6. Have any assets held by the company in one account been sold to another account? NOTE: The transaction may be permissible if appropriate disclosure is made, authorization is received, and the law or the governing instrument do not prohibit it. However, an interaccount transaction for ERISA accounts may be a prohibited transaction. In addition, difficult problems can arise in establishing or documenting a "fair" price for the transaction, particularly if the asset is a thinly traded security or is a unique asset.
7. Does the company have appropriate policies and procedures to ensure—
   a. its discretionary accounts are not left in uninvested cash positions beyond a minimum period of time?
   b. its accounts are invested in affiliate interest-bearing deposits only for appropriate temporary or other purposes? NOTE: To the extent the company has long-term affiliate deposits or significant aggregate holdings, a special review should be made of the company's documentation evidencing the suitability of such investments in view of available alternate vehicles.
8. Are securities of affiliates only purchased upon proper direction or specific authorization in account instruments?
9. When the adviser purchases securities which are underwritten by an affiliate, does the adviser do so only upon proper direction and specific authorization of the customer?
10. Does the company act as investment adviser to an open-end or closed-end investment company that is registered under the Investment Company Act of 1940? If so, do its activities conform with the Board's interpretation at 12 C.F.R. 225.125, which defines the scope of permissible activities?

3130.1.3.2.4.2 Broker Selection

1. When volume of activity warrants, is allocation of brokerage business controlled through an approved list which is periodically reviewed and approved by the company's board or a senior-officer-level committee?
2. Does management attempt to obtain the best service for customers, including periodic evaluations of broker qualifications such as—
   a. financial condition?
   b. past record of good and timely delivery and payment on trades?
   c. quality of execution and ability to handle specialized transactions?
   d. quality of research received, if applicable?
3. Are there procedures to monitor or periodically survey available negotiated commission prices in order to ascertain reasonable costs for the execution requirements of its accounts?
4. If commissions higher than the "lowest" available negotiated commissions are being paid for executions in order to receive goods and/or services—
   a. have such goods and/or services been determined to reasonably qualify as "brokerage and research services" as defined in section 28(e)(3) of the Securities Exchange Act of 1934?
   b. does an appropriate committee periodically (at least annually) review and determine that the value of the goods and services justifies the payment of the higher

brokerage commissions?

5. Does the entity periodically review and maintain records of all goods and/or services received from brokers or third parties in return for brokerage and/or dealer business allocated to particular firms?
6. Do policies and procedures preclude—
   a. selection of broker-dealers on the basis of deposit balances?
   b. agreements or understandings for allocation of specific amounts of business to a broker-dealer such that the adviser company would not be able to cease allocating business to the firm if it were no longer providing acceptable execution?
7. Are auditing and other monitoring controls and reporting procedures in effect to verify the compliance of traders with policies regarding broker selection and payment of commissions? NOTE: Under section 28(e) of the Securities Exchange Act of 1934, the adviser may also legitimately pay more than the lowest-available commission for reasons of execution, financial soundness, and efficiency of delivery and payment.
8. In addition to advisory services, are brokerage services provided for customers pursuant to section 225.28(b)(7)(i) of Regulation Y? If so, the examiner should refer to the securities brokerage inspection procedures and checklist questions for the inspection of brokerage activities.

3130.1.3.2.4.3 Trading Policies and Practices

1. When trading specialists are employed, are there adequate written or unwritten standards of competence, education, and training for such individuals?
2. When specialists are not employed, are the individuals responsible for trading reasonably trained and informed in relation to the volume and character of trading activity they are required to perform?
3. When transactions are permitted to be crossed between accounts, are procedures adequate to ensure fair pricing of the transactions? If it is not clear the transactions are permitted, has the company determined through counsel that crossing is permissible under applicable law?
4. When specialists are employed and volume of activity permits, are block trades considered in order to obtain more favorable trade prices and execution prices for accounts?
5. If applicable, do procedures, including establishment of time frames in advance of such trading, require special authorization and attention for large or block trades which are to be executed in a number of transactions?
6. If procedures permit the combining of purchase or sale orders of the same security—
   a. are resulting benefits in price and/or execution costs applied on a pro rata or average basis to the participating accounts?
   b. are allocable shares similarly pro-rated to participating accounts when a combined trade is not executed at once, but in a number of transactions over a period of time?
7. Does the adviser maintain policies “reasonably designed to prevent the misuse of material non-public information?”

3130.1.3.2.5 Recordkeeping

Registered investment advisers are subject to extensive recordkeeping requirements. SEC Rule 204-2 imposes recordkeeping standards and requires that registered investment advisers keep accurate records. In addition to this recordkeeping, the adviser is subject to the “brochure rule” (Rule 204-3). This rule requires an investment adviser to deliver a specified disclosure statement with respect to its background and business practices to every client or prospective client. In addition to an initial disclosure, the adviser must offer annually to deliver a current disclosure statement upon request. Those advisers which have custody or possession of securities of any client must maintain certain additional records, including separate ledger accounts for each client, copies of confirmations, and a position record showing the interest of each client and the location of the securities.

1. Does the investment adviser make and keep current appropriate books and records including—
   a. journals or summary journals?
   b. a memorandum of each order given by the firm or instructions received, showing terms and conditions of the orders?
   c. all checkbooks, bank statements, canceled checks, and cash reconciliations?
   d. all bills or statements, paid or unpaid?
   e. trial balances, financial statements, and internal audit papers?
   f. written communications received or sent by the firm?
   g. list of discretionary accounts?

   h. powers of attorney and discretionary powers?
   i. written agreements?
   j. copies of each notice, circular, advertisement, newspaper article, investment letter, bulletin, or other communication recommending the purchase or sale of a security?
2. Does the adviser maintain a record of every transaction in which the adviser or any ‘‘advisory representative’’ has a direct or indirect beneficial interest?
3. Are partnership articles, articles of incorporation, charter, minute books, and stock certificate books maintained at the adviser’s principal office?
4. If required books and records are photocopied or microfilmed, or if they are produced or reproduced on computer storage media—
   a. are such media indexed and arranged to permit immediate location of any particular record?
   b. were any copies or printouts of such records promptly provided on request?
   c. is at least one copy of the original records that are now on such media stored in a separate location from the original for the time required?
   d. does the adviser maintain procedures for the maintenance and preservation of, and access to, records so as to reasonably safeguard them from loss, alteration, or destruction?
   e. does the adviser have facilities for the immediate, easily readable projection of microfilmed records and for producing easily readable facsimile enlargements?
5. Do the entries in the general ledger and journals properly reflect payments or receipts of monies or other goods or services?
6. Do the financial statements, canceled checks, deposit slips, and check register properly reflect payments or receipts of monies or other goods or services?
7. When the adviser’s financial records indicate that it is capitalized with client funds (through either loans or equity), have adequate disclosures been made to clients about the risks and conflicts of interest involved?

3130.1.3.2.6 Security Storage and Processing

Investment advisers generally do not take possession and control of client funds and securities. However, in those cases in which such responsibilities are assumed, the inspection must evaluate those internal controls which are in place for the safeguarding of client funds and securities. Controls and related processing procedures must be appropriately designed and implemented by the adviser to efficiently and safely facilitate such operations.

1. Does the adviser have custody of client funds or securities?
2. Does the adviser gain effective access to client assets through practices, arrangements, or relationships with clients, such as trustee, executor, or account signator?
3. When the adviser has custody of client funds or securities, does the adviser maintain the following records:
   a. a record reflecting all purchases, sales, receipts, and deliveries of securities, and all debits and credits to such accounts?
   b. a separate ledger account for each client, showing purchases, sales receipts, and deliveries of securities?
   c. copies of confirmations of all transactions for such clients?
   d. a record for each security in which any client has a position, reflecting the name of the client, amount of interest, and location of security?
4. When the adviser renders investment-management services, are the following records maintained:
   a. for each client, a record of securities purchased and sold, containing the date, amount, and price of each transaction?
   b. a record for each security in which any client has a current position, showing the name of each client and current interest or number of shares owned by each client?
5. Are client assets physically segregated from the adviser’s own assets?
6. For the vault and other related security-processing areas, are adequate controls/safeguards in effect which include the following:
   a. Are assets maintained under a system of joint custody or dual control?
   b. Is access to these areas restricted to designated/authorized personnel?
   c. As appropriate, are other controls/safeguards systems in place (for example, rotation of assignments, key/lock combinations, or vault or area entrance log(s))?

d. Is a security-ticket system used as a vault and asset-movement control system?

7. If a security-ticket system is used, are adequate controls/safeguards in effect which include the following:
   a. Are security tickets prenumbered?
   b. Does each copy of the security ticket clearly indicate its destination to ensure prompt and accurate delivery?
   c. Does the security ticket provide the necessary information to ensure proper processing and recording of the transaction?
   d. Does the security ticket contain sufficient copies to ensure that sound internal control is maintained over the physical security-movement process by providing the following with a copy (or copies):
      - portfolio managers who initiated the transactions?
      - appropriate vault/operations personnel?
      - the audit/asset control function?
   e. Are unissued security tickets properly safeguarded and subject to adequate numeric controls?
8. Does the control of security ticket/transaction cancellation and replacement include—
   a. restricting the ability to initiate such action to supervisory personnel?
   b. reporting such activity to the audit/asset control function and other function(s) affected by such action?
   c. procedures to ensure that securities are returned to the vault or that funds charged from an account are redeposited, or that the securities or funds are immediately placed under the control of a new security ticket/transaction?
   d. identifying a replacement security ticket by recording such information on the replacement ticket?
   e. requiring all copies of the replaced security ticket to be forwarded to the audit/asset control function?
9. For assets received, are adequate controls/safeguards in effect which include the following:
   a. Are all assets received promptly placed under joint custody or control?
   b. Is appropriate documentation required and on file for all assets received, and is it compared to actual assets received and posted to control ledgers?
   c. As applicable, are procedures in place for controlling and properly handling assets received by other means, including delivery by mail or messenger?
   d. If assets are not to be physically held or issued (for example, mutual fund shares), is a receipt, statement, or acknowledgment obtained from the issuer or holder and processed by receipt ticket or other means to ensure proper accountability?
   e. If securities received are not properly registered in the company's nominee name, are procedures in place to ensure prompt re-registration, control, and follow-up until re-registration?
10. For the delivery of assets, are adequate control/safeguards in place which include the following:
    a. Are appropriate receipts obtained and on file for securities delivered?
    b. Are procedures in place to ensure that bearer securities are not mailed in amounts in excess of the company's insurance limits?
11. Do vault custodians—
    a. compare securities received/withdrawn to the security ticket?
    b. for withdrawals, verify that the security ticket is signed (initialed) by authorized personnel?
    c. for securities temporarily withdrawn from the vault (for example, for transfer, re-registration, or account/portfolio manager review), is a copy of the security ticket retained by vault personnel pending the return of the security to the vault?
12. For pending security transactions, are adequate controls in effect which include the following:
    a. Are pending items periodically reviewed by operations personnel?
    b. Do procedures provide for prompt follow-up on items which have not been completed within established time periods?
    c. Are exceptions promptly reported and resolved by appropriate personnel (for example, management, supervisors, and/or the audit/asset control function)?
    d. Are current pending security items in compliance with established procedures for reporting exceptions, and are those transactions which have not been completed within established time periods been followed up satisfactorily? NOTE: Examiner judgment should be used in determining the scope of this review. However, at a minimum, the review should include procedures for

handling security transactions pending 30 days or more.

13. Does the security-processing system—
    a. contain a sufficient number of controls/safeguards to properly reflect the current status of and limit an individual's control over a security transaction?
    b. contain sufficient information to identify, locate, and trace the movement of each asset?
    c. provide for adequate segregation of duties and responsibilities?
14. Has individual accountability or responsibility been properly assigned for the physical protection of the securities and related cash flow, if applicable, throughout the security-processing system?
15. Do procedures require that orders for trades originate with account or portfolio managers, with the signature or initials of the authorizing party shown on the order form or purchase/sale ticket?
16. Are transactions made on a first-in, first-out basis (that is, executed in order of receipt), except when combined in blocks for execution pursuant to appropriate written procedures?
17. Do operations personnel perform independently of account or portfolio managers to—
    a. reconcile trade tickets to brokers' confirmations?
    b. monitor and promptly follow up on any outstanding transactions, such as confirmations not received within specified time periods or purchases/sales which have not settled on settlement date?
    c. promptly post payments for purchases/sales to the recordkeeping system and promptly record/remove assets?

3130.1.3.2.7 Other Matters

1. Is the adviser or any of its principals involved in litigation or arbitration which will have an impact on its ability to fulfill its contract with clients?
2. Were any matters of a material nature found in the adviser's correspondence, such as significant client complaints?
3. Did a review of customer-complaint files reveal any possible areas for special inspection focus?
4. Did a review of the adviser's current financial condition raise concerns as to the adviser's solvency or its ability to otherwise continue to provide advisory services?
5. Are there any other aspects of the adviser's operations, or the operations of an affiliate, which raise concerns?

3130.1.4 INSPECTION FINDINGS

A written summary of the subsidiary's activities should be presented to the examiner in charge of the bank holding company inspection and should be included in the inspection report or its supporting workpapers. Material exceptions should be noted with management's responses under an appropriate caption in the open section of the report. Any comments in the report regarding the scope of the investment advisory inspections should note that such inspections are primarily focused on safety-and-soundness considerations and not on compliance with securities laws.

In those cases in which a separate Report of Bank Holding Company Inspection on Investment Advisory Activities is prepared, examiners may use the Uniform Interagency Trust Rating System (see SR-98-37 FRB, revised October 13, 1998, and effective January 1, 1999), which provides a basis for the evaluation of critical areas of supervisory concern. The rating system is generally used by federal supervisory agencies to assess the condition of trust companies. However, the system can be adopted to report on advisory operations as well. When the inspection uncovers significant deficiencies which require corrective action, and the inspection was not done in conjunction with a concurrent bank holding company inspection, a separate report should be prepared and delivered to the inspected nonbank adviser. Send a copy of the summary and any report comments to the Trust Activities Program, Washington, DC 20551.

3130.1.5 ON-SITE INSPECTION BY TRUST EXAMINERS

An investment advisory subsidiary of a bank holding company will normally be registered as an investment adviser under the federal securities laws, and will be subject to examinations of its advisory activities by the Securities and Exchange Commission (SEC). Nevertheless, because investment responsibility is involved in any investment adviser's activities, and since the SEC's routine examinations may be infrequent, periodic on-site inspections should be conducted as an integral part of BHC inspections.

Consideration should be given to using trust examiners to conduct, or at least participate in, on-site inspections of financial and investment advisory nonbank subsidiaries, especially when the subsidiary provides services to an affiliate bank trust department examined by the Board of Governors of the Federal Reserve System. If the bank holding company has to "spin off" the investment research and selection process of its banks' trust departments into an investment advisory subsidiary, there may be a need to review the activities of the trust departments together with those of the advisory subsidiary through an on-site inspection.

The companies being advised on a contractual basis and which were sponsored by the holding company or any affiliate are also defined as affiliates in sections 23A and 23B of the Federal Reserve Act. The examiner should therefore be alert to any intercompany transactions between a bank subsidiary and the advised company. A review of financial statements of such companies is warranted.

3130.1.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Limitations and activity approval	15 U.S.C. 80; section 23A FRA 371c	225.28(b)(6) 225.125	4–177	1997 FRB 275 1971 FRB 512 1972 FRB 149, 571

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

This section renders inspection guidance on financial and investment advisory activities that are provided in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, and financing transactions and similar transactions, and on conducting financial-feasibility studies.[1] This section also provides historical examples of financial and investment advice previously approved by Board order. The examples consist of various kinds of advice with regard to mergers and similar corporate transactions under the current Regulation Y, section 225.28(b)(6)(iii). Some of the examples of advisory nonbank activities were approved for inclusion into Regulation Y long before the revision of Regulation Y that was effective April 21, 1997. The reader of these examples must only take into consideration the current provisions of Regulation Y. There should be no reliance on Board order commitments, old regulatory provisions, supervisory policies, and interpretations made before April 21, 1997, unless they were not revised. Certain former provisions or commitments may no longer be applicable. The historical examples discussed in this section have been revised according to the new regulatory provisions.

If inspection objectives and procedures are stated in a specific section, the examiner should use this specialized guidance. In addition, the examiner should use the generalized inspection objectives and procedures in section 3130.0, which are generally applicable to all advisory activities.

3130.3.1 ADVISER TO A MORTGAGE OR REAL ESTATE INVESTMENT TRUST

An adviser to a mortgage or real estate investment trust (REIT) furnishes expertise in the areas of funds acquisition, lending, investing, and servicing that is similar to the role of adviser to a mutual fund. The contracted service is performed on a fee basis that is generally based on a percentage of the trust's total assets. The intention of the exemption, found in section 225.28(b)(iii) of Regulation Y, is to allow the relationship to be advisory in nature as opposed to controlling. However, in some instances, the relationship between trusts and their advisers has gone beyond the parameters of advice and resulted in legal entanglements, conflicts of interest, and financial exposure for the bank holding company. Because of the potential risk exposures which may result when a bank holding company or its subsidiary engages in this activity, the overall relationship must be subject to particular scrutiny during an inspection.

REITs were established by the U.S. Congress in 1960, effective January 1, 1961. A REIT is a hybrid form of an investment vehicle which is essentially a financial intermediary specializing in real estate lending and investment. A REIT obtains funds by borrowing from financial institutions or other lenders or by issuing shares (equity capital). It invests the funds in real estate, either as a lender or equity owner. REITs are usually owned by passive owners, not operators. REITs are designed to take advantage of benefits within the federal Internal Revenue Code.

There are generally four types of REITs: equity, mortgage, hybrid, and "finite-life." An equity REIT acquires income-producing properties, deriving its earnings mostly from rents. A mortgage REIT provides financing to real estate projects that are owned by others, deriving its earnings from interest charged on the loans. A hybrid REIT combines the equity REIT and the mortgage REIT. The finite-life REIT is structured to self-liquidate within an established time frame.

By meeting certain prescribed requirements during a taxable year, a REIT may function as a conduit with respect to income distributed to its beneficiaries. If at least 95 percent of the trust's income is distributed to the beneficiaries (excluding capital gains), the trust pays no taxes on the distributed income, thus avoiding the double taxation associated with corporations. Therefore, this investment vehicle has the tax advantage of a partnership but offers the limited liability and perpetuity of a corporation.

A REIT must be a corporation (other than an insurance company or bank), an association, or a trust, or it must be managed by at least one trustee, with transferable shares of beneficial interest as form and evidence of ownership. There must be at least 100 beneficial owners, and the trust must elect to be treated as a REIT for tax purposes. A REIT must meet the following threefold gross income test. At least 95 per-

1. Feasibility studies do not include assisting management with the planning or marketing for a given product or providing general operational or management advice.

cent of the trust's income must come from real property rentals, dividends, abatements and refunds of real property taxes, interest on loans, or gains from the sale of securities or real estate, with the further stipulation that no less than 75 percent of the trust's income must be directly related to real property. Also, less than 30 percent of the trust's income can be derived from the sale of any securities held for less than six months and from foreclosure property and real property held for less than four years that is not involuntarily converted.

In addition to the threefold gross income test, there is a twofold investment test which must be met. First, at least 75 percent of the value of the trust's total assets must be real estate assets, government securities, and cash. Second, 25 percent of the trust's total assets may be securities, but the trust cannot hold securities from one issuer which amount to greater than 5 percent of the trust's total assets and more than 10 percent of the outstanding voting securities of the issuer.

3130.3.1.1 Evaluating Advisory Activities for a REIT

A bank holding company may have an insignificant amount of capital invested in the advisory company. However, if the bank holding company or its subsidiaries have extensions of credit or unfunded commitments outstanding, an evaluation of the credit may be needed using normal classification criteria as to their collectibility, particularly if there is substantial risk exposure. Examination/inspection reports of subsidiaries should be reviewed to determine the consolidated exposure. The holding company or its banking subsidiaries may be participating in exchanges or swaps with the advised REIT, whereby trust assets are exchanged for forgiveness of bank debt. Such pending asset swaps should be considered in conjunction with the credit evaluations. The swaps may be for the purpose of reducing the REIT's liabilities, which can involve an exchange of assets with the lender. The lender's balance sheet reflects an exchange of one asset for another together with, possibly, a lump-sum payment of cash to the trust. If a swap is pending, review the criteria that the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap. Also, determine the amount of any cash or earning assets that will be given to the trust.

A holding company and a trust have separate and distinct shareholders but common management. The potential exposure in such cases may be pronounced. Such relationships should be reviewed for conflicts of interest. Loans may be booked by the holding company or its subsidiary and subsequently sold to the trust. The credit decision may have been made by the subsidiary, and the REIT's purchase of the loans may have been approved by the affiliated adviser. The benefits to the holding company may include receiving the origination fee and selling the loan to the trust, thereby increasing the REIT's assets, upon which the holding company's advisory fee is based. Following receipt of the sale's proceeds, the process may be repeated. If the holding company has participated in this type of process, there is potential for a conflict of interest. The holding company or its subsidiary may have to repurchase the credit.

Theatened or pending litigation may result from loans that were originated by the holding company or its subsidiaries or that were recommended by the adviser. The number of such loans together with the current payment status of the credit should be determined. If there are numerous loans on a nonaccrual status, the holding company may have accumulated a significant loss. Finally, any suit involving the adviser which pertains to services it performed should be explored as to its validity and potential financial exposure.

3130.3.2 INSPECTION OBJECTIVES

1. To determine the level of risk involved when the bank holding company or its subsidiaries have extensions of credit and unfunded commitments outstanding to the advised trust.
2. To review for conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
3. To review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
4. To review all covered transactions between a bank holding company's subsidiary bank and a REIT, if the REIT is sponsored and advised on a contractual basis by the bank or any subsidiary or affiliate of the bank, to ensure that transactions are permitted pursuant to sections 23A and 23B of the Federal Reserve Act.

5. To determine whether the REIT has been advised to sell real estate in the ordinary course of business and, if so, whether the appropriate liability account for corporate federal and state taxes has been established by the advised subsidiary.
6. To determine whether the REIT adviser is providing the appropriate advice to the REIT to generate nonspeculative high yields; adequate liquidity; portfolio diversification; sufficient cash flow to pay dividends; continuous repricing; and adequate public disclosure, including the extent of risk involved.
7. To determine the adequacy and quality of professional management and the level of management's equity stake in the REIT.
8. To determine the effect on net earnings from floating interest rates on asset yields that may have been caused by prepayment risk.

3130.3.3 INSPECTION PROCEDURES

1. Determine if there are any significant extensions of credit or unfunded commitments outstanding. If so—
   a. evaluate the credit using normal classification criteria as to collectibility;
   b. review examination or inspection reports of the holding company's subsidiaries and determine the consolidated exposure; and
   c. review any pending asset swaps in conjunction with the credit evaluations, if the holding company or its banking subsidiaries are participating in exchanges or swaps with the advised REIT whereby trust assets are exchanged for forgiveness of bank debt.
      - Review the lender's balance sheet to make certain that it reflects an exchange of one asset for another, as well as any lump-sum payment of cash to the trust.
      - Review the criteria the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap.
      - Determine the amount of any cash or earning assets that will be given to the trust.
2. Determine and evaluate any significant conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
   a. Determine if there are any loans booked by the holding company or its subsidiary and subsequently sold to the trust, if the credit decision was made by the subsidiary, and if the REIT's purchase of the loans was approved by the affiliated adviser.
   b. If significant conflicts of interest exist, determine whether the holding company or its subsidiary must repurchase any associated credit.
3. Review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
   a. Determine the number and amount of such loans together with the current payment status of the credit and whether any loans are on a nonaccrual status.
   b. Evaluate any suit involving the adviser that pertains to services it performed as to the suit's validity and potential financial exposure.
4. Evaluate the effect on net earnings and dividends that declining rates (floating-rate assets) have on the prices of floating-rate mortgage assets. Determine the results and the nature of any hedging strategies that are used to offset a decline in net earnings.

See also the inspection procedures in sections 3130.0 and 3130.1.

3130.3.4 FINANCIAL ADVICE ON ISSUING SECURITIES OF FOREIGN GOVERNMENTS IN THE UNITED STATES

3130.3.4.1 Financial Advice to the Canadian Federal, Provincial, and Municipal Governments

An example of providing financial and investment advisory activities is a Board order that was previously approved (now authorized under section 225.28(b)(6)(iii) of Regulation Y). The order specifically authorized the providing of financial advice to the Canadian federal and provincial governments for issuing their securities in the United States. Also, the Board's Regulation K authorizes the provision of such investment, financial, or economic advisory services to foreign governmental entities (see section 211.10(a)(8)). The Board approved the proposed activity on February 12, 1988 (1988 FRB 249).

Another Board order authorized a foreign bank, subject to the BHC Act, to acquire a securities firm to engage in this activity, but to expand the activity to include the providing of such advice to the Canadian municipal governments in addition to the federal and provincial governments. The Board concluded that the slight modification would not alter the activity to render it less closely related to banking. The Board approved the order on March 28, 1988 (1988 FRB 334). Other approved Board orders for this activity are 1988 FRB 500 and 1988 FRB 571.

3130.3.4.2 Providing Financial Advice to the Japanese National and Municipal Governments and Their Agencies

Another example of providing advice to foreign governments is a bank holding company that applied for the Board's approval to engage, through its wholly owned securities subsidiary, in certain securities-related, foreign-exchange, and investment and financial advisory activities. The activity, which consisted of providing financial advice to the Japanese national and municipal governments, had not previously been authorized for bank holding companies. When making its decision, the Board referred to similar orders as well as to the facts provided. It approved these advisory services by order on June 4, 1990. (See 1990 FRB 654.)

The Board, effective September 10, 1992, added the providing of financial advice to foreign governments, such as advice with respect to the issuance of their securities, to the activities permissible by Regulation Y, currently authorized by section 225.28(b)(iii).

3130.3.5 PROVIDING FINANCIAL-FEASIBILITY STUDIES AND VALUATION SERVICES

The following provides an example of a bank holding company that was authorized to provide financial-feasibility studies and valuation services, including expert-witness testimony in connection with the valuation services. A bank holding company (the applicant) had requested the Board's approval to acquire 100 percent of the voting shares of a company (the company) that engaged in investment advisory, investment management, and financial advisory services. The company engaged in providing (1) financial-feasibility studies for specific projects of private corporations, (2) valuations of companies and of large blocks of utility stock for a variety of purposes, and (3) expert-witness testimony on behalf of utility companies in rate cases.

In providing financial-feasibility studies, all financial aspects of the particular project were evaluated, including economic conditions, sales and earnings statements, balance sheets, and cash-flow data. Each engagement involved analyzing and projecting the income to be generated by a particular project. The Board believed that this activity was functionally similar to the financial advice traditionally offered by banks to their commercial lending customers. The applicant provided evidence revealing that certain major banks perform similar financial-feasibility analysis services for their customers. The Board thus approved the provision of such financial-feasibility studies for corporations. Certain commitments were made to guard against any possible conflicts of interests and related adverse effects between the applicant's credit-extending subsidiaries and the company, acting as an adviser regarding the financial-feasibility studies. Included was the condition that the company's financial advisory activities would not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis.

Upon consideration of the above, the Board also determined the activity of providing valuations of companies, as well as the expert-witness testimony incidental to such valuations, to be permissible. The commercial lending and trust departments of banks commonly make valuations of a broad range of tangible and intangible property, including the securities of closely held companies. The applicant provided evidence that numerous banks compete directly with the company in offering corporate valuations for a fee.

The Board, effective September 10, 1992, added the providing of financial-feasibility studies to the list of nonbanking activities permitted by Regulation Y (see section 225.28(b)(6)(iii)). With the Regulation Y revisions, effective April 1997, the Board specifically determined that feasibility studies do not include assisting management with the planning or marketing for a given project or providing general operational or management advice. The 1992 amendment to this regulation permitted bank holding companies to conduct feasibility studies for high net worth individuals, as well as corporations, and financial and nonfinancial institutions. With the April 1997 amendment, such services could be provided to any person.

3130.3.5.1 Valuation Services

The valuation services included the following activities:

1. the valuation of a company for purposes of acquisitions, mergers, and divestitures
2. tender-offer evaluations
3. advice for management or for a bankruptcy court on the viability and capital adequacy of financially troubled companies and on the fairness of bankruptcy reorganizations
4. valuation opinions on transactions in publicly held securities
5. valuations on the fair market value of employee stock ownership trusts
6. periodic valuation of stock of privately owned companies held in pension or profit-sharing plans, charitable trusts, or venture-capital funds
7. the valuation of a privately owned company or of a large block of publicly owned securities for estate-tax purposes
8. for estate-tax purposes, valuations of a company's common stock and other securities for recapitalization of a privately held company

3130.3.5.2 Utility-Rate Testimony in Support of Utility-Company Valuations

The company frequently provided expert witness testimony on behalf of utility firms in rate cases. The company's personnel were retained to give expert testimony on financial matters such as the cost of capital, economic conditions, and the rate of return expected by investors in utility securities. The Board believed that to a large degree the activity may be considered incidental to the company's general provision of economic information and advice which is permissible under section 225.28(b)(6)(ii) of Regulation Y. Also, banks routinely calculate the cost of capital for customers to advise them regarding financial alternatives.

3130.3.6 EDUCATION-FINANCING ADVISORY SERVICES

Four bank holding companies (collectively, the notificants) gave notice pursuant to section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of their intention to each acquire more than 5 percent of a company (the company) that would provide education-financing advisory services.[2] The company would enable state governments to assist parents in financing the higher education of their children.

The company will (1) develop and manage an educational savings and lending program on behalf of the state, (2) design and provide necessary computer software for the program, (3) provide marketing and program materials, and (4) train state personnel to implement the program. The notificants would eventually provide the services to various state governments nationwide.

As part of developing the education savings and lending program, the company would assist in formulating and defining its overall scope; provide the research necessary to begin operations; design the program's operations; and organize the program in cooperation with all interested parties, including coordinating participation among the state authorities. The company would also coordinate key functions of a college-funding program, such as marketing, public relations, training, investment, lending, legal documentation, financial recordkeeping, and ongoing program evaluation. In addition, the company would design, install, and maintain the computer software necessary to implement the program's services. The company's compensation would be based on application fees received by a state educational assistance authority and the amount of investment and loan balances held by the program.

All of the intended services are integrally related to advising and administering student-loan and college-savings programs. Banks offering their own student-loan and college-savings programs engage in many of the planned activities and are uniquely suited to advise and assist other potential providers, including state governments, in structuring and implementing student-loan and college-savings programs.[3] The Board previously concluded that bank holding companies may provide similar advisory and support services to state authorities that are engaged in making student loans.[4] Accordingly,

2. The notificants would have varying ownership interests in excess of 5 percent. Other individual ownership interests of less than 5 percent would be held by various banks and savings institutions located in one state. Each notificant committed that the company would be treated as a subsidiary within the meaning of the BHC Act (12 U.S.C. 1841(d)).

3. See 12 C.F.R. 225.28(b)(1) and (6).

4. See 1985 FRB 725.

based on all the facts of record, the Board concluded that the proposed activities are closely related to banking under section 4(c)(8) of the BHC Act. The Board approved the notice on September 25, 1995 (1995 FRB 1042). Approval of this proposal is specifically conditioned on the notificants' compliance with the commitments made in connection with this notice.

3130.3.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Providing financial-feasibility studies, valuation services, utility-rate testimony, but not "public" credit ratings		225.28(b)(6)(iii)		1985 FRB 118, 120
Financial-feasibility studies for issues of tax-exempt revenue bonds and private corporations				1987 FRB 59
Advice in connection with merger, acquisition/ divestiture, and financing transactions and advice regarding loan syndications, interest-rate swaps, and interest-rate-cap transactions		225.28(b)(6)(iii)		1987 FRB 59
Providing financial advice to the Canadian federal, municipal, and provincial governments, such as with respect to the issuance of their securities in the United States		225.28(b)(6)(iii)		1988 FRB 249 1988 FRB 334

3130.4.1 INFORMATIONAL, STATISTICAL FORECASTING, AND ADVICE ON SUCH TRANSACTIONS AS FOREIGN EXCHANGE, SWAPS, COMMODITIES, AND DERIVATIVES

Providing financial and investment advisory activities may consist of a bank holding company's providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.[1] The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection with currency swaps is permissible,[2] as well as providing advice regarding loan syndications.[3] This section provides an example of a February 16, 1983, Board order permitting a bank holding company to establish a de novo subsidiary to offer certain informational, advisory, and transactional services including the provision of the following:

1. General economic information and statistical forecasting with respect to foreign exchange and money markets through time-sharing networks. The services included the analysis of foreign-exchange and money market trends in the context of economic and political developments and the provision of information with respect to foreign exchange.
2. Advisory services designed to assist customers in monitoring, evaluating, and managing their foreign-exchange exposure, including making recommendations regarding policies and procedures to enhance a customer's ability to identify, measure, and manage financial risks in a multicurrency environment. The newly formed subsidiary would also provide advice on the timing of purchases and sales of foreign exchange in both spot and forward markets.
3. Transactional services with respect to foreign-exchange exposures. The subsidiary would arrange foreign-exchange transactions by an affiliated bank holding company and other commercial banks.

As a condition for approval, the applicants were required to seek the Board's authorization if they engaged in any additional activities within the United States. (See 1983 FRB 221.)

Effective February 6, 1984, the Board amended Regulation Y to allow bank holding companies to offer foreign-exchange advisory and transactional services that include providing general information and statistical forecasting with respect to foreign-exchange markets. The activity included arranging for "swaps" among customers with complementary foreign-exchange exposures and the execution of foreign-exchange transactions, provided the activity would be conducted through a separately incorporated subsidiary of the bank holding company that will observe the standards of care and conduct applicable to fiduciaries with respect to its foreign-exchange advisory and transactional services.

3130.4.1.1 Inspection Objectives

1. To determine the financial effect of the activity on the parent BHC and its bank subsidiary (or subsidiaries).
2. To determine that the specific activities provided by the company are permissible.
3. To determine that the company is not exposing itself to conflicts of interest between its own role of recommending foreign-exchange positions to its customers and any role its affiliates may have in executing foreign-exchange transactions.

3130.4.1.2 Inspection Procedures

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiary (or subsidiaries).
2. Review the company's policies and procedures to determine that the following are present:
   a. adequate minutes of the board and board committee meetings
   b. adequate blanket bond coverage
3. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.

1. See 62 Federal Register 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.
2. See 1989 FRB 308.
3. See 1987 FRB 220.

4. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct foreign-exchange transactions for the company's customers. Determine whether bank subsidiaries are being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the bank holding company or its nonbank subsidiaries.
5. Review the company's revenue sources to determine that it has not taken foreign-exchange positions and does not execute foreign-exchange transactions.

3130.4.2 FINANCIAL ADVICE AS TO THE STRUCTURING OF AND ARRANGING FOR LOAN SYNDICATIONS, INTEREST-RATE SWAPS, CAPS, AND SIMILAR TRANSACTIONS

A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in swaps, caps, and similar transactions; commodities; and any forward contract, option, future, option on a future, and similar instruments.[4] The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible.[5] The Board has also found the provision of advice regarding loan syndications to be permissible.[6]

An example of a Board order regarding providing financial advice is one in which a bank holding company (BHC) applied for the Board's approval to establish its company de novo as a financial advisory firm. The Board had not previously approved the structuring of and arranging for loan syndications (see section 225.25(b)(6)(ii) of Regulation Y) or arranging for interest-rate "swaps" and interest-rate caps, and similar transactions (see section 225.28 (b)(6)(iv) of Regulation Y). Interest-rate caps are contractual agreements wherein the seller of a cap agrees to make payment to the purchaser of a cap if a particular interest-rate index (prime) exceeds a predetermined level, with payments calculated on an assumed principal amount for a deferred time period. The caps and swaps are typically used to manage or hedge outstanding positions in the financial markets.

The Board's authorization included the following conditions:

1. The advice rendered by the company on an explicit fee basis will be rendered without regard to correspondent balances maintained by the customers of the company at any depository institution subsidiary of the BHC.
2. Company's financial advisory activities shall not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis. The Board, on November 28, 1986, approved the activity by order (1987 FRB 59). (See 1990 FRB 756.) The Board subsequently, effective September 10, 1992, added this nonbanking activity to the list of activities permitted by Regulation Y. (See section 225.28(b)(6)(iii) for loan syndications and 225.28(b)(6)(iv) for interest-rate swaps and caps.)

Reference can also be made to another Board order (1991 FRB 184) relating to providing advice on joint ventures, leveraged buyouts, restructurings, recapitalizations, and other corporate transactions (see 225.28 (b)(6)(iii) of Regulation Y), as well as to providing advice regarding the structuring and arranging of swaps, caps, and similar transactions relating to interest rates, currency and exchange rates and prices, and economic and financial indexes (see 225.28(b)(6)(iv) of Regulation Y).

3130.4.3 ADVICE RELATING TO THE STRUCTURING OF AND ARRANGING FOR CURRENCY SWAPS

A foreign bank subject to the BHC Act applied for the Board's approval to acquire a company engaged in certain securities, foreign-exchange, and financial advisory activities. The Board previously determined the activities proposed by the BHC, except for providing advice relating to the structuring of and arranging for currency swaps, to be closely related to banking. As for advice on currency swaps, it was noted that most banks that provide advice relating to interest-rate swaps also provide advice relating to currency swaps. Providing advice as to currency swaps was deemed to be functionally and operationally similar to providing advice relating to the structuring of and arranging for interest-

4. See 62 Federal Register 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.
5. See 1989 FRB 308.
6. See 1987 FRB 220.

rate swaps. Both transactions have the common objectives of securing low-cost funds and converting one type of risk to another, and both transactions require similar documentation. The Board approved the activity by order on February 13, 1989 (1989 FRB 308). The Board, effective September 10, 1992, added providing advice as to currency swaps to the nonbanking activities permitted by regulation. See section 225.28(b)(iv) of Regulation Y.

3130.4.4 ADVICE WITH RESPECT TO FUTURES CONTRACTS

3130.4.4.1 Limited Advisory Services with Respect to Futures Contracts on Stock Indexes and Options on Such Futures Contracts

The following is an example of a bank holding company that applied to the Board to engage de novo, through a wholly owned subsidiary, in the provision of advisory services with respect to futures contracts on stock indexes and options thereon. The advisory services to be provided consisted of general research and advice on market conditions and hedging strategies, client-account information and reconciliation of trades, and communication linkage between clients and exchange floors in connection with the subsidiary's futures commission merchant activities. The services offered to customers were provided either as part of an integrated package of services or for a separate fee.

The futures advisory services were essentially identical to the advisory services previously approved by the Board by regulation and order with respect to other financially related futures contracts. The Board concluded the applicant's provision of advisory services for futures contracts on stock indexes and for options thereon to be permissible (1987 FRB 220 and section 225.28(b)(6)(iv) of Regulation Y).

Previously, the Board had approved the execution and clearance of futures contracts on stock indexes and options thereon (1985 FRB 251). At that time, however, the Board had not approved a proposal to provide investment advisory services in connection with the execution and clearance of such instruments.

3130.4.4.2 Advice on Certain Futures and Options on Futures

This section is a historical example of a bank holding company that requested the Board's approval to provide de novo investment advice concerning futures and options on futures contracts on foreign exchange, government securities, and bullion and money market instruments. In addition, the company would provide portfolio investment advice, for which applicant had previously received authorization pursuant to Regulation Y (the authorization is currently included in section 225.28(b)(6)(iv)).

Previously, the Board had approved the provision of investment advice as a futures commission merchant (FCM) (section 225.28(b)(7)(iv)(A)) or as a commodity trading adviser (CTA) registered with the Commodity Futures Trading Commission (CFTC). The provision by an FCM or CTA of such advice could include providing counsel, publications, written analyses, and reports relating to the purchase and sale of futures contracts and options on futures contracts that bank holding company futures commission merchant subsidiaries are permitted to execute and clear. Such advisory services could also consist of providing written or oral presentations on the historical relationship between the cash and futures markets or the functions of futures as hedging devices, demonstrating examples of financial futures uses for hedging, and assisting in structuring a hedging strategy for a cash position. FCMs and CTAs are subject to registration with and regulation by the Commodity Futures Trading Commission pursuant to the Commodity Exchange Act, as amended. (7 U.S.C. 1).

Before incorporation of the advisory activity into Regulation Y (see 1986 FRB 369), the Board had determined by order that the provision of futures and options advice by FCMs is permissible and closely related to banking (see 1985 FRB 168 and 111, 1984 FRB 780, and 1984 FRB 369). A CTA could provide such advice even though it is not acting as an FCM.

The issue presented by this latter proposal was whether the conduct of this activity by company would be a proper incident to banking if company, serving as an adviser, did not meet the *former* Regulation Y requirement of registering with the CFTC as a CTA or FCM. The applicant expected to qualify for a statutory exemption (7 U.S.C.6m) from the registration under section 4m of the Commodity Exchange Act. This exemption provides that any person who, during the previous 12 months, has not furnished commodity advisory services to more than 15 persons and has not represented himself or herself to the public as a CTA is exempt from the registration requirements for CTAs under the act. The applicant's proposal permitted company to provide commodity trading advice without those safeguards. The Board held that it expects the adviser to disclose to its customers substantially the same information required for registered CTAs, including the CTA's performance record, conflicts of interest, possible trading risks, and civil and criminal actions against the CTA.

The Board concluded that the possible adverse effects would be further minimized by the following conditions:

1. Company will remain subject to the antifraud provisions of the Commodity Exchange Act as well as other restrictions in the act.
2. The adviser will not trade for its own account (except to hedge), will limit its advice to instruments that banks deal in extensively (foreign exchange, bullion, government securities, and money market instruments), and will only serve customers that are financially sophisticated and have significant dealings or holdings in the underlying commodities or instruments. The Board approved the application by order on October 18, 1988 (1988 FRB 820).

3130.4.5 PROVIDING DISCRETIONARY PORTFOLIO MANAGEMENT SERVICES ON FUTURES AND OPTIONS ON FUTURES ON NONFINANCIAL COMMODITIES

With respect to the Regulation Y provisions effective April 21, 1997, discretionary portfolio management advice is not separately listed in section 225.28(b)(6)(iv). Discretionary investment advice is discussed, however, within the preamble to the final rule. The preamble emphasizes that such advice may be provided to any person (such advice is no longer limited to institutional investors) regarding contracts relating to financial and nonfinancial assets.

Foreign banking organizations (applicants) subject to the BHC Act provided notice to engage through their subsidiary (company) in providing investment advisory services with respect to futures and options on futures on financial and nonfinancial commodities, including discretionary portfolio management services.[7] The Board previously determined that the proposed activities, with the exception of providing discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities, are closely related to banking.

The Board had permitted bank holding companies to provide investment advice with respect to futures and options on futures on both financial and nonfinancial commodities. (See section 225.28(b)(6)(iv) of Regulation Y.) The Board also previously approved providing discretionary portfolio management services with respect to futures and options on futures on financial commodities. (See 1995 FRB 386.) In addition, the Office of the Comptroller of the Currency permits national banks to engage in discretionary funds management with respect to futures and options on futures on nonfinancial commodities. (See OCC Interpretive Letter No. 494 (December 20, 1989).)

In this regard, applicants committed that company would provide the proposed discretionary portfolio management services only at the request of the customer. Applicants also committed that company would comply with applicable law, including fiduciary principles. In addition, applicants proposed that company exercise its discretionary portfolio management authority only in purchasing and selling exchange-traded futures and options on futures contracts previously approved by the Board. The Board gave its approval on June 30, 1995 (1995 FRB 803).

3130.4.6 COMBINATION OF PROVIDING ADVICE WITH OTHER NONBANKING ACTIVITIES

3130.4.6.1 Providing Nonfinancial Futures Advice and the Combining of Foreign-Exchange, Government Securities Advisory, and Execution Services

A BHC applicant requested the Board's permission to engage in trading options on foreign exchange and offering investment advice on financial and nonfinancial options and futures contracts, securities, and interest-rate and currency swaps. The applicant applied to provide these advisory services through a partnership, of which it would own 80 percent of its equity.

7. Company does not trade futures or options on futures for its own account or provide futures commission merchant execution or clearance services.

This partnership would provide these advisory services only to the applicant, its affiliates, and the applicant's partner, a commodity trading organization. The partnership would provide execution services only to the applicant and its affiliates, not to the applicant's partner.

The Board had not previously approved the provision of nonfinancial futures advice for bank holding companies. The Board noted that the Office of the Comptroller of the Currency (OCC), by OCC Interpretive Letter 494 (December 20, 1989), determined that a national bank could provide execution, clearing, and advisory services for customer transactions in standardized, exchange-traded "nonfinancial" futures contracts and options, such as futures on oil and agricultural products. The OCC determined that the contracts are financial products and that the provision of investment advice was essentially the same as the advice given with respect to financial futures contracts. The OCC contends that investment advice is incidental to the bank's authority to purchase and sell the instruments on behalf of its customers.

The Board has permitted bank holding companies to provide advice with respect to futures and options on futures relating to bank-eligible securities, bullion, and foreign exchange (12 C.F.R. 225.28(b)(6)(iv)). The Board also has permitted bank holding companies to provide investment advice with respect to options and futures contracts based on broad-based indexes of stock and bonds (1990 FRB 770). The Board thus determined that the provision of investment advice with respect to investing in options and futures, based on nonfinancial instruments, to be the functional equivalent of providing advice on options and futures based on financial instruments. In each case, the bank holding company subsidiary is furnishing advice with respect to trading of a financial instrument. The partnership would not provide advice to third parties without Federal Reserve approval. The Board thus approved the providing of investment advice on nonfinancial futures, options, and options on futures.

The applicant also proposed that the partnership provide execution services to the applicant's wholly owned subsidiary and to the applicant's U.S. branches with respect to—

1. over-the-counter options on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments;
2. exchange-traded transactions in futures, options, and options on futures on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments; and
3. spot and forward transactions in foreign exchange.

The Board previously approved the combination of advice and execution for—

1. foreign-exchange transactions (1990 FRB 649),
2. transactions on derivative instruments based on U.S. government securities and other money market instruments (1990 FRB 664), and
3. securities brokerage (1989 FRB 396).

The Board approved by order the providing of the combination of foreign-exchange and government securities advisory and execution services on December 21, 1990 (1991 FRB 126).

For these reasons, the Board approved the providing of discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities on June 30, 1995. (See 1995 FRB 803).

3130.4.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Provide information and advice on foreign operations and arrange foreign-exchange transactions				1983 FRB 221

Providing nonfinancial futures advice and the combining of foreign-exchange, government securities advisory, and execution services		225.28(b)(6)(iv)		1995 FRB 803
Advice in connection with currency swaps		225.28(b)(6)(iv)		1989 FRB 309

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The financial and investment advisory nonbanking activity of consumer financial counseling may consist of providing advice, educational courses, and instructional materials to individuals on consumer-oriented financial-management matters, including debt consolidation, applying for a mortgage, bankruptcy, budget management, real estate tax shelters, tax planning, retirement and estate planning, insurance, and general investment management. The authority for this advisory activity is currently derived from section 225.28(b)(6)(v) of Regulation Y.

This nonbanking activity was added to the Regulation Y "laundry list" in 1986. Previously, the Board authorized the provision of consumer financial counseling services by order. (See 1979 FRB 65, 1979 FRB 265, 1985 FRB 253, and 1985 FRB 662. These references are only historical examples.) A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.[1] The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection with currency swaps is permissible,[2] as well as providing advice regarding loan syndications.[3] The revised Regulation Y, effective April 1997, deleted restrictions on consumer-counseling services that prohibited bank holding companies from promoting specific products and services, and from obtaining or disclosing confidential customer information without the customer's consent. These restrictions do not apply to banks that engage in the above activities.

Prudent management should take into consideration certain actions to prevent potential conflicts from arising. When considering these orders, the Board was concerned that the provision of consumer financial counseling activities could potentially result in unfair competition, conflicts of interest, and other adverse effects. (See 1979 FRB 267.) Examiners should be alert to problems that may arise from such conflicts as they review this nonbanking activity. Further, the examiner should determine whether counselors, as a general practice, are advising each customer that they are not required to purchase any services from affiliates, and determine whether customers have the option to exclude themselves from service and product offerings provided by affiliates.

2. See 1989 FRB 308.

3. See 1987 FRB 220.

3130.5.1 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Providing financial-management courses, counseling, and related instructional materials				1979 FRB 265
Engaging, through an acquired bank, in consumer financial counseling				1985 FRB 253
Providing consumer financial counseling services as a permissible nonbanking activity		225.28(b)(6)(v)		1986 FRB 833 1985 FRB 662

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Financial and investment advisory services include tax-planning and tax-preparation services. Tax planning involves providing advice and strategies designed to minimize tax liabilities. For individuals, this includes analysis of the tax implications of retirement plans, estate planning, and family trusts; for corporations, it includes analysis of the tax implications of mergers and acquisitions, the portfolio mix, specific investments, previous tax payments, and year-end tax planning. Tax preparation involves the preparation of tax forms and advice concerning liability based on records and receipts supplied by the client. This nonbanking activity was included in the Regulation Y ''laundry list'' in 1986. (See section 225.28(b)(6)(vi).) Such services may be provided to any person. Effective April 21, 1997, certain restrictions were removed. These Regulation Y revisions deleted restrictions in the area of tax-planning and tax-preparation services that prohibited bank holding companies from promoting specific products or services and from obtaining or disclosing confidential customer information without the customer's consent. These restrictions do not apply to banks. This fact needs to be considered when referring to the historical examples that follow.

The Board had previously approved, by order (1985 FRB 168), the activity of tax-preparation services for individuals. Since tax-preparation services for corporations is functionally or operationally similar to the tax-preparation services that banks already provide to individuals as well as to their affiliates and other financial institutions, the Board approved the providing of corporate tax-preparation services. When the nonbanking activity was incorporated into Regulation Y in 1986, tax-planning and tax-preparation services were authorized, not only for individuals and corporations, but for noncorporate businesses, such as partnerships and sole proprietorships and tax-exempt nonprofit organizations. Tax-planning and tax-preparation services must be conducted in accordance with applicable jurisdictional law.

3130.6.1 INSPECTION OBJECTIVES

1. To ascertain whether the customer has the option to be excluded from promotions of other specific products and services.
2. To determine what financial effect the activity has on the parent company and its subsidiaries.
3. To determine whether the company has formal written policies and procedures to ensure accurate, timely, and confidential preparation and maintenance of customers' tax returns.
4. To determine whether the tax-return preparers are appropriately qualified to provide such tax services, and to determine the extent of management's involvement in the activity.
6. To identify the potential and extent of off-balance-sheet risk associated with the activity.

3130.6.2 INSPECTION PROCEDURES

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent company or the bank subsidiaries.
2. Determine whether bonding and other insurance coverage is adequate in relation to the risks associated with the activity.
3. Review pertinent contracts, client lists, public advertising and information, correspondence, and other documentation representing the services provided, and determine if charges for the tax-preparation service are on an explicit fee basis that is not dependent on the amount of tax savings achieved.
4. Determine if the client has a written legal opinion on file certifying that the activity is not considered the practice of law.
5. Review pertinent correspondence and the minutes of board of directors and board committee meetings, and determine if any significant law suits, Internal Revenue Service adverse actions, or other potential or contingency losses are pending and probable because of inaccurate tax-return preparation. Analyze their probable effect in relation to the financial condition of the company.
6. Review the company's formal written policies and procedures for assurance of professional competence in providing sound tax-planning advice and the accurate, timely, and confidential preparation and maintenance of customer's tax returns. The policies and procedures should require that tax-planning advice be clearly communicated by persons who are adequately supervised and who possess the necessary professional technical training and experience needed to provide tax-planning advice.

3130.6.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*

2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised (subsection 3140.0.2.2) to include a brief summary of a June 10, 2016, Board order (FRB Order no. 2016-07) that approved a notice by a foreign bank holding company and its foreign wholly owned subsidiary bank to engage in permissible nonbanking activities under section 4(c)(8) of the BHC Act and section 225.24 of the Board's Regulation Y. The nonbanking activities include railcar leasing and the provision of certain railcar fleet management services pursuant to section 225.28(b)(3) of Regulation Y (leasing personal property and acting as an agent, broker, or advisor in leasing personal property) and section 225.21(a)(2) (engaging in incidental activities that are necessary to carrying on permissible nonbanking activities). The table of Laws, Regulations, Interpretations, and Orders has been amended to include the order in subsection 3140.0.7.

3140.0.1 LEASING AUTHORIZATIONS WITHIN REGULATION Y

Leasing is a form of financing that provides a lessee (the customer) the right to use land or depreciable assets without tying up working capital. As a result of the tax benefits that can arise from the ownership of equipment, real property, or tangible personal property, leasing provides the lessor (the owner of the property) with a generally higher rate of return than what could be achieved through lending. In 1971, "leasing personal property or acting as agent, broker, or adviser in leasing such property" was added to the Regulation Y list of permissible nonbanking activities for bank holding companies. In 1974, the authority to engage in this activity was expanded to include the leasing of real property.

In 1997, restrictions on leasing activities were removed to permit greater flexibility to acquire leaseable property in quantity and to sell or re-lease property upon the lease's expiration. The removed restrictions consisted of the maximum lease term, maximum holding period for leased property, limit on acquisitions of property to specific leasing transactions, restriction on leases to those that served as the functional equivalent of extensions of credit, and 100 percent limit on the amount of reliance that could be placed on the value of leased property. The added clarifications consisted of more details on the requirements for a nonoperating lease, particularly those for automobile rentals.

3140.0.2 PERMISSIBLE LEASING ACTIVITIES

Two types of leasing activities are permissible for bank holding companies: full-payout leasing and high-residual-value leasing. A *full-payout lease* is the functional equivalent of an extension of credit that relies primarily on rental payments and tax benefits to recover the cost of the leased property and related financing costs. *High-residual-value leasing* may involve significant reliance on the expected residual value of the leased property—on average, under 50 percent. However, this value can extend up to the full original cost of the property (that is, to recover the full acquisition cost of the leased property plus related financing costs).

When leasing personal or real property, or acting as agent, broker, or adviser, only those leasing transactions meeting the following criteria are considered permissible:

1. The lease must be on a nonoperating basis.
2. The initial lease term must be at least 90 days.
3. For leasing involving real property—
   a. at the inception of the initial lease, the effect of the transaction must yield a return that will compensate the bank holding company, as lessor, for its full investment in the property plus the estimated total cost of financing the property over the term of the lease (this includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease); and
   b. the estimated residual value (yield) of the property at the expiration of the initial term of the lease may not exceed 25 percent of the acquisition cost of the property to the bank holding company (lessor).

With respect to leasing personal or real property on a nonoperating basis, the bank holding company or its subsidiary may not engage in operating, servicing, maintaining, or repairing leased property during the lease term. A bank holding company, however, can arrange for a third party to provide the services or products. (See Regulation Y, section 225.28(b)(3).)

As for automobiles, a bank holding company may not (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories either in bulk or for an individual vehicle after its delivery to the lessee; (3) provide the loan of an automobile during the vehicle's servicing; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle's license (registration) without authorization from the lessor.

3140.0.2.1 Automobile Fleet Leasing and Fleet-Management Services

A foreign banking organization (FBO) that is treated as a bank holding company requested an opinion from the Board's staff regarding leasing activities that the Board has determined to be permissible under section 225.28(b)(3) of Regulation Y. (See 12 C.F.R. 225.28(b)(3).) In connection with its automobile-leasing activities, the FBO provides, through a wholly owned automobile fleet leasing subsidiary (AFLS), fleet-management services to its automobile fleet leasing customers. In connection with making automobile and equipment leases that conform with the requirements of Regulation Y, AFLS engages in the business of commercial lending and financial leasing of motor vehicle fleets and equipment located throughout the United States, and providing fleet-management services to companies that lease corporate automobile fleets. AFLS and other participants in the business market and deliver the three services as a bundled service to clients.[1]

To better provide fleet-management services to its automobile-leasing customers (in connection with leases that conform with Regulation Y), AFLS acquired another fleet-management-services subsidiary company (FMSS) that (1) arranges for third parties to provide vehicle maintenance, accident-management services, and safety-management services and (2) directly provides client-support services in connection with the services arranged by AFLS. FMSS, in addition to permissible leasing activities, conducts some fleet-management services for automobiles that are owned by the client and that are not, therefore, subject to a lease.

As represented, approximately 90 percent of the vehicles serviced by FMSS are leased and 10 percent are client-owned. Revenues earned from fleet-management services that are provided for client-owned vehicles are less than 2 percent of the AFLS's total revenues. The FBO asked whether it would be permissible for it to provide fleet-management services with regard to automobile fleets if the customer owns rather than leases the vehicles.

In an opinion issued on December 19, 2003, Board staff noted that Regulation Y, as a general matter, permits a bank holding company to engage in any incidental activities that are necessary to carry on an activity permitted by the regulation.[2] Board staff stated also that, in light of the nature of the practices in the fleet-management industry and the difficulty in continually monitoring the migration between leased and owned vehicles in the same fleet, some ability to perform fleet servicing for owned vehicles is necessary to retain customers in connection with AFLS's fleet-leasing activities. Board staff determined, in view of all the facts of record, including this necessity, the minimal amount of revenue earned from servicing owned vehicles,[3] and the fact that the activity is primarily an agency activity, that the FBO could provide fleet-management services to owned vehicles as an activity incidental to the FBO's authorized leasing activities. In a December 19, 2003, opinion, Board staff stated that the provision of fleet-management services on owned vehicles is subject to the same restrictions set forth in Regulation Y for leased vehicles.[4]

3140.0.2.2 Railcar Leasing and Railcar Fleet Management Services

On June 10, 2016, the Board approved a notice (FRB Order no. 2016-07) by a foreign bank holding company and its foreign wholly owned subsidiary bank to engage in nonbanking activities under section 4(c)(8) of the BHC Act and section 225.24 of the Board's Regulation Y. Fifty percent of the voting shares of a rail trans-

1. The Board previously found providing fleet-management services to be permissible if the fleet involves vehicles that are under a lease that conforms to Regulation Y. (See 12 C.F.R. 225.28(b)(3).) Permissible leases are considered to be the financial equivalent of a loan.

2. See 12 C.F.R. 225.21(a)(2). Staff also noted that the courts have recognized the authority of bank holding companies to engage in incidental activities that are reasonably necessary to the conduct of closely related activities.

3. AFLS has stated that it will limit its fleet-management services involving vehicles not subject to a Regulation Y permissible lease to no more than 15 percent of the fleet-management revenues and to 5 percent of the total leasing revenues of AFLS.

4. See 12 C.F.R. 225.28(b)(3).

port company (Delaware Corporation) would be acquired, thereby acquiring its wholly owned Illinois corporate subsidiary that engages in railcar leasing and related activities in North America. As a result of the acquisition, the wholly owned subsidiary bank would engage in certain nonbanking activities. The nonbanking activities include railcar leasing and the provision of certain railcar fleet management services pursuant to section 225.28(b)(3) of Regulation Y (leasing personal property and acting as an agent, broker, or advisor in leasing personal property) and section 225.21(a)(2) (engaging in incidental activities that are necessary to carrying on permissible nonbanking activities).

3140.0.3 ACCOUNTING FOR LEASES

Leasing has become a prominent financing vehicle. Lessors have employed a number of different methods in structuring and accounting for leases. Standards for lease accounting are set forth in Accounting Standards Codification (ASC) Topic 840, "Leases" (formerly FASB Statement No. 13, "Accounting for Leases," as amended and interpreted).

Accounting for leases must be viewed from the perspective of the parties involved in the leasing transaction, the lessee and the lessor. Negotiations and closing costs incurred with respect to the lease should be written off over the life of the lease. In applying ASC Topic 840, certain terminology is used. Basic terms that should be considered are described below.

Inception of a lease. The inception of a lease refers to the date the lease contract was signed or to the date that the construction was completed, or, if earlier, to the date of the written commitment stating the significant terms.

Term of the lease. The lease term consists of the noncancelable term and the period comprising the bargain renewal option.

Fair value of lease property. The fair value of a lease consists of the price that the property could be sold in an arm's-length transaction.

Economic life of the leased property. The economic life of the leased property represents the period over which the property is expected to be economically beneficial to one or more users for its intended purpose.

Estimated residual value of the leased property (ERV). The residual value is the estimated fair value of the leased property at the expiration of the lease term.

Interest rate implicit in the lease. The implicit interest rate is the discount rate that causes the sum of the minimum lease payments and the unguaranteed residual value at the end of the lease term to be equal to the fair value of the property at the beginning of the lease term.

Lessee's incremental borrowing rate. The incremental borrowing rate is the interest rate at which the lessee could borrow the funds to purchase the leased property.

3140.0.3.1 Accounting for Leases by a Lessee

The two methods for accounting for leasing transactions by a lessee are the operating method and the capitalized-lease method.

3140.0.3.1.1 Operating Method of Accounting for Leases

The operating accounting method merely records the cost of the rental payments as an expense when it is required to be paid in accordance with the terms of the lease agreement.

Example: Assume that equipment is leased for $100,000 per year for three years. Under this method, the annual cost would be recorded as a rental expense on the income statement:

Dr. Rent	$100,000	
Cr. Cash		$100,000

To record an annual payment of rent based on an operating-lease agreement.

3140.0.3.1.2 Capitalized-Lease Method of Accounting for Leases

3140.0.3.1.2.1 When a Lessee Is to Use the Capitalized-Lease Method

If *any one* of the following conditions exist, the lessee must capitalize the lease:

1. The asset is owned by the lessee at the end of the lease term.
*2. The lease term is equal to or more than 75 percent of the estimated economic life of the asset.
3. The lessee can purchase the asset below its fair market value before or at the end of the lease term (bargain purchase option).
*4. The present value of the minimum lease payments at the beginning of the least term is equal to or more than 90 percent of the fair market value of the property.

*If the lease begins in the remaining 25 percent of the asset's estimated economic life, these items do not apply; such leases are considered operating leases.

Using this method, the lease is recorded as an asset at the lesser of the present value of the rental and other minimum lease payments or the fair value of the leased property as though the lease obligation was being purchased on credit. The payment made is treated as a payment made on an installment debt. At the same time, the asset is being amortized over the lease term. The lease obligation is treated as a long-term debt. The discount rate that is used to capitalize the lease is the lessee's incremental borrowing rate or the interest rate implicit in the lease agreement.

Example #1: This example illustrates the capitalized-lease method using the same example as above with the added fact that the lease agreement contains an interest rate of 10 percent. Assume that the interest rate of the lease agreement is the same as the lessee's marginal borrowing rate.

Dr. Capitalized Lease	$248,685	
Cr. Lease Obligation		$248,685

To record an equipment lease obligation under a capitalized-lease agreement.

(Present value of $100,000 per year for three years at a 10 percent interest rate)

1st Year

Interest Expense	$ 24,869	
Lease Obligation	75,131	
Cash		$100,000

To record the first year's payment on an equipment lease obligation.

($248,685 × .10 = $24,869)

Dr. Equipment Lease Amortization	$ 82,895	
Cr. Capitalized Lease		$ 82,895

To record the annual amortization of a capitalized equipment lease.

($248,685/3 years)

2nd Year

Dr. Interest Expense	$ 17,355	
Dr. Lease Obligation	82,645	
Cr. Cash		$100,000

To record the second annual lease payment under a three-year capitalized-lease agreement.

(Interest = $248,685 + 24,869 − $100,000 = $173,554 × .10 = $17,355)

Dr. Lease Amortization	$ 82,895	
Cr. Capitalized Lease		$ 82,895

To record the second year's lease amortization under a three-year capitalized lease.

3rd Year

Dr. Interest Expense	$ 9,091	
Dr. Lease Obligation	90,909	
Cr. Cash		$100,000

To record the third year's lease payment under a three-year capitalized-lease obligation.

(Interest = $173,554 + $17,355 = $190,909 − $100,000 = $90,909 × .10 = $9,091)

The financial statements are to include footnotes that disclose the present value of noncancelable lease commitments where the lessor either recovers more than 75 percent of the economic life of the asset leased or recovers the investment plus a reasonable return.

3140.0.3.2 Accounting for Leases by a Lessor

3140.0.3.2.1 Operating Lease (Lessor)

A lessor would have the following accounting entries for an operating lease:

Dr. Cash	$xxx,xxx	
Cr. Rent Income on Leased Assets[5]		$xxx,xxx
Dr. Depreciation Expense	$xxx,xxx	
Cr. Accumulated Depreciation—Leased Assets		$xxx,xxx

In order for the *lessor* to be able to capitalize a direct-financing lease, any one of the same four criteria for a lessee must apply along with two additional criteria:

5. Any rent received in advance would be initially credited to "unearned rent revenue."

1. Collectibility of the minimum lease payments must be reasonably predictable.
2. No important uncertainties exist as the amount of unreimbursable costs incurred.

In accounting for the lessor's capitalized lease transactions, there are some common accounts that are used. These are described below.

Unearned income from lease financing receivables. Unearned income represents the unearned interest liability account that is netted against the total of lease payments receivable which includes the estimated residual value for balance-sheet presentation. It represents the "interest" income equal to the excess of rentals receivable over the fair value of the property at the inception of the lease.

Lease financing receivables. This asset account is established in the amount of total lease payments to be received from the lessee. The amount by which the rentals receivable exceeds the cost of the property is the functional equivalent of interest and represents a portion of the income to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed asset account, then transferred to lease payments receivable.

Throughout the lease term, the rentals receivable account is periodically reduced by the full amount of each rental payment received.

3140.0.3.2.2 Direct Financing Capitalized Lease

In this situation, a finance company purchases equipment from a manufacturer (recorded as equipment [asset] when purchased). The finance company (lease financing nonbanking subsidiary) then leases that equipment and records it as a normal financing lease. There is *no* dealer profit from the sale of the asset. Unearned interest income is recognized over the life of the lease using the effective interest method. Since the lessor has "sold" the asset, no depreciation is recorded.

Example #1: Lease with No Guaranteed Residual Value by the Lessee

Assume that the finance company purchases equipment costing $100,000. It then leases the equipment to a lessee under a five-year lease agreement that requires annual payments of $25,000 per year. At the end of the lease term, the lessee will own the equipment. The implied interest rate is 7.931 percent (comparison of the present value of the equipment of $100,000 against the $25,000 annual payment for five years).

Dr. Equipment	$100,000	
Cr. Cash		$100,000

To record the purchase of equipment to be leased

Dr. Lease Financing Receivables	$125,000	
Cr. Equipment		$100,000
Cr. Unearned Income from Lease Financing Receivables		25,000

To record the initial lease

Year 1

Dr. Cash	$ 25,000	
Cr. Lease Financing Receivables		$ 25,000
Dr. Unearned Income from Lease Financing Receivables	$ 7,931	
Cr. Income from Lease Financing Receivables		7,931

To record the receipt of the first equipment lease payment.

Lease Payments Receivable	$125,000
Unearned Interest Revenue	−25,000
	$100,000 × .07931 = $7,931

Year 2

Dr. Cash	$ 25,000	
Cr. Lease Financing Receivables		$ 25,000
Dr. Unearned Income from Lease Financing Receivables	$ 6,577	
Cr. Income from Lease Financing Receivables		$ 6,577

To record the receipt of the second equipment lease payment.

Lease Payments Receivable	$100,000	
Unearned Interest	−17,069	($25,000 − 7,931)
(Present Value of Remaining Receivable	$ 82,931)	× .07931 = $6,577

Year 3

Dr. Cash	$ 25,000	
Cr. Lease Financing Receivables		$ 25,000
Dr. Unearned Income from Lease Financing Receivables	$ 5,116	
Cr. Income from Lease Financing Receivables		$ 5,116

To record the receipt of the third equipment lease payment.

Lease Payments Receivable	$ 75,000	
Unearned Interest	−10,492	($17,069 − $6,577)
(Present Value of Remaining Receivable	$ 64,508)	× .07931 = $5,116

Year 4

Dr. Cash	$ 25,000	
Cr. Lease Financing Receivables		$25,000
Dr. Unearned Income from Lease Financing Receivables	$ 3,539	
Cr. Income from Lease Financing Receivables		$ 3,539

To record the receipt of the fourth equipment lease payment.

Lease Payments Receivable	$ 50,000	
Unearned Interest	−5,376	($10,492 − $5,116)
(Present Value of Remaining Receivable	$ 44,624)	× .07931 = $3,539

Year 5

Dr. Cash	$ 25,000	
Cr. Leases Financing Receivables		$ 25,000
Dr. Unearned Income from Lease Financing Receivables	$ 1,837	
Cr. Income from Lease Financing Receivables		$ 1,837

To record the receipt of the fifth equipment lease payment.

Lease Payments Receivable	$ 25,000	
Unearned Interest	−1,837	($5,376 − $3,539)
(Present Value of Remaining Receivable	$ 23,163)	× .07931 = $1,837

Example #2: Lease with a Residual Value (Guaranteed by the Lessee)

A lessor acquires property to be leased for $14,000 (its fair value at the inception of the lease). The estimated economic life of the property is five years. The lease has a noncancelable lease term of four years with a rental payment due of $3,649 at the end of each year. The lessee guarantees the residual value at the end of the four-year lease term in the amount of $4,000. The lessor's implied rate of interest in the lease is 10.8695 percent. The present value of the minimum lease payments at this interest rate and monthly payments exceeds 90 percent of the fair value of the property at the inception of the lease (.90 × $14,000 = $12,600).

Year 1

January 1, 19x1

Dr. Equipment	$ 14,000	
Cash		$ 14,000

To record purchase of equipment for the purpose of a financing lease.

Dr. Lease Financing Receivables	$ 18,596	
Cr. Equipment		$ 14,000
Cr. Unearned Income from Lease Financing Receivables		4,596

To record investment in direct-financing lease

December 31, 19x1

Dr. Unearned Income from Lease Financing Receivables	$ 1,521	
Cr. Income from Lease Financing Receivables		$ 1,521

To recognize the portion of unearned income that is earned at the end of the first year of investment.

(Fair value of property at inception of the lease of $14,000 × 10.8695% = $1,521)

Dr. Cash	$ 3,649	
Cr. Lease Financing Receivables		$ 3,649

To record receipt of the first year's rental

Year 2

Dr. Unearned Income from Lease Financing Receivables	$ 1,290	
Cr. Interest Income from Lease Financing Receivables		$ 1,290

To recognize the portion of unearned income that is earned at the end of the second year of investment

($14,000 + 1,521 − 3,649 = $11,872 × 10.8695% = $1,290)

Dr. Cash	$ 3,649	
Cr. Lease Financing Receivables		$ 3,649

To record the receipt of the second year's rental

Year 3

Dr. Unearned Income from Lease Financing Receivables	$ 1,034	
Cr. Income from Lease Financing Receivables		$ 1,034

($11,872 + 1,290 − 3,649 = $9,513 × 10.8695% = $1,034)

To recognize the portion of unearned income that is earned at the end of the third year of investment

Dr. Cash	$ 3,649	
Cr. Lease Financing Receivables		$ 3,649

To record the receipt of the third year's rental.

Year 4

Dr. Unearned Income from Lease Financing Receivables	$ 751	
Cr. Income Lease Financing Receivables		$ 751

To recognize the portion of unearned income that is earned at the end of the fourth year of investment.

($9,513 + 1,034 − $3,649 = $6,898 × 10.8695% = $751)

Dr. Cash	$ 3,649	
Cr. Lease Financing Receivable		$ 3,649

To record the receipt of the fourth year's rental.

Dr. Cash	$4,000	
Cr. Lease Financing Receivables		$ 4,000

To record the receipt of the lessor's guaranteed residual value (guaranteed by the lessee) at the end of the lease term.

($6,898 + 751 − $3,649 = $4,000)

3140.0.3.2.3 Balance-Sheet Presentation

The lease payments receivable would be reported on the balance sheet as a single amount "net investment" (Lease Financing Receivables less the balance of the Unearned Income from Lease Financing Receivables). If the lessor has established an allowance for possible lease losses, this amount is shown separately as a deduction from the net investment. The net investment in the direct financing lease is $18,000 for example #2 above. It consists of the gross investment of $18,596 ($3,649 × 4 annual rental payments) plus the $4,000 residual value less the unearned income of $4,596.

3140.0.3.2.4 Classification

If it is deemed appropriate to classify a lease, the amount to be classified (in example #2 above) would be the net investment. For illustration, assume that two of the four payments had been received on the lease, that income has been recognized monthly according to the effective interest rate method, and that the lease is now considered a loss. Further assume that the third payment should have been received eight months ago. It is determined during the inspection that the lease should be classified as doubtful of collection. The balance to be classified is the net investment of $7,728. This consists of the balance of Lease Financings Receivable of $9,513 (includes the $4,000 estimated guaranteed residual value) less the balance of Unearned Income from Lease Financings Receivable of $1,785 ($1,034 + $751 = amount due on regular payment intervals) or a net investment of $7,728.

