the steps that must be taken in order for the security interest to be enforceable against third parties who have claims against collateral.

Attachment of Security Interest

The three requirements for the creation of a security interest are stated in UCC section 9-203(1). Once the following requirements are met, the security interest attaches:

- The collateral is in the possession of the secured party pursuant to agreement, or the debtor has signed a security agreement that contains a description of the collateral and, when the security interest covers crops now growing or to be grown or timber to be cut, a description of the land concerned.
- Value has been given to the debtor.
- The debtor has rights in the collateral.

Thus, unless the collateral is in the possession of the secured party, there must be a written security agreement that describes the collateral. The description does not have to be very specific or detailed—"any description of personal property...is sufficient whether or not it is specific if it reasonably identifies what is described" (see section 9-110). The agreement must also be signed by the debtor. The creditor may sign it, but its failure to do so does not affect the agreement’s enforceability against the debtor.

"Giving value" is any consideration that supports a contract. Value can be given by a direct loan, a commitment to grant a loan in the future, the release of an existing security interest, or the sale of goods on contract.

While the debtor must have “rights” in the collateral, he or she does not necessarily have to have title to the property. For example, the debtor may be the beneficiary of a trust (the trustee has title of trust assets) or may lease the collateral. The debtor, in such cases, has rights in the collateral, but does not hold the title to the collateral. The secured party, however, only obtains the debtor’s limited interest in the collateral on default if the debtor does not have full title to the collateral.

Perfection of Security Interest in Property

Perfection represents the legal process by which a bank secures an interest in property. Perfection provides the bank assurance that it has an interest in the collateral. The category of collateral will dictate the method of perfection to be used. The most common methods of perfection are (1) automatic perfection when the security interest attaches (such as in the case of purchase-money security interests applicable to consumer goods other than vehicles); (2) perfection by possession; (3) the filing of a financing statement in one or more public filing offices (The financing statement is good for five years, and the lender must file for a continuation within the six-month period before expiration of the original statement.) and (4) compliance with a state certificate of title law or central filing under a state statute other than the UCC, such as registration of vehicles.

The most common method of perfecting a security interest is public filing. Public filing serves as a constructive notice to the rest of the world that the bank claims a security interest in certain property of the debtor described in both the security agreement and the financing statement. Public filing is accomplished by filing a financing statement (UCC-1) in a public office, usually the county recorder or secretary of state. The system of filing required by the UCC provides for a notice filing whereby potential creditors can determine the existence of any outstanding liens against the debtor’s property.

The form of the financing statement and where to file it varies from state to state. While the filing of a nonstandard form will generally be accepted, the failure to file in the proper public office can jeopardize the priority of the lender’s security interest. The UCC provides three alternative filing systems:

- **Alternative System One.** Liens on minerals, timber to be cut, and fixtures are filed in the county land records. All other liens are filed in the office of the secretary of state.
- **Alternative System Two.** The majority of states have adopted this version. It is the same as system one, except liens on consumer goods, farm equipment, and farm products are filed in the county where the debtor resides or in the county where the collateral is located if it is owned by a nonresident.
- **Alternative System Three.** In a minority of states, filings made with the secretary of state must
also be filed in the county of the borrower’s business (or residence if there is no place of business in that state). Otherwise, the requirement in these states is the same as system two.

As each state may select any of the above three alternatives or a modified version of them, it is important that the examiner ascertain the filing requirements of the state(s) where the bank’s customer operates. Most importantly, it is the location of the borrower, not the bank, that determines where the financing statement must be filed.

**Evaluation of Security Interest in Property**

Key items to look for in evaluating a security interest in property include the following:

- **Security agreement.** There should be a proper security agreement, signed and dated by the borrower, that identifies the appropriate collateral to be secured. It should include a description of the collateral and its location in sufficient detail so the lender can identify it, and should assign to the lender the right to sell or dispose of the collateral if the borrower is unable to pay the obligation.

- **Collateral possession.** If the institution has taken possession of the collateral to perfect its security interest, management of the institution should have an adequate record-keeping system and proper dual control over the property.

- **Financing statement.** If the institution has filed a financing statement with the state or local authority to perfect its security interest in the collateral, in general, it should contain the following information:
  - names of the secured party and debtor
  - the debtor’s signature
  - the debtor’s mailing address
  - the address of the secured party from which information about the security interest may be obtained
  - the types of the collateral and description of the collateral (Substantial compliance with the requirements of UCC section 9-402 is sufficient if errors are only minor and not seriously misleading. Some states require the debtor’s tax ID number on the financing statement.)

- **Amendments.** Not all amendments require the borrower’s signature, and banks may file an amendment for the following reasons:
  - borrower’s change of address
  - creditor’s change of address
  - borrower’s name change
  - creditor’s name change
  - correction of an inaccurate collateral description
  - addition of a trade name for the borrower that was subsequently adopted

- **Where to file a financing statement.** In general, financing statements filed in good faith or financing statements not filed in all of the required places are effective with respect to any collateral covered by the financing statement against any person with knowledge of the statement’s contents. If a local filing is required, the office of the recorder in the county of the debtor’s residence is the place to file. If state filing is required, the office of the secretary of state is the place to file.

- **Duration of effectiveness of a financing statement.** Generally, effectiveness lapses five years after filing date. If a continuation statement is filed within six months before the lapse, effectiveness is extended five years after the last date on which the filing was effective. Succeeding continuation statements may be filed to further extend the period of effectiveness.

**Perfection of Security Interest in Real Estate**

As previously mentioned, real estate is expressly excluded from coverage under the UCC. A separate body of state law covers such interests. However, for a real estate mortgage to be enforceable, the mortgage must be recorded in the county where the real estate covered by the mortgage is located.

**Real estate mortgage or deed of trust.** When obtaining a valid lien on real estate, only one document is used, the mortgage or deed of trust. The difference between a mortgage and a deed of trust varies from state to state; however, the primary difference relates to the process of foreclosure. A mortgage generally requires a judicial foreclosure, whereas, in some states, a foreclosure on a deed of trust may not. Nearly all matters affecting the title to the real estate, including the ownership thereof, are recorded in the recorder’s office.
When determining the enforceability of a real estate mortgage or deed of trust, the examiner should be aware of the following requirements:

- The mortgage must be in writing.
- To be recordable, the mortgage must be acknowledged. There are different forms of acknowledgments for various situations depending on whether individuals, corporations, partnerships, or other entities are executing the mortgage. Make sure that the form of the acknowledgment used is in accordance with the type of individual or entity executing the mortgage.
- If a corporation is the mortgagor, its articles of incorporation or bylaws often will specifically state which officers have authority to sign an instrument affecting real estate. In these instances, the designated officer should be required to sign. If the corporation has a seal, that also must be affixed. If the corporation does not have a seal, this fact must be shown in the acknowledgment.
- As soon as possible after the mortgage is executed, it should be recorded in the office of the recorder for each county in which the property described in the mortgage is located. In most cases, the borrower signs an affidavit that indicates, in part, that he or she will not attempt to encumber the property while the lender is waiting for the mortgage to be recorded. In smaller community banks, common practice may be not to advance any of the money under the loan until the mortgage has been recorded and the later search completed. In larger banks or cities, however, this practice is often not practical.
- If the mortgagor is married, the spouse must join in the execution of the mortgage to subject his or her interest to the lien of the mortgage. If the mortgagor is single, the mortgage should indicate that no spouse exists who might have a dower interest or homestead interest in the property.
- If the mortgagor is a partnership, it must be determined whether the title is in the name of the partnership or in the names of the individual partners. If the title is in the names of the individual partners, their spouses should join in executing the mortgage. If the title is in the name of the partnership, those partners who are required to sign under the partnership agreement should sign.

Unsecured Transactions

Unsecured transactions are granted based on the borrower’s financial capacity, credit history, earnings potential, and liquidity. Assignment of the borrower’s collateral is not required, and repayment is based on the terms and conditions of the loan agreement. While unsecured loans often represent the bank’s strongest borrowers, the unsecured loan portfolio can represent its most significant risk. One of the primary concerns related to unsecured credit is that if the borrower’s financial condition deteriorates, the lender’s options to work out of the lending relationship deteriorate as well. In general, if a credit is unsecured, the file should contain reliable and current financial information that is sufficient to indicate that the borrower has the capacity and can be reasonably expected to repay the debt.

Problem Loans

The following are key signals of an emerging problem loan:

- **Outdated or inaccurate financial information on the borrower.** The borrower is unwilling to provide the financial institution with a current, complete, and accurate financial statement at least annually. Management should also be requesting a personal tax return (and all related schedules) on the borrower. While borrowers will usually present their personal financial statements in the most favorable light, their income tax return provides a more conservative picture.
- **The crisis borrower.** The borrower needed the money yesterday, so the bank advanced unsecured credit.
- **No specific terms for repayment.** The unsecured loan has no structure for repayment, and it is commonly renewed or extended at maturity.
- **Undefined source of repayment.** These types of loans are often repaid through excess cash flow of the borrower, sale of an asset(s), or loan proceeds from another financial institution. These repayment sources are often not identified and are unpredictable.
Commercial Loan-Sampling Techniques

Sampling techniques are a valid and efficient method for reviewing the commercial loan portfolios at banks during on-site examinations. Sampling enables the examiner to draw conclusions regarding the condition of the entire loan portfolio by reviewing only a selected portion. These techniques make more efficient use of examination resources and allow examiners to devote more of their time and efforts to other areas of the examination.

Generally, a judgmental sampling technique is used for reviewing commercial loans. This technique enables examiners to evaluate the portfolio by reviewing a desired percentage of all the loans over a preselected cutoff amount. In addition to the judgmental sampling approach, statistical sampling techniques can also be valid methods for evaluating loan portfolios. Two statistical sampling techniques that may be selectively implemented during on-site examinations are attributes sampling and proportional sampling. Attributes sampling is especially well-suited for large banks that have formal loan review programs; proportional sampling may be better suited for smaller or regional banks without internal loan-review programs.

In statistical sampling, the examiner uses the concepts of probability to apply sampling techniques to the design, selection, and evaluation of loan samples. Statistical sampling eliminates (or at least minimizes) potential selection biases because each item in the sample-loan population must have an equal or otherwise determinable probability of being included in the examined portion. This probability provides the examiner with a quantitative, controllable measure of risk.

