Bank Holding Company Supervision Manual

On June 23, 2025, the Board announced that reputational risk will no longer be a component of examination programs in its supervision of banks.

General Table of Contents
Bank Holding Company Supervision Manual

This general table of contents lists the major section heads for each part of the manual:

Bank Holding Company Supervision Manual
Supplement 57—November 2024

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the February 2023 supplement.

Section 1045.0, "Supervision of Holding Companies with Less Than $10 Billion in Total Consolidated Assets"

This section was revised to describe the inspection report content for all holding companies in the community banking organization (CBO) supervisory portfolio. The section describes three ways that ratings are presented in inspection reports for CBO holding companies. First, the section explains the inspection report content for noncomplex holding companies with less than $3 billion in total consolidated assets (small noncomplex holding companies). Small noncomplex holding companies are only assigned a risk-management rating (R) and a composite rating (C) from the RFI/C(D) rating system. Second, the section refers examiners to section 1050.2.6, "Inspection Report Content for Certain Holding Companies in the Regional Banking Organization Portfolio," for inspection report instructions for CBO holding companies receiving the full RFI/C(D) rating. Lastly, the section describes the optional inspection report format that examiners can utilize for inspections of complex CBO holding companies that result in a composite RFI/C(D) supervisory rating of "4" or "5."

Section 1050.2, "Consolidated Supervision of Regional Holding Companies"

This section was revised to include an outline of the "Combined Roll-Up Report" for certain regional banking organizations. The Combined Roll-Up Report is an inspection report that examiners can use for conveying the supervisory assessment of bank holding companies (BHCs) with a lead bank subsidiary that is a state member bank. The section also provides detailed instructions that examiners should follow when completing the various sections of the Combined Roll-Up Report.

Section 2010.11, "Supervision of Subsidiaries (Private-Banking Functions and Activities)"

This section has been removed from the manual. Additional information on the assessment of private banking activities is provided in the *Federal Financial Institutions Examination Council Bank Secrecy Act/Anti-Money Laundering Examination Manual* as well as in the *Commercial Bank Examination Manual* (CBEM), section 5210.1.

Section 2065.1, "Nonaccrual Loans and Loan Modifications to Borrowers Experiencing Financial Difficulty"

This section was previously called "Nonaccrual Loans and Restructured Debt (Accounting, Reporting, and Disclosure Issues)." This section was updated to remove references to troubled debt restructurings (TDRs). In March 2022, the Financial Accounting Standards Board issued Accounting Standards Update No. 2022-02, "Financial Instruments – Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures," which amended Accounting Standards Codification Topic 326, Financial Instruments – Credit Losses. This guidance eliminated the recognition and measurement accounting guidance for TDRs by creditors in Subtopic 310-40, Receivables – Troubled Debt Restructurings by Creditors, while enhancing disclosure requirements for certain loan refinancings and restructurings by creditors when a borrower is experiencing financial difficulty. Other outdated accounting references were either removed or updated in the section.

Section 2124.3, "Risk Management of Third-Party Relationships"

This section was previously called, "Managing Outsourcing Risk," and was based on inactive guidance in SR-13-19/CA-13-21, "Guidance on Managing Outsourcing Risk." SR-13-19/CA-13-21 was superseded by SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management." The revised section briefly describes the guidance in SR-23-4 and provides hyperlinks to resources that provide more information and supervisory guidance on third-party relationships and the risk management of these relationships. See also the CBEM's section 4062.1, "Risk Management of Third-Party Relationships."

Sections 5010.0 through 5030.0—BHC Inspection Report Template Pages

The following sections have been removed from this manual:

- 5010.0 Procedures for Inspection Report Preparation—Inspection Report References
- 5010.1 General Instructions to FR 1225
- 5010.2 Cover
- 5010.3 Page i—Table of Contents
- 5010.4 Core Page 1—Examiner's Comments; Matters Requiring Special Board Attention
- 5010.5 Core Page 2—Scope of Inspection and Abbreviations
- 5010.6 Core Page 3—Analysis of Financial Factors
- 5010.7 Core Page 4—Audit Program
- 5010.8 Appendix Page 5—Parent Company Comparative Balance Sheet
- 5010.9 Appendix Page 6—Comparative Statement of Income and Expenses (Parent)
- 5010.10 Appendix Page 7—Consolidated Classified & Special-Mention Assets
- 5010.11 Appendix Page 8—Consolidated Comparative Balance Sheet
- 5010.12 Appendix Page 9—Comparative Consolidated Statement of Income and Expenses
- 5010.13 Capital Structure
- 5010.14 Page—Policies and Supervision
- 5010.15 Page—Violations
- 5010.16 Page—Other Matters
- 5010.17 Page—Classified Assets and Capital Ratios of Subsidiary Banks
- 5010.18 Page—Organization Chart
- 5010.19 Page—History and Structure
- 5010.20 Page—Investment in and Advances to Subsidiaries
- 5010.21 Page—Commercial Paper (Parent)
- 5010.22 Page—Lines of Credit (Parent)
- 5010.23 Page—Questions on Commercial Paper and Lines of Credit
- 5010.24 Page—Contingent Liabilities and Other Accounts
- 5010.25 Page—Statement of Changes in Stockholders' Equity (Parent)
- 5010.26 Page—Income from Subsidiaries
- 5010.27 Page—Cash Flow Statement (Parent)
- 5010.28 Page—Parent Company Liquidity Position
- 5010.29 Page—Classified Parent Company and Nonbank Assets
- 5010.30 Page—Bank Subsidiaries
- 5010.31 Page—Nonbank Subsidiary
- 5010.32 Page—Nonbank Subsidiary Financial Statements
- 5010.33 Page—Fidelity and Other Indemnity Insurance
- 5010.35 Page—Other Supervisory Issues
- 5010.36 Page—Extensions of Credit to BHC Officials
- 5010.37 Page—Interest Rate Sensitivity—Assets and Liabilities
- 5010.38 Page—Treasury Activities/Capital Markets
- 5010.40 Confidential Page A—Principal Officers and Directors
- 5010.41 Confidential Page B—Condition of Bank Holding Company
- 5010.42 Confidential Page C—Liquidity and Debt Information
- 5010.43 Confidential Page D—Administrative and Other Matters
- 5020.1 Page—Bank Subsidiary (FR 1241)
- 5020.2 Page—Other Supervisory Issues (FR 1241)
- 5030.0 Inspection Report Forms

These sections were removed from the manual because they conveyed BHC inspection report template pages and examiner instructions for completing these report pages that were outdated. Overall, many of these sections provided information that applied to past BHC rating systems and did not appropriately convey how holding company inspection reports are completed in the risk-focused supervisory framework. Information on the completion of holding company inspection reports can be found in the "About this Manual, Supervisory Process" sections (1000.0 through 1080.1) of this manual, which describe supervisory processes for the various portfolios. Specifically, see section 1045.0, "Supervision of Holding Companies with Less Than $10 Billion in Total Consolidated Assets," for more information on the completion of inspection reports for small noncomplex holding companies. Also see section 1050.2, "Consolidated Supervision of Regional Holding Companies," for information on the completion of inspection reports for holding companies that are subject to the full RFI/C(D) ratings.

Bank Holding Company Supervision Manual
Supplement 56—February 2023

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the November 2021 supplement.

Section 1000.0, "About this Manual"

This section was revised to remove a reference to SR letter 18-5/CA letter 18-7, "Interagency Statement Clarifying Role of Supervisory Guidance." The Board codified the 2018 "Interagency Statement Clarifying the Role of Supervisory Guidance," with clarifying changes, as appendix A to 12 C.F.R. 262, "Statement Clarifying the Role of Supervisory Guidance." The final rule superseded the 2018 statement. See 86 Fed. Reg. 18,173 (April 8, 2021).

Section 1020.0, "Supervision of Savings and Loan Holding Companies"

This new section contains guidance that was previously in section 2500.0, "Supervision of Savings and Loan Holding Companies." The material was moved closer to the manual's other sections that describe supervisory process guidance. In addition, this section was modified to provide an overview of the statutes, regulations, and guidance that apply to savings and loan holding companies (SLHCs). The section describes the supervisory approach for SLHCs, highlighting that the Federal Reserve employs a "portfolio approach" to consolidated supervision for most SLHCs to facilitate greater consistency of supervisory practices and assessments across comparable organizations. The section describes the ratings systems that apply to SLHCs. The Federal Reserve uses the "RFI/C(D)" rating system for non-insurance and non-commercial SLHCs with total consolidated assets less than $100 billion. The "Large Financial Institution" or "LFI" rating system is used for all non-insurance, non-commercial SLHCs with total consolidated assets of $100 billion or more. Supervised insurance institutions receive a unique rating. See 87 Fed. Reg. 60,160 (October 4, 2022). The section also describes guidance on qualified thrift lenders (see SR-17-9, "Supervisory Guidance for Examining Compliance with the Qualified Thrift Lender Test"), as well as covered savings associations (see SR-22-2, "Status of Covered Savings Associations and Holding Companies of Covered Savings Associations Under Statutes and Regulations Administered by the Federal Reserve").

Section 1045.0, "Supervision of Holding Companies with Less Than $10 Billion in Total Consolidated Assets"

Previously, this section was called "Supervision of Holding Companies with Total Consolidated Assets of $10 Billion or Less." The section's title and content have been revised to reflect minor technical applicability changes. Previously, the guidance in the section applied to the supervision of holding companies with $10 billion or less in total consolidated assets. The section was revised to reflect that the guidance applies to holding companies supervised by the Federal Reserve with less than $10 billion in total consolidated assets. For more information see SR-13-21, "Inspection Frequency and Scope Expectations for Bank Holding Companies and Savings and Loan Holding Companies that are Community Banking Organizations."

Section 1060.20, "Liquidity Planning and Positions (LFI Ratings System)

This new section provides an overview of key liquidity-related regulations and guidance issuances that apply to firms that are subject to the large financial institution (LFI) rating system. This section provides an overview of the "Interagency Policy Statement on Funding and Liquidity Risk Management" (see SR-10-6). The section introduces key liquidity-related requirements in Regulation YY, "Enhanced Prudential Standards" (12 C.F.R. part 252). Further, the section describes the liquidity coverage ratio requirements and the net stable funding ratio requirements in Regulation WW, "Liquidity Risk Measurement Standards" (12 C.F.R. part 249). The liquidity regulatory requirements in the *Complex Institution Liquidity Monitoring Report* (FR 2052a) are summarized. The FR 2052a is required to be submitted by top-tier BHCs, top-tier SLHCs, and FBOs subject to Category I, II, III, or IV standards under the Board's Regulation YY and Regulation LL. Lastly, the section describes the Federal Reserve's supervisory activities and approach for assessing liquidity at LFIs.

Section 1063.0, "Holding Company Ratings Applicability and Inspection Frequency"

This section was revised to update the inspection scope and frequency expectations for supervised insurance organizations. A "supervised insurance organization" is a depository institution holding company that is an insurance underwriting company, or that has over 25 percent of its consolidated assets held by insurance underwriting subsidiaries or has been otherwise designated as a supervised insurance organization by Federal Reserve staff. For more information on the ratings system that applies to supervised insurance organizations, see SR-22-8, "Framework for the Supervision of Insurance Organizations."

Section 1075.0, "Formal Corrective Actions"

This new section contains guidance that was previously in section 2110.0, "Formal Corrective Actions." The material was moved closer to the manual's other sections that describe supervisory process guidance. The section was revised to include the entities against which the Federal Reserve has the statutory authority to take formal enforcement actions. In particular, the section was revised to indicate which formal actions apply to SLHCs. Additional information was added to describe enforcement actions for Bank Secrecy Act and anti-money laundering compliance failures, as well as the interagency coordination activities of federal banking agencies on formal enforcement actions. Clarifying edits were made to the subsections describing civil money penalties, prohibited indemnification payments, and golden parachute payments, as well as prohibition and removal authority. The section highlights that the Board does not issue an enforcement action on the basis of a "violation" of or "non-compliance" with supervisory guidance.

Section 2010.6, "Supervision of Subsidiaries (Retail Sales of Nondeposit Investment Products)"

Previously, this section was called "Supervision of Subsidiaries (Financial Institution Subsidiary Retail Sales of Nondeposit Investment Products)." The section's title has been revised to reflect the significant changes that were made to the material. This section provides a summary of the relevant guidance on nondeposit investment products and directs readers to the key pieces of guidance, via hyperlinks, that the Board and other banking agencies have issued regarding this topic. The inspection objectives and inspection procedures have been removed. Relevant examination objectives and procedures on the retail sales of nondeposit investment products are in the *Commercial Bank Examination Manual*.

Section 2080.6, "Funding (Holding Company Funding from Sweep Accounts)"

Previously, this section was called "Funding (Bank Holding Company Funding from Sweep Accounts)." The section was renamed to reflect that the guidance in this section applies to SLHCs as well as bank holding companies (BHCs). The section was revised to reflect the expanded applicability of the guidance. Further, the section was revised to better align with the "Statement Clarifying the Role of Supervisory Guidance" (see 12 C.F.R. part 262, appendix A). Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the Board does not take enforcement actions based on supervisory guidance.

Section 2090.2 "Control and Ownership (BHC Formations)"

This section contains information about the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (12 C.F.R. part 225, appendix C). Additional information was added to explain the calculation of equity, the denominator of the debt-to-equity ratio, as described in this policy statement. The components of total equity capital align with the components of equity that are listed in the *Parent Company Only Financial Statements for Small Holding Companies Report* (FR-Y-9SP). Total equity capital includes perpetual preferred stock (including related surplus); common stock (including related surplus); retained earnings; accumulated other comprehensive income; and all other equity capital components, including the total carrying value (at cost) of treasury stock and unearned Employee Stock Ownership Plan shares.

Section 2110.0, "Formal Corrective Actions"

The material in this section has been revised and moved to section 1075.0. As a result, this section has been removed from the manual. See the description above for section 1075.0 for more information.

Section 2128.02 Asset Securitization (Risk Management and Internal Controls)

This section was significantly revised. Much of the information that was previously in the section was removed because it conveyed outdated risk-based capital provisions affecting asset securitization, as well as outdated accounting references. The section refers readers to the Asset Securitization section of the *Commercial Bank Examination Manual* for more information. The inspection objectives and inspection procedures also were removed, as the Securitization Examination Documentation (ED) module provides more detailed examination procedures for examiners.

Section 2241.0, "Retail-Credit Classification"

This section was revised to reflect that the guidance in this section applies to BHCs as well as SLHCs. Outdated references were removed from the section. Minor edits were made to the definitions for the classifications used for retail credit: *Substandard*, *Doubtful*, and *Loss*. Edits were made to these definitions to ensure they align with the definitions that the federal bank regulatory agencies utilize for assets adversely classified for supervisory purposes. Further, edits were made to better align the guidance in the manual section with the "Statement Clarifying the Role of Supervisory Guidance."

Section 2500.0, "Supervision of Savings and Loan Holding Companies"

The material in this section has been revised and moved to section 1020.0. As a result, this section has been removed from the manual. See the description above for section 1020.0 for more information.

Section 3520.0, "Section 4(c)(10) of the BHC Act (Exemption from Section 4 for BHCs That Are Banks)"

This section, previously called "Section 4(c)(10) of the BHC Act (Grandfather Exemption from Section 4 for BHC's Which Are Banks)" was revised to note that at the time of the enactment of the BHC Act, the exemption described in the section accommodated only three BHCs and that these BHCs no longer exist. The section remains in the manual to provide historical background information.

Bank Holding Company Supervision Manual
Supplement 55—November 2021

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the February 2020 supplement.

Section 1050.2, "Consolidated Supervision of Regional Holding Companies"

This section was previously called "Guidance for the Consolidated Supervision of Regional Bank Holding Companies." The section was revised to note that it applies to domestic bank holding companies (BHCs) and savings and loan holding companies (SLHCs) having between $10 billion and $100 billion in total consolidated assets. Several discussions regarding supervisory findings were modified to align more closely with the "Statement Clarifying the Role of Supervisory Guidance" (12 CFR part 262, appendix A). Further, this section was revised to include an outline of the report of inspection that examiners should follow when assigning holding company rating components and subcomponents at full-scope or roll-up inspections of BHCs and SLHCs in the regional banking organization portfolio. The section explains the timing expectations for examination staff to complete safety-and-soundness examination and inspection reports for domestic regional financial institutions and the submission of the reports to the institution. Lastly, references to inactive guidance issuances were updated.

Section 1060.1, "Large Financial Institution Rating System: Capital Planning and Positions"

This new section provides an overview of key capital-related regulations and guidance issuances that apply to firms that are subject to the large financial institution (LFI) rating system. The section describes capital stress testing requirements for BHCs and covered SLHCs with total consolidated assets of $100 billion or more (Regulation YY and Regulation LL). The section also contains an overview of Regulation Q, which establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. A fuller discussion of Regulation Q is provided in the "Assessment of Capital Adequacy" section of the *Commercial Bank Examination Manual.* In addition, the section describes the applicability and purpose of the capital plan rule (Regulation Y and Regulation LL), which requires an LFI to develop an annual capital plan that is approved by its board of directors. This section contains updated information that was previously discussed in section 4060.5, "Capital Adequacy (Advanced Approaches)" and section 4061.0, "Consolidated Capital (Capital Planning)."

Section 1060.2, "Supervisory Assessment of Capital Planning and Positions for Category I Firms"

This new section contains guidance that was previously in section 4063.0, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms." This material was moved closer to the other sections in the manual that provide guidance on the assessment of capital planning and positions at LFIs. Further, this section was modified to cover U.S. BHCs that are subject to category I standards under the Board's tailoring framework. These applicability modifications align with the Board's tailoring rules. See 84 Fed. Reg. 59,032 (November 1, 2019) for more information. See also SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category I Standards."

Section 1060.3, "Supervisory Assessment of Capital Planning and Positions for Category II or III Firms"

This new section contains guidance that was previously in section 4065.0, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms." The material was moved closer to the other sections in the manual that provide guidance on the assessment of capital planning and positions at LFIs. Further, this section was modified to cover U.S. BHCs, U.S. intermediate holding companies of foreign banking organizations, and covered SLHCs that are subject to category II or III standards under the Board's tailoring framework. These applicability modifications align with the Board's tailoring rules. See 84 Fed. Reg. 59,032 (November 1, 2019); and SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category II or III Standards."

Section 1060.30, "Supervisory Guidance on Board of Directors' Effectiveness (Governance and Controls)"

This new section is based on SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness." The guidance in this section explains key attributes of effective boards at BHCs and SLHCs that are LFIs. Specifically, this guidance notes that boards of directors at LFIs should: (1) set clear, aligned and consistent direction regarding the firm's strategy and risk appetite; (2) direct senior management regarding the board's information needs; (3) oversee and hold senior management accountable; (4) support the independence and stature of independent risk management and internal audit; and (5) maintain a capable board composition and governance structure. The section also provides an explanation of supervisory considerations in assessing board effectiveness as part of the LFI rating system.

Section 1060.31, "Assessment of Risk-Management Processes and Internal Controls of BHCs Having $100 Billion or More in Total Assets"

This new section was previously section 4070.1. The material was moved closer to the manual's sections on the assignment of ratings for holding companies subject to the LFI rating system. The section was revised to cover the supervision of BHCs having $100 billion or more in total consolidated assets. Further, this section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management.

Section 1062.1, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion"

This new section was previously section 4071.0. The material in this section was moved closer to the manual's sections on the assignment of ratings for holding companies with less than $100 billion in assets (RFI/C(D) rating system). In addition, the section was revised to cover the supervision of Federal Reserve-regulated institutions with total consolidated assets of less than $100 billion, including state member banks, BHCs, and SLHCs (including insurance and commercial SLHCs); as well as foreign banking organizations with consolidated U.S. assets of less than $100 billion. Previously, the guidance in the section generally applied to the supervision of Federal Reserve-regulated institutions with total consolidated assets of less than $50 billion. Outdated references to SR letters also were removed from the section. See SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 billion."

Section 1070.1, "Communication of Supervisory Findings"

This section was revised to include a reference to the "Statement Clarifying the Role of Supervisory Guidance." This statement, as codified in 12 CFR part 262, implements a September 2018 statement clarifying the differences between regulation and guidance. Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the Board does not take enforcement actions based on supervisory guidance. Rather, guidance outlines expectations and priorities, or articulates views regarding appropriate practices for a specific subject. See 12 CFR part 262, appendix A; 86 Fed. Reg. 18,179, (April 8, 2021).

Section 1072.0, "Considerations in Assigning and Revising Supervisory Ratings"

This new section was previously section 4070.3, "Revising Supervisory Ratings." The material was moved closer to the other sections in the manual covering aspects of the Federal Reserve's supervisory process. The section was revised to describe considerations for upgrading supervisory ratings at community banking organizations. See SR-12-4, "Upgrades of Supervisory Ratings for Banking Organizations with $10 Billion or Less in Total Consolidated Assets." In addition, the section describes how examiners provide timely and accurate assessments of larger holding company through the LFI rating system.

Section 1080.0, "Federal Reserve System Holding Company Surveillance Program"

This section was formerly section 4080.0, "Federal Reserve System BHC Surveillance Program." The material was moved to be closer to the other sections in the manual covering aspects of the Federal Reserve's supervisory process. Minor technical edits were made to the section.

Section 1080.1, "Surveillance Program for Small Holding Companies"

This section was formerly section 4080.1, "Surveillance Program for Small Holding Companies." The material was moved closer to the other sections in the manual covering aspects of the Federal Reserve's supervisory process. Minor technical edits were made to the section.

Section 2010.12, "Fees Involving Investments of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest"

This section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to this activity.

Section 2065.2, "Maintaining and Documenting the Allowance for Loan and Lease Losses"

Section 2065.2, "Determining an Adequate Level for the Allowance for Loan and Lease Losses (Accounting, Reporting, and Disclosure Issues)," was renamed "Maintaining and Documenting the Allowance for Loan and Lease Losses." Section 2065.2 was modified to summarize the contents of the following manual sections, which were based on several SR letters:

- Section 2065.3, "Maintenance of an Appropriate Allowance for Loan and Lease Losses (Accounting, Reporting, and Disclosure Issues)" (See SR-06-17);
- Section 2065.4, "ALLL Methodologies and Documentation (Accounting, Reporting, and Disclosure Issues)" (See SR-01-17); and
- Section 2065.5, "ALLL Estimation Practices for Loans Secured by Junior Liens" (See SR-12-3)

As a result of the changes to section 2065.2, sections 2065.4, and 2065.5 have been removed from the manual. Section 2065.3 "Maintenance of an Appropriate Allowance for Loan and Lease Losses (Accounting, Reporting, and Disclosure Issues)," has been replaced with entirely new content on the "Allowance for Credit Losses." In addition, references to the 2020 interagency guidance on credit-risk review systems were added to section 2065.2. See SR-20-13, "Interagency Guidance on Credit Risk Review Systems."

Section 2065.3, "Allowance for Credit Losses"

This new section provides an overview of the Financial Accounting Standards Board's (FASB) Accounting Standards Update No. 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments. The section highlights the Interagency Policy Statement on Allowances for Credit Losses," which was issued by the Federal Reserve, Office of the Comptroller of the Currency, Federal Deposit Insurance Corporation, and National Credit Union Administration. (See SR-20-12.) The statement describes the measurement of expected credit losses under the current expected credit losses (CECL) methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB Accounting Standards Codification Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate allowances for credit losses (ACLs); the responsibilities of boards of directors and management; and examiners' review of a bank's ACLs. The section also explains the Board's rules providing institutions the option to phase in the day-one adverse effects on regulatory capital that may result transitioning from the incurred loss methodology to the CECL methodology.

Section 2065.4, "ALLL Methodologies and Documentation (Accounting, Reporting, and Disclosure Issues)"

This section has been removed from the manual. See the description above for section 2065.2 for more information on the removal of this section from the manual.

Section 2065.5, "ALLL Estimation Practices for Loans Secured by Junior Liens"

This section has been removed from the manual. See the description above for section 2065.2 for more information on the removal of this section from the manual.

Section 2090.0, "Control and Ownership (General)"

This section was revised to provide an overview of the concept of control as it is applied by the Federal Reserve under the relevant banking and savings and loan-related statutes. The section was revised to include key concepts from a final rule that the Board issued in 2020 on control and divesture proceedings. See 85 Fed. Reg. 12,398 (March 2, 2020).

Section 2122.0, "Internal Credit-Risk Ratings at Large Firms"

This section was renamed and updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to this activity. Outdated guidance references in the section were updated. In addition, the inspection objectives and procedures were removed.

Section 2124.01, "Risk-Focused Supervision Framework for Large Complex Banking Organizations"

Section 2124.01 was removed from the manual as SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions," has been made inactive. Refer to SR-21-4/CA-21-2, "Inactive or Revised SR Letters Related to the Federal Reserve's Supervisory Expectations for a Firm's Boards of Directors."

Section 2124.07, "Compliance Risk-Management Programs and Oversight at Large Firms"

This section was renamed and updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to implementing compliance risk-management programs.

Section 2124.1, "Assessment of Information Technology in Risk-Focused Supervision"

This section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to institutions' use of information technology. Outdated references to information technology tools or processes were removed. Further, the inspection objectives and inspection procedures were removed from the section. More information on inspection objectives and procedures is provided in the *FFIEC IT Examination Handbook.*

Section 2124.3, "Managing Outsourcing Risk"

This section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to outsourcing risk.

Section 2125.0, Trading Activities of Banking Organizations (Risk Management and Internal Controls)

Section 2125.0 was removed from the manual as SR-93-69, "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations," has been made inactive. Refer to SR-21-4/CA-21-2, "Inactive or Revised SR Letters Related to the Federal Reserve's Supervisory Expectations for a Firm's Boards of Directors."

Section 2126.5, "Volcker Rule (Section 13 of the Bank Holding Company Act)"

This section's title was revised from "Procedures for a Banking Entity to Request an Extended Transition Period for Illiquid Funds." Further, the section was revised to provide an overview of section 13 to the Bank Holding Company Act of 1956 (BHC Act), commonly referred to as the Volcker rule. The Volcker rule generally prohibits any banking entity from engaging in proprietary trading or from acquiring or retaining an ownership interest in, sponsoring, or having certain relationships with a hedge fund or private equity fund, subject to certain exemptions. The section provides background information on the applicability of the Volcker rule, as well as Regulation VV, which implements the Volcker rule. The section retained salient information related to the procedures that institutions could follow to request an extended transition period for illiquid funds.

Section 2129.05, "Risk and Capital Management—Secondary-Market Credit Activities (Risk Management and Internal Controls)"

This section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." The material related to SR-97-21, "Risk Management and Capital Adequacy of Exposures Arising from Secondary Market Credit Activities," was removed from the section as this letter was made inactive. Refer to SR-21-4/CA-21-2, "Inactive or Revised SR Letters Related to the Federal Reserve's Supervisory Expectations for a Firm's Boards of Directors." SR-21-4/CA-21-2 notes that the expectations related to the responsibilities of board of directors will be revised in the *Bank Holding Company Supervision Manual* to be consistent with the guidance in SR-21-3/CA-21-1 as well as SR-16-11.

Section 3500.0, "Prohibitions Against Tying Arrangements"

This section was revised to provide an overview of section 106 of the BHC Act amendments of 1970 (section 106). Section 106, as implemented by the Federal Reserve Board's Regulation Y (12 CFR part 225), prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. Several legal interpretations about the application of section 106 were removed from the section because legal interpretations are available on the Board's public website. The inspection objectives and inspections procedures were updated.

Section 3909.0, "Supervisory Guidance on Equity Investment and Merchant Banking Activities (Section 4(k) of the BHC Act)"

This section was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness," and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion." Specifically, the section was revised to better reflect the roles and responsibilities of the board of directors and the roles and responsibilities of senior management with regards to this activity.

Section 4020.9, "Supervision Standards for De Novo State Member Banks of Bank Holding Companies"

This section was revised to incorporate updated guidance on the supervision program for de novo state member banks. The section was revised to explain that a state member bank is considered to be in the de novo stage until it has been operating for at least three years. In addition, the section was updated to note that as a condition of membership, the Federal Reserve typically requires each de novo to maintain a tier 1 leverage ratio of at least 8 percent for the first three years of its existence. See SR-20-16, "Supervision of De Novo State Member Banks."

Section 4060.3, "Consolidated Capital (Examiners' Guidelines for Assessing the Capital Adequacy of BHCs)"

Section 4060.3 has been removed from the manual. This section contained outdated information describing the capital adequacy guidelines for BHCs that was previously found in appendix A to Regulation Y (12 CFR part 225). Supervised institutions should refer to the Board's capital rule (12 CFR part 217 or Regulation Q) and the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (12 CFR part 225, appendix C). For more information on Regulation Q, see the *Commercial Bank Examination Manual*'s section entitled, "Assessment of Capital Adequacy." For more information on the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement, see this manual's section 2090.2, "Control and Ownership (BHC Formations)."

Section 4060.5, "Capital Adequacy (Advanced Approaches)"

Section 4060.5 has been removed from the manual. This section described the advanced approaches framework, which provides a risk-based capital framework that requires some bank holding companies to use an internal ratings-based approach to calculate credit-risk capital requirements and advanced measurement approaches in order to calculate regulatory operational-risk capital requirements. The relevant information on the advanced approaches framework is located in section 1060.1, "Large Financial Institution Rating System: Capital Planning and Positions," in the subsection entitled, "Regulation Q (12 CFR 217): Capital Positions." For more information on the advanced approaches framework see 12 CFR part 217, subpart E, as well as the Basel Coordination Committee Bulletins on the Board's public website.

Section 4061.0, "Consolidated Capital (Capital Planning)"

Section 4061.0 has been removed from the manual. Relevant guidance on the capital plan rule (12 CFR 225.8) is in section 1060.1, "Large Financial Institution Rating System: Capital Planning and Positions," in the subsection entitled, "Regulation Y: Capital Plan Rule and Stress Capital Buffer." Section 1060.1 explains the purpose of a firm's capital plan; the applicability of the rule; and the mandatory elements of a capital plan. The tailored capital plan rule sets forth requirements for firms that are subject to category IV standards.

Section 4063.0, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms"

This section has been removed from the manual. See the description above for section 1060.2 for more information on the removal of this section from the manual.

Section 4065.0, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms"

This section has been removed from the manual. See the description above for section 1060.3 for more information on the removal of this section from the manual.

Section 4070.1, "Rating Risk-Management Processes and Internal Controls of BHCs Having $50 Billion or More in Total Assets"

This section has been removed from the manual. See the description above for section 1060.31 for more information on the removal of this section from the manual.

Section 4070.3, "Revising Supervisory Ratings"

The content of this section was revised and moved to section 1072.0, "Considerations in Assigning and Revising Supervisory Ratings." As a result, this section has been removed from the manual. See the description above for section 1072.0 for more information.

Section 4071.0, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion"

This section has been removed from the manual. See the description above for section 1062.1 for more information on the removal of this section from the manual.

Section 4080.0, "Federal Reserve System BHC Surveillance Program"

The material in this section has been moved to section 1080.0. As a result, this section has been removed from the manual. See the description above for section 1080.0 for more information.

Section 4080.1, "Surveillance Program for Small Holding Companies"

The material in this section was moved to section 1080.1. As a result, this section has been removed from the manual. See the description above for section 1080.1 for more information.

Bank Holding Company Supervision Manual
Supplement 54—February 2020

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the February 2019 supplement.

Section 1045.0

The contents of this new section, "Supervision of Holding Companies with Total Consolidated Assets of $10 Billion or Less," were previously in this manual's section 5000.0, "BHC Inspection Program (General)." A standalone section was developed to help clarify the supervisory program for smaller holding companies. The content of the section was revised to modify inspection frequency and scope expectations for holding companies with total consolidated assets between $1 billion and $3 billion. The inspection frequency and scope expectations were modified for this population of holding companies to align with updated statutory requirements as authorized by the Economic Growth, Regulatory Relief, and Consumer Protection Act. References were also updated to reflect that non-commercial and non-insurance savings and loan holding companies (SLHCs) are assigned RFI ratings, effective February 1, 2019. See SR-13-21, "Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less."

Section 1063.0

This new section, "Holding Company Ratings Applicability and Inspection Frequency," provides an overview of the inspection scope and frequency expectations for bank holding companies (BHCs) and SLHCs supervised by the Federal Reserve. The section explains the applicability of the two rating systems Federal Reserve examiners use to assess the condition of BHCs and SLHCs. The section also provides a table illustrating the inspection scope and frequency expectations for holding companies with less than $10 billion in assets, which is described in more detail in section 1045.0. See also SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion"; SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System"; and SR-13-21.

Section 1065.0

This new section, "Nondisclosure of Supervisory Ratings and Confidential Supervisory Information," was previously section 4070.5. The section was moved to section 1065.0 so it would be located closer to the manual's sections on the assignment of ratings for holding companies. In addition, the section was revised to reference the large financial institution (LFI) rating system as another example of confidential supervisory information. Superfluous historical background information was removed from the section. In addition, outdated references to the Office of Thrift Supervision and their holding company rating system were removed from the section.

Section 1070.1

The content of this new section was previously part of section 5000.0, "BHC Inspection Program (General)." The content of section 1070.1 primarily is based on the guidance in SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings." Section 1070.1 highlights that examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. The section also includes a reference to SR-18-5/CA-18-7, "Interagency Statement Clarifying the Role of Supervisory Guidance," which examiners should also consider when communicating supervisory findings. Lastly, the section describes key factors examiners should consider in determining whether to recommend additional formal or informal investigation or enforcement action for a holding company.

Section 2231.0

Section 2231.0, "Real Estate Appraisals and Evaluations," has been revised significantly. This section provides a brief summary of the Board's appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real estate appraisals and evaluations. Previously, the section contained the entire contents of the December 2010 "Interagency Appraisal and Evaluation Guidelines." The revised manual section includes a brief summary of the December 2010 Interagency Appraisal and Evaluation Guidelines, as well as a hyperlink to the guidelines. (See SR-10-16.)

Section 4060.4

Section 4060.4, "Consolidated Capital (Tier 1 Leverage Measure)," has been removed from the manual. The section was outdated and based on regulations that no longer exist. For more information on the leverage ratio, including leverage ratio components and requirements, see the Board's Regulation Q (12 CFR part 217). In addition, the instructions to the FR Y-9C, "Consolidated Financial Statements for Holding Companies," (Schedule HC-R) outline the reporting requirements for the leverage capital ratios.

Section 4070.5

This section, "Nondisclosure of Supervisory Ratings," has been removed from the manual. See the description above for section 1065.0 for more information on the removal of this section from the manual.

Section 4080.1

This section, "Surveillance Program for Small Holding Companies," was modified to alter the applicability of the Federal Reserve's surveillance program for holding companies. The small holding company surveillance program covers holding companies having total consolidated assets of less than $3 billion. Previously, the program covered holding companies having total consolidated assets of less than $1 billion. (See SR-13-21.)

Section 5000.0

Section 5000.0, "BHC Inspection Program (General)," has been revised significantly and is now focused on the coordination of holding company supervisory activities. Much of the relevant content in section 5000.0 was moved to other sections to improve the manual's organization. More specifically, information related to the supervision of holding companies with total consolidated assets $10 billion or less was removed, revised, and incorporated into section 1045.1 of the manual. The section's content related to the communication of supervisory findings was removed and incorporated into section 1070.1 of the manual. In addition, outdated content on the frequency and scope of holding company inspections was removed from this section. Section 1063.0 contains consolidated and updated inspection frequency and scope expectations for holding companies.

Section Tables of Contents

The detailed tables of contents sections, which listed the subheadings within each major part of the manual (parts 2000, 3000, 4000, and 5000) have been removed. Because the Board no longer offers print versions or subscriptions for the manual, these detailed tables of contents sections are obsolete. Manual readers can use the search function within the online version of the manual to find material. The General Table of Contents (section 1010.0) at the beginning of the manual, which provides a broad overview, has been retained.

Bank Holding Company Supervision Manual
Supplement 53—February 2019

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the September 2017 supplement.

Section 1000.0

This section was renamed from "Foreword" to "About this Manual" and now includes the relevant content from sections 1020.0 and 1030.0. In addition, the section clarifies the role of supervisory guidance. A statute or regulation has the force and effect of law. Unlike a law or regulation, supervisory guidance does not have the force and effect of law. Rather, supervisory guidance outlines the agencies' supervisory expectations or priorities and articulates the agencies' general views regarding appropriate practices for a given subject area. See SR letter 18-5/CA letter 18-7, "Interagency Statement Clarifying Role of Supervisory Guidance," for more information.

Section 1020.0

The relevant content of this section, "Preface," was moved to section 1000.0 of this manual. As a result, section 1020.0 was removed from the *Bank Holding Company Supervision Manual.*

Section 1030.0

The relevant content in this section, "Use of the Manual," has been moved to section 1000.0 of this manual. As a result, section 1030.0 was removed from the *Bank Holding Company Supervision Manual.*

Section 1060.0

This new section, "Large Financial Institution Rating System," presents the supervisory rating system adopted in November 2018 for

- bank holding companies with total consolidated assets of $100 billion or more;
- all non-insurance, non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more; and
- U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve's Regulation YY.

The large financial institution (LFI) rating system represents a supervisory evaluation of whether a firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations and comply with laws and regulations, including those related to consumer protection, through a range of conditions. The LFI rating system is composed of the following three components: (1) Capital Planning and Positions; (2) Liquidity Risk Management and Positions; and (3) Governance and Controls. The Federal Reserve will assign initial LFI ratings to firms in the Large Institution Supervision Coordinating Committee portfolio in early 2019. For all other firms subject to the LFI rating system, the Federal Reserve will assign initial LFI ratings in early 2020. See 83 Fed. Reg. 58,724 (November 21, 2018) and 84 Fed. Reg. 4309 (February 15, 2019). See also SR letter 19-3/CA letter 19-2, "Large Financial Institution (LFI) Rating System."

Section 1062.0

This new section, "RFI Rating System," primarily clarifies which supervisory rating system applies to holding companies with total consolidated assets less than $100 billion. In 2018, the Board adopted the LFI rating system for bank holding companies and non-insurance and non-commercial savings and loan holding companies (SLHCs) with total consolidated assets of $100 billion or more (see section 1060.0). Also in 2018, the Board adopted the RFI rating system for non-insurance and non-commercial SLHCs with total consolidated assets less than $100 billion. See 83 Fed. Reg. 56,081 (November 7, 2018). This section notes all of the bank holding companies and savings and loan holding companies that are subject to the RFI rating system. The elements of the RFI rating system and the ratings' definitions have not changed. The majority of the content in this section, was previously in section 4070, "Bank Holding Company Rating System." See also 69 Fed. Reg. 70,444 (December 6, 2004). However, the RFI rating system guidance was revised to provide current references to regulations and guidance. The manual references have also been revised. See SR letter 19-4/CA letter 19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion," for more information.

Section 2020.7

This section was renamed from "Intercompany Transactions (Transfer of Low-Quality Loans or Other Assets)" to "Intercompany Transactions (Transfer of Low-Quality Assets)." The section was updated to provide the current definition of low-quality assets, as per the Federal Reserve Board's Regulation W (12 CFR 223.3(v)). Outdated references were removed from the section.

Section 2090.2

This section, "Control and Ownership (BHC Formations)," was revised to reflect the Board's August 30, 2018 (effective date) amendment of the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (12 CFR 225, appendix C) to expand the applicability of the policy statement. The interim final rule raised the asset threshold of the policy statement from $1 billion to $3 billion in total consolidated assets. All firms covered by the policy statement must meet certain qualitative requirements, including those pertaining to nonbanking activities, off-balance sheet activities, and publicly registered debt and equity. For the interim final rule, see 83 Fed. Reg. 44,195 (August 30, 2018).

Section 2100.0

This section, "International Banking Activities," was revised to remove outdated information from year-end 2009 regarding the number of member banks, Edge Act corporations and agreement corporations operating in foreign countries and overseas areas of the United States, and entities representing foreign banking organizations operating in the United States. The section also was revised to note that in 2014, the Federal Reserve Board approved a final rule required by section 165 of the Dodd-Frank Act, which requires enhanced prudential standards for large U.S. bank holding companies. Section 165 directed the Board to strengthen supervision and regulation of foreign banking organizations. The section also includes a reference to the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA), which amended section 165 of the Dodd-Frank Act.

Section 2170.0

This section, "Purchase and Sale of Loans Guaranteed by the U.S. Government," has been removed from the manual. The contents of the section were based on a Federal Financial Institutions Examination Council (FFIEC) policy statement from 1985 on supervising banking organizations that participate in the purchase and sale of loans guaranteed by the U.S. government. The 1985 FFIEC policy statement was rescinded in 1997. See 62 Fed. Reg. 16,158 (April 4, 1997) for more information.

Section 2178.0

This section, "Support of Bank-Affiliated Investment Funds," was revised to clarify that a state member bank's management should notify and consult with the Federal Reserve prior to the bank providing material financial support to its advised funds. The section also was revised to remove a reference to the abolished Office of Thrift Supervision and to update an accounting standards reference. The inspection objectives and inspection procedures were removed from the section. Examination objectives and procedures to review banks providing financial support to advised funds are available in the "Investment-Funds Support" section of the *Commercial Bank Examination Manual.*

Section 4000.0 and section 4020.5

Section 4000.0, "Financial Factors (Introduction)," and section 4020.5, "Banks (Summary Analysis)," were updated to remove references to section 4070.0, which is no longer a section in the *Bank Holding Company Supervision Manual.*

Section 4060.8

Section 4060.8 has been significantly revised. The section was renamed from "Consolidated

Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs" to "Overview of Asset-Backed Commercial Paper Programs." The section was substantially revised because the material did not reflect the current capital rules. The previous capital rules permitted banking organizations with qualifying internal risk-rating systems to use those systems to apply the internal-ratings approach to their un-rated direct-credit substitutes extended to asset-backed commercial paper programs that they sponsored by mapping internal risk ratings to external rating equivalents. The revised capital rules (78 Fed. Reg. 62,018 (October 11, 2013)) replaced references to credit ratings with new measures of credit-worthiness.

Section 4069.0

Section 4069.0, "Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion," has been removed from the *Bank Holding Company Supervision Manual.* Eighteen months after the Economic Growth, Regulatory Relief, and Consumer Protection Act's (EGRRCPA) enactment (May 24, 2018), financial companies with total consolidated assets of less than $250 billion that are not bank holding companies (BHCs) will no longer be subject to the company-run stress testing requirements in section 165(i)(2) of the Dodd-Frank Act. In contrast, on EGRRCPA's date of enactment, BHCs under $100 billion in total consolidated assets were no longer subject to section 165(i)(2). The agencies' regulations implementing company-run stress testing provide that the agencies may extend any deadline relating to company-run stress testing. In order to avoid unnecessary burden for depository institutions and to maintain consistency between BHCs and depository institutions, the agencies are extending the deadlines for all regulatory requirements related to company-run stress testing for depository institutions with average total consolidated assets of less than $100 billion until November 25, 2019 (at which time both statutory exemptions will be in effect). For more information, see the Interagency statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act issued on July 6, 2018.

Section 4070.0

The majority of the content in this section, "Bank Holding Company Rating System," has moved to section 1062.0, "RFI Rating System." In addition to moving the contents to section 1062.0, the information was revised to clarify the applicability of the RFI rating system and to provide current references to regulations and guidance. The elements of the RFI rating system and the ratings' definitions are unchanged. As a result, section 4070.0 was removed from the *Bank Holding Company Supervision Manual.* See section 1062.0 and SR letter 19-4/CA letter 19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion," for more information.

Section 6000.0

This section, the "Alphabetical Subject Index," was removed from the *Bank Holding Company Supervision Manual.* Effective December 31, 2017, the Board no longer offers print versions or subscriptions for the manual, which has rendered the Alphabetical Subject Index obsolete. Manual readers can use the search function within the online version of the manual to find material.

Bank Holding Company Supervision Manual
Supplement 52—September 2017

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the January 2017 supplement.

SUMMARY OF CHANGES

Section 2010.13

Section 2010.13, "Supervision of Subsidiaries (Establishing Accounts for Foreign Governments, Embassies, and Political Figures)," was updated to provide additional guidance, which was conveyed in a 2011 interagency advisory entitled, "Guidance on Accepting Accounts from Foreign Embassies, Consulates and Missions." This interagency advisory provides information to financial institutions providing account services to foreign missions in a manner that fulfills the needs of those foreign governments while complying with the provisions of the Bank Secrecy Act. It advises that financial institutions are expected to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage the risk identified in these relationships with foreign missions. The 2011 advisory also confirms that it is the financial institution's decision to accept or reject a foreign mission account. See SR letter 11-6, "Guidance on Accepting Accounts from Foreign Embassies, Consulates and Missions."

Section 4060.9

Section 4060.9, "Consolidated Capital Planning Processes (Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies)," was updated to clarify that the guidance in the section does not apply to U.S. bank holding companies or intermediate holding companies of foreign banking organizations with $50 billion or more in total consolidated assets. Capital planning guidance for the previously mentioned firms is provided in SR letter 15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms" (section 4063.0.1 of this manual) and SR letter 15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms" (section 4065.0.1 of this manual). In addition, inactive guidance references in this section have been updated.

Section 4069.0

This section, "Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets of $10–50 Billion," was updated to address changes to the agencies' rules implementing Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) company-run stress testing disclosure requirements since the issuance of SR letter 14-3, "Supervisory Guidance on Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets of More Than $10 Billion but Less Than $50 Billion." For more information on the changes to the Board's stress testing rules, see 80 *Fed. Reg.* 75419 (December 2, 2015).

FILING INSTRUCTIONS

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the July 2016 supplement.

SUMMARY OF CHANGES

Section 2126.5

Section 2126.5, "Procedures for a Banking Entity to Request an Extended Transition Period for Illiquid Funds," is a new section that provides applicable banking entities with information on the procedures for submitting a request for an extended transition period for a hedge fund or private equity fund that qualifies as an illiquid fund pursuant to section 13 of the Bank Holding Company Act of 1956 (BHC Act), also known as the Volcker rule. Under the statute, a banking entity must apply to the Board for an extended transition period for an illiquid fund regardless of the banking entity's primary financial regulatory agency. The term "banking entity" is defined by statute to include, with limited exceptions: (i) any insured depository institution (IDI) (as defined in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813)); (ii) any company that controls an IDI (including a bank holding company (BHC), savings and loan holding company (SLHC), and any other company that controls an insured depository institution but that is not a BHC or SLHC, such as the parent company of an industrial loan company); (iii) any company that is treated as a BHC for purposes of section 8(a) of the International Banking Act of 1978 (for example, any foreign bank operating a branch or agency in the United States); and (iv) any affiliate or subsidiary of any of the foregoing (for example, a broker–dealer subsidiary of a BHC). (Refer to SR-16-18.)

Section 3140.0

This section, "Section 4(c)(8) of the BHC Act (Leasing Personal or Real Property)," has been revised to include a brief summary of a June 10, 2016, Board order (FRB Order no. 2016-07) that approved a notice by a foreign bank holding company and its foreign wholly owned subsidiary bank to engage in permissible nonbanking activities under section 4(c)(8) of the BHC Act and section 225.24 of the Board's Regulation Y. The nonbanking activities include railcar leasing and the provision of certain railcar fleet management services pursuant to sections 225.28(b)(3) and 225.21(a)(2) of Regulation Y. The corresponding table of Laws, Regulations, Interpretations, and Orders has been amended to include the order.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2016 supplement.

SUMMARY OF CHANGES

Section 1050.2

Section 1050.2, "Guidance for the Consolidated Supervision of Regional Bank Holding Companies," is revised (beginning at subsection 1050.2.5) to include guidance for regional banking organizations based on SR-16-4, "Relying on the Work of the Regulators of Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion." The letter was issued by the Federal Reserve to explain its expectations for its examiners' reliance on the work of the regulators of insured depository institution subsidiaries of these holding companies. The letter presents a tailored supervisory approach for regional banking organizations, which are defined as companies with total consolidated assets of between $10 billion and $50 billion.

Section 4066.0

Section 4066.0, "Consolidated (Funding and Liquidity Risk Management)," is amended at subsection 4066.0.2 to include "Appendix B - Interagency Guidance on Funds Transfer Pricing Related to Funding and Contingent Liquidity Risks," issued March 1, 2016. The guidance was issued to address weaknesses observed in some large financial institutions' funds transfer pricing practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. (Refer to SR-16-03 and to the March 1, 2016, attachment to the interagency guidance, "Illustrative Funds Transfer Pricing Methodologies.")

Section 4070.1

Section 4070.1, "Rating...Risk Management Processes and Internal Controls of BHCs..." is partially superseded as the result of the issuance of SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion." With the issuance of SR-16-11, SR-95-51 (section 4070.1) is applicable only to bank holding companies and state member banks having $50 billion or more in total assets.

Section 4071.0

Section 4071.0, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion," is a new section that reaffirms the Federal Reserve's long-standing supervisory approach that emphasizes the importance of prudent risk management. This section's guidance and SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less Than $50 Billion," outlines core risk categories and risk-management principles. This supervisory guidance reflects updates to, and partially supersedes, SR-95-51, "Rating the Adequacy of Risk Management and Internal Controls at State Member Banks and Bank Holding Companies." The guidance in SR-16-11 provides clarifications on, and distinguishes supervisory expectations for, the roles and responsibilities of the board of directors and senior management. The risk-management expectations within this guidance are applicable to all supervised institutions with total consolidated assets of less than $50 billion, including bank holding companies, state member banks, savings and loan holding companies, and foreign banking organizations with total combined U.S. assets of less than $50 billion. The guidance also applies to insurance and commercial savings and loan holding companies with total consolidated assets of less than $50 billion.

Substantive changes that are included in SR-16-11 (when compared to SR-95-51) are:

1. Certain major risk categories are modified.
   a. Compliance risk is a separate core risk;
   b. Reputation risk is not considered a core risk
   c. Risk definitions that are revised:
      i. Operational risk is the risk resulting from inadequate or failed internal processes, people, and systems or from external events.
      ii. Market risk includes commodity prices
      iii. Legal risk includes legal sanctions

2. The responsibilities of the board of directors versus senior management are separated across all risk-management components.
   a. Senior management is responsible for risk identification.
   b. Senior management is responsible for the establishment and maintenance of effective information systems.
   c. Both the board of directors and senior management are responsible for an effective system of internal controls.

3. Additional risk-management concepts are included:
   a. Information systems should consist of a consolidated and integrated view of risks.
   b. The board of directors should approve significant policies to establish risk tolerances for the institution's activities.

Section 5000.0

Section 5000.0, "BHC Inspection Program (General)," is revised at subsection 5000.0.4.3.05 to provide additional guidance on the supervisory approach to be used for holding companies with total consolidated assets of $10 billion or less. The guidance pertains to relying on the work of insured depository institution (IDI) regulators for community banking organizations. Examiners are to rely substantially on the findings of the IDI regulator in evaluating the overall condition of the holding company. Reserve Bank reviews are to evaluate the condition, performance, and prospects of a subsidiary IDI based on the conclusion of the IDI regulator and are not to duplicate the IDI regulator's work. (Refer to SR-16-4.)

Bank Holding Company Supervision Manual
Supplement 49—January 2016

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the July 2015 supplement.

SUMMARY OF CHANGES

Section 2060.1

Section 2060.1, "Audit (Management Information Systems)," is revised (beginning at subsection 2060.1.8) to include an Overview and Appendix A—"Interagency Advisory on External Audits of Internationally Active U. S. Financial Institutions." The federal banking agencies[1] (the agencies) issued the advisory to communicate their support for the principles and expectations that are set forth in Parts 1 and 2, respectively, of the Basle Committee on Banking Supervision (the BCBS) March 2014 guidance on "External audits of banks."

The agencies acknowledge that the existing standards and practices in the United States are broadly consistent with the BCBS external audit guidance. Because of the legal and regulatory framework in the United Sates, certain differences exist between the standards and practices followed in the United States and the principles and expectations in the BCBS external audit guidance. These differences are addressed in this advisory, which also describes the agencies' supervisory expectations for U. S. financial institutions within the scope of the advisory for incorporating the principles and expectations in the BCBS external audit guidance into their practices. The advisory also outlines examiner responsibilities related to these supervisory expectations.

The BCBS external audit guidance is intended for "internationally active banks," which, the agencies defined in the advisory (Refer to SR-16-2 and its attachment.)

Section 2093.0

Section 2093.0, "Control and Ownership (Shareholder Protection Arrangements)" is a new section that discusses Federal Reserve supervisory concerns and issues regarding the establishment of arrangements by some bank and savings and loan holding companies (collectively, "holding companies") to protect the financial investments made by shareholders (collectively, "shareholder protection arrangements"). There has been an increase in interest by some holding companies to benefit certain shareholders, enhance short-term investor returns, and/or provide a distinct disincentive for investors to acquire or increase ownership in a holding company's common stock and other capital instruments. Such shareholder protection arrangements raise concerns because they could have negative implications on a holding company's capital or financial position, limit a holding company's financial flexibility and capital raising capacity, or otherwise impair a holding company's ability to raise additional capital in the future. These arrangements impede the ability of a holding company to serve as a source of strength to its insured depository institutions subsidiaries and are considered unsafe and unsound. A holding company, regardless of its asset size, should be aware that the Federal Reserve may object to a shareholder protection arrangement based on the facts and circumstances and the features of the particular arrangement. Examples of shareholder protection arrangements that have raised supervisory issues are discussed. (Refer to SR-15-15.)

Section 4061.0

Section 4061.0, "Consolidated Capital (Capital Planning)," is revised for amendments to Regulation Y, 12 C.F.R. 225.8 "Capital Planning." The rule was amended to limit the ability of a bank holding company with $50 billion or more in total consolidated assets to make capital distributions under the rule if the bank holding company's net capital issuances are less than the amount indicated in its capital plan. The tier 1 common capital ratio requirement was removed, and certain mandatory capital action assumptions were modified. (Refer to 79 *Fed. Reg.* 64040 (October 27, 2014) and 80 *Fed. Reg.* 75424 (December 2, 2015)).

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

Section 4060.7

Section 4060.7, Consolidated Capital (Assessing Capital Adequacy and Risk at Large Banking Organizations and Others with Complex Risk Profiles) is deleted. The section was derived from SR-99-18, superseded by SR-15-18 and SR-15-19, both issued on December 18, 2015.

Section 4063.0

Section 4063.0, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms," is a new section consisting of Federal Reserve guidance that was issued to explain its expectations for capital planning at Large Institution Supervision Coordinating Committee (LISCC) firms and large and complex bank holding companies and intermediate holding companies of foreign banking organizations. This guidance is consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions." It sets forth the Federal Reserve's core capital planning expectations for LISCC and large and complex firms. Several appendices are included that detail supervisory expectations on a firm's capital planning processes. The new guidance largely consolidates the Federal Reserve's existing capital planning guidance.

The expectations for LISCC Firms and Large and Complex Firms are higher than the expectations for Large and Noncomplex Firms. Within the group of firms subject to this guidance, the Federal Reserve has significantly heightened expectations for the LISCC Firms. This guidance sets forth only minimum expectations, and LISCC Firms are consistently expected to exceed those minimum standards and have the most sophisticated, comprehensive, and robust capital planning practices for all of their portfolios and activities. Refer to SR-15-18 and its attachment.

Section 4065.0

Section 4065.0, "Federal Reserve Supervisory Assessment of Capital Planning And Positions for Large and Noncomplex Firms," The Federal Reserve's guidance explains its supervisory expectations for capital planning at large and noncomplex bank holding companies and intermediate holding companies of foreign banking organizations, consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions." This guidance applies to U.S. bank holding companies and intermediate holding companies of foreign banking organizations that have total consolidated assets of at least $50 billion but less than $250 billion, have consolidated total on-balance sheet foreign exposure of less than $10 billion, and are not otherwise subject to the Federal Reserve's LISIC framework (referred to as a "Large and Noncomplex Firm"). Refer to SR-15-19 and its attachment.

Section 4080.0

Section 4080.0, "Federal Reserve System Bank Holding Company Surveillance Program," is revised to discuss the Federal Reserve's revision of its safety-and-soundness surveillance program (the Surveillance Program) for top-tier bank holding companies and savings and loan holding companies (HCs). The revised program includes a new early warning model for HCs, the *"Holding Company Statistical Assessment of Bank Risk"* or "HC-SABR" model. It deploys risk identification algorithms ("Outlier Metrics") and other surveillance products to process financial and economic data and generate forward-looking, actionable intelligence on HCs that will provide examiners and other supervisory staff with early signals by which to monitor risk-taking. Results are used to assess exposures, outlooks, and possible compliance shortcomings, with the goal of calibrating supervisory resources to risk. The Surveillance Program's objectives, structure, and maintenance are discussed along with additional information on the metrics, procedures, and write-up requirements used to monitor HCs. The program also distributes surveillance results across the Federal Reserve's supervision function. (Refer to SR-15-16 and its attachment.)

Bank Holding Company Supervision Manual
Supplement 48—July 2015

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2015 supplement.

SUMMARY OF CHANGES

Section 2010.2

Section 2010.2, “Supervision of Subsidiaries (Loan Administration and Lending Standards),” is revised (subsection 2010.2.4.1.9) to remove a footnote reference to SR letter 02-16, “Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes and Residual Interests in Asset Securitizations,” which is superseded by SR letter 15-6, “Interagency Frequently Asked Questions (FAQs) on the Regulatory Capital Rule.”

Section 2090.2

Section 2090.2, “Control and Ownership (BHC Formations),” has been revised to include the Board’s April 9, 2015, approval of its Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (effective May 15, 2015). This policy statement expands the applicability of the former policy statement to include savings and loan holding companies (SLHCs). The policy applies to those bank holding companies (BHCs) and certain SLHCs that have consolidated assets of less than $1 billion. Previously, the policy only applied to BHCs having consolidated assets of less than $500 million.

Section 2128.03

Section 2128.03, “Credit-Supported and Asset-Backed Commercial Paper (Risk Management and Internal Controls) is revised (subsection 2128.03.3.3) to delete a footnote reference to SR letter 05-13 and its attachment, “Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Program Liquidity Facilities and the Resulting Risk-Based Capital Treatment,” which is superseded by SR letter 15-6 “Interagency Frequently Asked Questions on the Regulatory Capital Rule.”

Section 2500.0

This section, “Supervision of Savings and Loan Holding Companies” was revised to include a reference to SR letter 14-9, “Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program,” which provides a listing of supervisory guidance documents (SR letters) that were issued prior to July 21, 2011. The Federal Reserve has determined that these SR letters are applicable to savings and loan holding companies.

Section 3070.3

This section, “Section 4(c)(8) of the BHC Act (Non-Traditional Mortgages–Associated Risks),” is revised to delete a footnote reference to SR letter 02-16, “Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations,” and its attachment, which is superseded by SR letter 15-6 “Interagency Frequently Asked Questions on the Regulatory Capital Rule.” Refer to subsection 3070.3.2.5. “Secondary Market Activity.”

Section 3111.0

This section, “Section 4(c)(8) of the BHC Act (Acquisition of Savings Associations)” includes (subsection 3111.0.3) reference corrections to listed Board orders that authorized the acquisition of savings associations.

PURPOSE AND THE ROLE OF GUIDANCE

The *Bank Holding Company Supervision Manual* is prepared by Federal Reserve supervision personnel to provide guidance to examiners as they conduct inspections of bank holding companies and their nonbank subsidiaries as well as savings and loan holding companies. The manual is a compilation of formalized procedures and Board supervisory policies that examiners and supervision personnel should follow for the supervision of these organizations. It also discusses the relevant statutes, regulations, interpretations, and orders that pertain to holding company supervision. The manual enhances the staff's ability to implement the Board's inspection, supervisory, and monitoring activities, which is integral to the Federal Reserve's supervision program for organizations operating under a holding company structure. This manual is periodically updated on the Board's public website to reflect the latest supervisory policy and procedures and to address changes in industry risk-management practices.[1]

The Federal Reserve and the other banking and regulatory agencies issue various types of supervisory guidance, including interagency statements, advisories, bulletins, policy statements, questions and answers, and frequently asked questions, to their respective supervised institutions. Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the Federal Reserve does not take enforcement actions based on supervisory guidance.[2] Rather, supervisory guidance outlines the Federal Reserve's supervisory expectations or priorities and articulates its general views regarding appropriate practices for a given subject area. Supervisory guidance often provides examples of practices that the Federal Reserve generally considers consistent with safety-and-soundness standards or other applicable laws and regulations, including those designed to protect consumers. See "Statement Clarifying the Role of Supervisory Guidance," (12 C.F.R. part 262, appendix A).

This manual is designed to provide guidance to examination and supervision personnel. *It should not be considered a legal reference document.* Questions concerning the applicability of and compliance with federal laws and regulations should be referred to appropriate legal counsel.

USE OF THE MANUAL

The *Bank Holding Company Supervision Manual* is presented in "sections" which have been grouped together into "parts" that have in common a central theme pertaining to holding company supervision. For example, Part I provides an overview of the supervisory process of holding companies. Part II is composed of sections that discuss topics of special interest for supervisory review. Part III is composed of sections that discuss the various exemptive provisions to the nonbank prohibitions of the Bank Holding Company Act. Part IV presents sections on the preparation of a financial analysis.

The content of the sections within parts II–IV are grouped into four broad categories: (1) Main Section Content (2) Inspection Objectives, (3) Inspection Procedures, and (4) Laws, Regulations, Interpretations, and Orders. Not all of the categories are presented in each section. This manual uses a numbering system for organizing and referencing content. Content in subsections with headings having "tenths" or one decimal point generally provide higher-level or foundational information. Content under subheadings with several decimal points convey more detailed information.

Where a particular topic is exclusively financially related and does not involve legal considerations, the subsection on "Laws, Regulations," may be omitted. These procedures were designed for a full-scope, comprehensive inspection. It is recognized that in some instances the procedures may not apply in their entirety to all holding companies. Examiners should exercise supervisory judgment in completing procedures depending upon the characteristics of the organization under inspection.

1. https://www.federalreserve.gov/boarddocs/supmanual/

2. Government agencies issue regulations that generally have the force and effect of law. Such regulations generally take effect only after the agency proposes the regulation to the public and responds to comments on the proposal in a final rulemaking document.

TYPES OF HOLDING COMPANIES

Bank Holding Companies (Including Financial Holding Companies)

Banks are often owned or controlled by another company, called a bank holding company (BHC). The Federal Reserve has supervisory and regulatory authority for all BHCs, regardless of whether subsidiary banks of the holding company are national banks, state member banks, or state nonmember banks. The Federal Reserve also has supervisory authority over any nonbank subsidiary of a BHC that is not functionally regulated by another federal or state supervisor, such as a leasing subsidiary.

The Gramm-Leach-Bliley Act of 1999 permits BHCs that meet certain criteria to become financial holding companies (FHCs), which are also under Federal Reserve's supervisory and regulatory authority. FHCs engage in an expanded list of activities including securities underwriting and dealing, merchant banking, insurance underwriting, and the sale of insurance. When an FHC engages in these activities, the Federal Reserve coordinates its supervisory efforts with those of the subsidiary's functional regulator—for example, the U.S. Securities and Exchange Commission in the case of a broker-dealer, and state insurance regulators in the case of an insurance company.

Savings and Loan Holding Companies

Savings and loan holding companies (SLHCs) directly or indirectly control a savings association. Federal savings associations (those with federal charters) are supervised by the Office of the Comptroller of the Currency, while state-chartered savings associations are generally supervised by the Federal Deposit Insurance Corporation and their chartering state. Besides owning federal and/or state savings associations, an SLHC that meets capital and management requirements and elects to be treated as a financial holding company may also engage in activities as if it were a FHC that controls a bank.

Historically, SLHCs were regulated by other agencies: at first, the Federal Home Loan Bank Board, and more recently, by the Office of Thrift Supervision (OTS). In 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act eliminated the OTS and transferred supervisory and regulatory responsibilities for SLHCs to the Federal Reserve. As a result, the Federal Reserve supervises and regulates all SLHCs regardless of the charter of the subsidiary savings associations. The Federal Reserve coordinates its supervisory efforts with the appropriate functional regulator(s) for a savings association or the SLHC's subsidiary.

1020.0.1 INTRODUCTION

Under the Home Owners' Loan Act (HOLA), a savings and loan holding company (SLHC) includes any company, other than a bank holding company (BHC), that directly or indirectly controls either a savings association or any other company that is an SLHC.[1] Depository institution subsidiaries of SLHCs may have either a federal or a state charter. Federally chartered savings associations are supervised by the Office of the Comptroller of the Currency (OCC). State-chartered savings banks and cooperative banks may also elect to be deemed a savings association for purposes of section 10 of HOLA, causing their holding company to be an SLHC.[2] State-chartered savings banks and cooperative banks that have elected such treatment under section 10(l) are generally supervised by the Federal Deposit Insurance Corporation (FDIC) and their chartering state. The Federal Reserve supervises and regulates all SLHCs regardless of the charters of the subsidiary depository institution.

The Board of Governors of the Federal Reserve System (Board) supervises and regulates companies that control one or more banks. Congress gave the Board regulatory and supervisory authority over BHCs through the Bank Holding Company Act of 1956 (BHC Act).[3] In many respects, SLHCs are similar to BHCs. As with BHCs, an SLHC that meets certain criteria may also elect to be a financial holding company.

SLHCs differ from BHCs in several important ways. SLHCs may engage in a wider array of activities than BHCs. For example, the types of businesses operated by companies that own savings associations include securities brokers and dealers, insurance underwriters and agents, manufacturing firms, and retail companies. Further, SLHCs may have concentrations in commercial mortgage lending that are not typical for BHCs.

1. 12 U.S.C. 1467a(a)(1)(D)(i). The Board's Regulation LL (12 C.F.R. part 238) provides more detailed information on the definition of an SLHC. The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) amended HOLA to exclude from the definition of an SLHC any company that controls only one savings association subsidiary, provided that subsidiary functions solely in a trust or fiduciary capacity, as described in section 2(c)(2)(D) of the Bank Holding Company Act (BHC Act). See also, SR-11-12, "Deregistration Procedures for Certain Savings and Loan Holding Companies."

2. 12 U.S.C. § 1467a(*l*).

3. Ch. 240, 70 Stat. 133.

1020.0.2 THE FEDERAL RESERVE'S AUTHORITY OVER SAVINGS AND LOAN HOLDING COMPANIES

The Board's regulation and supervision of SLHCs began July 21, 2011, when provisions of the Dodd-Frank Act transferring supervision and regulation of SLHCs from the former Office of Thrift Supervision (OTS) to the Board took effect.[4] The Dodd-Frank Act also provides that all regulations, guidelines, and other advisory materials issued by the OTS on or before the transfer date with respect to SLHCs and their nondepository subsidiaries will be enforceable until modified, terminated, set aside, or superseded.[5] Upon this transfer, the Board became the federal supervisory agency for all depository institution holding companies, including a portfolio of SLHCs significantly engaged in insurance activities.

1020.0.3 KEY STATUTES, REGULATIONS, AND GUIDANCE THAT APPLY TO SLHCS

The main governing statute for SLHCs is HOLA. Other statutes apply to both SLHCs and BHCs, such as the Change in Bank Control Act and the Management Interlocks Act. The Board also has implemented various regulations that are relevant to SLHCs.

1020.0.3.1 Regulation LL

Regulation LL (12 C.F.R. part 238) sets forth requirements generally governing SLHCs.[6] Regulation LL covers the acquisition of control of savings associations and defines and regulates the activities of SLHCs. Regulation LL also sets forth procedures under which directors and executive officers may be appointed or employed.

In the development of Regulation LL, the Board aimed to collect OTS regulations applicable to SLHCs (other than regulations pertaining uniquely to SLHCs in mutual form) and transfer them into a single part of chapter 2 of title 12 for

4. Pub. L. 111-203, 124 Stat. 1376 (2010); Dodd-Frank Act tit. III, 124 Stat. at 1520–70.

5. 12 U.S.C. § 5414(b).

6. 76 Fed. Reg. 56,507 (September 13, 2011).

ease of locating. Generally, the structure of Regulation LL closely follows that of the Board's Regulation Y (12 C.F.R. part 225), which houses regulations directly related to BHCs, in order to provide an overall structure to rules that were previously found in disparate locations.

Certain requirements of Regulation LL are only applicable to large SLHCs. For instance, Regulation LL establishes capital planning requirements for large SLHCs.[7] Regulation LL includes the risk-based categories of banking organizations that are subject to prudential standards for large U.S. banking organizations and foreign banking organizations, consistent with section 165 of the Dodd-Frank Act, as amended by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA), and with HOLA.[8] Large SLHCs are subject to certain prudential standards, including standards relating to liquidity, risk management, stress testing, and single-counterparty credit limits, to reflect the risk profile of the banking organization. These SLHCs are also subject to the Board's company-run stress test and supervisory stress test rules, consistent with section 401 of EGRRCPA.[9]

Safe and Sound Operations

A fundamental and long-standing principle underlying the Federal Reserve's supervision and regulation of BHCs is that they should serve as sources of financial and managerial strength to their subsidiary banks.[10] The Federal Deposit Insurance Act (FDIA) requires that a BHC act as a source of strength to its depository institution(s). FDIA defines the term "source of strength," which generally means the ability of a company to provide financial assistance to an insured depository institution that the company directly or indirectly owns or controls, in the event of financial stress to the insured depository institution.

Section 616(d) of the Dodd-Frank Act revised section 38A of the FDIA to require a SLHC and any other company (including a BHC) that controls an insured depository institution to act as a source of strength to its depository institution. The board implemented the source of strength requirement into Regulation LL, which explicitly states that an "SLHC shall serve as a source of financial and managerial strength to its subsidiary savings associations and shall not conduct its operations in an unsafe or unsound manner."[11]

Additionally, Regulation LL (12 C.F.R. 238.8(a)(2)) specifies that if the Board believes an activity of the SLHC or a nonbank subsidiary constitutes a serious risk to the financial safety, soundness, or stability of a subsidiary savings association and is inconsistent with the principles of sound banking, the purposes of HOLA or other applicable statutes, the Board may require the SLHC to terminate the activity or divest control of the nonbanking subsidiary. This obligation is established in section 10(g)(5) of HOLA; BHCs are subject to equivalent obligations under the BHC Act and Regulation Y.

1020.0.3.2 Regulation MM

Regulation MM (12 C.F.R. part 239) sets forth regulations governing SLHCs in mutual form (mutual savings and loan holding companies or mutual SLHCs). Regulation MM

- regulates the reorganization of mutual savings associations to mutual holding companies and the creation of subsidiary holding companies of mutual holding companies,
- defines and regulates the operations of mutual holding companies and their subsidiary holding companies, and
- sets forth procedures for securing approval for these transactions.

1020.0.3.3 Regulation Q

In 2013, the Federal Reserve Board, the FDIC, and the OCC adopted Regulation Q (12 C.F.R. part 217) to replace their general risk-based capital requirements, advanced approaches capital requirements, market risk capital requirements, and leverage capital requirements. Regulation Q implements certain federal laws related to capital requirements and international regulatory capital standards adopted by the Basel Committee on Banking Supervision. Regula-

7. 12 C.F.R. 238.170.
8. 12 C.F.R. 238.10.
9. Public Law 115–174, 132 Stat. 1296 (2018). SLHCs significantly engaged in insurance activities are generally exempt from most of these requirements.
10. For more information, see this manual's section 2010.0, entitled "Supervision of Subsidiaries," specifically subsection 2010.0.1, entitled "Policy Statement on the Responsibility of Bank Holding Companies to Act as Sources of Strength to Their Subsidiary Banks."
11. 12 C.F.R. 238.8(a)(1).

tion Q applies, on a consolidated basis, to every Board-regulated institution that is

- a state member bank;
- a BHC domiciled in the United States that is not subject to 12 C.F.R. part 225, appendix C;[12] or
- a covered SLHC domiciled in the United States.

Regulation Q does not apply to SLHCs substantially engaged in insurance underwriting or commercial activities, or to SLHCs that are insurance underwriting companies. For more information, see section 3000.1, entitled "Assessment of Capital Adequacy," in the *Commercial Bank Examination Manual*, as well as section 1060.1, entitled "Large Financial Institution Rating System: Capital Planning and Positions," in this manual.

1020.0.3.4 Applicable Guidance to SLHCs

As with BHCs, the objective of SLHC supervision is to ensure that a holding company acts as a source of strength for its depository subsidiaries, and that it and its nondepository subsidiaries operate in a safe-and-sound manner and in compliance with banking laws. The Board typically issues supervisory guidance through SR letters, which provide further information on the Federal Reserve's supervisory priorities and practices consistent with the Board's expectations for condition, performance, and activities of supervised financial institutions. Many SR letters have been issued to describe the Federal Reserve's consolidated supervision program for BHCs.

In 2014, the Federal Reserve identified SR letters issued prior to July 21, 2011 (the date of transfer of supervision and regulation of SLHCs from the former OTS to the Federal Reserve Board) that are applicable to SLHCs.[13] In establishing its SLHC supervision program, the Federal Reserve, to the greatest extent possible, considered the unique characteristics of SLHCs in the decision to apply an SR letter to SLHCs. The guidance identified in SR-14-9 illustrates practices consistent with Federal Reserve supervisory expectations of SLHCs on a consolidated basis. In general, guidance that was issued after the 2011 transfer date notes whether it applies to the supervision of SLHCs.

1020.0.4 GENERAL SUPERVISORY APPROACH IN ASSESSING SLHCS

As with BHCs, the objective of SLHC supervision is to ensure that a holding company and its nondepository subsidiaries operate in a safe-and-sound manner and in compliance with banking laws. Further, the Board assesses whether an SLHC and its nondepository subsidiaries can serve as a source of strength for, and do not threaten the soundness of, its subsidiary depository institution(s). Federal Reserve supervisory staff also assess whether an SLHC, its subsidiary depository institution(s), and nondepository subsidiaries are in compliance with any enforcement actions, applications commitments, or other supervisory directives. If Federal Reserve supervisory staff concludes that an SLHC is not conducting its operations in a safe-and-sound manner; is in violation of applicable law or regulations; or is not complying with any outstanding enforcement action, commitment, or supervisory directive, or if the primary regulator of a subsidiary savings association has determined that it is not in satisfactory condition, appropriate action is taken against the SLHC, including possible enforcement actions.

The Board has a long-standing policy of supervising BHCs on a consolidated basis, which is also applicable to the supervision of SLHC. Consolidated supervision encompasses all legal

12. 12 C.F.R. part 225, appendix C is the "Small Bank Holding Company and Savings and Loan Holding Company Policy Statement," and it applies to BHCs with pro forma consolidated assets of less than $3 billion that (1) are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary; (2) do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and (3) do not have a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission. The Board may, in its discretion, exclude any BHC, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes. With some exceptions, the policy statement applies to SLHCs as if they were BHCs (12 C.F.R. 238.8(b)). See this manual's section 2090.2, entitled "Control and Ownership (BHC Formations)," for more information on the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement. The Board may, by order, apply any or all of Regulation Q to any BHC, based on an institution's asset size, level of complexity, risk profile, scope of operations, or financial condition.

13. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

entities within a holding company structure and supports an understanding of the organization's complete risk profile and its ability to address financial, managerial, operational, or other deficiencies before they pose a danger to its subsidiary depository institution(s).

In the supervision of BHCs and SLHCs, Federal Reserve examiners rely on the work of the regulators of insured depository institution (IDI) subsidiaries. The principle of relying on the work of the IDI regulators is a well-established tenet of Federal Reserve supervisory policy and is required by statute.[14] BHC and SLHC supervision focuses on the Federal Reserve's assessment of the consolidated organization based on a review of parent and nonbank activities, together with an assessment of the organization's IDI subsidiaries. When assigning Federal Reserve supervisory ratings to BHCs and SLHCs where the Federal Reserve is not the IDI regulator, the Federal Reserve will rely, to the fullest extent possible, on the assessment of the IDI as reflected in the examination work performed by the IDI regulator(s). For more information, see SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion."

1020.0.4.1 Supervisory Portfolios and Types of SLHCs

The population of SLHCs is diverse in size, complexity, geographic footprint, and activities. A limited number of SLHCs primarily engage in insurance, broker-dealer, or commercial activities, and, as such, have varying supervision requirements.

An important aspect of the Federal Reserve's consolidated supervision programs is the assessment and evaluation of practices across groups of organizations with similar characteristics and risk profiles. This "portfolio approach" to consolidated supervision facilitates greater consistency of supervisory practices and assessments across comparable organizations and enhances the Federal Reserve's ability to identify outlier organizations among established peer groups.

In general, the Federal Reserve's supervisory program for an SLHC engaged primarily in depository institution activities conducted through its savings association(s) is based on the Federal Reserve's supervisory program for portfolios of BHCs of similar asset size and complexity. Specifically, such an SLHC is treated as a community, regional, or large banking organization from a supervisory perspective.[15] In addition, the Federal Reserve considers any unique characteristics of SLHCs and the requirements of HOLA to assess the condition, performance, and activities of SLHCs on a consolidated basis in a manner that is consistent with the Board's established risk-based approach regarding BHC supervision.

A limited number of SLHCs are primarily engaged in commercial, insurance, and broker-dealer activities. Given the distinct nature of these entities, the Board generally supervises these entities outside of the traditional BHC portfolio approach, which is based largely upon asset size.

Certain SLHCs were permitted to engage in commercial activities through the exemption in section 10(c)(9)(C) of HOLA, or are primarily engaged in activities that were authorized by regulation on March 5, 1987, for SLHCs to engage in directly, and have savings association subsidiaries that account for only a small percentage of the total consolidated assets of the SLHC. Commercial SLHCs are principally engaged either in commercial activities (such as manufacturing or merchandising) or in activities not specifically permissible for financial holding companies (such as real estate development).[16] For SLHCs engaged in commercial activities, the segregation of the financial business lines of these companies will vary and some or all corporate functions may integrate both commercial and financial business lines. Inspections of such companies include functions that directly relate to financial activities, such as risk management, corporate governance, and internal financial activities (e.g., treasury functions, derivative/hedging transactions, or lending). Examiners also assess commercial activities only to the extent that these activities may impact the savings association subsidiary(ies), including the holding company's ability to serve as a source of strength to them.

14. Refer to sections 5(c)(1)–(2) of the BHC Act and sections 10(b)(2) and (b)(4) of the HOLA, as amended by section 604 of the Dodd-Frank Act. 12 U.S.C. 1844(c)(1)–(2); 12 U.S.C 1467a(b)(2), (b)(4).

15. For more information, see the "Community & Regional Financial Institutions" page and the "Large Financial Institutions" page on the Board's public website.

16. Section 10(c)(9)(C) of HOLA permitted certain SLHCs, referred to as legacy unitary SLHCs, to retain their authority to engage in nonfinancial activities. 12 U.S.C. § 1467a(c)(9)(C).

In general, SLHCs are considered insurance SLHCs if they are an insurance underwriting company or if 25 percent or more of their total consolidated assets are in subsidiaries that are insurance underwriting companies. The risks arising from insurance activities are materially different from traditional banking risks. Additionally, instead of producing consolidated financial statements based on generally accepted accounting principles, some of these firms only produce legal entity financial statements based on Statutory Accounting Principles (SAP) established by states through the National Association of Insurance Commissioners (NAIC).

The top-tier holding company for some supervised insurance SLHCs is an insurance underwriting company, which is subject to supervision and regulation by the relevant state insurance regulator as well as consolidated supervision from the Board. For all insurance SLHCs, the state insurance regulators supervise and regulate the business of insurance. Much like the assessment of BHCs, examiners responsible for the supervision of insurance SLHCs rely, to the fullest extent possible, on the work of an insurance SLHC's state insurance regulator(s) and factor this work, as well as the insurance SLHC's Own Risk and Solvency Assessment (ORSA) into their consolidated assessment. Inspection activities are also commensurate with, and proportional to, the scope, complexity, and size of the insurance SLHC's risk profile.

1020.0.4.2 Assignment of Supervisory Ratings

CORE Rating System

Prior to the transfer of supervisory responsibility for SLHCs to the Federal Reserve, the OTS assigned supervisory ratings for SLHCs under the CORE rating system. Under the CORE rating system, SLHCs generally were assigned individual component ratings for capital (C), organizational structure (O), risk management (R), and earnings (E), as well as a composite rating that reflected an overall assessment of the holding company as reflected by consolidated risk management and financial strength.

Indicative RFI Ratings

In 2011, the Board began transitioning SLHCs to the Board's "RFI/C(D)" rating system (commonly referred to as "RFI"), applicable to BHCs. The Federal Reserve decided to issue "indicative RFI ratings" to SLHCs until such time that a rating system was formally adopted for these companies.[17] Indicative ratings were issued to SLHCs as a way of providing feedback to SLHCs regarding their performance relative to supervisory expectations. Further, indicative ratings described how the SLHC would be rated under the RFI rating system if applied to the company. Similar to traditional inspections, the findings accompanying the indicative rating included detailed descriptions of deficiencies that need to be addressed by management and/or the board of directors.

The Board continues to assign indicative ratings under the RFI rating system to SLHCs that derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the BHC Act, as amended (12 U.S.C. 1843(k)) (commercial SLHCs). For SLHCs that continue to receive an indicative rating under the RFI rating system, examiners consider the risks inherent in the SLHC's activities and the ability of capital to absorb unanticipated losses, provide a base for growth, and support the level and composition of the parent company and subsidiaries' debt in the evaluation of the SLHC's capital adequacy.

Assignment of RFI Ratings

In November 2018, the Federal Reserve adopted a final rule to apply the RFI rating system on a fully implemented basis to SLHCs with total consolidated assets less than $100 billion, excluding SLHCs engaged in significant insurance or commercial activities.[18] Because the vast majority of SLHCs face similar risks and engage largely in the same activities as BHCs, the Board sought to apply the same RFI rating system to SLHCs (rather than the CORE rating system) as the Board currently applies to BHCs to promote consistency.

The Federal Reserve modified the applicability of the RFI rating system, which was initially developed in 2004, to cover non-insurance and non-commercial SLHCs with total consolidated assets less than $100 billion. Examination staff

17. For more information on the RFI rating system, see SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion," and this manual's section 1062.0, "RFI Rating System."
18. See 83 Fed. Reg. 56,081 (November 7, 2018).

assign and communicate ratings to BHCs and non-insurance and non-commercial SLHCs with total consolidated assets between $10 billion and $100 billion on at least an annual basis, and more frequently as warranted.

The scope and frequency of inspections of BHCs and non-insurance and non-commercial SLHCs with less than $10 billion in total consolidated assets is dependent on a number of factors such as the asset size, rating and examination cycle of the holding company's subsidiary depository institution, and the complexity of the holding company. For example, noncomplex holding companies with total consolidated assets less than $3 billion only receive a composite rating and risk management rating to the holding company based on the ratings of the lead depository institution. For more information, see SR-13-21, "Inspection Frequency and Scope Expectations for Bank Holding Companies and Savings and Loan Holding Companies that are Community Banking Organizations" and section 1045.1 of this manual.

Large Financial Institutions Rating System

In 2019, the Federal Reserve began to implement the large financial institution (LFI) rating system.[19] Federal Reserve supervisory staff use this rating system to evaluate and communicate the supervisory condition of

- BHCs with total consolidated assets of $100 billion or more;
- U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more, established pursuant to the Federal Reserve's Regulation YY; and
- all non-insurance, non-commercial SLHCs with total consolidated assets of $100 billion or more.

For more information on the assignment of LFI ratings to BHCs and SLHCs, see this manual's section 1060.0, entitled "Large Financial Institution Rating System," as well as SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System."

Regulation LL restricts SLHCs from commencing certain activities without the Federal Reserve's prior approval unless the company received a composite rating of 1 or 2 at its most recent examination.[20] After the issuance of the LFI ratings system, the Federal Reserve amended regulatory provisions so that they will apply to entities that receive numerical composite ratings, as well as to entities that do not receive numerical composite ratings (including firms subject to the LFI rating system). To be considered satisfactory, an SLHC under the LFI ratings system would have to be rated "Broadly Meets Expectations" or "Conditionally Meets Expectations" for each component of the LFI rating system. An SLHC rated "Deficient-1" or lower for any component would not be considered satisfactory. This standard applies to any provision contained in the Federal Reserve's regulations, which requires or refers to a firm having a satisfactory composite rating.

Supervisory Framework and Rating System for Insurance Organizations

In September 2022, the Federal Reserve issued a framework describing the consolidated supervision of supervised insurance organizations. See SR-22-8, "Framework for the Supervision of Insurance Organizations."[21] The framework addresses Federal Reserve supervisory expectations for insurance organizations that are overseen by the Board, including

- *Proportional application of supervisory guidance, resources, and activities*: how supervised insurance organizations are categorized as either complex or noncomplex based on risk profile, how the application of supervisory guidance is risk-based, and how supervisory resources are assigned and supervisory activities are conducted.
- *Supervised insurance organization ratings*: the ratings system applied to supervised insurance organizations, including the component ratings and rating definitions. Federal Reserve examiners periodically assign one of four ratings (Broadly Meets Expectations, Condition-

19. SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System."

20. 12 C.F.R. 238.54(a)(1).

21. See also 87 Fed. Reg. 60,160 (October 4, 2022). At the time the framework was established all supervised insurance organizations were savings and loan holding companies. However, the framework applies to any depository institution holding company that meets the criteria of a "supervised insurance organization." A "supervised insurance organization" is a depository institution holding company that is an insurance underwriting company, or that has over 25 percent of its consolidated assets held by insurance underwriting subsidiaries, or has been otherwise designated as a supervised insurance organization by Federal Reserve staff.

ally Meets Expectations, Deficient-1, and Deficient-2) to each of the three rating components (Capital Management, Liquidity Management, and Governance & Controls) used to assess supervised insurance organizations.[22]
- *Incorporating the work of other supervisors*: Similar to the approach taken by the Federal Reserve in its consolidated supervision of other firms, the oversight of supervised insurance organizations relies, to the fullest extent possible, on work performed by other relevant supervisors.

1020.0.5 SPECIFIC ISSUES RELATED TO THE SUPERVISION OF SLHCS

1020.0.5.1 Qualified Thrift Lender and the Qualified Thrift Lender Test

SR-17-9, "Supervisory Guidance for Examining Compliance with the Qualified Thrift Lender Test," provides supervisory guidance regarding the Qualified Thrift Lender (QTL) test under section 10(m) of HOLA.[23] Section 10(l) of HOLA permits a state savings bank or insured cooperative bank (referred to as an "electing bank") that meets the QTL test to be deemed a savings association solely for the purpose of determining the status of the electing bank's parent holding company as a SLHC under section 10 of HOLA.[24] Further, SR-17-9 provides an overview of the Federal Reserve's QTL requirements and the consequences of failing the QTL test for electing banks that are members of the Federal Reserve System and their parent holding companies.

SR-17-9 also outlines procedures examiners should consider when assessing an institution's QTL compliance program. The purpose of these procedures is to help examiners determine whether an electing bank meets the QTL test under section 10(m) of HOLA[25] and has a satisfactory process to ensure ongoing compliance with the QTL test. The examination procedures in SR-17-9 are applicable only to electing banks in which the Federal Reserve has responsibility for assessing QTL compliance.

1020.0.5.2 Covered Savings Associations

Section 206 of EGRRCPA created a new section 5A in HOLA, which requires the OCC to issue regulations to allow certain federal savings associations to elect to operate as covered savings associations (CSAs).[26] CSAs have the same rights and privileges, and are subject to the same duties, restrictions, penalties, liabilities, conditions, and limitations as a national bank that has its main office in the same location as the home office of the CSA.[27] A CSA is therefore not required to comply with the lending limits established by HOLA and is not directly subject to penalties for failing to remain a QTL.[28] However, CSAs continue to be treated as federal savings associations for some purposes, including governance, incorporation, bylaws, boards of directors, shareholders, mutual members, and distribution of dividends; and consolidation, merger, dissolution, conversion (including conversion to a stock bank or another charter), conservatorship, and receivership.[29]

Applicability Considerations

Eligible federal savings associations may make an election to operate as CSAs any time on or after July 1, 2019. To qualify as a CSA, a federal savings association must have

1. existed on December 31, 2017, and
2. had $20 billion or less in total assets as reported on its December 31, 2017, Call Report.[30]

Under the first qualification prong, an institution that was a credit union, state savings association, or state bank on December 31, 2017, but later converted to a federal savings association charter, would not be eligible to make an election to operate as a CSA.[31]

---

22. To be considered "well managed," a firm must receive a rating of "Conditionally Meets Expectations" or better in each of the three rating components. Each rating is defined specifically for supervised insurance organizations with particular emphasis on the obligation that firms serve as a source of financial and managerial strength for their depository institution(s).
23. 12 U.S.C. 1467a(m).
24. 12 U.S.C. 1467a(l).
25. 12 U.S.C. 1467a(m)(1).
26. Public Law 115–174, 132 Stat. 1310; 12 U.S.C. 1464a.
27. 12 U.S.C. § 1464a(c); 12 C.F.R. 101.4(a)(1).
28. See 84 Fed. Reg. 23,991 (May 24, 2019).
29. 12 U.S.C. § 1464a(d); 12 C.F.R. 101.4(a)(2).
30. 12 U.S.C. § 1464a(1); 12 C.F.R. 101.3(a)(1).
31. See *Frequently Asked Questions: Implementation of Covered Savings Association Final Rule*, Office of the Comptroller of the Currency, OCC 2019-31 (July 2019), at 5 ("OCC FAQs").

Concerning the second qualification prong, a federal savings association that successfully becomes a CSA will continue to be treated as a CSA even if its total consolidated assets exceed $20 billion after it makes an election.[32] Unlike attaining financial holding company status for BHCs or SLHCs, the financial and managerial condition, as communicated via supervisory ratings, does not affect a federal savings association's ability to make an election or to continue to operate as a CSA after making an election.[33]

Federal Reserve Legal Interpretations of CSAs and Holding Companies over CSAs

The Federal Reserve Act does not address the treatment of CSAs for purposes of compliance with the affiliate transaction rules in sections 23A and 23B of the Federal Reserve Act (as implemented by the Board's Regulation W, 12 C.F.R. part 223) or membership in the Federal Reserve System (12 C.F.R. part 208). On April 1, 2021, the Federal Reserve published legal interpretations regarding the treatment of CSAs, clarifying that a CSA is subject to the same requirements regarding membership in the Federal Reserve System and the same prohibitions on affiliate transactions, under sections 23A and 23B of the Federal Reserve Act, as a national bank.[34]

The BHC Act, HOLA, and EGRRCPA also do not address the treatment of holding companies that control a CSA. Board staff interprets section 5A of HOLA as requiring the holding company of a CSA to be treated as a BHC, rather than as a SLHC. The Board has published a series of frequently asked questions (FAQs) to assist CSAs and companies that control a CSA in complying with statutes and regulations administered by the Board.[35]

See, SR-22-2, "Status of Covered Savings Associations and Holding Companies of Covered Savings Associations Under Statutes and Regulations Administered by the Federal Reserve"; and Frequently Asked Questions about Covered Savings Associations Pursuant to Section 5A of the Home Owners' Loan Act.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2012, this section has been revised to discuss the current authority for the Federal Reserve (FR) to conduct BHC inspections (examinations) under section 5(c) of the Bank Holding Company Act of 1956 (12 U.S.C. 1844(c)) and also 12 U.S.C. 5361(a)–(c). The section also is revised to include provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act (section 604(c)(2)), which removed the enforcement provisions of section 10A of the Bank Holding Company Act that limited the FR's rulemaking and enforcement authority. Previously, the FR was only able to take enforcement actions against a functionally regulated subsidiary when its actions posed a threat to the safety and soundness of a depository institution affiliate.

1040.0.1 BHC INSPECTIONS

The Gramm-Leach-Bliley Act (GLB Act) amended section 5(c) of the Bank Holding Company Act (BHC Act) pertaining to BHC reports and examinations (or inspections, in the case of BHCs). The GLB Act provides specific supervisory guidance to the Board of Governors (Board) of the Federal Reserve System (and the Federal Reserve Banks via delegated authority) with respect to the breadth of BHC inspections. It also emphasized the focus and scope of BHC inspections and the inspections of BHC subsidiaries. An inspection is to be conducted to—

1. inform the board of the nature of the operations and financial condition of each BHC and its subsidiaries, including—
   a. the financial and operational risks within the holding company system that may pose a threat to the safety and soundness of any depository institution (DI) subsidiary of such bank holding company, and
   b. the systems for monitoring and controlling such financial and operational risks; and
2. monitor compliance by any entity with the provisions of the BHC Act or any other federal law that the Board has specific jurisdiction to enforce against the entity, and to monitor compliance with any provisions of federal law governing transactions and relationships between any DI subsidiary of a BHC and its affiliates.

1040.0.1.1 Authority for Bank Holding Company Inspections

Section 5 of the BHC Act of 1956 authorizes the Board to require reports and to conduct inspections of bank holding companies and their affiliates.[1] Subject to the limitations discussed below, Section 5 authorizes the Board to examine each bank holding company and nonbank subsidiary thereof. Within those limitations, the Federal Reserve System's supervisory staff (includes BHC inspection and examination staff) may review *all* books and records of a banking organization that is subject to Federal Reserve (FR) supervision.[2]

1040.0.2 FOCUS AND SCOPE OF BHC INSPECTIONS

The focus and scope of an inspection is to be limited, to the fullest extent possible, to the BHC and any subsidiary of the BHC that could have a materially adverse effect on the safety and soundness of any DI subsidiary of the holding company due to (1) the size, condition, or activities of the subsidiary, or (2) the nature or size of the transactions between the subsidiary and any DI subsidiary of the BHC.

The Board is to use, to the fullest extent possible, the bank examination reports of DIs prepared by the appropriate federal or state DI supervisory authority. The Board also is to use, to the fullest extent possible, the examination reports for non-DIs prepared by the following:

1. the Securities and Exchange Commission (SEC) for any registered broker or dealer
2. the SEC or any state for any investment adviser registered under the Investment Company Act of 1940
3. any state insurance regulatory authority for any licensed insurance company
4. any federal or state authority for any other subsidiary that the Board finds to be comprehensively supervised

1. See 12 U.S.C. 1844.
2. Supervisory staff includes individuals that are on and/or off site.

1040.0.3 EXAMINATIONS OF FUNCTIONALLY REGULATED SUBSIDIARIES

In general, the Board may examine (inspect) any BHC and each subsidiary to inform the Board of

- the nature of the operations and financial condition of the company and such subsidiary;
- the financial, operational, and other risks of the company or such subsidiary that may pose a threat to the safety and soundness of such company or subsidiary or to the financial stability of the United States;
- the systems for monitoring and controlling such risks; and
- compliance by the company or such subsidiary with the requirements of 12 U.S.C. 5361(b) and other provisions of the BHC Act and certain other federal statutes.

1040.0.3.1 Use of Examination Reports and Information

The Board is required, to the fullest extent possible, to rely on reports of examination of any subsidiary depository institution or functionally regulated subsidiary made by the primary financial regulatory agency for that subsidiary, and on information described for reports under 12 U.S.C. 5361(a)(2). (See 12 U.S.C. 5361(b)(2).)

1040.0.3.2 Coordination with Other Regulators

The Board is to

- provide reasonable notice to, and to consult with, the primary financial regulatory agency for any subsidiary before requiring a report or commencing an examination of such subsidiary under this section; and
- avoid duplication of examination activities, reporting requirements, and requests for information, to the fullest extent possible.

(See 12 U.S.C. 5361(c).)

1040.0.4 SUPERVISION OF A NONBANK FINANCIAL COMPANY

The FR, as the appropriate federal supervisory banking agency, must, to the fullest extent possible, rely on (1) reports and other supervisory information that the BHC, or any subsidiary thereof, has been required to provide to other federal and state regulatory agencies; (2) externally audited financial statements of the BHC or subsidiary; (3) information that is otherwise available from federal and state regulatory agencies; and (4) information that is required to be reported publicly. (See 12 U.S.C. 1844(c)(1) or section 5(c) of the BHC Act.)

1045.0.1 OVERVIEW AND RELIANCE ON THE INSURED DEPOSITORY INSTITUTION REGULATOR

The Federal Reserve's approach to the supervision of holding companies with less than $10 billion in total consolidated assets is primarily described in SR-13-21, "Inspection Frequency and Scope Expectations for Bank Holding Companies and Savings and Loan Holding Companies that are Community Banking Organizations." Reserve Banks, in the vast majority of cases, conduct abbreviated off-site reviews of small, noncomplex holding companies with total consolidated assets of up to $3 billion upon receipt of examination reports from the insured depository institution (IDI) regulator of the lead subsidiary IDI.

These Reserve Bank reviews assess activities conducted outside of the subsidiary IDI and rely substantially on the findings of the IDI regulator to evaluate the overall condition of the institution. For larger holding companies in the community banking organization (CBO) supervision portfolio, Reserve Banks conduct point-in-time on- or off-site reviews that are coordinated with, or closely follow, onsite examinations of the lead subsidiary IDI by its IDI regulator. The Reserve Bank reviews of larger CBO holding companies are targeted toward assessing parent company and nonbank activities and their potential effect on the safety and soundness of the subsidiary IDI.

The Reserve Bank evaluates the condition, performance, and prospects of the subsidiary IDI based on the conclusions of the IDI regulator and makes best efforts not to duplicate the work of other prudential regulators. Refer to SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion."

The Federal Reserve relies on periodic on- and off-site inspections to assess the safety and soundness of supervised bank holding companies (BHCs) and savings and loan holding companies (SLHCs) (collectively referred to as "holding companies"). The guidance in SR-13-21 outlines the minimum inspection frequency and scope expectations for supervised holding companies with less than $10 billion in total consolidated assets to

- conform inspection frequency and scope expectations for SLHCs with less than $10 billion in total consolidated assets to those applicable to BHCs of the same size;
- clarify the scoping expectations for targeted inspections conducted at holding companies with total consolidated assets of at least $3 billion but less than $10 billion; and
- modify the expectations for targeted inspections for "3," "4," and "5"-rated holding companies with total consolidated assets of at least $3 billion but less than $10 billion.

These frequency and scope expectations vary depending on whether a holding company has been designated as "complex," with more complex holding companies subject to more frequent and in-depth review. If needed for supervisory purposes, Reserve Banks may inspect a holding company with greater frequency and scope.

1045.0.2 DEFINITION OF COMPLEX HOLDING COMPANIES

The determination of whether a holding company is "complex" should be made at least annually by the responsible Reserve Bank. Utilizing surveillance screens and other information obtained through supervisory or applications processes, Reserve Banks should update the complexity designation of a company as its activities or condition changes. The determination of a holding company's complexity should take into account a number of factors. These factors include the

- size and structure of the company;
- the extent of intercompany transactions between IDI subsidiaries and the holding company or uninsured subsidiaries of the holding company;
- the risk, scale, and complexity of activities of any nondepository subsidiaries;[1] and

1. For SLHCs, consideration should be given to whether the holding company is a legacy unitary SLHC, and if so, the type and extent of the activities in which the company engages. Guidance on ratings, examination frequency, and complexity classifications for supervised insurance organizations is available in SR-22-8, "Framework for the Supervision of Insurance Organizations."

- the degree of leverage at the holding company, including the extent of its debt outstanding to the public.

Companies should also be designated "complex" if material risk-management processes for the holding company and its affiliates are consolidated at the parent company.

1045.0.3 SUPERVISION AND SURVEILLANCE APPROACH

The frequency and scope of on- and off-site inspections should be adjusted based on the results of examinations of a company's depository institution subsidiaries and off-site surveillance. Whether the inspection is conducted on- or off-site will depend on the level and nature of the risks involved, the holding company's ability to manage those risks, and the Reserve Bank's ability to acquire the necessary information to analyze the activity off-site. If information obtained off-site is not sufficient for the Reserve Bank to determine the condition or assess the activity of the company to assign a rating, the Reserve Bank should conduct an on-site inspection (full-scope or targeted, as appropriate).

To facilitate prompt follow-up on changes in a company's performance and condition, the Federal Reserve maintains distinct surveillance programs for small holding companies (less than $3 billion in total consolidated assets) and larger holding companies. Surveillance screens for holding companies with $3 billion or more in total consolidated assets focus on identifying those companies reporting financial results that seem to be inconsistent with their current supervisory ratings, as well as activities conducted outside of depository institution subsidiaries. For small holding companies, surveillance screens focus on the identification of potential parent company and nondepository subsidiary issues that may adversely affect affiliated depository institutions. In particular, these screens address parent company cash flow, intercompany transactions, parent company leverage, and consolidated capital ratios, when applicable. Screens also assist in maintaining up-to-date complexity designations and are updated periodically to reflect industry trends and conditions as well as changes in regulatory reporting requirements.

1045.0.4 FREQUENCY AND SCOPE OF INSPECTIONS OF HOLDING COMPANIES WITH TOTAL CONSOLIDATED ASSETS OF AT LEAST $3 BILLION BUT LESS THAN $10 BILLION

Complex holding companies in satisfactory condition are inspected at least once per calendar year, while noncomplex holding companies may be inspected every other year. The Reserve Banks should attempt to conduct inspections of holding companies with at least $3 billion but less than $10 billion in total consolidated assets shortly after the examination of the lead depository subsidiary is completed. These holding companies are assigned a complete RFI rating (component ratings, subcomponent ratings, and a composite rating) regardless of their complexity.[2]

Depending on their condition and complexity, holding companies in this category will receive full-scope inspections or targeted inspections. At a minimum, a full-scope inspection should include sufficient procedures to reach an informed judgment regarding the assigned ratings for the factors addressed by the RFI rating system, evaluating the organization's methods of managing and controlling its risk exposures, and ascertaining whether management and directors fully understand and are actively monitoring the organization's exposure to those risks.

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a holding company. Targeted inspections of holding companies with total consolidated assets of at least $3 billion but less than $10 billion should focus primarily on parent company leverage, parent company cash flow, nondepository subsidiaries, consolidated capital (when applicable), and intercompany transactions. Targeted inspections may also cover other applicable areas, such as deficient risk-management practices at the holding company.

In addition, because compliance with laws and regulations is a statutory factor that must be considered as part of any supervisory review of an application or notice by a holding company, it is important that Reserve Bank staff ensure that compliance with relevant laws and regulations, including any commitments provided by a holding company in connection with an application or notice, is evaluated and addressed in written inspection reports.

2. See SR-19-4/CA-19-3, "Supervisory Rating Systems for Holding Companies with Consolidated Assets Less Than $100 billion," and section 1062.0 of this manual.

1045.0.4.1 Complex Holding Companies

- If a complex holding company is rated composite "1" or "2," a full-scope, on-site inspection should be completed annually.
- The following apply for a complex holding company rated composite "3," "4," or "5."
  - — A full-scope, on-site inspection should be completed annually.
  - — If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the holding company rating if necessary. The targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.
- Interim inspections between regular full-scope, on-site inspections are not required. However, additional follow-up, including interim inspections, may be necessary in response to off-site surveillance program results.

1045.0.4.2 Noncomplex Holding Companies

- If a noncomplex holding company is rated composite "1" or "2," an off-site targeted inspection should be completed every two years.
- The following apply for a noncomplex holding company rated composite "3," "4," or "5."
  - — A full-scope, off-site inspection should be completed annually.
  - — If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the holding company rating if necessary. This targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.
- Interim inspections between regular full-scope inspections are not required. However, additional follow-up, including interim inspections, may be necessary in response to off-site surveillance program results.

1045.0.5 FREQUENCY AND SCOPE OF REVIEW OF HOLDING COMPANIES WITH LESS THAN $3 BILLION IN TOTAL CONSOLIDATED ASSETS

The supervisory cycle for holding companies with less than $3 billion in total consolidated assets generally is determined by the examination frequency of the lead depository institution. Complex companies in this size category are assigned a complete RFI rating; others are assigned only a risk-management rating and a composite rating. All ratings assigned should be promptly entered into the National Examination Database (NED) and communicated to the company, Board staff, and appropriate state and federal regulatory authorities as soon as possible, but generally no later than 90 days after receipt of the lead depository institution examination report.

Although an off-site review of small holding companies will be appropriate in many cases, in some instances it may be necessary to conduct an on-site review for complex holding companies, as discussed below. In those cases when an on-site review is expected, the findings of that review and the assigned ratings should be communicated to the company no later than 120 days after receipt of the lead depository institution examination report. Documentation for the ratings and off-site or on-site reviews will generally consist of the examination reports for the depository institution subsidiaries, a copy of the transmittal letter communicating the ratings to the company, information related to relevant System surveillance results, and memoranda supporting any on-site review conducted. A meeting between Reserve Bank staff and the company's board of directors to communicate findings is not required, but should be conducted when warranted by supervisory concerns.

1045.0.5.1 Complex Holding Companies

- An off-site review should be conducted upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a complete RFI rating, the Reserve Bank should conduct an on-site review of the company.

- Any on-site review should be targeted at those areas where additional information or analysis is needed to assign a complete supervisory rating.

1045.0.5.2 Noncomplex Holding Companies

- If all subsidiary depository institutions have a management component rating and a composite supervisory rating of “1” or “2” and no material holding company issues are otherwise indicated, the Reserve Bank should assign only a composite rating and risk management rating to the holding company based on the ratings of the lead depository institution.
- If one or more subsidiary depository institutions have a management component rating or a composite supervisory rating of “3,” “4,” or “5” or a material holding company issue is otherwise indicated, an off-site review should be completed upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a risk-management rating and a composite rating, Reserve Bank staff should contact the holding company to obtain more information.
- Any off-site review should be targeted, as appropriate, at those areas where additional information or analysis is needed to develop the risk-management and composite ratings.

1045.0.6 INSPECTION REPORT CONTENT FOR CBO HOLDING COMPANIES

1045.0.6.1 Inspection Report Content for Small Noncomplex Holding Companies

As noted above, the supervisory cycle for noncomplex holding companies with less than $3 billion in total consolidated assets (“small noncomplex holding companies”) generally is determined by the examination frequency of the lead IDI subsidiary. Small noncomplex holding companies are assigned a risk-management rating and a composite rating from the RFI/C(D) rating system. Furthermore, Federal Reserve examiners rely on the primary regulator’s work on the subsidiary IDI.[3] At small noncomplex holding companies, Federal Reserve examination staff focus their review at the parent holding company and any nonbanking activities.

When a small noncomplex holding company’s subsidiary depository institution(s) has a management component rating and a composite CAMELS rating of “1” or “2” and no material holding company issues are otherwise indicated, the holding company ratings are based primarily on the ratings of the lead depository institution. As such, reports of inspection for these holding companies are developed primarily to briefly convey the risk-management rating and a composite rating. However, if there are supervisory issues at the subsidiary bank or small noncomplex holding company, the inspection report will convey additional information as appropriate.

Below is a summary of content that is included in inspection reports for small noncomplex holding companies.

All reports will contain the following information:

- *Ratings Assigned:* The report will state the numerical risk management and composite rating of the holding company. A brief qualitative description of the ratings assigned will also be provided in the report. For more information on the RFI/C(D) rating system, including ratings definitions, see section 1062.0.
- *Confidential Supervisory Information:* The report will note that the contents contain confidential supervisory information and that the Board has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in statute (12 U.S.C. 1817(a) and 1831m) and implementing regulations (12 CFR part 261, subpart C). This information may be conveyed on a report cover sheet or in a footnote reference in the report of inspection.
- *Standard Appeals Language:* The report will contain standard language in a footnote noting that any institution about which the Federal Reserve makes a written material supervisory

3. Several states have holding company supervisory authority and may issue ratings for small noncomplex holding companies. Examiners should rely on the review of a holding company conducted by a state agency to the extent that the scope of the review is consistent with the Federal Reserve’s objectives in holding company supervision.

determination is eligible to utilize the appeals process as described in the Appeals Process and Board Ombudsman (Ombuds) Policy Statement. For more information, see 85 Fed. Reg. 15,175 (March 17, 2020) as well as SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System."

- *Key Administrative Information:* This information includes
  - the date the Reserve Bank completed the offsite review,
  - a cross reference to the examination report from the subsidiary IDI that formed the basis of the conclusions in the holding company report of inspection, and
  - Reserve Bank examination staff contact information.

In certain situations, the inspection report for a holding company with a composite rating of "3" or worse would include additional information, as appropriate. Below are some content headings that could appear in the report depending on the circumstances at the holding company:

- *Overall Conclusion:* A discussion about the overall conclusion of the offsite review is included in the inspection report for holding companies rated "3" or worse. The contents of this heading will depend on the specific circumstances, such as multiple depository institution subsidiaries or a material nonbank subsidiary. This section may also be used for 1- or 2-rated companies if the examiner needs to convey a specific message to management.
- *Source of Strength:* The report may include language that a BHC or a SLHC is expected to act as a source of managerial and financial strength to its subsidiary depository institutions.[4] The report will inform holding company management and the board of directors to take steps to conserve assets and other resources for the benefit of the depository institution and keep the Reserve Bank informed of such measures.
- *Matters Requiring Attention:* This language is included in the report when examination staff cite a Matter Requiring Immediate Attention (MRIA) or Matter Requiring Attention (MRA). The definitions of MRIAs and MRAs, or references to the guidance defining MRIAs and MRAs, should be included as a footnote in the report.[5] The report should also provide a reference to the Statement Clarifying the Role of Supervisory Guidance.[6]
- *Enforcement Action:* This heading is included in the report if the holding company is under an enforcement action, will be placed under an enforcement action, or is communicating the termination of an enforcement action. Several factors dictate the contents of this heading language, such as
  - action status (initiate, continue, or terminate);
  - type of action (informal actions vs. formal actions);
  - whether the informal action is enclosed in the inspection report or will be communicated in a separate cover; and
  - whether the holding company is in noncompliance with the financial holding company requirements of section 4(*l*) of the Bank Holding Company Act and is therefore subject to the provision of section 4(m).
- *Troubled Condition:* If the holding company is determined to be in troubled condition, the report will communicate this information to the holding company. The report will also indicate whether the holding company is no longer considered to be in troubled condition. Furthermore, the section will also include references to relevant regulations and guidance, including
  - 12 CFR 225.71 (Regulation Y)
  - 12 CFR 238.72 (Regulation LL)
  - SR-19-12, "Statement Regarding Insurance Policies for Directors and Officers"
  - SR-03-6, "Guidance Regarding Restrictions on Institutions in Troubled Condition"
  - SR-02-17, "Guidance Regarding Indemnification Agreements and Payments"

4. See 12 CFR part 225 and 12 CFR part 238.

5. See SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."

6. The "Statement Clarifying the Role of Supervisory Guidance," which can be found at 12 CFR part 262, appendix A, states that examiners will not criticize (through the issuance of matters requiring attention), a supervised financial institution for, and the Board will not issue an enforcement action on the basis of, a "violation" of or "non-compliance" with supervisory guidance.

1045.0.6.2 Inspection Reports for CBO Holding Companies that Receive the Full RFI/C(D) Ratings

Section 1050.2.6 describes the inspection report content for certain holding companies in the regional banking organization (RBO) supervisory portfolio. The inspection report content in that section also generally applies to the completion of inspection reports for holding companies in the CBO portfolio that receive the full RFI/C(D) ratings. Examiners should follow the guidance in section 1050.2.6 when documenting the conclusions reached in assigning the holding company rating components and subcomponents at full-scope inspections of BHCs and SLHCs in the CBO portfolio with the following characteristics:

- The holding company has total consolidated assets greater than or equal to $3 billion and less than $10 billion, regardless of complexity or the entity type of the lead IDI subsidiary; and
- The holding company has a composite rating of “1,” “2,” or “3.”

In addition, examiners should follow the guidance in section 1050.2.6 for completing inspection reports for any complex holding company with less than $3 billion in total consolidated assets that has a composite rating of “1,” “2,” or “3.”

1045.0.6.3 Inspection Reports for Complex CBO Holding Companies Rated “4” or “5”

Section 1001.1, “Community Bank Supervision Process,” of the *Commercial Bank Examination Manual* describes the use of a letter-format examination report in lieu of the standard, longer-form report for communicating the findings of safety-and-soundness examinations and inspections of community banking organizations that result in composite supervisory ratings of “4” or “5.” The purpose of using the letter format for these poorly rated institutions is to enable Reserve Bank examination staff to focus their reports on key findings and improve the communication of supervisory expectations to companies in need of significant improvement. Furthermore, these institutions are examined with increased frequency, and the letter format hastens the communication of supervisory expectations to the institution.[7]

Examiners have the option to use a letter-format report for inspections in support of complex BHC and SLHC inspections that result in a rating of “4” or “5.” The content of these reports should be tailored to each company and fully support the ratings that are assigned. The letter-format inspection report for complex holding companies rated “4” or “5” should cover the following areas:

- scope of the inspection
- matters requiring attention
- analysis of consolidated, parent company, nonbank and bank subsidiary financial factors
- conclusions regarding the internal and external audit program

In addition, any applicable areas that are described in the report of inspection instructions (see this manual’s section 1050.2.6) and are necessary to support examiners’ findings should be included. As with any report of inspection, the letter-format reports must notify a banking organization and its board of the organization’s supervisory rating and the confidential nature of the report. The letter-format report should also set forth the deadline by which the organization must reply to the Reserve Bank, including the organization’s plans to address any matters requiring immediate attention or matters requiring attention that are noted in the report.

1045.0.7 COMPLETION STANDARD FOR EXAMINATION AND INSPECTION REPORTS

Safety-and-soundness examination and inspection reports for CBOs issued by the Federal Reserve should be completed and sent to the supervised institution within 60 calendar days following the “close date” of the examination.[8] These standards apply to formal examination and inspection reports for institutions supervised by the Federal Reserve with less than $10 billion in total consolidated assets including state member banks, BHCs, SLHCs, Edge Act and agreement corporations, U.S. branches and agencies of foreign banks, and foreign subsidi-

7. See also SR-19-5, “Communication Expectations for Community Bank Examinations and Inspections.”

8. This completion standard gives recognition to the continuous monitoring and roll-up supervisory process for larger organizations having $10 billion or more in total consolidated assets.

aries and branches of U.S. banks.[9] For institutions rated composite "3," "4," or "5," Reserve Banks are encouraged to adopt an internal target of 45 calendar days from the close date for sending the reports.

The "close date" of an on-site examination and inspection is defined as the last date that the examination team is physically on-site at the institution. For examinations and inspections for which all or a portion of the work is performed off-site, the "close date" is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the examiner-in-charge's review or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

Further, to ensure that findings are communicated to a supervised institution in a timely manner, Reserve Banks should ensure that the duration between the start of an examination/inspection to the completion and delivery of an examination/inspection report does not exceed 90 days.[10] In cases when reports are subject to statutory requirements for other state or federal agency review, such as by the Consumer Financial Protection Bureau (CFPB),[11] Reserve Banks may exceed these guidelines at the discretion of senior management. However, deviations from these guidelines are expected to be rare. At the discretion of senior Reserve Bank management, additional exemptions from this 90-day guideline may be considered for examinations that are conducted simultaneously on multiple affiliated banks or examinations of larger complex CBOs that require additional time on-site to review specialized or complex business lines.

Findings and conclusions delivered to a supervised institution at the close date and exit meetings for examinations and inspections must be consistently documented in workpapers.[12] At a minimum, documentation should include

1. a list of attendees at the meetings;
2. a description of significant examination and inspection findings discussed, including preliminary ratings; and
3. a summary of the bank management's views on the findings and, if applicable, the views of the board of directors.

To the extent conclusions in the final report differ from those discussed at the close date and exit meetings, Reserve Bank examiners and supervisory staff should communicate the reasons for the differences to the supervised institution and document these discussions in their workpapers. See SR-13-14, "Timing Standards for the Completion of Safety-and-Soundness Examination and Inspection Reports for Community Banking Organizations," for more information.

9. Most BHCs and SLHCs with less than $3 billion in total consolidated assets are subject to a separate program that has different requirements for the issuance of reports of inspection.

10. The start date is the date that Reserve Bank examiners and supervisory staff commence the examination and inspection work, excluding pre-examination visitations and preparation.

11. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the "Memorandum of Understanding on Supervisory Coordination" and the June 4, 2012, joint press release.

12. In some cases, Reserve Bank examiners or supervisory staff may conduct a pre-exit meeting with the institution's management at the close date of the examination or inspection. Representatives from the on-site examination or inspection team may also hold a final exit meeting with the institution after vetting examination or inspection findings with the responsible Reserve Bank officer(s). An "exit meeting" is defined as an examiner's meeting with the institution's management or management and board of directors to communicate preliminary supervisory findings and conclusions.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, this section was revised to delete a reference to SR-99-15, which was superseded by SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions."

The continuing growth in the size and complexity of many banking organizations exposes these firms to a wide array of potential risks, while at the same time making it more challenging for a single supervisor to have a complete view of firmwide risks and controls. In response to these trends, and to better fulfill both its responsibilities as consolidated supervisor and its other central bank objectives, the Federal Reserve continues to refine and enhance its programs for the consolidated supervision of bank holding companies (BHCs) and the combined U.S. operations of foreign banking organizations (FBOs).

The Federal Reserve has set forth its consolidated supervision program for bank holding companies and the combined U.S. Operations of Foreign Banking Organizations in SR-08-9/CA-08-12 and its attachments. (See sections 1050.1 for the consolidated supervision of large complex banking organizations and see 1050.2 for the consolidated supervision of regional banking organizations.) The primary objectives of this supervisory guidance are to specify principal areas of focus for consolidated supervision activities and thereby provide for consistent Federal Reserve supervisory practices and assessments across organizations with similar activities and risks. Consistent with these objectives, the SR letter and its attached guidance detail specific expectations for Federal Reserve staff for understanding and assessing primary governance functions and risk controls, material business lines, nonbank operations, financial condition, and other key activities and risks at banking organizations; address unique aspects of supervising the combined U.S. operations of FBOs; and highlight the supervisory attention that should be paid to risk-management systems and internal controls used by BHCs and FBOs that provide core clearing and settlement services (core clearing and settlement organizations) or that have a significant presence in critical or key financial markets.[1] The guidance also reiterates the importance of coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators.

The Federal Reserve's enhanced approach to consolidated supervision emphasizes several elements that should help make the financial system more resilient. These include focus on corporate governance, capital adequacy, funding and liquidity management, and the supervision of material nonbank subsidiaries,[2] as well as other aspects of the Federal Reserve's consolidated supervision activities designed to further the objectives of fostering financial stability and deterring or managing financial crises. In addition, the Federal Reserve continues to work, both independently and in conjunction with other domestic and foreign bank supervisors and functional regulators, on a number of other initiatives to strengthen supervisory approaches and reinforce expectations for sound practices in response to recent lessons learned.

1050.0.1 SUPERVISION AND REGULATION FRAMEWORK FOR COMPANIES THAT CONTROL A BANK AND THE SUBSIDIARIES OF SUCH COMPANIES

The Bank Holding Company Act (BHC Act), originally enacted in 1956, provides a federal framework for the supervision and regulation of all domestic and foreign companies that control a bank and the subsidiaries of such companies. Among the principal purposes of the BHC Act is to protect the safety and soundness of corporately controlled banks. Financial trouble in one part of an organization can spread rapidly to other parts of the organization; moreover, large BHCs increasingly operate and manage their businesses on an integrated basis across corporate boundaries. Risks that cross legal entities or that are managed on a consolidated basis cannot be monitored properly through supervision directed at any one of the legal entity subsidiaries within the overall organization.

The BHC Act provides for all BHCs, including financial holding companies formed under

1. See Attachment C to SR-08-9/CA-08-12 or this section's appendix for the definitions of "core clearing and settlement organizations," "critical financial markets," and "key financial markets."

2. The term "nonbank subsidiaries" as used in SR-08-9/CA-08-12 and its attachments does not include savings associations.

the Gramm-Leach-Bliley Act (GLBA), to be supervised on a consolidated basis by the Federal Reserve. Consolidated supervision of a BHC encompasses the parent company and its subsidiaries, and allows the Federal Reserve to understand the organization's structure, activities, resources, and risks, as well as to address financial, managerial, operational, or other deficiencies before they pose a danger to the BHC's subsidiary depository institutions.

To carry out these responsibilities, the BHC Act grants the Federal Reserve broad authority to inspect and obtain reports from a BHC and its subsidiaries concerning, among other things, the company's financial condition, systems for monitoring and controlling financial and operational risks, and compliance with the BHC Act and other federal law (including consumer protection laws) that the Board has specific jurisdiction to enforce. In addition, federal law authorizes the Federal Reserve to take action against a BHC or nonbank subsidiary to prevent these entities from engaging in unsafe or unsound practices or to address violations of law that occur in connection with their own business operations even if those operations are not directly connected to the BHC's subsidiary depository institutions. Using its authority, the Federal Reserve also has established consolidated capital standards for BHCs, helping to ensure that a BHC maintains adequate capital to support its groupwide activities, does not become excessively leveraged, and is able to serve as a source of strength for its depository institution subsidiaries.

The Federal Reserve's consolidated supervision program has served as the benchmark for many of the current and evolving international standards for the consolidated supervision of financial groups. Key concepts that have been part of the Federal Reserve's approach to consolidated supervision for many years are reflected in the Basel Committee on Banking Supervision's *Minimum Standards for Internationally Active Banks* (1992), capital accords (1988 and 2006), and *Core Principles for Effective Banking Supervision* (1997 and 2006), and are now used by the International Monetary Fund and the World Bank in connection with their assessments of countries' bank supervisory regimes.

In addition to its role as consolidated supervisor of BHCs, the Federal Reserve also is responsible for the overall supervision of the U.S. operations of foreign banks that have a banking presence in the United States. This role was established by the International Banking Act of 1978, which introduced a policy of national treatment[3] promoting competitive equality between FBOs operating in the United States and domestic banking organizations. The Foreign Bank Supervision Enhancement Act of 1991 established uniform federal standards for entry, expansion, and supervision of FBOs in the United States and increased the Federal Reserve's supervisory responsibility and authority over the U.S. operations of FBOs. This act also introduced the requirement that the Federal Reserve approve the establishment of all U.S. banking offices of foreign banks and, in that regard, take into account whether the foreign bank is subject to comprehensive, consolidated supervision by its home-country supervisor.

The Federal Reserve's consolidated supervision activities closely complement its other central bank responsibilities, including the objectives of fostering financial stability and deterring or managing financial crises. The information, expertise, and powers that the Federal Reserve derives from its supervisory authority enhance its ability to help prevent financial crises and to manage such crises (in consultation and conjunction with the Treasury Department and other U.S. and foreign authorities) should they occur. Similarly, the supervisory responsibilities of the Federal Reserve benefit from its responsibilities for financial stability. For example, knowledge gained about financial market developments through interactions with primary dealers in government securities and capital market expertise derived from nonsupervisory activities improve the Federal Reserve's ability to understand and evaluate the activities of banking organizations and otherwise enhance its contributions to supervisory and regulatory policy initiatives.

Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant primary supervisors and functional regulators.[4] These relation-

3. "National treatment" refers to a policy that generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.

4. The term "primary supervisor" as used in this document refers to the primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a U.S. banking office of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution's chartering/licensing state. Where a BHC has multiple depository institution subsidiaries or an FBO has multiple U.S. banking offices, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. The term "functional regulator"

ships respect the individual statutory authorities and responsibilities of the respective supervisors and regulators and provide for appropriate information flows and coordination so that individual responsibilities can be carried out effectively, while limiting the potential for duplication or undue burden. Information sharing among domestic and foreign supervisors, consistent with applicable law and the jurisdiction of each supervisor, is essential to ensure that a banking organization's global activities are supervised on a consolidated basis.

These concepts underlie the provisions of the GLBA governing the interaction between the Federal Reserve, as consolidated supervisor, and the other primary supervisors or functional regulators that may be involved in supervising one or more subsidiaries of a BHC.[5] Under these provisions, the Federal Reserve, in conducting its consolidated supervisory responsibilities, relies to the fullest extent possible on (1) the reports that a BHC or subsidiary has provided to another federal or state supervisor or to an appropriate self-regulatory organization, (2) information that is otherwise required to be reported publicly, and (3) externally audited financial statements. In addition, the Federal Reserve relies to the fullest extent possible on the reports of examination of a depository institution made by its appropriate federal or state bank supervisor, of a broker–dealer or investment adviser made by or on behalf of the SEC or relevant state regulatory authority, or of a licensed insurance company made by or on behalf of its appropriate state regulatory authority. In developing its overall assessment of a BHC or the combined U.S. operations of an FBO, the Federal Reserve also relies to the fullest extent possible on the information gathered and assessments developed by these other supervisors and regulators.

Similarly, the Federal Reserve seeks to assist relevant primary supervisors and functional regulators in performing their supervisory responsibilities with respect to regulated subsidiaries by sharing pertinent information that relates to these regulated subsidiaries consistent with each agency's supervisory responsibilities and applicable law. Examples include shared information relating to the financial condition, risk-management policies, and operations of a banking organization that may have a material impact on regulated subsidiaries, as well as information concerning transactions or relationships between regulated subsidiaries and their affiliates.

1050.0.2 KEY OBJECTIVES FOR, AND APPROACHES TO, CONSOLIDATED SUPERVISION

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis and of the combined U.S. operations of an FBO. These assessments are reflected in the RFI (Risk-Management, Financial Condition, and Impact) rating assigned to a BHC[6] and the combined U.S. operations rating assigned to an FBO with multiple U.S. operations.[7] The Federal Reserve utilizes three principal processes to understand, supervise, and assess BHCs and FBOs: continuous monitoring activities,[8] discovery reviews,[9] and testing.[10]

as used in this document refers to the appropriate federal (examples include the U.S. Securities and Exchange Commission and the U.S. Commodity Futures Trading Commission) or state regulator for a functionally regulated nondepository subsidiary or affiliate of a BHC or FBO. (See SR-00-13, "Framework for Financial Holding Company Supervision.") For U.S. operations of FBOs, the U.S. supervisor of a U.S. banking office is referred to as a domestic primary supervisor.

5. See SR-00-13.

6. The RFI rating system for BHCs is discussed in SR-04-18, "Bank Holding Company Rating System" and section 4070.0. RFI ratings are assigned at least annually for BHCs with $1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC's assigned ratings and encompasses the results of the entire supervisory cycle.

7. SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations," discusses the U.S. combined operations rating for an FBO and other aspects of the FBO Supervision Program. The Federal Reserve's rating and assessment, as well as a summary of condition analysis describing the strengths and weaknesses of the FBO's combined U.S. operations, are provided to the head office of each FBO. This information is also shared with the FBO's home-country supervisor so that it may assess the impact of U.S. operations on the parent banking organization in its role as consolidated supervisor of the banking organization's global operations.

8. "Continuous monitoring activities" are nonexamination/inspection supervisory activities primarily designed to develop and maintain an understanding of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to assess inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and functional regulators (including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results).

9. A "discovery review" is an examination/inspection activity designed to improve the understanding of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process.

The Federal Reserve's supervisory objectives are the same for all BHCs and FBOs. However, the type and amount of information and the scope and extent of Federal Reserve supervisory and examination[11] work that are necessary to understand, supervise, and develop an assessment of an individual BHC or the U.S. operations of an individual FBO vary. Federal Reserve supervisory activities are tailored for each organization based on a variety of factors, including the organization's legal entity and regulatory structure;[12] the risks posed by the organization's specific activities and systems; and the potential effect of weaknesses in control functions on the organization, its subsidiary depository institutions, or key financial markets. For example, additional supervisory activities, including transaction testing in appropriate circumstances, may be conducted when there are information gaps relating to material risks or activities, indications of weaknesses in risk-management systems or internal controls, or indications of violations of consumer protection or other laws, or when a consolidated organization or subsidiary depository institution is in less-than-satisfactory condition.

1050.0.2.1 Key Supervisory Objectives

In fulfilling its responsibilities for supervising a BHC on a consolidated basis and the combined U.S. operations of an FBO, the Federal Reserve is guided by the following key supervisory objectives.

10. "Testing" is an examination/inspection activity to assess whether a control process is appropriately designed and achieving its objectives or to validate a management assertion about an organization's operations. Activities may include the review and validation of internal MIS, such as business records related to an internal control process; audit findings and processes; or a sample of transactions that have been entered into by a banking organization.

11. While by definition "examination" activities are applicable to the supervision of banks and other depository institutions, as well as U.S. banking offices of FBOs, and "inspection" activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates, the term "examination" is generally used throughout this guidance to refer to both examination and inspection activities.

12. An organization's "regulatory structure" refers to the various legal entities within the organization that are subject to oversight by different domestic and foreign supervisors or functional regulators.

1050.0.2.1.1 Understanding the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve develops a comprehensive understanding of each BHC and the combined U.S. operations of each FBO. Key elements in developing this understanding include

- corporate strategy and significant activities;
- business line, legal entity, and regulatory structure, including interrelationships and dependencies across multiple legal entities;
- corporate governance, risk management, and internal controls for managing risks; and
- for certain organizations, presence in critical or key financial market activities.

1050.0.2.1.2 Assessing the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve supervises each BHC on a consolidated basis and assigns an RFI rating through an evaluation and assessment of the following areas

- key corporate governance, risk management, and control functions (including, where applicable, such functions as they relate to core clearing and settlement activities and activities where the organization has a significant presence in critical or key financial markets);
- the adequacy of the financial condition of the consolidated organization; and
- the potential negative impact of nonbank entities on subsidiary depository institutions.

The Federal Reserve also supervises and assesses the combined U.S. operations of each FBO and assigns a U.S. combined operations rating based on analysis of these same elements.

1050.0.2.1.3 Interagency Coordination

Supervisory Objective: As noted earlier, effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant domestic and foreign supervisors and functional regulators. To achieve this objective, while limiting the potential for duplication or undue burden, the nature and scope of Federal Reserve work is tailored to the organization's legal entity and regulatory structure as well as the risks associated with the organization's activities. In this regard, the Federal Reserve

- relies to the fullest extent possible on assessments and information developed by other relevant domestic and foreign supervisors and functional regulators;
- focuses supervisory attention on material risks from activities that are not supervised by another supervisor or regulator or that cut across legal entities; and
- participates in the sharing of information among domestic and foreign supervisors and functional regulators, consistent with applicable law, to provide for the comprehensive, consolidated supervision of each banking organization's global activities.

Since coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators is so central to the Federal Reserve's conduct of consolidated supervision, direction for achieving these objectives is closely integrated into the attached guidance for understanding and assessing consolidated BHCs and the combined U.S. operations of FBOs.

1050.0.2.2 Risk-Focused Approach to Consolidated Supervision

The Federal Reserve uses a risk-focused approach to supervision of banking organizations in general and to each organization individually. In this regard, the Federal Reserve focuses supervisory activities on identifying the areas of greatest risks to a banking organization and assessing the ability of the organization's management to identify, measure, monitor, and control these risks. In addition, the Federal Reserve typically is more actively and comprehensively engaged in the supervision of the largest and most complex BHCs and FBOs, as well as those with the most dynamic risk profiles. By paying particular attention to these organizations, the Federal Reserve aims to minimize significant adverse effects on the public (including consumers), the financial markets, and the financial systems in the United States and abroad, as well as on taxpayers, who provide the ultimate resources behind the federal safety net.

The Federal Reserve also focuses special supervisory attention on the risk-management systems and internal controls used by core clearing and settlement organizations or organizations that have a significant presence in key financial markets. In light of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, these activities pose special legal, reputational, and other risks to the banking organization and its depository institution subsidiaries. The Federal Reserve has unique expertise and perspective in these areas based on its broader central bank responsibilities and functions.

Unlike banks, nonbank subsidiaries of a banking organization may not accept FDIC-insured deposits and do not have routine access to the Federal Reserve's discount window and payment system. As a result, certain laws and supervisory policies that apply to banks (e.g., the prompt-corrective-action framework[13]) do not apply to nonbank subsidiaries, and the manner in which the Federal Reserve supervises the nonbank subsidiaries of a banking organization reflects these differences. The Federal Reserve's supervision of nonbank subsidiaries under the BHC Act is primarily directed toward, and focused on, ensuring that the nonbank subsidiary does not present material financial, legal, or reputational risks to affiliated depository institutions or to the BHC's or FBO's ability to support these depository institutions. The Federal Reserve also may interact with nonbank entities, such as primary dealers in government securities, in connection with its other central bank functions and responsibilities, including conducting monetary policy, fostering financial stability, and deterring or managing financial crises.

As part of the supervisory process, the Federal Reserve reviews the systems and controls used by BHCs and the U.S. operations of FBOs to monitor and ensure that the organization, including its nonbank subsidiaries, complies with applicable laws and regulations, including those related to consumer protection. The Federal Reserve develops and maintains an understanding and assessment of consumer compliance risk at nonbank subsidiaries of a BHC or FBO primarily through continuous monitoring activities, relying to the fullest extent possible on work performed by the relevant functional regulator, if any. While the Federal Reserve routinely conducts examinations of the compliance function at the BHC, including its systems for monitoring and ensuring compliance with consumer and other applicable laws, the Federal Reserve currently does not routinely conduct examinations for the purpose of determining

13. For more information on the prompt-corrective-action framework for banks, see section 4133.1 of the Federal Reserve's *Commercial Bank Examination Manual*, or see 12 C.F.R. 208, Subpart D.

compliance with specific consumer laws enforced primarily by other supervisors regarding nonbank subsidiaries of BHCs and FBOs. When consumer compliance-related deficiencies are noted as part of the ongoing supervision of a BHC or FBO, however, consumer compliance examiners may conduct onsite examinations (including transaction testing, if appropriate) of nonbank subsidiaries to resolve significant issues that have the potential for widespread violations or harm to consumers.[14]

The Federal Reserve also seeks to reinforce market discipline by encouraging public disclosures that balance quantitative and qualitative information with clear discussions about risk-management processes and that reflect evolving disclosure practices for peer organizations.

1050.0.2.3 Supervisory Portfolios

An important aspect of the Federal Reserve's consolidated supervision programs for BHCs and the combined U.S. operations of FBOs is the assessment and evaluation of practices across groups of organizations with similar characteristics and risk profiles. This "portfolio approach" to consolidated supervision facilitates greater consistency of supervisory practices and assessments across comparable organizations and enhances the Federal Reserve's ability to identify outlier organizations among established peer groups. The supervisory portfolios that the Federal Reserve currently uses in structuring its supervisory programs for BHCs and the U.S. operations of FBOs are as follows:

BHC Portfolios:

- large complex banking organizations (LCBO BHCs)
- regional bank holding companies (regional BHCs)
- community bank holding companies (community BHCs)

FBO Portfolios:

- large complex foreign banking organizations (LCBO FBOs)
- multi-office foreign banking organizations (multi-office FBOs)
- single-office foreign banking organizations (single-office FBOs)

LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structures, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.

Banking organizations that are not designated as LCBOs belong to the portfolios of regional or community BHCs, or multi-office or single-office FBOs. While there is considerable variety among organizations across these portfolios, the simpler regulatory structure of most non-LCBO organizations increases the likelihood that a single primary supervisor has a substantially complete view of, and ability to address, significant areas of firmwide (or combined U.S. operations for FBOs) activities, risks, risk management, and controls.

1050.0.3 SUPERVISORY GUIDANCE

The guidance attached to SR-08-9/CA-08-12 (e.g., sections 1050.1 and 1050.2) describes how Federal Reserve staff will develop an understanding and assessment of a BHC or the U.S. operations of an FBO through continuous monitoring activities, discovery reviews, and testing activities, as well as through interaction with, and reliance to the fullest extent possible on, other relevant primary supervisors and functional regulators. Because the Federal Reserve's supervisory activities are tailored in the manner described above, separate guidance documents are provided for four different supervisory portfolios to promote appropriate and consistent supervision of organizations that broadly share similar characteristics and risk profiles. The documents' guidance addresses

- consolidated supervision of LCBO BHCs (Attachment A.1) (See section 1050.1);
- consolidated supervision of regional BHCs (Attachment A.2) (See section 1050.2);
- supervision of the combined U.S. operations of LCBO FBOs (Attachment B.1); and
- supervision of the combined U.S. operations of multi-office FBOs (Attachment B.2).

14. See SR-03-22/CA-03-15, "Framework for Assessing Consumer Compliance Risk at Bank Holding Companies," and section 2124.01.6.1.2.

As a supplement to these four guidance documents, definitions of key terms for consolidated supervision are provided in Attachment C to SR-08-9/CA-08-12 (See appendix, section 1050.0.4).

Consolidated supervision of community BHCs follows the procedures contained in SR-02-1 and section 5000.0.4.3, "Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of $5 Billion or Less," while supervision of single-office FBOs follows the procedures contained in SR-00-14.

1050.0.3.1 Overview of Significant Federal Reserve Supervisory Activities

The Federal Reserve will maintain for each BHC and the combined U.S. operations of each FBO

- an understanding of key elements of the banking organization's strategy, primary revenue sources, risk drivers, business lines, legal entity structure, governance and internal control framework, and presence in key financial markets; and
- an assessment of (1) the effectiveness of risk-management systems and controls over the primary risks inherent in the organization's activities, (2) the organization's financial condition, and (3) the potential negative impact of nonbank operations on affiliated depository institutions.

This understanding and assessment will encompass both prudential and consumer compliance supervision and reflect judgments developed by Federal Reserve staff drawing from all available sources, including the work of other relevant primary supervisors and functional regulators and the organization's internal control functions. Primary areas of focus will include

1. key corporate governance functions, including internal audit;
2. risk management and internal control functions for primary risks of the consolidated organization (or combined U.S. operations for FBOs), and supporting MIS;
3. where applicable, core clearing and settlement activities and related risk management and internal controls of firms that are large-value payment system operators and market utilities;
4. for LCBOs, activities in critical or key financial markets in which the organization plays a significant role, as well as related risk management and internal controls;
5. where applicable, areas of emerging interest with potential financial market consequences;
6. consolidated financial strength (in the case of FBOs, the financial strength of combined U.S. operations);
7. risk management and financial condition of significant nonbank subsidiaries; and
8. parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations).

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—will typically require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The guidance in the attachments to SR-08-9/CA-08-12 outlines when the Federal Reserve will conduct (i.e., participate in or lead) testing activities in order to determine whether a control process is appropriately designed and achieving its objectives or to otherwise validate management assertions. Testing activities are an important element of the Federal Reserve's consolidated supervision program for BHCs and the combined U.S. operations of FBOs. They supplement ongoing continuous monitoring activities and periodic discovery reviews necessary to maintain an understanding and assessment for each of these key functions.

The guidance in the SR letter's attachments also discusses in greater detail control processes for several areas subject to testing on at least a three-year cycle, supplemented by a reassessment on at least an annual basis to identify whether changes in inherent risk or control structures, or potential concerns regarding controls, merit interim targeted testing activities. These areas are

- internal audit infrastructure;

- parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations);
- where applicable, core clearance and settlement activities; and,
- where applicable, activities in critical financial markets in which the organization plays a significant role.[15]

There may also be instances when additional supervisory activities are necessary to improve the understanding and/or to assess the adequacy of key corporate governance functions or risk management or internal control functions for primary risks due to significant changes, potential concerns, or the absence of recent testing.

All cycle times set forth in the guidance for testing represent maximum periods between testing activities. Shorter cycle times should be utilized whenever significant changes occur in, or material concern exists regarding, a key governance, risk-management, or internal control function.

In conducting the activities described in the guidance, the Federal Reserve will rely to the fullest extent possible on the information and assessments of relevant primary supervisors and functional regulators, and will work with such supervisors and regulators to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of consolidated BHC or combined U.S. FBO operations, as applicable. In addition, because of the specific statutory limitations that apply with respect to functionally regulated subsidiaries of a BHC or FBO, the Federal Reserve will continue to adhere to the procedures and limits described in SR-00-13 (see sections 3900.0 and 1040.0) in conducting any examination of, or requesting a specialized report from, a functionally regulated subsidiary of a BHC or FBO.[16] Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.

1050.0.3.2 Application of Supervisory Guidance

As a general matter, the supervisory expectations and processes of the guidance documents that are attached to SR-08-9/CA-08-12 are intended for use in supervising BHCs and the combined U.S. operations of FBOs in circumstances where both the banking organization and its subsidiary depository institutions are in at least satisfactory condition and there are no indications of material weakness in the organization's risk management or internal controls. Additional Federal Reserve supervisory activities may be necessary or appropriate if the banking organization is facing, or is expected to face, material financial, managerial, operational, legal, or reputational difficulties, or is the subject of an investigation or formal or informal enforcement action.

Section IV of each of the documents attached to SR-08-9/CA-08-12 (see sections 1050.1.4 and section 1050.2.4) provides additional guidance on the steps the Federal Reserve will take to coordinate with other supervisors in certain special situations. This guidance does not limit any authority that the Federal Reserve may have under applicable law and regulations, including the authority to obtain reports or conduct examinations or inspections. Moreover, because this guidance relates to supervisory practices, it does not address or limit the circumstances under which the Federal Reserve may take formal or informal enforcement action against a banking organization or other person.

This supervisory guidance is not intended to comprehensively describe all elements of an effective supervision program for BHCs or U.S. operations of FBOs. Rather, the guidance supplements, and should be used in conjunction with, existing Federal Reserve guidance, including among others the *Bank Holding Company Supervision Manual;* the *Examination Manual for*

15. For these activities, the three-year testing cycle focuses on adherence with expectations of the *Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System* (see SR-03-9), including the geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

16. For these purposes, a "specialized report" means a report that the functionally regulated subsidiary is not required to prepare for another federal or state regulatory authority or an appropriate self-regulatory organization. Consistent with the GLBA, if the Federal Reserve seeks to obtain a specialized report from a functionally regulated subsidiary, the Federal Reserve will first request that the subsidiary's appropriate regulatory authority or self-regulatory organization obtain the report and make it available to the Federal Reserve.

U.S. Branches and Agencies of Foreign Banking Organizations; SR-04-18; SR-03-22/CA-03-15; SR-00-14; and SR-00-13.

1050.0.4 APPENDIX—DEFINITIONS OF KEY TERMS FOR CONSOLIDATED SUPERVISION

1050.0.4.1 Supervisory Objectives

Assessing: To go beyond developing an *understanding* by making supervisory judgments regarding the degree of inherent risks or evaluating whether risk-management and internal control practices are functioning as intended, and whether they are adequate relative to the risk taken. It is often necessary for bank supervisors or *functional regulators* to conduct *testing* activities as a means to arrive at an assessment.

Understanding: To gain comprehensive insight into the nature of a business activity, its related risks, and the design of risk-management and compensating controls. Understanding also involves comprehending the significance of such activities, risks, and controls for the institution's safety and soundness. *Continuous monitoring* or *discovery reviews* are often utilized to develop an understanding of a banking organization's operations and the related inherent risk and controls.

1050.0.4.2 Supervisory Activities

Active participation: When the Federal Reserve has input into determining the objectives, final conclusions, and related communications to institution management for an *examination* led by another *relevant primary supervisor* or *functional regulator*.

Continuous monitoring: Non-*examination/inspection* supervisory activities primarily designed to develop and maintain an *understanding* of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to *assess* inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and *functional regulators*, including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results.

Discovery review: An *examination/inspection* supervisory activity designed to improve the *understanding* of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process. If questions regarding the adequacy of practices or sufficiency of information are raised during this review, it will likely be necessary to conduct further and more in-depth *examination* activity (e.g., *testing*).

Examination/inspection: Examination activities are applicable to the supervision of banks and other depository institutions, as well as *U.S. banking offices* of FBOs, and inspection activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates. Examination and inspection activities are generally described as examinations throughout this guidance.

Testing: An *examination/inspection* supervisory activity designed to go beyond a *discovery review*, as it will result in an *assessment* of whether a control process is appropriately designed and achieving its objectives, or validation of a management assertion about an organization's operations. Such activities may include the review and validation of internal MIS, such as business records related to an internal control process; audit findings and processes; or a sample of transactions that have been entered into by a banking organization.

1050.0.4.3 Foreign Banking Organization Supervision

Booked in: Recorded on the books and records of the legal entity in question. For supervisory purposes, the U.S. operations of FBOs include activities that are booked in or *traded through* U.S. operations.

Comprehensive, consolidated supervision: An FBO is supervised or regulated in such a manner that its home-country supervisor receives sufficient information on the worldwide operations of the FBO (including the relationship of the bank to any affiliate) to assess the FBO's overall financial condition and compliance with law and regulation. The Foreign Bank Supervision Enhancement Act of 1991 introduced the requirement that the Federal Reserve approve the establishment of all *U.S. banking offices* of FBOs, and in that connection, take into account whether the FBO is subject to comprehensive, consolidated supervision by its home-country supervisor.

Multi-office foreign banking organizations: All FBOs except for (1) those that are designated as being part of the portfolio of LCBOs and (2) FBOs whose U.S. operations consist solely of a single *U.S. banking office*.

National treatment: As established by the International Banking Act of 1978 (IBA), a policy that requires nondiscrimination between domestic and foreign firms or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. This policy generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.

Net due to / from positions: Net due to and from positions refer to the flow of funds between a U.S. branch or agency and its parent FBO (including other affiliated depository institutions). For example, a U.S. branch is in a net due from position with its parent FBO if the parent owes funds to the branch once all transactions between the branch and the parent are netted.

Qualifying foreign banking organizations (QFBOs): FBOs that are entitled to certain exemptions from the nonbanking activities restrictions of the Bank Holding Company Act, including for certain limited commercial and industrial activities in the United States. The Federal Reserve does not *examine* or supervise these commercial/industrial activities. The Federal Reserve monitors the extensions of credit by *U.S. banking offices* of foreign banks to U.S. companies held directly under this authority to ensure that such loans are made on market terms.

Traded through: Transacted or arranged by the personnel of the institution in question (in an agent role), but booked at a different related legal entity. For supervisory purposes, the U.S. operations of FBOs include activities that are *booked in* or traded through U.S. operations.

U.S. banking offices: U.S. depository institution subsidiaries of FBOs and branches/agencies of FBOs.

U.S. nonbank affiliates of U.S. banking offices: U.S. BHC parent companies and their nonbank subsidiaries, as well as other U.S. nonbank affiliates and representative offices held directly by the FBO.

1050.0.4.4 Other Terms

Banking Organization National Desktop (BOND): A Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the *consolidated supervision* of individual BHCs and FBOs, and in developing comparative analyses of institutions with similar business lines and risk characteristics.

College of supervisors: A multilateral group of supervisors that discusses issues related to specific internationally active banking organizations. The Federal Reserve participates in colleges of supervisors as both a home-country supervisor of internationally active U.S. BHCs and as a host-country supervisor of the U.S. operations of FBOs.

Consolidated supervision (also known as ''umbrella'' or ''groupwide'' supervision): Supervision of a BHC on a groupwide basis, including its nonbanking subsidiaries, providing important protection to its subsidiary banks and to the federal safety net beyond that afforded by supervision of a bank individually. Consolidated supervision allows the Federal Reserve to *understand* the financial and managerial strength and risks within the consolidated organization as a whole, providing the ability to address significant management, operational, capital, or other deficiencies within the overall organization before they pose a threat to subsidiary banks.

Core clearing and settlement organizations: As defined in the ''Interagency Paper on Sound Practices to Strengthen the Resilience of the U. S. Financial System'' (SR-03-9), two groups of organizations that provide clearing and settlement services for *critical financial markets* or act as large-value payment system operators, and present the potential for *systemic risk* should they be unable to perform. The first group consists of market utilities (government-sponsored services or industry-owned organizations), whose primary purpose is to clear and settle transactions for *critical markets* or transfer large-value wholesale payments. The second group consists of those private-sector firms that provide clearing and settlement services that are integral to a *critical market* (i.e., their aggregate market share is significant enough to present the potential for *systemic risk* in the event of their sudden failure to carry out those activities because there are no viable immediate substitutes).

Critical financial markets: As defined in the "Interagency Paper on Sound Practices to Strengthen the Resilience of the U. S. Financial System," the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities.

Domestic BHC: A BHC incorporated in the United States that is not controlled by an FBO.

Double leverage: Situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

Financial instability: When external events or market behavior in the financial system are substantial enough to significantly distort or impair national or global financial markets or to create significant risks for real aggregate economic performance. Banking organizations with a considerable presence in activities that are potentially vulnerable to such externalities—or that are capable of contributing to financial instability if not adequately managed—require supervisors to develop an *understanding* of these activities and their risk profile.

Functional regulator: With respect to domestic authorities, the appropriate federal (examples include the U.S. Securities and Exchange Commission and the U.S. Commodity Futures Trading Commission) or state regulator for a functionally regulated nondepository subsidiary or affiliate of a BHC or FBO.

Key corporate governance functions: Primary firmwide governance mechanisms relied upon by the board of directors and senior management. This includes the board and its committees, senior management and its executive committees, internal audit, and other functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining the consolidated organization as well as a firm's business resiliency and crisis management capabilities.

Key financial markets: Includes *critical financial markets* as well as (1) broader U.S. capital market activity, including underwriting, securitization, derivatives, and trading; (2) retail financial services; and (3) international financial markets.

Key models and processes: Those where evaluation of the model/process will influence the Federal Reserve's *assessment* of the activity or control area that is supported by the model/process.

Large complex banking organizations (LCBOs): LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their *regulatory structure*, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one *key financial market.*

Material portfolios or business lines: Portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue for the BHC, or that otherwise materially contribute to *understanding* inherent risk or *assessing* related controls for a broader corporate function (such as consolidated credit-risk management). When identifying these areas during the development of the institutional overview and risk assessment, as well as during other supervisory processes, consideration is given to all associated risk elements, including legal and compliance risks.

Net debit cap: The maximum dollar amount of uncollateralized daylight overdrafts that an institution may incur in its Federal Reserve account.

Nonmaterial business lines: Business lines that are not primary drivers of risk or revenue for the BHC, and are not principal contributing factors to either *understanding* risk inherent in a broader corporate function or to *assessing* related controls.

Nontraditional BHCs: BHCs in which most or all of the organization's significant nondepository subsidiaries are regulated by a *functional regulator*, and subsidiary depository institution(s) are small in relation to nondepository subsidiaries.

Other relevant primary supervisors: Primary bank or thrift supervisors of BHC subsidiaries, including host-country supervisors (or home-country supervisors for FBOs), whose understanding and assessments are key to effective firmwide *consolidated supervision*.

Primary firmwide risk management and control functions: Mechanisms relied upon by the board of directors and senior management for identifying, measuring, monitoring, and controlling primary risks to the consolidated organization. This includes risk management and control functions for primary credit, legal and compliance, liquidity, market, operational, and reputational risks for the consolidated organization.

Primary supervisor: The primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a *U.S. banking office* of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution's chartering/licensing state. Where a BHC has multiple depository institution subsidiaries, or an FBO has multiple *U.S. banking offices*, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. For U.S. operations of FBOs, the U.S. supervisor of a *U.S. banking office* is referred to as a domestic primary supervisor.

Regional bank holding companies: BHCs with $10 billion or more in consolidated assets (including *nontraditional BHCs*) that are not designated as *LCBOs*.

Regulatory structure: The various legal entities within the organization that are subject to oversight by different domestic and foreign *primary supervisors* or *functional regulators*.

Significant nonbank activities and risks: Where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution affiliate.

Specialized report from a functionally regulated subsidiary: As discussed in the GLBA, a report that the functionally regulated subsidiary is not required to prepare by another federal or state regulatory authority or an appropriate self-regulatory organization.

Systemic risk: The risk that the failure of one participant to meet its required obligations in a transfer system or financial market will cause other participants to be unable to meet their obligations when due, causing significant liquidity or credit problems or threatening the stability of national or global financial markets.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, this section is revised for the adoption of a new consolidated supervision framework for large banking organizations. Refer to SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions." SR-99-15 was superseded by SR-12-17/CA-12-14.

1050.1.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS, AND FUNCTIONAL REGULATION

In 1999, the Federal Reserve established its supervisory program for large complex banking organizations (LCBOs).[1] LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structure, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.[2]

As outlined in the following sections, a range of continuous monitoring activities is utilized, along with discovery reviews and testing activities (examination/inspection activities),[3] to develop and maintain an understanding and assessment of each domestic bank holding company (BHC) that is an LCBO.[4] These organizations are collectively referred to as large complex BHCs.

1. With the implementation of the "Consolidated Supervision Framework for Large Financial Institutions" (refer to SR-12-17/CA-12-14), SR-99-15, "Risk-Focused Supervision of Large Complex Banking Organizations," was superseded. (Refer to section 2124.05 of this manual).

2. See section 1050.0.4, Appendix, for the definitions of terms commonly used in this section and sections 1050.1 and 1050.2.

3. The term "examination" is generally used throughout this guidance to refer to both commercial bank examination and BHC inspection activities.

4. The term "domestic BHC" refers to a BHC incorporated in the United States that is not controlled by a foreign banking organization (FBO). Attachment B.1. to SR-08-9/CA-08-12 addresses—in the context of supervising the combined U.S. operations of FBOs—how the Federal Reserve will develop and maintain an understanding and assessment of a BHC that is, or is controlled by, an FBO that is itself an LCBO.

1050.1.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a large complex BHC depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—typically will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk-management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The following sections provide further detail on how the Federal Reserve will develop, working in coordination with other relevant primary supervisors and functional regulators, an understanding and assessment of a large complex BHC. In conducting the activities described throughout this document, the Federal Reserve will, to the fullest extent possible

- rely on the information and assessments of relevant primary supervisors and functional regulators, including the information and assessments reflected in the reports of examination of such supervisors and regulators;
- focus its supervisory activities on the bank holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the BHC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements), as well as reports that a large complex BHC or a subsidiary prepares for other primary supervisors, functional regulators, or self-regulatory organizations.

1050.1.1.2—Functionally Regulated Subsidiaries

As discussed below, in certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve's responsibilities as supervisor of the consolidated organization. In any such case, the Federal Reserve will continue to adhere to the procedural and other requirements governing examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.[5]

1050.1.2 UNDERSTANDING THE ORGANIZATION

For each large complex BHC, the Federal Reserve will develop an understanding of the legal, operating, and corporate governance structure of the organization and its primary strategies, business lines, and risk-management and internal control functions.[6] This understanding will inform the development of a risk assessment and supervisory plan for the BHC. Typically, the information necessary to gain this understanding may be obtained from the organization's management, public reports, regulatory reports, surveillance screens, third-party sources (e.g., credit rating agency and market analyst reports), and other relevant primary supervisors or functional regulators. Key elements that should be identified and understood include the following:

- *Corporate strategy*. Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities, areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.
- *Significant activities*. Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations; market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vulnerable to volatility in revenue, earnings, capital, or liquidity.
- *Structure*. Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for accounting or risk-management purposes; and the activities and risk profiles of Edge and agreement corporation subsidiaries.
- *Corporate governance, risk management, and internal controls for primary risks*. Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions, and associated management information systems (MIS), relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures with how the board and senior management assess and manage risks.

5. The Federal Reserve also may examine a functionally regulated subsidiary of a large complex BHC if, after reviewing relevant reports and other information, it has reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve cannot determine compliance by examining the BHC or its affiliated depository institutions).

Similarly, before requiring a specialized report from a functionally regulated subsidiary, the Federal Reserve first will request that the subsidiary's appropriate functional regulator obtain the report and make it available to the Federal Reserve. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the BHC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

6. This understanding is formally documented during development of the institutional overview, which coincides with creation of the annual risk assessment. SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions" (see section 2124.01), describes processes for developing an institutional overview, risk assessment, and supervisory plan. Each of these products is kept current to reflect significant changes in an organization's risks or activities.

- *Presence in critical or key financial markets.*[7] Core clearing and settlement activities; business lines with a significant presence in critical or key national or global financial markets; and related risk-management and disclosure practices.

To ensure the quality and consistency of consolidated supervision across the large complex BHC portfolio, it also is necessary to understand how these key elements compare with industry trends and with evolving practices of well-managed organizations with similar characteristics.

1050.1.3 ASSESSING THE LARGE COMPLEX BHC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a BHC.[8]

1050.1.3.1 Risk Management

1050.1.3.1.1 Key Corporate Governance Functions

Objectives: One of the primary areas of focus for consolidated supervision of large complex BHCs is the adequacy of governance provided by the board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a banking organization is capable of maintaining fully effective risk-management and internal control processes.

The board and its committees should have an ongoing understanding of key inherent risks, associated trends, primary control functions, and senior management capabilities. Primary expectations for the board and its committees include

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers' performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;
4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. ensuring that public disclosures
   - are consistent with how the board and senior management assess and manage the risks of the organization,
   - balance quantitative and qualitative information with clear discussions about risk-management processes, and
   - reflect evolving disclosure practices for peer organizations.

A large complex BHC's senior management and its committees should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization's risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the size and complexity of the organization. Primary expectations for senior management include

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation of effective policies for the proper segregation of duties and for the avoidance or management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization's established risk appetite;

7. See sections 1050.1.3.1.6 and 1050.1.3.1.7 for definitions of "critical financial markets" and "key financial markets."

8. The RFI rating system for BHCs is discussed in SR-04-18, "Bank Holding Company Rating System" (see section 4070.0). RFI ratings are assigned for BHCs that are complex or that have $1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC's assigned ratings and encompasses the results of the entire supervisory cycle.

4. establishing and implementing incentives for personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;
5. promoting a continuous dialogue between and across business areas and risk-management functions to help align the organization's established risk appetite and risk controls;
6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to changing circumstances regarding risks and controls; and
7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role by providing an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit's role in identifying risks and testing internal controls has increased.

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of each large complex BHC.

Supervisory Activities: For each large complex BHC, the Federal Reserve will understand and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will understand and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining consolidated holding company operations, as well as the organization's business resiliency and crisis management capabilities.

- *Board, senior management, and other key corporate governance functions*. Continuous monitoring activities—which draw from all available sources, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.

  The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain corporate governance functions that will require more intensive supervisory focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently recent examination activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.
- *Internal audit*. Continuous monitoring and examination activities will be used to understand and assess key elements of internal audit governance for the organization on a consolidated basis, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk-assessment process; and (4) the adequacy of audit programs and workpaper standards. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit's recent work in these areas to the extent possible as a means of validating internal audit's findings.
- *Additional supervisory activities*. If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.[9]

9. Active participation by the Federal Reserve in an exami-

If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

- *Additional required audit testing activities.* In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.2 Risk Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: Underlying the risk-focused approach to consolidated supervision of large complex BHCs is the premise that it is each organization's responsibility to develop an appropriate control structure for identifying, measuring, monitoring, and controlling key risks as measured against supervisory standards and expectations, applicable laws and regulations, and evolving practices of well-managed organizations.

The Federal Reserve will understand and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS, for each large complex BHC. This will include risk-management and control functions for primary credit, legal and compliance,[10] liquidity, market, operational, and reputational risks for the consolidated organization. The Federal Reserve also will understand and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual BHC, relate to primary risks to the organization as a whole.

For example, for large complex BHCs with particularly dynamic corporate strategies, the Federal Reserve will understand and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes for ensuring that risk management and controls keep pace with areas of growing inherent risk. Furthermore, large complex BHCs operating across a range of financial intermediary activities are more likely to face potential conflicts of interest due to their greater likelihood of acting as agents for both issuers and investors. For these holding companies, it is necessary to assess the adequacy of processes for identifying and avoiding or managing conflicts of interest.