3140.0.3.2.5 Delinquency

It is considered appropriate to state in the inspection report the percentage of delinquency in the lease portfolio. The percentage is calculated by deviding the aggregate rentals receivable on delinquent leases (less unearned income on the delinquent leases) by the total of rentals receivable on all leases (less their unearned income). Estimated realizable values would not be included in the delinquent amounts unless they were guaranteed by the lessee.

3140.0.4 LEVERAGED LEASES

The lessor can ''leverage'' a lease transaction by borrowing a substantial portion of the acquisition cost from a long-term lender, with the rentals and the property pledged as collateral for the loan. The lessor borrows in order to finance a leasing transaction with a small, or perhaps, a negative equity in the property to be leased.

The initial step in accounting for this type of lease involves calculating the cash flows over the term of the lease. The cash flows include the income tax effects of tax deductions to the lessor, the lessor's initial investment in the property, the rental receipts net of debt service, and the proceeds expected to be received from the sale of any residual. The next step in accounting for a leverage lease involves determining the applied interest rate that, when applied to the net investment in the years that the net investment will be positive, would precisely allocate the net income to the positive years. See appendix E of SFAS 13 for an example as to how to account for a leveraged lease.

3140.0.5 INSPECTION OBJECTIVES

1. To determine the effect of the investment in the leasing subsidiary upon consolidated operations, and indirectly upon the bank subsidiaries' safety and soundness.
2. To determine if the company is operating in compliance with applicable laws and regulations, and to ensure that corrective action is initiated if warranted.
3. To determine if policies, procedures, and controls are adequate to protect the company from mismanagement, unnecessary risk, and loss.
4. To assess the management's ability to operate the company in a safe and sound manner.
5. To determine that accounting practices do not overstate income.

3140.0.6 INSPECTION PROCEDURES

The decision whether the operations of a leasing subsidiary will be inspected ''on-site'' is based on the availability and adequacy of leasing company data at the offices of the parent company. Item 1 below provides a listing of information necessary to the inspection process. If this and any other information necessary to assess the overall condition of the subsidiary is available at the parent's office or can be obtained through a written request to the subsidiary, an on-site inspection may not be necessary. The inspection frequency requirements, found in section 5000.0.4, should be reviewed in making such a determination.

1. The following information should be available at the start of the inspection:
   a. trial balance of all leases and outstanding credits,
   b. listing of accounts on which payments are delinquent 30 days or more, or on which payments are otherwise not being made according to schedule,
   c. comparative interim and fiscal financial statements of the leasing company,
   d. listing of unbooked assets and contingent liabilities,
   e. cash-flow projections for the current fiscal year and the next fiscal year,
   f. listing of available lines of credit,
   g. copies of the most recent internal and external audit reports, and
   h. minutes of board and executive committee meetings since the date of the previous inspection.
2. Establish a ''credit line'' above which all leases will be reviewed. The line can be set at an amount that will cause a certain percentage of the dollar volume of the lease portfolio to be reviewed (e.g., between 70 percent and 80 percent), or at an amount that will cause the review of each lease exceeding a certain percentage of gross capital. Leases on which payments are delinquent are to be reviewed regardless of amount.
3. Analyze the creditworthiness of the lessees. Consideration is given to the figures derived from the lessee's financial statements, as well as cash flow, trends and projections of growth in sales and income, and the qualifications of management.

   Delinquency on a lease obligation is potentially more serious than delinquency on a conventional loan. If the property under lease is necessary for the lessee's continued production of income, as is frequently the case, the lessee's financial condition will be seriously deteriorated before the lessee is willing to risk losing the property by default.

4. For those leases which might result in loss to the lessor, or for which financial information was not adequate to make such a determination, transcribe the following information to line sheets:
   a. name and line of business of lessee
   b. name of guarantor(s)
   c. original date of the lease contract
   d. original amount of the rentals receivable
   e. ERV of the property
   g. book value of the investment in the lease as of the inspection date
   h. cost of the property
   i. description and location of the property
   j. amount and frequency of rental payments
   k. original amount, term, rate, and schedule of amortization of any nonrecourse debt associated with the lease
   l. lessor's percentage of equity participation in the lease obligation, if applicable
   m. summary financial data indicating the creditworthiness of the lessee, and guarantors, if applicable
5. Before the conclusion of the inspection, discuss with management all classified leases. Inadequate or negative cash flow and unfavorable trends reflected in financial statements of the lessee are usually indicative of a substandard lease. Leases classified doubtful typically include those on which payments are delinquent for an extended period and those on which the lessor's recovery of investment is dependent upon an event of unknown probability, such as a pending lawsuit or insurance claim.

   A loss classification results from the lessee's inability or refusal to continue making payments.
6. Prepare a write-up to support the classifications. The write-up should include the lessee's type of business, present financial status, circumstances which led to the classification, the probability that the terms of the lease can be met, and the amount of protection afforded by sale or re-lease of the underlying property.
7. Review a sample of the lessor's computations of lease yields to determine whether the lessor will recover not less than the full investment in the property plus the estimated total cost of financing the property over the term of the lease. This includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease.

   With respect to the full-payout lease, governmental entities may be prohibited from entering into leases for periods exceeding one year. In that case, the bank holding company or its subsidiary (as lessor) should demonstrate that the lease is expected to be continually renewed until the cost is fully recovered.
8. Ascertain whether title to the property rests with the lessor, and that the lessor has taken steps to protect its ownership rights. Evidence of filing under the Uniform Commercial Code, where appropriate, should be found in the documentation file. Aircraft should be registered with the FAA, interstate vehicles with the ICC, and ships with the Coast Guard.
9. Check for cancellation or other provisions in the contract which could jeopardize the full-payout status of the lease. There is no need to take exception to a cancellation provision which provides for payment by the lessee of an amount which allows the lessor to recover fully its investment in the property.
10. Check that insurance coverage is effective on leased property and is provided by the lessee in compliance with all insurance provisions of the contract in an amount sufficient to protect against loss from property damage. Public liability insurance should also be provided to protect against loss from lawsuits which could arise from situations such as the crash of leased aircraft.
11. Review the lessee's duties under the contract with respect to repairs and taxes. Determine whether the lessor has instituted procedures to check that the lessee's required duties are being performed.
12. Review the status of all property acquired for lease purposes but which is not now under lease. Determine the reason for the "off-lease" status of the property, ascertain the realizable value of the property, and investigate whether the off-lease property will be sold or re-leased within the required two-year period.
13. Investigate the lessor's procedures for periodic review of the reasonableness of the estimated residual value. The estimate should be reviewed at least annually and reduced in amount on the books if the value has declined on a presumably permanent basis.
14. Review past operations of the lease company to determine if projections of income and ERV have been realistic in light of actual experience.
15. Review the minutes of the meetings of the

board and executive committees to determine whether purchases of property and delinquent leases are reported to the board.

16. Determine if the company has entered into leases with companies owned or controlled by any director, officer, or 10 percent shareholder of the leasing company or holding company. Compare the rates and terms on such leases to the rates and terms offered on leases to companies of similar credit standing.
17. Check for lease concentrations to any one lessee or industry and prepare a comment for the inspection report if any concentration is considered unwarranted.
18. Determine whether the company has established limits for the maximum amount of "credit" to be extended to a single lessee. If such limits have been established, investigate whether the company adheres to them. If they have not been established, inquire as to the company's policy on this matter.
19. Provide the examiner-in-charge with information to be included in the inspection report, including:
    a. scope of the inspection (on- or off-premises)
    b. comments concerning any policies or conditions having an adverse effect on the leasing company or parent company
    c. brief history of the company and a description of its activities
    d. summary analysis of financial factors of the company, including trends in the volume and classification of receivables, adequacy of capital and reserves, return on assets, and contribution to consolidated income and consolidated assets
    e. statutory authority under which the company operates
    f. details of all borrowings of the company from within the holding company system and from external sources
    g. details of any litigation in which the company is a defendant
    h. scope and frequency of audit of the company by both internal and external auditors
20. Compare current earnings performance and balance-sheet ratios of the company with past performance and industry composites.
21. Determine whether cash flows of the company are adequate to service all debts.
22. Assess the adequacy of internal controls over the company's operations.
23. Check for action taken on matters criticized in the most recent audit reports and the previous inspection report. Determine if leases classified "loss" were removed from the books.
24. Investigate whether any affiliated banks maintain compensating balances for lines of credit of the leasing company, and if so, whether the leasing company compensates the bank for maintenance of the balances. If "loss" leases have not been removed from the books, discuss with management the reasons why the charge-offs were not made. Determine whether the financial statements and reports submitted to the Board of Governors were misstated as a result of the "no charge-off" decision.
25. For higher residual value leasing, determine that—
    a. the residual values have been estimated accurately;
    b. residual values are reviewed and adjusted annually;
    c. the initial terms of the lease are at least 90 days;
    d. the lessor relies on a residual value of the leased property that will recoup the acquisition cost of the property and any related financing or other associated costs;
    e. the aggregate book value of all tangible personal property held for such a lease, having an estimated residual value in excess of 25 percent of the acquisition cost of the property, does not exceed 10 percent of the BHC's consolidated domestic and foreign assets;
    f. the BHC maintains separately identifiable records of the leasing transactions and activities; and
    g. each company maintains capitalization fully adequate to meet its obligations and support its activities, and that its capital levels are commensurate with industry standards for companies engaged in comparable leasing activities.

3140.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Automobile Leasing				1976 FRB 930

Higher residual value leasing				1991 FRB 490, 187 1990 FRB 462, 960
Personal or real property leasing activities of bank holding companies		225.28(b)(3)		
Special-purpose leasing corporation			3-712	
Railcar leasing, railcar fleet management services (leasing personal property and acting as agent, broker, or adviser in leasing personal property)		225.28(b)(3)		2016 FRB Q2 Board Order 2016-07
Engaging in incidental activities reasonably necessary to carrying on permissible nonbanking activities		225.21(a)(2)		

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

The Board considers the making of equity and debt investments in corporations or projects designed "primarily to promote" community welfare as an activity closely related to banking. The Board includes such investments in the list of permissible nonbanking activities in Regulation Y; however, bank holding companies must obtain prior approval to engage in these activities. The Board, effective April 21, 1997, included the provision of advisory and related services for programs designed primarily to promote community welfare into Regulation Y. Such advisory activities had previously been permitted only by Board order. For examples of advisory services approved for community development projects, see 1990 FRB 671, 1989 FRB 576, and 1988 FRB 140.

3150.0.1 INVESTMENTS IN CORPORATIONS OR PROJECTS TO PROMOTE COMMUNITY WELFARE—BOARD INTERPRETATION

The Board also provides guidance with regard to investments in community welfare projects through its interpretation (see section 225.127 of Regulation Y (12 C.F.R. 225.127)). This interpretation describes projects that the Board has considered as promoting community welfare as their primary intent. These include but are not limited to—

1. projects to construct or rehabilitate housing for low- or moderate-income persons,
2. projects for construction or rehabilitation of ancillary local commercial facilities necessary to provide goods or services principally to persons residing in low- or moderate-income housing, and
3. projects designed explicitly to create improved job opportunities for low- or moderate-income groups.

Because the Board believes that bank holding companies should take an active role in the quest for solutions to the nation's social problems, it has not defined other types of investments designed primarily to promote the community welfare in order to give bank holding companies greater flexibility in developing new and creative approaches to resolving community problems. Accordingly, the Board has maintained the flexibility to determine whether an activity is primarily designed to promote the community welfare. Factors that the Board might consider include whether the activity benefits low- and moderate-income individuals in areas such as housing and employment and the need for specialized community development activities in different localities. The Board will consider a range of different activities, but will probably not approve a proposal that does not in some way either benefit low- or moderate-income individuals or benefit the specialized needs of local communities.

Once a bank holding company has obtained Board approval to engage in community development activities pursuant to Regulation Y, the holding company may, without further System approval, engage either directly or through a subsidiary in certain community development activities, so long as such activities do not exceed 5 percent of the bank holding company's total consolidated capital stock and surplus.

A bank holding company may invest and provide financing—

1. to a corporation or project or class of corporations or projects that the Board previously has determined is a public welfare project pursuant to paragraph 23 of section 9 of the Federal Reserve Act (12 U.S.C. 338a);
2. to a corporation or project that the Office of the Comptroller of the Currency previously has determined, by order or regulation, is a public welfare investment pursuant to section 5136 of the Revised Statutes (12 U.S.C. 24 (Eleventh));
3. to a community development financial institution (other than a bank or bank holding company) pursuant to section 103(5) of the Community Development Banking and Financial Institutions Act of 1994 (12 U.S.C. 4702(5));
4. for the development, rehabilitation, management, sale, and rental of residential property if a majority of the units will be occupied by low- and moderate-income persons or if the property is a "qualified low-income building" as defined in section 42(c)(2) of the Internal Revenue Code (26 U.S.C. 42(c)(2));
5. for the development, rehabilitation, management, sale, and rental of nonresidential real property or other assets located in a low- or moderate-income area provided the property

is used primarily for low- and moderate-income persons;
6. to one or more small businesses located in a low- or moderate-income area to stimulate economic development;
7. for the development of, and to otherwise assist with, job training or placement facilities or to foster programs designed primarily for low- and moderate-income persons;
8. to an entity located in a low- or moderate-income area if that entity creates long-term employment opportunities, a majority of which (based on full-time equivalent positions) will be held by low- and moderate-income persons; and
9. for providing technical assistance, credit counseling, research, and program development assistance to low- and moderate-income persons, small businesses, or nonprofit corporations to help achieve community development.

3150.0.2 EXAMPLES OF BOARD-APPROVED ACTIVITIES DESIGNED TO PROMOTE COMMUNITY WELFARE

With its primary thrust to promote community welfare rather than creating a focus on a collateral effect, economic rehabilitation and development should focus on providing housing, services, or jobs for low- or moderate-income residents or groups. Examples of projects previously approved by the Board include an investment in—

1. an agricultural test farm (testing crops, equipment, alternative farming methods and chemicals, and providing student agricultural research opportunities and financial planning workshops for farmers (see 1990 FRB 671);
2. an entity that provides education to young persons (see 1991 FRB 70) through a nonprofit, tax-exempt bank holding company (educational programs consisted of the American economic system, how to start a business, college financial planning, and career opportunities in banking);
3. the acquisition and redevelopment of a sole medical clinic in a small rural town without public transportation that was located 30 miles from another facility and was needed to attract new physicians to replace those retiring (see 1991 FRB 63); and
4. a limited partnership to develop a nearly vacant office building into a hotel complex within a major city, located adjacent to a public housing project. Commitments included providing training to welfare recipients residing in public housing projects and employing low- and moderate-income individuals at the hotel complex, and donating a portion of the profits to a nonprofit corporation designated to provide low-cost housing, employment, and business opportunities for disadvantaged residents. (See 1996 FRB 679.)

3150.0.3 EXAMPLES OF INVESTMENTS VIEWED AS NOT PROMOTING COMMUNITY WELFARE

The Board has indicated that some investments are not designed primarily to promote community welfare unless there is substantial evidence to the contrary, even though the investment may benefit the community to some extent. Examples include investments to build or rehabilitate high-income housing or commercial, office, or industrial facilities which are not designed explicitly to create job opportunities for low-income persons, even though the investment may benefit the community to some extent. This latter point was made in an order (see 1996 FRB 679) whereby the Board denied an application by a bank holding company to acquire an investment in an industrial development corporation involved in the construction of a shopping and office complex in an urban renewal area. The Board identified the critical issue as whether the project was devised primarily to promote the community welfare or primarily designed as a profit-making venture in which the benefits to the community were merely a collateral effect.

In another case, the Board denied a proposal intended to acquire a company that indirectly acted as a managing general partner of a private development venture. The venture was a large-scale, urban redevelopment initiative, jointly sponsored by government and private entities, that was intended to revitalize a geographic area that was largely abandoned within a working middle-class community. (See 1990 FRB 672.)

3150.0.4 INSPECTION OBJECTIVES

1. To determine that new investments and financing in community development and other corporations and projects are designed primarily to promote community welfare.
2. To determine that previous investments and financings continue to meet the standards

imposed by section 225.28(b)(12) of Regulation Y.

3. To determine that the activity remains within the scope of regulatory approval when such approval involves specific rather than general investments.
4. To determine that advisory and related services for programs designed primarily to promote community welfare are being conducted within the scope of their regulatory approval.

3150.0.5 INSPECTION PROCEDURES

As is standard practice in the examination of other subsidiaries engaged in nonbanking activities, a thorough review of pertinent books, records, contracts, and financial statements should be undertaken by the examiner. To fulfill the inspection objectives concerning this activity, the examiner may have to go beyond routine investigative practices. Since this activity encompasses a wide variety of programs, procedures will have to be developed on an ad hoc basis. When federal or state approval of the program is required, the examiner may wish to review applications and other materials submitted to such authorities. The terms or conditions imposed by such bodies as well as the subsidiary's continued eligibility may also be of importance. Contact with responsible federal or state officials may be deemed appropriate in certain cases. Such contacts, however, should be initiated only in accordance with respective Reserve Bank procedures. When a community welfare project or financing does not include the involvement of another governmental body, the examiner will need to verify directly whether goals essential to the nature of the activity, such as providing housing for the elderly or jobs for low- or moderate-income people, are being met. In this regard, the burden should be on the holding company to provide such data. In some instances, an on-site visit to the project may be appropriate.

3150.0.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Permissible investments described	1701	225.28(b)(12) 225.127	4–178	1972 FRB 495 1978 FRB 45 1984 FRB 452

Denial of a bank holding company formation by a community development corporation				1976 FRB 639
Denial of a venture that would revitalize an abandoned area in a middle-class community				1994 FRB 733

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

3160.0.1 PROVISION OF DATA PROCESSING AND TRANSMISSION SERVICES

Under section 4(c)(8) of the BHC Act, the permissibility of bank holding company data processing activities is generally predicated upon the type of data processed or transmitted. Subsidiaries formed under this section may engage in business directly with outside customers, unlike section 4(c)(1) subsidiaries, which can act only as servicers for affiliates[1] and cannot deal directly with outside customers.

The intent of section 4(c)(8) is to permit bank holding companies and their nonbank subsidiaries to directly provide to customers financially or economically oriented services (or services that are similar to these services) that banks have traditionally used in their own internal operations and provided to their customers. Such services (with prior approval) are unrestricted as to location and may be provided from out-of-state locations.

3160.0.2 INCIDENTAL ACTIVITIES

The Board regards the following as incidental activities necessary to carrying on permissible data processing activities:

1. Making excess computer time available to anyone as long as the only involvement by the bank holding company system is furnishing the facility and the necessary operating personnel. This stipulation applies when—
   a. the equipment is not purchased solely for the purpose of creating excess capacity to sell;
   b. hardware is not offered in conjunction with excess capacity; and
   c. the facilities for the use of the excess capacity do not include providing any software other than systems software (including language), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.
2. Selling byproducts of permissible data processing and data transmission activities when they are not designed, or appreciably enhanced, for the purpose of marketability.
3. Furnishing any data processing service upon request of a customer if the service is not otherwise reasonably available in the relevant market area.

3160.0.3 SECTION 4(c)(8) vs. SECTION 4(c)(1)

Section 4(c)(1) data processing subsidiaries, which do not require prior approval, are limited as follows:

1. They can furnish computer services *only* for the internal operations of the bank holding company and its bank affiliates.[1]
2. Direct computer services to nonaffiliated customers are not permitted. Any contract to furnish services to nonaffiliated customers must be between the affiliate bank and its customer, with the data processing subsidiary acting as a servicer for its affiliate bank. In addition, the kinds of services furnished are limited to those that a bank can normally provide.

Section 4(c)(8) data processing subsidiaries may deal directly with the customer. In accordance with section 4(c)(8) of the BHC Act and section 225.28(b)(14) of Regulation Y, the kinds of services nonbank subsidiaries of bank holding companies may provide to others are—

1. data processing and transmission services, facilities (including hardware, software, documentation, or operating personnel), databases, advice, and access to such services, facilities, or databases by any technological means, if—
   a. the data to be processed or furnished are financial, banking, or economic data and
   b. the hardware provided in connection with the data processing and transmission services is offered only in conjunction with software designed and marketed for the processing and transmission of financial, banking, or economic data, and the general-purpose hardware does not constitute more than 30 percent of the cost of any packaged offering.
2. data processing, data storage, and data transmission services for a third party that are not financial, banking, or economic related if the subsidiary's total annual revenue derived from

1. In this context, "affiliates" is limited to other organizations that have subsidiaries of the same parent bank holding company as the servicer.

those activities does not exceed 30 percent of its total annual revenues derived from data processing, data storage, and data transmission activities. On November 26, 2003, the Board approved an increase of this limit to *49 percent*, effective January 8, 2004. See 1993 FRB 1158, 2004 FRB 55, and section 3160.2. The Board currently recognizes that, in certain situations, a bank holding company may have bona fide operational reasons for conducting its financial and related nonfinancial data processing activities through separately incorporated subsidiaries. In these cases, bank holding companies may request permission to administer the 49 percent revenue test on a business-line or multiple-entity basis. See section 225.28(b)(14) of Regulation Y (12 C.F.R. 225.28(b)(14)).

3160.0.4 MINICOMPUTER ACTIVITIES

Some data processing subsidiaries are actively engaged in placing minicomputers with some of their customers. However, if the subsidiary acts as sales agent for the manufacturer and receives a commission, it is in violation of section 225.28(b)(14) of Regulation Y and should be advised to cease the practice.

3160.0.5 HARDWARE AND SOFTWARE AS AN INTEGRATED PACKAGE

Customers of data processing services require that suppliers provide them with hardware and software as an integrated package. Providing general-purpose hardware is permissible only if the cost of the hardware does not exceed 30 percent of the cost of the packaged offering, and only in conjuction with permissible software. When hardware is provided in a specialized form (such as ATMs), its provision meets the *National Courier* test and is closely related to banking and therefore not subject to the 30 percent limitation.

3160.0.6 PACKAGED FINANCIAL SYSTEMS

The Board found that providing packaged financial systems, including data processing hardware and software, to be installed on the premises of the customer is closely related to banking if conducted within the limits of Regulation Y.

3160.0.7 EXCESS CAPACITY

The sale of excess computer time is currently treated in a Board interpretation as a permissible incidental activity. The interpretation (12 C.F.R. 225.123(e)(1)) currently permits a bank holding company to make excess computer time available to anyone so long as the only involvement of the holding company is furnishing the facility and the necessary operating personnel. Data processors that process time-sensitive data must maintain sufficient capacity to meet peak demand and provide backup in case of equipment failure. Excess capacity necessarily results from such needs; thus the sale of excess capacity is necessary to reduce costs and to remain competitive. Bank holding companies are limited in the sale of excess capacity as follows:

1. A bank holding company may not purchase data processing equipment solely for the purpose of creating excess capacity.
2. A bank holding company may not sell hardware in conjunction with excess capacity.
3. A bank holding company may provide only limited types of software in connection with its sale of excess capacity. This includes systems software (that is, software designed only to control and operate the hardware and not to perform substantive operations), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.

3160.0.8 BYPRODUCTS

The sale of byproducts for the development of a program for a permissible data processing activity is treated in a Board interpretation (12 C.F.R. 225.123(e)) as a permissible incidental activity. Byproducts may be data, software, or data processing techniques or information developed by the bank holding company. Byproducts *may not* be designed or appreciably enhanced for the purpose of marketability.

3160.0.9 REQUIREMENT OF SEPARATE RECORDKEEPING

The Board's data processing interpretation is designed to minimize any possibility of unfair competition. A bank holding company subsidiary or related entity that provides permissible data processing and data transmission activities (services, facilities, byproducts, or excess capacity) must keep separate books and records and provide the documents to any new or renewal customer upon request.

3160.0.10 SUMMARY

Holding company EDP proposals are evaluated from the standpoint of whether the proposed data processing activities involve banking, financial, or related economic data within the meaning of the Board's Regulation Y. Processing, storing, and transmitting data for third parties, when the data are not financial, banking, or economic, is permissible if the revenues derived from those activities do not exceed 49 percent of the subsidiary's total annual revenues derived from data processing, data storage, and data transmission activities. For examples of previous Board authorizations for data processing and transmission services in accordance with Regulation Y, see sections 3160.1 through 3160.5.

The data processing that is permissible under Regulation Y encompasses various data processing services, including sales analysis, inventory analysis, freight payment, municipal tax billing, credit union accounting, and savings and mortgage company bookkeeping and payroll processing.

3160.0.11 INSPECTION OBJECTIVES

1. To determine that the full range of EDP services performed are permissible financially oriented activities in compliance with applicable laws and regulations.
2. To review the relationship between the data processing subsidiary and its affiliates and the effect of those relationships on the affairs and soundness of the bank affiliate.
3. To determine if operating policies are adequate and if management is operating in conformance with the established policies.
4. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

NOTE: All bank-related EDP servicers receive EDP examinations conducted by the primary bank regulator; these examinations cover detailed operations, audit, proper backup, and overall computer operations. The bank holding company–related inspection should focus on the types and permissibility of services performed, the revenue limitations of section 225.28(b)(14) of Regulation Y, the types of customers serviced, and transactions between affiliates. The inspection should also provide an overall financial evaluation.

3160.0.12 INSPECTION PROCEDURES

3160.0.12.1 Pre-Inspection

1. Where available, review the EDP examination report in conjunction with the lead bank examination for details of the subsidiary's operations and management.
2. Review correspondence files and the application memo for the history of the subsidiary.

3160.0.12.2 On-Site

3. Have a brief meeting with the chief executive officer of the subsidiary to establish contact and present a brief indication of the scope of the inspection.
4. Ask the controller of the company for the schedules and other information requested in the entry letter.
5. Request the following information and schedules in addition to what was requested in the entry letter:
   a. complete list of the computer applications the subsidiary performs
   b. list of customers
   c. policy and procedures manual, if any
   d. copy of the latest internal and external financial and operational audits and internal control reviews
   e. copy of the types of management reports the subsidiary submits to the parent company and directors
   f. internal management organization chart
   g. copy of the agreement executed with the affiliates concerning the services provided and the fees collected
6. Review minutes of meetings of the board of directors and of the executive committee to determine the broad types of the company's operations.
7. Determine the scope of the inspection, based on evaluations of—
   a. corporate minutes,
   b. schedules,

c. accounting records,
d. internal controls, and
e. the scope of the work performed by the internal auditor.

8. Review the trial balances and compare them with the respective general ledger control accounts.
9. Where necessary, interview pertinent division heads.
10. Determine if management information systems are adequate and if regular periodic reports are made available. Determine if the reports provide sufficient segregated details on the annual revenues earned from (1) financial-, banking-, or economic-related data processing and data transmission services and (2) third-party nonfinancial data processing and data transmission services. Ascertain whether the information will allow verification of compliance with the revenue limitations found in section 225.28(b)(14) of the Board's Regulation Y.
11. Verify that the subsidiary of the bank holding company is complying with the revenue limitations found in section 225.28(b)(14) of Regulation Y.
12. Review the data processing, data storage, and data transmission services provided to customers for violations of the Board's regulations and interpretations. Obtain sufficient documentation for the workpapers.
13. Prepare a statement of condition with a minimum two-year comparison. More than two years may be prepared if the information is available and meaningful.
14. Prepare a statement of income using the same procedures outlined above.
15. Review all significant internal policies. Determine if the policies were developed internally or by the parent company.
16. Review the subsidiary's management reports to the parent company. Is the reporting complete and frequent (at least quarterly)? Is the parent company fully aware of the subsidiary's operations or problems?
17. Review the adequacy of internal and external financial and operational audits and internal control reviews. Interview the EDP auditor and review the audit reports and CPA management letters (for the period of the inspection). Also conduct interviews with the auditors, including the EDP auditor (if one was engaged).
18. Review the condition of the company's records, that is, their availability, completeness, and accuracy. Deficiencies should be discussed in detail with recommendations for improvement.
19. Review all intercompany transactions. Be consistently alert for any transactions with affiliate bank(s) that would be a violation of Federal Reserve Act sections 23A and 23B and Regulation W.
20. Review significant litigation and other contingent liabilities.

3160.0.13 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

A bank holding company applied for the Board's approval to acquire all the shares of a nonbank data processing company to engage in the processing and transmission of certain medical-payment data. The nonbank subsidiary plans to engage in activities that specialize in a range of medical-payment electronic funds transfer services, including the development of software products related to the processing of medical-claims payments.

Basic network services. The Board determined by order that a nonbank subsidiary of a bank holding company may provide a network for the processing and transmission of medical-payment data between health-care providers (such as physicians, hospitals, and pharmacies) and entities responsible for paying medical benefits (such as health insurers, health maintenance organizations, and preferred provider organizations). These nonbanking activities are permissible under the Bank Holding Company Act and the Board's Regulation Y (12 C.F.R. 225.28(b)(14)). The information on the patient's medical-benefits card (made available by paying organizations) would be used to access the system (similar to a debit or credit card). In general, health-care providers would enter claims information into the network with a request for payment, and the payers would authorize electronic fund transfers for full or partial payment of the claims.

The bank holding company's nonbank subsidiary would also process and transmit medical-treatment data necessary for the processing of claims, and would furnish providers with access to a coverage-information database. The database would transmit information about the terms of a particular payer's medical coverage contract, such as the extent to which specific medical treatments are covered by the patient's insurance policy. While such medical and coverage data are not financial data, the processing and transmission of these data are essential to the transmission and processing of the medical payments and financial information in the network. Also, these data processing services allow the electronic transfer of funds. The Board found that the processing and transmission of the medical and coverage data, in connection with the nonbank subsidiary's operation of a payments network, are permissible as incidental activities. The Board further determined that the nonbank subsidiary's operation of a medical-payments network would constitute permissible data processing and data transmission activities under the BHC Act.

Adjudication software. The Board also authorized the bank holding company's nonbank subsidiary to furnish claims-adjudication software to payers. The software is designed for the processing of routine claims and would include the basic rules of a payer's coverage contract. Claims-adjudication processing would involve the interaction of financial and banking data and medical and coverage data as a necessary prelude to electronic funds transfer. The Board found that the processing of medical and coverage data involved in claims adjudication is an integral and necessary part of the processing of related financial and banking information, and the nonbank subsidiary's processing of underlying payment transactions. The Board concluded that the nonbank subsidiary's provision of claims-adjudication software is permissible as an activity incidental to its provision of software for the processing of banking and financial data and to its operation of a medical-payments network.

Electronic data interchange. The bank holding company's nonbank subsidiary also plans to provide medical–payments system participants with statistical and other data derived from the information in its database. Each participant would have on-line access to all of the data it places into the system, and third parties designated by a payer or provider could also receive access to the data owned by that customer. The Board has previously stated that bank holding companies may provide byproducts of permissible data processing and data transmission activities as long as the byproducts are not designed, or appreciably enhanced, for the purpose of marketability (12 C.F.R. 225.123(e)(2)). The Board has also indicated that byproducts include data, software, or data processing techniques that may be applicable to the data processing requirements of other industries.

The nonbank subsidiary may perform limited selection, combination, and similar functions on raw data so that the data can be transmitted to the customer in a reorganized and more usable form. It may also design software that would enable customers to perform similar reorganization functions on raw data. The Board concluded that the proposed electronic data interchange services would constitute permissible byproducts of the nonbank subsidiary's primary data processing activities, and are therefore permissible as an incidental activity.

The Board's approval of the application on December 22, 1993, is based on the facts of record and is subject to the commitments and representations that were made by the applicant and the conditions referred to in the order. (See 1994 FRB 139.)

Four bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act to engage de novo, through their joint venture corporation (the company), in nonbanking activities consisting of engaging in electronic benefit transfer services, stored-value-card services, and electronic data interchange services. The applicants proposed to engage in the activities throughout the United States. The applicants provide data processing and transmission services through the company to retail merchants using point-of-sale (POS) terminals and to banks who are members of the company's automated teller machine (ATM) network.

3160.2.1 ELECTRONIC BENEFIT TRANSFER SERVICES

The electronic benefit transfer services would involve data processing and transmission services required to permit the delivery of governmental program benefits (such as welfare payments and food stamps) through the ATM and POS terminals of participating merchants and banks. Under a benefits-services system, a benefit recipient would be issued a magnetically encoded card similar to an ATM card, which could be used to obtain access to a government benefit account maintained on behalf of the recipient. The Board concluded that such activities are financial activities that are operationally and functionally similar to the electronic payment and data processing services provided by banks and bank holding companies in the operation of ATM and POS networks. In particular, the proposed benefit services involve the processing of access and authorization requests submitted to, and the processing of electronic payments originating from, financial accounts on the same basis as transactions initiated with traditional credit and debit cards. The Board thus concluded that such electronic benefit transfer activities are closely related to banking and permissible for bank holding companies under the BHC Act.

3160.2.2 STORED-VALUE-CARD SERVICES

Stored-value-card services would involve data processing and transmission services and electronic payment services related to stored-value cards. These cards are similar to credit or debit cards in which authorized funds can be transferred and credited using magnetic stripe or computer chip technology. The services would be provided in connection with both "closed" and "open" stored-value-card systems. Closed systems include both single-vendor stored-value-card systems and systems designed for single-use sites. An open system, by contrast, refers to multiple-vendor, multiple-site stored-value-card systems.

3160.2.2.1 Stored-Value-Card Closed Systems

In most current closed systems, cash must be deposited in a particular vendor's card-dispensing terminal, and the card received from the terminal may be used only for purchases from that specific vendor. The card itself is disposable, and the only account reconciliation that may be required would involve the vendor's own cash receipts, the amount of funds debited from the cards at turnstiles or other points of sale, and the amount of the vendor's liabilities stored on outstanding cards. The company intended to play a role in the operation of this basic type of closed system, as well as to help develop and operate more complex closed systems. These systems would use a plastic card containing electronic technology, such as a computer chip or magnetic stripe, to which funds could be credited and from which funds could be debited, for an indefinite period of time. The company proposed performing accounting functions in customer accounts and accounting for the level of the vendor's stored liabilities. In such a capacity, the company would be responsible for the settlement and reconciliation of these customer and vendor accounts. The company would also perform other functions, such as embossing and issuing cards and arranging for funds collection.

3160.2.2.2 Stored-Value-Card Open Systems

The applicants anticipate that stored-value cards eventually will operate in an open system similar to a POS network, which allows value stored on a card to be used with a wide range of participating vendors. The applicants expect that the company's principal stored-value-card activities would involve the development and operation of such open systems.

In an open system, customers' debit cards would hold an integrated computer chip or some type of comparable technology capable of storing value for use in stored-value-card transactions. Value could be placed on the card at an ATM adapted to read and place value on the chip, at a limited-purpose ATM-type machine whose only functions would be to add value to the chip and to transfer stored value back to the customer's account, or at a cash-to-card machine or other value-transfer device (collectively, value terminals). These value terminals would be operated, in at least some cases, by the company. Once value is placed on a card, equivalent funds could be transferred to the company, which would hold the funds for payment of stored-value-card transactions. Stored value would leave the chip when the customer purchases goods or services either at a POS terminal (which may be operated by the company) or at a vending machine, telephone booth, mass transit turnstile, or other unmanned delivery location (collectively, reader terminals), or when the customer transfers funds back to an account at a value terminal. Reader terminals generally would be offline devices not connected to the company's ATM or POS networks. Instead of a direct electronic connection, a reader terminal would retain, for a period of time, value representing the amount of customer purchases at the terminal. Then, at the vendor's convenience, the company, the vendor, or a third party would collect value from the reader terminals using specially designed collection cards issued by the company. The collection cards would then be submitted to the company so that funds can be properly credited. Once these transactions occur, the company would be responsible for making settlement by transferring funds to the accounts of participating merchants and other appropriate parties.

The Board concluded that the company's activities in providing stored-value-card services, in both closed and open systems, are closely related to banking. The activities involve processing debits and credits to the stored-value cards and performing related accounting and settlement functions, and are thus a data processing activity. Financial balances are maintained and adjusted at POS and other terminals as the customer purchases various items or adds value to the card, and the activity constitutes the processing of banking, financial, or economic data within the meaning of Regulation Y. In addition, aspects of the company's stored-value-card services are functionally similar to the issuance and sale of consumer payment instruments such as traveler's checks, which are activities that banks conduct and that the Board has previously determined to be closely related to banking within the meaning of the BHC Act. The Board concluded that the company's proposed services in connection with stored-value cards, in either an open system or a closed system, are closely related to banking.

3160.2.3 ELECTRONIC DATA INTERCHANGE SERVICES

The company also proposes to furnish retail merchants with data collected from sales transactions consummated at the merchant's place of business (data services). The data collected and furnished would relate to specific items and quantities of products purchased by the customer, as well as to customer-purchasing patterns over a period of time. The data would be formatted so that it could be used by the merchant for inventory control, targeted marketing, and other purposes. The company's data services generally would be furnished to merchants as an adjunct to its POS-transaction-processing services and would be rendered through a retail merchant's POS terminals. The company does not intend to offer data services independently. In addition, the data that are collected by the company would be furnished only to the merchant that is a party to the underlying sales transaction; that is, the company does not intend to provide such information to third parties.

The company's data services would be limited to capturing, formatting, and furnishing data collected from sales transactions consummated at a particular merchant's place of business. In addition, the data collected would be furnished only to that merchant and only in accordance with the merchant's specific instructions. The company does not intend to provide software, render advice, or provide other services associated with the marketing or other uses of the data. The applicants do anticipate, however, that the company could provide additional related functions, such as issuing store coupons or credits related to a merchant's marketing programs at POS terminals. Based on the facts presented, the Board determined that the sales data that would be processed under the proposed data services are financial and economic data within the meaning of Regulation Y.

3160.2.4 BOARD APPROVAL

Based on all the facts of record, the Board approved the applications. The Board's approval is specifically conditioned on compliance with the commitments made in connection with the applications and with the conditions referred to in the order. (See 1993 FRB 1158.)

Regulation Y provides that a bank holding company may render advice to anyone on processing and transmitting banking, financial, and economic data. On November 26, 2003, the Board approved an amendment to section 225.28(b)(14) of Regulation Y to expand the ability of all bank holding companies, including financial holding companies, to process, store, and transmit nonfinancial data in connection with their financial data processing, storage, and transmission activities. The Board raised the total annual revenue limit from 30 percent to the 49 percent limit that applies to nonfinancial data processing activities. Specifically, a company (a nonbank subsidiary of a bank holding company) conducting data processing, data storage, and data transmission activities may conduct nonfinancial data processing, data storage, and data transmission activities (those that are not financial, banking, or economic in nature) if the total annual revenue derived from those activities does not exceed 49 percent of the company's total annual revenues derived from data processing, data storage, and data transmission activities. (See 12 C.F.R. 225.28(b)(14).)

Data Processing Activities: Obtaining Travelers' Checks and Postage Stamps Using an ATM Card and ATM Terminal Section 3160.3

Eleven bank holding companies (the applicants) applied for the Board's approval to engage through a joint venture corporation (the company) in certain nonbanking activities related to the operation of a retail electronic funds transfer network, including data processing and data transmission activities related to automated teller machine (ATM) and point-of-sale (POS) transactions, as well as electronic benefit transfer, stored-value card, and electronic data capture and interchange services. (A complete list of the proposed activities is found at 1994 FRB 1110–1111.)

The applicants also proposed to offer through the company certain data processing and data transmission services not previously considered by the Board. Those services consisted of allowing customers to use their ATM cards at an ATM terminal to withdraw funds from a bank account in the form of travelers' checks or postage stamps. Payment for the transactions would be accomplished by a debit to a cardholder's deposit account.

The transactions would occur at terminals that would not be owned and operated by the company. Cardholders buying postage stamps or travelers' checks at an ATM terminal would purchase those products from the bank owning the ATM. The decision on which travelers' checks to issue would remain with the bank that owns the ATM terminal, and the company would not be the issuer of the travelers' checks.

The company's primary activities would be processing and transmitting access requests and payment authorizations. The company would also provide terminal-driving services, load ATM terminals with postage stamps and travelers' checks, and market the products through the network.

The Board determined that the proposed activities involved the processing of access and authorization requests submitted to deposit accounts on the same basis as other transactions initiated with a traditional debit card. The activity is operationally and functionally similar to the data processing services provided by banks and bank holding companies in their operation of ATM and POS networks. Traditionally, banks have been permissibly engaged in the sale of travelers' checks and postage stamps. The Board thus found the company's proposed data processing and transmission activities, with respect to these transactions, to be closely related to banking. (See 1994 FRB 1107.)

Five bank holding companies (the applicants) applied for the Board's approval to engage, through a joint venture subsidiary (the company), in certain data processing activities pursuant to Regulation Y. The applicants, through the company, would provide data processing and related services to banks and other automated teller machine (ATM) owners in connection with the distribution through ATMs of tickets, gift certificates, prepaid telephone cards, and other documents evidencing a prepayment for goods or services.[1]

The company would provide the software and telecommunications channels necessary to transmit cardholder requests, card-issuer authorizations, and related switching and account reconciliation services. Specifically, the company would provide terminal driving services that include—

- establishing and maintaining an electronic link between an ATM and a telecommunications switch to transmit cardholder requests and card-issuer authorizations; and
- operating the feature and functions displays on an ATM screen using computer software to permit an ATM to dispense various products in addition to currency.

The company would also provide switching services and transaction processing to transmit account debiting, transaction authorization, and settlement data between the ATM owner, or its bank, and the cardholder's bank.

A typical transaction would consist of an ATM cardholder selecting a particular product, such as a concert ticket, from a menu displayed on the ATM screen. The electronic commands transmitted by the company would verify that the deposit account or line of credit designated by the cardholder had sufficient funds to effect the purchase. Following authorization, the ATM would dispense the product and issue a receipt. The card-issuing bank would then debit an amount equal to the cost of the purchase from the cardholder's designated account and transfer the funds to the account of the merchant or ATM owner, using settlement procedures established by the company's ATM network.

The Board previously determined that a bank holding company could provide data processing and related services necessary to permit customers to use an ATM card to debit a deposit account or line of credit at an ATM terminal for cash and credit transactions, and for the purchase of travelers' checks, money orders, and postage stamps. The Board has further determined that a bank holding company may provide data processing services that support the use of credit cards by consumers in the direct purchase of goods and services from a merchant. (See 1995 FRB 492, 1990 FRB 549, and 1985 FRB 113.)

The data processing proposed in this case involves the same type of data processing support as the Board has previously approved for credit card transactions and other more traditional types of ATM transactions. The Board thus concluded that the activities proposed by the applicants are permissible, consisting of data processing and transmission services encompassed within the Board's Regulation Y, and are thus closely related to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. (See 1996 FRB 848.)

1. The tickets would include public transportation tickets and tickets to entertainment events. Gift certificates and prepaid telephone cards would be issued in fixed denominations for a specific merchant or group of merchants, and they would evidence prepayment of the purchase price of merchandise or services to be selected by the bearer at some time in the future. The ATM owners would also sell products that could be offered for sale directly by a financial institution, such as mutual fund shares or insurance policies, where permitted by applicable law.

3160.5.1 ENGAGE IN TRANSMITTING MONEY IN THE UNITED STATES

A bank holding company gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through two companies (the companies) in the activity of transmitting money for customers within the United States and its territories (''domestic money transmission services'') to third parties located in foreign countries.[1] The activity was to be conducted at first through a network of approximately 1,200 ''outside representative offices'' located in California, Florida, Illinois, and Texas that are under contract with the companies to provide money transmission services.[2] The bank holding company proposes to engage in the planned activity nationwide. The companies are corporations that currently engage in the business of money transmission to Mexico through representatives in California, Florida, Illinois, and Texas.

Domestic money transmission services would be provided in the following manner: A customer would contact the companies directly by means of a dedicated telephone located in the outside representative office to request that the companies transmit funds to a third party for a fee. The outside representative would collect cash and a fee from the customer, issue a receipt, and deposit funds in an account maintained by the outside representative solely for the purpose of receiving funds in trust to be transmitted to a third party. The outside representative may maintain this account at any bank, including a subsidiary bank, but would have no agreement with any bank to accept deposits on its behalf. Neither the outside representatives nor the companies would be FDIC-insured institutions.

The companies would collect funds deposited in an outside representative's account daily through an automated clearinghouse (ACH) or similar transaction and deposit an amount equal to the amount to be transmitted into an account they maintain at a bank, which may include one of its subsidiary banks, located near the third party receiving the funds. The third party would be notified that money is available at a local disbursement site, which could include a bank subsidiary of the bank holding company or consumer finance office or an unaffiliated check-cashing, finance, or other type of office. Funds would be made available to the third party by a check drawn on the companies' account almost immediately after the transmission order is placed by the customer.[3]

A customer would not transmit funds to any bank account maintained by the customer or any third party. Thus, the bank holding company would not use this service to collect deposits for customers of its subsidiary banks or any other bank.

There was no agreement between a customer and a bank to accept money in an account for use by the bank in connection with the proposed domestic money transmission services. The companies and their outside representative would accept money from a customer for the sole purpose of transmitting funds to a third party. A customer would not give funds to the companies with the expectation that the companies would permit the customer to reclaim the funds on demand or after a period of time. Moreover, the companies would not maintain balances or pay interest on the money they receive, and they would only hold funds long enough to transmit them to the designated third party.[4]

The Board previously determined that money transmission abroad is closely related to banking.[5] The Office of the Comptroller of the Currency (OCC) also has concluded that it is permissible for a national bank to accept money from nonbank affiliates for the purpose of transmitting the funds to a foreign country and that a

1. The Board previously approved the bank holding company's acquisition of a company to engage in the activity of transmitting funds to third parties in Mexico by using an unaffiliated foreign bank to make the cash payments. See 1995 FRB 974.

2. Outside representative offices would be expanded to include consumer finance offices in addition to existing grocery stores, travel agencies, pharmacies, and insurance agencies.

3. The domestic money transmission services do not involve lending money because only funds provided by the customer would be transmitted to a third party. The plan does not involve the paying of checks. Although the third party receives money by means of a check drawn on an account maintained by the companies, the receipt of funds in check form is not the payment of a check (see *Independent Bankers Ass'n of America v. Smith*, 534 F.2d 921, 943–45 (D.C. Cir. 1976)).

4. Many states permit companies that are not chartered as banks to transmit money without deeming this activity to involve the taking of deposits. The bank holding company is required to conduct the proposed activities in compliance with licensing and other requirements of relevant state law.

5. See 1990 FRB 270.

nonbank affiliate that participates with the national bank in transmitting money abroad would not become a branch of the bank.[6] Based on all the facts of record and for the reasons discussed in this and the Board's previous orders, the Board concludes that domestic money transmission services are closely related to banking. The Board has relied on the fact that the companies are subject to licensing and examination by state authorities.[7] The companies have committed to comply with all applicable reporting requirements, including reporting all transactions over $10,000 to the Internal Revenue Service. The bank holding company committed to apply the internal controls currently in place at the financial services company to ensure compliance with the Bank Secrecy Act.[8]

Based on the foregoing and all the facts of record, the Board approved the notice on October 17, 1995 (see 1995 FRB 1130). The Board's decision was specifically conditioned on the bank holding company's complying with all the commitments made in connection with the notice and obtaining all necessary approvals from state regulators.

6. The OCC has reasoned that nonbank offices that transmit funds through a national bank to a third party do not constitute "branches" under federal law.

7. This order was specifically conditioned on requiring the bank holding company to obtain all necessary state licenses.

8. These procedures include a weekly review of all transactions over $10,000. In addition, the companies will require customer identification, including the customer's current address and occupation, for all transmissions above $3,000. The companies also will run a computer match of all remitters and recipients by name and Social Security number so that reporting requirements cannot be evaded by means of a series of transactions.

The Board has included within Regulation Y (section 225.28(b)(10)(ii)(B)) the authority for bank holding companies to engage in the printing and selling of magnetic ink character recognition (MICR)-encoded items as part of support services. This activity includes this primary activity and also the printing and selling of corporate image checks, cash tickets, voucher checks, deposit slips, savings withdrawal packages, and other forms that require MICR encoding. The activity was initially authorized as a permissible activity by Board order, whereby such documents were to be printed for and sold exclusively to depository institutions. The applicant associated with that Board order proposed to acquire a controlling interest in a printing company that prints and sells checks and related documents. It planned to engage in a joint venture with another company that engages in check printing and other printing activities. The Board concluded for that application that checks and other MICR-encoded documents used in the payments process are provided in specialized form and that they are an integral part of a fundamental banking service, and thus the activity is deemed closely related to banking. See 1986 FRB 794. The Board included the nonbanking activity in the Regulation Y "laundry list," effective April 1997.

3170.0.1 INSURANCE ACTIVITIES PERMISSIBLE FOR BANK HOLDING COMPANIES

Before the enactment of the 1970 amendments to the Bank Holding Company Act, the Board by order authorized certain bank holding companies to engage in insurance activities. The specific type of permissible insurance activity for each bank holding company was described in its Board order. These few bank holding-companies that commenced insurance agency activities before January 1, 1971, have grandfather rights under the current statutes and regulations (section 4(c)(8)), exemption G and 12 (CFR 225.28(b)(11)(vii)). These bank holding companies may, with the prior approval of the Board, engage in general insurance agency activities without restriction as to location or to type of insurance sold. (See section 3170.0.3.7)

The 1970 amendments to the Bank Holding Company Act authorized the Board to determine permissible nonbanking activities under section 4(c)(8). Subsequently, on September 1, 1971, the Board amended Regulation Y to permit bank holding companies to engage in certain insurance agency activities.

The Board further amended the section of Regulation Y concerning permissible insurance agency activities on September 1, 1981. The 1981 amendments limited permissible insurance activities previously authorized by Regulation Y. The first amendment deleted from the Board's regulations the authority for bank holding companies to act under section 4(c)(8) of the Bank Holding Company as agent for the sale of insurance for themselves and their subsidiaries. This amendment reflected a court decision of the United States Court of Appeals for the Fifth Circuit that acting as agent for the sale of insurance for the bank holding company and its nonbanking subsidiaries was impermissible (permissible for banks, however). Such insurance is permissible, however, if conducted pursuant to section 4(c)(1)(C) of the BHC Act.[1] The second 1981 amendment deleted from the Board's regulations the authority to act as agent for insurance sold as a matter of convenience to the public. The opinion also found that the part of the Board's regulation relating to the sale of "convenience insurance"[2] exceeded the scope of the provisions of section 4(c)(8) of the Bank Holding Company Act. The sale of this other insurance was considered impermissible.

On October 15, 1982, Congress enacted the Garn–St Germain Depository Institutions Act (Public Law 97-320). Title VI of that act amended section 4(c)(8) of the Bank Holding Company Act. This amendment stated that insurance agency, brokerage, and underwriting activities are *not* "closely related" to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. However, the amendment provided for seven exceptions to the general prohibition of bank holding companies engaging in insurance activities. One of the seven exceptions contains grandfather exemptions for insurance agency activities conducted on May 1, 1982, or for those insurance activities approved by the Board on or before May 1, 1982. As a result, bank holding companies receiving Board approval on or before May 1, 1982, may continue to engage in their insurance agency activities. (See section 3170.0.3.4)

The seven types of insurance activities allowed as permissible for bank holding companies are as follows:

1. Acting as agent, broker, or principal (i.e., underwriter) for credit-related life, accident and health, or unemployment insurance.
2. For bank holding company finance subsidiaries, acting as agent or broker for credit-related property insurance in connection with loans not exceeding $10,000 ($25,000 in the case of a mobile home loan) made by finance company subsidiaries of bank holding companies. (The Board interpreted this provision as permitting only the sale of insurance that does not exceed the outstanding balance of the loan—vendor's single interest insurance rather than general property insurance that covers the borrower's equity interest.)

1. The Board's Regulation Y was amended as of December 1983 to include the sale of insurance for a holding company based on the services provision of section 4(c)(1)(C) of the BHC Act, which did not require any prior Board approval. Included in the regulation were the services of selling, purchasing, or underwriting such insurance as blanket bond insurance, group insurance for employees, and property and casualty insurance for the bank holding company or its subsidiaries.

2. "Convenience insurance" consisted of insurance that was sold as a matter of convenience to the purchaser. The premium income from the sale of this insurance was expected to constitute less than 5 percent of the aggregate insurance premium income of the holding company. The sale of this insurance was not designed to permit entry into the general insurance-agency business.

3. Acting as agent for the sale of any type of insurance in a place with a population not exceeding 5,000, or with insurance agency facilities that the bank holding company demonstrates to be inadequate.
4. Any insurance agency activity engaged in by a bank holding company or its subsidiaries on May 1, 1982 (or approved as of May 1, 1982), including (i) insurance sales at new locations of the same bank holding company or subsidiaries in the state of the bank holding company's principal place of business or adjacent states or any state or states in which insurance activities were conducted by the bank holding company or any of its subsidiaries on May 1, 1982, or, (ii) insurance coverage functionally equivalent to those engaged in or approved by the Board as of May 1, 1982.
5. Acting, on behalf of insurance underwriters, as supervisor of retail agents who sell fidelity insurance and property and casualty insurance on holding company assets or group insurance for the employees of a bank holding company or its subsidiaries.
6. Any insurance agency activities engaged in by a bank holding company having total consolidated assets of $50,000,000 or less. Life insurance and annuities sold under this provision, however, must be authorized by (1), (2), or (3) above.
7. Any insurance agency activity that is performed by a registered bank holding company, which was engaged in some insurance activity before January 1, 1971, pursuant to the approval of the Board.

These seven types of insurance allowed by the amendment to section 4(c)(8) of the Garn–St Germain Act are generally consistent with the types of insurance activities previously authorized by the Board. The one general exception related to the prohibition of the sale of property and casualty insurance.

3170.0.2 INSURANCE AGENCY ACTIVITIES

Insurance agency activities are among the most widely practiced nonbank activities engaged in by bank holding companies. Many bank holding companies are involved in the sale of insurance at some level in the organization; however, the inspection focuses on these activities only when performed by the parent company or by a nonbank subsidiary (excluding bank-owned subsidiaries). Many of the smaller bank holding companies engage directly in these activities rather than through insurance agency subsidiaries. In either arrangement, however, sales are usually conducted on the premises of the subsidiary bank by personnel who most often serve as officers or employees of the bank or parent company.

Performance of insurance agency activities has been profitable for most bank holding companies with many of the smaller companies relying heavily on the commissions generated to service acquisition or other related indebtedness. In most cases, little or no expenditures for fixed assets are required since the premises of the subsidiary banks or parent company are utilized. Likewise, little or no liabilities are incurred since there are minimal assets to be financed.

3170.0.3 PERMISSIBLE TYPES OF COVERAGE INCLUDING GRANDFATHER PRIVILEGES

As noted above, the Board, effective November 7, 1986, approved a revision of specific insurance agency and underwriting activities permissible for bank holding companies under section 4(c)(8) of the BHC Act (section 225.28(b)(11) of Regulation Y). In clarifying the scope of insurance activities that are closely related to banking and permissible for bank holding companies under the Garn–St Germain Act, the Board included in its revised Regulation Y the seven specific exemptions contained in that statute.

3170.0.3.1 Insurance Activities Permissible for Bank Holding Companies per Section 225.28(b)(11)(i) of the Board's Regulation Y

Permissible insurance agency activities include the sale of life, accident and health, and involuntary unemployment insurance that is directly related to an extension of credit by a bank holding company with respect to its own extensions of credit and those of its subsidiaries. For the purpose of determining what activities are permissible, the Board interpreted the term "extension of credit" to include direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases meet all the criteria contained in section 225.28(b)(3) of Regulation Y, which defines leases as the functional equivalent of an extension of credit. (See the discussion of leasing in section 3140.0.)

The regulation requires that insurance coverage be limited to the ''outstanding balance due'' on an extension of credit. The ''outstanding balance due'' is calculated as follows:

1. Include:
   a. principal and interest
   b. reasonable administrative fees outstanding on the loan
   c. the balance of payments due in a lease transaction
2. Exclude:
   a. the residual value of the leased item (since the lessor owns the leased item and the lessee is not obligated to purchase the item by paying the residual value)

The insurance may provide for total repayment of the extension of credit in the event of the death of the borrower or for periodic payments on the extension of credit when the borrower is temporarily disabled or unemployed. Such single or periodic payments may not exceed the balance on the loan and thus provide for additional general life or accident coverage.

While ordinarily such credit-related insurance coverage would be declining term as payments reduce the balance due on an extension of credit (loans in connection with first mortgages), a bank holding company may write or sell a level term policy on nonamortizing loans. Policies written or sold pursuant to this paragraph, moreover, may be individual rather than group policies, and the premiums on such policies may be age-related. The Board continues to require that insurance policies sold or written to cover the ''outstanding balance due'' insure only named borrowers or lessees of a particular bank holding company. Accordingly, such policies could cover both spouses jointly only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company.

The Board permits, with regard to an extension of credit, the sale and underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions, as previously discussed, when such lease transactions are the equivalent of loans; (2) in connection with loans secured by residential first mortgages; and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

The regulation explicitly permits the sale of life, disability, and involuntary unemployment insurance with respect to a lease transaction, provided the lease is the type of nonoperating, full payout lease described as permissible for bank holding companies in section 225.28(b)(3) of Regulation Y. The Board has determined that such leases are the ''functional equivalent of an extension of credit.'' It believes that this type of lease is encompassed in the term ''extension of credit'' as it is used in exemption A of the Garn–St Germain Act.

As discussed previously, the first exemption of the Garn–St Germain Act permits the sale of any type of life, disability, and involuntary unemployment insurance relating to an extension of credit, including home mortgage redemption insurance. Home mortgage insurance insures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. The Board has determined that home mortgage redemption insurance is closely related to banking because it supports the lending function (1986 FRB 339 and 671) by providing for repayment of residential mortgage loans at a time when the death or disability of the borrower may delay or disrupt the scheduled repayment of such loans. Home mortgage redemption insurance in connection with residential mortgage loans is considered as fulfilling the same function as credit life and credit accident and health insurance with respect to other types of loans. The Board recognized that such insurance functions as credit insurance in supporting a bank's lending function (see the Board's approval for the *sale* of such insurance by bank holding companies within 1975 FRB 45).

In approving the activity of home mortgage redemption insurance by order, the Board previously relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. The Board continues to require that such notices be provided to borrowers. In addition, the Board continues to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrowers' ability to rescind the insurance and to limit premium financing as an incentive to sell such insurance.

The Board considers an "extension of credit" as covering loans that are made or purchased by the bank holding company or its subsidiaries. Credit-related insurance may be continued on the loans that were sold, and are now only being serviced, provided that they were made or purchased by the bank holding company or its subsidiaries. The Board permits bank holding companies to sell credit-related life, accident and health, and involuntary unemployment insurance where the bank holding company previously placed funds at risk. In this situation, the bank holding company must continue to limit its insurance coverage to the outstanding balance due on the extension of credit by the borrower.

A bank holding company may not sell or underwrite insurance when merely servicing a loan and *it has never placed its funds at risk* either by originating or purchasing the loan; the bank holding company is permitted to collect and transmit insurance premiums, act as intermediary in renewing existing policies or adjusting coverages, and engage in other activities which are incidental to the servicing of loans. The bank holding company may collect a fee for such services, providing that the fee is based on the provision of the service and is not a premium for insurance sold. In that case, the bank holding company would be engaging in loan servicing rather than insurance activities.

3170.0.3.2 Section 225.28(b)(11)(ii) of Regulation Y—Sale of Credit-Related Property Insurance by Finance Company Subsidiaries of a BHC

The Garn–St Germain Act restricts the authority of bank holding companies to engage in property and casualty insurance activities. Before 1982, the Board approved the sale of property and casualty insurance that was directly related to an extension of credit by a bank or bank-related firm in the bank holding company system. The sale of property insurance is now limited to an extension of credit made by a finance company that is a subsidiary of a bank holding company, acting as agent or broker. A finance company subsidiary may only engage in the sale of such property insurance if—

1. the insurance is limited to assuring repayment of the outstanding balance on such extension of credit in the event of loss or damage to any property used as collateral for the extension of credit;
2. the extension of credit is not more than \$10,000, or \$25,000 if it is to finance the purchase of a residential manufactured home[3] and the credit is secured by the home; and
3. the applicant commits to notify borrowers in writing that—
   a. they are not required to purchase such insurance from the applicant;
   b. such insurance does not insure any interest of the borrower in the collateral; and
   c. the applicant will accept more comprehensive property insurance in place of such single interest insurance.

3170.0.3.2.1 Definition of a Finance Company

A "finance company" for purposes of the sale of property insurance includes all non-deposit-taking financial institutions that engage in a significant degree of consumer lending (excluding lending secured by first mortgages) and all financial institutions specifically defined by individual states as finance companies that engage in a significant degree of consumer lending. Finance companies, under this provision, include those entities that may be authorized to accept limited types of time or savings deposits under state law but which a state has defined to be a finance company. Since exemption B of the Garn–St Germain Act is directed to consumer loans, the regulation requires that a qualifying company be engaged in that type of lending to a significant degree as measured by either number of loans, percentage of loans, percentage of loan amounts outstanding, or some similar measure. The Board will evaluate the amount of the consumer lending on a case-by-case basis.

3170.0.3.2.2 Property Insurance a Finance Company May Sell

Section 225.28(b)(11)(ii) of Regulation Y permits finance company subsidiaries of bank holding companies to engage in the sale of single-interest property insurance that insures against damage or loss only to the extent of the lender's interest in the property that serves as collateral-for a loan. The Garn–St Germain Act limits the permissible insurance coverage to "the out-

3. These limitations increase at the end of each year, beginning with 1982, by the percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers published by the Bureau of Labor Statistics.

standing balance due on an extension of credit.'' It does not contemplate general property insurance that covers the entire value of the property, including the balance due the lender and the equity interest of the borrower/owner. Generally such insurance is declining balance and the only interest in the collateral property that may be insured is that of the lender.

The sale of single-interest insurance is permitted provided that the BHC finance company subsidiary does not require such insurance of borrowers who have adequate property insurance on the loan collateral. In addition, the finance company subsidiary is required to disclose in writing that such insurance, if required, need not be purchased from the lender and that such insurance does not cover the borrower's interest in the property. The requirement is also imposed by the Board's Regulation Z, section 226.4(d)(2), if the premium is excluded from the finance charge.

3170.0.3.3 Section 225.28(b)(11)(iii) of Regulation Y—Insurance in Small Towns

Engaging in any insurance activity is permitted in a place where the bank holding company or a subsidiary of the bank holding company has a lending office in a community that—

1. has a population not exceeding 5,000 (as shown by the last preceding decennial census) or
2. has inadequate insurance-agency facilities, as determined by the Board, after notice and opportunity for hearing.

In order to provide insurance agency activities in a town with a population not exceeding 5,000, or in a community that has inadequate insurance agency facilities, the bank holding company must have a lending office that serves the public in the small town. The regulation specifically requires that the office be a lending office in order to provide the bank holding company with a link to the town, to avoid remote operation from a central location of a network of small-town insurance agencies, and generally to maintain insurance as a fee-generating activity to help sustain a small-town lending office as an independent, viable profit center.

The *current* requirement does not limit the sale of insurance to a ''principal place of banking business'' located in a community not exceeding a population of 5,000. Also, a bank holding company insurance agency is not precluded from selling insurance to those residing outside the community who initiate the transaction at the agency's place of business in the town of less than 5,000. Advertising in the community newspaper or a telephone book that may serve an area larger than the community of 5,000 is also not prohibited. The current regulation requires that the bank holding company or a subsidiary thereof establish or have a lending office in the community that has a population not exceeding 5,000.

3170.0.3.4 Section 225.28(b)(11)(iv) of Regulation Y—Insurance Agency Activities Conducted on May 1, 1982

This provision of the regulation includes engaging in any specific insurance agency activity[4] if the bank holding company, or subsidiary conducting the specific insurance agency activity, conducted the insurance agency activity on May 1, 1982, or received Board approval to conduct the insurance agency activity on or before May 1, 1982. Activities engaged in on May 1, 1982, include activities carried on subsequently as the result of an application to engage in such activities pending before the Board on May 1, 1982, and approved subsequently by the Board or as the result of an acquisition by such company pursuant to a binding written contract entered into on or before May 1, 1982, of another company engaged in such activities at the time of the acquisition.

A bank holding company or subsidiary engaging in a specific insurance-agency activity under section 225.28(b)(11)(iv) of Regulation Y may—

1. engage in such specific insurance-agency activity only at locations—
   a. in the state in which the bank holding company has its principal place of business (as defined in 12 U.S.C. 1842(d));
   b. in any state or states immediately adjacent to such state; and
   c. in any state in which the specific insurance-agency activity was conducted (or was

4. Nothing in paragraph (iv) precludes a BHC subsidiary that is authorized to engage in a specific insurance-agency activity under this clause from continuing to engage in the particular activity after merger with an affiliate, if the merger was for legitimate business purposes and prior notice has been provided to the Board.

approved to be conducted) by such bank holding company or subsidiary thereof or by any other subsidiary of such bank holding company on May 1, 1982; and
2. provide other insurance coverages that may become available after May 1, 1982, so long as those coverages insure against the types of risks as (or are otherwise functionally equivalent to) coverages sold or approved to be sold on May 1, 1982, by such bank holding company or subsidiary.

This provision of the regulation parallels exemption D of the Garn–St Germain Act and grandfathers those insurance agency activities in which individual bank holding companies were engaged on May 1, 1982. Under this provision, a bank holding company or subsidiary thereof may continue to engage in particular types of insurance agency activities that were permissible before the passage of the Garn–St Germain Act but which are now prohibited by that act. A qualifying bank holding company may engage, for example, in the sale of property and casualty insurance on property serving as collateral for loans made by a lending subsidiary of the holding company.

A qualifying bank holding company may also engage in grandfathered insurance related to the provision of "other financial services" previously authorized under section 225.28(b)(11)(i)(B) of Regulation Y. This type of insurance is not considered to be related to an extension of credit under the Garn–St Germain Act. As a result, the Board *no longer permits* the sale of insurance related to the provision of the general financial services offered by a bank or bank-related firm. Such insurance included, for example, insurance on the contents of safe deposit boxes, or savings completion insurance on certificates of deposit, Christmas club accounts, individual retirement accounts, tuition completion plans, or credit-related insurance for serviced loans. Prior to the Garn–St Germain Act, insurance related to the provision of general financial services was permitted to be sold to borrowers whose loans were neither purchased nor originated, but may have been serviced by the bank holding company. Insurance with respect to loan servicing was the primary type of insurance previously permitted by the Board as related to such financial services. Now, the Garn–St Germain Act limits the sale of insurance by bank holding companies in general to insurance related to an extension of credit.

3170.0.3.4.1 Limitations on Expansion of Grandfather Rights

Exemption D provides for limited expansion of grandfathered insurance agency activities in order to permit qualifying bank holding companies to remain effective insurance agent competitors. The exemption presented three issues that the Board resolved in paragraph (iv) of the regulation: (1) defining which subsidiaries of a bank holding company may engage in otherwise impermissible insurance agency activities under exemption D; (2) the scope of permissible geographic expansion; and (3) the scope of product-line expansion.

Specific Subsidiaries That May Engage in Grandfathered Activities

Grandfather rights do not inure to the benefit of the entire holding company system by virtue of the fact that a particular subsidiary was engaged in insurance agency activities before May 1, 1982. Only the subsidiary of the bank holding company that was engaged in insurance activities on May 1, 1982, or received Board approval to engage in insurance activities before May 1, 1982, has grandfather status.

The Board believes that the emphasis in the legislative history on the transfer of grandfather rights shows the intent of Congress to prohibit not only the transfer of such rights from "grandfathered" subsidiaries to those affiliates wholly without grandfather rights, but also to prohibit the transfer of grandfather rights with respect to particular kinds of insurance from one "grandfathered" subsidiary to another. Thus, a subsidiary that sold only credit life insurance before the grandfather date should not acquire grandfather rights to sell property and casualty insurance solely because an affiliate sold property and casualty insurance before the grandfather date. The grandfather rights of a particular subsidiary are limited to the precise activities (or their functional equivalent) engaged in before May 1, 1982. This requirement does not preclude the transfer of grandfather rights in the case of a bona fide merger (1983 FRB 554, 555).

Section 225.28(b)(11) of the Board's Regulation Y is only intended to clarify the exemptions in title VI of the Garn–St Germain Act. It does not authorize any bank holding company to commence any insurance activity, or to acquire a company with insurance activities, without compliance with the notice and application requirements of section 4(c)(8) of the BHC Act.

Geographic Expansion by a Grandfathered Subsidiary of a Bank Holding Company.

The language of exemption D of the Garn–St Germain Act, while limiting the grandfathered activities to those agency activities conducted by the specific grandfathered subsidiary, *does allow* expansion into states where such specific types of agency activities "were conducted by the bank holding company or any of its subsidiaries on May 1, 1982 . . ." If a bank holding company subsidiary is selling a particular type of insurance in a given state, the Board does not believe there is any regulatory or business purpose served by restricting another grandfathered subsidiary from engaging in the same activity in the same location.

Product-Line Expansion

The Board's regulation provides for product-line expansion. A grandfathered subsidiary of a bank holding company may seek approval from the Board to engage in the sale of new types of insurance that protect against the same types of risks as, or are otherwise functionally equivalent to, insurance sold on the grandfather date.

3170.0.3.4.2 Transfer of Grandfather Rights among Subsidiaries

A grandfathered subsidiary of a bank holding company (or its successor) may retain its grandfather rights after merger with an affiliate, if such merger is based on legitimate business concerns, for example, centralized management or increased efficiency, rather than as a means of extending insurance powers. The regulation further provides that bank holding companies must advise the Board before any such merger for legitimate business purposes in order to confirm the transfer of grandfather rights.

3170.0.3.5 Section 225.28(b)(11)(v) of Regulation Y—Bank Holding Company's Insurance Coverage for Internal Operations

The Garn–St Germain Act approved, and the revised Regulation Y included, insurance agency activities where the activities are solely limited to supervising on behalf of insurance underwriters the activities of retail insurance agents who sell—

1. fidelity insurance and property and casualty insurance on the real and personal property used in the operations of the bank holding company or its subsidiaries and
2. group insurance that protects the employees of the bank holding company or any of its subsidiaries.

This provision of Regulation Y is reflective of an intent on the part of Congress to avoid preempting certain practices permissible under Texas law. This insurance relates to a particular situation that may have little applicability elsewhere.

3170.0.3.6 Section 225.28(b)(11)(vi) of Regulation Y—Small Bank Holding Companies

The Board has determined in section 225.28(b)(11)(vi) of its Regulation Y that engaging in any insurance agency activity is permissible if the bank holding company has total consolidated assets of $50 million or less. A bank holding company performing insurance agency activities under this paragraph *may not* engage in the sale of life insurance or annuities except as provided in section 225.28(b)(11)(i) and (iii) of Regulation Y, and it may not continue to engage in insurance agency activities pursuant to that provision more than 90 days after the end of the quarterly reporting period in which total assets of the holding company and its subsidiaries exceed $50 million.

A bank holding company is required to cease general insurance-agency activities pursuant to this provision within 90 days after the end of the quarterly reporting period in which the bank holding company's total assets exceed $50 million. Thereafter, the bank holding company may continue to engage in the sale of insurance pursuant to other exemptions.

3170.0.3.7 Section 225.28(b)(11)(vii) of Regulation Y—Insurance Agency Activities Conducted before 1971

The Board has determined in section 225.28(b)(11)(vii) of its Regulation Y that any insurance agency activity performed at any location in the United States directly or indirectly by a bank holding company that was engaged in insurance agency activities before January 1, 1971, as a consequence of approval by the Board before January 1, 1971, is permissible.

3170.0.3.7.1 Agency Activities

The Board adopted a position in section 225.28(b)(11)(vii) permitting any qualifying bank holding company to engage in general insurance-agency activities without restriction as to location or to type of insurance sold (1985 FRB 171 and 1984 FRB 235, 470). A company qualifies under this provision if it was engaged in insurance agency activities as a consequence of Board approval before January 1, 1971. A very limited number of active bank holding companies received such Board approval in the period from passage of the BHC Act in 1956 until January 1, 1971.

The regulation does not limit the insurance agency activities of a qualifying company by requiring that the company engage only in the sale of such types of insurance as it sold before 1971 from such locations as it conducted insurance agency activities before 1971. The Board's regulation permits the limited number of qualifying companies to engage in general insurance-agency activities pursuant to exemption G regardless of their precise insurance agency activities before 1971 (1985 FRB 171 and 1984 FRB 470).