Generally, statistical sampling techniques may be implemented only in those banks (1) that were found to be in financially sound condition, (2) that were without any undue loan portfolio problems at the latest examination, and (3) where it was determined that the systems and controls were appropriate for implementing such techniques. Moreover, if during an examination, the examiner determines that the statistical sampling results are unsatisfactory, the traditional judgmental sampling technique should be implemented.

The two recommended statistical sampling techniques are described below:

- **Attributes Sampling.** The objective of attributes sampling is to determine from a sample, within specified reliability limits, the validity of the bank’s internal loan-review program. The reliability limits are determined by the examiner, who formulates a hypothesis about the bank’s loan-review program when evaluating its policies, practices, and procedures for loan extensions. The population to be sampled consists of all loans between certain dollar parameters, except for loans reviewed under the shared national credit program and loans to identified problem industries (the latter are reviewed separately during the examination). The lower dollar parameter is an amount that the examiner deems sufficient to achieve the desired coverage of the loan portfolio and is selected in much the same manner as a cutoff line is chosen in judgmental sampling. The upper dollar parameter is an amount over which all loans must be reviewed because of the significant effect each could have on the bank’s capital. Loans are selected from the sample population by using a random digit table.

  When the selected loans are reviewed, the examiner compares his or her grading with those of the bank’s loan-review program. An “error” generally exists if the examiner’s grading of a particular loan is significantly more severe than the bank’s grading. If the error rate in the sample is beyond the preestablished reliability limits the examiner is able to accept, all loans over the cutoff amount should be reviewed. If the examiner is satisfied with the sample results, the bank’s internal grading will be accepted for all criticized loans that have not been independently reviewed within the sample population. Even when the bank’s internal grading is deemed acceptable by the examiner, any loans reviewed and found to be in error will be appropriately classified in the report.

- **Proportional Sampling.** The procedures for proportional sampling are similar to those followed for attributes sampling. The objective of this sampling technique is to determine whether bank management can identify all the criticizable loans in the portfolio. The examiner formulates a hypothesis about the quality of the examined bank’s loan administration, based on an analysis of loan policies, practices, and procedures for loan extensions. In proportional sampling, every loan in the sample population is given an equal chance of
selection in proportion to its size, so the larger the loan, the more likely it will be selected for review. Examiners grade the loans in the sample and compare these gradings with the bank’s problem-loan list.

As in attributes sampling, the examiner specifies the desired precision of the sample, that is, that the true error rate in the bank’s problem-loan list should be within a certain range of values. A statistical error occurs whenever the examiner criticizes a loan that is not criticized by the bank. If the error rate is higher than expected, the examiner will review all loans over a cutoff line, which is determined using the same criteria as line selection in judgmental sampling. If the sample results indicate an error rate within expectations, then the examiner will accept the bank’s problem-loan list as a reliable list of the nonpass loans in the population from which the sample was taken. The examiner will then review and grade each loan on the problem-loan list over the cutoff amount.

For detailed procedures on how to implement both attributes and proportional sampling, examiners should contact either Reserve Bank supervision staff or Federal Reserve Board supervision staff.

REVIEWING CREDIT QUALITY

Importance of Cash Flow

Evaluating cash flow is the single most important element in determining whether a business has the ability to repay debt. Two principal methods of calculating the cash flow available in a business to service debt are presented in this subsection. The results of these methods should be used to determine the adequacy of cash flow in each credit evaluated at an institution. The accrual conversion method is the preferred method because it is the most reliable. The second and less reliable method is the supplemental or traditional cash-flow analysis; however, the information needed for this analysis is usually more obtainable and easier to calculate. The traditional method can be used when circumstances warrant, for example, when the borrower’s financial statements are not sufficiently detailed for the information requested in the accrual conversion analysis or when historical information is inadequate.

Analysis and Limitations of Cash Flow

Cash-flow analysis uses the income statement and balance sheet to determine a borrower’s operational cash flow. Careful analysis of all investment and financing (borrowing) activities must be made for an accurate assessment of cash flow. In reality, examiners face time constraints that often prevent them from performing the complex mathematical calculations involved in sophisticated cash-flow analysis. Therefore, the cash-flow methods presented below were designed to be reasonable and practical for examiner use. However, examiners should be careful of conclusions reached using the traditional cash-flow analysis, without consideration to balance-sheet changes or other activities that affect cash flow. The traditional cash-flow analysis does not recognize growth in accounts receivable or inventory, a slow-down in accounts payable, capital expenditures, or additional borrowings. If the credit file contains a CPA-prepared statement of cash flow or a statement prepared using the accrual conversion method, the examiner should concentrate efforts on reviewing and analyzing these statements rather than on preparing a traditional cash-flow statement.

One critical issue to remember is that deficit cash flow does not always mean that the borrower is encountering serious financial difficulties. In some cases, deficit cash flow is caused by a business’s experiencing significant growth, and there is a pronounced need for external financing to accommodate this growth and eliminate the deficit cash-flow position. In this case, an adequate working-capital facility may not be in place to accommodate the need for additional inventory. A comprehensive analysis of changes in the balance sheet from period to period should be made before the loan is criticized.1

1. Examiners should make sure that they are using financial data from consistent periods, that is, year-to-date financial information. Mixing annual financial data with interim financial information can cause misinterpretation of cash flow for a given business cycle or annual period.
### Components of the Accrual Conversion Method of Cash Flow

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Sales:</td>
<td>Dollar amount of sales in period</td>
</tr>
<tr>
<td>+/- change in A/R, INV., A/P:</td>
<td>Represents the absolute difference of the current period from the corresponding period of the previous year in accounts receivable, inventory, and accounts payable.</td>
</tr>
</tbody>
</table>
| Formula:          | (a) An increase in any current asset is a use of cash and is subtracted from the calculation. Conversely, a decrease in any current asset is a source of cash and is added to the calculation.  
|                   | (b) An increase in any current liability is a source of cash and is added to the calculation. Conversely, a decrease in any current liability is a use of cash and is subtracted from the calculation. |
| SGA:              | Subtract selling, general, and administrative expenses.                                                    |
| Interest Expense: | Add interest expense to the calculation if SGA “expense” includes interest expense.                      |
| Excess (Deficit) Cash Flow: | Represents cash available before debt service.                                                          |

### Calculation of Supplemental/Traditional Cash Flow

- **Net Income:** Amount of net income reported on most recent annual income statement before taxes.  
- **Interest Expense:** Add the total amount of interest expense for the period.  
- **Depreciation/Amortization:** Add all noncash depreciation and principal amortization on outstanding debt.

- **Cash Flow before Debt Service:** Indicates net Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA). Amortization should include both principal and interest payments required on debt.  
- **Debt Service:** Subtract scheduled principal and interest payments.  
- **Capital Expenditures:** Subtract all capital expenditures for the period.  
- **Total amount of excess or deficit cash flow for the period after debt service:** **Excess (Deficit) Cash Flow:**  
- **Cash flow before debt service divided by debt service (principal and interest):** **Coverage Ratio:**

---

### Importance of Financial Analysis

While cash-flow analysis is critical in reviewing whether a borrower has the ability to repay individual debt, a review of the borrower’s other financial statements can offer information about other sources of repayment, as well as the borrower’s overall financial condition and future prospects. The availability of historical balance-sheet and income information, which allow declining trends to be identified, is critical. Also, it may be appropriate to compare the borrower’s financial ratios with the average for the industry overall. Much of the financial information that examiners will review will not be audited; therefore, considerable understanding of general accounting principles is necessary to competently review an unaudited financial statement. The bank should obtain at least annual financial statements from a borrower.

When reviewing a credit file of a borrowing customer of a bank, the following financial information should be available for review: income statement, balance sheet, reconciliation of equity, cash-flow statements, and applicable notes to financial statements. The components for a financial review can be segregated into three areas: operations management, asset man-
management, and liability management. Operations management is derived from the income statement and can be used to assess company sales, cost control, and profitability. Asset management involves the analysis of the quality and liquidity of assets, as well as the asset mix. Liability management covers the analysis of the company’s record of matching liabilities to the asset conversion cycle, such as long-term assets being funded by long-term liabilities.

In studying the above forms of management, various ratios will help the examiner form an informed and educated conclusion about the quality of the credit being reviewed. The ratios can be divided into four main categories:

- **Profitability ratios.** These ratios measure management’s efficiency in achieving a given level of sales revenue and profits, as well as management’s ability to control expenses and generate return on investment. Examples of these ratios include gross margin, operating profit margin, net profit margin, profit to sales ratio, profit to total assets ratio, and direct cost and expense ratios.

- **Efficiency ratios.** These ratios, which measure management’s ability to manage and control assets, include sales to assets, inventory days on hand, accounts receivable days on hand, accounts payable days on hand, sales to net fixed assets, return on assets, and return on equity.

- **Leverage ratios.** These ratios compare the funds supplied by business owners with the financing supplied by creditors, and measure debt capacity and ability to meet obligations. These ratios may include debt to assets, debt to net worth, debt to tangible net worth, and interest coverage.

- **Liquidity ratios.** Include ratios such as the current ratio and quick ratio, which measure the borrower’s ability to meet current obligations.

### Common “Red Flags”

The symptoms listed below are included to provide an understanding of the common problems or weaknesses examiners encounter in their review of financial information. While one symptom may not justify criticizing a loan, when symptoms are considered in the aggregate, they may help the examiner detect near-term trouble. This list is only a sampling of “red flags” that should prompt further review; examiners should also be able to identify issues that may require further investigation from their cursory review of a borrower’s financial statement.

- **A slowdown in the receivables collection period.** This symptom often reveals that the borrower has become more liberal in establishing credit policies, has softened collection practices, or is encountering an increase in uncollected accounts.

- **Noticeably rising inventory levels in both dollar amount and percentage of total assets.** Increases in inventory levels are usually supported by trade suppliers, and financing these increases can be extremely risky, particularly if turnover ratios are declining. The increase in inventory levels or lower turnover ratios may also be related to the borrower’s natural reluctance to liquidate excessive or obsolete goods at a reduced price. Many businesses are willing to sacrifice liquidity to maintain profit margins.