In all instances, the adequacy of each primary firmwide risk management or control mechanism depends on the appropriateness of the following:

1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;

nation led by another primary supervisor or functional regulator includes having input into determining the examination objectives, final conclusions, and related communications to the organization's management. In the event that a material aspect of the Federal Reserve's input is not reflected in the examination's objectives, conclusions, or related communications with the organization, the Federal Reserve will review the situation to determine whether additional steps are appropriate to address any remaining concerns.

10. Federal Reserve processes for understanding and assessing legal and compliance risk management apply to the domestic and international operations of large complex BHCs and, as described in SR-03-22/CA-03-15, "Framework for Assessing Consumer Compliance Risk at Bank Holding Companies," (see section 2124.01) encompass consumer compliance risk inherent in the organization's business activities.

7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization's compensation structure.

Most large complex BHCs have evolved toward comprehensive, consolidated risk management to measure and assess the range of their exposures and the way these exposures interrelate. Nonetheless, a variety of control structures are in place across this portfolio, and in some instances there is not a firmwide mechanism in place to oversee and manage a key control function across the organization's business lines and legal entities.

In all instances, the Federal Reserve will focus on individual control structures in place for primary business lines or legal entities as needed to reach an understanding and assessment of the consolidated organization. When applicable, the Federal Reserve also will assess whether a decentralized approach to a key control function is sufficient by evaluating the effectiveness of such an approach in controlling primary risks to the consolidated organization.[11]

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to understand and assess each primary firmwide risk-management or control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in section 1050.1.3.1.3 below). Activities will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company's current risk profile and in comparison with supervisory expectations and evolving sound practices and assess the capability of these primary functions (whether centralized or decentralized) to remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) significant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

In these instances, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the primary firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each large complex BHC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to understanding inherent risk or assessing con-

11. As outlined in SR-08-8/CA-08-11, "Compliance Risk-Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles" (see section 2124.07), while the Federal Reserve does not prescribe a particular organizational structure for primary firmwide risk-management and control functions, establishment of a firmwide function that is dedicated to managing and overseeing compliance risk, and that promotes a strong compliance culture, is particularly important for large banking organizations with complex compliance profiles, due to the unique challenges associated with compliance risk management for these organizations. In addition to the oversight provided by the board and various executive and management committees, a key component of firmwide compliance oversight for these organizations is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the implementation of the organization's firmwide compliance risk-management program, and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.

trols for a broader corporate function (such as consolidated credit-risk management).

During the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve will analyze external factors and internal trends in the BHC's strategic initiatives—as evidenced by budget and internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evaluating whether retail activities such as mortgage or credit card lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as credit and market risks, should be considered.

Supervisory Activities: Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding section 1050.1.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk-management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented as appropriate by examination activities.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of related firmwide risk-management and control functions.

Many activities of large complex BHCs span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. If this is the case, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.4 Risk Management of Nonmaterial Business Lines

Objectives: For nonmaterial business lines identified during the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve's focus will be on identifying and understanding those business lines that are increasing in importance and have the potential to become material.

Supervisory Activities: When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become material. The Federal Reserve also will maintain an ability to access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices, initiate discovery reviews (in coordination with relevant primary supervisors or functional regulators as appropriate and in accordance with section 1050.1.1.2 above if relevant) to increase understanding of selected business lines that have the potential to become material, and maintain an understanding of associated MIS to facilitate more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

1050.1.3.1.5 Core Clearing and Settlement Activities (Where Applicable)

Objectives: The Federal Reserve will understand and assess the adequacy of risk-management and internal controls—including credit risk-management practices—related to core clearing and settlement organizations.[12] In light of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, and given the Federal Reserve's unique expertise and perspective with respect to these activities, the Federal Reserve focuses special supervisory attention on the risk-management and internal control practices and the public disclosures made by an organization with respect to these activities.

Supervisory Activities: Continuous monitoring and examination activities will be used to maintain an understanding of inherent risk and assess risk-management and internal controls, including related credit risk-management practices. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent risk for core clearing and settlement activities stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the discovery review or testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that these control mechanisms are appropriately designed and achieving their objectives. In addition to assessing the adequacy of risk-management and internal controls, testing activities will focus on assessing the contribution of the organization to the resilience or fragility of the clearance and settlement system as a whole, and on the organization's adherence to the expectations of the interagency sound practices paper. Key expectations include geographic diversity and resiliency of data centers and operations, testing of recovery and resumption arrangements, and identification of downstream implications of failure of a major counterparty or clearing organization.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.6 Significant Presence in Critical Financial Markets (Where Applicable)

Objectives: The Federal Reserve will understand and assess the adequacy of risk management and controls for LCBO business lines with a significant presence in critical financial markets.

"Critical financial markets" are defined in the interagency sound practices paper as the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities. A business line may have a significant presence in a critical financial market even though the business line accounts for a relatively small portion of the organization's total consolidated assets or revenues. These business

12. Core clearing and settlement organizations, as defined in the *Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System* (interagency sound practices paper, see SR-03-9), consist of two groups of organizations that provide clearing and settlement services for critical financial markets or act as large-value payment system operators, and that present the potential for systemic risk should they be unable to perform. These organizations are (1) market utilities (government-sponsored services or industry-owned organizations) whose primary purpose is to clear and settle transactions for critical markets (see section 1050.1.3.1.6) or transfer large-value wholesale payments, and (2) private-sector firms that provide clearing and settlement services that are integral to a critical market (i.e., their aggregate market share is significant enough to present the potential for systemic risk in the event of their sudden failure to carry out those activities because there are no viable immediate substitutes).

lines are subject to special supervisory focus by the Federal Reserve in light of their potential to transmit a collective adverse impact across multiple firms and financial markets and the resulting significant reputational and other risks they pose to the organization.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk and assess risk-management and internal controls for business lines with a significant presence in a critical financial market. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified in these business lines, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the testing activities and will coordinate these activities with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle. These activities will focus on the organization's adherence to the expectations set forth in the interagency sound practices paper, including geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.7 Risk Management of Activities in Key Financial Markets

Objectives: To be designated as an LCBO by the Federal Reserve, a banking organization must meet specified criteria as a significant participant in at least one key financial market.[13] For each key financial market activity where the large complex BHC is a significant participant, the Federal Reserve will maintain an understanding of inherent risk, assess the adequacy of related risk-management and internal controls (including the sufficiency of business continuity planning), and understand the organization's potential impact on the overall functioning of the market.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk for key financial market activities and assess related risk-management and internal controls.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of risk-management and control functions for key financial market activities.

For activities that span legal entities subject to oversight by multiple supervisors or regulators, or that are outside the oversight of other supervisors or regulators, the Federal Reserve will develop and conduct—in coordination with

13. "Key financial markets" include the critical financial markets defined in section 1050.1.3.1.6 above as well as (1) broader U.S. capital market activity, including underwriting, securitization, derivatives, and trading; (2) retail financial services; and (3) international financial markets. Each LCBO meets at least one of these key market thresholds.

other relevant primary supervisors and functional regulators to the extent possible and in accordance with the provisions described above in section 1050.1.1.2 if relevant—testing and discovery review activities as necessary to complement continuous monitoring work.

1050.1.3.1.8 Issues and Developments in Areas of Emerging Interest with Potential Financial Market Consequences

Objectives: The Federal Reserve will use information obtained in the course of supervising LCBOs, as well as information and analysis obtained through relationships with other domestic and foreign supervisors and regulators or other sources, to

1. identify potential vulnerabilities across the portfolio of LCBOs and their nonbank peers—such as the operational infrastructure that underpins the credit derivatives market—that have the potential to affect banking organizations generally, financial stability, systemic risk, or domestic or global financial markets;
2. identify areas of supervisory focus—such as counterparty credit risk-management practices—to further the Federal Reserve's understanding of markets, their linkages with banking organizations, and potential implications for financial stability;
3. understand the activities of nonbank counterparties of LCBOs and the implications of such activities on the risks, risk management, and internal controls of banking organizations; and
4. enhance the Federal Reserve's ability to act effectively during periods of financial stress by combining timely and reliable information on conditions in the banking system and capital markets that is obtained through its supervisory activities with information obtained through the Federal Reserve's monetary policy and payments activities.

Supervisory Activities: During each supervisory planning cycle, and more frequently as required, continuous monitoring opportunities will be identified that utilize information gained through LCBO supervision to further the Federal Reserve's understanding of risks and activities that could adversely affect LCBOs or the stability of domestic or global financial markets. Activities will include meetings with chief risk officers, chief financial officers, and other LCBO senior management, as well as collaboration with other domestic and foreign supervisors and regulators and foreign central banks.

These activities also will be used to review areas of specific supervisory interest; answer ad hoc information requests related to areas of emerging interest or concern; help in understanding the contribution of the entity to the resilience or fragility of key markets as a whole; and provide insights into interdependencies across firms, markets, and the real economy. During periods of financial stress, this information will be combined with knowledge obtained from other Federal Reserve functions, such as monetary policy and payments activities, to help mitigate the likelihood or consequences of a financial crisis and to help develop sound policy responses to market developments. Periodic examination activities also may be used to review a specific activity or risk-management practice across a group of peer organizations to obtain a more complete understanding of industry practice.[14]

These activities will be designed and conducted in coordination with other relevant primary supervisors and functional regulators to the fullest extent possible and in accordance with the provisions described above in section 1050.1.1.2, where relevant. Coordination opportunities, however, may be limited in special circumstances, such as when addressing urgent matters with potentially adverse financial market consequences, due to the inherent time constraints when information must be gathered quickly.

1050.1.3.2 Financial Condition

Objectives: The Federal Reserve's evaluation of a large complex BHC's consolidated financial condition focuses on the ability of the organization's resources to support the level of risk associated with its activities. Assessments are developed for each "CAEL" subcomponent—Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L).[15]

In developing this evaluation, the Federal Reserve's primary focus is on developing an understanding and assessment of

14. In order to minimize burden while obtaining information necessary to understand market developments, these activities will focus on those organizations that are most active in the area of interest or concern.

15. See SR-04-18 and section 4070.0.2.3.1 for more information about the CAEL subcomponents.

1. the sufficiency of the BHC's consolidated capital to support the level of risk associated with the organization's activities and provide a sufficient cushion to absorb unanticipated losses;
2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and
3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization's various legal entities, or that relate to the financial soundness of the parent company and significant nonbank subsidiaries, as discussed in section 1050.1.3.3 below.

In assessing consolidated regulatory capital, the Federal Reserve looks to ensure that the BHC demonstrates the effectiveness of its framework for complying with relevant capital adequacy guidelines and meeting supervisory expectations, and focuses on analyzing key models and processes[16] that influence this assessment. This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the BHC's internal control functions and from market-based assessments.

Capital planning activities for large complex BHCs should be forward looking and provide for a sufficient range of stress scenarios commensurate with the organization's activities. Many LCBOs require more rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, as these measures often do not adequately capture the full spectrum of risk-taking activities for these organizations.[17] For these organizations, the Federal Reserve focuses on whether internal processes for assessing capital adequacy ensure that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital.

When assessing the adequacy of a BHC's liquidity levels and funds management practices, areas of focus include[18]

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business-line information into assessments of actual and contingent liquidity risk;
2. whether funds management practices provide sufficient funding flexibility to respond to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and
3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, the nature of independent Federal Reserve supervisory work required to evaluate a large complex BHC's consolidated financial condition depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. For example, more independent Federal Reserve work typically will be required to assess consolidated asset quality or earnings for large complex BHCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, a minimal level of incremental Federal Reserve efforts typically will be required to assess consolidated asset quality and earnings.

16. "Key models and processes" are those where evaluation of the model/process will influence the Federal Reserve's assessment of the activity or control area that is supported by the model/process.

17. Footnote reserved.

18. Assessing liquidity levels and funding practices for a consolidated BHC also incorporates elements presented in section 1050.1.3.3.2, "Parent company and nonbank funding and liquidity."

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to assess a large complex BHC's financial strength. Such activities will include periodic meetings with BHC management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators, including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in the understanding and assessment of areas of concern.

Testing and discovery activities also will be used to understand and assess the sufficiency of the BHC's consolidated capital and liquidity positions to support the level of risk associated with its activities, including (1) regulatory capital calculation methodologies[19] and internal assessments of capital adequacy and (2) funds management and liquidity planning tools and practices. The Federal Reserve will work with other relevant primary supervisors and functional regulators to participate as actively as appropriate in or, if necessary, to coordinate activities designed to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary that are of such significance that they will influence the Federal Reserve's assessment of these areas. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.3 Impact

1050.1.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

Objectives: Most large complex BHCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. These BHCs often have considerable intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization's legal entities. Common interactions between a large complex BHC's depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the depository institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational troubles in one part of a BHC can spread rapidly to other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus directly or indirectly to its depository institution subsidiaries. As the federal banking agency charged with supervising the organization on a consolidated basis, the Federal Reserve is responsible for understanding and assessing the risks that the parent bank holding company and its nonbank subsidiaries may pose to the BHC itself or its depository institution subsidiaries.

The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a bank holding company are to

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;
2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;

19. Assessments of the adequacy of regulatory capital for large complex BHCs that have received Federal Reserve supervisory approval to use internal estimates of risk in their regulatory capital calculations should include, among other things, regular verification that these organizations continue to meet on an ongoing basis all applicable requirements associated with internal estimates. See, for example, the capital adequacy guidelines for market risk at BHCs (Regulation Y: 12 C.F.R. 225, Appendix E) and the new advanced capital adequacy framework for BHCs (Regulation Y: 12 C.F.R. 225, Appendix G).

3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;
4. identify and assess any intercompany relationships, dependencies, or exposures—or aggregate firmwide concentrations—with the potential to threaten the condition of a depository institution affiliate; and
5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable laws and regulations, including consumer protection laws.[20]

Supervisory Activities: For all significant nonbank subsidiaries and activities of the parent BHC, the Federal Reserve will use continuous monitoring activities and discovery reviews to

1. maintain an understanding of the holding company's business line and legal entity structure, including key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates, utilizing regulatory structure reports, internal MIS, and other information sources;
2. understand and assess the exposure to, and tolerance for, legal, compliance, and reputational risks, as well as the extent to which potential conflicts of interest are identified and avoided or managed;
3. understand the scope of intercompany transactions and aggregate concentrations, and assess the adequacy of risk-management processes, accounting policies, and operating procedures to measure and manage related risks;
4. identify and assess key interrelationships and dependencies between subsidiary depository institutions and nonbank affiliates, such as the extent to which a depository institution subsidiary is reliant on services provided by the parent company or other nonbank affiliates and the reasonableness of associated management fees;
5. identify those nonbank subsidiaries whose activities present material financial, legal, compliance, or reputational risk to the consolidated entity and/or a depository institution subsidiary;
6. identify significant businesses operated across multiple legal entities for accounting, risk management, or other purposes, as well as activities that functionally operate as separate business units for legal or other reasons;
7. identify intercompany transactions subject to Regulation W—utilizing information submitted on quarterly regulatory reporting form FR Y-8 ("The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates"), internal MIS, and other information sources—and determine (in conjunction with the primary supervisor) whether compliance issues are present; and
8. understand and assess the sufficiency, reliability, and timeliness of associated MIS relied upon by the board, senior management, and senior risk managers and committees to monitor key nonbank activities and risks.

Periodic testing may be used to supplement continuous monitoring and discovery reviews to (1) ensure that key risk-management and internal control practices conform to internal policies and/or are designed to ensure compliance with the law and (2) understand and assess operations presenting a moderate or greater likelihood of significant negative impact to a subsidiary depository institution or the consolidated organization. Areas of potential negative impact include financial or operational risks that pose a potential threat to the safety and soundness of a depository institution subsidiary, or to the holding company's ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. Testing will focus on controls for identifying, monitoring, and controlling such risks. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.3.2 Parent Company and Nonbank Funding and Liquidity

Objectives: One of the Federal Reserve's primary responsibilities as consolidated supervisor is to help ensure that the parent company and its nonbank subsidiaries do not have an adverse impact on the organization's depository institution subsidiaries. To meet this objective, the

20. The Federal Reserve's supervisory objectives and activities related to the effectiveness of consumer compliance policies, procedures, and systems at nonbank subsidiaries of a BHC currently are under review, and additional or modified guidance on this topic may be issued in the future.

Federal Reserve will assess the extent to which funding and liquidity policies and practices of the parent company or nonbank subsidiaries may undermine the BHC's ability to act as a source of strength to the organization's depository institution subsidiaries.

Areas of focus will include an assessment of

1. the ability of the parent company and nonbank subsidiaries to maintain sufficient liquidity, cash flow, and capital strength to service their debt obligations and cover fixed charges;
2. the likelihood that parent company or nonbank funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions;
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
4. the extent of "double leverage"[21] and the organization's capital-management policies, including the distribution and transferability of capital across jurisdictions and legal entities;
5. the parent company's ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts; and
6. intraday liquidity management policies and practices, and compliance with the "Federal Reserve Policy on Payments System Risk,"[22] including expectations for depository institutions with a self-assessed net debit cap (the maximum dollar amount of uncollateralized daylight overdrafts that the institution may incur in its Federal Reserve account).

The Federal Reserve also will remain apprised of the funding profile and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated BHC's primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and discovery reviews to understand and assess parent company and nonbank subsidiary funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on understanding and assessing the areas of change and/or concern in order to ensure that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

In all instances the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and liquidity: board and senior management oversight; policies, procedures, and limits; risk-monitoring and management information systems; and related internal controls.

For large complex BHCs with a depository institution that has a self-assessed net debit cap, the Federal Reserve will conduct an annual review of the self-assessment file to ensure that the institution has appropriately applied the payment system risk guidelines. The Federal Reserve will either lead this review and coordinate its activities with other relevant primary supervisors or participate as actively as appropriate in the related work of such supervisors. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

21. "Double leverage" refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

22. This policy statement is available on the Board's public website at www.federalreserve.gov/paymentsystems/psr.

1050.1.4 INTERAGENCY COORDINATION

1050.1.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators

Objective: Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators.[23] To achieve this objective, the Federal Reserve has worked over the years to enhance interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained. For example, the Federal Reserve and the U.S. Securities and Exchange Commission entered into a memorandum of understanding (MOU) in July 2008 that, among other things, provides for the parties to share specific types of information concerning entities under the parties' respective supervision as well as information on other areas of mutual regulatory or supervisory interest.

As discussed in section 1050.1.3, in understanding and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a BHC's subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators and will work to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated BHC's operations as applicable.

Supervisory Activities. The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a large complex BHC's subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the BHC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable laws and regulations.[24]

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and MOUs with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms, such as the Banking Organization National Desktop (BOND),[25] to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President's Working Group on Financial Markets, and the Federal Reserve-sponsored cross-sector meetings of financial supervisors and regulators.

23. Section 1050.1.4.2 discusses cross-border cooperation and information sharing among foreign supervisors.

24. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 et seq.) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board's Rules Regarding the Availability of Information (12 C.F.R. 261.20 *et seq.*).

25. BOND is a Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of organizations with similar business lines and risk characteristics.

1050.1.4.1.1 Coordination of Examination Activities at a Supervised BHC Subsidiary

As discussed in section 1050.1.3, the Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised BHC subsidiary that are material to the Federal Reserve's understanding or assessment of the consolidated organization's risks, activities, or key corporate governance, risk-management, or control functions. Prior to conducting discovery reviews or testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a BHC, the Federal Reserve will

- review available information sources as part of its continuous monitoring activities, including examination reports and the BHC's internal MIS, to determine whether such information addresses the Federal Reserve's information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor's or functional regulator's basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve's information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in section 1050.1.3 above.[26]

1050.1.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: Many large complex BHCs have considerable international banking and other operations that are licensed and supervised by foreign host-country authorities. As home-country supervisor for domestic BHCs, the Federal Reserve is responsible for the comprehensive, consolidated supervision of these global organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. BHCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a large complex BHC's global activities are supervised on a consolidated basis. Cross-border information sharing is often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in "colleges of supervisors" and other multilateral groups of supervisors that discuss issues related to specific internationally active banking organizations.

The Federal Reserve also is a member of the Basel Committee on Banking Supervision, which is a forum for supervisors from member countries to discuss important supervisory issues, foster consistent supervision of organizations with similar business and risk profiles, promote the sharing of leading supervisory practices, and formulate guidance to enhance and refine banking supervision globally.

The Federal Reserve's processes for understanding and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company's international operations. For example, some host-country legal and regulatory structures and supervisory approaches are fundamentally different from those in the United

26. As outlined in section 1050.1.3, certain Federal Reserve examination activities are to be conducted on a minimum three-year cycle to verify, through testing, the sufficiency of key control processes. These activities are to be conducted regardless of whether or not there is an information gap or indication of weakness or risk.

States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a BHC's foreign office may share with its parent company, thereby limiting the parent company's ability to exercise consolidated risk management on a global basis.

Additionally, while considerable progress has been made to strengthen supervisory cross-border cooperation and information sharing, the Federal Reserve and other U.S. supervisors have, at times, faced challenges in accessing information on a bank's or BHC's foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a large complex BHC with cross-border or foreign operations.

Supervisory Activities: Continuous monitoring will be used to understand and assess each large complex BHC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls. For a large complex BHC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include review of materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations. These continuous monitoring activities may be supplemented, as appropriate, by examination activities to understand and assess the large complex BHC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls.

When assessing the sufficiency of a large complex BHC's management of its international operations, consideration is given to the extent that foreign laws restrict the transmission of information to the BHC's head office. Impediments to sharing information imposed by a host country may constrain the BHC's ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve's ability to access information on host-country operations, or to engage in onsite activities at the organization's operations in the host country, should be considered when assessing whether the organization's activities in that jurisdiction are appropriate.

1050.1.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

Objectives: For areas beyond those specifically addressed in section 1050.1.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a BHC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the BHC's depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, it is addressed appropriately.

Supervisory Activities: The Federal Reserve will take the following steps if it has indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in section 1050.1.3, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of the depository institution's primary supervisor.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor's related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a discovery review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in

consultation with the primary supervisor. A senior Federal Reserve official will communicate this decision in writing to a senior official of the primary supervisor.

1050.1.4.4 Condition or Management of BHC Subsidiary is Less-than-Satisfactory

Objectives: As noted above, a primary responsibility of the Federal Reserve as consolidated BHC supervisor is to ensure that a holding company's activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated BHC subsidiary is determined to be less-than-satisfactory, the Federal Reserve's focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to ensure that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company's depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in section 1050.1.3 for understanding and assessing key corporate governance functions or primary firmwide risk-management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated BHC is in weakened condition or when there are questions regarding the capabilities of the holding company's management.

Supervisory Activities:

- *Depository institution subsidiary*. In instances when a depository institution subsidiary's condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve's primary supervisory objectives as consolidated supervisor are to ensure that the parent company (1) provides appropriate support to the depository institution and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to understand whether the BHC or a nonbank affiliate has contributed to the depository institution's weakened condition, to understand the impact of the depository institution on the BHC's condition, and to determine if the holding company is providing appropriate support to the depository institution. The Federal Reserve will coordinate its activities with those of the primary supervisor to the extent appropriate.
- *Nonbank subsidiary*. When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to ensure that its condition and activities do not jeopardize the safety and soundness of the BHC or its depository institution subsidiaries, as discussed above in sections 1050.1.3.3.1, "Risk Management and Financial Condition of Significant Nonbank Subsidiaries" and 1050.1.3.3.2, "Parent Company and Nonbank Funding and Liquidity." The Federal Reserve also will take appropriate steps to ensure that any actions taken by the parent company to assist a nonbank subsidiary do not impair the BHC's continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.1.4.5 Edge and Agreement Corporations

Objectives: Many large complex BHCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated BHC supervisor.[27] When the Edge or agreement corporation is held by a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money Laundering

27. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, "Rating System For International Examinations," one of the Federal Reserve's supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.

(BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement corporations to determine whether a consumer compliance examination is warranted, in which case a compliance examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity's activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation's primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and BHC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated BHC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable laws and regulations imposed by host-country supervisors for the Edge or agreement corporation's international operations.

Supervisory Activities: The Federal Reserve will maintain an understanding and perform an annual examination of each Edge and agreement corporation. While the examination scope will be risk focused to reflect the organization's scale, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. laws and regulations and with applicable foreign laws and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those elements that are unique to the Edge or agreement corporation and those that are shared with the parent bank or BHC and will coordinate fulfillment of the Federal Reserve's responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role. This strategy will reflect the extent to which reliance can be placed on (1) the Federal Reserve's understanding and assessments of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated BHC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation's parent bank relies on the Federal Reserve's understanding and assessment in order to develop its CAMELS rating,[28] the Federal Reserve will work to fulfill that supervisor's information needs.

28. The U.S. banking agencies assign CAMELS (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, and Sensitivity to Market Risk) ratings to U.S. banking organizations as part of the ongoing supervision of these organizations. See SR-96-38, "Uniform Financial Institutions Rating System," (see section A.5020.1 of the *Commercial Bank Examination Manual*.) and SR-97-4, "Interagency Guidance on Common Questions About the Application of the Revised CAMELS Rating System."

1050.2.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS

The regional banking organization supervisory portfolio generally includes domestic bank holding companies (BHCs) and savings and loan holding companies (SLHCs) having total consolidated assets between $10 billion and $100 billion (collectively, "regional holding companies or regional HCs").[1] Regional HCs include nontraditional holding companies where most or all of the organization's significant nondepository subsidiaries are regulated by a functional regulator, and subsidiary depository institution(s) are small in relation to nondepository subsidiaries. Regional holding companies are generally subject to the RFI rating system, as described in SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

The primary objective of the Federal Reserve's consolidated supervision program for firms in the regional banking organization supervisory portfolio is to promote a firm's safety and soundness and compliance with applicable laws and regulations. The manner in which the Federal Reserve achieves this objective, however, is tailored to the characteristics and risk profiles of regional holding companies.[2]

A range of continuous monitoring activities is utilized, along with testing activities (examination activities),[3] to develop and maintain an understanding and assessment of the condition of a regional HC. For organizations within this portfolio, continuous monitoring activities typically take the form of meetings with the HC's management, analysis of a firm's management information system (MIS) reports and regulatory reports, review of surveillance screens, and discussions and coordination with other relevant primary supervisors and functional regulators, including review of their work. Federal Reserve staff determine the scope and frequency of supervisory monitoring activities based on a firm's risk profile. For many regional HCs that are in sound condition, examiners perform monitoring activities on a periodic or quarterly basis, supplemented by more frequent or intensive activities as necessary.

1. The Federal Reserve considers several factors such as a firm's asset size, complexity of operations, and organizational structure in determining whether a firm is included in the regional banking organization supervisory portfolio or in another supervisory portfolio.

2. See section 1050.0.4, appendix, for definitions of terms commonly used in this section.

3. While by definition "examination" activities are applicable to the supervision of banks and other depository institutions, as well as U.S. banking offices of FBOs, and "inspection" activities are applicable to the supervision of HCs and nonbank subsidiaries and affiliates, the term "examination" is generally used throughout this section to refer to both examination and inspection activities.

1050.2.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a regional HC depend largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. Many regional HCs conduct the majority of their business operations through a single bank subsidiary, increasing the likelihood that a single primary supervisor has a complete view of, and ability to address, major aspects of the organization's business activities and related risks, risk management, and controls. In these instances, the Federal Reserve typically will be able to use the information and assessments developed by this primary supervisor of the bank subsidiary to develop an understanding and assessment of the condition of the regional HC and its consolidated activities. However, for a regional HC with more extensive or complex nonbank activities, the Federal Reserve will perform a more extensive assessment of the firm's risk-management systems and financial condition of nonbank subsidiaries.

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk-management and control functions—will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

In conducting its supervisory activities for regional HCs, the Federal Reserve will, to the fullest extent possible:

- rely on the information, reports, and assessments from relevant primary supervisors and functional regulators, including the reports of examination of such supervisors and regulators; (for more information, see subsection 1050.2.5, "Relying on the Work of Regulators of Subsidiary Insured Depository Institutions")
- focus its supervisory activities on the holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the HC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements).

1050.2.1.2 Functionally Regulated Subsidiaries

In certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve's responsibilities as supervisor of the consolidated organization. In these cases, the Federal Reserve will follow the procedural and other requirements governing examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. For example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.[4]

1050.2.2 UNDERSTANDING THE ORGANIZATION

For each regional HC, the Federal Reserve will review information on a firm's legal, operating, and corporate governance structure, as well as the regional HC's primary strategies, business lines, and risk-management and internal control functions. Examiners may obtain information from the organization's management, public reports, regulatory reports, surveillance screens, third-party sources (e.g., credit-rating agency and market analyst reports), and other relevant primary supervisors or functional regulators. Based on the review of this information, examiners develop a risk-assessment and create an appropriately tailored supervisory plan for the HC.

To understand the organizations, examiners generally review the following:

- *Corporate strategy*. Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities; areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.
- *Significant activities*. Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations (as applicable); market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vulnerable to volatility in revenue, earnings, capital, or liquidity.
- *Structure*. Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for account-

4. The Federal Reserve also may examine a functionally regulated subsidiary of a regional HC if, after reviewing relevant reports and other information, examiners have reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve cannot determine compliance by examining the HC or its affiliated depository institutions).

Before requesting a specialized report from a functionally regulated subsidiary, the Federal Reserve should first request the report from the subsidiary's appropriate functional regulator. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the HC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

ing or risk-management purposes; and the activities and risk profile of Edge and agreement corporation subsidiaries.
- *Corporate governance, risk management, and internal controls for primary risks*. Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions and associated MIS relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures that describe the duties and responsibilities of a firm's board and senior management to assess and manage risks.

To improve the quality and consistency of consolidated supervision across the regional HC portfolio, the Federal Reserve compares an individual HC to firms with similar characteristics. Such supervisory activities aid the Federal Reserve in identifying risk-management practices that well-managed organizations employ and evolving practices.

1050.2.3 ASSESSING THE REGIONAL HC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a HC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a HC.[5]

1050.2.3.1 Risk Management

1050.2.3.1.1 Key Corporate Governance Functions

Objectives: One of the primary areas of focus for consolidated supervision of regional HCs is the adequacy of governance provided by a firm's board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a firm can maintain fully effective risk-management and internal control processes.

The board and its committees should have a process to monitor key inherent risks, associated trends, control functions, and senior management capabilities. Primary expectations for a firm's board or a board committee include:

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers' performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;
4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. for publicly held organizations, ensuring that public disclosures
   - are consistent with how the board and senior management assess and manage the risks of the organization,
   - balance quantitative and qualitative information with clear discussions about risk-management processes, and
   - reflect evolving disclosure practices for peer organizations.

A regional HC's senior management or a management committee should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization's risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the asset size and complexity of the organization. Primary expectations for senior management include:

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation

5. The RFI rating system is discussed in SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion." RFI ratings are assigned at least annually for HCs that are complex or that have between $3 billion and $100 billion in total consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the HC's assigned ratings and encompasses the results of the entire supervisory cycle. See this manual's section entitled, "Holding Company Ratings Applicability and Inspection Frequency."

of effective policies for the proper segregation of duties and for the avoidance or management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization's established risk appetite;
4. establishing and implementing incentives for personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;
5. promoting an effective dialogue between and across business areas and risk-management functions to help align the organization's established risk appetite and risk controls;
6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to changing circumstances regarding risks and controls; and
7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role in providing a firm's management with an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit's role in identifying risks and testing internal controls has increased.[6]

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of individual regional HCs.

Supervisory Activities: For each regional HC, the Federal Reserve will review and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will review and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining consolidated holding company operations, as well as the organization's business resiliency and crisis management capabilities.[7]

- *Board, senior management, and other key corporate governance functions*. Continuous monitoring activities—which draw from all available sources on an as-needed basis, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.[8]

  The results of continuous monitoring activities, as documented in supervisory products that reflect the Federal Reserve's overview and risk assessment of the organization, may identify certain corporate governance functions that will require more intensive supervisory focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently recent examination activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.
- *Internal audit*. Continuous monitoring activities will be used to understand and assess key elements of internal audit governance for the consolidated organization, including (1) the adequacy (and, where applicable, independence[9]) of the audit committee; (2) the independence, professional competence, and the quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk-assessment process; and (4) the adequacy of audit programs and workpaper standards. On at least an annual basis, the results of these supervisory activities

---

6. SR-13-1/CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing."

7. As discussed further in subsection 1050.2.4.6, because of the special structure of nontraditional BHCs and the relatively small size of their depository institution subsidiaries, much of the information necessary to develop the assessments of the risk-management (as described in this subsection 1050.2.3.1) and financial condition elements (as described in subsection 1050.2.3.2) typically may be obtained or drawn from the work of the relevant functional regulator.

8. As noted in subsection 1050.2.1, the scale and frequency of monitoring activities will differ by organization. For many regional HCs in sound condition, these activities are typically performed on a periodic or quarterly basis and supplemented as necessary.

9. As outlined in section 2060.05, "The Sarbanes-Oxley Act of 2002," section 301 of the Sarbanes-Oxley Act requires that each public company (including banks, bank holding companies, and savings and loan holding companies that are public companies) have an audit committee composed entirely of independent directors. (See 15 U.S.C. 78j-1.)

will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit's recent work in these areas to the extent possible as a means of validating internal audit's findings.

- *Additional supervisory activities*. If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing target reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

  If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.
- *Additional required audit testing activities*. In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.[10]

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.3.1.2 Risk-Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: A firm is responsible for developing and maintaining an appropriate control structure for identifying, measuring, monitoring, and controlling key risks and complying with applicable statutes and regulations. Further, a firm's risk-management and internal control functions should promote the firm's safety and soundness.

As part of supervisory activities for a regional HC, the Federal Reserve will review and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS. This review includes an assessment of the risk-management and control functions for primary credit, legal and compliance, liquidity, market, operational, and reputational risks for the consolidated organization.[11] The Federal Reserve also will review and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual HC, relate to primary risks to the organization as a whole.

For example, for regional HCs with particularly dynamic corporate strategies, the Federal Reserve will review and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes to confirm that risk management and controls are keeping pace with areas of growing inherent risk.

In all instances, the adequacy of each primary firmwide risk management or control mechanism depends on the appropriateness of the following:

10. For nontraditional HCs, the Federal Reserve will routinely conduct testing activities on at least a three-year cycle in instances where the HC's relevant functional regulator has not developed—or, because of the organization's legal, operating, and regulatory structure, is not able to develop—a comprehensive understanding and assessment of the internal audit infrastructure.

11. Federal Reserve processes for reviewing and assessing legal and compliance risk management also encompass consumer compliance risk inherent in the organization's business activities. See SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion."

1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;
7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization's compensation structure.

Firms in the regional supervisory portfolio use a variety of control structures to monitor, manage, and control firmwide risks. A number of larger firms have implemented firmwide risk-management functions to measure and assess the range of a firm's exposures across business lines and legal entities and the way these exposures interrelate. However, some regional HCs effectively control risks using a decentralized approach that relies on individual control structures for the organization's primary business lines or legal entities. In all instances, the Federal Reserve will assess whether a firm's key control function is effective in controlling primary risks to the consolidated organization.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to review and assess each primary firmwide risk-management and control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in subsection 1050.2.3.1.3). Federal Reserve staff will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company's current risk profile. In particular, supervisory activities focus on assessing the adequacy of a firm's primary control functions and whether a firm's control functions (centralized or decentralized) remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous supervisory monitoring activities may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) significant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

The Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

If the firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. For a firm with functionally regulated subsidiaries, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each regional HC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as residential mortgage or commercial real estate lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to either understanding inherent risk within the consolidated organization or assessing controls for a broader corporate function (such as consolidated credit-risk management).

As part of the overview and risk assessment of a firm, the Federal Reserve will analyze external factors and internal trends in the HC's strategic initiatives—as evidenced by budget and (where applicable) internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks or activities of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evaluating whether retail activities such as mortgage or automobile lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as interest rate and credit risks, should be considered.

Supervisory Activities: Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding subsection 1050.2.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented, as appropriate, by examination activities.

To the fullest extent possible, the Federal Reserve will base its review and assessment of these risks and risk-management practices from the information and assessment of the primary supervisor or functional regulator where the HC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators, as necessary, to maintain an understanding and assessment of related firmwide risk-management and control functions.

A regional HC's activities may span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. In these cases, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.3.1.4 Risk Management of Nonmaterial Business Lines

Objectives: For nonmaterial business lines identified during the development of the scope of supervisory activities, the Federal Reserve will focus on identifying and reviewing those business lines that are increasing in importance to a firm's operations and have the potential to become a material risk to the firm.

Supervisory Activities: When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become a material risk. The Federal Reserve also will maintain access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices. Further, the Federal Reserve will assess the adequacy of associated MIS for the business line, if appropriate, to determine its importance to the organization.

1050.2.3.2 Financial Condition

Objectives: The Federal Reserve's evaluation of a regional HC's consolidated financial condition focuses on the ability of the organization's resources to support the level of risk associated with its activities. Assessments are developed for each "CAEL" subcomponent: Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L).[12] In developing this evaluation, the Federal Reserve's primary focus is on reviewing and assessing:

1. the sufficiency of the HC's consolidated capital to support the level of risk associated with the organization's activities and provide a sufficient cushion to absorb unanticipated losses;
2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and
3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization's various legal entities, or that relate to the financial soundness of the parent company and significant nonbank subsidiaries, as discussed in subsection 1050.2.3.3.

In assessing consolidated regulatory capital, the Federal Reserve determines whether the HC has an effective framework for complying with relevant capital regulations.[13] This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the HC's internal control functions and from market-based assessments, where available.

When assessing the adequacy of a HC's liquidity levels and funds-management practices, examiners focus on[14]

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business line information into assessments of actual and contingent liquidity risk;
2. whether funds-management practices provide sufficient funding flexibility to respond to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and
3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, Federal Reserve supervisory staff evaluate a regional HC's consolidated financial condition considering the availability of information or assessments from other relevant primary supervisors or functional regulators. For example, Federal Reserve staff may perform additional work to assess consolidated asset quality or earnings for regional HCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, Federal Reserve will perform a minimal level of incremental review and analysis to assess the firm's consolidated asset quality and earnings.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to assess a regional HC's financial strength. Such activities will include periodic meetings with the HC's management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators (where available), including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in reviewing and assessing areas of concern.

Testing activities are used to assess the sufficiency of the HC's consolidated capital and liquidity positions to support the level of risk associated with a firm's activities, including (1) regulatory capital calculation methodologies and, where applicable, internal assessments of

12. See SR-19-4/CA-19-3 for more information about the CAEL subcomponents.

13. See for example Regulation Q (12 CFR part 217).

14. Assessing liquidity levels and funding practices for a consolidated BHC also incorporates elements presented in subsection 1050.2.3.3.2 on "Parent Company and Nonbank Funding and Liquidity."

capital adequacy[15] and (2) funds-management and liquidity planning tools and practices. The Federal Reserve will work with other primary supervisors and functional regulators to participate in or, if necessary, to coordinate activities designed to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary, which based on the significance of the activity, would influence the Federal Reserve's supervisory assessment. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.3.3 Impact

1050.2.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

Objectives: Many regional HCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. In some instances, these HCs have intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization's legal entities. Common interactions between a regional HC's depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the depository institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational risks in one part of a HC can affect other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus to its depository institution subsidiaries. As the consolidated supervisor, the Federal Reserve is responsible for reviewing and assessing the risks that the parent holding company and its nonbank subsidiaries may pose to the holding company or its depository institution subsidiaries. The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a holding company are to:

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;
2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;
3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;
4. identify and assess any intercompany relationships, dependencies, or exposures—or aggregate firmwide concentrations—with the potential to threaten the condition of a depository institution affiliate; and
5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable statutes and regulations, including consumer protection laws.

Supervisory Activities: For all significant nonbank subsidiaries and activities of the parent HC, the Federal Reserve will use continuous monitoring activities to:

1. maintain an understanding of the holding company's business line and legal entity structure, including key interrelationships and dependencies between depository institution

15. Capital planning activities for all HCs should be forward looking and provide for a sufficient range of stress scenarios commensurate with the organization's risk tolerance and activities. For those regional HCs that utilize more-rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, the Federal Reserve focuses on whether such internal processes confirm that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital.

subsidiaries and nonbank affiliates, utilizing regulatory structure reports, internal MIS, and other information sources;
2. understand and assess the exposure to, and tolerance for, legal, compliance, and reputational risks, as well as the extent to which potential conflicts of interest are identified and avoided or managed;
3. understand the scope of intercompany transactions and aggregate concentrations, and assess the adequacy of risk-management processes, accounting policies, and operating procedures to measure and manage related risks;
4. identify and assess key interrelationships and dependencies between subsidiary depository institutions and nonbank affiliates, such as the extent to which a depository institution subsidiary is reliant on services provided by the parent company or other nonbank affiliates and the reasonableness of associated management fees;
5. identify those nonbank subsidiaries whose activities present material financial, legal, compliance, or reputational risk to the consolidated entity and/or a depository institution subsidiary;
6. identify significant businesses operated across multiple legal entities for accounting, risk management, or other purposes, as well as activities that functionally operate as separate business units for legal or other reasons;
7. identify intercompany transactions subject to Regulation W—utilizing information submitted on quarterly regulatory reporting form FR Y-8 ("The Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates"), internal MIS, and other information sources—and determine (in conjunction with the primary supervisor) whether compliance issues are present; and
8. understand and assess the sufficiency, reliability, and timeliness of associated MIS relied upon by the board, senior management, and senior risk managers and committees to monitor key activities and risks.

Federal Reserve staff may use periodic testing to supplement continuous monitoring to (1) ensure that key risk-management and internal control practices conform to internal policies and/or are designed to ensure compliance with the law, and (2) understand and assess operations presenting a moderate or greater likelihood of significant negative impact to a subsidiary depository institution or the consolidated organization. Areas of potential negative impact include financial or operational risks that pose a potential threat to the safety and soundness of a depository institution subsidiary, or to the holding company's ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. Testing will focus on controls for identifying, monitoring, and controlling such risks. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.3.3.2 Parent Company and Nonbank Funding and Liquidity

Objectives: One of the Federal Reserve's primary responsibilities as consolidated supervisor is to help ensure that the parent company and its nonbank subsidiaries do not have an adverse impact on the organization's depository institution subsidiaries. To meet this objective, the Federal Reserve will assess the extent to which funding and liquidity policies and practices of the parent company or nonbank subsidiaries may undermine the HC's ability to act as a source of strength to the organization's depository institution subsidiaries.

Areas of focus will include an assessment of:

1. the ability of the parent company and nonbank subsidiaries to maintain sufficient liquidity, cash flow, and capital strength to service their debt obligations and cover fixed charges;
2. the likelihood that parent company or nonbank funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institution(s);
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
4. the extent of "double leverage"[16] and the organization's capital management policies, including the distribution and transferability of capital across jurisdictions and legal entities; and

16. "Double leverage" refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

5. the parent company's ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts.

The Federal Reserve also will monitor a firm's funding profile—including intraday liquidity management policies and practices[17]—and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated HC's primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and target examinations to review and assess parent company's and nonbank subsidiary's funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On an annual basis, Federal Reserve staff will review a firm's funding and liquidity policies and practices to determine whether there have been (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; or (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; as well as whether examiners have any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on reviewing and assessing the areas of change and/or concern in order to confirm that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

For regional HCs where parent company or nonbank subsidiary third-party debt obligations are deemed to be material in relation to equity or may otherwise have a potentially negative impact on the HC's ability to serve as a source of strength for its depository institution subsidiaries, the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and liquidity: board and senior management oversight; policies, procedures, and limits; risk monitoring and management information systems; and related internal controls. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.4 INTERAGENCY COORDINATION

1050.2.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators

Objectives: Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators.[18] To achieve this objective, the Federal Reserve has worked over the years to enhance interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained.

As discussed in subsection 1050.2.3, reviewing and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a HC's subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators, and will work to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated HC's operations as applicable.

17. More information on payment systems risk is available on the Board's public website.

18. Subsection 1050.2.4.2 discusses cooperation and information sharing among foreign supervisors.

Supervisory Activities: The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a regional HC's subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the HC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable statutes and regulations.[19]

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and memoranda of understanding (MOUs) with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President's Working Group on Financial Markets, and the Federal Reserve-sponsored cross-sector meetings of financial supervisors and regulators.

19. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 *et seq.*) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board's Rules Regarding the Availability of Information (12 CFR 261.20 *et seq.*).

1050.2.4.1.1 Coordination of Examination Activities at a Supervised HC Subsidiary

The Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised HC subsidiary that are material to the Federal Reserve's review or assessment of the consolidated organization's risks, activities, or key corporate governance, risk-management, or control functions. Prior to conducting testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a HC, the Federal Reserve will:

- review available information sources as part of its continuous monitoring activities, including examination reports and the HC's internal MIS, to determine whether such information addresses the Federal Reserve's information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor's or functional regulator's basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve's information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in subsection 1050.2.3.[20]

1050.2.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: Some regional HCs have international banking and other operations that are licensed and supervised by foreign host- country authorities. As home-country supervisor for domestic HCs, the Federal Reserve is responsible for the comprehensive, consolidated super-

20. As outlined in subsection 1050.2.3, certain Federal Reserve examination activities are to be conducted on a minimum three-year cycle to verify, through testing, the sufficiency of key control processes. These activities are to be conducted regardless of whether or not there is an information gap or indication of weakness or risk.

vision of these organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. HCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a regional HC's global activities are supervised on a consolidated basis. Cross-border information sharing is often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in supervisory colleges and other multilateral groups of supervisors that discuss issues related to specific, internationally active banking organizations.

The Federal Reserve's processes for reviewing and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for a firm's management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company's international operations. For example, some host-country legal and regulatory structures and supervisory approaches are fundamentally different from those in the United States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a HC's foreign office may share with its parent company, thereby limiting the parent company's ability to exercise consolidated risk management on a global basis.

Additionally, the Federal Reserve and other U.S. supervisors have at times faced challenges in accessing information on a bank's or HC's foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a regional HC with cross-border or foreign operations.

Supervisory Activities: For regional HCs with international operations, Federal Reserve's continuous monitoring will be used to review and assess each HC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk management, and internal controls. For a regional HC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include reviewing materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations.

When assessing the sufficiency of a regional HC's management of its international operations, Federal Reserve staff will consider the extent to which foreign laws restrict the transmission of information to the HC's head office. Impediments to sharing information imposed by a host country may constrain the HC's ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve's ability to access information on host-country operations, or to engage in supervisory activities at the organization's operations in the host country, should be considered when assessing whether the organization's activities in that jurisdiction are appropriate.

1050.2.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

Objectives: For areas beyond those specifically addressed in subsection 1050.2.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a HC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the HC's depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, these weaknesses are addressed appropriately by the HC and its depository institution subsidiaries.

Supervisory Activities: The Federal Reserve will take the following steps when there are indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in subsection 1050.2.3. Further, the Federal Reserve will take these steps when it is not clear whether the depository institution's primary supervisor has reflected the weakness or risk in its assessment.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor's related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in consultation with the primary supervisor. A senior Federal Reserve official will communicate this decision in writing to a senior official of the primary supervisor.

1050.2.4.4 Condition or Management of HC Subsidiary is Less than Satisfactory

Objectives: As noted above, a primary responsibility of the Federal Reserve as consolidated HC supervisor is to confirm that a holding company's activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated HC subsidiary is determined to be less than satisfactory, the Federal Reserve's focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to confirm that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company's depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in subsection 1050.2.3 for reviewing and assessing key corporate governance functions, or primary firmwide risk management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated HC is in weakened condition or when there are questions regarding the capabilities of the holding company's management.

Supervisory Activities:

- *Depository institution subsidiary*. In instances when a depository institution subsidiary's condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve's primary supervisory objectives as consolidated supervisor are to confirm that the parent company (1) provides appropriate support to the depository institution, and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to assess whether the HC or a nonbank affiliate has contributed to the depository institution's weakened condition, to evaluate the impact of the depository institution on the HC's financial condition, and to determine if the holding company is providing appropriate support to the depository institution.
- *Nonbank subsidiary*. When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to assess that its condition and activities do not jeopardize the safety and soundness of the HC or its depository institution subsidiaries, as discussed in subsections 1050.2.3.3.1, "Risk Management and Financial Condition of Significant Nonbank Subsidiaries" and 1050.2.3.3.2, "Parent

Company and Nonbank Funding and Liquidity." The Federal Reserve also will take appropriate steps to confirm that any actions taken by the parent company to assist a nonbank subsidiary do not impair the HC's continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.2.4.5 Edge and Agreement Corporations

Objectives: Some regional HCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated holding company supervisor.[21] When the Edge or agreement corporation is a subsidiary of a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money-Laundering (BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement corporations to determine whether a consumer compliance examination is warranted, in which case a compliance examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity's activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including:

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation's primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and HC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated HC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable statutes and regulations imposed by host-country supervisors for the Edge or agreement corporation's international operations.

Supervisory Activities: The Federal Reserve will perform an annual examination for each Edge and agreement corporation. While the examination scope will be tailored to reflect the organization's size, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. statutes and regulations, and with applicable foreign statutes and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those risks and activities that are unique to the Edge or agreement corporation and those that are shared with the parent bank or HC, and will coordinate fulfillment of the Federal Reserve's responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role.

This strategy will reflect the extent to which the Federal Reserve staff can rely on (1) the Federal Reserve's review and assessment of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated HC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement

21. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, "Rating System For International Examinations," one of the Federal Reserve's supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.

corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation's parent bank relies on the Federal Reserve's understanding and assessment in order to develop its CAMELS rating, the Federal Reserve will work to fulfill that supervisor's information needs.[22]

1050.2.4.6 Nontraditional Holding Companies

Objectives: A small number of regional HCs are considered to be nontraditional holding companies because most or all of their significant nondepository subsidiaries are regulated by a functional regulator, and subsidiary depository institutions are small in relation to the nondepository entities. As with all HCs, the level of analysis conducted and resources needed to supervise and assess nontraditional HCs should be commensurate with the level of risk posed by the organization's depository institution subsidiaries to the federal safety net and the level of risk posed by the parent or its nonbank subsidiaries to the HC's subsidiary depository institutions.

Due to the unique structure of nontraditional HCs, a single functional regulator is likely to have a complete view of, and ability to address, significant aspects of the organization's firmwide activities, risks, risk management, and controls. Therefore, assessments and information developed by the primary functional regulator typically will be the main tool utilized by the Federal Reserve in developing and assigning the "R" and "F" components of the consolidated RFI rating. More independent Federal Reserve work typically will be required to review and assess the impact of the nondepository entities on the subsidiary depository institutions in order to assign the "I" rating.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to maintain its assessments of risk management and financial condition for nontraditional HCs, relying on the assessments and information developed by the primary functional regulator to the fullest extent possible.

In addition to continuous monitoring, periodic testing will be used to perform an assessment of the potential negative impact of nonbank entities on subsidiary depository institutions as discussed in subsections 1050.2.3.3.1 and 1050.2.3.3.2 on, respectively, "Risk Management and Financial Condition of Significant Nonbank Subsidiaries" and "Parent Company and Nonbank Funding and Liquidity." In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described in subsection 1050.2.1.2.

1050.2.5 RELYING ON THE WORK OF OTHER REGULATORS

The principle of relying on the work of the insured depository institution (IDI) regulator is a well-established tenet of Federal Reserve supervisory policy and is required by statute.[23] Therefore, holding company supervision focuses on the Federal Reserve's assessment of the consolidated organization based on a review of parent and nonbank activities, together with an assessment of the organization's IDI subsidiaries. When assigning Federal Reserve supervisory ratings to a holding company, the Federal Reserve will rely to the fullest extent possible on the assessment of the IDI as reflected in the examination work performed by the IDI regulator(s).

The Federal Reserve tailors its supervision of holding companies based on the asset size of the organization, complexity, and the degree of systemic risk that the organization poses to the U.S. financial system and the economy, including the deposit insurance fund. Within this framework of tailored supervision, the Federal Reserve focuses on the goals of both macroprudential and microprudential supervision for systematically important institutions, and microprudential

22. The U.S. banking agencies assign CAMELS (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, and Sensitivity to Market Risk) ratings to U.S. banking organizations as part of their ongoing supervision of these organizations. See SR-96-38, "Uniform Financial Institutions Rating System," as well as the *Commercial Bank Examination Manual*.

23. For the purpose of this guidance, "IDI regulator" is defined as the prudential bank regulator(s) other than the Federal Reserve, which includes the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the state banking supervisory authorities.

Refer to sections 5(c)(1)–(2) of the Bank Holding Company Act of 1956 (BHC Act) and sections 10(b)(2) and (b)(4) of the Home Owners' Loan Act (HOLA), as amended by section 604 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). 12 U.S.C. 1844(c)(1)–(2); 12 U.S.C 1467a(b)(2), (b)(4).

supervisory goals for a holding company with total consolidated assets of less than $100 billion.[24]

The BHC Act and the HOLA authorize the Federal Reserve to conduct examinations of holding companies, and certain subsidiaries of such holding companies, to obtain information needed to assess the safety and soundness of supervised financial institutions.[25] Further, the Dodd-Frank Act requires the Federal Reserve, to the fullest extent possible, to rely on the reports and supervisory information from other regulatory agencies to avoid duplication of examination activities, reporting requirements, and requests for information. Supervisory overlap at the level of the IDI can be avoided through reliance on the examination work performed by the IDI regulators, as each agency follows similar rules and supervisory guidance when assessing the financial and managerial condition of an insured depository institution.

Consistent with this mandate to rely on the work of the IDI regulators, the IDI regulators and the Federal Reserve have the mutual responsibility to foster the timely sharing of information, including their risk-focused supervisory analysis and conclusions. Moreover, the sharing of information is necessary so that Federal Reserve staff have an adequate basis for relying on the IDI regulators' work. While exercising the Federal Reserve's responsibility to assess and assign appropriate supervisory ratings to the consolidated holding company, the microprudential supervision framework for smaller holding companies provides the Federal Reserve with the flexibility to rely on the assessment of an IDI's condition by another regulator.

The following guidance explains the Federal Reserve's supervisory expectations for relying on the work of the IDI regulators in the supervision of regional holding companies.[26] Refer to SR-16-4.

1050.2.5.1 Relying on the Work of IDI Regulators for Regional Banking Organizations

The Federal Reserve supervises regional banking organizations (RBOs) using a program of continuous oversight which is characterized by a series of targeted examinations during the annual supervisory cycle, a roll-up examination at the end of the cycle, and continuous monitoring between examination events during the cycle.

1. Taking into account a holding company's complexity, risk profile, and condition, the Federal Reserve will rely to the fullest extent possible on the work of the IDI regulators to supplement its own supervisory work regarding the consolidated holding company and its nonbank subsidiaries.
2. Federal Reserve staff will promote the sharing of information with the IDI regulators throughout the supervisory cycle, which will foster collaborative interagency relationships. Federal Reserve staff and the IDI regulators generally may participate on each other's inspections and examinations to support and complement each other's work as necessary. Through ongoing dialogue and exchange of supervisory documents and information, Federal Reserve staff are expected to:
   - understand the IDI regulators' risk assessment and supervisory plan for each IDI, to include this information in the Federal Reserve's evaluation of consolidated holding company risk, and to support development of the Federal Reserve's supervisory plan for the holding company;
   - understand the IDI regulators' examination work, including the scope, basis for, and support of conclusions reached, and the goal of any supervisory action;
   - communicate to the IDI regulators the Federal Reserve's supervision goals and approach with respect to the holding company and any subsidiaries not subject to the supervision of IDI regulators; and

24. While recognizing that a large number of smaller asset-sized holding companies simultaneously experiencing financial distress could have a harmful effect on a local economy's availability of credit or on certain sectors or regions of the U.S. economy, institutions that are not systemically important do not have the size or degree of interconnectedness to the financial system to individually pose macroprudential risk.

25. 12 U.S.C. 1844(c)(2); 12 U.S.C. 1467a(b)(4)(A). This information pertains to the nature of the operations and financial condition of the holding company and its subsidiaries; the financial, operational, and other risks within the holding company system that may pose a threat to the safety and soundness of the holding company or of any depository institution subsidiary of the holding company, or the stability of the financial system of the United States; the systems of the holding company for monitoring and controlling any such risks; and the holding company's and subsidiaries' compliance with federal law, other than in the case of an insured depository institution or functionally regulated subsidiary.

26. The guidance in SR-16-4 also applies to any U.S. bank holding company with total consolidated assets of less than $50 billion that is owned or controlled by a foreign banking organization.

- use all information made available from the IDI regulators to reach conclusions regarding the consolidated holding company's overall condition and to assign appropriate Federal Reserve supervisory ratings.

3. Federal Reserve staff should verify that the supervisory ratings of the consolidated holding company are adequately supported by information that is timely and complete, including the information received from the IDI regulators.
4. Federal Reserve staff will scale their supervisory approach, including the review of and reliance on the IDI regulators' work, according to the complexity,[27] risk, and condition of the consolidated organization, and to the timeliness of information available from the IDI regulators. For noncomplex holding companies with satisfactory supervisory ratings, Federal Reserve consolidated ratings should rely heavily on the IDI regulators' work for IDI subsidiaries exhibiting the following characteristics:
   - CAMELS Composite 1 or 2;
   - low or moderate risk profiles;
   - stable financial condition;
   - satisfactory management practices and an associated satisfactory management component rating; and
   - IDI regulator examination reports issued within the past year.

In these situations, the Federal Reserve expects to limit its supervisory work to verify that the holding company can serve as a source of strength to, and the non-bank subsidiaries do not pose a threat to, the safety and soundness of the IDI(s). Thus, Federal Reserve staff will likely need to perform only limited analysis outside of the required annual holding company inspection of the parent and nonbank subsidiaries. In addition, this analysis will be supplemented by the Federal Reserve's continuous monitoring process.

In other situations, the Federal Reserve will scale its supervisory approach, including performing more detailed monitoring of a consolidated holding company's internal management information systems, internal audit, and loan review reports, depending on the company's complexity, risk, condition of the consolidated organization, and timeliness of information available from the IDI regulator. For example, a holding company with the following characteristics is a candidate for closer Federal Reserve supervision to ensure the conclusions reached by the IDI regulators remain a valid basis for assigning the supervisory ratings to the consolidated holding company:

- the IDI examination reports are not current;[28]
- the composite rating for the holding company or any of its IDI subsidiaries is less than satisfactory; or
- the holding company has deteriorating financial or risk trends that are not reflected in the most current IDI regulators' examination reports.

5. If Federal Reserve staff do not have an adequate basis for relying on the IDI regulators' supervisory findings, the Federal Reserve will work to resolve information gaps with the IDI regulators.[29]

1050.2.6 INSPECTION REPORT CONTENT FOR CERTAIN HOLDING COMPANIES IN THE REGIONAL BANKING ORGANIZATION PORTFOLIO

Reserve Bank supervision staff should document in a report of inspection the conclusions reached in assigning the holding company rating components and subcomponents at full-scope or roll-up inspections of bank and savings and loan holding companies in the RBO portfolio. This subsection describes the content that examiners

27. The Federal Reserve distinguishes between complex and noncomplex holding companies by evaluating a number of factors, including: the size and structure of the company; the extent of intercompany transactions between IDI subsidiaries and the holding company or its non-depository subsidiaries; the risk, scale, and complexity of activities of any non-depository subsidiaries; and the degree of leverage at the holding company, including the extent of debt outstanding to the public. Companies are also designated "complex" if material risk-management processes for the holding company and its affiliates are consolidated at the parent company.

28. For the purpose of this guidance, RBO IDI examination reports that are not current are defined as reports older than one year, measured from the mailing date of an IDI regulator's report to the start date of the Federal Reserve supervisory evaluation.

29. In rare and limited circumstances, where unresolved information gaps exist or reliance upon information obtained from the IDI regulators does not sufficiently support the Federal Reserve's supervision of a consolidated holding company, the Federal Reserve would consider invoking its expanded examination authority under section 5(c)(2) of the BHC Act and section 10(b)(4) of the HOLA, as amended by section 604 of the Dodd-Frank Act, to examine IDIs for which the Federal Reserve is not the primary regulator. 12 U.S.C. 1844(c)(2); 12 U.S.C. 1467a(b)(4).

should include in a roll-up or full scope inspections for institutions with the following characteristics:

- The holding company has between $10 billion and $100 billion in total consolidated assets;
- The holding company is noncomplex; and
- The lead IDI subsidiary of the holding company is not a state member bank.[30]

For complex holding companies that have total consolidated assets between $10 billion and $100 billion, Reserve Bank examiners may develop a report of inspection based on this outline, and include other inspection report pages, as necessary, to document supervisory activities completed to assign a rating. For holding companies with lead state member bank subsidiaries, supervision staff should generally utilize a combined examination/inspection report.

Sections marked with as asterisk (*) should be omitted from the report if they are not applicable.

I. Overview (see 1050.2.6.1)
II. Scope (see 1050.2.6.2)
III. Summary of Inspection Conclusions (see 1050.2.6.3)
IV. Ratings (Overall Composite Rating) (see 1050.2.6.4)
V. Violations of Law* (see 1050.2.6.5)
VI. Matters Requiring Attention* (see 1050.2.6.6)
VII. Risk Management (see 1050.2.6.7)
   a. Board and Senior Management Oversight
   b. Policies, Procedures, and Limits
   c. Risk Monitoring and Management Information Systems
   d. Internal Controls
VIII. Financial Condition (see 1050.2.6.8)
   a. Capital
   b. Asset Quality
   c. Earnings
   d. Liquidity
IX. Impact (see 1050.2.6.9)
X. Depository Institution (see 1050.2.6.10)
XI. Other Matters* (see 1050.2.6.11)
XII. Closing Comments (see 1050.2.6.12)
XIII. Signatures of Directors (see 1050.2.6.13)

30. However, examiners may follow the inspection report outline—presented in this subsection of the manual—when the holding company report of inspection is issued separately from the lead state member bank report of examination.

1050.2.6.1 Overview

This section includes basic information about the supervisory event or inspection. It should include the type of event (such as a full-scope inspection) as well as the timeframes of the event. This section should also indicate the date the Reserve Bank met with representatives from the institution to discuss the inspection report as well as the names of the meeting participants.

1050.2.6.2 Scope

This section of the report explains the breadth of the supervisory event. The scope of the report should note the specific areas or business lines that were reviewed. The Scope section of the report should state the Federal Reserve's statutory authority for completing the inspection (e.g. section 5(c) of the Bank Holding Company Act of 1956).

The Scope section should describe some of the information examiners reviewed to develop their assessment of the parent company's ability to support and act as a source of strength to its subsidiary institution, board and senior management oversight and the governance structure, and the consolidated financial condition of the organization. Common sources of information include:

- minutes of the board of directors' and related committee meetings;
- corporate policies of the holding company;
- financial statements of the parent and subsidiary depository institution;
- management information systems (MIS); and
- IDI regulator's work.[31]

1050.2.6.3 Summary of Inspection Conclusions

This section of the inspection report provides the overall ratings, assessment of the institution's financial condition and risk management, as well as any key supervisory messages.

31. For more information, see SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion."

1050.2.6.4 Ratings

This section describes the overall condition of the holding company as well as the composite rating of the institution as defined in the Federal Reserve System's RFI/C(D) holding company rating system.[32] Composite, component, and subcomponent ratings are assigned based on a 1 to 5 numeric scale. A "1" indicates the highest rating, strongest performance and practices, and least degree of supervisory concern; a "5" indicates the lowest rating, weakest performance, and highest degree of supervisory concern. This section also contains a table listing the composite, component, and subcomponent RFI/C(D) ratings assigned to the company at this inspection, as well as the ratings assigned at the two prior inspections (see table 1). The possible composite rating definitions are as follows:

Rating 1 (Strong). Holding companies in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Risk-management practices and financial condition provide resistance to external economic and financial disturbances. Cash flow is more than adequate to service debt and other fixed obligations, and the nondepository entities pose little risk to the subsidiary depository institution(s).

Rating 2 (Satisfactory). Holding companies in this group are fundamentally sound but may have modest weaknesses in risk-management practices or financial condition. The weaknesses could develop into conditions of greater concern but are believed correctable in the normal course of business. As such, the supervisory response is limited. Cash flow is adequate to service obligations, and the nondepository entities are unlikely to have a significant negative impact on the subsidiary depository institution(s).

Rating 3 (Fair). Holding companies in this group exhibit a combination of weaknesses in risk-management practices and financial condition that range from fair to moderately severe. These companies are less resistant to the onset of adverse business conditions and would likely deteriorate if concerted action is not effective in correcting the areas of weakness. Consequently, these companies are vulnerable and require more than normal supervisory attention and financial surveillance. However, the risk management and financial capacity of the company, including the potential negative impact of the nondepository entities on the subsidiary depository institution(s), pose only a remote threat to its continued viability.

Rating 4 (Marginal). Holding companies in this group have an immoderate volume of risk management and financial weaknesses, which may pose a heightened risk of significant negative impact on the subsidiary depository institution(s). The holding company's cash flow needs may be being met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, the organization's future viability could be impaired. These companies require close supervisory attention and substantially increased financial surveillance.

Rating 5 (Unsatisfactory). The critical volume and character of the risk management and financial weaknesses of holding companies in this category, and concerns about the nondepository entities negatively impacting the subsidiary depository institution(s), could lead to insolvency without urgent aid from shareholders or other sources. The imminent inability to prevent liquidity and/or capital depletion places the holding company's continued viability in serious doubt. These companies require immediate corrective action and constant supervisory attention.

1050.2.6.5 Violations of Law*

If violations of statutes or regulations were identified during the inspection, this section should describe the statute or regulation and the conditions or circumstances that led to the violation. Examiners should indicate whether the violation is isolated (management generally understands the statute or regulation but missed one instance) or systemic (management was not aware of or did not understand fully the statute or regulation). Further, examiners should describe the institution's corrective action taken or planned.

1050.2.6.6 Matters Requiring Attention*

This section should be included in the inspection report if there are findings from the inspection or previous inspection. Supervisory findings may consist of Matters Requiring Immediate

32. See SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion," for more information on the descriptions and definitions of the RFI/C(D) component and subcomponent ratings.

Table 1. Holding Company Ratings

[Holding Company Name]	**Current Inspection MM/DD/YYYY**	**Prior Inspection MM/DD/YYYY**	**Prior Inspection MM/DD/YYYY**
R – Risk Management			
Subcomponents:			
Board and Senior Management Oversight			
Policies, Procedures, and Limits			
Risk Monitoring and MIS			
Internal Controls			
F – Financial Condition			
Subcomponents:			
Capital			
Asset Quality			
Earnings			
Liquidity			
I – Impact of Parent and Non-Depository Subsidiaries on Depository Institution			
C – Composite Rating			
(D) – Depository Institution			

Attention (MRIA) and Matters Requiring Attention (MRA). The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action, as well as the immediacy with which the banking organization must begin and complete corrective actions. This section should address newly identified MRIAs and/or MRAs, as well as the status of all other MRIAs/MRAs that were open at the beginning of the inspection. Reserve Banks can also provide history of MRIAs/MRAs addressed during the supervisory cycle. Examiners may include subheadings in this section to differentiate (1) MRIAs; (2) MRAs; and (3) status of prior MRIAs and MRAs.

Examiners should refer to SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings," for guidance on standardized language, timeframes and supervisory follow-up for MRIAs and MRAs. Further, when issuing a supervisory finding (including through the issuance of an MRIA or MRA), examiners will *not* criticize an institution for a "violation" of supervisory guidance (as supervisory guidance is not legally binding). When appropriate, examiners may reference (including in writing) supervisory guidance to provide examples of safe-and-sound conduct, appropriate risk-management practices, and other approaches to addressing compliance with applicable statutes or regulations.[33]

33. See 12 CFR 262, Appendix A, "Statement Clarifying the Role of Supervisory Guidance."

1050.2.6.7 Risk Management *[Assign a Rating 1 to 5]*

In this section of the report, examiners are expected to provide a qualitative description of the institution's risk management (R component), and subcomponent ratings. The risk-management rating contains four subcomponents to guide examiners in the assessment of the effectiveness of the holding company's risk management and controls. The subcomponents are (1) Board and Senior Management Oversight; (2) Policies, Procedures, and Limits; (3) Risk Monitoring and Management Information Systems; and (4) Internal Controls. Examiners can generally complete a brief overview summarizing the risk-management subcomponent ratings in one paragraph. In situations where Risk Management or any subcomponents are rated "3" or worse, or otherwise require emphasis, examiners may consider including information on the deficiencies into the introductory comment before providing a more comprehensive discussion and assessment of the holding company within the four risk-management subcomponent ratings.

Board and Senior Management Oversight *[Assign a Rating 1 to 5]*

Examiners are to evaluate the adequacy and effectiveness of board and senior management oversight and management's capabilities including the ability to identify and understand corporate risks, hire competent staff, and respond to changes in the organization's risk profile or the banking sector. Examiners should consider corporate governance, strategic planning, capital planning, budgeting process, and responsiveness to auditors and supervisory authorities.

Policies, Procedures, and Limits
[Assign a Rating 1 to 5]
Examiners should describe their assessment of the holding company's policies, procedures, and limits given the risks inherent in the organization's activities and stated goals and objectives.

Risk Monitoring and Management Information Systems
[Assign a Rating 1 to 5]
Examiners are to evaluate the adequacy of risk measurement and monitoring, management reports, information systems including the assumptions, data, and procedures used to measure risk and the consistency of these tools with the complexity of the organization's activities.

Internal Controls
[Assign a Rating 1 to 5]
Examiners are to assess the adequacy of internal controls and audit, including the accuracy of financial reporting and disclosure, the strength and influence of audit, the independence of control areas from management, and the consistency of audit scopes relative to the organization's complexity.

1050.2.6.8 Financial Condition *[Assign a Rating 1 to 5]*

The financial condition component (F component) is supported by four subcomponents reflecting an assessment of the quality of the holding company's Capital; Asset Quality; Earnings; and Liquidity. In this section, examiners should provide a qualitative write-up for the financial condition subcomponents. Examiners may add tables with financial ratios and other analyses, as necessary. In situations where Financial Condition or any subcomponents are rated "3" or worse, or otherwise require emphasis, examiners may include information on the deficiencies into the introductory comment, with more detailed comments reserved for discussion under separate subheadings, or in the applicable supplemental report page.

Capital
[Assign a Rating 1 to 5]
Examiners should describe the adequacy of the organization's consolidated capital position from a regulatory capital perspective. (See for example, 12 CFR part 217 and 12 CFR part 225.) The evaluation of capital adequacy will consider the risk inherent in an organization's activities and the ability of capital to absorb unanticipated losses, to provide a base for growth, and to support the parent company and subsidiaries' debt. Also discuss the capital planning process, and capital management objectives viewed in accordance with applicable statutes and regulations.[34]

Asset Quality
[Assign a Rating 1 to 5]
Examiners should assess the quality of the organization's consolidated assets. The evaluation will include, as appropriate, both on-balance sheet and off-balance sheet exposures, and the level of classified and nonperforming assets. Forward-looking indicators of asset quality, such as the adequacy of underwriting standards, the level of concentration risk, the adequacy of credit administration policies and procedures, and the adequacy of management information systems for credit risk may also form the Federal Reserve's view of asset quality. Also assess the adequacy of the allowance at the parent company level if applicable.

Earnings
[Assign a Rating 1 to 5]
In assessing the quality and sustainability of consolidated earnings, examiners should consider the level, trend, and sources of earnings, as well as the ability of earnings to augment capital as necessary, to provide ongoing support for a bank holding company's activities. In addition, examiners should assess material nonrecurring income and expense items, and adjust the return on average assets accordingly.

Liquidity
[Assign a Rating 1 to 5]
Examiners should describe the consolidated organization's ability to attract and maintain the sources of funds necessary to support its opera-

34. For more background information, see SR-09-4, "Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies."

tions and meet its obligations. Further examiners should evaluate the funding conditions for each of the material legal entities in the holding company structure and determine whether any weaknesses exist that could affect the funding profile of the consolidated organization.[35]

1050.2.6.9 Impact
[Assign a Rating 1 to 5]

The Impact, or I component, is an assessment of the potential impact of the nondepository entities on the subsidiary depository institution(s). The depth of analysis for this component rating will depend on the complexity of the organization. In supporting the Impact component rating, examiners should describe general activities and profiles of the parent company and nonbank entities. Examiners should evaluate the risk-management practices and financial condition of the nondepository entities. The assessment of the I component includes an assessment of the following key areas:

Parent Company Financial Analysis

- Examiners should determine whether the parent company is reasonably positioned to serve as a source of strength to the depository institution subsidiaries.
- Examiners should assess the level and adequacy of parent company cash flow by:
  - — Identifying the level, structure and terms of debt instruments; as well as total quarterly or annual debt service requirements.
  - — Determining whether the parent company's cash flow position (current and projected) is sustainable.
- Examiners should review and evaluate the parent company's dividend policy and dividend payment by assessing:
  - — The appropriateness of dividends paid by the parent company to its shareholders.[36]
  - — The reasonableness of dividend payments of the subsidiaries to the parent company in relation to each subsidiary's capital needs.
- Examiners should discuss the parent company's liquidity position including the composition and level of available funding sources and the adequacy of contingency funding planning.

Intercompany Transactions

Examiners should comment on:

- The relationships and transactions between and among affiliated entities including assessing compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W (12 CFR part 223).
- Intercompany transactions, and whether they were undertaken at arm's length and that consistency and fairness are demonstrated.
- The reasonableness of fees charged by a parent company and/or nonbank subsidiary by examining the services provided and the basis for allocating fees.

1050.2.6.10 Depository Institution
[Assign a Rating 1 to 5]

This rating generally reflects the composite CAMELS rating assigned by the lead subsidiary Depository Institution's (DI's) primary regulator. In a multi-depository institution holding company, this rating will reflect a weighted average of the CAMELS composite ratings of the individual subsidiary depository institutions, weighted by both asset size and the relative importance of each depository institution within the holding company structure. Risk management and financial matters for the DI's are generally covered above and comments should not be redundant. A summary of the DI's condition is not required unless a rating deviates from that of the primary regulator, but a brief discussion of problem DIs may be appropriate.

1050.2.6.11 Other Matters*

This section, which should be omitted if not applicable, includes a discussion of risk management of areas such as Bank Secrecy Act (BSA), information technology, assessment of the organization's response to any supervisory action(s), or other supervisory matters deserving specific attention. Consumer compliance issues

35. For more background information on assessing liquidity see SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management," (75 Fed. Reg. 13,656 (March 22, 2010)).

36. For more background information, review the Board's Policy Statement on Cash Dividend Payments (For the text on the Board's policy statement "Unsound Banking Practices—Cash Dividends Not Fully Covered by Earnings," (November 14, 1985) see Attachment B to SR-09-4, and this manual's section entitled, "Intercompany Transactions (Dividends).")

that affect risk management should be addressed under the appropriate risk-management subcomponent.

1050.2.6.12 Closing Comments

This section of the inspection report should instruct the institution's board and senior management to review the report of inspection and that the directors should sign the Signature of Directors page. The report should also indicate that the institution should retain the report in its records.

If there are supervisory findings, this section should indicate that the holding company is to provide a written response to the Reserve Bank that describes plans for addressing the findings. Depending on the circumstances, the report may indicate that Reserve Bank staff will schedule a formal presentation at an upcoming scheduled board of directors meeting to communicate the inspection report findings and answer questions regarding any possible supervisory findings.

The section should also include standard language indicating that any institution about which the Federal Reserve makes a written material supervisory determination is eligible to use the appeals process as described in "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System."[37] An appeal under this process may be made of any written material supervisory determination, as defined in the policy statement. It should also provide the contact information for the Board's Ombudsman.

Lastly, this section should note that the contents of the report are confidential and should not be made public.

1050.2.6.13 Signature of Directors

The signature of directors page demonstrates that the board of directors received and reviewed the report of inspection.

37. 85 Fed. Reg. 15,175 (March 17, 2020) and SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System."

1050.2.7 COMBINED ROLL-UP REPORT FOR REGIONAL BANKING ORGANIZATIONS

1050.2.7.1 Applicability, Purpose, and Outline of the Report

This manual subsection describes the content in the Combined Roll-Up Report. Examiners should use the Combined Roll-Up Report for regional banking organizations (RBOs) that are bank holding companies (BHCs) with a lead bank subsidiary that is a state member bank (SMB), and the following conditions apply:

- The Reserve Bank was the lead regulatory agency completing the statutorily required full-scope examination of the SMB;[38] and
- The BHC's board has formally approved a combined report being released to its lead SMB subsidiary.[39]

The purpose of the Combined Roll-Up Report is to increase efficiencies when completing the roll-up supervisory assessment of a BHC with a SMB subsidiary.[40] The Combined Roll-Up Report comments on the condition of the holding company, as well as the SMB, which likely possesses similar risk characteristics. Furthermore, in many cases, most of the assets of the consolidated BHC are held at the bank subsidiary. As such, many of the sections in the Combined Roll-Up Report are similar in form and function to the sections in the RBO holding company report described earlier in this manual section, as well as the examination report for RBO SMBs (see section 1002.1 of the *Commercial Bank Examination Manual*). In addition, the Combined Roll-Up Report aligns with the interagency principles on completing reports of examination.[41]

Other general report completion principles that apply to the Combined Roll-Up Report are as follows:

38. In cases where the BHC has more than one SMB subsidiary, separate examination reports should be prepared for all other state member bank subsidiaries.

39. If the BHC's board wishes to receive a combined report, it should formally approve the release of the combined report to its lead SMB subsidiary by board resolution.

40. The Combined Roll-Up Report should not be used to communicate the conclusions of target examination or instances when there are state banking agency requirements that preclude the use of the Combined Roll-Up Report. In such instances, examiners should reference the RBO report template in the *Commercial Bank Examination Manual*.

41. See SR-19-6, "Federal Financial Institutions Examination Council Policy Statement on the Principles for Completing the Report of Examination."

- The scope and depth of matters discussed under a section will vary based on the underlying issues and areas of concern presented as well as on their severity.
  - For example, written conclusions for BHCs rated composite "1" or "2" under the RFI Rating System and SMBs rated "1" or "2" under the Uniform Financial Institutions Rating System will generally be more concise than for institutions rated a composite "3," "4," or "5."
- The most important comments should be described first.
- Comments should be provided primarily on areas of the institution's operations and aspects of its financial condition that display weaknesses, deficiencies, or vulnerabilities. While examiners may recognize positive actions taken by management, particularly those related to actions taken by management in relation to prior supervisory matters, laudatory or conclusive remarks and endorsements of specific management actions should be avoided. Furthermore, any contextual statements or comments should support the conclusion in the report.
- In all instances, the report should explain that the contents contain confidential supervisory information and that the Board has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 U.S.C. 1817(a) and 1831m) and implementing regulations (12 CFR pt. 261, subpart C). This information may be conveyed on the report cover sheet or in a footnote reference in the report.

Below is an outline of the Combined Roll-Up Report. Sections and subheadings listed below are required to be included in Combined Roll-Up Report, unless they are marked with an asterisk (*). Sections or sub-headings marked with an asterisk should be omitted from the report if they are not applicable.

I. Directorate Responsibility (see 1050.2.7.2)
II. Scope (see 1050.2.7.3)
III. Overall Risk Profile, Conclusions, and Key Supervisory Themes (see 1050.2.7.4)
  a. Overall Risk Profile*
  b. Overall Conclusions
  c. Holding Company Rating
  d. Bank Rating
  e. Key Supervisory Themes*
IV. Summary of Ratings (see 1050.2.7.5)
V. Apparent Violations of Law* (see 1050.2.7.6)
VI. Supervisory Issues* (see 1050.2.7.7)
  a. Matters Requiring Immediate Attention (MRIAs)*
  b. Matters Requiring Attention (MRAs)*
  c. Status of Prior MRIAs/MRAs*
VII. Compliance with Enforcement Action(s)* (see 1050.2.7.8)
VIII. Consolidated Management and Risk Management (see 1050.2.7.9)
IX. Consolidated Financial Condition (see 1050.2.7.10)
X. Impact and Depository Institution(s) (see 1050.2.7.11)
  a. Impact
  b. Depository Institution(s)
XI. Information Technology Assessment* (see 1050.2.7.12)
XII. Fiduciary Activities Assessment* (see 1050.2.7.13)
XIII. Consumer Compliance Assessment (see 1050.2.7.14)
XIV. Additional Supervisory Assessments (see 1050.2.7.15)
  a. Bank Secrecy Act/Anti-Money Laundering Compliance Program
  b. Audit Program*
  c. Other Matters*
XV. Signature of Directors (see 1050.2.7.16)

1050.2.7.2 Directorate Responsibility

This section informs board members that they are responsible for thoroughly reviewing the report and that each director must sign the Signature of Directors section at the conclusion of this report. This section also includes standard language informing the organization of its right to appeal material supervisory determinations. This standard language can be placed in the body of the report or in a footnote. See the *Federal Register* for more information on the Federal Reserve's appeals process (85 Fed. Reg. 15,175 (March 17, 2020)).[42]

42. See also SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System."

1050.2.7.3 Scope

This section of the report explains the breadth of the roll-up supervisory event as it relates to both the SMB and the BHC. The Scope section of the report should note the specific areas or business lines that were reviewed. In general, the section should contain two concise paragraphs discussing the inspection/examination scope, including management information systems (MIS) reviewed and meetings conducted. Furthermore, the Scope section of the report should state the Federal Reserve's statutory authority for completing the inspection and examination, namely

- section 5(c) of the Bank Holding Company Act of 1956 and
- section 9(7) of the Federal Reserve Act.

The Scope section should also describe the exit meeting between representatives from the organization and the supervisory agencies. The exit meeting description should include the date of the meeting and the meeting attendees, such as Reserve Bank and other regulatory agency and organization representatives, including affiliations and titles.

1050.2.7.4 Overall Risk Profile, Conclusions, and Key Supervisory Themes

This overall section is required to be included in the Combined Roll-Up Report. However, depending on the circumstances, some of the subheadings (indicated with an asterisk) may be omitted from the Combined Roll-Up Report.

*Overall Risk Profile**

If the bank and the BHC are both rated a composite "1" or "2," this subheading is optional. This subheading is required if the bank and/or the BHC are rated a composite "3," "4," or "5." In either case, this subheading is very concise, typically one paragraph in length. In terms of content, this subheading describes the organization's overall risk profile within the context of the analysis that is described in the Overall Conclusions subheading below. This section should focus on the key activities that influence the risk profile and could include a discussion of specific risk stripes.[43] However, this subheading should *not* include a risk matrix, nor should this subheading repeat information on the organization's risk profile that is included in the sections on "Consolidated Management and Risk Management," and "Consolidated Financial Condition."

Overall Conclusions

This subheading describes the overall ratings and ratings support for the holding company and the bank. The subheading includes a supervisory assessment of the organization's financial condition and risk management, as well as any key supervisory messages for the institution. This subheading's content is concise, generally two paragraphs. If examiners need to expound on the key supervisory messages, they should include that discussion in the Key Supervisory Themes subheading below.

Holding Company Rating

Examiners should insert the composite rating definition for BHCs rated "3," "4," or "5." Examiners are not required to insert the composite rating definitions for BHCs rated "1" or "2." The section should include a reference to the appropriate guidance with the ratings definitions: SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

Bank Rating

Examiners should insert the composite CAMELS rating definition for SMBs rated "3," "4," or "5." Examiners are not required to insert the composite CAMELS rating definitions for SMBs rated "1" or "2." The section should include a reference to the appropriate guidance with the ratings definitions: SR-96-38, "Uniform Financial Institutions Rating System"; the *Commercial Bank Examination Manual*; or 61 Fed. Reg. 67,021 (December 19, 1996).

43. See SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion."

*Key Supervisory Themes**

This section is optional and is included at the discretion of examination staff. Examiners should consider including the Key Supervisory Themes subheading based on the organization's condition, risk profile, the severity of findings, and other significant factors. Examiners can also use Key Supervisory Themes to communicate focus areas for the upcoming supervisory cycle. If there are multiple supervisory themes, examiners should describe each theme in concise paragraphs separating each of them with a header. Each Supervisory Theme should be significant to the financial or operating condition of the organization and/or its strategic direction. Possible Key Supervisory Themes could include

- describing the root causes for a significant volume or severity of findings (MRIAs, MRAs, or apparent violations of law);
- indicating that an organization's risk profile raises more than normal supervisory concerns; or
- describing other material supervisory issues or matters that examiners want to communicate to the board and senior management.

1050.2.7.5 Summary of Ratings

The Summary of Examination Ratings report section is mandatory. In tabular format, examiners should include all supervisory ratings assigned during the current supervisory cycle and the two previous supervisory cycles. On the Summary of Ratings page, examiners should convey the following ratings, as applicable:

- for the BHC, the composite ratings, as well as the component and relevant subcomponent ratings that are part of the RFI rating system
- for the SMB, the composite and component CAMELS ratings, as well as the overall risk management rating
- any specialty area assessments, such as information technology, trust, and transfer agent examinations
- additional supervisory assessments (some of which do not have a ratings system associated with them), such as audit, BSA/AML compliance, consumer compliance, and Community Reinvestment Act

*1050.2.7.6 Apparent Violations of Law**

The Apparent Violations of Law section is optional. However, when examiners identify apparent violations of applicable banking statutes and regulations, it is mandatory to include this section in the report. If apparent violations of statutes or regulations were identified during the inspection, this section should describe the statute or regulation and the conditions or circumstances that led to the apparent violation. Examiners should indicate whether the apparent violation is isolated (management generally understands the statute or regulation but missed one instance) or systemic (management was not aware of or did not fully understand the statute or regulation). Further, examiners should describe the institution's corrective action taken or planned.

1050.2.7.7 Supervisory Issues*

This section can be omitted if there are no prior open MRAs or MRIAs (collectively "findings") at the SMB, BHC, or any nonbank subsidiary(ies) of the holding company and if no findings were identified in the current supervisory cycle. In general, this section conveys newly identified findings, as well as the status of all prior findings that were open at the beginning of the inspection/examination cycle. This section could potentially contain the following sub-headings: (1) Matters Requiring Immediate Attention, (2) Matters Requiring Attention, and (3) Status of Prior MRIAs/MRAs.

For the "Matters Requiring Immediate Attention" and "Matters Requiring Attention" subheadings, examiners should describe the findings from the current roll-up supervisory event and inform the institution to review the finding(s) and appropriately respond within the designated timeframe(s). The section should include a footnote to the relevant guidance that provides definitions of MRIAs and MRAs.[44] The footnote should provide a reference to the Statement Clarifying the Role of Supervisory Guidance.[45]

44. SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."

45. See 12 CFR part 262, appendix A, which states that examiners will not criticize (through the issuance of matters requiring attention), a supervised financial institution for, and the Board will not issue an enforcement action on the basis of, a "violation" of or "non-compliance" with supervisory guidance.

The subheading on the "Status of Prior MRIAs/MRAs" should include a summary and status of all open findings from the start of the supervisory cycle as well as findings that were opened during the current supervisory cycle. This subheading should contain a table that conveys the following information:

- exact title of the finding that was communicated in a previous examination report or supervisory letter
- type of finding (MRIA/MRA)
- specific entity (e.g., bank, bank holding company, credit-extending nonbank subsidiary) that the finding identified
- date the finding was issued
- status (closed/open) of the finding
- expected date of completion for an open finding or the date of completion if the finding is closed

1050.2.7.8 Compliance with Enforcement Action*

The Compliance with Enforcement Action section should be omitted if there are no open informal or formal enforcement actions at either the SMB or BHC. However, this section is required if there is an open formal or informal enforcement action for the bank and/or parent BHC and compliance with the enforcement action was assessed during the roll-up supervisory event. This section includes an assessment that summarizes the institution's overall compliance with the enforcement action. Additionally, this section should include (1) all provisions of the enforcement action; (2) a concise description of actions taken to achieve compliance with each provision; and (3) the compliance status (in process, partial compliance, full compliance, noncompliance) of each provision. Examiners should follow the format of the enforcement action for this section.

If examination staff assessed compliance with the enforcement action prior to the roll-up supervisory event (but during the same supervisory cycle) and previously conveyed that assessment to the institution, this section in the Combined Roll-Up Report should contain a concise paragraph describing overall compliance with the enforcement action. Furthermore, the section in the Combined Roll-Up Report should provide a cross reference to the initial correspondence for additional information.

1050.2.7.9 Consolidated Management and Risk Management

This section is required as it explains the rationale for assigning the management rating of the SMB as well as the risk management rating of the BHC and SMB. Guidance for completing this section is provided in the subheadings below. Note that examiners may tailor the subheadings to reflect the structure of the organization or if certain activities are only performed within a certain legal entity (SMB or BHC). In this section, the Management rating applies to the SMB. The Risk Management rating applies to both the parent BHC and the SMB. The Risk Management sub-component ratings apply to the parent BHC.

Management Rating
[Assign a Rating 1 to 5]

Examiners are to assign the numerical Management CAMELS component rating (1 to 5) of the SMB. Examiners are expected to provide a written description providing the rationale for the rating assigned. The Management assessment should include commentary on the composition and qualifications of the SMB board and senior management. Furthermore, this subheading can include commentary on governance structure.

Risk Management Rating
[Assign a Rating 1 to 5]

Examiners are to assign the numerical Risk Management rating (1 to 5) of the SMB and the BHC. Examiners should explain the rationale for assigning the overall Risk Management rating. In situations where the Risk Management or any subcomponents are rated "3" or worse, examiners may describe the weaknesses or deficiencies in the introductory comment before providing a more comprehensive discussion and assessment within the four risk management subcomponent ratings. Examiners may use the introductory comment field to describe other matters that would otherwise require emphasis from the risk management perspective.

Furthermore, examiners are to assign the numerical ratings for the BHC's Risk Management subcomponents, which include

- Board and Senior Management Oversight *[Assign a Rating 1 to 5*]
- Policies, Procedures, and Limits *[Assign a Rating 1 to 5*]

- Risk Monitoring and Management Information Systems *[Assign a Rating 1 to 5*]
- Internal Controls *[Assign a Rating 1 to 5*]

Under each component and subcomponent rating, examiners are expected to explain the rationale for assigning the rating.

1050.2.7.10 Consolidated Financial Condition

This section is required and exhibits one of the primary benefits of using the Combined Roll-Up Report as it generally reduces the level of duplicative information that is provided to the organization. In this section, only the analysis for the Sensitivity to Market Risk focuses specifically on the activities of the SMB. The analysis and ratings of Consolidated Capital, Consolidated Asset Quality, Consolidated Earnings, and Consolidated Liquidity reflect the condition for both the BHC and the SMB, provided the ratings are the same at both entities.[46] The examiner should appropriately modify the headers below if the analysis cannot be completed on a consolidated basis, or if the financial ratings differ between the parent BHC and the SMB.

The outline of this section is as follows:
Financial Condition –
[Assign a Rating 1 to 5]

Examiners should explain the rationale for assigning the overall Financial Condition rating. Furthermore, for each financial component, examiners are expected to provide written support rationalizing the assigned rating. If examiners use reference tables to help justify ratings (e.g., capital, earnings, or liquidity ratios), examiners should not repeat this information in the supporting paragraph.

In situations where the Financial Condition Rating or any of the financial ratings are rated "3" or worse, examiners may describe the weaknesses or deficiencies in the introductory comment before providing a more comprehensive discussion and assessment as listed below.

- Consolidated Capital – *[Assign a Rating 1 to 5*]
- Consolidated Asset Quality – *[Assign a Rating 1 to 5*] (also see table 2)
- Consolidated Earnings – *[Assign a Rating 1 to 5*]
- Consolidated Liquidity – *[Assign a Rating 1 to 5*]
- Sensitivity to Market Risk – *[Assign a Rating 1 to 5*]

46. For more information, see subsection 1050.2.6.8 "Financial Condition" in this section and section 1002.1 of the *Commercial Bank Examination Manual*.

1050.2.7.11 Impact and Depository Institutions

This required section is divided into the following two subsections:

Impact [Assign a Rating 1 to 5]

The Impact, or I component, is an assessment of the potential impact of the nondepository entities on the subsidiary depository institution(s). In supporting the Impact component rating, examiners should describe general activities and profiles of the parent company and nonbank entities. Examiners should evaluate both the risk management practices and financial condition of the non-depository entities and assess the potential negative impact non-depository institution(s) and/or the parent company could directly or indirectly have upon the risk management or financial condition of subsidiary depository institution(s) now or in the future. The Impact assessment generally covers (1) Parent Company Financial Analysis; (2) Intercompany Transactions; and (3) Nonbank Subsidiaries. For more information on assessing this component rating, see 1050.2.6.9, "Impact."

The depth of analysis will depend on the complexity of the organization, as well as any issues that were identified during the supervisory event. For BHCs rated "1" or "2," the examiners should generally provide one paragraph of supporting comments in this subsection for each of the three key areas noted in the preceding paragraph.

Depository Institutions [Assign a Rating 1 to 5]

In most cases, the Depository Institution rating reflects the SMB subsidiary's composite CAMELS rating. In a multi-depository institution holding company, this rating will reflect a weighted average of the CAMELS composite ratings of the individual subsidiary depository institution(s), weighted by both asset size and

Table 2. Summary of Items Subject to Adverse Classification

Organization	Substandard	Doubtful	Loss	Total
Parent				
Bank Subsidiaries				
Nonbank Subsidiaries				
Totals at Current Event [*Date*]				
Totals at Previous Event [*Date*]				
Totals at Previous Event [*Date*]				

the relative importance of each depository institution within the holding company structure. For more information on the assessment of the Depository Institution rating, see section 1062.0, "RFI Rating System" in this manual. In general, the comments in this subsection are brief as risk management and financial matters applicable to the subsidiary SMB are described in previous sections of the Combined Roll-Up Report.

1050.2.7.12 Information Technology Assessment* *[Assign Composite Rating and Component Ratings 1 to 5]*

The Information Technology Assessment section is optional. The section is mandatory, however, if an information technology assessment was completed during the roll-up event and a rating was assigned.[47] In these instances, examiners should communicate the ratings that were assigned as well as the supporting rationale for the ratings. Information technology conclusions should only be reflected in the Consolidated Financial Condition or Consolidated Management and Risk Management sections of the report, when they are significant contributing factors to the overall financial condition or the management or risk management rating components. In addition, significant supervisory concerns should be reflected in the Supervisory Issues section.

If examiners communicated to the institution the conclusions of an information technology assessment or examination in a separate report or supervisory letter, the Combined Roll-Up Report should contain a concise paragraph of the report conclusions from that assessment under the "Additional Supervisory Assessments" section (see 1050.2.7.15).

1050.2.7.13 Fiduciary Activities Assessment* *[Assign Composite Rating and Component Ratings 1 to 5]*

The Fiduciary Activities Assessment section is optional. The section is mandatory, however, if a fiduciary activities assessment was completed during the roll-up event and a trust or transfer-agent rating was assigned.[48] In these instances, examiners should communicate the ratings that were assigned as well as the supporting rationale for the ratings. Fiduciary activities conclusions should only be reflected in the Consolidated Financial Condition or Consolidated Management and Risk Management sections of the report when they are significant contributing factors to the overall financial condition or the management or risk management rating components. Significant supervisory concerns should be reflected in the Supervisory Issues section.

If examiners communicated to the institution the conclusions of a trust or transfer agent examination in a separate report or supervisory letter, the Combined Roll-Up Report should contain a concise paragraph of the report conclusions from that assessment under the "Additional Supervisory Assessments" section (see 1050.2.7.15).

1050.2.7.14 Consumer Compliance Assessment

This section is typically based on supervisory assessments that are completed by Federal Reserve examiners in consumer affairs. When a consumer compliance assessment is conducted during the supervisory cycle, safety-and-

47. See SR-99-8, "Uniform Rating System for Information Technology," and 64 Fed. Reg. 3109 (January 20, 1999) for more information.

48. See SR-98-37, "Uniform Interagency Trust Rating System," and 63 Fed. Reg. 54,704 (October 13, 1998) for more information.

soundness examiners should leverage consumer compliance target examinations, work products and discussions with consumer affairs counterparts, and include a high-level supervisory conclusion. While this section is typically brief, examiners should include additional information, particularly if consumer compliance deficiencies compromise the safety and soundness of the bank or impact the adequacy of risk management. More information about the Federal Reserve's consumer compliance supervision program can be found in the *Consumer Compliance Handbook*.

1050.2.7.15 Additional Supervisory Assessments

The information technology assessment and fiduciary activities assessment should be included in this section if the examination was performed and issued under separate cover during the supervisory cycle. The summary assessments for each area should be a concise paragraph to support the assessments. The assessments of each area should be included in the text. In situations where areas require emphasis, examiners may include information on the deficiencies into the introductory comment, with more detailed comments reserved for discussion under separate subheadings, or in the applicable supplemental report page. Discussion in this section should complement previous comments made in this report without being redundant.

Bank Secrecy Act/Anti Money Laundering Compliance Program

This subsection is mandatory. This subsection should describe the outcome of the BSA and AML compliance assessment from the roll-up supervisory event. If the BSA/AML assessment was completed under separate cover, a concise paragraph should be included in this subsection describing the outcome or conclusions of the assessment. Conclusions should also be reflected in the Consolidated Management and Risk Management section of the report, as appropriate. Significant supervisory concerns should be reflected in the Supervisory Issues section.

*Audit Program**

This subsection is mandatory if an audit assessment was performed during the annual supervisory cycle. If the audit assessment was not performed during the supervisory cycle, examiners should comment on the bank's audit program in the Consolidated Management and Risk Management section.

*Other Matters**

This subsection is optional and should only be included if matters of supervisory importance are not described elsewhere in the report. Examiners should discuss significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the organization is engaged. If issues or concerns are noted, examiners should provide comments on specific areas, such as nontraditional banking activities, affiliate relationships, and significant litigation.

1050.2.7.16 Signature of Directors

This section is mandatory. If the boards of directors for the SMB and the BHC differ, examiners should include a separate signature listing of the board of directors for each entity. This section should indicate that the signature page should be attached to the report and be retained at the institution. The signature of committee members will suffice only if the committee includes outside directors and a resolution has been passed by the applicable (bank or holding company) board delegating the review to such committee.

1050.2.8 TIMING EXPECTATIONS FOR THE COMPLETION OF SAFETY-AND-SOUNDNESS EXAMINATION AND INSPECTION REPORTS

The Federal Reserve has established timing expectations for examination staff in completing safety-and-soundness examination and inspection reports for domestic regional financial institutions and the submission of the reports to the institutions.[49] These expectations apply to examination and inspection reports for domestic institutions supervised by the Federal Reserve having between $10 billion and $100 billion in total

49. For more information, see SR-17-12, "Timing Expectations for the Completion of Safety-and-Soundness Examination and Inspection Reports for Regional Banking Organizations."

consolidated assets, including state member banks, bank holding companies, and their subsidiary Edge Act and agreement corporations, and savings and loan holding companies.

Federal Reserve supervisory staff should complete and send safety-and-soundness examination and inspection reports issued by the Federal Reserve to the institution within the following timeframes:[50]

- 90 calendar days from the start date for all reports issued to noncomplex holding companies;[51] and,
- 100 calendar days from the start date for all reports issued to state member banks, complex holding companies, and their nonbank and Edge Act subsidiaries.

In cases when reports are subject to statutory requirements for review by the Consumer Financial Protection Bureau (CFPB), Reserve Banks may add up to 30 calendar days to the above standards.[52] Reserve Banks may exceed the timing requirements included in this letter at the discretion of Reserve Bank senior management; however, deviations from these standards are expected to be rare, and should be appropriately documented in workpapers. At the discretion of senior Reserve Bank management, additional exemptions from these timeframe guidelines may be considered for Federal Reserve led examinations that are conducted jointly or concurrently with another insured depository institution regulator.

50. Examples of safety-and-soundness examination and inspection reports include, but are not limited to, full scope examination and inspection reports, target letters, roll-up examination and inspection letters, and specialty examination reports.

51. The start date is the date that Reserve Bank examiners and supervisory staff commence the commercial examination and inspection work, either offsite or onsite, excluding pre-exam visitations and examination preparation.

52. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the "Memorandum of Understanding on Supervisory Coordination" attached to the June 4, 2012 joint press release.

1060.0.1 OVERVIEW AND APPLICABILITY

Each large financial institution (LFI) is expected to ensure that the consolidated organization (or the combined U.S. operations in the case of foreign banking organizations), including its critical operations and banking offices, remain safe and sound and in compliance with laws and regulations, including those related to consumer protection.[1] On November 21, 2018, the Board adopted a specific rating system for LFIs in order to align with the Federal Reserve's supervisory programs and practices for these firms.[2] The LFI rating system provides a supervisory evaluation of whether a covered firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions, including stressful ones.[3]

The LFI rating system applies to:

- bank holding companies with total consolidated assets of $100 billion or more;
- all non-insurance, non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more;[4] and
- U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve's Regulation YY.[5]

The Federal Reserve will assign initial LFI ratings to firms in the LISCC portfolio in early 2019. For all other firms subject to the LFI rating system, the Federal Reserve will assign initial LFI ratings in early 2020.

Federal Reserve supervision staff will continue to use the RFI rating system in assessing bank holding companies with less than $100 billion in consolidated assets. For noncomplex holding companies with less than $3 billion in assets, Reserve Bank supervisory staff will assign only a composite RFI rating and risk-management rating to the firm following an inspection.

The LFI rating system is designed to:

- Fully align with the Federal Reserve's current supervisory programs and practices, which are based upon the LFI supervision framework's core objectives of reducing the probability of LFIs failing or experiencing material distress and reducing the risk to U.S. financial stability;
- Enhance the clarity and consistency of supervisory assessments and communications of supervisory findings and implications; and
- Provide transparency related to the supervisory consequences of a given rating.

1. See SR letter 12-17/CA letter 12-14, "Consolidated Supervisory Framework for Large Financial Institutions." Hereinafter, when "safe and sound" or "safety and soundness" is used in this framework, related expectations apply to the consolidated organization and the firm's critical operations and banking offices. "Critical operations" are a firm's operations, including associated services, functions and support, the failure or discontinuance of which, in the view of the firm or the Federal Reserve, would pose a threat to the financial stability of the United States. "Banking offices" are defined as U.S. depository institution subsidiaries, as well as the U.S. branches and agencies of foreign banking organizations.

2. See 83 Fed. Reg. 58,724 (November 21, 2018) and 84 Fed. Reg. 4309 (February 15, 2019). The final rule is effective on February 1, 2019.

3. "Financial strength and resilience" is defined as maintaining effective capital and liquidity governance and planning processes, and sufficiency of related positions, to provide for the continuity of the consolidated organization (including its critical operations and banking offices) through a range of conditions.

"Operational strength and resilience" is defined as maintaining effective governance and controls to provide for the continuity of the consolidated organization (including its critical operations and banking offices) and to promote compliance with laws and regulations, including those related to consumer protection, through a range of conditions.

References to "financial or operational" weaknesses or deficiencies implicate a firm's financial or operational strength and resilience.

4. Savings and loan holding companies (SLHCs) are considered to be engaged in significant commercial activities if they derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)). SLHCs are considered to be engaged in significant insurance underwriting activities if they are either insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies. SLHCs that meet these criteria are excluded from the definition of "covered savings and loan holding company" in section 217.2 of the Board's Regulation Q. See 12 CFR 217.2.

5. Total consolidated assets will be calculated based on the average of the firm's total consolidated assets in the four most recent quarters as reported on the firm's quarterly financial reports filed with the Federal Reserve. A firm will continue to be rated under the LFI rating system until it has less than $95 billion in total consolidated assets, based on the average total consolidated assets as reported on the firm's four most recent quarterly financial reports filed with the Federal Reserve. The Federal Reserve may determine to apply the RFI rating system or another applicable rating system in certain limited circumstances.

The LFI rating system is comprised of three components:

— *Capital Planning and Positions:* an evaluation of (1) the effectiveness of a firm's governance and planning processes used to determine the amount of capital necessary to cover risks and exposures, and to support activities through a range of conditions and events; and (2) the sufficiency of a firm's capital positions to comply with applicable regulatory requirements and to support the firm's ability to continue to serve as a financial intermediary through a range of conditions.

— *Liquidity Risk Management and Positions:* an evaluation of (1) the effectiveness of a firm's governance and risk-management processes used to determine the amount of liquidity necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm's liquidity positions to comply with applicable regulatory requirements and to support the firm's ongoing obligations through a range of conditions.

— *Governance and Controls:* an evaluation of the effectiveness of a firm's (1) board of directors,[6] (2) management of business lines and independent risk management and controls,[7] and (3) recovery planning (only for domestic firms that are subject to the Board's Large Institution Supervision Coordinating Committee (LISCC) Framework).[8] This rating assesses a firm's effectiveness in aligning strategic business objectives with the firm's risk appetite and risk-management capabilities; maintaining effective and independent risk-management and control functions, including internal audit; promoting compliance with laws and regulations, including those related to consumer protection; and otherwise planning for the ongoing resiliency of the firm.[9]

1060.0.2 ASSIGNMENT OF THE LFI COMPONENT RATINGS

Each LFI component rating is assigned along a four-level scale:

- *Broadly Meets Expectations:* A firm's practices and capabilities broadly meet supervisory expectations, and the firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions. The firm may be subject to identified supervisory issues requiring corrective action. These issues are unlikely to present a threat to the firm's ability to maintain safe-and-sound operations through a range of conditions.
- *Conditionally Meets Expectations:* Certain, material financial or operational weaknesses in a firm's practices or capabilities may place the firm's prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

  The Federal Reserve does not intend for a firm to be assigned a "Conditionally Meets Expectations" rating for a prolonged period, and will work with the firm to develop an appropriate timeframe to fully resolve the issues leading to the rating assignment and merit upgrade to a "Broadly Meets Expectations" rating.

  A firm is assigned a "Conditionally Meets Expectations" rating-as opposed to a "Deficient" rating-when it has the ability to resolve these issues through measures that do not require a material change to the firm's business model or financial profile, or its governance, risk management or internal control structures or practices. Failure to resolve the issues in a timely manner would most likely result in the firm's downgrade to a "Deficient" rating, since the inability to resolve the issues would indicate that the firm does not

6. References to "board" or "board of directors" in this framework includes the equivalent to a board of directors, as appropriate, as well as committees of the board of directors or the equivalent thereof, as appropriate.

At this time, recovery planning expectations only apply to domestic bank holding companies subject to the Federal Reserve's LISCC supervisory framework. Should the Federal Reserve expand the scope of recovery planning expectations to encompass additional firms, this rating will reflect such expectations for the broader set of firms.

7. The evaluation of the effectiveness of management of business lines would include management of critical operations.

8. There are eight domestic firms in the LISCC portfolio: (1) Bank of America Corporation; (2) Bank of New York Mellon Corporation; (3) Citigroup, Inc.; (4) Goldman Sachs Group, Inc.; (5) JP Morgan Chase & Co.; (6) Morgan Stanley; (7) State Street Corporation; and (8) Wells Fargo & Company. In this guidance, these eight firms may collectively be referred to as "domestic LISCC firms."

9. "Risk appetite" is defined as the aggregate level and types of risk the board and senior management are willing to assume to achieve the firm's strategic business objectives, consistent with applicable capital, liquidity, and other requirements and constraints.

possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is recognized that completion and validation of remediation activities for select supervisory issues-such as those involving information technology modifications-may require an extended time horizon. In all instances, appropriate and effective risk-mitigation techniques must be utilized in the interim to maintain safe-and-sound operations under a range of conditions until remediation activities are completed, validated, and fully operational.

- *Deficient-1:* Financial or operational deficiencies in a firm's practices or capabilities put the firm's prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require the firm to make a material change to its business model or financial profile, or its practices or capabilities.

  A firm's failure to resolve the issues in a timely manner that gave rise to a "Conditionally Meets Expectations" rating would most likely result in its downgrade to a "Deficient" rating.

  A firm with a "Deficient-1" rating is required to take timely corrective action to correct financial or operational deficiencies and to restore and maintain its safety and soundness and compliance with laws and regulations, including those related to consumer protection. There is a strong presumption that a firm with a "Deficient-1" rating will be subject to an informal or formal enforcement action, and this rating assignment could be a barrier for a firm seeking Federal Reserve approval to engage in new or expansionary activities.

- *Deficient-2:* Financial or operational deficiencies in a firm's practices or capabilities present a threat to the firm's safety and soundness, or have already put the firm in an unsafe and unsound condition.

  A firm with a "Deficient-2" rating is required to immediately implement comprehensive corrective measures, and demonstrate the sufficiency of contingency planning in the event of further deterioration. There is a strong presumption that a firm with a "Deficient-2" rating will be subject to a formal enforcement action, and the Federal Reserve would be unlikely to approve any proposal from a firm with this rating to engage in new or expansionary activities.

The Federal Reserve will take into account a number of individual elements of a firm's practices, capabilities, and performance when making each component rating assignment. The weighting of an individual element in assigning a component rating will depend on its impact on the firm's safety, soundness, and resilience as provided for in the LFI rating system definitions. For example, for purposes of the Governance and Controls rating, a limited number of significant deficiencies-or even just one significant deficiency-noted for management of a single material business line could be viewed as sufficiently important to warrant a "Deficient-1" for the Governance and Controls component rating, even if the firm meets supervisory expectations under the Governance and Controls component in all other respects.

Under the LFI rating system, a firm must be rated "Broadly Meets Expectations" or "Conditionally Meets Expectations" for each of the three component ratings (Capital, Liquidity, Governance and Controls) to be considered "well managed" in accordance with various statutes and regulations.[10] A "well managed" firm has sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions, including stressful ones.

1060.0.3 LFI RATING COMPONENTS

The LFI rating system is comprised of three component ratings: (1) capital planning and positions, (2) liquidity risk management and positions, and (3) governance and controls.[11]

10. 12 USC 1841 et. seq. and 12 USC 1461 et seq. See, e.g., 12 CFR 225.4(b)(6), 225.14, 225.22(a), 225.23, 225.85, and 225.86; 12 CFR 211.9(b), 211.10(a)(14), and 211.34; and 12 CFR 223.41.

11. There may be instances where deficiencies or supervisory issues may be relevant to the Federal Reserve's assessment of more than one component area. As such, the LFI rating will reflect these deficiencies or issues within multiple rating components when necessary to provide a comprehensive supervisory assessment.

1060.0.3.1 Capital Planning and Positions Component Rating

The Capital Planning and Positions component rating evaluates (1) the effectiveness of a firm's governance and planning processes used to determine the amount of capital necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm's capital positions to comply with applicable regulatory requirements and to support the firm's ability to continue to serve as a financial intermediary through a range of conditions.

In developing this rating, the Federal Reserve evaluates:

- *Capital Planning:* The extent to which a firm maintains sound capital planning practices through effective governance and oversight; effective risk management and controls; maintenance of updated capital policies and contingency plans for addressing potential shortfalls; and incorporation of appropriately stressful conditions into capital planning and projections of capital positions; and
- *Capital Positions:* The extent to which a firm's capital is sufficient to comply with regulatory requirements, and to support its ability to meet its obligations to depositors, creditors, and other counterparties and continue to serve as a financial intermediary through a range of conditions.

1060.0.3.1.1 Definitions for the Capital Planning and Positions Component Rating

Broadly Meets Expectations

A firm's capital planning and positions broadly meet supervisory expectations and support maintenance of safe-and-sound operations. Specifically:

- The firm is capable of producing sound assessments of capital adequacy through a range of conditions; *and*
- The firm's current and projected capital positions comply with regulatory requirements, and support its ability to absorb current and potential losses, to meet obligations, and to continue to serve as a financial intermediary through a range of conditions.

A firm rated "Broadly Meets Expectations" may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm's ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet the capital planning and position expectations associated with a "Broadly Meets Expectations" rating will be rated "Conditionally Meets Expectations," "Deficient-1," or "Deficient-2," and subject to potential consequences as outlined below.

Conditionally Meets Expectations

Certain material financial or operational weaknesses in a firm's capital planning or positions may place the firm's prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses:

- May threaten the firm's ability to produce sound assessments of capital adequacy through a range of conditions; and/or
- May result in the firm's projected capital positions being insufficient to absorb potential losses, comply with regulatory requirements, and support the firm's ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

The Federal Reserve does not intend for a firm to be rated "Conditionally Meets Expectations" for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the firm's business model or financial profile, or its governance, risk management, or internal control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the "Conditionally Meets Expectations" rating.

The Federal Reserve will closely monitor the firm's remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise, be upgraded to a "Broadly Meets Expectations" rating because the firm's capital planning practices and related positions would broadly meet supervisory expectations; or
2. Fail to resolve the issues in a timely manner and be downgraded to a "Deficient-1" rating, because the inability to resolve the issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the "Conditionally Meets Expectations" rating, but new issues are identified that, taken alone, would be consistent with a "Conditionally Meets Expectations" rating. In this event, the firm may continue to be rated "Conditionally Meets Expectations," provided the new issues do not reflect a pattern of deeper or prolonged capital planning or position weaknesses consistent with a "Deficient" rating.

A "Conditionally Meets Expectations" rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated "Deficient-1" may be upgraded to "Conditionally Meets Expectations" if the firm's remediation and mitigation activities are sufficiently advanced so that the firm's prospects for remaining safe and sound are no longer at significant risk, even if the firm has outstanding supervisory issues or is subject to an active enforcement action.

Deficient-1

Financial or operational deficiencies in a firm's capital planning or positions put the firm's prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require a material change to the firm's business model or financial profile, or its capital planning practices.

Specifically, although the firm's current condition is not considered to be materially threatened:

- Deficiencies in the firm's capital planning processes are not effectively mitigated. These deficiencies limit the firm's ability to effectively assess capital adequacy through a range of conditions; and/or
- The firm's projected capital positions may be insufficient to absorb potential losses and to support its ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

Supervisory issues that place the firm's safety and soundness at significant risk, and where resolution is likely to require steps that clearly go beyond the normal course of business-such as issues requiring a material change to the firm's business model or financial profile, or its governance, risk management or internal control structures or practices-would generally warrant assignment of a "Deficient-1" rating.

A "Deficient-1" rating may be assigned to a firm regardless of its prior rating. A firm previously rated "Broadly Meets Expectations" may be downgraded to "Deficient-1" when supervisory issues are identified that place the firm's prospects for maintaining safe-and-sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated "Conditionally Meets Expectations" may be downgraded to "Deficient-1" when the firm's inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its capital planning and positions consistent with supervisory expectations. There is a strong presumption that a firm rated "Deficient-1" will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated "Deficient-1" for any rating component would not be considered "well managed," which would subject the firm to various consequences. A "Deficient-1" rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.

Deficient-2

Financial or operational deficiencies in a firm's capital planning or positions present a threat to the firm's safety and soundness, or have already put the firm in an unsafe and unsound condition.

Specifically, as a result of these deficiencies:

- The firm's capital planning processes are insufficient to effectively assess the firm's capital adequacy through a range of conditions; and/or
- The firm's current or projected capital positions are insufficient to absorb current or potential losses, and to support the firm's ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate capital planning capabilities and adequate capital positions; and (2) demonstrate the sufficiency, credibility and readiness of contingency planning in the event of further deterioration of the firm's financial or operational strength or resiliency. There is a strong presumption that a firm rated "Deficient-2" will be subject to a formal enforcement action by the Federal Reserve.

A firm rated "Deficient-2" for any rating component would not be considered "well managed," which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated "Deficient-2" to engage in new or expansionary activities.

1060.0.3.2 Liquidity Risk Management and Positions Component Rating

The Liquidity Risk Management and Positions component rating evaluates (1) the effectiveness of a firm's governance and risk-management processes used to determine the amount of liquidity necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm's liquidity positions to comply with applicable regulatory requirements and to support the firm's ongoing obligations through a range of conditions.

In developing this rating, the Federal Reserve evaluates:

- *Liquidity Risk Management:* The extent to which a firm maintains sound liquidity-risk management practices through effective governance and oversight; effective risk management and controls; maintenance of updated liquidity policies and contingency plans for addressing potential shortfalls; and incorporation of appropriately stressful conditions into liquidity planning and projections of liquidity positions; and
- *Liquidity Positions:* The extent to which a firm's liquidity is sufficient to comply with regulatory requirements, and to support its ability to meet current and prospective obligations to depositors, creditors and other counterparties through a range of conditions.

1060.0.3.2.1 Definitions for the Liquidity Risk Management and Positions Component Rating

Broadly Meets Expectations

A firm's liquidity risk management and positions broadly meet supervisory expectations and support maintenance of safe-and-sound operations. Specifically:

- The firm is capable of producing sound assessments of liquidity adequacy through a range of conditions; *and*
- The firm's current and projected liquidity positions comply with regulatory requirements, and support its ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

A firm rated "Broadly Meets Expectations" may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm's ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet the liquidity risk management and position expectations associated with a "Broadly Meets Expectations" rating will be rated "Conditionally Meets Expectations," "Deficient-1," or "Deficient-2," and subject to potential consequences as outlined below.

Conditionally Meets Expectations

Certain material financial or operational weaknesses in a firm's liquidity risk management or positions may place the firm's prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses:

- May threaten the firm's ability to produce sound assessments of liquidity adequacy through a range of conditions; and/or
- May result in the firm's projected liquidity positions being insufficient to comply with regulatory requirements, and support its ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

The Federal Reserve does not intend for a firm to be rated "Conditionally Meets Expectations" for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the firm's business model or financial profile, or its governance, risk management or internal control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the "Conditionally Meets Expectations" rating.

The Federal Reserve will closely monitor the firm's remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise, and be upgraded to a "Broadly Meets Expectations" rating because the firm's liquidity risk-management practices and related positions would broadly meet supervisory expectations; or
2. Fail to resolve the issues in a timely manner and be downgraded to a "Deficient-1" rating, because the firm's inability to resolve those issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the "Conditionally Meets Expectations" rating, but new issues are identified that, taken alone, would be consistent with a "Conditionally Meets Expectations" rating. In this event, the firm may continue to be rated "Conditionally Meets Expectations," provided the new issues do not reflect a pattern of deeper or prolonged liquidity-risk management and positions weaknesses consistent with a "Deficient" rating.

A "Conditionally Meets Expectations" rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated "Deficient-1" may be upgraded to "Conditionally Meets Expectations" if the firm's remediation and mitigation activities are sufficiently advanced so that the firm's prospects for remaining safe and sound are no longer at significant risk, even if the firm has outstanding supervisory issues or is subject to an active enforcement action.

Deficient-1

Financial or operational deficiencies in a firm's liquidity risk management or positions put the firm's prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require a material change to the firm's business model or financial profile, or its liquidity risk-management practices.

Specifically, although the firm's current condition is not considered to be materially threatened:

- Deficiencies in the firm's liquidity risk-management processes are not effectively mitigated. These deficiencies limit the firm's ability to effectively assess liquidity adequacy through a range of conditions; and/or
- The firm's projected liquidity positions may be insufficient to support its ability to meet prospective obligations and serve as a financial intermediary through a range of conditions.

Supervisory issues that place the firm's safety and soundness at significant risk, and where resolution is likely to require steps that clearly go beyond the normal course of business-such as issues requiring a material change to the firm's business model or financial profile, or its governance, risk management or internal control structures or practices-would generally warrant assignment of a "Deficient-1" rating.

A "Deficient-1" rating may be assigned to a firm regardless of its prior rating. A firm previously rated "Broadly Meets Expectations" may be downgraded to "Deficient-1" when supervisory issues are identified that place the firm's prospects for maintaining safe-and-sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated "Conditionally Meets Expectations" may be downgraded to "Deficient-1" when the firm's inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its liquidity risk management and positions consistent with supervisory expectations. There is a strong presumption that a firm rated "Deficient-1" will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated "Deficient-1" for any rating component would not be considered "well managed," which would subject the firm to various consequences. A "Deficient-1" rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.

Deficient-2

Financial or operational deficiencies in a firm's liquidity risk management or positions present a threat to the firm's safety and soundness, or have already put the firm in an unsafe and unsound condition.

Specifically, as a result of these deficiencies:

- The firm's liquidity risk-management processes are insufficient to effectively assess the firm's liquidity adequacy through a range of conditions; and/or
- The firm's current or projected liquidity positions are insufficient to support the firm's ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate liquidity risk management capabilities and adequate liquidity positions; and (2) demonstrate the sufficiency, credibility and readiness of contingency planning in the event of further deterioration of the firm's financial or operational strength or resiliency. There is a strong presumption that a firm rated "Deficient-2" will be subject to a formal enforcement action by the Federal Reserve.

A firm rated "Deficient-2" for any rating component would not be considered "well managed," which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated "Deficient-2" to engage in new or expansionary activities.

1060.0.3.3 Governance and Controls Component Rating

The Governance and Controls component rating evaluates the effectiveness of a firm's (1) board of directors, (2) management of business lines and independent risk management and controls, and (3) recovery planning (for domestic LISCC firms only). This rating assesses a firm's effectiveness in aligning strategic business objectives with the firm's risk appetite and risk management capabilities; maintaining effective and independent risk management and control functions, including internal audit; promoting compliance with laws and regulations, including those related to consumer protection; and otherwise providing for the ongoing resiliency of the firm.

In developing this rating, the Federal Reserve evaluates:

- *Effectiveness of the Board of Directors:* The extent to which the board exhibits attributes that are consistent with those of effective boards in carrying out its core roles and responsibilities, including: (1) setting a clear, aligned, and consistent direction regarding the firm's strategy and risk appetite; (2) directing senior management regarding the board's information; (3) overseeing and holding senior management accountable, (4) supporting the independence and stature of independent risk management and internal audit; and (5) maintaining a capable board composition and governance structure.

- *Management of Business Lines and Independent Risk Management and Controls*
  The extent to which:
  - Senior management effectively and prudently manages the day-to-day operations of the firm and provides for ongoing resiliency; implements the firm's strategy and risk appetite; maintains an effective risk-management framework and system of internal controls; and promotes prudent risk-taking behaviors and business practices, including compliance with laws and regulations, including those related to consumer protection.
  - Business line management executes business line activities consistent with the firm's strategy and risk appetite; identifies and manages risks; and ensures an effective system of internal controls for its operations.
  - Independent risk management effectively evaluates whether the firm's risk appetite appropriately captures material risks and is consistent with the firm's risk management capacity; establishes and monitors risk limits that are consistent with the firm's risk appetite; identifies and measures the firm's risks; and aggregates, assesses and reports on the firm's risk profile and positions. Additionally, the firm demonstrates that its internal controls are appropriate and tested for effectiveness. Finally, internal audit effectively and independently assesses the firm's risk-management framework and internal control systems, and reports findings to senior management and the firm's audit committee.
- *Recovery Planning (domestic LISCC firms only):* The extent to which recovery planning processes effectively identify options that provide a reasonable chance of a firm being able to remedy financial weakness and restore market confidence without extraordinary official sector support.

1060.0.3.3.1 Definitions for the Governance and Controls Component Rating

Broadly Meets Expectations

A firm's governance and controls broadly meet supervisory expectations and support maintenance of safe-and-sound operations.

Specifically, the firm's practices and capabilities are sufficient to align strategic business objectives with its risk appetite and risk-management capabilities,[12] maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); and otherwise provide for the firm's ongoing financial and operational resiliency through a range of conditions.

A firm rated "Broadly Meets Expectations" may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm's ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet supervisory expectations associated with a "Broadly Meets Expectations" rating will be rated "Conditionally Meets Expectations," "Deficient-1," or "Deficient-2," and subject to potential consequences, as outlined below.

Conditionally Meets Expectations

Certain material financial or operational weaknesses in a firm's governance and controls practices may place the firm's prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses may threaten the firm's ability to align strategic business objectives with the firm's risk appetite and risk-management capabilities; maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); or otherwise provide for the firm's ongoing resiliency through a range of conditions.

The Federal Reserve does not intend for a firm to be rated "Conditionally Meets Expectations" for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the

12. References to risk-management capabilities includes risk management of business lines and independent risk management and control functions, including internal audit.

firm's business model or financial profile, or its governance, risk management or internal control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the "Conditionally Meets Expectations" rating.

The Federal Reserve will closely monitor the firm's remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise, be upgraded to a "Broadly Meets Expectations" rating because the firm's governance and controls would broadly meet supervisory expectations; or
2. Fail to resolve the issues in a timely manner and be downgraded to a "Deficient-1" rating, because the firm's inability to resolve those issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the "Conditionally Meets Expectations" rating, but new issues are identified that, taken alone, would be consistent with a "Conditionally Meets Expectations" rating. In this event, the firm may continue to be rated "Conditionally Meets Expectations," provided the new issues do not reflect a pattern of deeper or prolonged governance and controls weaknesses consistent with a "Deficient" rating.

A "Conditionally Meets Expectations" rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated "Deficient" may be upgraded to "Conditionally Meets Expectations" if the firm's remediation and mitigation activities are sufficiently advanced so that the firm's prospects for remaining safe and sound are no longer at significant risk, even if the firm has outstanding supervisory issues or is subject to an active enforcement action.

Deficient-1

Financial or operational deficiencies in a firm's governance and controls put the firm's prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require a material change to the firm's business model or financial profile, or its governance, risk management or internal control structures or practices.

Specifically, although the firm's current condition is not considered to be materially threatened, these deficiencies limit the firm's ability to align strategic business objectives with its risk appetite and risk-management capabilities; maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); or otherwise provide for the firm's ongoing resiliency through a range of conditions.

A "Deficient-1" rating may be assigned to a firm regardless of its prior rating. A firm previously rated "Broadly Meets Expectations" may be downgraded to "Deficient-1" when supervisory issues are identified that place the firm's prospects for maintaining safe-and-sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated "Conditionally Meets Expectations" may be downgraded to "Deficient-1" when the firm's inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its governance and controls consistent with supervisory expectations. There is a strong presumption that a firm rated "Deficient-1" will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated "Deficient-1" for any rating component would not be considered "well managed," which would subject the firm to various consequences. A "Deficient-1" rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.

Deficient-2

Financial or operational deficiencies in governance or controls present a threat to the firm's safety and soundness, or have already put the firm in an unsafe and unsound condition. Specifically, as a result of these deficiencies, the firm is unable to align strategic business objectives with its risk appetite and risk-management capabilities; maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); or otherwise provide for the firm's ongoing resiliency.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate governance and control capabilities; and (2) demonstrate the sufficiency, credibility, and readiness of contingency planning in the event of further deterioration of the firm's financial or operational strength or resiliency. There is a strong presumption that a firm rated "Deficient-2" will be subject to a formal enforcement action by the Federal Reserve.

A firm rated "Deficient-2" for any rating component would not be considered "well managed," which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated "Deficient-2" to engage in new or expansionary activities.

1060.0.4 COMMUNICATION OF RATINGS

In accordance with the Federal Reserve's regulations governing confidential supervisory information, ratings assigned under the LFI rating system will be communicated by the Federal Reserve to the firm, but individual ratings are not disclosed publicly. The Federal Reserve will assign LFI ratings and communicate ratings to large firms on an annual basis and more frequently as warranted. Under the LFI rating system, the Federal Reserve will continue to rely to the fullest extent possible on the information and assessments developed by other relevant supervisors and functional regulators.

INTRODUCTION

This section explains key capital requirements and relevant supervisory guidance that apply to firms that are subject to the large financial institutions (LFI) rating system.[1] The LFI rating system is used to evaluate and communicate the supervisory condition of bank holding companies (BHCs) with total consolidated assets of $100 billion or more; all non-insurance, noncommercial savings and loan holding companies (SLHCs) with total consolidated assets of $100 billion or more; and U.S. intermediate holding companies (IHCs) of foreign banking organizations (FBOs) with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve's Regulation YY.

Sound capital planning for any firm begins with adherence to all applicable rules and regulations relating to capital adequacy. The following Federal Reserve regulations form the basis of the regulatory framework for assessing capital positions and capital planning:

1. Regulation YY (12 CFR part 252, subparts E and F) and Regulation LL (12 CFR part 238, subparts O and P)
2. Regulation Q (12 CFR part 217), capital adequacy requirements for Board-regulated institutions
3. Regulation Y (12 CFR 225.8) and Regulation LL (12 CFR part 238, subpart S), together known as the capital plan rule

Regulation YY and Regulation LL establish capital stress testing requirements for BHCs and covered SLHCs, respectively, with total consolidated assets of $100 billion or more. Regulation Q establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. The capital plan rule establishes general capital planning requirements for a BHC or covered SLHC with total consolidated assets of $100 billion or more and requires such a firm to develop an annual capital plan that is approved by its board of directors.

1. See SR-19-3/CA 19-2, "Large Financial Institution (LFI) Rating System." See also 83 Fed. Reg. 58,724 (November 21, 2018) and 84 Fed. Reg. 4309 (February 15, 2019) for more information. The *Commercial Bank Examination Manual* provides more information on assessing the "capital" rating for commercial banks and thrifts as defined by the Uniform Financial Institutions Rating System. See also SR-96-38.

1060.1.2 ENHANCED PRUDENTIAL STANDARDS: REGULATION YY (12 CFR PART 252)

The financial crisis revealed significant weaknesses in resiliency and risk management in the financial sector, and demonstrated how the failure or distress of large, leveraged, and interconnected financial companies, including FBOs, could pose a threat to U.S. financial stability. To address weaknesses in the banking sector that were evident in the financial crisis, the Board strengthened prudential standards for large U.S. and foreign banking organizations. These enhanced standards included capital planning requirements; supervisory and company-run stress testing; liquidity risk management, stress testing, and buffer requirements; and single counterparty credit limits. The Board's enhanced standards also implemented section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), which directed the Board to establish enhanced prudential standards for BHCs and FBOs with total consolidated assets of $50 billion or more.[2]

For FBOs, the Board enhanced standards were based, in part, on the size and complexity of an FBO's activities in the United States. The standards applicable to FBOs with a more limited U.S. presence largely rely on compliance with comparable home country standards applied at the consolidated foreign parent level. In comparison, an FBO with a significant U.S. presence is subject to enhanced prudential standards and supervisory expectations that generally apply to its combined U.S. operations.[3]

The Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) amended section 165 of the Dodd-Frank Act by raising the threshold for general application of enhanced prudential standards.[4] More specifically, EGRRCPA increased the $50 billion minimum total consolidated asset threshold to

2. 12 U.S.C. 5365.

3. "Combined U.S. operations" of an FBO means the U.S. branches and agencies of the FBO, if any, and the U.S. subsidiaries of the FBO, if any (such as a U.S. IHC and subsidiaries of such U.S. subsidiaries). The combined U.S. operations of an FBO does not include any section 2(h)(2) company, as defined in section 2(h)(2) of the Bank Holding Company Act (12 U.S.C. 1841(h)(2)). For more information on "combined U.S. operations," see 12 CFR 252.2 and the FR-Y-15 report instructions.

4. Public Law 115–174, 132 Stat. 1296 (2018).

Table 1. Categories of regulatory capital and liquidity requirements in Regulation YY

Category	**U.S. banking organizations and foreign banking organizations**[1]
I	U.S. GSIBs and their depository institution subsidiaries[2]
II	$700 billion or more in total consolidated assets; or $75 billion or more in cross-jurisdictional activity; do not meet the criteria for Category I.[3]
III	$250 billion or more in assets, or firms with $100 billion or more in assets and at least $75 billion in (1) nonbank assets, (2) weighted short-term wholesale funding, or (3) off-balance-sheet exposure, that are not subject to Category I or II standards.
IV	$100 billion or more in total consolidated assets; do not meet the criteria for Category I, II or III.

[1] For **U.S. banking organizations,** the applicable category of regulatory capital and liquidity requirements is measured at the level of the top-tier banking organization level, and applies to any of its depository institution subsidiaries for purposes of capital requirements or to any of its depository institution subsidiaries with $10 billion or more in total consolidated assets for liquidity requirements.

For **FBOs,** the applicable category of regulatory capital and liquidity requirements is measured at the level of the top-tier U.S. IHC level, and applies to any depository institution subsidiary of such holding company for purposes of capital requirements or to any depository institution subsidiary with $10 billion or more in total consolidated assets for liquidity requirements.

[2] Category I standards apply solely to U.S. banking organizations.

[3] Cross jurisdictional activity is equal to the sum of cross jurisdictional claims and cross jurisdictional liabilities, as reported in the FR Y-15, "Systemic Risk Report."

$250 billion for general application of enhanced prudential standards to BHCs. EGRRCPA also provides the Board with discretion to apply standards to BHCs with total consolidated assets of between $100 billion and $250 billion.

In connection with its implementation of EGRRCPA and part of the Board's periodic efforts to improve the transparency, efficiency, and risk-sensitivity of its regulations, the Board revised Regulation YY by establishing categories of prudential standards applicable to BHCs, SLHCs that are not substantially engaged in insurance underwriting or commercial activities (covered SLHCs), and FBOs to align those requirements with a firm's risk profile and to apply consistent standards across similarly situated firms.[5] In particular, the regulation includes risk-based indicators to differentiate firms and tailor the application of enhanced prudential standards based on their (1) size, (2) cross-jurisdictional activity, (3) reliance on short-term wholesale funding, (4) nonbank assets, (5) off-balance-sheet exposure, and (6) whether a firm is identified as a U.S. GSIB under the Board's rules.[6] Each of the risk-based indicators is designed to identify, in a transparent way, firms that pose heightened risk. For example, material reliance on unstable short-term wholesale funding could lead to funding runs that can place stress on a firm and result in dislocations in asset markets should a firm liquidate assets at fire sale prices to recover its funding needs. Table 1 summarizes the scoping criteria for categories of regulatory capital and liquidity requirements in Regulation YY.

1060.1.2.1 Company Run Stress Testing Requirements

Stress testing is a core element of the Board's regulatory framework and supervisory program for large firms. Stress testing enables the Board to assess whether large firms have sufficient capital to absorb potential losses and continue lending under severely adverse conditions. Regulation YY (12 CFR part 252, subpart F) establishes the requirement for certain firms to conduct stress tests. The company-run stress testing

5. Other than risk-committee and related risk-management requirements, the final rule eliminated enhanced regulatory requirements for banking organizations with less than $100 billion in total assets. For FBOs with a limited U.S. presence, the final rule raised the global asset thresholds consistent with the changes made by EGRRCPA and continues to rely on compliance with comparable home-country standards.

6. For FBOs, Regulation YY measures risk-based indicators of the combined U.S. operations or U.S. IHC, as applicable. For U.S. banking organizations, Regulation YY measures risk-based indicators of the total consolidated organization.

Table 2. Applicability of company run stress tests

Type of covered company	Frequency of required stress test
Global systemically important BHC	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category II BHC or U.S. IHC	Annually, by April 5 of each calendar year based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Category III BHC or U.S. IHC	Biennially, by April 5 of each calendar year ending in an even number, based on data as of December 31 of the preceding calendar year, unless the time or the as-of date is extended by the Board in writing.
Nonbank financial company supervised by the Board	Periodically, as determined by rule or order.

requirements apply to Category I, Category II, and Category III U.S. BHCs, covered SLHCs, and IHCs. See table 2 for more information on the applicability of the company-run stress tests.

The company run stress testing requirements also apply to insured depository institutions with greater than $250 billion in average total consolidated assets over the prior four quarters (12 CFR part 252, subpart B).

Regulation YY also establishes definitions of stress testing, related terms, as well as methodologies for conducting stress tests, and reporting and disclosure requirements for covered companies.[7] In conducting a stress test under Regulation YY, for each quarter of the planning horizon, a covered company must estimate the following for each scenario required to be used:

1. Losses, pre-provision net revenue, provision for credit losses, and net income
2. The potential impact on the regulatory capital levels and ratios applicable to the covered bank, and any other capital ratios specified by the Board, incorporating the effects of any capital action over the planning horizon and maintenance of an allowance for loan losses or adjusted allowance for credit losses, as appropriate, for credit exposures throughout the planning horizon

The company-run stress testing requirements in Regulation YY also describe the assumptions covered companies must consider regarding its capital actions over the planning horizon. Specifically, it is assumed that the covered company will

1. not pay any dividends on any instruments that qualify as common equity tier 1 capital;
2. make payments on instruments that qualify as additional tier 1 capital or tier 2 capital equal to the stated dividend, interest, or principal due on such instrument;
3. not make a redemption or repurchase of any capital instrument that is eligible for inclusion in the numerator of a regulatory capital ratio; and
4. not make any issuances of common stock or preferred stock.

1060.1.2.1.1 Board and Senior Management Responsibilities

The board of directors or appropriate board committee must review and approve the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the covered company may warrant. At a minimum, the board of directors must review and approve its stress testing policies and procedures each year a stress test is conducted.[8]

Senior management must establish and maintain a system of controls, oversight, and documentation, including policies and procedures, that are designed to ensure that its stress testing processes are effective in meeting the requirements in Regulation YY. These policies and procedures must, at a minimum, describe the covered company's stress testing practices and methodologies, and processes for validating and updating the company's stress test practices and

7. See 12 CFR 252.56.

8. 12 CFR 252.56(c)(2).

methodologies consistent with applicable laws and regulations.[9]

The board of directors and senior management must receive a summary of the results of any stress test conducted under Regulation YY. After completing the stress tests, the board of directors and senior management must consider the stress test results

- as part of the covered company's capital plan and capital planning process, including when making changes to the covered company's capital structure (including the level and composition of capital);
- when assessing the covered company's exposures, concentrations, and risk positions; and
- in the development or implementation of any plans of the covered company for recovery or resolution.

1060.1.3 REGULATION Q (12 CFR PART 217): CAPITAL POSITIONS

In 2013, the Federal Reserve Board, the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) (collectively, the agencies) adopted a rule replacing their general risk-based capital requirements, advanced approaches capital requirements, market risk capital requirements, and leverage capital requirements.[10] The Federal Reserve's capital rule, Regulation Q, addresses weaknesses highlighted during the 2008–09 financial crisis by helping to ensure that the banking system is better able to absorb losses and continue to lend in future periods of economic stress. In addition, Regulation Q implements certain federal laws related to capital requirements and international regulatory capital standards adopted by the Basel Committee on Banking Supervision.

1060.1.3.1 APPLICABILITY

Regulation Q applies on a consolidated basis to every Board-regulated institution (referred to as a "banking organization") that is

- a state member bank;
- a BHC domiciled in the United States that is not subject to 12 CFR part 225, appendix C, or
- a covered SLHC domiciled in the United States.

Regulation Q does not apply to SLHCs substantially engaged in insurance underwriting or commercial activities, or to SLHCs that are insurance underwriting companies.

Smaller Firms that are not Fully Subject to Regulation Q

The Board may, by order, apply any or all of Regulation Q to any BHC, based on an institution's asset size, level of complexity, risk profile, scope of operations, or financial condition. However, there are certain smaller firms that are generally not subject to Regulation Q. As noted above, Regulation Q does not apply to holding companies that are subject to 12 CFR part 225, appendix C, which is the "Small Bank Holding Company and Savings and Loan Holding Company Policy Statement." The Small Bank Holding Company and Savings and Loan Holding Company Policy Statement applies to BHCs with pro forma consolidated assets of less than $3 billion that

1. are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary;
2. do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and
3. do not have a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission.

The Board may, in its discretion, exclude any BHC, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes. With some exceptions, the policy statement applies to SLHCs as if they were BHCs.[11]

In 2019, the agencies adopted a final rule that provides for a simple measure of capital adequacy for certain community banking organizations, consistent with section 201 of

9. 12 CFR 252.56(c)(1)
10. See 12 CFR part 217 (Regulation Q).

11. See "Control and Ownership (BHC Formations)," in this manual for more information on the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement.

Table 3. Captial Ratio Calculations and Minimum Ratios

Ratio	Calculation	Minimum
Common equity tier 1 capital ratio	$\frac{\text{common equity tier 1 capital}}{\text{standardized total risk-weighted assets}}$	4.5%
Tier 1 capital ratio	$\frac{\text{tier 1 capital}}{\text{standardized total risk-weighted assets}}$	6%
Total capital ratio	$\frac{\text{total capital}}{\text{standardized total risk-weighted assets}}$	8%
Leverage ratio	$\frac{\text{tier 1 capital}}{\text{average total consolidated assets}}$	4%

EGRRCPA.[12] This final rule established the community bank leverage ratio (CBLR) framework, which provides an optional measure of capital adequacy for depository institutions and depository institution holding companies with certain characteristics. A qualifying banking organization that elects to use the CBLR framework and that maintains a leverage ratio of greater than 9 percent will be considered to have satisfied the generally applicable risk-based and leverage capital requirements in the agencies' capital rules.

1060.1.3.2 Minimum Capital Ratios

All banking organizations covered under Regulation Q (12 CFR part 217) are subject to the following minimum regulatory capital requirements: a common equity tier 1 capital ratio of 4.5 percent, a tier 1 capital ratio of 6 percent, a total capital ratio of 8 percent of risk-weighted assets, and a leverage ratio of 4 percent.[13] See table 3 for more information on the calculation of these ratios.

Most banking organizations are expected to operate with capital levels above the minimum ratios. In addition, banking organizations that are undertaking significant expansion or that are exposed to high or unusual levels of risk are expected to maintain capital well above the minimum ratios; in such cases, the Federal Reserve may specify a higher minimum requirement.

In implementing Regulation Q, the Federal Reserve has reserved the authority to require a banking organization to hold more capital if the minimum requirements are not commensurate with the bank's credit, market, operational, or other risks (see 12 CFR 217.1(d)). This is a formal process that requires Federal Reserve approval, and an examiner alone cannot provide this directive.

The *Commercial Bank Examination Manual*'s section entitled, "Assessment of Capital Adequacy" contains more information on the components of capital and risk weighted assets, as defined in Regulation Q.

1060.1.3.3 Supplementary Leverage Ratio

The supplementary leverage ratio measures tier 1 capital relative to total leverage exposure, which includes on-balance-sheet assets (including deposits at central banks) and certain off-balance-sheet exposures.[14]

Advanced approaches banking organizations and Category III banking organizations (both of which are described in greater detail below) are subject to a minimum supplementary leverage ratio of 3 percent. Relative to the tier 1 leverage ratio, the denominator of the supplementary leverage ratio incorporates certain off-balance-

12. See 84 Fed. Reg. 61,797 (November 13, 2019) and 12 CFR 217.12.
13. Tier 1 capital is equal to the sum of common equity tier 1 capital and additional tier 1 capital. Total capital is the sum of common equity tier 1, additional tier 1, and tier 2 capital.
14. 12 CFR 217.10(a)(5) and (c)(4)

sheet exposures such as commitments and derivative exposures. The Federal Reserve applies this to advanced approaches banking organizations regulated by the Board and Category III Board-regulated institutions, because these firms typically hold higher levels of off-balance-sheet exposure that are not captured by the leverage ratio. The supplementary leverage ratio also factors into the prompt corrective action capital ratio framework applicable to these banking organizations at the depository institution level.

In January 2020, the Federal Reserve, together with the OCC and FDIC, issued a final rule to implement EGRRCPA section 402.[15] Under EGRRCPA section 402, the supplementary leverage ratio must not take into account funds of a custodial bank that are deposited with certain central banks, provided that any amount that exceeds the value of deposits of the custodial bank that are linked to fiduciary or custodial and safekeeping accounts must be taken into account when calculating the supplementary leverage ratio as applied to the custodial bank. Custody, safekeeping, and asset servicing activities generally involve holding securities or other assets on behalf of clients, as well as activities such as transaction settlement, income processing, and related record keeping and operational services. To qualify as a custodial banking organization, a depository institution holding company must have a ratio of assets under custody-to-total assets of at least 30:1, calculated as an average over the prior four calendar quarters.

1060.1.3.4 Enhanced Supplementary Leverage Ratio

In 2015, the Federal Reserve implemented an enhanced supplemental leverage ratio requirement for U.S. GSIBs and their depository institution subsidiaries.[16] The enhanced supplementary ratio standards require each U.S. GSIB to maintain a supplementary leverage ratio above 5 percent to avoid limitations on the firm's distributions and certain discretionary bonus payments and also require each of its insured depository institutions to maintain a supplementary leverage ratio of at least 6 percent to be deemed "well capitalized" under the prompt corrective action framework of each agency. Banking organizations that do not meet the enhanced supplementary leverage ratio are subject to restrictions on dividends and discretionary bonus payments, similar to the approach used for purposes of the countercyclical capital buffer (CCyB) described below.

1060.1.3.5 Countercyclical Capital Buffer

The CCyB is a supplemental policy tool that the Federal Reserve can increase during periods of rising vulnerabilities in the financial system and reduce when vulnerabilities recede. It is designed to increase the resilience of advanced approaches banking organizations or Category III Board-regulated institutions when there is an elevated risk of above-normal losses. Increasing the resilience of such organizations will, in turn, improve the resilience of the broader financial system. The Federal Reserve would most likely begin to increase the CCyB above 0 percent to augment minimum capital requirements and other capital buffers when systemic vulnerabilities are meaningfully above normal. By requiring large banking organizations to hold additional capital during a period of excess and removing the requirement to hold additional capital when the vulnerabilities have diminished, the CCyB is expected to moderate fluctuations in the supply of credit over time.

A CCyB, if applicable, would expand the capital conservation buffer by up to 2.5 percent of a banking organization's total risk-weighted assets for advanced approaches banking organizations or Category III Board-regulated institutions. The amount of the CCyB amount is determined by a country's bank supervisor and will differ by jurisdiction. At any point in time, a country's bank supervisor determines the degree of excessive credit growth in its jurisdictions. An advanced approaches Board-regulated institution or a Category III Board-regulated institution must calculate a CCyB amount in accordance with Regulation Q (12 CFR 217.11(b)) for purposes of determining its maximum payout ratio. The payout ratio is set forth in Regulation Q as well as the *Commercial Bank Examination Manual's* section entitled "Dividends."

1060.1.3.6 GSIB Surcharge Requirement

In July 2015, the Board adopted the GSIB surcharge requirements (12 CFR part 217, subpart H) as part of its implementation of sec-

15. 85 Fed. Reg. 4569 (January 27, 2020).
16. 80 Fed. Reg. 49,082 (August 14, 2015).

tion 165 of the Dodd-Frank Act.[17] The GSIB surcharge requirement works to mitigate the potential risk that the material financial distress or failure of a GSIB could pose to U.S. financial stability by increasing the stringency of capital standards for GSIBs as they grow across a group of metrics that serve as proxies for their systemic risk profile. The GSIB surcharge requirements establish a methodology to identify whether a U.S. top-tier BHC is a GSIB and imposes a risk-based capital surcharge on such an institution. The GSIB surcharge requirements takes into consideration the nature, scope, size, scale, concentration, interconnectedness, and mix of activities of each company subject to the rule in its methodology for determining whether the company is a GSIB and the size of the surcharge. These factors are captured in the method 1 and method 2 scores, which use quantitative metrics reported on the FR Y–15 reporting form to measure a firm's systemic footprint. The GSIB surcharge requirements establish the criteria for identifying a GSIB and the methods that those firms must use to calculate a risk-based capital surcharge, which is calibrated to each firm's overall systemic risk and which expands the capital conservation buffer requirement for these firms.

1060.1.3.7 Advanced Approaches

The advanced approaches framework provides a risk-based capital framework that permit certain banking organizations to use an internal risk-measurement approach to calculate capital requirements and advanced measurement approaches in order to calculate regulatory credit and operational-risk capital requirements. An advanced approaches banking organization must calculate its risk-based capital ratios using both the standardized and advanced approaches and meet each minimum requirement with the lower of the two ratios. The advanced approaches are supplemented by the market risk-capital requirement.

The advanced approaches in Regulation Q (12 CFR part 217) apply to Category I and Category II banking organizations. The advanced approaches also apply to a state member bank that is a subsidiary of a global systemically important BHC, a Category II Board-regulated institution; or a subsidiary of a bank, BHC, or SLHC that uses the advanced approaches to calculate its risk-based capital requirements. Advanced approaches banking organizations also include those banking organizations that have elected to use the advanced approaches to calculate their total risk-weighted assets.

17. 80 Fed. Reg. 49,082 (August 14, 2015)

1060.1.3.8 Market Risk Capital Requirement

Banking organizations with significant trading activities are subject to regulatory capital requirements for market risk. The purpose of the market risk capital requirement is to establish risk-based capital requirements for Board-regulated institutions with significant exposure to market risk, provide methods for these Board-regulated institutions to calculate their standardized measure for market risk and, if applicable, advanced measure for market risk, and establish public disclosure requirements. The market risk capital requirement applies to any Board-regulated institution with aggregate trading assets and trading liabilities equal to 10 percent or more of total assets or $1 billion or more. On a case-by-case basis, the Federal Reserve may require an institution that does not meet these criteria to comply with the market risk capital requirement if deemed necessary for safety-and-soundness reasons. Table 4 summarizes the applicability of several requirements in Regulation Q.

1060.1.4 REGULATION Y (12 CFR PART 225): CAPITAL PLAN RULE AND STRESS CAPITAL BUFFER

1060.1.4.1 Background and Interconnections with other Capital Rules

The firm's planned capital actions should be consistent with the firm's capital policy, including the amounts of planned dividends and repurchases. A firm's processes for managing and allocating its capital resources are critical to its financial strength and resiliency and to the stability and effective functioning of the U.S. financial system. In 2011, the Board implemented its capital plan rule to require large firms to develop and maintain capital plans supported by robust processes for assessing their capital adequacy.[18]

18. See 12 CFR 225.8; see also Capital Plans, 76 Fed. Reg. 74,631 (December 1, 2011). Amendments to the capital plan rule are found in 79 Fed. Reg. 64,040 (October 27, 2014); 80 Fed. Reg. 75,424 (December 2, 2015); 85 Fed. Reg. 15,576 (March 18, 2020); and 86 Fed. Reg. 7927 (February 3, 2021).

Table 4. Applicability of key requirements of Regulation Q

Requirement in Regulation Q (12 CFR part 217)	Category I	Category II	Category III	Category IV
Supplementary leverage ratio	Yes	Yes	Yes	
Enhanced supplementary leverage ratio	Yes			
Countercyclical capital buffer	Yes	Yes	Yes	
Must recognize elements of accumulated other comprehensive income (AOCI) in regulatory capital	Yes	Yes		
GSIB surcharge requirement	Yes			
Advanced approaches	Yes	Yes		
Market risk capital requirement[1]	Yes	Yes	Depends on the firm's activities	Depends on the firm's activities
Minimum capital standardized capital requirements and leverage ratio (12 CFR 217.10)	Yes	Yes	Yes	Yes

1 Any Board-regulated institution with aggregate trading assets and trading liabilities equal to 10 percent or more of total assets or $1 billion or more.

The aim of these requirements is to ensure that large firms have robust, forward-looking capital planning processes that account for their unique risks, and to help ensure that large firms have sufficient capital to continue operations throughout times of economic and financial stress. The capital plan rule works in conjunction with the stress test rules adopted by the Board to implement the stress testing requirements of the Dodd-Frank Act.[19]

In March 2020, the Board adopted the stress capital buffer rule to integrate its capital plan rule and regulatory capital rule through the establishment of a stress capital buffer requirement, creating a single, risk-sensitive framework for large banking organizations.[20] To achieve individually tailored and risk-sensitive capital requirements for firms subject to the capital plan rule, the stress capital buffer rule establishes the size of a firm's stress capital buffer requirement based in part on a supervisory stress test conducted by the Federal Reserve. Through the integration of the capital rule and Comprehensive Capital Analysis and Review (CCAR), the final rule removed redundant elements of the capital and stress testing frameworks, including the CCAR quantitative objection and the assumption that a firm makes all capital actions under stress.

In October 2019, the Board issued a final rule that established a revised framework for applying prudential standards to large firms to align

19. See 12 U.S.C. 5365(i) and 12 CFR part 252.

20. See Regulations Q, Y, and YY: Regulatory Capital, Capital Plan, and Stress Test Rules, 85 Fed. Reg. 15,576 (March 18, 2020).

prudential standards more closely to a large firm's risk profile (tailoring rule).[21] The tailoring rule established four categories of prudential standards and applies them based on indicators designed to measure the risk profile of a firm.[22] The scoping criteria for categories of prudential standards in the tailoring rule are described above in table 1. In February 2021, the Board issued a final rule to tailor the requirements in the Board's capital plan rule based on risk. Among other things, the February 2021 final rule modified the capital planning, regulatory reporting, and stress capital buffer requirements for firms subject to Category IV standards under the tailoring rule.[23]

1060.1.4.2 Capital Plan Requirements and Applicability

The capital plan rule applies to top-tier U.S. BHCs and top tier U.S. SLHCs with average total consolidated assets of $100 billion or more, as well as IHCs pursuant to the Board's Regulation YY.[24] The capital plan rule requires such firms to develop and maintain a capital plan that includes an assessment of the sources and uses of capital and reflects forward-looking projections of revenue and losses to monitor and maintain their internal capital adequacy.

At least annually, and prior to the submission of the capital plan to the Federal Reserve, a large firm's board of directors or a designated committee thereof is required to review the capital plan.[25] The board of directors or designated committee must (1) review the robustness of the holding company's process for assessing capital adequacy, (2) ensure that any deficiencies in the firm's process for assessing capital adequacy are appropriately remedied, and (3) approve the firm's capital plan.[26]

21. See Prudential Standards for Large Bank Holding Companies, Savings and Loan Holding Companies, and Foreign Banking Organizations, 84 Fed. Reg. 59,032 (November 1, 2019).

22. The final rule increased the threshold for general application of these standards from $50 billion to $100 billion in total consolidated assets.

23. 86 Fed. Reg. 7927 (February 3, 2021).

24. The capital plan rule also applies to nonbank financial companies supervised by the Board that is made subject to a rule or order of the Board.

25. The capital plans must be submitted by April 5th of a calendar year (or other Federal Reserve Board designated date) for review.

26. As part of this review, the board of directors should consider any remaining uncertainties, limitations, and assumptions associated with the firm's capital adequacy process.

1060.1.4.3 Mandatory Elements of a Capital Plan

A capital plan is defined as a written presentation of a large firm's capital planning strategies and capital adequacy process that includes certain mandatory elements. These mandatory elements are organized into four main components. For more information on the subcomponent elements of these four main components, see Regulation Y and Regulation LL.

1. An assessment of the expected uses and sources of capital over the planning horizon (at least nine quarters, beginning with the quarter preceding the quarter in which the firm submits its capital plan) that reflects the firm's size, complexity, risk profile, and scope of operations, assuming both expected and stressful conditions.
2. A detailed description of the firm's process for assessing capital adequacy, including how the firm will, under expected and stressful conditions,
   - maintain capital commensurate with its risks;
   - maintain capital above the minimum regulatory capital ratios;
   - serve as a source of strength to its subsidiary depository institutions; and
   - maintain sufficient capital to continue its operations by maintaining ready access to funding, meeting its obligations to creditors and other counterparties, and continuing to serve as a credit intermediary.
3. The firm's capital policy, which is the firm's written assessment of the principles and guidelines used for capital planning, capital issuance, usage and distributions, including internal capital goals, the quantitative or qualitative guidelines for dividend and stock repurchases, the strategies for addressing potential capital shortfalls, and the internal governance procedures around capital policy principles and guidelines; and
4. A discussion of any expected changes to the firm's business plan that are likely to have a material impact on the firm's capital adequacy or liquidity. For example, the capital plan should reflect any expected material effects of new lines of business or activities on the firm's capital adequacy or liquidity, including revenue and losses.

The Board, or the appropriate Reserve Bank with concurrence of the Board, will consider the following factors in reviewing a firm's capital plan:

- the comprehensiveness of the capital plan, including the extent to which the analysis underlying the capital plan captures and addresses potential risks stemming from activities across the firm and the firm's capital policy;
- the reasonableness of the firm's capital plan, the assumptions and analysis underlying the capital plan, and the robustness of its capital adequacy process;
- relevant supervisory information about the firm and its subsidiaries;
- the firm's regulatory and financial reports, as well as supporting data that would allow for an analysis of the firm's loss, revenue, and reserve projections;
- the results of any stress tests conducted by the firm or the Federal Reserve; and
- other information requested or required by the Board or the appropriate Reserve Bank, as well as any other information relevant, or related, to the firm's capital adequacy.

1060.1.4.4 The Capital Plan Rule and Firms Subject to Category IV Standards

All banking organizations, regardless of size and complexity, are expected to have the capacity to analyze the potential impact of adverse outcomes on their financial condition, including on capital.[27] Therefore, risk-management practices should be tailored to the risk and complexity of the individual firm and should include practices to identify and assess its sensitivity to unexpected adverse outcomes before they occur.

In February 2021, the Board issued a final rule that removed the requirement for firms subject to Category IV standards to include certain elements in their capital plans.[28] Firms subject to Category IV standards are not required to calculate estimates of projected revenues, losses, reserves, or pro forma capital levels (effectively a form of stress testing) using scenarios provided by the Board. However, under certain circumstances, based on the macroeconomic outlook or based on the firm's risk profile, financial condition, or corporate structure, the Board may require a firm subject to Category IV standards to submit a capital plan under scenarios provided by the Board. Firms subject to Category IV standards are still required to provide a forward-looking analysis of income and capital levels under expected and stressful conditions in their annual capital plans. These projections are required to be tailored to, and sufficiently capture, the firm's exposures, activities, and idiosyncratic risks in their capital plans. The Federal Reserve conducts an annual assessment of the capital plan of a firm subject to Category IV standards as part of its ongoing supervisory process, and the results of this assessment will continue to be an input into the firm's capital planning and positions component of the LFI rating system.

1060.1.4.5 Stress Capital Buffer

During the 2008–09 financial crisis, some banking organizations continued to pay dividends and substantial discretionary bonuses even as their financial condition weakened. Such capital distributions had a significant negative impact on the overall strength of the banking sector. To encourage better capital conservation and to enhance the resilience of the banking system, Regulation Q limits capital distributions and discretionary bonus payments for banking organizations that do not hold a specified amount of common equity tier 1 capital in addition to the amount of regulatory capital necessary to meet the minimum risk-based capital requirements (capital conservation buffer).

27. For example, smaller BHCs are subject to guidance that clarifies such firms are expected to hold capital commensurate with their overall risk profile. See SR-09-4, Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies (February 24, 2009, revised July 24, 2020). Holding companies with less than $100 billion in total consolidated assets are subject to an overall evaluation and rating of managerial and financial condition and an assessment of future potential risk to subsidiary depository institution(s) as part of the RFI or Modified RFI rating. See SR-19–4/CA-19–3, Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion (February 26, 2019) and SR-13–21, Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less (December 17, 2019, revised March 6, 2019). BHCs with total consolidated assets of $100 billion or greater and certain SLHCs are subject to a supervisory evaluation of whether a covered firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions, including stressful ones. See SR-19–3/CA-19-2, "Large Financial Institution (LFI) Rating System" (February 26, 2019).

28. 86 Fed. Reg. 7927 (February 3, 2021).