3170.0.4 INCOME FROM THE SALE OF CREDIT LIFE INSURANCE

3170.0.4.1 Policy Statement on Income from Sale of Credit Life Insurance

Effective May 1, 1981, the Board adopted a policy statement (1981 FRB 431) generally prohibiting employees, officers, directors, or others associated with a state member bank from profiting personally from the sale of life insurance in connection with loans made by the bank. The bank may, however, allow their employees and officers to participate in the income under a bonus or incentive plan not to exceed 5 percent of the recipient's annual salary. Income from the sale of credit-related life insurance should most appropriately be credited to the bank, or alternately to a bank holding company or other affiliate of the bank so long as the bank receives reasonable compensation for its role in selling the insurance. As a general rule, ''reasonable compensation'' means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the bank's credit life insurance sales. (Insurance agency activities engaged in directly by a bank subsidiary are regulated by the chartering authority. However, intercompany transactions should be reviewed by BHC inspection personnel.)

3170.0.4.2 Disposition of Credit Life Insurance Income

The Comptroller of the Currency has issued a regulation dealing with sales of credit life, health, and accident insurance by national banks which prohibits transfer of insurance commissions to an affiliate of the bank unless commission income in proportion to the shares held by the bank's minority shareholders is placed in trust and paid to them periodically. Where the subsidiary bank is wholly owned by a bank holding company, however, the regulation allows the commissions to be credited to the holding company or to its wholly owned subsidiaries (12 C.F.R. 2).

3170.0.5 INSPECTION OBJECTIVES

1. To determine the extent of insurance operations and the overall condition of subsidiaries engaged in insurance agency and underwriting activities.
2. To determine whether the types of insurance sold are in accordance with the provisions of section 225.28(b)(11) of Regulation Y.
3. To determine the impact of the performance of the activities on the parent bank holding company and its subsidiaries.
4. To suggest corrective action when necessary in the areas of policies, procedures, or laws and regulations.

3170.0.6 INSPECTION PROCEDURES

Where the insurance activities are performed through an insurance agency or underwriting subsidiary, perform the following activities:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6 and the annual report to the state insurance department.

2. Review minutes of the board of directors meetings.
3. Review the activity's compliance with the Board's policy statement on income from the sale of credit life insurance (See section 3170.0.4.1) and the Comptroller of the Currency's regulation dealing with the sales of credit life, health, and accident insurance by national banks (12 C.F.R. 2).
4. Review any agreements, guarantees, or pledges between the subsidiary and its parent holding company or affiliates.

Where the insurance activities are performed through an insurance agency or underwriting subsidiary or directly by the parent company, perform the following procedures:
1. Obtain copies of insurance policies issued to determine that the types and terms of insurance coverage sold are within the scope of those permitted by the Board under section 225.28(b)(11) of Regulation Y.
2. Check for compliance with section 106(b) of the 1970 Amendments to the BHC Act (prohibition against tie-in arrangements).

3180.0.1 INSURANCE UNDERWRITING ACTIVITIES

On December 11, 1972, after consideration of a public hearing held on March 24, 1972, the Board amended Regulation Y to add the activity of underwriting credit life insurance and credit accident and health insurance to the list of activities in which a bank holding company may engage, provided that such insurance is directly related to an extension of credit by the holding company system. Such insurance ensures a bank or bank-related firm of repayment of a credit extension in the event of death or disability while at the same time providing the borrower with financial security in either event. In approving this activity, the Board set forth, in a footnote to Regulation Y, requirements to ensure that performance of the activity would result in demonstrable benefits to the public. The Board stated that applications to engage in underwriting activities would be approved only in cases in which the applicant demonstrates that such approval would benefit the consumer or result in other public benefits and that normally such a showing would be made by a projected reduction in rates charged the public for the insurance or an increase in other public benefits resulting from bank holding company performance of this service.

On October 3, 1986, the Board adopted a revision of the provisions of Regulation Y that deals with permissible insurance agency and underwriting activities for bank holding companies. The general revision of the insurance provisions of Regulation Y combined both the insurance agency and insurance underwriting activities reflects amendments to the Bank Holding Company Act by the Garn–St Germain Depository Institutions Act of 1982. The revision of the provisions relating to insurance underwriting eliminated the rate-reduction requirement that previously applied to those companies engaged in the underwriting of credit life, credit accident and health, and involuntary unemployment insurance. Accordingly, bank holding companies engaging in this activity may charge premiums as permitted by the states.

In order for insurance underwriting (including home mortgage redemption insurance) to be permissible in accordance with section 225.28(b)(11) of the Board's revised Regulation Y, the insurance must—

1. be directly related to an extension of credit[1] by the bank holding company or any of its subsidiaries and
2. be limited to ensuring the repayment of the outstanding principal balance due on the extension of credit in the event of the death, disability, or involuntary unemployment of the debtor.

3180.0.1.1 Insurance Underwriting Activities Permissible for Bank Holding Companies per Section 225.28(b)(11)(i) of the Board's Regulation Y—Credit Insurance

The Board permits the insurance underwriting activities described above as well as the insurance agency activities described in section 3170.0.

In section 225.28(b)(11)(i) of Regulation Y, the Board issued three significant interpretations of the term ''extension of credit'' as contained in the Garn–St Germain Act. It permits the underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions where such lease transactions are the equivalent of loans (leasing is addressed in section 3140.0), (2) in connection with loans secured by residential first mortgages, and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

Permissible insurance underwriting requires that the credit insurance must be directly related to an extension of credit by the bank holding company or any of its subsidiaries. An ''extension of credit'' includes direct loans to borrowers, and the lease of real or personal property, and loans purchased from other lenders. The first significant interpretation, noted above, allows the inclusion of leasing personal or real property, provided the lease is a nonoperating and full-payout lease, the insurance ensuring the payment of the remaining lease payments that are due in the event of the death, disability, or involuntary unemployment of the lessee.

1. ''Extension of credit'' includes direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases are nonoperating and full-payout leases.

The interpretation thus defines leases as the functional equivalent of an extension of credit.

The second interpretation in paragraph (i) of the regulation involving the definition of "extension of credit" is the permissibility of underwriting home mortgage insurance, which ensures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. Exemption A of the Garn–St Germain Act permits the underwriting of any type of life, disability, and involuntary unemployment insurance related to an extension of credit by a bank holding company as long as the face value of the insurance policy does not exceed the "outstanding balance due" on the extension of credit. The Board continues to require that insurance policies written insure only named borrowers or lessees of a particular bank holding company. Such policies could cover both spouses jointly, but only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company (see 1974 FRB 138).

The Board had previously held that the underwriting of home mortgage insurance is not closely related to banking in part because it is more like general life insurance than credit life insurance and in part because banks have not generally underwritten such insurance (see 1980 FRB 660 and 1982 FRB 318). Recently, however, the Board permitted bank holding companies to underwrite such insurance (see 1986 FRB 339 and 1986 FRB 671). In permitting this activity by order, the Board provided detailed findings that the underwriting of home mortgage redemption insurance is permitted by exemption A of the Garn–St Germain Act, is closely related to banking, and does not present the possibility of such significant adverse effects that it should not be added to the list of activities permissible for bank holding companies. The Board also found that home mortgage insurance supports the lending function. The Board thus believes, for the reasons cited in the above-cited orders, that the underwriting of home mortgage redemption insurance is permissible for bank holding companies.

In approving the underwriting of home mortgage insurance by order, the Board relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. In processing applications to engage in the underwriting of home mortgage redemption insurance pursuant to the current regulation, the Board, and the Reserve Banks acting pursuant to delegated authority, will continue to require that such notices be provided to borrowers. In addition, the Board will continue to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrower's ability to rescind the insurance and to limit premium financing as an incentive to sell and underwrite such insurance.

A third significant interpretation of the term "extension of credit" found in exemption A of the Garn–St Germain Act involves the underwriting of insurance in connection with the serviced loans (see section 3170.0.3.1) The Garn–St Germain Act limits bank holding companies in general to insurance related to an extension of credit. The term "extension of credit" is used in exemption A to describe transactions in which the funds of the bank holding company or its subsidiaries have been placed at risk, including direct loans or leases or loans that have been purchased. Loans that are merely being serviced by the bank holding company generally would not be covered by this definition.

The underwriting of insurance on loans being serviced is necessary only when the term of the insurance was originally shorter than that of the loan. The bank holding company that is selling and underwriting insurance on the loan that it originated and is servicing is, in effect, only extending the term of its original insurance policy to be coterminous with the duration of the loan. It is providing insurance that it could have provided previously. A bank holding company may not underwrite insurance in the case where it is merely servicing a loan and it has never placed its funds at risk either by originating or purchasing the loan.

3180.0.2 LIMITED PROPERTY INSURANCE RELATED TO AN EXTENSION OF CREDIT (FINANCE COMPANY SUBSIDIARY OF A BANK HOLDING COMPANY)

The Board's revised regulation does not permit the underwriting of this type of insurance. See section 225.28(b)(11)(ii) of Regulation Y and section 3170.0.3.1 for information on authorized insurance agency activities.

3180.0.3 INSURANCE ACTIVITIES BEFORE 1971

The Board's revised regulation (section 225.28(b)(11)(vii)), as it relates to exemption G of the Garn–St Germain Act, does not authorize underwriting activities for bank holding companies. See section 3170.0.3.7 for information on the respective authorized insurance-agency activities under exemption G.

3180.0.4 UNDERWRITING AS REINSURER

The majority of bank holding company subsidiaries engaged in insurance underwriting are reinsurers rather than direct underwriters. As reinsurer, these companies engage a direct insurer to issue the policies, collect the premiums, pay claims, maintain accounting books and records, prepare federal and state tax returns, and perform other services necessary to conduct the insurance activities. Usually, such reinsurance companies will have executed a reinsurance agreement and a service agreement with the direct underwriter which spell out all services to be performed and set the fees to be paid for such services. The above arrangement involves a minimum of activity by the reinsurer and is probably most often chosen by bank holding companies since it does not place additional burdens on management and precludes hiring actuaries and other professional personnel to manage the insurance company.

There are many ratios or measures used to evaluate the condition of insurance underwriters. The National Association of Insurance Commissioners has developed a system consisting of nine ratios that measure various aspects of life and health insurance companies' financial condition and stability *(The Early Warning System for Life and Health Insurance Companies)*. These tests establish benchmarks which are likely to distinguish between troubled and sound companies. The examiner may wish to compare the subject company's ratios to these benchmarks. When making comparisons, however, the examiner should recognize that one insurer may require a somewhat better ratio than another due to greater underwriting and investment risks. Smaller companies will generally maintain a proportionately larger surplus account since loss experience on a small volume of business tends to fluctuate more widely.

Another possible source of information available to help determine a company's condition is *Best's Insurance Reports*. The report is published annually and provides pertinent financial and historical data for legal reserve life insurance companies operating in the United States and Canada. It assigns a rating for each company in the report. Information presented in the report is taken from annual statements filed with the state insurance departments. It should be noted that reports filed with the insurance departments are prepared using the statutory method of financial accounting and presentation rather than generally accepted accounting principles. Beginning in 1973, insurance companies were required to adhere to generally accepted accounting principles for certification of financial statements (see *Audits of Stock Life Insurance Companies*, American Institute of Certified Public Accountants), however, they continue to report under the statutory method to the state insurance departments. The statutory method is basically a cash-basis accounting presentation which generally depicts a more conservative position. Certain assets are "not admitted" by regulatory authorities in the financial presentation because they are not readily convertible into cash for the payment of claims and expenses.

Policy reserves represent the primary liability portion of underwriters' balance sheets. There are several acceptable methods permitted by state authorities for calculating these reserves. Most of these methods are rather complicated and a description of their calculation is beyond the scope of this manual. However, insurance companies are generally closely regulated by state authorities, which place primary importance on determining the adequacy of the policy reserves. A review of the latest available insurance examination report should give an evaluation of the adequacy of the reserves.

Reinsurance arrangements may distribute the insurance and losses in many different ways between the direct insurer and the reinsurer. An understanding of such arrangements is essential in determining the extent of risk incurred by the company being inspected.

3180.0.5 INSPECTION OBJECTIVES

1. To determine the extent of underwriting activities and the overall condition of subsidiaries engaged in underwriting.
2. To determine whether the activities performed are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3. To determine the impact of the underwriting operations on the parent bank holding company and its subsidiaries.
4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.

3180.0.6 INSPECTION PROCEDURES

Where the insurance underwriting activities are performed through an underwriting subsidiary, perform the following procedures:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6. (Generally, records are maintained on the statutory accounting basis and are more easily tied to the financial statements in the annual report to the state insurance department).
2. Review minutes of the board of directors meetings.
3. Review the quality and liquidity of the subsidiary company's investments in CDs, stocks, bonds, or other marketable securities.
4. Review intercompany transactions, including balances maintained with or assets purchased from affiliated banks.
5. Review any agreements, guarantees, or pledges between the company and its parent holding company or affiliates.

Where the insurance activities are performed either directly or through an underwriting subsidiary, perform the following procedures:

1. Review copies of any reinsurance and/or service agreements executed with other insurance companies.
2. Review the latest annual report submitted to the state insurance department.
3. Review the latest report of examination prepared by the state insurance department.
4. Check calculation of premium charges by a random sample of policies for adherence to the state rate structure.
5. Obtain copies of insurance policies issued to customers to determine that the types of insurance coverage and terms offered are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3180.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Permissible underwriting activities	12 U.S.C. 1843(c)(A)–(G)	225.28(b)(11)	4–050.1	
Underwriting of permissible credit-related home mortgage insurance				1986 FRB 671, 339
Nonpermissibility of mortgage guarantee insurance				1974 FRB 727
Underwriting of joint credit life insurance			4–337	39 Federal Register 7493 1974 FRB 138

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Courier activities are permissible for bank holding companies if the items being transported by the courier are themselves related to bank operations. Examples of such items are drafts, money orders, travelers' checks, commercial papers, written instruments, and data processing material. Currency and bearer-type negotiable instruments which require more than normal security measures may not be transported by the company.

If the courier company operates under the exemptive provision of section 4(c)(8) of the Bank Holding Company Act, the following restrictions are placed on its operations to ensure competition:

1. The company must be a separate, independent corporate entity.
2. The company must be profit-oriented and not subsidized by the holding company system.
3. Services of the company must be performed on a specific-fee basis with direct payment from the customer. Payment may not be made indirectly such as through maintenance by the customer of deposit balances at an affiliated bank.
4. Upon request, the company must furnish comparable services at comparable rates to firms which compete with banking or data processing subsidiaries of its parent company, unless compliance with the request would be beyond the practical capacity of the company.

The last restriction was intended to prevent use of bank-affiliated courier services for the purpose of gaining an advantage over competitors to whom courier services were not otherwise available.

3190.0.1 INSPECTION OBJECTIVES

1. To determine if the company is operating in compliance with applicable laws and regulations, and ensure that corrective action will be taken, if appropriate.
2. To determine if courier services are provided to competing institutions upon their request if courier services are not otherwise available.

3190.0.2 INSPECTION PROCEDURES

1. Determine whether the company makes known to its customers its minimum rate schedule for services and its general pricing policies.
2. Determine whether the company maintains for a period of two years or more the records of each request for service which it has denied to firms competing with the banking and data processing subsidiaries of its parent company. The reasons for the denial must also be recorded and maintained for a like period.
3. Review income statements of the company to ascertain whether the company is operating profitably, without a subsidy in any manner from any entity within the holding company system. Any operating losses sustained over an extended period of time are inconsistent with continued authority to engage in courier services.
4. Determine whether the materials transported by the company are restricted to those which would normally be exchanged among banks and banking institutions, including audit and accounting media of a banking or financial nature, and other business records or documents used in processing such media.

3190.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Courier activities of bank holding companies		225.28(b)(10)		1973 *Fed. Reg.* 32136 1975 *Fed. Reg.* 36309
Conditions of entry into courier activities		225.129	4–180	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

On February 26, 1974, the Board amended Regulation Y to permit bank holding companies to engage in the activity of providing bank management consulting services to nonaffiliated commercial banks. The advisee institution must be a ''bank'' as that term is defined by section 2(c) of the BHC Act or an operations subsidiary of such an institution. (See 12 C.F.R. 250.141.) Effective April 20, 1982, the Board expanded this activity by permitting holding companies to provide management consulting advice to nonbank depository institutions. When expanding the activity to include management consulting advice to nonbank depository institutions, the Board indicated that the advisory services provided to nonbank institutions should generally be the services that were then being provided to banks.

Effective April 21, 1997, management consulting was expanded in Regulation Y (section 225.28(b)(9)) to allow bank holding companies to provide management consulting services to any customer on any matter so long as the total annual revenue derived from third-party management consulting services by a nonbank subsidiary of the bank holding company is less than 30 percent of the subsidiary's total annual revenues derived from all management consulting activities. The Board continues to view ''management consulting'' as including, but not limited to, providing analysis or advice as to a firm's—

1. purchasing operations, such as inventory control, sources of supply, and cost minimization subject to constraints;
2. production operations, such as quality control, work measurement, product methods, scheduling shifts, time and motion studies, and safety standards;
3. market operations, such as market testing, advertising programs, market development, packaging, and brand development;
4. planning operations, such as demand and cost projections, plant location, program planning, corporate acquisitions and mergers, and determination of long-term and short-term goals;
5. personnel operations, such as recruitment, training, incentive programs, employee compensation, and management-personnel relations;
6. internal operations, such as taxes, corporate organization, budgeting systems, budgeting control, evaluation of data processing systems, and efficiency evaluations; and
7. research operations, such as product development, basic research, and product design and innovation.

By interpretation, the Board previously determined that it considers bank management consulting advice to include, but not be limited to, advice concerning (1) bank operations, systems, and procedures; (2) computer operations and mechanization; (3) implementation of electronic funds transfer systems; (4) site planning and evaluation; (5) bank mergers and the establishment of new branches; (6) operation and management of a trust department; (7) international banking and foreign-exchange transactions; (8) purchasing policies and practices; (9) cost analysis, capital adequacy, and planning; (10) auditing; (11) accounting procedures; (12) tax planning; (13) investment advice as authorized in section 225.28(b)(6) of Regulation Y; (14) credit policies and administration, including credit documentation, evaluation, and debt collection; (15) product development, including specialized lending provisions; (16) marketing operations, including research, market development, and advertising programs; (17) personnel operations including recruiting, training, evaluation, and compensation; and (18) security measures and procedures. Providing management consulting advice on compliance with laws and regulations may be accomplished only when these activities are incidental to a primary consulting activity and when such advice would not constitute the rendering of legal advice.

In general, those consulting services that correspondent banks traditionally have provided to their respondents (both bank and nonbank depository institutions) are considered to be included within the scope of Regulation Y as permissible services to be provided by nonbank holding company subsidiaries to nonaffiliated bank and nonbank depository institutions.

3200.0.1 MANAGEMENT CONSULTING LIMITATIONS

Recognizing the potential for conflict-of-interest situations, such as the possibility for anticompetitive cooperative arrangements, improper use of confidential information, and similar abuses that this activity could entail, the Board incorporated in Regulation Y a few restrictions on a bank holding company. With regard to affiliation status, neither the bank holding company nor any of its subsidiaries may own or control directly or indirectly more than 5 percent of the voting securities of the client institution. The prohibition would not apply when the shares were acquired in satisfaction of a debt previously contracted or to shares acquired in a fiduciary capacity without sole discretionary voting authority. A bank holding company may offer consulting advice to a client institution whose shares it holds in a fiduciary capacity with sole discretionary voting rights if said holding company does not hold more than 5 percent of the voting shares of that institution. Bank holding companies are permitted to have common management officials with the client institution to which they provide management consulting services if such interlocks would be permissible under exceptions found in the Board's Regulation L (Management Official Interlocks) that apply to such institutions in need of management or operating expertise (12 C.F.R. 212.4(b)).

Management consulting services may not be provided to a client on a daily or continuing basis except where necessary to instruct the client on how to perform the services for itself. The Board has informed bank holding companies that their management consulting subsidiaries should refrain from entering relationships on a daily or continuing basis even when the client institution may be experiencing financial or managerial difficulties. Particular caution should be exercised when a bank holding company contemplates the subsequent acquisition of the client institution. However, when a bank holding company is attempting to acquire a troubled depository institution, limited management consulting services may be offered via an on-premises bank holding company employee. Nevertheless, the representative should not have the authority to lend or make personnel decisions. Failure to heed these guidelines not only would cause the bank holding company to exceed the permissible bounds of the activity, but also could cause the BHC to acquire control of the client institution that might constitute an acquisition of a subsidiary within the meaning of section 3(a) of the BHC Act. Section 225.31(d)(2)(i) of Regulation Y indicates that a rebuttable presumption of control shall exist when a company enters into an agreement, such as a management contract, with a bank or other company pursuant to which the first company or any of its subsidiaries exercises significant influence over the general management or overall operations of the bank or other companies. Reserve Bank personnel are encouraged to contact the Board's applications section to discuss the restrictions on this activity whenever a BHC proposes to have its personnel assist a troubled or problem institution.

When evaluating a BHC's application to engage in management consulting, it is important to note whether the applicant bank holding company has exhibited the necessary expertise in operating its own subsidiaries—and whether this expertise qualifies it to offer advice to others.

3200.0.2 INSPECTION OBJECTIVES

1. To verify that the bank holding company is performing only those types of management consulting services at the locations for which it received prior regulatory approval.
2. To verify that the advice being provided is within the scope of the approval and consistent with the activities of the interpretation (12 C.F.R. 225.131) and section 225.28(b)(9) of Regulation Y.
3. To determine that the bank holding company does not own or control, directly or indirectly, securities of its client depository institutions except for shares acquired as the result of a default on a debt previously contracted or shares held in a fiduciary capacity (within certain limits), provided the holding company does not have sole discretionary authority to vote more than 5 percent of the client's shares. (See 12 C.F.R. 225.131.)
4. To determine that the bank holding company does not control the activities of a client institution by virtue of nonexempt interlocking directors.
5. To determine that services rendered to the client institutions are not being provided on a daily or continuing basis.
6. To determine that disclosure is made to each client of (1) the names of all depository institutions that are affiliates of the consulting company and (2) the names of all existing client institutions located in the same county (or counties) or standard metropolitan statistical area (or areas) (SMSA) as the client institution.

3200.0.3 INSPECTION PROCEDURES

A thorough review of pertinent records, contracts, lists of clients, and documentation of the services being provided to clients should be undertaken to determine that adequate management information systems and detailed revenue and other reports are available to verify the BHC's compliance with the Board's rule on the revenue limitations in section 225.28(b)(9) of Regulation Y. Determine that services are being provided to the appropriate customer base and within the scope of the Board's approval. Further, the examiner should ascertain the existence of procedures to inform each potential client of the names of all depository and client institutions that are affiliates of the consulting company and of the names of all existing clients located in the same market area as the prospective client.

For management consulting services that do not involve any financial, economic, accounting, and auditing matters, verify that the revenues earned are within the limits permitted by the Board's regulations and interpretations. The basis for any fee structure should be determined to ascertain that the advice is being rendered on an explicit-fee basis, such as an hourly or daily rate. Such fees should not be affected by factors not directly related to the service, such as balances maintained by the client at any subsidiary depository institution of the bank holding company. The extent of the consultant company's involvement in the day-to-day affairs and operation of the client should also be reviewed.

The absence of parent company control, direct or indirect, over the clients of the management consulting subsidiary should be established. The examiner should compare listings of directors and principal officers of the bank holding company, its various affiliates, and the clients with due regard to exempt interlocks. The examiner should determine the extent of ownership or control by the bank holding company and its affiliates of any equity securities in its clients by requesting a listing of all shares owned in outside organizations. Overall conclusions, including recommendations concerning the operation, apparent violations, and any possible control of client institutions and conflicts of interest, should be discussed with parent company management and detailed in the inspection report.

Within Regulation Y (section 225.28(b)(9)(ii)), management consulting and counseling activities include employee benefits consulting services. These employee benefits consulting services include providing consulting services to employee benefit, compensation, and insurance plans, including designing plans, assisting in the implementation of plans, providing administrative services to plans, and developing employee communication programs for plans.

The initial Board orders that were issued to permit employee benefit consulting services are summarized here as historical examples of the nonbanking activity. Commitments made in those Board orders should not be relied upon. Refer only to the provisions within the current Regulation Y, as cited above.

3202.0.1 BOARD ORDERS INVOLVING EMPLOYEE BENEFITS CONSULTING

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and Regulation Y to acquire 100 percent of the voting shares of a company that provides a full range of services involving employee benefits plans. The services are divided into four basic types of activities:

1. *Plan design.* Designing employee benefit plans, including determining actuarial funding levels and cost estimates.
2. *Plan implementation.* Providing assistance in implementing plans, including assistance in the preparation of plan documents and in the implementation of employee benefit administration systems.
3. *Administrative services.* Providing administrative services with respect to plans, including recordkeeping services, calculating and certifying employment reports and government filings pursuant to ERISA, and providing information to a client's legal counsel in labor relations and negotiations.
4. *Employee communications.* Developing employee communication programs with respect to plans for the benefit of the client.

The applicant represented that all of the proposed activities were included in trust company or financial or investment advisory service activities permissible under Regulation Y. Although certain employee benefits consulting activities (as conducted by the company being acquired, particularly activities involving plan administration) are conducted by trust companies or trust departments of banks in their capacities as trustees or custodians of employee benefit plans and investment managers of plan assets, it was not apparent that the *complete range* of employee benefits consulting services were generally conducted by trust companies or authorized by the Board as permissible trust company activities under Regulation Y.

The Board believed that employee benefits consulting was essentially a financial planning activity involving preparing and conveying financial data to a client, which it had previously determined to be closely related to banking and permissible under Regulation Y in the areas of investment advisory services, data processing services, and courier services. The record did not indicate, however, that employee benefits consulting is wholly encompassed within *any or all* of those activities. The Board, therefore, did not agree with the applicant that *all* of the proposed activities were currently authorized for bank holding companies under existing provisions of Regulation Y.

A review of the four basic types of activities revealed that many of the proposed employee benefits consulting activities either were already specifically engaged in by banks and trust companies, or were functionally related to activities in which banks and trust companies were regularly engaged. The Board recognized, however, that the actuarial aspect of the employee benefits consulting activities is not generally included in trust company or bank activities. Such activities are limited in scope and purpose in that they are conducted primarily as a means to ensure adequate funding of defined benefits plans. In this case, they were performed solely as a means for the applicant to provide a full range of benefits-planning activities for its clients. The acquired company's actuarial services would not be conducted as an independent activity, but only as a necessary and integrally related component of employee benefits consulting.[1]

1. As part of its acquisition, the bank holding company proposed to assist firms in IRS audits of plans; inform clients of developments in employee benefit programs through newsletters and other correspondence and through participation in seminars, public programs, and other forums; and engage in professional actuarial activities and other activities incidental

In *Association of Data Processing Organizations, Inc. v. Board of Governors,* 745 F.2d 277 (D.C. Cir. 1984), the court of appeals held that the Board may permit those activities that are ''a part of'' the overall permissible activity where, as here, ''in both market contemplation and technological reality, the service is a unitary one.'' Based on this ruling, the Board concluded that the applicant's proposed activities are permissible as closely related to banking, and were approved on June 19, 1985 (1985 FRB 656).

Another Board order permitting the provision of employee benefits consulting services, which is slightly different from the order cited above, is found in 1986 FRB 337. See also 1986 FRB 729 and 1987 FRB 158, 681.

to the actuarial profession. The activities are generally related to the type of actuarial activities performed for purposes of engaging in employee benefits consulting and that would not generate any significant income. Such activities were, therefore, permissible as incidental to the bank holding company's approved activities. The applicant also proposed to provide expert actuarial opinions of a general nature for purposes such as divorce actions and personal injury litigation. The Board believed that such activities were beyond the scope of incidental activities and were not permissible.

Career counseling services may be provided to—

1. a financial organization[1] and individuals currently employed by, or recently displaced from, a financial organization;
2. individuals who are seeking employment at a financial organization; and
3. individuals who are currently employed in or who seek positions in the finance, accounting, and audit departments of any company.

The initial Board order that was issued to permit the provision of career counseling services is summarized below as a historical example on the origination of this nonbanking activity. Commitments made in the Board order should not be relied upon. See the current provisions of Regulation Y (section 225.28(b)(9)(iii)) for that purpose.

3204.0.1 CAREER COUNSELING—INITIAL BOARD ORDER

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and the Board's Regulation Y to provide career counseling services to unaffiliated parties through its wholly owned nonbank subsidiary. The applicant proposed to expand its employee benefits consulting services to include career counseling activities. The nonbank subsidiary currently provides these services to the applicant and its affiliates under section 4(c)(1)(C) of the BHC Act. It plans to expand the provision of these services nationwide to unaffiliated companies and individuals in a wide array of industries. The services would provide assistance to individuals who are employed and seeking advancement in their careers and to unemployed individuals who are seeking new employment. The nonbank subsidiary plans to provide these services directly to companies and advise these companies on effective methods of providing career counseling services to their employees.

The nonbank subsidiary will advise unaffiliated organizations on the advantages of including career counseling services as part of a comprehensive employee benefits plan. It will assist these organizations in establishing their own facilities to implement career counseling services for their current or former employees. If the organization does not want to operate its own counseling facility, the nonbank subsidiary will provide the services directly to the organization's current or former employees at the nonbank subsidiary's career assistance center.

The proposed career counseling services include (1) assessing an individual's education, prior business experience, salary history, interests, and skills to aid in finding employment or evaluating opportunities for career development; (2) assisting in the preparation of résumés and cover letters; (3) contacting employers regarding employment opportunities and making this information available to clients; (4) conducting general workshops on the financial aspects of unemployment, current economic trends, the process of finding a job, and alternative career options; and (5) providing individual counseling on setting and obtaining employment goals.

The issue presented to the Board was whether the proposed activities are closely related to banking. The Board had not previously determined whether providing career counseling services to unaffiliated parties is closely related to banking under section 4 of the BHC Act and permissible for bank holding companies. The Board viewed the applicant's proposal in four parts: (1) career counseling services for financial organizations (that is, banks, bank holding companies and their subsidiaries, thrift institutions, and thrift holding companies and their subsidiaries) and employees of financial organizations; (2) career counseling services for individuals who are unemployed or employed outside the banking industry and who seek employment at banks and other financial institutions; (3) career counseling for individuals seeking financial positions (such as chief financial officer, cash management positions, and accounting and auditing personnel); and (4) career counseling services generally for any individual seeking any type of employment at any type of company.

The Board determined that career counseling services are closely related to banking when they are provided for (1) financial organizations and individuals currently employed at, or recently displaced from, a financial organization; (2) individuals who seek employment at a financial organization; and (3) individuals who

1. Financial organization means insured depository institution holding companies and their subsidiaries, other than nonbanking affiliates of diversified savings and loan holding companies that engage in activities not permissible under section 4 (c)(8) of the BHC Act.

are currently employed in, or who seek, financially related positions at any company. The Board concluded that the record does not presently support a finding that general career counseling services are otherwise closely related to banking.[2]

The applicant will provide career counseling services on a fee basis with no guarantee of employment. The Board approved the order on November 8, 1993. As a condition to its approval, the applicant must comply with all commitments made in connection with the application, as well as with other conditions stated within Regulation Y and the Board's order. (1994 FRB 51)

2. When providing career counseling for an individual within one of the three proposed categories, the applicant was permitted to provide limited career counseling services regarding positions outside of these categories as ''incidental'' to the proposed career counseling services. However, the applicant is not permitted to hold itself out as a provider of general career counseling services for individuals seeking career opportunities outside the banking or financial industries. Regulation Y and judicial decisions construe ''incidental activities'' as activities that must be necessary to the provision of a closely related activity in order to be considered incidental. (See 12 C.F.R. 225.21(a)(2) and *National Courier Association v. Board of Governors,* 516 F.2d 1229, 1240–41 (D.C. Cir. 1975).)

The Board has included in Regulation Y (see section 225.28(b)(13)) the authority to issue and sell at retail money orders and similar consumer-type payment instruments; the sale of U.S. savings bonds; and the issuance and sale of travelers' checks. Previously, the Board, through various orders, had authorized over time various nonbanking activities in this regard. Initially, it permitted by order and then the Board had included in the list of permissible activities the sale and issuance at retail of money orders having a face value of not more than $1,000, the sale of U.S. savings bonds, and the issuance and sale of travelers' checks. In its original order, effective February 26, 1979, the Board did not include the issuance of travelers' checks. However, after overwhelmingly favorable responses to its proposal to include the issuance of travelers' checks to the list of permissible activities, the Board included this activity effective December 21, 1981. As part of the Board's regulatory review of Regulation Y, and its subsequent overhaul, which was finalized and made effective February 4, 1984, the *issuance* of money orders was listed as a permissible activity. On March 16, 1984, the Board, by order, increased the face value of the payment instruments that the bank holding company could issue to $10,000, if the bank holding company agreed to meet certain weekly reporting requirements (1984 FRB 364). Also, by order dated December 16, 1985, the Board allowed the sale of official checks with no maximum limitation as long as the proceeds of checks in excess of $10,000 were deposited in a demand account and the bank holding company made weekly reports of these checks as well as money orders that had a face value of up to $10,000 (1986 FRB 148). The Board later authorized the issuance and selling of variably denominated payment instruments without limitation as to face value. (See 1993 FRB 42.) As part of the comprehensive revision of Regulation Y, effective April 21, 1997, the Board removed the limitation of the face amount of payment instruments. (See section 225.28(b)(13) of Regulation Y.)

3210.0.1 INSPECTION OBJECTIVES

1. To determine that the scope of the activity is within the parameters established by the Board.
2. To determine if there is any loss exposure due to the lack of systems and controls.

3210.0.2 INSPECTION PROCEDURES

In determining whether a significant degree of risk exposure to the BHC exists, the examiner should address the following questions to management, when considered appropriate:

1. Are there written agreements between the bank and its parent concerning the obligations of each for the sale of money orders and U.S. savings bonds and for the issuance and sale of travelers' checks? Do the agreements provide information on the fees, reimburseable expenses, sharing of overhead expenses, and taxes?
2. Who prints the travelers' checks and money orders?
3. Is the printer bonded or covered by insurance?
4. Is the newly printed inventory of travelers' checks and money orders received in dual custody?
5. If check inventory sent to outlets is on a consignment basis, does the consignee acknowledge receipt on a "trust receipt"?
6. Does the consignment "inventory invoice" describe, in complete detail, the number of checks, serial numbers, and denominations?
7. How are inventories and sales monitored at the outlet level?
8. What are the maximum dollar shipments for the day, per outlet and per package?
9. Does the subsidiary bank maintain the settlement account?
10. What procedures are in effect to establish the checks that have been sold?
11. What are the remittance requirements for the agents for checks sold?
12. If losses and redemptions exceed proceeds from sales, who makes up the deficiency?
13. Does the parent invest the settlement account's float, generated by the excess of proceeds received over checks redeemed, in long-term investments?
14. If a nonbank subsidiary acts as agent on behalf of its parent, what fee is paid by the parent other than commissions on the sale of checks?
15. Is the subsidiary reimbursed for its expenses?
16. What has been the history of losses?
17. How long are losses carried in suspense accounts before being charged off?
18. Does the subsidiary bank maintain compensating balances in financial institutions as

an inducement for the financial institutions to carry the holding company's travelers' checks? If so, does the parent compensate the bank for lost income?

19. What internal audit procedures are in place? Discuss frequency, scope, and follow-up.

3210.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Adding activity to permissible list (excluding issuance of travelers' checks)		225.28(b)(13)		1979 FRB 265
Adding the issuance of travelers' checks to permissible list		225.28(b)(13)		1981 FRB 912
Increased face value or payment instruments to $10,000, if weekly reports provided				1984 FRB 364
Sale of official checks with no maximum amount, if checks in excess of $10,000 deposited in demand deposit account, if weekly reports of checks made as well as money orders with face value up to $10,000				1984 FRB 148
Sale of official checks with no maximum limitation provided the proceeds of checks in excess of $10,000 were deposited in a demand account and that weekly reports of the official checks were made as well as the total value of official checks with face values exceeding $10,000				1986 FRB 148
Issuing and selling drafts and wire transfers in foreign currencies				1988 FRB 252
Issuing and selling variably denominated payment instruments without limitation as to face value				1993 FRB 42
Removal of the limitation on the face amount of payment instruments		225.28(b)(13)		1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

As noted in section 3210.0, the Board has authorized the issuance and sale of various payment instruments. This section provides brief historical summaries of the initial Board orders that led to the incorporation of the activity into the Regulation Y "laundry list." Provisions within the Board orders, including commitments and any regulatory references, should not be relied upon as provisions that are currently authorized. For the current regulatory authorization, see section 225.28(b)(13) of Regulation Y, effective April 1997.

3210.1.1 ISSUING CONSUMER-TYPE PAYMENT INSTRUMENTS HAVING A FACE VALUE OF NOT MORE THAN $10,000

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23 of the Board's Regulation Y to engage de novo in the issuance and sale of variably denominated payment instruments with a maximum face value of $10,000. The instruments would be sold in U.S. dollars and foreign currency by the holding company's subsidiaries and unaffiliated financial institutions and would consist of domestic and international money orders and official checks. They would also be used for certain internal transactions, such as payroll. The Board had recently amended Regulation Y to include on the list of permissible nonbanking activities the issuance or sale of money orders and other similar consumer-type instruments with a face value not exceeding $1,000. The Board concluded that an increase in the denomination of such instruments would not affect their fundamental nature.

As a condition to its approval, the Board required the bank holding company to file with the Board weekly reports of daily data on the activity. The issuance of such instruments with a face value of more than $1,000 could have an adverse effect on the bank holding company's reserve base. Because reserve requirements serve as an essential monetary policy tool, the Board was concerned that the proposal might result in adverse effects resulting from an erosion of reservable deposits within the banking system (1984 FRB 364).

3210.1.2 ISSUING AND SELLING OFFICIAL CHECKS WITH NO MAXIMUM FACE VALUE

Effective December 16, 1985, the Board approved by order a bank holding company's application to sell official checks with no maximum limitation on the face value, so long as the proceeds of checks in excess of $10,000 were deposited in a demand account at its subsidiary until the respective payment instrument was paid. To address the Board's monetary policy concerns about the activity potentially causing a significant reduction in the reserve base or resulting in other adverse effects on the conduct of monetary policy, the bank holding company agreed to make weekly reports of all outstanding instruments (including money orders and official checks) with face values of up to $10,000, and also the aggregate value of all official checks with face values exceeding $10,000 (1986 FRB 148).

3210.1.3 ISSUING AND SELLING DRAFTS AND WIRE TRANSFERS PAYABLE IN FOREIGN CURRENCIES

A foreign bank subject to the BHC Act applied for the Board's approval under section 4(c)(8) of the act and section 225.23(a)(3) of Regulation Y to engage de novo through a wholly owned subsidiary in the issuance and sale of foreign drafts and wire transfers with unlimited face amounts that are payable in foreign currencies. The applicant proposed to conduct these activities through the subsidiary as well as through a nationwide network of unaffiliated selling agents, including commercial banks, thrift institutions, and others.

The Board previously determined that the issuance and sale of money orders and similar payment instruments with a maximum face value of $1,000 is closely related to banking. (See former section 12 C.F.R. 225.25(b)(12).)[1] The Board also approved by order a limited number of applications to engage in the issuance and sale of (1) payment instruments with a $10,000 maximum face amount (see 1987 FRB 727) and

1. Effective April 21, 1997, the $1,000 limit was eliminated. The revised Regulation Y (see section 225.28(b)(13)) authorizes the issuance of payment instruments of any amount.

(2) payment instruments with unlimited face amounts, subject to certain operational and reporting requirements (see 1986 FRB 148).

In considering the previous applications, the Board expressed concern that the issuance of payment instruments in denominations larger than $1,000[2] would have an adverse effect on the reserve base because such instruments are not subject to the transaction reserve account requirements of the Board's Regulation D. The Board noted that because reserve requirements serve as an essential monetary policy tool, the conduct of monetary policy could be adversely affected by the erosion of reservable deposits in the banking system.

To address the concerns expressed in previous Board orders, the applicant committed that the proceeds of all sales of foreign-currency-denominated instruments will be held in demand deposit accounts at U.S. commercial banks. Deposits stemming from the sale of instruments with denominations of $10,000 or less are to be swept daily into nonreservable instruments. The total proceeds of the sale of any payment instruments with denominations greater than $10,000 will be deposited in a demand deposit account at a U.S. depository institution, to be used to purchase foreign currency for each particular payment instrument at the time of the transaction. The Board determined that these commitments and other procedures outlined in the order adequately addressed its concerns about the potential adverse effects on the reserve base. The Board approved the application on February 3, 1988, subject to the continued evaluation of its potential for adverse effects on the conduct of monetary policy (1988 FRB 252).

3210.1.4 ISSUING AND SELLING VARIABLY DENOMINATED PAYMENT INSTRUMENTS WITHOUT LIMITATION AS TO FACE VALUE

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act to engage both directly and indirectly through a bank holding company nonbank subsidiary in the issuance and sale of variably denominated payment instruments without limitation as to face value and without the reporting and reservable deposit requirement previously imposed by the Board on issuers of such instruments.

The Board previously determined by regulation that the issuance and sale of money orders and other similar consumer-type payment instruments with a face value not exceeding $1,000[3] is an activity that is closely related to banking and is therefore permissible for bank holding companies (see former section 225.25(b)(12) of Regulation Y (12 C.F.R. 225.25(b)(12))).

Effective December 22, 1992, the Board amended Regulation D to impose reserve requirements on teller's checks. The Board's notice amending Regulation D stated that bank holding companies that had received prior approval under section 4(c)(8) of the BHC Act to issue and sell variably denominated payment instruments—subject to the demand deposit requirement, reporting requirement, or limits on the denomination of payment instruments—could request relief by letter from those conditions. The Board believes that the adverse effect of erosion of the reserve base is addressed in the Regulation D revisions, and special reporting and demand deposit requirements previously imposed by the Board in connection with approvals to engage in the issuance and sale of variably denominated payment instruments in amounts over $10,000 are no longer needed. As a result, the Board determined not to impose those requirements on the applicant and to grant the applicant's request for relief from the reporting requirement to which it was subject. The Board approved the application on November 12, 1992, subject to the Regulation D effective date of December 22, 1992, and the conditions and commitments stated in the order (1993 FRB 42).

2. See footnote 1.

3. See footnote 1.

Section 4(c)(8) of the BHC Act (Arranging Commercial Real Estate Equity Financing) Section 3220.0

Effective September 1, 1982, the Board approved an application of a bank holding company to engage in, through a nonbank subsidiary, the activity of arranging equity financing for certain types of income-producing properties (1982 FRB 647). The Board limited the activity by requiring that the holding company act only as an intermediary between developers and investors to arrange financing, and imposed certain other conditions to prevent the holding company from engaging in real estate development or syndication. At that time, however, the Board did not expand the Regulation Y list of permissible activities for bank holding companies to include this activity.

In February 1984, the Board added the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y (section 225.28(b)(2)(ii)). Regulation Y incorporated the limitations placed on the activity by the Board's 1982 order, which is discussed below.

Equity financing involves arranging for the financing of commercial or industrial income-producing real estate through the transfer of the title, control, and risk of the project from the owner or developer to one or more investors. In performing the equity-financing activity for commercial or industrial income-producing real estate, consultations should be made with the owner or developer to determine the nature, objectives, and financing arrangements for the property or project. The project's concept, architectural design, building layout, suitability for its purpose and prospects, traffic flow, as well as competing projects, source(s) of customers, nature of the market, projected rentals and income flows, timetables for completion, and the availability of construction and long-term financing for the property, have to be carefully reviewed. Financing alternatives, including equity financing, should be predetermined.

The Board has found that the particular expertise and analysis required to provide equity financing for large commercial or industrial income-producing properties is functionally and operationally similar to the analysis and expertise that is required when a bank provides traditional mortgage financing services for such properties. This finding is supported by the fact that equity financing can be viewed as an economic substitute for long-term mortgage financing. The Board's view is that equity financing, subject to the limitations described below, bears a functional relationship to investment advisory services that are traditionally and lawfully performed by commercial banks with respect to commercial and industrial real estate.

The Board therefore, in 1984, approved adding the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y. On April 21, 1997, the comprehensive revision of Regulation Y removed certain restrictions from this nonbanking activity. The activity currently consists of acting as an intermediary for the financing of commercial or industrial income-producing real estate by arranging for the transfer of title, control, and risk of such a real estate project to one or more investors, if the bank holding company and its affiliates do not have an interest in, or participate in, managing or developing a real estate project for which it arranges equity financing, and do not promote or sponsor the development of the property.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to incorporate a name change to the Financial Industry Regulatory Authority, or FINRA (formerly, the National Association of Securities Dealers, or NASD).

3230.0.1 OVERVIEW OF SECURITIES BROKERAGE AS A NONBANKING ACTIVITY

In addition to providing a full panoply of financial services to their customers, banks and bank holding companies seek ''off-balance-sheet'' or non-asset-building sources of revenue. Securities brokerage is one type of endeavor perceived to have growth and profit potential. The main reasons for this are easy market entry, low start-up costs, and maximum use of a branch system and customer base.

After the deregulation of brokerage commissions in 1975, certain brokers began to compete for securities business by drastically reducing their commissions. In order to reduce operating expenses, yet still remain profitable at reduced commission rates, these firms ceased investment research and offered their customers a reduced level of service by ''unbundling'' brokerage services and offering only the execution of securities transactions. Brokers who offer this reduced level of service have come to be known as ''discount brokers.''

The Board, in 1983, added ''securities brokerage'' to the list of permissible activities for bank holding companies shortly after it approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., as discussed below. In 1984, the U.S. Supreme Court sustained the Board's approval order and ruled that it is not a violation of the Glass-Steagall Act for banks and bank-affiliated brokers to buy and sell securities as agent for customers (SIA v. Board of Governors, 104 S. Ct. 3003). For additional historical information regarding the expansion of securities brokerage nonbank activities by Board order or by incorporation into Regulation Y, see sections 3230.1 through 3230.3.

Before April 21, 1997, Regulation Y differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities). Regulation Y no longer distinguishes between discount and full-service brokerage activities.

Regulation Y currently authorizes securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or in combination with investment advisory services and incidental activities (including such related activities as securities credit, custodial services, individual retirement accounts, and cash-management services), if the services are restricted to buying and selling securities solely as agent for the account of customers and do not include securities underwriting or dealing. In addition to the information and examiner guidance provided in this section, see the American Institute of Certified Public Accountants' *Audit and Accounting Guide—Brokers and Dealers in Securities.*[1] The guide includes detailed information about the securities industry, broker-dealer functions, activities and operations, books and records, accounting and auditing standards and considerations, and other topics such as internal controls and regulatory considerations.

3230.0.2 INITIAL BOARD ORDER APPROVAL FOR SECURITIES BROKERAGE

On January 7, 1983, the Board approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., which engaged in retail discount securities brokerage, securities credit lending, and certain incidental activities (1983 FRB 105). None of the proposed activities was among those the Board had previously designated in Regulation Y as being closely related to banking.

In its order approving the application, the Board found that the brokerage and securities credit activities were closely related to banking for purposes of section 4(c)(8) of the Bank Holding Company Act (''BHC Act''). That decision was based on the fact that many banks provide various types of securities brokerage services as an accommodation to customers and as an agent for trusts and other accounts managed by banks.

Banks also administer employee stock purchases, dividend reinvestment, and automatic

1. Issued as of May 1, 2007.

investment service plans, which involve the periodic purchase of a particular security or securities from a fixed list of securities, on behalf of the customer. Banks often execute orders involving securities not listed on an exchange by dealing directly with dealers making a market in a particular security or with other third parties. In performing these services, banks exercise the same type of discretion and judgment with respect to the best method of execution as brokers do with respect to similar types of orders. Further, national banks are expressly authorized by statute to purchase and sell securities without recourse, solely upon the order, and for the account of, customers (12 U.S.C. 24 (Seventh)).

The Board, in summary, noted that banks in fact had generally provided securities brokerage to some extent. The company that was acquired, pursuant to the January 1983 order, provided several other services incidental to its discount brokerage activities.

3230.0.2.1 Margin Lending

Historically, banks have had a significant amount outstanding in loans to borrowers for the purpose of purchasing or carrying securities. The extension of such credit secured by stock and other collateral, or margin lending, has long been an important bank activity. The Board, therefore, ruled that this activity was closely related to banking and incidental to the securities brokerage activities of the company being acquired.

3230.0.2.2 Maintenance of Customer Securities Accounts

Charles Schwab & Co. offered various services to its brokerage customers. These services included individual retirement accounts for which an unaffiliated savings and loan association served as a trustee; a "sweep" arrangement, pursuant to which idle customer balances exceeding a certain minimum were automatically invested in an unaffiliated money market mutual fund; the payment of interest on net free balances awaiting investment; and a specially named account that combined the payment of interest on free credit balances with customer access to such balances through a debit card and checking account offered under an arrangement with an unaffiliated commercial bank. Increasingly, these types of services were being offered by other brokerage firms. The Board found that each of these services was identical, or functionally and operationally equivalent to, services generally offered by banks to customers directly or through bank trust departments. Based on that finding, the Board found that the provision of those accounts was closely related to banking as well as an incidental activity in connection with securities brokerage and margin lending activities.

3230.0.2.3 Custodial Services

The brokerage firm also provided various types of securities custodial services involving the safekeeping of customers' securities, accounting for dividends or interest received on such securities, and other ancillary services. Banks generally offer securities custodial services in connection with their trust departments and other securities transaction services. Furthermore, in extending margin credit, a lender is required to maintain custody of the securities pledged to the lender as collateral to secure the loan. Accordingly, the Board found that the provision of securities custodial services was closely related to banking and that it was a necessary incident to permissible margin lending activities.

3230.0.3 MARGIN CREDIT ACTIVITIES AND SECURITIES BROKERAGE

When securities brokerage was added to the permissible activities within Regulation Y, it was contemplated that a bank holding company, or its nonbank subsidiary performing the permitted securities brokerage activities, would be required to register as a broker–dealer with the Securities and Exchange Commission and that its margin credit activities would therefore be subject to the Board's Regulation T. Regulation T governs securities credit by broker–dealers (12 C.F.R. 220).

3230.0.4 ACTIVITY ADDED TO REGULATION Y

On August 10, 1983, the Board adopted a final rule deeming securities brokerage and margin lending "closely related" to banking, consistent with the Glass-Steagall Act, and are, therefore, generally permissible for bank holding companies. To clarify that services incidental to brokerage services are permissible, the Board did include a list of permissible incidental services. The list included services such as offering custodial services, furnishing individual retirement accounts, and cash-management services, provided that the securities brokerage services are restricted to buying and selling securities solely as agent for the account of customers and do not include securities underwriting.

As for cash-management services, such services are intended to include customer-account-related functions, such as paying interest on net free balances awaiting investment, providing arrangements under which free credit balances are automatically invested in money market mutual funds, and establishing arrangements under which access to such balances is provided by debit card or checking accounts.

The list of incidental activities in the regulation is not intended to be exhaustive. The Board believes that to compete effectively with other brokers, bank holding companies should have the flexibility to provide a full range of customer-account and custodial services, provided such services meet the test for permissible incidental activities under section 4(c)(8) of the BHC Act and are consistent with the Glass-Steagall Act.

As previously noted, Regulation Y, effective April 21, 1997, permits securities brokerage without distinguishing between discount and full-service brokerage activities. The previous regulatory requirement for certain disclosures has been eliminated. Those disclosure requirements are in an interagency policy statement that governs the sale of securities and other nondeposit investment products on bank premises (see sections 2010.6.1.3.1 and 2010.6.2.9), as well as in SEC rules. Similar disclosure requirements are required by the Board's policy statement that governs a bank holding company's sale of shares of mutual funds and other investment companies that it advises (see section 225.125 of Regulation Y).

3230.0.5 MARKET ENTRY INTO SECURITIES BROKERAGE

There are three general methods of market entry available to bank holding companies or nonbank subsidiaries of bank holding companies wishing to offer securities brokerage services: (1) become associated with a brokerage firm, (2) purchase an existing firm, or (3) establish their own brokerage operations. The most common mode is broker association, which is less costly and the most rapid form of entry. The following broker relationships are presently established:

1. *Introducing broker*. The first level of involvement occurs when a BHC or a nonbank subsidiary of a BHC serves as an "introducing broker" in effecting securities transactions by accepting the customers' orders and transmitting the orders to the executing broker.[2] Order tickets and records of original entry are prepared by the BHC or nonbank subsidiary. In this situation, the executing broker generally produces customer confirmations and account statements. These documents often prominently display the BHC or the bank holding company's nonbank subsidiary's name and logo. The executing broker, the bank holding company, and/or its nonbank subsidiaries may offer safekeeping services and margin credit.
2. *Omnibus account*. A higher level of bank holding company nonbank subsidiary involvement occurs when the broker "carries" customer accounts by accepting and transmitting orders for execution, producing the customer confirmation, and maintaining all customer records. When carrying customers' accounts, the bank holding company's nonbank subsidiary may maintain a single customer account, called an omnibus account, with the executing broker. Safekeeping and margin credit services may be offered.
3. *Separately incorporated broker–dealer subsidiary affiliate*. The highest level of involvement occurs when a bank holding company organizes or acquires a separately incorporated broker–dealer subsidiary or affiliate, which transacts business like any other broker–dealer. This would include its own customer lists, both retail and wholesale; possible exchange membership; and executing and clearing its own transaction.

3230.0.6 PURPOSE OF INSPECTION OF SECURITIES BROKERAGE ACTIVITIES

The purpose of the inspection is to evaluate

2. There is a lower level of involvement wherein the BHC or nonbank subsidiary is responsible for making the brokerage services available to customers by advertising the distributing customer account applications. Account acceptances are generally made by the unaffiliated broker who will receive orders directly from customers.

any potential liability due to wrongful or negligent performance of responsibilities, to assess the level of management expertise, and to determine the degree of compliance with legal and policy parameters necessary to protect investors.

3230.0.7 INSPECTION OBJECTIVES

1. To determine the scope and nature of services provided.
2. To evaluate operations, audits, and controls.
3. To review the sufficiency of administrative policies and procedures.
4. To determine the level of responsibility.
5. To appraise the quality of management and staff.
6. To ascertain earnings, volume of business, and prospects.
7. To review compliance with applicable laws, regulations, and policies.

3230.0.8 SCOPE OF INSPECTION

The scope of inspection will vary depending on the nature of the brokerage operation. In defining the scope of inspection, it is first necessary to determine the extent of activities performed and the corporate structure. Any bank holding company subsidiary (that is not a bank), which functions as a securities broker, is required to register as a broker–dealer with the Securities and Exchange Commission (SEC).[3]

In developing the scope of inspection, it is emphasized that Reserve Bank examiners can rely on the applicable self-regulatory organization's examination with respect to investor protection, compliance with SEC and SRO rules, and Regulation T. The self-regulatory organizations do not furnish an examination report, but instead furnish a registered broker–dealer with a letter pertaining to examination findings. Hence, the scope of inspection for a registered broker–dealer will commence with a review of a self-regulatory organization's most recent letter dealing with its examination of brokerage activities. A broker–dealer belonging to more than one self-regulatory organization will be examined only once in each examination cycle. Serious violations that could endanger a banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits) or significant violations that have not yet been corrected, should be noted in the bank holding company inspection report. Reserve Bank staff are responsible for evaluating all other aspects of securities brokerage activities.

The actual scope of this portion of the inspection will range from a brief visit for a limited service "arranger" relationship to extensive review for an omnibus relationship or registered broker–dealer.

3. A broker–dealer registered with the SEC (registered broker–dealer) is subject to SEC recordkeeping and confirmation rules, fair practice rules, professional qualification rules for individuals associated with securities firms, and the uniform net capital rule. Registered broker–dealers are also required to pay for insurance coverage on customers' assets by the Securities Investor Protection Corporation (SIPC) and are required to be members and subject to the rules of the Financial Industry Regulatory Authority (FINRA), or other self-regulatory organizations, such as the New York Stock Exchange. These self-regulatory organizations (SROs) also test for broker compliance with Regulation T (12 C.F.R. 220).

3230.0.9 MATERIALS REQUIRED FOR INSPECTION

When commencing the securities brokerage portion of a bank holding company or its nonbank subsidiary inspection, the following material should be obtained:

1. contractual agreement with the executing and/or clearing broker
2. recent activity report (for at least six months)
3. income and expense reports
4. written policies and procedures regarding—
    a. order processing,
    b. settlements,
    c. account reconciliations,
    d. audit coverage, and
    e. trust department relationship
5. account application forms
6. customer disclosure documents
7. organization chart
8. fee schedule
9. internal and external audit reports
10. a copy of the contingency plan for continuance in emergencies
11. the most recent SRO letter pertaining to the last brokerage examination

3230.0.10 INSPECTION PROCEDURES

If applicable, the following areas should be covered during the inspection.

3230.0.10.1 Organization and Management

Review carefully the contractual agreement with the executing and/or clearing broker and list all duties and obligations of the respective parties. Determine that the agreement contains an indemnification clause insulating against broker error. Once the review is completed, the examiner can identify the type of relationship and plan the scope of the inspection.

Review the organization chart and match responsibilities and operational functions to the appropriate section. Evaluate management and staff based upon their education, experience, performance, and the profitability and efficiency of operations and any other relevant factors.

3230.0.10.2 Operations

A securities brokerage operation is organized along functional lines including—

1. execution,
2. settlement,
3. delivery,
4. custody,
5. recordkeeping, and
6. audits and controls.

Before review, prepare a flow chart of the operation to quickly overview the operational areas and to locate control points and identify potential weaknesses.

3230.0.10.2.1 Execution

This area processes client orders. The orders may be received by telephone at the nonbank subsidiary or directly by the executing broker. When the nonbank subsidiary accepts customer orders, they can be transmitted by direct wire to the executing broker. Completed transactions initiated by the nonbank subsidiary are confirmed back to the nonbank subsidiary, which in turn sends a confirmation to the client. Examiners should determine that proper safeguards are in place to ensure valid orders are received, pending orders are controlled, and completed orders are reported for customer notification and record update. The examiner should also determine that the following are in place:

1. use of code numbers, names, or other verification devices when accepting orders
2. maintenance and reconcilement of a trade log (orders received) and execution report (orders completed)
3. taping of telephone orders
4. confirmation of completed orders are confirmed to clients in a timely fashion
5. preparation and transmittal of input media for record update

3230.0.10.2.2 Settlement

This area receives payments and proceeds, collects dividends and interest, and, in some instances, effects margin calls on broker instruction. Settlements are effected in two stages:

1. *Broker vs. customer*. Before settlement date, the customer must send cash or securities to the broker as requested in the broker's customer confirmation. Cash or securities are required to effect payment against delivery or delivery against payment in accordance with industry securities settlement procedures.
2. *Broker vs. broker*. When physical delivery of securities is required, it is generally done on a firm-to-firm basis or to a firm's safekeeping agent. Major equity securities, and an ever-increasing number of debt securities, are eligible for net settlement and securities immobilization with depositories. Usually, a net settlement account is used for cash and securities transactions; these accounts should be reconciled daily. The settlement process should include a procedure that verifies execution price and fees.

3230.0.10.2.3 Delivery

Securities are delivered to the executing broker and purchased securities to clients. The examiner should determine that safeguards provide adequate control over certificates in process. Proper fail-to-deliver/receive and completed transaction records should be maintained.

The securities broker that accepts customer orders generally is exposed to *delivery risk* by customers. Basically, customers can take advantage of the broker by placing an order to buy securities when the customer has no funds available to purchase securities or by placing an order to sell securities that are not owned by the customer. Either type of transaction is permissible in a *margin account,* provided that the customer has the resources available to properly margin the transaction. If the customer does not have a margin account, the broker should not purchase a security for the customer unless (1) there are sufficient funds in the customer's account or (2) the customer represents and the broker ascertains that the customer will promptly make full cash payment for the security before selling it and that the customer does not contemplate selling it before making payment. Alternatively, the broker should not sell a security for a customer unless (1) the security is held in the customer's account, or (2) the broker accepts in good faith the customer's statement that the security is owned by the customer and that it will be promptly deposited into the account.

By not executing a purchase or sale until the customer has deposited cash or securities, customer-default risks can be avoided on cash transactions. However, for competitive reasons, many brokers would not wish to place such stringent restrictions upon their customers—especially with respect to the purchase of securities. Lack of proper account supervision can lead to the fraudulent customer practice of "free riding," wherein the customer will buy securities in anticipation of a price rise. Before settlement date, the customer will sell the securities to take the profits. If the market price of the securities declines, the customer will dishonor the trade, and thus attempt to leave the broker holding the depreciated securities. Securities brokerage procedures should be designed to look for generally abusive practices by customers.

3230.0.10.2.4 Recordkeeping

Any records that must be prepared by the broker under inspection are subject to the Securities and Exchange Commission's recordkeeping and confirmation rules 17a-3 and 17a-4. Compliance with those recordkeeping rules will be verified by stock exchange or FINRA examiners during their routine compliance inspections.

3230.0.10.2.5 Audits and Controls

Complete the "Securities Brokerage/Internal Controls Checklist" to determine whether operations are satisfactorily controlled and audited by the bank holding company's or nonbank subsidiary's audit staff. All significant administrative and operational aspects should be covered. Management should receive reports of audit findings and respond in writing as to actions taken.

3230.0.10.3 Conflicts of Interest

Determine that policies have been effectively implemented covering relationships with affiliated trust departments, self-dealing, fee-splitting or rebate arrangements, and officer/employee transactions.

3230.0.10.3.1 Relationship with Affiliated Trust Departments

Questions may arise concerning the permissibility of a securities broker's executing securities transactions for an affiliated trust department. In general, the receipt of commission income for securities brokerage transactions entered into on behalf of a trust account (in addition to the fee received for account administration) raises conflict-of-interest considerations to which traditional prohibitions of fiduciary law are directed. When a securities broker affiliate is used, the trust institution may be considered to share indirectly in the commission income of the affiliate even when there is no direct remittance of the fee to the bank. The staff letter at 3–447.11 of the *Federal Reserve Regulatory Service* provides guidance in determining whether and in what circumstances use of affiliated discount brokerage services may or may not be permissible. If questionable trust department use of affiliated broker services is disclosed, appropriate trust examiner(s) should be notified.

3230.0.10.4 Earnings, Volume Trends, and Prospects

Determine the present and future impact that the securities brokerage activities may have on the bank holding company and its subsidiaries. If possible, a separate profit center should be established, thus providing a useful management tool that facilitates analysis of current profitability, business volume, fixed and variable costs, and degree of goal actualization. Periodic review of these factors will enable management to direct available resources, aid in the budget process, and provide a basis for business planning. Prospects for profitable growth should be assessed by noting changes in aggregate account levels and trade activity. The local competitive environment should be gauged and market-share information noted. In considering these factors, the examiner should attempt to determine what level of activity must be maintained or attained in order for the securities brokerage function to break even. Present a summary statement expressing an overall view on the current state and future viability of the operation.

3230.0.10.5 Compliance

The examiner should determine whether any additional state regulations must be complied with. Also determine that staff is aware of and complying with applicable regulations and laws, which may be outside the scope of an examination conducted by a self-regulatory organization.

3230.0.10.6 Presentation of Findings

The scope of inspection within the report should note that securities brokerage activities were reviewed. It should be noted that in order to avoid duplication of examination procedures, the inspection did not focus upon securities laws compliance (as verified by FINRA, or stock-exchange examiners), but instead focused upon financial and safety-and-soundness considerations. Appropriate nonbank subsidiary pages should be completed. Present a summary comment in the confidential section reflecting an overall appraisal of the operation. The self-regulatory organization responsible for examining the securities brokerage operation should be identified. Identify also the associated broker, if any, with whom the organization conducts business. Any material exceptions should be noted with management's responses under an appropriate caption within the open section. Matters of importance should be brought forward to the Examiner's Comments and Matters Requiring Special Board Attention page. In addition, any other significant problems, detrimental practices, or potential liabilities that could have a negative impact on the organization should be commented upon.

3230.0.11 EXAMINATION CHECKLISTS

Two checklists are provided for use by the examiner to aid in evaluating securities brokerage activities:

1. Securities Brokerage Inspections
2. Securities Brokerage/Internal Controls

All questions are not applicable for each brokerage subsidiary. The nature and scope of brokerage activities determine the applicability of specific questions. The term ''banking organization'' refers to a bank holding company and any of its nonbank subsidiaries.

3230.0.11.1 Securities Brokerage Inspection Checklist

	Yes	*No*
1. Is a contractual agreement between the banking organization and the executing and/or clearing broker on file?	____	____*
2. Does the agreement indemnify the banking organization against broker error?	____	____*
3. Does the agreement clearly define respective responsibilities of the banking organization and broker?	____	____*
4. Was the agreement reviewed by the banking organization's counsel?	____	____*
5. Was the agreement approved by the board of directors? If not, by whom?	____	____*
6. Are written procedures covering brokerage activities in effect?	____	____*
7. Have job descriptions been prepared?	____	____*
8. Have specific policies been developed regarding—		

*Response may require report comment.

		Yes	*No*
• relationships with affiliated bank trust depts?		____	____*
• conflicts of interest?		____	____*
• investment advice?		____	____*
9. Are investment advice or research services being offered?		____	____*
10. Are income and expense records separately maintained?		____	____*
11. Are brokerage activities included in the audit program?		____	____*
12. Are customer orders placed with banking organization personnel?		____	____*
If so, is customer authorization on file?		____	____*
Are telephone conversations tape recorded?		____	____*
Are transaction records maintained by traders?		____	____*
13. How are payments effected?	(check one)		
direct charge to customer account	____		
payment through the mail	____		
other ______________________________			
14. What is the timeframe of payment?			
prior to execution	____		
upon verbal notification of execution	____		
upon customer's receipt of confirmation	____		
after settlement date	____*		
15. What is the frequency of settlement-account reconcilements?			
daily	____		
biweekly	____		
weekly	____*		
other ____________________

custody	____		
employee benefit	____**		
17. Is sufficient insurance coverage in effect?		____	____*
Describe types and limits. ______________________________ ______________________________			
18. Does a review of records confirm that the broker functions solely as an agent, i.e., does not engage in underwriting or taking positions for its own account?		____	____*
19. Do monitoring and internal reporting procedures adequately track profitability and operating impact for management consideration?		____	____*

*Response may require report comment.

**If available documentation reveals that affiliated trust departments use brokerage services to execute transactions for this type of account, the appropriate federal regulator of trust activities should be notified.

3230.0.11.2 Securities Brokerage/Internal Control Checklist

The following questions should be answered, to the extent applicable, in reviewing a securities brokerage operation. Few brokers will perform all of the activities discussed below.

	Yes	*No*
1. Do internal audit procedures include the securities brokerage function?	____	____*
2. Has the banking organization adopted procedures for the periodic review of insurance coverage relating to securities brokerage activities (e.g., errors and omissions, fidelity bonding, and securities in transit)?	____	____*
3. Has the banking organization adopted procedures with respect to the accounts of directors, officers, or employees or their immediate families?	____	____*
4. Are procedures in place to prevent internally generated credits to the securities brokerage customers' accounts from being automatically recorded as collected funds?	____	____*
5. Are procedures in place to ensure that acceptance of a relatively large order will not be effected unless the order taker verifies that the customer placing the order has internal authorization to engage in large trades?	____	____*
6. Has the banking organization adopted written procedures prohibiting employees from furnishing investment advice?	____	____*
7. Are customer telephone orders tape recorded?	____	____*
8. Are tape recordings of telephone orders reviewed periodically to verify that employees have *not* made securities recommendations or furnished investment advice?	____	____*
9. Are persons responsible for taking and transmitting orders precluded from preparing accounting entries?	____	____*
10. Is there adequate separation of duties between persons responsible for making initial accounting entries and those responsible for making subsequent adjusting entries to prevent a concealment of theft or fraud?	____	____*
11. Does the securities brokerage function monitor and reconcile safekeeping, clearing, payment, and income expense accounts on a regular basis?	____	____*
12. Has management developed a contingency plan to ensure continued brokerage operations of the securities brokerage operation in the event of fire, flood, power failure, or some other unforeseen event?	____	____*
13. With respect to termination of brokerage accounts, does the securities brokerage operation have procedures in place to prevent an account from being closed while an open securities order is outstanding?	____	____*
14. Does the credit-approval process require a credit decision to be made by someone who routinely makes credit decisions—as opposed to a manager of a securities brokerage operation?	____	____*
15. If securities received from customers are registered in the name of a third party, are procedures in place to ensure that such securities are accepted only upon satisfactory proof of ownership?	____	____*

*Response may require report comment.

	Yes	*No*
16. Are procedures in place to ensure that customers delivering securities registered in a "street name" have title to such securities (i.e., they are not lost or stolen securities)?	____	____*
17. Is only a limited number of responsible employees authorized to execute or guarantee security assignments?	____	____*
18. Is the use of facsimile signature devices adequately controlled?	____	____*
19. Are procedures in place to control cash, securities, and documents pertaining to securities shipped for "delivery against payment"?	____	____*
20. Are adequate physical controls maintained over securities on hand (e.g., restricted access to the "cage area")?	____	____*
21. Are detail records pertaining to securities in transfer and those pledged as collateral to borrowings agreed periodically (at least quarterly) with the securities record?	____	____*
22. Are security positions (and related general-ledger amounts) in suspense accounts investigated and resolved on a timely basis?	____	____*
23. Are fails to receive and fails to deliver periodically reviewed and reconciled?	____	____*

*Response may require report comment.

3230.0.12 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Board's authority for rulemaking and jurisdiction over BHCs	1843(c)(8), 1844(b)			
Order approving the application of a BHC to acquire a retail discount securities broker				1983 FRB 105
Order approving acquisition of retail discount broker by a BHC				1983 FRB 565
Securities brokerage as a permissible activity		225.28(b)(7)(i)		
Credit by brokers and dealers—Regulation T	220

4(c)(8)—Securities Brokerage (Board Decisions)

Section 3230.05

This section serves as a prelude to the securities brokerage sections that follow. Sections 3230.1 through 3230.3 provide brief historical summaries of Board decisions on securities brokerage; these authorizations are now incorporated into Regulation Y for this activity. The summaries provide the reader with some historical perspective as to how and why the current provisions of Regulation Y evolved. The conditions and commitments within these orders may no longer apply to the current provisions of Regulation Y. Therefore, reference must be made to Regulation Y, section 225.28(b)(7)(i).

Before the 1997 revisions of the Board's Regulation Y (12 C.F.R. 225), the Board's rules differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities). The revisions to Regulation Y that became effective in April 1997 permit securities brokerage without distinguishing between discount and full-service brokerage activities.

Another major change for securities brokerage activities concerns the types of disclosures required of bank holding companies. Before the 1997 revisions, bank holding companies providing full-service brokerage services were required to make certain disclosures to customers regarding the uninsured nature of securities and were not permitted to disclose confidential customer information without the customer's consent. Effective in April 1997, these disclosure requirements were eliminated. The disclosure requirements—along with a number of other requirements that specifically address the potential for customer confusion, training requirements, suitability requirements, and other matters—are already contained in an interagency policy statement that governs the sale of securities and other nondeposit investment products on bank premises, as well as in rules adopted by the SEC. In addition, similar disclosure requirements are required by the Board's policy statement governing the sale by bank holding companies of shares of mutual funds and other investment companies that the bank holding company advises.

Banking organizations and their affiliates, in general, are becoming more effective in implementing the regulatory disclosure requirements. Customers are also becoming increasingly aware that such investment products purchased at banking organizations and their affiliates are not federally insured. Moreover, the Board and the SEC have adequate supervisory authority to ensure that bank holding companies comply with the applicable regulatory disclosure requirements. To the extent that disclosures to customers are appropriate in areas not covered by the regulatory policy statements or SEC regulations, the Board will consider whether to develop supervisory guidance.

Two bank holding companies jointly applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to form a de novo subsidiary that would engage in the following nonbanking activities:

1. providing portfolio investment advice to "institutional customers"
2. providing securities execution (brokerage) services, related securities credit activities pursuant to the Board's Regulation T, and incidental activities
3. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies to institutional customers
4. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to investment companies registered under that act

Separate fees are to be charged for the advisory services and the securities brokerage services. The company would also provide incidental services such as custodial and cash-management services and acting as a registered investment adviser. The services are to be provided throughout the United States. The providing of advisory services to retail clients was not authorized by the Board. The applicant committed to create a "Chinese Wall" between the affiliated bank and the securities affiliate.