- **Slowdown in inventory turnover.** This symptom may indicate overbuying or some other imbalance in the company’s purchasing policies, and it may indicate that inventory is slow-moving. If the inventory is undervalued, the actual turnover is even slower than the calculated results.

- **Existence of heavy liens on assets.** Evidence of second and third mortgage holders is a sign of greater-than-average risk. The cost of junior money is high. Most borrowers are reluctant to use this source of funds unless conventional sources are unavailable.

- **Concentrations of noncurrent assets other than fixed assets.** A company may put funds into affiliates or subsidiaries for which the bank may not have a ready source of information on operations.

- **High levels of intangible assets.** Intangible assets, which shrink or vanish much more quickly than hard assets, usually have very uncertain values in the marketplace. In some cases, however, intangible assets such as patents or trademarks have significant value and should be given considerable credit.

- **Substantial increases in long-term debt.** This symptom causes increasing dependence on cash flow and long-term profits to support debt repayment.
• A major gap between gross and net sales. This gap represents a rising level of returns and allowances, which could indicate lower quality or inferior product lines. Customer dissatisfaction can seriously affect future profitability.
• Rising cost percentages. These percentages can indicate the business’s inability or unwillingness to pass higher costs to the customer or its inability to control overhead expenses.
• A rising level of total assets in relation to sales. If a company does more business, it will take more current assets in the form of inventory, receivables, and fixed assets. Examiners should be concerned when assets are increasing faster than sales growth.
• Significant changes in the balance-sheet structure. These changes may not be the customary changes mentioned previously, but they are represented by marked changes spread across many balance-sheet items and may not be consistent with changes in the marketplace, profits or sales, product lines, or the general nature of the business.

REQUIRED MINIMUM DOCUMENTATION STANDARDS FOR LOAN LINE SHEETS

Certain minimum documentation must appear on all line examination sheets to leave an acceptable audit trail and to support the classification of designated loans. Currently, much of this information is often placed on the line ticket automatically by using computer-based loan-review systems. However, the disposition of the loan and the reasons for that disposition are the most crucial entries on the line ticket. Examiners must document their entries and decide how much of the documentation is required to support the loan-review decision. That decision and a summary of the reasons a loan is passed, listed for special mention, or adversely classified should be provided (preferably in bullet form) on the loan line ticket. Beyond that, the documentation will vary depending on the complexity and profile of the credit. The examiner may provide more detailed information on the collateral, cash flow, and repayment history. This additional information is not mandatory if the rationale for the disposition of the credit is otherwise clear.

The extension of credit line sheets and workpapers should document loan discussion comments, identify the examiner who reviewed the credit, and identify the officer(s) with whom the credit was discussed. Line sheets should also include the examiner’s conclusion on the specific credit and the reasons for that conclusion.

As part of a review of examination and supervisory policies and procedures and to promote consistency, the items described below have been implemented as required minimum documentation standards for loan line sheets. These standards recognize a transactional approach in examinations and reflect the efficiencies inherent in a risk-focused approach to examinations. The amount of information that should be documented or included as part of a line sheet may vary depending on the type, complexity, and materiality of the credit. However, all line sheets should include the following information to satisfy the required minimum documentation standards, as set forth by SR-99-25 (“Minimum Documentation Standards for Loan Line Sheets,” September 29, 1999). The first seven items are frequently provided through computer-based loan-review systems.

• Name and location of borrower. Document the name of the individual or company responsible for repayment of the debt.
• Notation if the borrower is an insider or a related interest of an insider. If the borrower is an insider or a related interest of the insider as defined by Regulation O, reflect this association on the line sheet.
• Business or occupation. Briefly describe the legal entity and the type of business in which the company is engaged, according to the following definitions:
  — Corporation. A business organization that is owned by shareholders who have no inherent right to manage the business. The organization is generally managed by a board of directors that is elected by the shareholders. The file should contain the borrowing resolution indicating which officers from the corporation are authorized to sign on its behalf. Indicate if the corporation is closely held.
  — Partnership. A business organization, specifically, an association of two or more persons to carry on as co-owners of a business for profit. Indicate if it is a general partnership (GP) or limited partnership (LP). If GP, each partner is fully liable for the firm’s debts and actions. If LP, at least one general partner is fully
liable, but there will also be a number of partners whose liability is limited to that enumerated by the partnership agreement. Indicate each partner’s proportionate interest (such as 25 or 50 percent).

— Proprietorship. A form of business organization that is owned and operated by an individual. If the borrower is an individual, include his or her primary occupation.

- **Loan terms.** Include the following loan information:
  - date of origination (note subsequent renewals and/or extensions)
  - repayment terms (for example, maturity, periodic payments, revolving)
  - maturity (restructured loans should be noted as such)
  - interest rate (fixed or variable) (If variable, state the basis (index) upon which the interest rate is determined.)
  - originated amount of the loan
- **Purpose of loan.** Note the purpose of each credit facility.
- **Repayment source.** Indicate the primary and secondary sources of repayment for each credit facility.
- **Collateral summary and value.** Describe collateral and assess the value of the collateral in which the bank maintains a perfected security interest. Values should be supported by some type of document, such as a recent financial statement, formal appraisal, management estimate, or any publication that maintains a current market value of collateral. At a minimum, the collateral assessment should include the following information:
  - collateral value
  - basis for valuation
  - date of valuation
  - control of collateral
  - current lien status
- **Loan officer assigned to the credit and the internal rating of the credit.** Note the name of the loan officer responsible for the loan. Also document the bank’s internal risk-rating. The date of the most recent update of the rating should also be noted. Particular attention should be given to the consistency between the loan classification at the current examination and the assessment provided by the bank’s internal loan-review department. Significant disparities should be noted in the asset-quality assessment.
- **Total commitment and total outstanding balances.** Indicate the total amount of the bank’s legal commitment or line of credit available to the borrower. Note the total outstanding debt to the borrower as of the date of examination.
- **Examination date.** Indicate the as-of date of the examination.
- **Past due or nonaccrual status.** Indicate the past due status (current, nonaccrual, and days past due).
- **Amounts previously classified.** Note the loan amount and how the loan was previously classified at the most recent examination (Federal Reserve Bank or state).
- **Loan disposition (pass, special mention, or adverse classification).** Note the credit amount and how the credit is being classified, such as pass, special mention, substandard, doubtful, or loss.
- **Rationale for examiner’s conclusions (preferably in bullet form).** Indicate the reasons for passing the credit or extending it for criticism, which should be consistent with the classification descriptions noted in the “Classification of Credits” section.
- **Name or initials of the examiner reviewing the credit.** Indicate the name or initials of the examiner who reviewed and assigned the classification to the credit.
- **Any significant comments by, or commitments from, management.** Clearly and specifically indicate relevant comments (including management’s disagreement with the disposition of the loan, if applicable) that may be considered when determining whether or not to criticize the credit. Comments can include officer’s comments noted in the credit file, information derived from discussions with management, questions the examiner may have about the borrower, or any other item deemed appropriate. If management plans to get out of the credit relationship, a workout strategy should be included in this section. Comments should be included as to why management disagrees with any loan classification or how any loan was classified.
- **Any noted documentation exceptions or loan-administration policy or procedural weaknesses, and any contravention of law, regulation, or policy.** Indicate any documentation exception or violation of law, regulation, or

---

2. If the loan is a shared national credit (SNC), this should be noted on the line sheet. A copy of the SNC write-up should be attached to the line sheet, and it is not necessary to provide any additional data.
policy that would be appropriate to include as part of the report of examination. The examiner may include any technical exception noted from the credit file that would inhibit the ability of the loan officer or the examiner to make an informed and/or competent judgment about the quality of the credit relationship.

When needed, loan line sheets should briefly note that information is not available or that certain information is not reliable due to deficient loan-administration systems and processes, particularly with respect to loan and collateral documentation and collateral values. If such deficiencies are material, a listing of the exceptions should be noted in the examination report. In addition, the effect of these loan-administration weaknesses should be discussed and factored into the risk-management rating.

Optional Information for Loan Line Sheets

In addition to the above information, additional items should be listed when needed to describe the terms of the credit and/or the disposition accorded to it by the examiners, for example, guarantors, amount of any specific reserve, or amounts previously charged off, as described below:

- **Related debt/tie-ins.** The name, total debt outstanding, and type of borrowings (such as real estate, commercial, installment debt) of the related party might be indicated.

- **Guarantor(s).** If a guarantor exists, the name, amount of the guaranty, and date the guaranty was signed can be noted. A summary and an assessment of data supporting a guaranty may also be included, along with current financial information from the guarantor(s) which the bank should obtain at least annually. Tax returns and supporting schedules, income statements, and other pertinent information on the guarantor(s) may be appropriate under certain circumstances. If a troubled credit, indicate whether the guarantor has exhibited any willingness to financially support the credit.

- **Summary of financial data.** The following information may be appropriate, based on the type and complexity of the loan:
  - key balance-sheet information (current ratio, D/E ratio)
  - key income items (EBITDA—earnings before income taxes, depreciation, and amortization; net income; profit margin)
  - cash-flow coverage (debt-service coverage, interest coverage)
  - source of financial data (company-prepared balance sheet, audited financial statement)

- **Dates and amounts of previous charge-offs.**

- **Specific reserves.** The examiner may indicate whether an amount (allocated reserve) was specifically set aside to absorb any loss from the credit. When evaluating the overall adequacy of the loan-loss reserve, subtract the aggregate of allocated reserves from the total reserve balance, and subtract the aggregate amount of loans for which allocated reserves exist from the total loan balance.

- **The name of the loan officer who may have offered the most pertinent discussion items that affected the classification decision.**

**BANKRUPTCY LAW AND COMMERCIAL LOANS**

This section provides examiners with an overview of the United States Bankruptcy Code (the code) chapters that affect commercial and industrial loans. Bankruptcy law is a significant body of law; it would be difficult in this manual to discuss all the issues necessary for comprehensive understanding of the code. This subsection will focus on basic issues that an examiner needs to be familiar with relative to three principal sections of the code: chapters 7, 11, and 13.

**Creditors of a Bankrupt Business**

A creditor in bankruptcy is anyone with a claim against a bankrupt business, even if a formal claim is not filed in the bankruptcy case. In bankruptcy court, a claim is defined very broadly. A claim may include a right to payment from a bankrupt business, a promise to perform work, or a right to a disputed payment from the debtor that is contingent on some other event. The two basic types of creditors are secured and unsecured. Secured creditors are those with perfected security interest in specific property, such as equipment, accounts receivable, or any other asset pledged as collateral on a loan. Unsecured creditors are generally trade creditors and others...
who have not taken a specific interest in property supplied to the bankrupt debtor.