On March 4, 2020, the Board adopted a final rule establishing a stress capital buffer for BHCs and U.S. IHCs of FBOs that have $100 billion or more in total consolidated assets. The stress capital buffer rule integrates the Federal Reserve's stress test results with its non-stress capital requirements.[29] More specifically, the stress capital buffer rule integrates CCAR with the capital rule. Under the stress capital buffer requirement, the Federal Reserve uses the results of its supervisory stress test to establish the size of a firm's stress capital buffer requirement, which replaces the static 2.5 percent of the risk-weighted assets component of a firm's capital conservation buffer requirement.

The stress capital buffer rule included several changes to the assumptions embedded in the supervisory stress test, notably removing the assumption that firms make all planned common distributions and excluding material business plan changes from the stress capital buffer requirement calculation. Previously, under CCAR, the Board assumed that a firm would continue to make all planned dividends and share repurchases under stress, and therefore required firms to pre-fund nine quarters of planned dividends and share repurchases. Under the stress capital buffer rule, the Board no longer assumes that a firm would continue to make all planned dividends and share repurchases under stress. The stress capital buffer requirement includes four-quarters of planned dividends; therefore, firms are subject to a pre-funding requirement of four quarters of planned dividends. This approach recognizes the capital rule's automatic limitations on capital distributions while continuing to promote forward-looking capital planning and mitigate pro-cyclicality.

A firm's stress capital buffer requirement varies based on a firm's risk. A firm that does not maintain capital ratios above its minimums plus its buffer requirements faces restrictions on its capital distributions and discretionary bonus payments. As explained in Regulation Y, the Board will notify a firm of its stress capital buffer requirement and an explanation of the results of the supervisory stress test by June 30 of the calendar year in which the capital plan was submitted or within 90 calendar days of receiving notice that the Board will recalculate the firm's stress capital buffer requirement pursuant to Regulation Y.[30]

29. 85 Fed. Reg. 15,576 (March 18, 2020).
30. 12 CFR 225.8(h).

1060.1.4.5.1 Calculation and Timing of Stress Capital Buffer Requirements for Firms Subject to Category IV Standards

The tailoring rule made two changes to the stress testing rules for firms subject to Category IV standards. First, the tailoring rule removed the requirement for firms subject to Category IV standards to conduct and publicly disclose the results of company-run stress tests as defined in the Board's stress testing rules. Second, the tailoring rule changed the frequency of the supervisory stress test for firms subject to Category IV standards from annual to biennial.

The Board issued a final rule in February 2021, requiring a firm subject to Category IV standards to update the stress test portion of the stress capital buffer requirement in a manner consistent with the frequency of the supervisory stress test (that is, both would occur every other year).[31] The stress test portion of such a Category IV firm's stress capital buffer requirement is not updated in a year in which it does not participate in the supervisory stress test. A Category IV firm may elect to opt-in to a stress test in a year in which the firm would not generally be subject to the supervisory stress test and to receive an updated stress capital buffer requirement in that year.

1060.1.5 SUPERVISORY ACTIVITIES, GUIDANCE, AND OTHER CONSIDERATIONS IN ASSESSING CAPITAL

1060.1.5.1 Supervisory Stress Test Requirements

Regulation YY requires the Federal Reserve to conduct annual analyses of nonbank financial companies supervised by the Board and BHCs with $100 billion or more in total consolidated assets to evaluate whether such companies have the capital, on a total consolidated basis, necessary to absorb losses as a result of adverse economic conditions. The stress test requirements in Regulation YY establish a framework to conduct supervisory stress tests of large BHCs.

31. 86 Fed. Reg. 7927 (February 3, 2021).

1060.1.5.1.1 Stress Testing Analysis Conducted by the Federal Reserve

For the supervisory stress tests described in Regulation YY, the Board conducts an analysis of each covered company's capital, on a total consolidated basis, taking into account all relevant exposures and activities of that covered company, to evaluate the ability of the covered company to absorb losses in specified economic and financial conditions. The analysis includes an assessment of the projected losses, net income, and pro forma capital levels and regulatory capital ratios and other capital ratios for the covered company and uses analytical techniques that the Board determines are appropriate to identify, measure, and monitor risks a covered company may pose to U.S. financial stability.

The Board conducts stress testing analysis using a minimum of two different scenarios: a baseline scenario and a severely adverse scenario. Prior to completing the supervisory stress test, the Federal Reserve will notify covered companies of the scenarios that the Board will apply in analyzing the institution. Regulation YY provides more information on assumptions used when assessing a company's capital actions over the planning horizon.

Concerning the frequency of these reviews, the Board will conduct annual supervisory stress tests for U.S. GSIBs; Category II BHCs, SLHCs and IHCs; Category III BHCs, SLHCs, and IHCs; and nonbank financial companies supervised by the Board.[32] The Federal Reserve assesses Category IV BHCs, SLHCs and IHCs biennially, occurring in each year ending in an even number.

1060.1.5.1.2 Comprehensive Capital Analysis and Review

At the height of the 2008–09 financial crisis, the Board created the Supervisory Capital Assessment Program (SCAP) as a way to help restore confidence in the largest U.S. banking organizations. SCAP estimated potential losses at those firms assuming that economic and financial conditions worsened. The SCAP evolved into the CCAR supervisory exercise. CCAR reflects a number of important steps forward in the Federal Reserve's approach to the supervision of the largest BHCs. Rather than evaluating capital at a moment in time, CCAR incorporates a forward looking, post-stress evaluation of a BHC's capital adequacy. Further, CCAR involves a simultaneous, horizontal assessment of capital adequacy at the largest U.S. BHCs, thus allowing the process to be informed by the financial condition of, and outlook for, these BHCs individually and as a group.

As part of CCAR, the Federal Reserve evaluates institutions' capital adequacy, internal capital adequacy assessment processes, and their individual plans to make capital distributions, such as dividend payments or stock repurchases.

The Federal Reserve coordinates supervisory stress tests with the CCAR process to reduce duplicative requirements and to minimize regulatory burden.

1060.1.5.2 Key Supervisory Guidance on the Assessment of Capital at Large Financial Institutions

Supervisory guidance outlines the agencies' supervisory expectations or priorities and articulates the agencies' general views regarding appropriate practices for a given subject area. Further, it often provides examples of practices that the agencies generally consider consistent with safety-and-soundness standards and any other applicable laws and regulations.[33] The following supervisory guidance issuances provide insight to industry, as well as supervisory staff, in a transparent way that helps to ensure consistency in the supervisory approach towards assessing capital at large holding companies.[34]

1060.1.5.2.1 Large Financial Institution Rating System

"Large Financial Institution (LFI) Rating System," SR-19-3/CA-19-2, outlines the ratings framework for BHCs and noninsurance, noncommercial SLHCs with total consolidated assets of $100 billion or more, and U.S. IHCs of FBOs established under Regulation YY with total consolidated assets of $50 billion or more. The Capital Planning and Positions rating of the LFI rating system evaluates

32. For more information on the supervisory stress test rule for the SLHCs, see 12 CFR part 238, subpart O.

33. Supervisory guidance does not have the force and effect of law, and the Federal Reserve does not take enforcement actions based on supervisory guidance. See 12 CFR part 262, appendix A.

34. For more information on guidance applicable to large financial holding companies, see the "Large Banking Organizations" topic page on the Board's public website.

1. the effectiveness of a firm's governance and planning processes used to determine the amount of capital necessary to cover risks and exposures, and to support activities through a range of conditions and events; and
2. the sufficiency of a firm's capital positions to comply with applicable regulatory requirements and to support the firm's ability to continue to serve as a financial intermediary through a range of conditions.

In developing this rating, the Federal Reserve evaluates

- *Capital planning:* The extent to which a firm maintains sound capital planning practices through effective governance and oversight; effective risk management and controls; maintenance of updated capital policies and contingency plans for addressing potential shortfalls; and incorporation of appropriately stressful conditions into capital planning and projections of capital positions; and
- *Capital positions:* The extent to which a firm's capital is sufficient to comply with regulatory requirements, and to support its ability to meet its obligations to depositors, creditors, and other counterparties and continue to serve as a financial intermediary through a range of conditions.

A firm's capital rating under the LFI rating system reflects a broad assessment, based on horizontal reviews and firm-specific supervisory work focused on capital planning and positions. In consolidating supervisory findings into a comprehensive assessment of a firm's capital planning and positions, the Federal Reserve takes into account the materiality of a firm's outstanding and newly identified supervisory issues.

A firm's compliance with minimum regulatory capital requirements is considered in assigning the firm's Capital Planning and Positions component rating; however, the Federal Reserve may determine that a firm does not meet expectations regarding its capital position in light of its idiosyncratic activities and risks, even if the firm meets minimum regulatory capital requirements. Any findings from supervisory stress testing or CCAR will represent inputs into the Capital Planning and Positions component rating.

See also the section entitled, "Large Financial Institution Rating System" in section 1060.0 of this manual.

1060.1.5.2.2 Model Risk Management

"Guidance on Model Risk Management," SR-11-7, is an interagency statement that provides guidance for banks on effective model risk management. A "model" refers to a quantitative method, system, or approach that applies statistical, economic, financial, or mathematical theories, techniques, and assumptions to process input data into quantitative estimates. A model consists of three components:

1. an information input component, which delivers assumptions and data to the model
2. a processing component, which transforms inputs into estimates
3. a reporting component, which translates the estimates into useful business information

Models are used for analyzing business strategies, informing business decisions, identifying and measuring risks, valuing exposures, instruments or positions, conducting stress testing, assessing adequacy of capital, managing client assets, measuring compliance with internal limits, maintaining the formal control apparatus of the bank, or meeting financial or regulatory reporting requirements and issuing public disclosures. Rigorous model validation plays a critical role in model risk management; however, sound development, implementation, and use of models are also vital elements. Furthermore, model risk management encompasses governance and control mechanisms such as board and senior management oversight, policies and procedures, controls and compliance, and an appropriate incentive and organizational structure.

1060.1.5.2.3 Supervisory Guidance on Stress Testing

In 2012, the Federal Reserve, OCC, and FDIC issued stress testing guidance for larger banking organizations.[35] The guidance emphasizes the importance of stress testing as an ongoing risk management practice that supports banking organizations' forward-looking assessment of risks and better equips them to address a range of adverse outcomes.

35. See SR-12-7, "Supervisory Guidance on Stress Testing for Banking Organizations with More Than $10 billion in Total Consolidated Assets."

The guidance describes five principles for banking organizations to consider when designing and implementing a stress testing framework:

- *Principle 1:* A banking organization's stress testing framework should include activities and exercises that are tailored to and sufficiently capture the banking organization's exposures, activities, and risks.
- *Principle 2:* An effective stress testing framework employs multiple conceptually sound stress testing activities and approaches.
- *Principle 3:* An effective stress testing framework is forward-looking and flexible.
- *Principle 4:* Stress testing results should be clear, actionable, well supported, and inform decisionmaking.
- *Principle 5:* An organization's stress testing framework should include strong governance and effective internal controls.

The guidance also describes several approaches and applications that banking organizations should consider using, such as scenario analysis, sensitivity analysis, enterprise-wide stress testing, and reverse stress testing. Organizations should also recognize that stress testing approaches will evolve over time and they should update their practices as needed.

1060.1.5.2.4 Dividends Policy Statement

On November 14, 1985, the Federal Reserve Board issued a policy statement on the payment of dividends by state member banks and BHCs. The complete statement is also available in section 2020.5, "Intercompany Transactions (Dividends)," of this manual. Overall, the policy statement states that as a matter of prudent banking it is generally appropriate for a bank or BHC to continue its existing rate of cash dividends on common stock only if

- the organization's net income available to common shareholders over the past year has been sufficient to fully fund the dividends; and
- the prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition.

Any banking organization whose cash dividends are inconsistent with either of these criteria should give serious considerations to cutting or eliminating its dividends. Such an action will help conserve the organization's capital base and help it weather a period of adverse conditions or distress. It is generally inconsistent with prudent banking practices for a banking organization that is experiencing financial problems or that has inadequate capital to borrow to pay dividends; this would result in increased leverage at the very time the organization needs to reduce its debt or conserve its capital. Similarly, the payment of dividends based solely or largely on gains resulting from unusual or nonrecurring events may be imprudent. Unusual or nonrecurring events may include the sale of assets, the effects of accounting changes, the postponement of large expenses to future periods, or negative provisions to the allowance for loan and lease losses.

1060.1.5.2.5 Supervisory Assessment of Capital Planning and Positions

"Consolidated Supervision Framework for Large Financial Institutions," SR-12-17/CA-12-14, outlines core expectations for sound capital planning for LFIs. This capital planning and positions guidance provides additional details around the Federal Reserve's core capital planning expectations for firms subject to Category I standards and firms subject to Category II or III standards, building on the capital planning requirements included in the capital plan rule and the Board's stress test rules.[36] A firm should maintain a sound capital planning process on an ongoing basis, including in between submissions of its annual capital plan.[37] In addition, this guidance lists broad elements that would be expected of sound capital planning processes. More specifically, to support effective capital planning, and the adequacy of capital positions, each firm should

- maintain strong capital positions that not only comply with regulatory requirements, but also

36. The capital planning process described in this guidance is broadly equivalent to an internal capital adequacy assessment process (ICAAP) under the Federal Reserve's advanced approaches capital guidelines. The expectations articulated in this document are consistent with the U.S. federal banking agencies' supervisory guidance relating to the ICAAP (see 73 Fed. Reg. 44,620 (July 31, 2008)).

37. The term "capital planning process" used in this document, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term "capital adequacy process" used in other Federal Reserve documents.

support the firm's ongoing ability to meet its obligations to creditors and other counterparties, as well as continue to serve as a financial intermediary through periods of stress;
- have in place robust internal processes that enable the firm to maintain capital commensurate with its unique risks under normal and stressful conditions, and to provide timely restoration of financial buffers in the event of drawdown;
- maintain processes that enable the identification and measurement of potential risks to asset quality, earnings, cash flows, and other primary determinants of capital positions;
- utilize comprehensive projections of the level and composition of capital resources, supported by rigorous and regular stress testing to assess the potential impact of a broad range of expected and potentially adverse scenarios;
- maintain sound risk measurement and modeling capabilities, supported by comprehensive data collection and analysis, independent validation, and effective governance, policies, and controls;
- establish goals for capital positions that are approved by the firm's board of directors and reflect the potential impact of legal or regulatory restrictions on the transfer of capital between legal entities; and
- maintain independent internal audit and other review functions with appropriate staff expertise, experience, and stature in the organization to monitor the adequacy of capital risk measurement and management processes.

In 2021, the Federal Reserve revised SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category I Standards," and SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category II or III Standards." While SR-15-18 and SR-15-19 generally apply to the largest BHCs, the principles of the 1985 Policy Statement on the Payment of Dividends are incorporated into these SR letters. Specifically, firms should have comprehensive policies on dividend payments that clearly articulate their objectives and approaches for maintaining a strong capital position and achieving the principles of the policy statement. In addition, the guidance in SR-15-18 and SR-15-19 outlines the Federal Reserve's core capital planning expectations building upon the capital planning requirements in the Federal Reserve's capital plan rule and stress test rules.

More specifically, the guidance outlines capital planning expectations for

- governance,
- risk management,
- internal controls,
- capital policy,
- scenario design, and
- projection methodologies.

Further, the guidance includes several appendixes that detail supervisory expectations on a firm's capital planning processes.

1060.1.5.3 Collaboration with Other Regulators

In the assessment of capital, as well as the other components of the LFI rating system, the Federal Reserve relies on strong, cooperative relationships with other regulators to implement effective consolidated supervision at the holding company-level. The principle of relying on the work of the insured depository institution regulators is a well-established tenet of Federal Reserve supervisory policy and is required by statute.[38]

The Federal Reserve is expected to rely, to the fullest extent possible, on the information and assessments provided by other regulators to support effective supervision. The views of other regulators may validate the conclusions from Federal Reserve-led supervisory events or fill in information gaps. Federal Reserve examination staff should understand and assess the scope of other regulators' work, including the extent to which transaction testing was performed, as well as the severity of the issues identified. By understanding the work of other regulators, Federal Reserve examiners can ascertain the extent another regulator's findings can be leveraged for assigning ratings under the LFI rating system for the holding company.

38. Refer to sections 5(c)(1)–(2) of the Bank Holding Company Act of 1956 and sections 10(b)(2) and (b)(4) of the Home Owners' Loan Act, as amended by section 604 of the Dodd-Frank Act. 12 U.S.C. 1844(c)(1)–(2); 12 U.S.C 1467a(b)(2), (b)(4).

The Federal Reserve issued this guidance (SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category I Standards," and its attachment) to explain its supervisory expectations for capital planning at firms subject to category I standards under the Board's tailoring framework.[1] Capital is central to a firm's ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. Therefore, a firm's processes for managing and allocating its capital resources are critical to its financial strength and resilience, as well as the stability and effective functioning of the U.S. financial system. The following guidance provides the Federal Reserve's core capital planning expectations for firms subject to category I standards, building upon the capital planning requirements in the Federal Reserve's capital plan rules and stress test rules.[2]

The guidance outlines capital planning expectations for

- governance
- risk management
- internal controls
- capital policy
- scenario design, and
- projection methodologies.

Further, the guidance includes several appendixes that detail supervisory expectations for a firm's capital planning process. This guidance largely consolidates the Federal Reserve's existing capital planning guidance, including:

- Capital Planning at Large Bank Holding Companies: Supervisory Expectations and Range of Current Practice (August 2013)
- Comprehensive Capital Analysis and Review 2015 – Summary Instructions and Guidance (October 2014)
- Instructions for the Capital Assessments and Stress Testing information collection (Reporting Form FR Y-14A)
- SR-11-7, "Supervisory Guidance on Model Risk Management" (Refer to section 2126.0 of this manual)
- SR-12-7, "Supervisory Guidance on Stress Testing for Banking Organizations with More Than $10 Billion in Total Consolidated Assets"
- SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions"

1060.2.1 GUIDANCE ON SUPERVISORY ASSESSMENT OF CAPITAL PLANNING AND POSITIONS FOR CATEGORY I FIRMS

I. Introduction

This guidance (the attachment to SR-15-18) provides the Federal Reserve's core capital planning expectations for firms subject to category I standards, building upon the capital planning requirements included in the Board's capital plan rules and stress test rules. This guidance outlines capital planning expectations for these firms in the following areas:[3]

- governance
- risk management
- internal controls
- capital policy

1. See 84 Fed. Reg. 59,032 (November 1, 2019) for more information on the Board's tailoring framework. With the issuance of SR-15-18 and SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category II or III Standards," SR-99-18, "Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles," is superseded. In addition, SR-09-4, "Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies," does not apply to firms subject to SR-15-18 and SR-15-19.

2. For the capital plan rules, refer to section 225.8 of Regulation Y (12 CFR 225.8) and section 238.170 of Regulation LL (12 CFR 238.170). Regulation Q (12 CFR part 217) establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Regulation YY (12 CFR part 252) and Regulation LL (12 CFR part 238) establish capital stress testing requirements for bank holding companies, U.S. intermediate holding companies of foreign banking organizations, and covered savings and loan holding companies with total consolidated assets of $100 billion or more.

3. Note that these expectations build upon the capital planning requirements set forth in the Board's capital plan rules and stress test rules (12 CFR 225.8; 12 CFR part 252, subparts E and F). Other relevant rules pertaining to the Board's regulatory regime for capital planning and positions are described in section II, "Regulatory Requirements for Capital Positions and Planning." The Federal Reserve may not conduct or sponsor, and an organization (or a person) is not required to respond to, a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. The OMB control numbers for this guidance are OMB No. 7100-0341 and OMB No. 7100-0342.

- incorporation of stressful conditions and events, and
- estimation of the impact on capital positions.

Further, the following appendixes in the guidance provides detailed supervisory expectations on a firm's capital planning process:

A. Use of Models and Other Estimation Approaches
B. Model Overlays
C. Use of Benchmark Models in the Capital Planning Process
D. Sensitivity Analysis and Assumptions Management
E. Role of the Internal Audit Function in the Capital Planning Process
F. Capital Policy
G. Scenario Design
H. Risk-weighted Asset (RWA) Projections
I. Operational Loss Projections

This guidance applies to firms that are subject to category I standards.[4] The Federal Reserve has different expectations for sound capital planning and capital adequacy depending on the size, scope of operations, activities, and systemic importance of a firm. The Federal Reserve has separate guidance set forth in SR-15-19 that clarifies that expectations for firms subject to category I standards are higher than the expectations for firms subject to category II or III standards.

II. Regulatory Requirements for Capital Positions and Planning

Sound capital planning for any firm begins with adherence to all applicable rules and regulations relating to capital adequacy. Certain Federal Reserve regulations form the basis of the regulatory framework for capital positions and capital planning:

1. Regulation Q (12 CFR part 217), Capital Adequacy Requirements for Board-regulated Institutions;
2. Regulation YY (12 CFR part 252, subparts E and F) and subparts O and P of Regulation LL (12 CFR part 238, subparts O and P); and
3. Section 225.8 of Regulation Y (12 CFR 225.8) and subpart S of Regulation LL (12 CFR part 238, subpart S), together, also known as the capital plan rules).

Regulation Q establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Among other things, Regulation YY and Regulation LL establish capital stress testing requirements for bank holding companies and covered savings and loan holding companies, respectively, with total consolidated assets of $100 billion or more. The capital plan rules establish general capital planning requirements for a bank holding company or covered savings and loan holding company with total consolidated assets of $100 billion or more and requires such a firm to develop an annual capital plan that is approved by its board of directors.

This guidance provides the Federal Reserve's core capital planning expectations for firms subject to category I standards, building upon the capital planning requirements in the Federal Reserve's capital plan rules and stress test rules.

III. Capital Planning Expectations

Capital is central to a firm's ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. A firm's capital planning processes are critical to its financial strength and resilience. At firms subject to category I standards, sound capital planning is also critical to the stability and effective functioning of the U.S. financial system.

SR-12-17/CA-12-14 outlines core expectations for sound capital planning for large financial institutions. This capital planning and positions guidance provides additional details around the Federal Reserve's core capital planning expectations for firms subject to category I standards and firms subject to category II or III standards, building on the capital planning requirements included in the capital plan rule and the Board's stress test rules.[5] A firm should

4. This guidance does not apply to nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Board of Governors.

5. The capital planning process described in this guidance is broadly equivalent to an internal capital adequacy assessment process (ICAAP) under the Federal Reserve's advanced approaches capital guidelines. The expectations articulated in this document are consistent with the U.S. federal banking agencies' supervisory guidance relating to the ICAAP (see 73 Fed. Reg. 44,620 (July 31, 2008)).

maintain a sound capital planning process on an ongoing basis, including between submissions of its annual capital plan.[6]

A. Governance

The Federal Reserve expects a firm to have sound governance over its capital planning process. In general, senior management should establish the capital planning process and the board of directors should review and periodically approve that process.

1. Board of Directors

A firm's board of directors is ultimately responsible and accountable for the firm's capital-related decisions and for capital planning. The firm's capital planning should be consistent with the strategy and risk appetite set by the board and with the firm's risk levels, including how risks at the firm may emerge and evolve under stress. The board must annually review and approve the firm's capital plan.[7]

The board should direct senior management to provide a briefing on their assessment of the firm's capital adequacy at least quarterly, and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The briefing should describe whether current capital levels and planned capital distributions remain appropriate and consistent with capital goals (see Section III.D, "Capital Policy"). In their briefing, senior management should also highlight for the board any problem areas related to capital planning identified by senior management, internal audit, or supervisors.

The board should hold senior management accountable for providing sufficient information on the firm's material risks and exposures to inform board decisions on capital adequacy and actions, including capital distributions. Information provided to the board should be clear, accurate, and timely. The board should direct senior management to provide this information at least quarterly and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The information presented to the board should include consideration of a number of factors, such as

- macro-economic conditions and relevant market events;
- current capital levels relative to budgets and forecasts;
- post-stress capital goals and targeted real time capital levels (see section III.D, "Capital Policy");
- enterprise-wide and line-of-business performance;
- expectations from stakeholders (including shareholders, regulators, investors, lenders, counterparties, and rating agencies);
- potential sources of stress to the firm's operating performance; and
- risks that may emerge only under stressful conditions.

After receiving the information, the board should be in a position to understand the major drivers of the firm's projections under a range of conditions, including baseline and stress scenarios.

The board should direct senior management to provide information about the firm's estimation approaches, model overlays, and assessments of model performance (see Appendix A, "Use of Models and Other Estimation Approaches," Appendix B, "Model Overlays," and Appendix C, "Use of Benchmark Models in the Capital Planning Process"). The board should also receive information about uncertainties around projections of capital needs or limitations within the firm's capital planning process to understand the impact of these weaknesses on the process. This information should include key assumptions and the analysis of sensitivity of a firm's projections to changes in the assumptions (see Appendix D, "Sensitivity Analysis and Assumptions Management"). The board should incorporate uncertainties in projections and limitations in the firm's capital planning process into its decisions on capital adequacy and capital actions. It should also review and approve mitigating steps to address capital planning process weaknesses.

The board should direct senior management to establish sound controls for the entire capital planning process. The board should approve policies related to capital planning, and review them annually. The board should also approve capital planning activities and strategies. The board of directors should maintain an accurate record of its meetings pertaining to the firm's capital planning process.

6. The term "capital planning process" used herein, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term "capital adequacy process" used in other Federal Reserve documents.
7. 12 CFR 225.8(e)(1)(iii).

2. Senior Management

Senior management should direct staff to implement board-approved capital policies, capital planning activities, and strategies in an effective manner. Senior management should make informed recommendations to the board regarding the firm's capital planning and capital adequacy, including post-stress capital goals and capital distribution decisions. Senior management's proposed capital goals and capital distributions should have analytical support and take into account the expectations of important stakeholders, including shareholders, rating agencies, counterparties, depositors, creditors, and supervisors.

Senior management should design and oversee the implementation of the firm's capital planning process; identify and assess material risks and use appropriate firm-specific scenarios in the firm's stress test; monitor and assess capital planning practices to identify limitations and uncertainties and develop remediation plans; understand key assumptions used throughout a firm's capital planning process and assess the sensitivity of the firm's projections to those assumptions (see Appendix D, "Sensitivity Analysis and Assumptions Management"); and review the capital planning process at least quarterly.

Senior management should establish a process for independent review of the firm's capital planning process, including the elements outlined in this guidance. The independent review process should be designed to identify the weaknesses and limitations of the capital planning process and the potential impact of those weaknesses on the process. Senior management should also develop remediation plans for any identified weaknesses affecting the reliability of capital planning results. Both the specific identified weaknesses and the remediation plans should be reported to the board of directors in a timely manner.

B. Risk Management

A firm should have a risk management infrastructure that appropriately identifies, measures, and assesses material risks and provides a strong foundation for capital planning.[8] This risk management infrastructure should be supported by comprehensive policies and procedures, clear and well-established roles and responsibilities, and strong and independent internal controls. In addition, the risk management infrastructure should be built upon sound information technology and management information systems. The Federal Reserve's supervisory assessment of the sufficiency of a firm's capital planning process will depend in large part on the effectiveness of the firm's risk management infrastructure and the strength of its process to identify unique risks under normal and stressful conditions, as well as on the strength of its overall governance and internal control processes.

8. 12 CFR 225.8(e)(2).

1. Risk Identification and Assessment Process

A firm's risk identification process should include a comprehensive assessment of risks stemming from its unique business activities and associated exposures. The assessment should include on-balance sheet assets and liabilities, off-balance sheet exposures, vulnerability of the firm's earnings, and other major firm-specific determinants of capital adequacy under normal and stressed conditions. This assessment should also capture those risks that only materialize or become apparent under stressful conditions.

The specifics of the risk identification process will differ across firms given differences in organizational structure, business activities, and size and complexity of operations. However, the risk identification process at all firms subject to this guidance should be dynamic, inclusive, and comprehensive, and drive the firm's capital adequacy analysis. A firm should

- evaluate material risks across the enterprise to ensure comprehensive risk capture on an ongoing basis;
- establish a formal risk identification process and evaluate material risks at least quarterly;
- actively monitor its material risks; and
- use identified material risks to inform key aspects of the firm's capital planning, including the development of stress scenarios, the assessment of the adequacy of post-stress capital levels, and the appropriateness of potential capital actions in light of the firm's capital objectives.

A firm should be able to demonstrate how material risks are accounted for in its capital planning process. For risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions. The firm should also be able to identify risks that may be difficult to quantify and explain how these risks are addressed in the capital planning process. The firm should appropriately segment risks beyond generic categories such as credit risk, market risk, and operational risk.

The Federal Reserve expects a firm to seek input from multiple stakeholders across the organization (for example, senior management, finance and risk professionals, front office and line-of-business leadership) in identifying its material risks. In addition, a firm should update its risk assessment at least quarterly to reflect changes in exposures, business activities, and its broader operating environment.

2. Risk Measurement and Risk Materiality

A firm should have a sound risk measurement process that informs senior management about the size and risk characteristics of exposures and business activities under both normal and stressful operating conditions. A firm is generally expected to use quantitative approaches supported by expert judgment, as appropriate, for risk-measurement.

Identified weaknesses, limitations, biases, and assumptions in the firm's risk measurement processes should be assessed for their potential impact on the integrity of a firm's capital planning process (see Appendix D, "Sensitivity Analysis and Assumptions Management"). A firm should have a process in place for determining materiality in the context of material risk identification and capital planning. This process should include a sound analysis of relevant quantitative and qualitative considerations, including, but not limited to, the firm's risk profile, size, and complexity, and their effects on the firm's projected regulatory capital ratios in stressed scenarios.[9]

A firm should identify how and where its material risks are accounted for within the capital planning process. The firm should be able to specify material risks that are captured in its scenario design, the approaches used to estimate the impact on capital, and the risk drivers associated with each material risk.

As part of its risk measurement processes, a firm should identify and measure risk that is inherent to its business practices and closely assess the reliability of assumptions about risk reduction resulting from risk transfer or risk mitigation techniques (see Appendix D, "Sensitivity Analysis and Assumptions Management"). Specifically, the firm should critically assess the enforceability and effectiveness of any guarantees, netting, and collateral agreements. Assumptions about accessibility and valuation of collateral exposures should also be closely reviewed for reliability given the likelihood that asset values will change rapidly in a stressed market.

C. Internal Controls

A firm should have a sound internal control framework that helps ensure that all aspects of the capital planning process are functioning as designed and result in sound assessments of the firm's capital needs. The framework should include

- an independent internal audit function;
- independent review and validation practices; and
- integrated management information systems, effective reporting, and change control processes.

A firm's internal control framework should support its entire capital planning process, including: the sufficiency of and adherence to policies and procedures; risk identification, measurement, and management practices and systems used to produce input data; and the models, management overlays, and other methods used to generate inputs to post-stress capital estimates. Any part of the capital planning process that relies on manual procedures should receive heightened attention. The internal control framework should also assess the aggregation and reporting process used to produce reports to senior management and to the board of directors and the process used to support capital adequacy recommendations to the board.

In addition, the control framework should include an evaluation of the firm's process for integrating the separate components of the capital planning process at the enterprise-wide level.

9. For simplicity, the terms "quantitative" and "qualitative" are used to describe two different types of approaches, with the recognition that all quantitative estimation approaches involve some qualitative/judgmental aspects, and qualitative estimation approaches produce quantitative output.

1. Comprehensive Policies, Procedures, and Documentation for Capital Planning

A firm should have policies and procedures that support consistent and repeatable capital planning processes.[10] Policies and procedures should describe the capital planning process in a manner that informs internal and external stakeholders of the firm's expectations for internal practices, documentation, and business line controls. The firm's documentation should be sufficient to provide relevant information to those making decisions about capital actions. The documentation should also allow parties unfamiliar with a process or model to understand generally how it operates, as well as its main limitations, key assumptions, and uncertainties.

Policies and procedures should also clearly identify roles and responsibilities of staff involved in capital planning and provide accountability for those responsible for the capital planning process. A firm should also have an established process for policy exceptions. Such exceptions should be approved by the appropriate level of management based upon the gravity of the exception. Policies and procedures should reflect the firm's current practices, and be reviewed and updated as appropriate, but at least annually. A firm should maintain evidence that management and staff are adhering to policies and procedures in practice.

A firm's documentation should cover key aspects of its capital planning process, including its risk-identification, measurement and management practices and infrastructure; methods to estimate inputs to post-stress capital ratios; the process used to aggregate estimates and project capital needs; the process for making capital decisions; and governance and internal control practices. A firm's capital planning documentation should include detailed information to enable independent review of key assumptions, stress testing outputs, and capital action recommendations.

2. Model Validation and Independent Review of Estimation Approaches

Models used in the capital planning process should be reviewed for suitability for their intended uses. A firm should give particular consideration to the validity of models used for calculating post-stress capital positions. In particular, models designed for ongoing business activities may be inappropriate for estimating losses, revenue, and expenses under stressed conditions. If a firm identifies weaknesses or uncertainties in a model, the firm should make adjustments to model output if the findings would otherwise result in the material understatement of capital needs (see Appendix B, "Model Overlays"). If the deficiencies are critical, the firm should restrict the use of the model, apply overlays, or avoid using the model entirely.

A firm should independently validate or otherwise conduct effective challenge of models used in internal capital planning, consistent with supervisory guidance on model risk management.[11] The model review and validation process should include an evaluation of conceptual soundness of models and ongoing monitoring of the model performance. The firm's validation staff should have the necessary technical competencies, sufficient stature within the organization, and appropriate independence from model developers and business areas to provide a critical and unbiased evaluation of the estimation approaches.

A firm should maintain an inventory of all estimation approaches used in the capital planning process, including models used to produce projections or estimates used by the models that generate final loss, revenue, expense, and capital projections.[12] Material models should receive greater attention (see Appendix C, "Use of Benchmark Models in the Capital Planning Process").[13] The intensity and frequency of validation work should be a function of the importance of those models in generating estimates of post-stress capital.

Not all models can be fully validated prior to use in capital planning. However, a firm should conduct a conceptual soundness review of all models prior to their use in capital planning. If such a conceptual soundness review is not possible, the absence of that review should be made transparent to users of model output and the

10. See Instructions for the Capital Planning and Stress Testing Information Collection (Reporting Form FR Y-14A), Appendix A (Supporting Documentation).

11. See SR-11-7. The term "effective challenge" means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.

12. The definition of a model covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.

13. Materiality of the model is a function of both the importance of the business or portfolio assessed and the impact of the model on the firm's overall results.

firm should determine whether the use of compensating controls (such as conservative adjustments) are warranted.

Further, a firm should treat output from models for which there are model risk management shortcomings with caution. In addition, a firm should have compensating controls for known model uncertainties and apply well supported conservative adjustments to model results, as appropriate.

A firm should ensure that benchmark or challenger models that contribute to post-stress capital estimates or are otherwise used explicitly in the capital planning process are identified and subject to validation (see Appendix C, "Use of Benchmark Models in the Capital Planning Process").

3. *Management Information Systems and Change Control Processes*

A firm should have internal controls that ensure the integrity of reported results and that make certain the firm is identifying, documenting, reviewing, and tracking all material changes to the capital planning process and its components. The firm should ensure that such controls exist at all levels of the capital planning process. Specific controls should ensure

- sufficiently sound management information systems to support the firm's capital planning process;
- comprehensive reconciliation and data integrity processes for key reports;
- the accurate and complete presentation of capital planning process results, including a description of adjustments made to compensate for identified weaknesses; and
- that information provided to senior management and the board is accurate and timely.

Many of the processes used to assess capital adequacy, including models, data, and management information systems, are tightly integrated and interdependent. As a result, a firm should ensure consistent change control oversight across the entire firm, in line with existing supervisory guidance.[14] A firm should establish and maintain a policy describing minimum internal control standards for managing change in capital planning process policies and procedures, model development, information technology, and data. Control standards for these areas should address risk, testing, authorization and approval, timing of implementation, post-installation verification, and recovery, as applicable.

4. *Internal Audit Function*

Internal audit should play a key role in evaluating capital planning and the elements described in this guidance to ensure that the entire process is functioning in accordance with supervisory expectations and the firm's policies and procedures. Internal audit should review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, internal audit should ensure appropriate independent review and challenge is occurring at all key levels within the capital planning process.

As discussed further in Appendix E, "Role of the Internal Audit Function in the Capital Planning Process," internal audit staff should have the appropriate competence and influence to identify and escalate key issues. All deficiencies, limitations, weaknesses and uncertainties identified by the internal audit function that relate to the firm's capital planning process should be reported to senior management, and material deficiencies should be reported to the board of directors (or the audit committee of the board) in a timely manner.[15]

D. Capital Policy

A capital policy is a firm's written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions.[16] This includes internal post-stress capital goals (as discussed in more detail below and in Appendix F, "Estimating Impact on Capital Positions") and real-time targeted capital levels; guidelines for dividend payments and stock repurchases; strategies for addressing potential capital shortfalls; and internal governance responsibilities and procedures for the capital policy. The capital policy must be approved by the firm's board of directors or a designated committee of the board.[17]

The capital policy should be reevaluated at least annually and revised as necessary to ad-

15. For additional information on supervisory expectations for internal audit, see SR-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing."

16. 12 CFR 225.8(d)(7).

17. 12 CFR 225.8(e)(1)(iii).

dress changes to the firm's business strategy, risk appetite, organizational structure, governance structure, post-stress capital goals, real-time targeted capital levels, regulatory environment, and other factors potentially affecting the firm's capital adequacy.

A capital policy should describe the firm's capital adequacy decision-making process, including the decision-making process for common stock dividend payments or stock repurchases.[18] The policy should incorporate actionable protocols, including governance and escalation, in the event a post-stress capital goal, real-time targeted capital level, or other early warning metric is breached. The policy should also include elements such as

- roles and responsibilities of key parties, including those responsible for producing analytical materials, reviewing the analysis, and making capital distribution recommendations and decisions;
- factors and key metrics that influence the size, timing, and form of capital actions, and the analytical materials used in making capital action decisions; and
- the frequency with which capital adequacy will be evaluated and the analysis that will be considered in the determination of capital adequacy, including the specific circumstances that activate the contingency plan.

1. Post-Stress Capital Goals

A firm should establish post-stress capital goals that are aligned with its risk appetite and risk profile, its ability to act as a financial intermediary in times of stress, and the expectations of internal and external stakeholders. Post-stress capital goals should be calibrated based on the firm's own internal analysis, independent of regulatory capital requirements, of the minimum level of post-stress capital the firm has deemed necessary to remain a going concern over the planning horizon. A firm should also determine targets for real-time capital ratios and capital levels that ensure that capital ratios and levels would not fall below the firm's internal post-stress capital goals (including regulatory minimums) under stressful conditions at any point over the planning horizon. For more details, see Appendix F, "Capital Policy."

18. Consistent with the Board's November 14, 1985, Policy Statement on the Payment of Cash Dividends, the principles of which are incorporated into this guidance, firms should have comprehensive policies on dividend payments that clearly articulate the firm's objectives and approaches for maintaining a strong capital position and achieving the objectives of the policy statement. See *Bank Holding Company Supervision Manual,* section 2020.5.1.1, Intercompany Transactions (Dividends).

E. Incorporating Stressful Conditions and Events

As part of its capital planning process, a firm should incorporate appropriately stressful conditions and events that could adversely affect the firm's capital adequacy into its capital planning. As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm's activities and associated risks, including those related to the company's capital adequacy and financial condition.[19] More generally, as part of its ongoing capital adequacy assessment, a firm should use multiple scenarios to assess a broad range of risks, stressful, conditions, or events that could impact the firm's capital adequacy.

1. Scenario design

A firm should develop complete firm-specific scenarios that focus on the specific vulnerabilities of the firm's risk profile and operations. The scenario design process should be directly linked to the firm's risk identification process and associated risk assessment. For those aspects of risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions.

In developing its scenarios, the firm should recognize that multiple stressful conditions or events can occur simultaneously or in rapid succession. The firm should also consider the cumulative effects of stressful conditions, including possible interactions among the conditions and second-order or "knock-on" effects.

When identifying and developing the specific set of stressful conditions to capture in its stress scenarios, the firm should engage a broad range of internal stakeholders, such as risk experts, business managers, and senior management, to ensure the process comprehensively takes into account the full range of vulnerabilities specific to the firm.

19. 12 CFR 225.8(e)(2).

2. Scenario narrative

A firm's stress scenario should be supported by a detailed narrative describing how the scenario addresses the firm's particular material risks and vulnerabilities, and how the paths of the scenario variables relate to each other. The narrative should describe the key attributes of the scenario, including any stress events in the scenario, such as counterparty defaults, large operational risk related events, and ratings downgrades. For more details, see Appendix G, "Scenario Design."

F. Estimating Impact on Capital Positions

A firm should employ estimation approaches that allow it to project the impact on capital positions of various types of stressful conditions and events. The firm's stress testing practices should capture the potential increase in losses or decrease in pre-provision net revenue (PPNR) that could result from the firm's risks, exposures, and activities under stressful scenarios. A firm should estimate losses, revenues, expenses, and capital using a sound method that relates macroeconomic and other risk drivers to its estimates. The firm should be able to identify the manner in which key variables, factors, and events in a scenario affect losses, revenue, expenses, and capital over the planning horizon. Projections of losses and PPNR should be done at a level of granularity that allows for the appropriate differentiation of risk drivers, while balancing practical constraints such as data limitations (see Appendix A, "Use of Models and Other Estimation Approaches" and Appendix D, "Sensitivity Analysis and Assumptions Management").

The balance sheet projection process should establish and incorporate the relationships among revenue, expense, and on- and off-balance sheet exposures under stressful conditions, including new originations, purchases, sales, maturities, prepayments, defaults, and other borrower and depositor behavior considerations. A firm should also ensure that changes in its asset mix and resulting RWAs are consistent with PPNR and loss estimates. A firm should be able to identify key risk drivers, variables or factors in the scenarios that generate increased losses, reduced revenues, and changes to the balance sheet and RWAs over the planning horizon (see Appendix H, "Risk-weighted Asset (RWA) Projections").

1. Loss estimation

A firm should estimate losses using a sound method that relates macroeconomic and other risk drivers to losses. A firm should empirically demonstrate that a strong relationship exists between the variables used in loss estimation and prior losses. When using supervisory scenarios, a firm should project additional scenario variables beyond those included in the supervisory scenarios if the additional variables would be more directly linked to particular portfolios or exposures. A firm should include a variety of loss types in its stress tests based on the firm's exposures and activities. Loss types should include retail and wholesale credit risk losses, credit and fair value losses on securities, market and default risk on trading and counterparty exposures, and operational-risk losses.

a. Credit risk losses on loans and securities

A firm should develop sound methods to estimate credit losses under stress that take into account the type and size of portfolios, risk characteristics, and data availability. A firm should understand the key characteristics of its loss estimation approach. In addition, a firm's reserves for each quarter of the planning horizon, including the last quarter, should be sufficient to cover estimated loan losses consistent with generally accepted accounting standards. A firm should account for the timing of loss recognition in setting the appropriate level of reserves at the end of each quarter of the planning horizon.

A firm should test credit-sensitive securities for potential other-than-temporary impairment (OTTI) regardless of current impairment status. The threshold for determining OTTI for structured products should be based on cash-flow analysis and credit analysis of underlying obligors.

b. Fair-value losses on loans and securities

As applicable, a firm should project changes in the fair value of loans and available-for-sale securities (and impaired held-to-maturity securities). The projections should be based on relevant risk drivers, such as changes in credit spreads and interest rates. The firm should ensure that the risk drivers appropriately capture underlying risk characteristics of the loan or security, including duration and the credit risk of the underlying collateral or issuer.

c. Market and default risks on trading and counterparty exposures

A firm should project how the stress affects mark-to-market values and the default risk of its trading and counterparty exposures. A firm should capture all of its trading positions and counterparty exposures, identify all relevant risk factors, and employ sound revaluation methods. As part of its scenario analysis, as described in greater detail in section III.E of this guidance "Incorporating Stressful Conditions," a firm should use scenarios that severely stress the firm's mark-to-market positions and account for the firm's idiosyncratic risks.

d. Operational-risk losses

A firm should maintain a sound process for estimating operational risk losses in its capital planning process. Operational losses can rise from various sources, including inadequate or failed internal processes, people, and systems, or from external events (see Appendix I, "Operational Loss Projections").

A firm should have a structured, transparent, and repeatable framework in place to develop credible loss projections under stress that takes into account the differences in loss characteristics of different types of operational loss events. The approaches used to project operational losses should be well supported and include scenario analysis.

2. *PPNR*

In projecting PPNR, a firm should take into account not only its current positions, but also how its activities, business strategy, and revenue drivers may evolve over time under the varying circumstances and operating environments. The firm should ensure that the various PPNR components, including net interest income, non-interest income and non-interest expense, and other key items projected by the firm such as balance sheet positions, RWA, and losses, are projected in a manner that is internally consistent.

The ability to effectively project net interest income is dependent upon the firm's ability to identify and aggregate current positions and their attributes; project future changes in accruing balances due to a variety of factors; and appropriately translate the impact of these factors and relevant interest rates into net interest income based on assumed conditions. Accordingly, a firm's current portfolio of interest-bearing assets and liabilities should serve as the foundation for its forward-looking estimates of net interest income. Beginning positions, positions added during the planning horizon, and the expected behavior of those positions are critical determinants of net interest income. A firm should have the ability to capture these dynamic relationships under its stress scenarios, and should ensure all related assumptions are well supported (see Appendix D, "Sensitivity Analysis and Assumptions Management").

Non-interest income is derived from a diverse set of sources, including fees, certain realized gains and losses, and mark-to-market income. Non-interest income generally is more susceptible to rapid changes than net interest income, especially if certain market measures move sharply. A firm's projections should incorporate material factors that could affect the generation of non-interest income under stress, including the firm's business strategy, the competitive landscape, and changing regulations.

Non-interest expenses include both expenses that are likely to vary with certain stressful conditions and those that are not. Projections of expenses that are closely linked to revenues or balances should vary with projected changes in revenue or balance sheet levels. Non-interest expense should be projected using either quantitative estimation methods or well-supported judgment, depending on the underlying drivers of the expense item.

3. *Aggregating Estimation Results*

A firm should have well-documented processes for projecting the size and composition of on- and off-balance sheet positions and RWAs over the planning horizon that feed in to the wider capital planning process (see Appendix H, "Risk-weighted Asset (RWA) Projections").

A firm should have a consistently executed process for aggregating enterprise-wide stress test projections of losses, revenues, and expenses, including estimating on- and off-balance sheet exposures, and RWAs, and for calculating post-stress capital positions and ratios. The aggregation system should be able to bring together data and information across business lines, portfolios, and risk types and should include the data systems and sources, data reconciliation points, data quality checks, and appropriate internal control points to ensure accurate and consistent projection of financial data within enterprise-wide scenario analysis. Internal processes for aggregating projections from all relevant systems and regulatory templates should be identified and documented. In addition, the beginning points for projections and scenario variables should align with the end of the historical reference period.

Appendix A: Use of Models and Other Estimation Approaches

Projections of losses and PPNR under various scenarios are key components of enterprise-wide stress testing and capital planning. The firm should ensure that its projection approaches, including any specific processes or methodologies employed, are well supported, transparent, and repeatable over time.

A firm should generally use models or other quantitative methods, supported by expert judgment as appropriate, as the basis for generating projections. In limited instances, such as in cases of new products or businesses, or where insufficient data are available to support modeled approaches, qualitative approaches may be appropriate in lieu of quantitative methods to generate projections for those specific areas.

A firm should adhere to supervisory guidance on model risk management (SR-11-7) when using models, and should have sound internal controls around both quantitative and qualitative approaches.

1. Quantitative Approaches

Firms use a range of quantitative approaches for capital planning. The type and level of sophistication of any quantitative approach should be appropriate for the type and materiality of the portfolio or activity for which it is used and the granularity and length of available data. The firm should also ensure that the quantitative approach selected generates credible estimates that are consistent with assumed scenario conditions.

A firm should separately estimate losses and PPNR for portfolios or business lines that are either sensitive to different risk drivers or sensitive to risk drivers in a markedly different way, particularly during periods of stress. For instance, losses on commercial and industrial loans and commercial real estate (CRE) loans are, in part, driven by different risk factors, with the path of property values having a pronounced effect on CRE loan losses, but not necessarily on other commercial loans. Similarly, although falling property values affect both income-producing CRE loans and construction loans, the effect often differs materially due to structural differences between the two portfolios. Such differences can become more pronounced during periods of stress.

A firm should have a well-supported variable selection process that is based on economic intuition, in addition to statistical significance where applicable. The firm should provide a clear rationale for the macroeconomic variables or other risk drivers chosen for all quantitative approaches, including why certain variables or risk drivers were not selected.

A firm should estimate losses and PPNR at a sufficiently disaggregated level within a given portfolio or business line to capture observed variations in risk characteristics (for example, credit score or loan-to-value ratio ranges for loan portfolios) and performance across sub-portfolios or segments under changing conditions and environments. Loss and PPNR estimates should also be sufficiently granular to capture changing exposure levels over the planning horizon. However, in assessing the appropriate level of granularity of segments, a firm should factor in issues such as the availability of data or the costs and benefits of model complexity. For example, when projecting losses for a more diverse portfolio with a range of borrower risk characteristics and observed historical performance, firms should segment the portfolio more finely based on key risk attributes unless the segments lack sufficient data observations to produce reliable model estimates.

a. Use of Data

A firm should use internal data to estimate losses and PPNR as part of its enterprise-wide stress testing and capital planning practices.[20] However, it may be appropriate for a firm to use external data if internal data limitations exist as

20. Firms are required to collect and report a substantial amount of risk information to the Federal Reserve on FR Y-14 schedules. These data may help to support the firms' enterprise-wide stress test. See Capital Assessments and Stress Testing information collection, Reporting Forms FR Y-14A, Q, and M.

a result of systems limitations, acquisitions, or new products, or other factors that may cause internal data to be less relevant for developing stressed estimates. If a firm uses external data to estimate its losses or PPNR, the firm should ensure that the external data reasonably approximate underlying risk characteristics of the firm's portfolios or business lines. Further, the firm should make adjustments to estimation methods or outputs, as appropriate, to account for identified differences in risk characteristics and performance reflected in internal and external data. In addition, firms should relate their projections under stress scenarios to the characteristics of their assets and activities described in their internal data.

A firm should generally include all available data in its analysis, unless the firm no longer engages in a line of business or its activities have changed such that the firm is no longer exposed to a particular risk. The firm should not selectively exclude data based on the changing nature of the ongoing business or activity without strong empirical support. For example, excluding certain loans only on the basis that they were underwritten to standards that no longer apply or on the basis that the loans were acquired by the firm is not sound practice.

b. Use of Vendor Models[21]

A firm should have processes to confirm that any vendor or other third-party models it uses are sound, appropriate for the given task, and implemented properly. A firm should clearly outline limitations and uncertainties associated with vendor models.

Vendor model management includes having an appropriate vendor selection process, assigning staff to oversee and maintain the vendor relationships, and ensuring that there is sufficient documentation of vendor models. A firm should also confirm that vendor models have been sufficiently tested and that data used by the vendor are appropriate for use at the firm. The firm should also establish key measures for evaluating vendor model performance and tracking those measures whenever those vendor models are used, as well as assess vendor models (including to incorporate any relevant updates or changes). Vendor models should be subject to validation processes similar to those employed for models developed internally.

2. *Assessing Model Performance*

A firm should use measures to assess model performance that are appropriate for the type of model being used. The firm should outline how each performance measure is evaluated and used. A firm should also assess the sensitivity of material model estimates to key assumptions and use benchmarking to assess reliability of model estimates (see Appendix C, "Use of Benchmark Models in the Capital Planning Process" and Appendix D, "Sensitivity Analysis and Assumptions Management").

A firm should employ multiple performance measures and tests, as generally no single measure or test is sufficient to assess model performance. This is particularly the case when the models are used to project outcomes in stressful circumstances. For example, assessing model performance through out-of-sample and out-of-time back testing may be challenging due to the short length of observed data series or the paucity of realized stressed outcomes against which to measure the model performance. When using multiple approaches, the firm should have a consistent framework for evaluating the results of different approaches and supporting rationale for why it chose the methods and estimates ultimately used.

A firm should provide supporting information about models to users of the model output, including descriptions of known measurement problems, simplifying assumptions, model limitations, or other ways in which the model exhibits weaknesses in capturing the relationships being modeled. Providing such qualitative information is critical when certain quantitative criteria or tests measuring model performance are lacking.

3. *Qualitative Approaches*

A qualitative approach to project losses and PPNR may be appropriate in limited cases where severe data or other limitations preclude the development of reliable quantitative approaches. The firm should document why such an approach is reliable for generating projections and is justified based on business need.

When using a qualitative approach, the firm should substantiate assumptions and estimates using analysis of current and past risk drivers and performance, internal risk identification, forward-looking risk assessments, external analy-

21. See SR-13-19/CA 13-21, "Guidance on Managing Outsourcing Risk." (Refer to this manual's section 2124.3)

sis or other available information. The firm should conduct an initial and ongoing assessment of the performance and viability of the qualitative approach. The processes used in qualitative projection approaches should be transparent and repeatable. The firm should also clearly document qualitative approaches and key assumptions used.

Qualitative approaches should be subject to independent review, although the review may differ from the review of quantitative approaches or models. The level of independent review should be commensurate with the

- materiality of the portfolio or business line for which the qualitative approach is used;
- impact of the approach's output on the overall capital results; and
- complexity of the approach.

Firm staff conducting the independent review of the qualitative approaches should *not* be involved in developing, implementing or using the approach. However, this staff can be different than the staff that conducts validation of quantitative approaches or models.

Appendix B: Model Overlays

A firm may need to rely on overrides or adjustments to model output (model overlay) to compensate for model, data, or other known limitations.[22] If well-supported, use of a model overlay can represent a sound practice.

A model overlay may be appropriate to address cases of identified weaknesses or limitations in the firm's models that cannot be otherwise addressed, or for select portfolios that have unique risks that are not well captured by the model used for those exposures and activities.[23] In contrast, a model overlay that functions as a general "catch all" buffer on top of targeted capital levels to account for model weaknesses generally would not represent sound practice.[24]

A firm should also avoid extensive reliance on model overlays throughout its capital planning process, particularly for material portfolios or where an overlay would have a large effect on projections. Further, a firm should reduce its reliance on overlays by addressing the underlying model issue over time. Firms should evaluate the reasons for overlays and track and analyze overlay performance.

As part of its overall documentation of methodologies used in stress testing, a firm should document its use of model overlays. Firms must be able to identify the main factors necessitating the use of an overlay as well as how the selected overlay addresses those factors. Key assumptions related to the overlay should be clearly outlined and consistent with assumed scenario conditions.

1. *Process for Applying Overlays*

A firm should establish a consistent firm-wide process for applying model overlays and for controls around model overlays. The process can vary by model type and portfolio, but should contain some key elements, as described below. This process should be outlined in the firm's policies and procedures and include a specific exception process for the use of overlays that do not follow the firm's standards. As part of model development, implementation and use, overlays should be well documented, supported and communicated to senior management. Model overlays should be applied in an appropriate, systematic, and transparent manner. Model results should also be reported to senior management with and without overlay adjustments.

Model overlays (including those based solely on expert or management judgment) should be subject to validation or some other type of effective challenge.[25] Consistent with the materiality principle in SR-11-7, the intensity of model risk management for overlays should be a function of the materiality of the model and overlay. Effective challenge should occur before the model overlay is formally applied, not on an ex-post basis.

22. For the purposes of this appendix, the term "overlays" will be used to cover overrides, overlays, or other adjustments applied to model output. Firms should follow expectations set forth in SR-11-7, relating to overlays.

23. Expectations for the use of judgment within model development is discussed in Appendix A, "Use of Models and Other Estimation Approaches."

24. Firms may choose to apply overall capital buffers as an additional conservative measure, beyond overlays applied at the model level. Overall capital buffers should be subject to the same governance processes applicable to model overlays, as described in section 2 of this appendix. However, supervisors emphasize that having such a buffer should not in any way replace sound model risk management practices for overlays at the individual model level or address the need for the overlay at the individual model level.

25. The term "effective challenge" means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.

Validation or other type of effective challenge of model overlays may differ from quantitative model validation. Staff responsible for effective challenge should *not* also be setting the overlay itself or providing significant input to the level or type of overlay. For example, a committee that develops an overlay should not also be responsible for the effective challenge of the overlay. In addition, staff engaging in the effective challenge of model overlays should meet supervisory expectations relating to incentives, competence, and influence (as outlined in SR-11-7). Staff conducting effective challenge should confirm that model overlays are sufficiently conservative to compensate for model limitations and associated uncertainties in model estimates. Sensitivity analysis should be used to help quantify the overlay.

2. *Governance of Overlays*

Overlays and adjustments used by a firm should be reviewed and approved at a level within the organization commensurate with the materiality of that overlay or adjustment to overall pro forma results. In general, the purpose and impact of overlays should be communicated to senior management in a manner that facilitates an understanding of the issues by the firm's senior management. Material overlays to the model—either in isolation or in combination—should receive a heightened level of support and scrutiny, up to and including review by the firm's board of directors (or a designated committee), in instances where the impact on pro forma results is material.

Senior management should periodically receive a high-level description of the use of model overlays. This description should include the number of models having overlays, whether more material models have overlays, whether overlays on the whole result in more or less conservative projections, and the range of the effect of overlays on the model output (especially for those cases where the overlays produce less conservative outcomes).

Senior management should be able to independently assess the reasonableness of using an overlay to capture a particular risk or compensate for a known limitation. Extensive use of overlays should trigger discussion as to whether new or improved modeling approaches are needed to reduce overlay dependency. Signs that the underlying model needs revision or redevelopment include a high rate of overrides or overrides that consistently affect model performance.

Appendix C: Use of Benchmark Models in the Capital Planning Process

As noted in Appendix A, "Use of Models and Other Estimation Approaches," a firm should use a variety of methods, including benchmarking, to assess model performance and gain comfort with model estimates. A firm should use benchmark or challenger models to assess the performance of its primary models for all material portfolios or to supplement, where appropriate, the primary models.[26] Such models should be used in conjunction with other aspects of benchmarking, such as comparing model results to actual market data, internal firm data, data from similar firms or portfolios, or judgmental estimates by business line experts. A firm should also use benchmark models during validation as an additional check on the primary model and its results.

Use of benchmark models is particularly important when primary models have exhibited significant deficiencies or are still under development. For instance, a firm's primary model may use a preferred methodology, but lack a rich data set to support modeled estimates. In these cases, the firm should use benchmark models based on different data and modeling approaches to provide additional checks on primary model estimates. To the extent that a benchmark model highlights that a primary model has flaws (e.g., the model is producing output that is vastly different from experience during prior periods of stress), a firm should analyze whether it would be appropriate to adjust the model specification, apply model overlays, or develop different estimation approaches.

Benchmark models that are developed and run independently of primary models can be used to more effectively calibrate the firm's final estimates. For example, a firm can use benchmark model outputs to substantiate model overlays, given differences in risk capture between primary and benchmark models. This type of "triangulation" is especially suitable for those areas of modeling that present considerable uncertainty.

Benchmark models used to arrive at the firm's final estimates should be subject to model risk

26. Note that the terms "benchmark model" and "challenger model" are used interchangeably for purposes of this appendix to mean a model to support or give additional perspective to a primary model.

management. The intensity and frequency of validation or other type of effective challenge of benchmark models of a firm should correspond to the importance of those models in generating estimates. For example, if the output of a benchmark model is averaged with primary model results to develop final estimates, or if the benchmark model is used to develop overlays or overrides for the primary model, that model should be subject to more intensive validation.

Benchmark models that are used only during the validation process and do not contribute directly to the firm's estimates do not need to be validated. However, a firm should assess the rigor of all benchmark models and benchmark data used to ensure they provide reasonable comparisons.

Appendix D: Sensitivity Analysis and Assumptions Management

A firm should understand the sensitivity of its stress testing estimates used in capital planning to the various inputs and assumptions. In addition, sensitivity analysis should be used to test the robustness of quantitative approaches and models and enhance reporting to the firm's senior management, board of directors, and supervisors. A firm should ensure that it identifies, documents, and manages the use of all key assumptions used in capital planning.

1. Sensitivity Analysis

Understanding and documenting a range of potential outcomes provides insight into the inherent uncertainty and imprecision around pro forma results. A firm should assess the sensitivity of its estimates of capital ratios, losses, revenues, and RWAs to key assumptions and uncertainty across the entire firm's projections under stress. Through this assessment, a firm should calculate a range of potential estimates based on changes to assumptions and inputs. Examples of assumptions that generally should be subject to sensitivity analysis include projected market share, size of the market, cost and flow of deposits, utilization rate of credit lines, discount rates, or level and composition of trading assets and RWA.

A firm should also evaluate the sensitivity of models to key assumptions to evaluate model performance, assess the appropriateness of assumptions, and understand uncertainty associated with model output.

Sensitivity analysis for capital planning models should be applied in a manner consistent with the expectations outlined in the Federal Reserve's supervisory guidance on model risk management (refer to SR-11-7). Sensitivity analysis should be conducted during model development and during model validation to provide information about how models respond to changes in key inputs and assumptions, and how those models perform in stressful conditions. In addition, sensitivity analysis should be applied to understand the range of possible results from vendor-provided models and vendor-provided scenario forecasts that have opaque or proprietary elements. Sensitivity analysis should be used to provide information to help users of model output interpret results, but does not have to result in changes to models or model outputs. Changes made based on sensitivity analysis should be clearly documented and justified.

A firm should ensure that the key sensitivities are presented to senior management and the board in advance of decision-making around the firm's capital plan and capital actions. Sensitivity analysis should also be used to inform senior management, and, as appropriate, the board of directors about the potential uncertainty associated with models employed of the firm's projections under stress.

2. Assumptions Management

A firm should clearly document assumptions when estimating losses, PPNR, and balance sheet, and RWA components. Documentation should include the rationale and empirical support for assumptions and specifically address how those assumptions are consistent with and appropriate under the firm's scenario conditions.

A firm's rationale for assumptions used in capital planning should be consistent with the different effects of scenario conditions, shifts in portfolio mix, and growth or decline in balances projected over the planning horizon. For example, the firm should scrutinize and support any assumptions about sizeable loan growth during a severe economic downturn.

A firm should generally use conservative assumptions, particularly in areas of high uncertainty. The firm should provide greater support for assumptions that appear optimistic or otherwise appear to benefit the firm (such as loss reduction or revenue enhancement). A firm should not assume that senior management will be able to realize favorable strategic actions that cannot be reasonably assured in stress scenarios given the high level of uncertainty around market conditions. Further, a firm should not assume that it would have the perfect foresight that would allow it, for example, to make significant expense reductions in the first quarter of the forecast horizon in anticipation of the forthcoming economic deterioration described in the scenario.

A firm should not always assume that historical patterns will repeat. For example, a firm should not assume that if it has suffered no or minimal losses in a certain business line or product in the past, such a pattern will continue. In addition, a firm should carefully analyze effects of any structural changes in customer base, product, and financial markets on its projections, as these changes could significantly affect a firm's performance under stress scenarios. Furthermore, the firm should explore the potential effects of changes in assumed interrelationships among variables and the behavior of exposures. The firm should also explicitly justify, document, and appropriately challenge any assumptions about diversification benefits.

A firm should confirm that key assumptions used in vendor or other third-party products are transparent and have sufficient support before using the products in stress testing. The firm should limit use of vendor products whose assumptions are not fully transparent or supported or use those products only in conjunction with another approach or compensating controls (e.g., overlays).

Appendix E: Role of the Internal Audit Function in the Capital Planning Process

A firm's internal audit function should play a key role in evaluating the adequacy of the firm's capital planning process and in assessing whether the risk management and internal control practices supporting that process are comprehensive and effective. A firm should establish an audit program around its capital planning process that is consistent with SR-13-1, "Supplemental Policy Statement on the Internal Audit Function and its Outsourcing."

1. Responsibilities of Audit Function

The internal audit function should identify all auditable processes related to capital planning and develop an associated audit plan. The audit function should also perform substantive testing to ascertain the effectiveness of the control framework supporting the firm's capital planning process, communicate identified limitations and deficiencies to senior management, and communicate material limitations and deficiencies to the board of directors (or the audit committee of the board). The audit function should comprehensively cover the firm's capital planning process.

The internal audit function should perform periodic reviews of all aspects of the internal control framework supporting the capital planning process to ensure that all individual components as well as the entire process are functioning in accordance with supervisory expectations and the firm's policies and procedures. The internal audit function should also review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, the internal audit function should ensure appropriate independent review is occurring at various levels within the capital planning process.

A firm's internal audit staff should have the appropriate competence and stature to identify and escalate key issues when necessary. Adequate quantitative expertise is needed to assess the effectiveness of the capital planning processes and procedures. The role of audit staff is to evaluate whether the capital planning process is comprehensive, rigorous, and effective. The internal audit function may also rely on an independent third party external to the firm to complete some of the substantive testing as long as the internal audit function can demonstrate proper independence of the third-party from the area being assessed and provide oversight over the execution and quality of the work.

Other supervisory expectations for the internal audit function relating to the capital adequacy process include

- verifying that acceptable policies are in place and that staff comply with those policies;
- assessing accuracy and completeness of the model inventory;
- evaluating procedures for updating processes and ensuring appropriate change/version controls;
- confirming that staff are meeting documentation standards, including reporting;
- reviewing supporting operational systems and evaluating the reliability of data used in the capital planning process; and
- reviewing the quality of any work conducted by external parties.

2. *Development of Audit Plan*

The internal audit function should have a documented plan describing its strategy to assess the processes and controls supporting the firm's capital planning process. When defining the annual audit universe and audit plan, the internal audit function of a firm should focus on the most significant risks relating to the capital planning process. The firm may leverage existing or regularly scheduled audits to ensure coverage of all the capital planning process components; however, the findings and conclusions of these audits should be incorporated into the overall summary of audit activities and conclusions regarding the firm's capital planning process.

The internal audit function should also establish a process for reviewing and updating, as appropriate, its audit plan annually to account for material changes to the firm's capital planning process, internal control systems, infrastructure, work processes, business lines, or changes to relevant laws and regulations. The firm should also ensure that the periodic assessment of the capital planning process is supported by a reliable and current assessment of the individual components.

3. *Briefings to Senior Management and Board*

On an annual basis, the internal audit function should report to senior management and the board of directors on the capital planning process to inform recommendations and decisions on the firm's capital plan. The report should provide an opinion of the capital planning process, a statement of the effectiveness of the controls and processes employed, a status update on previously identified issues and remediation plans, and any open issues or uncertainties related to the firm's capital plan. Any key processes that are not comprehensively reviewed and tested, due to timing or significant changes in processes, should be clearly documented and identified as areas with potential heightened risk. In addition, a firm's internal audit function should brief the board of directors (or a designated committee thereof) and senior management at least quarterly on the status of key findings relating to the capital planning process.

The internal audit function should track responses to its findings and report to the board any cases in which senior management is not implementing required changes related to audit findings or is doing so with insufficient intensity. In addition, the internal audit function should report any identified material deficiencies, limitations, or weaknesses related to the firm's capital planning process to the board of directors and senior management in a timely manner.

Appendix F: Capital Policy

A firm's capital policy should describe how the firm manages, monitors, and makes decisions regarding capital planning.[27] The policy should include internal post-stress capital goals and real-time targeted capital levels; guidelines for dividends and stock repurchases; and strategies for addressing potential capital shortfalls.

A firm's capital policy should describe the manner in which consolidated estimates of capital positions are presented to senior management and the board of directors. The capital policy should require staff with responsibility for developing capital estimates to clearly identify and communicate to senior management and board of directors the key assumptions affecting various components that feed into the aggregate estimate of capital positions and ratios. The capital policy should require that aggregated results be directly compared against the firm's stated post-stress capital goals, and that those comparisons are included within the standard reporting to senior management and the board of directors.

1. *Post-Stress Capital Goals*

Post-stress capital goals should provide specific minimum thresholds for the level and composition of capital that the firm intends to maintain during a stress period. Post-stress capital goals should include any capital measures that are relevant to the firm. The firm should be able to demonstrate through its own internal analysis, independently of regulatory capital requirements, that remaining at or above its internal post-stress capital goals will allow the firm to continue to operate. Capital goals should take into consideration the uncertainty inherent in capital planning, as well as the economic and market outlook.

27. A capital policy is a firm's written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions. 12 CFR 225.8(d)(7).

The capital policy should describe how senior management and the board concluded that the firm's post-stress capital goals are appropriate, sustainable in different conditions and environments, and consistent with its strategic objectives, business model, and capital plan. In addition, the capital policy should describe the process by which the firm establishes its post-stress capital goals, and include the supporting analysis underpinning the goals chosen by the firm.

A firm should annually review its capital goals, evaluate whether its post-stress capital goals are still appropriate based on changes in operating environment, business mix, or other conditions, and adjust those goals as needed.

A firm should adjust its real-time capital targets (that is the amount of current capital it holds above its post-stress capital goals to ensure it does not fall below those goals under stress) more frequently than it adjusts capital goals, based on changes in the business mix, operating environment, or other current conditions and circumstances.

2. *Dividends and Stock Repurchases*

A firm's capital policy should describe the processes relating to common stock dividend and repurchase decisions, including the processes to determine the timing, form, and amount of all planned distributions. The capital policy should also specify the analysis and metrics that senior management and the board use to make capital distribution decisions. The analysis should include strategic considerations such as new business initiatives, potential acquisitions, and the other relevant factors.

The capital policy should identify the types of calculations and analysis that support a firm's proposed capital actions and determine the amount of capital available for distribution at any given time. For example, a firm should develop and use payout ratio limits in the decision making process. While payout ratio limits or targets should not be the single determining factor, the capital policy should describe how payout ratio limits or targets are considered, including how they are consistent with firm's strategic goals, how they were derived, and what analysis was used to determine the appropriate amount of capital to distribute in a given period. Further, a firm should include in its capital policy threshold levels for payout ratios that trigger management action. Such action should include escalation to the board and potential suspension of capital distributions. Escalation protocols should be clear, credible, and actionable in the event of an actual or projected target is breached.

3. *Contingency Plans for Capital Shortfalls*

A firm's capital policy should include specific capital contingency actions the firm would take to remedy any current or prospective deficiencies in its capital position. The firm's capital contingency plan should reflect strategies for identifying and addressing potential capital shortfalls and specify circumstances under which the board of directors and senior management will revisit planned capital actions or otherwise institute contingency measures.[28] A contingency plan should include a set of thresholds for metrics or events that provide early warning signs of capital deterioration and that trigger management action or scrutiny.[29] Additionally, triggers for more severe levels of deterioration should be linked to escalation procedures for more immediate management action and should be consistent with triggers in the firm's recovery plan. Triggers should reflect both point-in-time and forward-looking measures (both baseline and stress).

Capital contingency plans should include options for actions that a firm would consider taking to remedy any current or prospective deficiencies in its capital position, such as reducing or ceasing capital distributions, raising additional capital, reducing risk, or employing other means to preserve existing capital. Contingency options in the firm's capital policy should be consequential, realistic, actionable, and comprehensive.

Capital contingency plans should include a detailed explanation of the circumstances in which the firm would consider implementing these options, including when it would reduce or suspend a dividend or repurchase program or not execute a previously planned capital action.

28. Capital contingency planning should be closely integrated with the broader crisis management framework, including recovery and other contingency planning efforts focused on ensuring sustainability under a broad range of internal or external stresses. See SR-14-1, "Heightened Supervisory Expectations for Recovery and Resolution Preparedness for Certain Large Bank Holding Companies," and SR-14-8, "Consolidated Recovery Planning for Certain Large Domestic Bank Holding Companies."

29. Capital contingency plans may include triggers for liquidity, earnings, debt and credit default swap spreads, ratings downgrades, stock performance, supervisory actions, general market stress, or other noncapital metrics.

The capital contingency plans should specify the type of information that would be provided to decision makers when the firm's current or projected capital levels have deteriorated, including how management would present options to address the capital position and the long-term viability of the firm. Contingency options should be ranked according to ease of execution and impact and should incorporate an assessment of stakeholder reactions. All options should be evaluated for their feasibility and the reasonableness of underlying assumptions (such as whether a firm would be able to raise capital or draw on capital from another entity during a period of stressful market conditions).

Appendix G: Scenario Design

As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm's risk profile and operations, including those related to the company's capital adequacy and financial condition.[30] The firm's stress scenario should be at least as severe as the Federal Reserve's severely adverse supervisory scenario, measured in terms of its effect on net income and other elements that affect capital.[31]

As noted in the core document, a firm should develop at least one complete firm-specific scenario that focuses on the specific vulnerabilities of the firm's risk profile and operations. The firm's scenario should be carefully tailored to the idiosyncratic risks of the firm, as defined through the firm's internal material risk identification process, and should incorporate circumstances that are particularly stressful to the firm, given the firm's idiosyncratic risks and key vulnerabilities. Such circumstances include those affecting the firm's particular business model, revenue drivers, mix of assets and liabilities, geographic footprint, portfolio characteristics, and specific operational risk vulnerabilities. The firm can incorporate the idiosyncratic stress considerations in macroeconomic and financial market variables or a discrete stress event included in the scenario. A firm-specific scenario would not meet supervisory expectations if it is not tailored to the firm's activities and risks. This is the case even if the severity is generally equivalent to the supervisory stress scenarios or if the post-stress capital ratios are lower than those under the supervisory severely adverse scenario.

The stress scenario should include stressful circumstances and events that could, on a standalone basis or in combination, reduce the firm's capital levels and ratios and potentially impede the firm's ability to operate as a going concern, and cover material risks to which the firm is exposed over the course of an annual planning cycle. A firm's scenario should include factors that capture economy- or market-wide stresses and idiosyncratic risks that can put a strain on the firm. A firm should also take into account conditions and events that have not previously occurred, but that may pose a significant threat to the firm given its exposures, risk profile, and business strategy.

Use of Multiple Scenarios

In addition, a firm should use multiple scenarios as part of its ongoing capital adequacy assessment to assess a broad range of risks, stressful conditions, or events that could impact the firm's capital adequacy. This assessment should inform development of the internal stress scenario(s) used in the firm's plan, the firm's post-stress capital goals, and its current capital targets. The firm's scenarios should collectively address all material risks to which the firm is exposed over the course of an annual planning cycle.

In designing its stress scenarios, a firm should incorporate risks and vulnerabilities that arise from multiple factors, sources and events. Historical data may provide a starting point for scenarios, but a firm should also consider other data sources and challenge conventional assumptions when identifying the stressful conditions and events that could adversely affect the firm's capital adequacy. In certain instances, scenarios that include economic and financial market variables that deviate from historical experience and correlations are appropriate if, for example, previously unobserved vulnerabilities exist in certain sectors of the economy or financial markets. In addition, the firm should not exclude experiences that have occurred outside its own history

30. 12 CFR 225.8(e)(2). In addition, a firm is required to report to the Federal Reserve its projections under a baseline scenario, which captures the firm's view of the likely operating environment over the planning horizon. A firm may use the Board's baseline scenario for its own baseline scenario if the firm can demonstrate that the Board's baseline scenario is appropriate for the firm's own risks, activities, and outlook; however, a firm cannot use the Board's severely adverse scenario for its own stress scenario.

31. For guidance on the severity of the scenarios, a firm should review the Board's "Policy Statement on the Scenario Design Framework for Stress Testing," which sets forth the Board's approach to designing the severely adverse scenario. See 12 CFR part 252, appendix A.

when designing stress scenarios, particularly if the firm has recently expanded its business to include new products, markets, or customers.

The macroeconomic variables used in a given scenario should collectively describe the general operational environment considered in the scenario. A firm should ensure that the scenario includes sufficient macroeconomic variables to support its stress testing estimation methods. While a firm should assess the internal consistency of the scenario, the firm should evaluate whether deviations from historically observed relationships among macroeconomic variables that increase the degree of stress placed on the firm may be appropriate.

Depending on the significance of market risk in a firm's overall risk profile, the firm's stress scenarios should include an adverse movement in financial market variables, such as asset prices, spreads, and rates, and related risk factors that impact a firm's trading exposures. The firm should base market risk factors in the scenario on a thorough evaluation of the specific positions of the firm and the material risks coincident with those positions. A firm should limit use of past periods of financial market stress that do not sufficiently stress the firm's current positions.

Appendix H: Risk-weighted Asset (RWA) Projections

A firm should maintain a sound process for projecting RWAs over the planning horizon. The firm's initial RWA calculations should be consistent with applicable regulatory capital requirements. In addition, the firm's projections of RWAs should be developed in a fashion consistent with the scenario conditions and in accordance with applicable regulatory capital requirements.

1. Initial RWA Calculations

Starting balances for both on- and off-balance sheet exposures and applicable risk weights form the foundation for estimates of post-stress capital ratios. Therefore, firms should verify carefully the accuracy of these starting balances. Moreover, deficiencies in starting RWA calculations are generally compounded in RWA projections over the planning horizon. A firm should ensure that it has sound controls around its RWA calculation and regulatory reporting processes as part of the firm's broader data governance program.

2. RWA Projections

A firm should ensure that RWA projections are consistent with a given scenario and incorporate the impact of projected changes in exposure amounts and risk characteristics of on- and off-balance sheet exposures under the scenario. A firm should demonstrate that assumptions associated with RWA projections are clearly conditioned on a given scenario and are consistent with stated internal and external business strategies. In addition, firms should ensure that projected market risk-weighted assets (market RWAs) are consistent with market factors (e.g., volatility levels, equity index levels, bond spreads) and assumptions around the size and composition of their trading assets.

A firm should document assumptions for projecting RWAs and their relationship to the RWA projections. If the firm's models for projecting RWAs rely upon historical relationships, the firm should provide a description of the historical data used and clearly describe why these relationships are expected to be maintained under a given scenario. Further, a firm should analyze the appropriateness of assumptions regarding the following:

- any aggregation of balance projections by exposure type or characteristic (e.g., balances for exposures that do not distinguish between amounts that are considered past due and those that are current) for purposes of applying corresponding risk weights;
- any use of average or effective risk weights based on the firm's as-of date portfolio composition or historical trend; and
- any exposure types for which RWAs are held constant over the projection horizon.

For purposes of projecting RWAs under the standardized approach, a firm should project balances, risk characteristics, and calculation parameters with appropriate consistency and granularity to facilitate application of appropriate regulatory risk weights for its on- and off-balance sheet exposures.[32] In particular, RWA projections should include information sufficient to assess the impact of potential changes to the following:

32. 12 CFR part 217, subpart D.

- counterparty mix, collateral mix, collateral haircuts, and netting assumptions for derivatives and repo-style transactions;
- default fund assumptions for derivatives that are centrally cleared;
- simplified supervisory formula approach (SSFA) input parameters for securitization exposures;
- organization for Economic Cooperation and Development (OECD) Country Risk Classifications (CRCs) or default status relating to foreign exposures;
- the utilization rate of off-balance sheet lines of credit;
- the mix between unconditionally cancellable and conditionally cancellable off balance sheet exposures;
- the volume of residential mortgage exposures that qualify for 50 percent risk weight, and;
- the volume of past due exposures as defined under Regulation Q.[33]

3. Market Risk-weighted Asset Projections

The methods and processes used to project market RWAs will differ across firms, in part as a function of the combination of model and nonmodel based methods used to determine starting market RWAs. However, as a general matter, market RWAs are expected to be positively correlated to volatility, spreads, or other relevant market factors, holding all things equal. If a firm projects flat or declining market RWAs over the planning horizon under the stress scenarios, the firm should provide support for the reasonableness of these assumptions under stressful market conditions. In addition, the firm should demonstrate that those assumptions are applied consistently across the enterprise-wide stress testing process, including for revenue projections.

If a firm that is not currently subject to the market risk rule projects its trading assets and trading liabilities to grow over the planning horizon, it should assess whether the projected growth would require the firm to calculate market RWA under the regulatory capital rule.[34] The firm should estimate the effect of market RWAs, if applicable, on its projected capital ratios and document the process used to project market RWAs in its capital plan.

4. Independent Review of RWA Reporting and Projections

A firm should implement and document an independent review of RWA regulatory reporting by the firm's internal audit function or another independent control function. The independent review should ensure point-in-time RWA calculation processes appropriately capture all relevant on- and off-balance sheet exposures and are consistent with applicable risk-weighting methodologies to which the firm is subject under Regulation Q. The independent review should be conducted by a party with the necessary expertise to perform such reviews but with independence from the assignment of the risk weights for regulatory reporting purposes. The review should provide reasonable assurance that the initial RWAs are accurate and that the methods used to project RWAs are sound. Documentation of the independent review should clearly describe the scope of the review, outcomes and findings of the review, and any associated remediation efforts. A firm should also ensure that the underlying data processes supporting RWA projections include appropriate controls, reconciliations and attestations, and that data integrity testing is conducted by an independent party.

Appendix I: Operational Loss Projections

A firm faces a wide range of operational risk in conducting its business operations. Operational losses can arise from various sources, including inadequate or failed internal processes, people, and systems, or from external events, and can differ in frequency and severity. For example, some operational loss events, such as credit card fraud, are often more predictable as they occur at high frequency, but generally have low loss severity. The outcome of other events, such as major litigation, are less certain and can result in outsized losses.

1. Risk Identification Process

A firm should maintain a sound process for estimating operational risk losses in its capital planning process, taking into account the differences in loss characteristics of different operational loss event types. A firm's risk identification process should include the evaluation of the type of operational risk loss events to which the

33. 12 CFR 217.32(k).
34. 12 CFR 217.201.

firm is exposed and the sensitivity of those events to internal and external operating environments.

The firm-specific scenario submitted in a firm's capital plan should capture the firm's material operational risks, be designed with the firm's particular vulnerabilities in mind, and include potential firm-specific events such as system failures, or litigation-related losses. The firm should evaluate both the firm's own loss history and the large loss events experienced by industry peers with similar business mix and overall operational risk profiles.

2. Approaches to Operational Loss Estimation

The firm should have transparent and well-supported estimation approaches based on both quantitative analysis and expert judgment, and should not rely on unstable or unintuitive correlations to project operational losses. Scenario analysis should be a core component of the firm's operational loss projection approaches.

Certain operational risks, particularly those most likely to give rise to large losses, often may not have measureable relationships to the overall scenario conditions. In addition, large operational loss events are often idiosyncratic, limiting the relevance of historical data. The firm should also limit dependence on distribution-based approaches that rely on historical data and require significant assumptions when projecting large operational losses. The firm should evaluate a range of outcomes under various scenarios, and make generally conservative assumptions.

The firm should engage business line and senior management to identify operational risk vulnerabilities and assess ways an operational risk event may unfold. The estimation approaches should also be subject to an effective independent review and challenge process.

3. Use of Data

The firm's operational loss projection approaches should make appropriate use of relevant reference data, including both internal and external data, evaluate all measurable linkages to overall scenario conditions, and include all potential sources of material operational risk losses across the firm. A firm's internal loss data should serve as both inputs to the firm's operational loss estimation approaches projections and a benchmark for operational loss estimates in various scenarios. A firm should have sound and comprehensive internal data-collection processes that capture key operational elements. The firm should include all relevant operational loss data, including large operational loss events such as legal settlements and tax and compliance penalties. If a firm's internal data lack sufficient operational loss history or granularity, the firm should use relevant external data to supplement its internal data.

The Federal Reserve has issued guidance (SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category II or III Standards," and its attachment) to explain its supervisory expectations for capital planning at firms subject to category II or III standards, consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions."[1] Capital is central to a firm's ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. Therefore, a firm's processes for managing and allocating its capital resources are critical to its financial strength and resiliency, and also to the stability and effective functioning of the U.S. financial system. The following guidance provides the Federal Reserve's core capital planning expectations for firms subject to category II or III standards, building upon the capital planning requirements in the Federal Reserve's capital plan rules and stress test rules.[2]

Firms subject to category I standards are U.S. holding companies identified as global systemically important bank holding companies. Firms subject to category II standards include banking organizations with $700 billion or more in total consolidated assets; or $75 billion or more in cross-jurisdictional activity; and do not meet the criteria for category I. Firms subject to category III standards include banking organizations with $250 billion or more in total consolidated assets; or banking organizations with $100 billion or more in total consolidated assets and $75 billion or more in weighted short-term wholesale funding, total nonbank assets, or off-balance sheet exposure; and do not meet the criteria for category I or II.

The guidance outlines capital planning expectations for

- governance,
- risk management,
- internal controls,
- capital policy,
- scenario design, and
- projection methodologies.

Further, the guidance includes several appendices that detail supervisory expectations on a firm's capital planning process. This guidance largely consolidates the Federal Reserve's existing capital planning guidance, including:

- Capital Planning at Large Bank Holding Companies: Supervisory Expectations and Range of Current Practice (August 2013)
- Comprehensive Capital Analysis and Review 2015 Summary Instructions and Guidance (October 2014)
- Instructions for the Capital Assessments and Stress Testing information collection (Reporting Form FR Y-14A)
- SR-11-7, "Supervisory Guidance on Model Risk Management" (Refer to section 2126.0 of this manual.)
- SR-12-7, "Supervisory Guidance on Stress Testing for Banking Organizations with More Than $10 Billion in Total Consolidated Assets"
- SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions."

1060.3.1 GUIDANCE ON SUPERVISORY ASSESSMENT OF CAPITAL PLANNING AND POSITIONS FOR FIRMS SUBJECT TO CATEGORY II OR III STANDARDS

I. Introduction

This guidance (the attachment to SR-15-19) provides the Federal Reserve's core capital planning expectations for firms subject to category II

1. See 84 Fed. Reg. 59,032 (November 1, 2019) for more information on the Board's tailoring rules. The term "capital planning process," as used herein, which aligns with terminology in SR-12-17/ CA-12-14, is equivalent to the term "capital adequacy process" used in other Federal Reserve documents. With the issuance of SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category I Standards," and SR-15-19, SR-99-18, "Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles," is superseded. In addition, SR-09-4, "Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies," is superseded with respect to firms subject to SR-15-18 and SR-15-19.

2. For the capital plan rules, refer to section 225.8 of Regulation Y (12 CFR 225.8) and section 238.170 of Regulation LL (12 CFR 238.170). Regulation Q (12 CFR part 217) establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Regulation YY (12 CFR part 252) and Regulation LL (12 CFR part 238) establish capital stress testing requirements for bank holding companies (including U.S. intermediate holding companies of foreign banking organizations) and covered savings and loan holding companies, respectively, with total consolidated assets of $100 billion or more.

or III standards under the Board's tailoring framework, building upon the capital planning requirements included in the Board's capital plan rules and stress test rules. This guidance outlines capital planning expectations for these firms in the following areas:[3]

Governance

- risk management
- internal controls
- capital policy
- incorporation of stressful conditions and events, and
- estimation of the impact on capital positions.

Further, the following appendixes in the guidance provides detailed supervisory expectations on a firm's capital planning process:

A. Use of Models and Other Estimation Approaches
B. Model Overlays
C. Use of Benchmark Models in the Capital Planning Process
D. Sensitivity Analysis and Assumptions Management
E. Role of the Internal Audit Function in the Capital Planning Process
F. Capital Policy
G. Scenario Design
H. Risk-weighted Asset (RWA) Projections
I. Operational Loss Projections

This guidance applies to U.S. bank holding companies and U.S. intermediate holding companies of foreign banking organizations, and covered savings and loan holding companies that are subject to category II or III standards under the Board's tailoring framework.[4] The guidance describes minimum examiner expectations when applying the capital plan rules and stress test rules to such firms.

The Federal Reserve has different expectations for sound capital planning and capital adequacy depending on the size, scope of operations, activities, and systemic importance of a firm. The Federal Reserve has separate guidance set forth in SR-15-18, which clarifies that expectations for firms subject to category I standards are higher than the expectations for firms subject to category II or III standards.

II. Regulatory Requirements for Capital Positions and Planning

Sound capital planning for any firm begins with adherence to all applicable rules and regulations relating to capital adequacy. Certain Federal Reserve regulations form the basis of the regulatory framework for capital positions and capital planning:

(1) Regulation Q (12 CFR part 217), Capital Adequacy Requirements for Board-regulated Institutions;
(2) Subparts E and F of Regulation YY (12 CFR part 252, subparts E and F), and subparts O and P of Regulation LL (12 CFR part 238, subparts O and P); and
(3) Section 225.8 of Regulation Y (12 CFR 225.8) and subpart S of Regulation LL (12 CFR part 238, subpart S), together known as the capital plan rules.

Regulation Q establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Among other things, Regulation YY and Regulation LL establish capital stress testing requirements for bank holding companies and covered savings and loan holding companies, respectively, with total consolidated assets of $100 billion or more. The capital plan rules establish general capital planning requirements for a bank holding company or covered savings and loan holding company with total consolidated assets of $100 billion or more and requires such a firm to develop an annual capital plan that is approved by its board of directors.

This guidance provides the Federal Reserve's core capital planning expectations for firms sub-

3. Note that these expectations build upon the capital planning requirements set forth in the Board's capital plan rules and stress test rules (12 CFR 225.8; 12 CFR part 238, subparts O, P, and S; 12 CFR part 252, subparts E and F). Other relevant rules pertaining to the Board's regulatory regime for capital planning and positions are described in section II, "Regulatory Requirements for Capital Positions and Planning." The Federal Reserve may not conduct or sponsor, and an organization (or a person) is not required to respond to, a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. The OMB control numbers for this guidance are OMB No. 7100-0341 and OMB No. 7100-0342.

4. This guidance does not apply to nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Board of Governors. A covered savings and loan holding company is a savings and loan holding company not predominantly engaged in insurance or commercial activities (see 12 CFR 217.2). Firms should refer to this guidance in the development of the capital plans that they will submit by April 5, 2021, and for subsequent years.

ject to this guidance, building upon the capital planning requirements in the Federal Reserve's capital plan rules and stress test rules.

III. Capital Planning Expectations

Capital is central to a firm's ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. A firm's capital planning processes are critical to its financial strength and resiliency.

SR-12-17/CA-12-14 outlines core expectations for sound capital planning for large financial institutions. This capital planning and positions guidance provides additional details around the Federal Reserve's core capital planning expectations for firms subject to category II or III standards, building on the capital planning requirements included in the capital plan rule and the Board's stress test rules.[5] A firm should maintain a sound capital planning process on an ongoing basis, including in between submissions of its annual capital plan.[6]

A. Governance

The Federal Reserve expects a firm to have sound governance over its capital planning process. In general, senior management should establish the capital planning process and the board of directors should review and periodically approve that process.

1. Board of Directors

A firm's board of directors is ultimately responsible and accountable for the firm's capital-related decisions and for capital planning. The firm's capital planning should be consistent with the strategy and risk appetite set by the board and with the firm's risk levels, including how risks at the firm may emerge and evolve under stress. The board must annually review and approve the firm's capital plan.[7]

5. The capital planning process described in this guidance is broadly equivalent to an internal capital adequacy assessment process (ICAAP) under the Federal Reserve's advanced approaches capital guidelines. The expectations articulated in this document are consistent with the U.S. federal banking agencies' supervisory guidance relating to the ICAAP (see 73 Fed. Reg. 44,620 (July 31, 2008)).

6. The term "capital planning process" used in this document, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term "capital adequacy process" used in other Federal Reserve documents.

7. 12 CFR 225.8(e)(1)(iii).

The board should direct senior management to provide a briefing on their assessment of the firm's capital adequacy at least quarterly, and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The briefing should describe whether current capital levels and planned capital distributions remain appropriate and consistent with capital goals (see Section III.D, "Capital Policy"). In their briefing, senior management should also highlight for the board any problem areas related to capital planning identified by senior management, internal audit, or supervisors.

The board should hold senior management accountable for providing sufficient information on the firm's material risks and exposures to inform board decisions on capital adequacy and actions, including capital distributions. Information provided to the board should be clear, accurate, and timely. The board should direct senior management to provide this information at least quarterly and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The information presented to the board should include consideration of a number of factors, such as

- macro-economic conditions and relevant market events;
- current capital levels relative to budgets and forecasts;
- post-stress capital goals and targeted real time capital levels (see section III.D, "Capital Policy");
- enterprise-wide and line-of-business performance;
- expectations from stakeholders (including shareholders, regulators, investors, lenders, counterparties, and rating agencies);
- potential sources of stress to the firm's operating performance; and
- risks that may emerge only under stressful conditions.

After receiving the information, the board should be in a position to understand the major drivers of the firm's projections under a range of conditions, including baseline and stress scenarios.

The board should direct senior management to provide information about the firm's estimation approaches, model overlays, and assessments of model performance (see Appendix A, "Use of Models and Other Estimation Approaches" and Appendix B, "Model Overlays").

The board should also receive information about uncertainties around projections of capital needs or limitations within the firm's capital planning process to understand the impact of these weaknesses on the process. This information should include key assumptions and the analysis of sensitivity of a firm's projections to changes in the assumptions (see Appendix D, "Sensitivity Analysis and Assumptions Management"). The board should incorporate uncertainties in projections and limitations in the firm's capital planning process into its decisions on capital adequacy and capital actions. It should also review and approve mitigating steps to address capital planning process weaknesses.

The board should direct senior management to establish sound controls for the entire capital planning process. The board should approve policies related to capital planning, and review them annually. The board should also approve capital planning activities and strategies. The board of directors should maintain an accurate record of its meetings pertaining to the firm's capital planning process.

2. *Senior Management*

Senior management should direct staff to implement board-approved capital policies, capital planning activities, and strategies in an effective manner. Senior management should make informed recommendations to the board regarding the firm's capital planning and capital adequacy, including post-stress capital goals and capital distribution decisions. Senior management's proposed capital goals and capital distributions should have analytical support and take into account the expectations of important stakeholders, including shareholders, rating agencies, counterparties, depositors, creditors, and supervisors.

Senior management should design and oversee the implementation of the firm's capital planning process; identify and assess material risks and use appropriate firm-specific scenarios in the firm's stress test; monitor and assess capital planning practices to identify limitations and uncertainties and develop remediation plans; understand key assumptions used throughout a firm's capital planning process and assess the sensitivity of the firm's projections to those assumptions (see Appendix D, "Sensitivity Analysis and Assumptions Management"); and review the capital planning process at least semi-annually.

Senior management should establish a process for independent review of the firm's capital planning process, including the elements outlined in this guidance. The independent review process should be designed to identify the weaknesses and limitations of the capital planning process and the potential impact of those weaknesses on the process. Senior management should also develop remediation plans for any identified weaknesses affecting the reliability of capital planning results. Both the specific identified weaknesses and the remediation plans should be reported to the board of directors in a timely manner.

B. Risk Management

A firm should have a risk management infrastructure that appropriately identifies, measures, and assesses material risks and provides a strong foundation for capital planning.[8] This risk management infrastructure should be supported by comprehensive policies and procedures, clear and well-established roles and responsibilities, and strong and independent internal controls. In addition, the risk management infrastructure should be built upon sound information technology and management information systems. The Federal Reserve's supervisory assessment of the sufficiency of a firm's capital planning process will depend in large part on the effectiveness of the firm's risk management infrastructure and the strength of its process to identify unique risks under normal and stressful conditions, as well as on the strength of its overall governance and internal control processes.

1. *Risk Identification and Assessment Process*

A firm's risk identification process should include a comprehensive assessment of risks stemming from its unique business activities and associated exposures. The assessment should include on-balance sheet assets and liabilities, off-balance sheet exposures, vulnerability of the firm's earnings, and other major firm-specific determinants of capital adequacy under normal and stressed conditions. This assessment should also capture those risks that only materialize or become apparent under stressful conditions.

The specifics of the risk identification process will differ across firms given differences in organizational structure, business activities, and size

8. 12 CFR 225.8(e)(2).

and complexity of operations. However, the risk identification process at all firms subject to this guidance should be dynamic, inclusive, and comprehensive, and drive the firm's capital adequacy analysis. A firm should

- evaluate material risks across the enterprise to ensure comprehensive risk capture on an ongoing basis;
- actively monitor its material risks; and
- use identified material risks to inform key aspects of the firm's capital planning, including the development of stress scenarios, the assessment of the adequacy of post-stress capital levels, and the appropriateness of potential capital actions in light of the firm's capital objectives.

A firm should be able to demonstrate how material risks are accounted for in its capital planning process. For risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions.

2. *Risk Measurement and Risk Materiality*

A firm should have a sound risk measurement process that informs senior management about the size and risk characteristics of exposures and business activities under both normal and stressful operating conditions. A firm should employ risk measurement approaches that are appropriate for its size, complexity and risk profile.

Identified weaknesses, limitations, biases, and assumptions in the firm's risk measurement processes should be assessed for their potential impact on the integrity of a firm's capital planning process (see Appendix D, "Sensitivity Analysis and Assumptions Management"). A firm should have a process in place for determining materiality in the context of material risk identification and capital planning. This process should include a sound analysis of relevant quantitative and qualitative considerations, including, but not limited to, the firm's risk profile, size, and complexity, and their effects on the firm's projected regulatory capital ratios in stressed scenarios.[9]

A firm should identify how and where its material risks are accounted for within the capital planning process. The firm should be able to specify material risks that are captured in its scenario design, the approaches used to estimate the impact on capital, and the risk drivers associated with each material risk.

C. Internal Controls

A firm should have a sound internal control framework that helps ensure that all aspects of the capital planning process are functioning as designed and result in sound assessments of the firm's capital needs. The framework should include

- an independent internal audit function;
- independent review and validation practices; and
- integrated management information systems, effective reporting, and change control processes.

A firm's internal control framework should support its entire capital planning process, including the sufficiency of and adherence to policies and procedures; risk identification, measurement, and management practices and systems used to produce input data; and the models, management overlays, and other methods used to generate inputs to post-stress capital estimates. Any part of the capital planning process that relies on manual procedures should receive heightened attention. The internal control framework should also assess the aggregation and reporting process used to produce reports to senior management and to the board of directors and the process used to support capital adequacy recommendations to the board.

1. *Comprehensive Policies, Procedures, and Documentation for Capital Planning*

A firm should have policies and procedures that support consistent and repeatable capital planning processes.[10] Policies and procedures should describe the capital planning process in a manner that informs internal and external stakeholders of the firm's expectations for internal prac-

9. For simplicity, the terms "quantitative" and "qualitative" are used to describe two different types of approaches, with the recognition that all quantitative estimation approaches involve some qualitative/judgmental aspects, and qualitative estimation approaches produce quantitative output.

10. See Instructions for the Capital Planning and Stress Testing Information Collection (Reporting Form FR Y-14A), Appendix A (Supporting Documentation).

tices, documentation, and business line controls. The firm's documentation should be sufficient to provide relevant information to those making decisions about capital actions. The documentation should also allow parties unfamiliar with a process or model to understand generally how it operates, as well as its main limitations, key assumptions, and uncertainties.

Policies and procedures should also clearly identify roles and responsibilities of staff involved in capital planning and provide accountability for those responsible for the capital planning process. A firm should also have an established process for policy exceptions. Such exceptions should be approved by the appropriate level of management based upon the gravity of the exception. Policies and procedures should reflect the firm's current practices, and be reviewed and updated as appropriate, but at least annually.

2. *Model Validation and Independent Review of Estimation Approaches*

Models used in the capital planning process should be reviewed for suitability for their intended uses. A firm should give particular consideration to the validity of models used for calculating post-stress capital positions. In particular, models designed for ongoing business activities may be inappropriate for estimating losses, revenue, and expenses under stressed conditions. If a firm identifies weaknesses or uncertainties in a material model, the firm should make adjustments to model output if the findings would otherwise result in the material understatement of capital needs (see Appendix B, "Model Overlays"). If the deficiencies are critical, the firm should restrict the use of the model, apply overlays, or avoid using the model entirely.

A firm should independently validate or otherwise conduct effective challenge of models used in internal capital planning, consistent with supervisory guidance on model risk management, with priority given to more material models.[11] The model review and validation process should include an evaluation of conceptual soundness of models and ongoing monitoring of the model performance. The firm's validation staff should have the necessary technical competencies, sufficient stature within the organization, and appropriate independence from model developers and business areas to provide a critical and unbiased evaluation of the estimation approaches.

A firm should maintain an inventory of all estimation approaches used in the capital planning process, including models used to produce projections or estimates used by the models that generate final loss, revenue, expense, and capital projections.[12] Material models should receive greater attention.[13] The intensity and frequency of validation work should be a function of the importance of those models in generating estimates of post-stress capital.

Not all models can be fully validated prior to use in capital planning. However, a firm should make efforts to conduct a conceptual soundness review of its material models prior to their use in capital planning. If such a conceptual soundness review is not possible, the absence of that review should be made transparent to users of model output and the firm should determine whether the use of compensating controls (such as conservative adjustments) are warranted.

Further, a firm should treat output from material models for which there are model risk management shortcomings with caution.

3. *Management Information Systems and Change Control Processes*

A firm should have internal controls that ensure the integrity of reported results and that make certain the firm is identifying, documenting, reviewing, and tracking all material changes to the capital planning process and its components. The firm should ensure that such controls exist at all levels of the capital planning process. Specific controls should ensure

- sufficiently sound management information systems to support the firm's capital planning process;
- comprehensive reconciliation and data integrity processes for key reports;
- the accurate and complete presentation of capital planning process results, including a

11. See SR-11-7. The term "effective challenge" means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.

12. The definition of a model covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.

13. Materiality of the model is a function of both the importance of the business or portfolio assessed and the impact of the model on the firm's overall results.

description of adjustments made to compensate for identified weaknesses; and
- that information provided to senior management and the board is accurate and timely.

Many of the processes used to assess capital adequacy, including models, data, and management information systems, are tightly integrated and interdependent. As a result, a firm should ensure consistent change control oversight across the entire firm, in line with existing supervisory guidance.[14] A firm should establish and maintain a policy describing minimum internal control standards for managing change in capital planning process policies and procedures, model development, information technology, and data. Control standards for these areas should address risk, testing, authorization and approval, timing of implementation, and post-installation verification.

4. Internal Audit Function

Internal audit should play a key role in evaluating capital planning and the elements described in this guidance to ensure that the entire process is functioning in accordance with supervisory expectations and the firm's policies and procedures. Internal audit should review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, internal audit should ensure appropriate independent review and challenge is occurring at all key levels within the capital planning process.

As discussed further in Appendix E, "Role of the Internal Audit Function in the Capital Planning Process," internal audit staff should have the appropriate competence and influence to identify and escalate key issues. All deficiencies, limitations, weaknesses and uncertainties identified by the internal audit function that relate to the firm's capital planning process should be reported to senior management, and material deficiencies should be reported to the board of directors (or the audit committee of the board) in a timely manner.[15]

D. Capital Policy

A capital policy is a firm's written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions.[16] This includes internal post-stress capital goals (as discussed in more detail below and in Appendix F, "Estimating Impact on Capital Positions") and real-time targeted capital levels; guidelines for dividend payments and stock repurchases; strategies for addressing potential capital shortfalls; and internal governance responsibilities and procedures for the capital policy. The capital policy must be approved by the firm's board of directors or a designated committee of the board.[17]

The capital policy should be reevaluated at least annually and revised as necessary to address changes to the firm's business strategy, risk appetite, organizational structure, governance structure, post-stress capital goals, real-time targeted capital levels, regulatory environment, and other factors potentially affecting the firm's capital adequacy.

A capital policy should describe the firm's capital adequacy decision-making process, including the decision-making process for common stock dividend payments or stock repurchases.[18] The policy should incorporate actionable protocols, including governance and escalation, in the event a post-stress capital goal, real-time targeted capital level, or other early warning metric is breached.

Post-Stress Capital Goals

A firm should establish post-stress capital goals that are aligned with its risk appetite and risk profile, its ability to act as a financial intermediary in times of stress, and the expectations of internal and external stakeholders. Post-stress capital goals should be calibrated based on the firm's own internal analysis, independent of regulatory capital requirements, of the minimum level of post-stress capital the firm has deemed necessary to remain a going concern over the planning horizon. A firm should also determine targets for real-time capital ratios and

14. Federal Financial Institutions Examination Council, "IT Examination Handbook—Operations Booklet."

15. For additional information on supervisory expectations for internal audit see SR-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing."

16. 12 CFR 225.8(d)(7).

17. 12 CFR 225.8(e)(1)(iii).

18. Consistent with the Board's November 14, 1985, Policy Statement on the Payment of Cash Dividends, the principles of which are incorporated into this guidance, firms should have comprehensive policies on dividend payments that clearly articulate the firm's objectives and approaches for maintaining a strong capital position and achieving the objectives of the policy statement. See *Bank Holding Company Supervision Manual,* section 2020.5.1.1, "Intercompany Transactions (Dividends)."

capital levels that ensure that capital ratios and levels would not fall below the firm's internal post-stress capital goals (including regulatory minimums) under stressful conditions at any point over the planning horizon. For more details, see Appendix F, "Capital Policy."

E. Incorporating Stressful Conditions and Events

As part of its capital planning process, a firm should incorporate appropriately stressful conditions and events that could adversely affect the firm's capital adequacy into its capital planning. As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm's activities and associated risks, including those related to the company's capital adequacy and financial condition.[19]

1. Scenario design

A firm should either develop a complete internal scenario or adjust the Federal Reserve's supervisory scenarios for the specific vulnerabilities of the firm's risk profile and operations, as needed, to appropriately capture the firm's risks (see Appendix G, "Scenario Design").

2. Scenario narrative

A firm's stress scenario should be supported by a brief narrative describing how the scenario addresses the firm's particular material risks and vulnerabilities, and how the paths of the scenario variables relate to each other.

F. Estimating Impact on Capital Positions

A firm should employ estimation approaches that allow it to project the impact on capital positions of various types of stressful conditions and events. The firm's stress testing practices should capture the potential increase in losses or decrease in pre-provision net revenue (PPNR) that could result from the firm's risks, exposures, and activities under stressful scenarios. A firm should estimate losses, revenues, expenses, and capital using a sound method that relates macroeconomic and other risk drivers to its estimates. The firm should be able to identify the manner in which key variables, factors, and events in a scenario affect losses, revenue, expenses, and capital over the planning horizon. The firm may use simple approaches for their non-material portfolios or business lines, such as application of loss or revenue rates during the prior stress periods or other conservative assumptions.

1. Loss estimation

A firm should provide support for the assumed relationship between risk drivers and losses. A firm is expected to estimate losses by type of business activity.

a. Credit risk losses on loans and securities

A firm should develop sound methods to estimate credit losses under stress that take into account the type and size of portfolios, risk characteristics, and data availability. A firm should understand the key characteristics of its loss estimation approach. In addition, a firm's reserves for each quarter of the planning horizon, including the last quarter, should be sufficient to cover estimated loan losses consistent with generally accepted accounting standards.

A firm should test credit-sensitive securities for potential other-than-temporary impairment (OTTI) regardless of current impairment status. The threshold for determining OTTI for structured products should be based on cash-flow analysis and credit analysis of underlying obligors.

b. Operational-risk losses

A firm should maintain a sound process for estimating operational risk losses in its capital planning process. Operational losses can rise from various sources, including inadequate or failed internal processes, people, and systems, or from external events (see Appendix I, "Operational Loss Projections").

2. PPNR

In projecting PPNR, a firm should take into account not only its current positions, but also how its activities, business strategy, and revenue drivers may evolve over time under the varying

19. 12 CFR 225.8(e)(2).

circumstances and operating environments. The firm should ensure that the various PPNR components, including net interest income, non-interest income and non-interest expense, and other key items projected by the firm such as balance sheet positions, RWA, and losses, are projected in a manner that is internally consistent.

The ability to effectively project net interest income is dependent upon the firm's ability to identify and aggregate current positions and their attributes; project future changes in accruing balances due to a variety of factors; and appropriately translate the impact of these factors and relevant interest rates into net interest income based on assumed conditions. Accordingly, a firm's current portfolio of interest-bearing assets and liabilities should serve as the foundation for its forward-looking estimates of net interest income.

Non-interest income is derived from a diverse set of sources, including fees and certain realized gains and losses. Non-interest income generally is more susceptible to rapid changes than net interest income, especially if certain market measures move sharply. A firm's projections should incorporate material factors that could affect the generation of non-interest income under stress, including the firm's business strategy, the competitive landscape, and changing regulations.

Non-interest expenses include both expenses that are likely to vary with certain stressful conditions and those that are not. Projections of expenses that are closely linked to revenues or balances should vary with projected changes in revenue or balance sheet levels.

3. Aggregating Estimation Results

A firm should have well-documented processes for projecting the size and composition of on- and off-balance sheet positions and RWAs over the planning horizon that feed in to the wider capital planning process (see Appendix H, "Risk-weighted Asset (RWA) Projections").

A firm should have a consistently executed process for aggregating enterprise-wide stress test projections of losses, revenues, and expenses, including estimating on- and off-balance sheet exposures, and RWAs, and for calculating post-stress capital positions and ratios. The aggregation system should be able to bring together data and information across business lines, portfolios, and risk types and should include the data systems and sources, data reconciliation points, data quality checks, and appropriate internal control points to ensure accurate and consistent projection of financial data within enterprise-wide scenario analysis. Internal processes for aggregating projections from all relevant systems and regulatory templates should be identified and documented. In addition, the beginning points for projections and scenario variables should align with the end of the historical reference period.

Appendix A: Use of Models and Other Estimation Approaches

Projections of losses and PPNR under various scenarios are key components of enterprise-wide stress testing and capital planning. The firm should ensure that its material projection approaches, including any specific processes or methodologies employed, are well supported, transparent, and repeatable over time.

A firm may use either quantitative methods or qualitative approaches for generating projections. A firm is not expected to employ a sophisticated modeled approach, particularly if the firm can demonstrate that a simpler approach, combined with well-supported expert judgment, produces credible and transparent output. A firm can apply simple assumptions to generate losses or PPNR for its non-material portfolios or business lines.

A firm should adhere to supervisory guidance on model risk management (SR-11-7) when using models, and should have sound internal controls around both quantitative and qualitative approaches.

1. Quantitative Approaches

If a firm decides to employ quantitative approaches, it is not expected to use any specific quantitative estimation method. Any quantitative approach should be appropriate for the type and materiality of the portfolio or activity for which it is used and the granularity and length of available data. The firm should also ensure that the quantitative approach selected generates credible estimates that are consistent with assumed scenario conditions. A firm should separately estimate losses and PPNR for portfolios or business lines that are either sensitive to different risk drivers or sensitive to risk drivers in a markedly different way, particularly during periods of stress.

a. Use of Data

A firm may use either internal or external data to estimate losses and PPNR as part of its enterprise-wide stress testing and capital planning practices.[20] If a firm uses external data to estimate its losses or PPNR, the firm should ensure that the external data reasonably approximate underlying risk characteristics of the firm's portfolios or business lines. Further, the firm should make adjustments to estimation methods or outputs, as appropriate, to account for identified differences in risk characteristics and performance reflected in internal and external data. If internal data are not available, a firm should strive to collect internal data over time to augment its projections.

For material portfolios and business lines, a firm should generally include all available data in its analysis, unless the firm no longer engages in a line of business or its activities have changed such that the firm is no longer exposed to a particular risk. The firm should not selectively exclude data for material portfolios and business lines based on the changing nature of the ongoing business or activity without strong empirical support. For example, excluding certain loans only on the basis that they were underwritten to standards that no longer apply or on the basis that the loans were acquired by the firm is not sound practice.

b. Use of Vendor Models[21]

A firm should have processes to confirm that any vendor or other third-party models it uses are sound, appropriate for the given task, and implemented properly. A firm should clearly outline limitations and uncertainties associated with vendor models.

2. *Assessing Model Performance*

A firm should use measures to assess model performance that are appropriate for the type of model being used. The firm should outline how each performance measure is evaluated and used. A firm should also assess the sensitivity of material model estimates to key assumptions (see Appendix D, "Sensitivity Analysis and Assumptions Management").

For models used for material portfolios and business lines, a firm should provide supporting information about the models to users of their output, including descriptions of known measurement problems, simplifying assumptions, model limitations, or other ways in which the model exhibits weaknesses in capturing the relationships being modeled. Providing such qualitative information is critical when certain quantitative criteria or tests measuring model performance are lacking.

3. *Qualitative Approaches*

A firm may use a qualitative approach to project losses and PPNR. When using a qualitative approach for material portfolios and business lines, the firm should substantiate assumptions and estimates using analysis of current and past risk drivers and performance, internal risk identification, forward-looking risk assessments, external analysis or other available information. The firm should conduct an initial and ongoing assessment of the performance and viability of the qualitative approach. The processes used in qualitative projection approaches should be transparent and repeatable. The firm should also clearly document material qualitative approaches and key assumptions used.

Qualitative approaches should be subject to independent review, although the review may differ from the review of quantitative approaches or models. The level of independent review should be commensurate with the

- materiality of the portfolio or business line for which the qualitative approach is used;
- impact of the approach's output on the overall capital results; and
- complexity of the approach.

Firm staff conducting the independent review of the qualitative approaches should *not* be involved in developing, implementing or using the approach. However, this staff can be different than the staff that conducts validation of quantitative approaches or models.

20. Firms are required to collect and report a substantial amount of risk information to the Federal Reserve on FR Y-14 schedules. These data may help to support the firms' enterprise-wide stress test. See Capital Assessments and Stress Testing information collection, Reporting Forms FR Y-14A, Q, and M.

21. See SR-13-19/CA-13-21, "Guidance on Managing Outsourcing Risk."

Appendix B: Model Overlays

A firm may need to rely on overrides or adjustments to model output (model overlay) to compensate for model, data, or other known limitations.[22] If well-supported, use of a model overlay can represent a sound practice.

A model overlay may be appropriate to address cases of identified weaknesses or limitations in the firm's models that cannot be otherwise addressed, or for select portfolios that have unique risks that are not well captured by the model used for those exposures and activities.[23] In contrast, a model overlay that functions as a general "catch all" buffer on top of targeted capital levels to account for model weaknesses generally would not represent sound practice.[24]

As part of its overall documentation of methodologies used in stress testing, a firm should document its use of model overlays.

1. *Process for Applying Overlays*

A firm should establish a consistent firm-wide process for applying model overlays and for controls around model overlays. The process can vary by model type and portfolio, but should contain some key elements, as described below. This process should be outlined in the firm's policies and procedures and include a specific exception process for the use of overlays that do not follow the firm's standards. As part of model development, implementation and use, overlays for material portfolios and business lines should be well documented, supported and communicated to senior management. Model overlays should be applied in an appropriate, systematic, and transparent manner. Model results should also be reported to senior management with and without overlay adjustments.

Model overlays (including those based solely on expert or management judgment) should be subject to validation or some other type of effective challenge.[25] Consistent with the materiality principle in SR-11-7, the intensity of model risk management for overlays should be a function of the materiality of the model and overlay. A firm should make efforts to conduct effective challenge of its material overlays prior to their use in capital planning. If such validation or effective challenge is not possible, those instances should be made transparent to users of the model and overlay.

Validation or other type of effective challenge of model overlays may differ from quantitative model validation. Staff responsible for effective challenge should not also be setting the overlay itself or providing significant input to the level or type of overlay. For example, a committee that develops an overlay should not also be responsible for the effective challenge of the overlay. In addition, staff engaging in the effective challenge of model overlays should meet supervisory expectations relating to incentives, competence, and influence (as outlined in SR-11-7).

2. *Governance of Overlays*

Overlays and adjustments used by a firm should be reviewed and approved at a level within the organization commensurate with the materiality of that overlay or adjustment to overall pro forma results. In general, the purpose and impact of material overlays should be communicated to senior management in a manner that facilitates an understanding of the issues by the firm's senior management. Material overlays to the model—either in isolation or in combination—should receive a heightened level of support and scrutiny, up to and including review by the firm's board of directors (or a designated committee), in instances where the impact on pro forma results is material.

Appendix C: Use of Benchmark Models in the Capital Planning Process

As noted in Appendix A, "Use of Models and Other Estimation Approaches," a firm should use a variety of methods to assess performance of material models and gain comfort with mate-

22. For the purposes of this appendix, the term "overlays" will be used to cover overrides, overlays, or other adjustments applied to model output. Firms should follow expectations set forth in SR-11-7, relating to overlays.

23. Expectations for the use of judgment within model development is discussed in Appendix A, "Use of Models and Other Estimation Approaches."

24. Firms may choose to apply overall capital buffers as an additional conservative measure, beyond overlays applied at the model level. Overall capital buffers should be subject to the same governance processes applicable to model overlays, as described in section 2 of this appendix. However, supervisors emphasize that having such a buffer should not in any way replace sound model risk management practices for overlays at the individual model level or address the need for the overlay at the individual model level.

25. The term "effective challenge" means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.

rial model estimates. However, a firm is not expected to use benchmark models in its capital planning process.

Appendix D: Sensitivity Analysis and Assumptions Management

A firm should understand the sensitivity of its stress testing estimates used in capital planning to the various inputs and assumptions. In addition, sensitivity analysis should be used to test the robustness of material quantitative approaches and models and enhance reporting to the firm's senior management, board of directors, and supervisors. A firm should ensure that it identifies, documents, and manages the use of all key assumptions used in capital planning.

1. Sensitivity Analysis

Understanding and documenting a range of potential outcomes provides insight into the inherent uncertainty and imprecision around pro forma results. A firm should assess the sensitivity of its estimates of capital ratios, losses, revenues, and RWAs to key assumptions and uncertainty across the entire firm's projections under stress. Through this assessment, a firm should calculate a range of potential estimates based on changes to assumptions and inputs.

A firm should also evaluate the sensitivity of material models to key assumptions to evaluate model performance, assess the appropriateness of assumptions, and understand uncertainty associated with model output.

Sensitivity analysis for capital planning models should be applied in a manner consistent with the expectations outlined in the Federal Reserve's supervisory guidance on model risk management (refer to SR-11-7). Sensitivity analysis should be conducted during model development and during model validation to provide information about how models respond to changes in key inputs and assumptions, and how those models perform in stressful conditions. In addition, sensitivity analysis should be applied to understand the range of possible results from material vendor-provided models and vendor-provided scenario forecasts that have opaque or proprietary elements. Sensitivity analysis should be used to provide information to help users of model output interpret results, but does not have to result in changes to models or model outputs. Changes made based on sensitivity analysis should be clearly documented and justified.

A firm should ensure that the key sensitivities are presented to senior management and the board in advance of decision-making around the firm's capital plan and capital actions. Sensitivity analysis should also be used to inform senior management, and, as appropriate, the board of directors about the potential uncertainty associated with models employed of the firm's projections under stress.

2. Assumptions Management

A firm should clearly document assumptions when estimating losses, PPNR, and balance sheet, and RWA components. Documentation should include the rationale and empirical support for assumptions and specifically address how those assumptions are consistent with and appropriate under the firm's scenario conditions.

A firm's rationale for assumptions used in capital planning should be consistent with the different effects of scenario conditions, shifts in portfolio mix, and growth or decline in balances projected over the planning horizon. For example, the firm should scrutinize and support any assumptions about sizeable loan growth during a severe economic downturn.

A firm should generally use conservative assumptions, particularly in areas of high uncertainty. The firm should provide greater support for assumptions that appear optimistic or otherwise appear to benefit the firm (such as loss reduction or revenue enhancement). A firm should not assume that senior management will be able to realize favorable strategic actions that cannot be reasonably assured in stress scenarios given the high level of uncertainty around market conditions. Further, a firm should not assume that it would have the perfect foresight that would allow it, for example, to make significant expense reductions in the first quarter of the forecast horizon in anticipation of the forthcoming economic deterioration described in the scenario.

A firm should confirm that key assumptions used in material vendor or other third-party products are transparent and have sufficient support before using the products in stress testing. The firm should limit use of material vendor products whose assumptions are not fully transparent or supported or use those products only in conjunction with another approach or compensating controls (e.g., overlays).

Appendix E: Role of the Internal Audit Function in the Capital Planning Process

A firm's internal audit function should play a key role in evaluating the adequacy of the firm's capital planning process and in assessing whether the risk management and internal control practices supporting that process are comprehensive and effective. A firm should establish an audit program around its capital planning process that is consistent with SR-13-1, "Supplemental Policy Statement on the Internal Audit Function and its Outsourcing."

1. Responsibilities of Audit Function

The internal audit function should identify all auditable processes related to capital planning and develop an associated audit plan. The audit function should also perform substantive testing to ascertain the effectiveness of the control framework supporting the firm's capital planning process, communicate identified limitations and deficiencies to senior management, and communicate material limitations and deficiencies to the board of directors (or the audit committee of the board). The audit function should comprehensively cover the firm's capital planning process.

The internal audit function should perform periodic reviews of all aspects of the internal control framework supporting the capital planning process to ensure that all individual components as well as the entire process are functioning in accordance with supervisory expectations and the firm's policies and procedures. The internal audit function should also review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, the internal audit function should ensure appropriate independent review is occurring at various levels within the capital planning process.

A firm's internal audit staff should have the appropriate competence and stature to identify and escalate key issues when necessary. The internal audit function may also rely on an independent third party external to the firm to complete some of the substantive testing as long as the internal audit function can demonstrate proper independence of the third-party from the area being assessed and provide oversight over the execution and quality of the work.

2. Development of Audit Plan

The internal audit function should have a documented plan describing its strategy to assess the processes and controls supporting the firm's capital planning process. When defining the annual audit universe and audit plan, the internal audit function of a firm should focus on the most significant risks relating to the capital planning process. The firm may leverage existing or regularly scheduled audits to ensure coverage of all the capital planning process components; however, the findings and conclusions of these audits should be incorporated into the overall summary of audit activities and conclusions regarding the firm's capital planning process.

3. Briefings to Senior Management and Board

On an annual basis, the internal audit function should report to senior management and the board of directors on the capital planning process to inform recommendations and decisions on the firm's capital plan. The report should provide an opinion of the capital planning process, a statement of the effectiveness of the controls and processes employed, a status update on previously identified issues and remediation plans, and any open issues or uncertainties related to the firm's capital plan. Any key processes that are not comprehensively reviewed and tested, due to timing or significant changes in processes, should be clearly documented and identified as areas with potential heightened risk.

The internal audit function should track responses to its material findings and report to the board any cases in which senior management is not implementing required changes related to audit findings or is doing so with insufficient intensity.

Appendix F: Capital Policy

A firm's capital policy should describe how the firm manages, monitors, and makes decisions regarding capital planning.[26] The policy should include internal post-stress capital goals and

26. A capital policy is a firm's written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions. 12 CFR 225.8(d)(7).

real-time targeted capital levels; guidelines for dividends and stock repurchases; and strategies for addressing potential capital shortfalls.

A firm's capital policy should describe the manner in which consolidated estimates of capital positions are presented to senior management and the board of directors. The capital policy should require staff with responsibility for developing capital estimates to clearly identify and communicate to senior management and board of directors the key assumptions affecting various components that feed into the aggregate estimate of capital positions and ratios. The capital policy should require that aggregated results be directly compared against the firm's stated post-stress capital goals, and that those comparisons are included within the standard reporting to senior management and the board of directors.

1. *Post-Stress Capital Goals*

Post-stress capital goals should provide specific minimum thresholds for the level and composition of capital that the firm intends to maintain during a stress period. Post-stress capital goals should include any capital measures that are relevant to the firm.

The firm should be able to demonstrate through its own internal analysis, independently of regulatory capital requirements, that remaining at or above its internal post-stress capital goals will allow the firm to continue to operate.

The capital policy should describe how senior management and the board concluded that the firm's post-stress capital goals are appropriate, sustainable in different conditions and environments, and consistent with its strategic objectives, business model, and capital plan. In addition, the capital policy should describe the process by which the firm establishes its post-stress capital goals, and include the supporting analysis underpinning the goals chosen by the firm.

A firm should annually review its capital goals, evaluate whether its post-stress capital goals are still appropriate based on changes in operating environment, business mix, or other conditions, and adjust those goals as needed.

A firm should adjust its real-time capital targets (that is the amount of current capital it holds above its post-stress capital goals to ensure it does not fall below those goals under stress) more frequently than it adjusts capital goals, based on changes in the business mix, operating environment or other current conditions and circumstances.

2. *Dividends and Stock Repurchases*

A firm's capital policy should describe the processes relating to common stock dividend and repurchase decisions, including the processes to determine the timing, form, and amount of all planned distributions. The capital policy should also specify the analysis and metrics that senior management and the board use to make capital distribution decisions. The analysis should include strategic considerations such as new business initiatives, potential acquisitions, and the other relevant factors.

3. *Contingency Plans for Capital Shortfalls*

A firm's capital policy should include specific capital contingency actions the firm would take to remedy any current or prospective deficiencies in its capital position. The firm's capital contingency plan should reflect strategies for identifying and addressing potential capital shortfalls and specify circumstances under which the board of directors and senior management will revisit planned capital actions or otherwise institute contingency measures. A contingency plan should include a set of thresholds for metrics or events that provide early warning signs of capital deterioration and that trigger management action or scrutiny.[27]

Capital contingency plans should include options for actions that a firm would consider taking to remedy any current or prospective deficiencies in its capital position, such as reducing or ceasing capital distributions, raising additional capital, reducing risk, or employing other means to preserve existing capital. Contingency options in the firm's capital policy should be consequential, realistic, actionable, and comprehensive.

Appendix G: Scenario Design

As part of its capital plan, a firm must use at least one scenario that stresses the specific vul-

27. Capital contingency plans may include triggers for liquidity, earnings, debt and credit default swap spreads, ratings downgrades, stock performance, supervisory actions, general market stress, or other noncapital metrics.

nerabilities of the firm's risk profile and operations, including those related to the company's capital adequacy and financial condition.[28] The firm's stress scenario should be at least as severe as the Federal Reserve's severely adverse supervisory scenario, measured in terms of its effect on net income and other elements that affect capital.[29]

As noted in the core document, a firm should create its stress scenario, either by developing a complete internal scenario, or using the Federal Reserve's supervisory scenarios, adjusted for the firm's idiosyncratic risk profile.

The stress scenario should include stressful circumstances and events that could, on a standalone basis or in combination, reduce the firm's capital levels and ratios and potentially impede the firm's ability to operate as a going concern, and cover material risks to which the firm is exposed over the course of an annual planning cycle. A firm's scenario should include factors that capture economy- or market-wide stresses and idiosyncratic risks that can put a strain on the firm. A firm should also take into account conditions and events that have not previously occurred, but that may pose a significant threat to the firm given its exposures, risk profile, and business strategy.

Appendix H: Risk-weighted Asset (RWA) Projections

A firm should maintain a sound process for projecting RWAs over the planning horizon. The firm's initial and projected RWA calculations should be consistent with applicable regulatory capital requirements.

Starting balances for both on- and off-balance sheet exposures and applicable risk weights form the foundation for estimates of post-stress capital ratios. Therefore, firms should verify carefully the accuracy of these starting balances. Moreover, deficiencies in starting RWA calculations are generally compounded in RWA projections over the planning horizon. A firm should ensure that it has sound controls around its RWA calculation and regulatory reporting processes as part of the firm's broader data governance program.

A firm should ensure that RWA projections are consistent with a given scenario and incorporate the impact of projected changes in exposure amounts and risk characteristics of on- and off-balance sheet exposures under the scenario. A firm should demonstrate that assumptions associated with RWA projections are clearly conditioned on a given scenario and are consistent with stated internal and external business strategies. For example, the firm should demonstrate how projected credit RWAs over the planning horizon are related to projected loan growth under the scenario. A firm should provide documented evidence for the appropriateness of key assumptions used to project RWAs.

Appendix I: Operational Loss Projections

A firm faces a wide range of operational risk in conducting its business operations. Operational losses can arise from various sources, including inadequate or failed internal processes, people, and systems, or from external events, and can differ in frequency and severity. For example, some operational loss events, such as credit card fraud, are often more predictable as they occur at high frequency, but generally have low loss severity. The outcome of other events, such as major litigation, are less certain and can result in outsized losses.

1. Risk Identification Process

A firm should maintain a sound process for estimating operational risk losses in its capital planning process, taking into account the differences in loss characteristics of different operational loss event types. A firm's risk identification process should include the evaluation of the type of operational risk loss events to which the firm is exposed and the sensitivity of those events to internal and external operating environments. The firm-specific scenario submitted in a firm's capital plan should capture the firm's material operational risks.

28. 12 CFR 225.8(e)(2). In addition, a firm is required to report to the Federal Reserve its projections under a baseline scenario, which captures the firm's view of the likely operating environment over the planning horizon. A firm may use the Board's baseline scenario for its own baseline scenario if the firm can demonstrate that the Board's baseline scenario is appropriate for the firm's own risks, activities, and outlook; however, a firm cannot use the Board's severely adverse scenario for its own stress scenario.

29. For guidance on the severity of the scenarios, a firm should review the Board's "Policy Statement on the Scenario Design Framework for Stress Testing," which sets forth the Board's approach to designing the severely adverse scenario. See 12 CFR 252, appendix A.

2. Approaches to Operational Loss Estimation

A firm can use a variety of estimation approaches to project operational losses for its enterprise-wide stress testing program, but should not rely on unstable or unintuitive correlations to project operational losses. The firm can use a simple, conservative approach based on historical loss data, such as applying average historical losses, or maximum historical losses, to project operational losses. A firm should also consider the use of scenario analysis to evaluate the effect of material operational risk events, especially those which are less certain or can result in outsized losses.

3. Use of Data

The firm's operational loss projection approaches should make appropriate use of relevant reference data. The firm should supplement its internal data with relevant external data if the internal data lacks sufficient operational loss history or granularity.

1060.20.1 LIQUIDITY

Liquidity is a firm's capacity to meet its cash and collateral obligations at a reasonable cost. Maintaining an adequate level of liquidity depends on the firm's ability to efficiently meet both expected and unexpected cash flows and collateral needs without adversely affecting either daily operations or the financial condition of the firm. Liquid assets are cash and assets that can be converted to cash quickly if needed to meet financial obligations. Other examples of liquid assets generally include central bank reserves and government bonds. To remain viable, a firm must have enough liquid assets to meet withdrawals by depositors and other near-term obligations.

Liquidity risk is the risk that a firm's financial condition or overall safety and soundness is adversely affected by an inability (or perceived inability) to meet its obligations. A firm's obligations, and the funding sources used to meet them, depend significantly on its business mix, balance-sheet structure, and the cash-flow profiles of its on- and off-balance-sheet obligations.

The purpose of this section is to describe significant guidance issuances and regulations covering liquidity and liquidity risk management. In general, this section focuses on the supervisory assessment of liquidity among firms that are covered by the large financial institution rating system.[1] Below is an outline of the key topics covered in this section:

- SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management"
- Regulation YY, "Enhanced Prudential Standards"
- Regulation WW, "Liquidity Risk Measurement Standards"
  - Liquidity Coverage Ratio
  - Net Stable Funding Ratio
- Liquidity Reporting Requirements
  - FR 2052a Complex Institution Liquidity Monitoring Report
- Supervisory Considerations for Assessing Liquidity
  - SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions"
  - Comprehensive Liquidity Analysis and Review
  - Large Financial Institutions Ratings System (SR-19-3/CA-19-2)
  - CAMELS Ratings (SR-96-38)

1. SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System."

1060.20.2 INTERAGENCY LIQUIDITY GUIDANCE

The 2008–09 financial crisis demonstrated the importance of effective liquidity risk management to ensure the safety and soundness of firms. Given this experience, supervisors participated in international and national level working groups to assess the lessons learned regarding firms' management of liquidity risk. In September 2008, the Basel Committee on Banking Supervision (BCBS) published "Principles for Sound Liquidity Risk Management and Supervision," which contains 17 principles for managing and supervising liquidity risk.[2]

In 2010, the Federal Reserve and the other supervisors of U.S. depository institutions issued the "Interagency Policy Statement on Funding and Liquidity Risk Management," (2010 policy statement or SR-10-6).[3] The 2010 policy statement sets forth interagency expectations on sound practices for liquidity risk management that are consistent with established Federal Reserve guidance contained in the *Commercial Bank Examination Manual* as well as the "Principles for Sound Liquidity Risk Management and Supervision" published by the BCBS in September 2008.

The 2010 policy statement articulates the process that firms should follow to appropriately identify, measure, monitor, and control their funding and liquidity risks. In particular, the 2010 policy statement re-emphasizes the importance of cash-flow projections, diversified funding sources, stress testing, a cushion of liquid assets, and a formal, well-developed contingency funding plan as primary tools for measuring and managing funding and liquidity risks.

2. Principles for Sound Liquidity Risk Management and Supervision (September 25, 2008).
3. SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management," and 75 Fed. Reg. 13656 (March 22, 2010).

1060.20.2.1 Scope of Application of the 2010 Policy Statement

The Federal Reserve expects all supervised firms to manage their liquidity risk using processes and systems that are commensurate with their complexity, risk profile, and scope of operations.

The 2010 policy statement addresses funding and liquidity risk management at insured depository institutions, including state member banks. The basic principles presented in the 2010 policy statement also apply to bank holding companies (BHCs) as well as savings and loan holding companies (SLHCs).[4] BHCs and SLHCs (collectively, holding companies) should manage and control aggregate risk exposures on a consolidated basis, while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries.

Holding companies should develop and maintain liquidity management processes and funding programs that are consistent with their complexity, risk profile, and scope of operations. Appropriate liquidity risk management is especially important for holding companies since liquidity difficulties can easily spread to both depository and nondepository subsidiaries. Holding companies should ensure that liquidity is sufficient at all levels of the organization to fully accommodate funding needs in periods of stress.

The general principles presented in the 2010 policy statement also apply to foreign banking organizations (FBOs) operating in the United States. The U.S. operations of FBOs are expected to have appropriate liquidity risk-management processes in place that are consistent with established international standards. Supervisory expectations for the U.S. operations of FBOs are the same as those for comparable domestic organizations. FBO branches and agencies are also expected to implement sound liquidity risk-management processes and practices with full recognition that the liquidity risk-management process depends significantly on the specific business models, governance structures, funding approaches, and liquidity risk profiles of the operations. For example, funding dependencies between a branch and home office, and governance structures without boards of directors, may impact a firm's ability to implement certain risk-management processes, procedures, systems, or controls for certain standalone legal entities. In such cases, appropriate mitigating controls should be in place.

Liquidity risk for the U.S. operations of FBOs should be managed with processes and systems appropriate for the U.S. entities' size, complexity, risk profile, and scope of activities. Regardless of the scope or scale of U.S. operations, the risks undertaken are expected to be managed with 1) effective governance and management oversight as appropriate; 2) adequate policies, procedures, and limits on risk taking; and 3) strong management information systems for measuring, monitoring, reporting, and controlling liquidity risks. While elements of these risk-management processes may be implemented locally or outside of the United States, the Federal Reserve expects to have ready access to the information necessary to maintain an understanding and assessment of these functions.

1060.20.2.2 Key Themes of the 2010 Policy Statement

The following subsections summarize the significant themes of SR-10-6 as well as the 2010 policy statement. To review the 2010 policy statement in its entirety, see the "Interagency Policy Statement on Funding and Liquidity Risk Management," attachment to SR-10-6.

Liquidity Risk-Management Processes

Liquidity risk-management processes and funding programs should take into account the firm's lending, investment, and other activities and should ensure that adequate liquidity is maintained. These processes and programs should fully incorporate real and potential constraints, including legal and regulatory restrictions, on the transfer of funds among subsidiaries and between subsidiaries and the parent holding company. Holding company liquidity should be maintained at levels sufficient to fund holding company and affiliate operations for an extended period of time in a stressed environment when access to normal funding sources are disrupted without having a negative impact on insured depository institution subsidiaries.

Material nonbank subsidiaries, such as broker-dealers, are expected to have liquidity management processes and funding programs that align with the subsidiaries' complexity, risk profile, and scope of operations. A nonbank subsidiary that directly accesses market sources of funding

4. SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

and/or manages specific funding programs should pay particular attention to

- maintaining sufficient liquidity, cash flow, and capital strength to service its debt obligations and cover fixed charges;
- assessing the potential that funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions; and
- ensuring the adequacy of policies and practices addressing the stability of funding and integrity of the firm's liquidity risk profile as evidenced by funding mismatches and the degree of dependence on potentially volatile sources of short-term funding.

Corporate Governance

The Federal Reserve expects the board of directors to provide effective oversight of a firm's liquidity risk and liquidity risk management. The board of directors is ultimately responsible for the liquidity risk assumed by the firm.[5] A firm's senior management is responsible for implementing the policies and risk-management strategies established by the board of directors and are involved in most daily operational decisions.

With regard to a firm's liquidity risk and liquidity risk management, the board of directors or its delegated committee should

- ensure the firm's liquidity risk tolerance is established and communicated in such a manner that all levels of management understand the firm's approach to managing trade-offs between liquidity risk and short-term profits;
- oversee the establishment and approval of liquidity management strategies, policies and procedures, and review them at least annually;
- establish executive-level lines of authority and responsibility for managing the firm's liquidity risk;
- enforce management's duties to identify, measure, monitor, and control liquidity risk; and
- understand and periodically review the firm's contingency funding plan for handling adverse liquidity events and understand the liquidity risk profiles of important subsidiaries and affiliates.

Senior management should

- ensure that board-approved strategies, policies, and procedures for managing liquidity are appropriately executed within the lines of authority and responsibility;
- regularly report to the board of directors on the liquidity risk profile of the firm;
- determine the structure, responsibilities, and controls for managing liquidity risk and for overseeing the liquidity positions of the firm; and
- monitor liquidity risks for each entity across the firm on an ongoing basis.

Strategies, Policies, Procedures, and Risk Tolerances

Firms should have documented strategies for managing liquidity risk and clear policies and procedures for limiting and controlling risk exposures that appropriately reflect the firm's risk tolerances. Firms should consider liquidity costs, benefits, and risks in strategic planning and budgeting processes. Significant business activities should be evaluated for both liquidity risk exposure and profitability.

Effective liquidity risk and risk-management policies and procedures should

- provide for the formulation of plans and courses of actions for dealing with potential temporary, intermediate-term, and long-term liquidity disruptions;
- address liquidity separately for individual currencies, legal entities, and business lines, when appropriate and material;
- articulate a liquidity risk tolerance that is appropriate for the business strategy of the firm;
- employ both quantitative targets and qualitative guidelines for identifying, measuring, and limiting liquidity risk;
- contain provisions for documenting and periodically reviewing assumptions used in liquidity projections; and
- specify the nature and frequency of management reporting.

Liquidity Risk Measurement, Monitoring, and Reporting

- Stress Testing
  Firms should conduct stress tests regularly for

5. See also SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness."

a variety of firm-specific and market-wide events across multiple time horizons. The magnitude and frequency of stress testing should be commensurate with the complexity of the firm and the level of its risk exposures. Stress test outcomes should be used to identify and quantify sources of potential liquidity strain and to analyze possible impacts on the firm's cash flows, liquidity position, profitability, and solvency. Stress tests should also be used to ensure that current exposures are consistent with the firm's established liquidity risk tolerance. The results of stress tests should also play a key role in shaping the firm's contingency planning. More information on liquidity stress testing for large firms is described in the subsection entitled "Regulation YY (12 C.F.R. Part 252)."

- Collateral Position Management
  A firm should be able to calculate all of its collateral positions in a timely manner, including the value of assets currently pledged relative to the amount of security required and unencumbered assets available to be pledged. A firm should monitor available collateral by legal entity, jurisdiction, and currency exposure, and its systems should be able to monitor shifts between intraday and overnight or term collateral usage. A firm should be aware of the operational and timing requirements associated with accessing the collateral given its physical location (i.e., the custodian firm or securities settlement system with which the collateral is held). Firms also should fully understand the potential demand on required and available collateral arising from various types of contractual contingencies during periods of both market-wide and firm-specific stress.

- Management Reporting
  Liquidity risk reports should provide aggregate information with sufficient supporting detail to enable management to assess the sensitivity of the firm to changes in market conditions, its own financial performance, and other important risk factors. The types of reports or information and their timing will vary depending on the firm's complexity and risk profile. For example, reportable items may include cash-flow gaps, cash-flow projections, asset and funding concentrations, key early warning or risk indicators, as well as the use of and availability of government support.

- Liquidity across Currencies, Legal Entities, and Business Lines
  A firm should monitor liquidity risk exposures and funding needs within and across currencies, legal entities, and business lines. A firm should actively monitor and control liquidity risks at the level of individual legal entities, and the consolidated organization, incorporating processes that aggregate data across multiple systems to develop a group-wide view of liquidity risk exposures. Also, a firm should consider operational limitations in the transferability of liquidity, and should maintain sufficient liquidity during economically stressed periods, particularly when there are legal and regulatory restrictions on the transfer of liquidity among regulated entities. A firm's liquidity risk-management plans should describe assumptions regarding the transferability of funds and collateral.

Intraday Liquidity Position Management

Large firms engaged in significant payment, settlement, and clearing activities should actively manage their intraday liquidity positions and risks to meet payment and settlement obligations on a timely basis under both normal and stressed conditions.

Diversified Funding

A firm should establish a funding strategy that provides effective diversification in the sources and tenor of funding. A firm should consider implementing limits to address counterparties, secured versus unsecured market funding, instrument type, securitization vehicle, and geographic market. It should maintain an ongoing presence in its chosen funding markets and strong relationships with funds providers to promote effective diversification of funding sources. A firm should periodically assess its ability to access markets and raise new funds. In addition, a firm should identify alternative sources of funding that strengthen its capacity to withstand a variety of severe firm-specific and market-wide liquidity shocks.

Cushion of Liquid Assets

A critical component of a firm's ability to effectively respond to potential liquidity stress is the availability of a cushion of highly liquid assets without legal, regulatory, or operational impediments (i.e., unencumbered) that can be sold or pledged to obtain funds in a range of stress scenarios. Examples of highly liquid assets include U.S. Treasury securities, securities issued by U.S. government-sponsored agencies, and excess reserves at the central bank. The appropriate cushion of highly liquid assets depends on the risk tolerance and risk profile of the firm, as well as estimates of liquidity needs based on a firm's stress testing.

Contingency Funding Plan

A contingency funding plan (CFP) provides a framework for managing unexpected situations or business conditions that may increase liquidity risk. The objective of the CFP is to ensure that the firm's sources of liquidity are sufficient to fund normal operating needs under contingent liquidity events. A CFP also identifies alternative contingent liquidity resources that can be employed under adverse liquidity circumstances. A firm's CFP should be commensurate with its complexity, risk profile, and scope of operations. Effective CFPs generally should

- identify stress events, which include events that may adversely affect the firm's liquidity given its specific balance-sheet structure, business lines, organizational structure, and other characteristics;
- assess the levels of stress severity that can occur during a contingent liquidity event and identify the different stages for each type of event;
- assess funding sources and needs by providing a quantitative projection and evaluation of expected funding needs and funding capacity during the stress event;
- identify potential alternative sources of liquidity and assess the firm's ability to access such contingent funding sources during a liquidity stress event;
- establish liquidity event-management processes, including a crisis management team and administrative structure, as well as action plans for executing various elements of the CFP depending on given levels of stress; and
- establish a framework for monitoring potential liquidity stress events by using early-warning indicators and event triggers.

Internal Controls

Internal controls consist of procedures, approval processes, reconciliations, reviews, and other mechanisms designed to provide assurance that the firm manages liquidity risk consistent with its board-approved policy. Appropriate internal controls should address relevant elements of the risk-management process, including adherence to policies and procedures, the adequacy of risk identification, risk measurement, reporting, and compliance with applicable rules and regulations. Management should ensure that an independent party regularly reviews and evaluates the various components of the firm's liquidity risk-management process.

1060.20.3 REGULATION YY (12 C.F.R. PART 252)

As discussed in section 1060.1, "Large Financial Institution Rating System: Capital Planning and Positions," the Board adopted enhanced prudential standards to strengthen the resiliency of large banking organizations, including certain FBOs with operations in the United States, and to implement section 165 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act).[6] These enhanced prudential standards, implemented in the Board's Regulation YY, strengthened the capital and liquidity positions of large banking organizations, and substantially mitigated the risks to safety and soundness and financial stability in the United States. Section 165 of the Dodd-Frank Act directed the Board to establish more string prudential standards for BHCs and FBOs with total consolidated assets of $50 billion or more.[7] In May 2018, Congress enacted the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA), which amended section 165 of the Dodd-Frank Act to raise the $50 billion minimum total consolidated asset threshold to $250 billion for general application of enhanced prudential standards to BHCs.[8] EGRRCPA also provides the Board with discretion to apply standards to BHCs with total consolidated assets of between $100 billion and $250 billion.

In connection with its implementation of EGRRCPA and as part of the Board's periodic efforts to improve the risk sensitivity of its regulations, the Board revised Regulation YY by establishing categories of prudential standards applicable to BHCs, certain SLHCs, and

6. 12 U.S.C. 5365.
7. 12 U.S.C. 5365.
8. Pub. L. No. 115-174, 132 Stat. 1296 (2018). The term "bank holding company" as used in section 165 of the Dodd-Frank Act includes a foreign bank or company treated as a bank holding company for purposes of the BHC Act, pursuant to section 8(a) of the International Banking Act of 1978. See 12 U.S.C. 3106(a); 12 U.S.C. 5311(a)(1).

FBOs to align those requirements with a firm's risk profile and to apply consistent standards across similarly situated firms.

In particular, Regulation YY establishes risk-based indicators to differentiate firms based on their size, cross-jurisdictional activity, reliance on short-term wholesale funding, nonbank assets, and off-balance sheet exposure, and whether a firm is identified as a U.S. global systemically important BHC (U.S. G-SIB). For more information on the firms that are covered by each of the four categories of standards, see section 1060.1 of this manual, "Large Financial Institution Rating System: Capital Planning and Positions" (table 1).

1060.20.3.1 Liquidity Requirements of Regulation YY

The liquidity risk-management requirements in Regulation YY build upon the Board's overall supervisory framework for liquidity adequacy and liquidity risk management.[9] Regulation YY is designed to provide a regulatory framework for ensuring that large BHCs and FBOs establish and maintain robust liquidity risk-management practices, perform internal stress tests for determining the adequacy of their liquidity resources, and maintain a buffer of highly liquid assets in the United States to cover cash-flow needs under stress.

1060.20.3.1.1 Liquidity Risk-Management Requirements

The Board's Regulation YY outlines the liquidity risk-management requirement for large BHCs (12 C.F.R. 252.34) and FBOs (12 C.F.R. 252.156) covered by the rule.[10] This part of the regulation describes governance responsibilities, namely the responsibilities of a firm's board of directors, risk committee, and senior management as well as the need to establish an independent review function. In addition, this section of the regulation describes other liquidity risk-management requirements covering cash-flow projections, contingency funding planning, liquidity risk limits, and liquidity risk monitoring. Many elements of the liquidity risk-management requirements apply to all firms covered by Regulation YY. However, certain elements of the liquidity risk-management requirements do not apply to Category IV firms. This section summarizes Regulation YY's liquidity risk-management requirements. Refer to the regulation for comprehensive information on liquidity risk-management requirements.

Board of Directors (BHC) and U.S. Risk Committee (FBO)

The board of directors of covered BHCs and U.S. risk committee of covered FBOs is responsible for oversight of liquidity risk management and is required to[11]

- approve the firm's liquidity risk tolerance at least annually;[12] and
- receive and review information from senior management at least semiannually to determine whether the firm is operating in accordance with its established liquidity risk tolerance.

In addition, a BHC's board of directors must approve and periodically review the liquidity risk-management strategies, policies, and procedures established by senior management.

Risk Committee

The risk committee of a covered BHC or covered FBO is responsible for understanding the liquidity risks associated with different business lines and products and must be composed of a subset of directors with the appropriate level of risk-management expertise to conduct an in-depth review of the CFP.[13] The risk committee, or a designated subcommittee thereof, is required to review and approve the CFP at least annually and prior to the implementation of material revisions.

Senior Management

Concerning the management of liquidity risk, Regulation YY requires a covered BHC's senior management to

9. For example, supervisory guidance regarding liquidity risk-management practices includes the 2010 policy statement, which is described in subsection 1060.20.2.

10. For large SLHCs, see 12 C.F.R. 238.123.

11. An FBO may maintain its U.S. risk committee at either the global board of directors or at the FBO's U.S. intermediate holding company.

12. The liquidity risk tolerance is the acceptable level of liquidity risk that a firm may assume in connection with its operating strategies.

13. For an FBO, the U.S. risk committee or a designated subcommittee of such committee may be composed of members of the board of directors (or the equivalent thereof) of the FBO or its U.S. intermediate holding company.

- establish and implement strategies, policies, and procedures designed to effectively manage risk;
- oversee the development and implementation of liquidity risk measurement and reporting systems;
- determine whether the firm is operating in accordance with such policies and produces at least quarterly or more often, if conditions change; and
- report to the board of directors or the risk committee regarding the firm's liquidity risk profile and liquidity risk tolerance at least quarterly or more often if conditions change.

Regulation YY requires a covered FBO's U.S. chief risk officer to

- review the strategies, policies, and procedures established by senior management of the U.S. operations for managing liquidity risk;
- review information provided by senior management of the U.S. operations to determine whether the combined U.S. operations are operating in accordance with the established liquidity risk tolerance; and
- report at least semi-annually to the FBO's U.S. risk committee and enterprise-wide risk committee (or the equivalent thereof) on the liquidity risk profile of the FBO's combined U.S. operations and whether it is operating in accordance with the established liquidity risk tolerance.

Senior management of a covered BHC and the U.S. chief risk officer of a covered FBO must

- approve new products and business lines and evaluate liquidity costs, benefits, and risks related to each new business line and product that could have a significant effect on the firm's liquidity risk profile;[14]
- review required cash-flow projections at least quarterly;
- establish the liquidity risk limits specified in the regulation and review the firm's compliance with those limits at least quarterly; and
- review and approve certain aspects of the liquidity stress testing framework and the liquidity buffer at specified intervals.

Independent review function

Covered BHCs (12 C.F.R. 252.34(d)) and FBOs (12 C.F.R. 252.156(c)) are required to establish and maintain a review function, which is independent of management functions that execute funding, to evaluate its liquidity risk management. The independent review function must

- review and evaluate the adequacy and effectiveness of the firm's liquidity risk-management processes, including its liquidity stress test processes and assumptions, regularly, but no less frequently than annually;
- assess whether the firm's liquidity risk-management function complies with applicable laws, regulations, and sound business practices; and
- report material liquidity risk-management issues in writing to the board of directors or the risk committee for corrective action, to the extent permitted by applicable law.

Cash-flow projections

Covered BHCs (12 C.F.R. 252.34(e)) and FBOs (12 C.F.R. 252.156(d)) are required to produce cash-flow projections over, at minimum, short- and long-term time horizons. Firms must update short-term projections daily and longer-term projections at least monthly. Regulation YY requires firms to establish a methodology for making cash-flow projections that result in projections that meet certain criteria. Firms may adapt the cash-flow projection requirements to their particular circumstances, such as if they have significant broker-dealer activities. More frequent cash-flow reports may be appropriate for firms with complex risk profiles or for all firms during times of stress. Similarly, while cash-flow projections over time horizons longer than one year are not required, it may be appropriate for certain firms to produce cash-flow projections for longer time periods, for instance to account for long-term debt maturities, if circumstances warrant.

Contingency funding plan

As part of a robust regulatory framework to promote comprehensive liquidity risk management, covered firms are required to establish and maintain a contingency funding plan (CFP).

14. In addition, a BHC's senior management and FBO's U.S. risk committee must review at least annually significant business lines and products to determine whether the liquidity risk of each line and product is within the firm's liquidity risk tolerance.

As previously discussed, a CFP is a compilation of policies, procedures, and action plans for managing liquidity stress events that, together, provide a plan for responding to a liquidity crisis. The CFP must be commensurate with the firm's capital structure, risk profile, complexity, activities, size, and established liquidity risk tolerance. Regulation YY requires a firm's implementation of its CFP to include quantitative assessments, liquidity event-management processes, monitoring, and testing.

Liquidity risk limits

Category I–IV firms are required to monitor sources of liquidity risk and establish limits on liquidity risk that are consistent with their established liquidity risk tolerance and that reflect the firm's capital structure, risk profile, complexity, and activities.

Category, I, II, and III firms are required to establish and maintain liquidity risk limits that include limits on

- concentrations of funding sources by instrument type, single counterparty, counterparty type, secured and unsecured funding, and other forms of liquidity risk, as applicable;
- the amount of liabilities that mature within various time horizons; and
- off-balance-sheet exposures and other exposures that could create funding needs during liquidity stress events.

Collateral, legal entity, and intraday liquidity risk monitoring

Category I–IV firms must establish and maintain procedures for monitoring liquidity risk related to collateral positions, liquidity risks across the enterprise, and intraday liquidity positions. Firms are required to establish and maintain procedures for monitoring

- assets they have pledged as collateral and assets that are available to be pledged, including by calculating and monitoring:
  - collateral positions at specified frequencies,
  - the level of unencumbered assets available to be pledged by legal entity, jurisdiction, and currency exposure,
  - shifts in the firm's funding patterns, and
  - operational and timing requirements associated with accessing collateral;
- liquidity exposures and funding needs within and across significant legal entities, currencies, and business lines, taking into account legal and regulatory restrictions on the transfer of liquidity between legal entities; and
- intraday liquidity risk exposures that are consistent with the firms' capital structure, risk profile, complexity, activities, and size.

Category I, II, and III firms' intraday liquidity risk exposure monitoring procedures must address how management will monitor and measure daily liquidity inflows and outflow, manage and transfer collateral to obtain intraday credit, identify and prioritize time-specific payment obligations, manage credit extensions to customers, and consider the amount of collateral and liquidity needed to meet payment systems obligations.

1060.20.3.1.2 Liquidity Stress Testing and Buffer Requirements

In addition to requiring firms to establish and maintain robust liquidity risk management, Regulation YY requires large BHCs (12 C.F.R. 252.35) and FBOs (12 C.F.R. 252.157) to conduct internal liquidity stress tests and maintain buffers of highly liquid assets sufficient to meet projected 30-day stressed cash-flow needs under internal stress scenarios. A firm that is subject to Regulation YY must conduct stress tests to assess the potential impact of the liquidity stress scenarios on its cash flows, liquidity position, profitability, and solvency, accounting for its current liquidity condition, risks, exposures, strategies, and activities. Category I, II, and III firms must perform the liquidity stress tests at least monthly, while Category IV firms must perform the liquidity stress tests at least quarterly.[15]

In conducting a liquidity stress test, the firm must address the potential direct adverse impact of associated market disruptions on the firm. Further the firm must incorporate the potential actions of other market participants experiencing liquidity stresses under the market disruptions that would adversely affect the firm. Stress testing should be sufficiently dynamic and incorporate a variety of changes in the firm's internal position and external circumstances, including risks that may arise over time. Liquidity stress tests must incorporate, at minimum, stress scenarios that reflect adverse market conditions, an

15. 12 C.F.R. 252.35(a)(2) and 252.157(a)(2).

idiosyncratic stress event, and combined market and idiosyncratic stresses. Additional scenarios, based on the firm's financial condition, size, complexity, risk profile, scope of operations, or activities, should be used as needed to ensure that all significant aspects of liquidity risks to the firm have been modeled.

A complementary requirement to the stress testing requirement is a liquidity buffer requirement. Regulation YY requires a firm to maintain a liquidity buffer composed of unencumbered highly liquid assets sufficient to meet projected net stressed cash-flow needs over a 30-day planning horizon (for BHCs and U.S. intermediate holding companies of FBOs) or the first 14 days of a 30-day planning horizon (for U.S. branches and agencies of FBOs) of its internal liquidity stress test. Highly liquid assets included in the liquidity buffer also must meet certain operational and diversification requirements. In particular, a firm must discount the fair market value of the asset to reflect any credit risk and market volatility, establish and implement policies and procedures that require highly liquid assets comprising the buffer be under control of the management function charged with managing liquidity risk, demonstrate the capability to monetize a highly liquid asset under each stress test scenario, and generally ensure the buffer does not contain significant concentrations of highly liquid assets by issuer, business sector, region, or other factor related to the firm's risk.

1060.20.4 REGULATION WW (12 C.F.R. PART 249)

The Board's Regulation WW establishes a liquidity coverage ratio (LCR) requirement and net stable funding ratio (NSFR) requirement for certain large firms on a consolidated basis.[16] Firms subject to Regulation WW include

- Global systemically important BHCs;
- Large depository institutions of global systemically important BHCs;
- Category II firms;
- Category III firms; and
- Category IV holding companies with $50 billion or more in average weighted short-term wholesale funding.

The stringency of LCR and NSFR requirements is tailored based on a firm's category and level of weighted short-term wholesale funding.

1060.20.4.1 Liquidity Coverage Ratio Rule

In 2014, the Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC) (collectively, "the agencies") adopted the LCR rule.[17] The LCR rule is designed to promote the short-term resilience of the liquidity risk profile of large and internationally active banking organizations, thereby improving the banking sector's ability to absorb shocks arising from financial and economic stress, and to further improve the measurement and management of liquidity risk.

The LCR rule implements a quantitative minimum liquidity requirement consistent with the liquidity coverage ratio standard established by the BCBS.[18] Specifically, the LCR rule requires a firm subject to the rule to maintain an amount of high-quality liquid assets (HQLA)—the numerator of the ratio—that is equal to or greater than its total net cash outflows over a prospective 30 calendar-day stress period (the denominator of the ratio).[19]

$$\frac{\text{HQLA amount}}{\text{Net cash outflow amount}} \geq 1.00$$

The Board's Regulation WW (12 C.F.R. part 249) provides more information on calculating the LCR. The LCR complements the liquidity requirements related to firm-specific measures of liquidity risk under the Board's Regulation YY.

1060.20.4.1.1 High-Quality Liquid Assets

HQLA are assets that generally maintain their value in stress and can be easily converted to cash. The LCR rule sets criteria for the catego-

16. Regulation WW applies to certain top-tier BHCs and SLHCs, U.S. intermediate holding companies, and state member banks.

17. See 79 Fed. Reg. 61,440 (October 10, 2014), codified at 12 C.F.R. part 249.

18. See also SR-17-11, "Interagency Frequently Asked Questions on Implementation of the Liquidity Coverage Ratio (LCR) Rule."

19. The firm's HQLA amount as of the calculation date, calculated under 12 C.F.R. part 249, subpart C. The firm's total net cash outflow amount as of the calculation date, calculated under 12 C.F.R. part 249, subpart D.

ries of assets that qualify as HQLA and divides HQLA into three categories: level 1, level 2A, and level 2B liquid assets.

Level 1 liquid assets include Reserve Bank balances and U.S. Treasury securities, which are the highest quality and most liquid assets. These assets are included in a firm's HQLA amount without a limit and without haircuts. Level 2A liquid assets include securities issued by U.S. government-sponsored enterprises and are subject to a 15 percent haircut. Level 2B liquid assets include certain debt and equity securities and municipal obligations and are subject to a 50 percent haircut. Level 2A and level 2B liquid assets together may not exceed 40 percent of the total HQLA amount and level 2B liquid assets alone may not exceed 15 percent of the total HQLA amount.

A firm must satisfy certain operational requirements to include an asset that qualifies as HQLA in the firm's HQLA amount, including that the HQLA be unencumbered, able to be efficiently monetized, and under control of the firm's liquidity management function. For more information on the qualifying criteria for HQLA and the operational requirements for inclusion in the HQLA amount, see the Board's Regulation WW.