The Board determined that the activities would not violate Glass-Steagall Act prohibitions. Board approval was conditioned with the requirement that the standards of care and conduct applicable to fiduciaries would be observed. The applicant would not allow the exchange of confidential information between the de novo subsidiary and its affiliates. The applicant further committed that employees of the de novo subsidiary would not be given customer lists and other confidential information obtained by its affiliates in connection with commercial banking operations. Transmission of advisory research and recommendations to the commercial lending department of any of the bank holding company's affiliates was not permitted.

The proposal represented the combination of activities, previously determined to be closely related to banking, in such a way that the functional nature and scope of the combined activities conducted would not be altered. By Board order, the applicants' application was approved on June 13, 1986 (see 1986 FRB 584), subject to the conditions stated therein. Other orders were approved by the Board on August 5, 1987 (1987 FRB 810), and October 1, 1987 (1987 FRB 930), which also authorized a bank holding company to engage in combined investment advisory and securities brokerage activities. In this order, the Board lowered the threshold for defining an "institutional investor" from $5 million to $1 million.

The Board, effective September 10, 1992, added this nonbanking activity to those activities that are permissible by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y, subject to the disclosure requirements, restrictions on exchanging confidential customer information, and other limitations stated therein.

4(c)(8)—Securities Brokerage with Discretionary Investment Management and Investment Advisory Services Section 3230.2

A bank holding company applied to the Board to expand the authority of its subsidiary to engage in offering investment advisory services for "institutional customers" and its affiliates[1] in conjunction with its previously approved brokerage services. The Board previously approved by order (1986 FRB 584) an application for a different bank holding company to offer the combination of investment advice and securities execution services for institutional customers.

The proposed activities in this order (1987 FRB 810) are similar except that the subsidiary would additionally exercise limited investment discretion at a customer's specific request. Under this plan, the subsidiary would offer as a service, within defined parameters established by the client, discretion in buying and selling securities on behalf of the client.

Such investment discretion would be exercised only at the request of a client; the subsidiary does not plan to market or solicit managed accounts. Each client will receive confirmation of each transaction, as well as monthly statements which would indicate in detail the terms of each transaction executed on its behalf. Each client would always be aware of the scope of the subsidiary's activity for its account. The subsidiary would receive a single fee for the combined activities of providing investment advice and exercising limited investment discretion.

The application was approved on August 5, 1987, subject to the commitments made by the applicant and the conditions (whether explicitly stated or incorporated by reference) in the order.

The Board approved another order on October 1, 1987 (1987 FRB 930), similar to the August 5, 1987, order, except that (1) the applicant proposed to lower the test for institutional customers from the $5 million threshold to $1 million; (2) the applicant's wholly owned brokerage subsidiary would share customer lists with its affiliates, but not confidential information obtained from the customer; and (3) the brokerage subsidiary would have officer and director interlocks with the parent bank holding company, but not with its bank affiliates. In the Board's view, these modifications did not alter the underlying rationale of its earlier decision.

The Board approved another order on August 10, 1988 (1988 FRB 700). The principal difference between the August 5, 1987, order and this proposal was the provision of such combined services to *retail* as well as *institutional* customers. The provision of services to retail customers does not include discretionary investment management. To further ensure the separation of the BHC and its bank affiliates and to avoid potential conflicts of interests, the applicant made several commitments, as detailed within the order.

The Board, effective September 10, 1992, added the providing of discretionary investment management to the nonbanking activities that are permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y.

1. The provision of such services by the subsidiary to other affiliates is a permissible servicing activity under section 225.22(a) of Regulation Y.

4(c)(8) of the BHC Act—Offering Full Securities Brokerage Services for Bank-Ineligible Securities Section 3230.3

A bank holding company (applicant) applied for the Board's permission for its subsidiary to provide investment advisory and brokerage services on a combined basis (''full-service brokerage'') to institutional and retail customers and to engage, to a limited extent, in underwriting and dealing in one- to four-family mortgage-related securities and consumer receivable–related securities (herein referred to as ''ineligible securities''). The applicant committed to conduct its ineligible securities underwriting and dealing activities subject to the revenue test and the prudential limitations established by the Board in 1987 FRB 473, except for a market-share limitation which the Board decided not to require for this BHC.

The Board determined previously that full-service brokerage for both institutional and retail customers is closely related and a proper incident to banking under section 4(c)(8) of the BHC Act and does not violate the Glass-Steagall Act (1988 FRB 700 and 1986 FRB 584). This BHC's proposal differs from prior cases in that the subsidiary will provide full-service brokerage to retail customers for ineligible securities that it may hold as principal. The BHC has committed that the subsidiary will provide full and appropriate disclosure of its interest in the transaction as required by the securities laws, the National Association of Securities Dealers, and fiduciary principles.

The Board had previously authorized an underwriting subsidiary to provide full-service brokerage with respect to ineligible securities that it holds as principal, *but only to institutional customers* (1988 FRB 695). Applicant made the same commitments regarding disclosures as found in 1988 FRB 695. The BHC committed further that its subsidiary would prominently disclose in writing to each customer, at the commencement of the relationship, that it is not a bank; that it is separate from any affiliated bank; and that the securities sold, offered, or recommended by the subsidiary are not deposits, are not insured by the FDIC, are not guaranteed by an affiliated bank, and are not otherwise an obligation of an affiliated bank, unless such is in fact the case. The Board emphasized that confirmations sent to customers will state whether the subsidiary is acting as agent or principal with respect to a security. The Board concluded that such disclosure commitments would be adequate. It recognized that in performing the full-service brokerage activity, the underwriting subsidiary would be operating under a more extensive framework of prudential limitations than would be the case if the full-service brokerage activity were conducted by a bank, a subsidiary of a bank, or by another holding company subsidiary. Based on the commitments made, the Board decided on March 14, 1989, to approve the proposed activities (see 1989 FRB 396) subject to all the terms and conditions found in 1987 FRB 473, except for the market-share limitation.

Effective September 10, 1992, the Board added this nonbanking activity to the activities permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y and subject to the Board's disclosure and other requirements and the limitations on exchanging confidential information, as stated therein.

This section discusses and provides a historical reference of previous Board orders that initially authorized, by order, a bank holding company's acting as agent in the private placement of securities and engaging in riskless-principal nonbanking activities. *With the Board's incorporation of private-placement and riskless-principal activities into its adoption of changes to Regulation Y, effective April 21, 1997, the majority of the previous private-placement and riskless-principal commitments are not effective. Only those current requirements listed for private-placement and riskless-principal activities in section 225.28(b)(7) of Regulation Y (the laundry list of permissible nonbanking activities) should be used by the examiner in conducting the supervision and inspection of bank holding companies and their subsidiaries.*

3230.4.1 ENGAGING IN COMMERCIAL-PAPER PLACEMENT ACTIVITIES TO A LIMITED EXTENT

A bank holding company (the applicant) applied pursuant to section 4(c)(8) of the Bank Holding Company Act and section 225.23(a) of the Board's Regulation Y to act as an agent and adviser to issuers of commercial paper in connection with the placement of commercial paper with institutional purchasers. The commercial-paper-placement activity, as proposed, is to be conducted from a wholly owned commercial finance subsidiary (the company) of the applicant's direct subsidiary.

The Board concluded that the proposed commercial-paper-placement activity was so functionally and operationally similar to the role of a bank that arranges a loan participation or syndication as to be a proper incident thereto and that banking organizations are particularly well suited to perform the commercial-paper-placement function. The Board found that the proposal, as limited by the applicant, was consistent with section 20 of the Glass-Steagall Act, and could reasonably be expected to result in public benefits that would outweigh possible adverse effects. The Board found, further, that the applicant could conduct the proposed activities to the extent and in the manner described in the order. The Board's approval (1987 FRB 138) extended only to the activities conducted within the limitations proposed by the applicant for company and the BHC's subsidiary banks and other subsidiaries. The placement of commercial paper in any manner other than as described within the limitations and conditions of the order would not be within the scope of the Board's approval. The Board also required that no lending affiliate of the company would disclose to the company any nonpublic customer information concerning an evaluation of the financial condition of an issuer whose paper is placed by the company or of any other customer of the company, except as expressly required by securities law or regulation.

On May 25, 1988, the Board approved an order (1988 FRB 500) for a bank holding company to engage de novo, through a subsidiary, in acting as an agent and adviser to issuers of commercial paper in connection with the placement of commercial paper with institutional customers, as well as to engage in certain other securities and financial advisory activities. The applicant proposed to place commercial paper in accordance with all the terms and conditions of the above order (1987 FRB 138), except one. The applicant did not propose any quantitative limitations on its placement activity. The Board concluded that the proposed commercial-paper placement did not constitute underwriting or distributing under the Glass-Steagall Act and that the quantitative limitations on the activity were not necessary to ensure compliance with that act. (See section 3230.4.2, in which a subsidiary of a bank holding company was authorized to privately place all types of debt and equity securities.)

3230.4.2 ACTING AS AGENT IN THE PRIVATE PLACEMENT OF ALL TYPES OF SECURITIES AND ACTING AS RISKLESS PRINCIPAL

A bank holding company (the applicant) applied for the Board's approval to transfer the private-placement business of its commercial bank subsidiary to its designated nonbanking subsidiary for securities underwriting and dealing. The subsidiary would act as agent in the private placement of all types of securities, including the providing of related advisory services, and buy and sell all types of securities on the order of investors as a riskless principal.

Because the section 20 subsidiary would be affiliated through common ownership with a member bank, it may not be "principally engaged'' in the ''issue, flotation, underwriting, public sale, or distribution'' of securities within the meaning of the former section 20 of the Glass-Steagall Act. In an earlier decision (1989 FRB 751), the Board determined that a subsidiary is not engaged principally in section 20 activities if revenues from underwriting and dealing in securities that banks are not authorized to underwrite and deal in directly (bank-ineligible securities) do not exceed 10 percent of the subsidiary's gross revenues (25 percent, effective March 6, 1997). The applicant contended that the proposed private-placement and riskless-principal activities are not the kind of securities activities described in section 20 and, thus, should not be subject to the revenue limit on bank-ineligible securities activities.

The private-placement market involves the placement of new issues of securities with a limited number of sophisticated purchasers in a nonpublic offering. In private-placement transactions, a financial intermediary acts solely as agent of the issuer in finding purchasers. The intermediary does not purchase the securities and then try to resell them.

Privately placed securities are *not* subject to the registration requirements of the Securities Act of 1933. Such securities are only offered to financially sophisticated institutions and individuals,[1] not to the public. The applicant stated that all of the individuals with whom the securities would be placed will qualify as ''accredited investors'' under SEC rules. The Board concluded that the subsidiary's private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities and that the revenues from the proposed activities should not be subject to the 10 percent revenue limitation (25 percent, effective March 6, 1997) on bank-ineligible securities activities.

The Board noted that other limitations on the activity should ensure that securities would not be offered to the public. First, the applicant agreed that the subsidiary would not make any general solicitation or advertisement to the public regarding the placement of particular securities. Second, the minimum denomination of securities to be placed would be $100,000. Third, the applicant agreed that the subsidiary would not privately place securities that are registered under the Securities Act of 1933 and that the subsidiary would be compelled to honor all provisions of that act, particularly those that limit the scope of private placements to nonpublic transactions. Fourth, the subsidiary agreed not to privately place as agent the securities of investment companies which are sponsored or advised by the applicant or its subsidiaries. Fifth, the subsidiary will not purchase or repurchase for its own account the securities being placed or will not inventory unsold portions of such securities. Sixth, the applicant further agreed to consult with its Federal Reserve Bank staff before transferring its private-placement activities from the subsidiary to any other nonbank subsidiary of the applicant to ensure that the transfer did not evade any of the firewall provisions committed to.

1. The subsidiary would not only place securities with institutional customers but with individuals whose net worth (or joint net worth with a spouse) exceeds $1 million. Such placement activities with individuals would not, in the Board's opinion, result in a public offering.

3230.4.3 INCORPORATION OF PRIVATE-PLACEMENT NONBANKING ACTIVITIES INTO REGULATION Y

The Board has added the activity of acting as agent in the private placement of securities to the laundry list of nonbanking activities (see 12 C.F.R. 225.28(b)(7)(ii)). Regulation Y adopts the definition of private-placement activities that is used by the SEC and the federal securities laws. In taking this action, the Board removed all but one restriction on private placement. The remaining restriction prohibits a bank holding company from purchasing for its own account the securities being placed or holding in inventory unsold portions of issues of these securities. This restriction prevents a bank holding company from classifying its securities underwriting activities as private-placement activities.

3230.4.4 RISKLESS PRINCIPAL

''Riskless principal'' is a broker-dealer that, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a simultaneous sale to (or purchase from) the customer.

3230.4.4.1 Description of Riskless-Principal Transactions

When acting as a dealer, the securities firm maintains an inventory of securities for its own account and buys and sells securities as principal. Riskless-principal transactions are usually undertaken as an alternative method of executing orders by customers to buy or sell securities on an agency basis. In this situation, when a customer places an order to purchase securities that the broker-dealer does not maintain in its inventory, the firm must purchase the securities from a third party. At this point, the broker-dealer has the option of acting either as the agent for the customer or a riskless principal in making the purchase. If the decision is made to act as a riskless principal, the broker-dealer will purchase the securities from a third-party dealer at the dealer's "inside price" (confirming the transaction for its customer) and then, acting as principal, resell them to the customer, adding a markup over cost. If the broker-dealer does not complete the purchase of the securities ordered by the customer, it is not obligated to provide the securities.

3230.4.4.2 Underwriting and Riskless Principal

In riskless-principal transactions, the subsidiary would execute orders by an investor and would not act on behalf of an issuer of new securities. The subsidiary would not be involved in making any public offering of securities as agent for the issuer. Thus, these activities would not constitute underwriting for Glass-Steagall purposes.

3230.4.4.3 Summary of Board Action on Acting as Agent in Private Placement and as Riskless Principal in Buying and Selling Securities

The Board concluded that the securities underwriting and dealing of the subsidiary's riskless-principal activity did not constitute an underwriting of securities. The riskless-principal activity would not be a public sale or underwriting of securities and would not be viewed as a bank-ineligible securities activity for purposes of the current 25 percent revenue test. As a condition for the approval of the riskless-principal activity, the Board required the subsidiary to maintain specific records that would clearly identify such transactions so that examiners will be able to trace the resulting revenue. The riskless-principal activity was found to be closely related to banking. The Board further concluded that the placement activity differed only slightly in scope from those approved previously and that the operational limitations agreed to by the applicant would ensure that the subsidiary would not become involved in the public offering of any securities. The Board approved the application on October 30, 1989 (1989 FRB 829). (See also 1997 FRB 146; 1996 FRB 350, 748; 1995 FRB 49, 880, 1133; 1994 FRB 554, 1014; 1993 FRB 1166; 1992 FRB 294, 335, 552, 868; 1991 FRB 61; and 1990 FRB 26, 79, 545, 567, 568 (footnote 7), 653, 659, 663, 667, 672, 674, 766, 857, 864.)

3230.4.4.4 1996 Changes to the Underwriting Conditions for Riskless-Principal Activities

In connection with a bank holding company proposal considered by the Board on June 10, 1996, the Board reviewed the continued appropriateness of applying the underwriting conditions to the conduct of riskless-principal activities. In that case, the Board determined, based on its experience in monitoring and examining the conduct of riskless-principal activities by bank holding companies, that the underwriting conditions were not necessary to address identifiable adverse effects. Accordingly, the Board permitted the bank holding company to engage in riskless-principal transactions through a nonbank subsidiary without conducting this activity in accordance with the underwriting conditions (See 1996 FRB 748). The Board noted that riskless-principal transactions are essentially equivalent to securities brokerage transactions and, therefore, must be conducted in compliance with federal securities laws. The Board concluded that the definitional limitations (see section 225.28(b)(7)(ii) of Regulation Y) would be all that is needed to purchase (or sell) securities as a riskless principal. The conditions are designed to ensure that bank holding companies do not avoid the Glass-Steagall Act by classifying underwriting and dealing activities as riskless-principal activities. In the June 10 order, the bank holding company agreed that, if riskless-principal services were provided in combination with its advisory services, it would provide its customers with the disclosures established by the Board for full-service brokerage activities of bank holding companies. With respect to its decision, the Board decided to grant identical relief to other bank holding companies that had been previously approved to conduct riskless-principal nonbanking activities.

3230.4.4.5 Incorporation of Riskless-Principal Transactions into Regulation Y

As part of the Board's February 19, 1997, adoption of the final amendments to Regulation Y, it retained the requirement that riskless-principal transactions be conducted in the secondary market. It further determined to eliminate all but two restrictions with respect to riskless-principal transactions. A bank holding company may thus buy and sell in the secondary market all types of securities on the order of customers as a riskless principal, to the extent of engaging in a transaction in which the company, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a contemporaneous sale to (or purchase from) the customer. This does not include—

1. selling bank-ineligible securities at the order of a customer that is the issuer of the securities, or selling in any transaction in which the bank holding company has a contractual agreement to place the securities as agent of the issuer; or
2. acting as riskless principal in any transaction involving a bank-ineligible security for which the bank holding company or any of its affiliates acts as an underwriter (during the period of the underwriting or for 30 days thereafter) or dealer. A bank holding company or its affiliates may not enter quotes for specific bank-ineligible securities in any dealer quotation system in connection with the bank holding company's riskless-principal transactions, except that the company or its affiliate may enter bid or ask quotations, or publish ''offering wanted'' or ''bid wanted'' notices on trading systems other than NASDAQ or an exchange, if the company or its affiliate does not enter price quotations on different sides of the market for a particular security for any two-day period. (See 12 C.F.R. 225.28(b)(7)(ii).)

A BHC applied for the Board's approval, pursuant to section 4(c)(8) and 225.23(a) of the Board's Regulation Y, to acquire, through a securities brokerage subsidiary, a 49 percent interest in a joint venture partnership. The applicant was a one-bank holding company formed over a bankers' bank. The shareholders comprised several hundred banks. The joint venture partnership (the company) proposed to engage in the activity of acting as a municipal securities brokers' broker.[1] This consisted of providing municipal securities brokerage services to other registered securities brokers and dealers, including dealer banks. The company would act as an undisclosed agent in the purchase and sale of municipal securities, including revenue bonds, for the account of its customers.

The applicant's proposal involved the purchase and sale of municipal securities as agent only and did not include dealing or otherwise taking a position in such securities. The activity fell within the third-party securities activities permitted for member banks under section 16 of the Glass-Steagall Act (12 U.S.C. 24), which allows banks to purchase and sell securities "without recourse, solely upon the order, and for the account of, customers." National banks had been permitted to engage in the activity of acting as municipal securities brokers' brokers.

The Board found the activity to be functionally similar to the retail securities brokerage activities performed by banks for their customers as permitted under section 16 of the Glass-Steagall Act. The Board thus concluded that the activity was closely related to banking. The Board's approval of the order was based on several commitments made by the applicant and the other joint venturer. The Board approved the application by order on June 26, 1985 (1985 FRB 651).

1. Rule 15c3-1(a)(8)(ii) implementing section 15(c)(3) of the Securities and Exchange Act of 1934 defines a municipal securities brokers' broker as a "municipal securities broker or dealer who acts exclusively as an undisclosed agent in the purchase or sale of municipal securities for a registered broker dealer or registered municipal securities dealer" who has "no retail customers" and "maintains no municipal securities in its proprietary or other accounts." Municipal securities brokers' brokers are subject to the federal securities laws applicable to securities brokers and are governed by the rules of the Municipal Securities Rulemaking Board.

A foreign bank holding company (the applicant), and its wholly owned subsidiary (the company), a commercial banking organization located in New York state, applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y for prior approval to engage de novo on a domestic and international basis, through the company, in the following activities:

1. providing investment advisory services and financial advisory services, including advice regarding mergers, acquisitions, and capital-raising proposals by institutional customers, pursuant to section 225.28(b) of Regulation Y
2. providing securities brokerage services on an individual basis as well as in combination with investment advisory services (''full-service brokerage''), including exercising limited investment discretion on behalf of institutional customers
3. purchasing and selling all types of securities on the order of institutional and retail customers as a ''riskless principal''
4. engaging in securities credit activities under section 225.28(b)(6) of Regulation Y, including acting as a ''conduit'' or ''intermediary'' in securities borrowing and lending

The Board previously determined by regulation that engaging in the above-listed nonbanking activities (1) and (2) is closely related to banking under section 4(c)(8) of the BHC Act (see section 225.28(b)(6) and (7) of the Board's Regulation Y). The Board previously determined by order that, subject to certain prudential limitations, the proposed riskless-principal activities (item 3) are so closely related to banking as to be a proper incident thereto within the meaning of section 4(c)(8) of the BHC Act. The applicant has committed that the company will conduct its riskless-principal activities using the same methods and procedures and subject to the same prudential limitations established by the Board in its orders that are found at 1989 FRB 829 and 1990 FRB 26.

Banks and BHCs are permitted to borrow and lend securities held in their own portfolios (see the FFIEC's 1985 Supervisory Policy Statement on Securities Lending, *Federal Reserve Regulatory Service* 3–1579.5). In this case, the applicant proposed that the company borrow and lend the securities of noncustomer third parties. The company would seek out counterparties to securities borrowing and lending transactions and would assume much the same risk in these transactions as if it was borrowing or lending its own securities or its customers' securities. In this capacity, it would act as a ''conduit'' or ''intermediary'' in securities borrowing and lending. The company would supply—upon the request of another broker-dealer who is unable to obtain securities needed to satisfy customer or investment or operational needs—securities not available in the company's accounts or customer accounts by seeking out third-party non-customer lenders. In addition to locating the securities, the company proposes to coordinate, on behalf of the borrower and lender, the exchange of securities and collateral that is necessary to the transaction.[1]

The Board, in its review of this application, believed that banks generally perform services that are operationally or functionally similar to the proposed conduit services. The proposed conduit activity was believed to be similar to the securities borrowing and lending activities that banks conduct. National and state banks are permitted to lend securities from their own portfolio, and with the customer's consent, from the accounts of customers, and banks regularly borrow securities to meet their needs and the needs of customers. The fact that a third party is substituted in place of a trust or other customer of a bank would not change significantly the way in which the securities lending activity would be conducted. The same steps and procedures that would be necessary to effectuate the loan of a customer's securities would be followed in loaning the securities of a noncustomer third party.

The risk associated with the proposed activity is the same risk that a bank would incur in managing the lending of securities from its own portfolio or the portfolio of a customer. The risk to the company, in acting as a conduit, is limited to ensuring that the collateral posted by the

1. The company agreed to coordinate this exchange through accounts established at a specifically named, privately held national clearinghouse for the settlement of transactions in corporate and municipal securities. Once the company had located the desired securities, the securities would be transferred to an account maintained by it at the clearinghouse and simultaneously delivered to an account of the borrower, also at that clearinghouse. At the same time, the borrower would be required to post collateral, which the company would receive into its clearinghouse account and simultaneously deliver to an account maintained by the lender at the clearinghouse.

borrower continuously reflects the market value of the securities loaned. The company committed to mark this collateral to market on a daily basis and to make calls for supplemental collateral where necessary.[2] The company also represented that it would not provide any indemnification to noncustomer third-party lenders of securities.

The Board determined, for the above reasons, that the proposed conduit activity is closely related to banking for the purposes of section 4(c)(8) of the BHC Act and approved the order on October 9, 1992 (1992 FRB 955).

The Board's approval was subject to the following specified conditions:

1. To minimize risk, the company is to act as a conduit only when the potential borrower and lender are matched before the transaction. In addition, it will take various measures to minimize operational risks, including conducting its conduit activities in accordance with the collateral requirements imposed on the borrowers by the Board's Regulation T.[3] A conduit transaction will commence only when a broker-dealer approaches the company and needs to borrow securities. Securities will not be borrowed in anticipation of a transaction.
2. At the end of each day, the company will mark to market the collateral posted by the borrower in all transactions in which it loaned securities or acted as an intermediary for a lender. As proposed, the company would establish credit lines for potential borrowers and lenders.[4]
3. The applicant committed that the company will conduct its conduit activities in compliance with the FFIEC Supervisory Policy Statement on Securities Lending (*Federal Reserve Regulatory Service* 3–1579.5).

2. If the price of the borrowed securities increases, the borrower is required under the Board's Regulation T to provide additional collateral to the company. The company, in turn, through transactions at the clearinghouse, will pass the collateral to the initial lender of the securities. If the borrower is unable to satisfy this requirement, the company is to have the contractual right to terminate the borrowing transaction by purchasing the securities in the open market and delivering them to the lender, who will then be obligated to return the borrower's collateral to the company. Because the borrowed securities will be marked to market daily by the company, the maximum exposure to the company in directly or indirectly borrowing or lending securities is one day's change in the price of the borrowed securities.

3. The applicant committed that the Board's Regulation T—which requires that all securities borrowing and lending transactions be collateralized by at least 100 percent of the value of the securities as computed on a daily basis—shall be the company's minimum guideline for posting collateral, and that the company will require many transactions to be collateralized in excess of 100 percent of the value of securities marked to market.

4. These credit policies are to include a review of all lenders and borrowers and the establishment of a credit committee that will determine limits on the credit exposure of any single borrower. The applicant proposed that the company would transact its business only with a select group of well-capitalized broker-dealers that will not be brokerage customers of the company.

The Board has authorized bank holding company subsidiaries to engage in investment or trading transactions as principal to underwrite and deal in certain securities and money market instruments that are eligible for bank underwriting and dealing by state member banks. Basically, the Board has subjected dealer subsidiaries to the same restrictions that govern underwriting and dealing by state member banks pursuant to 12 U.S.C. 24 and 335. Permissible activities include underwriting and dealing in type I securities as defined in 12 C.F.R. 1, including obligations of the United States, general obligations of states and their political subdivisions,[1] and type I municipal bonds; type II securities as defined in 12 C.F.R. 1, including, in part, municipal revenue obligations for housing, university, or dormitory purposes that do not qualify as type I securities; and banker's acceptances and certificates of deposit. In addition, such dealer subsidiaries are subject to the applicable capital restrictions (10 percent of the lead bank's capital and surplus) on dealing in type II securities in 12 C.F.R. 1.7. These underwriting and dealing activities were added to the permissible activities section of Regulation Y, effective February 6, 1984. Furthermore, dealer subsidiaries are permitted to furnish investment advice with respect to these bank-eligible securities.

The Board has authorized bank-affiliated securities dealers to underwrite, deal in, or privately place type III securities in separately capitalized nonbank subsidiaries subject to prudential limitations and restrictions to preclude such subsidiaries from being principally engaged in the underwriting and distribution of securities. In addition, the Board has authorized broker-dealer subsidiaries and brokerage subsidiaries to privately place any type of debt or equity security.

3240.0.1 HISTORY OF BOARD APPROVALS OF UNDERWRITING AND DEALING IN GOVERNMENT OBLIGATIONS AND MONEY MARKET INSTRUMENTS

On February 27, 1978, the Board approved an application to engage de novo in underwriting and dealing activities then being conducted by the bank holding company's only subsidiary bank. Thus, the formation of the subsidiary transferred these operations from the bank to the nonbank subsidiary. The activity included the underwriting and dealing in obligations of the United States and general obligations of various states and of political subdivisions. The Board determined that this activity is closely related to banking. The Board also approved, on February 27, 1978, another application of a bank holding company that would permit it to retain shares in a firm engaged in U.S. government securities underwriting activities.

On March 20, 1979, the Board approved an application of a bank holding company to acquire a company that would engage de novo in the activities of underwriting and dealing in certain government and municipal securities and in providing portfolio investment advice to individuals, associations, corporations, state and local governments, and financial institutions (''nonbank entities'') and to unaffiliated commercial banks. The Board determined that the proposed activities were closely related to banking.

On March 2, 1982, the Board approved an application of a bank holding company to form an incorporated securities company subsidiary that would engage de novo in the activities of soliciting, underwriting, dealing in, purchasing, and selling obligations of the United States, general obligations of various states, and money market instruments such as banker's acceptances and certificates of deposit. The Board regarded the government securities activities that the bank holding company proposed to engage in as substantially the same as the activities that the Board had approved in previous orders. Insofar as its proposal to deal in banker's acceptances, certificates of deposit, and other money market instruments that state member banks may from time to time be authorized to underwrite and deal in (such instruments are not regarded as ''securities'' subject to the prohibitions in sections 16 and 21 of the Glass-Steagall Act), the Board regarded such activities as closely related to banking because banks engage in such functions. The Board's approval of the bank holding company's application was subjected to the same restrictions and prudent limitations as if the activity were conducted in the affiliate's lead bank. For example, the nonbank subsidiary could not underwrite, deal in, or hold type II

1. The Gramm-Leach-Bliley Act authorized well-capitalized state member banks to deal in, underwrite, purchase, and sell all type I municipal securities and revenue bonds without any limitations relative to the bank's capital. See section 2020.1 of the *Commercial Bank Examination Manual* and SR-01-13.

securities of any issuer in amounts that would not be permitted if such activities were conducted by the subsidiary national bank, nor would it be permitted to sell securities to trust accounts of affiliated banks, except as permitted by regulations of the Comptroller of the Currency. Type II securities can consist of certain types of public housing and dormitory bonds of states and municipalities. The amount of such securities, of a single issue held by the bank, may not exceed 10 percent of the bank's capital and surplus (12 U.S.C 24 (seventh) and (12 C.F.R. 1.3(d)). The Board further ruled that any purchase of securities from the bank holding company's nonbank subsidiary by any of the bank holding company's subsidiary banks at other than current market values would constitute an unsafe or unsound practice.

3240.0.2 ADDING THE ACTIVITY TO REGULATION Y

Effective February 6, 1984, underwriting and dealing in U.S. government obligations and certain money market instruments was added to the list of permissible activities of Regulation Y. The regulation, which was amended in 1997, continues to place the same limitations as would be applicable if the activity were performed by the bank holding company's subsidiary member banks or its subsidiary nonmember banks as if they were member banks. (See Section 225.28(b)(8)(i) of Regulation Y.)

3240.0.3 REGULATION OF DEALER ACTIVITIES

While municipal securities dealers and dealers in government/agency securities are required to register as broker-dealers pursuant to the Securities Exchange Act of 1934, there are at present no registration requirements for firms that deal only in money market instruments. Regardless of whether a bank holding company subsidiary is registered as a broker-dealer with the Securities and Exchange Commission (SEC), Federal Reserve System examiners will conduct inspections to determine whether the subsidiary is in compliance with the provisions of Regulation Y or any specific conditions in a bank holding company order pertaining to the organization under inspection. In addition, examiners will need to focus on financial, managerial, and safety-and-soundness considerations in any bank holding company dealer subsidiary. In the event a firm is a registered broker-dealer subject to examination by the National Association of Securities Dealers (NASD), the inspection should be designed to prevent duplication of effort, relying on work performed by NASD examiners to the greatest extent possible, yet still evaluate the factors discussed above that are relevant for either registered or unregistered dealers.

Effective May 20, 1985, the Federal Reserve Bank of New York adopted a *Capital Adequacy Guideline for U.S. Government Securities Dealers.* The Federal Reserve Bank of New York recommends that U.S. government securities dealers that are not subject to federal oversight agree to comply voluntarily with the capital adequacy guideline. Hence, it is expected that any government securities dealer subject to System inspection will comply with the SEC's Uniform Net Capital Rule (17 C.F.R. 240.15c3-1).

3240.0.4 DEALER ACTIVITIES

A firm operates as a dealer when it underwrites or deals in securities or money market instruments. Those activities are usually distinguished as separate activities from normal investment activities. If the firm holds itself out to other dealers or investors as a dealer or engages in a repetitive pattern of short-term purchases and sales, the firm may be engaged in dealer activities, regardless of its stated investment activities.

As noted previously, when the Board added to the Regulation Y list of permissible activities the activities of underwriting and dealing in U.S. government securities, certain money market instruments, and municipal securities, the Board added a restriction that such nonbank activities be subject to the same restrictions as securities and money market instrument activities of member banks. Accordingly, the following discussion focuses upon *permissible securities activities of all member banks.*

3240.0.5 GOVERNMENT AND MUNICIPAL SECURITIES

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 U.S.C. 24). That authority is restricted by limitations on percentage holding of classes of securities as found in 12 C.F.R. 1.3. That regulation allows banks to deal in, underwrite, purchase, and sell type I securities without limit and type II securities limited to 10 percent of its capital and unimpaired surplus. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. (See section 2020.1 of the *Commercial Bank Examination Manual* for further information on type I, II, and III securities.)

There are three major types of securities transactions in which banks are involved. First, the bank may buy and sell securities on behalf of a customer. Those are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. Second, as a dealer, the bank buys and sells securities for its own account. That is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction. The third type of securities transaction frequently executed by banks is a contemporaneous ''riskless-principal trade.'' The dealer buys and sells qualified securities as a principal, with the purchase and sale originating almost simultaneously. Exposure to market risks is limited by the brief period of actual ownership, and profits result from dealer-initiated markup, the difference between the purchase and sale prices.

Dealers' securities transactions involve customers and other securities dealers. The word ''customer,'' as used in this section, means an investor. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes. The following subsections include general descriptions of significant areas of permissible trading and underwriting activities.

3240.0.6 U.S. GOVERNMENT SECURITIES TRADING

U.S. government security trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. The size of a transaction, the dealer efforts extended, and the nature of the security are common factors that affect the markup differential. Markups on government securities generally range between one and four thirty-seconds of a point. Long maturity issues may have higher markups.

The market risk inherent in U.S. government trading portfolios should be controlled by policy. Standards should be established to limit the total securities inventory and the amount of securities with similar yield or maturity characteristics. Limits imposed by policy should include commitments to purchase new governments on a when-issued basis.

Payments for and deliveries of U.S. government and most agency securities are settled on the business day following the trade. Government dealers and customers can negotiate same-day or delayed settlement for special situations, but the industry recognizes standard settlement as occurring on the trade date plus one business day.

3240.0.6.1 ''When-Issued'' Trading

A significant source of risk to dealers involves ''when-issued'' (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security issuance and payment date. The Dealer Surveillance Staff at the Federal Reserve Bank of New York began to require WI position reports from primary government securities dealers and request voluntary WI reports from certain other government securities dealers in 1984. At the time the reporting requirements were adopted, a senior official stated, ''The opportunity to trade with several dealers simultaneously without making payment could result in trading losses which exceed a participant's ability to settle.'' In essence, the fact that settlement date can extend to almost two weeks—as opposed to the ordinary next-day settlement—presents an opportunity for firms to engage in a large volume of trading without drawing on the firm's ability to purchase securities or effect delivery against short positions. Hence, there is increased credit risk in such transactions. Consequently, the dealer's trading position limits should include WI limits to protect against the increased credit risk associated with WI trading.

3240.0.6.2 Due Bills

A ''due bill'' is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and, alternatively, due bills received should be considered as lending transactions.

Registered broker-dealers are subject to the SEC's rule 15c3-3 (17 C.F.R. 240.15c3-3), ''Customer Protection—Reserves and Custody of Securities.” Basically, this rule states the principle that a broker-dealer needs to safeguard customer assets and cannot use such assets to fund its own business activities. While this rule is not directly applicable to unregistered U.S. government securities or money market instrument dealers, the principle is transferable. Dealers should not issue due bills as a means of obtaining operating funds or where the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe the collateral, if any, securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

3240.0.6.3 Clearance

Securities clearance services for the bulk of U.S. government and federal-agency security transactions are provided by the Federal Reserve as part of its telegraphic securities transfer system. The various Federal Reserve Banks will wire transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve’s systems also are used to facilitate security borrowings, loans, and pledges. Hence, the securities firm will need to use the services of a clearing bank.

3240.0.6.4 Short Sales

Another area of U.S. government security activity involves short-sale transactions. A short sale is the sale and delivery of a security that the seller does not own. It is accomplished by borrowing the security for delivery. The borrowed security is collateralized by an appropriate amount of a similar security. Short sales are conducted to accommodate customer orders, to obtain funds by leveraging existing assets, to hedge the market risk of other assets, or with the expectation that the market price of the sold security will decline sufficiently to allow the bank to complete the transaction by purchasing an equivalent security at a later date and a lower price.

3240.0.6.5 Arbitrage

Arbitrage is the coordinated purchase and sale of two securities or of a security and a futures or options contract in which there is a relative market imbalance. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage opportunities take many forms and can exist whenever segments of the securities markets are subject to a yield variance.

Exposure on arbitrage and/or short sales should be closely monitored for compliance with predetermined objectives. Risk should be controlled by point-spread limits coordinated with stop-loss buy provisions or sell provisions and by guidelines on the length of time a short position can remain uncovered.

3240.0.7 MONEY MARKET TRADING

Aside from short-term securities, banks customarily trade a substantial volume of other money market instruments such as banker’s acceptances. It should be noted that the Supreme Court has opined that commercial paper is a Glass-Steagall security.

3240.0.7.1 Banker’s Acceptances

Banker’s acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year.

3240.0.7.2 Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of $100,000 to $1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities often longer.

Money market instruments trade with the same-day or one-day settlement. Publicly quoted yields or dollar prices are usually based on round lot trades of $1 million, except for commercial paper, which trades in round lots of $250,000. Odd-lot prices may vary, but because of the large dollar volume of most trades, the percentage spread between the acquisition cost and sale price is characteristically modest.

Management should attempt to minimize market risk by establishing a maximum holding limit for each class of money market instrument. Policy guidelines also should establish concentration limits for money market instruments issued by a single obligor. Such limits should include commitments.

A sound money market trading policy recognizes the need for a qualitative analysis of the issuers of instruments. Credit approvals should be obtained before trading in CDs and acceptances, and reviews should be conducted on a regular schedule.

Banks dealing in money market instruments are subject to a number of legal restrictions. The sale of federal funds by a member bank to a bank affiliate is limited under section 23A (12 U.S.C. 371(c)) and subject to the restrictions of section 23B of the Federal Reserve Act (12 U.S.C. 371(c-1)). The acquisition, as principal, of a certificate of deposit issued by an affiliate bank also is subject to section 23A limitations and section 23B restrictions. These restrictions do not apply to transactions between bank subsidiaries that are 80 percent or more commonly owned by a bank holding company. These transactions must be conducted on terms that are consistent with safe and sound banking practices.

3240.0.8 REPURCHASE AGREEMENTS AND SECURITIES LENDING

The overwhelming majority of a government security dealer's inventory is financed by repurchase agreements. In addition, many dealers operate a "matched book" repo operation whereby they finance the acquisition or carrying of securities by customers through reverse repurchase agreements and contemporaneously obtain funding for such transactions through the sale of the same or similar securities under a repurchase agreement. In addition, securities dealers often lend or borrow specific issues to effect delivery against short positions or because of failure to receive securities required to be delivered. For prudential guidelines that have been issued to financial institutions in connection with repurchase agreements and securities lending, see the FFIEC supervisory policy statements at sections 2140.0 and 2150.0, which have been adopted by the Federal Reserve Board.

Firms enter into "reverse repos" to finance the U.S. government securities inventory of other dealers or mortgage bankers who have originated pools of mortgages to back federal housing agency securities. Repos are sold to customers in lieu of certificates of deposit. Customers find them attractive because interest can be paid on repos having maturities of less than seven days and because customer funds are collateralized by the security underlying the repurchase transaction.

The rate of interest received and paid is generally dictated by prevailing market rates. Profits are based on a modest positive spread between interest earned and interest paid. A dealer may attempt to improve that modest profit by increasing the volume of such transactions, using the proceeds to finance or pyramid the acquisition of reverse repos or securities to be used in additional repo arrangements.

A common dealer strategy is to vary resale and repurchase maturities in anticipation of interest-rate movements. If an upward rate trend is expected, the dealer will attempt to lock in a cheaper source of funds at the current low rate by negotiating longer maturities for repos and shorter maturities for reverse repos. Conversely, if interest rates are expected to decline, the dealer attempts to negotiate longer-maturity reverse repos to ensure continuing higher earnings, while negotiating shorter-maturity repos to take advantage of cheaper future sources of funds. Care should be taken to limit exposure by instituting policy guidelines that—

1. limit the aggregate amounts of reverse repo and repo positions,
2. specify acceptable amounts of funds for unmatched or extended maturity transactions,
3. determine maximum time gaps for unmatched maturity transactions and minimally acceptable interest-rate spreads for various maturity agreements, and
4. follow the prudential guidelines in the FFIEC's policy statement on repurchase agreements and securities lending. (See sections 2140.0 and 2150.0.)

3240.0.9 POLICY SUMMARY

The legal responsibilities of directors require that they ensure that dealer activities are conducted on a sound and legal basis that can only be accomplished if the directors endorse a written trading policy that addresses each area of market and legal risk. Written policy guidelines should be distributed to each individual engaged in trading activities.

3240.0.10 SCOPE OF THE INSPECTION

The scope of inspection will vary depending on the types of securities or money market instrument underwriting, dealing, and brokerage activities conducted by the subsidiary. Examiners may encounter situations in which a securities subsidiary is an SEC-registered broker-dealer because the subsidiary also executes transactions in municipal securities.

Registered broker-dealers are required to become members of the NASD or some other "self-regulatory organization." To avoid unnecessary regulatory overlap, examiners can rely on the NASD's compliance examination with respect to investor protection, including compliance with rules of the SEC, NASD, and Municipal Securities Rulemaking Board (MSRB), and the Board's Regulation T governing securities credit (if applicable). Consequently, in commencing such an inspection, examiners should begin by requesting and reviewing the NASD's most recent examination letter to the broker-dealer and serious violations that could endanger the banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits). Significant violations that have not yet been corrected should be noted in the bank holding company report.

Federal Reserve examiners retain responsibility for inspecting certain areas of registered broker-dealer operations regardless of whether the NASD reviews them. Specifically, System examiners should still evaluate management, financial results, and safety-and-soundness considerations, including internal controls. In addition, examiners still need to verify that registered broker-dealer subsidiaries comply with the provisions of Regulation Y, section 225.28(b)(8)(i), or specific Board orders pertaining to the firm under inspection. Finally, the examiner should be prepared to review in-depth any activities or money market instruments that are not securities that might not have been reviewed by the NASD because the activities are outside their scope of examination.

3240.0.11 INSPECTION OBJECTIVES

1. To determine if the policies, practices, procedures, and internal controls regarding dealer activities are adequate.
2. To determine if officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit-compliance functions.
5. To determine compliance with applicable laws and regulations, including 12 C.F.R. 225.28(b)(8)(i).
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

3240.0.12 INSPECTION PROCEDURES

1. Review the adequacy of the dealer's internal controls. (See section 3240.0.13.)
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the inspection.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal and External Audits," and determine if corrections have been accomplished.
4. Obtain a copy of the latest letter received from the self-regulatory organization responsible (if applicable) for examining broker-dealer activities of this subsidiary.
5. Request that the firm provide the following schedules:
   a. aged schedule of securities that have been acquired as a result of underwriting activities
   b. aged schedule of trading-account securities and money market instruments held for trading or arbitrage purposes, which should reflect commitments to purchase

and sell securities and all joint-account interests

c. schedule of short-sale transactions
d. aged schedule of due bills
e. list of bonds borrowed
f. aged schedule of "fails" to receive or deliver securities on unsettled contracts
g. schedule of approved securities borrowers and approved limits
h. schedule of loaned securities
i. schedule detailing account names and/or account numbers of the—
   - affiliated banks' permanent portfolio accounts;
   - personal accounts maintained at the firm by its employees;
   - accounts of brokers or other dealers; and
   - personal accounts of employees of other brokers, dealers, or municipal securities dealers
j. list of all joint accounts entered into since the last examination
k. list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid
l. list of all financial advisory relationships

6. Compare balances of appropriate schedules to the general ledger and review reconciling items for reasonableness.
7. Determine the extent and effectiveness of trading-policy supervision by—
   a. reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee,
   b. determining that proper authorization for the trading officer or committee has been made,
   c. ascertaining the limitations or restrictions on delegated authorities,
   d. evaluating the sufficiency of analytical data used in the most recent board or committee trading-department review,
   e. reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law, and
   f. reaching a conclusion about the effectiveness of director supervision of the trading policy. Prepare a memo for the examiner assigned "Duties and Responsibilities of Directors" stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)

8. Ascertain the general character of underwriting and direct-placement activities and ascertain the effectiveness of department management by reviewing underwriter files and ledgers, committee reports, and offering statements to determine—
   a. the significance of underwriting activities and direct placements of securities as reflected by the volume of sales and profit or loss on operations (compare current data to comparable prior periods);
   b. whether there is a recognizable pattern in—
      - the extent of analysis of material information relating to the ability of the issuer to service the obligation,
      - rated quality of offerings,
      - point spread of profit margin for unrated issues,
      - geographic distribution of issuers, and
      - syndicate participants, and
   c. the volume of outstanding bids. Compare current data to comparable prior periods.
9. Determine the general character of trading-account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets, and position records for various categories of trading activity and determining—
   a. the significance of present sales volume compared to comparable prior periods and departmental budgets;
   b. whether the firm's objectives are compatible with the volume of trading activity;
   c. significant inventory positions taken since the prior examination and determining if—
      - the quality and maturity of the inventory position was compatible with prudent practices, and
      - the size of the position was within prescribed limits and compatible with a sound trading strategy
   d. the exposure on offsetting repurchase transactions by—
      - reviewing the maturities of offsetting "repo" and "reverse repo" agreements to ascertain the existence, duration, amounts, and strategy used to manage unmatched maturity "gaps" and extended (over 30 days) maturities;
      - reviewing records since the last inspection to determine the aggregate amounts of—

— matched repurchase transactions and
— "reverse repo" financing extended to one or related firms(s); and
- performing credit analyses of significant concentrations with any single or related entities.

10. Determine the extent of risk inherent in trading-account securities which have been in inventory in excess of 30 days.
    a. Determine the dollar volume in extended holdings.
    b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
    c. Determine the current market value for individual issues which show an internal valuation markdown of 10 percent or more.
    d. Perform credit analyses on the issuers of nonrated holdings identified as significant positions.
    e. Perform credit analyses on those issues with valuation writedowns considered significant relative to the scope of trading operations.
    f. Discuss plans for disposal of slow-moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.
11. Using an appropriate technique, select issues from the schedule of trading-account inventory. Test valuation procedures by—
    a. reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed;
    b. comparing dealer-prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date "bid" prices); and
    c. investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine—
    a. the degree of speculation reflected by basis-point spreads,
    b. present exposure shown by computing the cost to cover short sales, and
    c. if transactions are reversed in a reasonable period of time.
13. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items (fail to receive securities and fail to deliver securities) that are a week or more beyond settlement date and determine—
    a. the amount of extended fails,
    b. the planned disposition of extended fails,
    c. if the control system allows a timely, productive follow-up on unresolved fails,
    d. the reasons for cancellations, and
    e. the planned disposition of securities that have been inventoried before the recognition of a fail or a cancellation.
14. Determine compliance with applicable laws, rulings, and regulations by performing the following:
    a. *12 C.F.R. 1.3—eligible securities.*
       - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the affiliated lead bank's capital and unimpaired surplus are type I securities.
       - Determine that the total par value of type II investments does not exceed 10 percent of the affiliated lead bank's capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
       - Elicit management's comments and review underwriting records on direct placement of type II securities and determine if the broker-dealer is dealing or engaging in impermissible direct placement of type III securities.
    b. *Sections 23A and 23B of the Federal Reserve Act (12 U.S.C. 371(c) and 375)—preferential treatment.* Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, including securities-clearance services, involving affiliates, insiders, or their interests are on terms less favorable to the bank than those transactions involving unrelated parties.
15. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by—
    a. reviewing transactions, including U.S. government tender-offer subscription files, involving employees and directors of dealer or other banks, and determining if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans,
    b. reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an addi-

tional markup and that gains were not recognized a second time,

c. reviewing securities position records and customer ledgers with respect to large-volume repetitive purchase and sales transactions and—
   - independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties, and
   - investigating the purchase of large blocks of securities from dealer firms just prior to month-end and their subsequent resale to the same firm just after the beginning of the next month

d. reviewing customer-complaint files and determining the reasons for such complaints.

16. Discuss with an appropriate officer and prepare report comments concerning—
    a. the soundness of trading objectives, policies, and practices;
    b. the degree of legal and market risk assumed by trading operations;
    c. the effectiveness of analytical, reporting, and control systems;
    d. violations of law;
    e. internal control deficiencies;
    f. apparent or potential conflicts of interest; and
    g. other matters of significance.
17. Reach a conclusion regarding the quality of department management and state your conclusions on the appropriate inspection report pages.
18. Update workpapers with any information that will facilitate future inspections.

3240.0.13 REVIEW OF INTERNAL CONTROLS

As a part of carrying out the inspection procedures for this activity, the examiner is expected to review the dealer's system of internal controls. The examiner should concentrate the internal controls review on the policies, practices, and procedures of the firm.

The system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. *Items marked with asterisks require substantiation by observation or testing.*

3240.0.13.1 Securities Underwriting Trading Policies

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that—
   a. outline objectives?
   b. establish limits and/or guidelines for the following:
      - price markups?
      - quality of issues?
      - maturity of issues?
      - inventory positions (including when-issued (WI) positions)?
      - amounts of unrealized loss on inventory positions?
      - length of time an issue will be carried in inventory?
      - amounts of individual trades or underwriter interests?
      - acceptability of brokers and syndicate partners?
   c. recognize possible conflicts of interest and establish appropriate procedures regarding—
      - deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
      - deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
      - transfers made between trading-account inventory and affiliated investment portfolio(s)?
      - the affiliated bank's trust department acting as trustee, paying agent, and transfer agent for issues which have an underwriting relationship with the trading department?
   d. state procedures for periodic, monthly or quarterly, valuation of trading inventories to market value?
   e. state procedures for periodic independent verification of valuations of the trading inventories?
   f. outline methods of internal review and reporting by department supervisors and internal auditors to ensure compliance with established policy?
   g. identify permissible types of securities?
2. Are the underwriting/trading policies reviewed at least quarterly by the board of directors to determine their adequacy in light of changing conditions?

3. Is there a periodic review by the board to ensure that the underwriting/trading department is in compliance with its policies?

3240.0.13.2 Offsetting Resale and Repurchase Transactions

1. Has the board of directors, consistent with its duties and responsibilities, adopted written offsetting repurchase transaction policies that—
   a. limit the aggregate amount of offsetting repurchase transactions?
   b. limit the amounts in unmatched or extended (over 30 days) maturity transactions?
   c. determine maximum time gaps for unmatched maturity transactions?
   d. determine minimally acceptable interest-rate spreads for various maturity transactions?
   e. determine the maximum amount of funds to be extended to any single or related firms through "reverse repo" transactions involving unsold (through forward sales) securities?
   f. require firms involved in reverse repo transactions to submit corporate resolutions stating the names and limits of individuals who are authorized to commit the firm?
   g. require submission of current financial information by firms involved in reverse repo transactions?
   h. provide for periodic credit reviews and approvals for firms involved in reverse repo transactions?
   i. specify types of acceptable offsetting repurchase transaction collateral?
   j. require receipt of assurance letters that unregulated securities dealers comply with the Federal Reserve Bank of New York's "Capital Adequacy Guideline for U.S. Government Securities Dealers?"
2. Are written collateral-control procedures designed so that—
   a. collateral assignment forms are used?
   b. collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner, and are registered securities registered in the dealer or dealer's nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse repo transactions?
   c. funds are not disbursed until reverse repo collateral is delivered into the physical custody of the dealer or an independent safekeeping agent?
   d. funds are only advanced against predetermined collateral margins or discounts?
   e. collateral margins or discounts are predicated upon the following:
      - the type of security pledged as collateral?
      - maturity of collateral?
      - historic and anticipated price volatility of the collateral?
      - creditworthiness of the counterparty?
      - maturity of the reverse repo agreements?
      - accrued interest?
   f. maintenance agreements are required to support predetermined collateral margin or discount by daily mark to market of repurchase agreement securities?
   g. maintenance agreements are structured to allow for obtaining additional securities or cash calls in the event of collateral price declines?
   h. collateral market value is frequently checked to determine compliance with margin and maintenance requirements?

3240.0.13.3 Custody and Movement of Securities

*1. Are the dealer's procedures such that persons do not have sole custody of securities in that—
   a. they do not have sole physical access to securities?
   b. they do not prepare disposal documents that are not also approved by authorized persons?
   c. for the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
   d. no person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?
2. Are securities physically safeguarded to prevent loss, unauthorized disposal, or use?
   a. Are negotiable securities kept under dual control?
   b. Are securities counted frequently on a surprise basis and reconciled to the securities record? Are the results of such counts reported to management?
   c. Does the dealer periodically test for

compliance with provisions of its insurance policies regarding custody of securities?

d. For securities in the custody of others—
   - are custody statements agreed periodically to position ledgers, and any differences followed up to a conclusion?
   - are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
   - are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?

3. Are trading-account securities segregated from other dealer-owned securities or securities held in safekeeping for customers?

*4. Is access to the trading-securities vault restricted to authorized employees?

5. Do withdrawal authorizations require countersignature to indicate security count verifications?
6. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?
7. Are prenumbered forms used to control securities trades, movements, and payments?
8. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?
9. Do alterations to forms governing the trade, movement, and payment of securities require—
   *a. signature of the authorizing party?
   b. use of a change-of-instruction form?
10. With respect to negotiability of registered securities—
    a. are securities kept in non-negotiable form whenever possible?
    b. are all securities received and not immediately delivered transferred to the name of the dealer or its nominee and kept in non-negotiable form whenever possible?
    c. are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

3240.0.13.4 Purchase and Sales Transactions

1. Are all transactions promptly confirmed in writing to the actual customers or dealers?
2. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including approval by a designated responsible employee)? Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?
3. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated? Are comparisons approved by a designated individual?

3240.0.13.5 Customer and Dealer Accounts

1. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
2. Are letters mailed to customers requesting confirmation of changes of address?
3. Are separate customer-account ledgers maintained for—
   a. employees?
   b. affiliates?
   c. affiliated bank's trust accounts?
4. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?

3240.0.13.6 Other

1. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?
2. Are subsidiary records reconciled, at least monthly, to the appropriate general-ledger accounts, and are reconciling items adequately investigated by persons who do not also have sole custody of securities?
3. Are fails to receive and deliver under a separate general-ledger control?
   a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?

b. Are periodic aging schedules prepared?
c. Are stale fail items confirmed and followed up to a conclusion?
d. Are stale items valued periodically, and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?

4. With respect to securities loaned and borrowed positions—
   a. are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
   b. are positions confirmed periodically?
   c. are all policies and procedures in conformance with the FFIEC policy on securities lending contained section 2140.0?

3240.0.14 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Authorization for state member banks of the Federal Reserve System to underwrite and deal in obligations of the United States, various states, and political subdivisions and other authorized obligations for state member banks	24 (7), 335	250.120 250.121 250.122 250.123 250.142	3–414.94 3–414.95 3–414.96 3–414.97 3–415.2 2–425.11

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

4(c)(8)—Agency Transactional Services (Futures Commission Merchants and Futures Brokerage) Section 3250.0

A futures commission merchant (FCM) is an entity referred to in the Commodity Exchange Act to denote a registered firm that is in the business of soliciting or accepting orders, as broker, for the purchase or sale of any exchange-traded futures contract and options thereon. For the purposes of this examiner guidance, the term ''FCM activities'' is used in a broad context and refers to all futures brokerage activities, operations, and their associated risks that are subject to the Federal Reserve System's supervision. In connection with these activities, banking organizations may hold customer funds, assets, or property and may be members of futures exchanges and their associated clearinghouses. They may also offer related advisory services as registered commodity trading advisers (CTAs). The guidance addresses the expanding scope of futures activities conducted by different types of banking organizations worldwide and implements supervisory initiatives to effect more risk-focused and burden-sensitive approaches to the supervision of FCM activities. The guidance is designed to help examiners (1) assess how well a consolidated financial organization manages one or more discrete futures brokerage operations and (2) make a broader assessment of the organization's overall risk management.

The guidance pertains to FCM subsidiaries of bank holding companies (BHCs), but it is also applicable to FCM subsidiaries of state member banks, Edge Act corporations, and foreign banking organizations. It addresses the broader scope of permissible futures brokerage activities articulated within Regulation Y[1] and, by extension, in Regulation K, and focuses on the adequacy of management and the management processes used to control the credit, market, liquidity, reputation, and operations risks entailed in these activities, including brokerage, clearing, funds management, and advisory services.

The guidance takes a global line-of-business supervisory approach to the inspection of FCM activities rather than using the traditional full-scope inspections of individual FCM subsidiaries, many of which are primarily supervised by functional regulators. Reviews and reports of functional regulators should be used to the fullest extent when planning and conducting inspections of FCM activities of bank holding companies and other banking organizations to avoid duplication and minimize supervisory burdens. However, in conducting an inspection of various aspects of an FCM's activities, a review of various functions, derived from a sample of the organization's FCM subsidiaries, may be necessary and appropriate to determine the extent of the risks these operations pose to the banking organization and to determine whether management of those risks is satisfactory. The examiner should pay particular attention to activities conducted in FCM subsidiaries that have not been subject to a regular inspection by their functional regulator and to FCM activities of foreign affiliates in which there is uncertainty concerning the level of local supervision.

BHC subsidiaries, banks (generally through operating subsidiaries), Edge Act corporations, and foreign banking organizations (FBOs) operating in the United States may operate futures brokerage and clearing services involving a myriad of financial and nonfinancial futures contracts and options on futures. These activities can involve futures exchanges and clearinghouses throughout the world. In general, most organizations conduct these activities as FCMs.

The Federal Reserve has a supervisory interest in ensuring that the banking organizations subject to its oversight conduct their futures brokerage activities in a safe and sound manner consistent with Regulations Y and K (and with any terms and conditions in Board orders for a particular organization). Accordingly, a review of futures brokerage activities is an important element for inspections of BHCs, examinations of state member banks, and reviews of FBO

1. The Board broadened the scope of permissible FCM nonbanking activities for a bank holding company with the revision of Regulation Y, effective April 21, 1997. For example, the following activities are permissible:

- Derivative contracts can be executed and cleared on a broad range of nonfinancial commodities.
- Derivative contracts can be cleared without simultaneously providing execution services. Likewise, execution services can be provided without also providing clearing services.
- Foreign-exchange transactional services can be provided in the same FCM subsidiary that provides advice regarding foreign exchange.
- Bank holding companies can engage in FCM activities through a section 20 subsidiary.
- An FCM nonbanking subsidiary can trade for its own account.
- An FCM nonbanking subsidiary may act on exchange-traded futures contracts and on options on futures contracts based on a financial or nonfinancial commodity.
- A bank holding company may combine FCM activities and incidental activities. For example, FCM activities may be combined with futures-related financing to customers, such as financing to cover margin obligations (note: such financing may be prohibited by some exchanges).

operations. The following guidance on evaluating the futures brokerage activities of bank holding company subsidiaries, branches and agencies of foreign banks operating in the United States, or any operating subsidiaries of state member banks provides a list of procedures that may be used to tailor the scope of an inspection of these activities.

3250.0.1 SCOPE OF GUIDANCE

Examiners are to use a risk-based inspection approach to evaluating FCM activities—including brokerage, clearing, funds management, and advisory activities. Significant emphasis should be placed on evaluating the adequacy of management and the management processes used to control the credit, market, liquidity, legal, reputation, and operations risks entailed in these operations. Both the adequacy of risk management and the quantitative level of risk exposures should be assessed, as appropriate to the scope of the FCM's activities. The objectives of a particular inspection should dictate the FCM activities to be reviewed and set the scope of the inspection.

Examiners are to use a functional-regulatory approach (consistent with section III of the Gramm-Leach-Bliley Act) to minimize duplicative inspection and supervisory burdens. Reviews and reports of functional regulators should be used to their fullest extent. For the examination authority and limitations on the examination of a functionally regulated subsidiary, see section 1040.0 and 12 U.S.C. 1844(c).

When futures brokerage occurs in more than one domestic or foreign affiliate, examiners should assess, using a functional-regulatory approach (consistent with section III of the Gramm-Leach-Bliley Act), the adequacy of the management of the futures brokerage activities of the consolidated financial organization to ensure that the parent organization recognizes and effectively manages the risks posed by its various futures brokerage subsidiaries. Accordingly, in reviewing futures brokerage operations, examiners should identify all bank holding company, bank operating, or FBO subsidiaries that engage in FCM activities and the scope of those activities. Not all subsidiaries may need to be reviewed to assess the risk management of the consolidated organization. Selection of the particular FCM subsidiaries to be reviewed should be based on an assessment of the risks their activities pose to the consolidated organization.

This guidance primarily addresses the assessment of activities associated with futures brokerage operations. Any proprietary trading that occurs at an FCM should be assessed in connection with the review of proprietary trading activities of the consolidated financial organization, using the appropriate guidance in the Federal Reserve's *Trading and Capital-Markets Activities Manual.* Similarly, when a review of futures advisory activities is planned, examiners should refer to investment, financial, and futures advisory inspection guidance in this manual (sections 3130.0 and 3130.4), as appropriate.

3250.0.2 EVALUATION OF FCM RISK MANAGEMENT

Consistent with existing Federal Reserve policies, examiners should evaluate the risk-management practices of FCM operations and ensure that this evaluation is incorporated appropriately in the rating of risk management under the bank CAMELS, BHC RFI/C(D), or FBO ROCA rating systems. Accordingly, examiners should place primary consideration on findings related to the adequacy of (1) board and senior management oversight; (2) policies, procedures, and limits used to control risks; (3) systems for measuring, monitoring, and reporting risk; and (4) internal controls and audit programs.

3250.0.2.1 Board and Senior Management Oversight

The board of directors has the ultimate responsibility for the level of risks taken by the organization. Accordingly, the board, a designated subcommittee of the board, or a high level of senior management should approve overall business strategies and significant policies that govern risk-taking in the organization's FCM activities. In particular, the board or a committee thereof should approve policies that identify authorized activities and managerial oversight and should articulate risk tolerances and exposure limits of FCM activities. The board should also actively monitor the performance and risk profile of its FCM activities. Directors and senior management should periodically review information that is sufficiently detailed and timely to allow them to understand and assess the various risks involved in these activities. In addition, the board or a delegated committee should periodically reevaluate the business strategies and major risk-management policies and procedures, emphasizing the organization's financial objectives and risk tolerances.

The FCM's senior management is responsible for ensuring that policies and procedures for conducting FCM activities on both a long-range and day-to-day basis are adequate. Senior management or a designated subcommittee of the board should review and approve these policies and procedures annually. The consistency of these policies with parent company limits or other directions pertaining to the FCM's activities should be confirmed. Management must also maintain (1) clear lines of authority and responsibility for managing operations and the risks involved, (2) appropriate limits on risk-taking, (3) adequate systems and standards for measuring and tracking risk exposures and measuring financial performance, (4) effective internal controls, and (5) a comprehensive risk-reporting and risk-management review process. To provide adequate oversight, management should fully understand the risk profile of FCM activities. Examiners should review reports given to senior management and evaluate whether they consist of good summary information and sufficient detail that will enable management to assess and manage the FCM's risk. As part of its oversight responsibilities, senior management should periodically review the organization's risk-management procedures to ensure that they remain appropriate and sound.

Management should also ensure that activities are conducted by competent staff whose technical knowledge and experience are consistent with the nature and scope of the organization's activities. There should be sufficient depth in staff resources to manage these activities if key personnel are not available. Management should also ensure that back-office and financial-control resources are sufficient to effectively manage and control risks. Functions for measuring, monitoring, and controlling risk should have clearly defined duties. There should be adequate separation of duties in key elements of the risk-management process to avoid potential conflicts of interest. The nature and scope of these safeguards should be in accordance with the scope of the FCM's activities.

3250.0.2.2 Policies, Procedures, and Limits

FCMs should maintain written policies and procedures that clearly outline their approach for managing futures brokerage and related activities. Such policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and general willingness to take risk. Policies, procedures, and limits should address the relevant credit, market, liquidity, reputation, and operations risks in light of the scope and complexity of the FCM's activities. Policies and procedures should establish a logical framework for limiting the various risks involved in an FCM's activities and should clearly delineate lines of responsibility and authority over these activities. They should also address the approval of new product lines, strategies, and other activities; conflicts of interest, including transactions by employees; and compliance with all applicable legal requirements. Procedures should incorporate and implement the parent company's relevant policies and should be consistent with applicable statutes, Federal Reserve Board regulations, interpretations, Board orders, and supervisory policies and guidance.

A sound system of integrated limits and risk-taking guidelines is an essential component of the risk-management process. Such a system should set boundaries for organizational risk-taking and ensure that positions that exceed certain predetermined levels receive prompt management attention so they can be either reduced or prudently addressed.

3250.0.2.3 Risk Measurement, Monitoring, and Reporting

An FCM's system for measuring the credit, market, liquidity, and other risks involved in its activities should be as comprehensive and accurate as practicable and should be commensurate with the nature of its activities. Risk exposures should be aggregated across customers, products, and activities to the fullest extent possible. Examiners should evaluate whether the risk measures and the risk-measurement process are sufficiently robust to accurately reflect the different types of risks facing the organization. Clear standards for measuring risk exposures and financial performance should be established. The standards should provide a common framework for limiting and monitoring risks and should be understood by all relevant personnel.

An accurate, informative, and timely management information system is essential to the prudent operation of an FCM. Accordingly, the examiner's assessment of the quality of the management information system is an important factor in the overall evaluation of the risk-management process. Appropriate mechanisms should exist for reporting risk exposures and the financial performance of the FCM to its board and parent company, as well as for internal management purposes. FCMs must establish management-reporting policies to apprise their boards of directors and senior management of material developments, the adequacy of risk management, operating and financial performance, and material deficiencies identified during reviews by regulators and by internal or external audits. The FCM should also provide reports to the parent company (or in the case of foreign-owned FCMs, to its U.S. parent organization, if any) on financial performance; adherence to risk parameters and other limits and controls established by the parent for the FCM; and any material developments, including findings of material deficiencies by regulators. Examiners should determine the adequacy of an FCM's monitoring and reporting of its risk exposure and financial performance to appropriate levels of senior management and to the board of directors.

3250.0.2.4 Internal Controls

An FCM's internal control structure is critical to its safe and sound functioning in general and to its risk-management system in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and appropriate separation of duties—such as trading, custodial, and back office—is one of management's more important responsibilities. Appropriately segregating duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice, possibly leading to serious losses or otherwise compromising the financial integrity of the FCM.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and organizational policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the entity's board of directors or its designated committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management's responses to them. In addition, communication channels should exist that will allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee (for example, a board audit committee).

3250.0.3 FUTURES EXCHANGES, CLEARINGHOUSES, AND FCMs

Futures exchanges provide auction markets for standardized futures and options on futures contracts. In the United States and most other countries, futures exchanges and FCMs are regulated by a governmental agency. Futures exchanges are membership organizations and impose financial and other regulatory requirements on members, particularly those that do business for customers as brokers. In the United States and most other countries, futures exchanges also have quasi-governmental (self-regulatory) responsibilities to monitor trading and prevent fraud, with the authority to discipline or sanction members that violate exchange rules. FCMs may be members of the exchange on which they effect customers' trades. When they are not members, FCMs must use other firms that are exchange members to execute customer trades.[2]

Each futures exchange has an affiliated clearinghouse responsible for clearing and settling trades on the exchange and for managing associated risks. When a clearinghouse accepts transaction information from its clearing members, it generally guarantees the performance of the transaction to each member and becomes the counterparty to the trade (that is, the buyer to every seller and the seller to every buyer). Daily cash settlements are paid or collected by clearing members through the clearinghouse. The cash transfers represent the difference between the original trade price and the daily official closing settlement price for each commodity futures contract. The two members settle their sides of the transaction with the clearinghouse,

2. A firm or trading company that maintains only a proprietary business may become a member of an exchange without registering as an FCM.

usually by closing out the position before delivery of the futures contract or the expiration of the option on the futures contract.

An exchange member that wishes to clear or settle transactions for itself, customers, other FCMs, or commodity professionals (locals or market makers) may become a member of the affiliated clearinghouse (clearing member) if it is able to meet the clearinghouse's financial-eligibility requirements. In general, these requirements are more stringent than those required for exchange membership. For example, a clearing member usually is required to maintain a specified amount of net capital in excess of the regulatory required minimum and to make a guaranty deposit as part of the financial safeguards of the clearinghouse. The size of the deposit is related to the scale of the clearing member's activity. If it is not a member of the clearinghouse for the exchange on which a contract is executed, an FCM must arrange for another FCM that is a clearing member to clear and settle its transactions.[3]

Margin requirements are an important risk-management tool for maintaining the financial integrity of clearinghouses and their affiliated exchanges. Clearinghouses require that their members post initial margin (performance bond) on a new position to cover potential credit exposures borne by the clearinghouse. The clearing firm, in turn, requires its customers to post margin. At the end of each day, and on some exchanges on an intraday basis, all positions are marked to the market. Clearing members with positions that have declined in value pay the amount of the decline in cash to the clearinghouse, which then pays the clearing members holding positions that have increased in value on that day. This process of transferring gains and losses among clearing-member firms, known as collecting variation margin, is intended to periodically eliminate credit-risk exposure from the clearinghouse.[4] In volatile markets, a clearinghouse may call for additional variation margin during the trading day, sometimes with only one hour's notice, and failure to meet a variation (or initial) margin call is treated as a default to the clearinghouse.

Some clearinghouses also require that their members be prepared to pay loss-sharing assessments to cover losses sustained by the clearinghouse in meeting the settlement obligations of a clearing member that has defaulted on its (or its customers') obligations. Such assessments arise when losses exceed the resources of defaulting members, the guaranty fund, and other surplus funds of the clearinghouse. Each clearinghouse has its own unique loss-sharing rules.[5] At least one U.S. and one foreign exchange have unlimited loss-sharing requirements. Most U.S. clearinghouses relate loss-sharing requirements to the size of a member's business at the clearinghouse. Given the potential drain on a banking organization's financial resources, the exposure to loss-sharing agreements should be a significant consideration in the decision to become a clearing member. A parent bank holding company may not provide a guarantee or become liable to an exchange or clearing association other than for trades conducted by the subsidiary for its own account or for the account of any affiliate. (See section 225.28(b)(6)(iv) of Regulation Y.)

3250.0.4 COMMODITY EXCHANGE ACT, COMMODITY FUTURES TRADING COMMISSION, AND SELF-REGULATORY ORGANIZATIONS

In the United States, the primary regulator of exchange-traded futures activities is the Commodity Futures Trading Commission (CFTC), which was created by and derives its authority from the Commodity Exchange Act (CEA). The CFTC has adopted registration,[6] financial responsibility, antifraud, disclosure, and other rules for FCMs and CTAs, and has general enforcement authority over commodities firms and professionals that buy or sell exchange-traded futures contracts.

3. The nonmember FCM opens an account, usually on an omnibus basis, with the clearing-member FCM. Separate omnibus accounts have to be maintained for customer and noncustomer or proprietary trading activity. If the FCM does not carry customer accounts by holding customer funds and maintaining account records, the clearing member will carry the customer's account on a fully disclosed basis and issue confirmations, account statements, and margin calls directly to the customer on behalf of the introducing FCM. In such cases, the introducing FCM operates as an introducing broker (IB) and could have registered with the Commodity Futures Trading Commission as such.

4. Some foreign exchanges do not allow the withdrawal of unrealized profits as mark-to-market variation.

5. Clearinghouses usually (1) retain the right to use assets owned by clearing members, but under the control of the clearinghouse (for example, proprietary margin); (2) require additional contributions of funds or assets or require the member to purchase additional shares of the clearinghouse; or (3) perfect a claim against the member for its share of the loss.

6. Many FCMs also are SEC-registered as broker-dealers and are subject to SEC and CFTC financial-responsibility rules.

The futures exchanges, in addition to providing a marketplace for futures contracts, are deemed to be self-regulatory organizations (SROs) under the CEA. For example, a number of SROs have adopted detailed uniform practice rules for FCMs, including ''know your customer'' recordkeeping rules and other formal customer-disclosure requirements. The National Futures Association (NFA) also is an SRO, although it does not sponsor a futures exchange or other marketplace. The NFA has adopted sales-practice rules applicable to members who do business with customers. All FCMs that wish to accept orders and hold customer funds and assets must be members of the NFA.

The CEA and rules of the CFTC require the SROs to establish and maintain enforcement and surveillance programs for their markets and to oversee the financial responsibility of their members.[7] The CFTC has approved an arrangement under which a designated SRO (DSRO) is responsible for performing on-site audits and reviewing periodic reports of a member FCM that is a member of more than one futures exchange. The NFA is the DSRO for FCMs that are not members of any futures exchange.