Voluntary Versus Involuntary Bankruptcy

When a debtor files a bankruptcy petition, it is described as a voluntary bankruptcy filing. The individual or organization does not have to be insolvent to file a voluntary case. Creditors may also file a bankruptcy petition, in which case the proceeding is known as an involuntary bankruptcy. This form of petition can occur in chapters 7 and 11 bankruptcy cases, and the debtor generally must be insolvent. To be deemed insolvent, the debtor must be unable to pay debts as they mature. However, the code does limit who an involuntary action can be sought against.

Chapter 7—Liquidation Bankruptcy

A chapter 7 action may be filed by virtually any person or business organization that is eligible to file bankruptcy. Chapter 7 bankruptcy can be filed by a sole proprietorship, partnership, corporation, joint stock company, or any other business organization. Restrictions apply to only a few highly regulated businesses, such as railroads, insurance companies, banks, municipalities, and other financial institutions. This chapter is often referred to as “straight liquidation,” or the orderly liquidation of all assets of the entity. Generally, a debtor in a chapter 7 bankruptcy case is released from obligations to pay all dischargeable prebankruptcy debts in exchange for surrendering all nonexempt assets to a bankruptcy trustee. The trustee liquidates all assets and distributes the net proceeds on a pro rata basis against the allowed claims of unsecured creditors. Secured creditor claims are generally satisfied by possession or sale of the debtor’s assets. Depending on the circumstances, a secured creditor may receive the collateral, the proceeds from the sale of the collateral, or a reaffirmation of the debt from the debtor. The reaffirmed debts are generally secured by property that the debtor can exempt from the bankruptcy estate, such as a home or vehicle. The amount of the reaffirmation is limited to the value of the asset at the time of the bankruptcy filing. Some characteristics of a chapter 7 bankruptcy are described below:

- A trustee is appointed in all chapter 7 bankruptcies and acts as an administrator of the bankruptcy estate. The bankruptcy estate that is established when the petition is filed becomes the legal owner of the property. The trustee acts to protect the interest of all parties affected by the bankruptcy.
- The trustee has control of all nonexempt assets of the bankrupt debtor.
- The trustee is required to liquidate the estate quickly without jeopardizing the interests of the affected parties.
- The proceeds from the sale pay trustee’s fees and other creditors. Trustee fees are determined according to the amount disbursed to the creditors and are a priority claim.
- A chapter 7 bankruptcy is typically completed in 90 days, depending on the time needed to liquidate collateral. Some chapter 7 bankruptcies take years to complete.
- The court may allow the trustee to continue to operate a business, if this is consistent with the orderly liquidation of the estate.

Chapter 11—Reorganization

Most major or large businesses filing bankruptcy file a chapter 11 reorganization. As in chapter 7, virtually any business can file a chapter 11 reorganization. There are specialized chapter 11 reorganization procedures for certain businesses such as railroads, and chapter 11 is not available to stockbrokers, commodity brokers, or a municipality. The basic concept behind chapter 11 is that a business gets temporary relief or a reprieve from paying all debts owed to creditors. This temporary relief gives the business time to reorganize, reschedule its debts (at least partially), and successfully emerge from bankruptcy as a viable business. The basic assumption underlying a chapter 11 bankruptcy is that the value of the enterprise as a going concern will usually exceed the liquidation value of its assets.

Reorganization Plan

Generally, the debtor has an exclusive 120-day period to prepare and file a reorganization plan. If the debtor’s plan has not been confirmed within 180 days of the bankruptcy filing, a
A creditor may file a plan. A plan can provide for any treatment of creditor claims and equity interest, as long as it meets the requirements set out in the code. For example, a plan must designate substantially similar creditor claims and equity interest into classes and provide for equal treatment of such class members. A plan must also identify those classes with impaired claims and their proposed treatment. Finally, a method of implementation must be provided. Although plans do not have to be filed by a deadline, the bankruptcy judge will generally place a deadline on the debtor or creditor authorized to prepare the plan.

Some characteristics of a chapter 11 bankruptcy are described below:

- The bankrupt debtor usually controls the business during the bankruptcy proceedings. This arrangement is referred to as “debtor in possession.”
- The business continues to operate while in bankruptcy.
- The debtor is charged with the duty of developing a reorganization plan within the first 120 days of the filing. After this period expires, the court may grant this authority to a creditors’ committee.
- Once the plan is approved by the bankruptcy court, the debtor’s payment of debts is generally limited to the schedule and amounts that are detailed in the reorganization plan.
- A chapter 11 proceeding can be complex and lengthy, depending on the number of creditors, amount of the debts, amount of the assets, and other factors that complicate the proceedings.

Chapter 13—Wage-Earner Bankruptcy

A chapter 13 bankruptcy is available to any individual whose income is sufficiently stable and regular to enable him or her to make payments under the plan. As long as the individual has regular wages or takes a regular draw from his or her business, the individual may qualify under chapter 13 of the code. Under chapter 13, an individual or married couple can pay their debts over time without selling their property. As a protection to creditors, the money paid to a creditor must equal or exceed the amount that the creditor would get in a liquidation or chapter 7 bankruptcy. Chapter 13 may be used for a business bankruptcy, but only if the business is a proprietorship. In most cases, the business needs to be fairly small to qualify.

Some characteristics of a chapter 13 bankruptcy are described below:

- In most cases, only an individual can file a chapter 13 bankruptcy.
- Secured debt may not exceed $350,000.
- Unsecured debt may not exceed $100,000.
- The debtor must propose a good-faith plan to repay as many debts as possible from available income.
- A debtor makes regular payments to a trustee, who disburses the funds to creditors under the terms of the plan.
- The trustee does not control the debtor’s assets.
- A chapter 13 bankruptcy may include the debts of a sole proprietorship. The business may continue to operate during the bankruptcy.
- After all payments are made under the plan, general discharge is granted.

SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT

The intent of this subsection is to provide examiners with general guidance on how to identify potential violations of sections 23A and 23B of the Federal Reserve Act as they pertain to the commercial-lending function. More specific guidance on sections 23A and 23B of the Federal Reserve Act can be obtained from the Board’s Regulation W (12 CFR part 223) as well as the sections of this manual on Regulation W.
tion W, which defines extensions of credit to mean any similar transaction as a result of which an affiliate becomes obligated to pay money or its equivalent to the bank. Any transaction by a bank with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to an affiliate. A key element of section 23A is that covered transactions between a bank and its affiliate must be on terms and conditions consistent with safe and sound banking practices.

Once the examiner has determined that the counterparty is an affiliate and that the transaction is a covered transaction, there are quantitative limitations that apply. Section 23A limits the amount of covered transactions between a bank and its subsidiary and a single affiliate to no more than 10 percent of the bank’s capital and surplus (as defined in 12 CFR 223(d)). In addition, an institution and its subsidiaries may only engage in a covered transaction with an affiliate if, in the case of all affiliates, the aggregate amount of the covered transactions of the institution and its subsidiaries will not exceed 20 percent of the capital stock and surplus of the institution.

When the transaction involves an extension of credit to an affiliate, certain collateral requirements must also be met. Generally, extensions of credit require certain collateral margins that are tied to the type of collateral. For example, extensions of credit that are secured by U.S. Treasury securities or certain agency securities require a collateral margin of 100 percent of the transaction amount, whereas collateral consisting of stock, leases, or other real or personal property requires a margin of 130 percent. Some collateral, such as the obligations of an affiliate, are not eligible as collateral for transactions between a bank and its affiliates. Certain exemptions to the specific collateral requirements of section 23A were included to permit transactions that posed little risk to the bank and to prevent undue hardship among the affiliated organizations in carrying out customary transactions with related entities. These exemptions include various transactions that are related to sister-bank relationships, correspondent relationships, and uncollected items in the process of collection.

Section 23B

Section 23B defines affiliates in the same manner as section 23A, except that all banks are excluded from section 23B as affiliates. The principal requirements of section 23B state that any transaction between a bank and a defined affiliate under the act must be (1) on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to the bank or its subsidiary, as those prevailing at the time for comparable transactions with or involving other nonaffiliated companies, or (2) in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would be offered or would apply to nonaffiliated companies. In short, the terms and conditions of an extension of credit to an affiliate under section 23B should be no more favorable than those that would be extended to any other borrowing customer of the bank. For covered transactions, all transactions that are covered under section 23A are covered under section 23B; however, section 23B expanded the list to include other transactions such as the sale of securities or other assets to an affiliate, the payment of money or furnishing of services to an affiliate, or any transaction if the affiliate has a financial interest or participates in the transaction.

The focus of section 23B is different from that of section 23A. Section 23A contains quantitative and collateral restrictions to protect the bank; section 23B focuses on whether transactions with nonbank affiliates are arm’s length and not injurious to the bank. Essentially, examiners need to keep one basic principal in mind: If money or assets flow from the bank to an affiliate other than through a dividend, the transaction is probably a covered transaction and would be subject to sections 23A and 23B. In addition, if a bank assumes the liabilities of an affiliate, the transaction is subject to sections 23A and 23B.

TYING ARRANGEMENTS

Among other things, section 106 of the Bank Holding Company Act Amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another
product from the bank or an affiliate of the bank. The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute’s prohibitions by regulation or order. For more information on section 106, see this manual’s section, “Regulation Y: Prohibitions Against Tying Arrangements.”

1. To determine if lending policies, practices, procedures, and internal controls for commercial and industrial loans are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for credit quality, performance, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.
Commercial and Industrial Loans
Examination Procedures
Effective date November 2003

Section 2080.3

1. If selected for implementation, complete or update the commercial loan section of the internal control questionnaire.

2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal or external auditors, and determine if corrections have been accomplished.

4. Obtain a trial balance of the customer liability records.
   a. Agree or reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.

