

**Supporting Statement for the
Report of Selected Balance Sheet Items for Discount Window Borrowers
(FR 2046; OMB No. 7100-0289)**

Summary

The Board of Governors of the Federal Reserve System, under delegated authority from the Office of Management and Budget (OMB), proposes to extend for three years, with minor revision, the Report of Selected Balance Sheet Items for Discount Window Borrowers (FR 2046; OMB No. 7100-0289). These data are used to monitor discount window borrowing. The Federal Reserve's Regulation A, Extensions of Credit by Federal Reserve Banks, requires that the Federal Reserve review balance sheet data in determining whether to extend credit and to help ascertain whether undue use is made of such credit. Depository institutions that borrow from the discount window report on the FR 2046 certain balance sheet data for a period that encompasses the dates of borrowing.

The Federal Reserve proposes to update data element definitions to account for the discontinuance of the Thrift Financial Report (OTS Form 1313). Also, the Federal Reserve proposes that institutions that file the *Weekly Report of Selected Assets and Liabilities of Domestically Chartered Commercial Banks and U.S. Branches and Agencies of Foreign Banks* (FR 2644; OMB No. 7100-0075) need not report the Wednesday-only data item for total loans on the FR 2046. The total annual burden for the FR 2046 is estimated to be 229 hours and would remain unchanged with the proposed revisions.

Background

The Federal Reserve's Regulation A establishes rules under which the Federal Reserve may extend credit to depository institutions and defines three basic lending programs: primary credit, secondary credit, and seasonal credit.¹ Primary credit is designed as a back-up funding source to assist depository institutions in meeting very short-term needs (usually overnight). Since such credit is provided at an above-market rate and ordinarily is available to generally sound depository institutions, there is little or no administrative burden on the borrower or the Federal Reserve. Secondary credit is designed as a back-up funding source for depository institutions that do not qualify for primary credit. Such credit may be provided to meet temporary funding needs of an institution if such a credit extension would be consistent with the institution's timely return to a reliance on market funding sources, or if such credit would facilitate the orderly resolution of serious financial difficulties of the borrowing institution. Unlike primary credit borrowers, secondary credit borrowers are subject to a higher level of administration by the Federal Reserve and therefore subject to a slightly higher interest rate. In these cases, supplemental information for monitoring the borrower would likely be obtained from other sources, such as direct contacts with banking regulators. Seasonal credit is designed to assist smaller institutions in meeting longer-term funding needs arising from regular intra-year patterns in deposits and loans. Regulation A requires that the Federal Reserve ensure that the borrower's funding need is truly seasonal in nature and that it will persist for at least four weeks. Seasonal credit is provided at a market-related rate. Nonetheless, borrowers may still find the rate charged

¹ Regulation A also defines "Emergency credit for others"—under which in unusual and exigent circumstances, credit may be extended to an individual, partnership, or corporation that is not a depository institution—and a temporary Term Auction Facility (TAF)—in which depository institutions obtain discount window loans at an interest rate that is determined as the result of an auction. Borrowers of emergency credit for others and TAF credit are not required to file the FR 2046.

on seasonal credit attractive relative to the rates they would be charged for comparable credit arrangements from market sources. Therefore, while borrowing at the discount window, seasonal borrowers must agree to limit their net federal funds sales to an amount consistent with their usual operating pattern.²

In 1998, the Subcommittee on Credit, Reserves, and Risk Management (SCRRM) requested standardized data reporting for discount window monitoring as part of its broader effort to promote greater uniformity across the Federal Reserve System in the administration of the discount window.³ There had been considerable variation across Districts in the specific data elements collected, in the time periods for which data were requested, and in the formats in which data were reported. The implementation of the FR 2046 standardized these aspects of data collection across Reserve Banks and, in many cases, reduced reporting burden relative to that under the previous data reporting procedures. In 2003, the FR 2046 was updated owing to changes to Regulation A (the establishment of the primary and secondary credit programs) with no substantial changes to the reporting form or the instructions. In 2010, the FR 2046 was revised to be consistent with the 2009 revisions to the FR 2644 so that respondents that provide Wednesday-only data on the FR 2046 and file the FR 2644 need not report data items that are commonly defined in both reports.

Justification

There are many cases in which discount window borrowing might be considered inappropriate and inconsistent with Regulation A. For example, using the primary or secondary credit programs as a primary funding source, or using seasonal credit to meet a non-seasonal funding need, would be considered inappropriate. To guard against such situations, Regulation A (12 CFR 201.3(c)(2)-(3)) requires the Federal Reserve to consider the balance sheet information of borrowers in determining whether to extend credit and to ensure that any credit provided is used for an appropriate purpose. Questionable behavior might lead to follow-up discussions with the borrower concerning their circumstances at the time of borrowing and to counseling if their borrowing is deemed to have been inappropriate.