Oversight of FCMs is accomplished through annual audits by the DSRO and the filing of periodic financial statements and early warning reports by FCMs, in compliance with CFTC and SRO rules. In summary, this oversight encompasses the following three elements:

1. *Full-scope audits at least once every other year of each FCM that carries customer accounts.* Audit procedures conform to a Uniform Audit Guide developed jointly by the SROs. The full-scope audit focuses on the firm's net capital computations, segregation of customer funds and property, financial reporting, recordkeeping, and operations.[8] The audit also reviews sales practices (including customer records, disclosures, advertisements, and customer complaints) and the adequacy of employee supervision. The audit's scope should reflect the FCM's prior compliance history as well as the examiner's on-site evaluation of the firm's internal controls. During the off-year, the DSROs perform limited-scope audits of member FCMs. This audit is limited to financial matters such as a review of the FCM's net capital computations, segregation of customer funds, and its books and records.
2. *FCM quarterly financial reporting requirements.* FCMs are required to file quarterly financial statements (form 1-FR-FCM) with their DSROs. The fourth-quarter statement must be filed as of the close of the FCM's fiscal year and must be certified by an independent public accountant. The filings generally include statements regarding changes in ownership equity, current financial condition, changes in liabilities subordinated to claims of general creditors, computation of minimum net capital, segregation requirements and funds segregated for customers, secured amounts and funds held in separate accounts, and any other material information relevant to the firm's financial condition. The certified year-end financial report also must contain statements of income and cash flows.
3. *Early warning reports.* FCMs are required to notify the CFTC and the SROs when certain financial weaknesses are experienced.[9] For example, if an FCM's net capital falls to a specified warning level, it must file a written notice within five business days and file monthly financial reports (form 1-FR-FCM) until its net capital meets or exceeds the warning level for a full three months. If an FCM's net capital falls below the minimum required, it must cease doing business and give telegraphic notice to the CFTC and any commodities or securities SRO of which it is a member. Similar notices must be given by a clearing organization or carrying FCM when it determines that a position of an FCM must be liquidated for failure to meet a margin call or other required deposit.

3250.0.5 FEDERAL RESERVE REGULATION OF FCMs AND CTAs

Bank holding companies are permitted, under Regulation Y (section 225.28(b)(7)(iv)), to engage

7. CFTC Rule 1.51, contract market program for enforcement, requires that SROs monitor market activity and trading practices in their respective markets, perform on-site examinations (audits) of members' books and records, review periodic financial reports filed by members, and bring disciplinary and corrective actions against members for violations of the CEA and CFTC and SRO rules.

8. If an FCM is also a broker-dealer, the DSRO is not required to examine the FCM for compliance with net capital requirements if the DSRO confers with the broker-dealer's examining authority at least annually to determine that the FCM is in compliance with the broker-dealer's net capital requirements and receives the DSRO copies of all examinations.

9. CFTC Rule 1.12 requires the maintenance of minimum financial requirements by FCMs and introducing brokers. These requirements are similar to those applicable to broker-dealers under SEC rules.

in FCM and CTA activities on both domestic and foreign futures exchanges through separately incorporated nonbank subsidiaries. As a general matter, the nonbank subsidiaries of bank holding companies (and some foreign banks) provide services to unaffiliated customers in the United States under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and to unaffiliated customers outside the United States under Regulation K.[10] Banks and the operating subsidiaries of banks usually provide futures-related services to unaffiliated parties in the United States under the general powers of the bank and to unaffiliated parties outside the United States under Regulation K. These various subsidiaries may provide services to affiliates under section 4(c)(1)(C) of the BHC Act.

Regulation Y permits a bank holding company subsidiary that acts as an FCM to engage in other activities in the subsidiary, including futures advisory services and trading, as well as other permissible securities and derivative activities as defined in sections 225.28(b)(6) (financial and investment advisory activities) and 225.28(b)(7) (agency transactional services for customer investments). Section 225.28(b)(7) specifically authorizes FCMs to provide agency services for unaffiliated persons in execution, clearance, or execution and clearance of any futures contract and option on a futures contract traded on an exchange in the United States and abroad. It also includes the authority to engage in other agency-type transactions (for example, riskless principal) involving a forward contract, an option, a future, an option on a future, and similar instruments. Furthermore, this section codifies the long-standing prohibition against a parent bank holding company's issuing any guarantees or otherwise becoming liable to an exchange or clearinghouse for transactions effected through an FCM, except for the proprietary trades of the FCM and those of affiliates.

A well-capitalized and well-managed bank holding company, as defined in section 225.2(r) and (s) of Regulation Y, respectively, may commence activities as an FCM or a CTA by filing a notice prescribed under section 225.23(a) of Regulation Y. Bank holding companies that are not eligible to file notices or that wish to act in a capacity other than as an FCM or CTA, such as a commodity pool operator (CPO), must follow the specific application process for these activities. Examiners should ensure that all of these activities are conducted in accordance with the Board's approval order.

A bank holding company, bank, or FBO parent company of an FCM is expected to establish specific risk parameters and other limits and controls on the brokerage operation. These limits and controls should be designed to manage financial risk to the consolidated organization and should be consistent with its business objectives and overall willingness to assume risk.

3250.0.6 PARTICIPATION IN FOREIGN MARKETS

FCMs frequently transact business on foreign exchanges as either exchange or clearinghouse members or through third-party brokers that are members of the foreign exchange. The risks of doing business in foreign markets generally parallel those in U.S. markets; however, some unique issues of doing business on foreign futures exchanges must be addressed by the FCM and its parent company to ensure that the activity does not pose undue risks to the consolidated financial organization.

Before doing business on a foreign exchange, an FCM should understand the legal and operational differences between the foreign exchange and U.S. exchanges. For example, the FCM should know about local business practices and legal precedents that pertain to business in the foreign market. In addition, the FCM should know how the foreign exchange is regulated and how it manages risk, and should develop policies and the appropriate operational infrastructure of controls, procedures, and personnel to manage these risks. Accordingly, examiners should confirm that, in considering whether and how to participate in a foreign market, an FCM performs due diligence on relevant legal and regulatory issues, as well as on local business practices. Foreign-exchange risks should be understood and authorized by the FCM's parent company, and any limits set by the parent company or FCM management should be carefully monitored. The FCM and its parent company also should assess the regulatory and financial risks associated with exchange and clearinghouse membership in a foreign market, including an understanding of the extent to which the

10. Those nonbank subsidiaries that operate in the United States may open offices outside the United States if (1) the bank holding company's authority under Regulation Y is not limited geographically, (2) the foreign office is not a separately incorporated entity, and (3) the activities conducted by the foreign office are within the scope of the bank holding company's authority under Regulation Y. In addition, a bank holding company may operate a limited foreign-based business in the United States under Regulation K. (See 12 C.F.R. 211.6.)

foreign clearinghouse monitors and controls day-to-day credit risk and its loss-sharing requirements.

3250.0.7 SPECIFIC RISKS AND THEIR RISK-MANAGEMENT CONSIDERATIONS

In general, FCMs face five basic categories of risk—credit risk, market risk, liquidity risk, reputation risk, and operations risk. The following discussions highlight specific considerations in evaluating the key elements of sound risk management as they relate to these risks. The compliance and internal-controls functions provide the foundation for managing the risks of an FCM.

3250.0.7.1 Credit Risk

FCMs encounter a number of different types of credit risks. The following discussions identify some of these risks and discuss sound risk-management practices applicable to each.

3250.0.7.1.1 Customer Credit Risk

Customer credit risk is the potential that a customer will fail to meet its variation-margin calls or its payment or delivery obligations. An FCM should establish a credit-review process for new customers that is independent of the marketing and sales function. It is not unusual for the FCM's parent company (or banking affiliate) to perform the credit evaluation and provide the necessary internal approvals for the FCM to execute and clear futures contracts for particular customers. In some situations, however, the FCM may have the authority to perform the credit review internally. Examiners should determine how customers are approved and confirm that documentation in the customer's credit files is adequate even when the approval is performed by the parent. Customer credit files should indicate the scope of the credit review and contain approval of the customer's account and credit limits. For example, customer credit files may contain recent financial statements, sources of liquidity, trading objectives, and any other pertinent information used to support the credit limits established for the customer. In addition, customer credit files should be updated periodically.

FCM procedures should describe how customer credit exposures will be identified and controlled. For example, an FCM could monitor a customer's transactions, margin settlements, or open positions as a means of managing the customer's credit risk. Moreover, procedures should be in place to handle situations in which the customer has exceeded credit limits. These procedures should give senior managers who are independent of the sales and marketing function the authority to approve limit exceptions and require that such exceptions be documented.

3250.0.7.1.2 Customer-Financing Risk

Several exchanges, particularly in New York and overseas, allow FCMs to finance customer positions. These exchanges allow an FCM to lend initial and variation margin to customers subject to taking the capital charges under the CFTC's (or SEC's) capital rules if the charges are not repaid within three business days. In addition, some exchanges allow FCMs to finance customer deliveries, again subject to a capital charge.

An FCM providing customer-financing services should adopt financing policies and procedures that identify customer-credit standards. The financing policies should be approved by the parent company and should be consistent with the FCM's risk tolerance. In addition, an FCM should establish overall lending limits for each customer based on a credit review that is analogous to that performed by a bank with similar lending services. The process should be independent of the FCM's marketing, sales, and financing functions, but it may be performed by the FCM's banking affiliate. Examiners should determine how customer-financing decisions are made and confirm that documentation is adequate, even when an affiliate approves the financing. In addition, the FCM should review financial information on its customers periodically and adjust lending limits when appropriate.

3250.0.7.1.3 Clearing-Only Risk

FCMs often enter into agreements to clear, but not execute, trades for customers. Under a "clearing-only" arrangement, the customer gives its order directly to an executing FCM. The executing FCM then gives the executed transaction to the clearing FCM, which is responsible for accepting and settling the transaction. Customers often prefer this arrangement because it provides the benefits of centralized clearing (recordkeeping and margin payments) with the flexibility of using a number of specialized brokers to execute transactions.

FCMs entering into clearing-only arrangements execute written give-up agreements, which are triparty contracts that set forth the responsibilities of the clearing FCM, the executing FCM, and the customer. Most FCMs use the ''uniform give-up agreement'' prepared by the Futures Industry Association, although some FCMs still use their own give-up contracts. The uniform give-up agreement permits a clearing FCM, upon giving prior notice to the customer and the executing FCM, to place limits or conditions on the transactions it will accept to clear or terminate the arrangement. If an executed transaction exceeds specified limits, the FCM may decline to clear the transaction unless it is acting as the qualifying or primary clearing FCM for the customer and has not given prior notice of termination.

Clearing-only arrangements can present significant credit risks for an FCM. An FCM's risk-management policies and procedures for clearing-only activities should address the qualifications required of clearing-only customers and their volume of trading, the extent to which customer-trading activities can be monitored by the clearing-FCM at particular exchanges, and how aggregate risk will be measured and managed.

The FCM should establish trading limits for each of its clearing-only customers and have procedures in place to monitor their intraday trading exposures. The FCM should take appropriate action to limit its liability either by reviewing and approving a limit exception or by rejecting the trade if a clearing-only customer has exceeded acceptable trading limits. Examiners should confirm that the FCM formally advises (usually in the give-up agreement) its customers and their executing FCMs of the trading parameters established for the customer. Examiners should also confirm that the FCM personnel responsible for accepting or rejecting an executed trade for clearance have sufficient current information to determine whether the trade is consistent with the customer's trading limits. Prudent give-up agreements (or other relevant documents such as the customer account agreement) should permit the FCM to adjust the customer's transaction limits when appropriate in light of market conditions or changes in the customer's financial condition.

Some FCMs act as the primary clearing firm (also referred to as the sponsoring or qualifying firm) for customers.[11] A primary clearing firm guarantees to the clearinghouse that it will accept and clear all trades submitted by the customer or executing FCM, even if the trade is outside the agreed-on limits. Because an FCM is obligated to accept and clear all trades submitted by its primary clearing customers, the FCM must be able to monitor its customers' trading activities on an intraday basis for compliance with agreed-on trading limits. Monitoring is especially important during times of market stress. The FCM should be ready and able to take immediate steps to address any unacceptable risks that arise, for example, by contacting the customer to obtain additional margin or other assurances, approving a limit exception, taking steps to liquidate open customer positions, or giving appropriate notice of termination of the clearing arrangement to enable the FCM to reject future transactions.

Intraday monitoring techniques will vary depending on the technology available at the particular exchange. A number of the larger, more automated U.S. exchanges have developed technologies that permit multiple intraday collection, matching, and reporting of trades—although the frequency of such reconciliations varies. On exchanges that are less automated, the primary clearing FCM must develop procedures for monitoring clearing-only risks. For example, the FCM could maintain a significant physical presence on the trading floor to monitor customer trading activities and promote more frequent collection (and tallying) of trade information from clearing-only customers. The resources necessary for such monitoring obviously will depend on the physical layout of the exchange—the size of the trading floor and the number of trading pits, the floor population and daily trading volumes, and the level of familiarity the FCM has with the trading practices and objectives of its primary clearing customers. The FCM should be able to increase its floor presence in times of market stress.

3250.0.7.1.4 Carrying-Broker Risk

An FCM may enter into an agreement with another FCM to execute and clear transactions

11. Primary clearing customers include institutions and individuals, as well as other nonclearing futures professionals (locals or floor traders), who execute their own trades on the exchange and other nonclearing FCMs that execute trades for unaffiliated customers.

on behalf of the first FCM (typically, when the first FCM is not an exchange or clearing member of an exchange). In such cases, the FCM seeking another or carrying FCM to execute its transactions should have procedures for reviewing the creditworthiness of the carrying FCM. If the FCM reasonably expects that the carrying FCM will use yet another FCM to clear its transactions (for example, if the carrying FCM enters into its own carrying-broker relationship with another firm for purposes of executing or clearing transactions on another exchange), the first FCM should try to obtain an indemnification from the carrying FCM for any losses incurred on these transactions.[12] When carrying transactions occur on a foreign exchange, an FCM should know about the legal ramifications of the carrying relationship under the rules of the exchange and the laws of the host country. Moreover, it may be appropriate for an FCM to reach an agreement with its customers that addresses liabilities relative to transactions effected on a non-U.S. exchange by a carrying broker.

3250.0.7.1.5 Executing-FCM Risk

When an FCM uses an unaffiliated FCM to execute customer transactions under a give-up arrangement, the clearing firm that sponsors the executing FCM guarantees its performance. Therefore, the first FCM should review the subcontracting risk of its executing FCMs and their sponsoring clearing firms. However, unlike the clearing risk inherent in a carrying-broker relationship, the subcontracting risk for an FCM using an executing FCM is limited to transaction risk (execution errors). An FCM's management should approve each executing broker it uses, considering the broker's reputation for obtaining timely executions and the financial condition of its sponsoring clearing firm.

3250.0.7.1.6 Pit-Broker Risk

Usually, FCMs will subcontract the execution of their orders to unaffiliated pit brokers who accept and execute transactions for numerous FCMs during the trading day. The risk associated with using a pit broker is similar to that of using an executing broker: the risk is limited to the broker's performance in completing the transaction. If the pit broker fails, then the primary clearing firm is responsible for completing the transaction. Therefore, an FCM should approve each pit broker it uses, considering the pit broker's reputation for obtaining timely executions and the resources of its sponsoring clearing firm.

3250.0.7.1.7 Clearinghouse Risk

Clearinghouse risk is the potential that a clearinghouse will require a member to meet loss-sharing assessments caused by another clearing member's failure. Before authorizing membership in an exchange or clearinghouse, an FCM's board of directors and its parent company must fully understand the initial and ongoing regulatory and financial requirements for members. The FCM's board of directors should approve membership in a clearinghouse only after a thorough consideration of the financial condition, settlement and default procedures, and loss-sharing requirements of the clearinghouse.

Particularly when it is considering membership in a foreign exchange or clearinghouse, an FCM's board should examine any regulatory and legal precedents related to how the exchange, clearinghouse, or host country views loss-sharing arrangements. As in the United States, some foreign clearinghouses have unlimited loss-sharing requirements, and some have "limited" requirements that are set at very high percentages. However, the loss-sharing provisions of some of the foreign clearinghouses have not yet been applied, which means that there are no legal and regulatory precedents for applying the stated requirements. In addition, the board should be apprised of any differences in how foreign accounts are viewed, for example, whether customer funds are considered separate from those of the FCM, whether the relationship between an FCM and its customer is viewed as an agency rather than a principal relationship, and whether there are material differences in the way futures activities are regulated.

The board also should be apprised of any material changes in the financial condition of every clearinghouse of which the FCM is a member. Senior management should monitor the financial condition of its clearinghouses as part of its risk-management function.

12. The CFTC takes the position that an FCM is responsible to its customers for losses arising from the failure of the performance of a carrying broker. The industry disagrees with this position, and the issue has not been resolved by the courts.

3250.0.7.1.8 Guarantees

FCM parent companies often are asked to provide assurances to customers and clearinghouses that warrant the FCM's performance. These arrangements may take the form of formal guarantees or less formal letters of comfort.

Under Regulation Y (section 225.28(b)(7)(iv)(B)), a bank holding company may not provide a guarantee to a clearinghouse for the performance of the FCM's customer obligations. A bank holding company may provide a letter of comfort or other agreement to the FCM's customers that states the parent (or affiliate) will reimburse the customers' funds on deposit with the FCM if they are lost as a result of the FCM's failure or default. Customers may seek this assurance to avoid losses that could arise from credit exposure created by another customer of the FCM, since the clearinghouse may use some or all of the FCM's customer-segregated funds in the event of a default by the FCM stemming from a failing customer's obligations.[13] Examiners should note any permissible guarantees for purposes of the consolidated report of the parent bank holding company, as they are relevant to calculating the consolidated risk-based capital of the bank holding company.

3250.0.7.2 Market Risk

When an FCM acts as a broker on behalf of customers, it generally is only subject to market risk if it executes customers' transactions in error. In this regard, operational problems can expose the FCM to market fluctuations in contract values. However, when an FCM engages in proprietary trading, such as market making and other position-taking, it will be directly exposed to market risk. Potential market-risk exposure should be addressed appropriately in an FCM's policies and procedures.

An FCM that engages in proprietary trading should establish market-risk and trading parameters approved by its parent company. The FCM's senior management should establish an independent risk-management function to control and monitor proprietary trading activities. Finally, the FCM should institute procedures to control potential conflicts of interest between its brokerage and proprietary trading activities.

13. The letter of comfort would protect customers whose funds were used to cover other customer losses by the clearinghouse. U.S. clearinghouses also have guarantee funds that can be used to reimburse customers at the clearinghouse's discretion.

3250.0.7.3 Liquidity Risk

Liquidity risk is the risk that the FCM will not be able to meet its financial commitments (end-of-day and intraday margin calls) to its clearing FCM or clearinghouse. Clearing FCMs are required to establish an account at one of the settlement banks used by the clearinghouse for its accounts and the accounts of its clearing members. In some foreign jurisdictions, the central bank fulfills this settlement function. An FCM should establish and monitor daily settlement limits for its customers and should ensure that there are back-up liquidity facilities to meet any unexpected shortfalls in same-day funds. To ensure the safety of its funds and assets, an FCM should also monitor the financial condition of the settlement bank it has chosen and should be prepared to transfer its funds and assets to another settlement bank, when necessary.

To control other types of liquidity risks, an FCM should adopt contingency plans for liquidity demands that may arise from dramatic market changes. An FCM, to the extent possible, should monitor the markets it trades in to identify undue concentrations by others that could create an illiquid market, thereby creating a risk that the FCM could not liquidate its positions. Most U.S. clearinghouses monitor concentrations and will contact an FCM that holds more than a certain percentage of the open interest in a product. In some situations, the exchange could sanction or discipline the FCM if it finds that the FCM, by holding the undue concentration, was attempting to manipulate the market. These prudential safeguards may not be in place on foreign exchanges; consequently, an FCM will have to establish procedures to monitor its liquidity risk on those exchanges.

3250.0.7.4 Reputation Risk

FCMs should have reporting procedures in place to ensure that any material events that harm its reputation, and the reputations of its bank affiliates, are brought to the attention of senior management; the FCM's board of directors; and, when appropriate, its parent company. Reports of potentially damaging events should be sent to senior management at the parent bank holding company, who will evaluate their effect on the FCM to determine what, if any, steps should be taken to mitigate the impact of the event on the whole organization.

3250.0.7.4.1 Commodity Trading Adviser

Acting as a commodity trading adviser (including providing discretionary investment advice to retail and institutional customers or commodity pools) may pose reputation and litigation risks to a CTA or an FCM, particularly when retail customers are involved. Accordingly, the FCM's board should adopt policies and procedures addressing compliance with CFTC and NFA sales-practice rules (including compliance with the "know your customer" recordkeeping rules).

3250.0.7.5 Operations Risk, Internal Controls, Internal Audits, and Compliance

3250.0.7.5.1 Operations Risk

Operations risk is the potential that deficiencies in information systems or internal controls will result in unexpected loss. Some specific sources of operating risk at FCMs include inadequate procedures, human error, system failure, or fraud. For FCMs, failure to assess or control operating risks accurately can be a likely source of problems. Back-office or transaction-processing operations are an important source of operations-risk exposures. In conducting reviews of back-office operations, examiners should consult the appropriate chapters of the *Trading and Capital-Markets Activities Manual* for further guidance.

Operations risk also includes potential losses from computer and communication systems that are unable to handle the volume of FCM transactions, particularly in periods of market stress. FCMs should have procedures that address the operations risks of these systems, including contingency plans to handle systems failures and back-up facilities for critical parts of risk-management, communications, and accounting systems.

When FCMs execute or clear transactions in nonfinancial commodities, they may have to take delivery of a commodity because a customer is unable or unwilling to make or take delivery on its contract. To address this situation, the FCM should have in place the procedures it will follow to terminate its position and avoid dealing in physical commodities.

3250.0.7.5.2 Internal Controls

Adequate internal controls are the first line of defense in controlling the operations risks involved in FCM activities. Internal controls that ensure the separation of duties involving account acceptance, order receipt, execution, confirmation, margin processing, and accounting are particularly important. Internal controls should also be established to record, track, and resolve errors and discrepancies with customers and other parties.

FCMs should have approved policies that specify documentation requirements for transactions and formal procedures for saving and safeguarding important documents, consistent with legal requirements and internal policies. Relevant personnel should fully understand documentation requirements. Examiners should also consider the extent to which entities evaluate and control operations risks through internal audits, contingency planning, and other managerial and analytical techniques.

3250.0.7.6 Internal Audits and Their Review

An FCM should be subject to regular internal audits to confirm that it complies with its policies and procedures and is managed in a safe and sound manner. In addition, the internal audit function should review any significant issues raised by compliance personnel to ensure that they are resolved. Other staff within the FCM (i.e., compliance personnel) should be able to reach internal audit staff to discuss any serious concerns they might have. Internal audit reports should be forwarded to the FCM's senior management. Material findings and management's plan to resolve the audit issues should be reported to the FCM's board of directors, the parent company, and any designated board committee (for example, an audit committee). Frequently, the internal audit function is located at the parent company, and audit reports are routinely sent to senior management at the parent company and to the audit committee designated by the board of directors.

3250.0.8 INSPECTION GUIDANCE

The review of an FCM's functions should take a functional-regulatory approach, using the findings of the FCM's primary regulators as much as possible. Examiners should especially focus on the significant risks that the FCM poses to the parent company and affiliated banks. These risks should be assessed by reviewing the adequacy of the FCM's policies and procedures, internal controls, and risk-management functions. Compliance with policies and procedures, and with any conditions on the FCM's activities imposed by regulatory authorities (including the Federal Reserve Board), should be fully reviewed.

Bank holding companies, banks, and FBOs may have more than one subsidiary that acts as an FCM in the United States or that engages in futures transactions for customers in foreign markets. To ensure that the FCM/CTA activities of a banking organization are evaluated on a consolidated basis, a cross-section of affiliated futures brokerage and advisory firms should be reviewed periodically—particularly those that present the greatest risk to the consolidated financial organization. Relevant factors to consider when identifying firms for review include (1) the volume of business; (2) whether the FCM has unaffiliated customers; (3) the number of customers; (4) whether the firm provides customer financing; (5) the number of brokers effecting transactions; (6) whether exchange or clearinghouse memberships are involved; (7) whether the FCM provides clearing-only services; and (8) the date and scope of the last review conducted by the Federal Reserve, SRO, or other regulator.

The scope of any review to be conducted depends on the size of the FCM and the scope of its activities. The draft first-day letter should provide an overview of an FCM's authorized activities and conditions, as well as a description of the actual scope of its business. Examiners should review the most recent summary of management points or other inspection results issued by the FCM's SRO or other regulator, as well as any correspondence between the FCM and any federal agency or SRO. If examiners have any questions about the findings of an SRO's or a regulator's results, they should contact the organization to determine whether the matter is material and relevant to the current inspection. The status of any matters left open after the SRO's or regulator's review should also be inquired about.

An important factor in determining the scope of the inspection is whether the FCM has unaffiliated customers or conducts transactions solely for affiliates. Other factors include whether (1) the FCM is a clearing member of an exchange, particularly of a non-U.S. exchange; (2) it acts as a carrying broker on behalf of other FCMs; (3) it has omnibus accounts with other brokers in markets in which it is not a member (U.S. or foreign); (4) it provides advisory or portfolio management services, including discretionary accounts, or has been authorized to act as a commodity pool operator (CPO); (5) it provides clearing services to locals or market-makers; and (6) it provides financing services to customers.[14]

Examiners are not expected to routinely perform a front- or back-office inspection unless (1) the FCM's primary regulator found material deficiencies in either office during its most recent examination or (2) if front- or back-office operations have not been examined by the primary regulator within the last two years. However, examiners may still choose to review a small sample of accounts and transactions to confirm that appropriate controls are in place. In addition, net capital computations of U.S. FCMs do not need to be reviewed; they are reviewed by the FCM's DSRO, and the FCM is subject to reporting requirements if capital falls below warning levels. Examiners should perform a front- and back-office review of the FCM's operations outside of the United States.[15]

Review of audit function. Examiners may rely on well-documented internal audit reports and workpapers to verify the adequacy of risk management at the FCM. Examiners should review the internal audit reports and workpapers to determine the adequacy of their scope and thoroughness in complying with FCM policies and procedures. If an examiner finds that an internal audit adequately documents the FCM's compliance with a policy or procedure pertaining to the management of the various risk assessments required by the current inspection, that fact should be documented in the workpapers, and inspection procedures should be completed in any area not adequately addressed by the internal audit report. Examiners should periodically spot check areas covered by internal audits to ensure the ongoing integrity of the audit process. Finally, examiners should ensure that internal auditors have adequate training to evaluate

14. If the FCM engages in proprietary trading for its own account, particularly for purposes other than hedging (market making or position taking), or if the FCM acts as an intermediary in any over-the-counter futures or other derivative activities, the examiner should advise the examiner in charge of the inspection so that the firm's proprietary trading can be evaluated in connection with similar activities of the consolidated financial organization.

15. The inspection procedures for reviewing front- and back-office operations may be found in sections 2050.3 and 2060.3, respectively, of the *Trading and Capital-Markets Activities Manual.*

the FCM's compliance with its policies and procedures and with applicable laws and regulations (both inside and, if applicable, outside the United States).

If an examiner has determined that it is not necessary to perform a routine back-office review, he or she should confirm that the FCM has addressed operations risks in its policies and procedures. Examiners also should review the internal controls of an FCM to ensure that the firm is operated safely and soundly according to industry standards and that it complies with any Board regulations or conditions placed on the FCM's activities. Examiners should be alert to any "red flags" that might indicate inadequate internal controls. An FCM must be organized so that its sales, operations, and compliance functions are separate and managed independently. If an FCM engages in proprietary trading, examiners should confirm that the firm has procedures that protect against conflicts of interest in the handling of customer orders (examples of these conflicts of interest include front-running or ex-pit transactions). To make an overall assessment of the FCM's future business, the results of any review should be consolidated with the results of reviews by other FCMs inspected during this cycle.

3250.0.9 INSPECTION OBJECTIVES

1. To identify the potential and extent of various risks associated with the FCM's activities, including credit, market, liquidity, and reputation risks.
2. To evaluate the adequacy of the audit function and review significant findings, the method of follow-up, and management's response to correct any deficiencies.
3. To assess the adequacy of the risk-management function at the FCM.
4. To assess the adequacy of and compliance with the FCM's policies and procedures and the adequacy of the internal control function.
5. To evaluate and determine the FCM's level of compliance with relevant statutes, Board regulations, interpretations, orders, and policies.
6. To assess the adequacy of risk management of affiliated FCMs on a consolidated basis.

3250.0.10 INSPECTION PROCEDURES

3250.0.10.1 Structural Organization and Activity Analysis

3250.0.10.1.1 General

1. Identify all bank holding company subsidiaries that engage in FCM- or CTA-type activities in the United States or abroad or identify U.S. FCM/CTA subsidiaries of FBOs. Determine which firms should be inspected to provide a global view of the adequacy of management of these activities on a consolidated basis, based on the scope of activities and the degree of supervision by other regulators. Complete applicable procedures below for firms selected for inspection.
2. Review first-day-letter documents, notices filed under Regulation Y, Board orders and letters authorizing activities, previous inspection reports and workpapers, previous audit reports by futures regulators (CFTC, DSRO, National Futures Association, foreign futures regulator) and correspondence exchanged with those regulatory entities, and reports by internal or external auditors or consultants.
3. Note the scope of the FCM's activities, including—
   a. execution and clearing;
   b. execution only for affiliates and third parties;
   c. clearing-only for affiliates, third parties, professional floor traders (locals);
   d. pit brokerage;
   e. advisory;
   f. discretionary portfolio management;
   g. commodities or commodity pool operator (in FCM or in affiliate);
   h. margin financing;
   i proprietary trading;
   j. exchange market maker or specialist;
   k. types of instruments (for example, financial, agricultural, precious metals, petroleum);
   l. contract markets where business is directed;
   m. other derivatives products (should be identified, for example, interest-rate swaps and related derivative contracts, foreign-exchange derivative contracts, foreign government securities, other);
   n. other futures-related activities, including off-exchange transactions;
   o. riskless-principal transactions; and
   p. registered broker-dealers.
4. Note exchange and clearinghouse memberships here and abroad, noting any financial commitments and any guarantees by the FCM

or its parent[16] to the exchange or clearinghouse with respect to proprietary, affiliate, or customer transactions.

5. Note any new lines of business or activities occurring at the FCM or any changes to exchange and clearing memberships since the last inspection.
6. Note the percentage of business conducted for—
   a. affiliate banks,
   b. nonbank affiliates,
   c. customers (note the breakdown between institutional and retail customers and if there is any guarantee or letter of comfort to customers in which the parent company provides that it will reimburse customers for loss as a result of the FCM's failure or other default),
   d. proprietary accounts (hedging, position-taking), and
   e. professional floor traders (locals, market makers).

3250.0.10.1.2 Audit Program

Determine the quality of the internal audit program. Assess the scope, frequency, and quality of the audit program for the FCM and related activities. Consider spot checking areas covered by internal audits.

1. Review the most recent audit report, noting any exceptions and their resolution.
2. Determine whether internal auditors have adequate training to evaluate the FCM's compliance with its policies and procedures and with applicable laws and regulations.
3. Verify that audit findings have been communicated to senior management and material findings have been reported to the FCM's board of directors and parent company.
4. Identify any areas covered by these procedures that are not adequately addressed by the internal audit report.
5. Identify areas of the internal audit report that should be verified as part of the current inspection.

3250.0.10.1.3 Operational Activities

Determine the scope of review that is appropriate to activities and allocate examiner resources, considering the adequacy of internal audit workpapers.

1. Complete the appropriate front- and/or back-office inspection procedures when—
   a. front- and back-office operations have not been examined by the DSRO within the last two years,
   b. material deficiencies in front- or back-office operations were found by the DSRO during the most recent audit, or
   c. the primary regulator for the FCM is not a U.S. entity.
2. Advise the examiner in charge of the inspection of the parent company if the FCM engages in proprietary trading or over-the-counter futures or derivatives business as principal or agent.

3250.0.10.2 Board and Senior Management Oversight

1. Review the background and experience of the FCM's board of directors and senior management, noting prior banking and futures brokerage experience.
2. Determine if the board of directors of the FCM has approved written policies summarizing the firm's activities listed below, and addressing oversight by the board or a board-designated committee:
   a. the risk appropriate for the FCM, including credit, market, liquidity, operation, reputation, and legal risk (see SR-95-51)
   b. the monitoring of compliance with risk parameters
   c. the exchange and clearinghouse memberships
   d. the internal audit function
3. Determine if senior management of the FCM has adopted procedures implementing the board's policies for—
   a. approval of new-product lines and other activities;
   b. transactions with affiliates;
   c. transactions by employees;
   d. compliance with applicable regulations and policies and procedures;
   e. management information reports;
   f. the separation of sales, operations, back-office, and compliance functions; and
   g. reports to the FCM boards of directors on material findings of the complaint or audit

16. The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

functions and on material deficiencies identified during the course of regulatory audits or inspections.

4. Determine that policies and procedures are periodically reviewed by the board of directors or senior management, as appropriate, and ensure that they comply with existing regulatory and supervisory standards and address all of the FCM's activities.
5. Review management information reporting systems and determine whether the board of directors of the parent company (or a designated committee of the parent's board) is apprised of—
   a. material developments at the FCM,
   b. the financial position of the firm including significant credit exposures,
   c. the adequacy of risk management,
   d. material findings of the audit or compliance functions, and
   e. material deficiencies identified during the course of regulatory reviews or inspections.
6. Review the FCM's strategic plan.
   a. Assess whether there are material inconsistencies between the stated plans and the FCM's stated risk tolerances.
   b. Verify that the strategic plan is reviewed and periodically updated.

3250.0.10.3 Risk Management

3250.0.10.3.1 Credit Risk

1. Review credit-risk policies and procedures.
   a. Verify the independence of credit-review approval from the limit-exceptions approval.
   b. Verify that the procedures designate a senior officer with the responsibility to monitor and approve limit-exception approvals.
2. Determine whether the FCM has authority to open customer accounts without parent company approval.
3. Review the customer base (affiliates, third parties) for credit quality in terms of affiliation and business activity (affiliates, corporate, retail, managed funds, floor traders, etc.).
4. Evaluate the process for customer-credit review and approval. Determine whether the customer-credit review identifies credit risks associated with the volume of transactions executed or cleared for the customer.
5. Evaluate the adequacy of credit-risk-management policies. Determine if they—
   a. establish and require adequately documented credit limits for each customer that reflect their respective financial strengths, liquidity, trading objectives, and potential market risk associated with the products traded;
   b. require periodic updates of such credit limits in light of changes in the financial condition of each customer and market conditions; and
   c. do not permit the FCM to waive important broker safeguards, such as the right to liquidate customer positions upon default or late payment of margin.
6. Consider verifying the above information by sampling customer-credit files.
7. Verify that up-to-date customer-credit files are maintained on site or are available for review during the inspection. If the customer-credit approval was performed by the parent company or an affiliate bank, verify that the FCM's files contain information indicating the scope of the credit review, the approval, and credit limits.
8. Review notifications and approval of limit exceptions for compliance with FCM procedures.
9. Determine whether the FCM has adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (for example, when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions).
10. Evaluate the adequacy of risk management of customer-financing activities.
11. Determine that the credit-review process is independent from the marketing, sales, and financing function.
    a. Verify that the FCM has policies that identify customer-credit standards and that it establishes overall lending limits for each customer.
    b. Assess the adequacy of the credit-review process and documentation, even when credit review is performed by an affiliate.
12. Review the instances when the FCM has lent margin to customers on an unsecured basis. If the FCM does not engage in margin financing as a business line, verify that extensions are short-term and within the operational threshold set for the customer.

3250.0.10.3.2 Clearing-Only Risk

1. Determine whether each clearing arrangement is in writing and that it—
   a. identifies the customer and executing brokers, and defines and adequately documents the respective rights and obligations of each party;
   b. establishes overall limits and trading parameters for the customer that are based on the customer's creditworthiness and trading objectives; and
   c. permits transaction limits to be adjusted to accommodate market conditions or changes in the customer's financial condition.
2. When the FCM has entered into a clearing-only agreement with a customer, verify that it has reviewed the creditworthiness of each executing broker or its qualifying clearing firm identified in the agreement.
3. If the FCM acts as the primary clearing firm for locals or other customers, confirm that the firm has adopted procedures for monitoring and controlling exposure. Note whether the firm monitors customer positions throughout the trading day and how this monitoring is accomplished.

3250.0.10.3.3 Carrying Brokers, Executing Brokers, and Pit Brokers

1. If the FCM uses other brokers to execute and/or clear transactions, either on an omnibus or a fully disclosed basis, determine that it has adequately reviewed the creditworthiness and approved the use of the other brokers. If the FCM uses nonaffiliated executing brokers, confirm that it also has considered the reputation of the broker's primary clearing firm. If the other broker is likely to use another broker, determine whether the broker has given the FCM an indemnification against any loss that results from the performance or failure of the other broker.
2. If the FCM uses other brokers to execute or clear transactions in non-U.S. markets, determine whether senior management understands the legal risks pertinent to doing business in those markets and has adopted policies for managing those risks.
3. When the FCM uses third-party "pit brokers" to execute transactions, verify that the FCM has reviewed and approved each broker after considering the reputation of the pit broker's primary clearing firm.

3250.0.10.3.4 Exchange and Clearinghouse Membership

1. Verify that the FCM completes a due-diligence study of each exchange and clearinghouse before applying for membership in the organization.
   a. Determine whether board minutes approving membership demonstrate a thorough understanding of the loss-assessment provisions and other obligations of membership for each exchange and clearinghouse, as well as a general understanding of the regulatory scheme.
   b. Determine whether, in approving membership in a non-U.S. exchange or clearinghouse, the board's minutes indicate a discussion of the regulatory environment and any relevant credit, liquidity, and legal risks associated with doing business in the particular jurisdiction. The minutes should also reflect discussion of any material differences from U.S. precedent in how foreign accounts are viewed, for example, whether customer funds held in an omnibus account are considered separate (segregated) from those of the FCM or whether the relationship between the FCM and its customers is viewed as an agency or principal relationship in the host country.
2. Verify that the FCM has apprised its parent company of the results of its study of the exchange or clearinghouse and that it has written authorization by senior management of its parent company to apply for membership.
3. Verify that the FCM monitors the financial condition of each exchange and clearing organization for which it is a member.
4. Review all guarantees, letters of comfort, or other forms of potential contingent liability. Verify that the parent company has not provided a guarantee to the clearinghouse for the performance of the FCM's customer obligations.[17] Note any guarantees against the parent losses incurred from the failure of an FCM and advise the examiner in charge of the parent company's inspection, who can confirm that guarantees are included in the

17. The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

bank holding company's calculation of consolidated risk-based capital.

3250.0.10.3.5 Market Risk

1. If an FCM engages in proprietary trading, determine whether policies and procedures are in place to control potential conflicts of interest between its brokerage business and trading activities.
2. When an FCM plans to enter (or has entered into) a foreign market, determine if the FCM performed due-diligence reviews of relevant legal and regulatory issues, as well as on local business practices.

3250.0.10.3.6 Liquidity Risk

1. Verify that the FCM has established and monitors daily settlement limits for each customer to ensure that liquidity is sufficient to meet clearinghouse obligations.
2. Determine whether the FCM has established back-up liquidity facilities to meet unexpected shortfalls.
3. Verify that the FCM monitors by product the amount of open interest (concentrations) that it holds at each exchange, either directly or indirectly through other brokers. If positions are held on foreign exchanges and concentrations are not monitored, verify that the FCM is able to monitor its positions and manage its potential liquidity risks arising from that market.
4. Review liquidity contingency plans for dealing with dramatic market changes.

3250.0.10.3.7 Reputation Risk

1. Review management information reporting systems and determine whether—
   a. the FCM is able to assess the extent of any material exposure to legal or reputation risk arising from its activities, and
   b. the parent company receives sufficient information from the FCM to assess the extent of any material exposure to litigation or reputation risk arising from the FCM's activities.
2. If the FCM provides investment advice to customers or commodity pools, determine whether it has procedures designed to minimize the risks associated with advisory activities. Such procedures might address the delivery of risk disclosures to customers, the types of transactions and trading strategies that could be recommended or effected for retail customers, compliance with the "know your customer" recordkeeping and other sales practice rules of the SROs, and conformance to any trading objectives established by the customer or fund.
3. If the FCM acts as a CPO, verify that it has obtained prior Board approval and is in compliance with any conditions in the Board order.

3250.0.10.4 Operations, Internal Controls, and Compliance

1. Determine the extent to which operating risk is evaluated and controlled through the use of internal audits, contingency planning, and other managerial and analytical techniques.
2. Review the most recent summary of management points or similar document and also respective correspondence issued by the FCM's DSRO or other primary futures regulator. Discuss any criticism with FCM management and confirm that corrective action has been taken.
3. Consider reviewing a small sample of accounts and transactions to confirm that appropriate controls are used and that the FCM has incorporated operations risks into its policies and procedures.
4. Review the organizational structure and reporting lines within the FCM and verify separation of sales, trading, operations, compliance, and audit functions.
5. Determine that the FCM's policies and procedures address the booking of transactions by affiliates and employees and other potential conflicts of interest.
6. If the FCM is authorized to act as a CPO, review the most recent NFA or other primary futures regulator's audit, including any informal findings by examiners. Discuss any criticism with the FCM management and confirm that corrective action has been taken.
7. If the FCM executes and clears nonfinancial futures, verify that the FCM has procedures to avoid taking physical possession of the nonfinancial product when effecting "exchange for physical transactions" for customers.

8. When the FCM takes physical delivery of commodities due to failure or unwillingness of a customer to make or take delivery of its contracts, determine whether the FCM has and follows procedures to close out its position. Note if the FCM frequently takes delivery of physical commodities.
9. Assess the adequacy of customer-complaint review by reviewing the complaint file and how complaints are resolved. Note if the FCM receives repeat or multiple complaints involving one or more of its activities or employees.
10. Determine whether the FCM has developed contingency plans that describe actions to be taken in times of market disruptions and whether such plans address management responsibilities, including communications with its parent bank holding company, liquidity, the effect on customer-credit quality, and communications with customers.

3250.0.10.5 Conclusions

1. Prepare inspection findings and draw conclusions as to the adequacy of the FCM's risk-management, compliance, operations, internal controls, and audit functions.
2. Present findings to FCM management and submit inspection findings to the examiner in charge of the parent company inspection.

3250.0.11 FCM Supplemental Checklist Questionnaire

	Yes	*No*
3250.0.11.1 General Questions		
1. Is the FCM a separately incorporated subsidiary of the bank holding company as required by Regulation Y, 12 C.F.R. 225.28(b)(6)(iv)?	______	______
2. Has the parent bank holding company provided a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by a subsidiary for its own account or for the account of any affiliate (prohibited by Regulation Y (see 12 C.F.R. 225.28(b)(6)(iv))?	______	______

3. How long has the FCM been in operation?______yrs.
4. Approximately how many customers does the FCM have?______
5. What degree of market participation does the FCM have (mark (x) for the highest level of involvement)?
   a. __________ FCM, nonmember of futures exchange. Must execute trades through exchange members and is subject to NFA rules.
   b. __________ Exchange member. Holds membership on one or more futures exchanges entitling FCM to execute trades on the exchange(s) and subjecting FCM to the rules of exchange(s).
   c. __________ Clearinghouse member. Holds membership in an exchange's clearinghouse as well as exchange membership, thus enabling FCM to execute and clear its own transactions. Such FCM is subject to exchange and clearinghouse rules.
6. If FCM is an exchange member, on which exchange(s) (domestic and foreign) does the FCM have membership(s)?

   ____

   ____

   ____

	Yes	No
7. If FCM is a clearing member, list below the clearinghouse(s) of which it is a member. ____ ____ ____		
8. Does the FCM periodically make an adjusted net capital computation to verify that it maintains capitalization fully adequate to meet its own commitments and those of its customers, including affiliates?	_____	_____
(NOTE: Under the CFTC's net capital computations, there have been no capital requirements for "hedge" transactions by FCM affiliate banks. It may be necessary to request that an adjusted net capital computation be made to determine the amount of adjusted net capital required when affiliate trades are treated as third-party transactions.)		
9. Does a review of the FCM's correspondence from its designated self-regulatory organization reveal that the FCM meets CFTC requirements with respect to capital rules, segregation of customer assets, and risk disclosure?	_____	_____
10. If an FCM will receive services from an affiliate (e.g., the lead bank assesses FCM customer-credit risk or monitors customer positions and margin accounts), have the FCM and affiliate entered into a formal service agreement on an explicit fee basis?	_____	_____

3250.0.11.2 Management

	Yes	No
1. Does the FCM's management have expertise and previous experience as a broker, dealer, or participant in cash, futures, or forward markets related to those in which the FCM executes transactions?	_____	_____
2. Does the FCM's management have prior banking experience?	_____	_____
3. Does it appear that management has the expertise necessary to evaluate the viability of various hedging strategies?	_____	_____
4. Does it appear that FCM management has the ability to recognize imprudent or unsafe customer activity that could endanger the FCM?	_____	_____
5. Does the board of directors have written policies that summarize the firm's activities and its oversight function (certain functions may be designated to a board audit or other committee) with respect to—		
a. risk appropriate for the FCM?	_____	_____
b. compliance monitoring and risk parameters?	_____	_____

3250.0.11.3 Controls of Risk Exposure with Customers

	Yes	No
1. Does the FCM have a system for assessing and periodically re-evaluating customer-credit risk?	_____	_____

	Yes	No
2. Does the FCM take customer-credit risk into consideration and establish for each customer—	______	______
a. position limits for each contract the customer wishes to trade?	______	______
b. an aggregate position limit for outstanding contracts held by each customer?	______	______
3. Does the FCM have a system for monitoring customer positions to ensure positions are within the limits imposed by the FCM?	______	______
4. Does the FCM have an adequate system in place to monitor its overall risk exposure, primarily customer-default risk, on a daily basis?	______	______
5. Do customer agreements and internal procedures enable the FCM to—		
a. limit the types of trades a customer engages in?	______	______
b. refuse, when appropriate, to execute any trades except those resulting in liquidation of existing positions?	______	______

3250.0.11.4 Margin Requirements

	Yes	No
1. Does the FCM have a system for daily monitoring of margin accounts to ensure that margin calls are promptly issued and satisfied?	______	______
2. Does the customer agreement permit and has the FCM adopted procedures for liquidating a customer's position if margin calls are not promptly satisfied?	______	______
3. Do customer-account agreements authorize the FCM to require higher initial and variation margin levels than those set by the exchanges?	______	______
4. Does the FCM have a system in place for obtaining higher customer margins in instances when the FCM determines—	______	______
a. a customer's futures position or deteriorating financial condition necessitates a greater amount of margin to protect the FCM?	______	______
b. volatile market conditions justify higher levels of margin than those required by an exchange?	______	______

3250.0.11.5 Credit Risk

	Yes	No
1. Is the credit-review approval independent from the limit-exceptions approval?	______	______
2. Does a senior officer monitor and approve limit-exception approvals?	______	______
3. Does the customer-credit review identify credit risks associated with the volume of transactions executed or cleared for the customer?	______	______
4. Is adequate documentation required and maintained of credit limits for each customer that reflect customers' respective financial strengths and liquidity, trading objectives, and the potential market risk associated with the products traded?	______	______
5. Has the FCM adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (e.g., when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions)?	______	______
6. Is the credit-review process independent from the marketing/sales function and the financing function?	______	______

	Yes	*No*

3250.0.11.6 Clearing-Only Risk

1. Is each arrangement in writing and does it—
   a. identify the customer, executing brokers, and define and adequately document the respective rights and obligations of each party? _____ _____
   b. establish overall limits and trading parameters for the customer that are based on the customer's creditworthiness and trading objectives? _____ _____
   c. permit transaction limits to be adjusted to accommodate market conditions or changes in the customer's financial condition? _____ _____
2. Has the FCM or its qualifying clearing firm verified that it has reviewed the creditworthiness of each executing broker? _____ _____
3. If the FCM acts as the primary clearing firm for locals or other customers, has the firm adopted procedures for monitoring and controlling exposure throughout the trading day? _____ _____

3250.0.11.7 Carrying Brokers, Executing Brokers, and Pit Brokers

1. If the FCM uses other brokers to execute and/or clear transactions, either on an omnibus or fully disclosed basis, has it adequately reviewed the creditworthiness and approved the use of the other brokers? _____ _____
2. Has the FCM been given an indemnification against any loss that results from the performance or failure of the other broker? _____ _____
3. If the FCM uses nonaffiliated executing brokers, has it considered the reputation of the broker's primary clearing firm? _____ _____

3250.0.11.8 Exchange and Clearinghouse Membership

1. Does the FCM complete a due-diligence study of each exchange and clearinghouse before applying for membership in such organization? _____ _____
2. Do the board minutes approving such memberships demonstrate a thorough understanding of the loss-assessment provisions and other obligations of membership for each exchange and clearinghouse, as well as a general understanding of the regulatory scheme? _____ _____
3. In approving membership in a non-U.S. exchange or clearinghouse, do the board minutes evidence a discussion of the regulatory environment and any relevant credit, liquidity, and legal risks associated with doing business in a particular jurisdiction? _____ _____
4. Does the FCM monitor the financial condition of each exchange and clearing organization for which it is a member? _____ _____

3250.0.11.9 Market Risk

1. If an FCM engages in proprietary trading, are policies and procedures in place to control potential conflicts of interest between its brokerage business and trading activities? _____ _____
2. If an FCM has entered or plans to enter a foreign market, has the FCM performed due-diligence reviews of relevant legal and regulatory issues, as well as on local business practices? _____ _____

	Yes	No

3250.0.11.10 Liquidity Risk

1. Has the FCM established and does it monitor daily settlement limits for each customer to ensure liquidity sufficient to meet clearinghouse obligations? ______ ______
2. Has the FCM established back-up liquidity facilities to meet unexpected shortfalls? ______ ______
3. Does the FCM monitor the amount of open interest (concentrations) by product that it holds, directly or indirectly, at each exchange? ______ ______

3250.0.11.11 Reputation Risk

1. Is the FCM able to assess the extent of any material exposure to legal or reputation risk arising from its activities? ______ ______
2. Does the parent company receive sufficient information from the FCM's information systems to assess the extent of any material exposure to litigation or reputation risk arising from the FCM's activities? ______ ______
3. If the FCM provides investment advice to customers or commodity pools, does it have procedures designed to minimize the risks associated with advisory activities? ______ ______
4. If the FCM acts as a CPO, has it obtained prior Board approval and is it in compliance with any conditions in the Board order? ______ ______

3250.0.11.12 Internal Controls

1. Does the FCM have written procedures pertaining to the following:
   a. the types of futures and options on futures contracts which the FCM will execute? ______ ______
   b. individuals authorized to effect transactions and sign contracts and confirmations? ______ ______
   c. the firms or individuals with whom FCM employees may conduct business? ______ ______
2. Does the FCM obtain written authorization from customers specifying the individuals who are authorized to execute trades on behalf of the customers? ______ ______
3. Does the FCM have written procedures governing—
   a. the solicitation and acceptance of customers? ______ ______
   b. the execution of purchases and sales? ______ ______
   c. processing transactions? ______ ______
   d. accounting for transactions? ______ ______
   e. clearing of transactions? ______ ______
   f. safekeeping of customer margin deposits or securities deposited as margin? ______ ______
4. Does the FCM have written contracts with all firms or individuals who may conduct business on behalf of the FCM? ______ ______
5. Does the FCM have proper segregation of duties to ensure that individuals involved in executing transactions are not able to make accounting entries? ______ ______
6. Does the FCM have a numbered and controlled system of order tickets and confirmations to prevent unauthorized trading and to verify the accuracy of records and enable reconciliation throughout the system? ______ ______

	Yes	No
7. Does the FCM have procedures to time stamp receipt of all orders at least to the nearest minute and execute all orders strictly in chronological sequence (to the extent consistent with the customers' specifications)?	_____	_____
8. Does the FCM have a system for routing incoming confirmations to an operating unit separate from the unit that executes transactions?	_____	_____
9. Does the FCM have a system for comparing internal and external confirmations to ensure that the FCM will not accept or deliver securities and/or margin payments without proper authorization and documentation?	_____	_____
10. Does the FCM have procedures to ensure that someone outside the trading unit is responsible for resolution of trades in which incoming and outgoing confirmations do not match?	_____	_____
11. With respect to transactions cleared by others, are procedures in place for verifying and agreeing clearing FCM open position and margin deposit reports?	_____	_____
12. Does the FCM review daily outstanding contracts, customer positions, and margin balances?	_____	_____
13. Does FCM management regularly review all adjustments affecting futures positions or income recognition to verify that such adjustments were proper and approved?	_____	_____
14. Are subsidiary ledgers regularly reconciled to the general ledger?	_____	_____
15. Has the FCM adopted written supervisory procedures for supervising brokers and others to ensure that they follow written policies and procedures?	_____	_____
16. Are there written procedures containing criteria for selecting and training competent personnel?	_____	_____
17. Does the FCM have a comprehensive reporting system for providing management with all the information necessary to effectively manage the FCM's operations?	_____	_____
18. Are procedures in place to ensure that any futures advisory services (investment advice) furnished—		
a. reflect the views of persons authorized to supervise advisory activities?	_____	_____
b. are authorized under Regulation Y or by Board order?	_____	_____
19. Is there a formal and comprehensive internal audit program pertaining to FCM activities?	_____	_____

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

This section serves as a prelude to the futures commission merchant activities (FCM) that are provided as examples of previous Board FCM decisions. Sections 3251.0.1 through 3251.0.13 provide brief historical summaries of Board decisions that may have led to the authorizations that have been incorporated into the April 1997 revision of Regulation Y for this activity. The summaries provide the reader with some historical perspective as to how and why the current provisions of Regulation Y evolved for FCMs. Certain conditions and commitments within these orders may no longer apply to the current provisions of Regulation Y. Therefore, reference must be made to the current Regulation Y, section 225.28(b)(7)(iv).

3251.0.1 FCM BROKERAGE OF FUTURES CONTRACTS ON A MUNICIPAL BOND INDEX

A bank holding company applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to engage de novo, through a wholly owned subsidiary located in the state of New York, to execute and clear futures contracts on a municipal bond index. The applicant also proposed to offer futures advisory services for a separate fee or as an integrated package of services to futures commission merchant customers through the subsidiary.

The Board had previously approved by regulation the activity of executing and clearing futures contracts on bullion, foreign exchange, U.S. government securities, and money market instruments, primarily on the basis that banks may hold and deal in the underlying cash items. The proposed futures contract on a municipal bond index was based on an index of general obligation bonds selected by the *The Bond Buyer*. The Bond Buyer Municipal Index is composed of 50 tax-exempt municipal revenue and general obligation bonds chosen on the basis of criteria that favor recently issued and actively traded bonds. The index is intended to be an accurate indicator of trends and changes in the municipal bond market. The offering of futures contracts based on the bond index (broad spectrum of municipal securities) could provide FCM customers with a more effective tool for hedging against the price risk associated with a portfolio of municipal bonds than any of the existing interest-rate futures contracts.

Banks are permitted to hold and deal in general obligation bonds, and they are active participants in the cash markets for those bonds. Based on these facts, the Board determined that the applicant's proposal was substantially similar to proposals to broker other financial futures previously approved by the Board, and was thus closely related to banking.

With regard to the proposed advisory activities, the Board had previously approved by order the provision of advisory services relating to approved FCM activities (1984 FRB 780). The applicant proposed to provide advisory services either for a separate fee or as an integral package of services to FCM customers. The services would include written or oral presentations on the historical relationship between the cash and futures markets, a demonstration of examples of financial futures uses for hedging, and assistance in structuring a hedging strategy. The applicant would provide these services only to major corporations and other financial institutions.

Based on all the facts provided, the Board concluded that—

1. the proposed activities by the applicant could reasonably be expected to produce benefits to the public;
2. the proposed FCM activities would entail risks or conflicts of interests different than those considered and addressed by the Board in its approvals of other FCM activities; and
3. the balance of the public-interest factors was favorable.

The Board noted, however, that trading of the futures contract involved in the application had not been approved by the Commodity Futures Trading Commission (CFTC). It therefore conditioned its December 21, 1984, approval of the application on the CFTC's approval of the contract (1985 FRB 111).

3251.0.2 FCM BROKERAGE OF CERTAIN FUTURES CONTRACTS ON STOCK INDEXES INCLUDING OPTIONS

A bank holding company applied, under section 4(c)(8) of the BHC Act and section 225.21(a) of Regulation Y, to engage, de novo through its wholly owned futures corporation, in executing and clearing, on major commodity exchanges, futures contracts on stock indexes and options on such futures contracts. The subsidiary would execute and clear—

1. the Standard & Poor's 100 Stock Price Index futures contract;
2. the Standard & Poor's 500 Stock Price Index futures contract (S&P 500);
3. options on the S&P 500, all of which are traded on the Index and Option Division of the Chicago Mercantile Exchange;
4. the Major Market Index futures contract, currently traded on the Chicago Board of Trade; and
5. the FT-SE 100 Equity Index futures contract, currently traded on the London International Financed Futures Exchange.

The execution and clearance of stock index futures and options traded on major commodity exchanges appeared to be functionally and operationally similar to securities brokerage, permitted for bank holding companies under section 225.28(b)(6)(i) of Regulation Y. Like municipal bond index futures (an activity proposed by an applicant which was previously approved by Board order), these futures contracts are settled in cash and are designed to allow customers to hedge the market risk associated with holding financial assets, in this instance, corporate equity securities. The equities represented by the listed indexes were chosen on the basis of criteria that favor a combination of securities that would accurately reflect fluctuations in the stock market.

The Board approved the application on February 4, 1985, based on the above analysis and on the fact that national banks have been permitted to execute and clear stock index futures, and options thereon, for the account of customers, through their FCM operations subsidiaries (1985 FRB 251). It also took into consideration the fact that trust departments of banks have begun to use stock index futures contracts and options on such contracts to hedge the market risk facing diversified stock portfolios.

3251.0.3 LIMITED FCM CLEARING-ONLY AND EXECUTING-ONLY TRADES

A bank holding company (the applicant) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to engage de novo in various FCM activities. The activities were to be conducted through its wholly owned FCM subsidiary (the company). The FCM activities consisted of—

1. executing and clearing, executing without clearing, and clearing without executing, as agent for institutional customers, the futures contracts and options on futures contracts listed in appendix A of the order;
2. executing and clearing as agent for institutional customers, through omnibus trading accounts with unaffiliated FCMs, the futures contracts and options on futures contracts listed in appendix B of the order; and
3. providing related investment advisory services.

The applicant proposed to conduct the activities throughout the United States.

The applicant requested authority to conduct, through the company, both execution and clearing activities on the Chicago Mercantile Exchange (CME) and the Chicago Board of Trade (CBOT). The company also planned to conduct FCM activities through omnibus customer trading accounts established in its own name with clearing members of the exchanges on which the company would not be a member.[1]

The applicant also sought authority for the company to clear trades on the CME and the CBOT that had been executed by unaffiliated brokers pursuant to "give-up agreements." Under the applicant's proposal, the company would not be the primary clearing member for any nonclearing member on the CBOT and would not qualify any nonclearing member on the CME. The company also planned to execute trades that would be given up for clearance, at the customer's request, to an unaffiliated FCM.

The Board had previously determined, by regulation and order, that acting as an FCM in executing and clearing all of the proposed financial futures contracts and options on futures contracts, and providing investment advisory services with respect to such contracts, are activities closely related to banking under sec-

1. An omnibus account is an arrangement between a member clearing firm of an exchange and a nonmember FCM that seeks to conduct business on that exchange. Using this arrangement, the member clearing firm executes and clears transactions for the nonmember FCM and its customers. The omnibus account reflects all positions of the FCM's customers but is divided into separate segments for each customer for the purposes of calculating margin requirements, reporting current holdings, and other matters.

tion 4(c)(8) of the BHC Act with two exceptions.[2] See section 225.28(b)(7)(iv) and (b)(6)(iv) of Regulation Y and the Board orders found at 1992 FRB 953, 1991 FRB 64, 1990 FRB 881, and 1990 FRB 554.

On January 9, 1991, the Board denied a bank holding company's application to engage, through a nonbanking subsidiary, in clearing-only activities related to securities options and other financial instruments. The applicant in that case had proposed that its subsidiary primarily clear, but not execute, trades for professional floor traders (primarily market makers and specialists) trading for their own accounts on major securities and commodities exchanges. (See section 3700.12 and 1991 FRB 189.)

In the 1991 case, the Board was concerned that, by not engaging in both the execution and clearance of a trade, the nonbanking subsidiary could not decline transactions that posed unacceptable risk. It would have been obligated to settle each trade entered into by one of its customers, even if the customer did not have the financial resources to honor the obligation. No mechanism existed by which the nonbanking subsidiary could contemporaneously monitor the intra-day trading activities of the floor traders, its primary customers. The Board decided that the proposed nonbanking activity exposed the parent bank holding company to substantial credit risk. This decision was based on (1) the subsidiary's inability to monitor and control the risks to be undertaken and (2) the fact that clearing agents had to guarantee the financial performance of their customers to the clearinghouses of the exchanges on which they operate. The public-benefit considerations therefore precluded approval of that application under section 4(c)(8) of the BHC Act.

The applicant's proposal differed from the 1991 case in several respects. Under the proposal, the company would not serve as the primary or qualifying clearing firm for any unaffiliated customers. Also, the company would clear only those trades that it executed, or that other executing brokers executed and the company accepted for clearance pursuant to a customer's give-up agreement. The executing brokers would be independent from the customers and would have the opportunity to evaluate the trade before it was executed.

All of the company's clearing-only activities would be conducted pursuant to give-up agreements. Under these give-up agreements and other customer agreements, the company would have the right to refuse to accept for clearance any customer trade that it deemed unsuitable. The refusal could stem, for example, from consideration of market conditions or the customer's financial situation or objectives. Also, the applicant represented that it would be able to restrict the number and types of positions to be held by a customer as it deemed reasonable. The company could then refuse to accept trades that posed unacceptable risks.

The company established a framework for limiting risk from the clearing-only activities. It would review the creditworthiness of each potential customer and, based on the review, approve or reject the customer and establish appropriate limits concerning trading, margin, credit, and exposure limits. The company had controls in place to monitor the intra-day trading activities and risk exposure of its customers.

The Board determined that the credit and other risk considerations associated with the proposed clearing-only activities on the CME and CBOT were consistent with previous approvals. The decision was based on (1) the framework for limiting risk from clearing-only activities, (2) the commitments made by the applicant, and (3) the other facts of record. After reviewing other required considerations, the Board approved the application on May 6, 1993 (1993 FRB 723). Approval was subject to the commitments made by the applicant and the terms and conditions set forth in the order as well as in other Board orders related to the proposed activities.

3251.0.4 FCM CLEARING TRANSACTIONS BY PREAPPROVED EXECUTION GROUPS

A foreign banking organization (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a) of Regulation Y to engage de novo in clearing trades of sophisticated institutional investors relating to contracts on futures and options on futures. Trades would be cleared through the applicant's majority-owned clearing subsidiary (the com-

2. The two exceptions are the Deutsche Aktienindex 30 Stock Index futures and the German Government Bond Index futures contracts traded on the Deutsche Terminborse GmbH. These two contracts had been approved as FCM activities pursuant to Regulation K. The Board also noted that these contracts served the same functions as the futures contracts for which FCM activities had previously been approved under section 4(c)(8) of the BHC Act.

pany) on the Chicago Mercantile Exchange (CME) and the Board of Trade of the City of Chicago (CBOT) and executed by nonaffiliated floor brokers.

In particular, the applicant proposed to accept for clearance customer orders that are executed by preapproved execution groups pursuant to "give-up agreements." [3] The applicant expected that the company would initially provide only limited execution services. The company would not be the primary clearing firm for any non-clearing member of the CBOT, and would not qualify any nonclearing member of the CME.

The applicant also sought approval to engage in other FCM and data processing and transmission activities. The applicant committed that the company would conduct these activities according to the provisions and subject to the limitations of Regulation Y (section 225.28(b)(7)(iv) and (b)(14)).[4] The company also planned to engage in certain other activities that the applicant maintained were incidental to its FCM services. These activities included the management of institutional-customer funds under its control. The incidental activities would also include providing to institutional customers, on request, general advice about (1) sources of information, (2) the selection and arrangement of an appropriate execution group, (3) the availability of computer software relating to futures and options on futures, (4) order-placement alternatives, and (5) cost-reduction methods in the use of futures and options on futures for hedging purposes. The company committed that it would not provide investment advice relating to futures and options on futures or on any other matter not authorized by the order.

The Board previously denied a proposal in which a nonbanking subsidiary of a BHC would have cleared, but not executed, trades for professional floor traders (primarily market makers and specialists) trading for their own account on major securities and commodity exchanges. (See 1991 FRB 189 and section 3700.12.) In that order, the Board was concerned that, by not engaging in both the execution and clearance of a trade, the FCM nonbanking subsidiary could not decline transactions that posed unacceptable risk. It would have been obligated to settle each trade entered into by one of its customers, even if the customer did not have the financial resources to honor the obligation. No mechanism existed by which the FCM nonbanking subsidiary could contemporaneously monitor the intra-day trading activities of the floor traders, its primary customers. The Board decided that the proposed nonbanking activity exposed the parent bank holding company to substantial credit risk. This decision was based on (1) the FCM's inability to monitor and control the risks to be undertaken and (2) the fact that the clearing agents had to guarantee the financial performance of their customers to the clearinghouses of the exchanges on which they operate. The public-benefit considerations therefore precluded approval of that application under section 4(c)(8) of the BHC Act.

The applicant's proposal differed from the above-mentioned denied application in various respects. In the applicant's case, the company would not serve as the primary or qualifying clearing firm for any broker that executes its clearing-only trades or for any nonaffiliated customer. The company would clear only trades that it executes, or that other executing brokers execute and the company accepts for clearance pursuant to the customer's give-up agreement.

The applicant represented that, under the give-up agreements, the company would have the contractual right to refuse a customer's trade that exceeded established trading limits that were documented in the give-up agreement for that particular customer. The company would have a period of time within which it could determine if the executed trade was properly authorized according to established limits, and could decide to reject the trade.

The company's customer base would consist of sophisticated institutional investors. The company would review the creditworthiness and other characteristics of each potential customer. Based on that review, it would approve or reject the customer and establish appropriate trading, credit, margin, and exposure limits for the customer. It would accept for clearance only trades that had been executed by preapproved execution groups trading on the CBOT and CME. Company would approve an execution group only if the floor brokers, and their primary or qualifying clearing firms, satisfied the com-

3. Under a give-up agreement, the executing floor broker (or give-in broker), pursuant to a customer's instructions, gives up an executed order for clearance to a clearing member other than the executing broker's primary clearing member (or qualifying member). Such agreements are used primarily to allow institutional customers to select a broker who has superior expertise and execution skills with respect to specific contracts or types of orders, while maintaining their accounts and positions with a clearing firm in which they have financial confidence.

4. Company would not trade for its own account except (1) to hedge a cash position in the related financial instrument or (2) to offset or liquidate a clearing error arising in the normal course of business.

pany's financial, managerial, and operational standards.

The Board decided that the credit and the other risk considerations associated with the proposed nonbanking activities were consistent with requirements for approval. The decision was based on (1) the framework described in the order; (2) the fact that the company would not be the primary or qualifying clearing firm for any broker that executed the company's clearing-only trades, or for any nonaffiliated customer; (3) the other contractual and operational distinctions noted between this proposal and the previous denied application (1991 FRB 189); and (4) the other facts of record.

The Board noted that it had recently approved applications by two bank-affiliated FCMs to engage in clearing-only activities, also on the CBOT and the CME (1993 FRB 723 and 1993 FRB 728). For a brief summary of the initial order, see section 3251.0.3.

The Board approved the application on August 2, 1993 (1993 FRB 961). The approval was subject to the facts of record, all the commitments made by the applicant, and the limitations and conditions stated in the order.

3251.0.5 FCM—EXECUTING AND CLEARING, AND CLEARING WITHOUT EXECUTING, FUTURES AND OPTIONS ON FUTURES ON NONFINANCIAL COMMODITIES

A bank holding company (the applicant, a BHC within the meaning of the BHC Act) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.3 of the Board's Regulation Y to act, through a wholly owned subsidiary (the company), as a futures commission merchant (FCM) for unaffiliated customers in executing and clearing, and clearing without executing, futures and options on futures on *nonfinancial commodities*. Initially, the applicant proposed to conduct these activities in futures and options on futures on heating oil, crude oil, corn, wheat, soybeans, cattle, and hogs. The applicant must give at least 20 days' written notice to the Federal Reserve before it engages in FCM activities with respect to additional contracts linked to other physical commodities, unless other contracts are approved for any other bank holding company under the BHC Act.

The company is engaged in executing and clearing on major commodities exchanges futures and options on futures on financial commodities and certain broad-based and widely traded stock and bond indices.[5] The company proposed to engage in its proposed activities on the CBOT, CME, and New York Mercantile Exchange (NYMEX).

The company *will not* trade in the proposed derivative instruments for its own account. However, when a customer defaults on a contract after the termination of futures trading and the company is required to make or take delivery of the underlying commodity, or when it exercises its right to liquidate a customer's account, the company is permitted to take the necessary actions to mitigate its damages. These actions include acting for its own account in retendering or redelivering the commodity, entering into an exchange-for-physical transaction, or entering into an offsetting transaction in the cash market, provided these and other appropriate actions are taken as soon as practicable.

The company will limit its proposed services only to institutional customers and will not provide such services to retain brokerage customers, locals, or market makers. Approximately 10 percent of its business will be conducted on behalf of managed commodity funds (regulated by the Commodity Futures Trading Commission (CFTC) and the National Futures Commission). None of the managed funds would be owned, sponsored, advised by, or otherwise affiliated with the applicant. The company will not act as a commodity trading advisor,[6] or otherwise provide investment advice on the proposed instruments.

The Board had not previously approved the execution and clearance by bank holding companies of futures and options on futures on nonfinancial commodities. The Board's approval had been limited to acting as an FCM in the execution and clearance on major commodities exchanges of futures and options on futures on a variety of financial commodities, such as gold

5. See 1985 FRB 970. The company already engages in FCM activities on the Chicago Mercantile Exchange (CME), Chicago Board of Trade (CBOT), Commodity Exchange, London International Financial Futures and Options Exchange, Marche a Terme International de France, and Singapore International Monetary Exchange.

6. As defined in the Commodities Exchange Act, a commodity trading advisor includes, with certain exceptions, "any person who, for compensation or profit, engages in the business of advising others, either directly or through publications or writings, as to the value of commodities or as to the advisability of trading in any commodity for future delivery on or subject to the rules of any contract market, or who for compensation or profit, and as part of the regular business, issues or promulgates analyses or reports concerning commodities." (7 U.S.C. 2)

and silver bullion and coins, foreign exchange, government securities, certificates of deposit and money market instruments that banks may buy and sell for their own accounts, and stock and bond indices.[7]

3251.0.5.1 BHC's Execution and Clearance of Futures and Options on Futures on Nonfinancial Commodities

National banks engage in a broad range of FCM activities involving all types of exchange-traded futures and option contracts consisting of financial and nonfinancial commodities for the accounts of customers, and for their own accounts, for hedging purposes. The Office of the Comptroller of the Currency (OCC) reasoned that the clearing process for any futures contract or option on a futures contract involves essentially an extension of credit because, upon receiving an executed order from a customer, the clearing broker supplies its own credit in an order on behalf of the customer and then sends the order to the exchange clearing organization for settlement. The OCC also determined that the execution, clearance, and advisory services provided by an FCM to its customers are essentially the same whether or not the underlying commodities are financial or nonfinancial.

Some national banks act as an FCM in the execution and clearance of futures and options on futures on a broad array of financial and nonfinancial commodities. The state of New York Banking Department has also permitted several New York–chartered banks to engage, to a limited extent, in FCM activities involving derivative instruments on nonfinancial commodities.

The Board has previously authorized bank holding companies to conduct FCM activities involving numerous instruments based on financial commodities. The Board determined that acting as an FCM in connection with contracts involving nonfinancial commodities is operationally and functionally similar to conducting FCM activities with respect to derivative contracts involving financial commodities. In both instances, the FCM monitors customer credit risk and trading exposure; assesses and collects initial and maintenance margins from customers; and brokers, executes, and clears trades.