5. Using an appropriate technique, select borrowers for examination. Prepare credit line cards.

6. Obtain the following information from the bank or other examination areas, if applicable:
   a. past-due loans
   b. loans in a nonaccrual status
   c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be given to loans that have been renewed with interest being rolled into principal.)
   d. loans whose terms have been modified by a reduction of interest-rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
   e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   g. loan commitments and other contingent liabilities
   h. loans secured by stock of other depository institutions
   i. extensions of credit to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
   j. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
   k. a list of correspondent banks
   l. miscellaneous loan-debit and credit-suspense accounts
   m. Shared National Credits
   n. loans considered “problem loans” by management
   o. specific guidelines in the lending policy
   p. each officer’s current lending authority
   q. any useful information resulting from the review of the minutes of the loan and discount committee or any similar committee
   r. reports furnished to the loan and discount committee or any similar committee
   s. reports furnished to the board of directors
   t. loans classified during the previous examination
   u. the extent and nature of loans serviced

7. Review the information received, and perform the following procedures.
   a. Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.
      • Participations only:
         — Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
         — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
         — Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
      • Procedures pertaining to all transfers:
         — Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were trans-
ferred to avoid possible criticism during the examination.

— Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.

— Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank’s books and is equal to the fair market value of the transferred loans. (While fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium.) Section 23A of the Federal Reserve Act generally prohibits a state member bank from purchasing a low-quality asset.

— Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.

— If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
  (1) name of originating institution
  (2) name of receiving institution
  (3) type of transfer (i.e., participation, purchase or sale, swap)
  (4) date of transfer
  (5) total number of loans transferred
  (6) total dollar amount of loans transferred
  (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
  (8) any other information that would be helpful to the other regulator

b. Miscellaneous loan-debit and credit-suspense accounts.
   • Discuss with management any large or old items.
   • Perform additional procedures as deemed appropriate.

c. Loan commitments and other contingent liabilities. Analyze the commitment or contingent liability if the borrower has been advised of the commitment and the combined amount of the current loan balance (if any) and the commitment or other contingent liability exceeds the cutoff.

d. Loans classified during the previous examination.
   • current balance and payment status, or
   • date the loan was repaid and the source of payment
   Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.

e. Review of leveraged buyouts.
   • In evaluating individual loans and credit files, pay particular attention to the reasonableness of interest-rate assumptions and earnings projections relied on by the bank in extending the loan; the trend of the borrowing company’s and the industry’s performance over time and the history and stability of the company’s earnings and cash flow, particularly over the most recent business cycle; the relationship between the company’s cash-flow and debt-service requirements and the resulting margin of debt-service coverage; and the reliability and stability of collateral values and the adequacy of collateral coverage.
   • In reviewing the performance of individual credits, attempt to determine if debt-service requirements are being covered by cash flow generated by the company’s operations or whether the debt-service requirements are being met out of the proceeds of additional or ancillary loans from the bank designed to cover interest changes.
• Review policies and procedures pertaining to leveraged buyout financing to ensure that they incorporate prudent and reasonable limits on the total amount and type (by industry) of exposure that the bank can assume through these financing arrangements.
• Review the bank’s pricing, credit policies, and approval procedures to ensure that rates are reasonable in light of the risks involved and that credit standards are not compromised in order to increase market share. Credit standards and internal review and approval standards should reflect the degree of risk and leverage inherent in these transactions.
• Total loans to finance leveraged buyouts should be treated as a potential concentration of credit. If, in the aggregate, these loans are sufficiently large in relation to capital, the loans should be listed on the concentrations page in the examination report.
• Discuss significant deficiencies or risks regarding a bank’s leveraged buyout financing on page 1 of the examination report, and bring them to the attention of the board of directors.

f. Uniform review of Shared National Credits.
• Compare the schedule of commercial credits included in the uniform review of the Shared National Credit Program with the loans being reviewed to determine which loans are portions of Shared National Credits.
• For each loan so identified, transcribe appropriate information from the schedule to line cards. (No further examination procedures are necessary for these credits.)

8. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources.
9. Transcribe or compare information from the schedules to commercial line cards, where appropriate.
10. Prepare commercial line cards for any loan not in the sample that, based on information derived from the above schedules, requires in-depth review.

11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.
12. Add collateral data to line cards selected in the preceding steps.
13. Obtain credit files for all borrowers for whom commercial line cards were prepared, and complete line cards. To analyze the loans, perform the following procedures:
a. Analyze balance-sheet and profit-and-loss items as reflected in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
b. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, if applicable, and determine the primary sources of repayment and evaluate their adequacy.
d. Ascertain compliance with provisions of loan agreements.
e. Review digests of officers’ memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual liquidation program.
f. Relate collateral values to outstanding debt.
g. Compare interest rates charged with the interest-rate schedule, and determine that the terms are within established guidelines.
h. Compare the original amount of loan with the lending officer’s authority.
i. Analyze secondary support afforded by guarantors and endorsers.
j. Ascertain compliance with the bank’s established commercial loan policy.
k. Determine whether public officials are receiving preferential treatment and
whether there is any correlation between loans to public officials and deposits they may control or influence.

14. For selected loans, check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness or suspected of having additional liability in other loan areas.

15. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.

16. Prepare “Report of Loans Supported by Bank Stock,” if appropriate. Determine if a concentration of any bank’s stock has been pledged.

17. Determine compliance with laws, rulings, and regulations pertaining to commercial lending by performing the following steps.
   a. Lending limits.
      • Determine the bank’s lending limits as prescribed by state law.
      • Determine advances or combinations of advances with aggregate balances above the limit, if any.
      • Obtain a listing of loans to affiliates.
      • Test-check the listing against the bank’s customer liability records to determine its accuracy and completeness.
      • Obtain a listing of other covered transactions with affiliates (i.e., purchase of loans from affiliates or acceptance of affiliates’ securities as collateral for loan to any person).
      • Ensure that covered transactions with affiliates do not exceed the limits of section 23A and Regulation W.
      • Ensure that covered transactions with affiliates meet the appropriate collateral requirements of section 23A and Regulation W.
      • Determine that low-quality loans have not been purchased from an affiliate.
      • Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
      • Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
   c. 18 U.S.C. 215, Receipt of Commission or Gift for Procuring Loans.
      • While examining the commercial loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
      • Investigate any such suspected situation.
      • While examining the commercial loan area, determine the existence of any loans in connection with any political campaigns.
      • Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.
   e. 12 U.S.C. 1972, Tie-In Provisions. While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon—
      • obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service;
      • the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit. (See “Tie-In Considerations of the BHC Act,” section 3500.0 of the Bank Holding Company Supervision Manual.)
   f. Insider lending activities. The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
• Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests. While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
  — test the accuracy and completeness of information about commercial loans by comparing it with the trial balance or loans sampled;
  — review credit files on insider loans to determine that required information is available;
  — determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
  — determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
  — determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections;
  — if prior approval by the bank’s board was required for a loan to an insider, determine that such approval was obtained;
  — determine compliance with the various reporting requirements for insider loans;
  — determine that the bank has made provisions to comply with the public disclosure requirements of Regulation O; and
  — determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years after the dates of the requests.

  — Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
  — Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

• 12 U.S.C. 1828(v), Loans Secured by Bank Stock.
  • While examining the commercial loan area, determine the existence of any loans or discounts that are secured by the insured financial institution’s own stock.
  • In each case, determine that the chief executive officer has promptly reported such fact to the proper regulatory authority.

• 12 U.S.C. 83 (Rev. Stat. 5201), made applicable to state member banks by section 9, para. 6, of the Federal Reserve Act (12 U.S.C. 324), Loans Secured by Own Stock (see also 3-1505 in the Federal Reserve Regulatory Service).
  • While examining the commercial loan area, determine the existence of any loans secured by the bank’s own shares or capital notes and debentures.
  • Confer with the examiner assigned to investment securities to determine whether the bank owns any of its own shares or its own notes and debentures.
  • In each case in which such collateral or ownership exists, determine whether the collateral or ownership was taken to prevent loss on a debt previously contracted (DPC) transaction.

• Regulation U (12 CFR 221). While reviewing credit files, check the following for all loans that are secured directly or indirectly by margin stock and that were extended for the purpose of buying or carrying margin stock:
  • Except for credits specifically exempted under Regulation U, determine that the required Form FR U-1 has been executed for each credit by the customer and that it has been signed and accepted by a duly authorized officer of the bank acting in good faith.
  • Determine that the bank has not extended more than the maximum loan value of the collateral securing such credits, as set by section 221.7 of Regulation U, and that the margin requirements are being maintained.
j. Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 1010), Retention of Credit Files.
   • Determine compliance with other specific exceptions and restrictions of the regulation as they relate to the credits reviewed.
   • Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of credit, the nature and purpose of the loan, and the date thereof. (See 31 CFR 1010.410.) (Loans secured by an interest in real property are exempt.)

18. Determine whether the consumer compliance examination uncovered any violations of law or regulation in this department. If violations were noted, determine whether corrective action was taken. Test for subsequent compliance with any law or regulation so noted.

19. Perform the appropriate procedural steps in “Concentration of Credits” section.

20. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
   a. delinquent loans
   b. violations of laws and regulations
   c. loans not supported by current and complete financial information
   d. loans on which collateral documentation is deficient
   e. concentrations of credits
   f. criticized loans
   g. inadequately collateralized loans
   h. Small Business Administration or other government-guaranteed delinquent or criticized loans
   i. transfers of low-quality loans to or from another lending institution
   j. extensions of credit to principal shareholders, employees, officers, directors, and related interests
   k. other matters regarding the condition of the department

21. Inform the Reserve Bank of all criticized participation loans that are not covered by the Shared National Credit Program. Include the names and addresses of all participating state member banks and copies of loan classification comments. (This step deals with loans that deteriorated subsequent to participation and does not duplicate step 7a, which deals with transfers of loans that were of low quality when transferred).

22. Inform the Reserve Bank of those loans eligible for the Shared National Credit Program that were not previously reviewed. Include the names and addresses of all participants and the amounts of their credit. (This step applies only to credits for which the bank under examination is the lead bank.)

23. Evaluate the function for—
   a. the adequacy of written policies relating to commercial loans,
   b. the manner in which bank officers are operating in conformance with established policy,
   c. adverse trends within the commercial loan department,
   d. the accuracy and completeness of the schedules obtained from the bank,
   e. internal control deficiencies or exceptions,
   f. recommended corrective action when policies, practices, or procedures are deficient,
   g. the competency of departmental management, and
   h. other matters of significance.