1060.20.4.1.2 Total Net Cash Outflow Amount

Subpart D of Regulation WW (12 C.F.R. part 249, subpart D) establishes the total net cash outflows (the denominator of the LCR), which is the difference between projected outflows and inflows over a 30 calendar-day period, with an adjustment to address mismatches in timing of outflows and inflows. Inflow amounts cannot offset more than 75 percent of total outflow amounts. A firm must determine outflow and inflow amounts by applying a standardized set of outflow and inflow rates to various asset and liability balances, together with certain off-balance-sheet commitments. These standardized outflow and inflow rates reflect the likelihood of an outflow or inflow in a time of stress. The LCR rule requires firms to employ standardized maturity assumptions to determine whether an outflow or inflow amount occurs within the 30 calendar-day period following the calculation date. To address the risk that a firm's outflows may mature before its inflows, a firm must include in its total net cash outflow amount a maturity mismatch add-on, which is calculated as the difference (if greater than zero) between the firm's largest net cumulative maturity outflow amount for any of the 30 calendar days following the calculation date and the net day 30 cumulative maturity outflow amount.

1060.20.4.1.3 Adjustment Percentage

The stringency of the LCR rule's minimum requirement is tailored to a firm's risk profile. The LCR rule calibrates a firm's minimum LCR requirement by multiplying the net cash outflow amount by an adjustment percentage based on the firm's category of standards and degree of reliance on short-term wholesale funding. Category I and II firms as well as Category III firms with $75 billion or more in average weighted short-term wholesale funding are subject to the full LCR requirement. Other Category III firms and Category IV holding companies with $50 billion or more in average weighted short-term wholesale funding are subject to reduced LCR requirements (adjustment percentages of 85 and 70 percent, respectively). See table 1 below for information on how the adjustment percentage is determined for these firms.

Table 1. Adjustment percentage

Type of firm	Percentage
Global systemically important BHC or G-SIB depository institution	100%
Category II firm	100%
Category III firm with $75 billion or more in average weighted short-term wholesale funding and any Category III firm that is a consolidated subsidiary of such a Category III firm	100%
Category III firm with less than $75 billion in average weighted short-term wholesale funding and any Category III firm that is a consolidated subsidiary of such a Category III firm	85%
Category IV holding company with $50 billion or more in average weighted short-term wholesale funding	70%

1060.20.4.1.4 LCR Shortfall Remediation

Under certain circumstances, a firm's LCR might temporarily fall below 1.0. Given the range of reasons a firm's LCR could fall below 1.0 (for example, the firm might temporarily fall below 1.0 during a period of extreme liquidity stress), Regulation WW establishes a framework for a flexible supervisory response percent to address a firm's LCR shortfall. A firm must notify the appropriate federal banking agency on any business day that its LCR is calculated to be less than its minimum requirement (12 C.F.R. 249.40). In addition, if a firm's LCR is below 1.0 for three consecutive business days, the firm must submit to its appropriate federal banking agency a plan for remediation of the shortfall.[20] These procedures are intended to enable supervisors to monitor and respond appropriately to the unique circumstances that give rise to a firm's LCR shortfall.

1060.20.4.2 Net Stable Funding Ratio Rule

In 2021, the OCC, Board, and the FDIC adopted the NSFR rule.[21] The NSFR rule is designed to reduce the likelihood that disruptions to a firm's regular sources of funding will compromise its liquidity position, promote effective liquidity risk management, and support the ability of firms to continue to lend to businesses and households across a range of market conditions.

The NSFR requires large firms to maintain a minimum level of stable funding based on the liquidity characteristics of the firm's assets, commitments, and derivative exposures. The NSFR rule requires a firm to calculate a weighted measure of the stability of its equity and liabilities over a one-year time horizon, known as its available stable funding amount (numerator of the ratio).[22] A firm also is required to calculate a minimum level of required stable funding, known as its required stable funding amount, based on the liquidity characteristics of its assets, derivative exposures, and commitments over the same one-year time horizon (denominator of the ratio).[23] Firms subject to the rule are required to keep their ratio of available stable funding to required stable funding equal to at least 1.0 on an ongoing basis.

$$\frac{\text{Available stable funding amount}}{\text{Required stable funding amount}} \geq 1.00$$

Consistent with the LCR rule, the NSFR rule calibrates a firm's minimum NSFR requirement by multiplying the required stable funding amount by an adjustment percentage based on the firm's category of standards and degree of reliance on short-term wholesale funding.[24] See table 1 for information on how the adjustment percentage is determined for these firms. The Board's Regulation WW (12 C.F.R. part 249) provides more information on calculating the NSFR. The NSFR complements the LCR rule, which focuses on short-term liquidity risks, and the firm-specific measures of funding risk under the Board's Regulation YY.

1060.20.4.2.1 NSFR Numerator — Available Stable Funding Amount

A firm's available stable funding amount measures the stability of its regulatory capital elements and liabilities. The available stable funding amount equals the sum of the carrying values of the firm's NSFR regulatory capital elements and NSFR liabilities, in each case multiplied by the available stable funding factor applicable.[25] The available stable funding factor represents the extent to which the capital element or liability is considered available for use by the firm over a one-year time horizon. The available stable funding factors are scaled from zero (least stable) to 100 percent (most stable) and were determined by taking into account the tenor of the funding, type of funding, and type of counterparty. See table 2 for more information on the available stable funding factor assignments.

20. During the period when a firm is required to calculate its LCR monthly, the firm must promptly consult with the appropriate federal banking agency to determine whether a plan would be required if the firm's LCR is below the minimum requirement for any calculation date that is the last business day of the calendar month.

21. 86 Fed. Reg. 9,120 (Feb. 11, 2021).

22. Calculated pursuant to 12 C.F.R. 249.103, as of the calculation date.

23. Calculated pursuant to 12 C.F.R. 249.105, as of the calculation date.

24. 12 C.F.R. 249.105(b).

25. "Carrying value" is the value of an asset, liability, or regulatory capital element on a banking organization's balance sheet as determined in accordance with U.S. Generally Accepted Accounting Principles.

Table 2. Summary of available stable funding factors

Available stable funding factor	Equity and liabilities assigned the available stable funding factor
100%	• Regulatory capital elements and liabilities with a remaining maturity of one year or more.
95%	• Fully insured stable retail deposits. • Certain fully insured affiliate sweep deposits.
90%	• Retail deposits that are neither fully insured stable retail deposits nor retail brokered deposits. • Certain more stable retail brokered deposits. • Non-fully insured affiliate sweep deposits.
50%	• Unsecured wholesale funding and secured funding transactions with a remaining maturity of less than one year that are provided by wholesale customers that are not financial sector entities or central banks.[1] • Unsecured wholesale funding and secured funding transactions with a remaining maturity of six months or more, but less than one year and that are provided by financial sector entities or central banks. • Securities issued by a banking organization with a remaining maturity of six months or more but less than one year. • Operational deposits received by a banking organization. • Certain retail brokered deposits with intermediate stability. • Retail funding that is not a deposit or security. • Any liability with a remaining maturity of six months or more but less than one year that is not described above.
0%	All other funding not described above, including • Funding (other than operational deposits) where the counterparty is a financial sector entity or a central bank, and the transaction matures within six months. • Retail brokered deposits that are not stable. • Derivatives liabilities. • Trade date payables.

1. Wholesale customers or counterparties that are not financial sector entities or central banks include sovereigns, certain multilateral development banks, public sector entities, and U.S. government-sponsored entities.

Note: See 12 C.F.R. 249.104.

1060.20.4.2.2 NSFR Denominator — Required Stable Funding Amount

A firm's required stable funding amount, the denominator of the NSFR, is based on the liquidity characteristics of the firm's assets, commitments, and derivative exposures. The required stable funding amount is the sum of the required stable funding amount for non-derivative assets and commitments and the required stable funding amount for derivative transactions.

A firm determines its required stable funding amount for non-derivative assets and commitments by

1. multiplying the carrying value of each asset and commitment by a required stable funding factor, and
2. summing these amounts.

The required stable funding factors are scaled from zero (most liquid and least likely to need ongoing funding during the one-year time horizon) to 100 percent (least liquid and most likely to need ongoing funding during the one-year time horizon) and were determined by taking into account the non-derivative assets' and commitments' tenor, credit quality, type of counterparty, market liquidity, and encumbrances. See table 3 for more information on required stable funding factor assignments.

Table 3. Summary of required stable funding factors excluding derivative calculations

Required stable funding factor	Assets and commitments assigned the required stable funding factor
0%	• Reserve Bank balances or other claims on a Reserve Bank that mature within six months. • Claims on a foreign central bank that mature within six months. • Currency, coin, and items in the process of collection. • Trade date receivables. • Level 1 liquid asset securities, including U.S. Treasury securities. • Secured lending transactions (e.g., reverse repurchase transactions) where the counterparty is a financial sector entity that mature within six months and are secured by level 1 liquid assets.
5%	• The undrawn amount of committed credit and liquidity facilities.
15%	• Level 2A liquid assets, including certain obligations issued or guaranteed by a U.S. government sponsored enterprise. • Secured lending transactions where the counterparty is a financial sector entity that mature within six months and are secured by assets other than level 1 liquid assets. • Unsecured wholesale lending that matures within six months and the counterparty is a financial sector entity.
50%	• Level 2B liquid assets, including certain publicly traded corporate equity and debt securities and certain U.S. municipal obligations. • Secured lending transactions and unsecured wholesale lending that mature in six months or more, but less than one year, where the counterparty is a financial sector entity or central bank. • Secured lending transactions and unsecured wholesale lending that mature in less than one year, where the counterparty is not a financial sector entity or central bank. • Lending to retail customers or counterparties that matures in less than one year. • Operational deposits placed by a banking organization at financial sector entities. • All other assets that mature in less than one year.
65%	• Retail mortgages with a remaining maturity of one year or more that are assigned a risk weight of no greater than 50 percent under the Board's capital regulations. • Other lending that has a remaining maturity of one year or more, is assigned a risk weight of no greater than 20 percent under the Board's capital regulations, and where the borrower is not a financial sector entity.
85%	• Retail mortgages with a remaining maturity of one year or more that are assigned a risk weight of greater than 50 percent under the Board's capital regulations. • Other lending that has a remaining maturity of one year or more and is assigned a risk weight greater than 20 percent under the Board's capital regulations, where the borrower is not a financial sector entity. • Publicly traded common equity shares that are not HQLA. • Other securities that are not HQLA and have a remaining maturity of one year or more. • Commodities for which derivative transactions are traded on a U.S. designated contract market, U.S. swap execution facility, or an exchange located outside the United States.
100%	All other assets not described above, including • Lending that has a remaining maturity of one year or more, where the borrower is a financial sector entity. • Nonperforming assets. • Equity securities that are not publicly traded. • Commodities that do not qualify to be assigned an 85% required stable funding factor.

Note: See 12 C.F.R. 249.106.

Derivative transactions present unique risks and generally retain more complex features relative to other assets and liabilities. As such, the NSFR rule requires a firm to calculate the required stable funding amount relating to its derivative transactions separately from its other assets and commitments. The required stable funding amount for a firm's derivatives reflects

- the current net value of the firm's derivatives assets and liabilities, taking into account variation margin provided and received (current net value component);
- contributions by the firm to a central counterparty's default fund in connection with cleared derivative transactions and initial margin provided by the firm pursuant to the derivative transactions (initial margin component); and
- potential changes in the value of the firm's derivative transactions (future value component).

See 12 C.F.R. 249.107 for more information on the calculation of the required stable funding amount for derivatives.

1060.20.4.2.3 NSFR Shortfall Remediation

If a firm has an NSFR shortfall, a firm is required to notify the appropriate federal banking agency of the shortfall within 10 business days. In addition, the NSFR rule requires a firm to develop a remediation plan that would be submitted to the appropriate federal banking agency. The agencies have flexibility in providing a supervisory response to address an NSFR shortfall, which should consider the circumstances of a particular case. In general, the agencies support a firm that chooses to reduce its NSFR during a liquidity stress period in order to continue to lend and undertake other actions to support the broader economy in a safe and sound manner.

1060.20.5 LIQUIDITY REPORTING

Federal Reserve supervision staff use data reported on the FR 2052a, "Complex Institution Liquidity Monitoring Report," to monitor the overall liquidity profile of large firms supervised by the Board. The FR 2052a is required to be submitted by top-tier BHCs, top-tier SLHCs, and FBOs subject to Category I, II, III, or IV standards under the Board's Regulation YY and Regulation LL. The FR 2052a is required to be submitted at the following frequencies:

- For U.S. firms, firms that are identified as
  - o (1) Global systemically important bank holding companies, (2) Category II banking organizations, or (3) Category III banking organizations and have average weighted short-term wholesale funding of $75 billion or more must submit a report *on each business day*; and
  - o (1) Category III banking organizations and have average weighted short-term wholesale funding of less than $75 billion, or (2) Category IV banking organizations must submit a report *monthly*.
- For FBOs, FBOs that are categorized based on the risk profile of their combined U.S. operations as
  - o (1) Category II FBOs, or (2) Category III FBOs with average weighted short-term wholesale funding of $75 billion or more must submit a *report on each business day*; and
  - o (1) Category III FBOs with average weighted short-term wholesale funding of less than $75 billion, or (2) Category IV FBOs must submit a report *monthly.*

Data from the FR 2052a provide detailed information on the liquidity risks within different business lines (for example, financing of securities positions, prime brokerage activities). FR 2052a data assist Federal Reserve supervision staff in monitoring compliance with the LCR rule and NSFR rule. The data serve as part of the Federal Reserve's liquidity risk-management supervisory surveillance program and provide timely information on firm-specific liquidity risks during periods of stress. The Board uses analyses of systemic and idiosyncratic liquidity risk to inform its supervisory processes, including the preparation of analytical reports that detail funding vulnerabilities. As the information required by the FR 2052a is collected as part of the Board's supervisory process, such information is entitled to confidential treatment.[26]

26. See exemption 8 of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(8)).

1060.20.6 Table 4. Overview of liquidity requirements for domestic and foreign banking organizations

Requirement	**C.F.R. reference(s)**	**Category I**	**Category II**	**Category III**	**Category IV**
Liquidity risk management	12 C.F.R. 252.34 12 C.F.R. 252.156	Full set of liquidity risk-management requirements	Full set of liquidity risk-management requirements	Full set of liquidity risk-management requirements	Tailored liquidity risk-management
Liquidity stress tests	12 C.F.R. 252.35 12 C.F.R. 252.157	At least **monthly**	At least **monthly**	At least **monthly**	At least **quarterly**
Liquidity coverage ratio (LCR)	12 C.F.R. 249.10h	Full **daily** LCR (100%)	Full **daily** LCR (100%)	If $75 billion or more in weighted short-term wholesale funding (wSTWF), full **daily** LCR (100%) If less than $75 billion in wSTWF, reduced **daily** LCR (85%)	If $50 billion or more in wSTWF, reduced **monthly** LCR (70%) If less than $50 billion in wSTWF, **no LCR requirement**

Note: Certain requirements for a foreign bank are determined by the risk profile of its intermediate holding company, whereas other requirements are determined by the risk profile of the firm's combined U.S. operations. Standardized liquidity requirements are determined by the risk profile of the intermediate holding company and other liquidity requirements are determined by the risk profile of the foreign bank's combined U.S. operations. Other foreign banks with limited U.S. presence and global assets of $100 billion ormore would be subject to certain minimum liquidity risk-management requirements.

1060.20.7 SUPERVISORY CONSIDERATIONS FOR ASSESSING LIQUIDITY

Through the supervisory process, the Federal Reserve assesses a firm's compliance with liquidity regulations and ability to manage liquidity risk. The Federal Reserve has issued the "Consolidated Supervision Framework for Large Financial Institutions," which describes the supervisory framework for the consolidated supervision of large U.S. and foreign financial institutions.[27]

The consolidated supervision framework for large financial institutions has two primary objectives: (1) to enhance the resiliency of a firm to lower the probability of its failure or an inability to serve as a financial intermediary and (2) to reduce the effect on the financial system and the broader economy of a firm's failure or material weakness.

The consolidated supervision framework guidance outlines expectations for effective liquidity planning for large financial institutions. To support effective liquidity planning and adequate liquidity positions, a firm should

- maintain strong liquidity positions that not only comply with regulatory requirements, but also support the firm's ongoing ability to meet its obligations to creditors and other counterparties, as well as continue to serve as a financial intermediary through periods of stress;
- have in place robust internal processes that enable the firm to maintain liquidity commensurate with its unique risks under normal and stressful conditions;
- maintain processes that enable the identification and measurement of potential risks to cash flows and other primary determinants of liquidity positions;
- utilize comprehensive projections of the level and composition of liquidity resources, supported by regular stress testing to assess the potential impact of a broad range of expected and potentially adverse scenarios;
- maintain sound risk measurement and modeling capabilities, supported by comprehensive data collection and analysis, independent validation, and effective governance, policies, and controls;[28]
- establish goals for liquidity positions and reflect the potential impact of legal or regulatory restrictions on the transfer of liquidity between legal entities; and
- maintain independent internal audit and other review functions with appropriate staff expertise, experience, and stature in the organization to monitor the adequacy of liquidity risk-measurement and management processes.

1060.20.7.1 Comprehensive Liquidity Analysis and Review

The Comprehensive Liquidity Analysis and Review (CLAR) program is an annual horizontal supervisory program for Large Institution Supervision Coordinating Committee (LISCC) firms subject to Federal Reserve System oversight.[29] The purpose of the CLAR program is to assess liquidity risk and evaluate each LISCC firm's liquidity position and liquidity risk-management practices. The CLAR program is divided into three pillars covering the various topics for assessing each firm's liquidity position and liquidity risk-management practices.

- Pillar I evaluates a firm's internal liquidity risk-measurement capabilities and practices. This assessment includes an evaluation of the internal stress testing frameworks used to evaluate a firm's liquidity position based on that firm's assumptions.
- Pillar II performs an independent liquidity risk analysis for each firm and measures the liquidity position of a firm using the Federal Reserve's internal metrics and publicly available models and data. This pillar assesses whether a firm has sufficient liquid assets to match its outflows and an adequate funding structure to decrease the likelihood that disruptions to its regular funding sources will affect that firm's liquidity position.

27. See SR-12-17/CA-12-14, "Consolidated Supervision Framework for Large Financial Institutions."

28. See SR-11-7, "Guidance on Model Risk Management."

29. A horizontal examination is a review of a specific activity, business line, or risk-management practice across a group of firms. Horizontal examinations are conducted to understand the range of industry practices for a specific activity, product, risk-management practice, or control; to ensure the consistent application of established supervisory expectations; and to confirm the consistent assignment of ratings. For more information on the criteria for determining which firms are in the LISSC supervisory program, see SR-20-30, "Financial Institutions Subject to the LISCC Supervisory Program."

- Pillar III evaluates a firm's liquidity risk management using methods other than internal stress testing. This component of the program informs the overall assessment of each firm's risk-management practices. This pillar, in conjunction with Pillar I, is also responsible for coordinating the completion of any liquidity risk reviews necessary for the Supervisory Assessment of Resolution and Recovery Preparedness.

The results from each pillar contribute to an assessment that includes each firm's final liquidity rating and overall liquidity assessment. Supervisors frequently use these horizontal examinations or reviews on a single topic across several firms to identify risks and common trends. Horizontal reviews may be conducted by a centralized team of examiners or through a common scope or work program executed by the dedicated supervisory teams. Unlike the Comprehensive Capital Analysis and Review, the LISCC liquidity program's assessment does not result in an objection or non-objection. Rather the LISCC liquidity program's assessment results in supervisory findings communicated to the firm, which may include "matters requiring attention" and "matters requiring immediate attention," as applicable.[30]

1060.20.7.2 Liquidity Reviews at Large and Foreign Banking Organizations

The Federal Reserve conducts various horizontal reviews to evaluate the adequacy of liquidity positions and the effectiveness of liquidity risk-management practices and liquidity stress testing of firms in the Large and Foreign Banking Organization (LFBO) supervisory portfolio. Additionally, the Federal Reserve completes focused analysis on firms' liquidity positions using data derived from the FR 2052a and other reports to supplement the horizontal reviews. These reviews are tailored to account for differences in the size, complexity, and risk profile among firms.

The Federal Reserve completes an annual Horizontal Liquidity Review (HLR) for the following large firms that are not in the LISCC portfolio:

- domestic firms with $100 billion or more in total consolidated assets; and
- foreign banking organizations with $50 billion or more in total consolidated assets.

Similar to the CLAR program, examiners complete forward-looking assessments of liquidity risk management and liquidity positions for firms in the LFBO portfolio. The HLR assessment evaluates similar liquidity risk topics as the CLAR pillars. However, the examination scope and expectations are tailored based on LFBO firms' risk profile, which pose lower systemic risk than LISCC firms. The HLR targets a select number of liquidity risk topics in a given year.

As discussed in this manual's section 1060.0, "Large Financial Institution Rating System," the Federal Reserve assigns a liquidity risk management and positions component rating to each LFBO. The liquidity risk management and positions component rating is not based solely on the outcome of HLR. The full body of related supervisory work and monitoring is considered, including from other regulators, since the previous ratings communication to a firm.

1060.20.7.3 Assessment of Liquidity at Firms Covered by the Large Financial Institution Ratings System

Given the Federal Reserve's development of a supervisory program to enhance resiliency and address the risks posed by large financial institutions, the Federal Reserve developed the Large Financial Institution (LFI) rating system to better assess these firms. Under the LFI rating system, examiners assign component ratings for capital planning and positions, liquidity risk management and positions, and governance and controls. Further, examiners assign each rating into one of the following rating categories: Broadly Meets Expectations, Conditionally Meets Expectations, Deficient-1, and Deficient-2. For more information on the LFI Rating System see this manual's section 1060.0, "Large Financial Institution Rating System."

1060.20.7.4 Assessment of Liquidity at the Depository Institution

The Uniform Financial Institutions Rating System (UFIRS), commonly referred to as the "CAMELS" rating system, establish criteria for rating a bank or thrift, including bank or thrift subsidiaries of holding companies. Under the UFIRS, each depository institution is assigned a composite rating based on an evaluation and rating

30. See SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."

of six essential components of its financial condition and operations. These component factors address the adequacy of capital, quality of assets, capability of management, quality and level of earnings, adequacy of liquidity, and sensitivity to market risk. For more information on the UFIRS, see the *Commercial Bank Examination Manual*, and "Uniform Financial Institutions Rating System."[31]

In evaluating the adequacy of a depository institution's liquidity position, consideration is given to the current level and prospective sources of liquidity compared to funding needs, as well as to the adequacy of funds-management practices relative to the firm's size, complexity, and risk profile. In general, funds management practices should ensure that a depository institution is able to maintain a level of liquidity sufficient to meet its financial obligations in a timely manner and to fulfill the legitimate banking needs of its community. Practices should reflect the ability of the firm to manage unplanned changes in funding sources, as well as react to changes in market conditions that affect the ability to quickly liquidate assets with minimal loss. In addition, funds-management practices should ensure that liquidity is not maintained at a high cost or through undue reliance on funding sources that may not be available in times of financial stress or adverse changes in market conditions.

31. See SR-96-38, "Uniform Financial Institutions Rating System."

1060.30.1 OVERVIEW AND APPLICABILITY

The Federal Reserve expects the board of directors (board) of a large financial institution (LFI) to be effective in its oversight of the firm. The board plays a critical role in maintaining the firm's safety and soundness and continued financial and operational resilience of its consolidated operations. The supervisory assessment of the board's effectiveness is one of the elements within the Governance and Controls component rating of the LFI rating system. In February 2021, the Federal Reserve issued guidance describing the key attributes of effective boards at large domestic bank holding companies and savings and loan holding companies, and systemically important nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Federal Reserve (board effectiveness guidance).

The board effectiveness guidance is intended to promote firms' safety and soundness and compliance with laws and regulations by better distinguishing supervisory expectations for boards from those of senior management and refocusing supervisory expectations on boards' performance of their core responsibilities. The Federal Reserve recognizes that boards can effectively fulfill their core responsibilities in a variety of ways. As such, the board effectiveness guidance adopts a principles-based approach to provide each board with flexibility to determine how to most effectively fulfill its responsibilities. Responsibilities that are typically the purview of senior management, including most daily and operational decisions, are not described in the board effectiveness guidance.

The board effectiveness guidance applies to

- domestic bank holding companies with total consolidated assets of $100 billion or more;[1]
- domestic savings and loan holding companies with total consolidated assets of $100 billion or more;[2] and
- systemically important nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Federal Reserve.

1. The guidance does not apply to U.S. intermediate holding companies of foreign banking organizations established pursuant to the Federal Reserve's Regulation YY.

2. This guidance applies to state regulated insurance companies that are also savings and loan holding companies to the extent it does not conflict with state insurance laws or regulatory requirements.

1060.30.2 KEY ATTRIBUTES OF AN EFFECTIVE BOARD OF DIRECTORS

The board effectiveness guidance describes the five key attributes of an effective board of directors in overseeing the firm's safe and sound conduct of consolidated operations; compliance with laws and regulations, including those related to consumer protection; and financial and operational strength and resilience necessary to carry out its business activities. The entire board effectiveness guidance is provided in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness."

1060.30.2.1 Set Clear, Aligned, and Consistent Direction Regarding the Firm's Strategy and Risk Appetite

An effective board oversees the development of, reviews, approves, and periodically monitors the firm's strategy and risk appetite.[3] Such a strategy and risk appetite are clear and aligned, and include a long-term perspective on risks and rewards that is consistent with the capacity of the firm's risk-management framework. The alignment of strategy and risk appetite helps the firm to maintain sufficient financial and operational strength and resilience for safety and soundness and to promote compliance with laws and regulations.

A clear strategy articulates a firm's strategic objectives for its businesses, while helping to establish and maintain

1. an effective risk-management structure;
2. appropriate processes and resources for strategy implementation, plans, and budgets for each business line and risk-management or control function; and
3. an effective risk-management and control function.

A clear strategy also provides direction to senior management about how to determine which business opportunities to pursue consis-

3. "Risk appetite" is defined as the aggregate level and types of risk the board and senior management are willing to assume to achieve the firm's strategic business objectives, consistent with applicable capital, liquidity, and other requirements and constraints.

tent with the firm's risk appetite and risk-management capacity.

A clear risk appetite

- includes sufficient detail to enable the firm's chief risk officer (CRO) and its independent risk-management function to set firm-wide risk limits.[4]
- specifies the level and types of risk that the board is willing to assume, that the board believes the firm is capable of managing, and that allows senior management to establish risk-management expectations and monitor risk-taking for the full set of risks.

A firm's strategy and risk appetite are aligned when they are developed, reviewed, and approved consistent with one another even though they are not necessarily developed and approved simultaneously.

An effective board also considers the capacity of the firm's risk-management framework when overseeing aspects of the firm's strategy and risk appetite. This practice helps to confirm that strategic plans are commensurate with the firm's ability to identify and manage risks, including identifying activities that could pose a material risk to the safety and soundness of the firm, threaten the financial system, violate the law, or harm consumers.

For example, if the firm is considering a new line of business, a clear strategy explains how conducting the business would be consistent with the firm's risk appetite and changes that would need to be made to the firm's risk-management program and its controls to effectively manage different or additional risks posed by the new business. If the strategy calls for expansion into a new line of business or a new jurisdiction, the board evaluates the increased level of risk. In addition, an effective board reviews any corresponding risk management or controls enhancements, including those related to compliance with U.S. laws, that are necessary to align with the risk appetite.[5] The same evaluation is conducted on a regular basis to assess growth strategies within current businesses and products.

A firm's policies, programs, and plans are sufficiently clear regarding the allocation of responsibilities to enable the board to evaluate senior management's execution of the firm's strategic plan. An effective board reviews and approves significant policies, programs, and plans based on the firm's strategy, risk appetite, risk-management capacity, and structure. These include but are not limited to the firm's

- capital plan,[6]
- recovery and resolution plans,[7]
- audit plan,[8]
- enterprise-wide risk-management policies,[9]
- liquidity risk-management policies,[10]
- compliance risk-management program,[11] and
- performance management and compensation programs.

An effective board might review summarized forms of policies, programs, and plans, with the summarized form including sufficient detail and context for the board to make an informed decision and to consider consistency with the firm's strategy, risk appetite, and risk-management capacity.

1060.30.2.2 Direct Senior Management Regarding the Board's Information Needs

An effective board directs senior management to provide directors with information that is sufficient in scope, detail, and analysis to enable

4. An "independent risk-management function" is responsible for identifying, measuring, aggregating, and reporting risks in a comprehensive and independent manner. The term "risk limits" refers to thresholds that constrain risk-taking so that the level and type of risks assumed remains consistent with the firm-wide risk appetite. Internal risk management sets risk limits in aggregate by concentration and risk type, as well as at more granular levels as appropriate.

5. U.S. laws include, without limitation, the Bank Secrecy Act and the Foreign Corrupt Practices Act.

6. 12 CFR 225.8(e)(iii); 12 CFR 252.47(a); SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category II or III Standards;" SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Firms Subject to Category I Standards;" and Federal Reserve paper on *Capital Planning at Large Bank Holding Companies: Supervisory Expectations and Range of Current Practice* (Federal Reserve Board press release issued on August 19, 2013).

7. 12 CFR part 243; SR-14-8, "Consolidated Recovery Planning for Certain Large Domestic Bank Holding Companies;" and SR-14-1, "Heightened Supervisory Expectations for Recovery and Resolution Preparedness for Certain Large Bank Holding Companies - Supplemental Guidance on Consolidated Supervision Framework for Large Financial Institutions (SR-12-17/CA-12-14)."

8. SR-13-1/CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing," and SR-03-5, "Amended Interagency Guidance on the Internal Audit Function and its Outsourcing."

9. 12 CFR 252.33.

10. 12 CFR 252.34(a).

11. SR-08-8/CA-08-11, "Compliance Risk Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles."

the board to make sound, well-informed decisions and consider potential risks.

An effective board directs senior management to provide it with information that is timely, accurate, and well organized. An effective board also evaluates the sufficiency and quality of information it receives and directs senior management to

1. provide more information;
2. address any concerns regarding the volume, structure, content, or quality of the information it receives; or
3. improve relevant firm processes and practices for the preparation of such information.

An effective board seeks, outside of regular board and committee meetings, information about the firm and its activities, emerging and ongoing risks, personnel, compensation, and other matters. Such additional inquiries are often conducted through special sessions of the board, outreach to staff other than the Chief Executive Officer (CEO) and their direct reports, and discussions with Federal Reserve senior supervisors. Director training is another way directors may learn more about topics relevant to their responsibilities and may highlight the need for further director inquiries.

Directors of an effective board, particularly the lead independent director or independent board chair and committee chairs, take an active role in setting board and committee meeting agendas. Directors provide input such that the content, organization, and time allocated to each topic allow the board and committees to make sound, well-informed decisions. If the board's agenda includes a discussion of growth into a new business, an effective board typically discusses the firm's risk management and control capabilities that reflect the views of the independent risk-management and internal audit functions.

1060.30.2.3 Oversee and Hold Senior Management Accountable

An effective board oversees and holds senior management accountable for effectively implementing the firm's strategy, consistent with its risk appetite, while maintaining an effective risk-management framework and system of internal controls. An effective board executes these responsibilities consistent with safety and soundness and in compliance with laws and regulations, including those related to consumer protection, under a range of conditions. An effective board also oversees and regularly evaluates the performance and compensation of senior management.

To facilitate accountability, an effective board engages senior management in a variety of ways. For instance, at board meetings, engagement is supported by allocating sufficient time to facilitate a candid discussion and debate of information while encouraging diverse views. Directors consider whether and how senior management's conclusions and recommendations align and support the firm's strategy and risk appetite. If weaknesses or gaps are identified, the information provided is incomplete, or as otherwise warranted, directors challenge senior management's assessments and recommendations. Engagement may also take place outside board and committee meetings.

An effective board engages in robust inquiry into, among other things,

- drivers, indicators, and trends related to current and emerging risks;
- adherence to the board-approved strategy and risk appetite by relevant lines of business; and
- material or persistent deficiencies in risk management or control practices, whether in policy or in practice.

An effective board also reviews reports of internal and external complaints, including "whistleblower" reports.

An effective board has independent directors who are sufficiently empowered to serve as an effective check against firm executives who sit on the board and against senior management. For example, if the board has an executive chair, independent directors may be empowered through the election of a lead independent director with the authority, among others, to call board meetings with or without the chair present.

A crucial aspect of holding senior management accountable is regular board oversight and evaluation of the performance and compensation of senior management. An effective board oversees and evaluates the development and implementation of performance management and compensation programs that encourage behaviors and business practices consistent with the firm's strategy, risk appetite, and safety and soundness. This includes promoting compliance with laws and regulations, including those related to consumer protection.

In addition, each component of senior management's total compensation is informed by the board's evaluation of the individual's performance against performance objectives. An effective board approves clear financial and nonfinancial performance objectives aligned with the firm's strategy and risk appetite for the CEO and business line executives and nonfinancial performance objectives for the CRO and chief audit executive. Similar performance objectives are developed for other members of senior management. An effective board of directors also holds senior management accountable for the implementation of performance management and compensation programs that promote sound risk management: compliance with laws and regulations; and internal standards, including for conduct. Performance management and compensation programs, when combined with business strategies, discourage risk-taking inconsistent with the firm's strategy and safety and soundness, including compliance with laws, regulations, and internal standards, and promote the firm's risk-management goals. Consistent with safety and soundness, compliance with laws and regulations, and the firm's strategy, an effective board oversees succession plans for the CEO, and depending on the size, complexity, and nature of the firm, the CRO, chief audit executive, or other senior management officials.[12]

1060.30.2.4 Support the Independence and Stature of Independent Risk Management and Internal Audit

An effective board of directors, through its risk and audit committees, assesses and supports the stature and independence of the firm's independent risk-management and internal audit functions. An effective risk committee and an effective audit committee engage in robust inquiry into, among other matters,[13]

- the causes and consequences of material or persistent breaches of the firm's risk appetite and risk limits,
- the timeliness of remediation of material or persistent internal audit and supervisory findings, and
- the appropriateness of the annual audit plan.

An effective risk committee supports the stature and independence of the independent risk-management function by:

- communicating directly with the CRO on material risk-management issues;
- overseeing the appropriateness of independent risk management function's budget, staffing, and systems of internal controls;
- coordinating with the compliance function; and
- providing the independent risk management function with direct and unrestricted access to the risk committee.[14]

After reviewing the risk-management framework relative to the firm's structure, risk profile, complexity, activities, and size, an effective risk committee effects changes that align with the firm's strategy and risk appetite.

An effective audit committee

- supports the stature and independence of internal audit by meeting directly with the chief audit executive regarding the internal audit function, organizational concerns, and industry concerns.
- supports internal audit's budget, staffing, and systems of internal controls relative to the firm's asset size, complexity, and the pace of technological and other changes.
- reviews the status of actions recommended by internal audit and external auditors to remediate and resolve material or persistent deficiencies identified by internal audit, external audit, and findings identified by supervisors.

An effective board monitors the independence and stature of independent risk management and internal audit and takes action if the views of these functions are not taken into

12. This may extend beyond requirements to which firms may be subject under other statutory and regulatory authorities. For example, the NYSE requires formalized succession planning for the CEO only. See NYSE Listed Company Manual, section 303A.09. The CRO and chief audit executive are named here given the independence of those positions and the control function each serves.

13. The risk committee is responsible for the firm's global risk-management policies and oversight of the firm's global risk-management framework. 12 CFR 252.33(a). Nonbank financial companies supervised by the Federal Reserve are required to establish a risk committee pursuant to section 165 of the Dodd-Frank Act. 12 U.S.C. 5365(h)(1). Savings and loan holding companies subject to this guidance should maintain a risk committee that meets the supervisory expectations discussed herein in order to enhance its safety and soundness. Also, see SR-13-1/CA-13-1. Firms that are publicly traded are subject to the audit committee requirements contained in the U.S. Securities and Exchange Commission's Rule 10A-3 ("Rule 10A-3") under the Exchange Act of 1934, in addition to any requirements imposed by the applicable stock exchange on which the firm is listed. See, for example, NYSE Listed Company Manual, sections 303A.06 and 303A.07, and the Nasdaq Stock Market Rules, section 5605(c).

14. See, e.g., 12 CFR 252.33(a)(3).

account when decisions are made, or if these functions are unduly influenced by business lines.

1060.30.2.5 Maintain a Capable Board Composition and Governance Structure

An effective board considers whether its composition, governance structure, and practices support the firm's safety and soundness and the ability to promote compliance with laws and regulations based on factors such as the firm's asset size, complexity, scope of operations, risk profile, and other changes that occur over time. Reflecting these factors, an effective board establishes a process designed to identify and select potential director nominees with a mix of skills, knowledge, experience, and perspectives. This process takes into account, for example, a potential nominee's expertise, availability, integrity, and potential conflicts of interest and considers a diverse pool of potential nominees, including women and minorities.[15]

An effective board maintains a governance structure capable of overseeing senior management and addressing issues arising from the firm's size, scope of operations, activities, risk profile, and resolvability. In addition, an effective board establishes committees and management-to-committee reporting lines to support effective oversight, timely access to information, and sound decisionmaking. An effective board also has the capacity to engage third-party advisors and consultants, when appropriate, to supplement the board's knowledge, expertise, and experience and support the board in making sound, well-informed decisions.

An effective board evaluates on an ongoing basis its strengths and weaknesses, including the performance of the board committees, particularly the risk, audit, and other key committees. An effective board adapts its structure and practices to address identified weaknesses or deficiencies and as the firm's asset size, scope of operations, risk profile, and other characteristics change over time.

15. "Final Interagency Policy Statement Establishing Joint Standards for Assessing the Diversity Policies and Practices of Entities Regulated by the Agencies," 80 Fed. Reg. 33,016 (June 10, 2015). The use of the term "minority" is consistent with the use of such term in this interagency policy statement and in section 342(g)(3) of the Dodd-Frank Act.

1060.30.3 SUPERVISORY CONSIDERATIONS IN ASSESSING BOARD EFFECTIVENESS

The board effectiveness guidance emphasizes the key aspects of board responsibilities and clarifies how supervisors assess board oversight. As the board effectiveness guidance builds on the principles set forth in the LFI ratings framework, the Federal Reserve uses the board effectiveness guidance to inform its assessment of the governance and controls for all firms to which the guidance applies. In addition to the board effectiveness guidance, the Federal Reserve considers applicable statutes, regulations, and guidance on specific risks or business activities.

Federal Reserve supervisory staff should base their assessment of board effectiveness on supervisory work that may include

- engaging directly with directors in meetings or other venues on how a board's structures and practices reflect the key attributes of an effective board. For example, the Federal Reserve supervisory staff may inquire as to how the board achieves the proper alignment of its strategy with its risk appetite;
- obtaining and reviewing information that the directors receive, including escalated issues, board packages, findings, and internal reports;
- meeting with firm management and other personnel;
- evaluating publicly available information as well as information obtained from examinations conducted by the Federal Reserve or other federal or state financial supervisors that relate to the expectations for boards;[16] and
- communicating with directors at firms with significant supervisory issues outside of board meetings (including meetings of the audit or risk committees) on a more frequent basis.

Ratings assigned under the LFI rating system are communicated by the Federal Reserve to the firm, but individual ratings are not disclosed

16. In assessing board effectiveness for insurance savings and loan holding companies, the Federal Reserve tailors its supervisory expectations based on each firm's size, risk profile, complexity, organizational structure, business model, and information gathered and assessments obtained from each firm's primary functional state insurance regulators and other functional regulators. The Federal Reserve relies, to the greatest extent possible, on the work and examination reports of state insurance regulators for its assessment of state regulated insurance companies within an insurance savings and loan holding companies' structure.

publicly. The Federal Reserve assigns LFI ratings and communicates ratings to large firms on an annual basis and more frequently as warranted.

Examiners will not criticize—through the issuance of "matters requiring attention" in an examination report or supervisory letter—a supervised financial institution for, and the Board will not issue an enforcement action on the basis of, a "violation" of or "non-compliance" with supervisory guidance, such as the board effectiveness guidance. However, in some situations, examiners may provide a written reference to the board effectiveness guidance in examination reports or supervisory letters to provide examples of safe and sound conduct.[17]

17. See 12 CFR part 263, appendix A.

1060.31.1 GOVERNANCE AND CONTROLS RATING AND APPLICABILITY

As described in section 1060.0, the “Governance and Controls” component rating of the Large Financial Institutions (LFI) rating system reflects Federal Reserve supervisory staff’s evaluation of the effectiveness of a firm’s (1) board of directors, (2) management of business lines and independent risk management and controls, and (3) recovery planning (for domestic Large Institution Supervision Coordinating Committee firms only). This component rating represents the Federal Reserve’s supervisory assessment of a firm’s effectiveness in aligning strategic business objectives with the firm’s risk appetite and risk-management capabilities; maintaining effective and independent risk-management and control functions, including internal audit; promoting compliance with laws and regulations, including those related to consumer protection; and otherwise providing for the ongoing resiliency of the firm.

This section provides guidance for examiners in the assessment of risk management, processes, and internal controls of bank holding companies that have $100 billion or more in total assets. The supervisory assessment of a state member bank’s risk management would be reflected in the management component (M) of the CAMELS rating framework as well as the Risk Management rating. For information on the CAMELS rating framework, refer to the Federal Reserve’s *Commercial Bank Examination Manual*.

Examiners should recognize that the matters discussed in this section are intended only to assist an examiner in evaluating a firm’s risk-management practices. Therefore, *the information in this section should not be treated as a checklist of requirements for an individual organization*. Moreover, while a bank holding company should be able to assess the major risks of the consolidated organization, examiners should expect a holding company that centrally manages the operations and functions of its subsidiary banks to have more-comprehensive, detailed, and developed risk-management systems than a company that delegates risk management to relatively autonomous banking subsidiaries. For more information, see the “Elements of Risk Management” discussion in SR-95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies.”[1]

1060.31.2 OVERVIEW

The Federal Reserve places significant supervisory emphasis on the importance of a bank holding company’s sound risk-management processes and strong internal controls when evaluating the activities of a supervised financial institution. A bank holding company’s failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Serious lapses or deficiencies in a bank holding company’s internal controls, including inadequate separation of duties, can constitute an unsafe and unsound practice and possibly lead to significant losses or otherwise compromise the financial integrity of the institution.[2] Accordingly, while a bank holding company’s financial performance is an important indicator of the adequacy of management, examiners should give significant weight to the quality of risk-management practices and internal controls when they evaluate the management and overall financial condition of bank holding companies. Properly managing risks is even more important as new technologies, product innovation, and the size and speed of financial transactions change the nature of banking markets.

1. Since the issuance of SR-95-51, the Federal Reserve revised the supervisory ratings frameworks for holding companies. Therefore, refer to this manual’s sections entitled, “Large Financial Institution Rating System,” (SR-19-3/CA-19-2) and “RFI Rating System,” (SR- 19-4/CA-19-3) for the supervisory ratings frameworks used for holding companies. The Risk Management rating, as described in SR-95-51, applies to all state member banks, regardless of their size. For more information on the Risk Management rating criteria and CAMELS ratings framework, see the *Commercial Bank Examination Manual*.

2. If appropriate, the institution should be advised that the Federal Reserve will initiate supervisory actions if its failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of its activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank or bank holding company, or its responsible officers and directors, or both, and would require the immediate implementation of all necessary corrective measures.

The principles of sound management should apply to the entire spectrum of risks which include, but are not limited to, credit, market, liquidity, operational, legal, and reputational risk:

- ***Credit risk*** arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- ***Market risk*** is the risk to a financial institution's condition resulting from adverse movements in market rates or prices, such as interest rates, foreign exchange rates, or equity prices.
- ***Liquidity risk*** is the potential that an institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions ("market liquidity risk").
- ***Operational risk*** arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.
- ***Legal risk*** arises from the potential that unenforceable contracts, lawsuits, or adverse judgements can disrupt or otherwise negatively affect the operations or condition of a banking organization.
- ***Reputational risk*** is the potential that negative publicity regarding an institution's business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions.

The supervisory assessment of a firm's risk-management process is designed to bring together and summarize much of the analysis of and many of the findings about a bank holding company's process for managing and controlling risks. This assessment is intended to highlight and incorporate both the quantitative and qualitative aspects of an examiner's review of a firm's overall process for identifying, measuring, monitoring, and controlling risks and to facilitate appropriate follow-up action.

The overall profitability, asset quality, and capital adequacy of a bank holding company should be considered in the examiner's assessment of management. These indicators can to some extent be affected, either favorably or adversely, by factors outside management's control. For this reason, examiners' evaluation of the risk-management process should be a primary factor when assessing management at larger firms whose activities and structures require more formal and extensive procedures.

1060.31.3 ELEMENTS OF RISK MANAGEMENT

When assessing the quality of risk management at bank holding companies, examiners should consider the adequacy, effectiveness, and comprehensiveness of the key elements of a sound risk-management system:

1. roles and responsibilities of board of directors and senior management
2. policies, procedures, and limits
3. risk measurements, risk monitoring, and management information systems
4. internal controls

1060.31.3.1 Board of Directors and Senior Management

In assessing the quality of oversight by the board of directors and senior management, examiners should consider whether the bank holding company follows policies and practices such as those described below:

Board of Directors

1. The board of directors makes appropriate efforts to remain informed about the risks inherent in the bank holding company's activities.
2. The board of directors reviews and approves significant policies to limit risks inherent in the bank holding company's lending, investing, trading, trust, fiduciary, and other significant activities or products.
3. The board of directors or the responsible committee of the board:
   a. reviews and approves risk-exposure limits to conform with any changes in the bank holding company's strategies,
   b. addresses new products, and
   c. reacts to changes in market conditions.
4. The board of directors holds senior management accountable as financial markets, risk-management practices, and the bank holding company's activities evolve.

Senior Management

1. Senior management has identified and has a clear understanding and working knowledge of the types of risks inherent in the bank holding company's activities.
2. Senior management is sufficiently familiar with and is using adequate recordkeeping and reporting systems to measure and monitor the major sources of risk to the organization.
3. Senior management ensures that its lines of business are managed and staffed by personnel whose knowledge, experience, and expertise are consistent with the nature and scope of the bank holding company's activities.
4. Senior management ensures that the depth of staff resources is sufficient to operate and soundly manage the bank holding company's activities and that its employees have the integrity, ethics, and competence that are consistent with a prudent management philosophy and operating style.
5. Senior management adequately oversees business line management who are responsible for carrying out the institution's day-to-day activities and implementing its strategic plan.
6. Senior management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
7. Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activity or product and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

1060.31.3.2 Policies, Procedures, and Limits

A bank holding company's board of directors should set clear, aligned, and consistent direction regarding the firm's strategy and risk appetite. The following guidelines should assist examiners in evaluating the adequacy of a bank holding company's policies, procedures, and limits:

1. The bank holding company's policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, fiduciary, and other significant activities.
2. The policies, procedures, and limits are consistent with senior management's experience level, the organization's stated goals and objectives, and its overall financial strength.
3. Policies clearly delineate accountability and lines of management authority across the organization's activities.
4. Policies provide for the review of new activities to ensure that the organization's infrastructure is adequate to identify, monitor, and control risks associated with an activity and that the control infrastructure is in place before the activity is initiated.

1060.31.3.3 Risk Monitoring Activities and Management Information System

As part of its risk monitoring activities and management information system (MIS), a firm should be able to identify and measure all material risk exposures. Therefore, a firm's MIS should be able to provide senior management and board of directors with timely reports on the financial condition, operating performance, and risk exposure of the consolidated organization. Further, the MIS should be able to provide regular and sufficiently detailed reports for line managers engaged in the organization's day-to-day activities.

In assessing the adequacy of a bank holding company's measurement and monitoring of risk and the adequacy of its MIS, examiners should consider whether the following conditions exist:

1. The bank holding company's risk-monitoring practices and reports address material risks.
2. Key assumptions, data sources, and procedures used in measuring and monitoring risks are appropriate and adequately documented and tested for reliability on an ongoing basis.
3. Reports and other forms of communication are consistent with the bank holding company's activities; are structured to monitor exposures and compliance with internal limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.
4. Reports to senior management or the board of directors are accurate and timely and contain sufficient information for decision makers to identify any adverse trends and to adequately evaluate the level of a firm's risk exposure.

1060.31.3.4 Internal Controls

A bank holding company's internal control structure is critical to promoting safe-and-sound operations and an effective risk-management system. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate separation of duties—such as trading, custodial, and back-office—is one of management's more important responsibilities.

Appropriate segregation of duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise a firm's financial integrity. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

When properly structured, an internal control system promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and promotes compliance with relevant laws, regulations, and bank holding company policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the bank holding company's board of directors or a designated board committee, typically the audit committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls, the results of audits or reviews, whether conducted by an internal auditor or other personnel, should be adequately documented, as well as senior management's responses to review findings. In addition, communication channels should exist that allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee.

In evaluating the adequacy of a bank holding company's internal controls and audit procedures, examiners should consider the following:

1. The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization's activities.
2. The bank holding company's organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
3. Reporting lines ensure that control areas are sufficiently independent from the business lines, and the reporting lines adequately separate duties throughout the organization, such as those duties relating to trading, custodial, and back-office activities.
4. Official organizational structures reflect actual operating practices.
5. Financial, operational, and regulatory reports are reliable, accurate, and timely. When applicable, policy exceptions are noted and promptly investigated.
6. Adequate procedures exist for ensuring compliance with applicable laws and regulations.
7. Internal audit or other control review practices ensure independence and objectivity of an audit or review.
8. Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are adequately documented; identified material weaknesses are given appropriate and timely high-level attention; and management's actions to address material weaknesses are objectively verified and reviewed.
9. The board of directors or its audit committee engages in robust inquiry into the effectiveness of internal audits and other control review activities.

1062.0.1 RFI RATING SYSTEM INTRODUCTION

Since 2004, the Federal Reserve has used the "RFI/C(D)" rating system (referred to as the "RFI rating system") to communicate its supervisory assessment of bank holding companies (BHCs) regardless of their asset size, complexity, or systemic importance.[1] In 2018, the Board adopted the RFI rating system for non-insurance and non-commercial savings and loan holding companies (SLHCs) with less than $100 billion in total consolidated assets.[2] At the same time, the Board also adopted a rating system for BHCs and non-insurance and non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more (referred to as the "LFI rating system").[3] As a result, the Federal Reserve has two frameworks for rating holding companies.

1062.0.2 RFI RATING SYSTEM APPLICABILITY

The RFI rating system generally applies to BHCs and non-insurance and non-commercial savings and loan holding companies with less than $100 billion in total consolidated assets. Examination staff assign and communicate ratings to BHCs and non-insurance and non-commercial savings and loan holding companies with total consolidated assets between $10 billion and $100 billion assets on at least an annual basis, and more frequently as warranted. However, U.S. intermediate holding companies of foreign banking organizations (FBOs) established under the Board's Regulation YY that have $50 billion or more in total consolidated assets would be subject to the LFI rating system.

1. 69 Fed. Reg. 70,444 (December 6, 2004).

2. SLHCs that are excluded from the definition of "covered holding company" in section 217.2 of the Board's Regulation Q receive indicative supervisory ratings. Section 271.2 excludes the following SLHCs: (1) SLHCs that derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)) (commercial SLHCs), and (2) SLHCs that are insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies (insurance SLHCs).

3. See 83 Fed. Reg. 58,724 (November 21, 2018) and 84 Fed. Reg. 4309 (February 15, 2019).

1062.0.3 RFI RATING AND SAVINGS AND LOAN HOLDING COMPANIES

The Dodd-Frank Wall Street Reform and Consumer Protection Act transferred to the Federal Reserve the supervisory functions of the Office of Thrift Supervision related to SLHCs and their nondepository subsidiaries beginning on July 21, 2011. At that time, the Federal Reserve decided to issue "indicative RFI ratings" to SLHCs until such time that a rating system was formally adopted for these companies.

In November 2018, the Federal Reserve adopted a final rule to apply the RFI rating system on a fully implemented basis to SLHCs with less than $100 billion in total consolidated assets, excluding SLHCs engaged in significant insurance or commercial activities.[4] Therefore, starting on February 1, 2019, the Federal Reserve will assign an RFI rating to non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets. Non-insurance and non-commercial SLHCs face similar risks and engage largely in the same activities as BHCs. As such, it is appropriate for the RFI rating system to apply to non-insurance and non-commercial SLHCs to ensure that they are subject to standards and supervisory programs that are consistent with those that apply to BHCs. Inspection frequency and scope guidance for non-insurance and non-commercial SLHCs with $10 billion or less in total consolidated assets are described in SR letter 13-21, "Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less." Further, in November 2018, the Federal Reserve adopted the LFI rating system for non-insurance or non-commercial SLHCs with total consolidated assets of $100 billion or more.

The Federal Reserve will continue to assign an indicative RFI rating to SLHCs engaged in significant insurance or commercial activities, regardless of asset size. The Federal Reserve is in the process of reviewing whether a modified version of the RFI rating system, LFI rating system, or some other supervisory rating system is appropriate for these firms on a permanent basis.

4. 83 Fed. Reg. 56,081 (November 7, 2018).

1062.0.4 RFI RATING SYSTEM

The RFI rating system provides an assessment of certain risk management and financial condition factors that are common to holding companies,[5] as well as an assessment of the potential impact of the parent holding company and its nondepository subsidiaries (collectively, nondepository entities) on the holding company's subsidiary depository institutions. Under this system, the Federal Reserve endeavors to ensure that applicable BHCs, including financial holding companies, and non-insurance and noncommercial SLHCs are evaluated in a comprehensive and uniform manner, and that supervisory attention is appropriately focused on the holding companies that exhibit financial and operational weaknesses or adverse trends. The RFI rating system serves as a useful vehicle for identifying problem or deteriorating holding companies, as well as for categorizing holding companies with deficiencies in particular areas. Further, the RFI rating system assists the Federal Reserve in following safety-and-soundness trends and in assessing the aggregate strength and soundness of the financial industry.

Each holding company subject to the RFI rating system is assigned a composite rating (C) based on an overall evaluation and rating of its managerial and financial condition and an assessment of future potential risk to its subsidiary depository institution(s).[6] The main components of the rating system represent: Risk Management (R); Financial Condition (F); and Impact (I) of the nondepository entities on the subsidiary depository institutions. While the Federal Reserve expects holding companies to act as a source of strength to their subsidiary depository institutions, the Impact rating focuses on downside risk—that is, on the likelihood of significant negative impact by the nondepository entities on the subsidiary depository institution(s).[7] A fourth rating, Depository Institution(s) (D), will generally mirror the primary regulator's assessment of the subsidiary depository institution(s). Thus, the primary component and composite ratings are displayed:

R F I / C (D)

In order to provide a consistent framework for assessing risk management, the R component is supported by four subcomponents that reflect the effectiveness of the organization's risk management and controls. The subcomponents are Board and Senior Management Oversight; Policies, Procedures, and Limits; Risk Monitoring and Management Information Systems (MIS); and Internal Controls. The F component is also supported by four subcomponents reflecting an assessment of the quality of the consolidated organization's Capital, Asset Quality, Earnings, and Liquidity.

Composite, component, and subcomponent ratings are assigned based on a 1 to 5 numeric scale. A 1 numeric rating indicates the highest rating, strongest performance and practices, and least degree of supervisory concern, whereas a 5 numeric rating indicates the lowest rating, weakest performance, and the highest degree of supervisory concern.

The sections that follow contain detailed descriptions of the composite, component, and subcomponent ratings; implementation guidance by holding company type; and definitions of the ratings.

1062.0.5 DESCRIPTION OF THE RFI RATING SYSTEM ELEMENTS

1062.0.5.1 The Composite (C) Rating

C is the overall composite assessment of the holding company as reflected by consolidated risk management, consolidated financial strength, and the potential impact of the nondepository entities on the subsidiary depository institutions. The composite rating encompasses both a forward-looking and static assessment of the consolidated organization, as well as an assessment of the relationship between the depository and nondepository entities. The C rating is not derived as a simple numeric average of the R, F, and I components; rather, it reflects examiner judgment with respect to the relative importance

5. The information in this manual section largely conveys the information in the original 2004 RFI rating system document conveyed in 69 Fed. Reg. 70,444 (December 6, 2004). However, the information was revised to clarify the applicability of the rating system and to provide current references to regulations and guidance. The elements of the RFI rating system and the ratings' definitions are unchanged. See SR letter 19-4, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

6. A simplified version of the rating system that includes only the R and C components will be applied to noncomplex holding companies with assets at or below $3 billion. See SR-13-21 for more information.

7. In 2004, this risk-management rating replaced the risk-management rating required for bank holding companies by SR letter 95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies."

of each component to the safe-and-sound operation of the holding company.

1062.0.5.2 The Risk Management (R) Component

R represents an evaluation of the ability of the holding company's board of directors and senior management, as appropriate for their respective positions, to identify, measure, monitor, and control risk. The R rating underscores the importance of the control environment, taking into consideration the complexity of the organization and the risk inherent in its activities.

The R rating is supported by four subcomponents that are each assigned a separate rating. The four subcomponents are as follows: (1) Board and Senior Management Oversight; (2) Policies, Procedures and Limits; (3) Risk Monitoring and Management Information Systems; and (4) Internal Controls. The subcomponents are evaluated in the context of the risks undertaken by and inherent in an organization and the overall level of complexity of the holding company's operations. They provide the Federal Reserve System with a consistent framework for evaluating risk management and the control environment. Moreover, the subcomponents provide a clear structure and basis for discussion of the R rating with holding company management, reflect the principles in supervisory guidance that are familiar to examiners, and parallel the existing risk assessment process.[8]

1062.0.5.2.1 Risk Management Subcomponents

Board and Senior Management Oversight

This subcomponent evaluates the adequacy and effectiveness of board and senior management's understanding and management of risk inherent in the holding company's activities, as well as the general capabilities of management.[9] It also includes consideration of management's ability to identify, understand, and control the risks undertaken by the institution, to hire competent staff, and to respond to changes in the institution's risk profile or innovations in the banking sector.

Policies, Procedures, and Limits

This subcomponent evaluates the adequacy of a holding company's policies, procedures, and limits given the risks inherent in the activities of the consolidated organization and its stated goals and objectives. This analysis will include consideration of the adequacy of the institution's accounting and risk disclosure policies and procedures.

Risk Monitoring and Management Information Systems

This subcomponent assesses the adequacy of a holding company's risk measurement and monitoring, and the adequacy of its management reports and information systems. This analysis will include a review of the assumptions, data, and procedures used to measure risk and the consistency of these tools with the level of complexity of the organization's activities.

Internal Controls

This subcomponent evaluates the adequacy of a holding company's internal controls and internal audit procedures, including the accuracy of financial reporting and disclosure and the strength and influence, within the organization, of the internal audit team. This analysis will also include a review of the independence of control areas from management and the consistency of the scope coverage of the internal audit team with the complexity of the organization.

1062.0.5.3 The Financial Condition (F) Component

F represents an evaluation of the consolidated organization's financial strength. The F rating focuses on the ability of the holding company's resources to support the level of risk associated with its activities. The F rating is supported by four subcomponents: capital (C), asset quality (A), earnings (E), and liquidity (L). The CAEL subcomponents can be evaluated along

8. See SR-95-51 and SR letter 16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion." SR-95-51 and SR-16-11 contain a detailed description of the four risk-management subcomponents.

9. The board of directors is considered separate from management.

individual business lines, product lines, or on a legal entity basis, depending on what is most appropriate given the structure of the organization. The assessment of the CAEL components should utilize benchmarks and metrics appropriate to the business activity being evaluated.

Examination staff should continue to review relevant market indicators, such as external debt ratings, credit spreads, debt and equity prices, and qualitative rating agency assessments as a source of information complementary to examination findings.

1062.0.5.3.1 Financial Condition Subcomponents (CAEL)

Capital Adequacy

C reflects the adequacy of an organization's consolidated capital position, from a regulatory capital perspective and an economic capital perspective, as appropriate to the holding company.[10] The evaluation of capital adequacy should consider the risk inherent in an organization's activities and the ability of capital to absorb unanticipated losses, to provide a base for growth, and to support the level and composition of the parent company and subsidiaries' debt.

Asset Quality

A reflects the quality of an organization's consolidated assets. The evaluation should include, as appropriate, both on-balance sheet and off-balance sheet exposures, and the level of criticized and nonperforming assets. Forward-looking indicators of asset quality, such as the adequacy of underwriting standards, the level of concentration risk, the adequacy of credit administration policies and procedures, and the adequacy of management information systems for credit risk may also inform the Federal Reserve's view of asset quality.

10. The regulatory minimum capital ratios for covered holding companies subject to the Board's Regulation Q (12 CFR part 217) are (1) a common equity tier 1 capital ratio of 4.5 percent; (2) a tier 1 capital ratio of 6 percent; (3) a total capital ratio of 8 percent; (4) a leverage ratio of 4 percent, and (5) for advanced approaches Board-regulated institutions, a supplementary leverage ratio of 3 percent.

Earnings

E reflects the quality of consolidated earnings. The evaluation considers the level, trend, and sources of earnings, as well as the ability of earnings to augment capital as necessary, to provide ongoing support for a holding company's activities.

Liquidity

L reflects the consolidated organization's ability to attract and maintain the sources of funds necessary to support its operations and meet its obligations. The funding conditions for each of the material legal entities in the holding company structure should be evaluated to determine if any weaknesses exist that could affect the funding profile of the consolidated organization.

1062.0.5.4 The Impact (I) Component

Like the other components and subcomponents, the I component is rated on a five-point numerical scale. However, the descriptive definitions of the numerical ratings for I are different than those of the other components and subcomponents. The I ratings are defined as follows:

1—low likelihood of significant negative impact;
2—limited likelihood of significant negative impact;
3—moderate likelihood of significant negative impact;
4—considerable likelihood of significant negative impact; and
5—high likelihood of significant negative impact.

The I component is an assessment of the potential impact of the nondepository entities on the subsidiary depository institution(s). The I assessment will evaluate both the risk-management practices and financial condition of the nondepository entities—an analysis that will borrow heavily from the analysis conducted for the R and F components. Nondepository entities will be evaluated using benchmarks and analysis appropriate for those businesses. In addition, for functionally regulated nondepository subsidiaries, examination staff will continue to rely, to the extent possible, on the work of those functional regulators to assess the risk management practices and financial condition of those entities. In rating the I component, examination staff is required to evaluate the degree to which current or potential issues within the nondepository entities present a threat to the safety and soundness of the subsidiary depository institution(s).

The I component focuses on the aggregate impact of the nondepository entities on the subsidiary depository institution(s). In this regard, the I rating does not include individual subcomponent ratings for the parent company and nondepository subsidiaries. An I rating is always assigned for each holding company; however, nonmaterial nondepository subsidiaries may be excluded from the I analysis at examiner discretion.[11]

Any risk-management and financial issues at the nondepository entities that potentially impact the safety and soundness of the subsidiary depository institution(s) should be identified in the written comments under the I rating. This approach is consistent with the Federal Reserve's objective not to extend bank-like supervision to nondepository entities.

The analysis of the parent company for the purpose of assigning an I rating should emphasize weaknesses that could directly impact the risk-management or financial condition of the subsidiary depository institution(s). Similarly, the analysis of the nondepository subsidiaries for the purpose of assigning an I rating should emphasize weaknesses that could negatively impact the parent company's relationship with its subsidiary depository institution(s) and weaknesses that could have a direct impact on the risk-management practices or financial condition of the subsidiary depository institution(s). The analysis under the I component should consider existing as well as potential issues and risks that may impact the subsidiary depository institution(s) now or in the future. Particular attention should be paid to the following risk-management and financial factors in assigning the I rating:

1062.0.5.4.1 Risk-Management Factors

- *Strategic Considerations:* The potential risks posed to the subsidiary depository institution(s) by the nondepository entities' strategic plans for growth in existing activities and expansion into new products and services;
- *Operational Considerations:* The spillover impact on the subsidiary depository institution(s) from actual losses, a poor control environment, or an operational loss history in the nondepository entities;
- *Legal and Reputational Considerations:* The spillover effect on the subsidiary depository institution(s) of complaints and litigation that name one or more of the nondepository entities as defendants, or violations of laws or regulations, especially pertaining to intercompany transactions where the subsidiary depository institution(s) is involved; and
- *Concentration Considerations:* The potential risks posed to the subsidiary depository institution(s) by concentrations within the nondepository entities in business lines, geographic areas, industries, customers, or other factors.

1062.0.5.4.2 Financial Factors

- *Capital Distribution:* The distribution and transferability of capital across the legal entities;
- *Intra-Group Exposures:* The extent to which intra-group exposures, including servicing agreements, have the potential to undermine the condition of subsidiary depository institution(s); and
- *Parent Company Cash Flow and Leverage:* The extent to which the parent company is dependent on dividend payments, from both the nondepository subsidiaries and the subsidiary depository institution(s), to service debt and cover fixed charges. Also, the effect that these upstreamed cash flows have had, or can be expected to have, on the financial condition of the holding company's nondepository subsidiaries and subsidiary depository institution(s).

1062.0.5.5 The Depository Institution(s) (D) Component

The (D) component will generally reflect the composite CAMELS rating assigned by the subsidiary depository institution's primary supervisor. In a multi-depository institution holding company, the (D) rating will reflect a weighted average of the CAMELS composite ratings of the individual subsidiary depository institutions, weighted by both asset size and the relative importance of each depository institution within the holding company structure. In this regard,

11. In general, nondepository subsidiaries should be included in the I analysis whenever their assets exceed 5 percent of the holding company's consolidated capital or $10 million, whichever is lower.

the CAMELS composite rating for a subsidiary depository institution that dominates the corporate culture may figure more prominently in the assignment of the (D) rating than would be dictated by asset size, particularly when problems exist within that depository institution.

The (D) component conveys important supervisory information, reflecting the primary supervisor's assessment of the legal entity. The (D) component stands outside of the composite rating although significant risk-management and financial condition considerations at the depository institution level are incorporated in the consolidated R and F ratings, which are then factored into the C rating.

In the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution's primary regulator, then the (D) rating should reflect the Federal Reserve's evaluation.

To highlight the presence of one or more problem depository institution(s) in a multi-depository institution holding company whose depository institution component, based on weighted averages, might not otherwise reveal their presence (i.e., depository institution ratings of 1, 2, or 3), a problem modifier, "P" would be attached to the depository institution rating (e.g., 1P, 2P, or 3P). Thus, 2P would indicate that, while on balance the depository subsidiaries are rated satisfactory, there exists a problem depository institution (composite 4 or 5) among the subsidiary depository institutions. The problem identifier is unnecessary when the depository institution component is rated 4 or 5.

1062.0.6 IMPLEMENTATION OF THE RFI RATING SYSTEM BY HOLDING COMPANY TYPE

Since 2004, the Federal Reserve has used the RFI rating system to communicate its supervisory assessment of BHCs regardless of their asset size, complexity, or systemic importance. In 2018, the Board adopted the RFI rating system for non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets. The scope and frequency of inspections of holding companies under the RFI rating system will vary based upon whether a holding company has been determined to be "complex" or "noncomplex."[12] In addition, the resources dedicated to the inspection of each holding company will continue to be determined by the risk posed by the subsidiary depository institution(s) to the federal safety net and the risk posed by the holding company to the subsidiary depository institution(s).[13]

1062.0.6.1 Noncomplex Holding Companies with Assets of $3 Billion or Less (Shell Holding Companies) Rating: R and C

Examination staff will assign only an R and C rating for all noncomplex holding companies with assets under $3 billion.[14] The R rating is the M rating from the subsidiary depository institution's CAMELS rating. The C rating is the subsidiary depository institution's composite CAMELS rating.

1062.0.6.2 Noncomplex Holding Companies with Assets Greater than $3 Billion

1062.0.6.2.1 One-Depository Institution Holding Company Rating: RFI/C(D)

For all noncomplex, one-depository institution holding companies with assets of greater than $3 billion, examination staff will assign all component and subcomponent ratings; however, examination staff should rely heavily on information and analysis contained in the primary regulator's report of examination for the subsidiary depository institution to assign the R and F ratings. If examination staff have reviewed the

12. The determination of whether a holding company is "complex" versus "noncomplex" is made at least annually on a case-by-case basis taking into account and weighing a number of considerations, such as: the size and structure of the holding company; the extent of intercompany transactions between depository institution subsidiaries and the holding company or nondepository subsidiaries of the holding company; the nature and scale of any nondepository activities, including whether the activities are subject to review by another regulator and the extent to which the holding company is conducting Gramm-Leach-Bliley authorized activities (e.g., insurance, securities, merchant banking); whether risk-management processes for the holding company are consolidated; and whether the holding company has material debt outstanding to the public. Size is a less important determinant of complexity than many of the factors noted above.

13. The federal safety net includes the federal deposit insurance fund, the payments system, and the Federal Reserve's discount window.

14. Refer to SR-13-21.

primary regulator's examination report and are comfortable with the analysis and conclusions contained in that report, then the holding company ratings should be supported with concise language that indicates that the conclusions are based on the analysis of the primary regulator. No additional analysis will be required.

Please note, however, in cases where the analysis and conclusions of the primary regulator are insufficient to assign the ratings, the primary regulator should be contacted to ascertain whether additional analysis and support may be available. Further, if discussions with the primary regulator do not provide sufficient information to assign the ratings, discussions with holding company management may be warranted to obtain adequate information to assign the ratings. In most cases, additional information or support obtained through these steps will be sufficient to permit the assignment of the R and F ratings. To the extent that additional analysis is deemed necessary, the level of analysis and resources spent on this assessment should be in line with the level of risk the subsidiary depository institution poses to the federal safety net. In addition, any activities that involve information gathering with respect to the subsidiary depository institution should be coordinated with and, if possible, conducted by, the primary regulator of that institution.

Examination staff are required to make an independent assessment in order to assign the I rating, which provides an evaluation of the impact of the holding company on the subsidiary depository institution. Analysis for the I rating in non-complex one-depository institution holding companies should place particular emphasis on issues related to parent company cash flow and compliance with sections 23A and 23B of the Federal Reserve Act.

1062.0.6.2.2 Multi-Depository Institution Holding Company Rating: RFI/C(D)

For all noncomplex holding companies with assets of greater than $3 billion and more than one subsidiary depository institution, examination staff will assign all component and subcomponent ratings of the RFI rating system. Examiners should rely, to the extent possible, on the work conducted by the primary regulators of the subsidiary depository institutions to assign the R and F ratings. However, any risk management or other important functions conducted by the nondepository entities of the holding company, or conducted across legal entity lines, should be subject to review by Federal Reserve examination staff. These reviews should be conducted in coordination with the primary regulator(s). The assessment for the I rating requires an independent assessment by Federal Reserve examination staff.

1062.0.6.3 Complex Holding Companies Rating: RFI/C(D)

For complex holding companies, examination staff will assign all component and subcomponent ratings of the RFI rating system. The ratings analysis should be based on the primary and functional regulators' assessment of the subsidiary entities, as well as on the examiners' assessment of the consolidated organization as determined through off-site review and the holding company inspection process, as appropriate. The resources needed for the inspection and the level of support needed for developing a full rating will depend on the complexity of the organization, including structure and activities, and should be commensurate with the level of risk posed by the subsidiary depository institution(s) to the federal safety net and the level of risk posed by the holding company to the subsidiary depository institution(s).

1062.0.6.4 Nontraditional Holding Companies Rating: RFI/C(D)

Examination staff are required to assign the full-rating system for nontraditional holding companies. Nontraditional holding companies include holding companies in which most or all nondepository entities are regulated by a functional regulator and in which the subsidiary depository institution(s) are small in relation to the nondepository entities.[15] The rating system is not intended to introduce significant additional work in the rating process for these organizations. As discussed above, the level of analysis conducted and resources needed to inspect the holding company and to assign the consolidated R and F ratings should be commensurate with the level

15. SLHCs that derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)) (commercial SLHCs), and SLHCs that are insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies (insurance SLHCs) will receive an "indicative" RFI rating regardless of size.

of risk posed by the subsidiary depository institution(s) to the federal safety net and the level of risk posed by the holding company to the subsidiary depository institution(s). The report of examination by, and other information obtained from, the functional and primary bank regulators should provide the basis for the consolidated R and F ratings. On-site work, to the extent it involves areas that are the primary responsibility of the functional or primary depository institution(s) regulator, should be coordinated with and, if possible, conducted by, those regulators. Examination staff should concentrate their independent analysis for the R and F ratings around activities and risk management conducted by the parent company and non-functionally regulated nondepository subsidiaries, as well as around activities and risk management functions that are related to the subsidiary depository institution(s), for example, audit functions for the depository institution(s) and compliance with sections 23A and 23B.

Examination staff are required to make an independent assessment of the impact of the nondepository entities on the subsidiary depository institution(s) in order to assign the I rating.

1062.0.7 RATING DEFINITIONS FOR THE RFI/C(D) RATING SYSTEM

All component and subcomponent ratings are rated on a five-point numeric scale. With the exception of the I component, ratings will be assigned in ascending order of supervisory concern as follows:

1—Strong; 2—Satisfactory; 3—Fair; 4— Marginal; and 5—Unsatisfactory.

A description of the I component ratings can be found below in subsection 1062.0.7.4, “Impact Component.”

The component ratings are not derived as a simple numeric average of the subcomponent ratings; rather, weight afforded to each subcomponent in the overall component rating will depend on the severity of the condition of that subcomponent and the relative importance of that subcomponent to the consolidated organization. Similarly, some components may be given more weight than others in determining the composite rating, depending on the situation of the holding company. Assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the holding company, although generally the composite rating bears a close relationship to the component ratings assigned.

1062.0.7.1 Composite Rating

Rating 1 (Strong). Holding companies in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Risk management practices and financial condition provide resistance to external economic and financial disturbances. Cash flow is more than adequate to service debt and other fixed obligations, and the nondepository entities pose little risk to the subsidiary depository institution(s).

Rating 2 (Satisfactory). Holding companies in this group are fundamentally sound but may have modest weaknesses in risk-management practices or financial condition. The weaknesses could develop into conditions of greater concern but are believed correctable in the normal course of business. As such, the supervisory response is limited. Cash flow is adequate to service obligations, and the nondepository entities are unlikely to have a significant negative impact on the subsidiary depository institution(s).

Rating 3 (Fair). Holding companies in this group exhibit a combination of weaknesses in risk-management practices and financial condition that range from fair to moderately severe. These companies are less resistant to the onset of adverse business conditions and would likely deteriorate if concerted action is not effective in correcting the areas of weakness. Consequently, these companies are vulnerable and require more than normal supervisory attention and financial surveillance. However, the risk management and financial capacity of the company, including the potential negative impact of the nondepository entities on the subsidiary depository institution(s), pose only a remote threat to its continued viability.

Rating 4 (Marginal). Holding companies in this group have an immoderate volume of risk management and financial weaknesses, which may pose a heightened risk of significant negative impact on the subsidiary depository institution(s). The holding company’s cash flow needs may be being met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, the organization’s future viability could be impaired. These companies require close supervisory attention and substantially increased financial surveillance.

Rating 5 (Unsatisfactory). The critical volume and character of the risk management and financial weaknesses of holding companies in this category, and concerns about the nondepository entities negatively impacting the subsidiary depository institution(s), could lead to insolvency without urgent aid from shareholders or other sources. The imminent inability to prevent liquidity and/or capital depletion places the holding company's continued viability in serious doubt. These companies require immediate corrective action and constant supervisory attention.

1062.0.7.2 Risk-Management Component

Rating 1 (Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the holding company's activities. Management is fully prepared to address risks emanating from new products and changing market conditions. The board and management are forward-looking and active participants in managing risk. Management ensures that appropriate policies and limits exist and are understood, reviewed, and approved by the board. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the information and analysis that is necessary to make timely and appropriate decisions in response to changing conditions. Risk-management practices and the organization's infrastructure are flexible and highly responsive to changing industry practices and current regulatory guidance. Staff has sufficient experience, expertise and depth to manage the risks assumed by the institution.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution's established policies and procedures, and none are material. Management effectively and accurately monitors the condition of the institution consistent with the standards of safety and soundness, and in accordance with internal and supervisory policies and practices. Risk-management processes are fully effective in identifying, monitoring, and controlling the risks to the institution.

Rating 2 (Satisfactory). A rating of 2 indicates that the institution's management of risk is largely effective, but lacking in some modest degree. Management demonstrates a responsiveness and ability to cope successfully with existing and foreseeable risks that may arise in carrying out the institution's business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are in the process of being resolved. Overall, board and senior management oversight, policies and limits, risk monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound institution. Risks are controlled in a manner that does not require more than normal supervisory attention.

The holding company's risk-management practices and infrastructure are satisfactory and generally are adjusted appropriately in response to changing industry practices and current regulatory guidance. Staff experience, expertise and depth are generally appropriate to manage the risks assumed by the institution.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound risk management (active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management monitoring and management information systems; comprehensive internal controls) is considered less than acceptable,[16] and has precluded the institution from fully addressing one or more significant risks to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Also, the risk-management structure may need to be improved in areas of significant business activity, or staff expertise may not be commensurate with the scope and complexity of business activities. In addition, management's response to changing industry practices and regulatory guidance may need to improve.

The internal control system may be lacking in some important aspects, particularly as indicated by continued control exceptions or by a failure to adhere to written policies and procedures. The risk-management weaknesses could

16. See SR - 95-51 and SR-16-11.

have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). A rating of 4 represents deficient risk-management practices that fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management is deficient and requires immediate and concerted corrective action by the board and management.

The institution may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in internal control or accounting procedures, or improved adherence to supervisory standards or requirements. The risk-management deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). A rating of 5 indicates a critical absence of effective risk-management practices with respect to the identification, monitoring, or control over significant risk exposures. One or more of the four elements of sound risk management is considered wholly deficient, and management and the board have not demonstrated the capability to address these deficiencies.

Internal controls are critically weak and, as such, could seriously jeopardize the continued viability of the institution. If not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and the potential for losses if corrective measures are not taken immediately. Deficiencies in the institution's risk-management procedures and internal controls require immediate and close supervisory attention.

1062.0.7.2.1 Risk Management Subcomponents

Board and Senior Management Oversight

Rating 1 (Strong). An assessment of "Strong" signifies that the board and senior management are forward-looking, fully understand the types of risk inherent in the holding company's activities, and actively participate in managing those risks. The board has approved overall business strategies and significant policies, and ensures that senior management is fully capable of managing the activities that the holding company conducts. Consistent with the standards of safety and soundness, oversight of risk-management practices is strong and the organization's overall business strategy is effective.

Senior management ensures that risk-management practices are rapidly adjusted in accordance with enhancements to industry practices and regulatory guidance, and exposure limits are adjusted as necessary to reflect the institution's changing risk profile. Policies, limits, and tracking reports are appropriate, understood, and regularly reviewed.

Management provides effective supervision of the day-to-day activities of all officers and employees, including the supervision of the senior officers and the heads of business lines. It hires staff that possess experience and expertise consistent with the scope and complexity of the organization's business activities. There is a sufficient depth of staff to ensure sound operations. Management ensures compliance with laws and regulations and that employees have the integrity, ethical values, and competence consistent with a prudent management philosophy and operating style.

Management responds appropriately to changes in the marketplace. It identifies all risks associated with new activities or products before they are launched, and ensures that the appropriate infrastructure and internal controls are established.

Rating 2 (Satisfactory). An assessment of "Satisfactory" indicates that board and senior management have an adequate understanding of the organization's risk profile and provide largely effective oversight of risk-management practices. In this regard, the board has approved all major business strategies and significant policies, and ensures that senior management is capable of managing the activities that the holding company conducts. Oversight of risk-management practices is satisfactory and the organization's overall business strategy is generally sound.

Senior management generally adjusts risk-management practices appropriately in accordance with enhancements to industry practices and regulatory guidance, and adjusts exposure limits as necessary to reflect the institution's changing risk profile, although these practices may be lacking in some modest degree. Policies, limits, and tracking reports are generally appropriate, understood, and regularly reviewed, and the new product approval process adequately identifies the associated risks and necessary controls.

Senior management's day-to-day supervision of management and staff at all levels is generally effective. The level of staffing, and its experience, expertise, and depth, is sufficient to operate the business lines in a safe and sound manner. Minor weaknesses may exist in the staffing, infrastructure, and risk-management processes for individual business lines or products, but these weaknesses have been identified by management, are correctable in the normal course of business, and are in the process of being addressed. Weaknesses noted should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). An assessment of "Fair" signifies that board and senior management oversight is lacking in some important way and, therefore, is a cause for more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. Weaknesses in one or more aspect of board and senior management oversight have precluded the institution from fully addressing one or more significant risks to the institution. The deficiencies may include a lack of knowledge with respect to the organization's risk profile, insufficient oversight of risk-management practices, ineffective policies or limits, inadequate or under-utilized management reporting, an inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may not be adequate or staff may not possess the experience and expertise needed for the scope and complexity of the organization's business activities. The day-to-day supervision of officer and staff activities, including the management of senior officers or heads of business lines, may be lacking. Certain risk-management practices are in need of improvement to ensure that management and the board is able to identify, monitor, and control all significant risks to the institution. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of "Marginal" represents deficient oversight practices that reflect a lack of adequate guidance and supervision by management and the board. A number of significant risks to the institution have not been adequately addressed, and the board and senior management function warrants a high degree of supervisory attention. Multiple board and senior management weaknesses are in need of immediate improvement. They may include a significant lack of knowledge with respect to the organization's risk profile, largely insufficient oversight of risk-management practices, ineffective policies or limits, inadequate or considerably under-utilized management reporting, an inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may not be adequate or possess the experience and expertise needed for the scope and complexity of the organization's business activities, and the day-to-day supervision of officer and staff activities, including the management of senior officers or heads of business lines, may be considerably lacking. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of "Unsatisfactory" indicates a critical absence of effective board and senior management oversight practices. Problems may include a severe lack of knowledge with respect to the organization's risk profile, insufficient oversight of risk-management practices, wholly ineffective policies or limits, critically inadequate or underutilized management reporting, a complete inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may be inadequate, inexpert, and/or inadequately supervised. The deficiencies require immediate and close supervisory attention, as management and the board have not demonstrated the capability to address them. Weaknesses could seriously jeopardize the continued viability of the institution.

Policies, Procedures, and Limits

Rating 1 (Strong). An assessment of "Strong" indicates that the policies, procedures, and limits provide for effective identification, measurement, monitoring, and control of the risks posed by all significant activities, including lending, investing, trading, trust, and fiduciary activities. Policies, procedures, and limits are consistent with the institution's goals and objectives and its overall financial strength. The policies clearly delineate accountability and lines of authority across the institution's activities. The policies also provide for the review of new activities to ensure that the infrastructure necessary to identify, monitor, and control the associated risks is in place before the activities are initiated.

Rating 2 (Satisfactory). An assessment of "Satisfactory" indicates that the policies, procedures, and limits cover all major business areas, are thorough and substantially up-to-date, and provide a clear delineation of accountability and lines of authority across the institution's activities. Policies, procedures, and limits are generally consistent with the institution's goals and objectives and its overall financial strength. Also, the policies provide for adequate due diligence before engaging in new activities or products. Any deficiencies or gaps that have been identified are minor in nature and in the process of being addressed. Weaknesses should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). An assessment of "Fair" signifies that deficiencies exist in policies, procedures, and limits that require more than normal supervisory attention. The deficiencies may involve a broad range of activities or be material to a major business line or activity. The deficiencies may include policies, procedures, or limits (or the lack thereof) that do not adequately identify, measure, monitor, or control the risks posed by significant activities; are not consistent with the experience of staff, the organization's strategic goals and objectives, or the financial strength of the institution; or do not clearly delineate accountability or lines of authority. Also, the policies may not provide for adequate due diligence before engaging in new activities or products. Weaknesses noted could have adverse effects on the safety and soundness of the institution unless corrective action is taken by management.

Rating 4 (Marginal). An assessment of "Marginal" indicates deficient policies, procedures, and limits that do not address a number of significant risks to the institution. Multiple practices are in need of immediate improvement, which may include policies, procedures, or limits (or the lack thereof) that ineffectively identify, measure, monitor, or control the risks posed by significant activities; are not commensurate with the experience of staff, the institution's strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Moreover, policies may be considerably lacking with regards to providing for effective due diligence before engaging in new activities or products. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of "Unsatisfactory" indicates a critical absence of effective policies, procedures, and limits. Policies, procedures, or limits (or the lack thereof) are largely or entirely ineffective with regard to identifying, measuring, monitoring, or controlling the risks posed by significant activities; are completely inconsistent with the experience of staff, the organization's strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Also, policies may be completely lacking with regard to providing for effective due diligence before engaging in new activities or products. Critical weaknesses could seriously jeopardize the continued viability of the institution and require immediate and close supervisory attention.

Risk Monitoring and MIS

Rating 1 (Strong). An assessment of "Strong" indicates that risk-monitoring practices and MIS reports address all material risks. The key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate, thoroughly documented, and frequently tested for reliability. Reports and other forms of communication are consistent with activities, are structured to monitor exposures and compliance with established limits, goals, or objectives, and compare actual versus expected performance when appropriate. Management and board reports are accurate and timely and contain sufficient information to identify adverse trends and to thoroughly evaluate the level of risk faced by the institution.

Rating 2 (Satisfactory). An assessment of "Satisfactory" indicates that risk-monitoring practices and MIS reports cover major risks and business areas, although they may be lacking in some modest degree. In general, the reports contain valid assumptions that are periodically tested for accuracy and reliability and are adequately documented and distributed to the appropriate decisionmakers. Reports and other forms of communication generally are consistent with activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and compare actual versus expected performance when appropriate. Management and board reports are generally accurate and timely, and broadly identify adverse trends and the level of risk faced by the institution. Any weaknesses or deficiencies that have been identified are in the process of being addressed.

Rating 3 (Fair). An assessment of “Fair” signifies that weaknesses exist in the institution’s risk-monitoring practices or MIS reports that require more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. They may contribute to ineffective risk identification or monitoring through inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, adequately monitor significant risks, or properly identify adverse trends and the level of risk faced by the institution. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of “Marginal” represents deficient risk-monitoring practices or MIS reports that, unless properly addressed, could seriously affect the safety and soundness of the institution. A number of significant risks to the institution are not adequately monitored or reported. Ineffective risk identification may result from notably inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, may inadequately monitor significant risks, or fail to identify adverse trends and the level of risk faced by the institution. The risk monitoring and MIS deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of “Unsatisfactory” indicates a critical absence of risk monitoring and MIS. They are wholly deficient due to inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. Moreover, MIS reports may not be distributed to the appropriate decisionmakers, fail to monitor significant risks, or fail to identify adverse trends and the level of risk faced by the institution. These critical weaknesses require immediate and close supervisory attention, as they could seriously jeopardize the continued viability of the institution.

Internal Controls

Rating 1 (Strong). An assessment of “Strong” indicates that the system of internal controls is robust for the type and level of risks posed by the nature and scope of the organization’s activities. The organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits, and wherever applicable, exceptions are noted and promptly investigated. Reporting lines provide clear independence of the control areas from the business lines and separation of duties throughout the organization. Robust procedures exist for ensuring compliance with applicable laws and regulations, including consumer laws and regulations. Financial, operational, and regulatory reports are reliable, accurate, and timely. Internal audit or other control review practices provide for independence and objectivity. Internal controls and information systems are thoroughly tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are well documented; identified material weaknesses are given thorough and timely high-level attention; and management’s actions to address material weaknesses are objectively reviewed and verified. The board or its audit committee regularly reviews the effectiveness of internal audits and other control review activities.

Rating 2 (Satisfactory). An assessment of “Satisfactory” indicates that the system of internal controls adequately covers major risks and business areas, with some modest weaknesses. In general, the control functions are independent from the business lines, and there is appropriate separation of duties. The control system supports accuracy in record-keeping practices and reporting systems, is adequately documented, and verifies compliance with laws and regulations, including consumer laws and regulations. Internal controls and information systems are adequately tested and reviewed, and the coverage, procedures, findings, and responses to audits and review tests are documented. Identified material weaknesses are given appropriate attention and management’s actions to address material weaknesses are objectively reviewed and verified. The board or its audit committee reviews the effectiveness of internal audits and other control review activities. Any weaknesses or deficiencies that have been identified are modest in nature and in the process of being addressed.

Rating 3 (Fair). An assessment of “Fair” signifies that weaknesses exist in the system of internal controls that require more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. The weaknesses may include insufficient oversight of internal controls and audit by the board or its audit committee; unclear or conflicting lines of authority and responsibility; a lack of independence between control areas and business activities; or ineffective separation of duties. The internal control system may produce inadequate or untimely risk coverage and verification, including monitoring compliance with both safety and soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or a lack of timeliness in management review and correction of identified weaknesses. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of "Marginal" represents a deficient internal control system that does not adequately address a number of significant risks to the institution. The deficiencies may include neglect of internal controls and audit by the board or its audit committee; conflicting lines of authority and responsibility; a lack of independence between control areas and business activities; or no separation of duties in critical areas. The internal control system may produce inadequate, untimely, or nonexistent risk coverage and verification in certain areas, including monitoring compliance with both safety and soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or infrequent management review and correction of identified weaknesses. The internal control deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of "Unsatisfactory" indicates a critical absence of an internal control system. There may be no oversight by the board or its audit committee; conflicting lines of authority and responsibility; no distinction between control areas and business activities; or no separation of duties. The internal control system may produce totally inadequate or untimely risk coverage and verification, including monitoring compliance with both safety and soundness and consumer laws and regulations; completely inaccurate records or regulatory reporting; a severe lack of documentation for work performed; or no management review and correction of identified weaknesses. Such deficiencies require immediate and close supervisory attention, as they could seriously jeopardize the continued viability of the institution.

1062.0.7.3 Financial Condition Component

Rating 1 (Strong). A rating of 1 indicates that the consolidated holding company is financially sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. The capital adequacy, asset quality, earnings, and liquidity of the consolidated holding company are more than adequate to protect the company from reasonably foreseeable external economic and financial disturbances. The company generates more than sufficient cash flow to service its debt and fixed obligations with no harm to subsidiaries of the organization.

Rating 2 (Satisfactory). A rating of 2 indicates that the consolidated holding company is fundamentally financially sound, but may have modest weaknesses correctable in the normal course of business. The capital adequacy, asset quality, earnings and liquidity of the consolidated holding company are adequate to protect the company from external economic and financial disturbances. The company also generates sufficient cash flow to service its obligations; however, areas of weakness could develop into areas of greater concern. To the extent minor adjustments are handled in the normal course of business, the supervisory response is limited.

Rating 3 (Fair). A rating of 3 indicates that the consolidated holding company exhibits a combination of weaknesses ranging from fair to moderately severe. The company has less than adequate financial strength stemming from one or more of the following: modest capital deficiencies, substandard asset quality, weak earnings, or liquidity problems. As a result, the holding company and its subsidiaries are less resistant to adverse business conditions. The financial condition of the holding company will likely deteriorate if concerted action is not taken to correct areas of weakness. The company's cash flow is sufficient to meet immediate obligations, but may not remain adequate if action is not taken to correct weaknesses. Consequently, the holding company is vulnerable and requires more than normal supervision. Overall financial strength and capacity are still such as to pose only a remote threat to the viability of the company.

Rating 4 (Marginal). A rating of 4 indicates that the consolidated holding company has either inadequate capital, an immoderate volume of problem assets, very weak earnings, serious liquidity issues, or a combination of factors that are less than satisfactory. An additional weakness may be that the holding company's cash flow needs are met only by upstreaming imprudent dividends and/or fees from subsidiaries. Unless prompt action is taken to correct these conditions, they could impair future viability. Holding companies in this category require close supervisory attention and increased financial surveillance.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the volume and character of financial weaknesses of the holding company are so critical as to require urgent aid from shareholders or other sources to prevent insolvency. The imminent inability of such a company to service its fixed obligations and/or prevent capital depletion due to severe operating losses places its viability in serious doubt. Such companies require immediate corrective action and constant supervisory attention.

1062.0.7.3.1 The Financial Condition Subcomponents

The financial condition subcomponents can be evaluated along business lines, product lines, or legal entity lines—depending on which type of review is most appropriate for the holding company structure.

Capital Adequacy

Rating 1 (Strong). A rating of 1 indicates that the consolidated holding company maintains more than adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products; provide a sufficient cushion to absorb unanticipated losses arising from the parent and subsidiary activities; and support the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 1 has more than sufficient capital to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries.

Rating 2 (Satisfactory). A rating of 2 indicates that the consolidated holding company maintains adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products; provide a sufficient cushion to absorb unanticipated losses arising from the parent and subsidiary activities; and support the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 2 has sufficient capital to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries.

Rating 3 (Fair). A rating of 3 indicates that the consolidated holding company may not maintain sufficient capital to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products; the unanticipated losses arising from the parent and subsidiary activities; or the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 3 may not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. The capital position of the consolidated holding company could quickly become inadequate in the event of asset deterioration or other negative factors and therefore requires more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the capital level of the consolidated holding company is significantly below the amount needed to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products; the unanticipated losses arising from the parent and subsidiary activities; and the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 4 does not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. If left unchecked, the consolidated capital position of the company might evolve into weaknesses or conditions that could threaten the viability of the institution. The capital position of the consolidated holding company requires immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the level of capital of the consolidated holding company is critically deficient and in need of immediate corrective action. The consolidated capital position threatens the viability of the institution and requires constant supervisory attention.

Asset Quality

Rating 1 (Strong). A rating of 1 indicates that the holding company maintains strong asset quality across all parts of the organization, with a very low level of criticized and nonperforming assets. Credit risk across the organization is commensurate with management's abilities and modest in relation to credit risk-management practices.

Rating 2 (Satisfactory). A rating of 2 indicates that the holding company maintains satisfactory asset quality across all parts of the organization, with a manageable level of criticized and nonperforming assets. Any identified weaknesses in asset quality are correctable in the normal course of business. Credit risk across the organization is commensurate with management's abilities and generally modest in relation to credit risk-management practices.

Rating 3 (Fair). A rating of 3 indicates that the asset quality across all or a material part of the consolidated holding company is less than satisfactory. The holding company may be facing a decrease in the overall quality of assets currently maintained on and off balance sheet. The holding company may also be experiencing an increase in credit-risk exposure that has not been met with an appropriate improvement in risk-management practices. Holding companies assigned a rating of 3 require more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the holding company's asset quality is deficient. The level of problem assets and/or unmitigated credit risk subjects the holding company to potential losses that, if left unchecked, may threaten its viability. Holding companies assigned a rating of 4 require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the holding company's asset quality is critically deficient and presents an imminent threat to the institution's viability. Holding companies assigned a rating of 5 require immediate remedial action and constant supervisory attention.

Earnings

Rating 1 (Strong). A rating of 1 indicates that the quantity and quality of the holding company's consolidated earnings over time are more than sufficient to make full provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and holding company growth. Generally, holding companies with a 1 rating have earnings well above peer-group averages.

Rating 2 (Satisfactory). A rating of 2 indicates that the quantity and quality of the holding company's consolidated earnings over time are generally adequate to make provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and holding company growth. Generally, holding companies with a 2 rating have earnings that are in line with or slightly above peer-group averages.

Rating 3 (Fair). A rating of 3 indicates that the holding company's consolidated earnings are not fully adequate to make provisions for the absorption of losses and the accretion of capital in relation to company growth. The consolidated earnings of companies rated 3 may be further clouded by static or inconsistent earnings trends, chronically insufficient earnings, or less than satisfactory asset quality. Holding companies with a 3 rating generally have earnings below peer-group averages. Such holding companies require more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the holding company's consolidated earnings, while generally positive, are clearly not sufficient to make full provision for losses and the necessary accretion of capital. Holding companies with earnings rated 4 may be characterized by erratic fluctuations in net income, poor earnings (and the likelihood of the development of a further downward trend), intermittent losses, chronically depressed earnings, or a substantial drop from the previous year. The earnings of such companies are generally substantially below peer-group averages. Such holding companies require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the holding company is experiencing losses or a level of earnings that is worse than that described for the 4 rating. Such losses, if not reversed, represent a distinct threat to the holding company's solvency through erosion of capital. Such holding companies require immediate and constant supervisory attention.

Liquidity

Rating 1 (Strong). A rating of 1 indicates that the holding company maintains strong liquidity levels and well-developed funds-management practices. The parent company and subsidiaries have reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.

Rating 2 (Satisfactory). A rating of 2 indicates that the holding company maintains satisfactory liquidity levels and funds-management practices. The parent company and subsidiaries have access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses in funds-management practices may be evident, but those weaknesses are correctable in the normal course of business.

Rating 3 (Fair). A rating of 3 indicates that the holding company's liquidity levels or funds-management practices are in need of improvement. Holding companies rated 3 may lack ready access to funds on reasonable terms or may evidence significant weaknesses in funds-management practices at the parent company or subsidiary levels. However, these deficiencies are considered correctable in the normal course of business. Such holding companies require more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the holding company's liquidity levels or funds-management practices are deficient. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs at the parent company or subsidiary levels and require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the holding company's liquidity levels or funds-management practices are critically deficient and may threaten the continued viability of the institution. Institutions rated 5 require constant supervisory attention and immediate external financial assistance to meet maturing obligations or other liquidity needs.

1062.0.7.4 Impact Component

The I component rating reflects the aggregate potential impact of the nondepository entities on the subsidiary depository institution(s). It is rated on a five-point numerical scale. Ratings will be assigned in ascending order of supervisory concern as follows:

1—low likelihood of significant negative impact;

2—limited likelihood of significant negative impact;

3—moderate likelihood of significant negative impact;

4—considerable likelihood of significant negative impact; and

5—high likelihood of significant negative impact.

Rating 1 (Low Likelihood of Significant Negative Impact). A rating of 1 indicates that the nondepository entities of the holding company are highly unlikely to have a significant negative impact on the subsidiary depository institution(s) due to the sound financial condition of the nondepository entities, the strong risk-management practices within the nondepository entities, or the corporate structure of the holding company. The holding company maintains an appropriate capital allocation across the organization commensurate with associated risks. Intra-group exposures, including servicing agreements, are very unlikely to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow is sufficient and not dependent on excessive dividend payments from subsidiaries. The potential risks posed to the subsidiary depository institution(s) by strategic plans, the control environment, risk concentrations, or legal or reputational issues within or facing the nondepository entities are minor in nature and can be addressed in the normal course of business.

Rating 2 (Limited Likelihood of Significant Negative Impact). A rating of 2 indicates a limited likelihood that the nondepository entities of the holding company will have a significant negative impact on the subsidiary depository institution(s) due to the adequate financial condition of the nondepository entities, the satisfactory risk-management practices within the parent nondepository entities, or the corporate structure of the holding company. The holding company maintains adequate capital allocation across the organization commensurate with associated risks. Intra-group exposures, including servicing agreements, are unlikely to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow is satisfactory and generally does not require excessive dividend payments from subsidiaries. The potential risks posed to the subsidiary depository institution(s) by strategic plans, the control environment, risk concentrations, or legal or reputational issues within the nondepository entities are modest and can be addressed in the normal course of business.

Rating 3 (Moderate Likelihood of Significant Negative Impact). A rating of 3 indicates a moderate likelihood that the aggregate impact of the nondepository entities of the holding company on the subsidiary depository institution(s) will have a significant negative impact on the subsidiary depository institution(s) due to weaknesses in the financial condition and/or risk management practices of the nondepository entities. The holding company may have only marginally sufficient allocation of capital across the organization to support risks. Intra-group exposures, including servicing agreements, may have the potential to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow may at times require excessive dividend payments from subsidiaries. Strategic growth plans, weaknesses in the control environment, risk concentrations or legal or reputational issues within the nondepository entities may pose significant risks to the subsidiary depository institution(s). A holding company assigned a 3 impact rating requires more than normal supervisory attention, as there could be adverse effects on the safety and soundness of the subsidiary depository institution(s) if corrective action is not taken by management.

Rating 4 (Considerable Likelihood of Significant Negative Impact). A rating of 4 indicates that there is a considerable likelihood that the nondepository entities of the holding company will have a significant negative impact on the subsidiary depository institution(s) due to weaknesses in the financial condition and/or risk-management practices of the nondepository entities. A 4-rated holding company may have insufficient capital within the nondepository entities to support their risks and activities. Intra-group exposures, including servicing agreements, may also have the immediate potential to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow may be dependent on excessive dividend payments from subsidiaries. Strategic growth plans, weaknesses in the control environment, risk concentrations or legal or reputational issues within the nondepository entities may pose considerable risks to the subsidiary depository institution(s). A holding company assigned a 4 impact rating requires immediate remedial action and close supervisory attention because the nondepository entities could seriously affect the safety and soundness of the subsidiary depository institution(s).

Rating 5 (High Likelihood of Significant Negative Impact). A rating of 5 indicates a high likelihood that the aggregate impact of the nondepository entities of the holding company on the subsidiary depository institution(s) is or will become significantly negative due to substantial weaknesses in the financial condition and/or risk-management practices of the nondepository entities. Strategic growth plans, a deficient control environment, risk concentrations or legal or reputational issues within the nondepository entities may pose critical risks to the subsidiary depository institution(s). The parent company also may be unable to meet its obligations without excessive support from the subsidiary depository institution(s). The holding company requires immediate and close supervisory attention, as the nondepository entities seriously jeopardize the continued viability of the subsidiary depository institution(s).

1062.0.7.5 (D) Depository Institutions Component

The (D) component identifies the overall condition of the subsidiary depository institution(s) of the holding company. For holding companies with only one subsidiary depository institution, the (D) component rating generally will mirror the CAMELS composite rating for that depository institution. To arrive at a (D) component rating for holding companies with multiple subsidiary depository institutions, the CAMELS composite ratings for each of the depository institutions should be weighted, giving consideration to asset size and the relative importance of each depository institution within the overall structure of the organization. In general, it is expected that the resulting (D) component rating will reflect the lead depository institution's CAMELS composite rating.

If in the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution's primary regulator, then the (D) rating should reflect the Federal Reserve's evaluation.

Managing risks is fundamental to the business of banking. Accordingly, the Federal Reserve places significant supervisory emphasis on an institution's management of risk, including its system of internal controls, when evaluating the overall effectiveness of an institution's risk management. An institution's failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks of its activities has long been considered unsafe-and-unsound conduct. Principles of sound management should apply to the entire spectrum of risks facing an institution including, but not limited to, credit, market, liquidity, operational, compliance, and legal risk:

- *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- *Market risk* is the risk to a financial institution's condition resulting from adverse movements in market rates or prices, including, but not limited to, interest rates, foreign exchange rates, commodity prices, or equity prices.
- *Liquidity risk* is the potential that a financial institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as "market liquidity risk").
- *Operational risk* is the risk resulting from inadequate or failed internal processes, people, and systems or from external events.[1]
- *Compliance risk* is the risk of regulatory sanctions, fines, penalties or losses resulting from failure to comply with laws, rules, regulations, or other supervisory requirements applicable to a financial institution.
- *Legal risk* is the potential that actions against the institution that result in unenforceable contracts, lawsuits, legal sanctions, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a financial institution.

1. This definition conforms to the Basel Committee on Banking Supervision's "Principles for the Sound Management of Operational Risk," June 2011, Bank for International Settlements.

The risk-management expectations outlined in this guidance are applicable to all supervised institutions with total consolidated assets less than $100 billion, including state member banks, bank holding companies, savings and loan holding companies, and foreign banking organizations with combined total U.S. assets of less than $100 billion. This guidance also applies to insurance and commercial savings and loan holding companies with total consolidated assets less than $100 billion by providing core risk-management guidance. Reserve Bank staff may further consult with Board staff on appropriately tailoring this guidance for these institutions. This guidance is not applicable to intermediate holding companies of foreign banking organizations established pursuant to the Federal Reserve's Regulation YY with total consolidated assets of $50 billion or more.

These risks and the activities associated with them are addressed in greater detail in the Federal Reserve's supervision manuals and other guidance documents.[2] In practice, an institution's business activities present various combinations, concentrations, and interrelationships of these risks depending on the nature and scope of the particular activity. The following discussion provides guidelines for the supervisory assessment of the overall effectiveness of an institution's risk management and its formal or informal systems for identifying, measuring, monitoring, and controlling these risks. Refer to SR-16-11 and its attachment.

1062.1.1 ELEMENTS OF RISK MANAGEMENT

When evaluating the risk management at an institution as part of the evaluation of the overall effectiveness of management, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system:

2. Refer to the Federal Reserve's *Commercial Bank Examination Manual*, this *Bank Holding Company Supervision Manual, Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations*, and relevant FFIEC Examination Manuals.

- board[3] and senior management oversight
- policies, procedures, and limits
- risk monitoring and management information systems
- internal controls

Each of these elements is described further below, along with a list of considerations relevant to assessing each element. Examiners should recognize that the considerations specified in these guidelines are intended only to assist in the evaluation of risk-management practices and are not a checklist of requirements for each institution.

An institution's risk-management processes are expected to evolve in sophistication, commensurate with the institution's asset growth, complexity, and risk. At a larger or more complex organization, the institution should have more sophisticated risk-management processes that address the full range of risks regardless of where the activity is conducted in the organization. Moreover, while a holding company should be able to assess the major risks of the consolidated organization, examiners should expect a parent company that centrally manages the operations and functions of its subsidiary banks to have more comprehensive, detailed, and developed risk-management systems than a parent company that delegates the management of risks to relatively autonomous subsidiaries.[4]

For a small community banking organization (CBO) engaged solely in traditional banking activities and whose senior management is actively involved in the details of day-to-day operations, relatively basic risk-management systems may be adequate. In accordance with the *Interagency Guidelines Establishing Standards for Safety and Soundness*, a CBO is expected, at a minimum, to have internal controls, information systems, and internal audits that are appropriate for the size of the institution and the nature, scope, and risk of its activities.[5]

The risk-management processes of a regional banking organization (RBO) would typically contain detailed guidelines that set specific prudent limits on the principal types of risks relevant to a RBO's consolidated activities.[6] Furthermore, because of the diversity and the geographic dispersion of their activities, these institutions will require relatively more sophisticated information systems that provide management with timely information that supports the management of risks. The information systems, in turn, should provide management with information that present a consolidated and integrated view of risks that are relevant to the duties and responsibilities of individual managers, senior management, and the board of directors.[7]

Consistent with the principle of national treatment,[8] the Federal Reserve has the same supervisory goals and standards for the U.S. operations of FBOs as for domestic organizations of similar size, scope, and complexity. Given the added element of foreign ownership, an FBO's risk-management processes and control functions for the U.S. operations may be implemented domestically or outside of the United States. In cases where these functions are performed outside of the United States, the FBO's oversight function, policies and procedures, and information systems need to be sufficiently transparent to allow U.S. supervisors to assess their adequacy. Additionally, the FBO's U.S. senior management need to demonstrate and maintain a thorough understanding of all relevant risks affecting the U.S. operations and the associated management information systems, used to manage and monitor these risks within the U.S. operations.

The information systems at a larger institution will naturally require frequent monitoring and testing by independent control areas and by both internal and external auditors, to ensure the integrity of the information used by the board of directors and senior management in overseeing compliance with policies and limits. Therefore,

3. For the purpose of this guidance, for foreign banking organizations, "board of directors" refers to the equivalent governing body of the U.S. operations of the FBO.

4. If these subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely to the fullest extent possible on the conclusions drawn by relevant regulators regarding risk management. See also, SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank. Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion."

5. Refer to 12 CFR 208, Appendix D-1, the *Interagency Guidelines Establishing Standards for Safety and Soundness*.

6. The Federal Reserve considers an RBO to be a midsize financial institution with total consolidated assets between $10 and $100 billion.

7. Subpart C of the Federal Reserve's Regulation YY includes risk committee requirements for bank holding companies with total consolidated assets between $50 billion and $100 billion.

8. National treatment requires nondiscrimination between domestic and foreign firms, or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. The International Banking Act of 1978 generally gives foreign banks operating in the United States the same powers as domestic banking organizations and subjects them to the same restrictions and obligations.

an institution's risk oversight function needs to be sufficiently independent of the business lines to achieve an adequate separation of duties and the avoidance of conflicts of interest.

1062.1.1.1 Board and Senior Management Oversight

The board of directors has the responsibility for establishing the level of risk that the institution should take. Accordingly, the board of directors should approve the institution's overall business strategies and significant policies, including those related to managing risks. Further, the board of directors should also ensure that senior management is fully capable of implementing the institution's business strategies and risk limits. In evaluating senior management, the board of directors should consider whether management is taking the steps necessary to identify, measure, monitor, and control these risks.

The board of directors should collectively have a balance of skills, knowledge, and experience to clearly understand the activities and risks to which the institution is exposed. The board of directors should take steps to develop an appropriate understanding of the risks the institution faces, through briefings from experts internal to their organization and potentially from external experts. The institution's management information systems should provide the board of directors with sufficient information to identify the size and significance of the risks. Using this knowledge and information, the board of directors should provide clear guidance regarding the level of exposures acceptable to the institution and oversee senior management's implementation of the procedures and controls necessary to comply with approved policies.

Senior management is responsible for implementing strategies set by the board of directors in a manner that controls risks and that complies with laws, rules, regulations, or other supervisory requirements on both a long-term and day-to-day basis. Accordingly, senior management should be fully involved in and possess sufficient knowledge of all activities to ensure that appropriate policies, controls, and risk monitoring systems are in place and that accountability and lines of authority are clearly delineated. Senior management is also responsible for establishing and communicating a strong awareness of the need for effective risk management, internal controls, and high ethical business practices. To fulfill these responsibilities, senior management needs to have a thorough understanding of banking and financial market activities and detailed knowledge of the institution's activities, including the internal controls that are necessary to limit the related risks.

In assessing the quality of the oversight provided by the board of directors and senior management, examiners should consider the following:

- The board of directors has approved significant policies to establish risk tolerances for the institution's activities and periodically reviews risk exposure limits to align with changes in the institution's strategies, address new activities and products, and react to changes in the industry and market conditions.
- Senior management has identified and has a clear understanding and working knowledge of the risks inherent in the institution's activities. Senior management also remains informed about these risks as the institution's business activities evolve or expand and as changes and innovations occur in financial markets and risk-management practices.
- Senior management has identified and reviewed risks associated with engaging in new activities or introducing new products to ensure that the necessary infrastructure and internal controls are in place to manage the related risks.
- Senior management has ensured that the institution's activities are managed and staffed by personnel with the knowledge, experience, and expertise consistent with the nature and scope of the institution's activities and risks.
- All levels of senior management provide appropriate management of the day-to-day activities of officers and employees, including oversight of senior officers or heads of business lines.
- Senior management has established and maintains effective information systems to identify, measure, monitor, and control the sources of risks to the institution.

1062.1.1.2 Policies, Procedures, and Limits

Although an institution's board of directors approves an institution's overall business strategy and policy framework, senior management develops and implements the institution's risk-management policies and procedures that address the types of risks arising from its activities. Once the risks are properly identified, the institution's policies and procedures should provide guidance for the day-to-day implementation of business strategies, including limits designed to prevent excessive and imprudent risks. An institution should have policies and procedures that address its significant activities and risks with the appropriate level of detail to address the type and complexity of the institution's operations. A smaller, less complex institution that has effective senior management directly involved in day-to-day operations would generally not be expected to have policies as sophisticated as larger institutions. In a larger institution, where senior managers rely on widely-dispersed staffs to implement strategies for more varied and complex businesses, far more detailed policies and procedures would generally be expected. In either case, senior management is expected to ensure that policies and procedures address the institution's material areas of risk and that policies and procedures are modified when necessary to respond to significant changes in the institution's activities or business conditions.

The following guidelines should assist examiners in evaluating an institution's policies, procedures, and limits

- The institution's policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its significant risk-taking activities.
- The institution's policies, procedures, and limits are consistent with its stated strategy and risk profile.
- The policies and procedures establish accountability and lines of authority across the institution's activities.
- The policies and procedures provide for the review and approval of new business lines, products, and activities, as well as material modifications to existing activities, services, and products, to ensure that the institution has the infrastructure necessary to identify, measure, monitor, and control associated risks before engaging in a new or modified business line, product, or activity.

1062.1.1.3 Risk Monitoring and Management Information Systems

Institutions of all sizes are expected to have risk monitoring and management information systems in place that provide the board of directors and senior management with timely information and a clear understanding of the institution's business activities and risk exposures. The sophistication of risk monitoring and management information systems should be commensurate with the complexity and diversity of the institution's operations. Accordingly, a smaller and less complex institution may require less frequent management and board reports to support risk monitoring activities. For example, these reports may include, daily or weekly balance sheets and income statements, a watch list for potentially troubled loans, a report on past due loans, an interest rate risk report, and similar items. In contrast, a larger, more complex institution would be expected to have much more comprehensive reporting and monitoring systems, which includes more frequent reporting to board and senior management, tighter monitoring of high-risk activities, and the ability to aggregate risks on a fully consolidated basis across all business lines, legal entities, and activities.

In assessing an institution's measurement and monitoring of risk and its management reports and information systems, examiners should consider whether these conditions exist:

- The institution's risk monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, models, and procedures used in measuring and monitoring risks are appropriate and adequately documented and tested for reliability on an ongoing basis.[9]
- Reports and other forms of communication address the complexity and range of an institution's activities, monitor key exposures and compliance with established limits and strategy, and as appropriate, compare actual versus expected performance.
- Reports to the board of directors and senior management are accurate, and provide timely and sufficient information to identify any adverse trends and to evaluate the level of risks faced by the institution.

1062.1.1.4 Internal Controls

An effective internal control structure is critical to the safe and sound operation of an institution. Effective internal controls promote reliable financial and regulatory reporting, safeguard assets, and help to ensure compliance with relevant laws, rules, regulations, supervisory require-

9. See also SR-11-7, "Guidance on Model Risk Management."

ments, and institutional policies. Therefore, an institution's senior management is responsible for establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate segregation of duties.

Adequate segregation of duties is a fundamental and essential element of a sound risk management and internal control system. Failure to implement and maintain an adequate segregation of duties can constitute an unsafe-and-unsound practice and possibly lead to serious losses or otherwise compromise the integrity of the institution's internal controls. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

Internal controls should be tested by an independent party who reports either directly to the institution's board of directors or its designated committee, which is typically the audit committee.[10] However, small CBOs whose size and complexity do not warrant a full scale internal audit function may rely on regular reviews of essential internal controls conducted by other institution personnel. Given the importance of appropriate internal controls to institutions of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management's responses to the findings. In addition, communication channels should allow for adverse or sensitive findings to be reported directly to the board of directors or to the relevant board committee.

In evaluating internal controls, examiners should consider whether these conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the institution's activities.
- The institution's organizational structure establishes clear lines of authority and responsibility for risk management and for monitoring adherence to policies, procedures, and limits.
- Internal audit or other control functions, such as loan review and compliance, provide for independence and objectivity.
- The official organizational structures reflect actual operating practices and management responsibilities and authority over a particular business line or activity.
- Financial, operational, risk management, and regulatory reports are reliable, accurate, and timely; and wherever applicable, material exceptions are noted and promptly investigated or remediated.
- Policies and procedures for control functions support compliance with applicable laws, rules, regulations, or other supervisory requirements.
- Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits, regulatory examinations, and other review tests are adequately documented; identified material weaknesses are given appropriate and timely, high-level attention; and management's actions to address material weaknesses are objectively verified and reviewed.
- The institution's board of directors, or audit committee, and senior management are responsible for developing and implementing an effective system of internal controls and that the internal controls are operating effectively.

1062.1.1.5 Conclusions

Examiners are expected to assess risk management for an institution and assign formal ratings of "risk management" as described in the *Commercial Bank Examination Manual* for state member banks, this manual for holding companies, and the *Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations.*[11] In reports of examination or inspection, and in transmittal letters to the boards of directors of state member banks, holding companies,[12] and to the FBO officer of the U.S. operations, examination staff should specifically

10. Given the importance of the internal audit function, several additional policy statements have been issued. For comprehensive guidance on internal audit, see SR-03-5, "Amended Interagency Guidance on the Internal Audit Function and its Outsourcing" and for institutions with more than $10 billion in assets, see SR-13-1/ CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing."

11. Refer to section 1200.1 of the *Commercial Bank Examination Manual*; section 1062.0 of the *Bank Holding Company Supervision Manual*; and section 2003.1 of the *Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations*. For savings and loan holding companies, see also SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

12. SR-16-11 applies to insurance and commercial savings and loan holding companies with total consolidated assets less than $100 billion by providing core risk-management guidance. Reserve Bank staff should further consult with Board staff on appropriately tailoring this guidance for these institutions.

reference the types and nature of corrective actions that need to be taken by an institution to address noted risk management and internal control deficiencies. Where appropriate, the Federal Reserve will advise an institution that supervisory action will be initiated, if the institution fails to timely remediate risk-management weaknesses when such failures create the potential for serious losses or if material deficiencies or situations threaten its safety and soundness. Such supervisory actions may include formal enforcement actions against the institution, or its responsible officers and directors, or both, and would require the immediate implementation of all necessary corrective measures.

If bank or holding company subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely to the fullest extent possible on the conclusions drawn by relevant regulators regarding risk management. See also, SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion."

Holding Company Ratings Applicability and Inspection Frequency Section 1063.0

The purpose of this section is to provide an overview of the inspection scope and frequency expectations for bank holding companies (BHCs) and savings and loan holding companies (SLHCs) supervised by the Federal Reserve. The Federal Reserve utilizes different rating systems to assess these and other holding companies.

BHCs and non-insurance, non-commercial SLHCs with total consolidated assets of $100 billion or more generally are subject to the large financial institution (LFI) rating system. (See section 1060.0 of this manual.) U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve's Regulation YY are also subject to the LFI rating system.

BHCs and non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets generally are subject to the RFI rating system. (See section 1062.0 of this manual.) However, noncomplex holding companies with less than $3 billion in total consolidated assets only receive the risk-management rating and composite rating from the RFI rating system.

BHCs exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, as a result of any of the following exemptions, will not be subject to any required periodic inspection:

1. section 4(a)(2)—permanent grandfather rights
2. section 4(c)(i)—labor, agricultural, or horticultural organization
3. section 4(c)(ii)—85 percent family-owned
4. section 4(c)(12)—irrevocable declaration to cease to be a BHC
5. section 4(d)—hardship exemption

However, the Reserve Bank should continue to monitor the financial condition of such holding companies and should conduct inspections whenever there is any indication of a potential problem in a subsidiary bank.

1063.0.1 RATING SYSTEMS FOR HOLDING COMPANIES

Rating System	Rating System Components	Applicability
LFI rating (SR-19-3/CA-19-2)	• Capital planning and positions • Liquidity risk management and positions • Governance and controls	• BHCs with total consolidated assets of $100 billion or more • Non-insurance, non-commercial SLHCs with total consolidated assets of $100 billion or more • U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established under the Board's Regulation YY
RFI rating (SR-19-4/CA-19-3)	• Risk management (4 subcomponents) ○ Board and senior management oversight, ○ Policies, procedures, and limits, ○ Risk monitoring and management information systems, and ○ Internal controls • Financial condition (4 subcomponents) ○ Capital, ○ Asset quality, ○ Earnings, and ○ Liquidity • Impact • Composite rating • Depository institutions	• BHCs with $3 billion or more and less than $100 billion in total consolidated assets • Non-insurance and non-commercial SLHCs with $3 billion or more and less than $100 billion in total consolidated assets • Complex BHCs and complex non-insurance and non-commercial SLHCs with less than $3 billion in total consolidated assets
Modified RFI rating (SR-13-21)	• Risk-management (no subcomponents) • Composite rating	Noncomplex BHCs and noncomplex non-insurance and non-commercial SLHCs with less than $3 billion in total consolidated assets
Supervised insurance organization rating (SR-22-8)	• Governance and controls, • Capital management, and • Liquidity management	Supervised insurance organizations[1]
Indicative RFI rating	Indicates to the firm how it would be rated if the RFI rating system was formally applied.	Commercial SLHCs[2]

1. A supervised insurance organization is a depository institution holding company that is an insurance underwriting company, or that has over 25 percent of its consolidated assets held by insurance underwriting subsidiaries or has been otherwise designated as a supervised insurance organization by Federal Reserve staff.

2. SLHCs are considered to be “commercial SLHCs” if they derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)).

1063.0.2 GENERAL INSPECTION FREQUENCY FOR A HOLDING COMPANY

<table>
<tr><th></th><th colspan="5">Total consolidated asset size</th></tr>
<tr><th>Type of holding company</th><td>$100 billion or more</td><td>$10 billion or more and less than $100 billion</td><td>$3 billion or more and less than $10 billion</td><td>Less than $3 billion (complex)</td><td>Less than $3 billion (non-complex)</td></tr>
<tr><td>Bank holding company[1]</td><td colspan="2" rowspan="3">Ratings (or indicative ratings) assigned and communicated to firms on at least an annual basis, and more frequently as warranted.</td><td colspan="3" rowspan="3">See the table below and SR letter 13-21, and its attachment for more information on inspection frequency and scope.</td></tr>
<tr><td>Non-insurance and non-commercial savings and loan holding company</td></tr>
<tr><td>Commercial savings and loan holding company[2]</td></tr>
<tr><td>Intermediate holding company</td><td colspan="5">U.S. intermediate holding companies of foreign banking organizations established under the Board’s Regulation YY that have $50 billion or more in total consolidated assets are assigned an LFI rating on at least an annual basis, and more frequently as warranted.</td></tr>
<tr><td>Supervised insurance organization</td><td colspan="5">“Complex” supervised insurance organizations are assigned ratings on an annual basis.[3] Noncomplex supervised insurance organizations are assigned ratings no less often than every other year.</td></tr>
</table>

1. BHCs exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, are not subject to any required periodic inspection.

2. SLHCs are considered to be “commercial savings and loan holding companies” if they derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)).

3. A supervised insurance organization is automatically classified as “complex” if its depository institution’s average assets exceed $100 billion.

1063.0.3 Small Holding Company Inspection Scope and Frequency

<table>
<tr><th colspan="2">Asset size</th><th colspan="2">$3 billion or more and less than $10 billion</th><th colspan="2">Less than $3 billion</th></tr>
<tr><th colspan="2">Complexity[2]</th><th>Complex</th><th>Noncomplex</th><th>Complex</th><th>Noncomplex</th></tr>
<tr><th colspan="2">Type of rating</th><th>Complete RFI rating</th><th>Complete RFI rating</th><th>Complete RFI rating</th><th>Risk-management rating and composite rating only</th></tr>
<tr><td rowspan="2">Scope and frequency[1]</td><td>Rating of 1 or 2</td><td>Full scope on-site inspection is expected annually.
Additional targeted follow-up may be needed in response to off-site surveillance program results.</td><td>Off-site targeted inspection is expected every two years.
Additional targeted follow-up may be needed in response to off-site surveillance program results.</td><td rowspan="2">Off-site review should be conducted upon receipt of the lead DI exam report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a complete RFI rating, the Reserve Bank should conduct an on-site review of the company.
Any on-site review should be targeted at those areas where additional information or analysis is needed to assign a complete supervisory rating.</td><td>If all subsidiary DIs have a management component rating and a composite supervisory rating of “1” or “2” and no material holding company issues are otherwise indicated, the Reserve Bank should assign only a composite rating and risk-management rating to the holding company based on the ratings of the lead DI.</td></tr>
<tr><td>Rating of 3, 4, or 5</td><td>Full scope on-site inspection is expected annually.
If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution (DI), the Reserve Bank should conduct an additional targeted inspection and update the rating if necessary. The targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead DI.
Additional targeted follow-up may be needed in response to off-site surveillance program results.</td><td>Full-scope off-site inspection is expected annually.
If the primary supervisor has conducted an interim examination or changed the rating at the lead DI, the Reserve Bank staff should conduct an additional targeted inspection and update the rating if necessary. This targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead DI.
Additional targeted follow-up may be needed in response to off-site surveillance program results.</td><td>If one or more subsidiary DIs have a management component rating or a composite supervisory rating of “3,” “4,” or “5” or a material holding company issue is otherwise indicated, an off-site review is expected upon receipt of the lead DI exam report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a risk-management rating and a composite rating, contact the holding company to obtain more information.</td></tr>
<tr><td rowspan="2">Report expectations</td><td>Rating of 1, 2, or 3</td><td colspan="3">A letter-format report template has been developed for supervision staff completing reports for holding companies that receive a complete RFI rating and have a composite rating of 1, 2, or 3.</td><td rowspan="2">Off-site reviews culminate in the issuance of a transmittal letter communicating the ratings to the company. Information in the transmittal letter review focuses on parent and nonbanking activities. Examiners also rely on the primary regulator’s work on the subsidiary insured depository institution and relevant surveillance results.</td></tr>
<tr><td>Rating of 4 or 5</td><td colspan="3">Letter-format report of inspection may be prepared as indicated in the Community Bank Supervision Process section of the Commercial Bank Examination Manual.</td></tr>
</table>

1. Full-scope inspection covers all areas of interest to the Federal Reserve in depth; targeted inspections will focus intensely on one or two activities.

2. Complexity factors include the size and structure of the company; the extent of intercompany transactions between insured depository institution subsidiaries and the holding company or uninsured subsidiaries of the holding company; the risk, scale and complexity of activities of any nondepository subsidiaries; and the degree of leverage at the holding company, including the extent of its debt outstanding to the public. Other factors are also noted in the text of SR-13-21.

1065.0.1 LIMITED DISCLOSURE OF CONFIDENTIAL COMPOSITE AND COMPONENT RATINGS IN INSPECTIONS AND EXAMINATIONS

The Federal Reserve provides senior management and directors of supervised financial institutions the numeric and alphabetic component ratings assigned under various supervisory rating systems.[1] (See SR-96-26, "Provision of Individual Components of Supervisory Rating Systems to Management and Boards of Directors.") This disclosure includes the ratings assigned to management under the holding company rating systems.[2]

Depending upon the size and complexity of the organization, the disclosure of the rating and its components is made to the holding company in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. In conjunction with disclosing the ratings and their components to a holding company, examiners or supervisory officials should clearly explain what the ratings mean to the board of directors and management. During the exit meeting, the examiner should discuss key overall inspection findings, including preliminary composite and component numeric ratings.

In disclosing the assigned ratings, the examiner-in-charge should remind the board of directors and management that the ratings are part of the findings of the inspection or supervisory activity and are privileged and confidential under applicable law.[3] When examiners change a firm's ratings, examiners need to inform the firm's board of directors and management about the rating change. Examiners should not disclose ratings to the holding company's directors and management until preliminary approval has been received from the appropriate senior Reserve Bank supervisory officials.

1065.0.2 CONFIDENTIALITY OF THE SUPERVISORY RATING AND OTHER NONPUBLIC SUPERVISORY INFORMATION

The holding company inspection report and other supervisory communications constitute or contain the Board's confidential supervisory information (CSI), which is nonpublic information belonging to the Board.[4] The Board's Rules Regarding Availability of Information specifically provide that, except in very limited circumstances, supervised financial institutions may not disclose CSI outside of the financial institution, including inspection or examination findings, nor make any representations concerning an examination or inspection report or the report's findings, without the prior written permission of the Board.[5] Any person who discloses or uses CSI except as expressly permitted by the appropriate federal banking agency or as provided by the agency's regulations may be subject to the criminal penalties provided in 18 USC 641.

The legal prohibition on the release of CSI applies to all financial institutions examined by the agencies, including bank and savings and loan holding companies, Edge corporations, and the U.S. branches or agencies of foreign banking organizations that receive confidential supervisory ratings, including the LFI rating, RFI/C(D) rating, ROCA rating, and CAMEO rating.[6] As

1. The supervisory ratings are disclosed for the following rating systems:
   - CAMELS (state member banks)
   - RFI/C(D) and Large Financial Institution (LFI) rating system (bank holding companies, and savings and loan holding companies)
   - CAMEO (Edge and agreement corporations and overseas subsidiaries of U.S. banks)
   - ROCA (U.S. branches and agencies of foreign banking organizations)
   - Uniform Interagency Trust Rating System (UITRS)
   - The interagency Uniform Rating System for Information Technology (URSIT)

2. See SR-19-3 / CA-19-2, "Large Financial Institution (LFI) Rating System" and SR-19-4 / CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

3. The inspection report should also include appropriate language stating that the findings of the inspection are privileged and confidential under applicable law.

4. See, e.g., 12 CFR 261.2(c)(1), 261.20(g), and 261.22(e).

5. 12 CFR part 261, subpart C. The regulation authorizes supervised financial institutions to disclose CSI to their directors, officers, and employees and to the directors, officers, and employees of their parent holding companies. 12 CFR 261.20(b)(1). In addition, institutions may also disclose CSI to their outside counsel and auditors on the premises of the institution. 12 CFR 261.20(b)(2).

6. RFI/C(D), LFI, ROCA, and CAMEO ratings are assigned by the Federal Reserve Board as a result of an examination or inspection. For noncomplex holding companies with assets of $3 billion or less, only risk-management and composite ratings are assigned. ROCA ratings are assigned to the U.S. branches, agencies, and commercial lending companies of foreign banking organizations. The ROCA rating components are risk management, operational controls, compliance,

with the CAMELS rating, examiners communicate these ratings to the regulated institutions in reports or other supervisory communications, which are the property of the Board.

Financial institutions that receive requests for confidential supervisory ratings should refer all requesters to the following publicly available information in lieu of disclosing any CSI, including the CAMELS rating:

- for banks and savings associations, an institution's quarterly reports of condition (Call Reports) (see 12 USC 1817)
- for holding companies or foreign banks with U.S. operations, an institution's quarterly and annual FR Y or H-(b)11 reports (see 12 USC 1844, 3106, 3108, 601–604a, and 611–631)
- for national banks, the annual disclosure statement (see 12 CFR 18.3)
- for banks, an institution's Uniform Bank Performance Report (UBPR), which is available to all interested parties at www.ffiec.gov and is designed for summary and in-depth analysis of banks;
- an institution's publicly available filings, if any, filed with the appropriate federal banking agency (15 USC 78(I)(i)) or with the U.S. Securities and Exchange Commission
- any reports or ratings on the institution compiled by private companies that track the performance of financial institutions
- any reports or ratings issued by private rating services on public debt issued by an institution
- any publicly available cease-and-desist order or enforcement proceeding against an institution[7]
- any reports or other sources of information on institution performance or internal matters created by the institution that do not contain information prohibited from release by law or regulation

and asset quality. CAMEO ratings are assigned to Edge corporations and the overseas branches and subsidiaries of U.S. banks. The CAMEO ratings components are capital, asset quality, management, earnings, and operations and internal controls.

7. Information on enforcement actions taken by the Federal Reserve may be found at https://www.federalreserve.gov/apps/enforcementactions/search.aspx.

Information on enforcement actions taken by other federal agencies, such as the Securities and Exchange Commission, the Financial Crimes Enforcement Network, and the Department of Justice, as well as foreign authorities, may also be publicly available.

1065.0.3 CONFIDENTIALITY PROVISIONS IN THIRD-PARTY AGREEMENTS

Under the Federal Reserve's statutory examination authority, examiners may review all books and records maintained on the premises of a financial institution that is subject to Federal Reserve supervision. This authority extends to any and all documents on the premises. In addition, under the Board's Rules Regarding Availability of Information, other than as set forth in the rules, Board-supervised organizations are prohibited from disclosing CSI to third parties without prior written permission of the Board's General Counsel. CSI is defined to include any information related to the examination or inspection of a banking organization, including supervisory ratings.[8] Significantly, Board staff has taken the position that identification of information requested by, or provided to, supervisory staff—including the fact that an inspection has taken or will take place—is related to an inspection and falls within the definition of CSI. Accordingly, it is contrary to Federal Reserve regulation and policy for agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties to contain confidentiality provisions that

1. restrict the banking organization from providing information to Federal Reserve supervisory staff;
2. require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or
3. require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve inspection or any nonpublic Federal Reserve supervisory initiative or action.

Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. (See SR-07-19, "Confidentiality Provisions in Third-Party Agreements," and SR-97-17, "Access to Books and Records of Financial Institutions During Examinations and Inspections.")

8. See 12 CFR 261.2(c)(1)(i).

1070.1.1 INTRODUCTION

This section on the communication of supervisory findings is based on the guidance in SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings," which applies to all Federal Reserve-supervised banking organizations. In a supervisory finding, examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. Examiners should also consider the "Statement Clarifying the Role of Supervisory Guidance," for more information on communication of supervisory findings, including the appropriate identification of issues that could have a negative effect on safety and soundness on the financial institution; could cause consumer harm; or could cause violations of laws, regulations, final agency orders, or other legally enforceable conditions.[1]

1070.1.2 COMMUNICATION OF SUPERVISORY FINDINGS

Communication of supervisory findings to the organization's board of directors is an important part of the supervision of a banking organization. While the board itself may not directly undertake the work to remediate supervisory findings as senior management is responsible for the organization's day-to-day operations, it is nevertheless important that the board be made aware of significant supervisory issues and ultimately be accountable for the safety and soundness and assurance of compliance with applicable laws and regulations of the organization.

Depending upon the size and complexity of the organization, supervisory findings are communicated in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. These written communications (referred to collectively as "reports" in this section) are generally directed to the board of directors, or an executive-level committee of the board as appropriate.[2] In turn, the board of directors (or executive-level committee of the board) typically will direct the organization's management to take corrective action and will provide management with appropriate oversight, including approvals of proposed management actions as necessary.

To be effective, the communication of supervisory findings must be (1) written in clear and concise language, (2) prioritized based upon degree of importance, and (3) focused on any significant matters that require attention. Reserve Banks must formally communicate matters requiring immediate attention (MRIAs) and matters requiring attention (MRAs) resulting from any supervisory activity to the organization in these written reports. In order to promote an understanding of these terms, examiners should include definitions of MRIAs and MRAs in all supervisory documents communicating supervisory findings.[3] When included in a safety-and-soundness examination or inspection report, MRIAs and MRAs should be listed in the "Matters Requiring Attention" section. In the case of findings from consumer compliance examinations, MRIAs and MRAs should be reflected in the "Executive Summary and Examination Ratings" section of the consumer affairs report of examination. Only outstanding MRIAs and MRAs are required to be discussed in the report; however, examiners have discretion to discuss closed MRIAs and MRAs in the report if such discussion would be meaningful.

For large banking organizations, an annual roll-up report summarizes the significant findings, based on outstanding MRIAs or MRAs, included in the reports of targeted reviews or other supervisory activities conducted during the supervisory cycle. These findings may be grouped by major supervisory issues, rating components, risks, or themes. This information should enable the banking organization's board of directors and any executive-level committee of the board to understand the substance and status of outstanding MRIAs or MRAs and focus their attention on the most critical and time-sensitive issues.

1. 12 CFR part 262, appendix A and 86 Fed. Reg. 18,179 (April 8, 2021).

2. An executive-level committee of the board (such as, the audit committee or risk committee) typically meets regularly, keeps minutes of those meetings, and is accountable to and routinely reports to the board of directors.

3. In a safety-and-soundness report, these definitions could be included on the "Scope" page, in an appendix, or as a footnote on the "Matters Requiring Attention" section. In a consumer compliance report, these definitions could be included on the "Executive Summary and Examination Ratings" section.

Communications to banking organizations concerning safety-and-soundness or consumer compliance MRIAs or MRAs must specify a timeframe within which the banking organization must complete the corrective actions. In certain circumstances, examiners may require the banking organization to submit an action plan that identifies remedial actions to be completed within specified timeframes. Action plans with intermediate- and long-term timeframes that span more than one supervisory or examination cycle with regard to safety-and-soundness matters, or a 12-month period with regard to consumer compliance issues, should include interim progress targets. Both safety-and-soundness and consumer protection or compliance considerations will remain a priority in determining whether the organization's timeframes to correct the matter are reasonable.

1070.1.2.1 Matters Requiring Immediate Attention

MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant noncompliance with applicable laws or regulations; (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization; and (4) in the case of consumer compliance examinations, matters that have the potential to cause significant consumer harm. An MRIA will remain an open issue until resolution and examiners confirm the banking organization's corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRIAs to the board of directors (or executive-level committee of the board):

"The board of directors (or executive-level committee of the board), or banking organization is *required to immediately...*"

Timeframe. The expected timeframe for a banking organization to address MRIAs is generally short, and may be "immediate," in the case of heightened safety-and-soundness or consumer compliance risk. For MRIAs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account any potential losses to the Federal Deposit Insurance Corporation's Deposit Insurance Fund, including the possibility that a delay in action will increase the potential for loss or the cost of resolution.

Organization response. Following its review of MRIAs discussed in the report, the banking organization's board of directors is required to respond to the Reserve Bank in writing regarding corrective action taken or planned along with a commitment to corresponding timeframes.

Supervisory follow-up. The Reserve Bank must follow up on MRIAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe specified for the action being required, and should be appropriate for the severity of the matter requiring the corrective action. The means of follow-up may vary depending upon the nature and severity of the matter requiring the action. Follow-up may take the form of a subsequent examination, a targeted review, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization's corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In such cases, examiners should consult with enforcement staff.[4] In all instances, examiners are expected to exercise judgment as to the supervisory activities best suited for evaluating a particular issue. Once follow-up is completed, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners are also expected to communicate in writing the results of their work and findings to the banking organization.

1070.1.2.2 Matters Requiring Attention

MRAs constitute matters that are important and that the Federal Reserve is expecting a banking organization to address over a reasonable period

4. Such consultation should be made in accordance with existing guidance to Reserve Bank supervisory staff on the processing of enforcement actions, which provides that recommendations concerning formal enforcement actions should be submitted to the Board's Legal Division.

of time but when the timing need not be "immediate." While issues giving rise to MRAs must be addressed to ensure the banking organization operates in a safe and sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIAs. Likewise, consumer compliance concerns that require less immediate resolution should be communicated as an MRA. An MRA typically will remain an open issue until resolution and confirmation by examiners that the banking organization has taken corrective action. If a banking organization does not adequately address an MRA in a timely manner, examiners may elevate an MRA to an MRIA. Similarly, a change in circumstances, environment, or strategy can also lead to an MRA becoming an MRIA. The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action as well as the immediacy with which the banking organization must begin and complete corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRAs to the board of directors (or executive-level committee of the board):

"The board of directors (or executive-level committee of the board), or banking organization *is required to*..."

Timeframe. Communications to banking organizations about MRAs must specify a timeframe within which the corrective action is expected to be completed. The timeframe, at least initially, may require estimation because the banking organization may first need to complete preliminary planning to establish the timeframe for initiating and completing the corrective action. The timeframes for MRAs are likely to become more precise over time as planning evolves and circumstances make the completion of the MRAs more urgent. Timeframes that span more than one examination cycle for safety-and-soundness issues or that exceed 12 months for consumer compliance issues should include appropriate interim progress reports.

Organization response. Following its review of the report, the banking organization's board of directors is required to provide a written response to the Reserve Bank regarding its plan, progress, and resolution of the MRA.

Supervisory follow-up. The Reserve Bank must follow-up on MRAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. For intermediate- or long-term corrective actions for MRAs, Reserve Bank follow-up may consist of assessing the organization's progress to address the MRAs, whether satisfactory or unsatisfactory, and noting whether the initial estimated timeframe continues to be reasonable or warrants adjustment.

The means of supervisory follow-up may vary based upon the nature and severity of the matter for which corrective action is expected. Follow-up may take the form of a subsequent examination, targeted review, continuous monitoring, reliance on validation work conducted by internal audit function, reliance on the results of examinations conducted by other supervisors, or any other supervisory activity deemed suitable for evaluating the issue at hand.[5]

In some cases, when follow-up indicates the organization's corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In all instances, examiners are expected to exercise judgment regarding the supervisory activities best suited for evaluating a particular issue. Once follow-up is complete, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners also are expected to communicate in writing the results of their work and findings to the organization.

1070.1.2.3 Supervisory Considerations

The volume of MRIAs and MRAs should be one of the many considerations in assigning a supervisory rating to a banking organization. The presence of a large number of MRIAs or MRAs may indicate that additional formal or informal investigation may be necessary or that the initiation of a formal or informal enforcement action may be warranted.

5. Examiners may choose to rely on the work of internal audit when internal audit's overall function and related processes are effective, as discussed in SR-13-1/CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing." (See this manual's section entitled "Internal Control and Audit Function, Oversight, and Outsourcing.") When relying on internal audit to follow up on MRAs, examiners are expected to review the relevant workpapers and, when necessary, meet with internal audit staff who documented the resolution of the issue.

Irrespective of the number of MRIAs or MRAs, in some cases, additional formal or informal investigation may be necessary or the initiation of a formal or informal enforcement action may be warranted based on the severity of the issues, the repeat nature of issues, lack of responsiveness of management, violations of law, insider abuse, fraud, or other material deficiency. In any of these cases, examiners should consult with the Board's enforcement staff.

1070.1.3 FACTORS IN ESCALATING ISSUES INTO ENFORCEMENT ACTIONS

The volume of open MRIAs and MRAs and the materiality of the issues therein to the safety and soundness of the banking organization are important overarching considerations in determining whether examiners need to consult with the Board's enforcement staff in escalating issues into enforcement actions.[6] In addition to the guidance presented in SR-13-13/CA-13-10, examiners should consider the following key factors in determining whether to recommend additional formal or informal investigation or enforcement action:

- the organization's supervisory ratings and financial condition;[7]
- whether the issues involve unsafe or unsound practices, violations of laws, noncompliance with regulations, insider abuse, fraud, or other material deficiencies;[8]
- the severity or repetitive or intentional nature of the issues;
- management's willingness and ability to correct the issues;
- management's history of instituting timely remedial or corrective actions;
- whether management already initiated corrective action or established procedures to prevent future deficiencies;
- whether criminal or other regulatory authorities are taking a formal enforcement or prosecutorial action against the same institution;
- the organization's history of violations of laws, noncompliance with regulations and unsafe and unsound unsatisfactory practices; and
- any other circumstances that warrant use of an enforcement action.

This manual's section, "Formal Corrective Actions," provides more information on formal supervisory actions, which regulators issue to correct practices that the regulators believe to be unlawful, unsafe, or unsound. See also the *Commercial Bank Examination Manual's* section entitled, "Formal and Informal Supervisory Actions," for more information.

6. Issues are considered closed if the banking organization implements and examiners verify and validate the effectiveness of the corrective action, or if the organization's practices are no longer a concern because of a change in the organization's circumstances.

7. See SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System," and SR-19-4/CA 19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

8. See 12 USC 1818(b)(1).

1072.0.1 GENERAL CONSIDERATIONS IN REVISING SUPERVISORY RATINGS

Supervisory ratings can affect an institution's risk-based deposit insurance premium; statutory and regulatory requirements, including applications and the prompt-corrective-action provisions of the Federal Deposit Insurance Act; supervisory reporting and inspection or examination requirements; and other factors. Given these implications, supervisory ratings should reflect an institution's current financial condition and risk profile. As such, Federal Reserve examiners should revise supervisory ratings whenever there is strong evidence that the financial condition or risk profile of an institution has significantly changed.[1]

Supervisory ratings may be revised as a result of on-site or off-site supervisory activities. For example, a significant change in an institution's financial condition may be evident from some combination of the following: off-site information or monitoring, reports of examinations conducted by another agency, meetings or other communications with management of the institution, published financial reports or press releases, an institution's status reports in connection with an enforcement action, and information generated by ongoing surveillance activities.

When examiners change a component of one of the supervisory rating systems, they should consider whether other applicable ratings should change, based on information available at that time. The factors contributing to a change in the rating of a component rating may affect one or more of the other ratings in the rating system, such as the composite rating (if applicable).[2] Further, a rating change at the holding company may precipitate a rating change at the subsidiary depository institution or vice versa.

Any change to a component or composite rating and the rationale for that change must be communicated by Federal Reserve supervisory staff in writing via a supervisory letter or report to the board of directors of the affected institution (or to the senior U.S. management official in the case of a U.S. branch, agency, office, or nonbank subsidiary of a foreign bank) and to the appropriate state and federal supervisory agencies. Federal Reserve Bank examiners should follow internal procedures for reviewing, vetting, and approving interim rating changes with Reserve Bank management and Federal Reserve Board staff, as well as communicating ratings changes to supervised institutions.

1072.0.2 UPGRADES OF SUPERVISORY RATINGS AT COMMUNITY BANKING ORGANIZATIONS

In 2012, the Federal Reserve issued guidance instructing examiners to use balanced judgment and consider progress by institutions in addressing supervisory issues and in restoring an institution to satisfactory condition when assigning ratings. See SR-12-4, "Upgrades of Supervisory Ratings for Banking Organizations with $10 Billion or Less in Total Consolidated Assets." Examiners should upgrade an institution's supervisory rating when there is a demonstrated improvement in the institution's financial condition and risk-management practices, and where improvement is likely to continue. In particular, the Federal Reserve supervisory staff should evaluate the strength of an institution's core financial components, overall risk management, and board of directors' oversight in assessing whether an upgrade is warranted.

Additional specific considerations include the extent to which

- the level of capital and capital planning process are appropriate relative to risk characteristics;
- core earnings have improved, and this trend is demonstrably sustainable;
- asset quality is improving, as evidenced by a material decline of adversely classified and

1. For more information, see SR-99-17, "Supervisory Ratings for State Member Banks, Bank Holding Companies and Foreign Banking Organizations, and Related Requirements for the National Examination Data System." The guidance in SR-99-17 and this manual section generally applies to the supervisory rating systems for bank holding companies and savings and loan holding companies; state member banks; U.S. branches and agencies of foreign banking organizations; and Edge and agreement corporations, overseas subsidiaries of U.S. banks, and U.S. nonbank subsidiaries of foreign banking organizations.

2. For more information on the scope and applicability of the holding company rating systems see SR-13-21, "Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less," SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System," and attachment 1 to SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion."

nonperforming assets, and this trend is expected to continue;
- liquidity and interest rate risk positions generally are managed prudently and, in a manner, consistent with applicable supervisory guidance;
- management's projections and assumptions related to core financial factors referred to above are reasonable and subject to regular board review and oversight;
- risk-management capabilities have improved to address principal weaknesses that contributed to prior ratings, and policies and practices have been implemented that focus on sustainability commensurate with the bank's risk profile; and
- the board provides strategic review and oversight of the institution's core financial factors and risk management and actively engages in the process of correcting deficiencies.

The Federal Reserve supervisory staff also should consider whether the institution has made demonstrable and sustained improvement in particular areas relevant to the institution's operation and financial condition as noted in reports of examination and condition.

1072.0.3 LARGE FINANCIAL INSTITUTIONS AND THE LFI RATING SYSTEM

While smaller banks and holding companies generally are examined at a specific point in time, larger holding companies are subject to continuous monitoring and ongoing supervision, which includes several supervisory events or assessments over the course of the supervisory cycle. Federal Reserve policy guidelines state that Federal Reserve supervisory staff should assign larger holding companies the appropriate holding company ratings on an annual basis and more frequently as warranted. (See SR-19-4/CA-19-3.) The Federal Reserve has internal processes and procedures for initiating and appropriately vetting ratings changes. This process involves a coordinated vetting of assigning and revising ratings for large holding companies subject to the LFI rating system.

For larger holding companies, rating changes typically are precipitated by the completion of significant supervisory assessments completed throughout the supervisory cycle. For instance, horizontal supervisory events and supervisory events assessing a firm's ability to address material findings identified in previous supervisory events are common instances when Federal Reserve examiners should consider the need to adjust an institution's ratings. In all cases, examiners should revise the supervisory ratings when an institution's financial or operational strength and resilience change and no longer meet the criteria for the existing rating.

The importance of examiners providing timely and accurate assessments of a larger holding company's financial and operational condition is reflected in the LFI rating system. As described in this manual's section entitled, "Large Financial Institution Rating System," each LFI component rating is assigned along a four-level scale. A firm is rated "Conditionally Meets Expectations" when it has certain material financial or operational weaknesses in its practices or capabilities, which may place the institution's prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business. Firms assigned a "Conditionally Meets Expectations" rating should not be rated as such for a prolonged period. The LFI ratings framework does not have a fixed timeline for how long a firm can be rated "Conditionally Meets Expectations." Instead, the LFI ratings framework reflects an understanding that timelines depend on the particular issue(s), noting that the Federal Reserve will work with the institution to develop appropriate timeframes for resolving the supervisory issues leading to the "Conditionally Meets Expectations" rating.

1075.0.1 STATUTORY TOOLS FOR FORMAL SUPERVISORY ACTION

The Federal Reserve supervises the following entities and has the statutory authority to take formal enforcement actions against them:
- state member banks
- bank holding companies (BHCs)
- savings and loan holding companies (SLHCs)
- nonbank subsidiaries of BHCs and of SLHCs
- Edge Act and agreement corporations
- branches and agencies of foreign banking organizations operating in the United States and their parent banks
- systemically important nonbank financial companies designated by the Financial Stability Oversight Council (FSOC) for supervision by the Federal Reserve
- officers, directors, employees, and certain other categories of individuals or entities associated with the above banks, companies, and organizations (referred to as "institution-affiliated parties")

The initial consideration and determination of whether formal action is required usually results from an examination or inspection. As such, Federal Reserve supervisory staff must include comments and conclusions in an examination report or other supervisory communications that are well supported, factually accurate, consistent, and void of editorial or inflammatory statements.

Statutory tools are available to the Federal Reserve Board if formal enforcement action is warranted against a BHC or SLHC (collectively, "holding company"), nonbank subsidiaries, or institution-affiliated parties. The primary objectives of formal actions include
- correcting practices that the regulators believe to be unlawful, unsafe, or unsound;[1]
- ensuring that appropriate corrective action programs are developed and used by financial institutions subject to formal actions;
- minimizing losses to financial institutions and the Federal Deposit Insurance Fund;
- ensuring that Federal Reserve requirements are complied with to the fullest extent possible by financial institutions and individuals; and
- ensuring that institution-affiliated parties who engage in an unsafe or unsound practice or violate the law are permanently barred from the banking industry, fined, or both, for their malfeasance.

In addition to an institution's supervisory ratings, compliance with statutes and regulations, and financial and managerial condition, Federal Reserve supervisory and legal staff consider numerous factors in determining whether to recommend additional formal or informal investigation or enforcement action. See the "Communication of Supervisory Findings" section in this manual to review factors in escalating issues into enforcement actions.

The Board does not issue an enforcement action on the basis of a "violation" of or "noncompliance" with supervisory guidance. This includes various types of Board or interagency supervisory guidance, interagency statements, advisories, letters, policy statements, questions and answers, and frequently asked questions. While supervisory guidance provides examples of practices that the Board generally considers consistent with safety-and-soundness standards or other applicable laws and regulations, supervisory guidance does not have the force and effect of law. See 12 C.F.R. part 262, appendix A, "Statement Clarifying the Role of Supervisory Guidance."

This section discusses the following topics:
- Board jurisdiction under the law
- actions or practices that may trigger the statutory remedies
- Board staff procedures
- the elements of a corrective order
- temporary orders
- written agreements
- suspensions and removals
- enforcement of orders
- civil money penalties
- indemnification payments and golden parachutes
- termination of certain nonbank subsidiary activities or ownership
- coordination of formal enforcement actions among federal banking agencies

1. For more information on informal supervisory actions, see the *Commercial Bank Examination Manual* section (1050.1) entitled, "Formal and Informal Supervisory Actions."

1075.0.2 TYPES OF CORRECTIVE ACTIONS

Generally, under section 8 of the Federal Deposit Insurance Act (FDI Act), 12 U.S.C. 1818(b), the Board may use its cease and desist authority and other enforcement tools against (1) a BHC, (2) a nonbank subsidiary of a BHC, and (3) any institution-affiliated party.[2] The term "institution-affiliated party" includes any director, officer, employee, controlling shareholder (other than a BHC), or agent, and any other person who has filed or is required to file a change in control notice. Further, institution-affiliated parties generally include

- shareholders;
- consultants;
- joint venture partners or any other person who participates in the conduct of the affairs of a BHC or nonbank subsidiary; and
- independent contractors, including attorneys, appraisers, and accountants who knowingly or recklessly participate in any violation of law or regulation, breach of fiduciary duty, or unsafe or unsound practice that causes (or is likely to cause) more than a minimal financial loss to, or a significant adverse effect on, an institution.[3]

The Board's jurisdiction over an institution-affiliated party extends for up to six years after the party's resignation, termination of employment, or separation caused by the closing of a financial institution, provided that any notice (such as a notice of intent to remove from office and of prohibition) is served on the party before the end of a six-year period.

1075.0.2.1 Cease and Desist Orders

Generally, under 12 U.S.C. 1818(b), the Board may use its cease and desist authority against a BHC and any institution-affiliated party when it finds that the entity or party is engaging, has engaged, or is about to engage in (1) a violation of law, rule, or regulation; (2) a violation of a condition imposed in writing by the Board in connection with the granting of any application or any written agreement; or (3) an unsafe or unsound practice in conducting the business of the institution. Section 12 U.S.C. 1818(b)(3) makes clear that the cease and desist authority applies to BHCs and Edge and agreement corporations, as well as to all institution-affiliated parties associated with them.

A cease and desist order may require the BHC or person subject to the order to (1) cease and desist from the unsafe or unsound practices or legal violations and (2) take affirmative action to correct the violations or practices. Affirmative actions are actions necessary to restore the BHC to a safe and sound condition, and include

- improving the BHC's consolidated capital by restricting dividends and new debt;
- conserving the BHC's assets so it can serve as a source of strength to the bank;
- employing qualified officers or employees; or
- taking any other action the Board determines to be appropriate.

An individual may be required to reimburse the company for unauthorized or improper payments received, or both.

Most cease and desist orders are issued by consent. When Board staff, in conjunction with the appropriate Reserve Bank, determines that a cease and desist action is necessary, the BHC or party is permitted an opportunity to consent to the issuance of the order without the need for the issuance of a notice of charges and a contested administrative hearing. Board staff drafts the proposed cease and desist order and, with Reserve Bank staff, presents it to the BHC or individual for consent. If the BHC or individual voluntarily agrees to settle the case by the issuance of a consent cease and desist order, the proposed consent order will be presented to senior Board officials for approval, at which time the order will be final and binding.

When a BHC or person fails to consent to a cease and desist order, the Board may issue a notice of charges to the entity or party. The notice of charges contains a detailed statement describing the facts constituting the alleged violations or unsafe or unsound practices. The issuance of the notice of charges starts a formal process that includes the convening of a public administrative hearing to be conducted before an administrative law judge.[4] After the hearing, the judge makes a recommended decision to the

2. The Board's authority under 12 U.S.C. 1818 also extends to SLHCs, their nonbank subsidiaries, and their institution-affiliated parties.

3. The Board is authorized to issue regulations further defining which individuals should be considered institution-affiliated parties. Similarly, the Board may determine whether an individual is an institution-affiliated party on a case-by-case basis (see 12 U.S.C. 1813(u)).

4. A private hearing may be held if the Board determines that holding a public hearing would be contrary to the public interest.

Board. A hearing must be held within 30 to 60 days of service of the notice of charges, unless a later date is set by the administrative law judge. After the Board considers the record of the proceeding, including the administrative law judge's recommended decision, the Board determines whether to issue a final cease and desist order. BHCs and individuals who are subject to cease and desist orders that were issued as a result of contested proceedings may appeal the Board's issuance of the order to the appropriate federal court.

1075.0.2.2 Temporary Cease and Desist Orders

The Board may, in conjunction with issuing a notice of charges, issue a temporary cease and desist order against a BHC or an institution-affiliated party to effect immediate correction (pursuant to 12 U.S.C. 1818(c)). The Board may issue a temporary cease and desist order to a BHC when the violation or unsafe or unsound practice described in the notice of charges, or the continuation of the violation or practice is likely to

- cause insolvency of a BHC or its subsidiary bank,
- weaken the condition of the BHC,
- cause a significant dissipation in earnings, or
- prejudice the interests of the subsidiary bank's depositors before the completion of the proceedings resulting from the notice of charges.

The Board may also issue a temporary order if it determines that a BHC's or nonbank subsidiary's books and records are so incomplete or inaccurate that the Board is unable to determine, through the normal supervisory process, the BHC's or nonbank subsidiary's financial condition or the details or purpose of any transaction that may have a material effect on the BHC's condition. The temporary order may require the BHC or nonbank subsidiary to take the same corrective actions as a cease and desist order. The advantage of issuing a temporary cease and desist order is that it is effective immediately after it is served on the BHC or individual. Within 10 days after being served with a temporary order, however, the BHC or individual may appeal to a U.S. district court for relief from the order. Unless set aside by the district court, the temporary order stays in effect until the Board issues a final cease and desist order or dismisses the action.

1075.0.2.3 Written Agreements

When circumstances warrant a less severe public action than a cease and desist order, it may be appropriate to execute a written agreement with a supervised institution. The provisions of a written agreement may relate to any of the problems found at the institution or involving institution-affiliated parties. Written agreements are drafted by Board staff, in consultation with Reserve Bank staff, and must be approved by the Board's Director of the Division of Supervision and Regulation. After approval by the General Counsel, the Reserve Bank may enter into the written agreement under delegated authority (12 C.F.R. 265.11(a)(15)).

1075.0.2.4 Prohibition and Removal Authority

The Board is authorized by 12 U.S.C. 1818(e) to remove any current institution-affiliated party of a BHC and its nonbank subsidiaries for certain violations and misconduct and to prohibit permanently from the banking industry any current or former institution-affiliated party from future involvement with any insured depository institution, BHC or SLHC, and non-bank subsidiary. The Board is authorized to initiate removal or prohibition actions when

1. the institution-affiliated party has directly or indirectly—
   a. violated any law, regulation, cease and desist order, condition imposed in writing, or any written agreement;
   b. engaged in any unsafe or unsound practice; or
   c. breached a fiduciary duty; and
2. the Board determines that, because of the violation, unsafe or unsound practice, or breach—
   a. the institution has suffered or will suffer financial loss or other damage;
   b. the interests of depositors have been or could be prejudiced; or
   c. the institution-affiliated party has received financial gain or other benefit from the violation or practice; and
3. such violation, practice, or breach—
   a. involves personal dishonesty; or
   b. demonstrates a willful or continuing disregard for the safety or soundness of the institution.

In addition to this legal authority, the statute separately authorizes the Board to initiate removal or prohibition actions against (1) any institution-affiliated party who has committed a violation of any provision of the Bank Secrecy Act that was not inadvertent or unintentional, (2) any officer or director who has knowledge that an institution-affiliated party has violated the money-laundering statutes and did not take appropriate action to stop or prevent the reoccurrence of such a violation, or (3) any officer or director who violates the prohibitions on management interlocks.[5]

Like a cease and desist order, a removal or prohibition order may be issued either by consent or after an administrative process initiated by the issuance of a notice of intent to remove and prohibit. If an institution-affiliated party's actions warrant immediate removal from the BHC, the Board is authorized to suspend the person temporarily from the BHC pending the outcome of the complete administrative process. An institution-affiliated party currently associated with a BHC may also be suspended or removed for cause based on actions taken while formerly associated with a different insured depository institution, BHC, or business institution.