Acting as an FCM for derivative instruments involves functions, skills, risks, and expertise that are substantially similar to those associated with the execution and clearance of financial futures and option contracts that the Board previously approved. The mechanics of executing and clearing trades are operationally the same whether the commodity underlying the exchange-traded derivative instrument is financial or nonfinancial. The rules and regulations of the CFTC, as well as the rules, procedures, practices, capital requirements, and safeguards of the various commodities exchanges, govern both the execution and clearance of nonfinancial futures and options and the execution and clearance of financial futures and options.

In 1991, the Board permitted bank holding companies to provide investment advice on trading futures contracts and options on futures contracts in nonfinancial commodities, such as agricultural and energy commodities. (See 1991 FRB 126.) It concluded that (1) providing investment advice on investing in futures and options on nonfinancial commodities appeared to be the functional equivalent of providing advice on futures and options on futures on financial commodities and (2) exchange-traded futures and options on futures involving nonfinancial commodities were essentially financial instruments.

The Board concluded, based on an analysis of the range of FCM activities currently existing in banking (as summarized above and cited in the order), that the activity of acting as an FCM in the execution and clearance of futures and options on futures on nonfinancial commodities, as proposed by the applicant, is an activity that is closely related to banking for the purposes of the BHC Act.

3251.0.5.2 FCM's Execution and Clearance of Futures and Options on Futures on Nonfinancial Commodities

The Board noted that both the company and the commodities exchanges on which the proposed FCM activities would be conducted are subject to regulatory oversight by the CFTC. The company's trading and clearance activities would also be subject to regulation and review by the CFTC and the commodities exchanges. The

7. See section 225.28(b)(7)(iv) of Regulation Y (12 C.F.R. 225). See also 1985 FRB 251, 1985 FRB 111, 1977 FRB 951, and 38 *Federal Register* 27,552 (1973). The applicant's proposed clearing without execution activities were approved in 1993 (FRB 723–728). The company proposed to conduct its clearing-only activities subject to the same conditions and limitations set forth in these Board orders, including the use of the "give-up agreement" by and among the company, its customers, and the nonaffiliated executing FCM that allows the company to refuse to clear trades that exceed specified risk parameters.

applicant committed to conduct the proposed activities subject to the same rules and procedures the Board imposed on FCM activities in derivatives of financial commodities, including prohibitions on extending credit to customers for the purpose of meeting margin requirements. The applicant committed to take several further steps in the event that one of the company's customers has an open position in a contract after futures trading is ceased, and the customer is not willing or is unable to make or take delivery. Based on the commitments made by the applicant for conducting the proposed activities, the limitations on the activities cited in the order, and all the facts on record, the Board approved the application on September 28, 1993, subject to all the terms and conditions set forth in the order and the noted Board regulations and orders that relate to the proposed activities. (See 1993 FRB 1049.)

3251.0.6 FCM AND RELATED ADVISORY SERVICES FOR OPTIONS ON EUROTOP 100 INDEX FUTURES AND THE ONE-MONTH CANADIAN BANKER'S ACCEPTANCE FUTURES

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to act as an FCM for and provide advisory services to nonaffiliated persons, in connection with the purchase and sale of futures and options on futures contracts that are based on bonds or other debt instruments; certain commodities; or stock, bond, or commodity indices. The applicant proposed contracts that were not previously considered by the Federal Reserve System: options on Eurotop 100 Index futures, to be traded on the Commodity Exchange, Inc. (Eurotop contracts), and the one-month Canadian Banker's Acceptance Futures, to be traded on the Montreal Exchange (banker's acceptance futures). These contracts are based on a financial instrument or a broad-based financial index and are comparable to contracts previously considered by the Federal Reserve System. They have essentially the same terms and serve the same functions as futures and options contracts for which FCM and related advisory services have been approved by the Board under section 4(c)(8) of the BHC Act. The Board concluded that the skills necessary to engage in providing FCM and futures advisory services are the same as those used to provide such services with regard to previously approved contracts. The Board thus approved the applicant's provision of these FCM and related advisory services for these contracts by the company, concluding that the activity is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. (See 1995 FRB 188–189.)

3251.0.7 FCM TRADING FOR ITS OWN ACCOUNT IN FUTURES, OPTIONS, AND OPTIONS ON FUTURES CONTRACTS BASED ON CERTIFICATES OF DEPOSIT OR OTHER MONEY MARKET INSTRUMENTS

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to trade as an FCM in all futures, options, and options on futures contracts based on certificates of deposit or other money market instruments that are permissible investments for national banks. The Board had previously authorized company to trade for its own account, for purposes other than hedging, in futures, options, and options on futures contracts based on U.S. government securities that are permissible investments for national banks and in similar contracts based on certain money market instruments. (See 1991 FRB 759.) In that order, the Board noted that trading in these contracts would require a market judgment on interest rates. It was noted that banks, through their core lending and funding activities, had developed expertise in judging interest-rate and price movements. For those reasons, and because that proposal would not authorize company to trade in derivative contracts based on securities or instruments that a state member bank could not purchase for its own account, the Board determined the trading activity to be closely related to banking under section 4(c)(8) of the BHC Act.

The Board concluded that its reasoning in the 1991 order could be applied currently to this expanded 1994 proposal. The Board noted that the Office of the Comptroller of the Currency had determined that trading in futures and options contracts based on bank-eligible securities or instruments is an activity that is within the legally authorized powers of national banks (OCC Interpretive Letter No. 494 (December 20, 1989)). The Board thus concluded that the proposed trading activity is conducted by banks and is so operationally and functionally similar to activities conducted by banks that banks are particularly well-equipped to engage in the activity. It therefore concluded that trading for one's own account, for purposes other than hedging, in futures, options, and options on futures contracts based on certificates of deposit or other money market instruments that are permissible investments for national banks is an activity that is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. (See 1995 FRB 190.)

3251.0.8 FCM ENGAGING IN COMMODITY AND INDEX SWAP TRANSACTIONS AS AN ORIGINATOR, PRINCIPAL, AGENT, BROKER, OR ADVISOR

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to engage in FCM activities and in acting as an originator, principal, agent, broker, or advisor with respect to swaps and swap-derivative products and over-the-counter option transactions based on certain commodities; stock, bond, or commodity indices; or a hybrid of interest rates and these commodities or indices (commodity and index swap transactions).[8] Except for certain advisory services, the Board had not determined whether these proposed activities are closely related to banking under section 4(c)(8) of the BHC Act. The Board had determined, by order or regulation, that acting as an originator, principal, broker, agent, or advisor with respect to interest-rate and currency swaps and swap-derivative products relating thereto (financial swap transactions) are activities closely related to banking and are thus permissible for bank holding companies. (See Regulation Y, section 225.28(b)(6) and 1993 FRB 345.)

8. The proposed activities are subject to the same commitments relating to interest-rate and currency swap transactions and related swap-derivative products. (See 1993 FRB 345.)

The applicant anticipates that the section 20 subsidiary's swap transactions will be based on a variety of stock and bond indices, similar to those previously approved in connection with proposed FCM activities (or to a specially tailored basket of securities selected by the parties) (index transactions), or they could be based on precious metals and energy products or related commodity indices (commodity transactions). They also could include hybrid transactions that are based on a combination of interest rates and such indices or commodities.

Commodity and index swap transactions are operationally, structurally, and functionally similar to financial swap transactions. Both types of swaps involve privately negotiated financial transactions. The parties involved in the transaction agree to exchange specified payment streams over a specific period of time, based on a predetermined formula. For an interest-rate swap, the basic structure is an exchange between two counterparties of the payment streams that arise out of different interest payment obligations, calculated on the basis of an agreed-upon notional principal amount. With the commodity or index swap transaction, the parties exchange payment streams based on a notional principal amount and the prices of certain commodities or the value of or returns on certain securities or indices of securities, or on a combination of these and other measures such as interest rates. For both types of swap transactions, the parties enter into these contracts to meet various common investment objectives, including taking positions in the market for the underlying assets for investment purposes, limiting one's exposure to market uncertainties and future price fluctuations, and preserving principal while participating in the potential returns of a particular financial market or economic sector. Since a swap transaction is negotiated between parties, the economic terms of the transaction (including the duration of the contract; notional principal amount; method of calculating and frequency of payments; and underlying assets, rates, or indices upon which the payments are to be determined) can be individually tailored to meet specific financial goals and risk sensitivities of the counterparty.

National banks have been authorized by the OCC to engage in activities that involve matched and unmatched commodity and index swap transactions (including related swap-derivative products and over-the-counter options). The New York State Banking Department also approved these activities for state-chartered banks under its jurisdiction. In addition, the Board permits state member banks to enter into perfectly matched commodity and index swap transactions, provided the transactions are consistent with their state charters. Further, the Federal Reserve Bank of New York, acting under delegated authority, has approved proposals by state member banks to engage in such activities on an unmatched basis. (See 12 C.F.R. 208.128.)

For the foregoing reasons and based on the facts of record, the Board determined that engaging in commodity and index swap transactions is an activity conducted by banks. The Board also considered the similarities between these transactions and the financial swap transactions noted above, as well as the fact that banks and other intermediaries play a similar role in financial swap transactions and commodity and index swap transactions. It was noted that all of these contracts represent forms of financial intermediation that banks have historically engaged in. Based on all the facts on record, the Board concluded that these proposed activities are closely related to banking under section 4(c)(8) of the BHC Act.

As noted previously, the company also proposes to provide advisory, agency, and brokerage services with respect to commodity and index swap transactions. The Board believes that the authority of banks to conduct these activities could be implicit in or incidental to their authority to engage in the transactions as principal. In its analysis, the Board noted that banks can develop a familiarity and expertise as to the structure and economic effects of these transactions, which should well equip them to provide the intended advisory, agency, and brokerage services. National banks have been expressly authorized to provide advisory, execution, and other services with respect to exchange-traded futures and options on futures contracts based on financial and nonfinancial commodities. (See OCC Interpretive Letter No. 494.) The exchange-traded transactions are used for purposes similar to the over-the-counter transactions for which the applicant proposes that the company render advisory, agency, and brokerage services. The pricing bases for, economic effects of, and risk presented by the two types of transactions are also similar in important respects.

Based on the facts on record, the Board determined that the proposed advisory, agency, and brokerage services are activities conducted by banks or are operationally and functionally similar to such activities. Thus, they are closely related to banking under section 4(c)(8) of the BHC Act. (See 1995 FRB 190–191.)

3251.0.9 FCM TRADING IN FUTURES, OPTIONS, AND OPTIONS ON FUTURES CONTRACTS BASED ON COMMODITIES OR ON STOCK, BOND, OR COMMODITY INDICES FOR ITS OWN ACCOUNT

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to engage in *trading for its own account* for purposes other than hedging in futures, options, and options on futures contracts based on certain commodities or on stock, bond, or commodity indices—transactions that have not been expressly authorized for banks. The instruments to be traded are generally the same as those previously approved by the Board in considering FCM and futures advisory activities of bank holding company subsidiaries, such as crude oil futures, Standard & Poor's 500 Stock Price Index futures, and municipal bond index futures. (See 1993 FRB 1,049 and 1994 FRB 151 and also SR-93-27 (refer to Appendix A).) The applicant proposes to engage in FCM activities and go beyond furnishing those FCM and related advisory services and seeks the Board's permission for the company to trade these instruments for its own account. Such activities include arbitrage operations, market making for customer-accommodation purposes, and proprietary trading (taking positions for investment purposes), as well as hedging transactions.

The proposed activities could consist of exchange-traded instruments that could be based on commodities such as crude oil, providing for delivery of the underlying commodity upon expiration of the contract. The applicant confirmed that it does not intend to take delivery of such commodities but plans to take several actions to avoid delivery of commodities other than precious metals. These actions include closing positions in expiring contracts during trading periods and engaging in exchange-for-physical transactions after trading closes. The Board stipulated, as a condition of approval, that the applicant could not take delivery of the commodities, except in unusual circumstances. Whenever delivery is taken, the applicant is required to notify the Federal Reserve System and divest itself of the commodity promptly. The Board views the contracts as financial instruments, despite the possibility that trading in such contracts can result in the delivery and ownership of commodities that banking organizations are generally not permitted to hold. The Board also noted, with respect to the proposed exchange-traded transactions that are based on an index of securities or commodities, that (1) the transactions would be settled in cash and (2) they would not provide for the delivery of the underlying securities or commodities.

The Board had not previously approved this trading activity, with respect to the instruments proposed, for bank holding companies or their subsidiaries under section 4(c)(8) of the BHC Act. The Board has, however, authorized acting as an FCM and providing advisory services with respect to the instruments to be traded. The Board also approved similar trading with respect to instruments based on U.S. government securities and money market instruments. (See 1991 FRB 759.) With respect to section 20 nonbank subsidiaries, the Board has recognized the utility of trading in these instruments to hedge market exposure resulting from other trading activities, indicating that these bank holding company subsidiaries may engage in such risk-management transactions as a necessary incident to their underwriting and dealing activities. (See 1994 FRB 449.) No federal bank regulatory authority had expressly permitted banks to trade in the proposed instruments for their own accounts for purposes other than hedging.

The Board believes that the proposed trading activities are closely related to banking. It noted that banks engage in activities with respect to the instruments in question that are similar to or related to the proposed trading activities and that they engage in trading activities for the same purposes with respect to similar instruments, including exchange-traded contracts based on bank-eligible securities and instruments and over-the-counter transactions based on commodities and various indices.

The Board further noted that banking organizations have substantial experience with exchange-traded derivative transactions based on commodities or on commodity or securities indices. It also noted important similarities between the proposed instruments and transactions that have been authorized for banks for nonhedging purposes. Moreover, the Board believes that the risks inherent in the proposed trading activities are similar to those that are experienced by banks that engage in swaps and other permissible transactions; hence, the proposed transactions require analytical skills; risk-management policies, procedures, and techniques; and computer and operations systems similar to those used by banks for engaging in those permissible transactions. Based on this reasoning, the Board determined the proposed activity to be closely related to banking under section 4(c)(8) of the BHC Act. The Board's December 23, 1994, approval is subject to all the facts of record, all the commitments made in connection with the application, and the conditions cited in the order. (See 1995 FRB 185.) These include adhering to future supervisory or examination policies and guidance issued by the Board for a banking organization's derivatives business, including policies or guidance with respect to customer transactions, trading and marketing practices and policies, and related systems and controls.

3251.0.10 APPENDIX A—PREVIOUS PRIOR-APPROVAL REQUIREMENTS FOR BANK HOLDING COMPANIES PROPOSING TO ENGAGE IN FCM ACTIVITIES

In May 1993, the Board reduced the prior-approval requirements for bank holding companies proposing to engage in certain futures commission merchant (FCM) activities. (See SR-93- 27.) First, the Board delegated to Reserve Banks its authority to approve proposals by bank holding companies to act as an FCM in executing and clearing any futures contract on a financial commodity or stock or bond index that the Board has previously approved, on any Board-approved exchange. The Board also delegated to Reserve Banks its authority to approve proposals by bank holding companies to act as an FCM or commodity trading advisor in providing investment advisory services for previously approved financial instruments.

In addition, the Board modified and, in certain cases, eliminated the prior-approval requirement for bank holding companies seeking to act as an FCM for additional financial instruments or to act as an FCM on additional exchanges in which the bank holding company already has Federal Reserve System approval to engage generally in FCM activities. Any bank holding company that had previously received approval to act as an FCM under either Board order or the former sections 225.25(b)(18) and (b)(19) of Regulation Y could act as an FCM subject to certain limitations and conditions. These requirements were replaced by the April 1997 Regulation Y revision at section 225.28(b)(7)(iv).

3251.0.11 PROVIDING DISCRETIONARY PORTFOLIO MANAGEMENT SERVICES ON FUTURES AND OPTIONS ON FUTURES ON FINANCIAL COMMODITIES

A foreign bank (the applicant), a bank holding company within the meaning of the BHC Act, applied under section 4(c)(8) of the act to engage through company in providing discretionary portfolio management services with respect to exchange-traded futures and options on futures on financial commodities.[9] The provision of discretionary portfolio management services, with respect to futures and options on futures on financial commodities, had not been previously considered by the Board as to whether it is closely related to banking under section 4(c)(8) of the act.

In providing discretionary management services, company would manage customers' accounts and purchase and sell in its sole discretion exchange-traded futures and options on futures on financial commodities for such accounts. Company would provide discretionary management services in combination with providing futures commission merchant (FCM) transactional services and would only provide such services to institutional customers.[10] Company would not act as a counterparty on customer transactions or trade these instruments for its own account. In addition, company would not purchase or sell over-the-counter contracts for accounts over which it exercises discretion.

The Board has permitted bank holding company FCMs and commodity trading advisors to provide investment advice with respect to futures and options on futures on financial and nonfinancial commodities. (See Regulation Y, section 225.28(b)(6) and 1994 FRB 151.) The bank holding company argued that discretionary management is a normal manner of providing investment advice to institutional customers. Indeed, the Board permits bank holding companies to act as discretionary portfolio managers as part of providing investment advisory and full-service brokerage services with respect to securities. (See Regulation Y, section 225.28(b)(6) and (b)(7)(i).) In addition, the Office of the Comptroller of the Currency permits national banks to engage in discretionary funds management with respect to futures and options on futures.[11]

The applicant also indicated that company would provide the proposed futures-related discretionary portfolio management services in accordance with the limitations and conditions that would be imposed if company were providing portfolio management services in the securities context. In this regard, the applicant committed that company would only provide the proposed discretionary portfolio management services to institutional customers and only at the request of such customers.

The applicant also indicated that it would have a fiduciary relationship with all customers to whom it provides the proposed discretionary management services and has committed that company would comply with applicable law, including fiduciary principles. As one method of meeting its fiduciary obligations, the bank holding company committed that company would obtain the consent of customers before engaging, as principal or agent, in a transaction in which any affiliate of company acts as principal in futures or options on futures transactions on the customer's behalf. Company and its affiliates also agreed not to share any confidential information concerning their respective customers without the consent of the customer. In addition, the applicant stated that company would exercise its discretionary management authority only in purchasing and selling exchange-traded instruments. Therefore, concerns surrounding over-the-counter instruments, such as the potential for abuses due to the lack of price transparency, were not presented by the proposal.

For these reasons, the Board concluded that providing discretionary portfolio management services with respect to futures and options on futures on financial commodities is closely related to banking and a proper incident to banking for purposes of section 4(c)(8). The application was approved by the Board on February 9, 1995. (See 1995 FRB 386.)

9. The bank holding company also proposed to engage in a variety of data processing, securities, futures, and foreign exchange–related activities through company and another subsidiary. The Board previously has determined by order or regulation that these activities are closely related to banking. The bank holding company committed to conduct these activities in accordance with the conditions established by the Board in Regulation Y and prior orders.

10. Company would provide these services to commodity pools but would not become a commodity pool operator.

11. See OCC Interpretive Letter No. 494 (December 20, 1989).

3251.0.12 FCM EXECUTION, CLEARANCE, AND ADVISORY SERVICES FOR CONTRACTS ON FINANCIAL AND NONFINANCIAL COMMODITIES FOR NONINSTITUTIONAL CUSTOMERS

A foreign banking organization (the notificant) subject to the provisions of the Bank Holding Company Act (BHC Act) provided notice under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its proposal that its indirect U.S. subsidiary (the indirect subsidiary)[12] acquire certain assets and assume certain liabilities of a company.[13] The notificant would engage indirectly in FCM execution, clearance, and advisory activities with respect to futures and options on futures on financial and nonfinancial commodities[14] and in buying and selling foreign exchange in the spot, forward, and over-the-counter options markets on the order of investors as riskless principal.[15] The Board had previously determined by order and regulation that the above proposed activities are closely related to banking within the meaning of section 4 of the BHC Act.[16]

12. The indirect subsidiary is wholly owned by the notificant. The indirect subsidiary engages in various futures commission merchant, foreign-exchange, and securities-related activities. See 1994 FRB 646 and 649.

13. The acquired firm was a clearing member of certain financial and nonfinancial commodities exchanges. The FBO stated that the indirect subsidiary would become a clearing member of those exchanges. In addition, that subsidiary would provide FCM services with respect to two exchange-traded contracts that had not previously been approved by the Board (heating oil crack-spread options and gasoline crack-spread options) and would purchase and sell through the use of omnibus account arrangements certain futures and options on futures on nonfinancial commodities traded on two other exchanges.

14. These activities include providing execution-only and clearing-only services to customers. See 1993 FRB 723 and 1994 FRB 151.

15. The indirect subsidiary would provide the proposed riskless-principal services only to institutional customers, except that it would provide such services to certain noninstitutional customers when they direct it to convert funds from one currency to another to trade futures and options on futures contracts. Foreign exchange–related advisory services would not be provided to these noninstitutional customers.

16. See 12 C.F.R. 225.28(b)(7)(iv) and 225.28(b)(6) and 1990 FRB 649 (1990).

3251.0.12.1 Providing FCM Services to Certain Sophisticated Noninstitutional Customers

First, the notificant proposed that the indirect subsidiary would provide FCM execution, clearance, and advisory services with respect to contracts on both financial and nonfinancial commodities to persons that do not qualify as institutional customers but who trade futures and options on futures solely to hedge risks arising from their business activities (noninstitutional commercial hedger customers), such as farmers. The Board has limited bank holding companies to providing nonfinancial commodities–related FCM services only to institutional customers. Similarly, with respect to contracts on financial commodities, the Board has not permitted bank holding companies to provide execution-only or clearing-only services to noninstitutional customers and only permits bank holding companies to provide advisory services to financially sophisticated customers that have significant dealings in the underlying commodities.[17]

The indirect subsidiary's noninstitutional commercial hedger customers would be engaged or would be affiliated with a commercial enterprise that is engaged in producing, manufacturing, processing, or merchandising products or in providing services that are related to the commodities underlying the futures and options on futures contracts in which the customers would trade. The noninstitutional commercial hedger-customers would not be engaged in executing their own trades on the floor of any commodities exchanges. The notificant stated that the indirect subsidiary would require noninstitutional commercial hedger customers to state in writing that they would only engage in "bona fide hedging transactions," as defined by the Commodity Futures Trading Commission (CFTC).[18] In addition, an initial credit-review process will be established to determine whether a noninstitutional commercial hedger customer's proposed hedging activities are appropriate in light of the customer's net worth and business activities. The indirect subsidiary will not permit noninstitutional commercial hedger customers to trade in any commodities other than those that the customer would trade to hedge risks from its commercial activities, and it would establish a system to detect any unauthorized trading activities.

By limiting transactional services and advice to areas in which the customer has special expertise, the proposed limitations address the concern that the customer would rely unduly on the bank holding company's advice or that the customer would be unable to detect conflicts of interest or advice that is motivated by the bank holding company's self-interest. Moreover, the notificant will abide by all the other limitations designed to more specifically address the potential risks that may result from providing clearing-only and execution-only services to these customers.

3251.0.12.2 Foreign-Exchange Activities

Second, in connection with the proposal that the indirect subsidiary will buy and sell foreign exchange on the order of customers as riskless principal, the notificant proposed that the indirect subsidiary be permitted to purchase and sell foreign exchange for its own account for limited purposes while also providing foreign-exchange-related execution and advisory services.[19] In several limited circumstances, the Board has permitted a bank holding company to provide foreign-exchange-related transactional and advisory services in a subsidiary that purchases and sells foreign exchange for its own account.[20] For example, the Board has permitted bank holding companies to provide foreign-exchange-related advice and transactional services through a subsidiary engaged in purchasing and selling foreign exchange for its own account to hedge positions in permissible interest-rate or currency-swap transactions or to hedge risks arising from the permissible securities underwriting and dealing activities of the subsidiary.[21]

The indirect subsidiary will take positions in foreign exchange only as a means to hedge financial-statement translations of income for its foreign parent and as necessary for the payment of invoices denominated in foreign currencies. It would not enter into a foreign-exchange transaction for its own account with a customer if the customer is receiving foreign-exchange services relating to such transaction from this subsidiary. The notificant committed that the indirect subsidiary will observe the standards of care and conduct applicable to fiduciaries with respect to its foreign-exchange-related advisory activities and will provide foreign-exchange-related execution and advisory services only to institu-

17. See 1993 FRB 1049 and 12 C.F.R. 225.25(b)(19) (contracts on financial commodities). These limitations address concerns that, in futures transactions, unsophisticated customers may place undue reliance on investment advice received from a banking organization and may not be able to detect investment advice that is motivated by the advisor's self-interest. Similarly, in cases involving clearing-only transactions, the limitation helps address the added risk to the bank holding company that results from its more limited ability to review and reject trades that have been executed through another FCM.

18. See 17 C.F.R. 1.3(z).

19. The indirect subsidiary currently provides foreign-exchange-related execution and advisory services to its customers. In permitting bank holding companies to provide foreign-exchange execution and advisory services on a combined basis, the Board has relied on the representation that the subsidiary providing the foreign-exchange-related services would not purchase or sell foreign exchange for its own account.

20. The Board also previously has noted that in conducting foreign-exchange operations, commercial banks combine the functions of giving advice, executing transactions, and taking positions in foreign exchange.

21. See 1994 FRB 157 and 1993 FRB 892.

tional customers. The notificant also committed that the indirect subsidiary's personnel engaged in purchasing and selling foreign exchange for its own account will not have access to information about the foreign-exchange trading activities of customers and that customer representatives will not have access to information about the foreign-exchange activities of personnel engaged in purchasing and selling foreign exchange for the indirect subsidiary's own account.[22]

3251.0.12.3 Board's Decision on the Proposed FCM Activities

Based on the foregoing and all the facts of record, the Board approved the notification subject to all the terms and conditions set forth in the order and in the above-noted Board regulations and orders that relate to these activities. The Board's determination is subject to all the terms and conditions set forth in the Board's Regulation Y, including those in sections 225.7 and 225.23(b). The Board's decision is specifically conditioned on compliance with all the commitments made. The notice was approved on July 14, 1995 (see 1995 FRB 880).

3251.0.13 FCM SERVING AS A PRIMARY CLEARING FIRM FOR A LIMITED NUMBER OF FLOOR TRADERS AND BROKERAGE SERVICES FOR FORWARD CONTRACTS ON FINANCIAL AND NONFINANCIAL COMMODITIES

A foreign banking organization and its parent holding companies (the notificants), bank holding companies within the meaning of the Bank Holding Company Act, requested the Board's approval under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to acquire all the voting securities of a company (the company) and thereby engage in a wide range of nonbanking activities, including securities- and derivatives-related activities. The company and its principal subsidiary (the subcompany) engage worldwide in a wide range of investment advisory, securities underwriting, and futures-related activities. The notificants proposed to merge the subcompany and the company into the notificants' existing nonbank section 20 company (the section 20 company). The section 20 company would continue as a registered broker-dealer with the Securities and Exchange Commission under the Securities Exchange Act of 1934 and as a member of the National Association of Securities Dealers. The section 20 company would also become registered as a futures commission merchant (FCM) and a commodity trading advisor (CTA).[23]

The notificants proposed to engage in a variety of FCM-related activities the Board previously had determined, by regulation or order, were so closely related to banking as to be proper incidents thereto within the meaning of section 4(c)(8) of the BHC Act. The proposed activities included engaging in execution-only, clearing-only, and omnibus account activities with respect to futures and options on futures based on financial and nonfinancial commodities, and providing discretionary portfolio management services with respect to futures and options on futures on financial and nonfinancial commodities.[24] (See 1997 FRB 138–142.) The section 20 company committed to providing these futures-related execution-only, clearing-only, and discretionary portfolio management services only to institutional customers and certain sophisticated noninstitutional commercial hedger customers.[25]

3251.0.13.1 Primary Clearing Firm for a Limited Number of Professional Floor Traders

The notificants also proposed that the section 20

22. To address potential conflicts of interest in connection with providing the proposed foreign-exchange riskless-principal services, the notificant committed that the indirect subsidiary will disclose to each customer that receives advice relating to over-the-counter transactions in the foreign-exchange market that it may have an interest as a counterparty principal in the course of action ultimately chosen by the customer. Also, in any case in which the indirect subsidiary has an interest in a specific over-the-counter foreign-exchange transaction as counterparty principal, it will advise its customer of that fact before recommending participation in that transaction.

23. The subcompany was already registered as an FCM and CTA.

24. The notificants committed that the section 20 company would provide these services in accordance with the limitations previously established by the Board. See 1993 FRB 723, 1993 FRB 1049, and 1994 FRB 151.

25. The notificants stated that all noninstitutional commercial hedger customers would meet the requirements previously reviewed by the Board. See 1995 FRB 880.

company provide clearing-only services to, and serve as the primary clearing firm for, certain professional floor traders on two exchanges with respect to the futures contracts and options on futures contracts traded on such exchanges.[26] The Board previously has determined that providing clearing services with respect to exchange-traded securities, options, futures, and options on futures contracts is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. In 1991, however, the Board denied an application by the notificants to engage de novo in providing the proposed services to an unlimited number of market makers and other professional floor traders dealing for their own accounts.[27]

In the 1991 order, the Board recognized that a company serving as the primary clearing firm for professional floor traders may be exposed to significant financial risks because the company generally would not have the ability to reject an executed trade presented to it for clearance, even when the company believes the trade presents unacceptable risks in light of market conditions or the traders' financial position. The Board also noted that, at the time of the 1991 application, the applicants lacked appropriate operational systems to track and manage the intraday risks arising from the trading activities of the floor traders. This lack of a mechanism to monitor intraday trading activities presented the possibility that a professional floor trader could incur substantial losses through the trading of options or futures contracts, which the applicants would be obligated to clear and guarantee, before the applicants could act to mitigate their credit-risk exposure.

It was noted that since 1991, the Board and bank holding companies have gained substantial experience with the conduct, methods, procedures, and regulation of clearing-only activities. Also, since 1991, the Board had authorized bank holding companies to provide clearing-only services with respect to futures contracts and options on futures contracts for customers other than professional floor traders, subject to certain conditions designed to ensure that the bank holding companies have the ability to manage the attendant financial risks.[28]

The Board concluded that the facts of record indicated that the subcompany had and the section 20 company would have sufficient risk-management policies, procedures, and systems to permit the notificants and the section 20 company to adequately monitor and control the risks, including the intraday risks, associated with the section 20 company's proposal to serve as the primary clearing firm for a limited number of professional floor traders on the two exchanges. Specifically, the section 20 company would use the subcompany's established trading, credit, margin, and exposure limits for each professional floor trader for which the section 20 company serves as the primary clearing firm. Adherence to these limits is monitored on an intraday basis by experienced personnel who are physically present on the floor of the two exchanges. These personnel visually monitor the trading activities of floor traders on the exchanges and review trades submitted by the floor traders for clearance.[29] If an employee of the section 20 company determines that a floor trader is exceeding the limits it has established, or is otherwise engaged in questionable trading activities, the employee would have the ability

26. A primary clearing firm is obligated to accept and clear all trades submitted by a professional floor trader, even if the trade was initially presented to, and rejected by, another clearing firm. Once a primary clearing firm clears a trade for a professional floor trader, the firm becomes obligated to settle the trade in the event of a default by the professional floor trader. The company served as the primary clearing firm for professional floor traders on the two exchanges. The notificants requested authority for the section 20 company to act as the primary clearing firm for up to 20 professional floor traders on one exchange and 40 professional floor traders on the other.

27. See 1991 FRB 189.

28. In particular, the bank holding companies agreed to provide the clearing-only services pursuant to "give-up" agreements, which provide the bank holding companies with the right to refuse to accept for clearance any customer trade that the bank holding company deems unsuitable in light of market conditions or the customer's financial situation or objective. In addition, the bank holding companies agreed to establish procedures to monitor the intraday trading activities and risk exposure of their clearing-only customers.

29. The Board recognizes that trades on the two relevant exchanges are not electronically submitted to the clearing firm or the exchange. Instead, trading cards for each trade are submitted by each professional floor trader to its clearing firm, which enters the trade into the exchange's clearing system. Both exchanges require that the subcompany collect the trading cards from each floor trader at least once during each half-hour period, thereby providing the subcompany personnel with an opportunity to review the intraday trading activities of floor traders. The rules of one exchange also require that the subcompany enter all collected trades into the exchange's on-line clearing system within 45 minutes of the end of the half-hour period during which the trades were collected. That exchange's on-line clearing system also permits the subcompany to monitor the trading activities of floor traders, both individually and in the aggregate, on an intraday basis, and allows the subcompany to identify any potentially unmatched trades. Although the other exchange does not operate an on-line clearing system, the subcompany personnel maintain tally sheets that are updated every 30 minutes and reflect all trades submitted by each professional floor trader throughout the day.

to limit or halt the floor trader's activities, require the floor trader to post additional margin, partially or entirely liquidate the floor trader's positions, or immediately revoke the floor traders membership on the exchange.[30] The notificants' operations managers on the two exchanges also would personally guarantee the section 20 company against any losses that it may incur from serving as the primary clearing firm for floor traders on the exchanges, thereby providing such personnel with an incentive to closely monitor the trading activities of the floor traders. The notificants also stated that the section 20 company would install an on-line risk-management system that would provide its personnel with intraday data on the trading activities of the professional floor traders, and the ability to analyze its exposure to such trading activities on an intraday basis.

The Board noted that the type of risk-management systems necessary to appropriately manage the risks arising from a particular activity necessarily depends on the scope and nature of the proposed activity. In this regard, the Board noted that the section 20 company proposed to serve as the primary clearing firm for only a limited number of professional floor traders on two exchanges. These exchanges have relatively small trading areas and volumes, which permit personnel on the floors of the exchanges to monitor trading activity. The Board noted that the Federal Reserve Bank had conducted an on-site operational and managerial infrastructure review used by the subcompany to monitor and control the financial risks associated with its primary clearing activities on the two exchanges. Based on that review and other facts of record, the Board concluded that the subcompany had the managerial and operational resources and systems to adequately monitor and control the financial risks arising from its role as primary clearing firm on the two exchanges.

The Board also noted that approval of the proposal could reasonably be expected to produce public benefits. Specifically, the Board noted that the subcompany served as the primary clearing firm for a significant percentage of the professional floor traders on the two exchanges and that the notificants' proposal would permit the section 20 company to continue providing primary clearing services to such professional floor traders.

In light of all the facts of record, including the limited nature of the section 20 company's proposed clearing-only activities for professional floor traders, the commitments provided by the notificants, and the operational and managerial systems that the section 20 company will have in place to monitor and control the risks arising from the proposed activities, the Board concluded that the credit and other risk considerations associated with the proposed clearing-only activities for professional floor traders on the two exchanges are consistent with approval of this notice and that, therefore, the proposed activity is a proper incident to banking within the meaning of section 4(c)(8) of the BHC Act.

3251.0.13.2 Brokerage Services with Respect to Forward Contracts Based on Certain Financial and Nonfinancial Commodities

The notificants also proposed that the section 20 company act as broker with respect to forward contracts based on certain financial and nonfinancial commodities. In this capacity, the company would assist customers in arranging forward contracts with third parties pursuant to which the customers would make (or receive) delivery of financial and nonfinancial commodities on a future date.[31] The section 20 company would act as a broker only with respect to forward contracts that are based on those financial and nonfinancial commodities that also serve as the basis for an exchange-traded futures contract.[32] The Board recognized that banking regulators had not expressly permitted banks to engage in the proposed activity.

Bank holding companies are permitted to act as a broker in the execution and clearance of futures contracts and options on futures contracts based on financial and nonfinancial commodities.[33] As noted above, the forward contracts that the section 20 company proposed to broker would be based on the same financial and nonfinancial commodities that underlie futures contracts that bank holding companies

30. The subcompany's risk-management personnel also electronically receive trade information from the two exchanges up to four times a day. Reports based on such data are prepared by risk-management personnel and reviewed daily.

31. Because the section 20 company will act only as a broker, the section 20 company will not itself be required to take physical delivery of the nonfinancial commodities underlying the forward contracts that it arranges under any circumstances.

32. Exchange-traded futures contracts may be based on a wide variety of commodities, including precious metals, oil, cocoa, or wool.

33. See 1993 FRB 1049.

are permitted to broker as an FCM. Bank holding companies also are permitted to broker forward contracts on foreign exchanges and arrange swap transactions that are based on nonfinancial commodities or indices of nonfinancial commodities.[34] Accordingly, based on these and other facts of record, the Board concluded that acting as a broker for forward contracts based on those financial and nonfinancial commodities that underlie an exchange-traded futures contract is a permissible activity for bank holding companies under section 4(c)(8) of the BHC Act.

34. See 1995 FRB 185.

3251.0.13.3 Conclusion

Based on all the facts of record, the Board approved the notice subject to all the terms and conditions discussed in the order and in the section 20 orders, as modified by the modification orders. (See 1997 FRB 138.)

With the adoption of the April 1997 revision to Regulation Y, the Board authorized certain types of other transactional services in section 225.28(b)(7)(v). Bank holding companies can provide to customers as *agent* transactional services with respect to swaps and similar transactions—

1. any transaction that is described in section 225.28(b)(8) of the regulation;
2. any transaction that is permissible for a state member bank; and
3. any other transaction involving a forward contract, option, futures, option on a futures or similar contract (whether traded on an exchange or not) relating to a commodity that is traded on an exchange.

Under this provision of the current rule, a bank holding company can provide transactional services for customers involving any derivative or foreign-exchange transaction that the bank holding company is permitted to conduct for its own account (item 1 above). A bank holding company may also act as a broker with respect to forward contracts based on a financial or nonfinancial commodity that also serves as the basis for an exchange-traded futures contract. This permits a bank holding company to act as agent in a forward contract that involves the same commodities and assessment of risk that underlie the permissible FCM activities of bank holding companies. This authority is not extended to forward contracts for the delayed sale of commercial products (such as automobiles, consumer products, etc.) or real estate.

Before the incorporation of the above transactions into the authority of Regulation Y, such activities had been previously approved individually by Board order. This section provides, as historical examples, summaries of such activities that were previously approved by Board order. Such orders led to the incorporation of the nonbanking activity into the April 1997 Regulation Y "laundry list." The reader of these examples should only consider the current provisions for "other transactional services" as found in section 225.28(b)(7)(v) of Regulation Y. There should be no reliance on previous Board order commitments, supervisory policies, and interpretations that relate to this nonbanking activity that were in existence before April 21, 1997, unless such provisions remain. Certain former provisions or commitments may no longer be applicable.

3255.0.1 BROKERING OPTIONS ON SECURITIES ISSUED OR GUARANTEED BY THE U.S. GOVERNMENT AND ITS AGENCIES AND OPTIONS ON U.S. AND FOREIGN MONEY-MARKET INSTRUMENTS

A bank holding company applied for the Board's approval under section 4(c)(8) and section 225.21(a) of the Board's Regulation Y to engage de novo, through a wholly owned indirect subsidiary, in certain futures commission merchant and broker-dealer activities. One of the activities proposed for Board approval consisted of engaging in brokerage activities with respect to options on certain physicals, that is, securities issued or guaranteed by the U.S. government and its agencies and U.S. and foreign money-market instruments. The Board concluded that an option on a physical appears to serve the same function as other instruments in that it offers the investor a means to hedge portfolio risk. The Board had previously approved applications to engage in discount securities brokerage for retail customers with respect to corporate securities, and had added discount securities brokerage to the list of permissible nonbanking activities for bank holding companies generally. As a broker for options on physicals, it was stated that the indirect subsidiary would act solely as agent on behalf of nonaffiliated persons for the purchase and sale of options.[1] The services performed by a broker of options on the proposed securities appeared to be similar to those of other brokers. The Board thus concluded on December 8, 1983, that the proposal was closely related to banking (1984 FRB 238).

3255.0.2 BROKERING OPTIONS IN FOREIGN CURRENCY ON EXCHANGES REGULATED BY THE SEC

A BHC applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y to engage

1. A broker of options on U.S. government and agency securities and options on money market instruments is a securities broker under the securities laws.

de novo, through a wholly owned subsidiary, in executing and clearing options in foreign currency. The Board referenced its approval to a previous order regarding the brokering of options on certain financial physicals (see subsection 3255.0.1 above). The Board concluded that its rationale for this prior action was equally applicable to the brokerage of options in foreign exchange. The Board noted that the applicant had been active in the cash and forward markets for foreign currency and had the expertise to provide the proposed services to customers. The Board concluded on March 19, 1984, that, in the manner proposed, the applicant's proposal to broker options in foreign currency was closely related to banking (1984 FRB 368).

In considering the potential for adverse effects, the Board took into account and relied on the regulatory framework established pursuant to law by the SEC for the trading of options. In addition, the Board noted that the applicant would not trade any of the options involved for its own account.

3255.0.3 EXECUTING AND CLEARING CFTC-REGULATED OPTIONS ON BULLION AND FOREIGN EXCHANGE ON AUTHORIZED COMMODITY EXCHANGES

A BHC applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y to engage de novo through its wholly owned subsidiary in executing and clearing options. As part of that request, the BHC requested the Board to approve the executing and clearing of CFTC-regulated options on bullion and foreign exchange on authorized commodity exchanges. In making a determination that the activity was closely related to banking, the Board noted—

1. that it previously determined the brokering of futures and options on futures in bullion and foreign exchange to be a permissible nonbanking activity under the former section 225.25(b)(18) of Regulation Y (currently section 225.28(b)(7)(iv));
2. that options on physicals serve essentially the same function as futures and options on futures; and
3. that the brokering of options on certain physicals, that is, U.S. government securities, money market instruments, and options on foreign currency regulated by the SEC, is closely related to banking (1984 FRB 368, see subsection 3255.0.2, above).

The Board determined that the proposed CFTC-regulated options on physicals are functionally and operationally comparable devices for hedging investment-portfolio risk. The Board also determined that the applicant's proposal was substantially similar to proposals to engage in options activities previously approved by the Board. It noted that the applicant had been active in the cash and forward markets for bullion and foreign currency and that it possessed the expertise to provide the proposed services to customers. The Board therefore concluded the activity to be closely related to banking and approved the application on June 5, 1984, in the manner proposed (1984 FRB 591).

Under Regulation Y, a bank holding company may engage in—

1. underwriting and dealing in government obligations and money market instruments (see section 3260.0.1),
2. certain investing and trading activities as principal, and
3. buying and selling bullion and related activities.[1]

A bank holding company may engage or trade as principal in the following:

1. foreign exchange
2. forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on any rate, price, financial asset (including gold, silver, platinum, palladium, copper, or any other metal approved by the Board), nonfinancial asset, or group of assets, other than a bank-ineligible security,[2] if—
   a. a state member bank is authorized to invest in the asset underlying the contract;
   b. the contract requires cash settlement;
   c. the contract allows for assignment, termination, or offset prior to delivery or expiration, and the company—
      (1) makes every reasonable effort to avoid taking or making delivery of the asset underlying the contract; or
      (2) receives and instantaneously transfers title to the underlying asset, by operation of contract and without taking or making physical delivery of the asset; or
   d. the contract does not allow for assignment, termination, or offset prior to delivery or expiration and is based on an asset for which futures contracts or options on futures contracts have been approved for trading on a U.S. contract market by the Commodity Futures Trading Commission, and the company—
      (1) makes every reasonable effort to avoid taking or making delivery of the asset underlying the contract; or
      (2) receives and instantaneously transfers title to the underlying asset, by operation of contract and without taking or making physical delivery of the asset
3. forward contracts, options,[3] futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on an index of a rate, a price, or the value of any financial asset, nonfinancial asset, or group of assets, if the contract requires cash settlement

Before the incorporation of these activities involving investment transactions as principal into the authority of Regulation Y, certain of the activities had been approved individually by Board order. Following the Board's adoption of the April 1997 revised Regulation Y, a bank holding company can continue to trade in foreign exchange and bank-eligible securities. Bank holding companies, however, are no longer required to have a separate subsidiary to provide advice to customers when engaging in trading activities as principal.

This section provides, as historical examples, summaries of such activities that were previously approved by Board order. Such orders may have led to the incorporation of the nonbanking activity into the April 1997 Regulation Y "laundry list." The reader of these examples should only consider the current regulatory provisions as currently found in section 225.28(b)(8) of Regulation Y. Only minimum reliance should be placed on previous Board order commitments, supervisory policies, and interpretations that relate to this nonbanking activity that were in existence before April 21, 1997, unless such provisions remain currently. Certain former provisions or commitments may no longer be applicable.

3260.0.1 UNDERWRITING AND DEALING IN GOVERNMENT OBLIGATIONS AND MONEY MARKET INSTRUMENTS

A bank holding company may engage in underwriting and dealing in obligations of the United States, general obligations of states and their

1. A bank holding company is authorized to buy, sell, and store gold, silver, copper, platinum, and palladium bullion, coins, bars, and rounds, and any other metal approved by the Board.
2. See sections 3260.0.4.6 and 3920.0.
3. This does not include acting as a dealer in options based on indexes of bank-ineligible securities when the options are traded on securities exchanges. These options are securities for purposes of the federal securities laws.

political subdivisions, and other obligations that state member banks of the Federal Reserve System may be authorized to underwrite and deal in under 12 U.S.C. 24 and 355. This activity includes banker's acceptances and certificates of deposit, under the same limitations as would be applicable if the activity were performed by the bank holding company's subsidiary member banks or its subsidiary nonmember banks as if they were member banks. See Regulation Y, section 225.28(b)(8)(i) and section 3240.0.

3260.0.2 FOREIGN EXCHANGE

A bank holding company may engage as principal in foreign exchange. See Regulation Y, section 225.28(b)(8)(ii)(A).

3260.0.3 DEALING IN GOLD, SILVER, PLATINUM, AND PALLADIUM BULLION AND COINS

On September 27, 1973, the Board approved a foreign banking organization's request to acquire 30 percent of the voting shares of a domestic company engaged in the trading and arbitrage of gold and silver bullion on various exchanges and in the open market. The subsidiary is enabled to participate in the domestic gold bullion market under 12 U.S.C. 24 (para. 7), which specifically authorized national banks to deal in bullion.

The Board found that buying and selling gold and silver bullion and silver coin, dealing in exchange and silver futures, and arbitraging gold and silver in markets throughout the world are activities closely related to banking or managing or controlling banks. Thus, in approving the application, the Board maintained its basic position that it will benefit the public to allow foreign banks to engage in U.S. activities on a nondiscriminatory basis. (See 1973 FRB 775.)

In another case, a BHC applied for the Board's permission to engage in certain activities related to dealing in gold and silver bullion. The activities consisted of (1) buying and selling gold and silver bullion, bars, rounds, and bullion coins for its own account and the account of others; (2) financing the production, refining, and fabrication of gold and silver, including lending and borrowing gold and silver in connection with such financing; (3) arbitraging gold and silver in markets throughout the world; and (4) providing various incidental services for customers, such as arranging for the safe custody, assaying, and shipment of gold and silver.[4]

The Board determined previously that many of the proposed activities are permissible for BHCs. A BHC may engage in the purchase and sale of gold and silver for its own account and for the account of others.[5] The Board believed the assaying and arranging for transport to be part of this activity.[6] Financing activities for the production and fabrication of gold and silver are permissible activities. (See section 225.28(b)(1) of Regulation Y—Extending credit and servicing loans.) The Board approved the application by order on November 24, 1986 (1987 FRB 61). (See SR-87-7.)

In a subsequent case, a foreign banking organization presented its application to the Board, pursuant to section 4(c)(8) of the BHC Act, requesting permission to engage in the activity, through its wholly owned subsidiary, of purchasing and selling platinum coins issued by the Canadian and Australian governments as legal tender. The subsidiary would acquire the platinum coins issued by the Canadian and Australian governments solely for the purpose of effecting distribution. It would maintain an inventory of the coins. However, it would not purchase the coins for investment or speculation for its own account or offer its customers investment advice regarding their purchase and sale. It would enter into forward contracts with its customers. In considering the BHC's application, the Board noted that the Office of the Comptroller of the Currency had authorized national banks to purchase and sell platinum coins and that the proposed activities were operationally and functionally similar to purchasing and selling gold and silver coins. The Board found the purchasing and selling of platinum coins that function as legal tender to be closely related to banking. The related application was approved on June 25, 1990 (1990 FRB 681).

In a more recent case, a foreign bank subject to the provisions of the BHC Act applied for the

4. The applicant further notified the Board of its intention to purchase and sell for its own account options, futures, and options on futures on gold and silver bullion. The applicant committed to take positions in these investments only as a means of hedging its position in the underlying commodity, that is, gold and silver. The activity was thus permissible under section 4(c)(1)(C) of the BHC Act, which allows BHCs to furnish services to or perform services for such BHCs or its banking subsidiaries.

5. See 1986 FRB 345, 1986 FRB 146, 1985 FRB 467, and 1981 FRB 635.

6. The Board allowed another BHC to provide storage facilities, weighing, coin-counting, and transportation services for bullion and coin. (See 38 *Fed. Reg.* 27,552 (1973).)

Board's permission under section 4(c)(8) of the act and section 225.23 of Regulation Y for its section 20 subsidiary to trade platinum coin and bullion for its own account. The Office of the Comptroller of the Currency has determined that a national bank may engage in this activity. (See OCC Interpretive Letter No. 553, May 2, 1991, relying, in part, on the fact that several countries had recently introduced platinum coins.) The Board had not previously determined that this activity was closely related to banking under section 4(c)(8) of the act. As stated previously, it had determined that the purchase and sale of platinum coins that function as legal tender is an activity that is closely related to banking. (See 1994 FRB 346 and 1990 FRB 681.) The Board had also approved as a nonbanking activity, under Regulation K, trading in platinum by bank holding company subsidiaries located abroad (1994 FRB 177 and 1990 FRB 552). On the basis of these decisions, the Board concluded that the proposed activity is closely related to banking. (See 1995 FRB 190.)

With respect to palladium, a bank holding company applied for the Board's approval under section 4(c)(8) of the act and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through a wholly owned asset-management subsidiary that will be established to serve as the general partner of limited partnerships (the partnerships) for investing in a wide variety of commodities and exchange-traded and over-the-counter instruments, including trading in precious metals. The partnerships would trade and invest in coin and bullion consisting of such precious metals as palladium, platinum, gold, and silver.

The Board has previously determined that it is closely related to banking under the act for bank holding companies to trade in all the instruments and commodities it proposed for the partnerships, except palladium.[7] Banks currently are permitted to engage in palladium trading.[8] Therefore, the Board concluded that trading palladium coin and bullion is closely related to banking within the meaning of section 4(c)(8) of the act.

3260.0.4 ENGAGING AS PRINCIPAL IN DERIVATIVES INVOLVING FINANCIAL ASSETS AND NONFINANCIAL ASSETS OR GROUPS OF ASSETS

A bank holding company may engage as principal in forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on any rate, price, financial asset, nonfinancial asset, or group of assets, other than a bank-ineligible security. A financial asset includes gold, silver, platinum, palladium, copper, and any other metal approved by the Board. See Regulation Y, section 225.28(b)(8)(ii)(B).

3260.0.4.1 Trading for a Company's Own Account in Futures, Options, and Options on Futures Based on U.S. Government Securities and Certain Money Market Instruments

A foreign bank, subject to the provisions of the BHC Act, applied to the Board under section 4(c)(8) and section 225.23 of the Board's Regulation Y to engage through a wholly owned subsidiary in trading activities for its own account. The trading included futures, options, and options on futures based on U.S. government securities that are permissible investments for national banks (bank-eligible securities) and certain money market instruments.[9]

The Board had previously determined that BHCs could purchase derivative instruments based on government securities for the purpose of reducing interest-rate exposure. (See 12 C.F.R. 225.142, Statement of Policy Concerning Bank Holding Companies Engaging in Futures, Forward, and Option Contracts on U.S. Government and Agency Securities and Money Market Instruments.) Previously, the Board approved applications to trade in derivative instruments based on foreign exchange for the company's own account for other than hedging purposes. (See 1989 FRB 217.) Section 225.28(b)(7)(iv) and 225.28(b)(6)(iv) of Regulation Y detail a BHC's ability to act as futures commission merchant and to offer advice with regard to futures

7. See 12 C.F.R. 225.28(b)(6)(iv), 1987 FRB 61 (trading gold and silver bullion and coin), and 1995 FRB 190 (trading platinum coin and bullion for a BHC's own account).

8. See OCC Interpretive Letters Nos. 683 (1995) and 553 (1991).

9. See 1991 FRB 759 for a listing of the derivative instruments to be traded, which are listed in appendix A. The subsidiary would hedge its positions in these instruments with the instruments listed in appendix B of the order.

and options on futures on bank-eligible securities, respectively.

The purchasing and selling of derivative instruments that represent the right to purchase and sell bank-eligible securities is considered by the Board to be closely related to banking.[10] The experience gained by banks in dealing with the securities underlying these instruments would equip the banks to trade in instruments based on these securities. In addition, the derivative instruments based on money market instruments require a market judgment on interest rates. Banks have developed an expertise in such judgments through their lending and funding activities. The Board thus concluded on July 12, 1991, the activity of trading for a company's own account in derivative instruments based on bank-eligible securities and certain money market instruments to be closely related to banking. (See 1991 FRB 759).

3260.0.4.2 Dealing as a Registered Options Trader on Foreign-Exchange Options

A foreign bank subject to the BHC Act applied under section 4(c)(8) of the act to deal, through its wholly owned U.S. subsidiary, as a registered options trader (trader) on foreign-exchange options. As a trader, the subsidiary would act as dealer and market maker in such options to assist in the maintenance of a ''fair and orderly'' market on the designated exchange. A trader deals for its own account in order to maintain a ''fair and orderly'' market in certain options when a lack of price continuity or temporary disparity exists on options for which the trader makes a market. The subsidiary would be obliged to make a market in the proposed foreign-currency options, or bid and offer, for all traders who approach it on the designated exchange. The subsidiary would not be obliged in any way as to the price and quantity it bids and offers. A trader is permitted to ''leave the floor,'' that is, not trade, if it meets minimum trading levels each quarter.

The Board previously recognized that foreign-exchange activities have traditionally been conducted at banks and are permissible activities under the BHC Act.[11] The Board noted that the Office of the Comptroller of the Currency authorized national banks to deal in foreign-currency options as a trader on a securities exchange. It also noted that through bank participation in the interbank market for foreign-currency options, banks developed experience in dealing, market making, and risk management, which are deemed essential elements of the activities proposed. For these reasons and the facts presented in the BHC's application, the Board approved the nonbanking activity as being closely related to banking. The application was approved by the Board on July 30, 1990 (1990 FRB 776).

3260.0.4.3 Acting as a Specialist in Options on Foreign Exchange

A foreign bank subject to the BHC Act applied for the Board's approval under section 4(c)(8) of the act (12 U.S.C. 1843(c)(8)) and section 225.21(a) of the Board's Regulation Y (12 C.F.R. 225.21(a)) for its wholly owned subsidiary (the company) to act as the sole specialist in deutsche mark options on a specified exchange (the exchange). As a specialist, the subsidiary would act as a dealer and market maker in these options for the purpose of assisting in the maintenance of a fair and orderly market on the exchange.

The Board found the activity of engaging as a specialist in foreign-currency options on the exchange to be closely related to banking for purposes of section 4(c)(8) of the BHC Act. Banks provide services that are operationally similar to the activities proposed. The Board deemed banking organizations to be particularly well equipped to provide the proposed activities. The Board believes that banks possess substantial experience in dealing in foreign exchange and related services that are similar to the functions involved in the BHC's proposed specialist activity. Foreign-exchange activities were noted as having been traditionally conducted by banks that are major participants in all aspects of the foreign-exchange markets. Banks act as market makers in various currencies. Banks trade for their own account as well as for their customers in virtually all foreign-exchange markets and instruments, including trading in foreign-currency options on regulated exchanges, as proposed by this BHC applicant.

The Board believes the financial risk in this case to be sufficiently minimized since (1) the rules of the exchange allow the specialist to set

10. The applicant was not authorized to purchase derivative instruments based on securities or instruments that a state member bank may not purchase for its own account.

11. See 1989 FRB 217, 308, and 580.

the price and quantity that it will buy and sell in order to limit its risk in an adverse or volatile market; (2) the specialist is prohibited from speculating; and (3) the BHC has committed not to write unhedged options, having developed substantial experience with hedging from its existing foreign-currency and options business. The company will be a registered broker-dealer with the Securities and Exchange Commission (SEC) and will thus be subject to the SEC's net capital rule. The Board expects that the company will maintain capital adequate to support its activity and to cover reasonable expenses and losses at all times.

The Board considered its earlier decision (1986 FRB 141) to deny a proposal to act as a specialist in French franc options on the exchange, summarized in section 3700.8. The Board believes that the facts and circumstances in this case were different in several significant respects from the current situation. The current proposal did not raise the issues relating to potential conflicts of interest and risk raised by the earlier decision (1986 FRB 141). The markets for deutsche marks and deutsche mark options are more liquid than they were for French francs at that time. Further, the market for foreign-currency options has broadened significantly on the exchange, and the involvement of commercial banks in that market has become more widespread. The Board approved the BHC's application by order on June 22, 1989. (See 1989 FRB 580.)

3260.0.4.4 Acting as a Dealer, Broker with Respect to Interest-Rate and Currency Swaps and Related Transactions

A bank holding company applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y for its wholly owned subsidiary to engage de novo in—

1. intermediating in the international swap markets by acting as originator and principal in interest-rate swap and currency-swap transactions;
2. acting as an originator and principal with respect to certain risk-management products such as caps, floors, and collars, as well as options on swaps, caps, floors, and collars (swap-derivative products);
3. acting as a broker or agent with respect to the foregoing transactions and instruments; and
4. acting as an adviser to institutional customers regarding financial strategies involving interest-rate and currency swaps and swap-derivative products.

The Board has permitted bank holding companies under section 4(c)(8) of the act to provide advice in connection with interest-rate and currency swaps, interest-rate caps, and similar transactions.[12] (See 1987 FRB 59 and 1989 FRB 308.) However, the Board had not previously approved the remaining activities proposed under section 4(c)(8) of the act. The Board determined that the remaining activities proposed are closely related to banking for the reasons summarized below.

Intermediating in the International Swap Market; Acting as an Originator and Principal with Respect to Certain Risk-Management Products—Caps, Floors, Collars, and Options on Swaps, Caps, Floors, and Collars

1. Banks, in particular, the money center banks, do conduct the proposed intermediation

12. Swap terminology:

Interest-rate swap. An exchange between two counterparties of different payment streams arising out of fixed-rate and floating-rate payment obligations. The exchange is made using the same currency and is calculated by reference to a mutually agreed-upon ''notional'' principal amount.

Currency swap. An exchange between two counterparties of a fixed-rate interest obligation in one currency for a fixed-rate interest obligation in another currency. Currency swaps may involve an initial physical exchange of principal at an agreed-upon current exchange rate or an exchange of interest payments in different currencies on an agreed-upon notional amount with no actual transfer of principal. In either case, there will be periodic exchange of fixed-rate interest payments over the course of the swap. Upon maturity, there would be a re-exchange of the original principal amounts.

Cap. An agreement under which one party purchases from the other a promise to pay, at predetermined future times, the excess, if any, of a specified floating interest rate over a fixed per annum rate. Caps may be sold separately or packaged with an interest-rate swap.

Floor. An agreement under which one party purchases a promise by another to pay the amount, if any, by which a specified floating interest rate is lower than a fixed per annum rate at specified times during the life of the agreement. Floors may be sold separately or packaged with an interest-rate swap.

Collar. The simultaneous sale of a cap and purchase of a floor, or purchase of a cap and sale of a floor.

Agent or broker in swap market. An agent or broker in the swap market locates, for a fee, a suitable counterparty for a party seeking to enter into a swap agreement.

Intermediary in swap market. A party that is willing to step between the two parties of a swap agreement and act as a principal counterparty with each of the other participants, thus taking on the credit risk of each of the participants. Upon entering into a swap with one counterparty, the intermediary enters into an equivalent and offsetting swap with another counterparty.

activities within the international swap market.

2. Banks have participated in the swap markets for several years as end-users, entering into swaps and purchasing swap-derivative products in order to hedge other business risks or to match assets and liabilities.

Acting as a Broker or Agent with Respect to These Transactions and Instruments

1. Banks provide services that are operationally similar to the proposed activities.
2. The Board had previously determined that acting as a broker with respect to foreign-exchange forward transactions is closely related to banking since banks have historically engaged in the provision of assistance with respect to foreign exchange. (See 1983 FRB 221.) Currency swaps are very similar to foreign-exchange forward transactions. The primary difference is the exchange of interest rates in connection with currency swaps. Interest-rate swaps are similar to currency swaps in that they involve agreements to exchange different payment streams that arise out of a prescribed principal amount. Similarly, caps, floors, and collars involve agreements to pay an amount by reference to a prescribed interest rate.

The Board approved the application on June 26, 1989 (see 1989 FRB 582), subject to the commitments included in the order to minimize the potential risk (that is, credit, price, basis, portfolio, and operations risk) and the possible conflicts of interest.

3260.0.4.5 Currency Swaps for Hedging a BHC's Own Position in Foreign Currency

A foreign bank, subject to section 4 of the BHC Act, applied for the Board's permission to acquire, through its wholly owned subsidiary, all the shares of a company located in New York, New York. The acquired company would engage in several nonbanking activities. One of the activities, not previously approved by the Board for BHCs, consisted of entering into currency-swap transactions for hedging the BHC's own position in foreign currency. The Board previously found that banks engage in this activity and thus concluded that the activity is closely related to banking.[13] In conducting this activity, the applicant is to use the same policies, quantitative limitations, and internal controls and audit programs applicable to its trading in futures, options, and options on futures and similar contracts used for hedging, including the guidelines in the Board's policy statement.[14] The application was approved on August 15, 1990 (1990 FRB 860).

3260.0.4.6 Derivative Transactions as Principal (Commodities Underlying Derivative Contracts)

On June 27, 2003, the Board amended section 225.28 of Regulation Y (12 C.F.R. 225.28(b)(8)(ii)(B)), effective August 4, 2003, to permit bank holding companies (BHCs) to enter into commodity derivative contracts (commodity contracts) that are settled by the BHC receiving and transferring title to the underlying commodity instantaneously, by operation of contract, without taking physical possession of the commodity. The Board also modified the existing condition in Regulation Y that generally prevented BHCs from engaging as principal in a physically settled commodity contract unless the contract specifically provides for assignment, termination, or offset before delivery (the contractual offset requirement).

The restrictions in Regulation Y that were effective before August 4, 2003, were designed to reduce the potential that BHCs would become involved in and bear the risks of physical possession, transport, storage, delivery, and sale of bank-ineligible commodities. These restrictions ensured that the commodity derivatives business of a BHC was largely limited to acting as a financial intermediary that facilitates transactions for customers who use or produce commodities or are otherwise exposed to commodity-price risk as part of their regular business.

The former Regulation Y derivatives restrictions, however, impeded the ability of BHCs to participate substantially in certain derivatives markets. Notably, in some over-the-counter (OTC) forward markets (U.S. energy markets, for example), the physically settled derivative contracts traded by market participants do not specifically provide for assignment, termination, or offset prior to delivery and, thus, did not conform to the contractual offset requirement of

13. See 1989 FRB 582.

14. Statement of Policy Concerning Bank Holding Companies Engaging in Futures, Forward and Options Contracts on U.S. Government and Agency Securities and Money Market Instruments. See 12 C.F.R. 225.142 (establishing guidelines for trading in forward, futures, and option contracts on financial instruments).

Regulation Y. Moreover, participants in these markets generally settle contracts by temporarily taking and making delivery of title to the underlying commodities and, thus, did not comply with the requirement in Regulation Y that the BHC make every reasonable effort to avoid taking or making delivery of the asset underlying the contract (the delivery avoidance requirement).

Financial intermediary participants in these markets generally enter into back-to-back derivative contracts with third parties that effectively offset each other. That is, financial intermediaries in these markets that enter into a contract to buy, for example, a certain number of barrels of oil from a certain counterparty in a certain future month generally also will enter into another contract, before the expiration of the original contract, to sell the same number of barrels of oil to another counterparty in the same future month on substantially identical delivery terms. These market practices typically result in the creation of a chain of contractual relationships that begins with a commodity producer, passes through a number of intermediaries who have entered into matched contracts both to buy and sell the same commodity at the same future time, and ends with a purchaser that intends to take physical delivery of the commodity. On the maturity date of the derivative contracts, the producer will be responsible for making physical delivery, and the ultimate buyer will be responsible for accepting physical delivery, while each intermediate participant in the chain will be deemed, by operation of contract, to have instantaneously received and transferred legal title to the commodity.

The Board believes that a BHC that takes title to a commodity on an instantaneous, pass-through basis takes no risk that is greater than or different in kind from the risk that the BHC has as a holder of a commodity derivative contract that met the former requirements of Regulation Y. Instantaneous receipt and transfer of title to (but not physical possession of) commodities does not appear to involve the usual activities relating to, or risks attendant on, commodity ownership. Instead, such transactions involve the routine operations functions of passing notices, documents, and payments—functions that BHCs regularly perform in their role as financial intermediaries in other markets. Moreover, although BHCs that receive and transfer title to commodities on an instantaneous, pass-through basis face default risks, they are not significantly different than the default risks associated with cash-settled derivative contracts or derivative contracts that include the assignment, termination, or offset provisions previously required by Regulation Y. In addition, banking organizations that engage in derivatives activities, including the modified Regulation Y commodity derivatives activities, will remain subject to the general securities, commodities, and energy laws and the rules and regulations of the Securities and Exchange Commission, the Commodity Futures Trading Commission (CFTC), and the Federal Energy Regulatory Commission.

For the above reasons, the Board modified Regulation Y by changing the delivery avoidance requirement to allow BHCs to take or make delivery of title to commodities underlying commodity derivative transactions on an instantaneous, pass-through basis. A BHC takes and makes delivery of title to a commodity on an instantaneous, pass-through basis for purposes of Regulation Y only if the BHC takes delivery of title to the commodity from a seller and immediately thereafter makes delivery of title to the commodity to a buyer. Accordingly, the revised delivery avoidance requirement does not provide authority for a BHC to take physical delivery of commodities for use or investment or to make physical delivery of commodities out of the inventory of the BHC. In other words, the BHC must not be the original seller of the commodity in the initial position in the delivery chain or the ultimate buyer of the commodity in the last position in the delivery chain.

The Board's modification of Regulation Y also changed the contractual offset requirement to permit BHCs to participate in physically settled derivative markets in which the standard industry documentation does not allow for assignment, termination, or offset. In particular, the modified Regulation Y allows BHCs to enter into commodity contracts that do not require cash settlement or specifically provide for assignment, termination, or offset before delivery so long as the contracts involve commodities for which futures contracts have been approved for trading on a U.S. futures exchange by the CFTC (and the BHC complies with the revised delivery avoidance requirement).[15]

15. The CFTC publishes annually a list of the CFTC-approved commodity contracts. See, for example, Commodity Futures Trading Commission, *FY 2001 Annual Report to Congress* 126. With respect to granularity, the Board intends this requirement to include all types of a listed commodity. For example, any type of coal or coal derivative contract would satisfy this requirement, even though the CFTC list specifically approves only Central Appalachian coal.

The Board's modifications of the derivatives provisions in Regulation Y are effective for all BHCs. (See 2003 FRB 385.)

3260.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Investment transactions as principal		225.25(b)(8)		
Investing and trading activities—engaging as principal	1843(c)(8)—section 4(c)(8) of the BHC Act	225.28(b)(8)(ii)		
BHCs can (1) take and make delivery of title to commodities underlying commodity derivatives contracts on an instantaneous, pass-through basis and (2) enter certain commodity derivative contracts that do not require cash settlement or specifically provide for assignment, termination, or offset prior to delivery		225.28(b)(8)(ii)(B)		2003 FRB 385

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Effective December 31, 1980, the Board amended section 225.28(b) of Regulation Y (12 C.F.R. 225.28(b)(2)(i)) to include the performance of real estate appraisals in the list of activities permissible for bank holding companies to engage in. The Board concluded that banks perform real estate appraisals either in connection with extensions of credit involving real estate lending or as a discrete activity. In addition, such an appraisal activity calls upon the necessary skills and resources often possessed by banking organizations. The Board thus determined that the activity of performing appraisals of real estate is closely related to banking and that its performance by bank holding companies will yield net benefits to the public.

In addition to authorizing the appraisals of real estate as a nonbanking activity, the Board has previously determined by order that the appraisal of certain types of personal property, both tangible and intangible, is closely related to banking (1985 FRB 118). Providing personal property appraisals was added to the list of permissible nonbanking activities in Regulation Y. It was combined with the already-approved activity of providing real estate appraisals (12 C.F.R. 225.28(b)(2)(i)). The action was approved by the Board on October 31, 1986, effective December 15, 1986, without any conditions. In permitting bank holding companies to engage in the activity of providing valuations of companies, the Board noted that the commercial lending and trust departments of banks commonly make valuations of a broad range of tangible and intangible property, including the securities of closely held companies. Providing valuations of companies necessarily involves the appraisal of various types of intangible personal property, such as securities of closely held corporations, as well as any tangible personal property that a company might possess.

Banks currently engage in the appraisal of personal property through their trust departments. Trust departments value private business interests for their own trust accounts and other types of personal property in a customer's estate for probate and tax purposes. Banks engage in property appraisal activities in connection with secured lending activities and routinely appraise property which they take as collateral on loans, including perishable commodities, durable goods, computer software, crops, livestock, machinery, and equipment.

Banks also engage in appraisal activities in connection with their leasing activities. With regard to leasing, banks determine the residual value of leased property, such as vehicles and equipment, in order to establish the terms of a lease. Some money-center banks have appraised aircraft and locomotives, in connection with their leasing or lending transactions. Finally, banks may become involved in personal property appraising when they appraise real property, since certain types of real property, such as factories or apartment buildings, contain fixtures or other personal property that must be evaluated separately to determine the value of the real property.

3270.0.1 SCOPE OF INSPECTION

As noted within the subsequent inspection procedures, a sampling of real estate and personal property appraisals is to be reviewed to determine whether the appraised value of the property is reasonable and the documentation supports the appraisal.

Regulatory appraisal standards for federally related transactions are discussed below and must be considered in determining the scope of the inspection. The types, components, and procedures that should be used in evaluating real estate appraisals are included in section 2231.0, which contains guidelines for use by bank holding companies and subsidiaries for real estate appraisal and evaluation programs. Personal property appraisal involves estimating or determining the value of property other than real property.

3270.0.2 APPRAISAL STANDARDS FOR FEDERALLY RELATED TRANSACTIONS

The Board approved, on June 27, 1990, Appraisal Standards for Federally Related Transactions[1] that represent amendments to Regulation H (12 C.F.R. 208) and Regulation Y (12 C.F.R. 225) that are designed to protect federal financial and public policy interests in real estate transactions requiring the services of an appraiser. The regulations are intended to supplement the Board's appraisal guidelines currently in effect. Section

1. "Federally related transaction" refers to any real estate–related financial transaction entered into on or after August 9, 1990, that (1) the Board or any regulated institution engages in or contracts for and (2) requires the services of an independent appraiser.

208.50 of Regulation H refers to the appraisal standards for federally related transactions entered into by state member banks. The appraisal standards for federally related transactions are found in subpart G, section 225 of Regulation Y. The amendments were the result of implementing provisions of title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) regarding real estate appraisals. The Regulation Y amendments identify which transactions require an appraiser (section 225.63),[2] set forth minimum standards for performing appraisals (section 225.64), and distinguish those appraisals requiring the services of a state-certified appraiser from those requiring a state-licensed appraiser (section 225.63). The effective dates are August 9, 1990, for the appraisal standards and July 1, 1991, for the appraiser certification and licensing requirements. Other provisions address appraiser independence (section 225.65), professional association membership, and competency.

3270.0.3 APPRAISER'S QUALIFICATIONS

With respect to an institution's selection of appraisers, examiners need to consider the following:

1. The professional certification, license, or other recognition of the competence of the appraiser. For real estate appraisals, the appraiser must have the proper state certification or license required by section 225.63 of Regulation Y. Examiners should also consider the September 1992 Guidelines for Real Estate Appraisal and Evaluation Programs. For personal property appraisals, the appraiser's qualifications might be evidenced by certification from a nationally recognized personal property appraisal organization or they may be supported by license or other recognition of the competence of the appraiser.
2. The reputation and standing of the specialist in the view of his peers and others familiar with the person's capability of performance.
3. The relationship, if any, of the appraiser to the bank holding company in order to determine independence and objectivity.
4. The appraiser's documented accomplishments (for example, the appraiser's personal "qualifications statement" or job history resume).
5. Whether the appraiser's experience and knowledge or expertise relates to the property appraised.
6. Whether the appraiser meets continuing-education requirements for licensing or certification. Membership or the absence of membership in any particular appraisal organization should not be accepted as prima facie evidence of an appraiser's qualifications.