As noted above, there is usually little or no administrative burden on primary credit borrowers, and the FR 2046 will usually not be collected from them. However, the FR 2046 may be required from a primary credit borrower in very unusual circumstances, such as frequent borrowing or if there is information to suggest that undue use is being made of the credit. In these cases, information on federal funds sold and purchased (including resale and repurchase agreements, respectively) would be important in identifying situations in which an institution might be attempting to substitute borrowing at the discount window for its normal market sources of funding. In addition, information on total assets, loans, deposits, and securities could be used to assess the borrower's funding need or use of the credit. Because primary credit is extended for very short terms, daily data are necessary to capture the borrower's balance sheet trends.

² S-Letter 2487, March 1985.

³ This subcommittee is now known as SCRM (Subcommittee on Credit Risk Management). SCRM is a subcommittee of the Conference of Presidents' Committee on Credit and Risk Management.

The FR 2046 data are not routinely collected from secondary credit borrowers if adequate information on the need for funding and the reason for borrowing from the Federal Reserve is available from other sources, such as direct contacts with banking regulators. However, because secondary credit borrowers are not in generally sound condition, they are subject to a higher level of administration by the Federal Reserve. For example, if the loan is requested for a reason other than to cover an unexpected overdraft, the borrower is not allowed to increase its net exposure to other depository institutions—such as by selling federal funds—without permission. The FR 2046 data may be required if the Federal Reserve becomes concerned about the frequency or size of the institution’s borrowing. The use of the data is very similar to that described for primary credit. Secondary credit is generally extended for one day at a time; therefore, daily data are necessary to capture the borrower’s balance sheet trends.

The FR 2046 data are collected primarily from seasonal credit borrowers. Information on federal funds sold and purchased is important to guard against situations in which a bank might be using seasonal credit inappropriately. Under the terms of the program, seasonal borrowers may be net sellers of federal funds while borrowing at the discount window, as long as this pattern is consistent with their normal operating practices. The information obtained on federal funds sold and purchased on the FR 2046 is used by discount officers to assess whether a seasonal borrower’s position in the federal funds market is normal.

Similarly, information on a seasonal borrower’s total assets, loans, securities and deposits is used to monitor whether loans advanced at the discount window are being used for the intended purpose. Total loans and total deposits are used in monitoring an institution’s net funds availability (defined as total deposits less total loans) during the period of borrowing. Historical data on net funds availability is a key variable used in establishing an institution’s seasonal credit line. Discount officers monitor net funds availability during the period of borrowing to ensure that an institution’s actual funding need during the year is consistent with its seasonal credit line. In addition, information on total assets, loans, and securities is used to ensure that seasonal credit is used appropriately. Many seasonal borrowers, for example, exhibit a marked increase in their loan portfolios over the first three quarters in each year reflecting increased agricultural credit demands. Later in the year, loan demand at these banks subsides as farmers sell their crops and repay their outstanding bank loans with the proceeds. Deviations from this typical pattern might indicate that seasonal credit was being used inappropriately. For example, if a seasonal borrower’s total loans increased only modestly during the year while its securities portfolio expanded sharply, discount officers might contact the institution to verify whether it remained eligible for the seasonal credit program.

Seasonal credit is typically extended over lengthy periods, and the borrower’s funding need is expected to change slowly over the term of the borrowing. Therefore, Wednesday-only data provide an adequate picture of a borrower’s balance sheet trends. In cases where seasonal credit is extended to institutions in marginal financial condition, increased monitoring of the borrower is required, and daily data may be collected at the Federal Reserve’s discretion.

Description of Information Collection

Table 1 lists the data elements that are reported on the FR 2046. Data are reported weekly for each two-week period in which a borrowing is outstanding. All data are reported for the borrower’s domestic offices only and reported in thousands of dollars. The data elements include

the amounts of total securities, federal funds sold and securities purchased under agreements to resell, total loans, total assets, total deposits, and federal funds purchased and securities sold under agreements to repurchase.

Primary or secondary credit borrowers report daily data. A borrower need not supply deposit data on the FR 2046 when it already files such information weekly on the Report of Transaction Deposits, Other Deposits and Vault Cash (FR 2900; OMB No. 7100-0087). For these respondents, the two-week reporting period corresponds to their reserve maintenance period.