Under 12 U.S.C. 1818(g), the Board is authorized to suspend from office or prohibit from further participation any institution-affiliated party charged or indicted for the commission of a crime involving personal dishonesty or breach of trust that is punishable by imprisonment for a term exceeding one year under state or federal law, if the continued participation might threaten either the interests of depositors or public confidence in the institution. The Board may also suspend or prohibit any individual charged with a violation of the money-laundering statutes. The suspension can remain in effect until the criminal action is disposed of or until the suspension is terminated by the Board. The Board may also initiate a removal or prohibition action against an institution-affiliated party who has been convicted of, or has entered into a pretrial diversion or similar program for, a crime involving personal dishonesty or breach of trust if his or her continued service would threaten the interests of the institution's depositors or impair public confidence in the institution. The Board is required to issue such an order against any institution-affiliated party who has been convicted of, or pleaded to, a violation of the money-laundering statutes.

Furthermore, section 19 of the Federal Deposit Insurance Act (12 U.S.C. 1829) prohibits any individual who has been convicted of, or has entered into a pretrial diversion or similar program for, a crime involving dishonesty, breach of trust, or money laundering from (1) serving as an institution-affiliated party of; (2) directly or indirectly participating in the affairs of; and (3) owning or controlling, directly or indirectly, an insured depository institution without the FDIC's prior approval. The statute also prohibits such an individual from holding any of the above-listed positions at a holding company or an Edge Act or agreement corporation without the Board's prior approval. The penalty for a knowing violation of this law is a potential fine of up to $1 million per day, imprisonment for up to five years, or both. The criminal penalty applies to both the individual and the employing institution.

1075.0.2.5 Termination of Nonbank Activity

The Board is authorized by 12 U.S.C. 1844(e) to order a BHC to terminate certain activities of its nonbank subsidiary (other than a nonbank subsidiary of a bank) or to sell its shares of the nonbank subsidiary. When the Board has reasonable cause to believe that the BHC's continuation of any activity or ownership or control of any of its nonbank subsidiaries constitutes a serious risk to the financial safety, soundness, or stability of the BHC, and if the activity, ownership, or control is inconsistent with sound banking principles or inconsistent with the purposes of the Bank Holding Company Act (BHC Act) or the Financial Institutions Supervisory Act of 1966, the Board may order the BHC to terminate the activity or sell control of the nonbank subsidiary.

1075.0.2.6 Violations of Final Orders and Written Agreements

When any final order or temporary cease and desist order has been violated, the Board may apply to a U.S. district court for enforcement of the action. Violations of final orders and written agreements may also give rise to the assessment of civil money penalties against the offending BHC or institution-affiliated parties, as circumstances warrant. The civil money penalty is assessed in the same manner as described in the

5. See 12 U.S.C. 1818(e)(2).

"Civil Money Penalties" section below. Any institution-affiliated party who violates a suspension or removal order is subject to a criminal fine of up to $1 million, imprisonment for up to five years, or both.

1075.0.2.7 Civil Money Penalties

The Board is authorized to address misconduct by any institution or institution-affiliated party through the imposition of civil money penalties under a variety of statutes, including most commonly 12 U.S.C. 1818(i)(2). The statutory maximums are adjusted annually for inflation; current maximums may be found at 12 C.F.R. 263.65. Under 12 U.S.C. 1818(i)(2), the Board may assess a first-tier civil money penalty against any institution or institution-affiliated party for a violation of (1) law or regulation; (2) a final cease-and-desist, temporary cease-and-desist, suspension, removal, or prohibition order; (3) a condition imposed in writing by the Board in connection with the granting of an application or other request; and (4) a written agreement.

A second-tier civil money penalty can be assessed for a violation, an unsafe or unsound practice recklessly engaged in, or a breach of fiduciary duty when the violation, practice, or breach is part of a pattern of misconduct, causes or is likely to cause more than a minimal loss, or results in pecuniary gain or other benefit for the offender. A third-tier civil money penalty can be assessed for any knowing violation, unsafe or unsound practice, or breach of any fiduciary duty when the offender knowingly or recklessly caused a substantial loss to the financial institution or received substantial pecuniary gain or other benefit. Civil money penalties may also be assessed, under the three-tier penalty framework described above, for any violation of the Change in Bank Control Act and for violations of the anti-tying provisions of federal banking law, among other provisions (12 U.S.C. 1972).

The Board may also assess civil money penalties for the submission of any late, false, or misleading reports required by the BHC Act and Regulation Y of the Board under the three-tier penalty structure of 12 U.S.C. 1847(d) or, for SLHCs, 12 U.S.C. 1467a(r). If a BHC maintains procedures that are reasonably adapted to avoid inadvertent errors and unintentionally fails to publish any report, submits any false or misleading report or information, or is minimally late with the report, it can be assessed a first-tier civil money penalty. The financial institution has the burden of proving that the error was inadvertent under these circumstances. If the error was not inadvertent, a second-tier penalty can be assessed for all false or misleading reports or information submitted to the Board. If the submission was done in a knowing manner or with reckless disregard for the law, a third-tier penalty can be assessed for each day of the violation. Notwithstanding the above, violations of the BHC Act (with the exception of late, false, or inaccurate report violations as described above) may be addressed by the assessment of civil money penalties under 12 U.S.C. 1847(d).

1075.0.2.8 Administration of Formal Actions

1075.0.2.8.1 Publication of Final Orders

Under 12 U.S.C. 1818(u), the Board is required to publish and make publicly available any final order issued for any administrative enforcement proceeding it initiates.[6] These orders include cease and desist, removal, prohibition, and civil money penalty assessments. The Board is also required to publish and make publicly available any written agreement or other written statement that it may enforce, unless the Board determines that publication of the order or agreement would be contrary to the public interest.

1075.0.2.8.2 Public Hearings

Under 12 U.S.C. 1818(u), all formal hearings, including contested cease and desist, removal, and civil money penalty proceedings, are open to the public unless the Board determines that a public hearing would be contrary to the public interest. Transcripts of all testimony; copies of all documents submitted as evidence in the hearing, which could include examination and inspection reports and supporting documents (except those filed under seal); and all other documents, such as the notice and the administrative law judge's recommended decision, are available to the public. These documents could include examiner's workpapers, file memorandums, reports of examination and inspection, and correspondence between a problem institution or wrongdoer and the Federal Reserve Bank. Ap-

6. For enforcement actions against an entity supervised by the Federal Reserve, see the Board's public website.

propriate actions should always be taken to ensure that all written material prepared in connection with any supervisory matter be accurate and free of insupportable conclusions or opinions.

1075.0.2.8.3 Subpoena Power

Under 12 U.S.C. 1818(n), which is made applicable to BHCs by 12 U.S.C. 1818(b)(3) and 1844(f), the Board has the authority to issue subpoenas directly or through its delegated representatives, as well as the authority to administer oaths or take depositions in connection with an examination or inspection.

1075.0.3 PROHIBITED INDEMNIFICATION PAYMENTS AND GOLDEN PARACHUTE PAYMENTS

Prohibited indemnification payments and golden parachute payments are governed by section 18(k) of the FDI Act (12 U.S.C. 1828(k)) and the FDIC's accompanying regulations at 12 C.F.R. part 359.

1075.0.3.1 Prohibited Indemnification Payments

Holding companies or insured depository institutions may seek to indemnify their officers, directors, and employees from any judgments, fines, claims, or settlements, whether civil, criminal, or administrative. The bylaws of some holding companies or insured depository institutions may have broadly worded indemnification provisions, or the holding company or institution may have entered into separate indemnification agreements with its institution-affiliated parties. Such indemnification provisions may be inconsistent with federal banking law and regulations, as well as with safe-and-sound banking practices.

Supervisory and examiner staff should be alert to the limitations and prohibitions on indemnification imposed by section 18(k) of the FDI Act and the accompanying Federal Deposit Insurance Corporation (FDIC) regulations.[7] The law and regulations apply to indemnification agreements and payments made by a holding company or insured depository institution to any institution-affiliated party, regardless of the holding company's or institution's financial condition. The purpose of the law and regulations is to preserve the deterrent effects of administrative enforcement actions by ensuring that individuals subject to final enforcement actions bear the costs of any judgments, fines, and associated legal expenses and to safeguard the assets of financial institutions.

A prohibited indemnification payment includes any payment (or agreement to make a payment) by a holding company or insured depository institution to an institution-affiliated party to pay or reimburse such person for any liability or legal expense incurred in any federal banking agency administrative proceeding that results in a final order or settlement in which the institution-affiliated party is assessed a civil money penalty; is removed or prohibited from banking; or is required to cease and desist from or take any affirmative action, including making restitution, with respect to the holding company or depository institution.[8]

The FDIC's regulations provide criteria for making permissible indemnification payments. A holding company or insured depository institution may make or agree to make a reasonable indemnification payment if all of the following conditions are met:

i. the institution's board of directors determines in writing after due investigation and consideration that the institution-affiliated party acted in good faith and the best interests of the institution;
ii. the board of directors determines in writing after due investigation and consideration that the payment will not materially affect the institution's safety and soundness;
iii. the payment does not fall within the definition of a prohibited indemnification payment; and
iv. the institution-affiliated party agrees in writing to reimburse the institution, to the extent not covered by permissible insurance, for the portion of the advanced indemnification payments which subsequently become prohibited indemnification payments.[9]

The statute and FDIC regulations reinforce the Federal Reserve's long-standing policy that an institution-affiliated party who engages in misconduct should not be insulated from the

7. See 12 U.S.C. 1828(k). The prohibition begins when a proceeding is instituted, which is when a notice of charges is issued.

8. 12 C.F.R. 359.1(l).

9. 12 C.F.R. 359.5(a).

consequences of their misconduct. From a safety-and-soundness perspective, a holding company should not divert its assets to pay a fine or other final judgment issued against an institution-affiliated party for misconduct that presumably violates the holding company's policy of compliance with applicable laws, especially when the individual's misconduct has already harmed the holding company.

Holding companies should review their bylaws and any outstanding indemnification agreements, as well as insurance policies, to ensure that they conform with the requirements of federal law and regulations. If a holding company fails to take appropriate action to bring its indemnification provisions into compliance with federal laws and regulations, appropriate follow-up supervisory action may be taken. As part of the supervisory process, which will include merger and acquisition applications, Federal Reserve supervisory staff and examiners will review identified agreements having indemnification-related issues for compliance with federal laws and regulations.[10]

1075.0.3.2 Golden Parachute Payments

FDIC regulations prohibit holding companies and their insured depository institution subsidiaries from making golden parachute payments except in certain circumstances. As described in 12 C.F.R. 359.0(b), the limitations on golden parachute payments apply to

- troubled insured depository institutions which seek to enter into contracts to pay or to make golden parachute payments to their institution-affiliated parties;[11]
- depository institution holding companies which are troubled and seek to enter into contracts to pay or to make golden parachute payments to their institution-affiliated parties; and
- healthy holding companies which seek to enter into contracts to pay or to make golden parachute payments to institution-affiliated parties of a troubled insured depository institution subsidiary.

The purposes of the law and regulations include safeguarding the assets of financial institutions and limiting rewards to institution-affiliated parties who may have contributed to the institution's troubled condition. (See SR-03-6, "Guidance Regarding Restrictions on Institutions in Troubled Condition.")

A golden parachute payment is any payment (or agreement to make any payment) in the nature of compensation for the benefit of any current or former institution-affiliated party that meets three criteria.

1. The payment or agreement must be contingent on, or by its terms payable on or after, the termination of the institution-affiliated party's primary employment or affiliation.
2. The agreement is made, or the payment is to be made on or after, or made in contemplation of, among other things, a determination that the holding company or its insured depository institution subsidiary is in a troubled condition.
3. The payment is payable to an institution-affiliated party who is terminated while a holding company or its insured depository institution subsidiary meets any of the troubled condition criteria in the golden parachute regulations.

The definition of a golden parachute payment also covers a payment made by a holding company that is not in a troubled condition to an institution-affiliated party of an insured depository institution subsidiary that is in a troubled

10. For additional information, consult SR-02-17, "Guidance Regarding Indemnification Agreements and Payments." The guidance in SR-02-17 and SR-03-6 also apply to SLHCs. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program." For additional considerations for institutions in choosing indemnification insurance policies, see SR-19-12, "Statement Regarding Insurance Policies for Directors and Officers."

11. See 12 C.F.R. 359.1(f)(1)(ii). The Board's Regulation Y (12 C.F.R. 225.71) states that "troubled condition" for a regulated institution means an institution that (1) has a composite rating, as determined in its most recent report of examination or inspection, of 4 or 5 under the CAMELS rating system or the Federal Reserve Bank Holding Company rating system; (2) is subject to a cease-and-desist order or formal written agreement that requires action to improve the financial condition of the institution, unless otherwise informed in writing by the Board or Reserve Bank; or (3) is informed in writing by the Board or Reserve Bank that it is in troubled condition for purposes of the requirements of subpart H of Regulation Y on the basis of the institution's most recent report of condition or report of examination or inspection, or other information available to the Board or Reserve Bank. Note that under the Federal Reserve's holding company rating system for large financial institutions, there is no presumption that a firm rated "Deficient-1" would be deemed to be in troubled condition. Whether a firm rated "Deficient-1" receives a troubled condition designation will be determined by the facts and circumstances of the situation. However, firms rated "Deficient-1" due to financial weaknesses in either capital or liquidity would be more likely to be deemed in troubled condition than firms rated "Deficient-1" due solely to issues of governance or controls. See 83 Fed. Reg. 58,724 (November 21, 2018) and 84 Fed. Reg. 4309 (February 15, 2019) for more information.

condition, if the other criteria in the definition are met. This circumstance may arise when a holding company, as part of an agreement to acquire a troubled holding company, bank, or savings association, proposes to make payments to the troubled institution's institution-affiliated parties that are conditioned on their termination of employment.[12]

Holding companies or insured depository institutions may request permission from the appropriate federal banking agency to make or enter into an agreement to make a golden parachute payment by filing an application in accordance with FDIC filing instructions at 12 C.F.R. 303.244. The appropriate federal banking agency may approve the application under one of the exceptions in 12 C.F.R. 359.4(a)(1)-(3). In determining the permissibility of the payment, the Federal Reserve may consider whether, and to what degree, the individual was in a position of managerial or fiduciary responsibility, the length of time the individual was affiliated with the institution and the reasonableness of the payment, and any other factors or circumstances that would indicate that the proposed payment would be contrary to the purposes of the statute or regulations. Generally, FDIC approval will also be required before a payment is permissible.

A holding company or state member bank requesting approval to make a golden parachute payment or enter into an agreement to make such a payment should submit its request simultaneously to the appropriate FDIC regional office and the Reserve Bank. The Reserve Bank should forward the golden parachute application to appropriate Board staff for a final determination on the permissibility of the request. Golden parachute payments or agreements may be approved by the Board's Director of the Division of Supervision and Regulation in conjunction with the General Counsel. Denials are not delegated by the Board of Governors to Board or Reserve Bank staff.

If a holding company or state member bank makes or enters into an agreement to make a golden parachute payment without prior regulatory approval, appropriate follow-up supervisory action should be taken. This follow-up could include an enforcement action requiring the offending institution-affiliated party to reimburse the institution for the amount of the prohibited payment. When a holding company or state member bank is identified as having golden parachute-related issues in the supervisory process, those issues should be carefully reviewed for compliance with the law and the FDIC's regulations. The appropriate Reserve Bank supervisory staff and the appropriate staff of the Board's Division of Supervision and Regulation and Legal Division should be notified and consulted on the golden parachute-related issues.

12. FDIC regulations exclude from the definition of a golden parachute payment several types of payments, such as payments made pursuant to a qualified pension or retirement plan; a benefit plan or bona fide deferred compensation plan (which are further defined in FDIC regulations); or a severance plan that provides benefits to all eligible employees, does not exceed the base compensation paid over the preceding 12 months, and otherwise meets the regulatory definition of nondiscriminatory and other conditions in the regulations.

1075.0.4 ENFORCEMENT ACTIONS FOR BANK SECRECY ACT/ANTI MONEY LAUNDERING COMPLIANCE PROGRAM FAILURES

In 2020, the federal banking agencies (FBAs) issued a joint statement updating their existing enforcement guidance to enhance transparency regarding how they evaluate enforcement actions that are required by statute when financial institutions fail to meet Bank Secrecy Act/anti-money laundering (BSA/AML) obligations.[13] The statement addresses how the agencies evaluate violations of individual components (known as pillars) of the BSA/AML compliance program. The statement also clarifies that isolated or technical violations or deficiencies are generally not considered the kinds of problems that would result in a mandatory enforcement action. The statement promotes a consistent approach to the application of section 8(s) of the FDI Act. See SR-20-19, "Joint Statement on Enforcement of Bank Secrecy Act/Anti-Money Laundering Requirements."

1075.0.5 COORDINATION OF FORMAL ENFORCEMENT ACTIONS AMONG FEDERAL BANKING AGENCIES

When an FBA determines to take a formal enforcement action against any federally insured depository institution, depository institution holding company, non-bank affiliate, or institution-affiliated party, the agencies evaluate whether

13. FBA refers to the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency.

the enforcement action involves the interests of another FBA. Examples of such interests include unsafe or unsound practices or significant violations of law by an insured depository institution, non-bank affiliate, or depository institution holding company or misconduct by an institution-affiliated party that may have significant connections with an institution regulated by another FBA. If it is determined that one or more other FBAs have an interest in the enforcement action, the FBA proposing the enforcement action notifies the other FBA(s). For more information, see SR-18-4/CA-18-5, "Policy Statement on Interagency Notification of Formal Enforcement Actions," and 83 Fed. Reg. 27,371 (June 12, 2018).

1075.0.6 APPOINTMENT OF DIRECTORS AND SENIOR EXECUTIVE OFFICERS

Under section 32 of the FDI Act (12 U.S.C. 1831i) and subpart H of Regulation Y (12 C.F.R. 225.71 et seq.), any BHC or state member bank must provide 30 days' written notice to the Board before appointing any new director or senior executive officer,[14] or changing the responsibilities of any senior executive officer so that the officer would assume a different senior officer position if

- the regulated institution is in troubled condition;
- the regulated institution does not meet minimum capital requirements applicable to the institution as determined on the basis of the institution's most recent report of condition or report of examination or inspection; or
- the Board determines, in connection with its review of a capital restoration plan required under section 38 of the Federal Deposit Insurance Act or subpart D of the Board's Regulation H (prompt corrective action requirements), or otherwise, that such notice is appropriate.

Subpart H of Regulation Y sets forth the procedures for filing and the content of the notice. If a BHC or state member bank that is in a troubled condition appoints a director or senior officer without the required 30-day prior written notice, appropriate follow-up supervisory action should be taken.

14. The Board or Reserve Bank, under extraordinary circumstances, may permit an individual to serve as a director or senior executive officer before a notice is provided; however, this permission does not affect the Federal Reserve's authority to disapprove a notice within 30 days of its filing.

The Board may disapprove a notice if it finds that the competence, experience, character, or integrity of the proposed individual indicates that his or her service would not be in the best interest of the institution's depositors or the public. A disapproved individual or the institution that filed the notice may appeal the Federal Reserve's notice of disapproval under the procedures set forth in Regulation Y. While the appeal is pending, the individual may not serve as a director or senior executive officer of a BHC or a state member bank.

1075.0.7 DISCIPLINARY ACTIONS AGAINST ACCOUNTANTS AND ACCOUNTING FIRMS PERFORMING CERTAIN AUDIT SERVICES

Section 36 of the FDI Act authorizes the federal bank regulatory agencies to take disciplinary actions against independent public accountants and accounting firms that perform audit services covered by the act's provisions. Section 36, as implemented by part 363 of the FDIC rules (12 C.F.R. part 363), requires that each federally insured depository institution with total assets of $500 million or more obtain an audit of its financial statements and an attestation on management's assertions concerning internal controls over financial reporting performed by an independent public accountant (the accountant). The insured depository institution must include the accountant's audit and attestation reports in its annual report. See SR-94-3, "Supervisory Guidance on the Implementation of Section 112 of the FDIC Improvement Act."

The audit requirement can be fulfilled by an independent audit of a BHC where the insured subsidiary bank (1) has total assets of less than $5 billion or (2) has total assets of $5 billion or more and has a composite CAMELS rating of 1 or 2. See SR-13-11, "Filing Procedures for Annual Independent Audits and Reports Required Under Federal Deposit Insurance Corporation (FDIC) Rules," for more information.

Section 36 and the rules enacted pursuant thereto set forth the practices and procedures to remove, suspend, or debar, for good cause, an accountant or firm from performing audit and testation services for an insured state member bank, or BHC that obtains audit services for an insured subsidiary bank.[15] Immediate suspensions are permitted in limited circumstances. Also, an accountant or accounting firm is prohibited from performing audit services for the covered institution if an authorized agency has taken such a disciplinary action against the accountant or firm, or if the U.S. Securities and Exchange Commission or the Public Company Accounting Oversight Board has taken certain disciplinary action against the accountant or firm.

15. The rules provide that certain violations of law, negligent conduct, reckless violations of professional standards, or lack of qualifications to perform auditing services may be considered good cause.

The Federal Reserve's Holding Company (HC) Surveillance Program covers top-tier bank and savings and loan holding companies. It deploys risk identification algorithms and other surveillance products to process financial and economic data and generate forward-looking, actionable intelligence on HCs. Results are used to assess exposures, outlooks, and possible compliance shortcomings, with the goal of calibrating supervisory resources to risk. (Refer to SR-15-16 and its attachment.)

The surveillance program's objectives cover these areas: (1) HC monitoring, (2) industry analysis, and (3) metric distribution. HC monitoring consists of forward-looking metrics targeting high-risk HCs and those with emerging financial difficulties for enhanced supervisory attention, while identifying low-risk HCs for more streamlined approaches. The metrics also detect possible regulatory violations or departures from supervisory guidance and feed into financial reports on individual HCs. In industry analysis, aggregate data views and accompanying financial analyses inform Federal Reserve leaders of broad financial institution conditions and trends. In metric distribution, web applications deliver surveillance results to examiners and other supervisory staff.

As fully integrated into the supervisory process, the HC Surveillance Program involves three distinct phases. First, data are processed by the risk identification algorithms, ranging from simple rules to financial models, machine learning, and signal processing. The algorithmic system's main components are the Outlier List, Watch List, HC Monitoring Screen, and Intercompany Transactions Exception List, all described below. When the algorithms detect departures from expected patterns involving HCs, the results are transmitted via Performance Report Information and Surveillance Monitoring (PRISM), a web application available to Federal Reserve examiners and other supervisory staff for interactive data analysis.

The second phase begins as supervisory staff use additional surveillance products to confirm the initial impressions presented by first-phase surveillance results. Key examples of these additional products are the Bank Holding Company Performance Report (BHCPR), a quarterly financial report on individual HCs, described below, and the Focus Report, a web application available to Federal Reserve examiners and other supervisory staff for interactive risk assessment. In addition, aggregate data views and reports of financial condition at the supervisory portfolio and industry levels can help place a particular HC's status in context.

The third phase involves the development of supervisory responses to the information generated in the first two. A primary goal is to focus supervisory resources on excessive risk-taking, the risk of emerging financial difficulties, and possible regulatory compliance shortcomings. When problems are identified, follow-up by examiners promotes correction and resolution. By also identifying low-risk situations, the HC Surveillance Program promotes the application of more streamlined supervisory approaches for such cases.

1080.0.1 OUTLIER LIST

An Outlier List highlights HCs with elevated risk-taking and identifies those with expanded or new areas of risk-taking. It is supported by "Outlier Metrics" in the form of algorithms generating risk classifications of low, moderate, or high for individual risk and performance dimensions. The Outlier List includes HCs (FR Y-9C filers only) categorized as high risk within at least one risk or performance dimension. The risk identification algorithms can be based on a broad range of approaches and may evolve over time.

Examiners and other supervisory staff use the Outlier List to monitor a HC's risk-taking and promote adequate risk management and mitigation, with the goal of bolstering HCs' capacity to prevent or buffer financial losses. The Outlier List and its metrics also assist supervisory staff in scoping HC inspections. No regular write-up or documentation requirement is tied to the Outlier List.

1080.0.2 WATCH LIST

The Watch List identifies the risk of emerging financial weaknesses among HCs. It includes FR Y-9C filers with composite safety-and-soundness ratings consistent with financial viability, but surveillance grades of 'D' or 'F,' pointing to the possibility of deterioration in inspection findings going forward.

To generate the surveillance grades, the Holding Company Statistical Assessment of Bank Risk (HC-SABR) early-warning model is applied to financial and supervisory information for each HC filing consolidated financial statements on the FR Y-9C. The HC-SABR rating consists of the composite RFI rating most recently assigned to an HC via the inspection process, coupled with a surveillance letter grade (A, B, C, D, or F) reflecting the HC's estimated financial condition relative to others in the same rating class.

HC-SABR ratings are designed for use both in monitoring and in determining the scope of an inspection. An accompanying Schedule of Risk Factors (SRF) highlights specific indicators leading the model to flag a particular HC as strong or weak. Through ongoing monitoring, examiners and other supervisory staff review each Watch List HC to assess its financial condition and discern whether substantial deterioration is evident or impending. In such cases, supervisory staff determine whether an inspection or other supervisory initiative might be needed. The Watch List, much like the Outlier List and its metrics, can also be used in scoping HC inspections to target potentially deteriorating situations for the most extensive reviews.

At times, Reserve Bank staff may need to produce supporting documentation to explain the reasons for an HC's placement on the Watch List and outline the appropriate supervisory response. For HCs other than community banking organizations (CBOs), this type of information is often already contained in quarterly supervisory write-ups outside of the Watch List process. Separate surveillance write-ups are required for CBO HCs on the Watch List when any of the following criteria are met:

1. The current HC-SABR rating is worse than the prior quarter; or
2. The HC-SABR rating is the same as the prior quarter, but the SRF identifies one or more new contributing factors; or
3. The most recent requirement for a write-up occurred four quarters earlier.

The assessments and conclusions comprising a write-up should be brief and supported by analysis. A Watch List write-up should accomplish the following:

1. summarize the factors leading to Watch List placement;
2. describe any response from the HC to those factors;
3. assess the likelihood of further financial deterioration;
4. judge whether assigned safety-and-soundness ratings are accurate; and
5. determine whether the timing of the next inspection should be accelerated.

Follow-up action associated with newly identified problems must be initiated promptly by Reserve Banks. Follow-up action may include correspondence or meetings with an HC's management or an on-site inspection. Problem situations should be closely monitored by supervisory staff until they have been corrected or otherwise resolved.

1080.0.3 HC MONITORING SCREEN

The HC Monitoring Screen includes a focus on the parent company and non-depository subsidiaries; addresses issues such as cash flow, leverage, and complexity; identifies risks to depository institution subsidiaries; and helps monitor compliance with regulations and supervisory guidance. It provides examiners and other supervisory staff with additional perspective on the risk position and financial condition of HCs by supplementing the Outlier List and Watch List. The FR Y-9SP is utilized, among other reports, allowing the HC Monitoring Screen to provide a surveillance view of smaller HCs. Those HCs that fail screening criteria are identified, with the criteria themselves updated periodically.

Examiners and other supervisory staff review HC Monitoring Screen results quarterly and follow up with supervisory initiatives when appropriate. Detailed instructions may accompany parts of the screen linked to specific supervisory programs, as for example, the guidance discussed in this manual's section 1080.1, "Surveillance Program for Small Holding Companies," and further described in SR-13-21. Unless otherwise instructed as part of a specific supervisory program, staff are not generally required to produce surveillance write-ups or maintain surveillance documentation for HCs on the HC Monitoring Screen.

1080.0.4 INTERCOMPANY TRANSACTIONS EXCEPTION LIST

The Intercompany Transactions Exception List (ITEL) helps track compliance with section 23A of the Federal Reserve Act. The ITEL is a specialized monitoring process utilizing data from the FR Y-8, together with information from the bank Call report.

For each depository institution possibly exceeding section 23A limits, supervisory staff perform the following: (1) follow up with the HC submitting the FR Y-8 to verify the data are accurate; (2) if an error caused the exception, require an amended report; and (3) if the data are correct, and a depository institution appears to have had covered transactions exceeding section 23A limits, determine the nature and extent of the apparent violation. Reserve Bank staff produce a written review of their findings for each depository institution on the list. The review addresses any apparent violations or reporting errors, along with any corrective action taken.

1080.0.5 THE SURVEILLANCE PROGRAM'S BHC PERFORMANCE REPORT

The HC Surveillance Program generates quarterly financial reports on individual HCs, including a publicly available BHCPR consisting of consolidated and parent-only financial information and peer-group percentiles for HCs filing the FR Y-9C. The information is useful in analyzing HCs on the Outlier List, Watch List, or HC Monitoring Screen. By reviewing the performance reports, examiners and other supervisory staff gain insight into potential HC weaknesses. For example, parent leverage, cash-flow, and coverage ratios can indicate problems at the parent level that could adversely affect depository institution subsidiaries. Information on the parent's income from subsidiaries can potentially indicate problems at non-depository subsidiaries that could negatively affect depository institution subsidiaries.

The financial indicators produced by the BHCPR are leveraged in surveillance models such as HC-SABR and used in the financial analysis of HCs. Some documentation is required to help support the report. Specifically, the BHCPR's peer group analysis involves the identification of HCs that for a variety of reasons could be considered atypical.

To support this process, Reserve Bank staff annually produce a list of atypical HCs. The list provides the name, location, and ID RSSD of a company; and the reason why the HC is considered atypical. HCs removed from the atypical list relative to the previous year are also identified and discussed.

1080.0.6 ROLE IN INSPECTION PROCESS

HCs identified through the surveillance process as (1) taking on positions or pursuing strategies that could lead to problem situations, (2) having a weak or declining financial condition, or (3) failing to comply with regulations should, in general, be inspected more intensely and frequently than companies without such deficiencies.

Regarding the positions and strategies of HCs, the Outlier List is designed to identify excessive risk-taking, as are parts of the HC Monitoring Screen. Similarly, the Watch List is intended to identify companies having a weak or declining financial condition, as are parts of the HC Monitoring Screen. Also, the HC Monitoring Screen and the ITEL help detect possible compliance problems among HCs and their subsidiaries.

The full array of risk identification algorithms and products deployed in the HC Surveillance Program can be used in the scheduling and scoping of HC inspections, so as to target, in a timely manner, the riskiest situations for the most extensive reviews, while conserving supervisory resources when risk is low. The examiner-in-charge should exercise prudent supervisory judgment and consider an HC's status on each surveillance list and screen, together with all other available information sources, including the BHCPR and Focus Report, when determining the scope and nature of the inspection work required.

The surveillance program for holding companies having total consolidated assets of less than $3 billion is described below. (See SR-13-21, "Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.") The surveillance program is a primary tool for identifying potentially significant changes in the condition of these organizations between reviews and for targeting the work of any onsite reviews. Quarterly surveillance screens identify potential parent-company and nonbank issues that may adversely affect affiliated insured depository institutions. In particular, the screens address parent-company cash flow, intercompany transactions, parent-company leverage, and consolidated capital ratios, where applicable. The surveillance screens are periodically updated to reflect industry trends and issues, as well as changes in regulatory reporting requirements.

Upon receipt and finalization of FR Y-9 data, Board surveillance staff provides each Reserve Bank with the results of the small holding company surveillance screens on a quarterly basis. Reserve Banks should evaluate this information and make a determination as to any appropriate supervisory actions within 45 days of the Board staff notice. In doing so, Reserve Banks should determine whether the screen results reveal that the holding company or its affiliates could pose or exacerbate a material risk to a depository institution subsidiary. If the screen results reveal no basis for a significant concern, no further action is required. Reserve Banks should also review the quarterly FR Y-8 data on transactions between an insured depository institution and its affiliates that are subject to section 23A of the Federal Reserve Act and Regulation W. Reserve Banks should document their FR Y-8 reviews and follow up on any potential violations.

If a Reserve Bank determines that the screen results reveal the potential for material risk to a depository institution, the Reserve Bank should take appropriate follow-up action within 90 days after initially receiving the surveillance results from Board staff. Follow-up actions may include

- contacting the holding company to obtain more information,
- requesting from the holding company a corrective action plan,
- implementing heightened monitoring procedures, or
- updating the holding company's complexity designation.

If an onsite review is recommended for a complex holding company, the review should commence within 90 days of the Reserve Bank's initial notification of the surveillance results from Board staff. The ratings assigned as a result of the onsite review should be promptly entered into the National Examination Data System (NED) and communicated to the company, Board staff, and appropriate state and federal regulatory authorities within 120 days of that notification.

In addition to the above surveillance monitoring screens, Board surveillance staff also provide Reserve Banks with program support screens containing additional information to assist in the supervision of small holding companies. One set of support screens identifies companies that have been designated as noncomplex, but which exhibit characteristics of complex organizations. Reserve Banks are to evaluate any such companies to determine whether their designation as noncomplex should be changed and their supervision program modified accordingly. A second set of support screens monitors compliance of financial holding companies with the capital, managerial, and Community Reinvestment Act standards set forth in the Gramm-Leach-Bliley Act.

Surveillance information is crucial to identifying potential issues between reviews and for ensuring that onsite work is risk focused. Accordingly, Reserve Banks should continue taking steps to ensure the accuracy of the regulatory reports that provide the basis for the surveillance program. In particular, System staff is to follow up promptly on any identified inaccuracies.

Introduction To Topics For Supervisory Review

Section 2000.0

Discussed within these subsections are topics associated with regard to the overall bank holding company organization. Included is general information, inspection objectives and procedures, and in some instances references to laws, interpretations, and Board orders. The primary topics addressed are the supervision of subsidiaries, grandfather rights, commitments, extensions of credit to BHC officials, management information systems, taxes, funding, control and ownership, reporting by foreign and domestic banking organizations, formal corrective actions, sharing of criminal referral information, investment transactions, recognition and control of risk, purchase and sale of U.S. Government guaranteed loans, and venture capital.

WHAT'S NEW IN THIS REVISED SECTION

This section is revised to include a revision of the Federal Deposit Insurance Act (FDIA) that requires a BHC or SLHC to serve as a "source of strength" to its depository institution subsidiaries. See section 38A of the FDIA and section 616(d) of the Dodd-Frank Act.

The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance. The degree and nature of control over subsidiary organizations in a holding company system usually falls between two extremes: a tightly controlled, centralized network similar to a branch system, or a loosely controlled, decentralized system with each subsidiary operating autonomously. A bank holding company might originate as a "shell" corporation organized by investors interested in purchasing a bank, or by a bank interested in reorganizing into a holding company structure in order to expand through acquisition of nonbank concerns or other banks. The management and directorate of such a holding company are often the same as that of the bank. As the holding company expands through acquisitions, the parent may continue to exercise control through the staff of the lead bank, or may form a separate staff to overview the operations of all subsidiaries. The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance.

The level at which policies are established and supervised, the frequency of contact between the parent and subsidiaries, and the extent to which officers and directors of the parent serve also as officers and directors of the subsidiary organizations are indicative of the level of control exercised by the parent. A centralized bank holding company is characterized by the placement of directors and officers of the parent company (or those of the lead bank) in each of its subsidiaries, with frequent group meetings held between the officers of the lead bank or holding company and those of the subsidiary organizations. While this is an efficient method of operation, this type of organization builds in the potential for conflicts of interest for those individuals who serve in dual capacities. Corporate policies should recognize this potential and provide guidance for resolution. The overriding principle should be that *no* member of the bank holding company organization should be disadvantaged by a transaction with another affiliate. Management of the investment portfolio, budgets, tax planning, personnel, correspondent relationships, loans and loan participations, and liability management are usually controlled by the parent or lead bank in a centralized system.

A decentralized system is one in which the banks act independently of the parent company, with infrequent contacts with affiliates, placement of parent or lead bank directors and officers in less than a majority of the banks within the system and infrequent reporting by subsidiaries concerning investments and operating performance. The bank holding company might act only in a minor advisory capacity. In such a decentralized system each subsidiary operates as a relatively autonomous unit, with authority and responsibility for certain actions delegated by the parent to the board and/or chief executive officer of each subsidiary.

It is the responsibility of the directors and management of the parent company to establish and supervise the policies of subsidiaries, either directly or through delegation of authority. The importance of written policies in a delegated, decentralized organization cannot be overemphasized, and the selection of qualified officers to carry out policies is equally important. If written policies have not been developed by the holding company, the examiner should recommend that major policies be written and communicated to subsidiaries. Policies should ensure that subsidiaries are not managed for cross purposes and should avoid concentrations of risks on a consolidated basis.

2010.0.1 POLICY STATEMENT ON THE RESPONSIBILITY OF BANK HOLDING COMPANIES TO ACT AS SOURCES OF STRENGTH TO THEIR SUBSIDIARY BANKS

The Board is concerned about situations where a bank has been threatened with failure notwithstanding the availability of resources to its parent bank holding company. In order to assure that the Board's policy that bank holding companies serve as sources of financial strength to subsidiary banks is understood by bank holding companies, the Board has issued a general policy statement reaffirming and articulating these principles, and confirming that the policy applies to failing bank situations. This long-standing policy has been recognized by the Supreme Court in its decision in *Board of Governors* v. *First Lincolnwood Corp.*, 439 U.S. 234 (1978), and has been incorporated explicitly in the Board's Regulation Y, 12 C.F.R. 225.4(a)(1).

A fundamental and long-standing principle underlying the Federal Reserve's supervision and regulation of bank holding companies is that bank holding companies should serve as sources of financial and managerial strength to their subsidiary banks. The Federal Deposit Insurance Act (FDIA) requires that a bank holding company or savings and loan holding company act as a source of strength to its depository institution(s). The term "source of strength" means the ability of a company that directly or indirectly owns or controls an insured depository institution to provide financial assistance to such insured depository institution in the event of financial stress to the insured depository institution. (See the FDIA, section 38A(a)–(c).) It is the policy of the Board that in serving as a source of strength to its subsidiary banks, a bank holding company should stand ready to use available resources to provide adequate capital funds to its subsidiary banks during periods of financial stress or adversity and should maintain the financial flexibility and capital-raising capacity to obtain additional resources for assisting its subsidiary banks in a manner consistent with the provisions of this policy statement.

Since the enactment of the Bank Holding Company Act in 1956, the Board has formally stated on numerous occasions that a bank holding company should act as a source of financial and managerial strength to its subsidiary banks. As the Supreme Court recognized, in the 1978 *First Lincolnwood* decision, Congress has expressly endorsed the Board's long-standing view that holding companies must serve as a "source of strength to subsidiary financial institutions."[1] In addition to frequent pronouncements over the years and the 1978 Supreme Court decision, this principle has been incorporated explicitly in Regulation Y since 1983. In particular, Section 225.4(a)(1) of Regulation Y provides that:

1. *Board of Governors* v. *First Lincolnwood Corp.,* 439 U.S. 234, 252 (1978), citing S. Rep. No. 95–323, 95th Cong., 1st Sess. 11 (1977).

"A bank holding company shall serve as a source of financial and managerial strength to its subsidiary banks and shall not conduct its operations in an unsafe or unsound manner."

The important public policy interest in the support provided by a bank holding company to its subsidiary banks is based upon the fact that in acquiring a commercial bank, a bank holding company derives certain benefits at the corporate level that result, in part, from the ownership of an institution that can issue federally-insured deposits and has access to Federal Reserve credit. The existence of the federal "safety net" reflects important governmental concerns regarding the critical fiduciary responsibilities of depository institutions as custodians of depositors' funds and their strategic role within our economy as operators of the payments system and impartial providers of credit. Thus, in seeking the advantages flowing from the ownership of a commercial bank, bank holding companies have an obligation to serve as a source of strength and support to their subsidiary banks.

An important determinant of a bank's financial strength is the adequacy of its capital base. Capital provides a buffer for individual banking organizations to absorb losses in times of financial strain, promotes the safety of depositors' funds, helps to maintain confidence in the banking system, and supports the reasonable expansion of banking organizations as an essential element of a strong and growing economy. A strong capital cushion also limits the exposure of the federal deposit insurance fund to losses experienced by banking institutions. For these reasons, the Board has long considered adequate capital to be critical to the soundness of individual banking organizations and to the safety and stability of the banking and financial system.

Accordingly, it is the Board's policy that a bank holding company should not withhold financial support from a subsidiary bank in a weakened or failing condition when the holding company is in a position to provide the support. A bank holding company's failure to assist a troubled or failing subsidiary bank under these circumstances would generally be viewed as an unsafe and unsound banking practice or a violation of Regulation Y or both.

Where necessary, the Board is prepared to take supervisory action to require such assistance. Finally, the Board recognizes that there may be unusual and limited circumstances where flexible application of the principles set forth in this policy statement might be necessary, and the Board may from time to time identify situations that may justify exceptions to the policy.

This statement is not meant to establish new principles of supervision and regulation; rather, as already noted, it builds on public policy considerations as reflected in banking laws and regulations and long-standing Federal Reserve supervisory policies and practices. A bank holding company's failure to meet its obligation to serve as a source of strength to its subsidiary bank(s), including an unwillingness to provide appropriate assistance to a troubled or failing bank, will generally be considered an unsafe and unsound banking practice or a violation of Regulation Y, or both, particularly if appropriate resources are on hand or are available to the bank holding company on a reasonable basis. Consequently, such a failure will generally result in the issuance of a cease and desist order or other enforcement action as authorized under banking law and as deemed appropriate under the circumstances.

2010.0.2 BOARD ORDER REQUESTING A WAIVER FROM THE BOARD'S SOURCE OF STRENGTH POLICY

On December 23, 1991, the Board approved an application of a BHC to eventually acquire 100 percent of the outstanding stock of another BHC under a 5 year option. Initially, the BHC would acquire approximately 26 percent of the acquiree's total capital by purchasing a 15-year subordinated capital note agreement. It would then have the option to acquire all of the remaining stock within 5 years. The acquiring BHC requested that the Board waive any requirement of the Board that it serve as a source of financial strength to the subsidiary bank (the Board's "Source of Strength" policy) of the BHC acquired until such time that the option is exercised to acquire the actual ownership of all the shares. The Board considered the request and determined that it would not be appropriate to waive the responsibility to serve as a source of financial strength to the bank in this case. The Board noted that the option agreement and the capital note agreement together provide a mechanism for the acquiring BHC to exert control over the future ownership of the acquired BHC and many of the most important management decisions. Refer to 1992 FRB 159 and the F.R.R.S. at 4-271.3.

2010.0.3 INSPECTION OBJECTIVES

1. To determine whether the board of directors of the parent company is cognizant of and performing its duties and responsibilities.
2. To determine the adequacy of written policies and compliance with such policies by the parent and its subsidiaries.
3. To determine whether the board is properly informed as to the financial conditions, trends and policies of its subsidiaries.
4. To determine the level of supervision over subsidiaries and whether the supervision as structured has a beneficial or detrimental effect upon the subsidiaries.

2010.0.4 INSPECTION PROCEDURES

1. Determine if the holding company maintains its own staff, or whether the holding company management and directorate are the same as those of a subsidiary.
2. Determine whether the board of directors of the parent company reviews the audit reports, regulatory examination reports, and board minutes of its subsidiaries.
3. Determine the extent to which subsidiaries rely upon the parent for investment and lending guidance.
4. Determine which specific functions and decisions are performed only at the parent company level.
5. Determine the extent to which representatives of the parent company serve as officers and/or directors of subsidiaries.
6. Review minutes of the board and executive committees of the parent to determine whether the parent company reviews loan delinquency reports, comparative balance sheets and comparative income statements of the subsidiaries.
7. Review the extent of influence and control over both bank and nonbank subsidiaries.
8. Determine the degree of influence by the parent company over:
   a. Appointment of officers;
   b. Salary administration;
   c. Budget and tax planning;
   d. Capital expenditures;
   e. Dividend policy;
   f. Investment portfolio management;
   g. Loan portfolio management;
   h. Asset/liability and interest rate/risk management.

9. Determine the degree to which management of the subsidiary companies interfaces with management of the parent company to discuss policies.

The responsibility for the performance of the organization rests with the board of directors of the parent company. Parent company management should have policies in place to prevent funding practices that put at risk the welfare of the subsidiary banks or the consolidated organization.

The parent's supervision and control of subsidiary funding activities and the funding between itself and its subsidiaries should be thus evaluated. The parent should be expected to maintain policies for itself and its subsidiaries that provide guidance and controls for funding practices. The presence and wording of funding policies and the degree to which the policies are followed by the subsidiaries, and the effectiveness of the policies in reducing risk to the entire organization should also be assessed.

The importance of the parent's involvement in funding decisions and the need for monitoring and control at the parent level needs to be emphasized. As a minimum, the parent's funding policies should address the following areas:

1. *Capitalization*—The holding company's policy on capital levels should address capital for the bank subsidiaries, the nonbank subsidiaries, and the consolidated organization. The policy for bank and consolidated capital should be consistent with the Board's Capital Adequacy Guidelines and should address the asset quality of the entity in question. The policy for nonbank capital should include maintaining the capital level at industry standards and should also address the asset quality of the subsidiary, the holding company's capital for each entity should address what measures would be taken in the event capital falls below a targeted level.

Capital should also be addressed at the parent company level by specifying the degree of ***double leverage*** that the parent is willing to accept. The parent's capital policy should provide some measure of assessing each individual subsidiary's capital adequacy in the context of the double leverage within the organization.

The capital policies should include the method for calculating dividends from each entity. The amount of dividends from subsidiaries to the parent is affected by the parent's philosophy on the distribution of capital throughout the organization. Some companies tend to keep minimum capital levels in their subsidiary banks by transferring the excess capital to the parent in the form of dividends. The parent then invests these funds for its own benefit, and downstreams the funds as needed. Other companies calculate dividends based strictly on the parent's cash needs and thus keep any excess capital at the bank level.

2. *Asset/Liability Management*—The holding company's policies in the area of *asset/liability management should include interest rate sensitivity matching, maturity matching, and the use of interest rate futures and forwards.* These topics should be addressed for each entity as well as the organization as a whole. It is the parent's responsibility to see that each entity is operating consistently with the corporate goals.

The ***interest rate sensitivity policies*** should be designed to reduce the organization's vulnerability to interest rate movements. Policies concerning the asset/liability rate sensitivity match should not be limited to the subsidiary lead bank. The rate charged on parent company debt and the rate received by the parent on its advances to subsidiaries should also be addressed to monitor the parent's ability to service its debt in the face of changing interest rates. The policy should specify what degree of mismatching is considered acceptable. The interest rate sensitivity matching of the organization should be monitored on a frequent basis through the timely preparation of a matching schedule.

Maturity matching policies should be designed to provide adequate liquidity to the organization. These policies should not be limited to the subsidiary lead bank, since a parent company serving as a funding vehicle for nonbank subsidiaries can have substantial exposure through its advances to these subsidiaries. The holding company's policies should include some measure of the liquidity of the assets in the nonbank subsidiary (determined partially by the quality of these assets), for comparison against the parent's source of funding. The policies should quantify the maximum degree of exposure in the organization that is considered acceptable to management. The reporting in this area should clearly indicate the current exposure and thus the potential for liquidity problems.

The holding company's ***policies addressing interest rate futures and forwards*** should be consistent with the Board's policy in this area. Involvement in this activity should be geared towards hedging against interest rate movements rather than speculating that interest rates will either increase or decrease. The policy should specify what use of futures and forwards is considered appropriate.

3. *Funding of Nonbank Subsidiaries*—The parent company should have policies addressing how nonbank subsidiaries fund their activities. If the subsidiaries obtain their own funding, market discipline may be a factor in controlling the activities of the subsidiaries. However, the parent cannot rely solely on market discipline due to the risks from interdependence. The parent company is still responsible under the centralized accountability approach to approve and supervise the subsidiaries' funding policies.

If the subsidiaries obtain funds from the parent, the risk from interdependence is increased. The subsidiary is less able to stand alone since it is reliant on the parent for funding. If the parent capitalizes the nonbank subsidiary through borrowed funds, bank capital is put at risk due to the increased exposure of the organization. If the borrowing results in ***double-leverage***, the risk is increased since less "hard" capital is available for support. The parent's policy on advances to nonbank subsidiaries should address this additional risk by specifying the level of borrowings that is considered acceptable relative to nonbank capital and consolidated capital. The terms of the borrowings should also be specified, and should be consistent with the company's asset/liability management policies. The policy should include contingency measures to be used in the event of liquidity problems.

2010.1.1 INSPECTION OBJECTIVES

1. To determine if the parent's funding policies adequately address funding risks to the organization.
2. To determine if the implementation of the parent's policies is effective in controlling funding risks to the organization.
3. To determine if the parent is adequately informed of actual funding practices and decisions.

2010.1.2 INSPECTION PROCEDURES

1. Review the funding policies at the parent and the subsidiary levels.
2. Determine how effectively the policies are implemented throughout the organization.
3. Discuss with management the funding practices of each subsidiary and any interorganizational funding.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2016, section 2010.2.5 is revised to reference SR-15-17, "Interagency Statement on Prudent Risk Management for Commercial Real Estate Lending" and its attachment. Refer to the Board's December 18, 2015, press release.

2010.2.05 LOAN ADMINISTRATION

The examiner should make a qualitative assessment of the parent's supervision and control of subsidiary lending activities. The System's ability to evaluate the effectiveness of a company's supervision and control of subsidiary lending activities can be strengthened not only by evaluating the parent's role in light of efficiency and operating performance, but also by evaluating the *quality* of control and supervision.

In order to assess quality, there must be a standard measure against which a company's policies can be evaluated. Establishing the minimum areas that a company's loan-administration policies should address will create a standard that will aid in evaluating the quality of the company's control and its supervision of that activity.

Current inspection procedures include the testing of subsidiaries' compliance with a parent company's policies. This section summarizes the parent's responsibilities with regard to supervising subsidiary lending. It defines the internal and external factors that should be considered in the formulation of loan policies and a strategic plan. It also outlines the minimum elements that the lending policies should include.

Internal and external factors that a banking organization should consider when formulating its loan policies and strategic plan are—

1. the size and financial condition of the credit-extending subsidiaries,
2. the expertise and size of the lending staff,
3. the need to avoid undue concentrations of risk,
4. compliance with all respective laws and regulations, and
5. market conditions.

Following are the components that generally form the basis for a sound loan policy:

1. *Geographic limits.* The trade area should be clearly defined and loan officers should be fully aware of specific geographic limitations for lending purposes. Such a policy avoids approval of loans to customers outside the trade area in opposition to primary objectives. The primary trade area should be distinguished from any secondary trade area so that emphasis for each trade area may be properly placed.
2. *Distribution of loans by category.* Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, and other categories are common. Such policies are beneficial; however, they should contain provisions for deviations that are approved by the directorate or a committee. This allows credit to be distributed in relation to the market conditions of the trade area. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another. Deviations from loan distributions by category may be beneficial but are appropriate only until the risk of further increasing the loan concentration outweighs the benefits to be derived from expanding the portfolio to satisfy credit demand. See component 11, "Concentrations of credit," below.
3. *Types of loans.* The lending policy should state the types of loans that will be made and the maximum amount for each type of loan. The policy should also set forth guidelines to follow in making specific loans. Decisions about the types of loans to be granted should be based on the expertise of the lending officers, the deposit structure, and anticipated creditworthy demands of the trade area. Sophisticated credits or loans secured by collateral that require more than normal supervision should be avoided unless or until there are the necessary personnel to properly administer them. Information systems and internal controls should be in place to identify, monitor, and control the types of credit that have resulted in abnormal loss. The amount of real estate and other types

of term loans should be considered in relation to the amount of stable funds.

4. *Maximum maturities.* The loan policy should call for underwriting standards that ensure realistic repayment plans. Loan maturities should be set by taking into consideration the anticipated source of repayment, the purpose of the loan, the type of property, and the useful life of the collateral. For term loans, the lending policy should state the maximum time within which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and/or modification of the original terms of the loan. If a clean-up period[1]
5. *Loan pricing.* Rates on various loan types must be sufficient to cover the cost of funds loaned and the servicing of the loan, including overhead and possible losses, while providing an acceptable margin of profit over the long run. These costs must be known and taken into consideration before rates are established. Periodic reviews should be conducted to determine whether adjustments are necessary to reflect changes in costs or competitive factors. Specific guidelines for other factors, such as compensating balances and commitment fees, are also germane to loan pricing.
6. *Loan amount to appraised value.* The policy should outline where the responsibility for appraisals rests and should define formal, standard appraisal procedures, including procedures for possible reappraisals in case of renewal or extension. Acceptable types of appraisals and limits on the dollar amount and the type of property that personnel are authorized to appraise should be outlined. Circumstances requiring appraisals by qualified independent appraisers should be described. The maximum ratio of the loan amount to appraised value,[2] the method of valuation, and differences for various types of property should be detailed. The policy should contain a schedule listing the downpayment requirements for financing consumer goods and business equipment.
7. *Loan amount to market value of pledged securities.* In addition to the legal restrictions imposed by Federal Reserve Regulation U, the lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security (for example, closely held, over-the-counter, actively traded). The policy should assign responsibility and set a frequency for the periodic pricing of the collateral.
8. *Financial information.* Extension of credit on a safe and sound basis depends on complete and accurate information regarding the borrower's credit standing. One possible exception is when the loan is predicated on readily marketable collateral, the disposition of which was originally designated as the source of repayment for the advance. Current and complete financial information is necessary, including secondary sources of repayment, not only at the inception of the loan, but also throughout the term of the advance. The lending policy should define the financial-statement requirements for businesses and individuals at various borrowing levels and should include requirements for audited, nonaudited, fiscal, interim, operating, cash-flow, and other statements.[3] It should include external credit checks required at various intervals. The requirements for financial information should be defined in such a way that any credit-data exception would be a clear violation of the lending policy.
9. *Limits and guidelines for loan participations.* Section 2020.2 provides significant information regarding intercompany loan participations between holding company affiliates. The lending policy should place

11. A "clean-up period" is when a borrower is asked to repay the entire balance of a credit line and to refrain from further borrowing for a specified period of time.

2. This is often referred to as the loan-to-value ratio.

3. On March 30, 1993, federal bank regulators set forth an expanded interagency policy to encourage small-business lending. Under the policy, banks and thrifts that are well or adequately capitalized and that are rated CAMELS 1 or 2 may make small-business and agricultural loans, the aggregate value of which cannot exceed 20 percent of their total capital. To qualify for the exemption, each loan may not exceed the lesser of $900,000 or 3 percent of the institution's total capital. Further, the loans selected for this exemption by the institution may not be delinquent as of the selection date and may not be made to an insider. The loans must be separately listed or have an accounting segregation from other loans in the portfolio. They "will be evaluated solely on the basis of performance and will be exempt from examiner criticism of documentation." The institution's records must include an evaluation of its ability to collect the loan in determining the adequacy of its allowance for loan and lease losses. If a loan becomes more than 60 days past due, it may be reviewed and classified by an examiner based on its credit quality, not the level of loan documentation.

limits on the amount of loans purchased from any one source and also place an aggregate limit on such loans. The policy should set forth credit standards for any loan purchased as well as require that complete documentation be maintained by the purchasing entities. The policy should define the extent of contingent liability, holdback and reserve requirements, and the manner in which the loan will be handled and serviced.

10. *Loans to insiders.* Lending policies should address loans to insiders. Such policies should incorporate applicable regulatory limitations (for example, Federal Reserve Regulation O) and should also address situations in which it would be prudent to exercise certain restrictions even though not explicitly required to do so by regulation (for example, loans by nonbank subsidiaries to insiders).
11. *Concentrations of credit.* Credit concentrations may be defined as loans collateralized by a common security; loans to one borrower or related group of borrowers; loans dependent upon a particular agricultural commodity; aggregate loans to major employers, their employees, and their major suppliers; loans within industry groups; out-of-territory loans; aggregate amount of paper purchased from any one source; or those loans that often have been included in other homogeneous risk groupings. Credit concentrations, by their nature, are dependent on common key factors, and when weaknesses develop, they have an adverse impact on each individual loan making up the concentration.

    In identifying asset concentrations, commercial real estate loans and residential real estate loans can be viewed separately when their performance is not subject to similar economic or financial risks. In the same vein, commercial real estate development loans need not necessarily be grouped with residential real estate development loans, especially when the residential developer has firm, reliable purchase contracts for the sale of the homes upon completion. Even within the commercial development and construction sector, distinctions for concentration purposes may be made, when appropriate, between those loans that have firm take-out commitments and those that do not. Groups or classes of real estate loans should, of course, be combined and viewed as concentrations when they do share significant common characteristics and are similarly affected by adverse economic, financial, or business developments.

Banking organizations should establish and adhere to policies that control "concentration risk." The lending policy should address the risk involved in various concentrations and indicate those that should be avoided or limited. However, before concentrations can be limited or reviewed, accounting systems must be in place to allow for the retrieval of information necessary to determine and monitor concentrations. The lending policy should provide for frequent monitoring and reporting of all concentrations.

Banking organizations with asset concentrations are expected to put in place effective internal policies, systems, and controls to monitor and manage this risk. Concentrations that involve excessive or undue risks require close scrutiny and should be reduced over a reasonable period of time. When there is a need to reduce asset concentrations, banking organizations are normally expected to develop a plan that is realistic, prudent, and achievable in view of the particular circumstances and market conditions. In situations where concentration levels have built up over an extended period, it may take time—in some cases several years—to achieve a more balanced and diversified portfolio. What is critical is that adequate systems and controls are in place for reducing undue or excessive concentrations in accordance with a prudent plan, along with strong credit policies and loan-administration standards to control the risks associated with new loans, and adequate capital to protect the institution while its portfolio is being restructured.

Institutions that have in place effective internal controls to manage and reduce concentrations over a reasonable period of time *need not* automatically refuse credit to sound borrowers simply because of the borrower's industry or geographic location. This principle applies to prudent loan renewals and rollovers, as well as to new extensions of credit that are underwritten in a sound manner.

The purpose of a lending organization's policies should be to improve the overall quality of its portfolio. The replacement of unsound loans with sound loans can enhance the quality of a portfolio, even when concentration levels are not reduced.

12. *Refinancing or renewal of loans.* Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and in a manner that protects the banking organization and improves its prospects for collecting or recovering on the asset.
13. *Loan origination and loan approvals.* The policy should establish loan-origination and loan-approval procedures, both generally and by size and type of loan. The loan limitations for all lending officers should be set accordingly. Lending limits should also be set for group authority, allowing a combination of officers or a committee to approve larger loans. Reporting procedures and the frequency of committee meetings should also be defined. The loan policy should further establish identification, review, and approval procedures for exception loans, including real estate and other loans with loan-to-value percentages in excess of supervisory limits.[4]
14. *Loan-administration procedures for loans secured by real estate.* The loan policy should establish loan-administration procedures covering documentation, disbursement, collateral administration and inspection, escrow administration, collection, loan payoffs, and loan review. Documentation procedures would specify, among other things, the types and frequency of financial statements and the requirements for verifying information provided by the borrower. They would also cover the type and frequency of collateral evaluations (appraisals and other estimates of value). In addition, loan-administration policies should address procedures for servicing and participation agreements and other loan-administration procedures such as those for claims processing (for example, seeking recovery on defaulted loans that are partially or fully guaranteed by a government entity or insurance program).
15. *Collection and foreclosure and the reporting and disclosure of delinquent obligations and charge-offs.* The lending policy should define delinquent obligations, provide guidelines on when loans are to be placed on nonaccrual or to be restructured, dictate appropriate procedures for reporting to senior management and to the directorate past-due credits, and provide appropriate guidance on the extent of disclosure of such credits. The policy should establish and require a follow-up collection procedure that is systematic and progressively stronger and should set forth guidelines (where applicable) for close surveillance by a loan work-out division. It should also address extensions and other forms of forbearance, the acceptance of deeds in lieu of foreclosure, and the timing of foreclosure. The policy must be consistent with supervisory instructions in the financial statements of condition and income for financial institutions and BHCs (bank call report and the FR Y-9C and the other FR Y-series reports). Guidelines should be established to ensure that all accounts are presented to and reviewed by management for charge-off after a stated period of delinquency. See section 2065.1 for disclosure, accounting, and reporting issues related to nonaccrual loans and restructured debt.
16. *Reserve for loan losses and provisions for loan losses.* The policy should set forth the parameters that management considers in determining an appropriate level of loan-loss reserves as well as provisions necessary to attain this level.

    Because an analysis of the allowance for loan and lease losses (ALLL) requires an assessment of the relative credit risks in the portfolio, many banking organizations, for analytical purposes, attribute portions of the ALLL to loans and other assets classified "substandard" by management or a supervisory agency. Management may do this because it believes, based on past history or other factors, that there may be unidentified losses associated with loans classified substandard in the aggregate.

    Furthermore, management may use this as an analytical approach in estimating the total amount necessary for the ALLL and in comparing the ALLL to various categories of loans over time. As a general rule, an individual loan classified substandard may remain in an accrual status as long as the regulatory reporting requirements for accrual treatment are met, even when an attribution of the ALLL has been made.
17. *Other.* The policy should address the handling of exceptions to the policy as well as

4. For subsidiaries that are insured depository institutions, real estate loans that are in excess of supervisory loan-to-value limits are to be identified in the subsidiaries' records. The aggregate amount of these loans is to be reported quarterly to the depository institution's board of directors.

provide for adherence to the policy via internal audits, centralized loan review, and/or “director’s examinations.” The policy should be reviewed annually to determine if it continues to be compatible with the BHC’s objectives as well as market conditions.

2010.2.1 UNIFORM REAL ESTATE LENDING STANDARDS

On December 23, 1992, the Board announced adoption of a uniform rule and guidelines on real estate lending, along with the FDIC, OCC, and OTS, as mandated by section 304 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). The Board’s Regulation H (12 C.F.R. 208, Membership of State Banking Institutions in the Federal Reserve System) was amended to implement the uniform real estate lending standards for state member banks. Although the Board did not directly apply the regulation to bank holding companies and their nonbank subsidiaries, those entities are expected to conduct and to supervise real estate lending activities prudently, consistent with safe and sound lending standards.

The agencies’ regulations require that each insured depository institution adopt and maintain comprehensive written real estate lending policies appropriate to the institution and the nature and scope of its lending activities. Lending policies must be reviewed and approved by the institution’s board of directors at least annually. The policies are to include standards for loan diversification and prudent underwriting as well as loan-administration procedures and documentation, approval, and reporting requirements. Depository institutions’ policies are to reflect consideration of the appendix to the banking agencies’ regulations, “Interagency Guidelines for Real Estate Lending Policies.” The guidelines are designed to help an institution formulate and maintain real estate lending policy that is appropriate to its size and the nature and scope of its operations, as required by the regulations. These guidelines are generally comparable to the inspection guidance provided in this section.

2010.2.2 LENDING STANDARDS FOR COMMERCIAL LOANS

The lending decision is properly that of the senior management and boards of directors of banking institutions, and not of their supervisory agencies. However, in fulfilling their roles, directors and senior managers have the obligation to monitor lending practices and to ensure that their policies are enforced and that lending practices generally remain within the overall ability of the institution to manage. The following subsections describe certain sound practices regarding lending standards and credit-approval processes for commercial loans.[5]

Sound lending practices address formal credit policies, formal credit-staff approval of transactions, loan-approval documentation, the use of forward-looking tools in the approval process, and management and lender information systems. In addition to evaluating adherence to these sound practices during inspections, supervisory personnel and examiners may wish to discuss these standards with loan portfolio managers at institutions where a full credit review is being performed. Senior management should be made aware of the potential for deterioration in the loan portfolio if lending discipline is not maintained, whether from inadequate assessment or communication of lending risks, incomplete adherence to prudent lending standards that reflect the risk appetite of the board of directors, or both.

Examiners should evaluate whether adequate internal oversight exists and whether institution management has timely and accurate information. As always, examiners should also discuss matters of concern with the institution and include them in their reports of inspection, even if cited practices and problem loans have not yet reached harmful or criticized levels. Such cautionary remarks help to alert institution management to potential or emerging sources of concern and may help to deter future problems. Any practices that extend beyond prudent bounds should be promptly corrected. See SR-98-18.

2010.2.2.1 Sound Practices in Loan Standards and Approval

Certain sound practices in lending can help to maintain strong credit discipline and ensure that an institution’s decision to take risk in lending is

5. This guidance is derived, in part, from the June 1998 Federal Reserve supervisory staff report, “The Significance of Recent Changes in Bank Lending Standards: Evidence from the Loan Quality Assessment Project.”

well informed, balanced, and prudent. Several of these sound practices are listed and described below.

2010.2.2.1.1 *Formal Credit Policies*

The Federal Reserve and other supervisory authorities have long stressed the importance of formal written credit policies in a sound credit-risk-management process. Such policies can provide crucial discipline to an institution's lending process, especially when the institution's standards are under assault due to intense competition for loans. They can serve to communicate formally an institution's appetite for credit risk in a manner that will support sound lending decisions, while focusing appropriate attention on loans being considered that diverge from approved standards.

In developing and refining loan policies, some institutions specify "guidance minimums" for financial performance ratios that apply to certain types of loans or borrowers (for example, commercial real estate). Such guidance makes explicit that loans not meeting certain financial tests (based on current performance, projected future performance, or both) should in general not be made, or alternatively should only be made under clearly specified situations. Institutions using this approach most effectively tend to avoid specifying standards for broad ranges of lending situations and instead focus on those areas of lending most vulnerable to excessive optimism, or where the institution expects loan volume to grow most significantly.

Formal policies can also provide lending discipline by clearly stating the type of covenants to be imposed for specific loan types. When designed and enforced properly, financial covenants can help significantly to reduce credit losses by communicating clear thresholds for financial performance and potentially triggering corrective or protective action at an early stage. Often, however, loan-approval documents do not describe the key financial covenants even when discussions with institutional staff disclose that such covenants are present. The staff and/or management of many institutions acknowledge that they have a "common practice" of imposing certain types of covenants on various types of loans. They indicate that such a practice is well known to lenders and others at the institution (but not articulated in their written loan policies), so that describing the actual covenants in the loan-approval document would be redundant. However, management and other approving authorities within an institution then receive no formal positive indication that "common practice" controls have been imposed and no indication of the level of financial performance that the covenants require of the borrower. As such, management and other approving authorities may be inadequately informed as to the risks and controls associated with the loan under consideration. In contrast, loan policies can create a clear expectation that (1) all key covenants should be described in loan-approval documents, (2) certain covenant types should be applied to all loans meeting certain criteria, and (3) explicit approval of any exception to these policies is necessary if such covenant requirements are to be waived.

Internal processes and requirements for underwriting decisions should be consistent with the nature, size, and complexity of the banking organization's (BO) activities. Departures from underwriting policies and standards, however, can have serious consequences for BOs of all sizes. Internal controls and credit reviews should be established and maintained to ensure compliance with those policies and procedures. When there are continued favorable economic and financial conditions, compliance monitoring of the BO's lending policies and procedures needs to be diligent to make certain that there is no undue reliance on optimistic outlooks for borrowers. Undue reliance on continued favorable economic conditions can be demonstrated by the following characteristics:

1. dependence on very rapid growth in a borrower's revenue as the "most likely" case
2. heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term
3. greater willingness to make loans without scheduled amortization prior to the loan's final maturity
4. willingness to readily waive violations of key covenants, to release collateral or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower, on the assumption that a favorable environment will allow the borrower to recover quickly

Among the adverse effects of undue reliance on a continued favorable economy is the possibility that problem loans will not be identified properly or in a timely manner. Timely identification of problem loans is critical for providing a full awareness of the BO's risk position, informing management and directors of that position, taking steps to mitigate risk, and providing a proper assessment of the adequacy of the allowance for credit losses and capital.[6] Similarly, an overreliance on continued ready access to financial markets on favorable terms can originate from the following situations:

1. explicit reliance on future public market debt or equity offerings, or on other sources of refinancing, as the ultimate source of principal repayment, which presumes that market liquidity and the market's appetite for such instruments will be favorable at the time that the facility is to be repaid
2. ambiguous or poorly supported analysis of the sources of repayment of the loan's principal, together with implicit reliance for repayment on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion), which also assumes that markets will be receptive to such transactions at the time that the facility is to be repaid
3. measuring a borrower's leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to "book" equity, thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed
4. more generally, extending loans with a risk profile that more closely resembles the profile of an equity investment, under circumstances that leave additional credit or default as the borrower's only resort if favorable expectations are not met

Banking organizations that become lax in adhering to established loan-underwriting policies and procedures, as a result of overreliance on favorable economic and financial market conditions, may have significant credit concentrations that are at great risk to possible economic and financial market downturns. See SR-99-23.

Some institutions have introduced credit scoring techniques into their small-business lending in an effort to improve credit discipline while allowing heavier reliance on statistical analysis rather than detailed and costly analysis of individual loans. Institutions should take care to make balanced and careful use of credit scoring technology for small-business lending and, in particular, avoid using this technology for loans or credit relationships that are large or complex enough to warrant a formal and individualized credit analysis.

In formalizing their lending standards and practices, institutions are not precluded from making loans that do not meet all written standards. Exceptions to policies, though, should be approved and monitored by management. Formal reporting that describes exceptions to loan policies, by type of exception and organizational unit, can be extremely valuable for informing management and directors of the number and nature of material deviations from the policies that they have designed and approved.

2010.2.2.1.2 Formal Credit-Staff Approval of Transactions

Credit discipline is also enhanced when experienced credit professionals are involved in the approval process and are independent of the line lending functions.[7] Such staff can play a vital role in ensuring adherence to formal policies and in ensuring that individual loan approvals are consistent with the overall risk appetite of the institution. These independent credit professionals can be most valuable if they have the authority to reject a loan that does not meet the institution's credit standards or, alternatively, if they must concur with a loan before it can be approved.

Providing credit staff with independent approval authority over lending decisions, rather than with a more traditional requirement for "consultation" between the lending function and credit staff, allows credit staff to influence outcomes on a broad and ongoing basis. This influence and indeed the ability of credit staff to reinforce lending discipline is clearly enhanced by their early involvement in negotiations with borrowers; a more traditional approach might be to only involve credit staff once the loan pro-

6. See section 2122.0 and SR-98-25, "Sound Credit-Risk Management and the Use of Internal Credit-Risk-Rating Systems at Large Banking Organizations." Federal Reserve guidance on credit-risk management and mitigation covers both loans and other forms of on- and off-balance-sheet credit exposure.

7. For example, loan officers might be compensated for bringing loan business into the institution. Independent credit professionals, however, would be another person who would not be compensated for bringing any loan business into the institution. That person would, however, serve as a quality control monitor that would have the independent authority to reject a loan(s) and to ensure that the institution's risk appetite and credit standards are not exceeded.

posal is well developed, allowing credit staff the opportunity to have only minor influence on the outcome of negotiations except in extreme cases. Maintaining a proper balance of lending and control functions calls for a degree of partnership between line lenders and credit staff, but also requires that the independence of credit staff not be compromised by conflicting compensation policies or reporting structures.

Independent credit staff can also support sound lending practice by maintaining complete and centralized credit files that contain all key documents relevant to each loan, including complete loan-approval packages. Such files ensure that decisions are well documented and avoid undue reliance on the files maintained by individual loan officers.

2010.2.2.1.3 Loan-Approval Documents

Institutions can help ensure a careful loan-approval decision by requiring thorough and standardized loan-approval documents. Thoroughness can be enhanced by requiring formal analysis of the borrower's financial condition, key characteristics and trends in the borrower's industry, information on collateral and its valuation, as well as financial analysis of the entities providing support or guarantees and formal forward-looking analyses appropriate to the size and type of loan being considered. Incorporating such elements into standardized formats and requiring that analysis and supporting commentary be complete and in adequate depth allows approving authorities access to all relevant information on the risk profile of the borrower. Loan-approval documents should also include all material details on the proposed loan agreement itself, including key financial covenants. Standardization of formats, and to some extent content, can be useful in ensuring that all relevant information is provided to management and other approving authorities in a manner that is understandable. Standard formats also draw attention to cases in which certain key information is not presented.

One area of particular interest in this regard is analysis and commentary on participations in syndicated loans. While it may be tempting to rely on the analysis and documentation provided by the agent institution to the transaction, it has been long-standing Federal Reserve policy that participating institutions should conduct their own analysis of the borrower and the transactions, particularly if the risk appetite or portfolio characteristics of the agent differs from that of the participating institution.

2010.2.2.1.4 Use of Forward-Looking Tools in the Approval Process

During continued periods of favorable economic conditions, institutions should guard against complacency and, in particular, the temptation to base expectations of a borrower's future financial performance almost exclusively on that borrower's recent performance. In making lending decisions, and in evaluating their loan portfolio, institutions should give sufficient consideration to the potential for negative events or developments that might limit the ability of borrowers to fulfill their loan obligations. Unforeseen changes in interest rates, sales revenue, and operating expenses can have material and adverse effects on the ability of many borrowers to meet their obligations. In prior decades, inadequate attention to these possibilities during the underwriting process contributed significantly to asset-quality problems in the system. Also, sudden turmoil within various countries can result in quick changes in currency valuations and economic conditions.

Examiners should evaluate the frequency and adequacy with which institutions conduct forward-looking analysis of borrower financial performance when considering an institution's credit-risk-management process. Formal use of forward-looking financial analysis in the loan-approval process, and financial projections in particular, can be important in guarding against such complacency, especially when financial institutions are competing intensely to attract borrowers. Such projections, if they include less favorable scenarios for the key determinants of the borrower's financial performance, can help to contain undue optimism and ensure that management and other approving authorities within the organization are formally presented with a robust analysis of the risks associated with each credit. They also provide credit staff and other risk-management personnel with information that is important for ensuring adherence to the institution's lending standards and overall appetite for loan risk.

The formal presentation of financial projections and/or other forms of forward-looking analyses of the borrower is important in making explicit the conditions required for a loan to perform and in communicating the vulnerabilities of the transaction to those responsible for approving loans. Analyses also provide a useful benchmark against which institutions can assess the borrower's future performance. Although it may be tempting to avoid analyzing detailed projections for smaller borrowers, such as middle-market firms, these customers may collectively represent a significant portion of the institution's loan portfolio. As such, applying formal forward-looking analysis even on a basic level assists the institution in identifying and managing the overall risk of its lending activities.

Detailed analysis of industry performance and trends can be a useful supplement to such analyses. Such projections have the most value in maintaining credit discipline when, rather than only describing the single "most likely" scenario for future events, they characterize the kind of negative events that might impair the performance of the loan in the future.

2010.2.2.1.5 Stress Testing of the Borrower's Financial Capacity

The analysis of alternative scenarios, or "stress testing," should generally focus on the key determinants of performance for the borrower and the loan, such as the level of interest rates, the rate of sales or revenue growth, or the rate at which expense reductions can be realized. Meaningful stress testing of the prospective borrower's ability to meet its obligations is a vital part of a sound credit decision. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or, alternatively, to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

Mechanical reliance on threshold financial ratios (and the "cushion" they imply) alone is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such an analysis should have a significant influence on the decision to extend credit and, if credit is extended, on the decisions as to the appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan's structure.

When properly conducted, meaningful stress testing can include assessing the effect the following situations or events will have on the borrower:

1. unexpected reductions in revenue growth or reversals, including shocks to revenue of the type and magnitude that would normally be experienced during a recession
2. unfavorable movements in market interest rates, especially for firms with high debt burdens
3. unplanned increases in capital expenditures due to technological obsolescence or competitive factors
4. deterioration in the value of collateral, guarantees, or other potential sources of principal repayment
5. adverse developments in key product or input markets
6. reversals in, or the borrower's reduced access to, public debt and equity markets

Proper stress testing typically incorporates an evaluation of the borrower's alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability to raise new equity. In particular, the evaluation should focus not only on the borrower's ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation. See SR-99-23.

2010.2.2.1.6 Management and Lender Information

Management information systems that support the loan-approval process should clearly indicate the composition of the institution's current portfolio or exposure to allow for consideration of whether a proposed new loan—regardless of its own merits—might affect this composition sufficiently to be inconsistent with the institution's risk appetite. In particular, institutions active in commercial real estate lending should know the nature and magnitude of aggregate exposure within relevant subclasses, such as by the type of property being financed (that is, office, residential, or retail).

In addition to portfolio information, institutions should be encouraged to acquire or develop information systems that provide ready access for lenders and credit analysts to information sources that can support and enhance the financial analysis of proposed loans. Depending on the nature of an institution's borrowers, appropriate information sources may include industry financial data, economic data and forecasts, and other analytical tools such as bankruptcy scoring and default-probability models.

2010.2.3 LEVERAGED LENDING

Leveraged lending has been a financing vehicle for transactions involving mergers and acquisitions, business recapitalizations, and business expansions.[8] It is an important type of financing for national and global economies, and the U.S. financial industry plays an integral role in making credit available and syndicating that credit to investors. Leveraged transactions are characterized by a degree of financial leverage that may significantly exceed industry norms as measured by ratios such as debt-to-assets, debt-to-equity, cash flow-to-total debt, or other ratios and standards that are unique to a particular industry. Leveraged borrowers, however, can have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution's overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged lending activities can be conducted in a safe-and-sound fashion if pursued with a risk-management structure that provides for the appropriate underwriting, pricing, monitoring, and controls. Comprehensive credit analysis processes, frequent monitoring, and detailed portfolio reports are needed to better understand and manage the inherent risk in leveraged portfolios. Sound valuation methodologies must be used in addition to ongoing stress testing and monitoring.

Financial institutions should ensure they do not unnecessarily heighten risks by originating and then distributing poorly underwritten loans.[9] For example, a poorly underwritten leveraged loan that is pooled with other loans or is participated with other institutions may generate risks for the financial system. The leveraged lending guidance that follows is designed to assist financial institutions in providing leveraged lending to creditworthy borrowers in a safe-and-sound manner.

On March 21, 2013, the Federal Reserve Board, along with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), issued "Interagency Guidance on Leveraged Lending."[10] The statement provides guidance about risk rating leveraged-financed loans. See SR-13-3 and its attachment.

2010.2.3.1 Interagency Guidance on Leveraged Lending

The vast majority of community banks should not be affected by this guidance, as they have limited involvement in leveraged lending. Community and smaller institutions that are involved in leveraged lending activities should discuss with their primary regulator the implementation of cost-effective controls appropriate for the complexity of their exposures and activities.[11]

2010.2.3.1.1 Risk-Management Framework

Given the high-risk profile of leveraged transactions, financial institutions engaged in leveraged lending should adopt a risk-management framework that has an intensive and frequent review and monitoring process. The framework should have as its foundation written risk objectives, risk-acceptance criteria, and risk controls. A lack of robust risk-management processes and controls at a financial institution with significant

8. For the purpose of this guidance, references to leveraged finance, or leveraged transactions encompass the entire debt structure of a leveraged obligor (including loans and letters of credit, mezzanine tranches, senior and subordinated bonds) held by both bank and nonbank investors. References to leveraged lending and leveraged loan transactions and credit agreements refer to all debt with the exception of bond and high-yield debt held by both bank and nonbank investors.

9. For purposes of this guidance, the term "financial institution" or "institution" includes national banks, federal savings associations, and federal branches and agencies supervised by the OCC; state member banks, bank holding companies, savings and loan holding companies, and all other institutions for which the Federal Reserve is the primary federal supervisor; and state nonmember banks, foreign banks having an insured branch, state savings associations, and all other institutions for which the FDIC is the primary federal supervisor.

10. This guidance augments previously issued supervisory statements on sound credit-risk management. Refer to SR-98-18, "Lending Standards for Commercial Loans."

11. The agencies do not intend that a financial institution that originates a small number of less complex, leveraged loans should have policies and procedures commensurate with a larger, more complex leveraged loan origination business. However, any financial institution that participates in leveraged lending transactions should follow applicable supervisory guidance provided in "Participations Purchased" of this section.

leveraged lending activities could contribute to supervisory findings that the financial institution is engaged in unsafe and unsound banking practices. This guidance outlines the agencies' minimum expectations on the following topics:

- Leveraged Lending Definition
- General Policy Expectations
- Participations Purchased
- Underwriting Standards
- Valuation Standards
- Pipeline Management
- Reporting and Analytics
- Risk Rating Leveraged Loans
- Credit Analysis
- Problem-Credit Management
- Deal Sponsors
- Credit Review
- Stress Testing
- Conflicts of Interest
- Reputational Risk
- Compliance

2010.2.3.1.2 Leveraged Lending Definition

The policies of financial institutions should include criteria to define leveraged lending that are appropriate to the institution.[12] For example, numerous definitions of leveraged lending exist throughout the financial services industry and commonly contain some combination of the following:

- proceeds used for buyouts, acquisitions, or capital distributions
- transactions where the borrower's Total Debt divided by EBITDA (earnings before interest, taxes, depreciation, and amortization) or Senior Debt divided by EBITDA exceed 4.0 * EBITDA or 3.0 * EBITDA, respectively, or other defined levels appropriate to the industry or sector[13]
- a borrower recognized in the debt markets as a highly leveraged firm, which is characterized by a high debt-to-net-worth ratio
- transactions when the borrower's post-financing leverage, as measured by its leverage ratios (for example, debt-to-assets, debt-to-net-worth, debt-to-cash flow, or other similar standards common to particular industries or sectors), significantly exceeds industry norms or historical levels[14]

A financial institution engaging in leveraged lending should define it within the institution's policies and procedures in a manner sufficiently detailed to ensure consistent application across all business lines. A financial institution's definition should describe clearly the purposes and financial characteristics common to these transactions, and should cover risk to the institution from both direct exposure and indirect exposure via limited-recourse financing secured by leveraged loans, or financing extended to financial intermediaries (such as conduits and special purpose entities (SPEs)) that hold leveraged loans.

2010.2.3.1.3 General Policy Expectations

A financial institution's credit policies and procedures for leveraged lending should address the following:

- Identification of the financial institution's risk appetite, including clearly defined amounts of leveraged lending that the institution is willing to underwrite (for example, pipeline limits) and is willing to retain (for example, transaction and aggregate hold levels). The institution's designated risk appetite should be supported by an analysis of the potential effect on earnings, capital, liquidity, and other risks that result from these positions, and should be approved by its board of directors.
- A limit framework that includes limits or guidelines for single obligors and transactions, aggregate hold portfolio, aggregate pipeline exposure, and industry and geographic concentrations. The limit framework should identify the related management-approval authorities and exception-tracking provisions. In addition to notional pipeline limits, the agencies expect that financial institutions with significant leveraged transactions will implement underwriting-limit frame-

12. This guidance is not meant to include asset-based loans unless such loans are part of the entire debt structure of a leveraged obligor. Asset-based lending is a distinct segment of the loan market that is tightly controlled or fully monitored, secured by specific assets, and usually governed by a borrowing formula (or "borrowing base").

13. Cash should not be netted against debt for purposes of this calculation.

14. The designation of a financing as "leveraged lending" is typically made at loan origination, modification, extension, or refinancing. "Fallen angels" or borrowers that have exhibited a significant deterioration in financial performance after loan inception and subsequently become highly leveraged would not be included within the scope of this guidance, unless the credit is modified, extended, or refinanced.

works that assess stress losses, flex terms, economic capital usage, and earnings at risk or that otherwise provide a more nuanced view of potential risk.[15]

- Procedures for ensuring the risks of leveraged lending activities are appropriately reflected in an institution's allowance for loan and lease losses (ALLL) and capital adequacy analyses.
- Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms.
- Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors.
- Expected risk-adjusted returns for leveraged transactions.
- Minimum underwriting standards (see the "Underwriting Standards" section below).
- Effective underwriting practices for primary loan origination and secondary loan acquisition.

2010.2.3.1.4 Participations Purchased

Financial institutions purchasing participations and assignments in leveraged lending transactions should make a thorough, independent evaluation of the transaction and the risks involved before committing any funds.[16] They should apply the same standards of prudence, credit assessment and approval criteria, and in-house limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for

- obtaining and independently analyzing full credit information both before the participation is purchased and on a timely basis thereafter;
- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, Uniform Commercial Code (UCC) searches, and other relevant documents;
- carefully monitoring the borrower's performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this document.

2010.2.3.1.5 Underwriting Standards

A financial institution's underwriting standards should be clear, written, and measurable, and should accurately reflect the institution's risk appetite for leveraged lending transactions. A financial institution should have clear underwriting limits regarding leveraged transactions, including the size that the institution will arrange both individually and in the aggregate for distribution. The originating institution should be mindful of reputational risks associated with poorly underwritten transactions, as these risks may find their way into a wide variety of investment instruments and exacerbate systemic risks within the general economy. At a minimum, an institution's underwriting standards should consider the following:

- Whether the business premise for each transaction is sound and the borrower's capital structure is sustainable regardless of whether the transaction is underwritten for the institution's own portfolio or with the intent to distribute. The entirety of a borrower's capital structure should reflect the application of sound financial analysis and underwriting principles.
- A borrower's capacity to repay and the ability to de-lever to a sustainable level over a reasonable period. As a general guide, institutions also should consider whether base-case cash-flow projections show the ability to fully amortize senior secured debt or repay a significant portion of total debt over the medium term.[17] Also, projections should include one or more realistic downside scenarios that reflect key risks identified in the transaction.

15. Flex terms allow the arranger to change interest-rate spreads during the syndication process to adjust pricing to current liquidity levels.

16. Refer to other joint agency guidance regarding purchased participations: OCC Loan Portfolio Management Handbook, www.occ.gov/publications/publications-by-type/comptrollers-handbook/lpm.pdf, "Loan Participations"; Board Commercial Bank Examination Manual, www.federalreserve.gov/boarddocs/supmanual/cbem/cbem.pdf, section 2045.1, "Loan Participations, the Agreements and Participants"; and FDIC Risk Management Manual of Examination Policies, "Section 3.2-Loans," www.fdic.gov/regulations/safety/manual/section3-2.html#otherCredit, Loan Participations (last updated Feb. 2, 2005).

17. In general, the base-case cash-flow projection is the borrower or deal sponsor's expected estimate of financial performance using the assumptions that are deemed most likely to occur. The financial results for the base case should be better than those for the conservative case but worse than those for the aggressive or upside case. A financial institution may adjust the base-case financial projections, if necessary. The most realistic financial projections should be used when measuring a borrower's capacity to repay and de-lever.

- Expectations for the depth and breadth of due diligence on leveraged transactions. This should include standards for evaluating various types of collateral, with a clear definition of credit-risk-management's role in such due diligence.
- Standards for evaluating expected risk-adjusted returns. The standards should include identification of expected distribution strategies, including alternative strategies for funding and disposing of positions during market disruptions, and the potential for losses during such periods.
- The degree of reliance on enterprise value and other intangible assets for loan repayment, along with acceptable valuation methodologies, and guidelines for the frequency of periodic reviews of those values.
- Expectations for the degree of support provided by the sponsor (if any), taking into consideration the sponsor's financial capacity, the extent of its capital contribution at inception, and other motivating factors. Institutions looking to rely on sponsor support as a secondary source of repayment for the loan should be able to provide documentation, including, but not limited to, financial or liquidity statements, showing recently documented evidence of the sponsor's willingness and ability to support the credit extension.
- Whether credit-agreement terms allow for the material dilution, sale, or exchange of collateral or cash-flow-producing assets without lender approval.
- Credit-agreement covenant protections, including financial performance (such as debt-to-cash flow, interest coverage, or fixed-charge coverage), reporting requirements, and compliance monitoring. Generally, a leverage level after planned asset sales (that is, the amount of debt that must be serviced from operating cash flow) in excess of 6* Total Debt/EBITDA raises concerns for most industries.
- Collateral requirements in credit agreements that specify acceptable collateral and risk-appropriate measures and controls, including acceptable collateral types, loan-to-value guidelines, and appropriate collateral-valuation methodologies. Standards for asset-based loans that are part of the entire debt structure also should outline expectations for the use of collateral controls (for example, inspections, independent valuations, and payment lockbox), other types of collateral and account maintenance agreements, and periodic reporting requirements.
- Whether loan agreements provide for distribution of ongoing financial and other relevant credit information to all participants and investors.

Nothing in the preceding standards should be considered to discourage providing financing to borrowers engaged in workout negotiations, or as part of a pre-packaged financing under the bankruptcy code. Neither are they meant to discourage well-structured, standalone asset-based credit facilities to borrowers with strong lender monitoring and controls, for which a financial institution should consider separate underwriting and risk-rating guidance.

2010.2.3.1.6 Valuation Standards

Institutions often rely on enterprise value and other intangibles when (1) evaluating the feasibility of a loan request; (2) determining the debt reduction potential of planned asset sales; (3) assessing a borrower's ability to access the capital markets; and (4) estimating the strength of a secondary source of repayment. Institutions may also view enterprise value as a useful benchmark for assessing a sponsor's economic incentive to provide financial support. Given the specialized knowledge needed for the development of a credible enterprise valuation and the importance of enterprise valuations in the underwriting and ongoing risk-assessment processes, enterprise valuations should be performed by qualified persons independent of an institution's origination function.

There are several methods used for valuing businesses. The most common valuation methods are assets, income, and market. Asset valuation methods consider an enterprise's underlying assets in terms of its net going-concern or liquidation value. Income valuation methods consider an enterprise's ongoing cash flows or earnings and apply appropriate capitalization or discounting techniques. Market valuation methods derive value multiples from comparable company data or sales transactions. However, final value estimates should be based on the method or methods that give supportable and credible results. In many cases, the income method is generally considered the most reliable.

There are two common approaches employed when using the income method. The "capitalized cash flow" method determines the value of a company as the present value of all future cash flows the business can generate in perpetuity. An appropriate cash flow is determined and then divided by a risk-adjusted capitalization rate, most commonly the weighted average cost of capital. This method is most appropriate when cash flows are predictable and stable. The "discounted cash flow" method is a multiple-period valuation model that converts a future series of cash flows into current value by discounting those cash flows at a rate of return (referred to as the "discount rate") that reflects the risk inherent therein. This method is most appropriate when future cash flows are cyclical or variable over time. Both income methods involve numerous assumptions, and therefore, supporting documentation should fully explain the evaluator's reasoning and conclusions.

When a borrower is experiencing a financial downturn or facing adverse market conditions, a lender should reflect those adverse conditions in its assumptions for key variables such as cash flow, earnings, and sales multiples when assessing enterprise value as a potential source of repayment. Changes in the value of a borrower's assets should be tested under a range of stress scenarios, including business conditions more adverse than the base-case scenario. Stress tests of enterprise values and their underlying assumptions should be conducted and documented at origination of the transaction and periodically thereafter, incorporating the actual performance of the borrower and any adjustments to projections. The institution should perform its own discounted cash-flow analysis to validate the enterprise value implied by proxy measures such as multiples of cash flow, earnings, or sales.

Enterprise value estimates derived from even the most rigorous procedures are imprecise and ultimately may not be realized. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral should have policies that provide for appropriate loan-to-value ratios, discount rates, and collateral margins. Based on the nature of an institution's leveraged lending activities, the institution should establish limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value. Regardless of the methodology used, the assumptions underlying enterprise value estimates should be clearly documented, well supported, and understood by the institution's appropriate decisionmakers and risk-oversight units. Further, an institution's valuation methods should be appropriate for the borrower's industry and condition.

2010.2.3.1.7 Pipeline Management

Market disruptions can substantially impede the ability of an underwriter to consummate syndications or otherwise sell down exposures, which may result in material losses. Accordingly, financial institutions should have strong risk management and controls over transactions in the pipeline, including amounts to be held and those to be distributed. A financial institution should be able to differentiate transactions according to tenor, investor class (for example, pro-rata and institutional), structure, and key borrower characteristics (for example, industry).

In addition, an institution should develop and maintain the following:

- A clearly articulated and documented appetite for underwriting risk that considers the potential effects on earnings, capital, liquidity, and other risks that result from pipeline exposures.
- Written policies and procedures for defining and managing distribution failures and "hung" deals, which are identified by an inability to sell down the exposure within a reasonable period (generally 90 days from transaction closing). The financial institution's board of directors and management should establish clear expectations for the disposition of pipeline transactions that are not sold according to their original distribution plan. Such transactions that are subsequently reclassified as hold-to-maturity should also be reported to management and the board of directors.
- Guidelines for conducting periodic stress tests on pipeline exposures to quantify the potential impact of changing economic and market conditions on the institution's asset quality, earnings, liquidity, and capital.
- Controls to monitor performance of the pipeline against original expectations, and regular reports of variances to management, including the amount and timing of syndication and distribution variances and reporting of recourse sales to achieve distribution.
- Reports that include individual and aggregate transaction information that accurately risk rates credits and portrays risk and concentrations in the pipeline.
- Limits on aggregate pipeline commitments.
- Limits on the amount of loans that an institution is willing to retain on its own books (that is, borrower, counterparty, and aggregate hold levels), and limits on the underwriting risk

that will be undertaken for amounts intended for distribution.
- Policies and procedures that identify acceptable accounting methodologies and controls in both functional as well as dysfunctional markets, and that direct prompt recognition of losses in accordance with generally accepted accounting principles.
- Policies and procedures addressing the use of hedging to reduce pipeline and hold exposures, which should address acceptable types of hedges and the terms considered necessary for providing a net credit exposure after hedging.
- Plans and provisions addressing contingent liquidity and compliance with the Board's Regulation W (12 CFR part 223) when market illiquidity or credit conditions change, interrupting normal distribution channels.

2010.2.3.1.8 Reporting and Analytics

The agencies expect financial institutions to diligently monitor higher-risk credits, including leveraged loans. A financial institution's management should receive comprehensive reports about the characteristics and trends in such exposures at least quarterly, and summaries should be provided to the institution's board of directors. Policies and procedures should identify the fields to be populated and captured by a financial institution's Management Information Systems, which should yield accurate and timely reporting to management and the board of directors that may include the following:

- Individual and portfolio exposures within and across all business lines and legal vehicles, including the pipeline.
- Risk-rating distribution and migration analysis, including maintenance of a list of those borrowers who have been removed from the leveraged portfolio due to improvements in their financial characteristics and overall risk profile.
- Industry mix and maturity profile.
- Metrics derived from probabilities of default and loss given default.
- Portfolio performance measures, including noncompliance with covenants, restructurings, delinquencies, non-performing amounts, and charge-offs.
- Amount of impaired assets and the nature of impairment (that is, permanent, or temporary), and the amount of the ALLL attributable to leveraged lending.
- The aggregate level of policy exceptions and the performance of that portfolio.
- Exposures by collateral type, including unsecured transactions and those where enterprise value will be the source of repayment for leveraged loans. Reporting should also consider the implications of defaults that trigger pari passu (in a fair way) treatment for all lenders and, thus, dilute the secondary support from the sale of collateral.
- Secondary-market-pricing data and trading volume, when available.
- Exposures and performance by deal sponsors. Deals introduced by sponsors may, in some cases, be considered exposure to related borrowers. An institution should identify, aggregate, and monitor potential related exposures.
- Gross and net exposures, hedge counterparty concentrations, and policy exceptions.
- Actual versus projected distribution of the syndicated pipeline, with regular reports of excess levels over the hold targets for the syndication inventory. Pipeline definitions should clearly identify the type of exposure. This includes committed exposures that have not been accepted by the borrower, commitments accepted but not closed, and funded and unfunded commitments that have closed but have not been distributed.
- Total and segmented leveraged lending exposures, including subordinated debt and equity holdings, alongside established limits. Reports should provide a detailed and comprehensive view of global exposures, including situations when an institution has indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative.
- Borrower and counterparty leveraged lending reporting should consider exposures booked in other business units throughout the institution, including indirect exposures such as default swaps and total return swaps, naming the distributed paper as a covered or referenced asset or collateral exposure through repo transactions. Additionally, the institution should consider positions held in available-for-sale or traded portfolios or through structured investment vehicles owned or sponsored by the originating institution or its subsidiaries or affiliates.

2010.2.3.1.9 Risk Rating Leveraged Loans

Previously, the agencies issued guidance on rating credit exposures and credit-rating systems, which applies to all credit transactions, including those in the leveraged lending category.[18]

The risk rating of leveraged loans involves the use of realistic repayment assumptions to determine a borrower's ability to de-lever to a sustainable level within a reasonable period. For example, supervisors commonly assume that the ability to fully amortize senior secured debt or the ability to repay at least 50 percent of total debt over a five- to seven-year period provides evidence of adequate repayment capacity. If the projected capacity to pay down debt from cash flow is nominal with refinancing the only viable option, the credit will usually be adversely rated even if it has been recently underwritten. In cases when leveraged loan transactions have no reasonable or realistic prospects to de-lever, a substandard rating is likely. Furthermore, when assessing debt service capacity, extensions and restructures should be scrutinized to ensure that the institution is not merely masking repayment capacity problems by extending or restructuring the loan.

If the primary source of repayment becomes inadequate, the agencies believe that it would generally be inappropriate for an institution to consider enterprise value as a secondary source of repayment unless that value is well supported. Evidence of well-supported value may include binding purchase and sale agreements with qualified third parties or thorough asset valuations that fully consider the effect of the borrower's distressed circumstances and potential changes in business and market conditions. For such borrowers, when a portion of the loan may not be protected by pledged assets or a well-supported enterprise value, examiners generally will rate that portion doubtful or loss and place the loan on nonaccrual status.

18. Board SR-98-25, "Sound Credit Risk Management and the Use of Internal Credit Risk Ratings at Large Banking Organizations"; OCC Comptroller's Handbooks "Rating Credit Risk" and "Leveraged Lending"; and FDIC Risk Management Manual of Examination Policies, "Loan Appraisal and Classification."

2010.2.3.1.10 Credit Analysis

Effective underwriting and management of leveraged lending risk is highly dependent on the quality of analysis employed during the approval process as well as ongoing monitoring. A financial institution's policies should address the need for a comprehensive assessment of financial, business, industry, and management risks including, whether

- cash-flow analyses rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- liquidity analyses include performance metrics appropriate for the borrower's industry, predictability of the borrower's cash flow, measurement of the borrower's operating cash needs, and ability to meet debt maturities;
- projections exhibit an adequate margin for unanticipated merger-related integration costs;
- projections are stress tested for one or more downside scenarios, including a covenant breach;
- transactions are reviewed at least quarterly to determine variance from plan, the related risk implications, and the accuracy of risk ratings and accrual status. From inception, the credit file should contain a chronological rationale for and analysis of all substantive changes to the borrower's operating plan and variance from expected financial performance;
- enterprise and collateral valuations are independently derived or validated outside of the origination function, are timely, and consider potential value erosion;
- collateral liquidation and asset sale estimates are based on current market conditions and trends;
- potential collateral shortfalls are identified and factored into risk rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when exposures rely on refinancing or the issuance of new equity; and
- the borrower is adequately protected from interest rate and foreign exchange risk.

2010.2.3.1.11 Problem-Credit Management

A financial institution should formulate individual action plans when working with borrowers experiencing diminished operating cash flows, depreciated collateral values, or other significant plan variances. Weak initial underwriting of transactions, coupled with poor structure and limited covenants, may make problem-credit discussions and eventual restructurings more difficult for an institution as well as result in less favorable outcomes.

A financial institution should formulate credit policies that define expectations for the management of adversely rated and other high-risk borrowers whose performance departs significantly from planned cash flows, asset sales, collateral values, or other important targets. These policies should stress the need for workout plans that contain quantifiable objectives and measureable time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution's interests, sale of the credit in the secondary market, or liquidation of collateral. Problem credits should be reviewed regularly for risk rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.

2010.2.3.1.12 Deal Sponsors

A financial institution that relies on sponsor support as a secondary source of repayment should develop guidelines for evaluating the qualifications of financial sponsors and should implement processes to regularly monitor a sponsor's financial condition. Deal sponsors may provide valuable support to borrowers such as strategic planning, management, and other tangible and intangible benefits. Sponsors may also provide sources of financial support for borrowers that fail to achieve projections. Generally, a financial institution rates a borrower based on an analysis of the borrower's standalone financial condition. However, a financial institution may consider support from a sponsor in assigning internal risk ratings when the institution can document the sponsor's history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. However, even with documented capacity and a history of support, the sponsor's potential contributions may not mitigate supervisory concerns absent a documented commitment of continued support. An evaluation of a sponsor's financial support should include the following:

- the sponsor's historical performance in supporting its investments, financially and otherwise
- the sponsor's economic incentive to support, including the nature and amount of capital contributed at inception
- documentation of degree of support (for example, a guarantee, comfort letter, or verbal assurance)
- consideration of the sponsor's contractual investment limitations
- to the extent feasible, a periodic review of the sponsor's financial statements and trends, and an analysis of its liquidity, including the ability to fund multiple deals
- consideration of the sponsor's dividend and capital contribution practices
- the likelihood of the sponsor supporting a particular borrower compared to other deals in the sponsor's portfolio
- guidelines for evaluating the qualifications of a sponsor and a process to regularly monitor the sponsor's performance

2010.2.3.1.13 Credit Review

A financial institution should have a strong and independent credit-review function that demonstrates the ability to identify portfolio risks and documented authority to escalate inappropriate risks and other findings to its senior management. Due to the elevated risks inherent in leveraged lending, and depending on the relative size of a financial institution's leveraged lending business, the institution's credit-review function should assess the performance of the leveraged portfolio more frequently and in greater depth than other segments in the loan portfolio. Such assessments should be performed by individuals with the expertise and experience for these types of loans and the borrower's industry. Portfolio reviews should generally be conducted at least annually. For many financial institutions, the risk characteristics of leveraged portfolios, such as high reliance on enterprise value, concentrations, adverse risk rating trends, or portfolio performance, may dictate reviews that are more frequent.

A financial institution should staff its internal credit-review function appropriately and ensure that the function has sufficient resources to ensure timely, independent, and accurate assessments of leveraged lending transactions. Reviews should evaluate the level of risk, risk rating integrity, valuation methodologies, and the quality of risk management. Internal credit reviews should include the review of the institution's leveraged lending practices, policies, and procedures to ensure that they are consistent with regulatory guidance.

2010.2.3.1.14 Stress Testing

A financial institution should develop and implement guidelines for conducting periodic portfolio stress tests on loans originated to hold as well as loans originated to distribute, and sensitivity analyses to quantify the potential impact of changing economic and market conditions on its asset quality, earnings, liquidity, and capital.[19] The sophistication of stress testing practices and sensitivity analyses should be consistent with the size, complexity, and risk characteristics of the institution's leveraged loan portfolio. To the extent a financial institution is required to conduct enterprise-wide stress tests, the leveraged portfolio should be included in any such tests.

2010.2.3.1.15 Conflicts of Interest

A financial institution should develop appropriate policies and procedures to address and to prevent potential conflicts of interest when it has equity and lending positions. For example, an institution may be reluctant to use an aggressive collection strategy with a problem borrower because of the potential impact on the value of an institution's equity interest. A financial institution may encounter pressure to provide financial or other privileged client information that could benefit an affiliated equity investor. Such conflicts also may occur when the underwriting financial institution serves as financial advisor to the seller and simultaneously offers financing to multiple buyers (that is, stapled financing). Similarly, there may be conflicting interests among the different lines of business within a financial institution or between the financial institution and its affiliates. When these situations occur, potential conflicts of interest arise between the financial institution and its customers. Policies and procedures should clearly define potential conflicts of interest, identify appropriate risk-management controls and procedures, enable employees to report potential conflicts of interest to management for action without fear of retribution, and ensure compliance with applicable laws. Further, management should have an established training program for employees on appropriate practices to follow to avoid conflicts of interest and provide for reporting, tracking, and resolution of any conflicts of interest that occur.

2010.2.3.1.16 Reputational Risk

Leveraged lending transactions are often syndicated through the financial and institutional markets. A financial institution's apparent failure to meet its legal responsibilities in underwriting and distributing transactions can damage its market reputation and impair its ability to compete. Similarly, a financial institution that distributes transactions, which over time have significantly higher default or loss rates and performance issues, may also see its reputation damaged.

2010.2.3.1.17 Compliance

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure potential conflicts are avoided and laws and regulations are adhered to, an institution's independent compliance function should periodically review the institution's leveraged lending activity. This guidance is consistent with the principles of safety and soundness and other agency guidance related to commercial lending.

In particular, because leveraged transactions often involve a variety of types of debt and bank products, a financial institution should ensure that its policies incorporate safeguards to prevent violations of anti-tying regulations. Section 106(b) of the Bank Holding Company Act Amendments of 1970[9k] prohibits certain forms of product tying by financial institutions and their affiliates. The intent behind Section 106(b) is to prevent financial institutions from using their market power over certain products to obtain an unfair competitive advantage in other products.

In addition, equity interests and certain debt instruments used in leveraged transactions may constitute "securities" for the purposes of federal securities laws. When securities are

19. See interagency guidance "Supervisory Guidance on Stress Testing for Banking Organizations with More Than $10 Billion in Total Consolidated Assets" (see Board SR Letter 12-7 and its attachment), 77 Fed. Reg. 29458 (May 17, 2012), at www.gpo.gov/fdsys/pkg/FR-2012-05-17/html/2012-11989.htm, and the joint "Statement to Clarify Supervisory Expectations for Stress Testing by Community Banks," May 14, 2012, by the OCC at www.occ.gov/news-issuances/news-releases/2012/nr-ia-2012-76a.pdf; the Board at www.federal reserve.gov/newsevents/press/bcreg/bcreg20120514b1.pdf; and the FDIC at www.fdic.gov/news/news/press/2012/pr12054a.pdf. 9k. 12 USC 1972.

involved, an institution should ensure compliance with applicable securities laws, including disclosure and other regulatory requirements. An institution should also establish policies and procedures to appropriately manage the internal dissemination of material, nonpublic information about transactions in which it plays a role.

2010.2.4 CREDIT-RISK MANAGEMENT GUIDANCE FOR HOME EQUITY LENDING

On May 16, 2005, the federal bank and thrift regulatory agencies collectively issued the following interagency guidance. The guidance is intended to promote sound credit-risk management practices at banking organizations[21] that have home equity lending programs, including open-end home equity lines of credit (HELOCs) and closed-end home equity loans (HELs). Banking organizations' credit-risk management practices for home equity lending need to keep pace with the rapid growth in home equity lending and should emphasize compliance with sound underwriting standards and practices.

The risk factors listed below, combined with an inherent vulnerability to rising interest rates, suggest that banking organizations need to fully recognize the risk embedded in their home equity portfolios. Following are the specific product, risk-management, and underwriting risk factors and trends that deserve scrutiny:

1. interest-only features that require no amortization of principal for a protracted period
2. limited or no documentation of a borrower's assets, employment, and income (known as "low do" or "no doc" lending)
3. higher loan-to-value (LTV) and debt-to-income (DTI) ratios
4. lower credit-risk scores for underwriting home equity loans;
5. greater use of automated valuation models (AVMs) and other collateral-evaluation tools for the development of appraisals and evaluations
6. an increase in the number of transactions generated through a loan broker or other third party

Home equity lending can be conducted in a safe and sound manner if pursued with the appropriate risk-management structure, including adequate allowances for loan and lease losses and appropriate capital levels. Sound practices call for fully articulated policies that address marketing, underwriting standards, collateral-valuation management, individual-account and portfolio management, and servicing.

Banking organizations should ensure that risk-management practices keep pace with the growth and changing risk profile of home equity portfolios. Management should actively assess a portfolio's vulnerability to changes in consumers' ability to pay and the potential for declines in home values. Active portfolio management is especially important for banking organizations that project or have already experienced significant growth or concentrations, particularly in higher-risk products such as high-LTV, "low doc" or "no doc," interest-only, or third-party-generated loans. (See SR-05-11.)

2010.2.4.1 Credit-Risk Management Systems

2010.2.4.1.1 Product Development and Marketing

In the development of any new product offering, product change, or marketing initiative, management should have a review and approval process that is sufficiently broad to ensure compliance with the banking organization's internal policies and applicable laws and regulations[22] and to evaluate the credit, interest-rate, operational, compliance, reputation, and legal risks. In particular, risk-management personnel should be involved in product development, including an evaluation of the targeted population and the product(s) being offered. For example, material

21. The agencies are the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the National Credit Union Administration. The interagency guidance frequently uses the term "financial institutions." Bank holding companies have financial institutions and various credit-extending nonbanking subsidiaries. The combined entity is being referred to in this guidance as a banking organization.

22. Applicable laws include the Federal Trade Commission Act; the Equal Credit Opportunity Act (ECOA); the Truth in Lending Act (TILA), including the Home Ownership and Equity Protection Act (HOEPA); the Fair Housing Act; the Real Estate Settlement Procedures Act (RESPA); and the Home Mortgage Disclosure Act (HMDA), as well as applicable state consumer protection laws.

changes in the targeted market, origination source, or pricing could have a significant impact on credit quality and should receive senior management approval.

When HELOCs or HELs are marketed or closed by a third party, banking organizations should have standards that provide assurance that the third party also complies with applicable laws and regulations, including those on marketing materials, loan documentation, and closing procedures. (For further details on agent relationships, see section 2010.2.4.1.3, "Third-Party Originations.") Finally, management should have appropriate monitoring tools and management information systems (MIS) to measure the performance of various marketing initiatives, including offers to increase a line, extend the interest-only period, or adjust the interest rate or term.

2010.2.4.1.2 Origination and Underwriting

All relevant risk factors should be considered when establishing product offerings and underwriting guidelines. Generally, these factors should include a borrower's income and debt levels, credit score (if obtained), and credit history, as well as the loan size, collateral value (including valuation methodology), lien position, and property type and location.

Consistent with the Federal Reserve's regulations on real estate lending standards, prudently underwritten home equity loans should include an evaluation of a borrower's capacity to adequately service the debt.[23] Given the home equity products' long-term nature and the large credit amount typically extended to a consumer, an evaluation of repayment capacity should consider a borrower's income and debt levels and not just a credit score.[24] Credit scores are based upon a borrower's historical financial performance. While past performance is a good indicator of future performance, a significant change in a borrower's income or debt levels can adversely alter the borrower's ability to pay. How much verification these underwriting factors require will depend upon the individual loan's credit risk.

HELOCs generally do not have interest-rate caps that limit rate increases.[25] Rising interest rates could subject a borrower to significant payment increases, particularly in a low-interest-rate environment. Therefore, underwriting standards for interest-only and variable-rate HELOCs should include an assessment of the borrower's ability to amortize the fully drawn line over the loan term and to absorb potential increases in interest rates.

2010.2.4.1.3 Third-Party Originations

Banking organizations often use third parties, such as mortgage brokers or correspondents, to originate loans. When doing so, they should have strong control systems to ensure the quality of originations and compliance with all applicable laws and regulations, and to help prevent fraud.

Brokers are firms or individuals, acting on behalf of either the banking organization or the borrower, who match the borrower's needs with institutions' mortgage-origination programs. Brokers take applications from consumers. Although they sometimes process the application and underwrite the loan to qualify the application for a particular lender, they generally do not use their own funds to close loans. Whether brokers are allowed to process and perform any underwriting will depend on the relationship between the banking organization and the broker. For control purposes, the banking organization should retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and independence in the appraisal and evaluation function.

Correspondents are financial companies that usually close and fund loans in their own name and subsequently sell them to a lender. Banking organizations commonly obtain loans through correspondents and, in some cases, delegate the underwriting function to the correspondent. In delegated underwriting relationships, a banking organization grants approval to a correspondent financial company to process, underwrite, and close loans according to the delegator's processing and underwriting requirements and is committed to purchase those loans. The delegating

23. On December 23, 1992, the Federal Reserve announced the adoption of uniform rules on real estate lending standards and issued the Interagency Guidelines for Real Estate Lending Policies. See subsection 2010.2.1. See also 12 C.F.R., section 208.51 and appendix C.

24. The Interagency Guidelines Establishing Standards for Safety and Soundness also call for documenting the source of repayment and assessing the ability of the borrower to repay the debt in a timely manner. See 12 C.F.R. 208, appendix D-1.

25. While there may be periodic rate increases, the lender must state in the consumer credit contract the maximum interest rate that may be imposed during the term of the obligation. See 12 C.F.R. 226.30(b).

banking organization should have systems and controls to provide assurance that the correspondent is appropriately managed, is financially sound, and provides mortgages that meet the banking organization's prescribed underwriting guidelines and that comply with applicable consumer protection laws and regulations. A quality-control unit or function in the delegating banking organization should closely monitor the quality of loans that the correspondent underwrites. Monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities.

Both brokers and correspondents are compensated based upon mortgage-origination volume and, accordingly, have an incentive to produce and close as many loans as possible. Therefore, banking organizations should perform comprehensive due diligence on third-party originators prior to entering a relationship. In addition, once a relationship is established, the banking organization should have adequate audit procedures and controls to verify that the third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.[26] Monitoring the quality of loans by origination source, and uncovering such problems as early payment defaults and incomplete packages, enables management to know if third-party originators are producing quality loans. If ongoing credit or documentation problems are discovered, the banking organization should take appropriate action against the third party, which could include terminating its relationship with the third party.

2010.2.4.1.4 Collateral-Valuation Management

Competition, cost pressures, and advancements in technology have prompted banking organizations to streamline their appraisal and evaluation processes. These changes, coupled with banking organizations underwriting to higher LTVs, have heightened the importance of strong collateral-valuation management policies, procedures, and processes.

Banking organizations should have appropriate collateral-valuation policies and procedures that ensure compliance with the Federal Reserve's appraisal regulations[27] and the Interagency Appraisal and Evaluation Guidelines (the guidelines).[28] In addition, the banking organization should—

1. establish criteria for determining the appropriate valuation methodology for a particular transaction, based on the risk in the transaction and loan portfolio (For example, higher-risk transactions or nonhomogeneous property types should be supported by more-thorough valuations. The banking organization should also set criteria for determining the extent to which an inspection of the collateral is necessary.)
2. ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation
3. implement policies and controls to preclude "value shopping" (Use of several valuation tools may return different values for the same property. These differences can result in systematic overvaluation of properties if the valuation choice becomes driven by the highest property value. If several different valuation tools or AVMs are used for the same property, the banking organization should adhere to a policy for selecting the most reliable method, rather than the highest value.)
4. require sufficient documentation to support the collateral valuation in the appraisal or evaluation

2010.2.4.1.5 AVMs

When AVMs are used to support evaluations or appraisals, the banking organization should validate the models on a periodic basis to mitigate the potential valuation uncertainty in the model. As part of the validation process, the banking organization should document the validation's

26. In addition, a banking organization that purchases loans subject to TILA's rules for HELs with high rates or high closing costs (loans covered by HOEPA) can incur assignee liability unless the banking organization can reasonably show that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers and correspondents may have implications for liability under ECOA, and for reporting responsibilities under HMDA.

27. 12 C.F.R. 208, subpart E, and 12 C.F.R. 225, subpart G.

28. See SR-94-55, dated October 27, 1994. These revised guidelines include the June 1994 amendments. See also section 2231.0.15, appendix A.

analysis, assumptions, and conclusions. The validation process includes back-testing a representative sample of the valuations against market data on actual sales (where sufficient information is available). The validation process should cover properties representative of the geographic area and property type for which the tool is used.

Many AVM vendors, when providing a value, will also provide a "confidence score," which usually relates to the accuracy of the value provided. Confidence scores, however, come in many different formats and are calculated based on differing scoring systems. Banking organizations that use AVMs should have an understanding of how the model works as well as what the confidence scores mean. Confidence levels should be established by the banking organization that are appropriate for the risk in a given transaction or group of transactions.

When tax-assessment valuations are used as a basis for the collateral valuation, the banking organization should be able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value as part of the validation process.

2010.2.4.1.6 Account Management

Since HELOCs often have long-term, interest-only payment features, banking organizations should have risk-management techniques that identify higher-risk accounts and adverse changes in account risk profiles, thereby enabling management to implement timely preventive action (e.g., freezing or reducing lines). Further, a banking organization should have risk-management procedures to evaluate and approve additional credit on an existing line or extending the interest-only period. Account-management practices should be appropriate for the size of the portfolio and the risks associated with the types of home equity lending.

Effective account-management practices for large portfolios or portfolios with high-risk characteristics include—

1. periodically refreshing credit-risk scores on all customers;
2. using behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
3. periodically assessing utilization rates;
4. periodically assessing payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the line to keep payments current;
5. monitoring home values by geographic area; and
6. obtaining updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral.

The frequency of these actions should be commensurate with the risk in the portfolio. Banking organizations should conduct annual credit reviews of HELOC accounts to determine whether the line of credit should be continued, based on the borrower's current financial condition.[29]

When appropriate, banking organizations should refuse to extend additional credit or reduce the credit limit of a HELOC, bearing in mind that under Regulation Z such steps can be taken only in limited circumstances. These include, for example, when the value of the collateral declines significantly below the appraised value for purposes of the HELOC, default of a material obligation under the loan agreement, or deterioration in the borrower's financial circumstances.[30] In order to freeze or reduce credit lines due to deterioration in a borrower's financial circumstances, two conditions must be met: (1) there must be a "material" change in the borrower's financial circumstances and (2) as a result of this change, the banking organization must have a reasonable belief that the borrower will be unable to fulfill the plan's payment obligations.

Account-management practices that do not adequately control authorizations and provide for timely repayment of over-limit amounts may significantly increase a portfolio's credit risk. Authorizations of over-limit home equity lines of credit should be restricted and subject to appropriate policies and controls. A banking

29. Under the Federal Reserve's risk-based capital guidelines, an unused HELOC commitment with an original maturity of one year or more may be allocated a zero percent conversion factor if the banking organization conducts at least an annual credit review and is able to unconditionally cancel the commitment (i.e., prohibit additional extensions of credit, reduce the credit line, and terminate the line) to the full extent permitted by relevant federal law. See 12 C.F.R. 208, appendix A, III.D.4., and 12 C.F.R. 225, appendix A, III.D.4.

30. Regulation Z does not permit these actions to be taken in circumstances other than those specified in the regulation. See 12 C.F.R. 226.5b(f)(3)(vi)(A)–(F).

organization's practices should require over-limit borrowers to repay in a timely manner the amount that exceeds established credit limits. Management information systems should be sufficient to enable management to identify, measure, monitor, and control the unique risks associated with over-limit accounts.

2010.2.4.1.7 Portfolio Management

Banking organizations should implement an effective portfolio credit-risk management process for their home equity portfolios that includes the following.

2010.2.4.1.7.1 Policies

The Federal Reserve's real estate lending standards regulations require that a banking organization's real estate lending policies be consistent with safe and sound banking practices and that the banking organization's board of directors review and approve these policies at least annually. Before implementing any changes to policies or underwriting standards, management should assess the potential effect on the banking organization's overall risk profile, which would include the effect on concentrations, profitability, and delinquency and loss rates. The accuracy of these estimates should be tested by comparing them with actual experience.

2010.2.4.1.7.2 Portfolio Objectives and Risk Diversification

Effective portfolio management should clearly communicate portfolio objectives, such as growth targets, utilization, rate-of-return hurdles, and default and loss expectations. For banking organizations with significant concentrations of HELs or HELOCs, limits should be established and monitored for key portfolio segments, such as geographic area, loan type, and higher-risk products. When appropriate, consideration should be given to the use of risk mitigants, such as private mortgage insurance, pool insurance, or securitization. As the portfolio approaches concentration limits, the banking organization should analyze the situation sufficiently to enable the banking organization's board of directors and senior management to make a well-informed decision to either raise concentration limits or pursue a different course of action.

Effective portfolio management requires an understanding of the various risk characteristics of the home equity portfolio. To gain this understanding, a banking organization should analyze the portfolio by segment, using criteria such as product type, credit-risk score, DTI, LTV, property type, geographic area, collateral-valuation method, lien position, size of credit relative to prior liens, and documentation type (such as "no doc" or "low doc").

2010.2.4.1.7.3 Management Information Systems

By maintaining adequate credit MIS, a banking organization can segment loan portfolios and accurately assess key risk characteristics. The MIS should also provide management with sufficient information to identify, monitor, measure, and control home equity concentrations. Banking organizations should periodically assess the adequacy of their MIS in light of growth and changes in their appetite for risk. For banking organizations with significant concentrations of HELs or HELOCs, MIS should include, at a minimum, reports and analysis of the following:

1. production and portfolio trends by product, loan structure, originator channel, credit score, LTV, DTI, lien position, documentation type, market, and property type
2. delinquency and loss-distribution trends by product and originator channel with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
3. vintage tracking
4. the performance of third-party originators (brokers and correspondents)
5. market trends by geographic area and property type to identify areas of rapidly appreciating or depreciating housing values

2010.2.4.1.7.4 Policy and Underwriting-Exception Systems

Banking organizations should have a process for identifying, approving, tracking, and analyzing underwriting exceptions. Reporting systems that capture and track information on exceptions, both by transaction and by relevant portfolio segments, facilitate the management of a portfolio's credit risk. The aggregate data is useful to management in assessing portfolio risk profiles and monitoring the level of adherence to policy and underwriting standards by various origination channels. Analysis of the information may also be helpful in identifying correlations between certain types of exceptions and delinquencies and losses.

2010.2.4.1.7.5 High-LTV Monitoring

To clarify the real estate lending standards regulations and interagency guidelines, the agencies issued Guidance on High Loan-To-Value (HLTV) Residential Real Estate Lending (the HLTV guidance) in October 1999. The HLTV guidance clarified the Interagency Real Estate Lending Guidelines and the supervisory loan-to-value limits for loans on one- to four-family residential properties. Banking organizations are expected to ensure compliance with the supervisory loan-to-value limits of the Interagency Real Estate Lending Guidelines. The HLTV guidance outlines controls that the banking organizations should have in place when engaging in HLTV lending. Banking organizations should accurately track the volume of HLTV loans, including HLTV home equity and residential mortgages, and report the aggregate of such loans to the banking organization's board of directors. Specifically, banking organizations are reminded that:

1. Loans in excess of the supervisory LTV limits should be identified in the banking organization's records. The aggregate of high-LTV one-to four-family residential loans should not exceed 100 percent of the banking organization's total capital.[31] Within that limit, high-LTV loans for properties other than one- to four-family residential properties should not exceed 30 percent of capital.
2. In calculating the LTV and determining compliance with the supervisory LTVs, the banking organization should consider all senior liens. All loans secured by the property and held by the banking organization are reported as an exception if the combined LTV of a loan and all senior liens on an owner-occupied one- to four-family residential property equals or exceeds 90 percent and if there is no additional credit enhancement in the form of either mortgage insurance or readily marketable collateral.
3. For the LTV calculation, the loan amount is the legally binding commitment (that is, the entire amount that the banking organization is legally committed to lend over the life of the loan).
4. All real–estate secured loans in excess of supervisory LTV limits should be aggregated and included in a quarterly report for the banking organization's board of directors.

Certain insurance products help banking organizations mitigate the credit risks of HLTV residential loans. Insurance policies that cover a "pool" of loans can be an efficient and effective credit-risk management tool. But if a policy has a coverage limit, the coverage may be exhausted before all loans in the pool mature or pay off. The Federal Reserve considers pool insurance to be a sufficient credit enhancement to remove the HLTV designation in the following circumstances: (1) the policy is issued by an acceptable mortgage insurance company, (2) it reduces the LTV for each loan to less than 90 percent, and (3) it is effective over the life of each loan in the pool.

2010.2.4.1.7.6 Stress Testing for Portfolios

Banking organizations with home equity concentrations as well as higher-risk portfolios are encouraged to perform sensitivity analyses on key portfolio segments. This type of analysis identifies possible events that could increase risk within a portfolio segment or for the portfolio as a whole. Banking organizations should consider stress tests that incorporate interest-rate increases and declines in home values. Since these events often occur simultaneously, the agencies recommend testing for these events together. Banking organizations should also periodically analyze markets in key geographic areas, including identified "soft" markets. Management should consider developing contingency strategies for scenarios and outcomes that extend credit risk beyond internally established

31. For purposes of the Interagency Real Estate Lending Standards Guidelines, high-LTV one- to four-family residential property loans include (1) a loan for raw land zoned for one- to four-family residential use with an LTV ratio greater than 65 percent; (2) a residential land development loan or improved lot loan with an LTV greater than 75 percent; (3) a residential construction loan with an LTV ratio greater than 85 percent; (4) a loan on non-owner occupied one- to four-family residential property with an LTV greater than 85 percent; and (5) a permanent mortgage or home equity loan on an owner-occupied residential property with an LTV equal to or exceeding 90 percent without mortgage insurance, readily marketable collateral, or other acceptable collateral.

risk tolerances. These contingency plans might include increased monitoring, tightening underwriting, limiting growth, and selling loans or portfolio segments.

2010.2.4.1.8 Operations, Servicing, and Collections

Effective procedures and controls should be maintained for such support functions as perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes. Credit-risk management should oversee these support functions to ensure that operational risks are properly controlled.

2010.2.4.1.8.1 Lien Recording

Banking organizations should take appropriate measures to safeguard their lien position. They should verify the amount and priority of any senior liens prior to closing the loan. This information is necessary to determine the loan's LTV ratio and to assess the credit support of the collateral. Senior liens include first mortgages, outstanding liens for unpaid taxes, outstanding mechanic's liens, and recorded judgments on the borrower.

2010.2.4.1.8.2 Problem-Loan Workouts and Loss-Mitigation Strategies

Banking organizations should have established policies and procedures for problem loan workouts and loss-mitigation strategies. Policies should be in accordance with the requirements of the FFIEC's Uniform Retail Credit Classification and Account Management Policy, issued June 2000 (see SR-00-8 and section 2241.0) and should, at a minimum, address the following:

1. circumstances and qualifying requirements for various workout programs including extensions, re-ages, modifications, and re-writes (Qualifying criteria should include an analysis of a borrower's financial capacity to service the debt under the new terms.)
2. circumstances and qualifying criteria for loss-mitigating strategies, including foreclosure
3. appropriate MIS to track and monitor the effectiveness of workout programs, including tracking the performance of all categories of workout loans (For large portfolios, vintage delinquency and loss tracking also should be included.)

While banking organizations are encouraged to work with borrowers on a case-by-case basis, a banking organization should not use workout strategies to defer losses. Banking organizations should ensure that credits in workout programs are evaluated separately for the allowance for loan and lease losses (ALLL), because such credits tend to have higher loss rates than other portfolio segments.

2010.2.4.1.9 Secondary-Market Activities

More banking organizations are issuing HELOC mortgage-backed securities (that is, securitizing HELOCs). Although such secondary-market activities can enhance credit availability and a banking organization's profitability, they also pose certain risk-management challenges. A banking organization's risk-management systems should address the risks of HELOC securitizations.[32]

2010.2.4.1.10 Portfolio Classifications, Allowance for Loan and Lease Losses, and Capital

The FFIEC's Uniform Retail Credit Classification and Account Management Policy governs the classification of consumer loans and establishes general classification thresholds that are based on delinquency. Banking organizations and the Federal Reserve's examiners have the discretion to classify entire retail portfolios, or segments thereof, when underwriting weaknesses or delinquencies are pervasive and present an excessive level of credit risk. Portfolios of high-LTV loans to borrowers who exhibit inadequate capacity to repay the debt within a reasonable time may be subject to classification.

Banking organizations should establish appropriate ALLL and hold capital commensurate with the riskiness of their portfolios. In determining the ALLL adequacy, a banking organization should consider how the interest-only and draw features of HELOCs during the

32. See the risk management and capital adequacy of exposures arising from secondary-market credit activities discussion in SR-97-21 (see also section 2129.05).

lines' revolving period could affect the loss curves for its HELOC portfolio. Those banking organizations engaging in programmatic subprime home equity lending or banking organizations that have higher-risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.[33]

2010.2.5 OVERSIGHT OF CONCENTRATIONS IN COMMERCIAL REAL ESTATE LENDING AND SOUND RISK-MANAGEMENT LENDING

As part of a bank holding company inspection, the examiner should make an assessment of the parent company's supervision and control over its subsidiary lending activities, which includes an overall assessment of the banking organization's credit-risk concentrations, including the risk concentrations in commercial real estate lending. (See also section 2010.2.) Banking organizations, including bank holding companies, are responsible for establishing the necessary and appropriate management oversight of their bank and nonbank subsidiaries by administering, monitoring, and assuring adherence to the organization's lending policies and practices for controlling "concentration risk." Banking organizations should therefore have adequate management information systems (including the appropriate accounting and internal control systems) in place to accomplish their supervisory oversight and to control such credit concentrations.

The following guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance) was issued on December 6, 2006 (effective on December 12, 2006).[34] The guidance was developed to reinforce sound risk-management practices for institutions (includes banking organizations) with high and increasing concentrations of commercial real estate loans on their balance sheets. An institution's strong risk-management practices and its maintenance of appropriate levels of capital are important elements of a sound CRE lending program, particularly when an institution has a concentration in CRE or a CRE lending strategy leading to a concentration. However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution's existing risk-management practices, and its levels of capital. (See 71 *Fed. Reg.* 74,580 [December 12, 2006], the Federal Reserve Board's press release dated December 6, 2006, and SR-07-01 and its attachments.) See also SR-15-17, "Interagency Statement on Prudent Risk Management for Commercial Real Estate Lending" and its attachment and the Board's December 18, 2015, press release.

2010.2.5.1 Scope of the CRE Concentration Guidance

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one- to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of the sale, refinancing, or permanent financing of the property. Loans to real estate investment

33. See the January 2001 Interagency Expanded Guidance for Subprime Lending Programs (section 2128.08) for supervisory expectations regarding risk-management processes, the allowance for loan and lease losses, and capital adequacy for banking organizations engaging in subprime-lending programs.

34. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation after the bank supervisory agencies' careful consideration of the comments received following the initial issuance of the January 10, 2006, proposed guidance on concentrations in commercial real estate lending. The final guidance is applicable to state member banks and broadly applicable to bank holding companies and their nonbank subsidiaries. For the purposes of this section the references to banks, institutions, and banking organizations is confined to those entities for which the Board of Governors of the Federal Reserve System has supervisory authority.

trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does not include loans secured by nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance's "Supervisory Oversight" section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

2010.2.5.2 CRE Concentration Assessments

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank's CRE portfolio stratification should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

2010.2.5.3 CRE Risk Management

The sophistication of a bank's CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit-risk review function

2010.2.5.3.1 Board and Management Oversight of CRE Concentration Risk

A bank's board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve's real estate lending regulations require that each bank adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and
4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank's strategies and to respond to changes in market conditions.

2010.2.5.3.2 CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank's overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation of the bank's ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

2010.2.5.3.3 CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank's lending strategy, underwriting standards, and risk tolerances. A bank should periodically assess the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio's size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

2010.2.5.3.4 Market Analysis

Market analysis should provide the bank's management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank's analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

2010.2.5.3.5 Credit Underwriting Standards

A bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve's real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation[35]
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment and maintenance of hard equity by the borrower
8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank's lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank's policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank's internal lending standards and the Federal Reserve's supervisory LTV limits[36] should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank's established risk tolerance limits.

35. Refer to the Federal Reserve's appraisal regulations: 12 C.F.R. 208 subpart E and 12 C.F.R. 225, subpart G.

36. The Interagency Guidelines for Real Estate Lending state that loans exceeding the supervisory LTV guidelines should be recorded in the bank's records and reported to the board at least quarterly.

Credit analysis should reflect both the borrower's overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank's minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

2010.2.5.3.6 CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank's CRE portfolio, taking into consideration the prevailing market environment and the bank's business strategy.

2010.2.5.3.7 Credit-Risk Review Function

A strong credit-risk review function is critical for a bank's self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank's credit-risk review function to assess credit quality and, ultimately, to identify problem loans.

Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

2010.2.5.4 Supervisory Oversight Of CRE Concentration Risk

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land[37] represent 100 percent or more of the bank's total capital[38] or
2. total commercial real estate loans as defined in this guidance[39] represent 300 percent or more of the bank's total capital, and the outstanding balance of the bank's commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the supervisory monitoring criteria do not constitute limits on a bank's lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a "safe harbor" for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

37. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.

38. For purposes of this guidance, the term *total capital* means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.

39. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.

2010.2.5.4.1 Evaluation of CRE Concentrations

The effectiveness of a bank's risk-management practices will be a key component of the supervisory evaluation of the bank's CRE concentrations. Examiners will engage in a dialogue with the bank's management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank's own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of takeout commitments on construction loans
5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

2010.2.5.4.2 Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve's existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank's capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.

2010.2.6 GUIDANCE ON PRIVATE STUDENT LOANS WITH GRADUATED REPAYMENT TERMS AT ORIGINATION

On January 29, 2015, interagency[40] guidance[41] was issued to provide financial institutions with principles applicable to private student loans that have graduated repayment terms. Financial institutions that originate private student loans may offer borrowers graduated repayment terms in addition to fixed amortizing terms at the time of loan origination. Graduated repayment terms are structured to provide for lower initial monthly payments that gradually increase. Refer to SR-15-2/CA-15-1 and its attachment.

Although most student loan agreements include a grace period[42] to help with the post-education transition, the agencies and SLC recognize that students leaving higher education programs may prefer more flexibility to transition into the labor market because of a number of factors, such as competitive job markets, traditionally low entry-level salaries, and higher student debt loads. Graduated repayment terms may align borrowers' income levels with loan repayment requirements, provide flexibility to repay the debt sooner if borrowers' incomes increase more quickly than projected, and may help long-term probability of full repayment.

Financial institutions that originate private student loans with graduated repayment terms should prudently underwrite the loans in a manner consistent with safe and sound lending practices. Financial institutions should provide disclosures that clearly communicate the timing and the amount of payments to facilitate a borrower's understanding of the loan's terms and features.

2010.2.6.1 Principles for Private Student Loans with Graduated Repayment Terms at Origination

Financial institutions should consider the following principles in their policies and procedures for underwriting private student loans with graduated repayment terms at origination:[43]

- *Ensure orderly repayment.* Private student loans should have defined repayment periods and promote orderly repayment over the life of the loans. Graduated repayment terms should ensure timely loan repayment and be appropriately calibrated according to reasonable industry and market standards based on the amount of debt outstanding. Graduated repayment terms should avoid negative amortization or balloon payments.
- *Avoid payment shock.*[44] Graduated repayment terms should result in monthly payments that a borrower can meet in a sustained manner over the life of the loan. Graduated increases in a borrower's monthly payment should begin early in the repayment period and phase in the amortization of the principal balance to limit payment shock to the borrower.
- *Align payment terms with a borrower's income.* Graduated repayment terms should be based on reasonable assumptions about the ability to repay of the borrower and cosigner, if any. Lender underwriting should include an assessment of a borrower's (and, if applicable, a cosigner's) ability to repay the highest amortizing payment over the term of the loan. Graduated repayment terms should not be structured in a way that could mask delinquencies or defer losses.
- *Provide borrowers with clear disclosures.* Financial institutions that offer private student loans with graduated repayment terms should provide borrowers with disclosures in compliance with all applicable laws and regulations. For example, the Truth in Lending Act, as implemented by Regulation Z, includes specific private student loan disclosure content requirements.[45] Ensuring that disclosures clearly communicate the timing and the

40. The agencies consist of the Board of Governors of the Federal Reserve System, the Consumer Financial Protection Bureau, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency.

41. In implementing this guidance, the agencies will examine financial institutions consistent with their respective authorities.

42. A grace period is the allotted amount of time during which borrowers are not expected to make payments on student loans after initially leaving higher education programs or dropping below half-time enrollment status.

43. In addition to offering graduated repayment terms at origination, financial institutions may also offer graduated repayment terms as well as other types of workout options to borrowers experiencing financial difficulties, as addressed in ″Banking Agencies Encourage Financial Institutions to Work With Student Loan Borrowers Experiencing Financial Difficulties,″ issued July 25, 2013.

44. Payment shock occurs when a borrower experiences a significant increase in the amount of the monthly payment after a reset date.

45. 12 CFR 1026.46 and 12 CFR 1026.47.

amount of payments facilitates borrowers' understanding of their loans' terms and features.

- *Comply with all applicable federal and state consumer laws and regulations and reporting standards.*[46] Private student loans with graduated repayment terms must comply with all applicable consumer protection laws. These include, but are not limited to, the Electronic Fund Transfer Act, the Equal Credit Opportunity Act, federal and state prohibitions against unfair, deceptive, or abusive acts or practices (such as section 5 of the Federal Trade Commission Act and sections 1031 and 1036 of the Dodd-Frank Wall Street Reform and Consumer Protection Act), the Truth in Lending Act, and the regulations issued pursuant to those laws.
- *Contact borrowers before reset dates.* Before originating private students loans with graduated repayment terms, financial institutions should develop processes for contacting borrowers before the start of the repayment period and before each payment reset date. These contacts can help establish student debt as a priority in borrowers' payment hierarchies[47] and aid borrowers in responding effectively to payment increases and other potential repayment challenges.

2010.2.7 LOAN PARTICIPATIONS, THE AGREEMENTS AND PARTICIPANTS

This subsection provides supervisory and accounting guidance for examiners to use in their inspection (or examination) and review of a bank holding company's (BHC's) or bank's use, purchase, or sale of loan participation agreements.[48] BHCs should manage and control aggregate credit and other risk exposures on a consolidated basis while recognizing legal distinctions and possible obstacles to asset movements within the parent company or its subsidiaries. Additional guidance, research, and information on loan participations and loan participation agreements will be developed and considered for future issuance and implementation.

A loan participation is an agreement that transfers a stated ownership interest in a loan to one or more other BHCs or subsidiaries, or other entities. The transfer represents an ownership interest in an individual financial asset. The lead BHC (or lead subsidiary) retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. The lead BHC or lead subsidiary should ensure that comprehensive participation agreements with originating institutions are in place for each loan facility before they consider purchasing any participating interest.

Many BHCs and their subsidiaries purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with BHC affiliates, groups of BHCs or chain banks, or other subsidiaries. Alternatively, a purchasing BHC or subsidiary may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a BHC or subsidiary may purchase or participate in a loan to accommodate another unrelated bank with which it has established an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a BHC's or bank's overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a BHC or bank diversify its risks and improve its liquidity.

2010.2.7.1 Board Policies on Loan Participations

BHCs and their subsidiaries should have sufficient board-approved policies in place that govern their loan participation activities. At a minimum, the policy should include (1) the requirements for entering into a loan participation agreement, (2) limits for the aggregate amount of loans purchased from and sold to an outside source, (3) limits of all loans purchased and sold, (4) limits for the aggregate amount of loans to particular industries, (5) comprehensive participation agreements with originating BHCs or banks, (6) complete analysis and documentation of the credit quality of obligations purchased, (7) an analysis of the value and lien status of the collateral, (8) appraisal guidelines, (9) the maintenance of full independent credit information on the borrower throughout the

46. Reporting standards include, but are not limited to, quarterly Consolidated Reports of Condition and Income.

47. Payment hierarchy refers to the prioritization of a borrower's payment obligations.

48. As determined by the Board, it is permissible for a BHC or its subsidiary to make, acquire, broker, or service loans or other extensions of credit (12 CFR 225.28(b)(1) and (2)).

term of the loan, (10) guidelines for the timely transfer of all financial and nonfinancial credit information to participant BHCs or banks, and (11) collection procedures.

2010.2.7.2 Loan Participation Agreement

A loan participation agreement may enable a smaller lead BHC or lead subsidiary, acting as transferor, to originate a large loan in excess of its legal lending limit. Participants having an ownership interest are able to offset low local loan demand or invest in large loans without the burden of servicing the loan or incurring origination costs. A loan participation agreement may also allow the originating BHC or subsidiary to facilitate and grant a larger loan without causing it to have a concentration of credit (i.e., enabling risk diversification) or an impairment of its liquidity position. The participation agreement should contain provisions that require the originator to transfer, in a timely manner, all financial and nonfinancial credit information to the participant banks upon the loan's origination and throughout the term of the loan. The agreement should specify the allocation of payments, losses, and expenses. It should also state that a participant has the right to perform its own independent review of the transaction. The agreement should contain no language indicating that the lead BHC or lead subsidiary is a "lender" or that a participating BHC or subsidiary is a "borrower." The purchase of loan participations without a comprehensive agreement could be viewed as an unsafe and unsound banking practice.

2010.2.7.3 Accounting for Loan Participations

A loan participation agreement usually is structured to allow the participation transaction to receive sale treatment of a portion of the loan by the originating BHC or its subsidiary even though the participation agreement may restrict the purchaser when reselling its interest in the loan, subject to certain conditions.[49] Sale treatment is achieved by structuring the loan participation agreement so that interests sold to a purchaser meet the definition of a "participating interest" and the transaction satisfies all conditions for transfer of control over the interests. In general, FAS 166 (paragraph 8B) briefly defines a participating interest as a portion of a financial asset that

1. conveys proportionate ownership rights with equal priority to each participating interest holder.
2. involves no recourse (other than standard representations and warranties) to, or subordination by, any participating interest holder.
3. does not entitle any participating interest holder to receive cash before any other participating interest holder.

A transfer of a participating interest in an entire financial asset in which the transferor surrenders control over those interests is to be accounted for as a sale if and only if all the following conditions are met:

1. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.[50]
2. Each purchaser has the right to pledge or exchange the interests it received, and no condition both constrains the purchaser from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor.
3. The transferor does not maintain effective control over the interests.[51]

49. Three sale recognition conditions denote the transferor's surrender of control under Financial Accounting Standards (FAS) 166, "Accounting for Transfers of Financial Assets" (an amendment of FAS 140). Those conditions must be met in order for the originator (transferor) to account for the transfer of the financial assets to the participating transferee as a sale. When a loan participation is accounted for as a sale, the seller (transferor) removes the participated interest in the loan from its financial statements. FAS 166 applies to both the transferor (seller) of the participated assets and the transferee (purchaser). (See the complete text of FAS 166 (paragraphs 8B and 9) that defines a "participating interest" and the conditions for sale recognition). See also the reporting instructions for the "Consolidated Financial Statements for Bank Holding Companies" (FR Y-9C), and the FFIEC "Consolidated Reports of Condition and Income" (FFIEC 031) (bank Call Report).

50. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its consolidated affiliates included in the financial statements being presented.

51. Examples of a transferor's effective control over the transferred financial assets include (a) an agreement that both entitles and obligates the transferor to repurchase or redeem the financial asset (or its third-party beneficial interests) before its maturity, (b) an agreement that provides the transferor with both the unilateral ability to cause the holder to return specific

2010.2.7.4 Structuring the Loan Participation Agreement

The written participation agreement should consider contingent events such as a defaulting borrower, the lead BHC or lead subsidiary becoming insolvent, or a party to the participant arrangement that is not performing as expected. The agreement should clearly state the limitations the originator or participants impose on each other and any rights that the parties retain. The participation agreement should clearly include

- the obligation of the lead BHC or lead subsidiary to furnish timely credit information and to notify the parties of significant changes in the borrower's status;
- a requirement that the lead BHC or lead subsidiary consult with the participants prior to any proposed change to the loan, guarantee, or security agreements, or taking any action when the borrower defaults;
- the lead BHC's or lead subsidiary's and participants' specific rights if the borrower defaults;
- the resolution procedures to be followed when the lead BHC or lead subsidiary or participants;
  - do not agree on the procedures to be taken when the borrower defaults and/or;
  - have potential conflicts when the borrower defaults on more than one loan
- provisions for terminating the agency relationship between the lead BHC or lead subsidiary and the participants upon events such as insolvency, breach of duty, negligence, or misappropriation by one of the parties to the agreement.

Some participation agreements may allocate payments using a method other than a pro rata sharing based on each participant's ownership interest. The first principal payment could be applied based on the participant's ownership interest while the remaining payments would be applied according to the lead BHC's or lead subsidiary's ownership interest. In this situation, the participation agreement should specify that if a borrower defaults, the participants would share subsequent payments and collections in proportion to their ownership interest at the time of default.[52]

A participation agreement may provide that the originating lender allow a participating BHC or subsidiary to resell, but the originator reserves the right to call at any time from whoever holds the ownership interest. The originator can then enforce the call option by cutting off or restricting the flow of interest at the call date.[53] In this situation, the originating lender has retained effective control over the participation; such a call option precludes sale accounting treatment by the transferor. The transaction, therefore, should be accounted for as a secured borrowing.

2010.2.7.5 Independent Credit Analysis

A BHC or subsidiary that acquires a loan participation should regularly perform a rigorous credit analysis on its loan participation as if it had originated the loan. Due to the indirect relationship that a participant has with a borrower, it may be difficult for the participant to receive timely credit information to allow it to conduct a comprehensive credit analysis of the transaction. However, the participant should not rely solely on the originator's credit analysis. It should gather all available relevant credit information, including the details on the collateral's value (for example, values determined by an independent appraisal or an evaluation), lien status, loan agreements, and the loan's other participation agreements that existed prior to making its commitment to acquire the loan participation. A participant also should reach an agreement with the loan originator (transferor) that it will provide ongoing, complete, and timely credit information about the borrower. It is important for the participants to maintain current and complete records on their loan participations. The absence of such information may indicate that the originator did not perform the necessary due diligence prior to making its decision to acquire the loan participation. During the life of the loan participation, the originator should monitor the loan's servicing and repayment status.

financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call, or (c) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them.

52. This is *not* a participating interest—no sale.

53. The cash flows from a loan participation agreement, except servicing fees, should be divided in proportion to the third parties' participating interests.

2010.2.7.6 Sales of Loan Participations in the Secondary Market

If a BHC or a subsidiary has a concentration in loan participations, it may be possible for it to sell its participating interests in the secondary market to reduce its dependence on an asset group. If the BHC or a subsidiary is not large enough to participate in the secondary market, an alternative might be to sell loans without recourse to another subsidiary or correspondent bank that also desires to diversify its loan portfolio.

2010.2.7.7 Sale of Loan Participations With or Without the Right of Recourse

The parties to a participation agreement (those having a participating ownership interest) generally may have *no recourse* to the transferor or to each other even though the transferor (e.g., the originating lender) continues to service the loan. No participant's interest should be subordinate to another. Some loan participation agreements, however, may give the seller a contractual right to repurchase the participated loan interest for purposes of working out or modifying the sale. When the seller has the right to repurchase the participation, it may provide the seller with a call option on a specific loan participation asset. If the seller's right to repurchase precludes the seller from recognizing the transaction as a sale, the transaction should be accounted for as a secured borrowing.

2010.2.7.8 Sales of 100 Percent Participations

Some loan participation agreements may be structured so that the transferor sells the entire underlying loan amount (100 percent) to the agreement's participants. If participation agreements are not structured properly they can pose unnecessary and increased risks (for example, legal, compliance, or reputational risks) to the originator and the participants. The originator would have no ownership in the loan. Such agreements should therefore clearly state that the loan participants are participating in the loan and that they are not investing in a business enterprise. The policies of a BHC or subsidiary engaged in such loan participation agreements should focus on safety and soundness concerns that include

- the program's objectives
- the plan of distribution
- the credit requirements that pertain to the borrower—the originator should structure 100 percent loan participation programs only for borrowers who meet its credit requirements
- the program participant's accessibility to the borrower's financial information (as authorized by the borrower)—the originator should allow potential loan participants to obtain and review appropriate credit and other information that would enable them to make an informed credit decision.

2010.2.7.9 Participation Transactions Between Affiliates

BHCs or their subsidiaries should not relax their credit standards when participation agreements involve their affiliates. Such agreements must be structured to comply with sections 23A and 23B of the Federal Reserve Act (FRA) and the Board's Regulation W. The Federal Reserve has determined that in certain very limited circumstances the purchase or sale of a participation agreement may be exempt from these provisions.

2010.2.7.9.1 Transfer of Low-Quality Assets

In general, a bank cannot purchase a low-quality asset, including a loan participation from an affiliate. Section 23A of the FRA provides a limited exception to the general rule prohibiting the purchase of low-quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset *before* the affiliate acquires the asset.[54] Section 223.15 of the Board's Regulation W provides an exception from the prohibition on the purchase of a low-quality asset by a member bank from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating

54. 12 U.S.C. 371c(a)(3).

member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would not increase the member bank's proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegees) and it must give a 20-day post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank's appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

2010.2.7.10 Concentrations of Credit Involving Loan Participations

BHCs or their subsidiaries should avoid purchasing loans that generate unacceptable credit concentrations. Such concentrations may arise solely from the BHC's or subsidiary's purchases, or they may arise when loans or purchased participations are aggregated with loans originated and retained by the purchaser. The extent of contingent liabilities, holdbacks, reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, loans purchased from another source should be evaluated in the same manner as originated loans. Guidelines should be established for the type and frequency of credit and other information the BHC or its subsidiary needs to obtain from the originator to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the BHC or its subsidiary.

2010.2.7.11 Loan Participations and Environmental Liability

Environmental risk represents the adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination. BHCs or their subsidiaries may be indirectly liable via their lending activities for the costs resulting from cleaning up hazardous substance contamination. BHCs and their subsidiaries need to be careful that their actions making, administering, and collecting loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of a borrower's business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). BHCs or their subsidiaries that originate loans to borrowers through loan participation agreements could be transferring environmental risk and liability to the holders of participations, thus making them susceptible to such losses. The originator should establish and follow policies and procedures designed to control environmental risks. See the *Commercial Bank Examination Manual*, section 2140.1 (the "Environmental Liability" subsection) for a more detailed discussion on ways banks can protect themselves as lenders, and their loan participation agreement holders, from environmental liability.

2010.2.7.12 Red Flag Warning Signals

The following conditions may indicate that there are significant problems with the management of the BHC's or a subsidiary's loan participation portfolio:

1. the absence of formal loan participation policies.
2. the absence of any formal participation agreement.
3. the absence of credit evaluations and independent credit analysis.
4. the absence of complete loan documentation.
5. a higher volume of loan participations when compared to the volume of other loans in the loan portfolio.
6. missing loan participation agreements and documentation which should denote the rights and responsibilities of all participants.
7. the existence of numerous disputes or disagreements among the participants regarding the receipt of payment(s) in accordance with the participation agreements, documentation requirements, or any other significant aspects of the entity's loan participation transactions.
8. the originator is making loan payments to loan participation acquirers without receiving reimbursement by the original borrower.

2010.2.8 INSPECTION OBJECTIVES

Loan Administration

1. To determine if the parent's loan policies are adequate in relation to the responsibilities it has for the supervision of its credit-extending subsidiaries and whether those policies are consistent with safe and sound lending practices.
2. To determine if internal and external factors (for example, the size and financial condition of the credit-extending subsidiary, the size and expertise of its staff, avoidance of or control over credit concentrations, market conditions, and statutory and regulatory compliance) are considered in formulating and monitoring the organization's loan policies and strategic plan.
3. To determine if the loan policy is being monitored and complied with.
4. To establish whether the loan policy ensures sound assessments of the value of real estate and other collateral.

Lending Standards for Commercial Loans

1. To focus on and evaluate the strength of the credit-risk management process.
2. To determine whether the bank holding company has formal credit policies that (1) provide clear guidance on its appetite for credit risk and (2) support sound lending decisions.
3. To determine whether experienced credit professionals who are independent of line lending functions provide adequate internal control in the loan-approval process.
4. To evaluate whether loan-approval documents provide internal approving authorities and management with sufficient information on the risks of loans being considered, and that the information is in a clear and understandable format.
5. To evaluate whether forward-looking analysis tools are being adequately and appropriately used as part of the loan-approval process.
6. To determine whether credit-risk management information systems provide adequate information to management and lenders.
7. To incorporate the examiner's evaluation of the bank holding company's adherence to sound practices into the overall assessment of credit-risk management.
8. To be alert to indications of insufficiently rigorous risk assessment at banking organizations, particularly inadequate stress testing and excessive reliance on strong economic conditions and robust financial markets to support a borrower's capacity to service its debts.
9. To be attentive in reviewing a banking organization's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead to delayed recognition of emerging weaknesses in some loans.
10. To ascertain whether the banking organization has relied, to a significant and undue extent, on favorable assumptions about borrowers or the economy and financial markets. If so, to carefully consider downgrading, under the applicable supervisory rating framework, a banking organization's risk-management, management, and/or asset-quality ratings and, if deemed sufficiently significant to the banking organization, its capital adequacy rating.
11. To determine if the banking organization's loan-review activities or other internal control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, inadequate training, and reduced scope or by less-thorough internal loan reviews. To incorporate such findings into the determination of supervisory ratings.

Leveraged Lending

1. *Risk-Management Framework, Definition, and Policy Expectations.* To determine
   a. whether the institution has established a sound definition of leveraged lending that is appropriate for the types of leveraged loans that are underwritten and if it can be applied across all business lines;
   b. whether it has adjusted (if necessary) its risk appetite and limit structure (including pipeline limits and overall portfolio limits) to conform with the institution's definition of leveraged lending and whether it has the necessary reporting in place to assess conformance with limits.
   c. if there are appropriate policies and procedures limits in place and if the institution maintains sound leveraged lending standards both for transactions that it intends to hold as well as transactions that are underwritten to distribute.
   d. if the institution's risk-management structure has strong and effective pro-

cesses and controls and if they are appropriate based on its leveraged lending activity.

2. *Participations Purchased.* To ensure that the institution applies the same standards of prudence and credit assessment techniques and in-house limits that would apply as if it had originated the loan(s).
3. *Underwriting Standards.* To assess the effectiveness of the institution's underwriting policy standards for leveraged lending to determine whether they
   a. are clear, written, and measurable;
   b. contain underwriting limits that reflect the institution's definition and risk appetite for leveraged lending;
   c. are applied equally to loans that are originated to be held and to loans that are originated to distribute; and
   d. fully reflect the underwriting standards listed in the guidance, including:
      i. sound business premise and sustainable capital structure for each transaction
      ii. capacity to repay and ability to de-lever to a sustainable level over a reasonable period
      iii. appropriate depth and breadth of due diligence
      iv. standards for valuating expected risk-adjusted returns
      v. appropriate credit agreement covenant protections
      vi. acceptable collateral agreements.
4. *Valuation Standards.* To determine:
   a. whether enterprise valuation methodologies are appropriate to the borrower's industry and condition;
   b. whether the assumptions are clearly documented, well supported, and understood by the institution's appropriate decision makers and risk-oversight units
   c. whether enterprise valuations are performed by qualified persons independent of an institution's origination function
   d. whether an institution has policies and provides for appropriate loan to value ratios, discount rates and collateral margins for loans dependent on enterprise value or illiquid and hard-to-value collateral.
5. *Pipeline Management.* To find out if there are strong risk-management standards and controls over transactions in and to the pipeline and if those standards are applied uniformly to transactions held in the portfolio and those that are distributed.
6. *Reporting and Analytics.*
   a. To determine if individual and portfolio exposures within and across all business lines and legal vehicles are captured and reported in the appropriate amount of detail to senior management and the board.
   b. To determine if the necessary risk information (as outlined in the guidance) about leveraged lending exposures (portfolio holds and pipeline exposures) are captured in reports that are distributed timely and that adequate information is distributed to senior management and the institution's board of directors at least quarterly.
7. *Risk Rating.* To verify that leveraged loans are risk rated based on the borrower's ability to repay and de-lever to a sustainable level.
8. *Credit Analysis.*
   a. To test transactions to determine if underwriting practices are effective and comprehensive.
   b. To determine if individual leveraged lending exposures contain a comprehensive assessment of financial, business, industry, and management risks based on the elements of the guidance.
9. *Problem Credit Management.*
   a. To ascertain whether the institution formulates individual action plans and expectations
   b. To evaluate workout plans to confirm that they contain quantifiable objectives and measureable time frames
   c. To determine if problem credits are regularly reviewed for risk-rating accuracy, accrual status, impairment status, and charge off.
10. *Deal Sponsors*
    a. To determine if the institution has guidelines for evaluating deal sponsors that are based on the sponsor's ability and willingness to support the transaction where sponsors are viewed as a source of repayment.
11. *Credit Review*
    a. To ensure that the institution regularly conducts an independent credit review of the leveraged lending portfolio more frequently and in greater depth than other segments of the portfolio generally at least annually. For firms making significant changes to policies, underwriting standards, procedures etc., ensure that a

credit review is scheduled to test compliance with changes.
   b. To ensure that credit review personnel have the expertise and experience to evaluate leveraged loans.
12. *Stress Testing.*
   a. To determine if the institution is conducting periodic loan- and portfolio stress tests on leveraged loan portfolios or if the portfolio has been incorporated into enterprise-wide stress testing practices.
   b. To verify the effectiveness of the institution's periodic portfolio stress tests (in accordance with stress testing guidance) in identifying what effect economic and market events could have on the institution's financial condition and leveraged lending transactions.
13. *Conflict of Interest.* To determine
   a. if policies identify and if there are procedures to address transactions in which the institution holds both an equity and lending positions;
   b. the adequacy and effectiveness of controls and training programs that aim to curb any potential conflicts of interests that result from leveraged lending.
14. *Reputational Risk.*
   a. To determine if the institution has suffered reputational damage by failing to meet its legal responsibilities in underwriting and syndicating leveraged loan transactions into the wider financial market.

Credit-Risk Management for Home Equity Lending

1. To determine if the banking organization has an appropriate review and approval process for new product offerings, product changes, and marketing initiatives.
2. To ascertain whether the banking organization has appropriate control procedures for third parties that generate loans on its behalf and if the control procedures comply with the laws and regulations that are applicable to the organization.
3. To determine if the banking organization has given full recognition to the risks embedded in its home equity lending.
4. To determine whether the banking organization's risk-management practices have kept pace with the growth and changing risk profile of its home equity portfolios and whether underwriting standards have eased.
5. To determine whether the loan policy—
   a. ensures prudent underwriting standards for home equity lending, including standards to ensure that a thorough evaluation of a borrower's capacity to service the debt is conducted (that is, the banking organization is not relying solely on the borrower's credit score);
   b. provides risk-management safeguards for potential declines in home values;
   c. ensures that the standards for interest-only and variable-rate home equity lines of credit (HELOCs) include an assessment of a borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates; and
   d. provides appropriate collateral-valuation policies and procedures and provides for the use and validation of automated valuation models.

Loan Participations, the Agreements and Participants

1. To ascertain if the BHC engages in the purchase or sale of loans via loan participation agreements.
2. To determine if the BHC's lending policy
   a. places limits on the amount of loan participations originated, purchased, or sold based on any one source or in the aggregate;
   b. has set credit standards for the BHC's borrowers requesting loans as well as third parties acquiring loan participations from the bank as originator;
   c. requires the same credit standards for loan participations as it does for other loans;
   d. sets the amount of contingent liability, holdback (retained ownership), and the manner in which the loan should be serviced; or
   e. requires complete loan documentation for loan participations.
3. To assess the impact of any concentrations of credit to a borrower, or in the aggregate, that arise from loans involved in loan participation agreements.
4. To determine if there are any informal repurchase agreements that exist between loan participation acquirers that are designed to circumvent the originating BHC's or its subsidiary's legal lending limits, disguise delinquencies, and avoid adverse classifications.

5. To determine whether the BHC's financial condition is compromised by assessing the impact of the BHC's loan participations with its affiliates.
6. To ascertain whether loan participation transactions with affiliates are in compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
7. To determine if there are disputes between the BHC or its subsidiaries as originator of loan participations and its participants.
8. To determine if any loan participations have been adversely classified by examiners, including examiners from other supervisory agencies (includes loan participations held by the other institutions).

