## Flow of Funds Summary Statistics Second Quarter 1999

Debt of domestic nonfinancial sectors slowed to a 5-1/4 percent annual rate in the second quarter of 1999, following an upward-revised increase of 7-3/4 percent in the first quarter. Deceleration was widespread across the major sectors.

The paydown of federal debt picked up a bit in the second quarter; since its peak in late 1997, the amount of federal debt outstanding has dropped more than \$100 billion, or about 2-1/2 percent.

The debt of nonfederal sectors grew at about a 7-1/2 percent rate, somewhat below the robust pace of the first quarter. Growth of household debt moderated to an 8-1/2 percent rate, owing to a slowdown in growth of consumer credit to a 4 percent rate. Business debt decelerated to a 7-3/4 percent rate, as growth of business loans ebbed. State and

local government debt rose at a 3 percent pace, considerably slower than the rate in the first quarter.

The level of domestic nonfinancial debt outstanding was \$16.8 trillion at the end of the second quarter of 1999. Debt of nonfederal sectors was \$13.1 trillion, and federal debt was \$3.7 trillion.

Figures for the growth and level of debt are found in tables D.1 through D.3. Tables that show financial flows, amounts outstanding, and selected sector balance sheets are included in the remaining pages of this release.

## Flow of Funds Accounts, Second Quarter 1999

---

This publication presents the flow of funds accounts for 1999:Q2.

**Data revisions and other changes.** The statistics shown in these tables reflect use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

1. Seasonal factors for quarterly financial flows have been recalculated for the period from 1989:Q1 onward. The factors were generated using the Statistics Canada X-11-ARIMA/88 seasonal adjustment program. Seasonal factors for total consumer credit (tables F.222 and L.222) were recalculated for the period of 1952:Q1 onward. The seasonal factors for this particular instrument are derived from the seasonally adjusted figures published in the Federal Reserve Board's G.19 statistical release.

2. Net bond issuance by nonfarm nonfinancial corporate business (tables F.102 and L.102) has been revised up for the period since 1995:Q1 to reflect new information on retirements of bonds issued under the Securities and Exchange Commission's Rule 144(a). The source for retirements of corporate bonds is Bloomberg Financial Markets.

3. Revisions to the rest of the world sector (tables F.107 and L.107) reflect new estimates of the balance of payments from the Department of Commerce. The revisions are detailed in the July 1999 *Survey of Current Business*. The revisions reflect preliminary results from the benchmark survey conducted by the Department of the Treasury and the Federal Reserve System of the stock of the U.S. portfolio investment in long-term foreign securities as of the end of 1997.

4. There have been two revisions to the data for state and local government employee retirement funds (tables F.120 and L.120). Beginning with statistics for 1987:Q3, foreign stock and bond assets and assets in trusts have been reallocated from miscellaneous assets into their respective instrument categories based on

new source data from the Public Pension Coordinating Council. In addition, new data from the Census Bureau provide benchmarks for 1992 through 1997 and revisions to quarterly figures for 1996:Q1 through 1998:Q4.

5. The market value of equity of nonfinancial corporations has been revised up, and the market value of equity of financial corporations has been revised down, for the period since 1969:Q1 (table L.213, lines 2 and 4, respectively). The revision does not affect the total market value of corporate equity outstanding (table L.213, line 1) or net issuance (table F.213).

### **Explanatory notes for tables D.1, D.2, and D.3.**

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

Outstanding<sub>t</sub> = Outstanding<sub>t-1</sub> + Flow<sub>t</sub> + Discontinuity<sub>t</sub>  
 where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated in the following manner:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of "discrepancies" for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies

relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication--the Z.1 release--is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

Data from the flow of funds accounts are also available on 3-1/2 inch diskettes. The diskettes contain quarterly data beginning in 1952, organized in files that correspond to the tables published in this release. One diskette contains the seasonally adjusted flows, a second diskette contains unadjusted flows, and a third diskette contains quarterly outstandings, which are not seasonally adjusted. In addition, the third diskette contains quarterly data for the debt tables (tables D.1, D.2, and D.3) and available balance sheet tables and supplemental tables, as well as monthly data from January 1955 onward for the monthly debt aggregate published in the Board's H.6 statistical release, "Money Stock and Debt Measures."

**Subscription Information.** The Federal Reserve Board charges for subscriptions to all statistical releases. Inquiries for releases or the diskettes should be directed to:

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 33). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.

(1) Estimates of equity shares (lines 7 through 12) could differ from other sources owing to alternative definitions of ownership of equity by households.

In this table, line 11 includes equities in defined contribution plans only; assets in defined benefit plans are included in 'other assets' (line 13).

Prior to 1985, all pension assets are assumed to have been in defined benefit plans.