24. Update the workpapers with any information that will facilitate future examinations.
WHAT’S NEW IN THIS REVISED SECTION

This section includes revised procedures governing the use of statistical sampling in the review of commercial and industrial loans and commercial real estate loans during safety and soundness examinations of community banking organizations (CBOs). The “Core” bucket and its sub-buckets have been amended to provide greater flexibility to risk focus the loan review process. Instead of the loan review “Core” bucket requirements of the ten largest, ten large problem, five insider, and five new borrower exposures, the revised procedures require that the “Core” bucket loan review consist of up to a total of 25 borrowers. The “Core” bucket is to consist of appropriate representation of the largest, largest new, largest problem, and largest insider credits, respectfully, to be determined based on the examiner’s judgment of where the examination should be appropriately risk-focused.

A statistically based sampling approach to loan reviews can serve as an alternative to the traditional “top-down” loan-coverage approach when scopeing certain bank examinations. In some cases, sampling requires fewer loans to be reviewed than would be required using the minimum-coverage approach, while in other cases it requires more. The results depend heavily on the number of commercial and industrial loans (C&I) and commercial real estate (CRE) loans and the structure of the loan portfolio. Asset size and the level of tier 1 capital also affect the sample methodology. Additionally, sampling may require fewer loans to be reviewed than under the traditional method in well-managed institutions whose portfolios are not dominated by a small number of relatively large exposures.

Significantly, sampling may provide examiners with a broader perspective on the accuracy of the bank’s classification process than is typically provided by the traditional minimum-coverage target approach. The sampling approach should be directed towards banks currently having a CAMELS composite and asset-quality rating of 1 or 2 and also assets of $10 billion or less. (See section 2086.1.) The statistical sampling approach is not recommended, however, for use at de novo banks or other banks with unusually high or low capital ratios. Reserve Banks wishing to experiment with the sampling program at organizations with CAMELS or asset-quality ratings of 3 or above or at larger organizations should contact Board staff so that the examiner’s experience that is gained in this area may be used to develop alternative sampling procedures for these other types of institutions.

See this manual’s section 2084.1 for the examiner loan-sampling requirements for state member bank and credit-extending nonbank subsidiaries of banking organizations with $10–$50 billion in total consolidated assets.

CONCEPT AND STRUCTURE OF THE SAMPLING TECHNIQUE

The sampling approach builds on procedures examiners currently use to evaluate loan portfolios, which require coverage of a similar “core” group of exposures. The principal difference relates to the manner in which loans outside the core group are selected for review. Under the traditional approach, the largest remaining loans are selected until a desired coverage ratio is achieved. Using sampling, the remaining noncore loans are grouped into several strata, or buckets, based on the size of the borrowing relationship. Loans are randomly selected from each of these buckets proportionate to the dollar value of each bucket relative to the total noncore portfolio. The total number of sampled loans required is determined by the number and size distribution of loans in the bank’s portfolio.

The sampling approach is an effective means to determine if the examiner can rely on the bank’s classification process or whether the examiner must determine the level of classifications by traditional means. Although sampling may, in some cases, require examiners to review

1. The term “loans” encompasses all sources of credit exposure arising from loans and leases, including guarantees, letters of credit, and other loan commitments. The sampling methods described in this section select “loans” for review by obligor or related group of obligors (where identifiable). Thus, in the sampling procedures, the term “loan” refers to total credit exposure to an individual obligor or related group of obligors. As this implies, loan amounts referred to in this section should be determined on an exposure basis, including all outstanding notes and commitments.
more loans than required by the traditional loan-coverage approach, sampling is more likely to detect problems among smaller loans and will provide a broader perspective of the bank’s classifications across the entire portfolio.

In most cases, examiners should expect to find very few misclassifications within the sampled buckets, since those segments would exclude any credits that the bank’s internal procedures have identified as weak and those that the examiner has otherwise identified for specific review (the “core” loans). When the examiner’s classifications agree with the bank’s internal loan classifications, then internal classification totals can be relied upon in calculating the total and weighted asset-classification ratios. However, if misclassifications are found within the sample, internal classifications may underestimate the true extent of problem loans, and the examiner must make adjustments to estimate the actual extent of problems. To make that estimate, the rate of misclassification is applied to the remaining loans in the sampled bucket to derive an estimate of other problems that the examiners would likely find if all the loans were read. This extrapolated amount of problem loans is then added to the total of specifically identified problems to evaluate the significance of credit weaknesses at the institution. Depending on the severity of misclassifications and the magnitude of problems specifically identified, expansion of the examination scope will probably be necessary to better assess the accuracy of loan grading.

Specific Procedures

Using electronic loan files provided by the bank (for example, those loan files available in the Automated Loan Examination Review Tool (ALERT) format) and the System’s loan-sampling software, examiners are able to construct a variety of core and noncore borrower groups. (See table 1.) The “core” group—bucket 1—consists of several categories of loans that examiners have traditionally reviewed and would continue to review using sampling. These core borrowers include, for instance, the largest exposures and certain large problem or insider loans. The sampling program also permits examiners to select any additional borrower (or borrowers) for review based on the examiner’s experience and judgment. These individually selected loans would be placed in the “examiner-selected” group—bucket 2. All loans contained in buckets 1 and 2 would be individually reviewed, not sampled, and examiners would not extrapolate their findings to other loans. All remaining internally identified problem borrowers are included in a separate “problem” group—bucket 3—designated as “discuss only”; these borrowers are not incorporated into the commercial-loan-coverage ratio nor are their findings extrapolated to other loans within the same bucket. However, any borrower in the “problem” group—bucket 3—may be individually selected for review by the examiner. Additionally, if the number of “discuss-only” borrowers in the “problem” group—bucket 3—is large, the examiner may select a number of borrowers to be randomly sampled.

The remaining noncore categories represent “pass” or creditworthy loans, grouped by the size of the borrowing relationship. Buckets 4 through 8 are composed of loans to be randomly sampled. The number of loans selected from buckets 4 through 8 is proportional to its total dollar value relative to the total noncore portfolio. Thus, if loans in a particular category represent 30 percent of the bank’s total noncore exposures, then approximately 30 percent of the number of sampled credits will be drawn from that category. A “custom” group—bucket 4—is available for examiners to target specific borrowers meeting a variety of selection criteria. Buckets 5 through 8 represent all remaining loans in the commercial loan portfolio, segregated by size relative to the bank’s tier 1 capital and loan-loss reserve. The results of examiners’ findings for these sampled buckets would be extrapolated to the entire group of borrowers not reviewed.

**Determination of Reliance on a Bank’s Internal Classifications**

Once the commercial loans have been selected for review, examiners are expected to use existing credit-analysis techniques as described in this manual to evaluate the borrower’s creditworthiness, determine the level of adverse classifications, and identify any discrepancies with the bank’s internal classifications.

In performing their analysis of the accuracy of classified credits, examiners should start with the assets internally classified by the bank’s rating system and add any pass credits that were misclassified by the bank and downgraded to a classified status during the examiner’s credit
These classified assets are the key component for a "base" weighted asset-classification ratio. Under the sampling program, the "base" weighted asset-classification ratio must be adjusted upward (extrapolated) to the extent misclassifications were uncovered within the randomly sampled loan buckets. The resulting extrapolated weighted asset-classification ratio is necessary to account for the likelihood that misclassifications uncovered from the sampled loans represent only a small portion of the total misclassified loans throughout the rest of the portfolio that was not reviewed. The extrapolation...
lated value provides examiners with a more comprehensive picture of the magnitude of the institution’s credit problems.

In many cases, there will be no disagreements between the examiner’s credit analysis and the bank’s internal classifications. Consequently, there will be no difference between the weighted asset-classification ratio and the extrapolated ratio. Generally, no additional sampling would be necessary. However, other types of credit-administration weaknesses may be discovered that warrant additional review and, as a result, an additional sample of loans may be selected. In this case, the number of loans selected is left to the examiner’s judgment.

In other cases, either minor or significant disagreements will require examiners to more fully investigate the reliability that can be placed on the internal classifications. When there are only a minor number of disagreements within the sampled loans, examiners should be aware that those seemingly minor disagreements may translate into fairly large differences between the base and extrapolated problem-loan figures. When those differences are significant enough that they would alter an examiner’s overall conclusion regarding the accuracy of the bank’s loan-grading system, follow-up work is required. In particular, significant differences between the “base” and extrapolated weighted classification ratios should raise concerns as to whether the institution is systematically misreporting credit problems.

For example, a disagreement may arise between an examiner’s analysis and the bank’s internal classification of a single credit that was drawn from the sample buckets. Assuming a “base” weighted asset-classification ratio of 4 percent, the disagreed-upon sample loan, when extrapolated, could increase the weighted asset-classification ratio to 7 percent. When the difference between the “base” and extrapolated ratios is not material, it would not be necessary to select additional loans if the ratio difference would not alter the examiner’s conclusions regarding the condition of the loan portfolio.

In another situation, there may be disagreement between the examiner’s analysis and the bank’s internal rating on two small-dollar loans sampled from bucket 8 (borrower exposures between 0.1 percent and 1 percent of tier 1 capital plus the allowance for loan and lease losses (ALLL)). In this example, the bank’s “base” weighted asset-classification ratio is calculated to be 3 percent. Individually, these loans do not play a significant role in the level of the “base” ratio. However, when these same disagreed-upon classifications are extrapolated, the result is a significant difference between the “base” ratio and the extrapolated classification ratio of 18.5 percent. This can occur when there are only four loans that are sampled from bucket 8, and the two loans in disagreement account for 40 percent of the dollar volume of the sampled loans. Through extrapolation, 40 percent of the remaining bucket 8 loans would be considered classified, thereby increasing the extrapolated ratio to a level that may cause an examiner to question the reliability of the bank’s classification system.