2010.2.9 INSPECTION PROCEDURES

Loan Administration

1. Obtain an organizational chart and determine the various levels of responsibility and job functions of individuals involved with the lending function.
2. Obtain and review the BHC's loan policy; determine if the policy contains the appropriate components, as summarized in this section. Determine how the policy is communicated to subsidiaries. Also determine whether the loan policy reflects the December 1992 uniform interagency real estate lending standards and guidelines as they apply to subsidiary depository institutions.
3. Obtain a copy of the most recent management reports concerning the quality of loans and other aspects of the loan portfolio (delinquency list, concentrations, yield analysis, loan-distribution lists, watch loan reports, charge-off reports, participation listings, internal and external audit reports, etc.). Determine the scope and sufficiency of the work performed by any committees related to the lending function. Determine if the information provided to the directorate and senior management is sufficient for them to make judgments about the quality of the portfolio and to determine appropriate corrective action.
4. Determine if an internal process has been established for the review and approval of loans that do not conform to internal lending policy. Establish whether such loans are supported by written documentation that clearly states all the relevant credit factors that culminated in the underwriting decision. Determine if exception loans of a significant size are reported to the board of directors of the subsidiary or to the holding company.
5. Review internal and external audit reports and bank examination reports for critical comments concerning loan-policy exceptions and administration. Determine whether action was taken in response to any identified exceptions. Determine who is responsible for follow-up and what the time frames are; seek rationale if no action was taken or if the action taken was half-hearted.
6. Review the organization's financial statements, the bank Call Reports, and the BHC FR Y-series reports submitted to the Federal Reserve. Determine whether reporting is accurate and disclosure is sufficient to indicate the organization's financial position and the nature of its loan portfolios, including nonaccrual loans.
7. When reviewing lending policies, ascertain whether—
   a. the loan policies facilitate extensions of credit to sound borrowers and facilitate the workout of problem loans, and
   b. the loan policies control and reduce concentration risk by placing emphasis on effective internal policies, systems, and controls to monitor the risk.
8. Through interviews with, or review of reports submitted by, the internal auditor, lending officers, loan-review personnel, and senior management, (1) evaluate the effectiveness of the BHC's self-monitoring of adherence to loan policy, (2) determine how changes to the loan policy occur, (3) determine how loans made in contradiction to the loan policy are explained, and (4) determine the various circumstances involving levels of approval and what specific consideration occurs at these levels.
9. Presuming the inspection is concurrent with a bank's primary regulator, coordinate, on a random basis, the selection of loans subject to classification. Determine whether they conform to loan policy.
10. Review management's policies and procedures for their determination of an appropriate level of loan-loss reserves.
11. On the "Policies and Supervision" or an equivalent page of the inspection report, evaluate the BHC's oversight regarding effective lending policy and procedures.

Lending Standards for Commercial Loans

1. Review formal credit policies for clear articulation of current lending standards, including—
   a. a description of the characteristics of acceptable loans and (if applicable) "guidance" minimum financial ratios,
   b. standards for the types of covenants to be imposed for specific loan types, and
   c. the treatment and reporting of policy exceptions, both for individual loans and the entire portfolio.
2. Evaluate the role played by independent credit staff in loan approvals and, in particular, whether these credit professionals are adequately experienced, are independent of line lending functions, and have authority to reject loans either because of specific exceptions to policy or because the loan does not meet the institution's credit-risk appetite.
3. Review written policies and determine operating practice in preparing loan-approval documents to evaluate whether sufficient information is provided on the characteristics and risks of loans being considered, and whether such information is provided clearly and can be easily understood.
4. Based on written policies and review of operating practice, evaluate whether loans being considered are evaluated not only on the basis of the borrower's current performance but on the basis of forward-looking analysis of the borrower.
   a. Determine whether financial projections or other forward-looking tools are an integral part of the preapproval analysis and loan-approval documents.
   b. Determine the extent to which alternative or "downside" scenarios are identified, considered, and analyzed in the loan-approval process.
5. Review credit-risk management information systems and reports to determine whether they provide adequate information to management and lenders about—
   a. the composition of the institution's current portfolio or exposure, to allow for consideration of whether proposed loans might affect this composition sufficiently to be inconsistent with the institution's risk appetite, and
   b. data sources, analytical tools, and other information to support credit analysis.
6. When appropriate, coordinate or conduct sufficient loan reviews and transaction testing in the lending function to accurately determine the quality of loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the preexamination risk assessment, the inspection, or bank or other examinations, arrange for the commitment of sufficient supervisory resources to conduct in-depth reviews, including transaction testing, that are adequate to ensure that the Federal Reserve achieves a full understanding of the nature, scope, and implications of the deficiencies.
7. When reviewing loans, lending policies, and lending practices—
   a. observe and analyze loan-pricing policies and practices to determine whether the institution may be unduly weighting the short-term benefit of retaining or attracting new customers through price concessions, while not giving sufficient consideration to potential longer-term consequences;
   b. be alert for indications of insufficiently rigorous risk assessment, in particular (1) excessive reliance on strong economic conditions and robust financial markets to support the capacity of borrowers to service their debts and (2) inadequate stress testing;
   c. be attentive in reviewing an institution's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead that institution to delay recognition of emerging weaknesses in some loans or to lessen staff resources assigned to internal loan review;[55] and
   d. give careful consideration to downgrading, under the applicable supervisory rating framework, a banking organization's risk-management, management, and/or asset-quality ratings and its capital adequacy rating (if sufficiently significant) when there is significant and undue reliance on favorable assumptions about borrowers or the economy and financial markets, or when that reliance has slowed the recognition of loan problems.
8. Discuss matters of concern with the senior management and the board of directors of the bank holding company and report those areas

55. Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of these increases and the surrounding circumstances in reaching their conclusions about the asset quality and risk management of an institution.

of concern on core page 1, “Examiner’s Comments and Matters Requiring Special Board Attention.”

Leveraged Lending

Overview

Complete or update the Leveraged Lending Internal Control Questionnaire if selected for implementation.

1. Based on an evaluation of internal controls, determine the scope of the inspection. The scope should include exposures related through common ownership, guarantors, or sponsors. Also include direct and indirect leveraged lending exposure found in financial intermediaries formed to house or distribute leveraged loans (for example CLOs, SPEs, conduits etc.).
2. Inspection procedures should include both a policy review and transaction testing approach to determine the effectiveness of the institution’s leveraged lending control process.

If the institution is found to lack robust risk-management processes and controls around leveraged lending that reinforces the institution’s risk profile, a supervisory finding of unsafe and unsound banking practices should be considered.

3. Applicability/Risk Management Framework
   a. At the start of the inspection, ascertain whether the institution has adopted an appropriate risk-management framework for leveraged lending that includes robust policies, procedures, and risk limits that have been approved by the board of directors.
   b. Implementation of this guidance should be consistent with the size and risk profile of the institution.
   c. All aspects of the guidance should be applied to institutions that originate and distribute leveraged loans.
   d. The section on Participations Purchased should be applied to banking organizations that have limited involvement in leveraged lending; community banks overall may not be materially affected by the guidance.
4. Definition of Leveraged Lending
   a. Determine if the institution has a written policy for leveraged lending and if that policy contains criteria for defining leveraged lending that are appropriate for the institution and consistent with the guidance standards.
   b. Determine if the institution’s definition includes related exposures and direct and indirect exposures.
5. General Policy Expectations
   a. Review the policy for the key risk elements referred to in the guidance (See the section on General Policy Expectations in the guidance and in the Internal Control Questionnaire). Determine if the policy includes the following elements:
      - Risk Appetite that clearly defines the amount of leveraged lending the institution is willing to underwrite and is willing to retain.
      - Limit Framework for aggregate portfolio held on balance sheet, single obligors and transactions, aggregate pipeline exposure, industry and geographic concentrations. For institutions with significant underwriting exposure, determine if limits have been established for stress losses, flex terms, economic capital, or earnings at risk associated with leveraged loans.
      - Allowance for loan and lease losses (ALLL) and capital adequacy analysis that reflect the risk of leveraged lending activities.
      - Credit approval and underwriting authorities.
      - Guidelines for senior management oversight and timely reporting to senior management and the board of directors.
      - Expected risk adjusted returns.
      - Minimum underwriting standards.
      - Underwriting practices for origination and secondary loan acquisition.
6. Participations Purchased
   a. Ascertain if the institution participating or purchasing into a leveraged loan has a clear understanding of the credit and the risks involved and also has a clear understanding of its rights and responsibilities under the participation agreement.
   b. Determine if the institution has conducted its own independent underwriting of participations and has applied the same standards of prudence, credit

assessment techniques, and in-house limits as if the institution had originated the loan(s).

c. Verify that the institution has received copies of all participation documents and any other documents relevant to the credit transaction(s).

7. Underwriting Standards
   a. Determine if the institution employs similar and consistent underwriting standards for leveraged loans it plans to hold or it plans to distribute.
      - Confirm that the institution's underwriting standards are clear, written, measurable, and reflect the institution's policy-based risk appetite for leveraged lending.
      - Evaluate the underwriting policies and standards and determine if they contain the elements found in guidance (Refer to the section on Underwriting Standards in the guidance and in the Internal Control Questionnaire):
8. Valuation Standards
   a. Confirm that the institution has policies and procedures in place for estimating enterprise value or for valuing other illiquid collateral. If enterprise value is relied on as a secondary source of repayment, determine the following:
      - If one or a combination of the three methods referred to in the guidance is used (asset, income, or market valuation).
      - If the underlying assumptions and the resulting values are well documented, supportable, and credible (Refer to the Valuations Standards section of the guidance and the Internal Control Questionnaire).
      - If enterprise value was calculated by qualified persons independent of the origination function.
      - If stress tests of key enterprise value variables and assumptions (such as cash flow earnings and sales multiples) are conducted.
      - That firms have policies that provide for appropriate loan-to-value ratios, discount rates and collateral margins.
      - If the institution has established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value.
9. Pipeline Management
   a. Determine if the institution has strong risk management and controls that are extended to deals in the pipeline, whether those deals are intended for hold, or if they are intended for distribution.
      - Determine if the institution has policies and procedures for handling distribution failures.
      - Determine if there are procedures for stress testing pipeline deals.
      - Ascertain if management reports show that transactions can be differentiated based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry).
      - Determine if there are clearly articulated rationales for the effectiveness of hedging methods and if there is appropriate measurement and monitoring.
      - Confirm that the institution has developed and maintained the pipeline procedures referred to in the guidance (see the section on Pipeline Management in the guidance and in the Internal Control Questionnaire).
10. Reporting and Analytics
    a. Ascertain if the institution's risk-management framework includes an intensive and frequent review and monitoring process.
    b. Establish whether management receives comprehensive reports about the characteristics and trends of the institution's leveraged-lending portfolio at least quarterly and if summaries are provided to the board of directors.
    c. Find out if internal reports provide a detailed and comprehensive view of global exposures, including situations when an institution has an indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative. Borrower and counterparty leveraged lending reporting should aggregate total exposure and consider exposures booked across business lines or legal entities.
    d. Verify that internal policies identify the data fields to be populated and captured by the institution's MIS and whether the reports are accurate, timely, and if the information is provided to management and the board of directors.
    e. Confirm that MIS reporting on the leveraged lending portfolio contains the appli-

cable measures listed in the guidance. (Refer to the section on Reporting and Analytics in the guidance and in the Internal Control Questionnaire.)

11. Credit Analysis
    a. Conduct transaction testing on individual leveraged lending credits to determine if the credit analysis contains a comprehensive assessment of financial, business, and industry and management risks.
    b. Evaluate individual credits to determine if they fit the institutions definition of a leveraged loan.
    c. Determine if individual credits were analyzed in conjunction with the parameters in the guidance. (Refer to the section on Credit Analysis in the guidance and in the Internal Control Questionnaire).
    d. Verify that there are guidelines for evaluating deal sponsors and their willingness and ability to support the credit.
    e. Confirm that sponsors are used as a secondary and not a primary source of repayment.
    f. Assess the credit agreement to determine if it contains language for:
        - Material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval.
        - Financial performance covenants; covenant-lite, and payment-in-kind (PIK) toggle loan structures
        - Reporting requirements and compliance monitoring.
        - The distribution of reporting and other credit information to participants and investors.
        - Acceptable collateral types, loan to value guidelines and appropriate collateral valuation methodologies
12. Internal Risk Rating
    a. Determine if individual loans are risk rated based on the borrower's demonstrated ability to repay the loan and de-lever over a reasonable period of time.
        - Confirm that the institution has evidence of adequate repayment capacity, for example borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a 5–7 year period. Ensure that extensions or other restructuring are not masking an inability to repay.
        - Consider adversely rating credits that do not show the capacity to pay down debt from cash flow or if refinancing is the only option for repayment.
        - Consider a substandard rating if there are no reasonable or realistic prospects for repayment or de-levering.
13. Deal Sponsors
    a. If a deal sponsor is relied on as a secondary source of repayment, determine if management has developed guidelines for evaluating the sponsor's creditworthiness.
    b. Evaluate the sponsor based on the criteria listed in the guidance (See the section on Deal Sponsors in the guidance and in the Internal Control Questionnaire).
14. Credit Review/Problem Credit Management
    a. Assess credit review staff's expertise relative to leveraged lending.
    b. Verify that the institution conducts frequent internal credit review of leveraged-lending portfolio that is done independently of the origination function. Portfolio reviews should generally be conducted no less than annually.
    c. Evaluate the institution's procedures for dealing with problem credits including if work out plans contain quantifiable objectives and measurable time frames.
15. Stress Testing
    a. Determine if the institution has developed stress tests for leveraged loans or if the loans are included in the existing stress testing protocol.
16. Conflicts of Interest/
    Reputational Risk/Compliance
    a. Confirm that the institution is meeting its legal responsibilities by underwriting and distributing transactions that do not result in undue reputational risk.
    b. Determine if potential conflicts of interest exist if the institution has both equity and lending positions in a particular transaction. Confirm that policies and procedures are in place to handle conflicts of interest.
    c. Ascertain whether the institution's compliance function periodically reviews the institution's leveraged-lending activity.
    d. Ascertain whether the institution's policies incorporate safeguards to prevent violations of anti-tying regulations.
    e. When securities are involved, determine how the institution ensures compliance with applicable securities laws, including disclosure and other regulatory requirements.

f. Ascertain what plans and provisions have been developed to ensure compliance with the Board's Regulation W (12 CFR part 223).

Credit-Risk Management for Home Equity Lending

1. Review the credit policies for home equity lending to determine if the underwriting standards address all relevant risk factors (that is, an analysis of a borrower's income and debt levels, credit score, and credit history versus the loan's size, the collateral value (including valuation methodology), the lien position, and the property type and location.
2. Determine whether the banking organization's underwriting standards include—
   a. a properly documented evaluation of the borrower's financial capacity to adequately service the debt and
   b. an adequately documented evaluation of the borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates for interest-only and variable-rate HELOCs.
3. Assess the reasonableness and adequacy of the analyses and methodologies underlying the banking organization's evaluation of borrowers.
4. If the organization uses third parties to originate home equity loans, find out—
   a. if the organization delegates the underwriting function to a broker or correspondent;
   b if the banking organization's internal controls for delegated underwriting are adequate;
   c. whether the banking organization retains appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function;
   d. if there are adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the banking organization's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations;
   e. if the banking organization has a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites; and
   f. whether the banking organization has adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.
5. Evaluate the adequacy of the banking organization's collateral-valuation policies and procedures. Ascertain whether the organization—
   a. establishes criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio);
   b. sets criteria for determining when a physical inspection of the collateral is necessary;
   c. ensures that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation;
   d. implements policies and controls to preclude "value shopping";
   e. requires sufficient documentation to support the collateral valuation in the appraisal or evaluation.
6. If the banking organization uses automated valuation models (AVMs) to support evaluations or appraisals, find out if the organization—
   a. periodically validates the models, to mitigate the potential valuation uncertainty in the model;
   b. adequately documents the validation's analysis, assumptions, and conclusions;
   c. back-tests a representative sample of evaluations and appraisals supporting loans outstanding; and
   d. evaluates the reasonableness and adequacy of its procedures for validating AVMs.
7. If tax-assessment valuations are used as a basis for collateral valuation, ascertain whether the banking organization is able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value, as part of the validation process.

8. Review the risk- and account-management procedures. Verify that the procedures are appropriate for the size of the banking organization's loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the organization.
9. If the banking organization has large home equity loan portfolios or portfolios with high-risk characteristics, determine if the organization—
   a. periodically refreshes credit-risk scores on all customers;
   b. uses behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
   c. periodically assesses utilization rates;
   d. periodically assesses payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current;
   e. monitors home values by geographic area; and
   f. obtains updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral.

   Determine that the frequency of these actions is commensurate with the risk in the portfolio.
10. Verify that annual credit reviews of home equity line of credit (HELOC) accounts are conducted. Verify if the reviews of HELOC accounts determine whether the line of credit should be continued, based on the borrower's current financial condition.
11. Determine that authorizations of over-limit home equity lines of credit are restricted and subject to appropriate policies and controls.
    a. Verify that the banking organization requires over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits.
    b. Evaluate the sufficiency of management information systems (MIS) that enable management to identify, measure, monitor, and control the risks associated with over-limit accounts.
12. Verify that the organization's real estate lending policies are consistent with safe and sound banking practices and that its board of directors reviews and approves the policies at least annually.
13. Determine whether the MIS—
    a. allows for the segmentation of the loan portfolios;
    b. accurately assesses key risk characteristics; and
    c. provides management with sufficient information to identify, monitor, measure, and control home equity concentrations.
14. Determine whether management periodically assesses the adequacy of its MIS, in light of growth and changes in the banking organization's risk appetite.
15. If the banking organization has significant concentrations of home equity loans (HELs) or HELOCs, determine if the MIS includes, at a minimum, reports and analysis of the following:
    a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type
    b. the delinquency and loss-distribution trends by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, or DTI)
    c. vintage tracking
    d. the performance of third-party originators (brokers and correspondents)
    e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values
16. Determine whether the banking organization accurately tracks the volume of high-LTV (HLTV) loans, including HLTV home equity and residential mortgages, and if the organization reports the aggregate of these loans to its board of directors.
17. Determine whether loans in excess of the supervisory LTV limits are identified as high-LTV loans in the banking organization's records. Determine whether the organization reports, on a quarterly basis, the dollar value of such loans to its board of directors.
18. Find out whether the organization has purchased insurance products to help mitigate the credit risks of its HLTV residential loans. If a policy has a coverage limit, determine whether the coverage may be exhausted before all loans in the pool mature or pay off.

19. Determine whether the organization's credit-risk management function oversees the support function(s). Evaluate the effectiveness of controls and procedures over staff persons responsible who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes.
20. Determine whether policies and procedures have been established for home equity problem-loan workouts and loss-mitigation strategies.

Loan Participations, the Agreements and Participants

These inspection procedures are designed to ensure that originated loans that were transferred via loan participation agreements or certificates to state member banks, bank holding companies, nonbank affiliates, or other third parties were carefully evaluated. The procedures instruct examiners to determine if the asset transfers were carried out to avoid or circumvent classification and to determine the effect of the transfers on the BHC's financial condition or that of its subsidiaries. In addition, the procedures are designed to ensure that the primary regulator of another financial institution involved in the asset transfer of any low-quality assets is notified.

1. Review the board of directors' or their designated committees' policies and procedures governing how loan participation agreements and activities are created, transacted, and administered. Refer to section 2010.2.7 for the minimum items that should be included in board-approved policies on loan participation activities.
2. Determine if managerial reports provide sufficient information relative to the size and risk profile of the loan participation portfolio and evaluate the accuracy and timeliness of reports produced for the board and senior management.
3. For loan participations held (either in whole or in part) with another lending institution, review, if applicable,
   - the participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
   - loan documentation to determine if it meets the BHC's (or its subsidiary's) underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for other loans the respective entity originates);
   - the transfer of loans immediately before the date of the inspection to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current inspection; and
   - losses to determine if they are shared on a pro rata or other basis according to the terms of the participation agreement.
4. Check participation certificates or agreements and records to determine whether the parties share in the risks and contractual payments on a pro rata or other basis.
5. Determine if loans are purchased on a recourse basis and that loans are sold on a nonrecourse basis.
6. Ascertain that the BHC (or its subsidiaries) do not buy back or pay interest on defaulted loans in contradiction of the underlying participation agreement.
7. Compare the volume of outstanding originated or purchased loans that were issued in the form of loan participations with the total outstanding loan portfolio.
8. Determine if the BHC (or its subsidiaries) has sufficient expertise to properly evaluate the volume of loans originated or purchased and sold as loan participations.
9. Based on the terms of the loan participation agreements, review the originator's distribution of the borrower's payments received to those entities or persons owning interests in the loan participations. Ascertain if the agreement's recourse provisions may require accounting for the transactions as a secured borrowing rather than as a sale.
10. Determine if loans are sold primarily to accommodate credit overline needs of customers or to generate fee income.
11. Determine if loans are purchased or sold to affiliates or other companies; if so, determine whether the purchasing companies request and are given sufficient information to properly evaluate the credit. (Section 23A of the Federal Reserve Act and the Board's Regulation W prohibit transfers of low-quality assets between affiliates.) See sections 2020.0, 2020.1, 2020.2.
12. Investigate any situations in which assets were transferred before the date of inspection:

a. Determine if any were transferred to avoid possible criticism during the inspection.
b. Determine whether any of the loan participations transferred were nonperforming at the time of transfer, classified during the previous examination, or transferred for any other reason that may cause the loans to be considered of questionable quality.

13. Review the BHC's policies and procedures to determine whether loan participations purchased are required to be given an independent, complete, and adequate credit evaluation. Review asset participations sold to affiliates to determine if the asset purchases were supported by an *arm's-length* and *independent* credit evaluation.
14. Determine that any assets purchased by the BHC (or its subsidiaries) were properly recorded at fair market value at the time of purchase.
15. Determine that transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.
16. If poor-quality assets were transferred by the BHC to another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank's appropriate staff will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable,
    - names of originating and receiving institutions;
    - type of assets involved;
    - date (or dates) of transfer;
    - total number and dollar amount of assets transferred;
    - status of the assets when transferred (e.g., nonperforming, classified, etc.); and
    - any other information that would be helpful to the other regulator. Ascertain whether the bank manages not only the risk from individual participation loans but also portfolio risk.
17. Find out if management develops appropriate strategies for managing concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse market conditions (such a plan may include strategies involving not only loan participations, but also whole loan sales). Find out if the BHC's (or its subsidiaries') contingency plan includes selling loans as loan participations.
18. Ascertain if management periodically assesses the marketability of its loan participation portfolio and evaluates the BHC's (or its subsidiaries') ability to access the secondary market.
19. Verify whether the BHC (or its subsidiaries) compare its underwriting standards for loan participations with those that exist in the secondary market.

2010.2.10 INTERNAL CONTROL QUESTIONNAIRE

Applicability/Risk-Management Framework

1. Has the institution adopted a risk-management framework around leveraged lending that includes:
    a. A leveraged lending policy that is based on risk objectives, risk acceptance criteria, and risk controls?
    b. Structuring transactions that reflect a sound business premise, have an appropriate capital structure, reasonable cash flow, and balance sheet leverage?
    c. A definition of leveraged lending that can be applied across all business lines?
    d. Well-defined underwriting standards that define acceptable leverage levels and amortization expectations?
    e. A limit framework?
    f. Sound MIS?
    g. Pipeline management procedures, hold limits, and expected timing for distributions?
    h. Guidelines for stress testing?
2. Is the institution able to identify leveraged exposures to related borrowers or guarantors?
3. Is the institution able to identify leveraged loans that are managed in non-lending portfolios (for example collateralized loan obligations (CLOs), special purpose entities (SPEs), or other indirect exposures)?
4. Is the institution originating leveraged loans; participating in leveraged loans, or both?

Definition of Leveraged Lending

1. Has the institution developed an appropriate written definition for leveraged lending and incorporated it into the leveraged lending policy?
2. Is the policy definition consistent with the amounts and types of leveraged loans that the institution is engaged in?

General Policy Expectations

1. Has the institution's leveraged lending policy been approved by the board of directors?
2. Does the leveraged lending policy contain the following elements:
   a. A clear statement of the amounts of leveraged lending that it is willing to underwrite and the amount(s) it is willing to hold in its own portfolio?
   b. A limit framework that establishes limits or guidelines around the following as applicable:
      1) Single obligors and transactions?
      2) Aggregate hold portfolio?
      3) Total pipeline exposure?
      4) Industry and geographic concentration?
      5) Notional pipeline limits?
      6) Stress losses, flex terms, economic capital usage, and earnings at risk?
      7) Other parameters particular to the portfolio?
      8) The required management approval authorities and exception tracking provisions?
   c. Procedures for insuring that leveraged lending risks are appropriately reflected in the institution's level of allowance for loan and lease losses (ALLL) and capital adequacy analysis?
   d. Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms?
   e. Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors?
   f. Expected risk-adjusted returns for leveraged transactions?
   g. Minimum underwriting standards and underwriting practices for primary loan origination and secondary loan acquisition?

Participations Purchased

1. Has the institution, with respect to participations purchased, done its own independent underwriting of its portion of the transaction and has it adequately identified its risks?
2. Has the institution received copies of all documentation relevant to the transaction?
3. Is there evidence that the institution has reviewed the participation agreement and has a clear understanding of its rights and responsibilities under the agreement?

Underwriting Standards

1. Is the institution using similar underwriting standards for leveraged loans it plans to hold as well as for leveraged loans it plans to distribute?
2. Are the institution's underwriting standards clear, written, and measurable?
3. Do underwriting standards require:
   - A sound business premise for each transaction and that the borrower's capital structure is sustainable?
   - A determination and documentation of the borrower's capacity to repay and ability to de-lever to a sustainable level over a reasonable period?
   - Standards for evaluating various types of collateral?
   - Standards for evaluating risk-adjusted returns?
   - The acceptable degree of reliance on enterprise value and other intangible assets for loan repayment?
   - Expectations for the degree of support expected to be provided by sponsors?
   - A prohibition on material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval?
   - A credit agreement that contains financial covenants, reporting covenants, and compliance monitoring? Does the loan contain covenant-lite and PIK toggle loan structures? If so, does the borrower have the ability to repay the loan under the contractual terms?
   - Guidelines for acceptable collateral types, loan-to value-guidelines, and acceptable collateral valuation methodologies?

- Loan agreements that provide for the distribution of financial information to participants and investors?

Valuation Standards

1. Does the institution have policies for valuing illiquid, intangible, or hard to value collateral that include appropriate LTV ratios, discount rates, and collateral margins?
2. Is the institution relying on enterprise value to confirm a secondary source of repayment?
   a. Has the institution documented its valuation approach to calculating enterprise value?
   b. Has the valuation been performed by qualified persons independent of the origination function?
   c. Has one or a combination of three methods been used for determining enterprise value, asset valuation, income valuation, or market valuation?
   d. If the income method is used, is it based on capitalized cash flow or discounted cash flow?
   e. Has the institution confirmed proxy measures such as multiples of cash flow earnings or sales by performing its own discounted cash flow analysis?
   f. Are stress tests of key variables and assumptions used in determining enterprise value (such as cash flow earnings and sales multiples) conducted at origination and periodically thereafter?
   g. Does the institution have established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value?

Pipeline Management

1. Do strong risk-management controls cover all transactions in the pipeline, including amounts planned for hold and those marked for distribution?
2. Does the institution have the capability to differentiate transactions based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry)?
3. Does the institution have the following controls for pipeline exposure:
   - A documented appetite for underwriting pipeline risk that considers the potential effects on earnings, capital, and liquidity?
   - Written policies and procedures for "hung deals" or deals that are not sold down within a reasonable or 90-day period?
     – Have transactions reclassified as hold-to-maturity been reported to management and the board of directors?
   - Guidelines for conducting periodic stress tests of pipeline exposures?
   - Controls to monitor expected vs. actual performance?
   - Reports that show individual and aggregate transaction information, risk ratings and concentrations?
   - Limits on hold levels per borrower, counterparty, and aggregate hold levels?
   - Limits on the amounts intended for distribution?
   - Policies and procedures for acceptable accounting methods, including prompt recognition of losses?
   - Policies and procedures around acceptable hedging practices if applicable?
   - Plans to address contingent liabilities and compliance with Sections 23A and 23B of the Federal Reserve Act and Regulation W?

Reporting and Analytics

1. Does management receive quarterly comprehensive reports about the characteristics and trends of the institution's leveraged lending portfolio? Are summaries provided to the board of directors?
2. Do internal policies identify the data fields to be populated and captured by the institution's MIS? Are the reports accurate and timely?
3. As dictated by the size and complexity of the leveraged lending portfolio, does MIS reporting on the leveraged lending portfolio include the following:
   a. Individual and portfolio exposures within and across all business lines and legal vehicles including the pipeline?
   b. Risk-rating distribution and migration analysis?
   c. A list of borrowers who have been removed from the leveraged-lending portfolio due to improvements in their

financial characteristics and risk profile? Is the removal from the profile concurrent with a refinance, restructure or some other modification in the loan agreement?

d. Industry mix and maturity profile?
e. Metrics derived from probability of default and loss-given default?
f. Portfolio performance measures including covenant breaches, restructurings, delinquencies, nonperforming asset amounts, and charge offs?
g. Amount and nature of impaired assets and the amount of ALLL attributable to leveraged lending?
h. The level of policy exceptions in the portfolio?
i. Exposures by collateral type, including unsecured transactions when enterprise values will be the only source of repayment?
j. Defaults that trigger *pari-passu* treatment for all lenders?
k. Secondary market pricing data and trading volume (when available)?
l. An aggregation of exposures by and performance of deal sponsors?
m. An indication of gross and net exposures, hedge and counterparty concentrations; and indication of policy exceptions?
n. Actual vs. projected distribution levels of the pipeline with reports of excess levels of exposure over hold targets?
o. *Types of exposure in the pipeline:* committed exposures not accepted by the borrower; exposures committed and accepted but not closed; funded and unfunded commitments closed but not distributed?
p. *Total and segmented exposures:* subordinated debt and equity holdings (compared to limits); global exposures; indirect exposure (to an obligor or if the institution is holding a previously sold position as collateral or as a reference asset in a derivative)?
q. Exposures booked in other business units throughout the institution that are related to a leveraged loan or borrower? (For example, default swaps or total return swaps naming the distributed paper as a covered or referenced asset or as collateral exposure through repo transactions).
r. Positions held in leveraged loans in available for sale or traded portfolios or held in structured-investment vehicles owned or operated by the originating institution or its subsidiaries or affiliates?

Internal Risk Rating

1. Does the institution have evidence of adequate repayment capacity? For example, do borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a five to seven-year period?
2. Are there extensions or other restructuring that are masking an inability to repay?
3. Has the primary source of repayment become inadequate? Is enterprise value being relied on as a secondary source of repayment? Is enterprise value well supported with binding purchase and sale agreements with qualified third parties? Does enterprise value consider the borrower's distressed circumstances?

Credit Analysis

1. Does transaction testing of individual leveraged lending credits contain the following elements and show that :
   a. *Cash flow analysis*—The analysis does not rely on overly optimistic or unsubstantiated projections of sales, margins, or merger and acquisition synergies?
   b. *Liquidity analysis*—There are measures to determine operating cash needs and cash needed to meet debt maturities? Analyze liquidity based on industry performance metrics?
   c. *Projections*—There is adequate margin for unanticipated merger-related integration costs?
   d. *Stress tests*—Projections are stress tested for one or more downside scenarios, including a covenant breach?
   e. *Variances from plan*—Transactions are reviewed at least quarterly to determine variance from plan; does the credit file contain a chronological rationale for and analysis of all changes to the operating plan and variances from the expected financial performance?
   f. *Enterprise Value*—Were enterprise values independently derived and validated outside of the origination function? Were

values calculated timely and did they consider value erosion?

g. *Collateral shortfalls*—Have shortfalls been identified and factored into the risk rating?
h. *Collateral liquidation and asset sales*—Are any liquidations and sales based on current market conditions and trends?
i. *Contingency plans*—Are there contingency analyses to anticipate changing conditions in debt or equity markets? Do the exposures rely on refinancing or the issuance of new equity?
j. *Interest Rate Risk and Foreign Exchange Risk*—Have these risks been addressed in the analysis? Are mitigants in place?

Problem Credit Management

1. Has the institution formulated and established procedures for dealing with problem credits?
2. Do work out plans contain quantifiable objectives and measurable time frames?
3. Are problem credits regularly reviewed for risk-rating accuracy, accrual status, recognition of impairment through specific allocations and charge-offs.

Deal Sponsors

1. Has the institution developed guidelines for evaluating the willingness and ability of sponsors to support the credit exposure and a process to regularly monitor sponsor performance?
2. Determine if the credit analysis has considered:
   a. If the sponsor is relied on as a secondary source of repayment and not a primary source of repayment?
   b. If the sponsor has a historical pattern of supporting investments, financially or otherwise?
   c. If the degree of support has been documented via a guarantee, comfort level, or verbal assurance?
   d. If there has been a periodic review of the sponsor's financial statements, an analysis of liquidity, and an analysis of the sponsor's ability to support multiple deals?
   e. If consideration has been given to the sponsor's dividend and capital contribution practices and the likelihood that the sponsor will support the borrower as compared to other deals in the sponsor's portfolio?

Credit Review

1. Does the institution conduct an internal credit review of the leveraged-lending portfolio regularly, but at least once per year?
2. Does the institution ensure that credit review personnel have the knowledge and ability to identify risks in the leveraged lending portfolio?

Stress Testing

1. Has the institution developed and implemented guidelines for conducting periodic portfolio stress tests on loans originated to hold and on loans originated to distribute?
2. Has the institution conducted periodic loan and leveraged lending portfolio level stress tests?
3. If applicable, has the leveraged-lending portfolio been included in enterprise wide stress tests?
4. Does stress testing of leveraged credits include sensitivity analyses to quantify the potential impact of changing economic and market conditions on the institution's asset quality, earnings, liquidity, and capital?

Reputational Risk

1. Does the institution have procedures, safeguards, actions, training, and staff reminders about the potential reputational risk associated with poorly underwritten originated leveraged loans?
2. Has there been any failure or apparent failure by the institution to meet its legal responsibilities in underwriting and distributing transactions that could damage its reputation or its ability to compete?

Conflicts of Interest

1. Has the institution developed appropriate policies and procedures to address and to prevent potential conflicts of interest when it has both equity and lending positions?
2. Do policies and procedures:

   a. Clearly define potential conflicts of interest?
   b. Identify appropriate risk-management controls and procedures?
   c. Enable employees to report potential conflicts of interest to managements without fear of retribution?
   d. Ensure compliance with applicable laws?
3. Has management:
   a. Established a training program for employees on appropriate practices to follow to avoid conflicts of interest?
   b. Provided for reporting, tracking, and resolution of any conflicts?

Compliance

1. Does the institution maintain an independent compliance review function to periodically review its leveraged-lending activity?
2. Do the institution's policies include safeguards to prevent violations of anti-tying regulations?
3. How does the institution ensure compliance with applicable securities laws, including disclosure and other regulatory requirements when equity interests and certain debt instruments have been used in leveraged transactions that may constitute "securities" under federal securities laws?
4. Have plans and provisions been developed to ensure compliance with sections 23A and 23B of the Federal Reserve Act and Regulation W?

2010.2.11 APPENDIX I - EXAMINER LOAN-SAMPLING REQUIREMENTS FOR CREDIT-EXTENDING NONBANK SUBSIDIARIES OF BHCS WITH $10-50 BILLION IN TOTAL CONSOLIDATED ASSETS

This guidance sets forth loan sampling expectations for the Federal Reserve's examination of state member bank (SMB) and the inspection of credit-extending nonbank subsidiaries of bank holding companies (BHCs) with $10-50 billion in total consolidated assets. Examiners will have the flexibility, depending upon the structure and size of subsidiary SMBs or credit-extending nonbank subsidiaries of BHCs, to utilize the guidance applicable to smaller organizations when the subsidiary's total assets are below $10 billion. This guidance clarifies expectations for the assessment of material[56] retail credit portfolios for these institutions. The guidance that follows has been solely adapted to BHC credit-extending nonbank subsidiaries.

A thorough review of a BHC's credit-extending nonbank subsidiary's loan and lease portfolio remains a fundamental element of the Federal Reserve's inspection program for these organizations. Such credit reviews are a primary means for examiners to (1) evaluate the effectiveness of a BHC's credit-extending nonbank internal loan review program and internal grading systems for determining the reliability of internal reporting of classified credits, (2) assess compliance with applicable guidance and regulations, and (3) determine the efficacy of credit-risk management and credit administration processes. Further, examiners use the findings from their credit review to identify the overall thematic credit-risk management issues, to assess asset quality, to assist in the assessment of the adequacy of the allowance for loan and lease losses (ALLL), and to inform their analysis of capital adequacy.

2010.2.11.1 Loan Sampling Methodology

Reserve Banks will establish the annual loan-sampling objective during the supervisory planning process. The annual sampling objective should provide coverage of material exposures, including those in the retail segments.[57] Reserve Banks should plan on conducting at least two loan quality reviews during the annual supervisory cycle of the BHC's credit-extending nonbank subsidiaries with $10–50 billion in total consolidated assets.

Each review should focus on one or more material commercial loan segment exposures using the comparable FR Y-9C Report loan types and, in total over the annual cycle, should cover the four highest concentrations for com-

56. A loan portfolio or portfolio segment is considered material when the portfolio or segment exceeds 25 percent of total risk-based capital (tier 1 capital plus the allowance for loan and lease losses) or contributes 25 percent or more to annual revenues.

57. Commercial loan segments include commercial and industrial (C&I) loans, 1-4 family construction, other construction loans, multifamily loans, farm loans, non-farm non-residential owner occupied, and non-farm non-residential other loans. Retail loan segments include first lien mortgages, closed-end junior liens, home equity lines of credit (HELOCs), credit cards, automobile loans, and other consumer loans.

mercial credits in terms of total risk-based capital for any FR Y-9C Report loan type from Schedule HC-C. Loan segments that generate substantial revenues are generally likely to entail higher risk. To the extent that examiners can determine that a loan category contributes 25 percent or more to annual revenues,[58] examiners should sample these segments. Examiners should also sample other loan segments that they or the bank's internal loan review have identified as exhibiting high-risk characteristics. Such risk characteristics include liberal underwriting, high levels of policy exceptions, high-delinquency trends, rapid growth, new lending products, concentrations and concentrations to industry, or significant levels of classified credits. In addition to these risk-focused samples, a sample of loans to insiders must be reviewed.[59] Annual loan sampling coverage by examiners should take into consideration the severity of the asset quality component rating, the effectiveness of the internal loan review program, the results of internal loan portfolio stress testing, and current asset quality financial trends.

During the inspection scoping phase, Reserve Bank staff should analyze the results of recent loan review reports or audits prepared for an institution's internal use and the Reserve Bank's most current assessment of credit-risk management to help establish the size and composition of loans to be selected for review. A nonbank subsidiary's internal loan review program should achieve substantial coverage beyond the examiners' annual judgmental sample of material loan portfolios. Examiners should review the findings and recommendations of the nonbank subsidiary's internal loan review program to help identify areas of risk. In selecting loans from each segment of the loan portfolio to review, examiners should include a selection of the largest loans, problem loans (past due 90 days or more, nonaccrual, restructured, or internally classified loans), and newly originated loans. Examiners should ensure the sample selection includes robust coverage of classified credits. At a minimum, loans selected for review from commercial loan segments should represent 10 percent of the committed dollar amount of credit exposure within the loan segment.

Sample sizes should be increased beyond the 10 percent minimum, based on examiner judgment, for segments when the inspection scoping process or the internal loan review program has identified

1. deficiencies with credit-risk management and administration practices,
2. unusually high loan growth,
3. credit quality or collateral values that have been adversely affected since the prior review by volatile local or national economic conditions, or
4. unreliable internal credit-risk grading.

Conversely, sample sizes should be based on the 10 percent minimum if

1. previous inspections concluded that internal loan review and credit-risk identification is effective,
2. internal loan review has reviewed a loan segment within the last 12 months and noted no material weaknesses, and
3. the inspection scoping process reveals no significant credit-risk management issues.

In general, the lower range of 10 percent sampling of each segment or the entire commercial portfolio would be acceptable when all aspects of credit risk indicate low and stable risk.

Examiners should determine classification amounts for retail credits using the Uniform Retail Classification Guidance (SR letter 00-8, "Revised Uniform Retail Credit Classification and Account Management Policy"). Annually, examiners should focus on one or more material retail loan segment exposures as divided by the comparable FR Y-9C Report loan type. Examiners should determine the appropriate sample of retail loans from material segments based on risk to be tested for compliance with internal credit administration policies and underwriting standards. While there is no minimum coverage expectation for retail portfolios or segments, the goal of sampling is to assist examiners in making an informed assessment of all aspects of retail credit-risk management. If applicable, examiners should evaluate and test secondary market origination and servicing practices and quality assurance programs. Examiners should also sample other retail loan segments, as needed, from segments the examiners or internal loan review identify as exhibiting high-risk characteristics such as liberal underwriting,

58. The 25 percent threshold should be based on internal MIS and may not be applicable or available in all instances. For the purposes of this guidance, annual revenue equals net interest income plus non interest income.

59. Federal Reserve examiners must test and evaluate Regulation O compliance annually.

high-delinquency trends, rapid growth, new lending products, or significant levels of classified credits.

2010.2.11.2 Documentation of Loan Sampling Analysis and Methodology

Examiners should discuss their analysis and objectives for achieving loan sampling coverage with Board staff during the annual supervisory planning process. Upon reaching a consensus with Board staff, the analysis and methodology should be retained in workpapers and documented in the supervisory plan. Further, examiners should document their loan sample selection methods in scoping memoranda and in the confidential section of the report of inspection. The required workpaper documentation of the commercial loan coverage calculation should be based on total loan commitments and should generally exclude loans reviewed outside of the Reserve Bank's supervisory plan when a detailed analysis of the loans by an examiner and an assessment of credit-risk management were not performed. Review of syndicated loans and participations, such as those from the Shared National Credits (SNCs) annual review, should only be included in the coverage ratio if Reserve Bank staff reviewed the credit-risk management aspects of the credit (for example, adherence to underwriting policies) and these findings are included in the examiner's assessment of overall credit-risk management practices. Examiners should continue to follow the SNC grading guidance.[60]

2010.2.11.3 Follow-Up Expectations for Inspections with Adverse Findings

Examiners should generally consider a credit-extending nonbank subsidiary's internal risk-rating system to be less reliable when examiner downgrades[61] or internal loan review downgrades equal 10 percent of the total number of loans reviewed, or 5 percent of the total dollar amount of loans and commitments reviewed. When a credit-extending nonbank subsidiary's risk-rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the entity's ALLL and capital. In such situations, examiners should direct the BHC and its credit-extending nonbank subsidiary to take corrective action to validate its internal ratings and to evaluate whether the ALLL or capital should be increased. The Reserve Bank will follow-up with the BHC and its nonbank subsidiary to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed.[62] All follow-up actions on adverse findings should be discussed with Board staff.

41. Refer to SR-77-377, "Shared National Credit Program."

61. A credit-risk grading difference is considered a downgrade when (a) a risk rating is changed by the examiner from an internal Pass rating to a classified category or (b) a risk rating is changed by the examiner within the classified categories.

62. Refer to SR-13-13/CA -13-10, "Supervisory Considerations for the Communications of Supervisory Findings."

The System's ability to evaluate the effectiveness of a company's supervision and control of subsidiary investment activities can be strengthened not only by evaluating the parent's role in light of efficiency and operating performance, but also by evaluating the quality of control and supervision. In order to assess quality there must be a standard or measuring block against which a company's policies can be evaluated. By establishing the minimum areas that a company's policies should address with respect to subsidiary investments, a standard is created which can evaluate the quality of company's control and supervision of that activity. The examiner needs to make a qualitative assessment of the parent's supervision and control of subsidiary investment activities.

2010.3.1 INSPECTION OBJECTIVES

1. Determine if the parent's investment policy is adequate for the organization.
2. Determine if the investment policy is being complied with.

2010.3.2 INSPECTION PROCEDURES

1. Determine whether the management has developed a flow chart on investment authorization procedures sufficiently detailed to assure that the execution of transactions precludes the ability to circumvent policy directives.
2. Determine whether all investment policies appear to be adequately tailored to fit the business needs of each subsidiary. Review the methods and/or process through which prior approval of new activities and investments in new instruments is granted.
3. Determine whether the boards of directors and the management of subsidiaries appear to be sufficiently involved in their respective roles to assure that the performance of fiduciary responsibilities of each appears adequate.
4. Assess the adequacy of the level of management expertise in relation to its involvement in various investment activities.
5. Evaluate the reasonableness of investment activity initiated to achieve corporate objectives in light of its potential impact on the risk exposure of subsidiaries.
6. Assess the adequacy of investment policy directives in regard to the required maintenance of adequate recordkeeping systems at subsidiaries.
7. Evaluate policy directives regarding the appropriateness of accounting practices in regard to transactions involving investment participations, swaps, other transfers of investments as well as specialized investment activities.
8. Evaluate whether investment policies adequately provide for the maintenance of a stable income stream at bank subsidiaries as well as the parent company level.
9. Determine whether investment policy directives adequately address statutory limitations, particularly those involving intercompany transactions.
10. Evaluate the effectiveness of the bank holding company's audit function in assuring that investment policies and directives are adhered to at each corporate level.

This section emphasizes the importance of integrating subsidiaries into a consolidated plan, the essential elements of the planning process, and the ultimate accountability of the board of directors of the holding company. As a minimum, the parent's consolidated plan should include the following ten elements:

1. *All plans should address a long-range goal or focus, intermediate term objectives, and short-term budgets.* A long-range focus is particularly important during a changing environment and during expansions of the organization. Long-range plans generally are broad with a service or customer orientation and market share emphasis. These plans provide the entire organization with a consistent direction and facilitate changes in the organization arising from environmental changes. Intermediate goals generally are narrower in scope. Short-term budgets are generally developed at the subsidiary level; however, they are subject to review and revision by the parent in an effort to maintain consistency throughout the organization.

2. *The planning process should be formalized.* A long-range focus, intermediate term objectives, and budgets should be written and adopted by the parent's board of directors to insure centralized accountability.

3. *Plans should be consistent and interrelated over the differing time periods.* For example, budgets should be consistent with long-range goals—the implementation of a short-term, high return orientation may be inconsistent with a long-term goal of increasing market share, or short-term compensation plans may be disfunctional in the long run.

4. *A consolidated plan should increase the consistency of goals among differing subsidiaries and the parent.* The long-range goals, intermediate term objectives, and short term goals and objectives should be periodically reviewed, preferably, annually, by the BHC's board of directors. A consolidated plan should reduce unnecessary internal competition.

5. *A consolidated plan should facilitate the allocation of resources throughout the organization.* This is particularly important when the parent is providing most, or all, of the short-term funds and long-term capital. As the parent has an awareness of all subsidiaries, it can better allocate funds and personnel to areas where they will be utilized most effectively.

6. *Plans should be formulated with an awareness to possible weaknesses and recognition to areas likely to be influenced by environmental change.* For these areas, flexibility should exist for contingency plans.

7. *Methods should be determined, in the plan, to monitor and evaluate compliance with the plan.*

8. *The consolidated plan should have a measurable aspect to determine whether budgets, objectives, and goals are being met.* If they are not met, determination as to the controllability of variances should be ascertained.

9. *Plans and goals must continually be evaluated to determine whether accomplishing the goal results in the desired and expected outcome.* For example, the desired outcome may be to increase net income by granting loans with higher interest rates and above normal risk. The granting of such loans may result in a need to increase the provision for loan losses, thus causing a decrease in earnings.

10. *Plans should be flexible enough to remain effective in a volatile environment.* If plans are too rigid, they may become disfunctional if the environment changes and actually constrain an organization's ability to react. On the other hand, flexible goals and plans should enhance an organization's ability to compete by providing the entire organization with a fluid consistent direction.

2010.4.1 INSPECTION OBJECTIVES

1. To determine if the board of directors at the parent company is cognizant of and performing its duties and responsibilities.
2. To determine if the level of supervision over subsidiaries is both adequate and beneficial.
3. To evaluate the consolidated plan for consistency, controls, and effectiveness.
4. To ascertain if the board of directors of the parent company is making judgments and decisions based on adequate information flowing from the management and financial reporting systems of the organization.

2010.4.2 INSPECTION PROCEDURES

1. Evaluate the participation by the board of directors of the parent company in giving overall direction to the organization.
2. Obtain and evaluate descriptions of all im-

portant management and financial policies, procedures, and practices.

3. Determine if contradictions or ‘‘conflicts’’ between expressed and unexpressed strategies and between long-term and short-term goals exist. Also determine that goals are consistent with concern over safety and soundness.

4. Determine whether the planning process is sufficiently flexible and if contingency plans exist.

5. Spell out the lines of authority associated with the planning process.

6. Determine the degree of control exercised by the parent company over the entire organization.

7. Test compliance with policies at all levels.

2010.5.1 BACKGROUND INFORMATION ON ENVIRONMENTAL LIABILITY

Banking organizations are increasingly becoming exposed to liability associated with the clean-up of hazardous substance contamination pursuant to, the Comprehensive Environmental Response, Compensation and Liability Act (''CERCLA''), the federal superfund statute. It was enacted in response to the growing problem of improper handling and disposal of hazardous substances. CERCLA authorizes the Environmental Protection Agency (''EPA'') to clean-up hazardous waste sites and to recover costs associated with the clean-up from entities specified in the statute. The superfund statute is the primary federal law dealing with hazardous substance contamination. However, there are numerous other federal statutes, as well as state statutes, that establish environmental liability that could place banking organizations at risk. For example, underground storage tanks are also covered by separate federal legislation.[1]

While the superfund statute was enacted a decade ago, it has been only since the mid-1980s that court actions have resulted in some banking organizations being held liable for the clean-up of hazardous substance contamination. In this connection, recent court decisions have had a wide array of interpretations as to whether banking organizations are owners or operators of contaminated facilities, and thereby liable under the superfund statute for clean-up costs. This has led to uncertainty on the part of banking organizations as to how to best protect themselves from environmental liability.

The relevant provisions of CERCLA, the so-called ''superfund'' statute, as it pertains to banking organizations, indicate which persons or entities are subject to liability for clean-up costs of hazardous substance contamination. These include ''. . . the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of. . . .''[2] A person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning-up contamination under the superfund statute.

The liability imposed by the superfund statute is strict liability which means the government does not have to prove that the owners or operators had knowledge of or caused the hazardous substance contamination. Moreover, liability is joint and several, which allows the government to seek recovery of the entire cost of the clean-up from any individual party that is liable for those clean-up costs under CERCLA. In this connection, CERCLA does not limit the bringing of such actions to the EPA, but permits such actions to be brought by third parties.

CERCLA provides a secured creditor exemption in the definition of ''owner and operator'' by stating that these terms do not include ''. . . a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility.''[3] However, this exception has not provided banking organizations with an effective ''safe harbor'' because recent court decisions have worked to limit the application of this exemption. Specifically, courts have held that actions by lenders to protect their security interests may result in the banking organization ''participating in the management'' of a vessel or facility, thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the banking organization, courts have held that the exemption no longer applies and that the banking organization is liable under the superfund statute as an ''owner'' of the property. Under some circumstances, CERCLA may exempt landowners who acquire property without the knowledge of pre-existing conditions (the so-called ''innocent landowner defense''). However, the courts have applied a stringent standard to qualify for this defense. Because little guidance is provided by the statute as to what constitutes the appropriate timing and degree of ''due diligence'' to successfully employ this defense, banking organizations should exercise caution before relying on it.

2010.5.2 OVERVIEW OF ENVIRONMENTAL HAZARDS

Environmental risk can be characterized as adverse consequences resulting from having gen-

1. Resource Conservation and Recovery Act of 1986 (RCRA).
2. CERCLA, Section 107(a).
3. CERCLA, Section 101(20)(A)..

erated or handled hazardous substances, or otherwise having been associated with the aftermath of subsequent contamination. The following discussion highlights some common environmental hazards, but by no means covers all environmental hazards.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals or solvents in the manufacturing process or as waste products. For years, these types of hazardous substances were disposed of in land fills, or just dumped on industrial sites. Hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of potential hazardous substance contamination which should be of concern to banking organizations:

- Farmers and ranchers (use of fuel, fertilizers, herbicides, insecticides, and feedlot runoff).
- Dry cleaners (various cleaning solvents).
- Service station and convenience store operators (underground storage tanks).
- Fertilizer and chemical dealers and applicators (storage and transportation of chemicals).
- Lawn care businesses (application of lawn chemicals).
- Trucking firms (local and long haul transporters of hazardous substances such as fuel or chemicals).

The real estate industry has taken the brunt of the adverse affects of hazardous waste contamination. In addition to having land contaminated with toxic substances, construction methods for major construction projects, such as commercial buildings, have utilized materials that have been subsequently determined to be hazardous, resulting in significant declines in their value. For example, asbestos was commonly used in commercial construction from the 1950's to the late 1970's. Asbestos has since been found to be a health hazard and now must meet certain federal and, in many instances, state requirements for costly removal or abatement (enclosing or otherwise sealing off).

Another common source of hazardous substance contamination is underground storage tanks. Leaks in these tanks not only contaminate the surrounding ground, but often flow into ground water and travel far away from the original contamination site. As contamination spreads to other sites, clean-up costs escalate.

2010.5.3 IMPACT ON BANKING ORGANIZATIONS

Banking organizations may encounter losses arising from environmental liability in several ways. The greatest risk to banking organizations, resulting from the superfund statute and other environmental liability statutes, is the possibility of being held solely liable for costly environmental clean-ups such as hazardous substance contamination. If a banking organization is found to be a responsible party under CERCLA, the banking organization may find itself responsible for cleaning-up a contaminated site at a cost that far exceeds any outstanding loan balance. This risk of loss results from an interpretation of the superfund statute as providing for joint and several liability. Any responsible party, including the banking organization, could be forced to pay the full cost of any clean-up. Of course, the banking organization may attempt to recover such costs from the borrower, or the owner if different than the borrower, provided that the borrower or owner continues in existence and is solvent. Banking organizations may be held liable for the clean-up of hazardous substance contamination in situations where the banking organization:

- Takes title to property pursuant to foreclosure;
- Involves the banking organization's personnel or contractors engaged by the bank in day-to-day management of the facility;
- Takes actions designed to make the contaminated property salable, possibly resulting in further contamination;
- Acts in a fiduciary capacity, including management involvement in the day-to-day operations of industrial or commercial concerns, and purchasing or selling contaminated property;
- Owns existing, or acquires (by merger or acquisition), subsidiaries involved in activities that might result in a finding of environmental liability;
- Owns existing, or acquires for future expansion, premises that have been previously contaminated by hazardous substances. For example, site contamination at a branch office where a service station having underground storage tanks once operated. Also, premises or other real estate owned could be contaminated by asbestos requiring costly clean-up or abatement.

A more common situation encountered by banking organizations has been where real property collateral is found to be contaminated by hazardous substances. The value of contaminated real property collateral can decline dramatically, depending on the degree of contamination. As the projected clean-up costs increase, the borrower may not be able to provide the necessary funds to remove contaminated materials. In making its determination whether to foreclose, the banking organization must estimate the potential clean-up costs. In many cases this estimated cost has been found to be well in excess of the outstanding loan balance, and the banking organization has elected to abandon its security interest in the property and write off the loan. This situation occurs regardless of the fact that the superfund statute provides a secured creditor exemption. Some courts have not extended this exemption to situations where banking organizations have taken title to a property pursuant to foreclosure. These rulings have been based on a strict reading of the statute that provides the exemption to ‘‘security interests’’ only.

Risk of credit losses can also arise where the credit quality of individual borrowers (operators, generators, or transporters of hazardous substances) deteriorates markedly as a result of being required to clean up hazardous substance contamination. Banking organizations must be aware that significant clean-up costs borne by the borrower could threaten the borrower's solvency and jeopardize the banking organization's ultimate collection of outstanding loans to that borrower, regardless of the fact that no real property collateral is involved. Therefore, ultimate collection of loans to fund operations, or to acquire manufacturing or transportation equipment can be jeopardized by the borrower's generating or handling of hazardous substances in an improper manner. Further, some bankruptcy courts have required clean-up of hazardous substance contamination prior to distribution of a debtor's estate to secured creditors.

Borrowers may have existing subsidiaries or may be involved in merger and acquisition activity that may place the borrower at risk for the activities of others that result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court imposed clean-up costs. Additionally, borrowers can be held liable for contamination which occurred prior to their owning or using real estate.

2010.5.4 PROTECTION AGAINST ENVIRONMENTAL LIABILITY

Banking organizations have numerous ways to identify and minimize their exposure to environmental liability. Because environmental liability is relatively recent, procedures used to safeguard against such liability are evolving. The following discussion briefly describes methods currently being employed by banking organizations and others to minimize potential environmental liability.

Banking organizations should have in place adequate safeguards and controls to limit their exposure to potential environmental liability. Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests as well as existing loans. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be held to a more stringent due diligence investigation than borrowers in low-risk industries or localities. In addition to establishing procedures for granting credit, procedures should be developed and applied to portfolio analysis, credit monitoring, loan workout situations, and—prior to taking title to real property—foreclosures. Banking organizations may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess and control environmental liability.

At the same time, banking organizations must be careful that any lending policies and procedures, but especially those undertaken to assess and control environmental liability, cannot be construed as taking an active role in participating in the management or day-to-day operations of the borrower's business. Activities which could be considered active participation in the management of the borrower's business, and therefore subject the bank to potential liability, include, but are not limited to:

- having bank employees as members of the borrower's board of directors or actively participating in board decisions;
- assisting in day-to-day management and operating decisions; and
- actively determining management changes.

These considerations are especially important when the banking organization is actively involved in loan workouts or debt restructuring.

The first step in identifying and minimizing environmental risk is for banking organizations to perform environmental reviews. Such reviews may be performed by loan officers or others, and typically identify past practices and uses of the facility and property, evaluate regulatory compliance, if applicable, and identify potential future problems. This is accomplished by interviewing persons familiar with present and past uses of the facility and property, reviewing relevant records and documents, and visiting and inspecting the site.

Where the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough review and inspection of the facility and property. Environmental audits differ markedly from environmental assessments in that independent environmental engineers are employed to investigate, in greater detail, those factors listed previously, and actually test for hazardous substance contamination. Such testing might require collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

Other measures used by some banking organizations to assist in identifying and minimizing environmental liability include: obtaining indemnities from borrowers for any clean-up costs incurred by the banking organization, and including affirmative covenants in loan agreements (and attendant default provisions) requiring the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identifying and minimizing potential environmental liability, they are not a substitute for environmental reviews, assessments and audits, because their effectiveness is dependent upon the financial strength of the borrower.

2010.5.5 CONCLUSION

Potential environmental liability can touch on a great number of loans to borrowers in many industries or localities. Moreover, nonlending activities as well as corporate affiliations can lead to environmental liability depending upon the nature of the these activities and the degree of participation that the parent exercises in the operations of its subsidiaries. Such liability can result in losses arising from hazardous substance contamination because banking organizations are held directly liable for costly court ordered clean-ups. Additionally, the banking organization's ability to collect the loans it makes may be hampered by significant declines in collateral value, or the inability of a borrower to meet debt payments after paying for costly clean-ups of hazardous substance contamination.

Banking organizations must understand the nature of environmental liability arising from hazardous substance contamination. Additionally, they should take prudential steps to identify and minimize their potential environmental liability. Indeed, the common thread to environmental liability is the existence of hazardous substances, not types of borrowers, lines of business, or real property.

2010.5.6 INSPECTION OBJECTIVES

1. To determine whether adequate safeguards and controls have been established to limit exposure to potential environmental liability.
2. To determine whether the banking organization has identified specific credits and any lending and other banking and nonbanking activities that expose the organization to environmental liability.

2010.5.7 INSPECTION PROCEDURES

1. Review loan policies and procedures and establish whether these and other adequate safeguards and controls have been established to avoid or mitigate potential environmental liability.[4] In performing this task, ascertain whether:
    a. an environmental policy statement has been adopted;
    b. training programs are being conducted so that lending personnel are aware of environmental liability issues and are able to identify borrowers with potential problems;
    c. guidelines and procedures have been established for dealing with new borrowers and real property offered as collateral.
    d. the lending policies and procedures and other safeguards, including those to assess and control environmental liability, may not be construed as actively participating in the management of day-to-day operations of borrowers' businesses.

4. Refer to SR-91-20.

2. When reviewing individual credits determine whether the loan policy has been complied with in regard to a borrower's activities or industry that is associated with hazardous substances or environmental liability.

3. Ascertain whether appropriate periodic analysis of potential environmental liability is conducted.

Such analysis should be more rigorous as the risk of hazardous substance contamination increases. The following are examples of types of analyses and procedures that should be progressively considered as the risk of environmental liability increases:

- Environmental review—screening of the borrower's activities by lending personnel or real estate appraisers for potential environmental problems (using questionnaires, interviews, or observations).

  Review procedures might include a survey of past ownership and uses of the property, a property inspection, a review of adjacent or contiguous parcels of property, a review of company records for past use or disposal of hazardous materials, and a review of any relevant Environmental Protection Agency records.
- Environmental assessment—structured analysis by a *qualified* individual that identifies the borrower's past practices, regulatory compliance, and potential future problems. This analysis would include reviewing relevant documents, visiting and inspecting the site, and, in some cases, performing limited tests.
- Environmental audit—a professional environmental engineer performs a similar structured analysis as previously indicated for "environmental assessments," however, more comprehensive testing might involve collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

4. Determine whether existing loans are reviewed internally to identify credits having potential environmental problems.

5. Review recordkeeping procedures and determine whether there is documentation as to the due diligence efforts taken at the time of making loans or acquiring real property.

6. Review loan agreements to determine if warranties, representations, and indemnifications have been included in loan agreements designed to protect the banking organization from losses stemming from hazardous substance contamination. (Although such provisions provide some protection for the lender, these agreements are not binding against the government or third parties. Such contractual protections are only as secure as the borrower's financial strength.)

7. For situations involving potential environmental liability arising from a banking organization's nonlending activities, verify that similar policies and procedures are in place.[5]

5. A banking organization's policies and procedures relating to environmental liability should apply to nonlending situations where appropriate. For example, banking organizations engaged in trust activities or contemplating a merger or acquisition should evaluate the possibility of existing or subsequent environmental liability arising from these activities.

2010.6.1 INTRODUCTION

Some depository institutions are active in selling uninsured nondeposit investment products, such as mutual funds or annuities, on their premises. Depository institutions provide these services at the retail level, directly or through various types of arrangements with third parties (an affiliated or non-affiliated party).[1]

Depository institutions selling nondeposit investment products should clearly inform customers of the nature and risks associated with these products. In particular, where nondeposit investment products are recommended or sold to retail customers, depository institutions should fully inform customers and make clear that the products

- are not insured by the Federal Deposit Insurance Corporation (FDIC);
- are not deposits or other obligations of the institution and are not guaranteed by the institution; and
- are subject to investment risks, including possible loss of the principal invested.

A depository institution should design sales activities involving these investment products to minimize the possibility of customer confusion. Further, a depository institution should design sales of the investment products to safeguard the institution from liability under the applicable antifraud provisions of the federal securities laws, which, among other things, prohibit materially misleading or inaccurate representations in connection with the sale of securities.

The purpose of this manual section is to provide an overview of the guidance addressing the retail sales of nondeposit investment products. For more information, see

- SR-94-11, "Interagency Statement on Retail Sales of Nondeposit Investment Products" (1994 interagency statement);
- SR-95-46, "Interpretation of Interagency Statement on Retail Sales of Nondeposit Investment Products"; and
- *Commercial Bank Examination Manual*, section 4580.1, "Retail Sales of Nondeposit Investment Products."

1. Sales arrangements involving companies affiliated with a depository institution subsidiary of a bank holding company could be subject to the provisions of section 106 of the Bank Holding Company Act amendments of 1970, as amended, 12 U.S.C. § 1871 et seq. For more information, see section 3070.0.7.4 of this manual.

2010.6.2 1994 INTERAGENCY STATEMENT SUMMARY

The Federal Reserve Board, along with the other federal banking agencies, issued an interagency statement on February 15, 1994, that provides comprehensive guidance on retail sales of nondeposit investment products occurring on or from depository institution premises. See SR-94-11.

The 1994 interagency statement was issued to address the expansion by depository institutions of activities involving the recommendation and sale to retail customers of nondeposit investment products, including mutual funds and annuities, as well as stocks and other investment products. The 1994 interagency statement focuses on issues that pertain specifically to the retail sale of investment products to customers on depository institution premises and seeks to avoid customer confusion of such products with those that are FDIC insured primarily through disclosure and separation of sales of investment products from other banking activities. In addition, the 1994 interagency statement provides guidance to depository institutions with respect to sales practices that are consistent with those applicable to registered securities brokers and dealers.

The 1994 interagency statement unifies pronouncements previously issued by the federal banking supervisory agencies that addressed various aspects of retail sales programs involving mutual funds, annuities, and other nondeposit investment products. This statement emphasizes the importance of adopting comprehensive policies and procedures governing sales programs and includes directions relating to the following matters:

- disclosure and advertising
- the use of identical and similarly named products
- the separation of sales programs
- the training and supervision of personnel
- sales practices and suitability
- third-party arrangements

The 1994 interagency statement applies to all depository institutions, including state member banks, and the U.S. branches and agencies of foreign banks, supervised by the Federal Reserve. This statement does not apply directly to bank holding companies or savings and loan holding companies (holding companies). However, the board of directors and management of holding companies should consider the provisions of the statement with regard to the holding company's oversight of its depository institution subsidiaries that offer such products to retail customers.

The 1994 interagency statement applies when retail recommendations or sales of nondeposit investment products are made by the following personnel:

- employees of the depository institution
- employees of a third party, which may or may not be affiliated with the institution,[2] occurring on the premises of the institution (including telephone sales or recommendations by employees or from the institution's premises and sales or recommendations initiated by mail from its premises)
- sales resulting from a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral

For these purposes, retail sales include (but are not limited to) sales to individuals by depository institution personnel or third-party personnel conducted in or adjacent to a depository institution's lobby area. Sales of government and municipal securities made in a depository institution's dealer department located away from the lobby area are *not* covered by the 1994 interagency statement.

The guidelines in the 1994 interagency statement generally do not apply to the sale of nondeposit investment products to nonretail customers, such as sales to fiduciary accounts administered by an institution.[3] The disclosures provided by the interagency statement, however, should be provided to customers of fiduciary accounts where the customer directs investments, such as self-directed IRA accounts. Such disclosures need not be made to customers acting as professional money managers. Fiduciary accounts administered by an affiliated trust company on the depository institution's premises should be treated as fiduciary accounts of the institution. However, as part of its fiduciary responsibility, an institution should take appropriate steps to avoid potential customer confusion when providing nondeposit investment products to the institution's fiduciary customers.

2010.6.3 SUPERVISORY REVIEW

Reserve Bank examiners review nondeposit investment product sales activities during examinations of institutions engaging in such activities on their premises, either directly or through a third party or an affiliate. In general, examiners review nondeposit investment product sales when examining a state member bank (or a state-licensed U.S. branch or agency of a foreign bank) that engages directly in the retail sale of nondeposit investment products. The review process aims to assess the nature and sufficiency of an institution's disclosures, the separation of functions, and the training of personnel involved with the sales of mutual funds and other nondeposit products. For more information on examination procedures and objectives, see the *Commercial Bank Examination Manual*.

2. The 1994 interagency statement does not apply to the subsidiaries of insured state nonmember banks, which are subject to separate provisions relating to securities activities.

3. Restrictions on a national bank's use as fiduciary of the bank's brokerage service or other entity with which the bank has a conflict of interest, including purchases of the bank's proprietary and other products, are set forth in 12 C.F.R. 9.12.

A banking organization should be able to readily determine for which entity within the bank holding company an individual is employed, and members of a banking organization's staff must be able to identify which subsidiary of the holding company employs them. The distinction is important because complex banking organizations must take steps to ensure that their officials and employees have both the corporate and legal authority to carry out their duties, and because the organization's personnel should only be performing activities that are permitted by law to be carried out by the holding company or its particular subsidiaries.

2010.8.1 IDENTIFICATION OF FACILITIES AND STAFF

Generally, unless there are statutory restrictions or the Federal Reserve or other regulators have issued explicit written proscriptions, such as those concerning mutual fund sales on bank premises, there is no fundamental legal prohibition on the entities of a banking organization sharing or using unmarked contiguous facilities and, in some instances, sharing officials and employees. There are, however, concerns about safety and soundness and conflicts of interest. These may arise when a banking organization does not take appropriate actions to define and differentiate the functions and responsibilities of each of its entities and staff.

Good corporate governance requires that a banking organization be able to readily identify the authority and responsibilities of its officials and employees at each of its entities, especially where the entities share facilities or use contiguous offices that are not clearly marked to indicate the identity of the different entities. This is necessary to ensure that—

1. an official or employee who makes a commitment to a counterparty on behalf of the organization has both the corporate and legal authority to do so,
2. the counterparty understands with whom it is dealing, and
3. each entity is in compliance with any legal restrictions under which it operates.

To accomplish the goal of ready identification, a banking organization should maintain well-defined job descriptions for each category of its staff at each entity. When officials and employees of one entity have responsibilities for other entities, particularly in shared facilities, the staff's responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for both the public and the regulators for which entity officials or employees are carrying out their duties and responsibilities. Also, this clarifies whether an entity is operating within the scope of its charter, license, or other legal restrictions. Finally, a banking organization should establish and maintain appropriate internal controls designed to ensure the separation of the functions of the legal entities, when required, as well as have an adequate audit program to monitor such activities.

If officials and employees have responsibilities for other offices or affiliates of the banking organization, particularly those that share facilities, these responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for which entity employees are carrying out their duties. Furthermore, in establishing employee responsibilities, management should ensure that they are within the scope of the entity's license or charter.

2010.8.2 EXAMINER GUIDANCE ON SHARING FACILITIES AND STAFF

Examiners should continue to be fully aware of the issues and potential problems involved in the sharing of staff and the sharing or use of unmarked contiguous facilities by the different entities of a banking organization with varied activities. At a minimum, examiners should check to see that a banking organization maintains clear records indicating the duties and responsibilities of the officials and employees at each of its entities. They should also take steps to check whether, in situations when an official or employee may perform duties for more than one entity in a shared facility, the banking organization has adequate policies and controls in place to ensure that its staff have the corporate and legal capacity to commit the organization to its counterparties and that the duties are carried out in conformance with the statutory restrictions applicable to each of the entities. See SR-95-34 (SUP).

One of the many basic tenets of internal control is that a banking organization (bank holding company, state member bank, and foreign banking organization) needs to ensure that its employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks. Such a requirement enhances the viability of a sound internal control environment because most frauds or embezzlements require the continuous presence of the wrongdoer.

In brief, this section contains a statement emphasizing the need for banking organizations to conduct an assessment of significant risk areas before developing a policy on required absences from sensitive positions. After making this assessment, the organization should require that employees in sensitive key positions, such as trading and wire transfer, not be allowed to transact or otherwise carry out, either physically or through electronic access, their assigned duties for a minimum of two consecutive weeks per year. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear. It should also require that an individual's daily work be processed by another employee during the employee's absence. (See SR-96-37.)

2010.9.1 STATEMENT ON REQUIRED ABSENCES FROM SENSITIVE POSITIONS

A comprehensive system of internal controls is essential for a financial institution to safeguard its assets and capital, and to avoid undue reputational and legal risk. Senior management is responsible for establishing an appropriate system of internal controls and monitoring compliance with that system. Although no single control element should be relied on to prevent fraud and abuse, these acts are more easily perpetrated when proper segregation and rotation of duties do not exist. As a result, the Federal Reserve is reemphasizing the following prudent banking practices that should be incorporated into a banking organization's internal control procedures. These practices are designed to enhance the viability of a sound internal control environment, as most internal frauds or embezzlements necessitate the constant presence of the offender to prevent the detection of illegal activities.

When developing comprehensive internal control procedures, each banking organization should first make a critical assessment of its significant areas and sensitive positions. This assessment should consider all employees, but should focus more on those with authority to execute transactions, signing authority and access to the books and records of the banking organization, as well as those employees who can influence or cause such activities to occur. Particular attention should be paid to areas engaged in trading and wire-transfer operations, including personnel who may have reconciliation or other back-office responsibilities.

After producing a profile of high-risk areas and activities, it would be expected that a minimum absence of two consecutive weeks per year be required of employees in sensitive positions. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear and to provide for an independent monitoring of the transactions that the absent employee is responsible for initiating or processing. This practice could be implemented through a requirement that affected employees take vacation or leave, the rotation of assignments in lieu of required vacation, or a combination of both so the prescribed level of absence is attained. Some banking organizations, particularly smaller ones, might consider compensating controls such as continuous rotation of assignments in lieu of required absences to avoid placing an undue burden on the banking organization or its employees.

For the policy to be effective, individuals having electronic access to systems and records from remote locations must be denied this access during their absence. Similarly, indirect access can be controlled by not allowing others to take and carry out instructions from the absent employee. Of primary importance is the requirement that an individual's daily work be processed by another employee during his or her absence; this process is essential to bring to the forefront any unusual activity of the absent employee.

Exceptions to the required-absence policy may be necessary from time to time. However, management should exercise the appropriate discretion and properly document any waivers that are granted. Internal auditing should be made aware of individuals who receive waivers and the circumstances necessitating the exceptions.

If a banking organization's internal control procedures do not now include the above practices, they should be promptly amended. After the procedures have been enhanced, they should be disseminated to all employees, and the documentation regarding their receipt and acknowledgment maintained. Additionally, adherence to the procedures should be included in the appropriate audit schedules, and the auditors should be cognizant of potential electronic access or other circumventing opportunities.

The development and implementation of procedures on required absences from sensitive positions is just one element of an adequate control environment. Each banking organization should take all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.

2010.9.2 INSPECTION OBJECTIVES

1. To determine whether a critical assessment has been performed of a banking organization's significant areas and sensitive positions.
2. To ascertain that sound internal controls exist, including policies and procedures that provide assurances that employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks per year.
3. To ascertain whether the banking organization has taken all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.
4. To establish that the appropriate audit schedules and the audits include a review of minimum absence policies and procedures, including potential electronic access or other circumventing actions by employees.

2010.9.3 INSPECTION PROCEDURES

1. Determine that a profile of high-risk areas and activities is performed on a regular periodic basis.
2. Ascertain if employees assigned to sensitive positions are required to be absent for a minimum of two weeks per year while—
   a. pending sensitive transactions are monitored while they clear, and
   b. daily work is monitored and processed by another employee during the regularly assigned employee's absence.
3. Determine if required internal control procedures for minimum absences (for example, rotation of assignments, vacation or leave, or a combination of both) are being used in sensitive operations such as trading, trust, wire transfer, reconciliation, or other sensitive back-office responsibilities.
4. Ascertain if appropriate policies, limits, and verification procedures have been established and maintained for an effective overall risk-managment system.
5. Determine whether the banking organization—
   a. prohibits others from taking and carrying out instructions from the absent employees, and
   b. prevents remote electronic access to systems and records involving sensitive transactions during the regularly assigned employee's required minimum two-week absence.
6. Ascertain that the banking organization documents waivers from the two-week minimum absence policies and procedures involving sensitive positions.
7. Determine that the appropriate audit schedules and the audits include a review of such procedures, including potential electronic access or other circumventing actions by employees.

Internal loan review is an activity which provides management with information about the quality of loans and effectiveness of a banking organization's lending policies and procedures. The objectives of loan-review procedures are to identify, in a timely manner, existing or emerging credit-quality problems and to determine whether internal lending policies are being adhered to.

The size and complexity of a bank holding company will dictate the need for and structure of internal loan review. One-bank holding companies with no significant credit-extending nonbank subsidiaries will normally establish internal loan-review procedures within the subsidiary bank. In these cases, there is no need to evaluate the loan-review procedures during the inspection.

For larger multibank companies or those with significant credit-extending nonbank subsidiaries, internal loan review is usually centralized at the parent company level. In some cases, a centralized loan-review function could operate in the lead bank and cover all affiliates within the organization. However, since parent company directors and senior management are ultimately accountable for the organization's asset quality, an evaluation of the internal loan-review function should be conducted as part of the inspection process no matter where the operations are technically located within the corporate structure. Since a subsidiary bank's primary regulator will normally want to evaluate the loan-review process as it relates to the respective bank, a coordination of efforts would be appropriate. This should be handled on an ad hoc basis, as deemed necessary by the holding company's examiner-in-charge, to avoid unnecessary duplication of efforts without compromising the independence of the appraisal process.

Internal loan-review procedures may take various forms, from senior officers' review of junior-officer loans to the formation of an independent department staffed by loan-review analysts. An effective system will identify deteriorations in credits, loans that do not comply with written loan policies, and loans with technical exceptions.

The loan-review program should be delegated to a qualified and adequate staff. The review should be systematic in scope and frequency. All related extensions of credit should be identified and analyzed together. A minimum credit size should be established that allows for an efficient review while providing adequate coverage. The process should also tie problem loans or technical exceptions to the particular loan officer to allow senior management to evaluate individual performance. Loans should be reviewed shortly after origination to determine their initial quality, technical exceptions, and compliance with written loan policies. Reasonable frequency guidelines should be set for normal reviews, with problem credits receiving special and more frequent analysis. An effective loan-review procedure will incorporate an early warning system of "red flags," such as overdrafts, adverse published reports, and deteriorating financial statements. Loan officers should also be encouraged to inform the organization's internal loan-review unit of developing loan problems, and they should be discouraged from withholding problem loans or adverse information from the review process.

The loan-review process should be independent of the loan-approval function, with written findings reported to a board or senior management committee that is not directly involved in lending. Follow-up and monitoring of problem credits should be instituted. The loan officer should be responsible for reporting on any corrective actions taken. The maintenance of adequate internal controls within the lending process, in particular for loan review or credit audit, is critical for maintaining proper incentives for banking organization staff to be rigorous and disciplined in their credit-analysis and lending decisions. A banking organization's credit analyses, loan terms and structures, credit decisions, and internal rating assignments have historically been reviewed in detail by experienced and independent loan-review staff. Such loan reviews have provided both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and that the banking organization continues to adhere to sound lending practice.

For larger multibank organizations, loan-review procedures are usually centralized and administered at the parent level, with loan-review staff employed by the parent company. In some cases, a centralized loan-review function may operate in the lead bank, covering all other affiliates in the organization. The parent company directors and senior management are ultimately accountable for supervision of the entire organization's asset quality. Therefore, it should be the System's responsibility to evaluate top management's loan-review policies and procedures as they relate to the subsidiaries, both bank and nonbank, no matter where the function is technically established within the corporate structure. The holding company examiner-in-charge should attempt to coordinate efforts and cooperate with the respective banks' primary supervisors to avoid unnecessary duplication, without compromising the independence of the appraisal process.

During favorable economic and financial markets, relatively low levels of problem loans and credit losses may increase pressure within banking organizations to reduce the resources committed to loan-review functions. These reductions may include a reduction in staff, more limited portfolio coverage, and less thorough reviews of individual loans. Undoubtedly, some useful efficiencies may be gained by reducing loan-review resources, but some banking organizations may reduce the scope and depth of loan-review activities beyond levels that are prudent over the longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate. This may be especially true when a large proportion of lenders may not have had direct lending experience during a credit cycle when there was an economic and financial market downturn. See SR-99-23.

If supervisors and examiners find that there are weaknesses in the internal loan-review function and in activities or other internal control and risk-management processes (for example, staff turnover, failure to commit sufficient resources, inadequate adherence to established internal controls, or inadequate training), such findings should be discussed with the senior management of the parent bank holding company or other management at a corporate-wide level and, if determined to be a major concern, presented as comments on the "Examiner's Comments and Matters Requiring Special Board Attention" core page. Findings that could adversely affect affiliated insured depository institutions should be conveyed to the primary federal or state supervisor of the insured institution. Those findings should also be considered when assigning supervisory ratings.

Shell one-bank holding companies will not have or need a loan-review program emanating from the parent company level. Loan review will normally function within the subsidiary bank and be supervised by bank directors and management.

2010.10.1 INSPECTION OBJECTIVES

1. Review the operations of the bank holding company to determine whether there is an internal loan-review program. If not, one should be implemented.
2. Determine whether the loan-review program is independent from the loan-approval function.
3. Determine if the loan-review staff is sufficiently qualified and whether its size is adequate.
4. Determine whether the scope and frequency of the loan-review procedure is adequate to ensure that problems are being identified.
5. Determine that findings from the loan-review process are being properly reported and receive adequate follow-up attention.

2010.10.2 INSPECTION PROCEDURES

1. Review the holding company's operations to determine what types of internal loan-review procedures are being performed and whether an internal loan-review program exists.
2. If no internal loan-review program exists, determine whether the size, complexity, and financial condition of the organization warrants implementation of a formal loan-review process.
3. Review the organizational structure of the loan-review function to ensure its independence from the loan-approval processes.
4. Review the reporting process for internal loan-review findings to determine whether a director committee or independent senior management committee is being appropriately advised of the findings. Determine whether adequate follow-up procedures are in place.
5. Through loan reviews, transaction testing, and discussions with loan-review management, evaluate the quality, effectiveness and adequacy of the internal loan-review staff and internal controls in relation to the organization's size and complexity.
6. Review the operation of the loan-review process to identify the method for selecting loans and the manner in which they are analyzed and graded. Determine whether these procedures are adequate.

7. Determine if loan-review activities or other internal control and risk-management processes have been weakened by turnover of internal loan-review staff; a failure to commit sufficient resources; inadequate internal controls; inadequate training; or the absence of other adequate systems, resources, or controls. If such significant findings are found, discuss those concerns with senior management and report those findings on the core page 1, "Examiner's Comments and Matters Requiring Special Board Attention."
8. Determine what type of "early warning" system is in place and whether it is adequate.
9. Determine how the scope and frequency of the review procedure is established and whether this provides adequate coverage.

Banking organizations, including trust institutions, are increasingly encountering various direct or indirect financial incentives to place trust assets with particular mutual funds. Such incentives include the payment of fees to banking organizations for using nonaffiliated fund families as well as other incentives for using those mutual funds that are managed by the institution or an affiliate. The payment of such fees, referred to variously as shareholder, subaccounting, or administrative service fees, may be structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution's fiduciary accounts. Those functions may consist of maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis point amount of the dollar value of assets invested, or on transaction volume. Another form of compensation may consist of a lump-sum payment based on assets transferred into a mutual fund.

In all cases, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interests of the trust beneficiary. The primary supervisory concern is that an institution may fail to act in the best interest of beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may expose itself to an increased risk of legal action by account beneficiaries, as well as to potential violations of law or regulation.

Nearly every state legislature has modified its laws explicitly to allow fiduciaries to accept fees from mutual funds under certain conditions. As for the permissibility of other financial incentives, guidance under applicable law may be less clear. Conditions involving fee payments under state law often include compliance with standards of prudence, quality, and appropriateness for the account, and a determination of the "reasonableness" of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) has also adopted these general standards for national banks.[1] The Employee Retirement Income Security Act of 1974 (ERISA), however, generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions.[2] ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

Similar conflict-of-interest concerns are raised by the investment of fiduciary-account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as "proprietary" funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments. This activity can be expected to become more prevalent as banking organizations more actively offer proprietary mutual funds.[3] See SR-99-7.

2010.12.1 DUE-DILIGENCE REVIEW NEEDED BEFORE ENTERING INTO FEE ARRANGEMENTS

Although many state laws now explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds, institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Even when the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform an appropriate level of due diligence before entering into any fee arrangements similar to those described earlier or placing fiduciary assets in proprietary mutual funds. The following measures should be included in this process:

1. *Reasoned legal opinion.* The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent

1. In general, national banks may make these investments and receive such fees if applicable law authorizes the practice and if the investment is prudent and appropriate for fiduciary accounts and consistent with established state law fiduciary requirements. This includes a "reasonableness" test for any fees received by the institution. See OCC Interpretive Letter No. 704, February 1996.

2. ERISA section 406(b)(3). See Department of Labor, Pension Welfare and Benefits Administration Advisory Opinion 97-15A and Advisory Opinion 97-16A.

3. A Federal Reserve Board interpretation of Regulation Y addresses investment of fiduciary-account assets in mutual funds for which the trustee bank's holding company acts as investment adviser. In general, such investments are prohibited unless specifically authorized by the trust instrument, court order, or state law. See 12 CFR 225.125.

in the receipt of fees or other forms of compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, the trust instrument, or a court order, as well as any applicable disclosure requirements or reasonableness standard for fees set forth in the law.

2. *Establishment of policies and procedures.* The institution should establish appropriate policies and procedures governing the acceptance of fees or other compensation from mutual fund providers as well as the use of proprietary mutual funds. Policies and procedures should generally address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable statutes, regulations, and sound fiduciary principles, including any disclosure requirements or "reasonableness" standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.
3. *Analysis and documentation of investment decisions.* When fees or other compensation are received in connection with fiduciary-account investments over which the institution has investment discretion or when such investments are made in the institution's proprietary mutual funds, the institution should fully conduct appropriate analysis supporting the investment decision. This analysis should be performed regularly and would typically include factors such as historical performance comparisons with similar mutual funds, management fees and expense ratios, and ratings by recognized mutual fund rating services. The institution should determine whether the investment is, and continues to be, (1) appropriate for the individual account, (2) in the best interest of account beneficiaries, and (3) in compliance with the provisions of the "prudent investor" or "prudent man rules," as appropriate.

On June 15, 2004, an interagency advisory concerning the embassy banking business and related banking matters was issued by the federal banking and thrift agencies[1] in coordination with the U.S. Department of the Treasury's Financial Crimes Enforcement Network. The purpose of the advisory is to provide general guidance to financial institutions regarding the treatment of accounts for foreign governments, foreign embassies, and senior foreign political figures.

The joint interagency statement advises financial institutions[2] that the decision to accept or reject an embassy or foreign government account is theirs alone to make. Financial institutions should be aware, however, that there are varying degrees of risk associated with such accounts, depending on the customer and the nature of the services provided. Financial institutions should take appropriate steps to manage such risks, consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory also encourages financial institutions to direct questions about embassy banking to their primary federal bank regulators. See SR letter 04-10, "Banking Accounts for Foreign Governments, Embassies, and Political Figures."

On March 24, 2011, another interagency advisory was issued to supplement the 2004 interagency advisory. The 2011 advisory provides information to financial institutions providing account services to foreign embassies, consulates, and missions ("foreign missions") in a manner that fulfills the needs of those foreign governments while complying with the provisions of the Bank Secrecy Act (BSA). It advises that financial institutions are expected to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage the risk identified in these relationships with foreign missions. The 2011 advisory also confirms that it is the financial institution's decision to accept or reject a foreign mission account. See SR letter 11-6, "Guidance on Accepting Accounts from Foreign Embassies, Consulates and Missions." See also the FFIEC *Bank Secrecy Act/ Anti-Money Laundering Examination Manual* for examination and inspection procedures on embassy, foreign consulate, and foreign mission accounts.

2010.13.1 INTERAGENCY ADVISORY ON ACCEPTING ACCOUNTS FOR FOREIGN GOVERNMENTS, EMBASSIES, AND POLITICAL FIGURES

The 2004 and 2011 interagency advisories answer questions on whether financial institutions should do business with foreign embassies and whether institutions should establish account services for foreign governments, foreign embassies, and senior foreign political figures. As it would with any new account, an institution should evaluate whether or not to accept a new account for a foreign government, embassy, or political figure. That decision should be made by the institution's management, under standards and guidelines established by the board of directors, and should be based on the institution's own business objectives, its assessment of the risks associated with particular accounts or lines of business, and its capacity to manage those risks. The agencies will not, in the absence of extraordinary circumstances, direct or encourage any institution to open, close, or refuse a particular account or relationship.

Providing financial services to foreign governments and embassies and to senior foreign political figures can, depending on the nature of the customer and the services provided, involve varying degrees of risk. Such services can range from account relationships that enable an embassy to handle the payment of operational expenses—for example, payroll, rent, and utilities—to ancillary services or accounts provided to embassy staff or foreign-government officials. Each of these relationships potentially poses different levels of risk. Institutions are expected to assess the risks involved in any such relationships and to take steps to ensure both that such risks are appropriately managed and that the institution can do so in full compliance with its obligations under the BSA, as amended by the USA PATRIOT Act, and the regulations promulgated thereunder.

1. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration (the agencies).

2. The advisory is primarily directed to financial institutions located in the United States. The boards of directors of bank holding companies, however, should consider whether the advisory should be applied to their other U.S. subsidiaries' financial and other services.

When an institution elects to establish financial relationships with foreign governments, embassies, or senior foreign political figures, the agencies, consistent with their usual practice of risk-based supervision, will make their own assessment of the risks involved in such business. As is the case with all accounts, the institution should expect appropriate scrutiny by examiners that is commensurate with the level of risk presented by the account relationship. As in any case where higher risks are presented, the institution should expect an increased level of review by examiners to ensure that the institution has in place controls and compliance oversight systems that are adequate to monitor and manage such risks, as well as personnel trained in the management of such risks and in the requirements of applicable laws and regulations.

Institutions that have or are considering taking on relationships with foreign governments, embassies, or political figures should ensure that such customers are aware of the requirements of U.S. laws and regulations to which the institution is subject. Institutions should, to the maximum extent feasible, seek to structure such relationships in order to conform them to conventional U.S. domestic banking relationships so as to reduce the risks that might be presented by such relationships.

2010.13.2 RISK MITIGATION AND SUPERVISORY EXPECTATIONS FOR FOREIGN MISSIONS

A financial institution should manage the risks associated with transactions involving embassy, foreign consulate, and foreign mission accounts, and implement effective due diligence, monitoring, and reporting systems as part of its BSA/Anti-Money Laundering compliance program. The financial institution has the flexibility to manage its risk in a number of ways. A financial institution may reduce risk by ensuring customers are aware of the requirements of U.S. banking laws and regulations and monitoring those accounts for compliance. When establishing a customer relationship, a financial institution should assess the risks posed such as the volume of activity, number of accounts, and country risk.

A financial institution may also mitigate risk by entering into a written agreement with the foreign mission that clearly defines the terms of use for the account(s) setting forth available services, acceptable transactions, and access limitations. Similarly, the financial institution could offer limited purpose accounts, such as those used to facilitate operational expense payments (e.g., payroll, rent and utilities, routine maintenance), which are generally considered lower risk and allow the foreign mission to carry out its customary functions in the United States. Account monitoring to ensure compliance with account limitations and the terms of any service agreements is essential to mitigate risks associated with these accounts.

A financial institution may also provide ancillary services or accounts to foreign mission personnel and their families. As with foreign mission accounts, written agreements, which clearly define the terms of use for these types of services or accounts, may assist in mitigating the varying degrees of risk.

As with any type of accountholder, the agencies expect financial institutions to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage varying degrees of risks in financial relationships with foreign missions. The agencies, consistent with their usual practice of risk-based supervision, will evaluate the risks associated with the account relationship and mitigating controls implemented. The agencies will not direct or require any financial institution to close or refuse a particular account or relationship, except in extraordinary circumstances (for example, when violations of law are identified that warrant an administrative enforcement action).

WHAT'S IN THIS SECTION

This section was revised as of January 2008 to incorporate references to the Federal Reserve Board's Regulation W, primarily with regard to the bank holding company (BHC) inspection process. The section includes also a discussion of the mandatory reporting of certain intercompany transactions on the FR Y-8, The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates, *and its instructions. The mandatory report is to be submitted quarterly to the Federal Reserve by (1) all top-tier BHCs, including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The examiner's inspection responsibilities are discussed.*

2020.0.1 ANALYSIS OF INTERCOMPANY TRANSACTIONS

The analysis of intercompany transactions between a parent company, its nonbank subsidiaries, and its bank subsidiaries is primarily intended to assess the nature of the relationships between these entities and the effect of the relationships on the subsidiary insured depository institutions (IDIs). IDIs include any state bank, national bank, trust company, or banking association and any institution that takes deposits that are insured by the Federal Deposit Insurance Corporation, including savings associations. Both the legal and financial ramifications of such transactions are areas of concern. Certain intercompany transactions are subject to the provisions of section 23A or 23B (or both) of the Federal Reserve Act and the Federal Reserve Board's Regulation W. Section 23A of the Federal Reserve Act is one of the most important statutes on limiting exposures to individual institutions and protecting the federal safety net. Several types of intercompany transactions and the primary regulatory concerns of each are presented below.

Dividends paid by subsidiaries to the parent. Dividends are a highly visible cash outflow by subsidiaries. If the dividend payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the subsidiary's capital ratios will deteriorate. These dividends may also have a negative effect on the subsidiary's liquidity position.

Transactions with affiliates. Transactions between subsidiary IDI affiliates is another area of potential abuse of subsidiary banks. Regulatory concern centers on the quantitative limits and collateral restrictions on certain transactions by subsidiary banks with their affiliates. These restrictions are designed to protect subsidiary IDIs from losses resulting from transactions with affiliates.

Fees paid by subsidiaries. Management or service fees are another cash outflow of bank subsidiaries. These fees may be paid to the parent, the nonbank subsidiaries, or, in some cases, to the other bank subsidiaries. Regulatory concern focuses on whether such fees are reasonable in relation to the services rendered and on the financial impact of the fees on the bank subsidiaries.

Tax allocation. How a bank holding company organization determines to allocate taxes among its component companies involves questions of both the magnitude and timing of the cash-flow effects. Unreasonable or untimely tax payments or refunds to the bank can have an adverse effect on the financial condition of the banking subsidiaries.

Purchases or swaps of assets. Asset purchases or swaps between a bank and its affiliates can create the potential for abuse of subsidiary banks. Regulatory concern focuses on the fairness of such asset transactions and their financial impact and timing. Fairness and financial considerations include the quality and collectibility and fair values of such assets and their liquidity effects. IDIs generally are prohibited from purchasing low-quality assets from affiliates. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with nonearning assets. Improper timing or certain structurings of asset transactions also can cause them to be regarded as extensions of credit to affiliates. As such, these types of transactions could potentially violate applicable regulations and statutes.

Compensating balances. A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Other expense allocations. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. Furthermore, a subsidiary bank should not pay for expenses for which it does not receive a benefit.

2020.0.2 ROLE OF THE EXAMINER

To properly assess intercompany transactions and relationships between affiliates, the examiner must make a thorough analysis of most intercompany transactions and must have a knowledge of applicable laws, regulations, and rulings. In particular, the examiner should be familiar with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W. The examiner should also be familiar with the FR Y-8, *The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates,* and its instructions. The mandatory report is to be submitted to the Federal Reserve by (1) all top-tier bank holding companies (BHCs), including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The completed quarterly reports are used by the Federal Reserve System to monitor bank exposures to affiliates and to ensure banks' compliance with section 23A of the Federal Reserve Act. With regard to the BHC's inspection, the examiner should review and verify, since the previous inspection, the BHC's accuracy and comprehensiveness in its reporting based on the FR Y-8 report form and instructions.

If a subsidiary IDI of a holding company is not a state member bank, the bank's primary regulator should determine the bank's compliance with pertinent banking laws. In reviewing the subsidiary bank's examination report, any violations of laws and regulations applicable to intercompany transactions should be noted. If the violation resulted from the actions of an affiliate, the affiliate's role should be identified and be subject to criticism in the inspection report.

Violations of banking laws discovered during the inspection should be brought to management's attention and referred to the bank's primary supervisor. However, any action or criticism levied directly on the bank should come from the bank's primary supervisor.

2020.1.01 *WHAT'S NEW IN THIS REVISED SECTION*

This section has been revised to discuss statutory amendments of sections 23A and 23B of the Federal Reserve Act resulting from the Dodd-Frank Act. One amendment involved the definition of an "affiliate," with regard to an investment fund when an insured depository institution (IDI) or one of its affiliates is an investment adviser. Also, the definition of "covered transactions" was revised to include the credit exposure resulting for derivative and securities lending and borrowing transactions between the IDI and its affiliates. In addition, the Dodd-Frank Act removed the quantitative 10 percent exemption limit between financial subsidiaries. The retained earnings of a financial subsidiary are to be included as part of the IDI's investment. The amendments were effective July 21, 2012. (See sections 608(a)(1)(A), 608(a)(1)(B), and 609(a) of the Dodd-Frank Act.)

Revised inspection objectives and inspection procedures also are included.

2020.1.05 SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT, AND REGULATION W

Section 23A of the Federal Reserve Act (FRA) restricts the ability of insured depository institutions (IDIs)[1] to engage in certain covered transactions with an affiliate. Transactions that are subject to section 23A also are subject to the provisions of section 23B of the FRA.[2] In addition to these statutory provisions, the Board issued Regulation W (the rule),[3] which implements sections 23A and 23B of the FRA. The rule provides several exemptions and combines the statutory restrictions on transactions between a member bank and its affiliates with numerous previously issued Board interpretations.

During a bank holding company inspection, transactions between an IDI and an affiliate (for example, a bank holding company parent or other nonbank subsidiary) are reviewed for compliance with sections 23A and 23B and Regulation W, as well as other banking regulations and statutes. Any violations of sections 23A and 23B of the FRA or Regulation W involving a transaction between an IDI and its affiliate that are disclosed or found during an inspection should be brought to management's attention, may be discussed in the inspection report as "Other Matters," and referred to the bank's primary supervisor. However, any action or criticism levied directly on the bank should come from the bank's primary supervisor. See also SR-03-2.

2020.1.1 SECTION 23A OF THE FEDERAL RESERVE ACT

Section 23A of the FRA (12 U.S.C. 371c) is the primary statute governing transactions between an IDI and its affiliates. Section 23A (1) designates the types of companies that are affiliates of an IDI; (2) specifies the types of transactions covered by the statute; (3) sets the quantitative limitations on an IDI's covered transactions with any single affiliate, and with all affiliates combined; (4) sets forth collateral requirements for certain transactions with affiliates; and (5) requires all covered transactions to be conducted on terms consistent with safe and sound banking practices.

2020.1.1.1 Definition of an Affiliate

In general, companies that control or are under common control with an IDI are defined by section 23A as "affiliates" of the bank. The definition includes a bank subsidiary of a bank and any company that a bank, or its subsidiaries or affiliates, sponsors and advises on a contractual basis.[4] Affiliates, for example, may

1. By their terms, sections 23A and 23B apply to banks that are members of the Federal Reserve System ("member banks"). Other federal laws subject FDIC-insured nonmember banks and FDIC-insured thrifts to sections 23A and 23B in the same manner and to the same extent as if they were member banks. (See 12 U.S.C. 1828(j) and 12 U.S.C.1468(a)(4)). The statute also states that most subsidiaries of a member bank are to be treated as part of the member bank itself for purposes of sections 23A and 23B. Because the statute and regulation apply to all insured depository institutions, this section will refer to the subject institutions as insured depository institutions (IDIs).

2. Federally insured savings associations also are subject to sections 23A and 23B as if they were banks.

3. In this section of the manual, Regulation W is referred to as "the rule" or to a specific numbered section of the rule.

4. The Board has the authority to expand the definition of affiliate to include a company that has a relationship with the bank so that covered transactions between the company and

include banks, financial holding companies, savings and loan holding companies, and their subsidiaries. Banks, savings associations, and nonbanking companies that are under common individual control or a group of individuals with the bank also are affiliates for the purposes of section 23A. Any investment fund with respect to which a member bank or affiliate thereof is an investment adviser. See section 608(a)(1)(A) of the Dodd-Frank Act. In addition, any transaction by an IDI with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are transferred to, or used for the benefit of, the affiliate. With respect to any IDI within a holding company, its affiliates include, among others, its parent, the parent's subsidiaries, and other companies directly or indirectly controlled by the bank's or holding company's shareholders. Specifically, Regulation W defines[5] an affiliate as—

1. any company that controls[6] the IDI and any other company that is controlled by the company that controls the IDI;
2. any bank subsidiary of the IDI;
3. any company—
   — that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the member bank or any company that controls the IDI; or
   — in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the IDI or any company that controls the IDI;
4. any company (including a real estate investment trust) that is sponsored and advised on a contractual basis by the IDI or any subsidiary or affiliate of the IDI;
5. any investment company, with respect to which an IDI or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940;
6. any investment fund for which the IDI or any affiliate of the IDI serves as an investment adviser, if the IDI and its affiliates own or control, in the aggregate, more than 5 percent of any class of voting securities or of the equity capital of the fund;
7. a depository institution that is a subsidiary of the IDI;
8. a financial subsidiary of the member bank;
9. any company in which a holding company of the IDI owns or controls, directly or indirectly, or acting through one or more other persons, 15 percent or more of the equity capital pursuant to the merchant banking authority in section 4(k)(4)(H) or (I) of the Bank Holding Company Act (12 U.S.C. 1843(k)(4)(H) or (I));
10. any partnership for which the IDI or any affiliate of the IDI serves as a general partner or for which the IDI or any affiliate of the IDI causes any director, officer, or employee of the member bank or affiliate to serve as a general partner;
11. any subsidiary of an affiliate described in paragraphs (a)(1) through (10) of section 223.2 of Regulation W; and
12. any company that the Board, or the appropriate federal banking agency for the IDI, determines by regulation or order to have a relationship with the IDI or any subsidiary or affiliate of the member bank, such that covered transactions by the member bank or its subsidiary with that company may be affected by the relationship, to the detriment of the IDI or its subsidiary.

The following generally are not considered to be affiliates of an IDI:

1. a nonbank subsidiary of the IDI (other than a financial subsidiary), unless the Board determines not to exclude such a subsidiary;
2. a company engaged solely in holding the IDI's premises;
3. a company engaged solely in conducting a safe deposit business;
4. a company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest; and
5. a company in which control arises from the exercise of rights arising out of a bona fide debt previously contracted (for the period of time specified by section 23A).

the bank may be affected by the relationship to the detriment of the bank.

5. See 12 C.F.R. 223.2.

6. By statute, "control" is defined as the power to (1) vote 25 percent or more of the voting shares of a company, excluding situations in which the stock is controlled in a fiduciary capacity; (2) elect a majority of the directors of a company; or (3) exercise a controlling influence over a company. Control is discussed in more detail at 2020.1.3.1.

2020.1.1.2 Definition of Affiliates by Type of Entity

2020.1.1.2.1 Investment Funds Advised by the Member Bank or an Affiliate of the Member Bank

Regulation W includes as an affiliate any company that is sponsored and advised on a contractual basis by the IDI or any of its affiliates as well as any investment company for which the IDI or its affiliate serves as an investment adviser, as defined in the Investment Company Act of 1940 (the 1940 Act). In Regulation W, the Board used its statutory authority to define as an affiliate any investment fund—even if not an investment company for purposes of the 1940 Act—for which the IDI or an affiliate of the IDI serves as an investment adviser, if the IDI or an affiliate of the IDI owns or controls more than 5 percent of any class of voting securities or similar interests of the fund.

Many investment funds that are advised by an IDI (or an affiliate of an IDI) are affiliates of the IDI under section 23A because the funds either are investment companies under the 1940 Act or are sponsored by the IDI (or an affiliate of the IDI). The IDI or its affiliate, in some instances, however, may advise but not sponsor an investment fund that is not an investment company under the 1940 Act.[7] The advisory relationship of an IDI or affiliate with an investment fund presents the same potential for conflicts of interest regardless of whether the fund is an investment company under the 1940 Act.[8] The Dodd-Frank Act treats any investment fund as an affiliate if the IDI or an affiliate of the IDI serves as an investment adviser to the fund.

2020.1.1.2.2 Financial Subsidiaries

In 1999, the Gramm-Leach-Bliley Act (the GLB Act) authorized banks to own ''financial subsidiaries'' that engage in activities not permissible for the parent bank to conduct directly, such as underwriting and dealing in bank-ineligible securities. The GLB Act amended section 23A to define a financial subsidiary of a bank as an affiliate of the bank and thus subjected covered transactions between the bank and a financial subsidiary to the limitations of sections 23A and 23B.

Section 23A defines a financial subsidiary as a subsidiary of any bank (state or national) that is engaged in an activity that is not permissible for national banks to engage in directly (other than a subsidiary that federal law specifically authorizes national banks to own or control). Specifically, a ''financial subsidiary'' is defined as ''any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United States.''[9] (See 12 U.S.C. 371c(e)(1).) Section 5136A, in turn, defines a financial subsidiary as any company that is controlled by one or more member banks, other than (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly (and subject to the terms and conditions that apply to national banks) or (2) a subsidiary that national banks are specifically authorized to control by the express terms of a federal statute (other than section 5136A of the Revised Statutes), such as an Edge Act corporation or a small business investment company (SBIC).[10] (See 12 U.S.C. 24a(g)(3).) Section 5136A also prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities.[11] (See 12 U.S.C. 24a(a)(2).)

The Dodd-Frank Act amended section 23A as it relates to financial subsidiaries of a bank. First, the 10 percent quantitative limit of section 23A between a bank and any individual affiliate applies to covered transactions between a bank and a financial subsidiary of the bank. In addition, for purposes of section 23A, the amount of a bank's investment in its financial subsidiary includes the retained earnings of the financial subsidiary. See section 609(a) of the Dodd-Frank Act.

Section 23A generally applies only to transactions between (1) a bank and an affiliate of the bank and (2) a bank and a third party in which some benefit of the transactions accrues to an

7. 12 U.S.C. 371c(b)(1)(E).
8. An investment fund typically escapes from the definition of investment company under the 1940 Act because it (1) sells interests only to a limited number of investors or only to sophisticated investors or (2) invests primarily in financial instruments that are not securities. An IDI may face greater risk from the conflicts of interest arising from its relationships with an investment fund that is not registered than an investment company under the 1940 Act because the 1940 Act restricts transactions between a registered investment company and entities affiliated with the company's investment adviser. (See 15 U.S.C. 80a-17).

9. 12 U.S.C. 24a(g)(3).
10. 12 U.S.C. 24a(a)(2).
11. 12 U.S.C. 371c(e)(1).

affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion provisions, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of, or investment in, the securities of a bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extension of credit made by a bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

2020.1.1.2.2.1 Regulation W Provisions for Financial Subsidiaries

Regulation W (1) defines a financial subsidiary of a bank, (2) exempts certain companies from the definition, and (3) sets forth special valuation and other rules for financial subsidiaries. (See sections 223.2(a)(8), 223.3(p), and 223.32 of the rule.) Regulation W also includes several special rules that apply to transactions with financial subsidiaries.

Applicability of the 10 percent quantitative limit to transactions with a financial subsidiary. The 10 percent quantitative limit in section 23A applies with respect to covered transactions between a member bank and any individual financial subsidiary of the bank.[12]

Valuation of investments in securities issued by a financial subsidiary. Because financial subsidiaries of a member bank are considered affiliates of the bank for purposes of section 23A, a member bank's purchases of, and investments in, the securities of its financial subsidiary are covered transactions under the statute.[13] The Dodd-Frank Act provides that a member bank's investment in its own financial subsidiary, for purposes of section 23A, shall include the retained earnings of the financial subsidiary.[14] In light of this statutory provision, section 223.32(b) of the rule contains a special valuation provision for investments by a member bank in the securities of its own financial subsidiary.[15] Such investments must be valued at the greater of (1) the price paid by the member bank for the securities or (2) the carrying value of the securities on the financial statements of the member bank (determined in accordance with generally accepted accounting principles (GAAP) but without reflecting the bank's pro rata share of any earnings retained, or losses incurred by, the financial subsidiary after the bank's acquisition of the securities).[16]

This valuation rule differs from the general valuation rule for investments in securities issued by an affiliate in that the financial subsidiary rule permits, consistent with the GLB Act, that the carrying value of the investment be computed without consideration of the retained earnings or losses of the financial subsidiary since the time of the member bank's investment. As a result of this rule, the covered transaction amount for a member bank's investment in securities issued by its financial subsidiary generally would not increase after the investment was made except if the member bank made an additional capital contribution to the subsidiary or purchased additional securities of the subsidiary.

The following examples were designed to assist banks in valuing investments in securities issued by a financial subsidiary of the bank. Each example involves a securities underwriter that becomes a financial subsidiary of the bank after the transactions described below.

1. *Initial valuation.*
   a. *Direct acquisition by a bank.* A bank pays $500 to acquire 100 percent of the shares of a securities underwriter. The initial carrying value of the shares on the member bank's parent-only GAAP financial state-

12. A member bank's aggregate amount of covered transactions with any individual financial subsidiary of the bank may not exceed 10 percent of the bank's capital and surplus.

13. See section 609(a) of the Dodd-Frank Act. The Dodd-Frank Act eliminated the 10 percent quantitative limit exemption for certain covered transactions with financial subsidiaries and individual affiliates.

14. See section 609(a) of the Dodd-Frank Act.

15. The rule's special valuation formula for investments by a member bank in its own financial subsidiary does not apply to investments by a member bank in a financial subsidiary of an affiliated depository institution. Such investments must be valued using the general valuation formula set forth in section 223.23 for investments in securities issued by an affiliate and, further, may trigger the anti-evasion rule contained in section 223.32(c)(1) of the rule.

16. The rule also makes clear that if a financial subsidiary is consolidated with its parent bank under GAAP, the subsidiary under the carrying value of the bank's investment in the financial subsidiary shall be determined based on parent-only financial statements of the bank.

ments is $500. The member bank initially must value the investment at $500.

b. *Contribution of a financial subsidiary to a member bank*. The parent holding company of a bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at $500 and immediately contributes the shares to the member bank. The bank gives no consideration in exchange for the shares. The bank initially must value the investment at the carrying value of the shares on the bank's parent-only GAAP financial statements. Under GAAP, the bank's initial carrying value of the shares would be $500.

2. *Carrying value not adjusted for earnings and losses of the financial subsidiary*. A bank and its parent holding company engage in a transaction whereby the member bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at $500. The bank initially values the investment at $500. In the following year, the securities underwriter earns $25 in profit, which is added to its retained earnings. The bank's investment of the shares of the underwriter is not adjusted for purposes of section 23A and Regulation W, and the bank's investment continues to be valued at $500. If, however, the member bank contributes $100 of additional capital to the securities underwriter, the bank must value the aggregate investment at $600.

Anti-evasion rules as they pertain to financial subsidiaries. Section 23A generally applies only to transactions between a bank and an affiliate of the bank and transactions between a member bank and a third party when some benefit of the transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. The GLB Act establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a member bank and another affiliate of the bank.[17] First, the GLB Act provides that any purchase of, or investment in, securities issued by a member bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem an extension of credit made by a member bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasions of the FRA or the GLB Act. Section 223.32(c) of the rule incorporates both of these provisions.

The Board exercised its authority under the second anti-evasion rule by stating that an extension of credit to a financial subsidiary of a bank by an affiliate of the bank would be treated as an extension of credit by the bank itself to the financial subsidiary if the extension of credit is treated as regulatory capital of the financial subsidiary. An example of the kind of credit extension covered by this provision would be a subordinated loan to a financial subsidiary that is a securities broker-dealer in which the loan is treated as capital of the subsidiary under the SEC's net capital rules. Treating such an extension of credit as a covered transaction is appropriate because the extension of credit by the affiliate has a similar effect on the subsidiary's regulatory capital as an equity investment by the affiliate, which is treated as a covered transaction by the terms of the GLB Act (as described above). The rule generally does not prevent a BHC or other affiliate of a member bank from providing financial support to a financial subsidiary of the bank in the form of a senior or secured loan.

2020.1.1.2.3 Partnerships

IDIs fund legitimate commercial transactions through partnerships. Partnerships for which an IDI or an affiliate(s) serves as a general partner are affiliates. Regulation W also defines an affiliate of an IDI as any partnership, if the IDI or an affiliate of the IDI causes any director, officer, or employee of the IDI or affiliate to serve as a general partner of the partnership (unless the partnership is an operating subsidiary of the bank.) Also, if a company, such as a bank holding company, controls more than 25 percent of the equity through a partnership, that company is an affiliate under Regulation W.

2020.1.1.2.4 Subsidiaries of Affiliates

Regulation W deems a subsidiary of an affiliate as an affiliate of the IDI.

17. GLB Act section 121(b)(1), or 12 U.S.C. 371c(e)(3).

2020.1.1.2.5 Companies Designated by the Appropriate Federal Banking Agency

Under section 223.2(a)(12), the Board or the appropriate federal banking agency for the relevant IDI (under authority delegated by the Board) can determine that any company that has a relationship with an IDI or an affiliate of the IDI, such that covered transactions by the IDI with that company may be affected by the relationship to the detriment of the IDI, is an affiliate of the IDI. The Board and the federal banking agencies can thus protect IDIs in their transactions with associated companies. An IDI may petition the Board to review any such affiliate determination made by the institution's appropriate federal banking agency under the general procedures established by the Board for review of actions taken under delegated authority.[18]

2020.1.1.2.6 Merchant Banking

The GLB Act also amended the Bank Holding Company Act (BHC Act) to permit BHCs and foreign banks that qualify as financial holding companies (FHCs) to engage in merchant banking and insurance company investment activities.[19] If an FHC owns or controls more than 25 percent of a class of voting shares of a company under the merchant banking or insurance company investment authority, the company is an affiliate of any member bank controlled by the FHC by operation of the statutory definitions contained in section 23A. The GLB Act also added paragraph (b)(11) to section 23A, which creates a rebuttable presumption that a company (''portfolio companies'') is an affiliate of a member bank, for purposes of section 23A, if the bank is affiliated with an FHC and the FHC owns or controls 15 percent or more of the equity capital of the other company pursuant to the FHC's merchant banking or insurance company investment authority[20] (section 4(k)(4)(H) or (I) of the BHC Act). (See 12 U.S.C. 371c(b)(11).)

The rule also provides three specific regulatory safe harbors from the 15 percent presumption. These safe harbors apply in situations where the holding company owns or controls more than 15 percent of the total equity of the company under the merchant banking or insurance company investment authority (thereby triggering the statutory presumption) and less than 25 percent of any class of voting securities of the company (thereby not meeting the statutory definition of control). The three situations are substantially identical to those listed in the Board's merchant banking regulation.[21]

The first exemption applies where no director, officer, or employee of the holding company serves as a director (or individual exercising similar functions) of the company. The second exemption applies where an independent third party controls a greater percentage of the equity capital of the company than is controlled by the holding company, and no more than one officer or employee of the holding company serves as a director (or individual exercising similar functions) of the company. The third exemption applies where an independent third party controls more than 50 percent of the voting shares of the company, and officers and employees of the holding company do not constitute a majority of the directors (or individuals exercising similar functions) of the company.[22]

These safe harbors do not require Board review or approval of the exclusion from affiliate status. Moreover, the safe harbors are not intended to be a complete list of circumstances in which the 15 percent presumption may be rebutted. The rule also provides, consistent with the GLB Act, that a holding company may rebut the presumption with respect to a portfolio company by presenting information to the Board that demonstrates, to the Board's satisfaction, that the holding company does not control the portfolio company. The Board notes that a company that qualifies as an affiliate under the 15 percent presumption and under another prong of the regulation's definition of affiliate cannot avoid affiliate status through a rebuttal of the 15 percent presumption (either by qualifying for

18. See 12 C.F.R. 265.3.

19. GLB Act, section 103(a); 12 U.S.C. 1843(k)(4)(H) and (I).

20. GLB Act, section 121(b)(2). As noted above, this rebuttable presumption applies only if the affiliated FHC owns or controls 15 percent or more of the company's equity capital under the merchant banking or insurance company investment authorities. The Board noted, however, that under existing Board precedents, a BHC may not own any shares of a company in reliance on section 4(c)(6) or 4(c)(7) of the BHC Act where the holding company owns or controls, in the aggregate under a combination of authorities, more than 5 percent of any class of voting securities of the company.

21. See 12 C.F.R. 225.176(b)(2) and (3).

22. For purposes of these safe harbors, the rule provides that the term ''holding company'' includes any subsidiary of the holding company, including any subsidiary bank of the holding company. Accordingly, if a director of a subsidiary bank or nonbank subsidiary of an FHC also serves as a director of a portfolio company, the first safe harbor, for example, would be unavailable.

one of the three regulatory safe harbors or by obtaining an ad hoc rebuttal of the presumption from the Board).

An FHC generally is considered to own or control only those shares or other ownership interests that are owned or controlled by itself or by a subsidiary of the holding company. The rule clarifies that, for purposes of applying the presumption of affiliation described above, an FHC that has an investment in a private equity fund (as defined in the Board's merchant banking rule) will not be considered indirectly to own the equity capital of a company in which the fund has invested unless the FHC controls the private equity fund (as described in the Board's merchant banking rule).

2020.1.1.2.7 Companies that are not Affiliates

Under the terms of section 23A, subsidiaries of an IDI generally are not treated as affiliates of the member bank.[23] The statute contains two specific exceptions to this general rule: financial subsidiaries of an IDI and IDI subsidiaries of an IDI are treated as affiliates of the parent IDI. The statute provides that the Board may determine that other subsidiaries of an IDI should be treated as affiliates in appropriate circumstances.[24]

Under section 223.2(b)(1)(iii) of the rule, certain joint venture subsidiary companies of an IDI are treated as affiliates. A subsidiary of an IDI is treated as an affiliate if one or more affiliates of the IDI, or one or more controlling shareholders of the IDI, directly control the joint venture. For example, if an IDI controls 30 percent of company A and an affiliate controls 70 percent of Company A, then Company A is an affiliate. This provision also covers situations in which a controlling natural-person shareholder or group of controlling natural-person shareholders of the IDI (who, as natural persons, are not themselves section 23A affiliates of the IDI) exercise direct control over the joint venture company. The rule's treatment of certain IDI-affiliate joint ventures as affiliates does not apply to joint ventures between an IDI and any affiliated IDIs. For example, if two affiliated IDIs each own 50 percent of the voting common stock of a company, the company would continue to qualify as a subsidiary and not an affiliate of each IDI (despite the fact that an affiliate of each IDI owned more than 25 percent of a class of voting securities of the company). The Board has retained its authority to treat such joint ventures as affiliates under section 23A on a case-by-case basis.

2020.1.1.2.8 Employee Benefit Plans

Regulation W clarifies, under section 223.2(b)(1)(iv), that an employee stock option plan (ESOP), of an IDI or an affiliate of the IDI cannot itself avoid classification as an affiliate of the member bank by also qualifying as a subsidiary of the member bank. Many, but not all, ESOPs, trusts, or similar entities that exist to benefit shareholders, members, officers, directors, or employees of an IDI or its affiliates are treated as affiliates of the IDI for purposes of sections 23A and 23B. The ESOP's share ownership or the interlocking management between the ESOP and its associated IDI (or BHC), in many cases, exceeds the statutory thresholds for determining that a company is an affiliate. For example, if an ESOP controls more than 25 percent of the voting shares of the member bank or bank holding company, the ESOP is an affiliate.

The relationship between an IDI and its (or its) affiliate's ESOP generally warrants coverage by sections 23A and 23B. IDIs have made unsecured loans to their ESOPs or their affiliates' ESOP or have guaranteed loans to such ESOPs that were made by a third party. These ESOPs, however, generally have no means to repay the loans other than with funds provided by the IDI. In addition, even if the ESOP's ownership control does not warrant treatment as an affiliate, the issuance of holding company shares to an ESOP that is funded by a loan from the holding company's subsidiary IDI could be used as a vehicle by the IDI to provide funds to its parent holding company when the IDI is unable to pay dividends or is otherwise restricted in providing funds to its holding company. The attribution rule (12 C.F.R. 223.16) subjects such transactions to the restrictions of sections 23A and 23B.

23. See 12 U.S.C. 371c(b)(1)(A) and (b)(2)(A). Section 23A defines a subsidiary of a specified company as a company that is controlled by the specified company. Under the statute, a company controls another company if the first company owns or controls 25 percent or more of a class of voting securities of the other company, controls the election of a majority of the directors of the other company, or exercises a controlling influence over the policies of the other company (12 U.S.C. 371c(b)(3) and (4)).

24. 12 U.S.C. 371c(b)(2)(A).

2020.1.2 QUANTITATIVE LIMITS

Section 23A(a)(1)(A) states that an IDI may engage in a covered transaction with an affiliate only if in the case of any affiliate

1. the IDI limits the aggregate amount of covered transactions to that particular affiliate to not more than 10 percent of the IDI's capital stock and surplus and
2. the IDI limits the aggregate amount of all covered transactions with all of its affiliates to 20 percent of the IDI's capital stock and surplus.

The rule's interpretation of the 10 percent limit is consistent with the statutory language.[25] An IDI that has crossed the 10 percent threshold with one affiliate may still conduct additional covered transactions with other affiliates, if transactions with all affiliates would not exceed 20 percent of the IDI's capital stock and surplus. An IDI is prohibited from engaging in a new covered transaction with that affiliate if the IDI's transactions would exceed the 10 percent threshold with that affiliate or if the level of covered transactions with all its affiliates exceeded the 20 percent threshold. The rule generally does not require an IDI to unwind existing covered transactions if the member bank exceeds the 10 percent or 20 percent limit because its capital declined or a preexisting covered transaction increased in value.

The Board strongly encourages IDIs with covered transactions in excess of the 10 percent threshold with any affiliate to reduce those transactions before expanding the scope or extent of the member bank's relationships with other affiliates.

2020.1.3 CAPITAL STOCK AND SURPLUS

Under section 23A, the quantitative limits on covered transactions are based on the "capital stock and surplus" of the IDI. An IDI's capital stock and surplus for purposes of section 23A of the FRA is—

1. the sum of tier 1 and tier 2 capital included in an institution's risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the institution's most recent consolidated FFIEC Reports of Condition and Income (Call Report) filed under 12 U.S.C. 1817(a)(3);
2. the balance of an institution's allowance for loan and lease losses not included in its tier 2 capital for purposes of the calculation of risk-based capital by the appropriate federal banking agency (based on the institution's most recent consolidated Call Report of Condition and Income that is filed under 12 U.S.C. 1817(a)(3)); and
3. the amount of any investment in a financial subsidiary that counts as a covered transaction that is required to be deducted from the IDI's regulatory capital.[26]

Examiners can determine the amount of the quantitative limits.[27]

2020.1.3.1 Determination of Control

The definition of "control" is similar to the definition used in the BHC Act. Under the rule, a company or shareholder shall be deemed to have control over another company if—

- such company or shareholder, directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of any class of voting securities of the other company;
- such company or shareholder controls in any manner the election of a majority of the directors or trustees (or general partners or individuals exercising similar functions), of the other company; or
- the Board determines, after notice and opportunity for hearing, that such company or shareholder, directly or indirectly, exercises a controlling influence over the management or policies of the other company.[28]

In addition, three additional presumptions of control are provided under the rule. First, a company will be deemed to control securities, assets, or other ownership interests controlled by any subsidiary of the company.[29] Second, a company that controls instruments (including options and warrants) that are convertible or exercisable, at the option of the holder or owner,

25. Sections 223.11 and 223.12 of the rule set forth these quantitative limits.

26. See section 223.3(d) of the rule (12 C.F.R. 223.3(d)).
27. Examiners should refer to the IDI's most recent Call Report.
28. See section 223.3(g) of the rule (12 C.F.R. 223.3(g)).
29. See 12 C.F.R. 225.2(e)(2)(i).

into securities, will be deemed to control the securities.[30] Third, a rebuttable presumption provides that a company or shareholder that owns or controls 25 percent or more of the equity capital of another company controls the other company, unless the company or shareholder demonstrates otherwise to the Board based on the facts and circumstances of the particular case.[31] Such a presumption of control is particularly appropriate in the section 23A context because a BHC may have incentives to divert the resources of a subsidiary IDI to any company in which the holding company has a substantial financial interest, regardless of whether the holding company owns any voting securities of the company.

Section 23A and the rule provide that no company shall be deemed to own or control another company by virtue of its ownership or control of shares in a fiduciary capacity except (1) when a company that is controlled, directly or indirectly, by a trust for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, a member bank, or (2) if the company owning or controlling such shares is a business trust.

2020.1.4 COVERED TRANSACTIONS

The restrictions of section 23A do not apply to every transaction between an IDI and its affiliates; section 23A only applies to seven "covered transactions" between an IDI and its affiliates.[32]

A covered transaction under section 23A of the FRA means—

1. a loan or extension of credit by an IDI to an affiliate;
2. a purchase of, or an investment in, the securities issued by an affiliate of an IDI including a purchase of assets subject to an agreement to repurchase;[33]
3. an IDI's purchase of assets from an affiliate, except for purchases of real and personal property as may be specifically exempted by the Board by order or regulation;
4. the acceptance by an IDI of securities or other debt obligations issued by an affiliate as collateral security for a loan or extension of credit by the member bank to any person or company;[34]
5. the issuance by an IDI of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate.
6. a transaction with an affiliate that involves the borrowing or lending of securities, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate; or
7. a derivative transaction, as defined in 12 U.S.C. 84(b), with an affiliate, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate.

If a transaction between an IDI and an affiliate is not within one of the above categories, it is not a covered transaction for the purposes of section 23A and is not subject to its limitations. All covered transactions must be made on terms and conditions that are consistent with safe and sound banking practices.[35]

Among the transactions that generally are not subject to section 23A are dividends paid by an IDI to its holding company, sales of assets by an IDI to an affiliate for cash, an affiliate's purchase of securities issued by an IDI, and many service contracts between an IDI and an affiliate.[36] Certain classes of transactions between a member bank and an affiliate are discussed below as to whether they are covered transactions for purposes of section 23A. (See section 223.3(h).)

2020.1.4.1 Attribution Rule

The "attribution rule," found in section 223.16, prevents an IDI from evading its restrictions of

30. See 12 C.F.R. 225.31(d)(1)(i). The rule refers more generically to convertible "instruments." It clarifies that the convertibility presumption applies regardless of whether the right to convert resides in a financial instrument that technically qualifies as a "security" under section 23A or the federal securities laws.

31. See, for example, 12 C.F.R. 225.143 (Board Policy Statement on Equity Investments in Banks and Bank Holding Companies).

32. 12 U.S.C. 371c(b)(7).

33. The investment by an IDI or its affiliate in a financial subsidiary of the bank excludes the retained earnings of the financial subsidiary.

34. The acceptance of an affiliate's securities for a loan when proceeds are transferred to, or used for the benefit of, an affiliate is prohibited. (See section 223.3(h)(2).)

35. Board staff has taken the position that safety and soundness requires that the transaction be conducted on market terms.

36. A transaction when an IDI receives assets from an affiliate and the IDI pays a dividend or returns capital to an affiliate may result in a purchase of assets for the purposes of section 23A. Although these transactions are not subject to section 23A, they may be subject to section 23B or other laws.

section 23A by using intermediaries, and it limits the exposure that an IDI has to customers of affiliates of the IDI. Section 223.16 provides that any covered transaction by an IDI or its subsidiary with any person is deemed to be a transaction with an affiliate of the IDI if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. For example, an IDI's loan to a customer for the purpose of purchasing securities from the inventory of a broker-dealer affiliate of the member bank would be a covered transaction under section 23A.

2020.1.4.2 Credit Transactions with an Affiliate

2020.1.4.2.1 Extension of Credit to an Affiliate or Other Credit Transaction with an Affiliate

Section 23A includes a ‘‘loan or extension of credit’’ to an affiliate as a covered transaction, but does not define these terms. Section 223.3(o) of the rule defines ‘‘extension of credit’’ to an affiliate to mean the making or renewal of a loan to an affiliate, the granting of a line of credit to an affiliate, or the extending of credit to an affiliate in any manner whatsoever, including on an intraday basis. Transactions that are defined as extensions of credit include but are not limited to the following:

1. an advance to an affiliate by means of an overdraft, cash item, or otherwise;
2. a sale of federal funds to an affiliate;
3. a lease that is the functional equivalent of an extension of credit to an affiliate;[37]
4. an acquisition by purchase, discount, exchange, or otherwise of a note or other obligation, including commercial paper or other debt securities, of an affiliate;
5. any increase in the amount of, extension of the maturity of, or adjustment to the interest-rate term or other material term of, an extension of credit to an affiliate;[38] and
6. any other similar transaction as a result of which an affiliate becomes obligated to pay money (or its equivalent) to an IDI.[39]

An IDI's purchase of a debt security issued by an affiliate is an extension of credit by the IDI to the affiliate for purposes of section 23A under the rule. An IDI that buys debt securities issued by an affiliate has made an extension of credit to an affiliate under section 23A and must collateralize the transaction in accordance with the collateral requirements of section 23A. An exemption from the collateral requirements is provided for situations in which an IDI purchases an affiliate's debt securities from a third party in a bona fide secondary-market transaction.

2020.1.4.2.2 Valuation of Credit Transactions with an Affiliate

A credit transaction between an IDI and an affiliate initially must be valued at the amount of funds provided by the IDI to, or on behalf of, the affiliate plus any additional amount that the IDI could be required to provide to, or on behalf of, the affiliate. The section 23A value of a credit transaction between an IDI and an affiliate is the *greater of* (1) the principal amount of the credit transaction; (2) the amount owed by the affiliate to the member bank under the credit transaction; or (3) the sum of (a) the amount provided to, or on behalf of, the affiliate in the transaction and (b) any additional amount that the member bank could be required to provide to, or on behalf of, the affiliate under the terms of the member transaction. (See 223.21)

The first prong of the rule's valuation formula for credit transactions (‘‘the principal amount of the credit transaction’’) would likely determine the valuation of a transaction in which an IDI purchased a zero-coupon note issued by an affiliate. An IDI should value such an extension of credit at the principal, or face amount of the note (that is, at the amount that the affiliate ultimately must pay to the IDI) rather than at the amount of funds initially advanced by the IDI. For example, assume an IDI purchased from an

37. The Board would consider a full-payout, net lease permissible for a national bank under 12 U.S.C. 24 (seventh) and 12 C.F.R. 23 to be the functional equivalent of an extension of credit.

38. A floating-rate loan does not become a new covered transaction whenever there is a change in the relevant index (for example, LIBOR or the member bank's prime rate) from which the loan's interest rate is calculated. If the member bank and the borrower, however, amend the loan agreement to change the interest-rate term from ‘‘LIBOR plus 100 basis points’’ to ‘‘LIBOR plus 150 basis points,’’ the parties have engaged in a new covered transaction.

39. The definition of extension of credit would cover, among other things, situations in which an affiliate fails to pay on a timely basis for services rendered to the affiliate by the IDI or the affiliate fails to pay a tax refund to the IDI.

affiliate for $50 a 10-year zero-coupon note issued by the affiliate with a face amount of $100. The rule's valuation formula requires the IDI to value this transaction at $100.

The second prong of the rule's valuation formula for credit transactions ("the amount owed by the affiliate") likely would determine the valuation of a transaction in which an affiliate fails to pay an IDI when due a fee for services rendered by the IDI to the affiliate. This prong of the valuation formula does not include (within section 23A's quantitative limits) items such as accrued interest not yet due on an IDI's loan to an affiliate.

IDIs will be able to determine the section 23A value for most credit transactions under the third prong of the rule's valuation formula. Under this prong, for example, a $100 term loan is a $100 covered transaction, a $300 revolving credit facility is a $300 covered transaction (regardless of how much of the facility the affiliate has drawn down), and a guarantee backstopping a $500 debt issuance of the affiliate is a $500 covered transaction.

Under section 23A and the rule, a member bank has made an extension of credit to an affiliate if the IDI purchases from a third party a loan previously made to an affiliate of the IDI. A different valuation formula is provided for these indirect credit transactions: The IDI must value the transaction at the price paid by the IDI for the loan plus any additional amount that the IDI could be required to provide to, or on behalf of, the affiliate under the terms of the credit agreement.

For example, if an IDI pays a third party $90 for a $100 term loan that the third party previously made to an affiliate of the IDI (because, for example, the loan was at a fixed rate and has declined in value because of a rise in the general level of interest rates), the covered-transaction amount is $90 rather than $100. The lower covered-transaction amount reflects the fact that the IDI's maximum loss on the transaction is $90 rather than the original principal amount of the loan. For another example, if an IDI pays a third party $70 for a $100 line of credit to an affiliate, of which $70 had been drawn down by the affiliate, the covered-transaction amount would be $100 (the $70 purchase price paid by the IDI for the credit plus the remaining $30 that the IDI could be required to lend under the credit line).

In another example, an IDI makes a term loan to an affiliate that has a principal amount of $100. The affiliate pays $2 in up-front fees to the member bank, and the affiliate receives net loan proceeds of $98. The IDI must initially value the covered transaction at $100.

Although the rule considers an IDI's purchase of, or investment in, a debt security issued by an affiliate as an extension of credit to an affiliate, these transactions are not valued like other extensions of credit. See section 223.23 for the valuation rules for purchases of, and investments in, the debt securities of an affiliate.

2020.1.4.2.3 Timing of a Credit Transaction with an Affiliate

An IDI has entered into a credit transaction with an affiliate at the time during the day that the IDI becomes legally obligated to make the extension of credit to, or issue the guarantee, acceptance, or letter of credit on behalf of, the affiliate. A covered transaction occurs at the moment that the IDI executes a legally valid, binding, and enforceable credit agreement or guarantee and does not occur only when an IDI funds a credit facility or makes payment on a guarantee. Consistent with section 23A, the rule only requires an IDI to compute compliance with its quantitative limits when the IDI is about to engage in a new covered transaction. The rule does not require an IDI to compute compliance with the rule's quantitative limits on a continuous basis. See section 223.21(b)(1) of the rule.

The burden of the timing rule is mitigated significantly by the exemption for intraday extensions of credit found in section 223.42(l). The intraday credit exemption generally applies only to extensions of credit that an IDI expects to be repaid, sold, or terminated by the end of its U.S. business day. The IDI must have policies and procedures to manage and minimize the credit exposure. Any such extension of credit that is outstanding at the end of the IDI's business day must be treated as an extension of credit and must meet the regulatory quantitative and collateral requirements.

2020.1.4.2.4 Leases

Lease transactions that constitute the functional equivalent of a loan or an extension of credit may be subject to section 23A. Such lease arrangements, in effect, are equivalent to a loan by the IDI and are essentially financing arrangements. Some of the characteristics that would normally cause a lease to be construed as a loan equivalent include the lessee's having responsibility for the servicing, maintenance, insurance, licensing, or risk of loss or damage, and the lessee's having the option to purchase the equipment.

2020.1.4.2.5 Extensions of Credit Secured by Affiliate Securities—General Valuation Rule (Section 223.24(a) and (b))

Section 23A defines as a covered transaction an IDI's acceptance of securities issued by an affiliate as collateral for a loan or extension of credit to any person or company.[40] This type of covered transaction has two classes: one in which the only collateral for the loan is solely affiliate securities and another in which the loan is secured by a combination of affiliate securities and other collateral.[40a]

Under the rule, if the credit extension is secured exclusively by affiliate securities, then the transaction is valued at the full amount of the extension of credit. This approach reflects the difficulty of measuring the actual value of typically untraded and illiquid affiliate securities and conservatively assumes that the value of the securities is equal to the full value of the loan that the securities collateralize. An exception is provided to the general rule when the affiliate securities held as collateral have a ready market (as defined by section 223.42 of the rule). In that case, the transaction may be valued at the fair market value of the affiliate securities. The exception grants relief in those circumstances when the value of the affiliate securities is independently verifiable by reference to transactions occurring in a liquid market.[41]

Covered transactions of the second class, in which the credit extension is secured by affiliate securities and other collateral, are valued at the lesser of (1) the total value of the extension of credit minus the fair market value of the other collateral or (2) the fair market value of the affiliate securities (if the securities have a ready market). The rule's ready-market requirement applies regardless of the amount of affiliate collateral.[42]

2020.1.4.2.6 Extensions of Credit Secured by Affiliate Securities—Mutual Fund Shares

Section 23A(b)(7)(D) of the FRA defines as a covered transaction a member bank's acceptance of securities issued by an affiliate as collateral security for a loan or extension of credit to any person or company.

Section 223.24(c) of the rule provides an exemption for extensions of credit by a member bank that are secured by shares of an affiliated mutual fund. To qualify for the exemption, the transaction must meet several conditions. First, to ensure that the affiliate collateral is liquid and trades at a fair price, the affiliated mutual fund must be an open-end investment company that is registered with the SEC under the 1940 Act. Second, to ensure that the IDI can easily establish and monitor the value of the affiliate collateral, the affiliated mutual fund's shares serving as collateral for the extension of credit must have a publicly available market price. Third, to reduce the IDI's incentives to use these extensions of credit as a mechanism to support the affiliated mutual fund, the IDI and its affiliates must not own more than 5 percent of the fund's shares (excluding certain shares held in a fiduciary capacity). Finally, the proceeds of the extension of credit must not be used to purchase the affiliated mutual fund's shares serving as collateral or otherwise used to benefit an affiliate. In such circumstances, the IDI's extension of credit would be covered by section 23A's attribution rule. For example, an IDI proposes to lend $100 to a nonaffiliate secured exclusively by eligible affiliated mutual fund securities. The IDI knows that the nonaffiliate intends to use all the loan proceeds to purchase the eligible affiliated mutual fund securities that would serve as collateral for the loan. Under the attribution rule

40. See 12 U.S.C. 371c(b)(7)(D). This covered transaction only arises when the member bank's loan is to a nonaffiliate. Under section 23A, the securities issued by an affiliate are not acceptable collateral for a loan or extension of credit to any affiliate. (See 12 U.S.C. 371(c)(4)) If the proceeds of a loan that is secured by an affiliate's securities are transferred to an affiliate by the unaffiliated borrower (for example, to purchase assets or securities from the inventory of an affiliate), the loan should be treated as a loan to the affiliate and the affiliates securities cannot be used to meet the collateral requirements of sections 23A. The loan must then be secured with other collateral in an amount and of a type that meets the requirements of section 23A for loans by an IDI to an affiliate.

40a. The securities issued by an affiliate cannot be used as collateral for a loan to any affiliate (12 U.S.C. 371c (c)(4)).

41. In either case, the transaction must comply with section 23B; that is, the IDI must obtain the same amount of affiliate securities as collateral on the credit extension that the IDI would obtain if the collateral were not affiliate securities.

42. Under the rule, an IDI may use the higher of the two valuation options for these transactions if, for example, the IDI does not have the procedures and systems in place to verify the fair market value of affiliate securities.

in section 223.16, the IDI must treat the loan to the nonaffiliate as a loan to an affiliate, and because securities issued by an affiliate are ineligible collateral under section 223.14, the loan would not be in compliance with section 223.14.

2020.1.4.3 Asset Purchases

2020.1.4.3.1 Purchase of Assets under Regulation W

Regulation W provides that a purchase of assets by an IDI from an affiliate initially must be valued at the total amount of consideration given by the IDI in exchange for the asset. (See section 223.22.) This consideration can take any form and includes an assumption of liabilities by the IDI. An assumption of liabilities can include a mortgage, other debt obligations, or the cost associated with the transfer of employees, such as pension obligations, bonuses, or accrued vacation.

Asset purchases are a covered transaction for an IDI for as long as the IDI holds the asset. The value of the covered transaction after the purchase may be reduced to reflect amortization or depreciation of the asset, to the extent that such reductions are consistent with GAAP and are reflected on the IDI's financial statements.

Certain asset purchases by an IDI from an affiliate are *not* valued in accordance with the general asset-purchase valuation formula. First, if the IDI buys from one affiliate a loan made to a second affiliate, the IDI must value the transaction as a credit transaction with the second affiliate under section 223.21. Second, if the IDI buys from one affiliate a security issued by a second affiliate, the IDI must value the transaction as an investment in securities issued by the second affiliate under section 223.23. Third, if the IDI acquires the shares of an affiliate that becomes an operating subsidiary of the IDI after the acquisition, the IDI must value the transaction under section 223.31.

A special valuation rule applies to an IDI's purchase of a line of credit or loan commitment from an affiliate. An IDI initially must value such asset purchases at the purchase price paid by the IDI for the asset plus any additional amounts that the IDI is obligated to provide under the credit facility.[43] This special valuation rule ensures that there are limits on the amount of risk a company can shift to an affiliated IDI.

Section 23A(d)(6) provides an exemption for purchasing assets having a readily identifiable and publically available market quotation. Section 224.42(e) of the rule codified this exemption. Section 223.42(f) expands the statutory (d)(6) exemption to allow an IDI to purchase securities from an affiliate based on price quotes obtained from certain electronic screens so long as, among other things, (1) the selling affiliate is a broker-dealer registered with the SEC, (2) the securities are traded in a ready market and eligible for purchase by state IDIs, (3) the securities are not purchased within 30 days of an underwriting (if an affiliate of the IDI is an underwriter of the securities), and (4) the securities are not issued by an affiliate. See section 2020.1.10.2 for a further discussion of this exemption.

In contrast with credit transactions, an asset purchase from a nonaffiliate that later becomes an affiliate generally does not become a covered transaction for the purchasing IDI. However, if an IDI purchases assets from a nonaffiliate in contemplation that the nonaffiliate will become an affiliate of the IDI, the asset purchase becomes a covered transaction at the time the nonaffiliate becomes an affiliate. In addition, the IDI must ensure that the aggregate amount of the IDI's covered transactions (including any such asset purchase from the nonaffiliate) would not exceed the quantitative limits of section 23A at the time the nonaffiliate becomes an affiliate.

The following examples are provided to assist IDIs in valuing purchases of assets from an affiliate. An IDI's receipt of an encumbered asset from an affiliate ceases to be a covered transaction when, for example, the IDI sells the asset.

- *Cash purchase of assets.* An IDI purchases a pool of loans from an affiliate for $10 million. The IDI initially must value the covered transaction at $10 million. Going forward, if the borrowers repay $6 million of the principal amount of the loans, the IDI may value the covered transaction at $4 million.
- *Purchase of assets through an assumption of liabilities.* An affiliate of an IDI contributes

43. A member bank would not be required to include unfunded, but committed, amounts in the value of the covered transaction if (1) the credit facility being transferred from the affiliate to the bank is unconditionally cancelable (without cause) at any time by the IDI and (2) the IDI makes a separate credit decision before each drawing under the facility (see 12 C.F.R. 223.22).

real property with a fair market value of $200,000 to the IDI. The IDI pays the affiliate no cash for the property, but assumes a $50,000 mortgage on the property. The IDI has engaged in a covered transaction with the affiliate and initially must value the transaction at $50,000. Going forward, if the IDI retains the real property but pays off the mortgage, the IDI must continue to value the covered transaction at $50,000. If the IDI, however, sells the real property, the transaction ceases to be a covered transaction at the time of the sale (regardless of the status of the mortgage).

2020.1.4.3.2 IDI's Purchase of Securities Issued by an Affiliate

Section 23A includes as a covered transaction an IDI's purchase of, or investment in, securities issued by an affiliate. Section 223.23 of the rule requires an IDI to value a purchase of, or investment in, securities issued by an affiliate (other than a financial subsidiary of the IDI) at the *greater* of the IDI's purchase price or carrying value of the securities. An IDI that paid no consideration in exchange for affiliate securities has to value the covered transaction at no less than the IDI's carrying value of the securities. In addition, if the IDI's carrying value of the affiliate securities increased or decreased after the IDI's initial investment (due to profits or losses at the affiliate), the amount of the IDI's covered transaction would increase or decrease to reflect the IDI's changing financial exposure to the affiliate. However, the amount of the IDI's covered transaction cannot decline below the amount paid by the IDI for the securities.

Several important considerations support the general carrying-value approach of this valuation rule. First, the approach would require an IDI to reflect its investment in securities issued by an affiliate at carrying value throughout the life of the investment, even if the IDI paid no consideration for the securities. Second, the approach is supported by the terms of the statute, which defines both a "purchase of" *and* an "investment in" securities issued by an affiliate as a covered transaction. The statute's "investment in" language indicates that Congress was concerned with an IDI's continuing exposure to an affiliate through an ongoing investment in the affiliate's securities.

Third, GLB Act amendments to section 23A supported the approach. The GLB Act defined a financial subsidiary of an IDI as an affiliate of the IDI, but specifically provides that the section 23A value of an IDI's investment in securities issued by a financial subsidiary did *not* include retained earnings of the subsidiary. The negative implication from this provision is that the section 23A value of an IDI's investment in *other* affiliates *includes* the affiliates' retained earnings, which would be reflected in the IDI's carrying value of the investment under the rule.

Finally, the carrying-value approach is consistent with the purposes of section 23A—imiting the financial exposure of IDIs to their affiliates and promoting safety and soundness. The valuation rule requires an IDI to revalue upwards the amount of an investment in affiliate securities only when the IDI's exposure to the affiliate increases (as reflected on the IDI's financial statements) and the IDI's capital increases to reflect the higher value of the investment. In these circumstances, the valuation rule merely reflects the IDI's greater financial exposure to the affiliate and enhances safety and soundness by reducing the IDI's ability to engage in additional transactions with an affiliate as the IDI's exposure to that affiliate increases.

The valuation rule also provides that the covered-transaction amount of an IDI's investment in affiliate securities can be no less than the purchase price paid by the IDI for the securities, even if the carrying value of the securities declines below the purchase price. This aspect of the valuation rule uses the IDI's purchase price for the securities as a floor for valuing the covered transaction. First, it ensures that the amount of the covered transaction never falls below the amount of funds actually transferred by the IDI to the affiliate in connection with the investment. In addition, the purchase-price floor limits the ability of an IDI to provide additional funding to an affiliate as the affiliate approaches insolvency. If investments in securities issued by an affiliate were valued strictly at carrying value, then the IDI could lend more funds to the affiliate as the affiliate's financial condition worsened. As the affiliate declined, the IDI's carrying value of the affiliate's securities would decline, the section 23A value of the IDI's investment likely would decline, and, consequently, the IDI would be able to provide additional funding to the affiliate under section 23A. This type of increasing support for an affiliate in distress is what section 23A was intended to restrict.

The following examples are designed to assist IDIs in valuing purchases of, and investments in, securities issued by an affiliate:

- *Purchase of the debt securities of an affiliate.* The parent holding company of an IDI owns 100 percent of the shares of a mortgage company. The IDI purchases debt securities issued by the mortgage company for $600. The initial carrying value of the securities is $600. The IDI initially must value the investment at $600.
- *Purchase of the shares of an affiliate.* The parent holding company of an IDI owns 51 percent of the shares of a mortgage company. The IDI purchases an additional 30 percent of the shares of the mortgage company from a third party for $100. The initial carrying value of the shares is $100. The IDI initially must value the investment at $100. Going forward, if the IDI's carrying value of the shares declines to $40, the IDI must continue to value the investment at $100.
- *Contribution of the shares of an affiliate.* The parent holding company of an IDI owns 100 percent of the shares of a mortgage company and contributes 30 percent of the shares to the IDI. The IDI gives no consideration in exchange for the shares. If the initial carrying value of the shares is $300, then the IDI initially must value the investment at $300. Going forward, if the IDI's carrying value of the shares increases to $500, the IDI must value the investment at $500.

2020.1.4.5 Issuance of a Letter of Credit or Guarantee

2020.1.4.5.1 Confirmation of a Letter of Credit Issued by an Affiliate

Section 23A includes as a covered transaction the issuance by an IDI of a letter of credit on behalf of an affiliate, including the confirmation of a letter of credit issued by an affiliate as a covered transaction. (See section 223.3(h)(5).) When an IDI confirms a letter of credit, it assumes the risk of the underlying transaction to the same extent as if it had issued the letter of credit.[44] Accordingly, a confirmation of a letter of credit issued by an affiliate is treated in the same fashion as an issuance of a letter of credit on behalf of an affiliate.

44. See UCC 5-107(2).

2020.1.4.5.2 Credit Enhancements Supporting a Securities Underwriting

The definition of guarantee in section 23A does not include an IDI's issuance of a guarantee in support of securities issued by a third party and underwritten by a securities affiliate of the IDI.[45] Such a credit enhancement would not be issued "on behalf of" the affiliate. Although the guarantee does provide some benefit to the affiliate (by facilitating the underwriting), this benefit is indirect. The proceeds of the guarantee would not be transferred to the affiliate for purposes of the attribution rule of section 23A.[46] Section 23B would apply to the transaction and, where an affiliate was issuer as well as underwriter, the transaction would be covered by section 23A because the credit enhancement would be on behalf of the affiliate.

2020.1.4.5.3 Cross-Guarantee Agreements and Cross-Affiliate Netting Arrangements

A cross-guarantee agreement among an IDI, an affiliate, and a nonaffiliate in which the nonaffiliate may use the IDI's assets to satisfy the obligations of a defaulting affiliate is a guarantee for purposes of section 23A. The cross-guarantee arrangements among IDIs and their affiliates are subject to the quantitative limits and collateral requirements of section 23A. (See section 223.3(h)(5).)

As for cross-affiliate netting arrangements (CANAs), such arrangements involve an IDI, one or more affiliates of the IDI, and one or more nonaffiliates of the IDI, where a nonaffiliate is permitted to deduct obligations of an affiliate of the IDI to the nonaffiliate when settling the nonaffiliate's obligations to the IDI. These arrangements also would include agreements in which an IDI is required or permitted to add the obligations of an affiliate of the IDI to a nonaffiliate when determining the IDI's obligations to the nonaffiliate. These types of CANAs expose an IDI to the credit risk of its affiliates because the IDI may become liable for the obligations of its affiliates. Because the exposure of an IDI to an affiliate in such an arrangement resembles closely the exposure of an IDI when it issues a guarantee on behalf of

45. See 62 *Fed. Reg.* 45295, August 27, 1997.
46. See 12 U.S.C. 371c(a)(2).

an affiliate, the rule explicitly includes such arrangements in the definition of covered transaction. Accordingly, the quantitative limits of section 23A would prohibit an IDI from entering into such a CANA to the extent that the netting arrangement does not cap the potential exposure of the IDI to the participating affiliate (or affiliates).

2020.1.4.5.4 Keepwell Agreements

In a keepwell agreement between an IDI and an affiliate, the IDI typically commits to maintain the capital levels or solvency of the affiliate. The credit risk incurred by the IDI in entering into such a keepwell agreement is similar to the credit risk incurred by an IDI in connection with issuing a guarantee on behalf of an affiliate. As a consequence, keepwell agreements generally should be treated as guarantees for purposes of section 23A and, if unlimited in amount, would be prohibited by the quantitative limits of section 23A.

2020.1.4.5.5 Prohibition on the Purchase of Low-Quality Assets

Section 23A generally prohibits the purchase by an IDI of a low-quality asset from an affiliate.[47] In addition, an IDI and its subsidiaries cannot purchase or accept as collateral a low-quality asset from an affiliate. Section 23A defines a low-quality asset to include (1) an asset classified as ''substandard,'' ''doubtful,'' or ''loss,'' or treated as ''other loans specially mentioned,'' in the most recent report of examination or inspection by a federal or state supervisory agency (a ''classified asset''), (2) an asset in nonaccrual status, (3) an asset on which payments are more than 30 days past due in the payment of principal or interest, or (4) an asset whose terms have been renegotiated or compromised due to the deteriorating financial condition of the obligor. Any asset meeting one of the above four criteria, including securities and real property, is a low-quality asset.

Regulation W expands the definition of low-quality assets in several respects. (See 12 C.F.R. 223.3(v).) First an asset may be identified by examiners as a low-quality asset if they represent credits to countries that are not complying with their external debt-service obligations but are taking positive steps to restore debt service through economic adjustment measures, generally as part of an International Monetary Fund Program. Although such assets may not be considered classified assets, examiners are to consider these assets in their assessment of an IDI's asset quality and capital adequacy.

Second, the rule considers a financial institution's use of its own internal asset-classification systems. The rule includes within the definition of low-quality asset not only assets classified during the last examination but also assets classified or treated as special mention under the institution's internal classification system (or assets that received an internal rating that is substantially equivalent to classified or special mention in such an internal system).

The purchase by an IDI from an affiliate of assets that have been internally classified raises potentially significant safety-and-soundness concerns. The Board expects companies with internal rating systems to use the systems consistently over time and over similar classes of assets and will view as an evasion of section 23A any company's deferral or alteration of an asset's rating to facilitate sale of the asset to an affiliated institution.

Finally, the rule defines low-quality asset to include foreclosed property designated ''other real estate owned'' (OREO), until it is reviewed by an examiner and receives a favorable classification. It further defines as a low-quality asset any asset (not just real estate) that is acquired in satisfaction of a debt previously contracted (not just through foreclosure) if the asset has not yet been reviewed in an examination or inspection. Under the rule, if a particular asset is good collateral taken from a bad borrower, the asset should cease to be a low-quality asset upon examination.

Section 23A provides a limited exception to the general rule prohibiting purchase of low-quality assets if the IDI performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset.[48] Section 223.15 of the rule also provides an exception from the prohibition on the purchase by an IDI of a low-quality asset from an affiliate for certain loan renewals. The rule allows an IDI that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying

47. 12 U.S.C. 371c(a)(3). Section 23A does not prohibit an affiliate from donating a low-quality asset to a member bank, so long as the bank provides no consideration for the asset and no liabilities are associated with the asset.

48. 12 U.S.C. 371c(a)(3).

loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating IDI to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the IDI purchased its participation and (2) the proposed transaction would not increase the IDI's proportional share of the credit facility. The IDI must also obtain the prior approval of its entire board of directors (or its delegees) and it must give a 20 days' post-consummation notice to its appropriate federal banking agency. An IDI is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the IDI's appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the IDI (not just affiliated IDIs).

2020.1.5 COLLATERAL FOR CERTAIN TRANSACTIONS WITH AFFILIATES

Section 23A requires a member bank's use of collateral for certain transactions between an IDI and its affiliates.[49] Each loan or extension of credit to an affiliate,[50] or guarantee, acceptance, or letter of credit issued on behalf of an affiliate by an IDI or its subsidiary, and any credit exposure of an IDI or a subsidiary to an affiliate resulting from a securities borrowing or lending transaction, or a derivative transaction, shall be secured at all times by collateral ("credit exposure") at the amounts required by the statute. The required collateral varies,[51] depending on the type of collateral used to secure the transaction.[52] The specific collateral requirements are—

1. 100 percent of the amount of such loan or extension of credit, guarantee, acceptance, letter of credit or credit exposure, if the collateral is composed of—
   a. obligations of the United States or its agencies;
   b. obligations fully guaranteed by the United States or its agencies as to principal and interest;
   c. notes, drafts, bills of exchange, or banker's acceptances that are eligible for rediscount or purchase by a Federal Reserve Bank;[53] or
   d. a segregated, earmarked deposit account with the member bank that is for the sole purpose of securing credit transactions between the member bank and its affiliates and is identified as such.
2. 110 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of obligations of any state or political subdivision of any state;
3. 120 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of other debt instruments, including receivables; or
4. 130 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of stock, leases, or other real or personal property.

For example, an IDI makes a $1,000 loan to an affiliate. The affiliate posts as collateral for the loan $500 in U.S. Treasury securities, $480 in corporate debt securities, and $130 in real estate. The loan satisfies the collateral requirements of section 23A because $500 of the loan is 100 percent secured by obligations of the United States, $400 of the loan is 120 percent secured by debt instruments, and $100 of the loan is 130 percent secured by real estate. The statute prohibits an IDI from counting a low-quality asset toward section 23A's collateral requirements for credit transactions with affiliates.[54] An IDI must maintain a perfected security interest at all times in the collateral that secures the credit transaction.

Each loan or extension of credit to an affiliate or guarantee, acceptance, credit exposure or letter of credit issued on behalf of an affiliate (herein referred to as credit transactions) by an IDI or its subsidiary must be secured at the time of the transaction by collateral.

49. The IDI must perfect the security interest in the collateral (*Fitzpatrick v. FDIC*, 765 F.2d 569 (6th Cir. 1985). A purchase of assets from an affiliate does not require collateral.
50. 12 U.S.C. 371c(b)(7).
51. "Credit extended" means the loan or extension of credit, guarantee, acceptance, or letter of credit.
52. 12 U.S.C. 371c(c)(1).
53. Regulation A includes a representative list of acceptable government obligations (12 C.F.R. 201.108).
54. 12 U.S.C. 371c(c)(3).

2020.1.5.1 Collateral Requirements in Regulation W

The collateral requirements for credit transactions are found in section 23A (c) of the statute. Section 23A (c)(1) requires that an IDI meet the collateral requirements of the statute at all times. A low-quality asset cannot be used to satisfy the statute's or regulation's collateral requirements, but can be taken as additional collateral.

2020.1.5.1.1 Deposit Account Collateral

Under section 23A, an IDI may satisfy the collateral requirements of the statute by securing a credit transaction with an affiliate with a ''segregated, earmarked deposit account'' maintained with the IDI in an amount equal to 100 percent of the credit extended.[55] IDIs may secure covered transactions with omnibus deposit accounts so long as the IDI takes steps to ensure that the omnibus deposit accounts fully secure the relevant covered transactions. Such steps might include substantial overcollateralization or the use of subaccounts or other recordkeeping devices to match deposits with covered transactions. To obtain full credit for any deposit accounts taken as section 23A collateral, IDIs must ensure that they have a perfected, first-priority security interest in the accounts. (See section 223.14(b)(1)(i)(D).)

2020.1.5.1.2 Ineligible Collateral

The purpose of section 23A's collateral requirements is to ensure that IDIs that engage in credit transactions with affiliates have legal recourse, in the event of affiliate default, to tangible assets with a value at least equal to the amount of the credit extended.

The statute recognizes that certain types of assets are not appropriate to serve as collateral for credit transactions with an affiliate. In particular, the statute provides that low-quality assets and securities issued by an affiliate are not eligible collateral for such covered transactions.

Under section 223.14(c) of the rule, intangible assets also are not deemed acceptable to meet the collateral requirements imposed by section 23A.[56] Intangible assets, including servicing assets, are particularly hard to value, and an IDI may have significant difficulty in collecting and selling such assets in a reasonable period of time.

Section 23A(c) requires that credit transactions with an affiliate be ''secured'' by collateral. A credit transaction between an IDI and an affiliate supported only by a guarantee or letter of credit from a third party does not meet the statutory requirement that the credit transaction be secured by collateral. Guarantees and letters of credit often are subject to material adverse change clauses and other covenants that allow the issuer of the guarantee or letter of credit to deny coverage. Letters of credit and guarantees are not balance-sheet assets under GAAP and, accordingly, would not constitute ''real or personal property'' under section 23A. There is a particularly significant risk that an IDI may have difficulty collecting on a guarantee or letter of credit provided by a nonaffiliate on behalf of an affiliate of the IDI. Accordingly, guarantees and letters of credit are not acceptable section 23A collateral.

As noted above, section 23A prohibits an IDI from accepting securities issued by an affiliate as collateral for an extension of credit to any affiliate. The rule clarifies that securities issued by the IDI itself also are not eligible collateral to secure a credit transaction with an affiliate. Equity securities issued by a lending IDI, and debt securities issued by a lending IDI that count as regulatory capital of the IDI, are not eligible collateral under section 23A. If an IDI was forced to foreclose on a credit transaction with an affiliate secured by such securities, the IDI may be unwilling to liquidate the collateral promptly to recover on the credit transaction because the sale might depress the price of the IDI's outstanding securities or result in a change in control of the IDI. In addition, to the extent that an IDI is unable or unwilling to sell such securities acquired through foreclosure, the transaction would likely result in a reduction in the IDI's capital, thereby offsetting any potential benefit provided by the collateral.