Seasonal credit borrowers report Wednesday-only data. Depositories that already report total securities, federal funds sold and resale agreements, and total assets weekly on the FR 2644 or total deposits weekly on the FR 2900 or on the FR 2644 do not need to provide these data on the FR 2046.⁴

Proposed Revisions

The Federal Reserve proposes two revisions to the FR 2046. First, data element definitions in the FR 2046 instructions would be updated to map to the Consolidated Reports of Condition and Income (FFIEC 031 & 041; OMB No. 7100-0036). For federally-chartered savings associations, data elements on the FR 2046 currently are defined to be the same as specified in the Thrift Financial Report (OTS Form 1313) definitions. In 2012, the Thrift Financial Report was discontinued. These institutions now file the FFIEC 031 & 041; the same Call Reports used by commercial banks and state-chartered savings associations.

Second, seasonal credit borrowers that also file the FR 2644 would not be required to provide Wednesday-only data for the total loans data item on the FR 2046. Because the definitions of loans on the FR 2644 differs from that used for the FR 2046, FR 2046 respondents that also file the FR 2644 are currently required to provide data on total loans. The Federal Reserve has determined that in practice the difference in the definitions is not usually significant for the small institutions that borrow seasonal credit.

⁴ The FR 2644 and the FR 2900 employ somewhat different concepts of total deposits. Either concept is adequate for the purpose of monitoring discount window borrowers.

Table 1: Data Items on the FR 2046

Type of Credit	Data Elements	Days of Report Period for which Data Provided	Qualifications	Definition Source*
Primary or Secondary	Total securities	All	None	Call Report / NCUA 5300
	Federal funds sold and resale agreements		None	Call Report
	Total loans		None	Call Report / NCUA 5300
	Total assets		None	Call Report/ NCUA 5300
	Total deposits		When not reported weekly on FR 2900	FR 2900 or Call Report / NCUA 5300
	Federal funds purchased and repurchase agreements		None	Call Report
Seasonal	Total securities	Wednesday only	When not reported on FR 2644	Call Report / NCUA 5300
	Federal funds sold and resale agreements	Wednesday only	When not reported on FR 2644	Call Report
	Total loans	Wednesday only	When not reported on FR 2644	FR 2644 or Call Report / NCUA 5300
	Total assets	Wednesday only	When not reported on FR 2644	Call Report / NCUA 5300
	Total deposits	Wednesday only	When not reported weekly on FR 2900 or FR 2644	FR 2900 or Call Report / NCUA 5300
	Federal funds purchased and repurchase agreements	Wednesday only	None	Call Report
* source of definition:				
Call Reports = U.S. commercial bank Consolidated Reports of Condition and Income (FFIEC 031 & 041; OMB No. 7100-0036) <i>or</i> Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks (FFIEC 002; OMB No. 7100-0032)				
NCUA 5300 = Statement of Financial Condition (NCUA 5300; OMB No. 3133-0004)				

Data Content

In general, the definitions of data items reported on the FR 2046 correspond closely with data definitions employed in the Call Reports for each type of institution. As shown in table 2, the FR 2046 definitions of total assets, total securities, total loans, and total deposits coincide with the relevant data definitions in the quarterly Call Reports filed by each type of institution.⁵

Most institutions that borrow at the discount window are banks and hence file the bank Call Report. Thus, these definitions should be familiar to the vast majority of discount window borrowers. Moreover, the Call Report definitions are adequate for discount window monitoring purposes; they include federal funds purchased and sold on an overnight basis or rolled over

⁵ For U.S. branches and agencies of foreign banks that file a consolidated condition report, it is likely that discount officers would request FR 2046 data for the particular branch that borrows.

daily under a continuing contract and also include most overnight and term funding under repurchase agreements. Thus, this definition includes instruments that are likely alternative market sources of short-term funds for most discount window borrowers.

Reporting Panel

The reporting panel for the FR 2046 changes from week to week. Any depository institution that maintains reservable deposits is eligible to borrow at the discount window. Approximately 14,500 depositories are eligible to borrow at the discount window including domestic commercial banks, savings banks, savings and loan associations, credit unions, U.S. branches and agencies of foreign banks, and others. However, in any given week only a relatively small number of depositories turn to the discount window.

As noted above, the FR 2046 is usually not collected from primary credit borrowers, and it is not routinely collected from secondary credit borrowers if necessary information is available from

other sources.⁷ The reporting panel consists almost entirely of institutions that borrow seasonal credit. The number of seasonal credit borrowers in any given week varies considerably over the year and is generally less than 300, even during peak borrowing months, and in the past several years has been much lower than that.