In the preceding example, to rule out the possibility that misclassifications were identified as a matter of chance, examiners should expand their loan coverage by pulling an additional sample from the bucket in which the misclassifications were identified. If the examiner selected four additional borrowers from bucket 8 to review and no new misclassifications were found, the extrapolated ratio would decline to 11 percent. As the base and extrapolated ratios move much closer together, the examiner may have greater confidence in the bank’s internal loan-rating system and place greater reliance on bank-identified problems in evaluating the bank’s asset quality. However, when reviewing the additional four back-up loans, if the examiner found one new misclassification, then the extrapolated ratio would be 15 percent. In these cases, it is highly unlikely that the misclassifications were caused by chance, and it is probable that a systematic problem exists in the ability of bank management to correctly risk-rate their commercial loans. Consequently, examiners should closely review the misclassifications and determine if any pattern exists, such as loans generated from a specific originating office or loan officer, or by type of credit extension. In these cases, internal classifications should be deemed unreliable and further credit review should be performed to evaluate the full extent of problem assets. That expanded review should be consistent with the minimum loan coverage of 55 percent to 65 percent or more, as required for banks posing supervisory concerns. (See SR-94-13, which is partially superseded by SR-14-4 and section 2086.1.)
Factoring Sampling Results into Examination Findings

An evaluation of a bank’s asset-quality rating within CAMELS should take into account both financial and managerial factors as detailed in SR-96-38. When using the sampling approach, the extrapolated weighted classification ratio is to be used as a tool for assessing the extent to which examiners may rely on the bank’s internal classifications. To the extent loan sampling indicates that the bank’s internal classifications are not reliable, the severity of that fundamental risk-management weakness should be factored into the asset-quality rating as well as the management and the risk-management rating. Results of the statistical loan sampling should be documented in the examination report. As for needed documentation, the traditional weighted classified asset ratio should appear in the open section of the examination report, and the extrapolated ratio should appear in the confidential section of the report. In cases where an expanded review was called for, the initial “base” classified asset ratio should also be noted, along with the final classified asset ratio resulting from the expanded review. (See the examination procedures, section 2082.3, for a detailed description of the required information.)

Discussions with Management Regarding the Sampling Procedures

The sampling procedure produces an extrapolated estimate of weighted classified assets. The principal use of extrapolation is to provide an estimate of what the weighted asset-classification ratio would be for the entire loan portfolio. The extrapolated ratio will differ significantly from the traditional weighted asset-classification ratio when errors in the bank’s internal classification system are detected through random sampling. Examiners may want to discuss (1) how the errors led to a widening of the loan-review scope and (2) the degree of errors found in the loans pulled beyond the initial sample. Any uncertainties regarding the integrity of the institution’s classification system or the extent of its asset-quality problems uncovered from the use of sampling (that resulted from rating errors) should be discussed with management and included in the examination report, along with any necessary follow-up work required to gain more certainty. Those discussions may center on the number of errors uncovered in sampled and core loans.
Loan-Sampling Program for Certain Community Banks
Examination Objectives
Effective date May 2003
Section 2082.2

1. To evaluate and improve, using statistical sampling, the comprehensiveness and effectiveness of the examination’s credit review of a bank’s loan portfolio.
2. To better evaluate, using statistical sampling, a bank’s internal credit-review process and also the effectiveness of its credit risk-management practices.
3. To assess the accuracy of the bank’s internal credit classifications.
Loan-Sampling Program for Certain Community Banks
Examination Procedures
Effective date May 2003

Section 2082.3

1. Using the Federal Reserve System’s loan-sampling software and the electronic files provided by the bank under examination (for example, those in the Automated Loan Examination Review Tool (ALERT) format), develop the bank’s core and sampled borrower groups. (See table 1 in section 2082.1.) Follow the “Specific Procedures” of section 2082.1 for selecting loans for review, including those that are to be randomly sampled.

2. Use the bank examination credit-analysis techniques in this manual to—
   a. evaluate the borrower’s creditworthiness,
   b. determine the level of adverse classifications, and
   c. identify any discrepancies within the bank’s internal classifications.

3. Continue to follow the “Specific Procedures.”
   a. Be especially alert when reviewing loan misclassifications to detect patterns of misclassifications (for example, whether the misclassified loans were generated by a specific originating office or loan officer).
   b. When misclassifications are identified, be prepared to expand the scope of the loan review.
   c. Ascertain whether the bank is systematically misreporting credit problems.

4. When it is determined that the bank’s internal classifications are unreliable, factor the severity of this risk-management weakness into the asset-quality, management, and risk-management ratings.

5. Include the following information in the examination report (for instance, the information illustrated below):
   a. Report the traditional weighted asset-classification ratio in the open section of the examination report.
   b. Report the extrapolated weighted asset-classification ratio, the traditional asset-classification ratio, and the number of errors found in the sampled buckets in the confidential section of the report.
   c. If an expanded sample was undertaken because of misclassification errors, report in the confidential section the number of additional loans selected, any errors from the expanded sample, and the adjusted weighted and extrapolated asset-classification ratios.

The illustration below is a sample table format that may be used to highlight the sampling findings within the indicated sections of the examination report.

Loan-Sampling Results—Items to Be Reported in the Examination Report

| Open section                                      |                 |
| Traditional weighted asset-classification ratio | %               |

Confidential section

| Extrapolated weighted asset-classification ratio | % |
| Number of borrowers sampled                     |   |
| Number of errors in sampled buckets             |   |
| Expanded-sample information                     |
| Number of sampled borrowers in expanded review   |
| Number of errors in expanded review             |
| Adjusted weighted asset-classification ratio     | % |

Page 1
LOAN SAMPLING METHODOLOGY

Reserve Banks will establish the annual loan sampling objective during the supervisory planning process. The annual sampling objective should provide coverage of material exposures, including those in the retail segments. Reserve Banks should plan on conducting at least two loan quality reviews during the annual supervisory cycle of SMBs with $10–$50 billion in total consolidated assets.

Each review should focus on one or more material commercial loan segment exposures by Call Report loan type and, in total over the annual cycle, should cover the four highest concentrations for commercial credits in terms of total risk-based capital for any Call Report loan type from Schedule RC-C. Loan segments that generate substantial revenues are generally likely to entail higher risk. To the extent that examiners can determine that a loan category contributes 25 percent or more to annual revenues, examiners should sample these segments. Examiners should also sample other loan segments that they or the bank’s internal loan review have identified as exhibiting high-risk characteristics. Such risk characteristics include liberal underwriting, high levels of policy exceptions, high delinquency trends, rapid growth, new lending products, concentrations and concentrations to industry, significant levels of classified credits, or significant levels of Special Mention credits. In addition to these risk-focused samples, a sample of loans to insiders must be reviewed. Annual loan-sampling coverage by examiners should take into consideration the severity of the asset quality component rating, the effectiveness of the internal loan

1. A loan portfolio or portfolio segment is considered material when the portfolio or segment exceeds 25 percent of total risk-based capital or contributes 25 percent or more to annual revenues. When calculating a concentration of credit in a loan portfolio or portfolio segment, total risk-based capital refers to tier 1 capital plus the allowance for loan and lease losses. For the purposes of this section’s discussion, the term “banking organizations” does not include savings and loan holding companies.

2. Commercial loan segments include commercial and industrial (C&I) loans, 1–4 family construction, other construction loans, multifamily loans, farm loans, non-farm non-residential owner occupied, and non-farm non-residential other loans. Retail loan segments include first-lien mortgages, closed-end junior liens, home equity lines of credit (HELOCs), credit cards, automobile loans, and other consumer loans.

3. The 25 percent threshold should be based on internal MIS and may not be applicable or available in all instances. For the purposes of this guidance, annual revenue equals net interest income plus noninterest income.

4. Federal Reserve examiners must test and evaluate Regulation O compliance annually.
review program, the results of internal loan portfolio stress testing, and current asset quality financial trends.

During the examination scoping phase, Reserve Bank staff should analyze the results of recent loan review reports or audits prepared for an institution’s internal use and the Reserve Bank’s most current assessment of credit-risk management to help establish the size and composition of loans to be selected for review. An institution’s internal loan review program should achieve substantial coverage beyond the examiners’ annual judgmental sample of material loan portfolios. Examiners should review the findings and recommendations of the institution’s internal loan review program to help identify areas of risk. In selecting loans from each segment of the loan portfolio to review, examiners should include a selection of the largest loans, problem loans (past due 90 days or more, nonaccrual, restructured, Special Mention, watch list, or internally classified loans), and newly originated loans. Examiners should ensure the sample selection includes robust coverage of classified, Special Mention, and watch credits. At a minimum, loans selected for review from commercial loan segments should represent 10 percent of the committed dollar amount of credit exposure within the loan segment.

Sample sizes should be increased beyond the 10 percent minimum, based on examiner judgment, for segments when the examination-scoping process or the internal loan review program has identified

1) deficiencies with credit-risk management and administration practices,
2) loan growth that has been unusually high,
3) credit quality or collateral values that have been adversely affected since the prior review by volatile local or national economic conditions, or
4) unreliable internal credit-risk grading.

Conversely, sample sizes should be based on the 10 percent minimum if

1) previous examinations concluded that internal loan review and credit-risk identification is effective,
2) internal loan review has reviewed a loan segment within the last 12 months and noted no material weaknesses, and
3) the examination-scoping process reveals no significant credit-risk management issues.

In general, the lower range of a 10 percent sampling of each segment or the entire commercial portfolio would be acceptable when all aspects of credit risk indicate low and stable risk.

Examiners should determine classification amounts for retail credits using the Uniform Retail Classification Guidance (SR-00-8, “Revised Uniform Retail Credit Classification and Account Management Policy”). Annually, examiners should focus on one or more material retail loan segment exposures by Call Report loan type. Examiners should determine the appropriate sample of retail loans from material segments based on risk to be tested for compliance with internal credit-administration policies and underwriting standards. While there is no minimum coverage expectation for retail portfolios or segments, the goal of sampling is to assist examiners in making an informed assessment of all aspects of retail credit-risk management. If applicable, examiners should evaluate and test secondary market origination and servicing practices and quality assurance programs. Examiners should also sample other retail loan segments, as needed, from segments the examiners or internal loan review identify as exhibiting high-risk characteristics such as liberal underwriting, high delinquency trends, rapid growth, new lending products, or significant levels of classified credits.