2020.1.5.1.3 Perfection and Priority

Under section 223.14(d) of the rule, an IDI's security interest in any collateral required by section 23A must be perfected in accordance with applicable law to ensure that an IDI has

55. 12 U.S.C. 371c(c)(1)(A)(iv).

56. The rule does not confine the definition of intangible assets by reference to GAAP.

good access to the assets serving as collateral for its credit transactions with affiliates. This requirement ensures that the IDI has the legal right to realize on the collateral in the case of default, including a default resulting from the affiliate's insolvency or liquidation. An IDI also is required to either obtain a first-priority security interest in the required collateral or deduct from the amount of collateral obtained by the IDI the lesser of (1) the amount of any security interests in the collateral that are senior to that obtained by the IDI or (2) the amount of any credits secured by the collateral that are senior to that of the IDI. For example, if an IDI lends $100 to an affiliate and takes as collateral a second lien on a parcel of real estate worth $200, the arrangement would only satisfy the collateral requirements of section 23A if the affiliate owed the holder of the first lien $70 or less (a credit transaction secured by real estate must be secured at 130 percent of the amount of the transaction).

The rule includes the following example of how to compute the section 23A collateral value of a junior lien: An IDI makes a $2,000 loan to an affiliate. The affiliate grants the IDI a second-priority security interest in a piece of real estate valued at $3,000. Another institution that previously lent $1,000 to the affiliate has a first-priority security interest in the entire parcel of real estate. This transaction is not in compliance with the collateral requirements of this section. Because of the existence of the prior third-party lien on the real estate, the effective value of the real estate collateral for the IDI for purposes of this section is only $2,000—$600 less than the amount of real estate collateral required by this section for the transaction ($2,000 × 130 percent = $2,600).

2020.1.5.1.4 Unused Portion of an Extension of Credit

Section 23A requires that the "amount" of an extension of credit be secured by the statutorily prescribed levels of collateral. Under the statute, an IDI provides a line of credit to an affiliate, it must secure the full amount of the line of credit throughout the life of the credit. Section 223.14(f)(2) of the rule, however, provides an exemption to the collateral requirements of section 23A for the unused portion of an extension of credit to an affiliate so long as the IDI does not have any legal obligation to advance additional funds under the credit facility until the affiliate has posted the amount of collateral required by the statute with respect to the entire used portion of the extension of credit.[57] In such credit arrangements, securing the unused portion of the credit line is unnecessary from a safety-and-soundness perspective because the affiliate cannot require the IDI to advance additional funds without posting the additional collateral required by section 23A. If an IDI voluntarily advances additional funds under such a credit arrangement without obtaining the additional collateral required under section 23A to secure the entire used amount (despite its lack of a legal obligation to make such an advance), the Board views this action as a violation of the collateral requirements of the statute. The entire amount of the line counts against the IDI's quantitative limit, even if the line of credit does not need to be secured.

2020.1.5.1.5 Purchasing Affiliate Debt Securities in the Secondary Market

An IDI's investment in the debt securities issued by an affiliate is an extension of credit by the IDI to the affiliate and thus is subject to section 23A's collateral requirements. Section 223.14(f)(3) of the rule provides an exemption that permits IDIs in certain circumstances to purchase debt securities issued by an affiliate without satisfying the collateral requirements of section 23A. The exemption is available where an IDI purchases an affiliate's debt securities from a third party in a bona fide secondary-market transaction. When an IDI buys an affiliate's debt securities in a bona fide secondary-market transaction, the risk that the purchase is designed to shore up an ailing affiliate is reduced. Any purchase of affiliate debt securities that qualifies for this exemption would still remain subject to the quantitative limits of section 23A and the market-terms requirement of section 23B. In analyzing an IDI's good faith under this exemption transaction, examiners should look at (1) the time elapsed between the original issuance of the affiliate's debt securities and the IDI's purchase, (2) the existence of any relevant agreements or relationships between the IDI and the third-party seller of the affiliate's debt securities, (3) any history of IDI

57. This does not apply to guarantees, acceptances, and letters of credit issued on behalf of an affiliate. These instruments must be fully collateralized at inception. Moreover, these transactions are still subject to the 10 and 20 percent limits of the statute.

financing of the affiliate, and (4) any other relevant information.

2020.1.5.1.6 Credit Transactions with Nonaffiliates that Become Affiliates

IDIs sometimes lend money to, or issue guarantees on behalf of, unaffiliated companies that later become affiliates of the IDI. Section 223.21(b)(2) provides transition rules that exempt credit transactions from the collateral requirements in situations in which the IDI entered into the transactions with the nonaffiliate at least one year before the nonaffiliate became an affiliate of the IDI. For example, an IDI with capital stock and surplus of $1,000 and no outstanding covered transactions makes a $120 unsecured loan to a nonaffiliate. The IDI does not make the loan in contemplation of the nonaffiliate becoming an affiliate. Nine months later, the bank holding company purchases all the stock of the nonaffiliate, thereby making the nonaffiliate an affiliate of the IDI. The IDI is not in violation of the quantitative limits of the rule's section 223.11 or 223.12 at the time of the stock acquisition. The IDI is, however, prohibited from engaging in any additional covered transactions with the new affiliate at least until such time as the value of the loan transaction falls below 10 percent of the IDI's capital stock and surplus, and the transaction counts toward the 20 percent limit for transactions with all affiliates. In addition, the IDI must bring the loan into compliance with the collateral requirements of section 223.14 promptly after the stock acquisition. Transactions with nonaffiliates in contemplation of the nonaffiliate becoming an affiliate must meet the quantitative and collateral requirements of the rule at the time of the inception of the credit transaction and of the affiliation.

2020.1.6 LIMITATIONS ON COLLATERAL

IDIs may accept as collateral for covered transactions receivables, leases, or other real or personal property.[58] The following are limitations and collateral restrictions:

58. As noted above, letters of credit and mortgage-servicing rights may not be accepted as collateral for purposes of section 23A. See section 223.14(c)(4)(5) of the rule (12 C.F.R. 223.14(c)(4) and (5).

1. Any collateral that is subsequently retired or amortized must be replaced by additional eligible collateral. This is done to keep the percentage of the collateral value relative to the amount of the outstanding loan or extension of credit, guarantee, acceptance, or letter of credit equal to the minimum percentage that was required at the inception of the transaction.
2. A low-quality asset is not acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, an affiliate, or credit exposure to an affiliate resulting from a securities borrowing or lending transaction, or derivative transaction.
3. Securities or other debt obligations issued by an affiliate of an IDI shall not be acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, or credit exposure from a securities borrowing or lending transaction, or derivative transaction to, that affiliate or any other affiliate of the IDI.

The above collateral requirements are not applicable to an acceptance that is already fully secured either by attached documents or by other property that is involved in the transaction and has an ascertainable market value.

2020.1.7 DERIVATIVE TRANSACTIONS WITH AFFILIATES

2020.1.7.1 Derivative Transactions between Insured Depository Institutions and Their Affiliates

Derivative transactions between an IDI and its affiliates generally arise from the risk-management needs of the institution or the affiliate. Transactions arising from the institution's needs typically occur when an institution enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract, or when the institution is unable to hedge the risk directly because it is not authorized to hold the hedging asset. To manage the market risk, the institution may have an affiliate acquire the hedging asset. The institution would then do a bridging derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between an IDI and its affiliate are affiliate-driven. To accomplish its asset-liability-management goals, an institution's affiliate may enter into an interest-rate or foreign-exchange derivative with the institution. For example, an institution's holding company may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The holding company may then enter into a fixed-to-floating interest-rate swap with its subsidiary member bank to reduce the holding company's interest-rate risk.

IDIs and their affiliates that seek to enter into derivative transactions for hedging (or risk-taking) purposes could enter into the desired derivatives with unaffiliated companies. IDIs and their affiliates often choose to use each other as their derivative counterparties, however, to maximize the profits of, and manage risks within, the consolidated financial group.

2020.1.7.1.1 Section 23A on Derivatives Transactions

The Dodd-Frank Act amended section 23A as it relates to derivatives and now provides that a derivative transaction, as defined in paragraph (3) of section 5200(b) of the Revised Statutes (12 U.S.C. 84(b)) with an affiliate, is a covered transaction to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate. The Dodd-Frank Act also requires that any credit exposure must be secured consistent with the collateral requirements of section 23A. This is a significant change and requires that all IDIs calculate the relevant credit exposure and count that amount towards the institution's quantitative limits. The Dodd-Frank Act requires the IDI to establish and maintain policies and procedures designed to manage the credit exposure arising from the derivative. These policies and procedures require, at a minimum, that the institution monitor and control its exposure to its affiliates by imposing appropriate credit controls and collateral requirements. Regulation W provides that credit derivatives between an institution and an unaffiliated third party that reference the obligations of an affiliate of the institution and that are the functional equivalent of a guarantee by the institution on behalf of an affiliate should be treated as a guarantee by the institution on behalf of an affiliate for the purposes of section 23A. (The novation of a derivative between an IDI and its affiliate is treated as a purchase under the statute.)

2020.1.7.1.2 Section 23B and Regulation W Regarding Derivative Transactions

Derivative transactions between an IDI and an affiliate also are subject to section 23B of the FRA under the express terms of the statute.[59]

Regulation W clarifies further that the transactions are subject to the market-terms requirement of section 23B of the FRA (see section 223.51). The rule requires IDIs to comply strictly with section 23B in their derivative transactions with affiliates. Section 23B requires an institution to treat an affiliate no better than a *similarly situated* nonaffiliate. To comply with section 23B of the FRA, each institution should have in place credit limits on its derivatives exposure to affiliates that are at least as strict as the credit limits the institution imposes on unaffiliated companies that are engaged in similar businesses and are substantially equivalent in size and credit quality. Similarly, each institution should monitor derivatives exposure to affiliates at least as rigorously as it monitors derivatives exposure to comparable unaffiliated companies. In addition, each institution should price and require collateral in its derivative transactions with affiliates in a way that is at least as favorable to the institution as the way in which it would price or require collateral in a derivative transaction with comparable unaffiliated counterparties.

Section 23B generally does not allow an IDI to use with an affiliate the terms and conditions it uses with its most creditworthy unaffiliated customer unless the institution can demonstrate that the affiliate is of comparable creditworthiness as its most creditworthy unaffiliated customer. Instead, section 23B requires that an affiliate be treated comparably (with respect to terms, conditions, and credit limits) to the majority of third-party customers engaged in the same business, and having comparable credit quality and size as the affiliate. Because an IDI generally has the strongest credit rating within a holding company, the Board generally would not expect an affiliate to obtain better terms and

59. In addition to applying to covered transactions, as defined in section 23A of the FRA, the market-terms requirement of section 23B of the FRA applies broadly to, among other things, "[t]he payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise" (12 U.S.C. 371c-1(a)(2)(C)). Institution-affiliate derivatives generally involve a contract or agreement to pay money to the affiliate or furnish risk-management services to the affiliate.

conditions from an IDI than the institution receives from its major unaffiliated counterparties. In addition, market terms for derivatives among major financial institutions generally include daily marks to market and two-way collateralization above a relatively small exposure threshold.

2020.1.7.1.3 Covering Derivatives That Are the Functional Equivalent of a Guarantee

Although most derivatives are not treated as covered transactions, section 223.33 of the rule provides that credit derivatives between an IDI and a nonaffiliate in which the IDI protects the nonaffiliate from a default on, or a decline in the value of, an obligation of an affiliate of the IDI are covered transactions under section 23A. Such derivative transactions are viewed as guarantees by a member bank on behalf of an affiliate (and, hence, are covered transactions) under section 23A.

The rule provides that these credit derivatives are covered transactions under section 23A and gives several examples.[60] An IDI is not allowed to reduce its covered transaction amount for these derivatives to reflect hedging positions established by the IDI with third parties. A credit derivative is treated as a covered transaction only to the extent that the derivative provides credit protection with respect to obligations of an affiliate of the IDI.

2020.1.8 INTRADAY EXTENSIONS OF CREDIT

An extension of credit under section 23A of the FRA includes the credit exposure arising from intraday extensions of credit by IDIs to their affiliates. IDIs regularly provide transaction accounts to their affiliates in conjunction with providing payment and securities clearing services. As in the case of unaffiliated commercial customers, these accounts are occasionally subject to overdrafts during the day that are repaid in the ordinary course of business.

Intraday extensions of credit by an IDI to an affiliate are subject to the market-terms requirement of section 23B under the rule. The rule also requires that, under section 23A, institutions establish and maintain policies and procedures that are reasonably designed to manage the credit exposure arising from an institution's intraday extensions of credit to affiliates. The policies and procedures must, at a minimum, provide for monitoring and controlling the institution's intraday credit exposure to each affiliate, and to all affiliates in the aggregate, and ensure that the institution's intraday credit extensions to affiliates comply with section 23B.

Section 223.42(l) of the rule provides that intraday credit extensions by an IDI to an affiliate are section 23A covered transactions but exempts all such intraday credit extensions from the quantitative and collateral requirements of section 23A if the IDI (1) maintains policies and procedures for the management of intraday credit exposure and (2) has no reason to believe that any affiliate receiving intraday credit would have difficulty repaying the credit in accordance with its terms. The policies and procedures are to be established and maintained for—

1. monitoring and controlling the credit exposure arising at any one time from the IDI's intraday extensions of credit to each affiliate and all affiliates in the aggregate and
2. ensuring that any intraday extensions of credit by the IDI to an affiliate comply with the market-terms requirement of section 223.51 of the rule.

2020.1.8.1 Standard under Which the Agencies May Grant Additional Exemptions

The Dodd-Frank Act amended section 23A to authorize the appropriate federal banking agency to exempt transactions or relationships by order if the exemption would be in the public interest and consistent with the purposes of section 23A. The exemption determination requires the concurrence of the Board. The FDIC has a 60-day period to determine whether the requested exemption presents an unacceptable risk to the insurance fund. The request should describe in detail the transaction or relationship for which the member bank seeks exemption. The exemption request also should explain why the Agency should exempt the transaction or relationship, and why it meets the public interest standard of the statute. The Board has approved a number of exemptions, most of

60. In most instances, the covered-transaction amount for such a credit derivative would be the notional principal amount of the derivative.

which involve corporate reorganizations. These exemptions are available on the Board's website, www.federalreserve.gov/boarddocs/legalint/FederalReserve Act.

2020.1.9 EXEMPTIONS FROM SECTION 23A

Section 23A exempts seven transactions or relations from its quantitative limits and collateral requirements.[61] Regulation W, subpart E, clarifies these exemptions and exempts a number of additional types of transactions. The Board reserves the right to revoke or modify any additional exemption granted by the Board in Regulation W, if the Board finds that the exemption is resulting in unsafe or unsound banking practices. The Board also reserves the right to terminate the eligibility of a particular IDI to use any such exemption if the IDI's use of the exemption is resulting in unsafe or unsound banking practices.

2020.1.9.1 Covered Transactions Exempt from the Quantitative Limits and Collateral Requirements

Under the rule's section 223.41, the quantitative limits (sections 223.11 and 223.12) and the collateral requirements (section 223.14) do not apply to the following transactions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13) and the prohibition on the purchase of a low-quality asset (section 223.15).

2020.1.9.1.1 Parent Institution/Subsidiary Institution Transactions

Transactions with an IDI are exempt from the quantitative limits and collateral requirements (section 223.14) if the member bank controls 80 percent or more of the voting securities of the IDI or the depository institution controls 80 percent or more of the voting securities of the IDI.

2020.1.9.1.2 Sister-Bank Exemption (section 223.41(b))

Regulation W exempts transactions with an IDI if the same company controls 80 percent or more of the voting securities of the member bank and the IDI.[62] In addition, the statute provides that covered transactions between sister banks must be consistent with safe and sound banking practices.[63]

The sister-bank exemption generally applies only to transactions between IDIs.[64] The rule's definition of affiliate excludes uninsured depository institution subsidiaries of a member bank. Covered transactions between a member bank and a parent uninsured depository institution or a commonly controlled uninsured depository institution, under the rule, generally would be subject to section 23A, whereas covered transactions between a member bank and a subsidiary uninsured depository institution would not be subject to section 23A.[65]

The sister-bank exemption, by its terms, only exempts transactions by a member bank with a sister-bank affiliate; hence, the sister-bank exemption cannot exempt a member bank's extension of credit or other covered transaction to an affiliate that is not a sister bank (even if the extension of credit was purchased from a sister bank). For example, an IDI purchases from Sister-Bank Affiliate A a loan to Affiliate B in a purchase that qualifies for the sister-bank exemption in section 23A. The IDI's asset purchase from Sister-Bank Affiliate A would be an exempt covered transaction under section 223.41(b), but the member bank also would have acquired an extension of credit to Affiliate B, which would be a covered transaction between the IDI and Affiliate B under section 223.3(h)(1) that does not qualify for the sister-bank exemption.

61. See 12 U.S.C. 371c(d)

62. Banks that are affiliated in this manner are referred to as "sister banks." Sister banks can improve their efficiency through intercorporate transfers under this exception. Also, "company" in this context is not limited to a bank holding company. For example, if a retail corporation owns two credit card banks, the two credit card banks would be sister banks, and the sister-bank exception could be used for transactions between two credit card banks.

63. 12 U.S.C. 371c(a)(4).

64. A member bank and its operating subsidiaries are considered a single unit for purposes of section 23A. Under the statute and the regulation, transactions between a member bank (or its operating subsidiary) and the operating subsidiary of a sister-insured depository institution generally qualify for the sister-bank exemption.

65. The sister-bank exemption in section 23A does not allow a member bank to avoid any restrictions on sister-bank transactions that may apply to the bank under the prompt corrective-action framework set forth in section 38 of the FDI Act (12 U.S.C. 1831o) and regulations adopted by the bank's appropriate federal banking agency.

2020.1.9.1.3 Purchase of Loans on a Nonrecourse Basis from an Affiliated IDI

Banks that are commonly controlled (i.e., at least 25 percent common ownership) can purchase loans on a nonrecourse basis. This allows chain banks and banks in companies that are not owned 80 percent by the same company to achieve the same efficiency as sister banks. The exemption only applies to the purchase of loans; other covered transactions, such as extensions of credit, are not exempt.

2020.1.9.1.4 Internal Corporate Reorganizations

Section 223.41(d) of the rule provides an exemption for asset purchases by an IDI from an affiliate that is part of a one-time internal corporate reorganization of a holding company.[66] The exemption includes purchases of assets in connection with a transfer of securities issued by an affiliate to an IDI, as described in section 223.31(a).

Under this exemption, an IDI would be permitted to purchase assets (other than low-quality assets) from an affiliate (including in connection with an affiliate share transfer that section 223.31 of the rule treats as a purchase of assets) that are exempt from the quantitative limits of section 23A if the following conditions are met.

First, the purchase must be part of an internal corporate reorganization of a holding company that involves the transfer of all or substantially all of the shares or assets of an affiliate or of a division or department of an affiliate. The asset purchase must not be part of a series of periodic, ordinary-course asset transfers from an affiliate to an IDI.[67] Second, the IDI's holding company must provide the Board with contemporaneous notice of the transaction and must commit to the Board to make the IDI whole, for a period of two years, for any transferred assets that become low-quality assets.[68] Third, a majority of the IDI's directors must review and approve the transaction before consummation. Fourth, the section 23A value of the covered transaction must be less than 10 percent of the IDI's capital stock and surplus (or up to 25 percent of the IDI's capital stock and surplus with the prior approval of the appropriate federal banking agency) for the IDI. Fifth, the holding company and all its subsidiary depository institutions must be well capitalized and well managed and must remain well capitalized upon consummation of the transaction.

2020.1.9.2 Other Covered Transactions Exempt from the Quantitative Limits, Collateral Requirements, and Low-Quality-Asset Prohibition

The quantitative limits (sections 223.11 and 223.12), the collateral requirements (section 223.14), and the prohibition on the purchase of a low-quality asset (section 223.15) do not apply to the following exempted transactions (see section 223.42) and certain conditions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13). Detailed conditions or restrictions pertaining to these exemptions are discussed after this list.

1. Making correspondent banking deposits in an affiliated depository institution (as defined in section 3 of the FDI Act (12 U.S.C. 1813) or in an affiliated foreign bank that represents an ongoing, working balance maintained in the ordinary course of correspondent business
2. Giving immediate credit to an affiliate for uncollected items received in the ordinary course of business

66. See 1998 *Fed. Res. Bull.* 985 and 1013-14.

67. The IDI must provide the Board, as well as the appropriate federal agency, a notice that describes the primary business activities of the affiliate whose shares or assets are being transferred to the IDI and must indicate the anticipated date of the reorganization.

68. The holding company can meet these criteria by either repurchasing the assets at book value plus any write-down that has been taken or by making a quarterly cash contribution to the bank equal to the book value plus any write-downs that have been taken by the bank. The purchase or payment must be made within 30 days of each quarter end. In addition, if a cash payment is made, the IDI will hold an amount of risk-based capital equal to the book value of any transferred assets that become low-quality so long as the IDI retains ownership or control of the transferred asset. For example, under this dollar-for-dollar capital requirement, the risk-based capital charge for each transferred low-quality loan asset would be 100 percent (equivalent to a 1250 percent risk weight), rather than the 8 percent requirement (equivalent to a 100 percent risk weight) that would apply to a similar defaulted loan asset that is not a part of the transferred asset pool. See the Board's letter dated December 21, 2007, to Andres L. Navarette (Capital One Financial Corp.). Once the capital pool has been allocated to specific assets as described above, the capital cannot be applied to other low-quality assets if the initial low-quality asset returns to performing status. The IDI can only apply the allocated capital pool to new assets if the initial assets are fully paid or sold.

3. Transactions secured by cash or U. S. government securities
4. Purchasing securities of a servicing affiliate, as defined by section 4(c)(1) of the BHC Act
5. Purchasing certain liquid assets
6. Purchasing certain marketable securities
7. Purchasing certain municipal securities
8. Purchasing from an affiliate an extension of credit subject to a repurchase agreement that was originated by an IDI and sold to the affiliate subject to a repurchase agreement or with recourse
9. Asset purchases from an affiliate by a newly formed IDI, if the appropriate federal banking agency for the IDI has approved the asset purchase in writing in connection with the review of the formation of the IDI
10. Transactions approved under the Bank Merger Act that involve affiliated IDIs or an IDI and the U.S. branches and agencies of a foreign bank
11. Purchasing, on a nonrecourse basis, an extension of credit from an affiliate under certain conditions
12. Intraday extensions of credit
13. Riskless-principal transactions

2020.1.9.2.1 Correspondent Banking

Section 23A exempts from its quantitative limits and collateral requirements a deposit by an IDI in an affiliated IDI or affiliated foreign bank that is made in the ordinary course of correspondent business, subject to any restrictions that the Board may impose.[69] Section 223.42(a) of the rule further provides that such deposits must represent ongoing, working balances maintained by the IDI in the ordinary course of conducting the correspondent business.[70] Although not specified by section 23A or the Home Owners' Loan Act (HOLA), the rule also provides that correspondent deposits in an affiliated insured savings association are exempt if they otherwise meet the requirements of the exemption.

2020.1.9.2.2 Secured Credit Transactions

Section 23A and section 223.42(c) of the rule exempt any credit transaction by an IDI with an affiliate that is ''fully secured'' by obligations of the United States or its agencies, or obligations that are fully guaranteed by the United States or its agencies, as to principal and interest.[71]

A deposit account meets the ''segregated, earmarked'' requirement only if the account exists for the sole purpose of securing credit transactions between the member bank and its affiliates and is so identified. Under section 23A, if U.S. government obligations or deposit accounts are sufficient to fully secure a credit transaction, then the transaction is completely exempt from the quantitative limits of the statute. If, however, the U.S. government obligations or deposit accounts represent less than full security for the credit transaction, then the amount of U.S. government obligations or deposits counts toward the collateral requirements of section 23A, but no part of the transaction is exempt from the statute's quantitative limits.

The exemption provides that a credit transaction with an affiliate will be exempt ''to the extent that the transaction is and remains secured'' by appropriate (d)(4) collateral. If an IDI makes a $100 nonamortizing term loan to an affiliate that is secured by $50 of U.S. Treasury securities and $75 of real estate, the value of the covered transaction will be $50. If the market value of the U.S. Treasury securities falls to $45 during the life of the loan, the value of the covered transaction would increase to $55. The Board expects IDIs that use this expanded (d)(4) exemption to review the market value of their U.S. government obligations collateral regularly to ensure compliance with the exemption.

2020.1.10 ASSET PURCHASES FROM AN AFFILIATE—EXEMPTIONS

2020.1.10.1 Purchase of a Security by an Insured Depository Institution from an Affiliate

Section 23A of the FRA restricts the ability of a member bank to fund its affiliates through asset purchases, loans, or certain other transactions (referred to as ''covered transactions'').

69. 12 U.S.C. 371c(d)(2).

70. Unlike the sister-bank exemption, the exemption for correspondent banking deposits applies to deposits placed by a member bank in an *uninsured* depository institution or foreign bank.

71. 12 U.S.C. 371c(d)(4). A partial list of such obligations can be found in the rules's section 201.108 (12 C.F.R. 201.108).

Paragraph (d)(6) of section 23A contains an exemption from the statute (the (d)(6) exemption) for "purchasing assets having a readily identifiable and publicly available market quotation," if the purchase is at or below such quotation.[72]

2020.1.10.2 Purchases of Assets with Readily Identifiable Market Quotes

Section 23A(d)(6) exempts the purchase of assets by an IDI from an affiliate if the assets have a "readily identifiable and publicly available market quotation" and are purchased at their current market quotation. The rule (section 223.42(e)) limits the availability of this exemption (the (d)(6) exemption) to purchases of assets with market prices that are recorded in widely disseminated publications that are readily available to the general public, such as newspapers with a national circulation. Because as a general matter only exchange-traded assets are recorded in such publications, this test has ensured that the qualifying assets are traded actively enough to have a true "market quotation" and that examiners can verify that the assets are purchased at their current market quotation. The rule applies if the asset is purchased at or below the asset's current market quotation.[73]

The (d)(6) exemption may apply to a purchase of assets that are not traded on an exchange. In particular, purchases of foreign exchange, gold, and silver, and purchases of over-the-counter (OTC) securities and derivative contracts whose prices are recorded in widely disseminated publications, may qualify for the (d)(6) exemption.

If an IDI purchases from one affiliate, the securities issued by another affiliate, the IDI has engaged in two types of covered transactions: (1) the purchase of securities from an affiliate and (2) the investment in securities issued by an affiliate. Under the rule, although the (d)(6) exemption may exempt the one-time asset purchase from the first affiliate, it would not exempt the ongoing investment in securities being issued by a second affiliate.

2020.1.10.3 Purchasing Certain Marketable Securities

Regulation W provided an additional exemption from section 23A for certain purchases of securities by a member bank from an affiliate. The rule expanded the statutory (d)(6) exemption to allow a member bank to purchase securities from an affiliate based on price quotes obtained from certain electronic services so long as, among other things, the selling affiliate is a broker-dealer registered with the SEC, the securities have a ready market and are eligible for purchase by state member banks, the securities are not purchased within 30 days of an underwriting (if an affiliate of the bank is an underwriter of the securities), and the securities are not issued by an affiliate.

2020.1.10.3.1 Broker-Dealer Requirement and Securities Purchases from Foreign Broker-Dealers

Under the Regulation W exemption, the selling affiliate must be a broker-dealer securities affiliate that is registered with the Securities and Exchange Commission (SEC). Broker-dealers that are registered with the SEC are subject to supervision and examination by the SEC and are required by SEC regulations to keep and maintain detailed records concerning each securities transaction conducted by the broker-dealer. In addition, SEC-registered broker-dealers have experience in determining whether a security has a "ready market" under SEC regulations. The rule does not expand the exemption to include securities purchases from foreign broker-dealers. The rule explicitly provides, however, that an IDI may request that the Board exempt securities purchases from a particular foreign broker-dealer, and the Board would consider these requests on a case-by-case basis in light of all the facts and circumstances.

2020.1.10.3.2 Securities Eligible for Purchase by a State Member Bank

The exemption requires that the IDI's purchase of securities be eligible for purchase by a state member bank. For example, the Board determined that a member bank may purchase equity securities from an affiliate, if the purchase is

72. 12 U.S.C. 371c(d)(6).

73. The rule provides that a U.S. government obligation is an eligible (d)(6) asset only if the obligation's price is quoted routinely in a widely disseminated publication that is readily available to the general public. Although all U.S. government obligations have low credit risk, not all U.S. government obligations trade in liquid markets at a publicly available market quotation.

made to hedge the member bank's permissible customer-driven equity derivative transaction. The purchase must be treated as a purchase of a security on the Call Report.

2020.1.10.3.3 No Purchases Within 30 Days of an Underwriting

The exemption generally prohibits an IDI from using the exemption to purchase securities during an underwriting, or within 30 days of an underwriting, if an affiliate of the IDI is an underwriter of the securities. This provision applies unless the security is purchased as part of an issue of obligations of, or obligations fully guaranteed as to principal and interest by, the United States or its agencies. The rule includes the 30-day requirement because of the uncertain and volatile market values of securities during and shortly after an underwriting period and because of the conflicts of interest that may arise during and after an underwriting period, especially if an affiliate has difficulty selling its allotment.

2020.1.10.3.4 No Securities Issued by an Affiliate

If an IDI purchases from one affiliate securities issued by another affiliate, it would not exempt the investment in securities issued by the second affiliate, even though the exemption may exempt the asset purchase from the first affiliate. The transaction would be treated as a purchase of, or an investment in, securities issued by an affiliate.

2020.1.10.3.5 Price-Verification Methods

The exemption applies only in situations in which the IDI is able to obtain price quotes on the purchased securities from an unaffiliated electronic, real-time pricing service. The Board reaffirmed its position that it would not be appropriate to use independent dealer quotations or economic models to establish a market price for a security under the (d)(6) exemption. A security that is not quoted routinely in a widely disseminated news source or a third-party electronic financial network may not trade in a sufficiently liquid market to justify allowing an IDI to purchase unlimited amounts of the security from an affiliate.

2020.1.10.3.6 Record Retention

The rule expressly includes a two-year record-retention and supporting information requirement that is sufficient to enable the appropriate federal banking agencies to ensure that the IDI is in compliance with the terms of the exemption.

2020.1.10.4 Purchasing Municipal Securities

Section 223.42(g) of the rule exempts an IDI's purchase of municipal securities from an affiliate if the purchase meets certain requirements.[74] First, the IDI must purchase the municipal securities from a broker-dealer affiliate that is registered with the SEC. Second, the municipal securities must be eligible for purchase by a state member bank, and the IDI must report the transaction as a securities purchase in its Call Report. Third, the municipal securities should either be rated by a nationally recognized statistical rating organization (NRSRO) or be part of an issue of securities that does not exceed $25 million in size. Finally, the price for the securities purchased must be (1) quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks; (2) verified by reference to two or more actual independent dealer quotes on the securities to be purchased or securities that are comparable to the securities to be purchased; or (3) in the case of securities purchased during the underwriting period, verified by reference to the price indicated in the syndicate manager's written summary of the underwriting.[75] Under any of the three pricing options, the IDI must purchase the municipal securities at or below the quoted or verified price.

74. Municipal securities are defined by reference to section 3(a)(29) of the Securities Exchange Act. That Act defines municipal securities as direct obligations of, or obligations guaranteed as to principal or interest by, a state or agency, instrumentality, or political subdivision thereof, and certain tax-exempt industrial development bonds. (See 17 U.S.C. 78c(a)(29).)

75. Under the Municipal Securities Rulemaking Board's Rule G-11, the syndicate manager for a municipal bond underwriting is required to send a written summary to all members of the syndicate. The summary discloses the aggregate par values and prices of bonds sold from the syndicate account.

2020.1.10.5 Purchase of Loans on a Nonrecourse Basis

Section 223.41(c) of the rule exempts the purchase of loans on a nonrecourse basis from an affiliated depository institution. Under sections 23A(d)(6), a member bank may purchase loans on a nonrecourse basis from an affiliated "bank" exempt from the quantitative limitations of section 23A, even if the transactions does not qualify for the sister-bank exemption.[76] The rule clarifies that the scope of the exemption parallels that of the sister-bank exemption by stating that this exemption applies only to a member bank's purchase of a loan from an affiliated IDI.

2020.1.10.6 Purchases of Assets by Newly Formed Institutions

Section 223.42(i) of the rule exempts a purchase of assets by a newly formed IDI from an affiliate if the appropriate federal banking agency for the IDI has approved the purchase. This exemption allows companies to charter a new IDI and to transfer assets to the IDI free of the quantitative limits and low-quality-asset prohibition of section 23A.

2020.1.10.7 Transactions Approved under the Bank Merger Act

The Bank Merger Act exemption applies to transactions between an IDI and a certain IDI affiliate. Section 223.42(j) exempts transactions between IDIs that are approved pursuant to the Bank Merger Act. The rule also makes the Bank Merger Act exemption available for merger and other related transactions between an IDI and a U.S. branch or agency of an affiliated foreign bank, if the transaction has been approved by the responsible federal banking agency pursuant to the Bank Merger Act. There is no regulatory exemption for merger transactions between an IDI and its nonbank affiliate. Any IDI merging or consolidating with a nonbank affiliate may be able to take advantage of the regulatory exemption for internal-reorganization transactions contained in section 223.41(d) of the rule.

76. See 12 U.S.C. 371c(d)(6).

2020.1.11 PURCHASES OF EXTENSIONS OF CREDIT—THE PURCHASE EXEMPTION

Regulation W codified, with changes, the exemption that was previously found at section 250.250 (12 C.F.R. 250.250). In general,

1. The purchase of an extension of credit on a nonrecourse basis from an affiliate is exempt from section 23A's quantitative limits provided that—
   a. the extension of credit is originated by the affiliate;
   b. the IDI makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;
   c. the IDI commits to purchase the extensions of credit before the affiliate makes or commits to the extensions of credit; and
   d. the IDI does not make a blanket advance commitment to purchase extensions of credit from the affiliate. (See section 223.42(k) of the rule.)
2. The rule also includes a 50 percent limit on the amount of loans an IDI may purchase from an affiliate under the purchase exemption. When an IDI purchases more than half of the extensions of credit originated by an affiliate, the purchases represent the principal ongoing funding mechanism for the affiliate. The IDI's status as the predominant source of financing for the affiliate calls into question the availability of alternative funding sources for the affiliate, places significant pressure on the IDI to continue to support the affiliate through asset purchases, and reduces the IDI's ability to make independent credit decisions with respect to the asset purchases.
3. *"Substantial, ongoing funding" test.* The rule allows the appropriate federal banking agency for an IDI to reduce the 50 percent threshold prospectively, on a case-by-case basis, in those situations in which the agency believes that the IDI's asset purchases from an affiliate under the exemption may cause harm to the IDI.
4. *Independent credit review by the IDI.* To qualify for the purchase exemption under section 223.42(k), an IDI must independently review the creditworthiness of the borrower before committing to purchase each loan. Under established Federal Reserve guidance, an IDI is required to have clearly defined policies and procedures to ensure that it performs its own due diligence in analyzing the

credit and other risks inherent in a proposed transaction.[77] This function is not delegable to any third party, including affiliates of the IDI. Also, an IDI cannot rely on the standards of a government-sponsored enterprise. Accordingly, to qualify for this exemption, the IDI, independently and using its own credit policies and procedures, must itself review and approve each extension of credit before giving a purchase commitment to its affiliate.

5. *Purchase of loans from an affiliate must be without recourse*. In connection with an IDI's purchase of loans from an affiliate, the affiliate cannot retain recourse on the loans. The rule (section 223.42(k)) specifies that the exemption does not apply in situations where the affiliate retains recourse on the loans purchased by the IDI. The rule also specifies that the purchase exemption only applies in situations where the IDI purchases loans from an affiliate that were originated by the affiliate. The exemption cannot be used by an IDI to purchase loans from an affiliate that the affiliate purchased from another lender. The exemption is designed to facilitate an IDI's using its affiliate as an origination agent, not to permit an IDI to take loans off an affiliate's books that the affiliate purchased from a third party.

2020.1.12 OTHER BOARD-APPROVED EXEMPTIONS FROM SECTION 23A

Section 23A gives the Board the authority to grant exemptions from the statute's restrictions if such exemptions are "in the public interest and consistent with the purposes of this section" (12 U.S.C. 371c(f)(2)). Regulation W includes several exemptions that are available to qualifying IDIs.

2020.1.12.1 Exemptions and Interpretation from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that "a transaction by a member institution with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate" (12 U.S.C. 371c(a)(2)). One respective interpretation and three exemptions are discussed below.

2020.1.12.2 Interpretation—Loans to a Nonaffiliate that Purchases Securities or Other Assets Through a Depository Institution Affiliate Agent or Broker

In Regulation W, the Board issued an interpretation (12 C.F.R. 223.26(b)) regarding an IDI's loan to a nonaffiliate that purchases assets through an institution's affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit an IDI grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. However, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board, however, granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee. (See 12 C.F.R. 223.16(c)(2).)

The interpretation would not apply if the securities or other assets purchased by the third-party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to "any transaction in which an affiliate acts as an agent or broker or receives a

77. See, for example, SR-97-21.

fee for its services to the institution or any other person" (12 U.S.C. 371c-1(a)(2)(D)). A market-rate brokerage commission or agency fee refers to a fee or commission that is no greater than that prevailing at the same time for comparable agency transactions the affiliate enters into with persons who are neither affiliates nor borrowers from an affiliated depository institution. (See Regulation W at 12 C.F.R. 223.16(b).)

2020.1.12.3 Exemption—Loans to a Nonaffiliate that Purchases Securities from a Depository Institution Securities Affiliate that Acts as a Riskless Principal

The Board has granted an exemption in Regulation W from section 23A of the FRA for extensions of credit by an IDI to customers who use the loan proceeds to purchase a security that is issued by a third party through a broker-dealer affiliate of the institution that acts as riskless principal. The exemption for riskless-principal transactions would not apply if the broker-dealer affiliate sold to the third-party borrower securities that were issued or underwritten by, or sold out of the inventory of, an affiliate of the depository institution. Riskless-principal trades, although the functional equivalent of securities brokerage transactions, involve the purchase of a security by the depository institution's broker-dealer affiliate. Accordingly, the broker-dealer retains the loan proceeds at least for some moment in time.

There is negligible risk that loans that a depository institution makes to borrowers to engage in riskless-principal trades through a broker-dealer affiliate of the depository institution would be used to fund the broker-dealer. For this reason, the Board adopted an exemption from section 23A to cover riskless-principal securities transactions engaged in by depository institution borrowers through broker-dealer affiliates of the depository institution. This exemption is applicable even if the broker-dealer retains a portion of the loan proceeds as a market-rate markup for executing the riskless-principal securities trade. (See Regulation W at 12 C.F.R. 223.16(c)(1) and (2).)

2020.1.12.4 Exemption—Depository Institution Loan to a Nonaffiliate Pursuant to a Preexisting Line of Credit and the Proceeds Are Used to Purchase Securities from the Institution's Broker-Dealer Affiliate

The Board approved an exemption in Regulation W from section 23A for loans by an IDI to a nonaffiliate pursuant to a preexisting line of credit, in which the loan proceeds are used to purchase securities from a broker-dealer affiliate. In more detail, the Board exempted extensions of credit by an IDI to its customers that use the credit to purchase securities from a registered broker-dealer affiliate of the institution, so long as the extension of credit is made pursuant to, and consistent with any conditions imposed in, a preexisting line of credit. This line of credit should not have been established in expectation of a securities purchase from or through an affiliate of the institution. The preexisting requirement is an important safeguard to ensure that the depository institution did not extend credit for the purpose of inducing a borrower to purchase securities from or issued by an affiliate. The preexisting line of exemption may not be used in circumstances in which the line has merely been preapproved. (See Regulation W at 12 C.F.R. 223.16(c)(3).)

2020.1.12.5 Exemption—Credit Card Transactions

Regulation W also provides an exemption from section 23A's attribution rule for general-purpose credit card transactions that meet certain criteria. (See section 223.16(c)(4).) The rule defines a general-purpose credit card as a credit card issued by a member institution that is widely accepted by merchants that are not affiliates of the institution (such as a Visa card or Mastercard) if less than 25 percent of the aggregate amount of purchases with the card are purchases from an affiliate of the institution. Extensions of credit to unaffiliated borrowers pursuant to special-purpose credit cards (that is, credit cards that may only be used or are substantially used to buy goods from an affiliate of the member institution) are subject to the rule.

The credit card exemption includes several different methods that are provided for a member institution to demonstrate that its credit card meets the 25 percent test. First, if a member institution has no commercial affiliates (other than those permitted for an FHC under section 4 of the BHC Act), the institution would be deemed to satisfy the 25 percent test if the institution has no reason to believe that it would fail the test. (A member institution could use this method of complying with the 25 percent test even if, for example, the institution's FHC controls, under section 4(a)(2), 4(c)(2), or 4(k)(4)(H) of the BHC Act, several companies engaged in nonfinancial activities.) Such a member institution would not be obligated to establish systems to verify strict, ongoing compliance with the 25 percent test. *Most BHCs and FHCs should meet this test.* If an IDI has commercial affiliates (beyond those permitted for an FHC under section 4 of the BHC Act), the institution would be deemed to satisfy the 25 percent test if—

1. the institution establishes systems to verify compliance with the 25 percent test on an ongoing basis and periodically validates its compliance with the test or
2. the institution presents information to the Board demonstrating that its card would comply with the 25 percent test. (One way that a member institution could demonstrate that its card would comply with the 25 percent test would be to show that the total sales of the institution's affiliates are less than 25 percent of the total purchases by cardholders.)

Second, for those member institutions that fall out of compliance with the 25 percent test, there is a three-month grace period to return to compliance before extensions of credit under the card become covered transactions. Third, member institutions that are required to validate their ongoing compliance with the 25 percent test have a fixed method, time frames, and examples for computing compliance.

Example of calculating compliance with the 25 percent test. A member institution seeks to qualify a credit card as a general-purpose credit card under section 223.16, paragraph (c)(4)(ii)(A), of the rule. The member institution assesses its compliance under paragraph (c)(4)(iii) of this section on the 15th day of every month (for the preceding 12 calendar months). The credit card qualifies as a general-purpose credit card for at least three consecutive months. On June 15, 2008, however, the member institution determines that, for the 12-calendar-month period from June 1, 2007, through May 31, 2008, 27 percent of the total value of products and services purchased with the card by all cardholders were purchases of products and services from an affiliate of the member institution. Unless the credit card returns to compliance with the 25 percent limit by the 12-calendar-month period ending August 31, 2008, the card will cease to qualify as a general-purpose credit card as of September 1, 2008. Any outstanding extensions of credit under the credit card that were used to purchase products or services from an affiliate of the member institution would become covered transactions at such time.

2020.1.13 AN IDI'S ACQUISITION OF AN AFFILIATE THAT BECOMES AN OPERATING SUBSIDIARY

Section 223.31 (a)-(c) of the rule provides guidance to an IDI that acquires an affiliate. The first situation is when an IDI directly purchases or otherwise acquires the affiliate's assets and assumes the affiliate's liabilities. In this case, the transaction is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any consideration paid by the IDI for the affiliate's assets (if any) plus the amount of any liabilities assumed by the IDI in the transaction.

Regulation W provides that the acquisition by an IDI of a company that was an affiliate of the IDI before the acquisition is treated as a purchase of assets from an affiliate if (1) as a result of the transaction, the company becomes an operating subsidiary of the IDI and (2) the company has liabilities, or the IDI gives cash or any other consideration in exchange for the securities. The rule also provides that these transactions must be valued initially at the sum of (1) the total amount of consideration given by the IDI in exchange for the securities and (2) the total liabilities of the company whose securities have been acquired by the IDI. In effect, the rule requires IDIs to treat such share donations and purchases in the same manner as if the IDI had purchased the assets of the transferred company at a purchase price equal to the liabilities of the transferred company (plus any separate consideration paid by the IDI for the shares). See 12 C.F.R. 223.31.

Similarly, when an affiliate donates a controlling block of an affiliate's shares to an IDI, a covered transaction occurs if the affiliate has liabilities that the IDI assumes. For example, the parent holding company of an IDI contributes between 25 percent and 100 percent of the voting shares of a mortgage company to the IDI.

The parent holding company retains no shares of the mortgage company. The IDI gives no consideration in exchange for the transferred shares. The mortgage company has total assets of $300,000 and total liabilities of $100,000. The mortgage company's assets do not include any loans to an affiliate of the IDI or any other asset that would represent a separate covered transaction for the IDI upon consummation of the share transfer. As a result of the transaction, the mortgage company becomes an operating subsidiary of the IDI. The transaction is treated as a purchase of the assets of the mortgage company by the IDI from an affiliate under paragraph (a) of section 223.31. The IDI initially must value the transaction at $100,000, the total amount of the liabilities of the mortgage company. Going forward, if the member bank pays off the liabilities, the member bank must continue to value the covered transaction at $100,000. However, if the member bank sells $15,000 of the transferred assets of the mortgage company or if $15,000 of the transferred assets amortize, the IDI may value the covered transaction at $85,000.

A similar situation is when an IDI acquires an affiliate by merger. Because a merger with an affiliate generally results in the IDI's acquiring all the assets of the affiliate and assuming all the liabilities of the affiliate, this transaction is effectively equivalent to the purchase and assumption transaction described in the previous paragraph. Accordingly, the merger transaction also is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any consideration paid by the IDI for the affiliate's assets (if any) plus the amount of any liabilities assumed by the IDI in the transaction.[78]

The assets and liabilities of an operating subsidiary of an IDI are treated in the rule as assets and liabilities of the IDI itself for purposes of section 23A.[79] The rule only imposes asset-purchase treatment on affiliate share transfers when the company whose shares are being transferred to the IDI was an affiliate of the IDI before the transfer. If the transferred company was not an affiliate before the transfer, it would not be appropriate to treat the share transfer as a purchase of assets from an affiliate. Similarly, the rule only requires asset-purchase treatment for affiliate share transfers when the transferred company becomes a subsidiary and not an affiliate of the IDI through the transfer.

If an IDI purchases, or receives a donation, of a partial interest in an entity that remains an affiliate, that transaction is treated as a purchase of, or investment in securities issued by an affiliate. This type of transaction is valued according to its purchase price or carrying value. (See 12 C.F.R. 223.23.)

2020.1.14 STEP-TRANSACTION EXEMPTION (SECTION 223.31(d) AND (e))

Under section 223.31(d) of the rule, an exemption is provided for certain step transactions that are treated as asset purchases under section 223.31(a) when an affiliate owned the transferred company for a limited period of time. Regulation W provides an exemption when a company acquires the stock of an unaffiliated company and, immediately after consummation of the acquisition, transfers the shares of the acquired company to the holding company's subsidiary IDI. For example, a bank holding company acquires 100 percent of the shares of an unaffiliated leasing company. At that time, the subsidiary IDI of the holding company notifies its appropriate federal banking agency and the Board of its intent to acquire the leasing company from its holding company. On the day after consummation of the acquisition, the holding company transfers all of the shares of the leasing company to the IDI. No material change in the business or financial condition of the leasing company occurs between the time of the holding company's acquisition and the IDI's acquisition. The leasing company has liabilities. The leasing company becomes an operating subsidiary of the IDI at the time of the transfer. This transfer by the holding company to the IDI, although deemed an asset purchase by the IDI from an affiliate under paragraph (a) of section 223.31, would qualify for the exemption in paragraph (d) of section 223.31.

The rule exempts these "step" transactions under certain conditions. First, the IDI must acquire the target company immediately after the company became an affiliate (by being

78. As noted, section 223.3(dd) of the rule makes explicit the Board's view that these merger transactions generally involve the purchase of assets by a member bank from an affiliate.

79. Because an IDI usually can merge a subsidiary into itself, transferring all the shares of an affiliate to an IDI often is functionally equivalent to a transaction in which the bank directly acquires the assets and assumes the liabilities of the affiliate. In a direct acquisition of assets and assumption of liabilities, the covered-transaction amount would be equal to the total amount of liabilities assumed by the IDI.

acquired by the bank's holding company, for example). The IDI must acquire the entire ownership position in the target company that its holding company acquired. Also, there must be no material change in the business or financial condition of the target company during the time between when the company becomes an affiliate of the IDI and when the IDI is in receipt of the company. Finally, the entire transaction must comply with the market-terms requirement of section 23B, and the IDI must notify its appropriate federal banking agency and the Board, at or before the time that the target company becomes an affiliate of the IDI, of its intent ultimately to acquire the target company.

Regulation W requires that the IDI consummate the step transaction immediately to ensure the quality and fairness of the transaction. To the extent that the IDI acquires the target company some time after the company becomes an affiliate, the transaction looks less like a single transaction in which the IDI acquires the target company and more like two separate transactions, the latter of which involves the IDI acquiring assets from an affiliate.

The Board recognized, however, that banking organizations may need a reasonable amount of time to address legal, tax, and business issues relating to an acquisition. Regulation W thus permits IDIs to avail themselves of the step-transaction exemption if the IDI acquires the target company within three months after the target company becomes an affiliate so long as the appropriate federal banking agency for the IDI has approved the longer time period.

The 100 percent ownership requirement (that the IDI must acquire the entire ownership position in the target company that its holding company acquired) prevents a holding company from keeping the good assets of the target company and transferring the bad assets to the holding company's subsidiary IDI. If a banking organization cannot meet the terms of the step-transaction exemption, the organization may be able to satisfy the conditions of the rule's internal-corporate-reorganization exemption or may be able to obtain a case-by-case exemption from the Board.

2020.1.14.1 Application of Sections 23A and 23B of Subpart G to U.S. Branches and Agencies of Foreign Banks

2020.1.14.1.1 Applicability of Sections 23A and 23B to Foreign Banks Engaged in Underwriting Insurance, Underwriting or Dealing in Securities, Merchant Banking, or Insurance Company Investment in the United States.

By its terms, sections 23A and 23B of the FRA do not apply to the U.S. branches, agencies, or commercial lending offices of foreign banks. The Board, however, used the authority granted to it by the Gramm-Leach-Bliley Act to impose restrictions on transactions between the branches, agencies, and lending offices and any affiliate of the foreign bank that operates in the United States in order to ensure that such transactions met certain prudential standards and provided competitive equality with U.S. banking organizations. The Board accomplished these goals by imposing the definition of affiliates within sections 23A and 23B on transactions between the branches, agencies, and lending offices and those affiliates if the company is also

1. directly engaged in the United States in certain activities. These activities are significant because a U.S. bank cannot engage in these activities directly or through an operating subsidiary and the 23A and 23B limitations help ensure competitive equality between U.S. banks and foreign banks. These activities are as follows:
   - Insurance underwriting pursuant to section 4(k)(4)(B) of the Bank Holding Company Act (12 U.S.C. 1843(k)(4)(B));
   - Securities underwriting, dealing, or market making pursuant to section 4(k)(4)(E) of the Bank Holding Company Act (12 USC 1843(k)(4)(E));
   - Merchant banking activities pursuant to section 4(k)(4)(H) of the Bank Holding Company Act (12 USC 1843(k)(4)(H)) (but only to the extent that the proceeds of the transaction are used for the purpose of funding the affiliate's merchant banking activities);
   - Insurance company investment activities pursuant to section 4(k)(4)(I) of the Bank Holding Company Act (12 USC 1843(k)(4)(I)); or

   - Any other activity designated by the Board.
2. a portfolio company (as defined in the merchant banking subpart of Regulation Y (12 CFR 225.177(c)) controlled by the foreign bank or an affiliate of the foreign bank or a company that would be an affiliate of the branch, agency, or commercial lending company of the foreign bank under paragraph (a)(9) of section 223.2 if such branch, agency, or commercial lending company were a member bank; or
3. a subsidiary of an affiliate as described in paragraph (b)(1) or (2) of section 223.61.

Regulation W also provides that for purposes of subpart G, the "capital stock and surplus" of a U.S. branch, agency, or commercial lending company of a foreign bank will be determined by reference to the capital of the foreign bank as calculated under its home-country capital standards.

2020.1.15 SECTION 23B OF THE FEDERAL RESERVE ACT

Section 23B of the FRA became law on August 10, 1987, as part of the Competitive Equality Banking Act of 1987. This section also regulates transactions with affiliates. Section 23B applies to any covered transaction with an affiliate, but excludes banks from the term "affiliate" as that term is defined in section 23A.

Regulation W, subpart F, sets forth the principal restrictions of section 23B. These include (1) a requirement that most transactions between an IDI and its affiliates be on terms and circumstances that are substantially the same as those prevailing at the time for comparable transactions with nonaffiliates; (2) a restriction on an IDI's purchase, as fiduciary, of assets from an affiliate unless certain criteria are met; (3) a restriction on an IDI's purchase, during the existence of an underwriting syndicate, of any security if a principal underwriter of the security is an affiliate; and (4) a prohibition on publishing an advertisement or entering into an agreement stating that an IDI will be responsible for the obligations of its affiliates. For the most part, subpart F restates the operative provisions of section 23B.

The following transactions with affiliates are covered by section 23B:

1. Any covered transaction with an affiliate.
2. The sale of securities or other assets to an affiliate, including assets subject to an agreement to repurchase.
3. The payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise.
4. Any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the institution or to any other person.
5. Any transaction or series of transactions with a nonaffiliate if an affiliate
   - has a financial interest in the third party or
   - is a participant in the transaction or series of transactions.

Any transaction by an IDI or its subsidiary with any person is deemed to be a transaction with an affiliate of the institution if any of the proceeds of the transaction are used for the benefit of, or transferred to, the affiliate. An IDI and its subsidiaries may engage in transactions covered by section 23B of the FRA, but only on terms and under certain circumstances, including credit standards, that are substantially the same or at least as favorable to the institution as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If comparable transactions do not exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonfinancial companies.

Section 23B restricts the following transactions with affiliates:

1. An IDI or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted (1) under the instrument creating the fiduciary relationship, (2) by court order, or (3) by law of the jurisdiction creating the fiduciary relationship.
2. An IDI or its subsidiary, whether acting as principal or fiduciary, cannot knowingly purchase or acquire, during the existence of any underwriting or selling syndicate, any security if a principal underwriter of that security is an affiliate of the institution. This limitation applies unless the purchase or acquisition of the security has been approved before it is initially offered for sale to the public by a majority of the directors of the institution. The purchase should be based on a determination that it is a sound investment for the

institution, irrespective of the fact that an affiliate is a principal underwriter of the securities.

2020.1.15.1 Transactions Exempt from Section 23B of the Federal Reserve Act

The market-terms requirement of section 23B applies to, among other transactions, any "covered transaction" between an IDI and an affiliate.[80] Section 23B(d)(3) makes clear that the term "covered transaction" in section 23B has the same meaning as the term "covered transaction" in section 23A, but does not include any transaction that is exempt under section 23A(d). For example, transactions between sister banks and IDIs that are part of a chain banking organization are exempt from section 23B;[81] Also exempt are transactions that are fully secured by a deposit account or U.S. government obligations, and purchases of assets from an affiliate at a readily identifiable and publicly available market quotation.[82] Consistent with the statute, Regulation W's section 223.52(a)(1) exempts from section 23B any transaction that is exempt under section 23A(d).[83]

The rule also excludes from section 23B any covered transaction that is exempt from section 23A under section 223.42(i) or (j) (that is, asset purchases by a newly formed IDI and transactions approved under the Bank Merger Act). The Board excluded from section 23B this additional set of transactions because, in each case, the appropriate federal banking agency for the IDI involved in the transaction should ensure that the terms of the transaction are not unfavorable to the IDI.

2020.1.15.2 Purchases of Securities for Which an Affiliate Is the Principal Underwriter

The GLB Act amended section 23B to permit an IDI to purchase securities during an underwriting conducted by an affiliate if the following two conditions are met. First, a majority of the directors of the IDI (with no distinction drawn between inside and outside directors) must approve the securities purchase before the securities are initially offered to the public. Second, such approval must be based on a determination that the purchase would be a sound investment for the IDI regardless of the fact that an affiliate of the IDI is a principal underwriter of the securities.[84] Section 223.53(b) includes this standard and clarifies that if an IDI proposes to make such a securities purchase in a fiduciary capacity, then the directors of the IDI must base their approval on a determination that the purchase is a sound investment for the person on whose behalf the IDI is acting as fiduciary.

An IDI may satisfy this director-approval requirement by obtaining specific prior director approval of each securities acquisition otherwise prohibited by section 23B(b)(1)(B). The rule clarifies, however, that an IDI also satisfies this director-approval requirement if a majority of the IDI's directors approve appropriate standards for the IDI's acquisition of securities otherwise prohibited by section 23B(b)(1)(B), and each such acquisition meets the standards adopted by the directors. In addition, a majority of the IDI's directors must periodically review such acquisitions to ensure that they meet the standards and must periodically review the standards to ensure they meet the "sound investment" criterion of section 23B(b)(2). The appropriate period of time between reviews would vary depending on the scope and nature of the IDI's program, but such reviews should be conducted by the directors at least annually. Before the passage of the GLB Act, Board staff informally allowed IDIs, based on the legislative history of section 23B, to meet the director-approval requirement in this fashion, and there is no indication that Congress in the GLB Act intended to alter the procedures that a member bank could use to obtain the requisite director approval. The rule codifies staff's preexisting approach to the director-approval requirement.

2020.1.15.3 Definition of Affiliate under Section 23B

Section 23B states that the term "affiliate" under section 23B has the meaning given to such terms in section 23A, except that the term "affiliate" under section 23B does not include a

80. 12 U.S.C. 371c-1(a)(2)(A).

81. Although transactions between banks are exempt from section 23B, the safety-and-soundness provisions of section 23A(a)(4) apply and generally require that transactions be conducted on terms similar to those terms and standards outlined in section 23B.

82. 12 U.S.C. 371c-1(d)(3).

83. Regulation W will again be subsequently referred to as the "rule" or by its specified section-numbered discussion of section 23B provisions.

84. See 12 U.S.C. 371c-1(b)(2).

"bank," as defined in section 23A. In the case of the sister-bank exemption, the rule's section 223.2(c) clarifies that the only companies that qualify for the "bank" exception to section 23B's definition of affiliate are IDIs.

2020.1.15.4 Advertising and Guarantee Restriction

In section 23B(c), the "advertising restriction" prohibits an IDI from publishing any advertisement or entering into any agreement stating or suggesting that the IDI shall in any way be responsible for the obligations of its affiliates. Regulation W clarifies this restriction to permit such guarantees and similar transactions if the transaction satisfies the quantitative and collateral restrictions of section 23A. The rule also clarifies that section 23B(c) does not prohibit an IDI from making reference to such a guarantee, acceptance, or letter of credit in a prospectus or other disclosure document, for example, if otherwise required by law.

2020.1.16 INSPECTION OBJECTIVES

1. To analyze and assess the financial impact of transactions (including loans and purchases of assets) between the IDIs and their subsidiaries and all affiliates.
2. To ascertain if all:
   a. credit transactions are properly secured; and
   b. covered transactions are consistent with the quantitative limits of section 23A.
3. To ascertain whether the IDIs are calculating credit exposure resulting from derivatives and securities borrowing and lending transactions. Also, to ascertain that any credit exposure is secured.
4. To determine if an IDI has engaged in a transaction with a third party when the proceeds are used for the benefit of, or transferred to, an affiliate.
5. To determine if an IDI has procedures for allowing intraday credit.
6. To determine whether covered transactions between a subsidiary IDI (and its subsidiaries), its holding company, and other affiliates are conducted consistent with the quantitative and collateral requirements of sections 23A and 23B of the FRA and Regulation W.
7. To determine if transactions between a subsidiary IDI and its affiliates in the holding company are on terms and conditions and under circumstances, including credit standards, are consistent with safe and sound banking practices and whether the terms and conditions of the transactions are the same as those that would be offered or applied to nonaffiliated companies.
8. To determine whether a subsidiary IDI or its subsidiary
   a. has purchased low-quality assets or
   b. has purchased, as fiduciary, any securities or other assets from an affiliate in the holding company.
9. To determine whether a subsidiary IDI, or any subsidiary or affiliate of the IDI, has published any advertisement or has entered into any agreement that states or suggests that it will, in any way, be responsible for the obligations of affiliates.
10. To determine if securities were purchased or acquired by the subsidiary IDI or its subsidiaries from an underwriting or selling syndicate affiliated with the IDI and, if so, if the majority of outside directors of the IDI approved the purchase or acquisition of securities before they were offered for sale to the public.
11. To confirm that the subsidiary IDI or its subsidiary has not purchased as fiduciary any securities or other assets from a nonbank affiliate in the holding company unless the purchase was permitted in accordance with the instrument creating the fiduciary relationship, by court order, or by the law governing the fiduciary relationship.
12. To ascertain if any subsidiary IDI (or its subsidiary) had knowingly purchased or acquired any security from an affiliate in which the principal underwriter of that security was a nonbank affiliate within the holding company organization.
13. To determine if the subsidiary IDI and its subsidiaries have conducted transactions with their parent holding company or any other company affiliated in the holding company organization that are not in compliance with the restrictions in sections 23A and 23B of the FRA or Regulation W.

2020.1.17 INSPECTION PROCEDURES

1. During the pre-inspection, perform the following activities:

a. Review examination reports of subsidiary IDIs for comments on loans to affiliates, intercompany transactions, other transactions with affiliates, and violations of the restrictions of sections 23A or 23B of the FRA, or Regulation W.
b. Review the most current FR Y-8 (The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates).

2. In the officer's questionnaire, request a list of subsidiary IDIs and their subsidiaries' transactions with affiliates since the previous inspection, including the amounts, types, and any collateral, consisting of—
   a. loans or extensions of credit to an affiliate, and purchases of extensions of credit from an affiliate;
   b. a purchase or sale of an investment in securities issued by, or sold to, the affiliate, or purchase or sale of other assets, including assets subject to an agreement to repurchase;
   c. the acceptance of securities or other debt instrument issued by the affiliate as collateral security for a loan or extension of credit;
   d. the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit on behalf of an affiliate;
   e. a transaction with an affiliate that involves the borrowing or lending of securities, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate;
   f. a derivative transaction, as defined in 12 U.S.C. 84(b), with an affiliate, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate.
   g. the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise;
   h. transactions in which an affiliate acts as agent or broker or receives a fee for its services to the bank or to any other person;
   i. any transaction or series of transactions with a third party if—
      (1) the affiliate has a financial interest in the third party or
      (2) the affiliate is a participant in such transactions; and
   j. Any transaction by a subsidiary bank or its subsidiary with any person, if the proceeds of that transaction are used for the benefit of, or transferred to, the affiliate.

3. During the BHC's inspection, perform the following activities:
   a. Review the bank holding company's policies and procedures regarding intercompany transactions of subsidiary banks.
   b. Determine if the substantive transactions of the holding company organization comply with the restrictions on transactions with affiliates in sections 23A and 23B of the FRA and Regulation W.
   c. Verify that covered transactions count against Regulation W's limits and are collateralized when required.
      (1) Ensure that covered transactions are properly valued and adequately collateralized;
      (2) Review collateral documentation to ensure that a lien is adequately perfected and prioritized.
      (3) Review all related documentation, terms, conditions, and circumstances for each transaction, including any resolutions for securities purchased (or established standards for securities purchased from affiliates).
      (4) Determine the purpose and use of the transaction's proceeds.
   d. Review all outstanding guarantees, endorsements, or pledge agreements by the bank to support the affiliates' borrowings.
   e. Review, on a test-sample basis, advertisements and written agreements to ascertain whether the bank or any subsidiary or affiliate of the bank has stated or suggested that it shall be responsible for the obligations of any affiliates in the holding company organization.
   f. If the BHC engages in derivative transactions with affiliates, review the BHC's policies and procedures to determine if credit limits, collateral restrictions, and other limitations (each affiliate and all affiliates combined) have been imposed on interaffiliate derivative transaction (IDI) exposures to affiliates.
      (1) Determine if the limits are similar to those imposed on nonaffiliated counterparties.
   g. Review the listed transactions of the BHC or its subsidiary with the affiliates

that the IDI claims are exempt under 12 C.F.R. 223.42(k) provided in response to the officer's questionnaire (item 2). Determine if

(1) extensions of credit, and purchases of extensions of credit, are supported by independent credit evaluations and if advance loan commitments are provided before the affiliates make loans;
(2) no blank advance purchase commitments exist to purchase loans; and
(3) the purchases meet the quantitative restrictions of the exemption.

4. Give additional attention to the following problems involving the BHC and its subsidiaries:
   a. The subsidiary IDI would not have made the loan or would not have made the loan with such favorable terms and conditions, or engaged in any other covered transaction, except for the parent holding company's insistence due to the affiliate relationship.
   b. The IDI's condition is weakened due to the extension of credit or the nature of the transaction with the affiliate.
   c. The affiliate has not provided adequate qualifying collateral to support the loan or extension of credit provided by the subsidiary IDI.
   d. The IDI does not have a perfected security interest in the collateral.
   e. The loan, extension of credit, or transaction with an affiliate is not in compliance with the limits and restrictions in sections 23A or 23B of the FRA or Regulation W.
   f. Purchases of low-quality assets by a subsidiary bank or its subsidiaries from an affiliate, unless previously exempted by the Board's Regulation W, Board order, or unless the IDI subsidiary or subsidiary affiliate, pursuant to an independent credit evaluation, had committed itself to purchase the low-quality assets before the time such asset was acquired by the affiliate.
   g. During the existence of any underwriting or selling syndicate, a subsidiary IDI or its subsidiary has purchased or acquired a security from an IDI affiliate or bank holding company affiliate, including an affiliated broker-dealer, and the principal underwriter of that security is an affiliate of the IDI.
   h. The purchase or acquisition of securities (1) was not approved by a majority of the outside board of directors before the IDI's securities were offered for sale to the public and (2) was not, in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would have been offered to, or would have applied to, nonaffiliated companies.
   i. The existence of advertisements or agreements that state or suggest that the IDI, its subsidiaries, or affiliate will be responsible for the obligations of its affiliates.
5. Review any checking accounts and IDI statements to check for overdrafts the parent company or any of its nonbank subsidiaries may have with a subsidiary IDI.
6. Review the accounts payable to the subsidiary IDI and other accounts payable accounts for servicers, contractors, lessors, and other affiliates to determine if they arose as the equivalent of an extension of credit, purchase of securities or other assets, or as a liability to third parties. Ascertain whether those transactions were listed in response to the officer's questionnaire and whether the transactions were in accordance with the restrictions in sections 23A and 23B of the FRA and Regulation W.
7. Review the accounts receivable from the subsidiary IDI and other accounts receivable of other affiliates for sales of securities or other assets and for the payment of money or the furnishing of services. Ascertain whether those transactions were reported in response to an officer's questionnaire and whether they are in accordance with section 23A and 23B of the FRA's and Regulation W's restrictions placed on transactions with affiliates.
8. Ascertain if the IDI's credit limits, collateral requirements, and monitoring of its exposures to affiliates are at least as strict as those it imposes on unaffiliated companies.
9. Determine if the IDI has policies and procedures to monitor and control its intraday credit exposure to each affiliate and to all affiliates in the aggregate.
10. Determine if the IDI's intraday extensions of credit to affiliates are on comparable market terms and if they comply with section 23B of the FRA.

11. Review all other transactions that the holding company organization has engaged in with its affiliated IDIs and their subsidiaries, including lease arrangements, to determine whether they are subject to the restrictions in sections 23A and 23B and Regulation W, and, if so, whether they are in compliance.
12. Discuss the findings with appropriate senior management and, if the findings are significant, the board of directors.
13. Determine management's corrective actions regarding any comments raised by the bank's primary regulator in an examination report.
    a. If violations are disclosed in a subsidiary bank's examination report or during an inspection of the holding company, the examiner may criticize management on the "Examiner's Comments and Matters Requiring Special Board Attention" page or section of the inspection report for causing the bank to be in violation or for engaging in unsafe and unsound practices.
    b. If loans to or transactions with affiliates within the holding company organization appear to adversely affect a subsidiary bank, request management's assessment of such effects and its rationale for the transactions. Use of the "Examiner's Comments and Matters Requiring Special Board Attention" report page or section may be appropriate.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2010, this section was revised to include a cross reference to section 2010.2.7 of this manual, which discusses loan participations. References in the table of Laws, Regulations, Interpretations, and Orders have also been updated.

It is common practice for a bank to sell to or place with other banks loans that the bank itself has made to its customers. A loan participation is a share or part of a loan which entitles the holder to a pro rata share of the income determined by the extent of the holder's contribution to the original loan and a preference ordering for repayment. Such loans may be sold outright without liability to the selling bank in case of default by the borrower, or they may be sold with terms granting the purchasing bank recourse to the selling bank should the loans become uncollectible. Sales to or placement of loans with other banks are for the accommodation of either the selling or purchasing bank and are arranged for purposes of increasing the rate of return when loan rates differ between banks, achieving diversification of loans by type, and altering liquidity positions. It is also common practice for banks to sell or place with other banks those portions of individual loans that would be in excess of the bank's legal lending limit (overlines) if the total loan were retained. Participations of this type should be placed without recourse as a matter of prudent banking practice; otherwise, the purpose of compliance with the legal lending limitations would be defeated in the event of default. See section 2010.2.7 of this manual for supervisory and accounting guidance regarding a BHC's or bank's use, purchase, or sale of loan participation agreements.

Banks also sell or place loans or participations with their parent holding companies or nonbank affiliates. A BHC's purchase of loan participations from its subsidiary bank(s) generally constitutes the making of a loan or extension of credit within the meaning of section 225.28(b)(1) of Regulation Y, and as such, a BHC needs prior approval to purchase loan participations from its subsidiary bank(s).

A bank may participate in or purchase a loan originated by its parent holding company or one of its nonbank subsidiaries. A subsidiary bank's purchase, or participation of a loan, note, or other asset from an affiliate is considered a purchase of an asset from an affiliate within the meaning of section 23A of the Federal Reserve Act and thus is a ''covered transaction'' that is subject to the quantitative limitations and the prohibition against purchasing of low-quality assets. Subsidiary banks must make independent judgments as to the quality of such participations before their purchase to avoid compromising the asset quality of such banks for the benefit of other holding company entities. All loans and participations must be purchased on market terms.

A bank's purchase of a loan or loan participation, on a nonrecourse basis from an affiliate, may not be a covered transaction under section 23A that is subject to the quantitative limitations (12 C.F.R. 223.11- 223.12)), collateral requirements (12 C.F.R. 223.14), and low-quality asset prohibition (12 C.F.R. 223.15) if

1. the extension of credit was originated by the affiliate;
2. the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;
3. the member bank commits to purchase the extension of credit before the affiliate makes or commits to make the extension of credit;
4. the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate; and
5. the dollar amount of the extension of credit, when aggregated with the dollar amount of all other extensions of credit purchased from the affiliate during the preceding 12 calendar months by the member bank and its depository institution affiliates, does not represent more than 50 percent (or such lower percent as is imposed by the bank's appropriate Federal banking agency) of the dollar amount of extensions of credit originated by the affiliate during the preceding 12 calendar months. (See 12 C.F.R. 223.42(k).)

In some cases, a bank may renew a loan or a participation that it purchased from another affiliated bank even when the original participation has become a low-quality asset. In some instances, a bank's renewal of a low-quality asset, such as a troubled agricultural loan, or an extension of limited amounts of additional credit to such a borrower may enable both the originating and participating banks to avoid or minimize potential losses. It would be inconsistent with the purposes of section 23A to bar a participating bank from using sound banking judgment to take the steps that it may deem necessary to protect itself from harm in such a situation, so long as the loan was not a low-quality asset at the time of the original participation and the participating bank does not assume more than its original proportionate share of the credit.

The following factors thus characterize the situation where it would be reasonable to interpret section 23A as not applying to the renewal of an otherwise low-quality asset:

1. the original extension of credit was not a low-quality asset at the time the affiliated bank purchased its participation,
2. the renewal and/or the extension of additional credit has been approved by the board of directors of the participating bank as necessary to protect the bank's investment by enhancing the ultimate collection of the original indebtedness, and
3. the participating bank's share of the renewal and/or additional loan will not exceed its proportionate share of the original investment by more than 5 percent. In addition, it is expected that, consistent with safe and sound banking practices, the originating bank would make its best efforts to obtain adequate collateral for the loan(s) to further protect the banks from loss. (See 12 C.F.R. 223.15.)

Loans and loan participations by the various members of the holding company family to individual borrowers or to the same or related interests may represent concentrations of credit which are large in relation to the holding company's consolidated capital position. These concentrations of credit should be assessed for potentially harmful exposure to the holding company's financial condition.

2020.2.1 INSPECTION OBJECTIVES

1. To determine the BHC's loan participation policy.
2. To assess the impact of a subsidiary bank's participation in loans with affiliates and to ensure that the bank's financial condition is not compromised and that the bank is not providing the funding needs of the affiliates, except within the parameters of sections 23A and 23B of the Federal Reserve Act.
3. To assess the impact of any concentrations of credit on the holding company's overall financial position.

2020.2.2 INSPECTION PROCEDURES

1. During the preinspection process, review each subsidiary bank's examination report for comments on participations with affiliates.
2. In the officer's questionnaire to the holding company, request the BHC's policy on loan participation. Request a list of any loan participations the holding company or the nonbank subsidiaries have with the subsidiary bank(s).
3. During the inspection, review the policy statements and each participation the holding company or the nonbank subsidiaries have with the subsidiary bank(s). The following characteristics should be analyzed:
   a. any repetitive transaction patterns which may indicate policy;
   b. the adequacy of credit information on file;
   c. the extent to which the terms of the participation including interest rates are handled in an arm's-length manner;
   d. the degree that the bank is accommodating the funding needs of the nonbank subsidiaries or its parent;
   e. the impact of these transactions on the subsidiary bank;
   f. eligibility for exclusion from section 23A restrictions and, if applicable, compliance with such restrictions.
4. Review participations among the bank holding company, nonbank subsidiaries, and the subsidiary banks to determine potentially adverse concentrations of credit.
5. Discuss with management—
   a. written and verbal policies regarding participations both within the holding company and with nonaffiliated third parties and
   b. any adverse findings on intercompany participations.
6. Comment on policy on the appropriate page of the inspection report (see section 5010.6). If any adverse comments on participations with affiliates are contained in a bank subsidiary's examination report, comment on their current status and the BHC's efforts to remedy the problem.

2020.2.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Limitations and restrictions	371c, FRA section 23A(c)			
Purchase of extensions of credit from affiliates		223.42(k)	3–1161	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Sales and transfers of assets between subsidiary banks and other entities in a bank holding company organization pose the potential of risk to the subsidiary banks. Asset purchases are covered by Section 23A and Section 23B of the Federal Reserve Act. The limitations state that all covered transactions, including asset purchases, by a bank with a single affiliate, may not exceed 10 percent of a bank's capital and surplus, and transactions with all affiliates may not exceed 20 percent of the bank's capital and surplus. In addition, all transactions must be conducted on market terms.

A bank's purchase of a loan or loan participation from a bank holding company or its subsidiary may not be a covered transaction under Section 23A if:

1. the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan;
2. the bank agrees to purchase the loan prior to the affiliate making the loan; and
3. the bank's purchase of the affiliate's loans is not the primary source of funding for the affiliate.

Sale and transfer of assets can also occur through swaps and spinoffs. Examples of such transactions which may have an adverse effect on a bank include the transfer of a profitable activity or subsidiary from the bank to the holding company, or the transfer of an unprofitable activity or subsidiary from the holding company to the bank. In addition, the transfer of a bank holding company subsidiary to a bank, whereby the bank assumes the liabilities of the affiliate raises supervisory concerns and may violate Sections 23A and 23B of the Federal Reserve Act.

Another example is the transfer of a subsidiary bank's deferred taxes, together with an equivalent amount of cash or earning assets, to the parent. In such a transaction, a subsidiary bank's liquidity position is weakened. All such transfers of deferred taxes must be reversed and the bank's asset and liability accounts restored to their level prior to the transfer. For a detailed discussion on transfers of a bank's deferred tax liability, see Manual section 2070.0.

A bank holding company may transfer a liquidating asset from a subsidiary bank to a section 4(c)(1)(D) liquidating subsidiary of the holding company. Also, pursuant to section 4(c)(3) of the Act, a BHC may transfer from a subsidiary bank an asset to be disposed of pursuant to the request of the bank's primary regulator. For more information on the transfer of such assets and the time parameters involved, refer to Manual section 3030.0.

The purchase of low-quality assets is prohibited by Section 23A of the Federal Reserve Act. Refer to section 2020.1.1.5 for a listing of transactions that are exempt from the limitations of Section 23A of the Federal Reserve Act.

2020.3.1 INSPECTION OBJECTIVES

1. To review intercompany sale and transfer of assets to assess the impact on the subsidiary bank.
2. To initiate corrective action to reverse the transaction, if necessary.

2020.3.2 INSPECTION PROCEDURES

1. During the preinspection process, review all notes to financial statements, the FR Y-8 report, and the examination reports of subsidiary banks to ascertain whether any purchase or transfer of assets has occurred between the subsidiary banks and the parent holding company or nonbank subsidiaries.
2. In the officer's questionnaire, request information on any transfer or sale of assets between the subsidiary bank and the parent holding company or the nonbank subsidiaries.
3. During the inspection, review all facts regarding any sale or transfer of assets transactions and assess their impact on the subsidiary bank. Examiners should determine:
   a. Whether the transaction required and received the approval of the bank's primary regulator; and
   b. The quality of the assets transferred or sold, and whether the sale of the assets was at a price significantly higher than would have been realized in an arm's-length transaction.
4. Discuss findings with management including:
   a. Apparent prejudicial transactions and violations of regulations; and
   b. Any unsound practices.

A compensating balance is a deposit maintained by a firm at a bank to compensate the bank for loans and lines of credit granted to the firm. Often, a commercial bank, when extending credit, requires an average deposit balance equal to a fixed percentage of the outstanding loan balance. Compensating balance requirements vary from informal understandings to formal contracts. Deposits maintained as compensating balances may be demand or time, active or dormant. Frequently, a lending bank will allow compensating balances to be supplied by a depositor other than the borrower itself. If compensating balances are maintained by a BHC's subsidiary bank on behalf of its parent, the practice is considered a diversion of bank income (i.e., the bank loses the opportunity to earn income on the balances that could be invested elsewhere). In general, this practice is inappropriate unless the bank is being compensated at an appropriate rate of interest. If the bank is not being appropriately reimbursed, the practice should be criticized and action taken to insure that the bank is compensated for the use of its funds.

BHCs borrow directly from nonaffiliated banks, using the proceeds for both bank and nonbank operations and investments. Also, bank holding companies seek credit lines from banks to back their borrowings in commercial paper markets and for other liquidity purposes. Nonbank subsidiaries of bank holding companies borrow from banks to fund activities such as mortgage banking, leasing and sales finance. In some cases, when a bank holding company or its nonbank subsidiaries borrow, the subsidiary bank's deposit at the lending institution may be accepted as a compensating balance for the borrowings of other members of the bank holding company organization. Such transactions raise questions under Section 23B of the Federal Reserve Act regarding the bank's compensation for such services.

Often the distinction between correspondent balances and compensating balances is not clear. Occasionally, the rate of the required compensating balance is written into the loan agreement; however, informal understandings usually appear to determine the amount of compensating balance maintained. At times, a balance may be identified in the bank's books as a compensating balance. A compensating balance may also be identified as an amount above a correspondent balance historically maintained by the bank. Compensating balances may also appear as a dormant account or may be the aggregate amount of a number of deposits of various subsidiary banks.

The interest rate on the loan to the holding company organization may also be helpful in determining the existence of compensating balances. Loans below the lending bank's normal rate may indicate that the lending bank is receiving compensation in another form.

At times, excess correspondent balances are maintained to encourage participation relationships and for other goodwill reasons. Therefore, the existence of excess balances may not always indicate that there is a compensating balance agreement.

Although a bank holding company may compensate its subsidiary banks for the use of the funds, the compensation may not equal the opportunity cost associated with providing the compensating balance. As a result, subsidiary banks which maintain compensating balances for holding company members may forego profit opportunities, and this practice may have a negative impact on the bank's earnings and capital adequacy. The amount of such compensation should be equal to a fair market rate.

If the lending bank has the right of offset to compensating balances maintained by the subsidiary bank in case of default by parent or nonbank subsidiaries, the subsidiary bank's funds are jeopardized. Such potential loss of funds should be commented on by the examiner.

2020.4.1 INSPECTION OBJECTIVES

1. To identify compensating balances maintained by a subsidiary bank for the parent holding company or any nonbank affiliate.
2. To determine whether the subsidiary bank is adequately reimbursed for the maintenance of any compensating balances.

2020.4.2 INSPECTION PROCEDURES

1. During the preinspection process:
   a. Review the subsidiary bank examination reports or contact management to determine whether the non-affiliated banks, lending to the holding company organization, are correspondents of the subsidiary banks. Where applicable, request detailed loan information which could

provide information on the compensating balances' terms required by the lending bank.

b. Review the notes to the financial statements and other available material, such as 10–K reports filed with the SEC, which may describe compensating balance agreements. FR Y–8 reports should be reviewed for questions applicable to compensating balances.

2. Review interbank loan agreements to determine whether compensating balances are formally required. Assess the terms of the loan to determine whether the loan appears to be at fair market rates for this type of credit request.

3. Request and review the account balance and monthly account statement provided by the lending bank to identify the amount of compensating balances. The statement should be available within the holding company or bank.

4. Request from management information regarding compensating balances maintained by subsidiary banks for the benefit of other affiliates.

5. Review the subsidiary bank's historical level of correspondent balances to assess trends. Compare levels of balances prior to any loan origination or interest rate changes.

6. Review intercompany accounts to determine the amount of compensation paid to the subsidiary bank for maintaining compensating balances. Assess adequacy of compensation. Assess impact of practice on the bank's financial condition.

7. Discuss with management the reasons for any apparent excess balances, and whether compensating balances are formally or informally required.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2012, this section was revised to update the references within the table of Laws, Regulations, Interpretations, and Orders.

Dividends are a means by which a corporation distributes earnings or assets to its shareholders. Although the word "dividends" usually applies to funds paid out of net profits or surplus and is usually thought of in such a context, dividends can also be made "in kind," which means in property or commodities. This section does not discuss "stock dividends" which represent transfers from retained earnings to paid-in capital rather than distributions of earnings. Dividends from the subsidiaries, both bank and nonbank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt service requirements and other obligations.

Dividends paid by any corporation are generally limited by certain State laws. Banks, however, are subject to further legal restrictions on dividends by their chartering authority and other regulators. Aside from the statutory limitations, the primary consideration in this area is the subsidiary's level of capital and its ability to meet future capital needs through earnings retention.

Although there are no specific regulations restricting dividend payments by bank holding companies other than State corporate laws, supervisory concern focuses on the holding company's capital position, its ability to meet its financial obligations as they come due, and its capacity to act as a source of financial strength to its subsidiaries. Some one-bank holding companies may be restricted in the amount of dividends they may pay as a result of certain limitations placed on future dividend distributions at the time of the holding company's formation. (see Manual section 2090.2)

When analyzing the dividend practices of the subsidiaries and the parent company the following must be considered: the present level of capital in relation to total assets, risk assets, and classified assets; growth rates and additional plans for expansion; past earnings performance and projections; and the ability to service debt.

Aside from reasonable and timely fees for services rendered, the most appropriate way for funds to be paid by the bank to the parent is through dividends. This principle applies, in general, to bank payments of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is not considered an appropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.5.1 POLICY STATEMENT ON CASH DIVIDEND PAYMENTS

On November 14, 1985 the Board approved a policy statement on the payment of cash dividends by state member banks and *bank holding companies that are experiencing financial difficulties.* The policy statement addresses the following practices of supervisory concern by institutions that are experiencing earnings weaknesses, other serious problems, or that have inadequate capital:

- The payment of dividends not covered by earnings,
- The payment of dividends from borrowed funds,
- The payment of dividends from unusual or nonrecurring gains, such as the sale of property or other assets.

It is the Federal Reserve's view that an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization's capital position, or that can only be funded in ways that may weaken the organization's financial health. In some instances, it may be appropriate to eliminate cash dividends altogether. The policy statement is as follows:

2020.5.1.1 Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies

The Board of Governors of the Federal Reserve System considers adequate capital to be critical to the health of individual banking organizations and to the safety and stability of the banking system. A major determinant of a bank's or bank holding company's capital adequacy is the strength of its earnings and the extent to which its earnings are retained and added to capital or paid out to shareholders in the form of cash dividends.

Normally, during profitable periods, dividends represent an appropriate return of a portion of a banking organization's net earnings to its shareholders. However, the payment of cash dividends that are not fully covered by earnings, in effect, represents the return of a portion of an organization's capital at a time when circumstances may indicate instead the need to strengthen capital and concentrate financial resources on resolving the organization's problems.

As a matter of prudent banking, therefore, the Board believes that a bank or bank holding company generally should not maintain its existing rate of cash dividends on common stock unless 1) the organization's net income available to common shareholders over the past year has been sufficient to fully fund the dividends *and* 2) the prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition. Any banking organization whose cash dividends are inconsistent with either of these criteria should give serious consideration to cutting or eliminating its dividends. Such an action will help to conserve the organization's capital base and assist it in weathering a period of adversity. Once earnings have begun to improve, capital can be strengthened by keeping dividends at a level that allows for an increase in the rate of earnings retention until an adequate capital position has been restored.

The Board also believes it is inappropriate for a banking organization that is experiencing serious financial problems or that has inadequate capital to borrow in order to pay dividends since this can result in increased leverage at the very time the organization needs to reduce its debt or increase its capital. Similarly, the payment of dividends based solely or largely upon gains resulting from unusual or nonrecurring events, such as the sale of the organization's building or the disposition of other assets, may not be prudent or warranted, especially if the funds derived from such transactions could be better employed to strengthen the organization's financial resources.

A fundamental principle underlying the Federal Reserve's supervision and regulation of bank holding companies is that bank holding companies should serve as a source of managerial and financial strength to their subsidiary banks. The Board believes, therefore, that a bank holding company should not maintain a level of cash dividends to its shareholders that places undue pressure on the capital of bank subsidiaries, or that can be funded only through additional borrowings or other arrangements that may undermine the bank holding company's ability to serve as a source of strength. Thus, for example, if a major subsidiary bank is unable to pay dividends to its parent company—as a consequence of statutory limitations, intervention by the primary supervisor, or noncompliance with regulatory capital requirements—the bank holding company should give serious consideration to reducing or eliminating its dividends in order to conserve its capital base and provide capital assistance to the subsidiary bank. . . .

This statement of principles is not meant to establish new or rigid regulatory standards; rather, it reiterates what for most banks, and businesses in general, constitutes prudent financial practice. Boards of directors should continually review dividend policies in light of their organizations' financial condition and compliance with regulatory capital requirements, and should ensure that such policies are consistent with the principles outlined above. Federal Reserve examiners will be guided by these principles in evaluating dividend policies and in formulating corrective action programs for banking organizations that are experiencing earnings weaknesses, asset quality problems, or that are otherwise subject to unusual financial pressures.

2020.5.2 INSPECTION OBJECTIVES

1. To assure compliance with statutes and the Board's November 1985, Policy Statement.
2. To determine reasonableness of dividend payout at both the subsidiary and holding company levels.

Depending on the type of charter and membership in the Federal Reserve, all insured commercial banks are subject to certain legal restrictions on dividends. In the case of nonbank subsidiaries and holding companies, there are no specific federal statutes, other than the policy statements discussed, which apply to dividend payments. State corporate laws would apply.

One objective of the inspection process is to check for compliance with these laws and to follow-up on any violations.

In some cases dividends which comply with the regulations still may not be in the best interest of the bank. It is the examiner's responsibility to assess the reasonableness of dividend payments in relation to each subsidiary's capital needs. Evaluation of the holding company's dividend policy and payment requires a review at both the parent company and the consolidated levels. On a consolidated basis the holding company's capital level in relation to the quantity and quality of total assets, earnings history and potential, and growth rates are important in the assessment of a reasonable dividend payout. At the parent level, the method of funding dividends should be reviewed. For example, a well capitalized corporation with strong earnings might pay dividends which could be considered unreasonable if the organization were in a strained liquidity position.

2020.5.3 INSPECTION PROCEDURES

1. Review dividend payments by subsidiaries and the parent company. Check for compliance with appropriate statutes and the Board's November 14, 1985 policy statement on the Payment of Cash Dividends. Discuss violations with management and comment on the "Examiner's Comments and Matters Requiring Special Attention" page.

This step will often require a review of net earnings and changes in the capital accounts in the past years, as legal restrictions on dividends often apply to cumulative income for several years rather than just the year the dividend is actually paid. For this reason detailed working papers are important, as these can help to avoid duplications of effort at future inspections. In some situations the regulations provide that dividends may be paid in excess of current year's earnings. If prior approval from the bank's primary regulator is necessary, verify that it has been obtained. Any violations of dividend statutes should be discussed with management and cited in the "Examiner's Comments and Matters Requiring Special Attention" page of the inspection report.

2. Analyze dividend payouts of subsidiaries and the parent in terms of capital adequacy, earnings and earnings potential.

Discuss excessive dividend payouts at any level with management and comment on the "Examiner's Comments and Matters Requiring Special Attention" page of the inspection report. In assessing the reasonableness of dividend payments by subsidiaries and the holding company, the organization's capital adequacy and future capital needs must be judged with the following in mind: the volume of total assets; asset quality (the percentage of weighted classified assets to gross capital could be used as an indicator of quality); asset mix and liquidity; asset growth rates and projections; and plans for expansion and development of new areas. The subsidiary's or the holding company's ability to augment capital through earnings is also important. If a bank, nonbank or holding company has a consistently strong earnings record and its capital position is healthy, a higher dividend payout may be acceptable than would be otherwise. In analyzing the strength of earnings both quantity and quality must be considered. The actual quality of earnings and earnings potential are related to operating income rather than extraordinary items, significant capital or securities gains, or substantial increases resulting from tax considerations.

3. Review the funding of dividends paid by the holding company. Analyze the parent's cash flow and income statements in accordance with section 4010.0 of this manual. Discuss any inappropriate funding with management and comment on, based on their severity, either on the "Cash Flow Statement (Parent)," or the "Analysis of Financial Factors" and the "Examiner's Comments and Matters Requiring Special Attention" pages.

An analysis of the parent company's cash flow statement supplemented by the income statement will identify the source of cash for dividend payments. The parent company has cash inflow from various sources including: dividends from subsidiaries, income from activities conducted for its own account, interest income on advances to subsidiaries, management and service fees, borrowings, and tax savings resulting from filing a consolidated tax return. Dividends should be internally funded from dividends paid by the subsidiaries, the parent company's earnings from activities for its own account or from interest income on advances to subsidiaries. Should the analysis of the cash flow statement indicate that dividends paid by the parent exceed cash inflow from these sources, further attention to the area is required to determine the actual underlying source of dividend funding. As discussed in the section on management and service fees, these are properly assessed at market value or cost of services rendered. They are not to be charged simply to divert income from subsidiaries in order to pay dividends. Borrowing to fund dividends is fundamentally an unsound practice.

When dividends paid by the holding company are funded by the bank subsidiary, it is possible to control indirectly the holding company's dividend payout level when it is determined to be detrimental to the bank subsidiary. It is important to remember that the primary responsibility of bank regulators is the promotion of safe and sound banking operations. Other than the mentioned policy statement there are no specific federal laws restricting dividends paid by bank holding companies; however, the System's cease and desist authority over bank holding companies does afford the ability to curb excessive dividend payouts.

Whenever the examiner determines that dividend payments at the subsidiary level or parent level are not reasonable, are not in the best interest of the organization, or are not funded in a proper manner, discussion with management and a close look at its philosophy are essential. Remarks on the matter should appear on the "Examiner's Comments and Matters Requiring Special Attention" page of the report.

Intercompany Transactions (Management and Service Fees) Section 2020.6

A bank holding company is permitted to own nonbank subsidiaries that furnish services to or perform services for its other subsidiaries pursuant to section 4(a)(2)(A), 4(c)(1)(C), or 4(c)(8) of the BHC Act. Many bank holding companies charge fees for providing to their subsidiaries services such as management advice, personnel services, data processing, marketing, supply administration, investment advice, bookkeeping, and trust services. The fees for these services that are assessed against subsidiary banks take many forms and are an area of potential abuse. In addition to direct fees paid to an affiliate, the compensation for providing these services might take the form of salaries or directors' fees paid to the bank holding company's management. A holding company should not, directly or indirectly through other subsidiaries, burden its bank subsidiaries with excessive fees or charge for services unrelated to value received in order to fund its debt service, dividend payments, or support of other subsidiaries.

Examiners should review the fees charged by a holding company's bank and nonbank subsidiaries to any banking subsidiary and judge the reasonableness of those fees by examining the reasonableness of the services provided and the basis for allocating fees. Fees charged nonbank subsidiaries and independent third parties should not be more favorable than fees charged banking subsidiaries. They should be reasonable and justifiable and be based on the fair market value of services provided or, when there is no market established for a particular service, on actual cost plus a reasonable profit. *The market value of similar services is the preferred basis of fee assessment.* When fees are based on cost plus a reasonable profit, there is less incentive for the efficient and effective use of resources, because a profit margin is built in regardless of the costs involved. In many situations, however, the cost method is the only method possible.

Any method of pricing services provided to bank subsidiaries that is based on anything other than value received is inappropriate. The fee mechanism should not be used to divert income from any bank subsidiary to meet the parent's financial needs if those needs are unrelated to the provision of services to that subsidiary. In addition, banks are prohibited from paying management fees* if it would cause the institution to become undercapitalized (see title I, section 131 of the FDIC Improvement Act of 1991 or section 38 of the FDIC Act).

Any fee for services to a banking subsidiary should be supported by evidence that the parent or other affiliate provided the service. Services provided by bank holding companies should serve the needs of the subsidiary bank; charges for services that appear to duplicate existing subsidiary-bank functions should be supported by a detailed explanation of the net benefit derived by the subsidiary bank and by an analysis of the reasonableness of the fee.

When it is impractical to allocate expenses on a direct-charge basis, bank holding companies frequently allocate overhead expenses to subsidiaries. Although this practice can be considered acceptable with regard to nonbanking subsidiaries, allocating all bank holding company expenses to bank subsidiaries is not permitted. The parent company should bear a portion of the costs connected with, for example, the holding company's investor/shareholder relations, regulatory reporting requirements, acquisitions, formations, applications, board of directors, and strategic planning. Bank holding companies are, however, expected to support their subsidiary banks, and expenses incurred to serve the needs of the subsidiary banks, such as expenses incurred in raising capital for subsidiary banks, can appropriately be allocated to those subsidiary banks that benefit from the services provided, in proportion to the benefit received from the service.

All fees for services rendered should be supported by written agreements that describe the service, the fees to be charged, and the method of allocating the fees among the subsidiaries. The absence of such contracts between the subsidiaries of the holding company is considered inappropriate and an unsafe and unsound banking practice. Supervisory action should be taken, in a manner consistent with the financial condition of the holding company and the subsidiary bank, to eliminate the improper practices. The practices should be criticized in the inspection report and actions taken to see that the situation is satisfactorily resolved. If the practices are having a serious impact on the bank, or if they might reasonably be expected to have a severe impact given the bank's financial condition, formal administrative action should be considered in order to require the holding company to terminate the practices and make restitution to the subsidiary bank.

* "Management fees" does not include fees for such services as electronic data processing or auditing.

A bank's prepayment of service fees to the parent company and payment of expenses incurred primarily in conjunction with holding company activities unconnected with the bank also are cause for supervisory concern. In general, prepayment for services is inappropriate unless the bank holding company can demonstrate that prepayment is standard industry practice for nonbanking companies acquiring the same service. Prepayment of sums for services that are not to be provided in the immediate future (for example, prepayment of an entire year's fees for services to be rendered throughout the year) can have an adverse impact on the bank and is therefore inappropriate. These practices should be addressed by requiring timely and reasonable payments for services and reimbursement to the banks for what are essentially holding company expenses. If bank expenses are incurred substantially in support of a holding company activity, the bank should be reimbursed for that portion of its cash outlay that benefits the holding company. Reimbursement is necessary to ensure that bank resources are not diverted to a holding company affiliate with little or no benefit to the bank.

Aside from reasonable and timely fees for services rendered, the most appropriate way, from a supervisory standpoint, for funds to be paid to the parent company is through dividends. This principle applies, in general, to bank payment of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is an inappropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.6.1 TRANSACTIONS SUBJECT TO FEDERAL RESERVE ACT SECTION 23B

Section 23B of the FRA applies to any covered transaction with an ''affiliate,'' as that term is defined in section 23A of the FRA. Section 23B also applies to a number of transactions that are not covered by section 23A, for example, transactions that involve the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise, or transactions in which an affiliate acts as an agent or a broker or receives a fee for its services. Although transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B, section 23A requires that covered transactions between a bank and an affiliate be conducted at arm's length. See section 2020.1.2 for other transactions that are covered by section 23B and the requirements that pertain to all such transactions. For examples of transactions that could violate section 23B, see section 3700.10, dealing with an application to provide armored car services through a bank holding company's nonbank subsidiary.

2020.6.2 INSPECTION OBJECTIVES

1. To determine whether the holding company and its subsidiaries charge fees to bank subsidiaries based on value received and fair market value.
2. To determine whether the subsidiaries are actually receiving these services.
3. To determine that the timing of fee payments is appropriate.
4. To determine whether there is an agreement between the entities relating to specific services and fees charged.
5. To determine if any fees result in an unsafe or unsound condition in any subsidiary bank.

Once the management policy underlying the fee structure is clearly understood, it is important for the examiner to determine that practice is consistent with policy. For example, if management indicates that fees charged are based on the fair market value of services received but the fee structure is actually geared to the bank subsidiary's asset size, an inconsistency exists. Assuming either that all of the bank subsidiaries have access to the same or similar markets for the services being provided by the bank holding company or that cost is used consistently to determine pricing, the established pricing structure should be used for all subsidiaries. Deviations from established policy intended to channel a greater proportion of income from financially sound banks to financially weak ones should be noted.

When it has been established that the fee structure is reasonable and is consistently followed, a final question remains. Are the bank subsidiaries actually receiving the services for which they are charged? This may be difficult to ascertain in many cases, but serious efforts must be made.

It is important that the basic business principles of an arm's-length transaction be applied to all transactions between banks and their affiliates. This approach provides protection for all the interests involved. In addition, payment should be made within a reasonable time of the rendering of the services. It is inequitable for the bank subsidiary to pay fees far in advance in order to suit the parent's cash needs. A clearly understood agreement between the holding company and its bank subsidiaries detailing the duties and responsibilities of each party and the method to be used for fee assessment is also important to the servicing arrangement.

2020.6.3 INSPECTION PROCEDURES

1. Review and analyze the policy regarding management and other services provided to bank subsidiaries and the method of assessing fees.
2. Determine the basis for valuation.
3. Review the actual pricing structure as it is applied.
4. Verify the following:
   a. Fees are charged in accordance with pricing structure.
   b. Pricing structure is consistently applied for all bank subsidiaries.
   c. Bank subsidiaries are actually receiving services for which they are assessed. Determine whether fee payments have caused the institution to become undercapitalized.
   d. Payments are made in a timely manner.
5. Review examination reports on bank subsidiaries for comments on fee assessment.
6. Analyze the parent company's cash flow and income statements for intercompany fees.
7. Review recordkeeping.

A review of management's written or stated policy regarding services provided subsidiaries and fee assessment is a logical starting point for the analysis of this area. The policy should be discussed with the holding company's officers to ensure that the examiner has a clear understanding of the purpose and basic underlying philosophy. Any policy that calls for fee assessment based on standards other than fair market value or the cost of providing the services requires discussion with management and comment on page 1 of the report.

The determination of fair market value or cost of providing services is the responsibility of the holding company. The examiner should review the market or cost information used to justify the pricing of services and be satisfied that the data presented actually supports the fee structure. Request a copy of the pricing schedule as it is applied, and determine that it is actually based on the valuation of the services received and consistent with stated policy. Any variations from the basic structure among the bank subsidiaries would also require support from the market or cost data furnished.

Once the holding company's policy, valuation data, and pricing structure are analyzed, they should be verified. Check the service at the bank-subsidiary level. The verification process can be modified as deemed appropriate by the examiner.

Note the timing of payment for services. Fees for services should be billed and paid as they are received, just as they would be with an unaffiliated servicer. Prepayments are inappropriate in most cases.

Written service agreements should be in effect specifically detailing the types and extent of services being rendered and the method of pricing. Any significant exceptions found during the verification process merit follow-up and comments in the report.

Thus far, these inspection procedures for management and service fees have emphasized a review of management's stated intent and the actual fees charged on the individual bank-subsidiary level and have been somewhat oriented toward micro-level analysis. An overall view of the parent company's cash flow and income statements can also provide certain indicators of appropriateness of fees. The parent company should be servicing its debt and paying dividends from sources other than management fees and service fees collected from bank subsidiaries. If the ratio of management and service fees to parent-company salaries and other expenses significantly exceeds 100 percent, the holding company could be charging fees that are unrelated to the value of the service. This situation would call for further investigation.

2020.6.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Statement of practice and procedure in reference to unsound banking practices; diversion-of-bank-income practices (SR-79-533, March 19, 1979)			4–876	
Potential violations of section 23B of the Federal Reserve Act:				1993 FRB 352
1. Proposal by a bank holding company to provide armored car services to its banking subsidiary through a de novo nonbank subsidiary. The cost of the service would be more than the cost of armored car services currently received from an unaffiliated provider.				
2. Proposal whereby the bank holding company's de novo nonbanking subsidiary would pay a flat fee based on a percentage of its direct operating expenses to cover all the back-office services provided by the holding company's banking subsidiary.				

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The transfer of low-quality assets to an insured depository institution can be reason for supervisory concern. Such transfers may be made to avoid detection and classification during regulatory examinations, and may be accomplished through participations, purchases/sales, and asset swaps with other affiliated or nonaffiliated entities. The donation of an asset with liabilities also is treated as a purchase of assets. An insured depository institution may not purchase a low-quality asset from an affiliate unless, pursuant to an independent credit evaluation, the member bank had committed itself to purchase the asset before the time the asset was acquired by the affiliate. Examiners should be alert to situations where an institution's intention appears to be the concealment of low-quality assets for the purpose of avoiding examination scrutiny and possible classification.

During holding company inspections, examiners should identify situations where low-quality assets have been transferred between the holding company and its subsidiaries and a subsidiary-insured depository institution. Low-quality assets are defined in the Federal Reserve Board's Regulation W (12 CFR 223.3(v)). In general, low-quality assets include assets that are classified or specially mentioned, or if subjected to review would most likely be classified or specially mentioned, including assets classified based on the institution's internal rating system. Low-quality assets also include past due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower's poor financial condition, and any other asset acquired through foreclosure, repossession, or otherwise in satisfaction of a debt previously contracted, if the asset has not yet been reviewed in an examination or inspection. Other assets of questionable quality would include noninvestment grade securities and other real estate owned (OREO). The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and may be a violation of section 23A of the Federal Reserve Act and the Federal Reserve Board's Regulation W that should be addressed through formal supervisory enforcement action, if necessary.

Any situations involving the transfer of low-quality assets to an insured depository institution should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary federal supervisor(s) of the other depository institution(s) involved in the transaction. For example, Reserve Banks should notify the primary federal supervisor of any depository institution to whom a state member bank or holding company is transferring or has transferred low-quality assets. Reserve Banks also should notify the primary regulator of any depository institution from which a state member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations and savings banks, as well as commercial banking organizations.

Legitimate transfers of assets should be properly recorded on the books of the acquiring institution at fair market value. If the transfer was with the parent holding company or a nonbank affiliate, determine that the transaction also should be properly recorded on the books of the affiliate.

2020.7.1 INSPECTION OBJECTIVES

1. To ensure that loan transfers involving state member banks, bank holding companies, savings and loan holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification, and to determine the effect of the transfer on the condition of the institution and to ascertain whether the transfer was consistent with the requirements of section 23A. Under section 23A of the Federal Reserve Act, an asset purchase is a "covered transaction." All "covered transactions" by a bank with a single affiliate and with all affiliates combined may not exceed 10 percent and 20 percent, respectively, of a bank's capital and surplus.
2. To ensure that the primary supervisor of the other financial institution involved in the transfer of low-quality assets is notified.

2020.7.2 INSPECTION PROCEDURES

1. Determine whether assets were transferred prior to the date of examination to avoid possible criticism during the examination.
2. Determine whether any of the loans transferred were nonperforming at the time of transfer, classified at the previous examination, or for any other reason were considered to be low-quality assets.

3. Review the institution's policies and procedures to determine whether assets or participations purchased are given an independent, complete and adequate credit evaluation. If a bank is a holding company subsidiary or a member of a chain banking organization, review asset purchases or participations from affiliates or other known members of the organization to determine if the asset purchases are given an arms-length and independent credit evaluation by the purchasing bank.

4. Determine whether any purchases of assets from an affiliate comply with section 23A, which generally prohibits purchases of low-quality assets from an affiliate and limits asset purchases and all other "covered transactions" by a bank from a single affiliate and all affiliates combined to 10 percent and 20 percent, respectively, of a bank's capital and surplus.

5. Determine whether any assets purchased are properly reflected at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any assets sold at less than book value.

6. Determine whether transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair value on the books of both the bank and the holding company affiliate.

7. If low-quality assets were transferred to or from another financial institution for which the Federal Reserve is not the primary supervisor, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal supervisor of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

- Name of originating and receiving institutions.
- Type of assets involved and type of transfer (i.e., participation, purchase/sale, swap).
- Date(s) of transfer.
- Total number and dollar amount of assets transferred.
- Status of the assets when transferred (e.g., nonperforming, classified)
- Any other information that would be helpful to the other supervisor.

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, or death benefit, or both. See SR-93-37 and its attachments for further discussion of the Federal Reserve's position on such arrangements between bank holding companies and their subsidiary banks.

2020.9.1 SPLIT-DOLLAR LIFE INSURANCE POLICY ARRANGEMENTS

Certain split-dollar life insurance policy arrangements involving banks and their parent bank holding companies raise legal and safety-and-soundness concerns. These arrangements fall into two general categories: (1) those in which the subsidiary bank owns the policy, pays all or substantially all of the premiums and is reimbursed for the premium payments (if at all) at some time in the future (endorsement plans) and (2) those in which the parent holding company owns the policy, and pays the premium, but uses the insurance policy as collateral for loans from its subsidiary bank (collateral assignment plans).

2020.9.1.1 Split-Dollar Life Insurance Endorsement Plan

Under an endorsement plan, the subsidiary bank purchases a policy in which its parent bank holding company or an officer, director, or principal shareholder thereof is the primary beneficiary, rather than the bank or one of its officers or directors. In this instance, the subsidiary bank receives only a limited portion of the death benefit—usually an amount equal to its premium payments plus interest. The primary beneficiary—the holding company or one of its officers, directors, or principal shareholders—receives a majority of the insurance proceeds but pays little or nothing for the benefit. Many of the policies in this category are single-premium universal life policies, whereby the subsidiary bank pays one large lump sum premium payment for the policy. Generally, a subsidiary bank involved in an endorsement plan records the cash surrender value of the policy as an asset on its books; the bank holding company does not record anything at the parent-only level.

A variation of the endorsement plan is an arrangement in which the bank pays an annual premium towards the policy and the parent holding company reimburses the bank for a nominal amount of the annual premium payments. These amounts are substantially lower than the premium payments made by the subsidiary bank and therefore do not accurately reflect the economic benefit derived by the holding company as primary beneficiary of the insurance policy.

2020.9.1.2 Split-Dollar Life Insurance Collateral Assignment Plan

Under a collateral assignment plan, the parent bank holding company owns the policy and pays the entire premium. The subsidiary bank makes annual loans to the bank holding company in an amount equal to the annual increase in the cash surrender value of the policy (or, in some cases, in amounts equal to premiums paid) with the policy itself serving as collateral for the loan. The loans are repayable at either the termination of employment or the death of the insured employee, and will be paid using the death benefits available from the policy.

2020.9.2 COMPLIANCE WITH APPLICABLE LAWS

2020.9.2.1 Compliance with Sections 23A and 23B of the FRA

Both of the aforementioned types of split-dollar life insurance policy arrangements may be inappropriate if they are inconsistent with sections 23A or 23B of the Federal Reserve Act (FRA). Section 23A places quantitative restrictions and other requirements on certain transactions, including loans, between banks and their affiliates. The statute also requires that loans between banks and their affiliates be secured with collateral having a specified market value that depends on the type of collateral used to secure the loan. Under an endorsement plan, where the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the subsidiary bank to its parent holding company generally results because the subsidiary bank has paid the bank holding company's portion of the premium, and the bank will not be reimbursed fully for its payment until sometime in the future.

Under a collateral assignment plan, if the insurance policy held by the parent bank holding company serves as collateral to secure a loan from its subsidiary bank, the loan may be a violation of section 23A unless it meets the quantitative requirements of section 23A and the cash surrender value of the insurance policy used as security is equal to 130 percent of the amount of the loan. Thus, a bank loan to the parent bank holding company that equals the cash surrender value of the insurance policy that is serving as collateral would not be adequately secured under section 23A, unless additional collateral was provided.

Both categories of split-dollar life insurance policy arrangements may also lead to violations of section 23B of the Federal Reserve Act, which requires that certain transactions involving a bank and its affiliates be on terms and under circumstances substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. Because the bank holding company is the beneficiary of the life insurance policy, it is a participant in a transaction between a bank and a third party; therefore, the split-dollar life insurance transaction must meet the standards of section 23B.[1] In order to conform to the statutory restrictions of section 23B, the return to the bank from ownership of the policy should be commensurate with the size and nature of its financial commitment. In most split-dollar insurance arrangements, the bank makes an investment in the policy not for the purpose of insuring itself against risk but for the purpose of obtaining insurance for its holding company. The only return that the bank will get from its participation in ownership of the policy is the return of its initial investment and possibly some interest. However, the insurance company deducts the cost of maintaining the insurance coverage from interest that would otherwise be credited to the equity in the policy. These costs include policy loads, surrender charges, and mortality costs. The holding company should fully reimburse the bank for all of these charges. Examiners should carefully evaluate these arrangements because, in many cases, the reimbursement the bank receives from the holding company is based on an implied value of the insurance coverage received by the holding company that is less than the assessments made to the policy equity.

In the process of evaluating split-dollar insurance arrangements, examiners should keep in mind the fact that the advances made by a bank to purchase the insurance are the equivalent of a loan to the holding company. Therefore, to comply with section 23B, the terms of the loan, such as its duration and interest rate, must be on market terms.

2020.9.2.2 Investment Authority Under the National Bank Act

Participation by bank holding companies and their state-chartered and national bank subsidiaries in split-dollar life insurance policy arrangements may also raise concerns whether the policies are permissible bank investments under section 24(7) of the National Bank Act. The Office of the Comptroller of the Currency's interpretation of this provision of the National Bank Act (OCC Banking Circular 249, May 9, 1991).[2] In addition, under section 24 to the Federal Deposit Insurance Act, a state-chartered bank generally may not, without the FDIC's permission, engage in any activity that is impermissible for a national bank.[3]

2020.9.3 SAFETY-AND-SOUNDNESS CONCERNS

The purchase of a split-dollar life insurance policy may also constitute an unsafe and unsound banking practice involving the diversion of bank income or assets. If a subsidiary bank pays the entire insurance premium but is not the beneficiary, it provides an economic benefit to its parent holding company or other beneficiary for which it is not being adequately reimbursed or compensated. In this instance, the bank loses the opportunity to use its assets productively. Generally, the bank pays the premium in return for the insurance company's payment of the entire proceeds. When the bank receives less than the entire proceeds, it has, in effect,

1. The Federal Deposit Insurance Corporation has taken the same position in a published interpretive letter, FDIC 92-40, dated June 18, 1992.

2. National banks may not purchase life insurance as an investment. See OCC Banking Circular 249, for the tests under which life insurance may be purchased and held for noninvestment purposes.

3. SR-92-97 (FIS) and SR-92-98 (FIS), dated December 16 and 21, 1992, respectively, describe the provisions of section 24 of the Federal Deposit Insurance Act.

paid a higher than market price for whatever limited benefit it may receive. This is also the case when the primary beneficiary of the policy is an officer, director, or principal shareholder of the parent holding company. Such an arrangement is not consistent with safe and sound banking practices because the subsidiary bank is conferring an economic benefit on an insider of the parent bank holding company without receiving adequate compensation.

2020.9.4 EXAMINER REVIEW OF SPLIT-DOLLAR LIFE INSURANCE

Examiners should be fully aware of the problems inherent in split-dollar life insurance policy arrangements between bank holding companies and their subsidiary banks. During the course of all bank examinations and bank holding company inspections, examiners should review corporate life insurance policy arrangements for compliance with applicable banking laws and safety-and-soundness standards.[4] If a split-dollar life insurance policy arrangement exists in either a bank holding company or a state member bank, it should be reviewed and modified if it does not comply fully with the law and principles of safe and sound banking. If a bank holding company or a state member bank fails to take appropriate action to bring its split-dollar life insurance policy arrangements into compliance, then the Reserve Bank should consider appropriate follow-up supervisory action (including a formal enforcement action) against the banking organization or its institution-affiliated parties, or both.

2020.9.5 INSPECTION OBJECTIVES

1. To determine if split-dollar life insurance arrangements between the parent holding company and its subsidiary banks are consistent with the provisions of sections 23A and 23B of the FRA.

4. Examiners conducting examinations of U.S. branches and agencies of foreign banks and Edge corporations should also be alerted to the problems associated with split-dollar life insurance arrangements because these institutions could purchase insurance for the benefit of a parent foreign bank or company, or one of the parent's officers or directors. In addition, section 7(h) of the International Banking Act of 1978 prohibits state-licensed branches or agencies from engaging in any activity that is impermissible for a federal branch unless the Board determines that such activity is consistent with ''sound banking practice'' and, in the case of an FDIC-insured branch, the FDIC determines that the activity poses no significant risk to the deposit insurance fund.

2. To ascertain whether participation by bank holding companies and their national bank or state-chartered bank subsidiaries is consistent with section 24(7) of the National Bank Act and section 24 of the Federal Deposit Insurance Act.

3. To verify the cash surrender values of split-dollar life insurance policies and to establish whether those values have been impaired by loans to, liens by, or assignments to, third parties or by unauthorized borrowings or cancellations.

2020.9.6 INSPECTION PROCEDURES

1. Review corporate life insurance policy arrangements between the parent company and its subsidiary banks.

   a. Determine if there are split-dollar life insurance arrangements between any subsidiary bank and the parent company or officers or directors of the parent company.

   b. If any such insurance arrangement exists, establish if the plan is either an endorsement plan or a collateral assignment plan.

   c. Review arrangements involving a split-dollar life insurance policy purchased by the parent company.

      (1) Review external documentation evidencing the cash surrender value. If no documentation exists, ask the audit committee and its internal auditors—

         (a) to obtain external documentation verifying its value and

         (b) to verify that there are no outstanding loans, liens, or assignments against the insurance policies.

      (2) Establish whether the parent company's board of directors has established policies and implemented procedures for transactions between the insurance carrier and the parent company to prevent unauthorized borrowing or cancellation of any insurance policy that has a cash surrender value.

      (3) Determine whether the corporate life insurance policy arrangements are consistent with applicable safety-and-soundness standards.

      (4) Verify that the recorded value of the respective asset is equal to the unimpaired cash surrender value of the asset.

2. If an endorsement plan arrangement is purchased by a subsidiary bank, establish whether the bank holding company is the beneficiary. If the parent company is the beneficiary, such an arrangement may result in an unsecured exten-

sion of credit when the subsidiary bank pays all or substantially all of the insurance premiums but is not reimbursed until some time in the future. Ascertain if the investment return to the bank from ownership of the policy is commensurate with the size and nature of its financial commitment.

3. If a collateral assignment plan (when the insurance policy held by the parent company serves as collateral to secure a loan from a subsidiary bank), ascertain whether the cash surrender value of the insurance policy is equal to 130 percent of the amount of the loan.

4. For both types of split-dollar life insurance:

a. Determine if the investment return from ownership of the policy is commensurate with the size and nature of the financial commitment, including all costs incurred for maintaining the insurance coverage.

b. Determine if the terms (duration and market interest rate) of the advances made to purchase the insurance are on market terms.

c. If the bank holding company is the beneficiary of a bank insurance policy and a bank is a participant in the purchase of the insurance from a third party, determine if the transaction was on terms and under circumstances that were substantially the same as or at least as favorable to the bank as those then prevailing for comparable transactions with or involving nonaffiliated companies.

3. *Federal Reserve Regulatory Service* reference.

The history of bank holding company legislation reflects a principle that banking and commerce should be separated in order to prevent abuses in the distribution of credit. The 1956 Act generally required companies to divest their nonbank activities and shares within two years. In the 1970 Amendments, the same requirement applied to companies formed in the future. However, one-bank holding companies in existence at the time of these amendments were given a "grace period" to comply with divestiture requirements of the legislation. Those companies whose bank and nonbank interests had been combined on or before June 30, 1968, were permitted to continue the existing combination for an indefinite period (indefinite or permanent grandfather privileges). But those BHCs which existed at the time of the 1970 Amendments, but whose bank was acquired or whose nonbank activity was initiated after June 30, 1968, were permitted to continue their nonbank activities for only 10 years until December 31, 1980. An exception to the divestiture deadline existed with respect to certain real estate holdings.

Although indefinitely grandfathered companies may continue to engage in nonbanking activities, these grandfather privileges are subject to review by the Federal Reserve Board at the time when a company's banking assets exceed $60 million.[1]

2030.0.1 INDEFINITE GRANDFATHER PRIVILEGES

Under the provisions of section 4(a)(2) of the Act, as amended in 1970, relating to grandfather privileges for certain nonbanking activities of bank holding companies, the Reserve Banks have been delegated the authority to determine that termination of grandfathered activities of a particular bank holding company is not warranted; provided, the Reserve Bank is satisfied that all of the following conditions are met:

1. The company or its successor is "a company covered in 1970;"
2. The nonbanking activities for which indefinite grandfather privileges are being sought do not present any significant unsettled policy issues; and
3. The bank holding company was lawfully engaged in such activities as of June 30, 1968 and has been engaged in such activities continuously thereafter.

A company covered in 1970 is defined in section 2(b) of the Act as "a company which becomes a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date." The Board has also determined that the company must have owned at least 25 percent of the voting shares of the same subsidiary bank on June 30, 1968, and December 31, 1970, in order to qualify as a company covered in 1970. If a company was not actively engaged in a nonbank activity prior to June 30, 1968, either directly, or indirectly through a subsidiary, it may still qualify for indefinite grandfather privileges if the company had entered into a binding contract prior to June 30, 1968. The binding contract must be a written document which specifies that the company (or its subsidiary) or persons representing the company will purchase another company which is already engaged in the activity.

Within two years after the subsidiary bank of an indefinitely grandfathered company attains banking assets in excess of $60 million, the status of the company's grandfather privileges is subject to review to determine whether the rights should remain in effect or be terminated. The Board or Reserve Bank may also review any company's grandfather privileges and terminate them if it determines that such action is necessary to prevent (1) undue concentration of resources, (2) decreased or unfair competition, (3) conflicts of interests, or (4) unsound banking practices. Moreover, when a company applies for approval of an acquisition, it may expect the Board or Reserve Bank to review the legitimacy of its grandfather privileges.

2030.0.2 ACTIVITIES AND SECURITIES OF NEW BANK HOLDING COMPANIES

A company that becomes a bank holding company may, for a period of two years, engage in

1. Effective October 20, 1981 the Board amended its Rules Regarding Delegation of Authority to delegate to the Reserve Banks authority to make these determinations regarding indefinite grandfather privileges.

nonbanking activities and control voting securities or assets of a nonbank subsidiary, if the bank holding company engaged in such activities or controlled such voting securities or assets on the date it became a bank holding company. The Board can grant requests for up to three one-year extensions of the two-year period. This is in accordance with a December 1983 revision to Regulation Y (12 C.F.R. 225.22(e)). The regulatory provision implements Section 4(a)(2) of the BHC Act.

2030.0.3 LIMITATIONS ON EXPANSION OF GRANDFATHER RIGHTS FOR INSURANCE AGENCY NONBANKING ACTIVITIES OF BANK HOLDING COMPANIES

Refer to Manual section 3170.0.3.4.1.

2030.0.4 SUCCESSOR RIGHTS

When a bank holding company transfers its bank shares to another company in a manner that produces no substantial change in the control of the bank, the transferee qualifies under section 2(e) of the Act as a "successor." The "successor" provision prevents a bank holding company from transferring its bank to some other organization. A successor is considered a bank holding company from the date the transferor became a bank holding company. Thus, it may hold the same grandfather privileges as its predecessor. By the same token, it becomes subject to any conditions or restrictions, such as divestiture requirements, imposed by the System upon its predecessor. For example, an irrevocable declaration filed by the predecessor would be binding upon the successor.

2030.0.5 EXPANSION OF GRANDFATHER ACTIVITIES

Grandfather privileges apply to activities, not to companies. As a general rule, these activities are permitted to be expanded through internal growth; however, there are a few exceptions. See Appendix 1 in this section.

In Appendix 1 it is important to distinguish between a purchase in the ordinary course of business and a purchase, in whole or in part, of a going concern. Each of the following conditions must be satisfied in order for the transaction to be in the "ordinary course of business," which is permissible: (1) less than a substantial amount of the assets of the company to be acquired must be involved; (2) the operations of the purchased company must not be terminated or substantially discontinued; (3) the assets acquired must not be significant in relation to the size of the same line of nonbank activity already in the holding company (an acquisition is deemed significant if the book value of the acquired nonbank assets exceeds 50 percent of the book value of the nonbank assets of the holding company or nonbank subsidiary comprising the same line of activity); (4) if the transaction involves the acquisition of assets for resale, the sale must be a nominal business activity of the acquiring company; and (5) the major purpose of the transaction must not be to hire essentially all of the seller's principal employees who are expert, skilled and experienced in the business of the company being acquired. If any of these five conditions is not satisfied, the transaction may be considered to be an acquisition of a going concern, which is not permissible without prior approval. Refer to 12 C.F.R. 225.132.

2030.0.6 DIVESTITURES *(also see Manual section 2090.6)*

The act specifies the time in which a company must divest of any impermissible activity. Any company becoming a bank holding company subsequent to the 1970 Amendments has two years in which to divest its impermissible activity. The Act allowed a temporarily grandfathered company ten years from December 31, 1970, to divest of its impermissible activities, except certain real estate holdings discussed earlier; and allows indefinitely grandfathered companies ten years from the date on which grandfather privileges are terminated by the Board or Reserve Bank, should they be terminated for good cause.

As mentioned earlier, reviews of a company's grandfather privileges may be precipitated by such circumstances as: (1) a subsidiary bank of an indefinitely grandfathered company attaining assets in excess of $60 million (reviewed within two years); (2) a company seeking approval to engage in another activity or acquire another bank; (3) a company which violates the Act; or (4) a company operating in a manner which results in an undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices.

When a company has filed an application requiring the Board's or Reserve Bank's approval, the Board or Reserve Bank may approve the application subject to the condition that the company divest of certain grandfathered shares or assets within a specified time period. The specified time period generally will be shorter than the aforementioned time periods stipulated in the Act.

The plan of divestiture should have provided for the removal of any control relationship between the company and its divested activities. These control requirements, as outlined in section 2(g) of the Act, include one or more of the following: (1) no interlocking directorates; (2) ownership of less than 25 percent of the voting shares by the BHC and related parties; (3) no interlocking management positions in policymaking functions; (4) no indebtedness between the transferor and the transferee; (5) no agreement or understanding which restricts the voting privileges of shares. Further discussion of these and other control requirements and issues is found in Manual sections 2090.1 and 2090.6.

2030.0.7 INSPECTION OBJECTIVES

1. To determine when the company acquired its subsidiary bank.
2. To determine when the company commenced its nonbanking activities and whether these activities were conducted continuously thereafter.
3. To determine if the banking assets of a bank controlled by a holding company with indefinite grandfather privileges have reached $60 million.
4. To determine if a change of ownership or control of the company has taken place, and whether the transferee qualifies as a "successor."
5. To determine if expansions of grandfathered activities occurred in accordance with the Act.

2030.0.8 INSPECTION PROCEDURES

1. If necessary, examine the subsidiary bank's stock certificate book to determine when the company acquired 25 percent or more of the bank.
2. Review the minute books and historical financial records of the company and its subsidiaries for evidence of the date of commencement of any nonbank activity and its continuation thereafter. In particular, the financial records should reflect the activity's impact as either an asset and/or an income item. From these records, also determine whether there has been expansion of the activity and whether such expansion complies with the Act.
3. If necessary, review the latest quarterly Call Report of Condition for the subsidiary bank to determine whether total assets exceeded $60 million. If appropriate, advise management that its grandfather status is subject to review.
4. If necessary, examine the stock certificate records and minutes of the bank or BHC to determine if the bank's shares have been transferred from one bank holding company to another in such a manner that the transferee qualifies as a successor.
5. Upon review of the aforementioned records, discuss the status of the company's grandfather privileges with the Reserve Bank's management, if necessary.
6. If divestment is required, encourage its execution as soon as possible during the divestment period. Request a divestment plan which specifies the manner by which divestment will be accomplished, the specific steps necessary to effect the divestment, and the time schedule for taking such steps. Advise management that failure to divest within the prescribed time period will be viewed as a violation of the Act.

2030.0.9 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Divestment of activities which are temporarily grandfathered			S-2346 February 15, 1977

2030.0.10 APPENDIX 1—EXPANSION OF GRANDFATHERED ACTIVITIES

Permissible Type of Expansion	*Without Approval*	*Requires Approval*
FOR COMPANIES WITH AN INDEFINITELY GRANDFATHERED NONBANK ACTIVITY		
1. Opening of additional offices of existing subsidiary	X	
2. Acquisition of assets in the ''ordinary course of business'' as defined	X	
3. Acquisition of a going concern:		
a. Additional shares of the grandfathered nonbanking subsidiary	X	
b. Additional shares of a nonbanking company which is regarded as an investment (generally companies in which the holding company has an interest of between 5 and 25 percent)		X
c. Initial acquisition of shares of any other company engaging in the activity		X

Commitments to the Board arise most often through the application process. Many commitments are included within the text of accompanying Board orders or letters transmitted to the applicants. Commitments can also arise through the supervisory process. Commitments should be specific and furnished in written form.

The most common type involves a commitment to inject capital (either equity or debt capital) into the company or subsidiary to be acquired or possibly into other subsidiaries of the bank holding company. The required injections may be for a specific dollar amount or for an unspecified amount necessary to achieve a predetermined capital relationship. Determining compliance with such commitments is generally not difficult since an agreed upon quantifiable result must be achieved.

Types of commitments made to the Board in the past include: divestiture of nonpermissible stock holdings or activities; introduction of new services; and reduction or elimination of dividends or management fees from subsidiaries.

Several of the above forms of commitments are rather difficult to monitor due to their inexact nature. The examiner should determine in such cases whether good faith compliance efforts have been made. Where an order approving an application imposes specific conditions, however, compliance is of the utmost importance since a conditional order is based on the theory that such conditions were necessary to eliminate or outweigh adverse factors. Willful noncompliance in these cases might necessitate the use of cease-and-desist powers to prevent evasion of the purposes of the Act. Pursuant to the Board's request, each Reserve Bank reports semi-annually on the status of all outstanding commitments made by holding companies in its District.

2040.0.1 INSPECTION OBJECTIVES

1. To determine that the bank holding company is taking the necessary steps to fulfill any outstanding commitments as scheduled.
2. To determine whether additional commitments or conditions should be imposed to achieve complete compliance.
3. To determine whether a request for an extension of time to fulfill any outstanding commitment is warranted.

2040.0.2 INSPECTION PROCEDURES

1. Review semi-annual commitment reports to the Board for commitments fulfilled since the last inspection. Determine whether such commitments were completed as required.
2. Review with management any actions taken to comply with outstanding commitments or plans to effect fulfillment.
3. If warranted, initiate action to consider an extension for compliance on outstanding commitments.

WHAT'S NEW IN THIS REVISED SECTION

This section was updated to discuss amendments to the Federal Reserve Act regarding insider lending. The definition of "extension of credit" was revised to include an insured depository institution's (IDI) credit exposure to a person arising from a derivative transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction. See the Federal Reserve Act, section 22(h)(9)(D)(i), as amended by the Dodd-Frank Act, section 614(a).

The Federal Deposit Insurance Act was amended to prohibit the purchase or sale of assets between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI's capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 615(1) of the Dodd-Frank Act.

2050.0.1 BHC OFFICIAL AND RELATED INTEREST TRANSACTIONS BETWEEN THE PARENT COMPANY OR ITS NONBANK SUBSIDIARIES

Business transactions between a parent bank holding company or its nonbank subsidiary and a BHC official or a BHC official's related interests require close supervisory review. "Bank holding company official" is defined as any director, executive officer, or principal shareholder of the parent company or any of its subsidiaries, excluding the subsidiary bank's nonbank subsidiaries.

Most of these transactions are soundly structured and have a legitimate business purpose that result in equitable treatment for all parties. However, examiners should pay close attention to all extensions of credit by a BHC or its nonbank subsidiary to a BHC official or related interest to ensure that the terms of the credit, particularly interest-rate and collateral terms, are not preferential and that the credit does not involve more than a normal risk of repayment.

An extension of credit by a BHC or nonbank subsidiary may be considered abusive or self-serving if its terms are unfavorable to the lender, or if the credit would not have been extended on the same terms absent the official relationship; that is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist. When a transaction appears questionable, a complete inquiry into the facts and circumstances should be undertaken so that a legal determination can be obtained.

In addition to the above supervisory considerations, the Sarbanes-Oxley Act of 2002 (Pub. L. No. 107-204) (the act) imposed certain insider lending restrictions on public companies, including BHCs that are public companies. A BHC generally is considered a public company for these purposes if it has a class of securities registered under section 12 of the Securities Exchange Act of 1934 (the 1934 act) or is required to file reports with the Securities and Exchange Commission (SEC) under section 15 of the 1934 act. The Sarbanes-Oxley Act[1] prohibits a publicly owned BHC (public BHC) and its subsidiaries from extending credit, or arranging for another entity to extend credit, in the form of a personal loan to any director or executive officer of the public BHC.[2] This prohibition does not apply to any extension of credit made before July 30, 2002, so long as the loan is not renewed or materially modified after that date.

The Sarbanes-Oxley Act includes two exceptions to this loan prohibition. First and most importantly, the prohibition does not apply to any loan made by an insured depository institution that is subject to the insider lending restrictions of section 22(h) of the Federal Reserve Act, as implemented by the Board's Regulation O. Thus, loans by the insured depository institution subsidiaries of a public BHC to a director or executive officer of the BHC likely are exempt from the prohibition, although they would be subject to Regulation O as discussed below. The second exception permits the directors and executive officers of a public BHC to obtain home improvement and manufactured home loans, consumer loans, and loans under open-end credit plans or charge cards from the public BHC or its subsidiaries, so long as the

1. See 15 U.S.C. 78m (section 402 of the act).

2. The act does not restrict lending by a subsidiary of a public BHC to the subsidiary's own directors and executive officers, so long as these persons are not also directors or executive officers of the public BHC.

credit (1) is extended in the ordinary course of the company's consumer credit business, (2) is a kind of credit generally made available to the public, and (3) is made on market terms or on terms that are no more favorable than those offered to the general public.

2050.0.2 TRANSACTIONS INVOLVING OTHER PROPERTY OR SERVICES

Other transactions involving BHC officials, their related interests, and the BHC and nonbank subsidiary that should be reviewed by the examiner include the—

1. purchase of assets or services from the BHC or nonbank subsidiary, particularly if at a discount or on preferential terms;
2. sale of assets or services to the BHC or nonbank subsidiary, particularly if at a premium;
3. lease of property to or from the BHC or nonbank subsidiary; and
4. use of BHC or nonbank subsidiary property or personnel by a BHC official or related interest.

As with loans and other extensions of credit to BHC officials on preferential terms, abusive or self-serving insider transactions involving other property or services deprive the BHC or nonbank subsidiary of higher returns or gains that may have been achieved had the same transaction been at a fair market price. A fair market price would be that price charged or received from an unaffiliated party.

The Dodd-Frank Act amended the Federal Deposit Insurance Act (FDIA) to impose a prohibition on asset purchases and between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI's capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 18(z) of the FDIA, as amended by the Dodd-Frank Act, section 615(a).

A fair market price is often difficult to determine because the assets or services involved may be unique to a given situation and individuals. In general, the fair market price of even unique assets or services can be approximated by the cost of the assets or services to the party selling or furnishing them, if appropriate. The value of services or properties provided by a BHC or nonbank subsidiary should be established and justified either by policy or on a case-by-case basis, and appropriate documentation should be available to the examiner.

Services provided by a BHC official or a related interest to a BHC or nonbank subsidiary, while not unusual, may be most difficult to value. In part because of the problem of valuation, this type of transaction is among the most susceptible to abuse. The cost of providing services is frequently derived by placing value on the time of the individuals providing the services. When services are provided by a BHC official who normally places a very high billing value on time provided, the benefits to the BHC must be assessed in order to form a basis for determining a fair price. The BHC official may be a highly regarded professional whose time and services have great value to the organization. However, when the BHC requires routine clerical services, officials should not charge the BHC a professional-level rate for such services. Under these or similar circumstances, the BHC would be considered imprudent in paying such rates and could be subject to critical comment.

2050.0.3 REGULATION O

For ease of reference, certain Regulation O definitions and limitations, as revised by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), are presented here, some in abbreviated form. A thorough review of the entire regulation (found at FRRS 3–960), and the Board's press releases pertaining to Regulation O, is necessary for a complete understanding of the regulation. (Note that section 108 of the Financial Institutions Regulatory Act of 1978 amended section 18(j) of the Federal Deposit Insurance Act to make section 22(h) of the Federal Reserve Act applicable to nonmember insured banks.)

Purpose of Regulation O. Regulation O governs any extension of credit by a member bank and its subsidiaries (based on amendments contained in FDICIA, Regulation O also applies to nonmember insured depository institutions) to an executive officer, director, or principal shareholder of (1) the member bank, (2) a bank holding company of which the member bank is a subsidiary, and (3) any other subsidiary of that bank holding company. It also applies to any extension of credit by a member bank to (1) a company controlled by such a person and (2) a political or campaign committee that benefits or is controlled by such a person.

Supervision of BHCs and their nonbank subsidiaries. Regulation O deals exclusively with extensions of credit by banks and their subsidiaries, not extensions of credit by BHCs and their nonbank subsidiaries. However, because the regulations curtail or eliminate abusive transactions, they can be used as a guide or model in providing standards for the supervisory review of extensions of credit by BHCs and nonbank subsidiaries. Although a direct extension of credit by a BHC could not be determined to be a *violation* of Regulation O, if the credit fails to meet the requirements that Regulation O establishes for banks, it may be possible to conclude that the BHC is engaging in either an unsafe or unsound practice that exposes the entire banking organization to undue risk and exposure to loss. Regulation O limits credit extensions by a bank to officials of that bank and their related interests; therefore, examiners should be especially alert to credit extensions from BHCs and nonbank subsidiaries. If credit extensions appear to circumvent the intent of Regulation O, they should be identified and discussed with management and noted in the inspection report for follow-up review and possible formal corrective action by regulatory authorities.

2050.0.3.1 FDICIA and BHC Inspection Guidance for Regulation O

On April 22, 1992, the Board adopted amendments to Regulation O, effective May 18, 1992, to implement the changes required by section 306 of FDICIA. Section 306 amended section 22(h) of the Federal Reserve Act and replaced the language of section 22(h) with the provisions of the Board's Regulation O. Section 306 also made several substantive modifications to section 22(h) that required revisions to Regulation O. These changes are outlined in the Board's press release and *Federal Register* notice of May 28, 1992 (57 *Fed. Reg.* 22,417).

The following are some of the more significant changes that were made effective May 18, 1992:[2a]

2a. The Regulation O cites are to the February 18, 1994, amendment.

1. *Aggregate lending limit (section 215.4(d)).* The aggregate limit on the total amount that a bank can lend to its insiders and their related interests as a class was changed. In general, this amount is equal to the bank's unimpaired capital and unimpaired surplus. The Board also decided as a one-year interim measure to permit banks with deposits under $100 million to adopt a higher limit, not to exceed 200 percent of the bank's unimpaired capital and unimpaired surplus. (This interim period was extended twice by the Board, extending the higher limit through February 18, 1994, when the higher limit became permanent. The board of directors must provide an annual resolution authorizing the use of this higher limit. Other conditions also apply.)

2. *Lending limits for directors and related interests (section 215.4(c)).* Loans to directors (and their related interests) are subject to the same lending limit that is applicable to executive officers and principal shareholders (and their related interests).

3. *Credit standards (section 215.4(a)).* When lending to an insider[2b] a bank must follow credit underwriting procedures that are as stringent as those applicable to comparable transactions by the bank with persons outside the bank.

4. *Definition of "principal shareholder" (section 215.2(m)(1)).* The definition of *principal shareholder* was tightened for banks located in small communities. The previously existing 10 percent limitation was made applicable to all banks, regardless of the size of the communities in which they were located.[3]

5. *Definition of "member bank" (section 215.2(j)).* The term *member bank* was redefined to include any subsidiary of the member bank. This revision clarified that an extension of credit from a subsidiary of a member bank is subject

2b. The term *insider* refers to an executive officer, director, or principal shareholder, and includes any related interest of such a person.

3. The Board amended the definition of *principal shareholder of a member bank,* effective December 17, 1992, so that it does not include a company of which a member bank is a subsidiary. This amendment excludes from Regulation O loans to a company that owns, controls, or exercises a controlling influence over a member bank, as those relationships are defined in section 2(d) of the Bank Holding Company Act, as well as the related interests of such a parent bank holding company. The definition of *principal shareholder* for purposes of reporting obligations under section 215.11 of Regulation O was not changed as a result of the Housing and Community Development Act of 1992 because those portions of Regulation O implement provisions of law in addition to section 22(h) of the Federal Reserve Act.

to the same insider restrictions as an extension of credit from a member bank itself.

6. *Coverage of all companies that own banks (section 215.2(b)).* All companies that own banks became subject to Regulation O, regardless of whether they are technically bank holding companies.

7. *Prohibition on knowingly receiving unauthorized extensions of credit (section 215.6).* Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extension of credit not authorized by section 22(h) of the Federal Reserve Act.

8. *Reporting requirement for certain credit (section 215.12).* Executive officers and directors of member banks that do not have publicly traded stock are required to report annually to their institutions the outstanding amount of any credit secured by shares of the insider's institution.

In a February 18, 1994, press release, the Federal Reserve Board announced its approval of a final rule that further amended several provisions of Regulation O, effective on that date. Some of the provisions carried out or further refined provisions of FDICIA. The amendments were designed to increase the ability of banks to make extensions of credit that pose minimal risk of loss, to eliminate recordkeeping requirements that impose a paperwork burden, and to remove certain transactions from the regulation's coverage consistent with bank safety and soundness. The amendments were expected to increase the availability of credit, particularly in communities served by small banks. The following is a discussion of some of the rule's primary provisions.

1. *Aggregate lending limit—exception for small, adequately capitalized banks (section 215.4(d)).* This revision of Regulation O made permanent an interim rule increasing the aggregate lending limit for small, adequately capitalized banks from 100 percent of the bank's unimpaired capital surplus to 200 percent, provided the bank satisfies three conditional criteria.

2. *Exceptions to the general limits on lending (section 215.4(d)(3)).* The Board adopted certain exceptions to the general restrictions on lending to insiders. The exceptions apply to loans fully secured by—

a. obligations of the United States or other obligations fully guaranteed as to principal and interest by the United States;

b. commitments or guarantees of a department or agency of the United States; or

c. a segregated deposit account with the lending bank.

An exception is also made for loans arising from the discount of installment consumer paper by an insider with full or partial recourse endorsement or guarantee by the insider, if the maker of the paper is not an insider and the loan was made relying primarily on the maker and this is properly documented. Such loans continue to be subject to the prohibitions against preferential lending.

3. *Including closing costs in the refinancing of home mortgage loans (section 215.5(c)(2)).* Section 22(g) of the Federal Reserve Act allows a bank to make a loan to its executive officer, without restrictions on the amount, if the loan is secured by a first lien on a dwelling that is owned and used by the executive officer as a residence after the loan is made. The Board's amendment includes the refinancing of home mortgage loans in this category only if the proceeds are used to pay off the previous home mortgage loan or for the other purposes listed in this section. The regulation states that closing costs can be included as part of the exempt portion of a home mortgage refinancing.

4. *Alternative recordkeeping procedures (section 215.8).* Banks are permitted to follow alternative recordkeeping procedures on loans to insiders of affiliates. The amendment allows a bank to decide on its own how to gather information on related interests, so long as its method is effective. For example, a nonbank credit card bank or other bank that does not make commercial loans could decide not to keep records on related interests. For banks that make commercial loans, one of two acceptable methods is required, unless a bank can demonstrate that another method is equally effective: (a) the "survey" method or (b) the "borrower inquiry" method. Every bank, regardless of the recordkeeping method it selects, must conduct an annual survey to identify *its own insiders*, but not those of its holding company affiliates. Every bank is expected to check this short list before extending credit, even if it is using the borrower-inquiry method of recordkeeping for affiliates in lieu of the survey method.

5. *Tangible-economic-benefit rule (section 215.3(f)).* This rule was similar to a provision in section 23A of the Federal Reserve Act and was adopted at a time when the Board was required by section 22(h) of the Federal Reserve Act to use the definition of "extension of credit" found in section 23A. However, the definition of extension of credit in section 22(h) is no longer

tied to section 23A. The Board has therefore revised the tangible-economic-benefit rule to clarify that it does not reach certain transactions that may benefit an insider. The Board explicitly provided that the rule does not apply to an arm's-length extension of credit by a bank to a third party where the proceeds of the credit are used to finance the bona fide acquisition of property, goods, or services from an insider or an insider's related interest.

2050.0.3.2 Definitions in Regulation O (abbreviated listing)

Note: Regulation O definitions, prohibitions, exceptions, and exemptions are particularly detailed and complex. Therefore, inspection staff should consult with Reserve Bank or Board supervisory or legal staff before discussing with management or presenting in an inspection report any BHC inspection findings that rely upon Regulation O.

(a) "Affiliate" means any company of which a member bank is a subsidiary or any other subsidiary of that company.

(b) "Company" means any corporation, partnership, trust (business or otherwise), association, joint venture, pool syndicate, sole proprietorship, unincorporated organization, or any other form of business entity. The term, however, does not include (1) an insured bank (as defined in 12 U.S.C. 1813) or (2) a corporation the majority of the shares of which are owned by the United States or by any state.

(c)(1) "Control of a company or bank" means that a person directly or indirectly, or acting through or in concert with one or more persons (i) owns, controls, or has the power to vote 25 percent or more of any class of voting securities of the company or bank; (ii) controls in any manner the election of a majority of the directors of the company or bank; or (iii) has the power to exercise a controlling influence over the management or policies of the company or bank. (Note: If a company does not have voting securities (that is, a partnership), review the degree of interest in the company to determine control.)

(2) A person is presumed to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank if (i) the person is an executive officer or director of the company or bank and directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank or (ii) the person directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank, and no other person owns, controls, or has the power to vote a greater percentage of that class of voting securities.

(3) An individual is not considered to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank solely by virtue of the individual's position as an officer or director of the company or bank.

(d) "Director" of a company or bank means any director of the company or bank, whether or not receiving compensation.[3a] An advisory director is not considered a director if the advisory director (1) is not elected by the shareholders of the bank or company, (2) is not authorized to vote on matters before the board of directors, and (3) provides solely general policy advice to the board of directors.

(e)(1) "Executive officer" of a company or bank means a person who participates or has authority to participate (other than in the capacity of a director) in major policymaking functions of the company or bank, whether or not the officer has an official title; the title designates the officer an assistant; or the officer is serving without salary or other compensation.[4]

3a. Extensions of credit to a director of an affiliate of a bank are not subject to the general prohibitions (section 215.4), the prohibitions on knowingly receiving unauthorized extensions of credit (section 215.6), and the alternative recordkeeping procedures (section 215.8) if—

(1) the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the director does not actually participate in those functions;

(2) the affiliate does not control the bank; and

(3) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the director of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (1) include the director (by name or by title) in a list of persons excluded from participation in such functions or (2) not include the director in a list of persons authorized (by name or by title) to participate in such functions.

4. The term "executive officer" is not intended to include persons who may have official titles and may exercise a certain measure of discretion in the performance of their duties, including discretion in the making of loans, but who do not participate in determining major policies of the bank or company and whose decisions are limited by policy standards

The chairman of the board, the president, every vice president, the cashier, the secretary, and the treasurer of a company or bank are considered executive officers, unless the officer is excluded, by resolution of the board of directors or by the bylaws of the bank or company, from participation (other than in the capacity of a director) in major policymaking functions of the bank or company, and the officer does not actually participate therein.

(2) Extensions of credit to an executive officer of an affiliate of a member bank (other than a company that controls the bank) are not subject to sections 215.4, 215.6, and 215.8 of Regulation O if—

(i) the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the executive officer does not actually participate in those functions;

(ii) the affiliate does not control the bank; and

(iii) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the executive officer of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (i) include the executive officer (by name or by title) in a list of persons excluded from participation in such functions or (ii) not include the executive officer in a list of persons authorized (by name or by title) to participate in such functions.

(f) ''Immediate family'' means the spouse of an individual, the individual's minor children, and any of the individual's children (including adults) residing in the individual's home.

(g) ''Insider'' means an executive officer, director, principal shareholder, and any related interest of such person.

fixed by the senior management of the bank or company. For example, the term does not include a manager or assistant manager of a branch of a bank unless that individual participates, or is authorized to participate, in major policymaking functions of the bank or company.

(h) The ''lending limit'' for a member bank is an amount equal to the limit on loans to a single borrower established by section 5200 of the Revised Statutes,[5] 12 U.S.C. 84. This amount is 15 percent of the bank's unimpaired capital and unimpaired surplus in the case of loans that are not fully secured, and an additional 10 percent of the bank's unimpaired capital and unimpaired surplus in the case of loans that are fully secured by readily marketable collateral having a market value, as determined by reliable and continuously available price quotations, at least equal to the amount of the loan. The lending limit also includes any higher amounts that are permitted by section 5200 of the Revised Statutes for the types of obligations listed therein as exceptions to the limit.

A member bank's *unimpaired capital* and *unimpaired surplus* equals the (1) member bank's tier 1 and tier 2 capital included in the bank's risk-based capital, under the capital guidelines of the appropriate federal banking agency, and (2) balance of the member bank's allowance for loan and lease losses that was not included in the bank's tier 2 capital. This computation is based on the bank's risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the bank's most recent consolidated report of condition filed under 12 U.S.C. 1817(a)(3).

(i) ''Member bank'' means any banking institution that is a member of the Federal Reserve System, including any subsidiary of a member bank. The term does not include any foreign bank that maintains a branch in the United States, whether or not the branch is insured (within the meaning of 12 U.S.C. 1813(s)) and regardless of the operation of 12 U.S.C. 1813(h) and 12 U.S.C. 1828(j)(3)(B).

(j) ''Person'' means an individual or a company.

(k) ''Principal shareholder''[6] means an individual or a company (other than an insured bank) that directly or indirectly, or acting through or in concert with one or more persons,

5. Where state law establishes a lending limit for a state member bank that is lower than the amount permitted in section 5200 of the Revised Statutes, the lending limit established by the applicable state laws shall be the lending limit for the state member bank.

6. On October 28, 1992, in section 955 of the Housing and Community Development Act of 1992, Congress amended section 22(h) of the Federal Reserve Act to exclude from the definition of *principal shareholder* a company of which a member bank is a subsidiary. Regulation O was amended, effective December 17, 1992, to implement this change. As a result of the amendment, extensions of credit by a bank to its holding company and to any related interests of its subsidiary are governed solely by sections 23A and 23B of the Federal Reserve Act.

owns, controls, or has the power to vote more than 10 percent of any class of voting securities of a member bank or company. Shares owned or controlled by a member of an individual's immediate family are considered to be held by the individual. A principal shareholder of a member bank includes (1) a principal shareholder of a company of which the member bank is a subsidiary and (2) a principal shareholder of any other subsidiary of that company, exclusive of nonbank subsidiaries of member banks.

(*l*) "Related interest" means (1) a company that is controlled by a person or (2) a political or campaign committee that is controlled by a person or the funds or services of which will benefit a person.

(m) "Subsidiary" has the meaning given in section 2(d) of the BHC Act, but does not include a subsidiary of a member bank.

2050.0.3.2.1 Extension of Credit

For the purposes of Regulation O, an "extension of credit" is

(a) a making or renewal of any loan, a granting of a line of credit, or an extending of credit in any manner whatsoever and includes:

(1) a purchase under repurchase agreement of securities, other assets, or obligations;

(2) an advance by means of an overdraft, cash item, or otherwise;

(3) issuance of a standby letter of credit (or other similar arrangement regardless of name or description) or an ineligible acceptance;

(4) an acquisition by discount, purchase, exchange, or otherwise of any note, draft, bill of exchange, or other evidence of indebtedness upon which an insider may be liable as maker, drawer, endorser, guarantor, or surety;

(5) an increase of an existing indebtedness, but not if the additional funds are advanced by the bank for its own protection for (i) accrued interest or (ii) taxes, insurance, or other expenses incidental to the existing indebtedness;

(6) an advance of unearned salary or other unearned compensation for a period in excess of 30 days; and

(7) any other similar transaction as a result of which a person becomes obligated to pay money (or its equivalent) to a bank, whether the obligation arises directly or indirectly, or because of an endorsement on an obligation or otherwise, or by any means whatsoever.

The Dodd-Frank Act added to the definition of an "extension of credit" an insured depository institution's (IDI) credit exposure to a person arising from a derivative transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction.

An extension of credit *does not* include—

(1) an advance against accrued salary or other accrued compensation, or an advance for the payment of authorized travel or other expenses incurred or to be incurred on behalf of the bank;

(2) a receipt by a bank of a check deposited in or delivered to the bank in the usual course of business unless it results in the carrying of a cash item for or the granting of an overdraft (other than an inadvertent overdraft in a limited amount that is promptly repaid under terms that are not more favorable than those offered to the general public).

(3) an acquisition of a note, draft, bill of exchange, or other evidence of indebtedness through (i) a merger or consolidation of banks or a similar transaction by which a bank acquires assets and assumes liabilities of another bank or similar organization or (ii) foreclosure on collateral or similar proceeding for the protection of the bank, provided that such indebtedness is not held for a period of more than three years from the date of the acquisition, subject to extension by the appropriate federal banking agency for good cause;

(4)(i) an endorsement or guarantee for the protection of a bank of any loan or other asset previously acquired by the bank in good faith or (ii) any indebtedness to a bank for the purpose of protecting the bank against loss or of giving financial assistance to it;

(5) indebtedness of $15,000 or less arising by reason of any general arrangement by which a bank (i) acquires charge or time credit accounts or (ii) makes payments to or on behalf of participants in a bank credit card plan, check credit plan, or similar open-end credit plan, provided—

(A) the indebtedness does not involve prior individual clearance or approval by the bank other than for the purposes of determining authority to participate in the arrangement and compliance with any dollar limit under the arrangement and

(B) the indebtedness is incurred under terms that are not more favorable than those offered to the general public;

(6) indebtedness of $5,000 or less arising by reason of an interest-bearing overdraft credit plan (see Regulation O, section 215.4(e)); or

(7) a discount of promissory notes, bills of exchange, conditional sales contracts, or similar paper, without recourse.

Non-interest-bearing deposits to the credit of a bank are not considered loans, advances, or extensions of credit to the bank of deposit. Also, the giving of immediate credit to a bank upon collected items received in the ordinary course of business is not considered to be a loan, advance, or extension of credit to the depositing bank.

An extension of credit by a member bank (for the purposes of section 215.4 of Regulation O) is considered to have been made at the time the bank enters into a binding commitment to make the extension of credit. A participation without recourse is considered to be an extension of credit by the participating bank, not by the originating bank.

Tangible-economic-benefit rule. In general, an extension of credit is considered made to an insider to the extent that the proceeds are transferred to the insider or are used for the tangible economic benefit of the insider. An extension of credit is not considered made to an insider if—

(1) the credit is extended on terms that would satisfy the standard set forth in section 215.4(a) of Regulation O for extensions of credit to insiders and

(2) the proceeds of the extension of credit are used in a bona fide transaction to acquire property, goods, or services from the insider.

2050.0.3.2.2 Insider Use of a Bank-Owned Credit Card

Board staff issued a May 22, 2006, legal opinion in response to an FDIC request for clarification on the application of the Board's Regulation O (12 C.F.R. 215) to credit cards that are issued to bank insiders for the bank's business purposes.[7] The FDIC asked whether, and under what circumstances, an insider's use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O.

The FDIC indicated that insiders of a bank often use a bank-owned credit card to purchase goods and services for the bank's business purposes. A bank-owned credit card is a credit card that is issued by a third-party financial institution to a bank to enable the bank (through its employees) to finance the purchase of goods and services for the bank's business. Board staff commented that it was understood that (1) a bank that provides a bank-owned credit card to its employees typically forbids or discourages use of the card by employees for their personal purposes and that an employee who uses the card for personal purposes is obligated to promptly reimburse the bank and (2) a bank is liable to the card-issuing institution for all extensions of credit made under the card (whether for the bank's business purposes or for an employee's personal purposes)[8].

Although section 215.3(a) of Regulation O broadly defines an extension of credit to include "a making or renewal of a loan, a granting of a line of credit, or an extending of credit in any manner whatsoever," the rule also provides several important exceptions to the definition that are relevant to the FDIC's inquiry. Section 215.3(b)(1) of Regulation O excludes from the definition of extension of credit any advance by a bank to an insider for the payment of authorized or other expenses incurred or to be incurred on behalf of the bank. Also, section 215.3(b)(5) of Regulation O excludes from the definition of extension of credit indebtedness of up to $15,000 incurred by an insider with a bank under an ordinary credit card.

Considering the provisions of Regulation O and the purposes of the insider lending restrictions in the Federal Reserve Act, Board legal staff opined that a bank does not make an extension of credit to an insider for purposes of Regulation O at the time of issuance of a bank-owned credit card to the insider (regardless of whether the line of credit associated with the card is greater than $15,000). The opinion states also that a bank does not extend credit to an insider for the purposes of Regulation O when the insider uses the card to purchase goods or services for the bank's business purposes. However, when an insider uses the card to purchase goods or services for the insider's personal purposes, the bank may be making an extension of

7. The provisions of Regulation O apply to a bank holding company of which a member bank is a subsidiary, and any other subsidiary of that bank holding company. (See 2050.0.3.)

8. In the responding letter, Board legal staff notes that it was understood that some banks directly issue credit cards to their employees to enable the employees to finance the purchase of goods and services for the bank's business (bank-issued credit cards). Also, the letter states that the principles set forth with regard to bank-owned credit cards also would apply to bank-issued credit cards.

credit to the insider. The opinion states that an extension of credit would occur for the purposes of Regulation O if—and to the extent that—the amount of outstanding personal charges made to the card, when aggregated with all other indebtedness of the insider that qualifies for the credit card exception in section 215.3(b)(5) of Regulation O, exceeds $15,000.

The FDIC also asked whether incidental personal expenses charged by an insider to a bank-owned credit card are per se violations of the market-terms requirement in section 215.4(a) of Regulation O because non-insiders do not have access to this form of credit from the bank. In response, Board staff stated that section 215.4(a) requires extensions of credit by a bank to its insiders to (1) be on substantially the same terms (including interest rates and collateral) as, and subject to credit underwriting standards that are not less stringent than, those prevailing at the time for comparable transactions with non-insiders and (2) not involve more than the normal risk of repayment or other features unfavorable to the bank.

The opinion states that a bank may be able to satisfy the market-terms requirement, however, if the bank approves an insider for use of a bank-owned credit card only (1) if the insider meets the bank's normal credit underwriting standards and (2) the card does not have preferential terms (or the card does not have preferential terms in connection with uses of the card for personal purposes). Nonetheless, use of a bank-owned credit card by an insider for personal purposes may violate the market- terms requirement of Regulation O if the card carries a lower interest rate or permits a longer repayment period than comparable consumer credit offered by the bank.

The Board staff's legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances.

2050.0.3.3 General Prohibitions and Limitations of Regulation O

(a) *Terms and creditworthiness*. No member bank may extend credit to any insider of the bank or insider of its affiliates unless the extension of credit (1) is made on substantially the same terms (including interest rates and collateral) as, and following credit-underwriting procedures that are not less stringent than, those prevailing at the time for comparable transactions by the bank with other persons that are not covered by Regulation O and who are not employed by the bank and (2) does not involve more than the normal risk of repayment or present other unfavorable features.

Nothing stated above (as to "terms and creditworthiness") should prohibit any extension of credit made in accordance with a benefit or compensation program that—

1. is widely available to employees of the member bank, and in the case of extensions of credit to an insider of its affiliates, is widely available to employees of the affiliates at which that person is an insider and
2. does not give preference to any insider of the member bank over other employees of the member bank and, in the case of extensions of credit to an insider of its affiliates, does not give preference to any insider of its affiliates over other employees of the affiliates of which that person is an insider.

(b) *Prior approval*. A member bank may not extend credit (including granting a line of credit) to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit to that person and to all related interests of that person, exceeds the higher of $25,000 or 5 percent of the member bank's unimpaired capital and unimpaired surplus, but in no event can it exceed $500,000. This provision applies unless (1) the extension of credit or line of credit has been approved in advance by a majority of the entire board of directors of that bank and (2) the interested party has abstained from participating directly or indirectly in the voting.

The board of directors' approval is not required for an extension of credit that is made pursuant to a line of credit that was approved by the board of directors within 14 months of the date of the extension of credit. Participation in the discussion, or any attempt to influence the voting, by the board of directors regarding an extension of credit constitutes indirect participation in the voting by the board of directors on an extension of credit.

(c) *Individual lending limit*. A member bank may not extend credit to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit by the member bank to that person and to all related interests of that person, exceeds the lending limit described above in section 2050.0.3.2 (paragraph h). This prohibition does not apply to an extension of credit by a member bank to a company of which the member bank is a subsidiary or to any other subsidiary of that company.

(d) *Aggregate lending limit.*

(1) *General limit.* A member bank may not extend credit to any insider of the bank or insider of its affiliates unless the extension of credit is in an amount that, when aggregated with all outstanding extensions of credit to all such insiders, would exceed the bank's unimpaired capital and unimpaired surplus as defined in section 215.2(i) of Regulation O (see section 2050.0.3.2, paragraph h).