3270.0.4 KEY COMPONENTS OF A PERSONAL PROPERTY APPRAISAL REPORT

When reviewing personal property appraisals, the appraisal should describe the following:

1. the kind of value being determined, such as fair market value, liquidation value, replacement/reproduction value, etc.
2. the property being valued
3. the detailed procedures used to estimate the values, such as—
   a. analysis of comparable sales,
   b. estimation and analysis of income, and
   c. the appraised values as of a specific date
4. the name of the individual who made the appraisal and who is responsible for its validity and objectivity (to the person receiving the appraisal, to third parties, and to the public)
5. the personal qualifications data of the appraiser

3270.0.5 APPRAISAL OF CONSTRUCTION AND CONSTRUCTION-ANALYSIS SERVICES

The activity of providing construction-analysis services, including appraisal of construction projects at various stages of development and disbursement of construction loan funds in accordance with the terms of the loan agreement, is included within the permissible activities of real estate appraising and loan servicing.

2. The Appraisal Standards for Federally Related Transactions that are found in Regulation Y were amended, effective December 28, 1998, to exclude from the Board's appraisal requirements transactions involving the underwriting of or dealing in mortgage-backed securities. The amendment permits bank holding company subsidiaries engaged in the underwriting of and dealing in securities to underwrite and deal in mortgage-backed securities without demonstrating that the loans underlying the securities are supported by appraisals that meet the Board' s appraisal requirements.

3270.0.6 INSPECTION OBJECTIVES

1. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
2. To determine whether the company has formal written policies and procedures. For real estate appraisals, the policies and procedures should be consistent with the Guidelines for Real Estate Appraisal and evaluation programs in section 2231.0.
3. To determine if there is compliance with the appraisal standards for federally related transactions detailed in the Board's Regulations H and Y.
4. To determine whether the appraisals were performed on an independent basis.
5. To determine whether the individuals performing the appraisals are qualified and that the appraisals are reasonable.
6. To determine whether the appraisals are current, complete, and reasonably accurate.
7. To determine if real estate appraisals are performed by state-licensed or state-certified appraisers.

3270.0.7 INSPECTION PROCEDURES

1. Review the company's financial statements and determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiaries.
2. Review the company's policies and procedures to determine that the following are present:
   a. Adequate minutes are prepared of the board and board committee meetings.
   b. Professional liability insurance and blanket bond coverage, if appropriate, are in place and the coverage appears sufficient.
   c. Only qualified individuals are authorized to perform appraisals.
3. Review a sampling of the real estate and personal property appraisals to determine how a value is derived and whether this value is adequately substantiated.
4. For the appraisals reviewed in procedure 3, determine the reason for each appraisal. If it is for the purpose of valuing collateral for a loan extended by or to a bank affiliate, does the value appear realistic in relation to the loan amount?
5. Check for compliance with section 106(b) of the 1970 Amendments of the BHC Act (prohibition against tie-in arrangements). (See section 3500.0.)

3270.0.8 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Real estate appraisal activity approval		225.28(b)(2)(i)		1980 FRB 962 and 984 1997 FRB 275
Acquisition of a nonbanking subsidiary that performs valuations of companies and of large blocks of stock for a variety of purposes				1985 FRB 118
Personal property appraisal activity approval		225.28(b)(2)(i)		1986 FRB 833 1997 FRB 275
Appraisal standards for federally related transactions		225 subpart G, 225.61–225.67	4–053	1990 FRB 639 1999 FRB 50

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The activities of check-guaranty and check-verification services permit bank holding companies to authorize the acceptance by subscribing merchants of certain personal checks tendered by the merchant's customers in exchange for goods and services, and to purchase validly authorized checks from merchants in the event the checks are subsequently dishonored.

The Board determined, previously, that check-guaranty services were closely related to banking, and had approved applications by bank holding companies on a case-by-case basis to engage in the activity (1979 FRB 263 and 1981 FRB 740). See also 1999 FRB 582, 1996 FRB 348 (fraud-detection services), 1994 FRB 1107, and 1995 FRB 492 (ATM network services).

The Board noted the potential for unfair competition or conflicts of interest with respect to the authorization of checks not drawn on affiliated banks. To minimize this possibility, the Board has maintained a condition in Regulation Y, noted in previous orders, stating that the check guarantor cannot discriminate against checks drawn on unaffiliated banks.

3320.0.1 INSPECTION OBJECTIVES

1. To determine the extent of exposure to guaranteed bad-check losses.
2. To determine whether management is qualified and effective in controlling losses.
3. To determine whether administrative and operating procedures and check-guaranty and check-verification transactions are processed in accordance with established Board or Board committee authorization policies and procedures, including adequate internal control procedures.
4. To determine whether recordkeeping and data processing are adequate and current to avoid losses resulting from outdated or inaccurate information.
5. To determine whether any significant contingent liabilities exist.
6. To determine whether the financial condition of the nonbanking subsidiary will have an adverse influence on the financial condition of the consolidated corporation.

3320.0.2 INSPECTION PROCEDURES

1. Review financial statements to determine the financial condition of the company and past and current operating trends. Test the accuracy of those records against the financial statements for each material asset, liability, and equity account.
2. Review the minutes of the board of directors and executive committees and correspondence exchanged with the company's legal counsel.
3. Review authorization records for check-guaranty and check-verification services for adequacy to determine whether check clearance is verified and whether the company has an accurate record of its contingent liability for guaranteed checks.
4. Review collection records to determine whether follow-up procedures on purchased guaranteed bad checks are adequate and whether they evidence timely collection contacts and successful recoveries.
5. Determine whether collection-problem checks are turned over to attorneys or collection agencies for appropriate collective or legal action on a timely basis.
6. Review the company's history of bad-check losses and the current status of uncollected bad checks, and determine whether adequate reserves have been set aside for those losses.
7. Determine whether fee calculations and billing procedures ensure accuracy and propriety.

3320.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Engage de novo through a new nonbank subsidiary in the activity of check verification				1979 FRB 263
Retail check-authorization and check-guaranty activities				1981 FRB 740 1999 FRB 582
Fraud-detection services				1996 FRB 348 (see footnote 15)
Amendment of Regulation Y adding check verification as a permissible activity		225.28(b)(2)(iii)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The Board authorized the addition of operating a collection agency to the list of approved activities. A collection-agency subsidiary seeks to collect payment on the overdue bills of debtors, charging the party submitting the claim a flat dollar amount or a specified percentage commission contingent on the amount collected. The Board determined that operating a collection agency is closely related to banking as banks engage in debt-collection activities for loans they originate and service, including overdue credit-card accounts.

The Board recognized the potential for unfair competition and conflicts of interest through the operation of a collection agency. Accordingly, the Board established the following conditions on operating a collection agency:

1. The collection agency shall not obtain the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies
2. The collection agency shall not provide preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.

3330.0.1 INSPECTION OBJECTIVES

1. To determine whether the collection agency is obtaining the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies.
2. To determine whether the collection agency provides preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.
3. To determine what effect the activity has on the parent company, its subsidiaries, and the overall consolidated organization, and whether the company or activity evidences a going concern.
4. To determine whether the company has formal written policies and operating and internal control procedures to successfully administer the activity.
5. To determine the extent of management expertise, experience, and involvement with the administration of the activity.
6. To determine the extent of compliance with laws, regulations, and interpretations associated with the activity, including the Fair Credit Reporting Act, Fair Debt Collection Practices Act, and Right to Financial Privacy Act.
7. To determine whether the company administers formal training programs which include proper operating and compliance methods.
8. To determine whether any significant contingent liabilities exist and whether those liabilities resulted from the failure of the bank holding company or its nonbanking subsidiary to fulfill its responsibilities as an agent for its customers.

3330.0.2 INSPECTION PROCEDURES

1. Review financial statements to determine the financial condition of the company and past and current operating trends. Test the accuracy of the financial statements against the company’s financial records and other supportive corroborating evidence.
2. Review the minutes of the board of directors and executive committees, and correspondence exchanged with the company’s legal counsel with regard to possible contingency losses.
3. Review collection records for adequacy, and determine whether the amount of payments received is independently verified.
4. Review collection records—tickler files—to determine whether follow-up procedures on acquired accounts are adequate and whether they evidence timely collection contacts and successful recovery rates.
5. Determine whether appropriate legal action is used and authorized by customers on a timely basis.
6. Determine whether fee calculations and billing procedures ensure accuracy and propriety.
7. Review parent company and subsidiary administrative and operating policies, and determine whether the collection agency is prohibited from obtaining the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies.
8. Review customer lists and billings and any prioritized collection schedules, and determine whether the collection agency is providing any preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.

3330.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Amendment of Regulation Y adding collection-agency services as a permissible activity		225.28(b)(2)(iv)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

A bank holding company that engages in the activity of operating a credit bureau gathers, stores, and disseminates factual information relating to the identity and paying habits of consumers. Credit bureaus then provide this information for a fee to credit grantors, such as retailers, banks, and finance companies, to enable the institutions to arrive at prudent credit-granting decisions. The Board concluded that the activity is closely related to banking as banks maintain credit files and analyze credit information as part of their consumer-lending function.

The Board recognized that possible adverse effects could result from a potential conflict of interest when a bank holding company performs credit bureau activities. For example, under the Fair Credit Reporting Act, a credit bureau is required to investigate the accuracy of any item of information disputed by a consumer (15 U.S.C. 1681(i)). A bank holding company credit bureau may not conduct an impartial investigation if the disputed information originates with an affiliate. The Board thus imposed the condition that a credit bureau could not provide preferential treatment to a customer of an affiliated financial institution.

Regulation Y allows bank holding companies to engage only in consumer-credit-reporting activities rather than credit-reporting activities concerning large commercial institutions.

3340.0.1 Inspection Objectives

1. To determine whether the activity is limited to only consumer-credit-reporting activities.
2. To determine whether the bank holding company gives preferential treatment to a customer of an affiliated financial institution.
3. To determine the adequacy of internal policies and operating and internal control procedures.
4. To determine whether any significant contingent liabilities exist which arose from the failure of the holding company and its nonbanking subsidiary to fulfill their responsibilities as an agent for their customers.
5. To determine whether appropriate steps have been taken to ensure compliance with the Fair Credit Reporting Act, Equal Credit Opportunity Act, and Right to Financial Privacy Act.
6. To determine whether adequate controls exist to prevent unauthorized access into any computerized credit bureau credit files to preserve the confidentiality of the information stored for customers' use.

3340.0.2 INSPECTION PROCEDURES

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent company or its banking or nonbanking subsidiaries.
2. Review recordkeeping practices, and determine whether such management information systems are adequate to service customers and limit the risk of loss resulting from weak recordkeeping activities.
3. Review customer logs or client lists, and determine whether the activity is limited to only consumer-credit-reporting activities.
4. Review the activity and billings for a customer of an affiliated financial institution, and compare those findings to the activities and billings of other customers. Determine whether the bank holding company is giving preferential treatment to a customer(s) of an affiliated financial institution.
5. Review the company's policies and operating and internal control procedures for the activity, and determine whether they have been documented and whether they are being tested for compliance as part of the company's internal/external audits.
6. Review correspondence with legal counsel, and determine whether any significant contingent liabilities exist due to the failure of the holding company and its nonbanking subsidiary to fulfill their responsibilities as an agent for their customers.
7. Determine whether internal control procedures and compliance audits test for compliance with the Fair Credit Reporting Act, Equal Credit Opportunity Act, and Right to Financial Privacy Act.
8. Determine what steps have been taken to prevent unauthorized access to any computerized credit bureau credit files to preserve the confidentiality of the information stored for customers' use.

Activity is closely related to banking and a permissible nonbanking activity for consumer-credit reporting only		225.28(b)(2)(v)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

3500.0.1 INTRODUCTION

Among other things, section 106 of the Bank Holding Company Act amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank.[1] The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services.[2] Tying arrangements that are prohibited by section 106 may be addressed by the bank's appropriate federal banking agency through an enforcement action, by the Department of Justice through a request for an injunction, or by a customer or other person injured by the tying arrangement through a request for an injunction or a legal action against the bank for damages.[3]

Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute's prohibitions by regulation or order.

3500.0.2 PROHIBITIONS UNDER SECTION 106

Section 106 prohibits a bank from extending credit, leasing or selling property, furnishing any service, or fixing or varying the consideration for any of the foregoing on the condition or requirement that a customer

- obtain some additional credit, property, or service from the bank or its affiliates other than a loan, discount, deposit, or trust service;
- provide some additional credit, property, or service to the bank or its affiliates, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service; or
- not obtain some additional credit, property, or service from a competitor of the bank or of an affiliate of the bank unless the condition is reasonably imposed in a credit transaction to assure the soundness of the credit.[4]

The most common types of tying arrangements are those where a bank product or consideration for a bank product to a customer is conditioned upon the customer obtaining another product from the bank or an affiliate. There are two elements necessary to establish a tying arrangement under these circumstances: (1) the arrangement must involve two or more separate products, and (2) the customer is, in fact, required to buy a tied product in order to get a tying product.

3500.0.3 APPLICABILITY OF SECTION 106

Section 106 applies only to tying arrangements that are imposed by a bank, whether or not they are subsidiaries of holding companies. The statute does not apply to tying arrangements imposed by affiliates of the bank. However, an examination of the facts and circumstances of a tying arrangement imposed by a bank affiliate that involves a bank product could reveal that the arrangement essentially is a tying arrangement set forth by the bank, but structured to appear as though it is required by the bank affiliate. These arrangements may constitute prohibited tying arrangements.

Section 106 specifically allows a bank to engage in a tying arrangement if the tied product is a "loan, discount, deposit, or trust service" (a "traditional bank product") provided to a customer.[5] The Board has not clarified the scope of this exception.

A parallel provision, codified in section 5(q) of the Home Owners' Loan Act of 1933, applies to savings associations and is also administered by the Board.[6]

1. 12 U.S.C. 1972. Although part of the Bank Holding Company Act amendments of 1970, section 106 applies to a bank whether or not the bank is owned or controlled by a bank holding company.

2. Banks and their affiliates, including nonbank affiliates, are also subject to the tying restrictions contained in the federal antitrust laws (the Sherman and Clayton Acts). 15 U.S.C. 1 et seq.; 15 U.S.C. 12 et seq.

3. 12 U.S.C. 1972, 1973, 1975, and 1976.

4. 12 U.S.C. 1972(1).

5. 12 U.S.C. 1972(1)(A). Products or services in the form of a "loan, discount, deposit, or trust service" are considered to be traditional bank products.

6. 12 U.S.C. 1464(q).

3500.0.4 EXCEPTIONS TO SECTION 106

Section 106 expressly permits a bank to condition the availability or price of a product on a requirement that the customer also obtain a loan, discount, deposit or trust service from the bank. The statute also expressly permits a bank to condition the availability or price of a product on a requirement that the customer provide the bank with some additional product that is related to and usually provided in connection with a loan, discount, deposit, or trust service. Mixed-product arrangements—or arrangements whereby bank customers can receive a discount if they choose several products among a larger menu of products—may or may not violate section 106 depending on the facts and circumstances.

In addition to the statutory exceptions set forth in section 106, additional regulatory exceptions can be found in the Board's Regulation Y (12 CFR 225.7). These exceptions include (1) situations where the tied product is a traditional bank product offered by an affiliate of the bank, (2) combined-balance discount packages, and (3) bank transactions with foreign persons.

The Board is also authorized, in consultation with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, to grant additional exceptions to the statute's prohibitions by regulation or order.

3500.0.5 INTERNAL CONTROLS TO PROMOTE COMPLIANCE WITH PROHIBITIONS OF SECTION 106

Banks should have policies, procedures, and systems in place that are reasonably designed to promote bank compliance with the tying prohibitions of section 106. The types of policies, procedures, and systems appropriate for a particular bank depend on the bank's size and the nature, scope, and complexity of its activities. Banks should review and update their policies, procedures, and systems periodically to ensure that they reflect any changes in the nature, scope, or complexity of their activities or applicable statutes, regulations, or supervisory guidance.

Banks should also ensure that appropriate bank personnel receive education and training concerning the provisions of section 106. A bank's internal audit function should periodically review and test its tying policies, procedures, and systems in order to confirm that they are working effectively and in the manner intended.

3500.0.6 SUPERVISORY CONSIDERATIONS

Depending on the facts and circumstances, it may be appropriate to assess compliance with section 106 at the holding company or the state member bank. Examiners should focus on the holding company's responsibility to oversee and safeguard against prohibited tying arrangements by its bank subsidiaries and affiliates. In addition, examiners may conduct more targeted examinations of the marketing programs, training materials, internal reports and internal tying investigations of a bank. Examiners should be aware that the principal objective of section 106 is to eliminate any potential for "arm twisting" customers into buying some other product to get the product they desire. In assessing tying arrangements, examiners should focus their review on the bank's policies, procedures, and internal controls as well as training and audit programs covering compliance with section 106. As part of this supervisory review, examiners should consider the inspection objectives and procedures in subsections 3500.0.7 and 3500.0.8.

Examiners should assess the adequacy of the bank's audit and compliance programs related to tying arrangements. If the audit program focused on tying arrangements is infrequent or inadequate, examiners may consider reviewing a sample of pertinent extensions of credit (for example, loans, lines of credit, and letters of credit) that may be susceptible to improper tying arrangements.

The determination of whether a violation of section 106 has occurred often requires a careful review of the specific facts and circumstances associated with the relevant transaction between the bank and the customer. If there is an apparent violation of law at the bank, examiners generally should communicate the findings in the report of examination or supervisory letter, which includes the name of the applicable law (section 106 of the Bank Holding Company Act amendments of 1970 (12 U.S.C. 1972)) or regulation (Regulation Y, 12 CFR 225.7), a brief description of the scope of the relevant law, the requirements of the regulation or statute, and a discussion of how or why the violation occurred. The discussion in the report of examination should also describe any plans or recommendations for corrective action.

3500.0.7 INSPECTION OBJECTIVES

1. To assess the adequacy of the institution's policies and procedures related to tying arrangements.
2. To determine whether the institution has established internal controls and procedures for complying with section 106.
3. To determine whether the institution appropriately monitors internal loan reviews of pertinent bank extensions of credit to borrowers whose credit facilities or services may be susceptible to improper tying arrangements in violation of section 106 or the Board's regulations.
4. To determine whether training is provided to management and employees who are responsible for compliance with tying prohibitions.

3500.0.8 INSPECTION PROCEDURES

Preliminary Review

1. Determine whether the institution engages in any activities that present an increased opportunity to inappropriately tie its services or credit facilities to other services or facilities.

Policies

2. Determine whether there is a holding-company-wide policy or if the holding company's banking subsidiaries have their own policies related to tying arrangements.
3. Ascertain whether the institution's policy incorporates safeguards to prevent violations of relevant statutes and regulations. Consider whether the policy
   a. indicates that certain tying arrangements are prohibited by statute and regulations;
   b. provides specific examples of impermissible practices relevant to the product lines; and
   c. contains procedures for employees to follow if questions arise concerning the application of the prohibitions against tying arrangements.
4. Assess whether the policy requires periodic review of servicing contracts between the bank and its affiliates, as well as expectations for reviewing the substance of transactions, to determine—
   a. the capacity in which the bank and its tied affiliate are acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?);
   b. the nature of all services provided; and
   c. billing arrangements for service fees, the frequency of billing, the method of computation, and the basis for such fees.
5. Determine whether the policy related to tying arrangements provides expectations for employee training, and whether management and its internal auditors have periodically confirmed that there is compliance with such an internal policy.
6. Determine whether the policy is periodically reviewed by appropriate risk-management staff and updated to accurately reflect the products and services offered by the holding company and its subsidiaries.

Monitoring and Internal Controls

7. Assess the holding company's program to monitor the internal loan reviews of subsidiary banks and their affiliates. Such reviews should include
   a. the inspection of credit files for loan agreements and other documentation that place conditions or restrictions on borrowers that indicate a possible tying arrangement.
   b. internal loan reviews of files for insurance applications, particularly if an insurance subsidiary maintains a consistently high penetration rate on credits granted by bank affiliates, which could indicate the presence of improper tying arrangements.
8. While reviewing credit and collateral files (especially loan agreements) as well as the accounts receivable area, consider whether any extension of credit—or terms for an extension of credit—are conditioned upon the customer—
   a. obtaining additional credit, property, or services from the bank, other than a loan, discount, deposit, or trust service;
   b. obtaining additional credit, property, or service from the bank's parent holding company or the parent's other subsidiaries;
   c. providing an additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
   d. providing additional credit, property, or service to the bank's parent holding com-

pany or any of the parent's other subsidiaries; or

e. not obtaining other credit, property, or service from a competitor of the bank, the bank's parent holding company, or the parent's other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

9. Review the holding company's internal controls that are intended to prevent prohibited tying arrangements by its bank subsidiaries and affiliates.
10. Review incentives that may encourage tying arrangements by bank employees, such as commission structures and fee-splitting arrangements between departments.

Audit

11. Determine whether the audit function assesses the institution's compliance with the prohibitions on tying arrangements.
12. Identify whether the institution's legal counsel or other competent experts review transactions in the appropriate areas of the holding company, its bank subsidiaries, and affiliates to ensure compliance with the prohibitions against tying arrangements. If yes, determine whether they identified any compliance weaknesses or are aware of customer allegations of prohibited tying arrangements.

Training

13. Assess the appropriateness of training programs aimed to instruct employees on tying arrangements. Consider whether
    a. employees are aware of the prohibitions against tying arrangements;
    b. participation in a training program is required for new employees; and
    c. training programs concerning the tying requirements are updated to reflect new activities at the institution.

A foreign bank that operates in the United States through a branch, agency, or commercial lending company subsidiary, or that owns or controls a U.S. bank or Edge corporation, must conform to the nonbanking restrictions of the BHC Act.

The BHC Act also provides exemptions that permit a foreign bank with U.S. banking operations to engage in certain nonbanking activities. As with domestic bank holding companies, pursuant to section 4(c)(8), a foreign bank may own shares of any company that the Board has determined to be so closely related to banking or managing or controlling banks as to be a proper incident thereto. As described below, a foreign bank may also qualify for additional exemptions pursuant to sections 4(c)(9) and 2(h). These latter exemptions apply only to foreign banking institutions and seek to limit the extraterritorial application of federal banking law while preserving national treatment of these institutions' domestic counterparts.

3510.0.1 REGULATION K

Regulation K implements the nonbanking restrictions of section 4 of the BHC Act by applying the limits to any foreign banking organization (FBO). An FBO is (1) any foreign bank that either operates a branch, agency, or commercial lending company subsidiary in the United States, or that controls a U.S. bank, and (2) any company that owns or controls a foreign bank described in (1). (See 12 C.F.R. 211.21(o) to apply these limits.) Regulation K requires any FBO that engages in activities in the United States to conform those activities to the nonbanking restrictions by either limiting the activities or obtaining an exemption. (See 12 C.F.R. 211.23(n).)

Regulation K implements statutory exemptions from the BHC Act for certain activities of foreign banks. Sections 4(c)(9) and 2(h) of the BHC Act provide exemptions that are available to "qualifying foreign banking organizations" (QFBOs).

Section 2(h) allows a foreign company that is principally engaged in banking business outside the United States to own foreign affiliates that engage in impermissible nonfinancial activities in the United States, subject to certain requirements. These include requirements that the foreign affiliate must derive most of its business from outside the United States and that it may engage in the United States in only the same lines of business it conducts outside the United States.

Section 4(c)(9) allows the Board to exempt foreign companies from the nonbank activity restrictions of the BHC Act when the exemption would not be substantially at variance with the BHC Act and would be in the public interest. Under this authority, the Board has exempted, among other things, all foreign activities of QFBOs from the nonbanking prohibitions of the BHC Act.

To qualify as a QFBO (and, hence, to be eligible for the 4(c)(9) and 2(h) exemptions), an FBO must chiefly engage in banking activities worldwide; that is, it must demonstrate that more than half of its business is banking and that more than half of its banking business is outside the United States. Regulation K sets forth a multistep test for determining when an FBO primarily engages in banking activities worldwide. This so-called QFBO test is met if "disregarding [the FBO's] U.S. banking business, more than half of [the FBO's] worldwide business is banking; and more than half of its banking business is outside the United States." (See 12 C.F.R. 211.23(a).)

Under the QFBO test, an FBO must satisfy at least two of the following criteria:

1. the banking assets held outside the United States must exceed total worldwide nonbanking assets;
2. revenues derived from the business of banking outside the United States must exceed total revenues derived from its worldwide nonbanking business; or
3. net income derived from the business of banking outside the United States must exceed total net income derived from its worldwide nonbanking business.

In addition, the FBO must meet at least two of the following criteria:

1. the banking assets held outside the United States must exceed the banking assets held in the United States;
2. revenues derived from the business of banking outside the United States must exceed the revenues derived from the business of banking in the United States; or
3. net income derived from the business of banking outside the United States must exceed

net income from the business of banking in the United States.

Regulation K provides rules on how to calculate the assets, revenues, and net income of the FBO and its foreign subsidiaries.[1] In calculating assets, revenues, or net income held or derived from the business of banking "outside the United States," the FBO may not include assets, revenues, or net income, whether held or derived directly or indirectly, of a subsidiary bank, a branch, an agency, a commercial lending company, or another company engaged in the business of banking in the United States, including any territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands.

Regulation K provides a broader definition of "banking" for use in the QFBO test. A QFBO may include assets, revenues, and income from any activity that a U.S. bank holding company may perform abroad pursuant to section 211.10 of Regulation K, if the activity is conducted by the foreign bank itself or by a subsidiary. Thus, for example, an FBO may treat certain insurance and securities activities as banking activities for determining QFBO status. (See 12 C.F.R. 211.23(b)(2) and 211.10.) However, this broader definition of banking applies to the QFBO test only. It does not define the types of permissible banking activities that a QFBO may perform in the United States.

An FBO may be unable to satisfy the QFBO test because a substantial part of its financial activities is conducted outside of the foreign bank itself. This might occur, for example, when an FBO conducts substantial life insurance activities through a parent or sister company of the foreign bank. Such an FBO may nevertheless be eligible for some more limited exemptive relief if it meets a modified test. Under this modified test, when calculating assets, revenues, or net income for the prong of the QFBO test that measures whether more than half of an FBO's business is banking, the FBO may count banking activities conducted outside the foreign banking chain. For the other prong of the test, which determines whether more than half of an FBO's banking business is outside the United States, the banking-chain requirement would still apply. An FBO that meets this modified test will be eligible for all of the exemptions other than the exemption for limited commercial and industrial activities provided under section 2(h) (as implemented by 12 C.F.R. 211.23(f)(5)).[2] However, any foreign banks within the FBO that independently meet the QFBO test would be eligible for all of the exemptions available to QFBOs. The modified test is intended to limit the extraterritorial effect of the BHC Act on foreign firms and to avoid penalizing a consolidated group that engages mostly in activities permissible for a U.S. banking organization.

An FBO that does not qualify, or that ceased to qualify for two consecutive years (as reported in the Annual Report of Foreign Banking Organizations, Form FR Y-7, that the FBO filed with the Board), is not eligible for the exemptions afforded by sections 2(h) and 4(c)(9). An FBO that does not qualify for these exemptions may only engage in activities in the United States that are permissible for a domestic bank holding company. An FBO that no longer qualifies under the QFBO test may seek a determination of continued eligibility from the Board. Otherwise, the FBO may only continue to engage in activities begun, or retain investments acquired, before the end of the first fiscal year in which it failed to qualify. Other activities or investments must cease or be divested within three months of the filing of the second FR Y-7, which demonstrates that the foreign bank no longer qualifies for the exemptions. The Board also has the authority to grant exemptive relief under Regulation K to foreign organizations that do not include foreign banks. (See 12 C.F.R. 211.23(e).)

3510.0.2 NONBANKING EXEMPTIONS FROM THE BHC ACT FOR QFBOs UNDER SECTIONS 4(C)(9) AND 2(H)

Sections 2(h) and 4(c)(9) of the BHC Act are exemptive provisions that seek to limit the extraterritorial impact of federal banking law. While there is considerable overlap in these two sections (for example, only a QFBO is eligible for both kinds of exemptions), they also have significant differences (for example, section 2(h) only exempts certain types of activities, whereas

1. A subsidiary is any company that either (1) has 25 percent or more of its voting shares directly or indirectly owned, controlled, or held with the power to vote by a company, including a foreign bank or a foreign banking organization, or (2) is otherwise controlled or capable of being controlled by a foreign bank or foreign banking organization. See 12 C.F.R. 211.21(z).

2. Any FBO that qualifies as a financial holding company (FHC) would be able to make merchant banking investments and investments in connection with its insurance business in the United States to the extent permitted for an FHC. The lack of eligibility for the exemption in section 211.23(f)(5) would not negate or otherwise affect such authority.

section 4(c)(9) may also exempt specific activities or investments upon Board order).

3510.0.2.1 Section 4(c)(9) of the BHC Act

Section 4(c)(9) of the BHC Act authorizes the Board to exempt the U.S. activities of a QFBO, through order or regulation, if the exemption "would not be substantially at variance with the purposes of [the BHC Act] and would be in the public interest." The Board has implemented this provision in Regulation K to permit a QFBO to engage directly or indirectly in any activity outside of the United States; hold the shares of any company that engages in activities in the United States that are "incidental" to foreign business; hold a *noncontrolling* interest in any chiefly foreign company that engages in any activity in the United States, if the foreign company derives more than half its assets and revenues from outside the United States; or own or control voting shares of any company acquired in good faith in a fiduciary capacity as permitted by section 4(c)(4) of the BHC Act. An FBO is *not* permitted to own more than 10 percent of the shares of a foreign company that directly or indirectly engages in underwriting, selling, or distributing securities to an extent not permitted for bank holding companies.[3] (See 12 C.F.R. 211.23(f)(1), (2), (3), (4), and 5(i) and (ii).)

The provision that permits a QFBO to own shares of a foreign company that engages in incidental, international activities in the United States has been defined by interpretation. That is, an activity is "incidental" to a foreign company's activities outside of the United States only if it is an activity that an Edge or agreement corporation may perform in the United States. Section 211.6 of Regulation K defines the permissible activities of an Edge or agreement corporation.[4] An application to the Federal Reserve is not required before a QFBO engages in an activity that is incidental to international business under this exemption.

A QFBO may also request a specific exemption from the BHC Act under section 4(c)(9) to perform otherwise impermissible activities in the United States. The Board considers these requests on a case-by-case basis.

3510.0.2.2 Section 2(h) of the BHC Act

Section 2(h) of the BHC Act permits a QFBO to own or control the voting shares of a foreign company that is principally engaged in business outside of the United States and that engages directly or indirectly in activities in the United States that are the same as or related to the company's lines of business abroad.

Section 2(h) is designed to allow a QFBO that has foreign commercial or industrial affiliates to continue to hold those affiliates, even if the affiliate engages in activities in the United States that would ordinarily be prohibited by section 4 of the BHC Act. The U.S. activities must be the same kind of activity the affiliate conducts outside the United States and the foreign affiliate must be chiefly foreign, that is, it must derive more than half of its assets and revenues from outside the United States. The U.S. branches and agencies of a QFBO may not lend to an affiliate held under section 2(h) except on an arm's-length basis.

A QFBO may *not* engage in financial activities in the United States on the basis of section 2(h). Regulation K provides a list of activities that are considered "financial." These activities should be referenced to Division H (Finance, Insurance, and Real Estate) of the Standard Industrial Classifications (SIC), as well as to selected activities in other divisions of the SIC that are considered financial in nature.[5]

3. Specifically, Regulation K permits a QFBO to (1) engage in activities of any kind outside the United States; (2) engage directly in activities in the United States that are incidental to its activities outside the United States; (3) own or control voting shares of any company that is not engaged, directly or indirectly, in any activities in the United States other than those that are incidental to the international or foreign business of such company; and (4) own or control voting shares of any company in a fiduciary capacity under circumstances that would entitle such shareholding to an exemption under section 4(c)(4) of the BHC Act if the shares were held or acquired by a bank.

4. Generally, these activities must have an international nexus and may consist of receiving deposits from foreign governments and persons; receiving deposits from other persons under certain conditions; holding or investing liquid funds in certain forms or instruments; engaging in certain credit activities or borrowing funds; receiving or collecting payments under certain conditions; performing foreign-exchange activities; acting as a fiduciary, an investment adviser, or a broker or performing other activities related to investing under certain conditions; providing banking services for employees; and engaging in other activities with prior Board approval. See 12 C.F.R. 211.6(a).

5. The North American Industry Classification System (NAIS) replaces the use of SIC codes. The NAICS codes differ from the SIC codes. To evaluate compliance with section 2(h) of the BHC Act, examiners should consult Regulation K directly when determining whether particular activities are permissible. Regulation K refers to NAICS codes.

Section 2(h) is implemented in Regulation K as follows: A QFBO may own or control voting shares of a foreign company that is engaged directly or indirectly in business in the United States other than that which is incidental to its international or foreign business, subject to the following limitations:

1. More than 50 percent of the foreign company's consolidated assets shall be located, and consolidated revenues derived from, outside the United States.[6] (See 12 C.F.R. 211.23(f)(5)(i).)
2. The foreign company shall not directly underwrite, sell, or distribute, nor directly own or control more than 10 percent of the voting shares of a company that underwrites, sells, or distributes, securities in the United States except to the extent permitted bank holding companies. (See 12 C.F.R. 211.23(f)(5)(ii), 12 C.F.R. 225.124, and section 3510.0.2.3.)

Regulation K places additional restrictions on the 2(h) exemption when a QFBO owns a foreign company that is a subsidiary. Specifically, the foreign company must be, or must control, an operating company. Its direct or indirect activities in the United States are subject to the following limitations:

1. The foreign company's activities in the United States shall be the same kind of activities or related to the activities engaged in directly or indirectly by the foreign company abroad, as measured by the "establishment" categories of the SIC. An activity in the United States shall be considered related to an activity outside the United States if it consists of supply, distribution, or sales in furtherance of the activity. (See 12 C.F.R. 211.23(f)(5)(iii)(A).)
2. The foreign company may engage in activities in the United States that consist of banking securities, insurance or other financial operations, or types of activities permitted by regulation or order under section 4(c)(8) of the BHC Act only under regulations of the Board or with the prior approval of the Board, subject to the following:
   a. Activities within Division H (Finance, Insurance, and Real Estate) of the SIC shall be considered banking or financial operations for this purpose, with the exception of acting as operators of nonresidential buildings (SIC 6512), operators of apartment buildings (SIC 6513), operators of dwellings other than apartment buildings (SIC 6514), operators of residential mobile home sites (SIC 6515), and operating title abstract offices (SIC 6541).
   b. The following activities shall be considered financial activities and may be engaged in only with the approval of the Board under section 211.23(g) of Regulation K:[7] credit reporting services (SIC 7323); computer and data processing services (SIC 7371 to 7379); armored car services (SIC 7381); management consulting (SIC 8732, 8741, 8742, and 8748); certain rental and leasing activities (SIC 4741, 7352, 7353, 7359, 7513, 7514, 7515, and 7519); accounting, auditing, and bookkeeping services (SIC 8721); courier services (SIC 4215 and 4513); and arrangement of passenger transportation (SIC 4724, 4725, and 4729).

The restriction in paragraph 2b. above reflects the fact that section 2(h) is not the source of authority for a QFBO to engage in banking, securities, or other financial activities in the United States through a subsidiary.

The section 2(h) exemption only applies to the nonfinancial, nonbanking activities of an FBO. To preserve competitive equity, the exemption does not permit an FBO to control a foreign nonbanking company that engages in, or that holds more than 5 percent of the voting shares of another company that engages in, banking, securities, insurance, real estate, or other financial activities in the United States. These activities may be performed only with Federal Reserve approval under section 4(c)(8) or 4(c)(9) of the BHC Act.

3510.0.2.3 Foreign Banks' Underwriting of Securities

A number of foreign banks, which are subject to

6. If the foreign company fails to meet the requirements of paragraph (f)(5)(i) (12 C.F.R. 211.23) for two consecutive years (as reflected in annual reports (FR Y-7) the FBO filed with the Board), the foreign company must be divested or its activities must be terminated within one year of the filing of the second consecutive annual report that reflects nonconformance with the requirements of paragraph (f)(5)(i), unless the Board grants consent to retain the investment under 12 C.F.R. 211.23(g).

7. Section 211.23(g) of Regulation K permits a foreign banking organization to request a case-by-case exemption from the nonbanking restrictions to engage in otherwise impermissible activities pursuant to section 4(c)(9) of the BHC Act.

the BHC Act, had participated as co-managers in the underwriting of securities that were distributed in the United States. These banks did not have the authority to engage in securities underwriting activity in the United States. The U.S. offices of affiliates of the foreign banks were used to engage in activities conducted in support of the underwriting transactions, for which these U.S. offices were compensated by the foreign bank. The foreign bank became a member of the underwriting syndicate but it did not distribute any of the securities in the United States or elsewhere. The foreign banks took the position that they were not engaged in underwriting in the United States because any underwriting obligation was booked outside the United States.

A foreign bank that is subject to the BHC Act may engage in underwriting activities in the United States only if it has been authorized under section 4 of that act. Section 225.124 of the Board's Regulation Y states that a foreign bank will not be considered to be engaged in the activity of underwriting in the United States if the shares to be underwritten are distributed outside the United States. In the transactions in question, all of the securities were distributed in the United States.

In 1985, the Board amended Regulation K in section 211.23(f)(5)(ii) to provide clarification that a foreign banking organization shall not "directly underwrite, sell, or distribute, nor own or control more than 10 percent of the voting shares of a company that underwrites, sells, or distributes securities in the United States, except to the extent permitted bank holding companies." When proposing this provision, the Board stated "...that no part of the prohibited underwriting process may take place in the United States and that the prohibition on the activity does not depend on the activity being conducted through an office or subsidiary in the United States."

Regulation K defines "engaged in business" and "engaged in activities" to mean conducting an activity through an office or subsidiary in the United States. The Regulation K definition of "engaged in business," adopted in 1979, however, does not authorize foreign banking organizations to evade regulatory restrictions on securities activities in the United States by using U.S. offices and affiliates to facilitate the prohibited activity. Also, the framework of the Gramm-Leach-Bliley Act (the GLB Act) requires that banking organizations meet certain financial and managerial requirements of the GLB Act and the Board's Regulation K to engage in these activities in the United States.

The Board therefore issued an interpretation on February 7, 2003 (effective February 19, 2003), clarifying that the underwriting by foreign banks of securities to be distributed in the United States is an activity conducted in the United States, regardless of the location at which the underwriting risk is assumed and the underwriting fees are booked. Consequently, any banking organization that wishes to engage in such activity must either be a financial holding company under the GLB Act or have authority to engage in underwriting activity under section 4(c)(8) of the BHC Act (so-called section 20 authority). Revenue generated by underwriting bank-ineligible securities in such transactions should be attributed to the section 20 company for those foreign banks that operate under section 20 authority. (See 12 C.F.R. 211.605.)

3510.0.3 GRANDFATHER RIGHTS

Section 8 of the International Banking Act (IBA) provides grandfather rights to foreign banks that operated a branch, agency, or subsidiary commercial lending company at the time of enactment of the IBA.

Section 8(c) of the IBA permanently grandfathers activities engaged in directly or through an affiliate on or before July 26, 1978, or for which an application to engage in such activities had been filed on or before that date.[8] Grandfathered nonbanking activities may not be expanded through the acquisition of any interest in or the assets of a going concern engaged in the same activities. The Board may, subject to opportunity for hearing, terminate these grandfather rights where it is necessary to prevent undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices in the United States. A foreign bank that is required to terminate its indirect grandfathered activity may retain ownership of the shares of the grandfathered company for a period of two years from the date of the Board's action.

Grandfather rights conferred under section 8(c) of the IBA shall terminate immediately upon the filing of an FHC declaration by the foreign bank or foreign company. With respect to a foreign bank or foreign company that did

8. The term "affiliate" means any company that controls, is controlled by, or is under common control with the foreign bank or the parent of the foreign bank.

not file an FHC declaration by November 12, 2001, the Board has the authority, giving due regard to the principle of national treatment and equality of competitive opportunity, to impose such restrictions and requirements on the conduct of any grandfathered activities as are comparable to those imposed on a U.S. FHC, including a requirement to conduct such activities in compliance with any prudential safeguards established under 12 U.S.C. 1828a.

Section 4(c)(10) of the BHC Act (Exemption from Section 4 for BHCs That Are Banks) Section 3520.0

This manual section explains the "grandfather" or legacy exemption from the general prohibitions of section 4(c)(10) of the Bank Holding Company (BHC) Act for a small group of BHCs that were themselves banks. For such BHCs and their wholly owned subsidiaries, the exemption provided for continued ownership of nonbank shares that were lawfully acquired and owned directly or indirectly prior to enactment of the BHC Act (May 9, 1956). At the time of its enactment, the exemption accommodated only three BHCs. While these BHCs no longer exist, this manual section provides historical background about this exemption from the BHC Act.

Section 4(c)(10) limited its exemption to "wholly owned subsidiaries." To have been eligible for the exemption in section 4(c)(10), the holding company must have continuously held the shares of the wholly owned subsidiary since May 9, 1956. This interpretation aligned with the Federal Reserve Board's interpretations of other sections of the BHC Act.

Section 4(c)(11) (Authorization for BHCs to Reorganize Share Ownership Held on the Basis of Any Section 4 Exemption) Section 3530.0

Section 4(c)(11) was adopted to authorize bank holding companies to reorganize share ownership held on the basis of any section 4 exemption. Reorganization is permitted with respect to section 4(a)(2) grandfathered activities engaged in prior to June 30, 1968, retaining indefinite grandfather authority. Shares held pursuant to Board approval under section 4(c)(8) or any other section 4 exemption also come within section 4(c)(11)'s reorganization authority.

Under section 4(c)(11), a bank holding company is authorized to reorganize its share ownerships, shift its activities among its various entities and form new subsidiaries without Board approval as long as there is no change in the activities of the bank holding company system. Congress also felt it entirely appropriate for these companies to expand their activities so long as such expansion did not produce anticompetitive or other adverse effects. Accordingly, internal expansion of the grandfathered activities was permitted but the provision was added that this section does not authorize the grandfathered companies to acquire, either directly or indirectly, any interest in or the assets of any going concern outside the holding company system (unless the acquisition is pursuant to a contract entered into before June 30, 1968). Congress reasoned that purchasing a going concern engaged in the grandfathered activities of a holding company would tend to have an anticompetitive effect in that it would reduce the number of firms competing against each other in a given activity.

This section provided an exemption from the general prohibitions of section 4 for shares held or activities which became subject to the Act by the 1970 amendments.

Section 4(c)(12) provided not only for continued ownership of shares or performance of activities so held or performed as of December 31, 1970, but also for others permitted afterward by the Board. As stated in subparagraphs (A) and (B) of section 4(c)(12), the 10-year exemption applied if such bank holding companies: (A)(i) ceased to be bank holding companies by December 31, 1980; or (A)(ii) ceased to retain direct or indirect ownership of the nonbank shares or engage in the nonbank activities by December 31, 1980; or (B) complied with such other condition as the Board may prescribe.

A company was required to file an irrevocable declaration that it would cease to be a bank holding company by January 1, 1981, unless the Board granted it hardship exemption under section 4(d) of the Act. Such a company could then expand its nonbanking activities *de novo* without notification to the Board and could acquire a going concern nonbank company 45 days after informing the appropriate Reserve Bank of the proposed acquisition unless notified otherwise within that time. If an irrevocable declaration was not filed, then no acquisition could have been made or activities commenced under section 4(c)(12) except with prior Board approval. These limitations did not apply to acquisitions made pursuant to a binding commitment entered into before March 23, 1971.

Few bank holding companies have claimed an exemption under section 4(c)(12). It is unlikely that many situations involving section 4(c)(12) will be encountered by inspection personnel. However, if a 4(c)(12) company has committed to cease the nonbanking activities examiners must ensure that the divestiture has occurred.

Successor rights				1977 FRB 946

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Section 4(c)(13) of the BHC Act governs the international activities of bank holding companies. In general, the act authorizes the Board to permit domestic bank holding companies to invest in companies that do no business in the United States except what is incidental to international or foreign business. Bank holding companies may invest in the same companies as Edge corporations.

3550.0.1 INVESTMENTS AND ACTIVITIES ABROAD

The investment provisions of Regulation K (sections 211.8, 211.9, and 211.10) implement section 4(c)(13) of the BHC Act. In general, an ''investor'' under Regulation K may invest, directly or indirectly, in a subsidiary or joint venture or may make portfolio investments, subject to the limits in section 211.8 and the general provisions in section 211.9(a). (See SR-02-03 and SR-02-02.)

Bank holding companies may invest in the same types of entities as Edge and agreement corporations. However, member banks may invest directly in only foreign banks; domestic or foreign organizations formed for the sole purpose of holding shares of a foreign bank; foreign organizations formed for the sole purpose of performing nominee, fiduciary, or other banking services incidental to the activities of a foreign branch or foreign bank affiliate of the member bank; and subsidiaries established pursuant to section 211.4(a)(8) of Regulation K (that is, a company that engages solely in activities in which the member bank is permitted to engage or that are incidental to the activities of the member bank's foreign branch). (See all sections of Regulation K for any other activity or investment authorizations, limitations, requirements, or prohibitions not discussed in this section.)

In general, the Board has limited the types of activities that a bank holding company may engage in through the ownership of foreign companies to banking or financially related activities, and to those that are necessary to carry on such activities. These include all of the activities permitted under section 211.10 of Regulation K and section 4(c)(8) of the BHC Act, including equity securities underwriting and management consulting. Many of the activities permitted abroad are not subject to the same limits as those imposed domestically under section 4(c)(8) (for example, brokerage of all types of insurance is permitted abroad).

Activities abroad, whether conducted directly or indirectly, are to be confined to activities of a banking or financial nature and to those that are necessary to carry on such activities. At all times, investors[1] must act in accordance with high standards of banking or financial prudence, having due regard for diversification of risks, suitable liquidity, and adequacy of capital. The Board follows the policy of allowing activities abroad to be organized and operated as best meets corporate policies. The following provides a limited discussion of general investment activities under Regulation K. The regulation should be referred to for more specific requirements and limitations.

In general, an investor may make (1) an investment in a subsidiary, (2) an investment in a joint venture, or (3) a portfolio investment in an organization. With regard to an investment in a subsidiary, the subsidiary must engage in activities authorized under section 211.10 of Regulation K, or in other activities that the Board has determined to be permissible (for a particular case). In the acquisition of a going concern, existing activities that are not otherwise permissible for a subsidiary may account for not more than 5 percent of either the acquired organization's consolidated assets or consolidated revenues. For an investment in a joint venture, no more than 10 percent of the joint venture's consolidated assets or consolidated revenues can be attributable to activities that are not listed in section 211.10.

For portfolio investments in an organization, the investor and its affiliates' total direct and indirect portfolio investments in an organization that is engaged in activities not permissible for joint ventures, when combined with all other shares in the organization (held under any other authority), cannot exceed—

1. 40 percent of the total equity of the organization, or
2. 19.9 percent of the organization's voting shares.

In addition to the individual investment limits, these portfolio investments are subject to an

1. For purposes of sections 211.8, 211.9, and 211.10 of Regulation K, a direct subsidiary of a member bank is deemed to be an investor.

aggregate equity limit. (See section 211.10(a)(15) of Regulation K.) For investments in organizations engaged in activities that are not permissible for joint ventures, when combined with shares held directly and indirectly by the investor and its affiliates under the equity dealing provisions of Regulation K, the investments cannot exceed—

1. 25 percent of the bank holding company's tier 1 capital, where the investor is a bank holding company;
2. 20 percent of the investor's tier 1 capital, where the investor is a member bank;[2] and
3. the lesser of 20 percent of any parent insured bank's tier 1 capital or 100 percent of the investor's tier 1 capital, for any other investor.

3550.0.2 INVESTMENT PROCEDURES

Except as the Board may otherwise determine, direct and indirect investments must be made in accordance with the general-consent, limited-general-consent, prior-notice, or specific-consent procedures of section 211.9 of Regulation K. The investment procedures of section 211.9(a) include the following requirements:

1. *Minimum capital adequacy standards.* The investor, the bank holding company, and the member bank must be in compliance with applicable minimum standards for capital adequacy set out in the capital adequacy guidelines. If the investor is an Edge or agreement corporation, the minimum capital required is total and tier 1 capital ratios of 8 percent and 4 percent, respectively.
2. *Composite rating.* For an investor to make investments under the general-consent or limited-general-consent procedures of sections 211.9(b) and (c), the investor and any parent insured bank must have received a composite rating of at least 2 at the most recent examination.
3. *Modification or suspension of procedures.* The Board may, at any time upon notice, modify or suspend the investment procedures for any investor or for the acquisition of shares of organizations engaged in particular kinds of activities.
4. *Long-range investment plan.* Any investor may submit a long-range investment plan to the Board for its specific consent. If approved by the Board, the plan shall be subject to the other procedures of section 211.9 only to the extent the Board determines is necessary to ensure the safety and soundness of the operations of the investor and its affiliates.
5. *Prior specific consent for initial investment.* For its initial investment in its first subsidiary or joint venture under subpart A of Regulation K, an investor must apply for and receive the prior specific consent of the Board, unless an affiliate previously has received approval to make such an investment.
6. *Expiration of investment authority.* Authority to make investments that was granted under prior-notice or specific-consent procedures shall expire one year from the earliest date on which the authority could have been exercised, unless the Board determines a longer period shall apply.
7. *Conditional approval; access to information.* The Board may impose such conditions on investment authority granted under section 211.9 as it deems necessary. The Board may also require termination of any activities conducted under subpart A of Regulation K, if an investor is unable to provide information on its activities or those of its affiliates that the Board deems necessary to determine and enforce compliance with U.S. banking laws.

3550.0.3 GENERAL CONSENT FOR WELL-CAPITALIZED AND WELL-MANAGED INVESTORS

The Board has granted its limited general consent to make investments by well-capitalized and well-managed investors. For these general-consent provisions to apply, the investor, any parent-insured bank, and any parent bank holding company must be well capitalized and well managed both before and immediately after the proposed investment. The investments are subject to the limitations discussed below.

3550.0.3.1 Individual Limit for Investment in a Subsidiary

The Board grants its general consent for investments by well-capitalized and well-managed investors, subject to certain investment limitations. For an investment in a subsidiary, the total amount that may be invested directly or indirectly (in one transaction or a series of transac-

2. For this purpose, a direct subsidiary of a member bank is deemed to be an investor.

tions) may not exceed 10 percent of the investor's tier 1 capital, where the investor is a bank holding company; 2 percent of the investor's tier 1 capital, where the investor is a member bank; or the lesser of 2 percent of the tier 1 capital of any parent-insured bank or 10 percent of the investor's tier 1 capital, for any other investor.

3550.0.3.2 Individual Limit for Investments in a Joint Venture

For individual investments in a joint venture, the total amount invested directly or indirectly (in one transaction or a series of transactions) may not exceed 5 percent of the investor's tier 1 capital, where the investor is a bank holding company; 1 percent of the investor's tier 1 capital, where the investor is a member bank; or the lesser of 1 percent of the tier 1 capital of any parent-insured bank or 5 percent of investor's tier 1 capital, for any other investor.

3550.0.3.3 Individual Limit for Portfolio Investment

For a portfolio investment, the total amount invested directly or indirectly (in one transaction or a series of transactions) in such company, general partnership, or unlimited-liability company cannot exceed the lesser of $25 million or—

1. 5 percent of the investor's tier 1 capital, in the case of a bank holding company or its subsidiary or an Edge corporation engaged in banking; or
2. 25 percent of the investor's tier 1 capital, in the case of an Edge corporation not engaged in banking.

3550.0.3.4 Aggregate Investment Limits

The amount of all investments made, directly or indirectly, during the previous 12-month period under section 211.9, when aggregated with the proposed investment, shall not exceed 20 percent of the investor's tier 1 capital, where the investor is a bank holding company; 10 percent of the investor's tier 1 capital, where the investor is a member bank; or the lesser of 10 percent of the tier 1 capital of any parent-insured bank or 50 percent of the tier 1 capital of the investor, for any other investor.

3550.0.4 LIMITED GENERAL CONSENT FOR AN INVESTOR THAT IS NOT WELL CAPITALIZED OR WELL MANAGED

3550.0.4.1 Individual Limit

For investors that are not well capitalized and well managed, the Board has granted limited general consent for an investor to make an investment in a subsidiary or joint venture, or to make a portfolio investment. The total amount invested, directly or indirectly (in one transaction or a series of transactions), cannot exceed the lesser of $25 million or 5 percent of the investor's tier 1 capital, where the investor is a bank holding company; 1 percent of the investor's tier 1 capital, where the investor is a member bank; or the lesser of 1 percent of any parent insured bank's tier 1 capital or 5 percent of the investor's tier 1 capital, for any other investor.

3550.0.4.2 Aggregate Limit

The amount of limited-general-consent investments made by such an investor directly or indirectly during the previous 12-month period, when aggregated with the proposed investment, cannot exceed 10 percent of the investor's tier 1 capital, where the investor is a bank holding company; 5 percent of the investor's tier 1 capital, where the investor is a member bank; and the lesser of 5 percent of any parent insured bank's tier 1 capital or 25 percent of the investor's tier 1 capital, for any other investor.

3550.0.5 CALCULATING COMPLIANCE WITH THE INDIVIDUAL AND AGGREGATE GENERAL-CONSENT LIMITS

When determining compliance with the individual and aggregate general-consent limits, an investment by an investor in a subsidiary can only be counted once, notwithstanding that the subsidiary may, within 12 months of making the investment, downstream all or any part of the investment to another subsidiary. Also, when determining compliance with these limits, an investor is not required to combine the value of all shares of an organization held in trading or dealing accounts under section 211.10(a)(15) of

Regulation K with investments in the same organization.

3550.0.6 OTHER ELIGIBLE INVESTMENTS UNDER GENERAL CONSENT

In addition to the general-consent authority already discussed, the Board has granted its general consent for any investor to make the following investments: any investment in an organization in an amount equal to cash dividends received from that organization during the preceding 12 calendar months, and any investment that is acquired from an affiliate at net asset value or though a contribution of shares.

3550.0.7 INVESTMENT INELIGIBLE FOR GENERAL CONSENT

An investment in a foreign bank is ineligible for general consent if (1) after the investment, the foreign bank would be an affiliate of a member bank, and (2) the foreign bank is located in a country in which the member bank and its affiliates have no existing banking presence.

3550.0.8 INVESTMENTS MADE WITH PRIOR NOTICE TO OR THE SPECIFIC CONSENT OF THE BOARD

An investment that does not qualify for general consent under section 211.9(b), (c), or (d) of Regulation K may be made after the investor has provided the Board with 30 days' prior written notice. The notice period commences at the time the notice is received. However—

1. the Board may waive the 30-day period if it finds the full period is not required for consideration of the proposed investment, or that the circumstances presented require immediate action, and
2. the Board may suspend the 30-day period or act on the investment under its specific-consent procedures.

Any investment that does not qualify for either the general-consent or the prior-notice procedure cannot be consummated without the specific consent (that is, express approval) of the Board.

3550.0.9 EXAMINATION OF FOREIGN SUBSIDIARIES OF BHCs

The procedures involved in examining foreign subsidiaries of domestic bank holding companies are generally the same as those used in examining domestic subsidiaries engaged in similar activities. The on-site examination of foreign subsidiaries is, however, necessarily limited. In most cases, examiners should try to implement asset-appraisal procedures by using records at the location of the U.S. parent or bank. Overseas examinations are intended primarily to appraise the firm's internal-control systems and the sufficiency of the firm's reporting to its parent company. For examination objectives and procedures for foreign subsidiaries, see the instructions for similar section 4(c)(8) investments in other sections of this manual.

3550.0.10 INVESTMENTS BY BANK HOLDING COMPANIES, EDGE CORPORATIONS, AND MEMBER BANKS IN FOREIGN COMPANIES

Subject to the limitations within subpart A of Regulation K, the Board allows, with its specific consent, banking organizations to acquire and hold investments in foreign companies that do business in the United States subject to the following conditions:

1. The activities abroad, whether conducted directly or indirectly, must be confined to activities of a banking or financial nature and those that are necessary to carry out such activities. When engaging in these activities, the investors are to act in accordance with high standards of banking and financial prudence, having due regard for diversification of risks, suitable liquidity, and adequacy of capital.
2. The activities are either those that the Board has determined to be usual in connection with the transaction of banking or other financial operations abroad as listed in section 211.10 of Regulation K, including those activities authorized with the Board's specific approval, and those that have been determined to be usual in connection with the transaction of the business of banking or other financial operations abroad, consistent with the Federal Reserve Act or the BHC Act.

2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

In 1982 the Bank Holding Company Act of 1956 was amended by the Bank Export Services Act (BESA). The Bank Export Services Act provided an exemption to the prohibitions of Section 4 of the BHC Act for a bank holding company's investment in the shares of any company that is an export trading company. The (BESA) was designed to increase U.S. exports by encouraging investments and participation in export trading companies by bank holding companies and the specified investors.

An export trading company is a company that is exclusively engaged in activities related to international trade and, by engaging in one or more export trade services:

1. derives at least one-third of its revenues in each consecutive four-year period (excluding a two-year start up period) from the export of goods and services produced in the United States by persons other than the export trading company or its subsidiaries; and
2. derives revenues from the export, or facilitating the export, of goods or services produced in the United States and those revenues exceed revenues from the import, or facilitating the import into the United States, of goods or services produced outside the United States.

A bank holding company's direct and indirect investment in export trading companies may not exceed 5 percent of the bank holding company's consolidated capital and surplus. The total amount of extensions of credit by a bank holding company and its subsidiaries to its affiliated export trading company may not exceed 10 percent of the bank holding company's consolidated capital and surplus.

A bank holding company may not invest in an export trading company, unless the Board has been given sixty days prior written notice of the proposed investment. The Board may disapprove any proposed investment only if:

1. Such disapproval is necessary to prevent unsafe or unsound banking practices, undue concentration of resources, decreased or unfair competition, or conflicts of interest; or
2. It finds that such investment would affect the financial or managerial resources of a bank holding company to an extent that is likely to have a materially adverse effect on the safety and soundness of any subsidiary bank of such bank holding company; or
3. The bank holding company fails to furnish the information required by the Board.

An Edge Act or agreement corporation that is a subsidiary of a bank holding company may invest directly or indirectly in the aggregate up to 5 percent (25 percent in the case of a corporation not engaged in banking) of the voting stock or other evidences of ownership in one or more export trading companies.

Sections 23A and 23B of the Federal Reserve Act applies to transactions between an export trading company and its affiliated banks. Regulation K, however, grants relief from section 23A's collateral requirements where a bank issues a letter of credit or advances funds to an affiliated export trading company solely to finance the purchase of goods for which: (1) the export trading company has a bona fide contract for the subsequent sale of the goods; and (2) the bank has a security interest in the goods or in the proceeds from their sale at least equal in value to the letter of credit or the advance. All other "covered transactions" between a bank and an affiliated export trading company should conform to sections 23A and 23B of the Federal Reserve Act.

3560.0.1 INSPECTION PROCEDURES

Export Trading Companies are generally subsidiaries of bank holding companies. Regulations applicable to them are contained in Section 211.31–4 of Regulation K. Inspections of Export Trading Companies will usually be conducted by international examiners or examiners having specialized training. Examiners conducting inspections of Export Trading Companies should be familiar with these sections as well as Section 4(c)(14) of the BHC Act.

There is no standardized inspection report form for inspections of Export Trading Companies. However, as a minimum, the report is to include the following items:

Page	Description
—	Cover Name of organization Location Name of parent Location of parent Date inspection commenced Date of financial statements
i	Table of Contents Same information as cover
1	Examiner's comments Scope of inspection Summary of condition Violations Operating results Adequacy of accounting records, internal controls, and audit
2	Comparative balance sheets
3	Comparative income statements
4	Classified Assets
	CONFIDENTIAL
A	Officers[1]
B	Directors[1]
C	Confidential comments Assessment of management

1. Same information in tabular form as in Edge report.

Inspection procedures should follow the Export Trading Company Questionnaire, illustrated herein. The questionnaire will be part of a special inspection report, prepared separately, or in conjunction with, a holding company inspection.

A copy of the Export Trading Company report as well as a copy of the Export Trading Company Questionnaire will be retained and included in the workpapers for the BHC inspection. Significant findings will be incorporated into the "Examiner's Comments" page, or the Analysis of Financial Factors page, when appropriate.

3560.0.1.1 Export Trading Company Questionnaire

	Yes	No	NA	Comments
1. Is the Bank Holding Company (BHC) or banking Edge Corporation investment in the Export Trading Company (ETC) limited to 5% of its consolidated capital and surplus? Reference: BESA, Section 203; BHC Act, Section 4(c); Regulation K, Section 211.33(a)		( )		
2. Is the investment in the ETC by an Edge Corporation not engaged in banking limited to 25% of its consolidated capital and surplus? Reference: Same as question 1.		( )		
3. Did the BHC or Edge Corporation furnish the Federal Reserve Board through the local FRB written notice of its proposed investment in the ETC at least 60 days prior to its investment in the ETC? Reference: BESA, Section 203; BHC Act, Section 4(c); Regulation K, Section 211.34		( )		
4. Do the direct and indirect outstanding credit extensions to the ETC by the investor and its subsidiaries exceed 10% of the investor's consolidated capital and surplus? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(B); Regulation K, Section 211.33(b)	( )			
5. If the BHC or its subsidiary has extended credit to an affiliated ETC or to any of the ETC's customers:				
a. are the terms of the credit any more favorable than those afforded to similar borrowers in similar circumstances;	( )			
b. does the credit involve more than normal risk of repayment; and	( )			
c. does the credit present any unfavorable features? Reference: Regulation K, Section 211.33(b)(2)	( )			
6. If the BHC or its subsidiary has extended credit to another investor with at least 10% interest in the ETC, or to an affiliate of the investor:				
a. are the terms of the credit any more favorable than those afforded to similar borrowers in similar circumstances;	( )			

	Yes	No	NA	Comments
b. does the credit involve more than normal risk of repayment; and,	( )			
c. does the credit present any unfavorable features?	( )			
Reference: Same as question 5.				
7. Do covered transactions (under Sections 23A and 23B of the Federal Reserve Act) between a bank and an affiliated ETC meet the collateral requirements of Section 23A unless exempted because the bank has extended a letter of credit or advance to the affiliated ETC solely for the purchase of goods for which:		( )		
a. the ETC has a bona fide sales contract; and				
b. the bank has a security interest in the goods, or in the proceeds from their sale at least equal in value to the letter of credit or advance?				
Reference: Regulation K, Section 211.33(b)(3)				
8. Has the ETC received an export trade Certificate of Review which exempts it from antitrust laws?		( )		
Reference: BESA, Section 301				
9. Has the ETC Certificate holder submitted an annual report to the Secretary of Commerce as required?		( )		
Reference: BESA, Section 308				
10. Is the ETC exclusively engaged in activities related to international trade?		( )		
Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(F) Regulation K, Section 211.32(a)				
11. Is the ETC operated principally for the purposes of exporting goods or services produced in the U.S., or for purposes of facilitating the exportation of goods or services produced in the U.S. by unaffiliated persons by providing one or more export trade services?		( )		

	Yes	No	NA	Comments
The term "export trade services" includes, but is not limited to, consulting, international market research, advertising, marketing, insurance other than acting as principal, agent or broker in the sale of insurance on risks resident or located, or activities performed, in the United States, except for insurance covering transportation of cargo from any point of origin in the U.S. to point of origin in the U.S. to a point of final destination outside the U.S., product research and design, legal assistance, transportation, including trade documentation and freight forwarding, communication and processing of foreign orders to and for exporters and foreign purchasers, warehousing, foreign exchange, financing, and taking title to goods in order to facilitate U.S. exports. An ETC may engage in importing, barter, and third-party trades only if these activities further U.S. exports and only if the preponderance of ETC activities do not involve importing and the revenues from export activities exceed revenues from import activities. Reference: Same as question 10.				
12. If the ETC has expanded its activities significantly beyond those in the original notice to the Board, such as to taking title to goods, product research and design, product modification, or activities not specifically covered in the BHC Act, has the investor given a 60 day notice in advance to the Board? Reference: Regulation K, Section 211.34		( )		
13. If the ETC has been in operation more than six years, is more than one-third of the ETC's revenue in the last consecutive four-year period derived from exports or facilitating exports of U.S. goods and services produced in the U.S. by persons other than the ETC or its subsidiaries? Revenue includes net sales revenue from the trading of goods by the ETC for its own account and gross revenue from all other activities of the ETC. Reference: Regulation K, Section 211.32(a)		( )		

	Yes	No	NA	Comments
14. Does the ETC engage in agricultural production, manufacturing or product modification of goods, e.g., repackaging, reassembly, or extracting by-products other than incidental product modification as necessary to conform to the requirements of foreign countries for sale of the goods in the foreign countries? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(c) Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(c)	( )			
15. Does the ETC take title to goods for which it has received no firm purchase order or commitment? Reference: BESA, Section 103(a)(3)	( )			
16. What period of time do the goods on which the ETC has taken title remain in the inventory of the ETC?				
Does this activity appear unduly speculative? Reference: Same as question 15.	( )			
17. Do the nature and terms of sale of goods retained by the ETC appear to be in line with proper ETC business operations, i.e., not unduly speculative and related to authorized activities? Reference: Same as question 15.		( )		
18. If the ETC acts as a principal, agent, or broker in the sale of insurance, does such activity exclude the sale of insurance on risks or activities located or performed in the U.S. Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(F)		( )		
19. If the ETC engages in, or holds shares of a company engaged in underwriting, selling or distributing securities in the U.S., are such activities limited to the same extent as for BHC's under applicable Federal and State banking laws and regulations? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(C), 12 USC, Section 1843(c)(14)(C)(i)		( )		

	Yes	*No*	*NA*	*Comments*
20. Does the ETC take positions in commodities, commodity contracts, securities or foreign exchange other than as may be necessary in the course of the ETC's authorized business transactions? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(D)	( )			
21. Are activities of the ETC Certificate holder in compliance with the Certificate of Review? (If not, the ETC could be subject to antitrust laws.) Reference: BESA, Section 306		( )		
22. Does the ETC capital base appear to adequately support the strength of the ETC and its ability to withstand unexpected adverse developments so as not to affect the financial resources of the parent or the safety and soundness of affiliated banks? Reference: 43 *Federal Register,* 26,448(1983).		( )		
23. Is there any evidence of adverse effect of the investment in the ETC on the investment in the ETC on the financial or managerial resources of the BHC or Edge Corporation investor, or on the safety and soundness of any subsidiary bank of a BHC investor? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(A)(iv)(11)	( )			
24. Has the ETC's capital to asset ratio remained at all times at or above the minimum established in the original notice to the Board?		( )		
25. Is the ETC in compliance with operational policies, including maximum financial leverage per transaction, as established in the original notice to the Board?		( )		

( ) = Exception

Export Trading Company

____
Bank Holding Company Investor

____
Examination Date

Prepared by: ____________________

Date: ____________________

As a general rule, a bank holding company must provide 60 days' prior written notice to its Reserve Bank to engage in any nonbanking activity, or to acquire or retain the shares of a company engaged in an activity based on section 4(c)(8) or 4(a)(2). When a bank holding company gives notice to a Reserve Bank for approval to engage in, or retain or acquire shares in a company engaged in, a nonbank activity, the BHC must be of the opinion that the activity is closely related to banking and, assuming this test is met, that the activitiy is a proper incident thereto. In addition, a BHC that also is an FHC must provide 60 days' prior written notice to its Reserve Bank to engage in an activity that is complementary to a financial activity under section 4(k)(1)(B). In considering such a notice, the Board must determine whether performance of the activity can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices.

As an exception to the general rule, no prior notice is required for a bank holding company that is qualified under section 4(j)(4) of the BHC Act to engage de novo, directly or through a subsidiary, in an activity that the Board permitted under section 225.28 of Regulation Y before November 12, 1999. After passage of the Gramm-Leach-Bliley Act of 1999, this list of activities cannot be expanded. For all bank holding companies that are not qualified under section 4(j)(4), for all other nonbanking activities based on section 4(c)(8) or section 4(a)(2), and for all activities that are complementary to a financial activity under section 4(k)(1)(B), the bank holding company must provide the appropriate prior written notice of its proposal to its Reserve Bank.[1] The Board must review the notice without disapproving it each time the bank holding company wishes to engage in a proposed activity. The inspection objective and procedures set forth below can be implemented for each of the activities summarized in subsequent sections.

3600.0.1 INSPECTION OBJECTIVE

1. To determine what financial effect nonbanking activities have on the parent and the bank subsidiaries, and if there is any degree of exposure in the activities because of a lack of appropriate audit systems and controls.

3600.0.2 INSPECTION PROCEDURES

1. Review the company's financial statements for accuracy and determine if any factors or trends could have an adverse impact on the parent holding company or the bank subsidiaries.
2. Review the adequacy of the company's policies, procedures, practices, internal controls, and audit coverage regarding nonbanking activities, and whether they are adhered to.

1. A bank holding company that is qualified under section 4(j)(4) of the BHC Act may provide 12 calendar days' prior written notice before engaging by acquisition in an activity permitted under section 225.28 or engaging in an activity based on section 4(c)(8) and approved by the Board by order.

Two bank holding companies (Company A) and (Company B) had requested the Board to determine whether their planned nonbank subsidiary activities were of the kind described in Section 4(c)(8) of the BHC Act. The applications had been filed prior to the passage of the Bank Holding Company Act Amendments of 1970. The applicants proposed to expand their activities under a "pool reserve plan" to include correspondent banks. Such activities were limited to subsidiary banks.

The "pool reserve plan" was described as a method of pooling of loss reserves with respect to term loans to small businesses and the establishment of uniform credit standards in that regard. The "pool reserve plan" permitted banks to adopt a uniform and liberal credit policy in extending credit and the usual method of exchanging participations between the banks.

The General Counsel of the Board of Governors determined, on October 14, 1971, pursuant to delegated authority, that the proposed activities would be "so closely related to banking or managing or controlling banks as to be a proper incident thereto" in accordance with Section 4(c)(8) of the BHC Act, as amended by the BHC Act Amendments of 1970. The approval (1971 FRB 1037) included the following conditions that:

1. The subsidiary was to amend its charter so that the charter would authorize it to perform its functions, and make its services available to banks, but not to lenders other than banks, and to amend its proposed contracts with correspondent banks;
2. Any correspondent banks could terminate their contract with the subsidiary respecting future transactions upon 90-day prior written notice, and that;
3. The subsidiary be subject to the same limitations with the respect to the ownership of any collateral acquired in the course of the conduct of its proposed activities as were its parents, (Company A and Company B).

3600.5.1 NEW YORK INVESTMENT COMPANY

On May 10, 1977, the Board approved an application of a foreign-owned domestic bank to form a holding company, and, at the same time, for that holding company to acquire substantially all of the voting shares of an investment company organized and operating under article XII of the New York State Banking Law (a New York investment company).

The investment company at that time was engaged in providing lending and international banking services, including letters of credit, acceptances, and other financing facilities in connection with exports and imports, international transfers of funds, and foreign-exchange services; investments and foreign-exchange transactions for its own account; leasing improved real estate and data processing equipment; and maintenance of credit balances incidental to or related to the foregoing activities. Although the holding company believed that certain of the activities of the New York investment company had already been determined by the Board to be permissible for bank holding companies, it requested approval of its application on the basis that *all* the activities that a New York investment company is permitted to engage in under New York law are closely related to banking. A New York investment company had not previously been determined by the Board to be an activity permissible for bank holding companies.

The Board noted that the structural and competitive circumstances under which a New York investment company operates are unique to New York and have served in the past as a means for foreign-bank entry into New York in cases where entry through a direct branch or agency was either unavailable or undesirable for the purposes sought. Most of the lending and banking services offered by these companies are also offered by commercial banks generally and, in this connection, compete with foreign banking organizations and domestic commercial banks and their Edge corporation subsidiaries. However, under article XII of the New York State Banking Law, a New York investment company is permitted to engage in various other activities which the Board does not consider to be closely related to banking.

Based on the foregoing, the Board's approval in this case was limited to and contingent upon the New York investment company's (1) continuing to engage principally in transactions involving international or foreign commerce, and not accept demand deposits; (2) complying with all Board or legislatively imposed reserve and interest-rate requirements; (3) divesting of offices in another state within two years; (4) confining activities of its foreign branch to those permitted in the Board's order; and (5) not engaging in the activities of underwriting, selling, or distributing securities; buying or selling coin and bullion; or acting as a financial agent of the U.S. government or as a depositary of public moneys of the United States, or in any new activity which New York investment companies by subsequent enactment may be permitted to engage in, without the prior approval of the Board. (See 1977 FRB 595.)