DOCUMENTATION OF LOAN SAMPLING ANALYSIS AND METHODOLOGY

Examiners should discuss their analysis and objectives for achieving loan sampling coverage with Board staff during the annual supervisory planning process. Upon reaching a consensus with Board staff, the analysis and methodology should be retained in workpapers and documented in the supervisory plan. Further, examiners should document their loan sample selection methods in scoping memoranda and in the confidential section of the report of examination. The required workpaper documentation of the commercial loan coverage calculation should be based on total loan commitments and should generally exclude loans reviewed outside of the Reserve Bank’s supervisory plan when a detailed analysis of the loans by an examiner and an assessment of credit-risk management were not
performed. Review of syndicated loans and participations, such as those from the Shared National Credits (SNCs) annual review, should only be included in the coverage ratio if Reserve Bank staff reviewed the credit-risk management aspects of the credit (for example, adherence to underwriting policies) and these findings are included in the examiner’s assessment of overall credit-risk management practices. Examiners should continue to follow the SNC grading guidance.  

FOLLOW-UP EXPECTATIONS FOR EXAMINATIONS WITH ADVERSE FINDINGS

Examiners should generally consider a bank’s internal risk-rating system to be less reliable when examiner downgrades equal 10 percent of the total number of loans reviewed, or 5 percent of the total dollar amount of loans and commitments reviewed. When a bank’s risk rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the bank’s ALLL and capital. In such situations, examiners should direct the bank to take corrective action to validate its internal ratings and to evaluate whether the ALLL or capital should be increased. The Reserve Bank will follow-up with the bank to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. All follow-up actions on adverse findings should be discussed with Board staff.

5. Refer to SR-77-377, “Shared National Credit Program.”
6. A credit-risk grading difference is considered a downgrade when a) a risk rating is changed by the examiner from an internal Pass rating to Special Mention or classified category, b) a risk rating is changed by the examiner from Special Mention to a classified category, or c) a risk rating is changed by the examiner within the classified categories.
Loan Coverage Examination Requirements for Community State Member Banks with $10 Billion or Less in Total Consolidated Assets
Effective date October 2015

Section 2086.1

WHAT’S NEW IN THIS REVISED SECTION

This section is revised to remove references to SR-02-19, replace them with references to section 2082.1, remove references to SR-14-7 and reference this section, and to delete and reserve footnote 6.

This guidance sets forth the loan-sampling expectations for Federal Reserve led examinations of community state member banks and clarifies when statistical sampling is expected to be used. In addition, the guidance establishes minimum coverage expectations for judgmental samples for full-scope and asset-quality target examinations. Examiners are expected to select for review a sample of loans that is of sufficient size and scope to enable them to reach sound and well-supported conclusions about the quality of, and risk management over, a community state member bank’s lending portfolio.

In selecting a sample of loans for review, examiners should be guided by the following requirements.

COMMERCIAL AND INDUSTRIAL AND COMMERCIAL REAL ESTATE LOANS

For community state member banks with CAM-ELS composite and Asset Quality ratings of “1” or “2” that have not materially changed the composition of their loan portfolios or their credit administration practices since the prior examination, and whose most recent overall SR-SABR rating is not “1D,” “1F,” “2D,” or “2F,” examiners are expected to use the statistical loan-sampling procedures outlined in section 2082.1.8 Examiners are not expected to supplement statistical samples with additional loans to reach the specified minimum coverage ratios discussed below for judgmental samples.6

For all other community state member banks, examiners should draw a judgmental sample that includes a selection of large, insider, problem, watch, renewed, and new credits. The sample should mainly be drawn from the bank’s primary lending business lines, new business lines, and out-of-area loans or highly specialized lending or leasing portfolios. Coverage targets should factor in the bank’s current asset quality rating and credit risk management assessment. More specifically, for community state member banks with “weak” credit risk management practices, with asset quality component ratings of “3 or worse,” or where SR-SABR ratings of “D” or “F” raise questions about loan quality, coverage should be 40 percent or more. Community state member banks with strong or acceptable credit-risk management practices and asset quality component ratings of “1” or “2” should have 20 to 30 percent coverage. This is illustrated further in the table below.

It may be necessary to expand the sample when using either statistical or judgmental sampling in situations where there are several differences in credit ratings between those assigned by examiners and bank management. To expand the sample when using the statistical sampling methodology, examiners should follow the guidance discussed in section 2082.1. When using judgmental sampling, examiners should gener-

1. With the issuance of this guidance, SR-94-13, “Loan Review Requirements for On-site Examinations,” is superseded only for Federal Reserve led examinations of community state member banks.
2. A loan review coverage ratio, or “coverage,” should be calculated by dividing the dollar volume of commercial and industrial and commercial real estate loans reviewed during the examination by a bank’s total dollar volume of such loans in the bank’s loan portfolio. Credit exposures arising from trading and derivatives activities should not be included in the coverage ratio.
3. For the purposes of this section 2086.1, the term “loans” includes all sources of credit exposure arising from loans and leases. Such exposure includes guarantees, letters of credit, and other loan commitments. Both funded and unfunded commitments should be considered when assessing loan exposure.
4. For additional information on SR-SABR, see SR-06-2, “Enhancements to the System’s Off-Site Bank Surveillance Program,” this manual’s section 1020.1.
5. For section 2086.1, “Commercial and Industrial and Commercial Real Estate Loans” include all non-consumer related loan categories.
6. Footnote reserved.
7. Problem loans are comprised of past due loans, nonaccrual loans, impaired loans, renegotiated or restructured loans, loans internally criticized or classified by the bank, and loans that were classified at the previous examination.
8. Together, these credits constitute the “core” loan categories.
ally consider a community state member bank’s internal risk-rating system to be unreliable when examiner downgrades 9 are 10 percent or more of the total number of credit facilities reviewed, and 5 percent or more of the total dollar amount of loans reviewed. When a bank’s risk-rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the bank’s allowance for loan and lease losses (ALLL) and capital. In such situations, examiners should direct the bank to promptly take corrective action to validate its internal ratings and to evaluate whether the ALLL or capital should be increased. The Reserve Bank should follow up with the bank to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up will depend on the nature and severity of problems identified and typically should be no more than six months after the Reserve Bank notifies the bank of the deficiencies.

**RETAIL CONSUMER LENDING**

Retail consumer lending involves a large number of relatively homogenous, small-balance loans such as installment loans, credit card receivables, home equity lines of credit (HELOCs), and residential mortgages. The supervisory review and classification of retail consumer loans should be carried out in accordance with the procedures set forth in the *Commercial Bank Examination Manual* and SR-00-8, “Revised Uniform Retail Credit Classification and Account Management Policy” (see section 2130.1, “Consumer Credit”) and will generally be limited to past due and non-performing assets. 10

When a bank has a concentration (defined as more than 25 percent of the bank’s tier 1 capital plus ALLL) in retail consumer loans, examiners should include in their examination scope a review of the retail lending program, its underwriting standards and policies, and related risks and controls. Examiners should also consider sampling a portion of credits in those segments (for instance, residential mortgages or HELOCs) of the bank’s retail loan portfolio with a high concentration in order to assess risks and the adequacy of underwriting, internal controls, and credit risk management practices. A judgmental sample size should be used that is commensurate with concentration and credit risks and sufficient for the examiner to assess the quality and risks of the portfolio.

**Loan Coverage of Commercial and Industrial and Commercial Real Estate Loans in a Target Examination**

The Federal Reserve may deem it necessary to conduct a target examination prior to the next statutorily required full-scope examination. 11 Such target examinations should be risk-focused in accordance with existing guidance, including SR-97-25, “Risk-Focused Framework for the Supervision of Community Banks” (see section 1000.1, “Examination Strategy and Risk-Focused Examinations”). Any loan coverage goals should be determined using the judgment and discretion of the supervision staff involved in establishing the scope of the examination. For banks with a “3” composite rating, loan coverage of 30 percent or more should be achieved at a target examination that includes a review of asset quality. For banks with a “4” or “5” composite

---

9. A credit risk grading difference is considered a downgrade when: 1) a risk rating is changed by the examiner from an internal Pass rating to Special Mention or classified category, 2) a risk rating is changed by the examiner from Special Mention to a classified category, or 3) a risk rating is lowered by the examiner within the classified categories, including a split classification.

10. See section 2130.3, “Consumer Credit (Examination Procedures).”

11. SR-85-28, “Examination Frequency and Communicating with Directors,” indicates targeted examinations will be conducted when deemed necessary by the Reserve Bank between statutorily required examinations (refer to section 1000.1). The Federal Reserve’s examination frequency requirements for state member banks are in Regulation H (12 CFR 208.64).
rating, loan coverage of 40 percent or more should be achieved at the target examination.

Loan coverage may consist of updates to credits reviewed and classified or downgraded at the previous examination and any credit originated or extended since the previous examination. The examination results should be used to update the asset quality and credit-risk management assessment and inform the level of coverage needed at the next full-scope examination. Deteriorating asset quality or uncorrected credit-risk management deficiencies noted at the target examination would generally necessitate expanded coverage for the next full-scope examination.

Documentation of Loan Review Coverage

The scope of loan coverage and the loan-sampling procedures used in the examination process should be documented within examination workpapers and the examination report. In particular, examiners should ensure that the composition and volume of the reviewed loans are documented within the examination report. This documentation should include the core loan categories that were included in the sample, the loan portfolio segments that were the focus of the review, and cutoff values that were used in deciding which loans are included in the sample. Documentation supporting the establishment of the sample should be included in the workpapers.

12. See section 1030.1, “Workpapers.”
Off-site Review of Loan Files

Effective date November 2020

Section 2088.1

State member banks with less than $100 billion in total assets, in the community banking organization and regional banking organization supervision portfolios, have the option to have Federal Reserve examiners review loan files off site during full-scope or target examinations. Federal Reserve examiners may conduct an off-site loan review provided the state member bank is amenable to such an arrangement, and the bank is able to securely send legible and sufficiently comprehensive loan information to the Reserve Bank.

In the past, the Federal Reserve’s off-site examination work focused on financial performance analyses and the review of bank policies, procedures, and certain bank internal reports. With technological advancements, such as secure data transmission and electronic file imaging, examiners have the ability to collect and review loan file information off site without compromising the effectiveness of the examination process. Therefore, Federal Reserve examiners may use the off-site loan review program when a state member bank has communicated its willingness to participate in the program and can appropriately image and send its loan documents to the Reserve Bank in a secure manner.

PROCESS FOR DETERMINING WHETHER A STATE MEMBER BANK MAY PARTICIPATE IN THE OFF-SITE LOAN REVIEW PROGRAM