(2) A member bank with deposits of less than $100,000,000 may, by an annual resolution of its board of directors, increase the general limit (specified above) to a level that does not exceed two times the bank's unimpaired capital and unimpaired surplus if the board of directors determines that such higher limit is consistent with prudent, safe, and sound banking practices in light of the bank's experience in lending to its insiders and is necessary to attract or retain directors or to prevent the restriction of the availability of credit in small communities.

The board of directors' resolution must set forth the facts and reasoning on which it bases its finding, including the amount of the bank's lending to its insiders as a percentage of the bank's unimpaired capital and unimpaired surplus as of the date of the resolution. In addition, the bank must meet or exceed, on a fully phased-in basis, all applicable capital requirements established by the appropriate federal banking agency. The bank would also have had to receive a satisfactory composite rating in its most recent bank examination report.

If a member bank has adopted a resolution authorizing a higher limit and subsequently fails to meet the above-listed requirements, the member bank cannot extend any additional credit (including a renewal of any existing extension of credit) to any insider of the bank or its affiliates unless the extension or renewal is consistent with the general limit.

(3) *Exceptions to the general limit.* Effective May 3, 1993, the general limit, described in manual section 2050.0.3.3 (paragraph d) and specified in section 215.4(d)(1) of the Board's Regulation O does not apply to—

(i) extensions of credit secured by a perfected security interest in bonds, notes, certificates of indebtedness, or Treasury bills of the United States or in other such obligations fully guaranteed as to principal and interest by the United States;

(ii) extensions of credit to or secured by unconditional takeout commitments or guarantees of any department, agency, bureau, board, commission, or establishment of the United States or any corporation wholly owned directly or indirectly by the United States;

(iii) extensions of credit secured by a perfected security interest in a segregated deposit account in the lending bank; or

(iv) extensions of credit arising from the discount of negotiable installment consumer paper that is acquired from an insider and carries a full or partial recourse endorsement or guarantee by the insider,[9] provided that—

(A) the financial condition of each maker of such consumer paper is reasonably documented in the bank's files or known to its officers;

(B) an officer of the bank designated for that purpose by the board of directors of the bank certifies in writing that the bank is relying primarily upon the responsibility of each maker for the payment of the obligation and not upon any endorsement or guarantee by the insider; and

(C) the maker of the instrument is not an insider.

(e) *Overdrafts.* A member bank may not pay an overdraft of an executive officer or director of the bank[10] on an account at the bank, unless the payment of funds is made in accordance with (1) a written, preauthorized, interest-bearing extension of credit plan that specifies a method of repayment or (2) a written, preauthorized transfer of funds from another account of the account holder at the bank.

The prohibition above does not apply to payment of inadvertent overdrafts on an account in an aggregate amount of $1,000 or less, provided (1) the account is not overdrawn for more than five business days and (2) the member bank charges the executive officer or director the same fee charged any other customer of the bank in similar circumstances.[11]

9. The exceptions to the aggregate lending limit pertaining to extensions of credit secured in the manner described above (i through iii) apply only to the amounts of such extensions of credit that are secured in such manner.

10. This prohibition does not apply to the payment by a member bank of an overdraft of a principal shareholder of the member bank, unless the principal shareholder is also an executive officer or director. This prohibition also does not apply to the payment by a member bank of an overdraft of a related interest of an executive officer, director, or principal shareholder of the member bank.

11. The requirement that the member bank charge the executive officer or director the same fee charged any other customer of the bank in similar circumstances does not prohibit the member bank from charging a fee provided for in a benefit or compensation program that satisfies the require-

2050.0.3.4 Additional Restrictions on Loans to Executive Officers of Member Banks

The following restrictions on extensions of credit by a member bank to any of its executive officers are in addition to any restrictions on extensions of credit by a member bank to insiders of itself or its affiliates. The restrictions listed below apply only to the executive officers of the member bank and not to the executive officers of its affiliates.

A member bank may not extend credit to any of its executive officers, and no executive officer of a member bank can borrow from or otherwise become indebted to the bank, except in the amounts, for the purposes, and upon the conditions specified in items 3 and 4 below.

A member bank is authorized to extend credit to any executive officer of the bank—

(1) in any amount to finance the education of the executive officer's children;

(2) in any amount to finance or refinance the purchase, construction, maintenance, or improvement of a residence of the executive officer, provided—

(i) the extension of credit is secured by a first lien on the residence and the residence is owned (or expected to be owned after the extension of credit) by the executive officer; and

(ii) in the case of refinancing, that only the amount used to repay the original extension of credit, together with the closing costs of the refinancing, and any additional amount thereof used for any of the purposes enumerated in item 2 above, are included within this category of credit;

(3) in any amount, if the extension of credit is secured in a manner described in the first three exceptions to the general limit of the aggregate lending limit (see section 2050.0.3.3, paragraph d, subparagraphs i to iii); and

(4) for any other purpose (not specified in items 1 through 3 above), if the aggregate amount of loans to that executive officer does not exceed, at any one time, the higher of 2.5 percent of the bank's unimpaired capital and unimpaired surplus or $25,000, but in no event more than $100,000.

Any extension of credit by a member bank to any of its executive officers must be—

(1) promptly reported to the member bank's board of directors,

(2) in compliance with the general prohibitions of section 215.4 of Regulation O (manual section 2050.0.3.3),

(3) preceded by the submission of a current detailed financial statement of the executive officer, and

(4) made subject to the condition in writing that the extension of credit will, at the option of the member bank, become due and payable at any time that the officer is indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit that may be made available by a member bank to any of its executive officers.

No member bank may extend credit in an aggregate amount greater than the amount permitted for general-purpose loans to an executive officer (section 215.5(c)(4) of Regulation O) to a partnership in which one or more of the bank's executive officers are partners and, either individually or together, hold a majority interest. The total amount of credit extended by a member bank to such partnership is considered to be extended to each executive officer of the member bank who is a member of the partnership.

Prohibition on knowingly receiving unauthorized extensions of credit. Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extensions of credit not authorized by section 22(h) of the Federal Reserve Act and by Regulation O.

2050.0.3.5 Grandfathering Provisions

(a) *Under FDICIA.* FDICIA provided that the amendments to Regulation O would not affect extensions of credit entered into on or before the effective date of the regulation. Therefore, extensions of credit, including lines of credit, made on or before May 18, 1992, are not required to comply with either the individual-borrower limit made applicable to directors and their related interests, or with the aggregate limit on all loans to insiders. All extensions of credit, loan renewals, and loan rollovers made after May 18, 1992, must comply with all of the provisions of Regulation O. In other words, banks cannot make new loans or renew outstanding extensions of credit in amounts that, when aggregated with all other outstanding loans to insiders, would exceed either of the new limits.

(b) *Extensions of credit outstanding on March 10, 1979.* Any extension of credit that was outstanding on March 10, 1979, and that would have, if made on or after March 10, 1979, violated the individual lending limit, had to be

ments detailed in section 2050.0.3.3, item (a).

reduced in amount by March 10, 1980, to be in compliance with the aggregate lending limit of Regulation O. Any renewal or extension of such a credit extension on or after March 10, 1979, must have been made only on terms that would have brought it into compliance with the aggregate lending limit by March 10, 1980. However, any extension of credit made before March 10, 1979, that bears a specific maturity date of March 10, 1980, or later, had to be repaid in accordance with the repayment schedule in existence on or before March 10, 1979.

2050.0.3.6 Reports by Executive Officers

Each executive officer of a member bank who becomes indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit in section 215.5(c) of Regulation O (manual section 2050.0.3.4) must make a written report to the board of directors of the officer's bank within 10 days of the date the indebtedness reaches such a level. The report must state the lender's name, the date and amount of each extension of credit, any security for it, and the purposes for which the proceeds have been or are to be used.

Report on credit secured by BHC stock. In addition to the report required above, each executive officer or director of a member bank the shares of which are not publicly traded must report annually to the bank's board of directors the outstanding amount of any credit that was extended to the executive officer or director that is secured by shares of the member bank. (See also Regulation Y section 225.4(f) for the identical restriction on executive officers and directors of a bank holding company with loans secured by shares of the bank holding company.)

2050.0.3.7 Report on Credit to Executive Officers

Each member bank must include with (but not as part of) each report of condition (and copy thereof) filed pursuant to 12 U.S.C. 1817(a)(3) a report of all extensions of credit made by the member bank to its executive officers since the date of the bank's previous report of condition.

2050.0.3.8 Disclosure of Credit from Member Banks to Executive Officers and Principal Shareholders

(a) *Definitions.* For the purposes of this section, the following definitions apply:

(1) "Principal shareholder of a member bank" means a person (individual or a company), other than an insured bank, or branch or representative office of a foreign bank as defined in 12 U.S.C. 3101(7)[12] that, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has power to vote more than 10 percent of any class of voting securities of the member bank or company. The term includes an individual or company that controls a principal shareholder (for example, a person that controls a bank holding company). Shares of a bank (including a foreign bank), bank holding company, or other company owned or controlled by a member of an individual's immediate family are considered to be held or controlled by the individual for the purposes of determining principal shareholder status.[13]

(2) "Related interest" means (i) any company controlled by a person; or (ii) any political or campaign committee the funds or services of which will benefit a person or that is controlled by a person. A related interest does not include a bank or a foreign bank (as defined in 12 U.S.C. 3101(7)).

(b) *Public disclosure.* Upon receipt of a written request from the public, a member bank shall make available the names of each of its executive officers (with the exception of any executive officer of a bank holding company of which the member bank is a subsidiary or of any other subsidiary of that bank holding company unless the executive officer is also an executive officer of the member bank) and each of its principal shareholders to whom, or to whose related interests, the member bank had outstanding at the end of the latest previous quarter of the year, an extension of credit that, when aggregated with all other outstanding extensions of credit at that time from the member bank to such person and to all related interests of such

12. A *foreign bank* means any company organized under the laws of a foreign country, a territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands that engages in the business of banking, or any subsidiary or affiliate, organized under such laws, of any such company. This includes foreign commercial banks, foreign merchant banks, and other foreign institutions that engage in banking activities usual in connection with the business of banking in the countries where such foreign institutions are organized or operating.

13. See footnote 3.

person, equaled or exceeded 5 percent of the member bank's capital and unimpaired surplus or $500,000, whichever amount is less. No disclosure under this paragraph is required if the aggregate amount of all extensions of credit outstanding at that time from the member bank to the executive officer or principal shareholder of the member bank and to all related interests of such a person does not exceed $25,000.

A member bank is not required to disclose the specific amounts of individual extensions of credit.

(c) *Maintaining records.* Each member bank is required to maintain records of all requests for the information described above and the disposition of the requests. These records may be disposed of two years after the date of the request.

2050.0.3.9 Civil Penalties of Regulation O

Any member bank, or any officer, director, employee, agent, or other person participating in the conduct of the affairs of the bank, that violates any provision of Regulation O is subject to a civil penalty, as specified in section 29 of the Federal Reserve Act.

2050.0.3.10 Records of Member Banks (and BHCs)

To help inspection and examination personnel identify BHC officials, Regulation O requires each member bank to maintain records necessary to monitor compliance with this regulation. BHCs and nonbank subsidiaries should be given access to the records identifying ''bank officials.'' Each state member bank is required to (1) identify, through an annual survey, all insiders of the bank itself; and (2) maintain records of all extensions of credit to insiders of the bank itself, including the amount and terms of each such extension of credit.

2050.0.3.10.1 Recordkeeping for Insiders of the Member Bank's Affiliates

A member bank is required to maintain records of extensions of credit to insiders of the member bank's affiliates by—

(1) a ''survey'' method, which identifies, through an annual survey, each of the insiders of the member bank's affiliates. Under the survey method, the member bank must maintain records of the amount and terms of each extension of credit by the member bank to such insiders or

(2) a ''borrower inquiry'' method, which requires, as part of each extension of credit, the borrower to indicate whether the borrower is an insider of an affiliate of the member bank. Under this method, the member bank must maintain records that identify the amount and terms of each extension of credit by the member bank to borrowers so identifying themselves.

Alternative recordkeeping method for insiders of affiliates. A member bank may use a recordkeeping method other than those identified above if the appropriate federal banking agency determines that the bank's method is at least as effective.

2050.0.3.10.2 Special Rule for Noncommercial Lenders

A member bank that is prohibited by law or by an express resolution of the bank's board of directors from making an extension of credit to any company, or other entity that is covered by Regulation O as a company, is not required to maintain any records of the related interests of the insiders of the bank or its affiliates. The bank is also not required to inquire of borrowers whether they are related interests of the insiders of the bank or its affiliates.

2050.0.3.11 Section 23A Ramifications

Loans to a holding company parent and its affiliates are governed by section 23A of the Federal Reserve Act and are not subject to Regulation O.

2050.0.4 REMEDIAL ACTION

Self-serving and abusive transactions deprive a BHC of opportunities and benefits that may otherwise have been available and may strip a BHC of its ability to serve as a source of financial and managerial strength to its subsidiary banks. Even if not extended on preferential terms, self-serving loans and other extensions of credit to insiders may be an imprudent business practice and may reduce the lender's liquidity or otherwise overextend the BHC. In such situations, formal or informal remedial measures by the Federal Reserve may be necessary. Formal enforcement action is provided for in the 1974 amendments to the Financial Institutions Supervisory Act of 1966 (12 U.S.C. 1818), which grant the Board authority to issue cease-and-desist orders in appropriate situations. For complete details on formal corrective actions, see section 2110.0.

2050.0.5 INSPECTION OBJECTIVES

1. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries are based on preferential treatment.
2. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries result in any undue loss exposure to the BHC or its subsidiaries.
3. To determine if any BHC or nonbank extension of credit to a BHC official or related interest is in the spirit of Regulation O's requirements or whether it is an attempt to circumvent Regulation O's prohibition on various bank extensions of credit to similar parties.
4. To determine that BHC officials are aware of Regulation O's limitations and prohibitions and have established internal policies and procedures for the bank subsidiaries to ensure compliance by the banks.
5. To determine that the BHC has arranged to make available, upon request, a listing or some other form of information sufficient to identify all ''BHC officials'' and to make certain that such information is available to the bank subsidiaries in particular.

2050.0.6 INSPECTION PROCEDURES

1. Review the balance sheets and other records of the parent-only and nonbank subsidiaries to determine if there are any loans or other extensions of credit to BHC officials.
2. Review the income statements and supporting records of the parent-only and nonbank subsidiaries to determine if any interest income, other income, or expense is associated with a transaction with a BHC official or a related interest.
3. Ask management to identify all such transactions and to provide supporting documentation.
4. Review management's familiarity with Regulation O's limitations and the steps they have taken to establish policies for the internal administration of their subsidiary banks' extensions of credit to BHC officials.
5. Review any information prepared by management that presents a listing of all BHC officials and their related interests.
6. Review any corporate resolutions declaring an individual not to be an ''executive officer'' for purposes of Regulation O and, if necessary, confirm the individual's nonparticipation in the formulation of corporate policy.
7. As the provision of Regulation O apply to the BHC and its subsidiaries, determine if the BHC provides employees or other insiders with extensions of credit, including BHC-owned or BHC-issued credit cards. Find out if any of the credit cards are used to conduct the BHC's business.
   a. Verify that the BHC has a written policy that forbids or discourages an employee or other insider from using a BHC-owned or BHC-issued credit card for the insider's personal purposes and that the policy obligates the insider to promptly make reimbursement to the BHC.
   b. Determine the BHC's compliance with Regulation O regarding its extensions of credit (including BHC-owned or BHC-issued credit card loans) to insiders. Verify that the BHC monitors the amount of personal charges outstanding on its BHC-owned or BHC-issued credit cards that are held by insiders so that the outstanding charges, when aggregated with all of an insider's other indebtedness owed to the BHC, do not exceed $15,000.
   c. Verify the BHC's compliance with the market-terms requirement of Regulation O. Determine if—
      - the BHC requires employees and other insiders who have extensions of credit, or use BHC-owned or BHC-issued credit cards for personal purposes, to meet the BHC's normal credit underwriting standards and

- the BHC has verified that the insiders' extensions of credit (or BHC-owned or BHC-issued credit cards) do not have more preferential terms (for example, a lower interest rate or a longer repayment period) than the consumer credit cards offered by the BHC.

2050.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Loans and extensions of credit to executive officers, directors, and principal shareholders	375a and 375b (sections 22(g) and 22(h) of F.R. Act)	215.4 215.5 (Reg. O)		
Granting of below-market interest rate mortgage loans to executives of BHC subsidiaries as compensation	1972(2)		4–514 3–1094	
Restrictions on loans to insiders of a bank or its correspondent bank	1972 (2)			
Board staff interpretation on the use of bank-owned or bank-issued credit cards by bank insiders			3–1081.5	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Management Information Systems refers to the policies and operating procedures, including systems of internal control, that the board of directors of a bank holding company initiates to monitor and ensure control of its operations and activities, while maintaining and improving the financial strength and objectives of the overall organization. These policies should focus on the overall organizational structure with respect to identifying, monitoring, and managing risks. Subsequent sections of the manual focus on the essential elements of various management information systems. Included are inspection objectives and procedures to be used by Federal Reserve Bank examiners when conducting inspections of bank holding companies.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2014, this section was revised to include new and revised inspection objectives and inspection procedures for both the 2003 interagency guidance, "Policy Statement on the Internal Audit Function and its Outsourcing," and the January 23, 2013, Federal Reserve "Supplemental Policy Statement on Internal Audit Function and its Outsourcing." Refer to SR-03-5 and SR 13-1/CA 13-1 and Manual section 2060.07.

2060.05.01 AN EFFECTIVE SYSTEM OF INTERNAL CONTROLS

Effective internal control[1] is a foundation for the safe and sound operation of a financial institution (institution).[2] The board of directors and senior management of an institution are responsible for ensuring that the system of internal control operates effectively. Their responsibility cannot be delegated to others within the institution or to outside parties. An important element in assessing the effectiveness of the internal control system is an internal audit function. When properly structured and conducted, internal audit provides directors and senior management with vital information about weaknesses in the system of internal control so that management can take prompt, remedial action. The federal banking agencies'[3] (agencies) long-standing inspection policies call for examiners to review an institution's internal audit function and recommend improvements, if needed. In addition, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 U.S.C. 1831p-1), the agencies have adopted Interagency Guidelines Establishing Standards for Safety and Soundness that apply to insured depository institutions.[4] Under these guidelines and policies, each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In addressing various quality and resource issues, many institutions have been engaging independent public accounting firms and other outside professionals (outsourcing vendors) in recent years to perform work that traditionally has been done by internal auditors. These arrangements are often called "internal audit outsourcing," "internal audit assistance," "audit co-sourcing," and "extended audit services" (hereafter, collectively referred to as outsourcing). Typical outsourcing arrangements are more fully illustrated in part II below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the agencies have concerns that the structure, scope, and management of some internal audit outsourcing arrangements do not contribute to the institution's safety and soundness. Furthermore, the agencies want to ensure that these arrangements with outsourcing vendors do not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002.[5] The act addresses weaknesses in corporate governance and the

1. In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following internal control objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution's board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report *Internal Control—Integrated Framework*. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for purposes of this policy statement, encompass both financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

2. The term "institution" includes depository institutions insured by the Federal Deposit Insurance Corporation (FDIC), U.S. financial holding companies and bank holding companies supervised by the Federal Reserve System, thrift holding companies supervised by the Office of Thrift Supervision (OTS), and the U.S. operations of foreign banking organizations.

3. The Board of Governors of the Federal Reserve System (FRS), Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and Office of Thrift Supervision (OTS).

4. For national banks, appendix A to part 30; for state member banks, appendix D-1 to part 208; for insured state nonmember banks and insured state-licensed branches of foreign banks, appendix A to part 364; for savings associations, appendix A to part 570.

5. Pub. L. No. 107-204.

accounting and auditing professions, and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee composed entirely of independent directors. Public banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges' listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality control, and ethics (including independence) standards for auditors of public companies, subject to SEC review. (See SR-02-20.) Accounting firms that conduct audits of public companies (i.e., registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies, as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards.

[Sections 2060.05.02–2060.05.04 are reserved.]

2060.05.05 APPLICATION OF THE SARBANES-OXLEY ACT TO NONPUBLIC BANKING ORGANIZATIONS

In May 2003, the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision announced that they did not expect to take actions to apply the corporate-governance and other requirements of the Sarbanes-Oxley Act generally to nonpublic banking organizations that are not otherwise subject to them.[5a] (See SR-03-08.) The agencies, however, encouraged nonpublic banking organizations to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance and remain appropriate in light of the organization's size, operations, and resources. Furthermore, the agencies stated that a banking organization's policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and the agencies may take appropriate supervisory action if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

5a. As discussed below, some aspects of the auditor-independence rules established by the Sarbanes-Oxley Act apply to all federally insured depository institutions with $500 million or more in total assets. See part 363 of the FDIC's regulations.

2060.05.06 INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve and other federal banking agencies[6] adopted on March 17, 2003, an interagency policy statement addressing the internal audit function and its outsourcing (See SR 03-5). The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 and associated SEC rules. (See also sections 2124.0.2.4, 2060.1, 3230.0.10.2.5, 5010.7, and 5030.0 [page 7] pertaining to internal and external audits.)

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, insured depository institutions with assets of $500 million or more that are subject to the annual audit and reporting requirements of section 36 of the Federal Deposit Insurance Act, and also nonpublic institutions that are not subject to section 36.

6. The FDIC, OCC, and OTS.

2060.05.1 INTERNAL AUDIT FUNCTION (PART I)

2060.05.1.1 Director and Senior Management Responsibilities for Internal Audit

The board of directors and senior management are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution's policies.[7]

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management's responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution's operations. Therefore, institutions generally should also have their internal controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal audit function addresses the risks and meets the demands posed by the institution's current and planned activities. To accomplish this objective, directors should consider whether their institution's internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors' (IIA) *Standards for the Professional Practice of Internal Auditing*. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution's internal audit function.

2060.05.1.1.1 Internal Audit Placement and Structure Within the Organization

Careful thought should be given to the placement of the audit function in the institution's management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee,[8] using objective criteria it has established, should oversee the internal audit function and evaluate its per-

7. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC's regulations (12 C.F.R. 363), FDIC-insured depository institutions with total assets of $500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain the following: (1) a statement of management's responsibilities for preparing the institution's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management's assessment of the institution's compliance with those laws and regulations; and (2) for an institution with total assets of $1 billion or more at the beginning of the institution's most recent fiscal year, the report should include an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 C.F.R. 363.2(b) and 70 *Fed. Reg. 71,232, November 28, 2005.)*

8. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC's regulations must maintain an independent audit committee (i.e., consisting of directors who are *not* members of management). For institutions with between $500 million and $1 billion in assets, only a majority, rather than all, of the members of the audit committee—who must be outside directors—must be independent of management. For insured institutions having total assets of more than $3 billion, the audit committee must (1) have members with banking or related financial management expertise, (2) have access to outside legal counsel, and (3) not include any large customers of the institution. The audit committee also may be required to satisfy other audit committee membership criteria (see 12 U.S.C. 831m(g)(1)(c) and section 363.5(b)(12 C.F.R. 363.5(b)). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term ''audit committee'' is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement.

formance.[9] The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters (e.g., resources, budget, appraisals, and compensation). Institutions are encouraged to consider the IIA's *Practice Advisory 2060-2: Relationship with the Audit Committee*, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager.

Many institutions place the manager of internal audit under a dual reporting arrangement: functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan review, market-risk assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better use available resources, and enhance the institution's ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit's functional reporting to and ability to directly communicate with the institution's audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA's *Practice Advisory 1110-2: Chief Audit Executive Reporting Lines* provides additional guidance regarding functional and administrative reporting lines.

2060.05.1.1.2 Internal Audit Management, Staffing, and Audit Quality

In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

1. A control risk assessment (or risk-assessment methodology) documents the internal auditor's understanding of the institution's significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.
2. An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.
3. An internal audit program describes the objectives of the audit work and lists the

9. For example, the performance criteria could include the timeliness of each completed audit, comparison of overall performance to plan, and other measures.

procedures that will be performed during each internal audit review.

4. An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function's only role should be to independently and objectively evaluate and report on the effectiveness of an institution's risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganizations. This role typically includes helping design controls and participating in the implementation of changes to the institution's control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function's consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution's system of internal control. In order to maintain its independence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA's standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

2060.05.1.1.3 Internal Audit Frequency and Scope

The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution's on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit's control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit's adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution's environment, structure, activities, risk exposures, or systems.[10]

2060.05.1.1.4 Communication of Internal Audit Findings to the Directors, Audit Committee, and Management

To properly carry out their responsibility for internal control, directors and senior management should foster forthright communications and critical inspection of issues to better understand the importance and severity of internal control weaknesses identified by the internal auditor and operating management's solutions to these weaknesses. Internal auditors should report internal control deficiencies to the appropriate level of management as soon as they are identified. Significant matters should be promptly reported directly to the board of directors (or its audit committee) and senior management. In periodic meetings with management and the manager of internal audit, the audit committee should assess whether management is expeditiously resolving internal control weaknesses and other exceptions. Moreover, the audit committee should give the manager of internal audit the opportunity to discuss his or her findings without management being present.

10. Major changes in an institution's environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or disposals thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

Furthermore, each audit committee should establish and maintain procedures for employees of their institution to submit confidentially and anonymously concerns to the committee about questionable accounting, internal accounting control, or auditing matters.[11] In addition, the audit committee should set up procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.

2060.05.1.1.5 Contingency Planning

As with any other function, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas. Lack of contingency planning for continuing internal audit coverage may increase the institution's level of operational risk.

2060.05.1.2 U.S. Operations of Foreign Banking Organizations

The internal audit function of a foreign banking organization (FBO) should cover its U.S. operations in its risk assessments, audit plans, and audit programs. Its U.S.-domiciled audit function, head-office internal audit staff, or some combination thereof normally performs the internal audit of the U.S. operations. Internal audit findings (including internal control deficiencies) should be reported to the senior management of the U.S. operations of the FBO and the audit department of the head office. Significant adverse findings also should be reported to the head office's senior management and the board of directors or its audit committee.

2060.05.1.3 Internal Audit Systems and the Audit Function for Small Financial Institutions

An effective system of internal control and an independent internal audit function form the foundation for safe and sound operations, regardless of an institution's size. Each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities. The procedures assigned to this function should include adequate testing and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system after taking into account the internal audit function's costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the person(s) directing and/or performing the review of internal controls is not also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

2060.05.2 INTERNAL AUDIT OUTSOURCING ARRANGEMENTS (PART II)

2060.05.2.1 Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourcing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution's manager of internal

11. Where the board of directors fulfills the audit committee responsibilities, the procedures should provide for the submission of employee concerns to an outside director.

audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as ''internal audit assistance'' or ''audit co-sourcing.''

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

2060.05.2.2 Additional Inspection and Examination Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution's board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should carefully consider its current and anticipated business risks in setting each party's internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter.[12] Contracts between the institution and the vendor typically include provisions that—

1. define the expectations and responsibilities under the contract for both parties;
2. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
3. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
4. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
5. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
6. specify the locations of internal audit reports and the related workpapers;
7. specify the period of time (for example, seven years) that vendors must maintain the workpapers;[13]
8. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
9. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
10. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if

12. The engagement letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits (see AICPA Professional Standards, AU section 310). These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.

13. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

2060.05.2.2.1 Management of the Outsourced Internal Audit Function

Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor's performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

2060.05.2.2.2 Communication of Outsourced Internal Audit Findings to Directors and Senior Management

Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution's manager of internal audit. Decisions not to report the outsourcing vendor's findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board's attention, the concept of "materiality," as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution's compliance with laws and regulations, any exception may be important.

2060.05.2.2.3 Competence of Outsourced Internal Audit Vendor

Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff's qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution's internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

2060.05.2.2.4 Contingency Planning to Avoid Discontinuity of Internal Audit Coverage

When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

2060.05.3 INDEPENDENCE OF THE INDEPENDENT PUBLIC ACCOUNTANT (PART III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution's financial statements, the accounting firm will consider the extent to which it may rely on the internal control system, including the internal audit function, in designing audit procedures.

2060.05.3.1 Applicability of the SEC's Auditor Independence Requirements

2060.05.3.1.1 Institutions That Are Public Companies

To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC under section 15(d) of that act.[14] The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company.[15] In addition, if a public company's external auditor will be providing auditing services and permissible nonaudit services, such as tax services, the company's audit committee must preapprove each of these services.

According to the SEC's final rules (effective May 6, 2003) implementing the act's nonaudit service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other prohibited nonaudit services to the public company audit client. The SEC's final rules generally become effective May 6, 2003, although a one-year transition period is provided if the accountant is performing prohibited nonaudit services and actual audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period, however, must not have impaired the auditor's independence under the preexisting independence requirements of the SEC, the Independence Standards Board, and the AICPA. Although the SEC's pre-Sarbanes-Oxley independence requirements (issued November 2000 (effective August 2002)) did not prohibit the outsourcing of internal audit services to a public company's independent public accountant, they did place conditions and limitations on internal audit outsourcing.

2060.05.3.1.2 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

Under section 36, as implemented by part 363 of the FDIC's regulations, each FDIC-insured depository institution with total assets of $500 million or more is required to have an annual audit performed by an independent public accountant.[16] The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that ''[t]he independent public accountant should also be in compliance with the AICPA's *Code of Professional Conduct* and meet the independence requirements and interpretations of the SEC and its staff.''[17]

Thus, the guidelines provide for each FDIC-insured depository institution with $500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC's auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC's January 2003 auditor independence rules, once the rules come into effect.[18]

---

14. 15 U.S.C. 78*l* and 78o(d).

15. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 U.S.C. 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor's independence. Based on these three broad principles, the other nonaudit services . . . referred to in this section . . . that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client's accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management functions or human resources; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.

16. 12 C.F.R. 363.3(a). (See FDIC Financial Institutions Letter, FIL-17-2003 (Corporate Governance, Audits, and Reporting Requirements), Attachment II, March 5, 2003.)

17. Appendix A to part 363, Guidelines and Interpretations, paragraph 14, Independence.

18. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding company, once the SEC's January 2003 regulations prohibiting an external auditor from performing internal audit outsourcing services for an audit client take effect May 6, 2003, or May 6, 2004, depending on the circumstances, the holding company's external auditor cannot perform internal audit outsourcing

2060.05.3.1.3 Institutions Not Subject to Section 36 of the FDI Act That Are Neither Public Companies Nor Subsidiaries of Public Companies

The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company[19] to have its financial statements audited by an independent public accountant.[20] The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies. As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution's internal audit activities. These circumstances include, but are not limited to, situations where—

1. splitting the audit activities poses significant costs or burden,
2. persons with the appropriate specialized knowledge and skills are difficult to locate and obtain,
3. the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution, and
4. the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement.[21] In this regard, the audit committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution's board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety-and-soundness reasons, the institution's primary federal regulator may require that the institution and its independent public accountant comply with the auditor independence requirements of the Act.[22]

2060.05.3.1.4 AICPA Guidance

As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA's *Code of Professional Conduct*. This code includes professional ethics standards, rules, and interpretations that are binding on all certified public accountants (CPAs) who are members of the AICPA in order

work for that holding company or the subsidiary institution.

19. FDIC-insured depository institutions with less than $500 million in total assets are not subject to section 36 of the FDI Act. Section 36 does not apply directly to holding companies, but it provides that, for an insured depository institution that is a subsidiary of a holding company, its audited financial statements requirement and certain of its other requirements may be satisfied by the holding company.

20. See, for example, the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Institutions.

21. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the performance of these services on the auditor's independence.

22. 15 U.S.C. 78j-1.

for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client's management or as a client employee. The AICPA's guidance includes illustrations of activities that would be considered to compromise a CPA's independence. Among these are activities that involve the CPA authorizing, executing, or consummating transactions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA's *Code of Professional Conduct*.

2060.05.4 INSPECTION GUIDANCE (PART IV)

2060.05.4.1 Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their inspection work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution's internal audit function, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Specifically, examiners should consider whether—

1. the internal audit function's control risk assessment, audit plans, and audit programs are appropriate for the institution's activities;
2. the internal audit activities have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
3. the internal audit activities are consistent with the long-range goals and strategic direction of the institution and are responsive to its internal control needs;
4. the audit committee promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
5. the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
6. the institution has promptly responded to significant identified internal control weaknesses;
7. the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and results of audits are promptly communicated to senior management and members of the audit committee and board of directors;
8. workpapers adequately document the internal audit work performed and support the audit reports;
9. management and the board of directors use reasonable standards, such as the IIA's *Standards for the Professional Practice of Internal Auditing*, when assessing the performance of internal audit; and
10. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution's internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

1. the arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
2. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
3. the scope of the outsourced work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
4. the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
5. the arrangement with the outsourcing vendor satisfies the independence standards described in this policy statement and

thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant; and
6. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

2060.05.4.2 Inspection Concerns About the Adequacy of the Internal Audit Function

If the examiner concludes that the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet the institution's internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the inspection should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. Should the examiner find material weaknesses in the internal audit function or the internal control system, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution's management and composite ratings should reflect the examiner's conclusions regarding the institution's internal audit function. The report of inspection should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

2060.05.4.3 Concerns About the Independence of the Outsourcing Vendor

An examiner's initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution's and its vendor's adherence to the independence standards described in parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner's concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution's senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution's external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable.

2060.05.5 INSPECTION OBJECTIVES

1. To determine with reasonable assurance whether the institution[23] has an adequate system of internal controls that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
2. To determine if the internal audit function and the internal audit outsourcing arrangements of the banking organizations are adequately and competently managed by the board of directors and senior management.

23. The term ''institution'' is used to maintain consistency with the interagency policy statement, but these inspection objectives and procedures apply to financial holding companies, bank holding companies, and their bank and nonbank subsidiaries.

3. To ascertain that the banking organization's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the management process: the control environment, risk assessment, control activities, information and communication, and monitoring activities.
4. To make an overall determination as to whether an institution's internal audit function and its processes are effective or ineffective based on the 2003 interagency policy statement and the FR supplemental policy guidance.
5. To determine whether the internal audit function reports vital information about weaknesses in the system of internal control to the board of directors (or its audit committee) and senior management and that expeditious remedial action is taken to resolve the internal control weaknesses as well as any other exceptions.
6. To determine if
   a. the audit committee has established and maintains procedures for employees of the institution to confidentially and anonymously submit concerns to the committee about questionable accounting, internal control, or auditing matters; and
   b. the audit committee has procedures for the timely investigation of complaints received and the retention, for a reasonable time period, of documentation concerning the complaint and its subsequent resolution.
7. To determine the adequacy of the internal audit function (including its use of outsourced internal audit vendors) as to organizational structure, prudent management, staff having sufficient expertise, audit quality, and the ability of auditors to directly and freely communicate internal audit findings to the board of directors, its audit committee, and senior management.
8. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor, under standards established in the 2003 "Interagency Policy Statement on the Internal Audit Function and Its Outsourcing" and the 2013 Federal Reserve's "Supplemental Policy Statement on the Internal Audit Function and its Outsourcing."
9. To determine whether the internal audit function and its processes can be relied upon for the current supervisory review period.
10. For high risk areas, to make a determination as to whether additional inspection work is needed even when the internal audit may be deemed effective and its work reliable.

2060.05.6 INSPECTION PROCEDURES

Examiners should obtain assurances from the audit committee and senior management that they will have full and timely access to an institution's internal audit resources, including personnel, work papers, risk assessments, work plans, programs, reports, and budgets. Examiners should consider widening the scope of their inspection work when such assurances are not provided or if there are any significant delays in gaining access to the internal audit resources. Such a delay may subject the institution to follow-up supervisory action.

This inspection program should include a review of audit function and audit outsourcing, which would include a review of the holding company's internal and external audits and the audit procedures they encompass. The audit guidelines are general and all sections or questions may not be applicable to every entity within the consolidated organization.

Before reviewing any specific audit procedures, the examiner should first determine the independence and competence of the auditors. If the examiner believes the auditors to be both competent and independent, he or she should then determine the effectiveness and adequacy of their work, and whether the auditors made an assessment as to whether the institution's internal audit function incorporated the enhanced practices outlined in the FR's "Supplemental Policy Statement on Internal Audit Function and its Outsourcing" (Supplemental Guidance).

Based on a review of the audit function and on the auditor's work, the examiner must then determine the scope of the inspection. The program and related supporting documentation should be completed in an organized manner and should be retained as part of the inspection work papers.

Upon completion of the review of the internal audit program, the examiner should be able to formulate a conclusion on the effectiveness of audit processes and coverage. Conclusions about any weaknesses in the internal or external audit work performed for the FR supervised bank or savings and loan holding company should be summarized and included in the inspection report. Matters Requiring Immediate Attention (MRIA) or Matters Requiring Attention (MRA) to be included in the inspection report should be discussed with the audit committee and board of directors, the Chief Audit Executive, (CAE) and senior bank management.

2060.05.6.1 Internal Audit Function

The following inspection procedures should encompass a review of the structure of the internal audit organization and function:

1. *Organizational structure of the audit department.* Review the internal audit's charter and its organization chart for direct and indirect reporting lines of the CAE, and the minutes of the board's audit or examining committee to determine how effectively the CAE and board of directors are discharging their responsibility. If the CAE reports to someone other than the chief executive officer (CEO), determine if the audit committee has documented its rationale for the reporting structure, including any mitigating controls for situations that could adversely impact the objectivity of the CAE. Determine if the audit committee has quarterly, but at least annually, evaluated whether (1) the CAE is impartial and not unduly influenced by the administrative reporting line and (2) any conflicts of interest for the CAE and other audit staff are accompanied by appropriate restrictions to mitigate those conflicts.
2. *Independence of the audit function.* Interview the CAE and observe the operation of the audit department to determine its functional responsibilities.
3. *CAE's qualifications.* Review biographical data and interview the CAE to determine his or her ability to manage the institution's internal audit function and his or her responsibility within the institution (i.e., bank holding or savings and loan holding company).
4. *Audit staff qualifications.* Review the biographical data and interview the management staff of the audit department to determine their qualifications commensurate with their delegated responsibilities compared to the institution's strategy and operations. Review the educational background, professional certifications and relevant banking and audit experience of staff to assess overall staff qualifications and to identify any knowledge gaps.
5. *Skills gap assessments.* Review how often they are performed, and how gaps in coverage are addressed (e.g. targeted staff hires; training; business- line rotation programs, and co-sourcing/ outsourcing arrangements).
6. *Training.* Ensure there is a process in place to determine and monitor the annual training, typically 40 hours minimum, for each staff member based on their needs.
7. *Content and use of the audit frequency and scope schedule.* Review the methodology utilized to determine the audit universe and frequency of coverage per auditable entity.
8. *Audit department participation in systems design projects.* Determine through interviews and documentation reviews, internal audit's role in assessing systems change control processes.
9. *Internal audit charter.* Review the internal audit charter to determine its current adequacy. Determine whether the CAE periodically reviews the current adequacy of the charter and makes recommendations to the audit committee for improving internal audit function and whether outsourcing to external experts may be needed.
10. *Audit manual.* Review the audit manual to ensure that it includes all applicable audit processes, practices, and procedures, and applicable references to Institute of Internal Auditor (IIA) standards.
11. *Maintenance of audit records.* Review a sample of the audit reports and associated work papers to determine compliance with prescribed procedures and proper documentation, including appropriate distribution to senior managers.
12. *Audit department's formal reporting procedures.* Review CAE presentations and MIS reporting to the audit or examining committee to ensure the committee is providing effective oversight of the internal audit function.
13. *Issue Tracking Follow-up Processes.* Review processes utilized to validate closure of internal audit findings. Review a sample of closed issues to ensure that internal audit maintains sufficient documentation to validate issue closure.

14. *Use and effectiveness of audit computer programs.* Interview the CAE and/or the appropriate staff members regarding the use of the computer and access to the files for audit purposes. Obtain a walkthrough of automated auditing systems and methodologies.

2060.05.6.2 Other Internal Audit Function Inspection Procedures

1. Broaden the scope of the inspection if the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet its internal audit needs, does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise inadequate.
2. Discuss supervisory concerns and outstanding internal-external audit report comments with the CAE or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's comments and concerns, bring these matters to the attention of senior management and the board of directors or audit committee.
3. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions that should be taken to ensure that the institution corrects the deficiencies (including formal and informal enforcement actions).
4. Incorporate conclusions about the institution's internal audit function into its management and composite supervisory ratings.
5. Include in the inspection report comments concerning the adequacy of the internal audit function, significant issues or concerns, and recommended corrective actions.

2065.05.6.3 Additional Aspects of the Examiner's Review of an Outsourcing Arrangement

1. Review the internal audit outsourcing arrangement and determine if the institution has a written contract or an engagement letter with the vendor.
2. Determine whether the written contract or engagement letter includes provisions that—
   a. define the expectations and responsibilities under the contract for both parties;
   b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
   c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
   d. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and establish stipulations for default and termination of the contract;
   e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related work papers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the work papers prepared by the outsourcing vendor;
   f. specify the locations of internal audit reports and the related work papers;
   g. specify the period of time (for example, seven years) that vendors must maintain the work papers;[24]
   h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related work papers prepared by the outsourcing vendor;
   i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
   j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.
3. Determine whether—
   a. the outsourcing arrangement maintains or improves the quality of the internal

24. If the work papers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the banking organization and examiners to access the electronic work papers for a specified time period.

audit function and the institution's internal control;
b. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
c. the scope of work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
d. the directors have ensured that the outsourced internal audit function is effectively managed by the institution;
e. the arrangement with the outsourcing vendor satisfies the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant;
f. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and whether there are adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement; and
g. the institution has a contingency plan to ensure continuity in audit coverage, especially for high-risk areas.

4. Adjust the scope of the inspection if the outsourcing arrangement has diminished the quality of the institution's internal audit. If the quality of the internal audit is diminished, inform senior management and the board of directors and consider it in the institution's management and composite ratings.

2060.05.6.4 Assessment of Auditor Independence

1. The initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution's and its vendor's adherence to the independence standards discussed in parts I, II, and III of the "Interagency Policy Statement on the Internal Audit Function and Its Outsourcing" (2003 Policy Statement) and the Federal Reserve's 2013 Supplemental Guidance. If the vendor provides both external and internal audit services to the institution—
   a. question the bank or savings and loan holding company's CAE and audit committee how they determined that the vendor was independent; and
   b. if the vendor is an accounting firm, ask the CAE or audit committee how they assessed that the arrangement had not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence.
2. If the answers to the above raise supervisory concern, or are not adequately addressed, discuss the matter with appropriate Reserve Bank management and supervisory staff.
3. If the Reserve Bank management and supervisory staff concurs that the independence of the external auditor or other vendor appears to be compromised, discuss the inspection findings and what appropriate supervisory actions the Federal Reserve may take with the bank holding or savings and loan holding company's senior management, board of directors (or audit committee), and the external auditor or other vendor.

2060.05.6.5 Supplemental Procedures to Evaluate the Effectiveness of the Internal Audit Function

1. Determine whether the internal audit function and its processes are effective or ineffective and whether internal audit's work can be potentially relied upon as part of the supervisory review process. An institution's internal audit function generally would be considered effective if the institution's internal audit function structure and practices are consistent with the 2003 interagency policy statement and the Federal Reserve's 2013 supplemental guidance (supplemental guidance).
2. To determine if the institution has incorporated the Federal Reserve's Supplemental Guidance, evaluate whether the factors and requirements underpinning the following characteristics and processes are in place:
   Attributes
   - Independence
   - Competent internal audit staff
   - Objectivity and ethics

Governance
- Role of board of directors
- Role of audit committee
- Role of Chief Audit Executive (CAE)

Audit Processes
- *Audit methodology*—Review the internal audit's risk-assessment methodology that drives its risk-assessment process and determine if it represents the audit universe. Determine if the methodology included a documented analysis of cross-institutional risk and thematic control issues and the processes and procedures for evaluating the effectiveness of risk-management, control, and governance processes. Evaluate internal audit's plan for continuous monitoring and in determining and evaluating risk. Assess internal audit's process for incorporating other risk identification techniques (i.e., risk and control self-assessment) that the institution's management utilizes.
- *Audit universe*—Determine if internal audit has effective processes to identify all auditable entities within the audit universe. Review the documentation of the audit universe and verify whether it has been reviewed periodically (e.g., during the annual audit planning process) and when significant organizational changes have occurred.
- *Risk assessment*—Review internal audit's documentation of its understanding of the institution's significant business activities and their associated risks. Verify that internal audit includes, at least annually, a review of critical risk-management functions as well as changes in the system of internal controls, infrastructure, work processes, new or changed business lines, or laws and regulations. Review the disposition of the results of the overall risk assessment summary and determine if internal audit gave consideration to key performance or risk indicators and the most significant risks facing the institution, including how the risks are addressed within the internal audit plan.
- *Audit plan*—Verify that internal audit develops and periodically revises its comprehensive audit plan. Determine if it verifies that the plan includes audit coverage for all identified, auditable entities within the audit universe appropriate for the size and complexity of the institution's activities.
- *Continuous monitoring*— Supplement inspection procedures with continuous monitoring and an assessment of key elements of internal audit, including:
  - — the adequacy and independence of the audit committee;
  - — the independence, professional competence, and quality of the internal audit function;
  - — the quality and scope of the audit methodology, audit plan, and risk assessment; and
  - — the adequacy of audit programs and work paper standards.

  1) Review these key elements at least annually to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.
  2) Make a determination on whether the work of internal audit can be relied upon when internal audit's overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing inspection procedures.
  3) Evaluate and determine whether additional inspection work is needed in high risk areas even where internal audit has been deemed effective and its work reliable.

Audit Performance and Monitoring
- *Scope*—Adjust the scope of the inspection if the bank holding or savings and loan holding company's internal audit function does not sufficiently meet the institution's internal audit needs (whether or not the audit function is outsourced), or is otherwise ineffective.
- *Work papers*—Determine whether the internal audit work papers adequately document the work program, the work performed and work paper standards, including documentation of any observations and analysis made, the conclusions, and audit results.
- *Audit reports:*

1) Ascertain whether internal audit has effective audit reporting processes that communicate audit report issues throughout the institution and they are addressed in a timely manner.
2) Review the inspection period's audit reports and verify that they contain an executive summary describing the auditable area, its conclusions, rationale, key issues, and management's documented action plans to address audit findings.

- *Audit issues tracking*
  1) Verify that internal audit has effective processes in place to track, monitor, and follow up on open audit issues.
  2) Determine if the institution conducts independent quality assurance reviews of internal audit work performed.
  3) Verify that the CAE implements appropriate improvements in internal audit processes or staff training through the quality assurance and improvement programs.
  4) Determine whether the institution conducts an internal quality assessment at least annually and if the CAE reports the results and status of internal assessments to senior management and the audit committee at least annually.
  5) Discuss supervisory concerns and outstanding internal-external audit report comments with the CAE or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's comments and concerns, bring these matters to the attention of senior management and the board of directors or the audit committee.
- *Retrospective review processes.*
  1) Determine if management has conducted a post-mortem and "lessons learned" analysis when adverse events (fraud or a significant loss) have occurred.
  2) Find out if internal audit function verified that a review took place and that appropriate action was taken to remediate identified issues.
  3) Ascertain if internal audit function evaluated management's analysis of the reasons for the event and if the adverse event was the result of a control break down or failure, and whether management identified measures to be put in place to prevent a similar event from occurring in the future.

Quality Assurance

— *Internal Quality Assurance.* Ensure that the internal audit function process is documented in the audit manual. Review samples of work, overall results and status of any action plans.

— *External Quality Assurance.* Determine whether an independent assessment had been performed within the five-year requirement. Review results and action plan status to remediate issues.

1) Assess the quality and scope of the internal audit work, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Consider whether—
   a. the internal audit function's risk assessment, plans, and programs are appropriate for the institution's activities;
   b. the internal audit function is adequately managed to ensure that audit plans are accomplished, programs are carried out, and results of audits are promptly communicated to the managers and directors;
   c. the internal audit plan and program have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
   d. the activities of internal audit are consistent with the long-range goals of the institution and are responsive to its internal control needs; and
   e. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

3. If there are deficiencies in any internal audit characteristics, use your judgment to:
   - evaluate the significance of the deficiencies and their relevance to the institution's safety and soundness or compliance with laws and regulations, and
   - determine whether these deficiencies would preclude overall audit processes from being deemed effective.

   While the internal audit function's overall processes could be deemed effective, some elements of the internal audit function may require enhancements or improvements, such as documentation with respect to specific audit processes (for example, risk assessments or work papers).
4. If examiners find the key elements of the internal audit function to be insufficient, the overall effectiveness of the internal audit function should come into question. Such findings may be include:
   - Lack of an appropriate risk-assessment process
   - Lack of sufficient and competent resources
   - Lack of audit coverage in key areas
   - Inappropriate classification of audit findings
   - Insufficient root cause analyses
   - Numerous work paper deficiencies
   - A large number of unresolved control-related issues
5. Internal audit processes may be considered ineffective if there are significant, unresolved supervisory matters requiring immediate attention (MRIAs) and/or matters requiring attention (MRAs) pertaining to internal audit, or if other supervisory concerns exist relating to the effectiveness of the internal audit function.

2060.05.6.6 Continuous Monitoring between Inspections of Internal Audit

1. Supplement the inspection procedures through continuous monitoring. Include an assessment of key elements of internal audit during the period following the institution's most recent inspection. The assessment of key elements of internal audit should include:
   - The adequacy and independence of the audit committee;
   - The independence, professional competence, and quality of the internal audit function;
   - The quality and scope of the audit methodology, audit plan, and risk assessment; and
   - The adequacy of audit programs and work paper standards.
2. Review, at least annually, the above key elements and determine whether there have been significant changes to the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

2060.05.6.7 Evaluating the Ability to Rely on Internal Audit

1. Consider relying on internal audit at a supervised institution based on whether:
   a. an internal audit was deemed effective at the most recent supervisory inspection of internal audit;
   b. internal audit's overall function and related processes are considered effective and when recent work was performed by internal audit in a area where examiners are performing inspection procedures and the examiners can evaluation whether they may rely on the work of internal audit;
   c. an evaluation was performed of the significance and degree of risk of particular activities, business lines or other areas or business and if a determination was made as to the existence of appropriate internal controls over such risks; and
   d. the extent of continuous monitoring activities that did not identify any significant deficiencies or discover any adverse changes in audit processes or the quality of internal audit's work.
2. Leverage off an internal audit function's assessment of how emerging risks and high-risk areas are mitigated within the institution, including whether appropriate internal controls are in place over such risks;
3. For emerging risks and high-risk areas, determine if additional inspection work is needed, even when internal audit has been deemed effective and its work considered reliable.
4. Document the results of the supervisory review, supporting the basis for a conclusion as to whether the examiners can rely upon internal audit and whether there are any specific auditable areas (that is, function or business line) or elements of internal

audit (e.g. open audit issues) on which the examiners cannot rely.

2060.05.6.8 Considerations for Consolidated Supervision

1. Tailor the nature and scope of the Federal Reserve's supervisory and inspection work to the organization's legal entity and regulatory structure and also the risks associated with the organization's activities. Promote effective consolidated supervision by fostering strong, cooperative relationships among the Federal Reserve, relevant domestic and foreign supervisors, and functional regulators. Achieve this objective while limiting the potential for duplication of effort or undue burden on the institution under review.
2. Focus on the scope and depth of the other supervisor's or regulator's internal audit review. Determine the Federal Reserve's ability to rely on the work of the relevant supervisor or functional regulator:
   - Rely to the fullest extent possible on assessments and information developed by other relevant domestic and foreign supervisors and functional regulators;
   - Focus Federal Reserve supervisory attention on material risks from activities that are not supervised by another supervisor or regulator, or that cut across legal entities; and
   - Participate in the exchange of information among domestic and foreign supervisors and functional regulators, consistent with applicable laws and information-sharing arrangements, providing for the comprehensive, consolidated supervision of each banking organization's global activities.
3. The Federal Reserve's conduct of consolidated supervision is central to and dependent on the coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators. The Federal Reserve's direction for achieving these objectives is closely integrated into the supervisory framework for consolidated bank holding companies and the combined U.S. operations of foreign banking organizations.
4. When the Federal Reserve is not the primary supervisor or functional regulator of all entities consolidated under the holding company, the Federal Reserve will evaluate whether, and the degree to which, the major subsidiaries of the holding company implemented the supplemental guidance.

The Federal Reserve issued this January 23, 2013, policy statement to supplement the guidance in the 2003 "Interagency Policy Statement on the Internal Audit Function and Its Outsourcing" (referred to as the 2003 Policy Statement).[1] Federal Reserve staff has identified areas for improving regulated institutions' internal audit functions. This supplemental policy statement addresses the characteristics, governance, and operational effectiveness of an institution's internal audit function. Further, this statement reflects certain changes in banking regulations that have occurred since the issuance of the 2003 Policy Statement. The Federal Reserve is providing this supplemental guidance to enhance regulated institutions' internal audit practices and to encourage them to adopt professional audit standards and other authoritative guidance, including those issued by the Institute of Internal Auditors (IIA).[2]

This supplemental statement applies to supervised institutions with greater than $10 billion in total consolidated assets, including state member banks, domestic bank and savings and loan holding companies, and U.S. operations of foreign banking organizations.[3] This supplemental guidance is also consistent with the objectives of the Federal Reserve's consolidated supervision framework for large financial institutions with total consolidated assets of $50 billion or more, which promotes an independent internal audit function as an essential element for enhancing the resiliency of supervised institutions.[4]

Assessment of the effectiveness of the internal audit function. The degree to which an institution implements the internal audit practices outlined in this policy statement will be considered in the Federal Reserve's supervisory assessment of the effectiveness of an institution's internal audit function as well as its safety and soundness and compliance with consumer laws and regulations. Moreover, the overall effectiveness of an institution's internal audit function will influence the ability of the Federal Reserve to rely upon the work of an institution's internal audit function.

This supplemental policy statement builds upon the 2003 Policy Statement, which remains in effect, and follows the same organizational structure, with a new section entitled "Enhanced Internal Audit Practices" and updates to Parts I-IV of the 2003 Policy Statement. Refer to SR-13-1/CA13-1 and its attachment. To avoid historical references and duplication some introductory paragraphs and other small phrases are omitted from the policy statement here, as indicated by a line of asterisks.

* * * * * *

2060.07.1 SUPPLEMENTAL POLICY GUIDANCE

2060.07.1.1 Enhanced Internal Audit Practices

An institution's internal audit function should incorporate the following enhanced practices into their overall processes:

2060.07.1.1.1 Risk Analysis

Internal audit should analyze the effectiveness of all critical risk-management functions both with respect to individual risk dimensions (for example, credit risk), and an institution's overall risk-management function. The analysis should focus on the nature and extent of monitoring compliance with established policies and processes and applicable laws and regulations within the institution as well as whether monitoring processes are appropriate for the institution's business activities and the associated risks.

2060.07.1.1.2 Thematic Control Issues

Internal audit should identify thematic macro control issues as part of its risk-assessment pro-

1. Refer to SR-03-5, "Amended Interagency Guidance on the Internal Audit Function and Its Outsourcing."

2. In this guidance, references have been provided to the IIA's International Standards for the Professional Practice of Internal Auditing (Standards). Refer to the IIA website at https://na.theiia.org/standards-guidance/pages/standards-and-guidance-ippf.aspx.

3. Section 4 of this document, however, clarifies certain changes to the Federal Deposit Insurance Corporation regulation (12 CFR part 363) on independence standards for independent public accountants at insured depository institutions with total assets of $500 million or more, which were adopted pursuant to 2009 amendments to section 36 of the FDI Act.

4. Refer to SR-12-17/CA letter 12-14, "Consolidated Supervision Framework for Large Financial Institutions."

cesses and determine the overall impact of such issues on the institution's risk profile. Additional audit coverage would be expected in business activities that present the highest risk to the institution. Internal audit coverage should reflect the identification of thematic macro control issues across the firm in all auditable areas. Internal audit should communicate thematic macro control issues to senior management and the audit committee.

In addition, internal audit should identify patterns of thematic macro control issues, determine whether additional audit coverage is required, communicate such control deficiencies to senior management and the audit committee, and ensure management establishes effective remediation mechanisms.

2060.07.1.1.3 Challenging Management and Policy

Internal audit should challenge management to adopt appropriate policies and procedures and effective controls. If policies, procedures, and internal controls are ineffective or insufficient in a particular line of business or activity, internal audit should report specific deficiencies to senior management and the audit committee with recommended remediation. Such recommendations may include restricting business activity in affected lines of business until effective policies, procedures, and controls are designed and implemented. Internal audit should monitor management's corrective action and conduct a follow-up review to confirm that the recommendations of both internal audit and the audit committee have been addressed.

2060.07.1.1.4 Infrastructure

When an institution designs and implements infrastructure enhancements, internal audit should review significant changes and notify management of potential internal control issues. In particular, internal audit should ensure that existing, effective internal controls (for example, software applications and management information system reporting) are not rendered ineffective as a result of infrastructure changes unless those controls are compensated for by other improvements to internal controls.

2060.07.1.1.5 Risk Tolerance

Internal audit should understand risks faced by the institution and confirm that the board of directors and senior management are actively involved in setting and monitoring compliance with the institution's risk tolerance limits. Internal audit should evaluate the reasonableness of established limits and perform sufficient testing to ensure that management is operating within these limits and other restrictions.

2060.07.1.1.6 Governance and Strategic Objectives

Internal audit should evaluate governance at all management levels within the institution, including at the senior management level, and within all significant business lines. Internal audit should also evaluate the adequacy and effectiveness of controls to respond to risks within the organization's governance, operations, and information systems in achieving the organization's strategic objectives. Any concerns should be communicated by internal audit to the board of directors and senior management.

2060.07.1.2 Internal Audit Function *(Part I of the 2003 Policy Statement)*

The primary objectives of the internal audit function are to examine, evaluate, and perform an independent assessment of the institution's internal control system, and report findings back to senior management and the institution's audit committee. An effective internal audit function within a financial institution is a vital means for an institution's board of directors to maintain the quality of the internal control environment and risk-management systems.

The guidance set forth in this section supplements the existing guidance in the 2003 Policy Statement by strongly encouraging internal auditors to adhere to professional standards, such as the IIA guidance. Furthermore, this section clarifies certain aspects of the IIA guidance and provides practices intended to increase the safety and soundness of institutions.

2060.07.1.2.1 Attributes of Internal Audit

Independence. Internal audit is an independent function that supports the organization's business objectives and evaluates the effectiveness of risk management, control, and governance processes. The 2003 Policy Statement addressed the structure of an internal audit function, noting that it should be positioned so that an institution's board of directors has confidence that the internal audit function can be impartial and not unduly influenced by managers of day-to-day operations. Thus, the member of management responsible for the internal audit function (hereafter referred to as the chief audit executive or CAE)[5] should have no responsibility for operating the system of internal control and should report functionally to the audit committee. A reporting arrangement may be used in which the CAE is functionally accountable and reports directly to the audit committee on internal audit matters (that is, the audit plan, audit findings, and the CAE's job performance and compensation) and reports administratively to another senior member of management who is not responsible for operational activities reviewed by internal audit. When there is an administrative reporting of the CAE to another member of senior management, the objectivity of internal audit is served best when the CAE reports administratively to the chief executive officer (CEO).

If the CAE reports administratively to someone other than the CEO, the audit committee should document its rationale for this reporting structure, including mitigating controls available for situations that could adversely impact the objectivity of the CAE. In such instances, the audit committee should periodically (at least annually) evaluate whether the CAE is impartial and not unduly influenced by the administrative reporting line arrangement. Further, conflicts of interest for the CAE and all other audit staff should be monitored at least annually with appropriate restrictions placed on auditing areas where conflicts may occur.

For foreign banking organizations (FBOs), the internal audit function for the U.S. operations of an FBO should have appropriate independent oversight for the total assets of U.S. operations.[6] When there is a resident U.S. audit function, the CAE of the U.S. audit function should report directly to senior officials of the internal audit department at the head office such as the global CAE. If the FBO has separate U.S. subsidiaries, oversight may be provided by a U.S. based audit committee that meets U.S. public company standards for independence or by the foreign parent company's internal audit function.

Professional competence and staffing. Internal audit staff should have the requisite collective skill levels to audit all areas of the institution. Therefore, auditors should have a wide range of business knowledge, demonstrated through years of audit and industry-specific experience, educational background, professional certifications, training programs, committee participation, professional associations, and job rotational assignments. Internal audit should assign staff to audit assignments based on areas of expertise and, when feasible, rotate staff within the audit function.

Internal audit management should perform knowledge-gap assessments at least annually to evaluate whether current staff members have the knowledge and skills commensurate with the institution's strategy and operations. Management feedback surveys and internal or external quality assurance findings are useful tools to identify and assess knowledge gaps. Any identified knowledge gaps should be filled and may be addressed through targeted staff hires, training, business line rotation programs, and outsourcing arrangements. The internal audit function should have an effective staff training program to advance professional development and should have a process to evaluate and monitor the quality and appropriateness of training provided to each auditor. Internal auditors generally receive a minimum of forty hours of training in a given year.

Objectivity and ethics. Internal auditors should be objective, which means performing assignments free from bias and interference. A major characteristic of objectivity is that the CAE and all internal audit professional staff avoid any conflicts of interest.[7] For their first year in the internal audit function, internally recruited internal auditors should not audit activities for which they were previously responsible. Moreover, compensation schemes should not provide incentives for internal auditors to act contrary to the attributes and objectives of the internal audit

5. More recently, this title is used to refer to the person in charge of the internal audit function. An institution may not have a person at the management level of CAE and instead may have an internal audit manager.

6. This is defined as the combined total assets of U.S. operations, net of all intercompany assets and claims on U.S.-domiciled affiliates.

7. IIA standards define conflict of interest as a situation in which an internal auditor, who is in a position of trust, has a competing professional or personal interest. Such competing interests can make it difficult for the individual to fulfill his or her duties impartially.

function.[8] While an internal auditor may recommend internal control standards or review management's procedures before implementation, objectivity requires that the internal auditor not be responsible for the design, installation, procedures development, or operations of the institution's internal control systems.

An institution's internal audit function should have a code of ethics that emphasizes the principles of objectivity, competence, confidentiality, and integrity, consistent with professional internal audit guidance such as the code of ethics established by the IIA.

Internal audit charter. Each institution should have an internal audit charter that describes the purpose, authority, and responsibility of the internal audit function. An audit charter should include the following critical components:

- The objectives and scope of the internal audit function;
- The internal audit function's management reporting position within the organization, as well as its authority and responsibilities;
- The responsibility and accountability of the CAE; and
- The internal audit function's responsibility to evaluate the effectiveness of the institution's risk management, internal controls, and governance processes.

The charter should be approved by the audit committee of the institution's board of directors. The charter should provide the internal audit function with the authorization to access the institution's records, personnel, and physical properties relevant to the performance of internal audit procedures, including the authority to examine any activities or entities. Periodically, the CAE should evaluate whether the charter continues to be adequate, requesting the approval of the audit committee for any revisions. The charter should define the criteria for when and how the internal audit function may outsource some of its work to external experts.

8. IIA standards have additional examples of "conflict of interest" for consideration.

2060.07.1.2.2 Corporate Governance Considerations

Board of directors and senior management responsibilities. The board of directors and senior management are responsible for ensuring that the institution has an effective system of internal controls. As indicated in the 2003 Policy Statement, this responsibility cannot be delegated to others within the institution or to external parties. Further, the board of directors and senior management are responsible for ensuring that internal controls are operating effectively.

Audit committee responsibilities. An institution's audit committee is responsible for establishing an appropriate internal audit function and ensuring that it operates adequately and effectively. The audit committee should be confident that the internal audit function addresses the risks and meets the demands posed by the institution's current and planned activities. Moreover, the audit committee is expected to retain oversight responsibility for any aspects of the internal audit function that are outsourced to a third party.

The audit committee should provide oversight to the internal audit function. Audit committee meetings should be on a frequency that facilitates this oversight and generally should be held four times a year at a minimum, with additional meetings held by audit committees of larger financial institutions. Annually, the audit committee should review and approve internal audit's charter, budget and staffing levels, and the audit plan and overall risk-assessment methodology. The committee approves the CAE's hiring, annual performance evaluation, and compensation.

The audit committee and its chairperson should have ongoing interaction with the CAE separate from formally scheduled meetings to remain current on any internal audit department, organizational, or industry concerns. In addition, the audit committee should have executive sessions with the CAE without members of senior management present as needed.

The audit committee should receive appropriate levels of management information to fulfill its oversight responsibilities. At a minimum, the audit committee should receive the following data with respect to internal audit:

- Audit results with a focus on areas rated less than satisfactory;
- Audit plan completion status and compliance with report issuance timeframes;

- Audit plan changes, including the rationale for significant changes;
- Audit issue information, including aging, past-due status, root-cause analysis, and thematic trends;
- Information on higher-risk issues indicating the potential impact, root cause, and remediation status;
- Results of internal and external quality assurance reviews;
- Information on significant industry and institution trends in risks and controls;
- Reporting of significant changes in audit staffing levels;
- Significant changes in internal audit processes, including a periodic review of key internal audit policies and procedures;
- Budgeted audit hours versus actual audit hours;
- Information on major projects; and
- Opinion on the adequacy of risk-management processes, including effectiveness of management's self-assessment and remediation of identified issues (at least annually).

Role of the chief audit executive. In addition to communicating and reporting to the audit committee on audit-related matters, the CAE is responsible for developing and maintaining a quality assurance and improvement program that covers all aspects of internal audit activity, and for continuously monitoring the effectiveness of the audit function. The CAE and/or senior staff should effectively manage and monitor all aspects of audit work on an ongoing basis, including any audit work that is outsourced.[9]

2060.07.1.2.3 The Adequacy of the Internal Audit Function's Processes

Internal audit should have an understanding of the institution's strategy and operating processes as well as the potential impact of current market and macroeconomic conditions on the financial institution. Internal audit's risk-assessment methodology is an integral part of the evaluation of overall policies, procedures, and controls at the institution and the development of a plan to test those processes.

Audit methodology. Internal audit should ensure that it has a well-developed risk-assessment methodology that drives its risk-assessment process. The methodology should include an analysis of cross-institutional risk and thematic control issues and address its processes and procedures for evaluating the effectiveness of risk management, control, and governance processes. The methodology should also address the role of continuous monitoring in determining and evaluating risk, as well as internal audit's process for incorporating other risk identification techniques that the institution's management utilizes such as a risk and control self-assessment (RCSA). The components of an effective methodology should support the internal audit function's assessment of the control environment, beginning with an evaluation of the audit universe.

Audit universe. Internal audit should have effective processes to identify all auditable entities within the audit universe. The number of auditable entities will depend upon whether entities are captured at individual department levels or at other aggregated organizational levels. Internal audit should use its knowledge of the institution to determine whether it has identified all auditable entities and may use the general ledger, cost centers, new product approval processes, organization charts, department listings, knowledge of the institution's products and services, major operating and application systems, significant laws and regulations, or other data. The audit universe should be documented and reviewed periodically as significant organizational changes occur or at least during the annual audit planning process.

Internal audit risk assessment. A risk assessment should document the internal audit staff's understanding of the institution's significant business activities and the associated risks. These assessments typically analyze the risks inherent in a given business line or process, the mitigating control processes, and the resulting residual risk exposure to the institution.

A comprehensive risk assessment should effectively analyze the key risks (and the critical risk-management functions) within the institution and prioritize audit entities within the audit universe. The risk-assessment process should be well documented and dynamic, reflecting changes to the system of internal controls, infrastructure, work processes, and new or changed

9. The ongoing review of audit work should include risk assessments of audit entities and elements, scope documents, audit programs, detailed audit procedures and steps (including sampling methodologies), audit work papers, audit findings, and monitoring of the timely and effective resolution of audit issues.

business lines or laws and regulations. The risk assessments should also consider thematic control issues, risk tolerance, and governance within the institution. Risk assessments should be revised in light of changing market conditions or laws and regulations and updated during the year as changes are identified in the business activities of the institution or observed in the markets in which the institution operates, but no less than annually. When the risk assessment indicates a change in risk, the audit plan should be reviewed to determine whether the planned audit coverage should be increased or decreased to address the revised assessment of risk.

Risk assessments should be formally documented and supported with written analysis of the risks.[10] There should be risk assessments for critical risk-management functions within the institution. Risk assessments may be quantitative or qualitative and may include factors such as the date of the last audit, prior audit results, the impact and likelihood of an event occurring, and the status of external vendor relationships. A management RCSA, if performed, may be considered by the internal audit function in developing its independent risk assessment. The internal audit risk assessment should also include a specific rationale for the overall auditable entity risk score. The overall disposition of the risk assessment should be summarized with consideration given to key performance or risk indicators and prior audit results. A high-level summary or discussion of the risk-assessment results should be provided to the audit committee and include the most significant risks facing the institution as well as how these risks have been addressed in the internal audit plan.

Internal audit plan. Internal audit should develop and periodically revise its comprehensive audit plan and ensure that audit coverage for all identified, auditable entities within the audit universe is appropriate for the size and complexity of the institution's activities. This should be accomplished either through a multiyear plan approach, with the plan revised annually, or through an approach that utilizes a framework to evaluate risks annually focusing on the most significant risks. In the latter approach, there should be a mechanism in place to identify when a significant risk will not be audited in the specified timeframe and a requirement to notify the audit committee and seek its approval of any exception to the framework. Generally, common practice for institutions with defined audit cycles is to follow either a three- or four-year audit cycle; high-risk areas should be audited at least every twelve to eighteen months.[11]

The internal audit plan should consider the risk assessment and internal audit's approach to audit coverage should be appropriate based on the risk assessment. An effective plan covers individual business areas and risk disciplines as well as cross-functional and cross-institutional areas.

The audit planning process should be dynamic, allowing for change when necessary. The process should include a process for modifying the internal audit plan to incorporate significant changes that are identified either through continuous monitoring or during an audit. Any significant changes should be clearly documented and included in quarterly communications to the audit committee. Critical data to be reported to the audit committee should include deferred or cancelled audits rated high-risk and other significant additions or deletions. Significant changes to audit budgets and timeliness for the completion of audits should be reported to the audit committee with documented rationale.

Internal audit continuous monitoring. Internal audit is encouraged to utilize formal continuous monitoring practices as part of the function's risk-assessment processes to support adjustments to the audit plan or universe as they occur. Continuous monitoring can be conducted by an assigned group or individual internal auditors. An effective continuous monitoring process should include written standards to ensure consistent application of processes throughout the organization.

Continuous monitoring results should be documented through a combination of metrics, management reporting, periodic audit summaries, and updated risk assessments to substantiate that the process is operating as designed. Critical issues identified through the monitoring process should be communicated to the audit committee. Computer-assisted auditing techniques are useful tools to highlight issues that

10. For example, risks include credit, market, operational, liquidity, compliance, IT, fraud, political, legal, regulatory, strategic, and reputational.

11. Regardless of the institution's practice, particular care should be taken to ensure that higher-risk elements are reviewed with an appropriate frequency, and not obscured due to their inclusion in a lower risk-rated audit entity.

warrant further consideration within a continuous monitoring process.

2060.07.1.2.4 Internal Audit Performance and Monitoring Processes

Performance. Detailed guidance related to the performance of an internal audit should be documented in the audit manual[12] and work programs to ensure that audit execution is consistent across the audit function. Internal audit policies and procedures should be designed to ensure that audits are executed in a high-quality manner, their results are appropriately communicated, and issues are monitored and appropriately resolved. In performing internal audit work, an institution should consider the following.

- *Internal audit scope:* During the audit planning process, internal audit should analyze the auditable entity's specific risks, mitigating controls, and level of residual risk. The information gathered during the audit planning phase should be used to determine the scope and specific audit steps that should be performed to test the adequacy of the design and operating effectiveness of control processes.

- *Internal audit work papers:* Work papers document the work performed, observations and analyses made, and support for the conclusions and audit results. The work papers should contain sufficient information regarding any scope or audit program modifications and waiver of issues not included in the final report. Work papers also should document the specific sampling methodology, including minimum sample sizes, and the rationale for such methodology. The work papers should contain information that reflects all phases of the audit process including planning, fieldwork, reporting, and issues tracking and follow-up. On an ongoing basis, a comprehensive supervisory review should be performed on all audit work, including any outsourced internal audit procedures.[13]

- *Audit report:* Internal audit should have effective processes to ensure that issues are communicated throughout the institution and audit issues are addressed in a timely manner. The audit report should include an executive summary that describes the auditable area, audit's conclusions, the rationale for those conclusions, and key issues. Most audit reports also include management's action plans to address audit findings. To ensure that identified issues are addressed in a timely manner, reports should be issued to affected business areas, senior management, and the audit committee within an appropriate timeframe after the completion of field work. Compliance with issuance timeframes should be monitored and reported periodically to the audit committee. At a minimum, internal audit should ensure that management considers the level and significance of the risk when assigning resources to address and remediate issues. Management should appropriately document the action plans either within the audit report or separately.

- *Internal audit issues tracking:* Internal audit should have effective processes in place to track and monitor open audit issues and to follow-up on such issues. The timely remediation of open audit issues is an essential component of an organization's risk reduction efforts. Internal audit and the responsible management should discuss and agree to an appropriate resolution date, based on the level of work necessary to complete remediation processes. When an issue owner indicates that work to close an issue is completed, the internal audit function should perform validation work prior to closing the issue. The level of validation necessary may vary based on the issue's risk level. For higher-risk issues, internal audit should perform and document substantive testing to validate that the issue has been resolved. Issues should be tested over an appropriate period of time to ensure the sustainability of the remediation.

Retrospective review processes. When an adverse event occurs at an institution (for example, fraud or a significant loss), management should conduct a post-mortem and "lessons learned" analysis. In these situations, internal audit should ensure that such a review takes place and appropriate action is taken to remediate identified issues. The internal audit function should evaluate management's analysis of the reasons for the event and whether the adverse

12. To facilitate effective, efficient, and consistent practice within the internal audit department, an institution should develop an audit manual that includes comprehensive policies and procedures and is made available to all internal audit staff. The manual should be updated as needed.

13. An experienced audit manager should perform this review.

event was the result of a control breakdown or failure, and identify the measures that should be put in place to prevent a similar event from occurring in the future. In certain situations, the internal audit function should conduct its own post-mortem and a "lessons learned" analysis outlining the remediation procedures necessary to detect, correct, and/or prevent future internal control breakdowns (including improvements in internal audit processes).

Quality assurance and improvement program. A well-designed, comprehensive quality assurance program should ensure that internal audit activities conform to the IIA's professional standards and the institution's internal audit policies and procedures. The program should include both internal and external quality assessments.

The internal audit function should develop and document its internal assessment program to promote and assess the quality and consistency of audit work across all audit groups with respect to policies, procedures, audit performance, and work papers. The quality assurance review should be performed by someone independent of the audit work being reviewed. Conclusions reached and recommendations for appropriate improvement in internal audit process or staff training should be implemented by the CAE through the quality assurance and improvement program. Action plan progress should be monitored and subsequently closed after a period of sustainability. Each institution should conduct an internal quality assessment annually and the CAE should report the results and status of internal assessments to senior management and the audit committee at least annually.

The IIA recommends that an external quality assessment of internal audit be performed by a qualified independent party at least once every five years. The review should address compliance with the IIA's definition of internal auditing, code of ethics, and standards, as well as with the internal audit function's charter, policies and procedures, and any applicable legislative and regulatory requirements. The CAE should communicate the results, planned actions, and status of remediation efforts to senior management and the audit committee.

2060.07.1.3 Internal Audit Outsourcing Arrangements *(Part II of the 2003 Policy Statement)*

As stated in the 2003 Policy Statement, an institution's board of directors and senior management are charged with the overall responsibility for maintaining an effective system of internal controls. Responsibility for maintaining an effective system of internal controls cannot be delegated to a third party. An institution that chooses to outsource audit work should ensure that the audit committee maintains ownership of the internal audit function. The institution's audit committee and CAE should provide active and effective oversight of outsourced activities. Institutions should carefully consider the oversight responsibilities that are consequential to these types of arrangements in determining appropriate staffing levels.

To distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, which may take the form of an engagement letter or similar services agreement. Contracts between the institution and the vendor should include a provision stating that work papers and any related non-public confidential information and personal information must be handled by the vendor in accordance with applicable laws and regulations. An institution should periodically confirm that the vendor continues to comply with the agreed-upon confidentiality requirements, especially for long-term contracts. The audit committee should approve all significant aspects of outsourcing arrangements and should receive information on audit deficiencies in a manner consistent with that provided by the in-house audit department.

2060.07.1.3.1 Vendor Competence

An institution should have appropriate policies and procedures governing the selection and oversight of internal audit vendors, including whether to continue with an existing outsourced arrangement. The audit committee and the CAE are responsible for the selection and retention of internal audit vendors and should be aware of factors that may impact vendors' competence and ability to deliver high-quality audit services.

2060.07.1.3.2 Contingency Planning

An institution's contingency plan should take into consideration the extent to which the institution relies upon outsourcing arrangements.

When an institution relies significantly on the resources of an internal audit service provider, the institution should have contingency procedures for managing temporary or permanent disruptions in the service in order to ensure that the internal audit function can meet its intended objectives.

2060.07.1.3.3 Quality of Audit Work

The quality of audit work performed by the vendor should be consistent with the institution's standards of work expected to be performed by an in-house internal audit department. Further, information supplied by the vendor should provide the board of directors, its audit committee, and senior management with an accurate report on the control environment, including any changes necessary to enhance controls.

2060.07.1.4 Independence Guidance for the Independent Public Accountant *(Part III of the 2003 Policy Statement)*

The following discussion supplements the discussion in Part III of the 2003 Policy Statement and addresses additional requirements regarding auditor independence for depository institutions subject to section 36 of the FDI Act (as amended in 2009).

2060.07.1.4.1 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

The July 2009 amendments to section 36 of the FDI Act (applicable to insured depository institutions with total assets of $500 million or more) require an institution's external auditor to follow the more restrictive of the independence rules issued by the AICPA, SEC, and PCAOB. In March 2003, the SEC prohibited a registered public accounting firm that is responsible for furnishing an opinion on the consolidated or separate financial statements of an audit client from providing internal audit services to that same client.[14] Therefore, by following the more restrictive independence rules, a depository institution's external auditor is precluded from performing internal audit services, either on a co-sourced or an outsourced basis, even if the institution is not a public company.

14. See SEC final rule, "Strengthening the Commission's Requirements Regarding Auditor Independence," at 17 CFR parts 210, 240, 249 and 274.

2060.07.1.5 Examination Guidance *(Part IV of the 2003 Policy Statement)*

The following discussion supplements the existing guidance in Part IV of the 2003 Policy Statement on examination guidance and discusses the overall effectiveness of an institution's internal audit function and the examiner's reliance on internal audit.

2060.07.1.5.1 Determining the Overall Effectiveness of Internal Audit

An effective internal audit function is a vehicle to advance an institution's safety and soundness and compliance with consumer laws and regulations and is therefore considered as part of the supervisory review process. Federal Reserve examiners will make an overall determination as to whether the internal audit function and its processes are effective or ineffective and whether examiners can potentially rely upon internal audit's work as part of the supervisory review process. If internal audit's overall processes are deemed effective, examiners may be able to rely on the work performed by internal audit depending on the nature and risk of the functions subject to examination.

The supervisory assessment of internal audit and its effectiveness will consider an institution's application of the 2003 Policy Statement and this supplemental guidance. An institution's internal audit function generally would be considered effective if the institution's internal audit function structure and practices are consistent with the 2003 Policy Statement and this guidance.

Conversely, an institution's internal audit function that does not follow the enhanced practices and supplemental guidance outlined in this policy letter generally will be considered ineffective. In such a case, examiners will not rely on the institution's internal audit function.

Examiners will inform the CAE as to whether the function is deemed to be effective or ineffective. Internal audit's overall processes could be deemed effective even though some aspects of the internal audit function may require enhancements or improvements such as additional documentation with respect to specific audit processes (for example, risk assessments or work papers). In these situations, the required enhancements or improvements generally should not be a critical part of the overall internal audit function, or the function should be deemed to be ineffective.

2060.07.1.5.2 Relying on the Work Performed by Internal Audit

Examiners may rely on internal audit at supervised institutions if internal audit was deemed effective at the most recent examination of internal audit. In examining an institution's internal audit function, examiners will supplement their examination procedures through continuous monitoring and an assessment of key elements of internal audit, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk assessment; and (4) the adequacy of audit programs and work paper standards. On at least an annual basis, examiners should review these key elements to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

Examiners may choose to rely on the work of internal audit when internal audit's overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing examination procedures. For example, if an internal audit department performs internal audit work in an area where examiners might also review controls, examiners may evaluate whether they can rely on the work of internal audit (and either eliminate or reduce the testing scheduled as part of the regulatory examination processes). In high-risk areas, examiners will consider whether additional examination work is needed even where internal audit has been deemed effective and its work reliable.

* * * * * * * * * * *

(End of the January 23, 2013, Supplemental Policy Statement)

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2016, this section has been revised to incorporate the January 15, 2016 "Interagency Advisory on External Audits of Internationally Active U.S. Financial Institutions." The federal banking agencies issued the interagency advisory to communicate their support for the principles and expectations set forth in parts 1 and 2 of the Basel Committee on Banking Supervision's March 2014 guidance on "External audits of banks." "Internationally Active Banks" is defined in the advisory. Refer to subsection 2060.1.8 and SR-16-2 and its attachment.

2060.1.1 INTERNAL AND EXTERNAL AUDIT PROGRAMS AND ACTIVITIES

Audit is an independent appraisal activity that serves as a managerial control within an organization. The primary responsibility for the maintenance of sound systems of internal controls and an adequate internal audit program rests with the directorate of the bank holding company. Included among the objectives of a comprehensive audit program are the detection of irregularities; the determination of compliance with applicable laws and regulations; and the appraisal of the soundness and adequacy of accounting, operating, and administrative controls designed to ensure prompt and accurate recording of transactions and proper safeguarding of assets. At a minimum, an audit program should ensure that adequate systems of checks and balances are in effect to deter fraud and detect control deficiencies.

The size and complexity of a bank holding company operation are major determinants in the scope and extent of the audit program that is developed. In the smaller, less sophisticated organizations, such as holding company shells for small banks, it may not be feasible to employ an auditor or implement an audit program. In some cases, such as those in which banking assets represent virtually all of the parent company's assets and a comprehensive, effective audit program is being implemented in the various subsidiaries, neither an internal nor an external audit program may be necessary at the parent company level.

The development and implementation of an internal audit program should be delegated to a qualified staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor. When evaluating the effectiveness of an internal audit program, the examiner may want to consider the size of audit staffs of banking organizations of a similar size and complexity. To ensure freedom of access to corporate records and complete independence and objectivity in administering the audit program, the auditor should report directly to the directorate or a committee thereof. Administratively, the internal auditor is usually responsible to an officer at a major policymaking level.

To supplement the internal audit activities, external accountants-auditors may be engaged to certify or audit the financial statements or specified activities of the bank holding company and its subsidiaries. Each top-tier bank holding company with total consolidated assets of $500 million or more must engage independent public accountants to perform audits and report on its annual financial statements in accordance with generally accepted accounting principles. The scope of the audit engagement must be sufficient to permit such accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. Bank holding companies do not have to submit audited financial statements as part of the requirements for the FR Y-6 annual report. The Federal Reserve may request audited consolidated financial statements from any bank holding company with total consolidated assets of less than $500 million if deemed warranted for supervisory purposes.

The internal and external auditors should work together in establishing the scope and frequency of audits to be performed. In addition to performing some of the basic functions of the internal auditor, the external auditor should review the internal auditing program to assess its scope and adequacy. When a bank holding company is perhaps too small to employ an internal audit staff, but when the complexities and activities of the organization suggest the need for an audit, the holding company should consider hiring an external auditor. Independence and objectivity are mandatory in any audit program, and these are difficult to maintain if the audit function is a part-time responsibility. When external auditors are employed to perform the internal audit function, they should be permitted to establish the scope of their audits and schedule surprise audits. They also should be given responsibility for suggesting systems and organizational duty assignments for maximum control consistent with the size of the organization.

2060.1.2 EXTERNAL AUDITORS AND THE RELEASE OF REQUIRED INFORMATION

The enactment of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) on August 9, 1989, requires that FDIC-insured depository institutions that are being audited provide their independent auditors with information concerning their financial condition and any supervisory actions being taken against them. Specifically, section 36(h)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831m(h)(1)) (the FDI Act) requires an insured depository institution that has engaged the services of an independent auditor to perform an audit within the past two years to provide the auditor with—

1. a copy of the most recent report of condition made by the institution (pursuant to the FDI Act or any other provision of law) and a copy of the most recent report of examination received by the institution;
2. a copy of any supervisory memorandum of understanding with such institution and any written agreement between a federal or state banking agency and the depository institution that is in effect during the period covered by the audit; and
3. a report of any action initiated or taken by a federal banking agency during the period covered by the audit under subsection (a), (b), (c), (e), (g), (i), (s), or (t) of section 8 of the FDI Act or of any similar action taken by a state banking agency under state law, or any other civil money penalty assessed under any other provision of law with respect to the depository institution or any affiliated party.

External auditors who are serving as agents of a bank holding company may, with the approval of the organization, review examination or inspection reports and supervisory correspondence received and communicate with examiners. Examiners should remind external auditors of their responsibility to maintain the confidentiality of the reports and other supervisory communications reviewed as part of their engagement. See also the Board's rules on the release of confidential supervisory information (12 C.F.R. 261, subpart C).

2060.1.3 EXTERNAL AUDITOR INQUIRIES

In some situations, examiners may not be able to fully respond to external auditors' inquiries on certain matters relating to examinations still in progress. The examiners' findings may be incomplete or may be under review by higher supervisory authorities within the Federal Reserve System. In addition, as a general practice, examiners will normally only discuss with external auditors issues and inspection findings that have been presented to the bank holding company's management. These situations relate primarily to the timing of the auditors' inquiries in relation to the stage of inspection work and, thus, should not automatically preclude an auditor from expressing an opinion on the organization's financial statements.

2060.1.4 UNSAFE AND UNSOUND USE OF LIMITATION-OF-LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)[1] issued an interagency advisory (the advisory) to address safety-and-soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as *engagement letters*) that limit the auditors' liability for audit services.[2] The advisory informs financial institutions'[3] boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors' liability.

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

2. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

3. As used in this advisory, the term *financial institutions* includes bank holding companies, banks, savings associations, and savings and loan holding companies.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Limits on external auditors' liability may weaken the external auditors' objectivity, impartiality, and performance and, thus, reduce the agencies' ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory and its appendix A; see section 2060.1.4.7) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the U.S. Securities and Exchange Commission (SEC), the Public Company Accounting Oversight Board (PCAOB), and the American Institute of Certified Public Accountants (AICPA).

2060.1.4.1 Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management's assessment of internal control over financial reporting (collectively, *audit* or *audits*).

The advisory does not apply to—

1. nonaudit services that may be performed by financial institutions' external auditors,
2. audits of financial institutions' 401(k) plans, pension plans, and other similar audits,
3. services performed by accountants who are not engaged to perform financial institutions' audits (e.g., outsourced internal audits or loan reviews), and
4. other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor's liability with respect to audits in an unsafe and unsound manner.

2060.1.4.2 External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution's financial statements. The external auditor's objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution's internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC's September 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations[4] notes, "[a]n institution's internal and external audit programs are critical to its safety and soundness." The policy also states that an effective external auditing program "can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC."

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution's audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As with all agreements that affect a financial institution's legal rights, the financial institution's legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and pro-

4. See 64 Fed. Reg. 52,319 (September 28, 1999).

vides examples.[5] Financial institutions' boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors' and officers' liability policies) might not cover losses arising from claims.

2060.1.4.3 Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

1. indemnifies the external auditor against claims made by third parties;
2. holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
3. limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as *limitation-of-liability provisions.*

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agreements by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

5. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor's liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory's appendix A. See section 2060.1.4.7.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with $500 million or more in total assets are required to have annual independent audits.[6] Furthermore, financial institutions that are public companies[7] must have annual independent audits. Certain savings associations (for example, those with a CAMELS rating of 3, 4, or 5) and savings and loan holding companies are also required by OTS's regulations to have annual independent audits.[8] The agencies rely on the results of audits as part of their assessment of a financial institution's safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors' liability, the external auditors' objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors' objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors' adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

6. For banks and savings associations, see section 36 of the FDI Act (12 U.S.C. 1831m) and part 363 of the FDIC's regulations (12 C.F.R. 363).

7. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.

8. See OTS regulation at 12 C.F.R. 563.4.

2060.1.4.4 Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC's rules, pursuant to part 363 (or section 562.4 of the OTS's regulations) require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution's external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC's regulations (or in section 562.4 of the OTS regulations), the external auditor should be in compliance with the AICPA's Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.[9] In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC's auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The SEC's FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor's independence. The FAQ is consistent with the SEC's Codification of Financial Reporting Policies, section 602.02.f.i, "Indemnification by Client." (See section 2060.1.4.8.)

On the basis of the SEC guidance and the agencies' existing regulations, certain limits on auditors' liability are already inappropriate in audit engagement letters entered into by—

1. public financial institutions that file reports with the SEC or with the agencies,
2. financial institutions subject to part 363,[10] and
3. certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors' liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

2060.1.4.5 Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

1. apply equally to all parties,
2. provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
3. are not imposed in a coercive manner.

9. See part 363 of the FDIC's regulation (12 C.F.R. 363), *Appendix A—Guidelines and Interpretations, Guideline 14, "Role of the Independent Public Accountant-Independence."*
10. See also the OTS's regulation (12 C.F.R. 562.4).

2060.1.4.6 The Advisory's Conclusion

Financial institutions' boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution's external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

2060.1.4.7 Examples of Unsafe and Unsound Limitation-of-Liability Provisions

The following information was contained in appendix A of the February 9, 2006, interagency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions' external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar effects is considered an unsafe and unsound practice.

1. "Release from Liability for Auditor Negligence" Provision

In this type of provision, the financial institution agrees not to hold the audit firm liable for *any* damages, *except* to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the financial institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm's] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. "No Damages" Provision

In this type of provision, the financial institution agrees that in no event will the external audit firm's liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm's] liability under the terms of this agreement include responsibility for any claimed incidental or consequential damages.

3. "Limitation of Period to File Claim" Provision

In this type of provision, the financial institution agrees that *no* claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution's rights in filing a claim.

Example: It is agreed by the financial institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the financial institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. "Losses Occurring During Periods Audited" Provision

In this type of provision, the financial institution agrees that the external audit firm's liability will be limited to any losses occurring during periods covered by the external audit, and will not include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm's liability to a period before there could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client's financial statements in those years.

Example: In the event the financial institution is dissatisfied with [the audit firm's] services, it is understood that [the audit firm's] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm's] audit, and shall not include any losses occurring in later periods for which is not engaged as auditors.

5. *"No Assignment or Transfer" Provision*

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution's insurer under its directors' and officers' liability or other insurance coverage.

Example: The financial institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. *"Knowing Misrepresentations by Management" Provision*

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the financial institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

7. *"Indemnification for Management Negligence" Provision*

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm's failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The financial institution shall indemnify, hold harmless, and defend and its authorized agents, partners, and employees from and against any and all claims, damages, demands, actions, costs, and charges arising out of, or by reason of, the financial institution's negligent acts or failure to act hereunder.

8. *"Damages Not to Exceed Fees Paid" Provision*

In this type of provision, the financial institution agrees to limit the external auditor's liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the financial institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.[11]

2060.1.4.8 Frequently Asked Questions on the Application of the SEC's Auditor-Independence Rules

The following information is contained in appendix B of the February 9, 2006, interagency advisory. The information is derived from the SEC's Office of Chief Accountant's Codification of Financial Reporting Policies.

Question[12]

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement "from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at ′common law,' other than for their willful misstatements or omissions."

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agreement of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, one of the major stimuli to objective and unbiased consideration of the problems encountered in a particular engagement is removed or greatly weakened. Such condition must frequently induce a departure from the standards of objectivity and impartiality which the concept of independence implies. In such difficult matters, for example, as the determination of the scope of audit necessary, existence of such an agreement may easily lead to the use of less extensive or thorough procedures than would otherwise be followed. In other cases it may result in a failure to appraise with professional acumen the information disclosed by the examination. *Consequently, the accountant cannot be recognized as independent for the purpose of certifying the financial statements of the corporation.*

Question

Has there been any change in the commission's long-standing view (Financial Reporting Policies—Section 600—602.02.f.i., "Indemnification by Client") that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, *the accountant is not independent.* Further, including in engagement letters a clause that a registrant would release, indemnify, or hold harmless from any liability and costs resulting from *knowing misrepresentations by management would also impair the firm's independence.*

2060.1.3 INSPECTION OBJECTIVES

1. To review the operations of the bank holding company to determine if an audit program exits.
2. To determine the independence and competence of those who administer and provide the internal and external audit function.

11. The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.
12. The subtitles in this section have been revised for this manual.

3. To determine the adequacy of the scope and frequency of the audit program.
4. To determine with reasonable assurance that the bank holding company has adequate internal audit and external audit functions that ensure efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
5. To ascertain if the bank holding company's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank holding company's management process—the control environment, risk assessment, control activities, information and communication, and monitoring activities.
6. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor under the standards established by the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.
7. To consider the policies, processes, and personnel surrounding the bank holding company's external auditing program and to determine the existence of any unsafe and unsound practices or conditions, including whether—
   a. any engagement letter or other agreement related to external audit activities (1) provides any assurances of indemnification to the bank's external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or (2) raises any other safety-and-soundness concerns; and
   b. the external auditors have not maintained appropriate independence in their relationships with the bank holding company, in accordance with relevant professional standards.
8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

2060.1.6 INSPECTION PROCEDURES

The primary thrust of the inspection should be directed toward the audit activities that relate to the parent company and all subsidiaries. An assessment of the audit function as it pertains to the bank (or banks) is primarily the responsibility of the regulatory agency that examines that particular bank. The examiner should review the latest bank examination reports to note comments and deficiencies cited concerning internal controls and the audit function. In addition to providing an input into the overall assessment of the audit function, review of the bank examination reports may provide a basis for determining areas of investigation during the inspection. Further, if matters cited in the latest bank examination report are deemed to be significant and indications are that corrective action has not been taken, the examiner should mention the facts to senior management of the bank holding company and note the details in the inspection report.

To judge the adequacy of the audit program, including its scope and frequency, the following procedures, with equal emphasis being placed on the parent, bank, and nonbank subsidiaries, are recommended as minimum guidelines for the inspection.

1. Review the parent company and nonbank operations and the audit comments in the bank examination reports to ascertain the adequacy of the existing audit program or the need for developing such a program, if the organization currently lacks one.
2. Review the scope of the audit function to ensure that procedures are in place to cover adequately those areas that may be susceptible to exposure. When reviewing the audit scope, determine whether the auditor was able to perform all the procedures necessary to complete the audit. If not—
   a. establish whether the scope limitations were imposed by the directorship or management and
   b. determine whether the auditor established and documented the reasons why the scope limitations were imposed.
      (1) Was the auditor able to quantify the effects of the scope limitation on the financial statements and the audit results, and, if not pervasive, was a qualified opinion or disclaimer of opinion issued?
      (2) Did the auditor evaluate all possible effects on his ability to express an opinion on the financial statements?
      (3) Were there any external circumstances that imposed limitations on the audit's scope?
      (4) Were alternative procedures used to accomplish the same audit objectives? If so, did the use of the alternative procedures justify issuance of an unqualified opinion?

3. Review the audit schedule to determine that the audits are satisfactorily spaced and that all functions are audited with adequate frequency.
4. Review audit workpapers and reports on a test-check basis for adequacy of content, satisfactory maintenance, and conformance to audit guidelines outlined by the board of directors.
5. Determine the qualifications and background of the auditor and others participating in the audit function.
6. To establish that the auditor has a direct communication line to the board of directors and freedom of access to all records for audit purposes, review audit reports and minutes of meetings held by directors or a committee thereof.
7. Determine the entity responsible for maintaining the audit function. If a bank provides audit services to affiliates, indicate the manner in which the bank is reimbursed for the cost of such services.
8. Determine whether audit reports are submitted on a timely basis to—
   a. the directors and senior management and
   b. management in the area being audited.
9. Review responses to exceptions and recommendations noted in audit reports.
10. Check on the relationship between the internal and any external auditors to determine whether their activities are coordinated in a manner that effects comprehensive coverage of the organization and at the same time avoids duplication of effort.
11. Review the letter addressed to management by the external auditor and determine that steps have been taken to correct any deficiencies noted. If no deficiencies were noted in the letter, inquire as to whether such comments were communicated to management by any other means.
12. Ascertain that the audit program is annually reviewed and approved by the directors.
13. If the BHC has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management's assessment of internal control, appraisals of the BHC's audit function, or any internal audit or audit function or operational review, the examiner should:
    a. Review the engagement letters (including past or pending engagement letters) and any agreements between the board of directors (and the audit committee) and the external auditor, noting any qualifications that are contained therein.
    b. Review any correspondence exchanged between the BHC and the external auditor, including any letters requesting opinions from external auditors. Determine if BHC management influenced any of the opinions.
    c. Ascertain if any of the engagement letters restricted the scope of the audit in any way, including whether the letters limited the degree of reliance to be placed on the work of the internal audit staff.
14. Determine if the audit engagement letters or other agreements include possible unsafe and unsound provisions or practices that—
    a. indemnify the external auditor against all claims made by third parties;
    b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the BHC may assert, thus providing relief from liability for the auditors' own negligent acts, including any losses, claims, damages, or other liabilities, (other than claims for punitive damages); or
    c. limit the remedies available to the BHC (other than punitive damages).
15. Find out whether the BHC's board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign, thus indicating the BHC's approval and financial commitment.
16. Verify that the BHC has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the BHC's legal rights.
17. If new external auditors have been engaged, ascertain the reasons for such change.
18. Determine if the parent company or nonbank subsidiaries have reported any defalcations. If so, determine if adequate controls have been initiated to lessen any further risk and exposure.
19. Determine if the BHC's external auditors received copies of the subsidiary FDIC-insured institution's examination and other designated supervisory reports and correspondence required by section 36(h)(1) of the FDI Act.

20. Determine the degree of independence of the external audit firm by reviewing any financial ties between the BHC, audit firm, and any of its partners or employees. Also review any other relationships or potential conflicts of interest that may exist.[13]

The independence of the internal auditor should be evaluated by ascertaining whether the following conditions exist: (1) reports are distributed directly to the board or a committee thereof or, less desirably, to an officer not connected with the area being reviewed; (2) there are no relationships within the organization that are incompatible with the internal audit function; and (3) severe restrictions are not placed on the program or its scheduling by management. In order to maintain the degree of objectivity essential to the audit function, the examiner should establish that the internal auditor does not install procedures, originate and approve entries, or otherwise engage in any activity that would be subject to audit review and appraisal.

The examiner should consider meeting with the audit committee and the auditor and, subsequently, with senior bank holding company management to communicate conclusions concerning the adequacy of the scope and frequency of the audit program. During the discussions, the examiner should concentrate on detailing criticisms or deficiencies noted. The auditor and senior bank holding com-pany management should be made fully cognizant of the examiner's analyses and the comments concerning the audit function that will appear on the relevant pages in the inspection report.

13. The Securities and Exchange Commission (SEC) has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if there are financial, employment, or business relationships between auditors and audit clients, or if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC's independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing. (See section 2060.05.)

2060.1.7 (reserved for future use)

2060.1.8 OVERVIEW: INTERAGENCY ADVISORY ON EXTERNAL AUDITS OF INTERNATIONALLY ACTIVE U.S. FINANCIAL INSTITUTIONS

The federal banking agencies (the agencies)[14] issued this interagency advisory to communicate the agencies' support for the principles and expectations set forth in parts 1 and 2, respectively, of the Basel Committee on Banking Supervision's (the BCBS or the Committee) March 2014 guidance on "External audits of banks" (hereafter, referred to as "the BCBS external audit guidance").[15]

In supporting these principles and expectations, the agencies acknowledge that the existing standards and practices in the United States are broadly consistent with the BCBS external audit guidance. However, because of the legal and regulatory framework in the United States, certain differences exist between the standards and practices followed in the United States and the principles and expectations in the BCBS external audit guidance. These differences are addressed in this advisory, which also describes the agencies' supervisory expectations for U.S. financial institutions within the scope of this advisory for incorporating the principles and expectations in the BCBS external audit guidance into their practices. This advisory also outlines examiner responsibilities related to these supervisory expectations.

The BCBS external audit guidance is intended for "internationally active banks" and is relevant for the management, audit committees, external auditors, and prudential supervisors of such financial institutions. The agencies define "internationally active banks" in the advisory. (Refer to SR-16-2 and its attachment.)

14. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency.

15. See www.bis.org/publ/bcbs280.pdf.

2060.1.8.1 Appendix A—Interagency Advisory on External Audits of Internationally Active U.S. Financial Institutions

Scope

The BCBS external audit guidance is intended for "internationally active banks" and is relevant for the management, audit committees, external auditors, and prudential supervisors of such financial institutions. For purposes of this advisory, the agencies are defining "internationally active banks" as:

- Insured depository institutions that meet either of the following two criteria: (1) consolidated total assets of $250 billion or more; or (2) consolidated total on-balance sheet foreign exposure of $10 billion or more (referred to as "core banks"); and
- U.S. depository institution holding companies that meet any of the following three criteria: (1) consolidated total assets (excluding assets held by an insurance underwriting subsidiary) of $250 billion or more; (2) consolidated total on-balance sheet foreign exposure of $10 billion or more; or (3) have a subsidiary depository institution that is a core bank.

In the United States, core banks are subject to 12 CFR 363, the Federal Deposit Insurance Corporation's (FDIC) regulation on Annual Independent Audits and Reporting Requirements.[16] Core banks typically comply with 12 CFR 363 requirements at a holding company level. In addition, these holding companies generally are public companies that are required to file annual, quarterly, and other periodic reports with the U.S. Securities and Exchange Commission (SEC). The Public Company Accounting Oversight Board (PCAOB) regulates the external auditors of these public companies.

Background

In March 2014, the Committee published the BCBS external audit guidance to improve the external audit quality of banks and enhance the effectiveness of prudential supervision, which contributes to financial stability. The BCBS external audit guidance elaborates on Core Principle 27, *Financial Reporting and External Audit,* of the Committee's Core Principles for Effective Banking Supervision[17] by providing guidance related to bank audit committees' responsibilities in overseeing the external audit function. This guidance also discusses prudential supervisors' relationships with external auditors of banks and audit oversight bodies. Additionally, the BCBS external audit guidance includes information relevant to external audits of financial statements that the Committee believes will enhance the quality of these external audits.

The BCBS external audit guidance has two parts:

- Part 1 provides guidance (principles) on the roles and responsibilities of audit committees relevant to external audits and the engagement of bank supervisors with external auditors and external auditors' regulators.
- Part 2 of the document (expectations) emphasizes the proper application of existing internationally accepted auditing standards. The BCBS external audit guidance also provides recommendations for procedures that external auditors could perform in the execution of bank audits to enhance audit quality.[18]

Supervisory Expectations Regarding the Differences Between U.S. Standards and Practices and the BCBS External Audit Guidance

The BCBS external audit guidance builds upon internationally accepted auditing standards and sets expectations for institutions and their external auditors. In the United States, financial institutions within the scope of this advisory are directly or indirectly subject to the audit requirements of 12 CFR 363[19] and supervisory guid-

16. 12 CFR 363 applies to any insured depository institution with respect to any fiscal year in which its consolidated total assets as of the beginning of such fiscal year are $500 million or more.

17. The Committee's Core Principles are available at www.bis.org/publ/bcbs230.pdf. In particular, Core Principle 27 states, "The supervisor determines that banks and banking groups maintain adequate and reliable records, prepare financial statements in accordance with accounting policies and practices that are widely accepted internationally and annually publish information that fairly reflects their financial condition and performance and bears an independent external auditor's opinion. The supervisor also determines that banks and parent companies of banking groups have adequate governance and oversight of the external audit function."

18. The BCBS external audit guidance acknowledges that the Committee does not have the authority to set professional standards for external auditors.

19. 12 CFR 363.3(f) requires external auditors to comply

ance related to audits of financial institutions.[20] In order for a core bank to comply with the audited financial statements requirement of 12 CFR 363 at a public holding company level, the audit must be performed in accordance with PCAOB standards. The 12 CFR 363 audit requirements, supervisory guidance, and PCAOB standards, collectively, are generally consistent with the BCBS external audit guidance, except for the differences noted below. This advisory discusses the agencies' supervisory expectations regarding these differences with reference to the corresponding principles from part 1 and expectations from part 2 of the BCBS external audit guidance.

Part 1, Principle 2: The audit committee should monitor and assess the independence of the external auditor.

Paragraph 49 of the BCBS external audit guidance indicates that an institution's audit committee should have a policy in place that stipulates the criteria for "tendering," i.e., putting its external audit contract out for bid. This paragraph further states that the policy also should call for the audit committee to periodically consider whether to put the external audit contract out for bid. Consistent with 12 CFR 363, the banking agencies encourage audit committees to establish policies and procedures addressing the retention and remuneration of the external auditor (independent public accountant).[21] In addition, the external auditors of insured depository institutions subject to 12 CFR 363 must comply with the SEC's rules regarding audit partner rotation. Audit committees are encouraged to consider whether their policies should explicitly address the criteria for tendering the audit contract and whether the contract should periodically be put out for bid.

Part 1, Principle 6: The supervisor and the external auditor should have an effective relationship that includes appropriate communication channels for the exchange of information relevant to carrying out their respective statutory responsibilities.

and

Part 1, Principle 7: The supervisor should require the external auditor to report to it directly on matters arising from an audit that are likely to be of material significance to the functions of the supervisor.

Paragraphs 95 and 96 of the BCBS external audit guidance indicate that the auditor may share information about the external audit of an institution that may be of interest to the depository institution's supervisor (e.g., significant risks of material misstatements, significant or unusual transactions, evidence of management bias, significant deficiencies or material weaknesses in internal control over financial reporting, and actual or suspected breaches of regulations or laws[22]), either (1) directly with the supervisor when a safe harbor exists or (2) indirectly through the institution to the supervisor when a legal safe harbor does not exist. Paragraph 99 of the BCBS external audit guidance provides that the external auditor should communicate matters arising from the audit that may be of material significance to the supervisor when required by the legal or regulatory framework or by a formal agreement or protocol. According to the BCBS external audit guidance, "[a] matter or group of matters is normally of material significance ... when, due either to its nature or its potential financial impact, it is likely of itself to require investigation by the regulator."[23]

There is no generally applicable legal or regulatory requirement in the United States for external auditors of banks and holding companies to report directly to the institution's primary federal (and, if applicable, state) supervisor matters arising from the audit that may be of material significance, nor is there a legal safe harbor to do so. Insured depository institutions subject to 12 CFR 363 are required to file with appropriate federal and state supervisors copies of reports and other written communications issued by the external auditor to the institution in connection with the external audit services provided to the institution. Consistent with interagency policy

with the independence standards and interpretations of the American Institute of Certified Public Accountants, the SEC, and the PCAOB.

20. For example, *Interagency Policy Statement on Coordination and Communication Between External Auditors and Examiners* (July 23, 1992).

21. 12 CFR 363.5(a) states, "The duties of the audit committee shall include the appointment, compensation, and oversight of the independent public accountant who performs services required under this part, and reviewing with management and the independent public accountant the basis for the reports issued under this part."

22. See also paragraphs 90-94 of the BCBS external audit guidance.

23. See footnote 9 in the BCBS external audit guidance.

statements[24] and practices, the agencies continue to encourage open and candid communication between an institution's external auditor and the institution's supervisors.

Part 2, Expectation 5: The external auditor of a bank should identify and assess the risks of material misstatement in the bank's financial statements, taking into consideration the complexities of the bank's activities and the effectiveness of its internal control environment.

and

Part 2, Expectation 6: The external auditor of a bank should respond appropriately to the significant risks of material misstatement in the bank's financial statements.

Paragraphs 157 and 168 of the BCBS external audit guidance set forth the Committee's expectations for external auditors to (1) consider regulatory ratios in the determination of materiality for the audit, and (2) evaluate any identified audit differences, errors, and adjustments and their effect on regulatory capital or regulatory capital ratios. PCAOB standards[25] and SEC Staff Accounting Bulletin Topic 1.M, Materiality, indicate external auditors should consider qualitative factors (which include regulatory capital, ratios, and disclosures) in determining materiality and when evaluating the effect of audit differences, errors, and adjustments. Therefore, the agencies expect institutions' audit committees will ensure that their external auditors consider regulatory capital ratios in planning and performing the audit. In this regard, audit committees are encouraged to inquire as to how the external auditors factored these ratios into their materiality assessments.

Additionally, paragraph 166 of the BCBS external audit guidance recommends that the external auditor provide written feedback about the audit engagement team's relations with the institution's internal audit function, including its observations on the adequacy of the work of internal audit, to those charged with governance of the bank. PCAOB Auditing Standard No. 16, *Communications with Audit Committees,* requires the external auditor, as part of communicating the overall audit strategy, to explain the extent to which the auditor plans to use the work of internal audit in an audit of the financial statements or an audit of internal control over financial reporting. However, PCAOB standards do not require the external auditor to provide written feedback about the audit engagement team's relations with the institution's internal audit function, including its observations on the adequacy of the work of internal audit. The agencies encourage audit committees to consider requesting their external auditor to provide written feedback about the audit engagement team's relations with internal audit, including its observations on the adequacy of the work of internal audit, as it relates to the audit of the financial statements or the audit of internal control over financial reporting.

Furthermore, consistent with the March 2003 *Interagency Policy Statement on the Internal Audit Function and Its Outsourcing,* an institution's audit committee should consider whether the institution's internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors' (IIA) *International Professional Practices Framework* (previously known as the *Standards for the Professional Practice of Internal Auditing).* Audit committees may look to the IIA's Framework for guidance for both internal and external assessments of the internal audit function.

Examiner Responsibilities

Examiners should evaluate any actions taken by institutions within the scope of this advisory and their audit committees to ensure such actions are consistent with the objectives of this advisory and the BCBS external audit guidance. Where there are differences between the BCBS external audit guidance and U.S. standards, examiners should encourage institutions' audit committees to follow the practices identified in this advisory.

Conclusion

External auditors play an important role in contributing to financial stability when they deliver quality audits, which foster market confidence in institutions' financial statements. Quality audits are also a valuable complement to the supervisory process. The agencies support the principles and expectations set forth in the BCBS external audit guidance because

24. See footnote 6 of this advisory.
25. See PCAOB Auditing Standard No. 11, Consideration of Materiality in Planning and Performing an Audit, paragraph 6, and PCAOB Auditing Standard No. 14, Evaluating Audit Results, appendix B, paragraph B2.

enhanced audit quality is an important factor in ensuring the safety and soundness of U.S. institutions. Institutions and their external auditors are expected to comply with existing laws, regulations, and professional standards, as applicable, including those referenced in this advisory.

An assessment of management's strategic plans and its success in meeting previously established budgetary goals is one of the factors considered in evaluating a BHC's management, operations, financial condition, and prospects.[1] Through review of the budget figures, insight can be gained concerning an organization's future plans and other matters such as capital adequacy, liquidity, sources and applications of funds, level and quality of earnings, and performance of management.

The budget is a coordinated financial plan used to estimate and control all or a few of the activities of the various divisions or subsidiaries in a bank holding company. Based on an assessment of future economic developments and conditions, management formulates a plan of action and indicates anticipated changes in the balance-sheet accounts and profitability (predicated on implementation of the plan). The budget is a significant management tool in that it projects expected results and also serves as an important check on management decisions and performance by providing a basis for comparison and corrective action on a timely basis. The comparison of actual performance to budget allows management to give careful attention to various possible courses of action and to choose the course which should result in the greatest benefit. Budgeting is also useful in measuring the performance of individuals and the departments they manage. Further, the comparison of budget totals to actual changes in activities such as loans, investments, and deposits assists in decision making and can promote coordination and cooperation among affiliates. The variance indicated by the comparison process may be construed as a measure of management's performance and planning record and its relationship to the organization's goals and objectives. It should be noted that some significant variances may be caused by factors beyond management's control or factors that could not reasonably be anticipated.

1. The *stragetic planning process* focuses on intermediate and long-term strategic goals and is the vehicle used to determine the overall direction and focus of the organization. The *budgeting process* refers to the tactical decisions required to meet goals and objectives. The budget is a subset of the strategic plan. While smaller bank holding company organizations may not always have formal written budgets, all organizations should have a strategic planning process, which determines overall corporate direction, general resource allocation, and balance-sheet relationships with respect to capital needs, growth, asset mix, and risk.

While various individuals may be responsible for input to the budget process, the chief executive officer typically has the ultimate responsibility for preparation and implementation of the formal budget. The time period covered by a budget typically encompasses one year, although it often covers longer periods in the larger, more sophisticated bank holding companies. The longer the budget period, the greater are the prospects for increased variances from original budget figures. In some cases in which four- or five-year projections are made, bank holding companies may formulate several forecasts based on different sets of assumptions. In such instances, the examiner should work with the "most likely" situation that may evolve based on economic trends, history, and experience of the organization, but should also give serious consideration to the "worst-case" projections.

Many bank holding companies, particularly the smaller organizations, may not have formal written budgets or plans. In small shell companies, while it is not essential to have a formal budget, budgeting procedures should be encouraged where appropriate. Budgeting at the parent level could be appropriately limited to debt-servicing and dividend considerations.

2060.2.1 INSPECTION OBJECTIVES

1. To determine the extent of an organization's financial planning and budget program.
2. To indicate to management of organizations that are without formal planning procedures the advantages of adopting a budget.
3. To understand the institution's decision-making process as it relates to the budget.
4. To determine the causes of significant variances between the budget and actual performance.
5. To assess the reasonableness of projected figures, including controls over the data throughout the budgeting process.
6. To assess the impact of the budget on the present condition and future prospects of the bank holding company.
7. To determine whether the plan outlined in the budget is supported by the financial and managerial resources of the holding company.

2060.2.2 INSPECTION PROCEDURES

1. Familiarity with a bank holding company's financial condition and results of operations should begin before the start of the inspection with a review of the annual report to shareholders, financial reports submitted to the Federal Reserve System, and other financial documentation contained in the files. The more significant accounts, statistical data, and pertinent ratios should be compared on a period-to-period basis to highlight significant changes and discern trends.

2. The examiner also should become familiar with current and projected economic conditions, both nationally and locally, including general industry conditions.

3. Based on a review of the aforementioned data, the examiner should be in a position to substantiate the reasonableness of budgeted figures without a systematic examination of all of the transactions affecting the figures presented. Further, such an analysis provides a better understanding of the operation and highlights matters of interest and potential problem areas to be investigated during the inspection.

4. Throughout the review process, the examiner must maintain a sense of perspective to avoid spending excessive time on relatively immaterial amounts.

5. The examiner should meet with the officer responsible for the preparation of the budget to determine the scope of the organization's financial plans. The extent of senior management's and the board of directors' involvement in the strategic planning and budgeting process should also be ascertained in this preliminary meeting.

6. Workpapers which document or illustrate the rationale for the budget data should be reviewed and discussed with budget personnel, including the existence and extent of internal controls over the data.

7. The examiner should evaluate plans, projections, and forecasts in light of market-area characteristics and the present condition and history of the organization.

8. The examiner should determine whether the accounting principles of major importance have been applied consistently and, if not, the impact of the alternative accounting treatment on the budget totals.

9. The sources of input for the budget should be reviewed and the frequency and procedures for effecting revision should be ascertained.

10. When there are significant budget variances, the examiner should seek documented explanations. Review any such documentation to determine if management policy or factors beyond management control were responsible for the variances.

11. A final summary discussion should be held with management to discuss goals which the examiner believes may be unattainable and to communicate conclusions concerning the budget. Due consideration should be given to management's views, whether or not in concurrence with the examiner's conclusions. If management indicates future changes which could have a significant impact on the organization, the matter should be noted in the inspection report. Further, management's assessment of the effect of contemplated action on the operations and financial condition of the bank holding company should be noted.

12. For those bank holding companies that do not have formal written plans, the examiner should obtain from senior management information on their plans for matters such as growth and expansion, capital injections, debt retirement, and changes in sources of funding. Except for small, shell companies, the examiner should recommend adoption of a budget program and emphasize the need for strategic planning by indicating how management methods may be improved as a result of a logically conceived and properly operated budget. Budgets and planning are especially important in cases in which a bank holding company is losing its share of the market or in which inefficiencies are depressing profitability.

Adequate and accurate records and financial statements are an integral part of a sound bank holding company operation. Records should be maintained to allow preparation of financial statements in accordance with generally accepted accounting principles and to ensure proper accountability for all assets, liabilities, income, and expenses. Generally, an independently certified statement inspires greater confidence than a statement prepared internally. Moreover, an unqualified, independently certified statement may act as a check on management recordkeeping policies and procedures, and provide more assurance that transactions are being properly recorded and that books accurately reflect overall financial condition.

Management may exercise reasonable discretion in selecting and adopting the type of books and records it uses and in formulating accounting systems and bookkeeping procedures. From the examiner's viewpoint, the test of a bank holding company's records is one of adequacy, consistency, and accuracy. The financial statements of every bank holding company must accurately reflect financial condition and operating results. This principle is applicable whether a bank holding company is small and has a relatively simple bookkeeping system or whether it is a larger institution with a fully automated system. A recordkeeping system that is capable of generating a wide variety of pertinent internal data and other information facilitates problem solving and decision making and, thus, contributes to the efficiency of a bank holding company's operations. Further, such a system serves as a convenient tool to provide directors, stockholders, and other interested parties with information on conditions in a bank holding company.

2060.3.1 INSPECTION OBJECTIVES

1. To determine whether financial statements are prepared in accordance with generally accepted accounting principles and are sufficiently detailed to accurately portray the company's financial condition.
2. To determine that sufficient records are maintained to provide detail on material balance-sheet items, income-statement items, and various contingent liabilities and off-balance-sheet risks that permit the preparation of appropriate financial information.
3. To recommend corrective action when policies and procedures employed have resulted in inadequate or inaccurate records and financial statements.

2060.3.2 INSPECTION PROCEDURES

1. The examiner should review the sections relating to audit and records in the prior inspection report and the latest examination reports of the subsidiary banks to note any comments or deficiencies cited concerning records, including any MIS deficiencies. In addition to providing an input into the overall assessment of the quality of records, the review may provide a basis for determining areas of emphasis and follow-up during the inspection.
2. The examiner should discuss recommendations and criticisms contained in such reports with an appropriate officer to ascertain what changes, if any, have taken place.
3. The examiner should review the external auditing firm's management letter, giving particular attention to comments concerning recordkeeping. Determine if any corrective actions were recommended by the external auditors and the extent to which the cited items have been corrected.
4. In those situations when it appears that records are deficient or financial statements are inaccurate, a thorough investigation of applicable transactions may be required. The purpose of the investigation is to obtain information needed in outlining improved controls over MIS, accounting methods, and records so that the financial data presented are in accordance with generally accepted accounting principles. Thus, information is provided which will better serve bank holding company management. The investigation should not necessarily involve a review of every transaction, but should involve a check of a sufficient number of transactions to ensure the examiner that the records, as checked, reflect an accurate financial condition. The extent of the review will depend largely on the procedures and controls over MIS and the condition and adequacy of the books and underlying records. During the investigative process, the examiner should be careful to distinguish between documented facts and statements of intent or interpretations set forth by company representatives.

The directorate and management of bank holding companies have a responsibility to contribute to the health and growth of the organization they serve. To carry out this responsibility effectively, they must be kept fully informed of conditions throughout the organization and trends within the banking industry. Reporting is the process of developing and communicating information internally to directors and management and externally to shareholders and regulatory authorities. Management and the board of directors must recognize that as a company develops and grows, its environment, strategic goals, and information needs change. The guidelines and requirements for reports flowing to management and the board of directors should be established and allow for change, recognizing the fact that informational needs can vary, including those at different levels of the organization.

Informational needs will also be dictated by the particular type of management structure in place—centralized, decentralized, legal entity, or business line. The ultimate decision-making responsibility rests with the corporation's board of directors, and the responsibility for implementing their decisions rests with designated board committees, executive management, or other designated management committees or individuals. As such, examiners should make an assessment of the qualifications of the persons on the board of directors, executive management staff, and the board and executive management committees to ensure that they have the necessary knowledge, experience, and expertise to understand the information presented and to act on it constructively. The assessment should include a review of reporting lines to identify information flows and the various decision-making levels involved or needed.

All reports flowing to executive management, board committees, and the board of directors should be analyzed for clarity, consistency, timeliness, quality, and coverage of crucial areas of the organization. A review of board and committee minutes should reveal if participants had any questions or whether there were any uncertainties as to the meaning of the data presented.

Each bank holding company prepares various reports for submission to its management and directors; an effective internal reporting system facilitates their ability to analyze a situation and to make informed decisions. Although such reports may vary in content from company to company, emphasis is generally placed on the financial data generated. The important consideration is whether each company is providing sufficient data to keep the interested parties informed of the financial condition and performance of all the divisions or entities. The frequency of the reporting and the detail of information provided can be categorized as being on a need-to-know basis. The form of reports ranges from consultations and meetings to submission of printed material for study and review. The scope and size of the operations will have an effect on the frequency and detail of the information submitted. In the larger, more sophisticated companies, frequent meetings and consultations are held to discuss the performance of various entities, the impact of performance on the organization's goals and objectives, and policies and strategies to be followed. Written reports outlining important matters and summarizing various financial data are typically reviewed and discussed regularly.

The number and variety of reports depends on the size and sophistication of the bank holding company operation. For smaller bank holding companies, the extent of their reports may be limited to annual statements, as more frequent periodic reports may not be necessary under normal conditions. The larger holding companies normally prepare monthly comparative balance sheets and income statements covering similar periods for two consecutive years. Thus, any significant deviation from the prior year's data can be readily detected. Generally, reports detailing the extent of delinquent and nonaccrual loans are prepared monthly. Facts and figures pertaining to the adequacy of the loan-loss provision are presented periodically. Additional reports containing information on budgets, cash flow, liquidity, and capital adequacy are prepared to assist management in assessing the organization's overall financial condition and performance. Summaries of internal audit reports and reports of examinations of subsidiary banks are brought to management's attention. Data relative to other bank holding companies or banks in the same peer groups are assembled, when available, so that comparisons with similarly sized organizations are possible. All of the aforementioned information may be prepared for directors, although not necessarily in as much detail as that submitted to management. On occasion, key management personnel of the holding company attend directors' meetings to expand on the topics being discussed.

Reports to shareholders usually consist of quarterly and annual reports which detail the company's financial condition and results of operations. Additional information may include the chief executive officer's overall assessment of the company, future plans, and other financial and analytical data. The financial information is used for public disclosure and enables investors, depositors, and creditors to make informed judgments concerning the financial condition of the bank holding company. Bank holding companies whose securities have been registered pursuant to the Securities and Exchange Act of 1934 are required to prepare various reports containing specific financial information.

2060.4.1 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, including board and executive management committees.
2. To determine whether the bank holding company has written policies and procedures, and internal controls covering the types of reports required to be submitted to management and the directors.
3. To determine that the required reports are adequate to accurately reflect the financial condition and performance within the organization's divisions and units and whether the reporting systems and reports are adequate to monitor the risks therein.
4. To evaluate whether the reports and reporting systems are adequate to measure and reflect the company's financial position and performance in all areas, to measure the company's progress in meeting its financial and business goals, and to monitor inherent risks.
5. To determine that the contents of the reports are complete and submitted on a timely basis.
6. To recommend corrective action when reporting practices, policies, or procedures are deficient.
7. To evaluate management's procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by reporting systems, and to evaluate the system's ability to adapt to change caused by regulatory and accounting issues or other market conditions.

2060.4.2 INSPECTION PROCEDURES

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls.
2. Ascertain whether any corporate policies address risk managment or internal reporting requirements and determine:
   a. the types of reports required to be submitted and
   b. the adequacy of such reporting requirements in light of a company's particular circumstances.

   Comment: In a holding company with a decentralized system of control over subsidiaries, the existence of written policies and procedures is important since each subsidiary operates as a relatively autonomous unit.
3. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors (including packages for the board of directors and executive committees).
4. Randomly sample, based on a material risk focus, the individual as well as the various types of management reports and determine whether they are adequately prepared in accordance with established policies and procedures and submitted to the appropriate individuals on a timely basis. Determine whether the management reports are sufficient to measure the company's progress in achieving its financial and business goals and forecasts.
5. Identify and document management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Also evaluate the ability of the information system to handle regulatory and accounting issues and to adapt to change.
6. At the conclusion of the review process, the examiner should discuss with management, as appropriate, topics such as—
   a. the lack of established policies and procedures and internal controls,
   b. inadequate reporting requirements, and
   c. noncompliance with reporting requirements and/or the untimely submission of reports.

2060.4.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

2060.5.1 INTRODUCTION

In establishing an insurance program, a bank holding company should be aware of where it is exposed to loss, the extent to which insurance is available to cover potential losses and the cost of such insurance. These various factors should be weighed to determine how much risk the bank holding company will assume directly. In assessing the extent of risk an organization is willing to assume, it is important to analyze the impact of an uninsured loss not only on the entity where the loss occurs, but also on the affiliates and the parent. Once appropriate coverage has been acquired, procedures should be established for the periodic review of the program to assure the continuing adequacy of the coverage. Particularly for larger BHCs, these procedures should include at least an annual review of the program by the board of directors of the parent organization.

Insurance is a highly specialized field and no attempt is made here to discuss all the various types and forms of insurance coverage that are available to financial institutions. Examiners are not expected to be insurance experts; however, examiners should recognize that a financial organization's primary defenses against loss include adequate internal controls and procedures and that insurance is intended to complement, not replace, an effective system of internal controls. Thus, an overall appraisal of the control environment becomes a significant consideration in assessing the adequacy of the insurance program. To the extent controls are lacking, the need for additional coverage increases.

2060.5.2 BANKER'S BLANKET BOND

The most important and comprehensive insurance coverage available is the bankers' blanket bond which is usually extended to encompass all the entities in a bank holding company structure. Generally, the scope of the blanket bond contract is intended to cover risks of loss due to criminal acts, such as embezzlement, burglary, robbery, theft, larceny, forgery, etc., but in addition it provides indemnity for loss of property through damage, destruction, misplacement and mysterious, unexplainable disappearance. The most important item of protection under the bond, however, is the blanket fidelity coverage for officers and employees.

2060.5.3 TYPES OF BLANKET BONDS

While there are several similar forms of blanket bonds in use, those commonly found are the Financial Institutions Bond Standard Form No. 24, the Bankers Blanket Bond Standard Form No. 2, and Lloyd's Banks' and Trust Companies' Policy HAN Form (C). Under these blanket forms, every employee is usually covered for the total amount of the bond. Typically, new employees and new offices are automatically covered and no notice is required for an increase in the number of employees or in the number of offices established, unless such increases result from a merger or consolidation with another institution. The word "blanket," however, refers to the over-all amount that applies to the several specified risks covered under the bond and is not intended to mean "all risks" coverage. A most important feature of the bankers' blanket bond is the "discovery rider." The rider, which converts the blanket bond from a "loss sustained basis" to a "discovery basis," provides indemnity against any loss sustained by the insured entity at any time but discovered after the effective date of the bond and prior to the termination or cancellation of the bond, even though lower amounts of insurance and more restrictive coverage may have been carried when the loss was actually sustained.

2060.5.4 DETERMINING THE COVERAGE NEEDED

One of the most difficult insurance problems management faces is the determination of the amount of blanket bond coverage that should be maintained. An estimate of the maximum amount of money and securities that may be lost through burglary or robbery can be calculated with reasonable accuracy, but the potential loss resulting from dishonest acts of officers and employees is not easily measured. The Insurance and Protective Committee of the American Bankers Association has conducted several studies of the problems of determining adequate coverage and has concluded that total deposits represent the most appropriate item in bank financial statements upon which to base an estimate of a reasonable or suitable amount of blanket bond coverage.

In a bank holding company structure, the amount of blanket bond coverage is generally determined by the deposits of the largest bank and the amount of suggested coverage in the ABA's schedule. Such an amount is considered to be a minimum and other factors such as a rapidly expanding operation, excessive cash on hand, or inferior audit and control practices may suggest the need for larger coverage. Since coverages are generally extended to include the nonbank subsidiaries and such subsidiaries usually operate on a smaller scale than their affiliated banks, the question concerning the adequacy of the amount of the blanket bond coverage for a nonbank subsidiary is more easily addressed and is typically a function of the parent's and the bank's coverage.

2060.5.5 NOTIFICATION OF LOSS

When submitting a claim, most blanket bonds have provisions which require a report to be submitted within a specified period after a reportable item comes to the attention of management. Occasionally, items are not reported to the bonding company because of uncertainty as to whether the incident constitutes a reportable item. Failure to report in a timely manner could invalidate the claim and jeopardize existing coverages. Thus, it should be emphasized to management that any questionable items should be reported.

2060.5.6 DIRECTORS' AND OFFICERS' LIABILITY INSURANCE

Directors' and Officers' Liability Insurance (''DOL Insurance'') insures the Directors and Officers against *personal* liability resulting from claims of alleged negligence, wrongful acts, errors and omissions, etc. This insurance is not included in the blanket bond or other standard fidelity coverage.

2060.5.7 INSPECTION OBJECTIVES

1. To determine the scope and extent of insurance coverages for the various entities in the organization.
2. To determine the adequacy of insurance coverage after giving due consideration to the overall control environment and factors such as the organization's claim experience and costs associated with various coverages.
3. To ascertain that a comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes.
4. To determine the entity(ies) responsible for paying the premiums and the manner in which such payments are allocated among the affiliates that receive the coverage benefits.
5. To determine if procedures are in place to assure that claims are filed promptly.

2060.5.8 INSPECTION PROCEDURES

1. The prior year's inspection report should be reviewed for comments relative to controls and insurance. The examiner should note the types and extent of coverages, comments concerning the control environment and any deficiencies related to the administration of the insurance program and the coverages in force.
2. A similar review encompassing the latest examination reports of all major affiliated banks should be conducted. The review process is intended to provide a basis for determining areas of emphasis and follow-up during the inspection. The examiner need not re-examine the insurance program or the controls in force in the individual banks.
3. The examiner should meet with the officer responsible for maintaining the insurance policies and related documentation and ascertain the location of such policies and documentation. Review any independent review of coverages and any deficiencies that may have been cited by the internal or external auditors.
4. Review the manner and frequency of presentations to the board of directors of the insurance coverage.

2065.1.1 INTRODUCTION

Loan workouts with borrowers who are experiencing financial difficulties may take many forms, including a renewal or extension of terms, extension of additional credit, or a restructuring with or without concessions. Such actions, if done in a way that is consistent with prudent lending principles and safety-and-soundness standards, can improve the prospects for collection. Generally accepted accounting principles (GAAP) and regulatory reporting requirements provide a framework for reporting these actions that may alleviate a lender's concerns about working constructively with borrowers who are experiencing financial difficulties.

2065.1.2 TYPES OF LOAN ACCOMMODATIONS AND WORKOUTS

Short-term loan accommodations. These accommodations typically occur when financial institutions work proactively and prudently with borrowers who are, or may be, unable to meet their contractual payment obligations during periods of financial stress. Such actions may entail loan accommodations that are generally short-term or temporary in nature and occur before a loan reaches a workout scenario. These actions can mitigate long-term adverse effects on borrowers by allowing them time to address the issues affecting repayment.

Loan workout programs. When short-term accommodation measures are not sufficient or have not been successful in addressing a borrower's problems, financial institutions could proceed into longer-term or more complex loan arrangements with borrowers under a formal workout program. Such workouts are often in the best interest of the financial institution and its borrower. Loan workout arrangements can take many forms, including, but not limited to

- renewing or extending loan terms,
- granting additional credit to improve prospects for overall repayment, or
- restructuring the loan with or without concessions.[1]

Typically, financial institutions consider longer-term loan workout arrangements after analyzing a borrower's repayment ability, evaluating the support provided by guarantors, and assessing the value of any collateral pledged. Proactive engagement by the financial institution with the borrower often plays a key role in the success of the workout. Consistent with safety-and-soundness standards, examiners will not criticize a financial institution for engaging in loan workout arrangements, even though such loans may be adversely classified, as long as the institution has developed a well-conceived and prudent workout plan supplemented with appropriate analysis of the borrower's willingness and ability to repay. For more information, see SR-23-5, "Prudent Commercial Real Estate Loan Accommodations and Workouts."

2065.1.3 LOAN MODIFICATIONS TO BORROWERS EXPERIENCING FINANCIAL DIFFICULTY

In March 2022, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2022-02, "Financial Instruments - Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures," which amended Accounting Standards Codification (ASC) Topic 326, Financial Instruments – Credit Losses.[2] This guidance eliminated the recognition and measurement accounting guidance for troubled debt restructurings (TDRs) by creditors in subtopic 310-40, Receivables – Troubled Debt Restructurings by Creditors, while enhancing disclosure requirements for certain loan refinancings and restructurings by creditors when a borrower is experiencing financial difficulty. Under ASU 2022-02, a holding company must evaluate whether a loan modification to a borrower experiencing financial difficulty represents a new loan or a continuation of an existing loan consistent with ASC section 310-20-35, Receivables—Nonrefundable Fees and Other Costs—Subsequent Measurement.

Prior to the adoption of ASU 2022-02, under GAAP, financial institutions, including holding

1. SR-23-5, "Prudent Commercial Real Estate Loan Accommodations and Workouts," states that a loan restructuring involves a formal, legally enforceable modification in the loan's terms.

2. For additional information on ASU 2022-02, holding companies should refer to the FASB's website at www.fasb.org (Accounting Standards Updates Issued), which includes a link to the accounting standard update.

companies, were required to recognize and disclose modified loans where the financial institution has granted a concession for economic or legal reasons, related to the borrower's financial difficulty as TDRs.

As noted in the supplemental instructions for the Consolidated Financial Statements for Holding Companies (FR Y-9C), holding companies that have adopted ASU 2022-02 should report all loans modified since adoption of the new standard to borrowers experiencing financial difficulty who are performing in accordance with their modified terms on Schedule HC-C, Part I, Memorandum items 1.a. through 1.g.[3] If a loan is not performing in accordance with its modified terms, it should be reported on Schedule HC-N, Memorandum items 1.a through 1.g. TDRs should no longer be reported in these Memorandum items. For the detailed breakout of Memorandum item 1.f on both Schedule HC-C and HC-N, holding companies should calculate the 10 percent threshold for loan modifications to borrowers experiencing financial difficulty. For more information, see the instructions for completing the FR Y-9C, which contains instructions for institutions transitioning to the previously described accounting standards.

2065.1.4 NONACCRUAL ASSETS

The instructions for completing the FR Y-9C contain more information about nonaccrual assets and the restoration of nonaccrual assets to accrual status. As explained in the FR Y-9C instructions, holding companies on an accrual basis of reporting shall not accrue interest or discount on any asset:

(1) which is maintained on a cash-basis because of deterioration in the financial position of the borrower;
(2) for which payment in full of interest or principal is not expected; or
(3) upon which principal or interest has been in default for a period of 90 days or more, unless it is both *well secured* and *in the process of collection*.[4]

3. See the Supplemental FR Y-9C Instructions from December 2023.

4. For exceptions to this general rule, see the instructions to the FR Y-9C.

An asset is "well secured" if it is secured (1) by collateral in the form of liens on or pledges of real or personal property, including securities, that have a realizable value sufficient to discharge the debt (including accrued interest) in full, or (2) by the guaranty of a financially responsible party.

An asset is "in the process of collection" if collection of the asset is proceeding in due course either (1) through legal action, including judgment enforcement procedures, or (2) in appropriate circumstances, through collection efforts not involving legal action, which are reasonably expected to result in repayment of the debt or in its restoration to a current status in the near future.

For determining when to place an asset on nonaccrual status, an institution uses the date on which an asset reaches nonaccrual status determined by its contractual terms. If the principal or interest on an asset becomes due and unpaid for 90 days or more on a date that falls between report dates, the asset should be placed in nonaccrual status as of the date it becomes 90 days past due, and it should remain in nonaccrual status until it meets the criteria for restoration to accrual status.

2065.1.5 CASH-BASIS INCOME RECOGNITION ON NONACCRUAL ASSETS

Current regulatory reporting requirements do not preclude the cash-basis recognition of income on nonaccrual assets (including loans that have been partially charged off), if the remaining book balance of the loan is deemed fully collectible. Interest income recognized on a cash basis should be limited to that which would have been accrued on the recorded asset at the contractual rate. Any cash payments received over this limit should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered.

The recognition of interest income on a cash basis should be handled in accordance with GAAP. Acceptable practices under GAAP include allocating the cash payment to interest income (i.e., the contractual interest payment); reducing the recorded asset balance; or applying the cash payment to amortized cost of the asset, as applicable, or to the recovery of prior charge-offs. The method used for accounting for cash payments needs to be consistent with the holding company's accounting policies for its financial reporting.

2065.1.6 RETURNING AN ASSET TO ACCRUAL STATUS

As a general rule, a nonaccrual asset may be restored to accrual status when

(1) none of its principal and interest is due and unpaid, and the holding company expects repayment of the remaining contractual principal and interest, or
(2) when it otherwise becomes well secured and in the process of collection.

For purposes of meeting the first test for restoring an asset to accrual status, the holding company must have received repayment of the past due principal and interest unless

(1) the asset has been formally restructured and qualifies for accrual status, as discussed below;
(2) the asset is a purchased credit-impaired loan, pool of loans, or debt security accounted for in accordance with ASC Subtopic 310-30, and it meets the criteria for accrual of income under the interest method specified in that subtopic; or
(3) the borrower has resumed paying the full amount of the scheduled contractual interest and principal payments on a loan that is past due and in nonaccrual status, even though the loan has not been brought fully current, and certain criteria are met.

An important element to return an asset to accrual status is demonstrating that the payment performance by the borrower is sustained for a reasonable time. For example, a loan may have been restructured, in part, to reduce the amount of the borrower's contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period, within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

2065.1.6.1 Loan Performance Considerations

A period of sustained performance is very important in determining whether there is reasonable assurance of repayment and performance.

One perspective on loan performance is based upon an assessment as to whether the borrower is contractually current on principal or interest payments. For many loans, the assessment of payment status is sufficient to arrive at a loan's classification. In other cases, being contractually current on payments can be misleading as to the credit risk embedded in the loan. This may occur when the loan's underwriting structure or the liberal use of extensions and renewals masks credit weaknesses and may obscure an assessment of a borrower's ability to meet reasonable repayment terms.

A second perspective for assessing a loan's classification is to consider the borrower's expected performance and ability to meet its obligations in accordance with the modified terms over the remaining life of the loan. Therefore, the loan classification is meant to measure risk over the term of the loan rather than just reflecting the loan's payment history. As a borrower's expected performance is dependent upon future events, examiners' credit analyses should focus on

- the borrower's financial strength as reflected by its historical and projected balance sheet and income statements and
- the prospects for the sale or use of a commercial real estate property considering events and market conditions that reasonably may occur during the term of the loan.

2065.1.7 ACQUISITION OF FINANCIAL ASSETS THAT ARE EXPERIENCING MORE-THAN-INSIGNIFICANT DETERIORATION IN CREDIT QUALITY

For purchase credit deteriorated (PCD) assets that have experienced more-than-insignificant deterioration in credit quality since origination, accounting standards require an entity to record as the amortized cost basis the sum of the purchase price and the entity's estimate of credit losses as of the date of acquisition. The recognition of income on PCD assets is dependent on having a reasonable expectation about the amount expected to be collected over the life of the asset. When an entity can no longer reasonably estimate the amount expected to be collected, it should place the PCD asset on nonaccrual status.

2065.1.8 TREATMENT OF NONACCRUAL LOANS WITH PARTIAL CHARGE-OFFS

Considering all relevant factors, a loan with well-defined weaknesses that jeopardize collection in full of all amounts contractually due may result in a partial charge-off as part of a restructuring. When well-defined weaknesses exist and a partial charge-off has been taken, the remaining recorded balance for the restructured loan generally should be classified no more severely than "substandard." A more severe classification than "substandard" for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined. Such situations may occur when significant remaining risk exposures are identified but are not quantified, such as a borrower's bankruptcy or a loan collateralized by a property with potential environmental concerns.

As a general principle, whether to place an asset in nonaccrual status should be determined by the bank's assessment of the individual asset's collectibility. One loan to a borrower being placed in nonaccrual status does not automatically have to result in all other extensions of credit to that borrower being placed in nonaccrual status. When a single borrower has multiple extensions of credits and one meets the criteria for nonaccrual status, the lender should evaluate the other loans to determine whether one or more of them should also be placed in nonaccrual status.

A restructuring may involve a multiple note structure in which, for example, a loan is restructured into two notes (referred to as Note A and Note B). Lenders may separate a portion of the current outstanding debt into a new, legally enforceable note (Note A) that is reasonably assured of repayment and performance according to prudently modified terms. When restructuring a collateral-dependent loan using a multiple note structure, the amount of Note A should be determined using the fair value of the collateral. This note may be placed back in accrual status in certain situations. In returning the loan to accrual status, sustained historical payment performance for a reasonable time prior to the restructuring may be taken into account. Additionally, a properly structured and performing Note A generally would not be adversely classified by examiners. The portion of the debt that is unlikely to be repaid or collected and therefore is deemed uncollectible (Note B) would be adversely classified "loss" and must be charged off.

In contrast, the loan should remain on, or be placed in, nonaccrual status if the financial institution does not split the loan into separate notes, but internally recognizes a partial charge-off. A partial charge-off would indicate that the financial institution does not expect full repayment of the amounts contractually due. If facts change after the charge-off is taken such that the full amounts contractually due, including the amount charged off, are expected to be collected and the loan has been brought contractually current, the remaining balance of the loan may be returned to accrual status without having to first receive payment of the charged-off amount.[5] In these cases, examiners should assess whether the financial institution has well-documented support for its credit assessment of the borrower's financial condition and the prospects for full repayment.

2065.1.9 IN-SUBSTANCE FORECLOSURES

Loans should be recategorized on the balance sheet as "other real estate owned" (OREO) when a holding company has taken physical possession of the collateral. Physical possession is determined by the type of collateral, as outlined below:

- *real estate loan collateralized by property other than a consumer's residential property*—when a holding company, as creditor, has received physical possession of a borrower's assets, regardless of whether a formal foreclosure proceeding has taken place.
- *residential real estate property collateralizing a consumer mortgage*—when a holding company, as creditor, is considered to have received physical possession of the property upon the occurrence of either of the following:
  - The holding company obtains legal title to the residential real estate property upon completion of a foreclosure even if the borrower has redemption rights, whereby they have a legal right for a period of time after a

5. The charged-off amount should not be reversed or re-booked, under any condition, to increase the recorded investment in the loan or its amortized cost, as applicable, when the loan is returned to accrual status. However, expected recoveries, prior to collection, are a component of management's estimate of the net amount expected to be collected for a loan under ASC Topic 326. Refer to relevant regulatory reporting instructions for supervisory guidance on returning a loan to accrual status.

foreclosure to reclaim the real estate property by paying certain amounts specified by law.
- The borrower conveys all interest in the residential real estate property to the creditor to satisfy the loan through completion of a deed in lieu of foreclosure or through a similar legal agreement. The deed in lieu of foreclosure or similar legal agreement is completed when agreed-upon terms and conditions have been satisfied by both the borrower and the creditor.

When a holding company receives a long-lived asset, such as real estate, from a borrower in full satisfaction of a loan, the long-lived asset is rebuttably presumed to be held for sale and the holding company shall initially measure this asset at its fair value less cost to sell.[6]

2065.1.10 LIQUIDATION VALUES OF REAL ESTATE LOANS

Examiners should evaluate real estate loans based on the borrower's ability to pay over time, rather than on a presumption of immediate liquidation of the real estate (i.e., a forced sale of the property).[7] Loans may be reported at fair value in certain situations including when firm management has an intent to sell the loans, has elected to account for the loans under the fair value option election, or when repayment is expected to be provided substantially through the operation or sale of the collateral.

2065.1.11 KEY MANAGEMENT RESPONSIBILITIES

Financial institution management is responsible for preparing regulatory reports in accordance with GAAP and regulatory reporting requirements. Management is also responsible for establishing and maintaining an appropriate governance and internal control structure over the preparation of regulatory reports. An effective governance and control structure commonly includes policies and procedures that provide clear guidance on accounting matters.

Accurate regulatory reports are critical to the transparency of a financial institution's financial position and risk profile and are imperative for effective supervision. Decisions related to loan workout arrangements may affect regulatory reporting, particularly interest accruals and loan loss estimates. Therefore, a firm's loan workout staff have an important role in communicating with the firm's accounting and regulatory reporting staff to ensure that the firm's loan restructurings are presented accurately in regulatory reports.

A firm needs to consider whether a loan that was accruing interest prior to the loan restructuring should be placed in nonaccrual status at the time of modification to ensure that income is not materially overstated. Consistent with regulatory report instructions, a loan that has been restructured so as to be reasonably assured of repayment and performance according to prudent modified terms need not be placed in nonaccrual status. Therefore, for a loan to remain in accrual status, the restructuring and any charge-off taken on the loan must be supported by a current, well-documented credit assessment of the borrower's financial condition and prospects for repayment under the revised terms. Otherwise, the restructured loan must be placed in nonaccrual status. While an appropriately designed restructuring should improve the collectibility of the loan in accordance with a reasonable repayment schedule, it does not relieve the financial institution from the responsibility to promptly charge off all identified losses.

2065.1.12 SUPERVISORY CONSIDERATIONS

In evaluating credit risk-management processes and validating the accuracy of internal loan grades, examiners are responsible for reviewing management's processes related to accounting and regulatory reporting. While similar data are used for loan risk monitoring, accounting, and reporting systems, this information does not necessarily produce identical outcomes. For example, loss classifications may not be equivalent to the associated allowance measurements.

Examiners need to have a clear understanding of the differences between credit risk management and accounting and regulatory reporting concepts (such as accrual status and the allowance) when assessing the adequacy of the financial institution's reporting practices for on- and off-balance sheet credit exposures. Examiners should also refer to appropriate regulatory reporting instructions as well as applicable accounting standards for further information.

6. Long-lived assets are described in greater detail in ASC Topic 360, Property, Plant, and Equipment.

7. See the *Bank Holding Company Supervision Manual*, section 2231.0, "Real Estate Appraisals and Evaluations," for more information on liquidation value.

2065.2.1 PURPOSE OF THE ALLOWANCE FOR LOAN LEASE LOSSES

The allowance for loan and lease losses (ALLL) reflects estimated credit losses within a holding company's portfolio of loans and leases. Estimated credit losses are estimates of the current amount of loans that are probable that the holding company will be unable to collect given the facts and circumstances since the evaluation date (generally the date of the holding company's balance sheet). That is, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans as of the evaluation date.

In accordance with U.S. Generally Accepted Accounting Principles (GAAP), a holding company maintains an ALLL at a level that is appropriate to cover estimated credit losses associated with its loan and lease portfolio, that is, loans and leases that the holding company has intent and ability to hold for the foreseeable future or until maturity or payoff. The ALLL is presented on an institution's balance sheet as a contra-asset account that reduces the amount of the loan portfolio reported on the balance sheet. Each holding company should also maintain, as a separate liability account, an ALLL at a level that is appropriate to cover estimated credit losses associated with off-balance sheet credit instruments such as off-balance sheet loan commitments, standby letters of credit, and guarantees. The FR-Y9C report instructions provide more ALLL reporting information for holding companies.

The ALLL also is a component for calculating tier 2 capital, as set forth in Regulation Q (12 CFR 217.20(d)). Tier 2 capital includes surplus related to the issuance of tier 2 capital instruments; limited amounts of total capital minority interest not included in an institution's tier 1 capital; and limited amounts of the ALLL, or adjusted allowances for credit losses (AACL), as applicable, less applicable regulatory adjustments and deductions.[1] An institution calculating its total capital ratio using the standardized approach may include in tier 2 capital the amount of ALLL or AACL that does not exceed 1.25 percent of its standardized total risk-weighted assets.

2065.2.2 DETERMINING AN ADEQUATE LEVEL FOR THE ALLL

In determining the adequacy of an institution's ALLL (including amounts based on an analysis of the commercial real estate portfolio), examiners will consider an institution's process for conducting the analysis and whether management consistently applies this process to the loan and lease portfolio.[2] The determination of the adequacy of the ALLL should be based on management's consideration of all current significant conditions that might affect the ability of borrowers (or guarantors, if any) to fulfill their obligations to the institution. While historical loss experience provides a reasonable starting point, historical losses or even recent trends in losses are not sufficient, without further analysis, to produce a reliable estimate of anticipated loss.

In determining the adequacy of the ALLL, management should consider factors such as

- changes in the nature and volume of the portfolio;
- the experience, ability, and depth of relevant staff;
- changes in credit standards;
- collection policies and historical collection experience;
- concentrations of credit risk;
- trends in the volume and severity of past-due and classified loans; and
- trends in the volume of nonaccrual loans, specific problem loans, and commitments.

1. ALLL means valuation allowances that have been established through a charge against earnings to cover estimated credit losses on loans, lease financing receivables, or other extensions of credit as determined in accordance with GAAP. ALLL excludes "allocated transfer risk reserves." For purposes of Regulation Q, ALLL includes allowances that have been established through a charge against earnings to cover estimated credit losses associated with off-balance-sheet credit exposures as determined in accordance with GAAP.

2. The estimation process described in this section permits a more accurate estimate of anticipated losses than could be achieved by assessing the loan portfolio solely on an aggregate basis. However, it is only an estimation process and does not imply that any part of the ALLL is segregated for, or allocated to, any particular asset or group of assets. The ALLL is available to absorb overall credit losses originating from the loan and lease portfolio. The balance of the ALLL is management's estimation of potential credit losses, synonymous with its determination as to the adequacy of the overall ALLL.

In addition, this analysis should consider the quality of the institution's systems and management in identifying, monitoring, and addressing asset-quality problems. Further, management should consider external factors such as local and national economic conditions and developments, competition, and legal and regulatory requirements, as well as reasonably foreseeable events that are likely to affect the performance of the loan portfolio.

Management should adequately document the factors that were considered, the methodology and process that were used in determining the adequacy of the ALLL, and the range of possible credit losses estimated by this process. The complexity and scope of this analysis must be appropriate to the size and nature of the institution and provide for sufficient flexibility to accommodate changing circumstances.

Management should maintain reasonable records to support evaluating the adequacy the ALLL. Further, each institution is responsible for ensuring that controls are in place to consistently determine the allowance for loan and lease losses in accordance with GAAP (including ASC Subtopic 450-20, Contingencies – Loss Contingencies, and ASC Topic 310, Receivables), the institution's policies and procedures, management's best judgment, and relevant supervisory guidance.

2065.2.3 OVERVIEW OF THE 2006 ALLL POLICY STATEMENT

In 2006, the Federal Reserve and the other banking agencies issued a policy statement (2006 policy statement) regarding the ALLL that discusses

- its nature and purpose;
- the responsibilities of boards of directors, the institution's management, and the examiners of institutions; and
- factors to be considered in the estimation of the ALLL.[3]

The 2006 policy statement applies to all depository institutions supervised by the banking agencies, except for U.S. branches and agencies of foreign banks.[4] In addition, the Federal Reserve believes the guidance is broadly applicable to bank holding companies as well as savings and loan holding companies.[5] Accordingly, examiners should apply the policy, as appropriate, during inspections of holding companies and their nonbank subsidiaries, in addition to the examination of state member banks.

The 2006 policy statement indicates that it is the responsibility of an institution's board of directors and management to maintain the ALLL at an appropriate level. Each institution is responsible for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses. To fulfill this responsibility, an institution should have controls to consistently determine the ALLL in accordance with GAAP, the institution's policies and procedures, management's best judgment, and relevant supervisory guidance. The 2006 policy statement also discusses the analysis of the loan and lease portfolio, factors to consider in estimating credit losses, and the characteristics of an effective loan-review system.[6]

The 2006 policy statement reiterates the policy that Federal Reserve examiners will generally accept management's estimates in their assessment of the appropriateness of the ALLL when management has (1) maintained effective loan review systems and controls for identifying, monitoring, and addressing asset-quality problems in a timely manner; (2) analyzed all significant environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner; (3) established an acceptable ALLL-evaluation process for both individual loans and groups of loans that meets the objectives for an appropriate ALLL; and (4) incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

The 2006 policy statement emphasizes that an institution should provide reasonable support

3. For the entire text of the 2006 policy statement, see SR-06-17, "Interagency Policy Statement on the Allowance for Loan and Lease Losses."

4. See SR-95-42, "Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations," and SR-95-4, "Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations."

5. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

6. Attachment 1, "Loan Review Systems," of the 2006 policy statement has been superseded. For more guidance on effective credit risk review systems. See 85 Fed. Reg. 33,278 (June 1, 2020); SR-20-13, "Interagency Guidance on Credit Risk Review Systems;" and the *Commercial Bank Examination Manual*'s section entitled, "Credit Risk Review Systems."

and documentation of its ALLL estimates, including adjustments to the allowance for qualitative or environmental factors and unallocated portions of the allowance. This emphasis on support and documentation supplements, but does not replace, the guidance in the 2001 Interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions (see SR-01-17).

Additionally, an institution-specific loss estimate generally should not be based solely on a "standard percentage" of loans. While peer group or other benchmark averages are an appropriate tool to evaluate the reasonableness of the allowance, an institution should analyze the collectibility of the loan portfolio to estimate the allowance and not assume a set percentage for loss estimates (that is, 15 percent for loans classified as substandard and 50 percent for loans classified as doubtful).

The 2006 policy statement also includes accounting guidance covering the acceptable methods to measure impairment. Lastly, the 2006 policy statement reminds institutions that allowances related to off-balance-sheet financial instruments such as loan commitments or letters of credit should not be reported as part of the ALLL. Any allowance for these types of instruments is recorded as an "other liability."

2065.2.4 ALLL METHODOLOGIES AND DOCUMENTATION

In 2001, the Federal Financial Institutions Examination Council issued the "Interagency Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions" (2001 policy statement).[7] The 2001 policy statement clarifies the agencies' expectations for documentation that supports the ALLL methodology. Additionally, this statement emphasizes the need for an institution to have appropriate ALLL policies and procedures, including an effective loan-review system. The guidance also provides examples of appropriate supporting documentation. While the 2001 policy statement was intended for insured depository institutions, the Federal Reserve believes this guidance is broadly applicable to bank holding companies and to savings and loan holding companies.[8] Accordingly, examiners should consider this policy statement in their inspection of holding companies and their nonbank subsidiaries.

As discussed in the 2001 policy statement, an institution needs to establish its ALLL methodology in accordance with GAAP. An ALLL methodology should be systematic, consistently applied, and auditable. The methodology should be validated periodically and modified to incorporate new events or findings, as needed. Under the direction of the board of directors, an institution's management should implement appropriate procedures and controls to promote compliance with the institution's ALLL policies and procedures. Institution management should (1) segment the portfolio to evaluate credit risks; (2) select loss rates that best reflect the probable loss; and (3) be responsive to changes in the institution, the economy, or the lending environment by changing the methodology, when appropriate.

An institution's determination of an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses.

2065.2.5 ALLL ESTIMATION PRACTICES FOR LOANS SECURED BY JUNIOR LIENS

In January 2012, the Federal Reserve and the other federal banking agencies issued, "Interagency Supervisory Guidance on Allowance for Loan and Lease Losses Estimation Practices for Loans and Lines of Credit Secured by Junior Liens on 1–4 Family Residential Properties." (See SR-12-3.)

An institution should consider all credit quality indicators relevant to their junior liens. Generally, this information should include the delinquency status of senior liens associated with the institution's junior liens and whether the senior lien has been modified. Further, institutions should ensure that during the ALLL estimation process, sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios. As discussed in the

7. For the entire text of the 2001 policy statement, see SR-01-17, "Final Interagency Policy Statement on Allowance for Loan and Lease Losses (ALLL) Methodologies and Documentation for Banks and Savings Institutions." See also 66 Fed. Reg. 35,629 (July 6, 2001).

8. See SR-14-9.

guidance, an institution should refer to GAAP for recognizing ALLL.

The guidance states that an institution should use reasonably available tools to determine the payment status of senior liens associated with its junior liens, such as credit reports, third-party services, or, in certain cases, a proxy. Typically, large, complex institutions with significant home equity lending activity would find most tools reasonably available and would use proxies in limited circumstances.

More information on risk-management principles for junior-lien loans and home equity lines of credit is available in the May 2005 "Interagency Credit Risk Management Guidance for Home Equity Lending." (See SR-05-11 and section 2010.2.4 of this manual.)

2065.2.6 SUPERVISORY CONSIDERATIONS FOR ASSESSING ALLL

Examiners should assess the credit quality of an institution's loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of its ALLL. The Federal Reserve Board, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency issued interagency guidance on credit risk review systems for supervised institutions in 2020.[9] The credit risk review guidance discusses sound management of an institution's credit risk; a system of independent, ongoing credit review; and appropriate communication regarding the performance of the institution's loan portfolio to its management and board of directors. In addition, the *Commercial Bank Examination Manual* provides specific examination objectives and procedures to assist examiners in reviewing the appropriateness of an institution's ALLL.

In their review and classification or grading of the loan portfolio, examiners consider significant factors that affect the collectibility of the loan portfolio, including the value of any collateral. In reviewing the appropriateness of the ALLL, examiners should:

- Consider the effectiveness of board oversight as well as the quality of the institution's loan review system and its management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution's loan review function and credit grading system. Typically, examiners will test a sample of the institution's loans.[10]
- Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management's assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management's best estimate within the range. In making these evaluations, examiners should ensure that the institution's historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution's loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP.
- Review management's use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review the appropriateness and reasonableness of the overall level of the ALLL. In some instances, this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner's knowledge of the collectibility of loans at the institution and its current environment.
- Review the ALLL amount reported in the institution's regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance

9. See SR-20-13.

10. An institution may have a credit risk rating framework that differs from the framework for loan classifications used by the federal banking agencies. Such institutions should maintain documentation that translates their risk ratings into the regulatory classification framework used by the federal banking agencies. This documentation will enable examiners to reconcile the totals for the various loan classifications or risk ratings under the institution's system to the federal banking agencies' categories contained in the Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions Attachment 1 — Classification Definitions (SR-13-18). See also SR-20-13 for more information.

reported in the financial statements. Inquire about reasons for any material differences between the results of the institution's ALLL analyses and the institution's reported ALLL to determine whether the differences can be satisfactorily explained.