Frequency

The FR 2046 collects data for any two-week reporting period ending on Wednesday in which borrowing was outstanding on one or more days. The data are typically collected after the fact in one-week increments. For example, if an institution borrows on each day of a two-week reporting period, the Federal Reserve collects FR 2046 data twice: once to obtain data for the first week of the reporting period and a second time to obtain data for the second week of the reporting period. If an institution borrowed only during the first week of the maintenance period (or only during the second week), FR 2046 data are still collected for both weeks of that maintenance period. The Federal Reserve indicates the dates for which FR 2046 data are required. For a weekly FR 2900 respondent, this period coincides with its reserve maintenance period.

For primary and secondary borrowers, the FR 2046 collects daily (business day) data. For seasonal credit borrowers, the FR 2046 collects weekly (Wednesday) data. The Federal Reserve may collect daily data from seasonal borrowers in questionable financial condition.

Time Schedule for Information Collection

Depository institutions are required to file the FR 2046 by the Wednesday following the end of the reporting week. Generally, the Federal Reserve receives the data via mail or fax to the discount window or statistics department.

Sensitive Questions

This collection of information contains no questions of a sensitive nature, as defined by OMB guidelines.

Consultation Outside the Agency

On May 16, 2013, the Federal Reserve published a notice in the *Federal Register* (78 FR 28846) seeking public comment for 60 days on the extension, with minor revision, of the Report of Selected Balance Sheet Items for Discount Window Borrowers. The comment period for this notice expired on July 15, 2013. The Federal Reserve did not receive any comments. The revision will be implemented as proposed. On July 25, 2013, the Federal Reserve published a final notice in the *Federal Register* (78 FR 44952).

⁷From 2010 to 2012 the weekly number of primary credit borrowers ranged from 11 to 123, and the weekly number of secondary credit borrowers ranged from 0 to 9.

Legal Status

The Board's Legal Division has determined that sections 10B and 19(b)(7) of the Federal Reserve Act (12 U.S.C. §§ 347b and 461(b)(7)) authorize the Board to require this report when institutions request discount window borrowing; that is, it is required to obtain a benefit because an entity may be required to file the form in order to use the Federal Reserve's discount window. Individual respondent data are regarded as confidential under the Freedom of Information Act (5 U.S.C. §552(b)(4)).

Estimates of Respondent Burden

The annual reporting burden of the FR 2046 is estimated to be 229 hours, as shown in the following table. Because the report is event-generated, it is not possible to predict exactly how many reports will be filed in a given year. As a result, the estimate of respondent burden is based on recent historical discount window borrowing frequencies. As noted above, the FR 2046 data usually are not collected from primary credit borrowers, and are not routinely collected from secondary credit borrowers if necessary information is available from other sources. Therefore, only a nominal burden is expected for these programs. The estimated number of respondents and annual frequency for the seasonal credit program is based on borrowing activity in 2010 through 2012. The estimated average hours per response of 0.75 hours for primary and secondary borrowers is attributed to the collection of daily data. The estimated average hours per response of 0.25 hours for seasonal credit borrowers is attributed to the collection of weekly (Wednesday) data. The Federal Reserve estimates the proposed revisions would have a negligible effect on the total burden. This reporting requirement represents less than 1 percent of total Federal Reserve System paperwork burden.

<i>Type of credit</i>	<i>Estimated number of respondents</i>	<i>Estimated annual frequency</i>	<i>Estimated average hours per response</i>	<i>Estimated annual burden hours</i>
Primary and Secondary Credit	1	1	0.75	1
Seasonal Credit	<u>70</u>	13	0.25	<u>228</u>
<i>Total</i>	71			229

The annual cost to the public of this report is estimated to be \$11,427.⁸

⁸ Total cost to the public was estimated using the following formula: percent of staff time, multiplied by annual burden hours, multiplied by hourly rate (30% Office & Administrative Support at \$18, 45% Financial Managers at \$59, 15% Lawyers at \$63, and 10% Chief Executives at \$85). Hourly rate for each occupational group are the (rounded) mean hourly wages from the Bureau of Labor and Statistics (BLS), Occupational Employment and Wages 2012, www.bls.gov/news.release/ocwage.nr0.htm. Occupations are defined using the BLS Occupational Classification System, www.bls.gov/soc/

Estimate of Cost to the Federal Reserve System

The ongoing annual cost of the FR 2046 is estimated to be \$62,067. The data are not subject to extensive editing or other manipulation and are not submitted to the Board of Governors.