3600.5.2 ENGAGING IN BANKING ACTIVITIES THROUGH FOREIGN BRANCHES OF A NONBANK COMPANY

A bank holding company applied for the Board's approval to retain direct or indirect ownership of a subsidiary, "CBC," a Delaware-chartered corporation, after it established branches in Nassau and Luxembourg, to engage in certain commercial banking activities. The activities included accepting funds in U.S. dollars or foreign currency in wholesale money markets in amounts over $100,000, making commercial loans in amounts over $100,000, placing funds with and making loans and advances to subsidiary and affiliated organizations, engaging in foreign-exchange transactions, and other activities constituting commercial banking outside the United States. CBC held the shares of a number of nonbanking subsidiaries of the BHC pursuant to section 4(c)(1)(C) of the BHC Act, which permits a subsidiary of a bank holding company to perform services for its parent company.

The purpose of the proposal was to provide the BHC with increased flexibility in funding its domestic operations by allowing CBC to gain access to the offshore wholesale money market. The proposed foreign branches of CBC, by obtaining banking licenses, would give direct access to Eurocurrency interbank markets, and the activities of the proposed branches were expected to be viewed as an integral part of a large U.S.–headquartered entity, making the branches competitive in the offshore interbank markets.

The Board decided that the lending and banking services that the proposed branches would offer were generally offered by commercial banks, and thus are permissible activities of foreign branches of domestic banks and foreign subsidiaries of bank holding companies. The proposed activities of CBC's branches were substantially similar to activities that the Board had previously approved under section 4(c)(8) of the BHC Act for the foreign branches of the New York investment company, incorporated under article XII of the New York Banking Law (see 1977 FRB 595 and 1979 FRB 667). CBC did not propose to engage in any activity that would not be permitted for a separately incorporated foreign subsidiary of a bank holding company. The Board, therefore, ruled that the proposed activities of CBC were closely related to banking (1982 FRB 251).

CBC proposed to engage in no banking activities in the United States, stating that its only U.S. activities would consist of its indirect nonbanking activities through subsidiaries. The subsidiaries would be funded through funds raised by the proposed foreign branches. In this connection, the BHC committed to accepting no placement of or deposits from,[1] or extending no credit to (other than a subsidiary or affiliated organization) a United States resident.[2] The BHC committed that the liabilities to CBC of any person, other than an affiliate, would not exceed 10 percent of the capital and surplus of CBC. The Board felt that these prudential conditions were adequate to meet any supervisory concerns to which the proposal might give rise and thus approved the application, subject to the obtaining of the necessary licensing requirements of the countries involved.

1. A placement or deposit received from a foreign branch, office, subsidiary, affiliate, or other foreign establishment (''foreign affiliate'') controlled by one or more domestic corporations is not regarded as a placement or deposit received from a U.S. resident if such funds are used in its foreign branches or that of other foreign affiliates of the controlling domestic corporation(s).

2. Credit extended to a foreign affiliate, controlled by one or more domestic corporations, is not regarded as credit extended to a U.S. resident if the proceeds will be used in its foreign business or that of other foreign affiliates of the controlling domestic corporation(s).

A domestic bank holding company (the BHC) and a foreign banking organization (the FBO), subject to the BHC Act, applied for the Board's permission to engage in operating a securities exchange under the authority of section 4(c)(8) of the BHC Act and section 225.24 of Regulation Y. The BHC proposed to control approximately 17 percent of the voting shares of group (the group), and the FBO planned to control approximately another 11 percent of the voting shares of the group. The group owned about 54.1 percent of a financial network subsidiary (FNS), which operated an electronic securities exchange (the exchange) for the secondary trading of equity and equity-related securities listed on the London Stock Exchange (LSE). The BHC and FBO indicated that the group planned to establish an office in the United States. In anticipation of the establishment of this office, the BHC and FBO requested the Board's approval to acquire their interests in the group. A BHC must obtain the Board's approval if a foreign company held by the BHC seeks to engage in business in the United States.

The exchange is a screen-based electronic market that provides securities trade matching, trade execution, and related services to U.S. and foreign market makers, broker-dealers, and institutional investors that become members of the exchange. Members may access the exchange and enter bid and ask quotations using electronic terminals that are linked to designated financial networks (for example, a Bloomberg terminal) or through a personal computer linked directly to the exchange. The exchange can be accessed from terminals located anywhere in the world. Trading, however, may occur only during the operating hours of the LSE. Orders entered in the exchange's system appear on separate electronic order books for each security, which display the best bid and ask quotes for the security in descending order. The exchange automatically and continuously matches equal bid and ask offers for each listed security on a first-come, first-served basis.

FNS does not take a principal position in securities, clear or settle the securities transactions executed on the exchange, or assume any principal risk for securities trades executed on the exchange. FNS and its shareholders are not obligated to guarantee any member's trades. Each member of the exchange must be a member of the London Clearing House, or must appoint a member of the London Clearing House to clear the member's trades on the exchange. Trades matched by the exchange are registered at the end of each business day with the London Clearing House in the name of the appropriate clearing member. London Clearing House then becomes the counterparty to each side of the trade until the trade is settled. The trade is settled through a designated system operated by a corporation established by the Bank of England to settle uncertificated U.K. equities.

The exchange is a recognized investment exchange under section 37(3) of the U.K. Financial Services Act of 1986, and is regulated and supervised by the U.K. Financial Services Authority (FSA), under the securities laws of the United Kingdom. While FNS makes its services available to customers in the United States, the SEC has granted it a limited volume exception from the registration requirements of the Securities Exchange Act of 1934. The SEC exemptive order permits FNS to operate in the United States without registering as a securities exchange provided (1) the exchange's average daily volume of trades involving U.S. members does not exceed $40 million, and (2) the exchange's worldwide average daily volume does not exceed 10 percent of the average daily trading volume on the LSE. The SEC exemptive order requires the exchange to comply with other conditions that are designed to ensure orderly and fair markets and to protect U.S. investors.

The Board had not previously determined by regulation or order that the operation of a securities exchange is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. The principal function of a securities exchange is to provide a centralized facility for the execution, clearance, and settlement of securities transactions. The Board indicated in its order that banks and BHCs are authorized to provide securities brokerage services to their customers and, as part of those services, to execute and clear such transactions on a securities exchange. The Board also noted that BHC subsidiaries authorized to act as dealers in securities (section 20 subsidiaries) may provide securities execution, clearance, and settlement services in connection with their dealer operations. In addition, the Board noted that broker or dealer subsidiaries of banks and BHCs often become members of securities exchanges and thus acquire a small ownership (less than 5 percent) in a mutually owned exchange (for example, the New York Stock Exchange). Through the development of these relationships, banks and BHCs have gained considerable experience with and knowledge of the rules and operations of securities exchanges.

Banks and BHCs also provide services that are functionally and operationally similar to those of the exchange. Banks and BHC subsidiaries acting as securities brokers may execute cross-trades for their customers and thereby match equal bid and offer orders received from them. In addition, section 20 subsidiaries may, if authorized, act as a specialist or market maker on a securities exchange such as the NYSE or NASDAQ. A specialist generally maintains a book of current buy and sell orders received from other brokers and matches equal bid and offer quotes for execution. Market makers on NASDAQ also publish bid and ask prices at which they stand ready to execute transactions in the relevant security.

For the above reasons, and based on all the facts on record, the Board concluded that operating a securities exchange is an activity that is closely related to banking for the purposes of section 4(c)(8) of the BHC Act. The application was approved on November 8, 1999. See 2000 FRB 61 for the order and more specific information regarding the Board's approval.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2007, this section is amended to include another Board order in which the Board approved a notice for a foreign bank to act as a certification authority (CA) in connection with financial and nonfinancial transactions and to engage in related data processing activities. The bank planned to engage in the activities by entering into an agreement with a newly organized, wholly owned indirect subsidiary of the bank. (See 2006 FRB C150.) The proposed CA nonbanking activities are slightly different, but are consistent with those CA nonbanking activities that were previously approved by the Board (discussed below).

3600.7.1 ACTING AS CERTIFICATION AUTHORITY IN CONNECTION WITH FINANCIAL AND NONFINANCIAL TRANSACTIONS

A foreign banking organization (FBO)[1] subject to the BHC Act and several bank holding companies (BHCs), deemed to be BHCs (all referred to as the notificants) within the meaning of the BHC Act, requested the Board's approval under section 4(c)(8) of the BHC Act and section 225.24 of the Board's Regulation Y (12 C.F.R. 225.24) to retain 12.5 percent of the voting interests in Indent Company (Indent), and to engage through Indent and other nonbank subsidiaries in acting as a CA in the United States in connection with financial and nonfinancial transactions and other related activities. Indent represents a joint venture among the notificants and other commercial banks and foreign banking organizations. As proposed, Indent would act as the global rulemaking and coordinating body for a network of financial institutions that would act as CAs and thereby provide services designed to verify or authenticate the identity of customers conducting financial and nonfinancial transactions over the Internet and other "open" electronic networks. To provide these services, Indent and its network of participating financial institutions (the identity system) would use digital certificates and digital signatures created through the use of public-key cryptography.

In a CA system using public-key cryptography, a company generates (or is assigned) a public-key/private-key pair and registers with a CA as the unique "owner" of the key pair.[2] Private keys and public keys are a set of different but related mathematical functions that can be used to encrypt and decrypt electronic communications. A message encrypted by a particular private key can be decrypted only by its corresponding public key. Although a private key and its corresponding public key are related, a private key cannot feasibly be derived from its corresponding public key. Thus, while a private key must be kept confidential by the company that is the registered owner of the key pair, the company's public key can be made publicly available without jeopardizing the confidentiality of the company's private key.

A company sending a business communication (for example, a purchase order) to another entity over an open electronic network like the Internet uses its confidential private key to digitally sign the message being sent. A digital signature is a compressed and encrypted version of the message to which it is attached. The entity receiving the digitally signed message then uses the sender's public key to decrypt the digital signature.[3] If the receiver successfully decodes the signature with the sender's public key, the receiver can be assured that the message was created using the sender's private key.[4]

To be assured that the message was actually sent by the purported sender, however, the receiver must confirm that the private-key/public-key pair used to sign and decode the message is uniquely "owned" by the purported sender. A CA provides this assurance by issuing "digital certificates" certifying that the relevant private-key/public-key pair is uniquely associated with the message sender and by verifying upon request the validity of such digital certificates.

1. Foreign banks may engage in permissible nonbanking activities in the United States directly through a U.S. branch or agency. A foreign bank, however, must receive the Board's approval under section 4(c)(8) of the BHC Act to engage in the United States in activities that are deemed to be closely related to banking.

2. A number of nonbanking companies currently operate CA systems that rely on public-key cryptography to provide identity-authentication services to senders and receivers of electronic communications.

3. The sender's public key may be attached to the digitally signed communication, or the receiver of the message may obtain the sender's public key from a publicly available database.

4. The receiver also can confirm that the message was not altered after it was signed by comparing the message received with the decrypted version of the message text embedded in the digital signature.

The notificants and other financial institutions participating in the identity system (participants)[5] would create unique private-key/public-key pairs for, and issue digital certificates on behalf of, eligible customers that contract with one of the participants to receive Indent identity-authentication services.[6] Each participant would act as a repository for the digital certificates that it has issued, that is, it would maintain a database containing information on the status of the outstanding, expired, or revoked digital certificates that it has issued to customers. The participants also would verify for third parties the validity of digital certificates issued to their customers and, upon request of the third party, may provide an explicit warranty as to the validity of the customers' digital certificates.[7] The participants also may process and transmit verification and warranty requests received from customers concerning digital certificates issued by other participants in the identity system. In addition, the participants may provide customers with a limited range of software and hardware that is required for customers to use the identity system.[8]

Indent would provide the infrastructure framework within which the participants would act as CAs and provide related services. The primary function of Indent would be to act as the "root certification authority" of the identity system, that is, issuing digital certificates to the participants that establish their status as CAs in the identity system and authenticating for customers of, and the other participants in, the identity system the identity of the participants.[9] Indent also would (1) establish and maintain the operating rules governing the identity system, including the minimum technical requirements for digital certificates and other components of the system; (2) monitor compliance by the participants with the identity system's operating rules and technical standards; and (3) monitor collateral requirements and aggregate warranty exposure for the participants in the identity system.[10]

Section 4(c)(8) of the BHC Act provides that a bank holding company may, with the Board's approval, engage in any activity that the Board determines to be closely related to banking. The Board previously has authorized BHCs under section 4(c)(8) of the BHC Act to act as CAs and provide identity-authentication services in connection with payment-related and other financial transactions conducted over electronic networks.[11] The Board has not previously authorized BHCs under section 4(c)(8) to act as CAs or provide identity-authentication services in connection with nonfinancial transactions.

Banks and BHCs have long provided identity-authentication services in connection with nonfinancial transactions conducted by third parties and for their own traditional banking and lending activities. For example, banks and BHCs are authorized to provide notary services to customers.[12] The role of a notary is to authenticate signatures on financial or nonfinancial documents for the benefit of third parties.[13] To verify a signature on a paper-based document, a notary must verify the identity of the person signing

5. Participation in the identity system is available only to organizations that are engaged primarily in the business of providing financial services; are subject to regulation and examination by a government authority in their home country; and that meet certain eligibility criteria, such as minimum capital requirements and debt-rating criteria. A participant also must agree to be bound by the identity system operating rules and to execute certain participation agreements. Financial institutions would not be required to purchase an ownership interest in Indent to become a participant.

6. The participants may provide identity system–related services only to customers that have agreed to be bound by applicable provisions of Indent's operating rules and have signed the appropriate customer agreements. Indent's operating rules allow the participants to provide identity system–related services only to business entities, such as corporations and governmental organizations, and not to natural persons. Indent's operating rules and customer agreements would make each customer contractually responsible for ensuring that its private key is kept confidential.

7. The operating rules of the identity system would provide that a company relying on a digital certificate issued by the participant would have recourse against the participant only if the company purchased an explicit warranty from the participant, and then only up to the amount of the purchased warranty. The participant that issues a digital certificate could refuse to issue a warranty for a digital certificate for any bona fide reason. The identity system would limit the aggregate amount of warranties that the participant may have outstanding at any one time, and would require each participant to post collateral with Indent to cover its warranty exposure.

8. For example, the participants may provide smart cards containing digital certificates and smart-card readers to their customers.

9. Digital certificates issued by the participant to a customer are digitally signed by the participant with its own private key and are accompanied by a digital certificate issued by Indent. The digital certificates Indent issues would certify that the participant is an authorized participant in the identity system and that the private key the participant uses to digitally sign its certificates is uniquely associated with it, thereby authenticating the identity of the participant.

10. The activities of the notificants and Indent would be limited to providing the identity-authentication and related services described above. The notificants and Indent would not provide a general encryption or electronic message service, or any warranty of the underlying financial or nonfinancial transactions between customers whose identities are authenticated through the use of the identity system.

11. See Regulation Y, section 225.28(b)(14); 1997 FRB 602, 606; and 1982 FRB 505, 510.

12. See 1998 FRB 481.

13. 58 Am. Jur. 2d *Notaries Public* § 31 (2d ed. 1989).

the document. The Board noted that the role a CA serves with respect to electronic documents is functionally similar to the role a notary serves with respect to paper-based documents.[14]

Banks have traditionally identified their customers to third parties through the issuance of letters of introduction or letters of reference.[15] In addition, banks and BHCs routinely authenticate the identity of customers and noncustomers in connection with their authorized check-cashing functions.[16]

Banks and BHCs also have long been authorized to issue signature guarantees to issuers of securities and their transfer agents in connection with the transfer of securities.[17] A bank issuing a signature guarantee warrants that the customer's signature endorsing a certificated security or authorizing the transfer of an uncertificated security is authentic. The issuing bank also warrants that the signer was an appropriate person to endorse the security or authorization (or, if the signature is by an agent, that the agent had actual authority to act on behalf of the appropriate person) and that the signer had legal capacity to sign. In light of these warranties, a bank providing a signature guarantee must verify the identity of the customer providing the endorsement or signing the instruction.[18]

Identity-authentication services are an integral part of many traditional banking functions. Banks and BHCs have developed sophisticated methods for authenticating the identity of customers and noncustomers that transact business or communicate with the bank or BHC through electronic means or otherwise. Many of these activities are operationally and functionally similar to the proposed activities, and make banks and BHCs particularly well equipped to provide the proposed services. For example, banks and BHCs maintain systems to electronically authenticate the identity of persons engaged in credit and debit card, automated teller machine (ATM), home banking, and wire transfer transactions with the institution.[19] Banks and BHCs also electronically authenticate the identity of persons in connection with the check and credit card verification services they are authorized to provide to merchants and other businesses.[20]

The Board noted that state banks and national banks have recently been authorized to act as CAs and to provide identity-authentication services in connection with financial and nonfinancial transactions conducted over electronic networks. Based on the foregoing, the Board concludes that acting as a CA and, more generally, authenticating the identity of customers conducting financial and nonfinancial transactions are activities that are closely related to banking within the meaning of section 4(c)(8) of the BHC Act.

Indent and the notificants also propose to engage in a number of activities as part of and in connection with their proposed CA activities. These activities include (1) processing, transmitting, and storing data necessary for the operation of the identity system, such as digital certificates, requests for verification of digital certificates, and warranty requests; (2) developing and marketing software and hardware necessary for operating the identity system; and (3) complying with, monitoring, and enforcing the collateral-posting requirements associated with identity warranties. In addition, Indent would establish operating policies, procedures, and guidelines for the identity system.

The Board's Regulation Y permits BHCs to provide data processing and data transmission services and facilities (including software and hardware) for the processing and transmission of financial, banking, or economic data, and to engage in activities related to making, acquiring, brokering, or servicing extensions of credit, such as posting collateral and monitoring collateral requirements.[21] Regulation Y also permits BHCs to engage in incidental activities that are

14. The American Bar Association, for example, has noted that the issuance of digital certificates by CAs is "analogous to traditional certification processes undertaken by notaries with respect to documents executed with pen and ink." "Digital Signature Guidelines," published by the Information Security Committee of the Electronic Commerce and Information Technology Division, Section of Science and Technology, American Bar Association. (Aug. 1, 1996), p. 54.

15. Banks have drafted letters of introduction or letters of reference on behalf of their customers for the purpose of introducing the customer to other banks or third parties with which the customer seeks to do business.

16. Under the Uniform Commercial Code (UCC), a bank that accepts a check for deposit warrants to the drawee bank that all endorsements on the check are genuine, and the bank is liable to the drawee bank for the amount of the check plus expenses and lost interest if an endorsement on the check was forged.

17. Broker-dealer subsidiaries of BHCs also have provided signature guarantees.

18. A bank issuing a signature guarantee is liable to the issuer of the security or its transfer agent for any loss that results from a breach of any of these warranties by the bank.

19. Article 4A of the UCC encourages banks to develop and maintain commercially reasonable security procedures, such as algorithms or other encryption devices, for authenticating the identity of customers that transmit wire transfer instructions to the bank.

20. See Regulation Y, section 225.28(b)(2)(iii) and 1985 FRB 648.

21. See Regulation Y, section 225.28(b)(2) and (14). A BHC may develop and sell hardware and software that is

necessary to the conduct of an activity that is closely related to banking. Indent and the notificants have represented that they would engage in the additional activities only in connection with their CA activities and would not engage in such activities separate or apart from their CA activities. The notificants also have committed that the data processing and data transmission activities of the notificants and Indent, including any proposed development or sale of hardware and software, will comply with the Board's regulations and interpretations. In light of the nature of these additional activities and the fact that they would be conducted only in connection with the CA activities of Indent and the notificants, and all the other facts of record, the Board concludes that these activities are encompassed within the activities previously approved by the Board by regulation or are incidental to the permissible CA activities of Indent and the notificants and, therefore, are permissible under Regulation Y.[22]

Based on the facts stated in the Board's order, the Board determined that the certification authority and other activities discussed were closely related to banking under section 4(c)(8) of the BHC Act. The Board issued its approval order on November 10, 1999. (See 2000 FRB 56). See the Board's order for more specific information and for the more detailed information and references in the order's footnotes.

The Board approved another notice for a foreign bank, specifically a foreign banking organization that is subject to the BHC Act.[23] The foreign bank had requested the Board's approval under sections 4(c)(8) and 4(j) of the BHC Act[24] and section 225.24 of the Board's Regulation Y[25] to act as a CA in connection with financial and nonfinancial transactions and to engage in related data processing activities. It was proposed that the agreement be assigned to a newly organized wholly owned indirect subsidiary of the bank, CLX.

The proposed activities would be undertaken within the Identity Trust System (ITS), which would serve as a central rulemaking and coordinating body for a global network of institutions that would act as digital CAs. The CAs would verify or authenticate the identity of customers conducting financial and nonfinancial transactions over the Internet and on other "open" electronic networks. To provide these services, ITS and its network of participating financial institutions would use digital signatures created with encryption technology. These digital signatures would uniquely identify participants in the ITS who send signed messages over electronic networks. The CAs would issue digital certificates that certify that the digital signature is uniquely associated with a particular message sender so that the message recipient can be assured of the identity of its trading partner.

As a certification authority, CLX would provide the technical systems and support necessary for banks to verify and authenticate the identity of customers conducting electronic transactions and to register digital certificates to customers. These services would be provided to the foreign banking organization as well as to other banks that enter into contracts with CLX.[26] The foreign bank, and any other banks to which CLX may provide services, would be responsible for performing the due diligence on customers that request digital credentials, a role referred to as "registration authority." Bank and other registration authorities would register the digital certificates issued to their customers, and CLX would maintain a database of all certificates issued through its registration authorities. CLX would also provide registration authorities with the software and hardware required to use the ITS.

In this order, the Board referenced its previous approval (2000 FRB 56) in which it determined that the CA activities conducted in connection with financial and nonfinancial transactions and data processing were activities that are closely related to banking for the purposes of section 4(c)(8) of the BHC Act. Also for this latter order, the Board found that the foreign bank's proposed activities were consistent with those that it had previously approved. The foreign bank committed that it would conduct its proposed nonbanking activities in accor-

designed and marketed for processing and transmitting financial, banking, or economic data. It may also develop and sell general purpose hardware so long as it does not constitute more than 30 percent of the cost of any packaged offering.

22. The notificants may engage in data processing and data transmission activities, including the development and sale of hardware and software, pursuant to this order only to the extent such activities are necessary to permit the proper operation of the identity system. The notificants and Indent also must conduct their data processing and data transmission activities subject to the software and hardware limitations in Regulation Y.

23. As a foreign bank operating an agency in the United States, the foreign bank is subject to the BHC Act by operation of section 8(a) of the International Banking Act of 1978 (12 U.S.C. 3106(a)).

24. 12 U.S.C. 1843(c)(8) and 1843(j).

25. 12 C.F.R. 225.24.

26. These banks would also have to enter into agreements to participate with ITS.

dance with the limitations set forth in Regulation Y and the Board's above-mentioned previous order governing these proposed activities. The Board approved the notice on June 8, 2006 (2006 FRB C149).

3600.7.2 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Acting as a certification authority for financial and nonfinancial transactions and related data processing activities.	12 U.S.C. 1843(c)(8)	225.28(b)(14)		2000 FRB 56 2006 FRB 149

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

A bank holding company (the applicant) applied under section 4(c)(8) of the Bank Holding Company Act and the Board's Regulation Y to engage de novo through a wholly owned subsidiary (the company) in privately placing limited partnership interests in a group of partnerships having a limited number of investors. The company was to serve as the investment adviser, administrator, and sole general partner of a series of seven partnerships (the partnerships) that would be sold to a number of institutional investors. The company would maintain an equity interest of approximately 1.25 percent of the total capitalization in each partnership.

The partnerships were to be engaged solely in investing in limited amounts of debt and equity securities, including interests in real estate investment equity trusts (REITs).[1] The partnerships, together with the applicant and its other subsidiaries, were not to hold more than 5 percent of any class of voting securities of any issuer, and not more than 25 percent of the total equity of any issuer.[2] The equity investments were to be held in accordance with section 4(c)(6) of the BHC Act and section 225.22(d)(5) of Regulation Y.

The company also proposed to privately place limited partnership interests with new sophisticated institutional investors and possibly form similar additional partnerships in the future. The company was not to privately place debt securities issued by the partnerships without prior approval from the Federal Reserve System. The applicant committed that the private placement of limited partnership interests would conform to the limitations and conditions for private placements in previous Board orders approving private-placement activities (for example, 1990 FRB 26 and 1989 FRB 829).[3] Each investor was required to have an initial minimum investment of $100,000. Investors with $250,000 or more under management by the company, however, would be permitted to invest in any partnership in any amount. The applicant would continue the company's practice of allowing existing investors in a partnership to add to their investment in the partnership in any amount. The application was approved on June 28, 1994 (1994 FRB 736).

Subsequently, another bank holding company (the BHC applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y to engage de novo, through a wholly owned asset-management subsidiary (AMS), in establishing and serving as the general partner of limited partnerships (the limited partnerships) that would invest in a wide variety of commodities and exchange-traded and over-the-counter instruments including those specified in the Board order. AMS would be the general partner of each partnership and would hold a nominal equity interest in each one. In this case, AMS would not provide investment advice directly to the limited partnerships, but would employ unaffiliated investment advisers to manage the investments of the limited partnerships, pursuant to parameters set by AMS. Interests in the limited partnerships would be privately placed with institutional customers by the BHC applicant's subsidiary banks.

One or more of the limited partnerships could invest a substantial portion of their assets in commodity pools, which would require the applicant to register as a commodity pool operator (CPO). The interests purchased by the limited partnerships would consist of less than 5 percent of the outstanding voting securities of any commodity pool and less than 10 percent of the total equity of any commodity pool. The applicant proposed that the limited partnerships purchase such assets with debt. It further stated that it would not permit any limited partnership that invested in distressed debt instruments to use borrowed funds to purchase or carry distressed debt instruments or to use the distressed debt instruments as collateral in acquiring other assets. The applicant also indicated that the leverage employed by the limited partnerships would include margin credit from broker-dealers, reverse repurchase agreements, and short sales.

The limited partnerships would invest in debt and equity instruments and distressed debt instruments.[4] The applicant stated that invest-

1. The partnerships were not to invest in futures contracts or options on futures contracts on any financial or nonfinancial commodity, or knowingly invest in debt that, upon acquisition, is in default without the prior approval of the Federal Reserve System. The applicant further committed that it would not use the investments of the partnerships to obtain or exercise control over any issuer of securities owned or held by the partnerships. Also, no directors, officers, or employees of the applicant and its affiliates will serve as directors, officers, or employees of any issuer of which the applicant and its affiliates held more than 10 percent ownership of total equity.

2. The applicant committed that all subordinated debt of an issuer would be subject to this 25 percent limit.

3. See the current Regulation Y, section 225.28(b)(7)(iii), regarding private-placement services.

4. The Board had previously permitted bank holding com-

ments in debt and equity securities and distressed debt would be made in accordance with the BHC Act's limitations and those of previous Board decisions. (See 1995 FRB 1128 and section 3104.0.)

The limited partnerships, together with the applicant and its subsidiaries, would make investments not greater than 5 percent of any class of voting securities of any issuer, and not greater than 25 percent of the total equity, including the subordinated debt, of any issuer. No directors, officers, or employees of the applicant would serve as directors, officers, and employees of any issuer of which the applicant and its subsidiaries (that is, the limited partnerships) would hold more than 10 percent of the total equity. For this case, the Board required AMS to consolidate the assets and liabilities of the limited partnerships in the financial statements of AMS for regulatory capital purposes. In addition, AMS was required to establish an appropriate risk-management structure consisting of investment and position limits for each investment adviser before engaging in the proposed activities. Compliance and trading limits would be monitored by computerized systems to be established by the applicant. The Board approved the notice on April 24, 1996, subject to all the facts of record and the commitments furnished. See 1996 FRB 569. For more recent Board orders whereby bank holding companies propose to act as a CPO and to control a private limited partnership that invested solely in permissible investments for a bank holding company, see 1999 FRB 209, 1998 FRB 852, and 1998 FRB 361.

panies to sponsor, organize, and manage closed-end investment companies and unregistered limited partnerships that invest in securities.

3600.13.1 SERVING AS AND CONTROLLING A PRIVATE LIMITED PARTNERSHIP AS A COMMODITY POOL OPERATOR

A bank holding company applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through a wholly owned asset-management subsidiary (ASM) that would be established to serve as the general partner of limited partnerships (the partnerships) that would invest in a wide variety of commodities and exchange-traded and over-the-counter instruments, including interests in investment funds that invest in futures and options on futures on financial and nonfinancial commodities (commodity pools). It was indicated that the partnerships would not directly invest in futures or options on futures contracts for purposes other than hedging. The partnerships would purchase and sell derivative contracts on precious metals and financial commodities, instruments, and indices for hedging purposes. It was further stated that one of the limited partnerships may invest a substantial portion of its assets in commodity pools, which would require the ASM (the general partner) to become a registered commodity pool operator (CPO) with the Commodity Futures Trading Commission (CFTC). As such, the ASM would register as a CPO with the CFTC, and a portion of the general partner's activities would become subject to the recordkeeping, reporting, fiduciary standards, and other requirements of the Commodity Exchange Act (7 U.S.C. 2 et seq.), CFTC, and National Futures Association.

The Board previously has found that a subsidiary of a state member bank may serve as the CPO of investment funds engaged in purchasing and selling futures and options on futures on certain commodities.[1] In addition, the Board has permitted bank holding companies to trade futures and options on futures on financial and nonfinancial commodities.[2] For these reasons, the Board has concluded that serving as a CPO, and controlling as a CPO a private limited partnership that invests solely in investments that a bank holding company is permitted to make directly, under the circumstances of this case (1996 FRB 569) are closely related to banking. See also 1998 FRB 1075, 1998 FRB 852–854, 1998 FRB 361, and 1994 FRB 736.

1. See 1996 FRB 239.
2. See 1995 FRB 185.

3600.17.1 ENGAGING IN TITLE INSURANCE AGENCY ACTIVITIES PURSUANT TO REGULATION Y

A bank holding company applied under section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y to acquire all the outstanding shares of a title insurance agency. The title insurance agency is to conduct activities pursuant to exemption G of the Garn–St Germain Depository Institutions Act of 1982 (the act) and section 225.28(b)(11)(vii) of Regulation Y. Title VI of the act amended section 4(c)(8) of the BHC Act to provide that insurance agency, brokerage, and underwriting activities are not "closely related to banking" and thus are not permissible activities for bank holding companies, unless the activities are included within one of seven specific exemptions (A through G) in section 4(c)(8).

The applicant claimed that it was authorized to operate a title insurance agency under exemption G, which authorizes those bank holding companies that engaged in insurance agency activities before 1971 to engage, or control a company engaged in, insurance agency activities. The company has been engaged in the sale of insurance related to extensions of credit by its subsidiary banks since 1939.

The bank holding company applicant was one of 16 active companies with grandfather rights under exemption G.[1] Previously, the Board determined (1985 FRB 171) that those companies that had received Board approval to engage in general insurance agency activities before 1971 would be grandfathered under exemption G with respect to the sale of any type of insurance that is within the scope of general insurance agency activities—even an insurance agency activity (such as title insurance) not actually offered by the applicant bank holding company before 1971. The Board found that there is no requirement in the statute that a company qualifying for exemption G engage only in those insurance agency activities it conducted with Board approval before 1971. Thus, although the Board may not have specifically approved title insurance before 1971, provided the proposed activity is encompassed within the authorization of insurance agency activities, the activity falls within exemption G.

The Board determined selling title insurance through a title insurance agency to be permissible pursuant to exemption G and the Board's regulations. The Board approved the application on November 17, 1988 (1989 FRB 31).

1. There are currently 12 companies remaining.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to incorporate a name change to the Financial Industry Regulatory Authority, or FINRA (formerly, the National Association of Securities Dealers, or NASD).

3600.21.1 UNDERWRITING AND DEALING IN COMMERCIAL PAPER TO A LIMITED EXTENT

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y to underwrite and deal in third-party commercial paper to a limited extent. As proposed, the activity will be conducted through a commercial finance subsidiary (the company). The company is to act for issuers as an underwriter of commercial paper, purchasing commercial paper for resale to institutional investors such as banks, insurance companies, mutual funds, and nonfinancial businesses. In addition, the company may place commercial paper as agent for issuers and advise issuers on the rates and maturities of proposed issues that are likely to be accepted in the market—activities previously approved by the Board (1987 FRB 138). The activities in this order (1987 FRB 367) differ from those previously authorized (1987 FRB 138) in that the applicant will underwrite and deal in commercial paper as principal.

The Board may not approve a proposal of a member bank affiliate if upon consummation it would be "engaged principally" in the flotation, underwriting, public sale, or distribution of commercial paper (hereafter referred to as "underwriting and dealing in") within the meaning of the former section 20 of the Glass-Steagall Act (12 U.S.C. 377). The Board concluded that even if placement of commercial paper were deemed to constitute an activity, the commercial lending subsidiary would not be "engaged principally" in underwriting and dealing in securities. The subsidiary's activity was not substantial under a former 5 percent limit on the subsidiary's gross income (increased to 25 percent, effective March 6, 1997) from its commercial paper activities and a former 5 percent limit on its market share. The company is required to restrict its commercial paper activities so it does not exceed these limits.

The Board concluded that underwriting and dealing in commercial paper is closely related to banking on the same basis as acting as placement agent and adviser to issuers in commercial paper (1987 FRB 138). Banks provide services that are operationally and functionally similar to the services of underwriting and dealing in commercial paper. Banking organizations are particularly well equipped to provide such services. In the Board's view, the underwriting and dealing activity represents a natural extension of commercial lending activities traditionally conducted by banks, involving little additional risk or new conflicts of interest, and potentially yielding significant public benefits in the form of increased competition and convenience.

The Board concluded that the applicant could conduct the activities to the extent and in the manner described in the order, consistent with the former section 20 of the Glass-Steagall Act and section 4(c)(8) of the BHC Act. The Board's approval extended only to commercial paper underwriting, dealing, placement, and advisory activity conducted in accordance with the limitations stated in the order (1987 FRB 367).

3600.21.2 ENGAGE IN UNDERWRITING AND DEALING, TO A LIMITED EXTENT, IN MUNICIPAL REVENUE BONDS, MORTGAGE-RELATED SECURITIES, AND COMMERCIAL PAPER

On April 30, 1987, the Board approved by order the applications of three bank holding companies to engage through subsidiaries in underwriting and dealing in commercial paper, one- to four-family mortgage-backed securities, and municipal revenue bonds.[1] (For a complete description of the nonbanking activities authorized by the Board in this order, see 1987 FRB 473.) The subsidiaries are to be involved in underwriting and dealing in U.S. government securities as their major activity. Board approval

1. The applicants had previously received Board approval under section 4(c)(8) of the BHC Act for the subsidiaries mentioned in the order to engage in underwriting and dealing in U.S. government and agency and state municipal securities that state member banks are authorized to underwrite and deal in under section 16 of the Glass-Steagall Act. The newly proposed underwriting and dealing activities were approved in addition to the previously approved activities.

could only occur if the affiliates would not be ''principally engaged'' in underwriting and dealing in ''securities'' under the provisions of the former section 20 of the Glass-Steagall Act.

A hearing was held on February 3, 1987, because of the important legal and factual issues involved. The Board reaffirmed its finding in its previous decisions (1987 FRB 138 and 367) that the applicants were not principally engaged in the proposed securities activities if they limited their underwriting and dealing income from these securities to 5 percent of the total gross income of the affiliate, and if they limited their market share in each of these securities to 5 percent of the total domestic market.[2] The Board established a number of conditions to ensure that the underwriting activity would be consistent with safe and sound banking practices and would avoid conflicts of interest, undue concentration of resources, and other adverse effects.

The Board determined, consistent with its previous underwriting and dealing decisions in administering the Glass-Steagall Act, that a range of between 5 percent and 10 percent of gross revenue and market share is the appropriate framework for determining whether an affiliate is engaged principally in securities activities. The lower end of the range—5 percent—was the level applied at the time. The Board noted that it would review this level within a year on the basis of experience gained from operations to determine whether a higher level would be permissible. On September 21, 1989, the Board modified section 20 orders to increase from 5 percent to 10 percent the revenue limit on the amount of total revenues a section 20 subsidiary may derive from ineligible securities underwriting and dealing activities (increased to 25 percent, effective March 6, 1997) (1989 FRB 751).[3]

The Board's approval of the applications extends only to the activities conducted within the limitations of the order and is subject to the gross revenue limitation discussed above. Two of the applicants also proposed to underwrite and deal in consumer-receivable-related securities (CRRs). Although the companies noted certain similarities between these securities and mortgage-related securities, the Board did not believe that the record before the Board provided a sufficient basis for it to make a formal finding (as required by the BHC Act) that underwriting and dealing in CRRs is closely related to banking and a proper incident thereto. The Board noted that the market for CRRs was relatively new and untested compared with the market for one- to four-family mortgage-related securities and municipal revenue bonds. The Board indicated that it would reconsider the matter within 60 days on the basis of more complete information to be submitted by the applicants regarding the types of assets that would be securitized, the manner in which this would be accomplished, and other matters bearing on risk.

In a subsequent order, six BHCs applied for and received the Board's conditional approval (1987 FRB 731) for the activity, but the Board stayed its order for the same period of time applicable to the stay issued by the Second Circuit Court of Appeals (see footnote 2 and section 3600.21.3). After approving the order set out in 1987 FRB 731, the Board approved several other orders that rely on this order and the limitations imposed therein. (See the following Board orders: 1987 FRB 607, 616, 618, 620, 622, 731, 738, 742, 928; 1988 FRB 133, 500, 699, 700, 706, 819; 1989 FRB 33, 190, 396, 398, 520, 645, 647; 1990 FRB 79, 158, 256, 461, 554, 568, 573, 652, 682, 756; 1991 FRB 954; 1992 FRB 338; 1993 FRB 141, 716; and 1994 FRB 249, 346.)

The major difference between the three applications decided on April 30, 1987, and the two applications previously approved by the Board (1987 FRB 138 and 367) is that the underwriting would take place in an affiliate engaged in underwriting and dealing in U.S. government securities. This arrangement raised the major legal question of whether these government securities could serve as a basis for measuring the principal activity of the affiliate. In its approval, the Board took into account the fact that the Glass-Steagall Act specifically

2. The U.S. Court of Appeals for the Second Circuit upheld the Board's determination that the underwriting subsidiaries would not be engaged principally in ineligible securities underwriting and dealing under the above revenue limitation; the U.S. Supreme Court declined to review that decision (*Securities Industry Association v. Board of Governors of the Federal Reserve System*, 839 F.2d 47 (2d Cir. 1988), *cert. denied*, 108 S.Ct. 697 (1988)). The Supreme Court also let stand the lower court's determination that the 5 percent market share limitation was not adequately supported by the facts of record, thus sustaining elimination of the market share test that had been invalidated by the U.S. Court of Appeals. Accordingly, the Board decided not to impose a market share limitation on orders approved on August 4 and 8, 1988.

3. The Board in this order also modified its section 20 orders to permit underwriting and dealing in securities of affiliates if the securities are rated by a nonaffiliated, nationally recognized rating organization or are issued or guaranteed by the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, or the Government National Mortgage Corporation, or represent interests in such obligations.

allows member banks to underwrite U.S. government securities and that the act intends affiliates to have a broader scope for underwriting than member banks. On that basis, the Board had previously allowed affiliates of member banks to engage in underwriting of U.S. government securities.

3600.21.3 ENGAGE IN LIMITED UNDERWRITING AND DEALING IN CONSUMER-RECEIVABLE-RELATED SECURITIES

Six bank holding companies applied for the Board's approval to engage in limited underwriting and dealing in consumer-receivable-related securities (CRRs). CRRs, which were first issued in 1985, consist of debt obligations that are secured by or represent an interest in a diversified pool of loans to or receivables from consumers, such as loans to individuals to finance the purchase of automobiles or personal credit card accounts.

The Board concluded that underwriting and dealing in CRRs is an activity closely related to banking on the basis that banks provide services that are operationally and functionally so similar to the services proposed that banking organizations are particularly well equipped to provide them. In accordance with section 16 of the Glass-Steagall Act, banks underwrite and deal in certain mortgage-related securities that are issued or guaranteed by the United States or by U.S. government agencies. Some of the securities represent interests in pools of mortgage loans for residential housing purposes made by banks and other financial institutions. Such securities are very similar to CRRs.

Both CRRs and bank-eligible mortgage-related securities represent interests in pools of loans made by financial institutions to individuals to finance the purchase of housing or consumer goods and services.

The techniques involved in underwriting and dealing in bank-eligible mortgage-related securities are also very similar to those that would be involved in conducting the approved activity with respect to CRRs. In each case, the underwriter must perform substantially identical functions of evaluating prepayment risk, analyzing credit and cash flow from a pool of numerous individuals' loans, negotiating or bidding, and distributing and dealing.

In addition, banks now directly perform some of the functions involved in the approved activity. Banks select the consumer loans that form the pool of interests that are then sold to investors. Banks also advise issuers of CRRs and assist issuers in privately placing these securities.

Because of the similarity between securities involved in CRRs and the previously approved bank-ineligible one- to four-family mortgage-related securities nonbanking activities set forth in a previous order (1987 FRB 473), the Board required that this activity be conducted in accordance with the same requirements established in that order. This includes a requirement that the securities be rated for investment quality by a nationally recognized agency.

The Board concluded, based on the reasons set forth in its previous order (1987 FRB 473), that the approved activity would not result in a violation of the former section 20 of the Glass-Steagall Act and is closely related and a proper incident to banking. The Board's approval of these applications is restricted to underwriting and dealing to a limited extent in securities representing an interest in or backed by a diversified pool of loans to or receivables from individuals for the purchase of consumer goods and services, and the limitations of section 225.25(b)(16) of Regulation Y (1987 FRB 731).

3600.21.4 LIMITED UNDERWRITING AND DEALING IN DEBT AND EQUITY SECURITIES

Five bank holding companies applied for the Board's approval under section 4(c)(8) of the BHC Act for their wholly owned subsidiaries to underwrite and deal in, on a limited basis—

1. debt securities, including, without limitation, sovereign debt securities, corporate debt, debt securities convertible into equity securities, and securities issued by a trust or other vehicle secured by or representing interests in debt obligations; and
2. equity securities, including, without limitation, common stock, preferred stock, American Depositary Receipts, and other direct and indirect equity ownership interests in corporations and other entities.

Section 16 of the Banking Act of 1933 (the Glass-Steagall Act) prohibits a member bank from underwriting and dealing in these securities (referred to hereafter as "bank-ineligible securities"). However, as far as the Glass-Steagall Act is concerned, an affiliate of a member bank may underwrite and deal in bank-ineligible securities so long as it is not engaged principally or substantially in that activity (12 U.S.C. 377).

The applicants had previously received Board approval to underwrite and deal in U.S. government and agency securities and state and municipal securities that state member banks are specifically authorized to deal in under section 16 of the Glass-Steagall Act (referred to hereafter as "bank-eligible securities"). The Board had also authorized the subsidiaries to underwrite and deal in commercial paper, one- to four-family mortgage-backed securities, municipal revenue bonds, and consumer-receivable-related securities—all securities that member banks may not underwrite or deal in under section 16 of the Glass-Steagall Act.[4]

To ensure that the subsidiaries would not be principally or substantially engaged in underwriting or dealing in the ineligible securities in violation of the former section 20 of the Glass-Steagall Act, the Board's approval was made subject to the requirement that gross revenues from those ineligible securities activities would not exceed 5 percent of the subsidiary's total gross revenues on average (moving average) over any two-year period. (See 1989 FRB 192 and 196–197.) The Board increased this level to 10 percent on September 5, 1989.

The subsidiaries are also subject to a framework of structural and operating limitations established to avoid the potential for conflicts of interest, unsound banking practices, unfair competition, loss of public confidence in affiliate banks, and other adverse effects from the conduct of the bank-ineligible securities underwriting and dealing activity.

The Board recognized that underwriting and dealing in securities is a natural extension of activities currently conducted by banks, involving manageable risks and potential conflicts of interest when conducted in an organizational structure that insulates these activities from banking activities supported by the federal safety net of deposit insurance and access to Federal Reserve lending. The Board has acknowledged that certain bank holding companies have an existing expertise in securities underwriting, dealing, brokerage, investment advisory activities, and broad financial skills that make them well equipped to provide the new services.

4. See the following Board orders: 1987 FRB 473, 607, 616, 618, 620, 622, 731, 738, 742, 928; 1988 FRB 133, 500, 699, 706, 819; 1989 FRB 33, 190, 396, 398, 520, 645, 647; 1990 FRB 79, 158, 256, 461, 554, 568, 573, 652, 682, 756; 1991 FRB 672; 1993 FRB 133, 719; and 1994 FRB 249, 449.

The Board's approval of each application is subject to the conditions stated in previous orders (see 1989 FRB 192; 1990 FRB 158, 455, 573, 652, 683, 756; 1991 FRB 672; 1993 FRB 133, 719; and 1994 FRB 249, 449). The conditions consist of structural and operating limitations designed to avoid conflicts of interest and potential adverse effects, and other conditions designed to ensure safe and sound operations. The conditions include requirements, limitations, and prohibitions with regard to—

1. capital adequacy;
2. credit extensions to customers of the underwriting subsidiary;
3. maintaining the separateness of an underwriting affiliate's activity;
4. disclosures by the underwriting subsidiary;
5. marketing activities on behalf of an underwriting subsidiary;
6. investment advice by bank or thrift affiliates;
7. extensions of credit to the underwriting subsidiary and to purchasers or issuers of ineligible securities (or to major users of projects funded by industrial revenue bonds);
8. transfers of information;
9. reporting and recordkeeping requirements;
10. transfer of activities and formation of subsidiaries of an underwriting subsidiary to engage in underwriting and dealing; and
11. reciprocal arrangements and prohibitions against discriminatory treatment regarding unaffiliated securities firms.

3600.21.5 ACTING AS A DEALER–MANAGER IN CONNECTION WITH CASH-TENDER AND EXCHANGE-OFFER TRANSACTIONS

In connection with a bank holding company application to underwrite and deal in, to a limited extent, all types of equity securities through its section 20 nonbanking subsidiary, an applicant also proposed to act as a dealer–manager in connection with cash-tender and exchange-offer transactions. Dealer–managers generally act as agent for tender or exchange offerors in arranging or facilitating mergers, acquisitions, and other corporate transactions. All-cash tender offers do not, of themselves, involve the issuance, public sale, or distribution of securities. The Board thus concluded that all revenues derived from the section 20 company acting as a dealer–manager in connection with such tender offers may be treated as bank-eligible revenues for purposes of determining compliance with the Board's 10 percent revenue limitation (changed to 25 percent, effective March 6, 1997) on bank-ineligible securities activities. The Board approved the application on November 24, 1993 (see 1994 FRB 49, footnote 5).

3600.21.6 UNDERWRITING "PRIVATE OWNERSHIP" INDUSTRIAL DEVELOPMENT BONDS

A bank holding company (the notificant) provided notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its proposal to engage de novo through its section 20 subsidiary (the company) in underwriting, to a limited extent, certain "private ownership" industrial development bonds. The bonds are issued for the provision of the following governmental services: water facilities, sewer facilities, solid waste disposal facilities, electric energy and gas facilities, and local district heating or cooling facilities (collectively, traditional governmental services). The notificant controls one bank subsidiary.

The company is currently engaged in limited underwriting and dealing in certain municipal revenue bonds, activities permissible under section 20 of the Glass-Steagall Act (12 U.S.C. 377).[5] The company is a broker–dealer registered with the Securities and Exchange Commission (SEC) under the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq.) and is a member of the Financial Industry Regulatory Authority (FINRA). Thus, the company is subject to the recordkeeping and reporting obligations, fiduciary standards, and other requirements of the Securities Exchange Act of 1934, the SEC, and the FINRA. The notificant engages directly and through subsidiaries in other permissible nonbanking activities.

The Board previously determined that the activities of underwriting and dealing in municipal revenue bonds, including industrial development bonds, are so closely related to banking as to be proper incidents thereto within the meaning of section 4(c)(8) of the BHC Act.[6] Certain bank holding companies previously requested approval to underwrite and deal in only municipal revenue bonds, as opposed to a full range of debt securities. Their requests were limited to underwriting and dealing in industrial development bonds that are "public ownership" industrial development bonds. Public ownership industrial development bonds are those "tax-exempt bonds where the issuer, or the governmental unit on behalf of which the bonds are issued, is the sole owner for federal income tax purposes of the financed facility."[7]

The notificant plans to engage through the company in underwriting private ownership industrial development bonds issued solely for the provision of traditional governmental services. It committed to conduct this activity subject to the same limitations and other conditions that govern underwriting and dealing in public ownership industrial development bonds.[8]

The underwriting risk and the risk analysis required to underwrite private ownership industrial development bonds issued for traditional governmental services is essentially the same as the risk and analysis related to underwriting traditional public ownership bonds. For each, the funds for the repayment of the bonds are derived from revenue generated by the financed facility, including revenue resulting from a service contract between the owner/lessor of the financed facility and a state or local government or political subdivision, pursuant to which the state or local government or political subdivision agrees to purchase the output of the facility.[9] The notificant committed that all the pri-

5. See 1993 FRB 716.

6. *Citicorp, J.P. Morgan & Co. Incorporated, and Bankers Trust New York Corporation*, 1987 FRB 473, *aff'd sub nom. Securities Industry Ass'n v. Board of Governors of the Federal Reserve System*, 839 F.2d 47 (2d Cir.), *cert. denied*, 486 U.S. 1059 (1988), as modified by order approving modifications to section 20 orders, 1989 FRB 751 ("*Citicorp/Morgan/Bankers Trust*"). See also *J.P. Morgan & Co. Incorporated, et al.*, 1989 FRB 192, *aff'd sub nom. Securities Industry Ass'n v. Board of Governors of the Federal Reserve System*, 900 F.2d 360 (D.C. Cir. 1990).

7. See 1987 FRB 502. Examples of financed facilities include airports and mass-commuting facilities.

8. *Citicorp/Morgan/Bankers Trust*. All the bonds that the notificant proposed that the company underwrite would qualify as "exempt facility bonds" under the Internal Revenue Code (the code). See 26 U.S.C. 142. The types of exempt facility bonds that the company would underwrite may, subject to certain volume caps and other limitations, be tax-exempt under the code even if the proceeds of the bonds are used to finance facilities that are privately owned. See 26 U.S.C. 103, 141, 142, 146, and 147.

9. Typically, in the case of public ownership bonds, the governmental unit that issues the bonds owns the financed facility and repays the bonds from the revenue generated by the facility and this service contract. The governmental unit

vate ownership bonds that the company would underwrite would be rated ''investment quality'' by a nationally recognized rating agency to the same extent as are the municipal revenue bonds that the company currently underwrites.

Considering these circumstances, the Board concluded that underwriting and dealing in private ownership bonds issued for the provision of traditional governmental services is a permissible activity if conducted subject to the conditions and prudential limitations set forth in *Citicorp/Morgan/Bankers Trust* (1987 FRB 473 and 1989 FRB 751 (Modification Order)) and agreed to in 1993 FRB 716. The notification was approved on October 24, 1995 (see 1995 FRB 1116).

may also enter into a contract with a third party to operate the financed facility. In the case of the private ownership bonds that the notificant plans to underwrite, the governmental unit that issues the bonds either uses the proceeds of the bonds to acquire or construct a facility, which the governmental unit then leases to a third party, or lends the proceeds of the bonds to a third party to acquire or construct the facility. The third party agrees to make lease payments or loan repayments to the governmental unit that enable the governmental unit to pay debt service on the bonds. As security for the lease or loan agreement, the third party assigns and pledges the revenues generated by the facility and a service contract with a state or local government or political subdivision.

A foreign bank subject to the Bank Holding Company Act applied for the Board's approval to engage in various nonbanking activities, one being to purchase mortgage loans and to issue securities for its own account, through a wholly owned subsidiary or third party servicers, and to sell securities guaranteed by the Government National Mortgage Association (GNMA). Because National Banks are specifically authorized under the Glass–Steagall Act (12 U.S.C. 24) to issue and sell securities guaranteed by GNMA, as well as to underwrite and deal in such securities, the Board concluded that the issuance and sale of GNMA securities is closely related to banking (1988 FRB 573). In addition, the Board determined that the statutory exemption reflects a Congressional determination that GNMA securities are not the type of securities that would lead to unsound speculation or that the public interest in the issuance and sale of GNMA securities by banks outweighs any potential harm resulting therefrom. Also, the Board previously determined that underwriting and dealing in GNMA certificates is of sufficiently low risk to be generally permissible activities for bank holding companies (12 C.F.R. 225.25(b)(16)).

A foreign bank, subject to Section 4 of the BHC Act, applied for the Board's permission to acquire, through its wholly owned subsidiary, all the shares of a company located in New York, New York. The acquired company would engage in several nonbanking activities. Two of the activities, not previously approved by the Board for BHCs, consisted of acting as a sales tax refund agent for the State of Louisiana and Cashing U.S. Dollar Payroll Checks Drawn on Unaffiliated Banks. Both activities were found to be closely related to banking subject to the facts and conditions found in the Board order and briefly discussed below. The application was approved on August 15, 1990 (1990 FRB 860).

3600.24.1 ACTING AS A SALES TAX REFUND AGENT FOR THE STATE OF LOUISIANA

The company being acquired serves as the State's exclusive sales tax refund agent for its tax-free shopping program for foreign visitors. Under the program, foreign visitors present sales invoices evidencing sales taxes paid in Louisiana to the company's office in the state. It refunds the tax in U.S. dollars to the visitor, less a handling fee. A portion of the handling fee is then remitted to the State and local tax authorities refund to the company the amount of tax refunds advanced. The Board found the activity to be closely related to banking since banks: (1) routinely forward to taxing authorities tax receipts delivered to the bank on taxes due; (2) commonly act as fiscal agent for government authorities which involves disbursing funds on behalf of state and local governments.

3600.24.2 CASHING U.S. DOLLAR PAYROLL CHECKS DRAWN ON UNAFFILIATED BANKS

The company being acquired also cashes, and the Applicant plans to continue cashing, U.S. dollar payroll checks on a limited basis, primarily to accommodate employees in airport facilities that lack banking services, but where the company maintains offices. Since check cashing is a fundamental banking activity performed routinely by banks, and the company being acquired proposed to cash only checks drawn on unaffiliated banks, the Board found the activity to be closely related to banking. The Board stipulated, however, that the Applicant was not to use the acquired company's offices as branches of the Applicant or any affiliated bank.

A bank holding company (the notificant) requested the Board's approval, under section 4(c)(8) of the BHC Act and section 225.24(a) of Regulation Y, to acquire through its wholly owned subsidiary a cash-express company, certain assets of an exchange company, and another firm to engage in various nonbanking activities. Many of the nonbanking activities had previously been determined by the Board to be closely related to banking in Regulation Y, by order, or by interpretation. In addition to those nonbanking activities already approved, the notificant requested the Board's approval to engage in providing various governmental service activities at the offices of the cash-express company:

1. postage stamps and postage-paid envelopes
2. vehicle registration services, including the sale, distribution, and renewal of license plates and license tags for motor vehicles
3. public-transportation tickets and tokens
4. notary public services

The Board noted that banks are permitted to provide customer access to the type of government services involved in the proposal, whereby the banks may be acting in an agency capacity or accomplishing the distribution of some of the services using automated teller machines (ATMs).[1] The Board thus concluded that the proposed nonbank activities are closely related to banking. Based on all the facts and commitments provided by the notificant, and the representations and conditions relied upon in reaching a decision, the Board approved the proposal on April 2, 1998 (1998 FRB 481).

1. See 12 C.F.R. 7.1010 and OCC Interpretive Letter No. 718 (March 14, 1996) (postage stamps, acting as an agent for the state in selling and renewing license plates and license tags, and public-transportation tickets from ATMs). See also OCC Conditional Approval Letter No. 267 (January 12, 1988)(notary services).

Permissible Activities by Board Order (Real Estate Settlement Through a Permissible Title Insurance Agency) Section 3600.26

A BHC Applicant requested the Board's permission under section 4(c)(8) of the BHC Act to acquire all the outstanding shares of a company engaged in title insurance agency and real estate settlement activities. The Board previously determined that title insurance agency activities are permissible under section 4(c)(8)(G) of the BHC Act, for which the BHC Applicant qualifies.

The real estate settlement services consist of: (1) reviewing the status of the title in the title commitment, resolving any exceptions to the title, and reviewing the purchase agreement to identify any requirement in it in order to ensure compliance with them; (2) verifying payoffs on existing loans secured by the real estate and verifying the amount of and then calculating the pro rating of special assessments and taxes on the property; (3) obtaining an updated title insurance commitment to the date of closing, preparing the required checks, deeds, affidavits, and obtaining any authorization letters needed; (4) establishing a time and place for the closing, conducting the closing, and ensuring that all parties properly execute all appropriate documents and meet all commitments; (5) collecting and disbursing funds for the parties, holding funds in escrow pending satisfaction of certain commitments, preparing the HUD settlement statement, the deed of trust, mortgage notes, the Truth-in-Lending statement, and purchaser's affidavits; and (6) recording all of the documents required under law.

In reviewing the proposed activity, the Board noted that real estate settlement services are provided by the Applicant's bank subsidiaries in connection with their origination of mortgage loans, and banks within the Applicant's state are generally permitted to conduct real estate settlement activities. It was further noted that banks routinely prepare collateral security agreements and other documentation required to close loans in accordance with federal and state lending requirements as part of the general lending activities authorized under the Board's Regulation Y.

The Board concluded that aspects of the proposed real estate settlement activities are directly linked to permissible title insurance agency activities by BHCs. These activities can directly affect the insured risks under a title insurance policy. Title insurance agents have special experience in assessing potential title defects that can arise in real estate settlement. Title insurance agents thus have the expertise to generally engage in real estate settlements.

For these reasons, the proposed real estate settlement activities conducted through a permissible title insurance agency, were deemed by the Board to be closely related to banking for purposes of section 4(c)(8) of the BHC Act. The Board approved the application by order on October 15, 1990 (1990 FRB 1058).

A bank holding company (the applicant) applied under sections 3(a)(3) and 4(c)(8) of the BHC Act to acquire another company (the company), thereby indirectly acquiring its subsidiary (the subcompany) as well as the subsidiary bank and nonbank companies of the company and the subcompany. Upon consummation of the transaction, the company and subcompany would be subject to the provisions of the BHC Act. Both companies applied for permission under section 3(a)(1) of the BHC Act to become a bank holding company.

The applicant also applied for the Board's permission to engage, through one subsidiary of the subcompany (the adviser), in providing administrative and certain other services to mutual funds, nonbanking activities that the Board has not previously considered under section 4(c)(8) of the BHC Act. The applicant also applied for the Board's permission to acquire certain other nonbanking subsidiaries of the company (as listed in appendix B of the order) to engage in making or servicing loans, providing trust services, and providing investment advisory nonbanking services pursuant to section 225.28(b)(1), (b)(5), and (b)(6) of Regulation Y.

In addition, the applicant provided notice of its intent to indirectly acquire a foreign trust company, a trust administration company, and an advisory company. The companies engage in activities that are permissible under section 211.10 of Regulation K.

3600.27.1 GLASS-STEAGALL ACT ISSUES IN PROVIDING ADMINISTRATIVE SERVICES

The administrative services the applicant proposed to provide through the adviser and its affiliates raised a number of issues under the Glass-Steagall Act. Under that act, a company that owns a member bank may not control "through stock ownership or in any other manner" a company that engages principally in distributing, underwriting, or issuing securities.

Because mutual funds continuously issue and redeem securities, the Board in 1972 issued an interpretation setting out its position on the Glass-Steagall Act as it governs the relationship between mutual funds and companies that own member banks (12 C.F.R. 225.125). The Board found that the Glass-Steagall Act prohibits affiliates of banks from sponsoring, organizing, or controlling mutual funds or distributing their shares.

The Board also found, however, that the Glass-Steagall Act does not prohibit all relationships between a bank holding company and a mutual fund and that it is permissible, under the BHC Act and the Glass-Steagall Act, for bank holding companies to provide investment advice to mutual funds. Also, the Board found that the Glass-Steagall Act does not prohibit bank holding companies from providing certain other services to mutual funds, such as acting as custodian, transfer agent, or registrar.[1] Banks and affiliates of banks may serve as investment adviser, transfer agent, custodian, and registrar. *They may not act as distributor to the fund.* The application raised the question whether it was consistent with the Glass-Steagall Act for an affiliate of a member bank to act as an administrator to a mutual fund.

3600.27.2 PERMISSIBILITY OF PROPOSED ADMINISTRATIVE-SERVICES ACTIVITIES

The adviser furnishes a variety of services to open-end investment companies (mutual funds) and closed-end investment companies in the United States. Because certain of the activities of the adviser and its affiliates are prohibited by the Glass-Steagall Act, the applicant has taken steps and has committed to terminate the

1. The Board imposed a number of restrictions on the relationship between bank holding companies and mutual funds to avoid conflicts of interest and to address potential safety-and-soundness concerns. The Board's rule includes restrictions preventing a bank holding company or any of its subsidiaries from—

- acting as investment adviser to any investment company that has a name similar to the holding company or any of its subsidiary banks;
- purchasing for its own account shares of any investment company for which the holding company serves as investment adviser;
- purchasing in its sole discretion in a fiduciary capacity shares of an investment company advised by the holding company; or
- extending credit to an investment company advised by the holding company as collateral for a loan used to purchase shares of the investment company.

In addition, the rule requires that, in cases in which a customer purchases or sells securities of the fund through the holding company or is advised by the holding company to purchase shares of the fund, the customer be informed in writing of the holding company's involvement with the fund, and be informed that the shares of the fund are not federally insured and are not guaranteed by, or obligations of, a bank.

adviser's role as a sponsor of new mutual funds. The applicant also committed that it would not acquire those of the adviser's subsidiaries that engaged in the distribution of mutual fund shares. The applicant further committed that it would not be involved in the distribution of the shares of any mutual fund. The applicant represented to the Board, that, after the acquisition of the company, neither the adviser nor any of its affiliates would be obligated by any agreement to engage in any sales activities in connection with any mutual fund's shares and would not enter into any distribution agreement with any mutual fund, unless permitted to do so by a change in current law.

The adviser will not—

1. engage in the development of marketing plans except to give advice to the distributor regarding regulatory compliance;
2. engage in advertising activities with respect to the funds and will not be involved in the preparation of a fund's sales literature, except to review it for the sole purpose of ensuring compliance with pertinent regulatory requirements; or
3. permit employees of the adviser to engage in sales activities at meetings or seminars (such activities would be conducted solely by the fund's distributor).

It was noted that the applicant did not propose providing administrative services to those mutual funds that are marketed and sold primarily to customers of any of the applicant's subsidiary banks.

The Board believes that it is permissible under the Glass-Steagall Act for the applicant to provide the following administrative services to mutual funds as proposed:

1. maintaining and preserving the records of the fund, including financial and corporate records
2. computing the fund's net asset value, dividends, and performance data and financial information regarding the fund
3. furnishing statistical and research data
4. preparing and filing with the Securities and Exchange Commission (SEC) and state securities regulators registration statements, notices, reports, and other material required to be filed under applicable laws
5. preparing reports and other informational materials regarding the fund, including proxies and other shareholder communications, and reviewing prospectuses
6. providing legal and regulatory advice to the fund in connection with its other administrative functions
7. providing office facilities and clerical support for the fund
8. developing and implementing procedures for monitoring compliance with regulatory requirements and compliance with the fund's investment objectives, policies, and restrictions as established by the fund's board
9. providing routine fund accounting services and liaison with outside auditors
10. preparing and filing tax returns
11. reviewing and arranging for payment of fund expenses
12. providing communication and coordination services with regard to the fund's investment adviser, transfer agent, custodian, distributor, and other service organizations that render recordkeeping or shareholder communication services
13. reviewing and providing advice to the distributor, fund, and investment adviser regarding sales literature and marketing plans to ensure regulatory compliance
14. providing the distributor's personnel with information about fund performance and administration
15. participating in seminars, meetings, and conferences designed to present information to brokers and investment companies, but not in connection with the sale of shares of the funds to the public, concerning the operation of the funds, including administrative services provided by the bank holding company to the funds
16. assisting existing funds in the development of additional portfolios
17. providing reports to the fund's board regarding fund activities

A mutual fund administrator provides services that are essentially ministerial or clerical. The administrator does not have policymaking authority or control over the mutual fund. The policymaking functions rest with the board of directors of the mutual fund. The board of directors is responsible for the selection and review of the major contractors to the fund, including the investment adviser and, in certain circumstances, the administrator.

The Investment Company Act of 1940 requires that at least 40 percent of the board of directors of a mutual fund be disinterested persons who are not affiliated with the investment adviser, with any person that the SEC has determined to have a material business or professional relationship with the fund, with any employee or officer of the fund, with any registered broker or dealer, or with any other interested or affiliated person. These unaffiliated board members must approve the fund's contracts with its investment adviser, underwriter, and often its administrator. The applicant committed that the adviser will provide administrative services only to mutual funds whose board of directors consists of a majority of disinterested persons.

In situations in which the applicant's subsidiaries serve as administrator to the mutual fund, the Board permitted one representative of the administrator to serve as a director of the fund. The applicant contended that such an interlocking director would facilitate the provision of administrative services by providing the fund with a person knowledgeable in the operation of the fund who would be in a position to advise the board of directors on administration.

The applicant proposed that a director interlock would be used only in situations in which a company unaffiliated with it serves as the investment adviser to the mutual fund. With regard to the adviser's serving as an administrator, this interlocking director would be deemed an interested person and would be excluded from those actions that must be taken by disinterested board members, such as the approval of an investment advisory contract or a contract for the administrator. The applicant committed that the adviser would serve as administrator only to mutual funds for which a majority of the board of directors are disinterested individuals. The Board believed that, in this proposed arrangement, the applicant would not control a mutual fund if one employee of the adviser or an affiliate[2] would serve as a director of a mutual fund to which the advisor provides administrative services.

The applicant plans, in a small number of cases, to provide mutual funds with a combination of administrative, investment advisory, and other services. The OCC has permitted national banks that serve as investment adviser to mutual funds also to provide some administrative services to those mutual funds. In addition, a number of national banks have been providing these and other services as "subadministrator" to mutual funds that are advised by the bank or an affiliate.

In the Board's opinion, permitting a bank holding company that serves as investment adviser to a mutual fund and also in essence provides ministerial or supporting functions as administrator to that fund would not significantly increase the bank holding company's ability to control the mutual fund. In other words, the adviser would not, by virtue of becoming an administrator to a fund that it or an affiliate advises, become involved in policymaking functions of these funds to a greater extent than when it provides solely investment advisory services. The Board believes that control would continue to rest with the board of directors of the mutual fund.

With regard to providing a combination of advisory and administrative services, the applicant further committed that it would not have any director or officer interlocks with these mutual funds. It would also not have any director or officer interlocks with mutual funds to which it provides both advisory and administrative services.

In providing the combination of services, the applicant would be subject to the Board's interpretation on investment advisory activities (12 C.F.R. 225.125) and would therefore be required to conform the adviser's activities to the interpretation within two years. On this condition, and subject to the commitments made by the applicant, the Board concluded that the proposal was permissible under the Glass-Steagall Act.

3600.27.3 BOARD'S CONCLUSION ON PROVIDING ADMINISTRATIVE SERVICES

The Board found the applicant's proposed activities to be closely related to banking because (1) it had previously determined by regulation that a bank holding company could act as investment adviser to a mutual fund; (2) national banks, including national bank trust departments, provide administrative services to mutual funds; and (3) it had also permitted bank holding companies to provide certain individual financial data processing services (calculation of investment values and tax consulting) by a mutual fund administrator. The Board thus approved the application on April 21, 1993 (1993 FRB 626), based on the facts of record and all of the commitments and representations made by the applicant, and subject to the terms and conditions set forth in the order.

2. This director cannot serve as an officer, director, or employee of the applicant, its bank, or any subsidiary bank or bank holding company of the applicant.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to incorporate a name change to the Financial Industry Regulatory Authority, or FINRA (formerly, the National Association of Securities Dealers, or NASD).

A foreign banking organization (FBO), subject to the provisions of the Bank Holding Company Act, had requested the Board's approval to acquire, through a wholly owned subsidiary (the company), substantially all the assets of an asset-management partnership (the partnership). The company would be an investment adviser registered with the Securities and Exchange Commission (SEC) under the Investment Company Act of 1940. The company's acquisition of the partnership would also include a membership interest in a services firm that would provide transfer-agency services to mutual funds advised by the company (the funds).

The FBO, among other things, proposed to provide marketing support to a mutual fund by directly contacting broker-dealers, 401(k) plan providers, financial planners, insurance companies, and other financial intermediaries to recommend the funds. It would be primarily responsible for the development of marketing plans and the preparation of advertising and sales literature materials for the funds. The Board had not previously considered whether a bank holding company could provide promotional or marketing services to the extent that was proposed.

3600.28.1 CONTROL CONSIDERATIONS INVOLVING PROMOTIONAL AND MARKETING ACTIVITIES

Under the Glass-Steagall Act, a company that owns a member bank may not own or control "through stock ownership or in any other manner" a company that engages principally in distributing, underwriting, or issuing securities.[1] The Board has found that this provision prohibits affiliates of banks from sponsoring, organizing, or controlling a mutual fund. The Board previously has determined, however, that the Glass-Steagall Act does not prohibit a bank holding company from providing advisory and administrative services to a mutual fund.[2]

The proposed promotional and marketing activities would not, it was believed, cause the FBO to control the funds or to be involved in the underwriting and distribution of the funds' securities to the public. The proposed promotional activities involved contact only with financial intermediaries. The activities are similar to the activities previously approved by the Board. The Board had previously permitted bank holding companies to present information about the operations of the mutual funds advised and administered by the bank holding company at meetings or seminars for brokers of mutual funds.[3] In addition, the Office of the Comptroller of the Currency (OCC) had also authorized subsidiaries of national banks to provide marketing and advertising support to mutual funds in connection with their brokerage and advisory services.

As for the distribution and sales of the funds, it was proposed that an independent distributor be given that responsibility.[4] The independent distributor would serve as the principal underwriter of the funds and would enter into sales agreements with financial intermediaries to sell shares of the funds on their behalf.[5] Actual sales would be conducted by the independent distributor or by an independent broker–dealer for the funds.

The FBO did not propose to solicit retail customers to purchase shares in particular funds, to accept orders for the purchase of shares, or to engage in any retail sales activities. Neither the company nor any of its employees would receive transaction-based income or commissions in connection with the company's promotional or marketing activities.

The company would have primary responsibility for preparing the advertising and marketing materials. The independent distributor, however, would be responsible for placing all

1. 12 U.S.C. 221a and 377.

2. See 12 C.F.R. 225.28(b)(6) and 12 C.F.R. 225.125.

3. See 1993 FRB 626 (footnote 15).

4. The FBO committed that none of its U.S. affiliates, including the company, would be obligated by any agreement to engage in any sales activities with regard to shares of the funds, nor would such affiliates enter into any distribution agreement with the funds without the prior approval of the Board.

5. The funds could enter into distribution agreements with intermediaries, but in no event could the company enter into such agreements.

advertisements. The independent distributor would also have legal responsibility, under the rules of the Financial Industry Regulatory Authority (FINRA), for the form and use of all advertising and sales literature prepared by the company, and would also be responsible for filing these materials with the FINRA or SEC.

For the reasons cited, the Board believed that the promotional and marketing activities proposed by the FBO would not involve the company in the underwriting or distribution of shares of the funds for the purposes of the Glass-Steagall Act.

3600.28.2 MANAGEMENT INTERLOCK CONTROL CONSIDERATIONS

The FBO also proposed that the chief executive officer serve as the chairman of the four-member board of trustees of the funds and that no more than three officers or employees of the company serve as junior-level officers of the funds. The employees would serve as assistant secretary, assistant treasurer, or assistant vice president of the funds and would be supervised by the board of trustees or senior-level officers. These employees would have no policymaking authority at the funds and would not be responsible for, or involved in, making recommendations on policy decisions. No employee or officer of the company would serve as a senior-level officer of the funds.

The Board had previously authorized a bank holding company to have director and officer interlocks with mutual funds that the bank holding company advises or administers.[6] The Board concluded that the proposed interlocks between the company and the funds, in this case, would not compromise the independence of the boards of trustees of the funds, compromise the independent distribution of the funds, or result in control of the funds by the FBO.

Based on the facts given, the Board concluded that the control of the funds would rest with the independent members of the boards of trustees of the funds and that the proposed interlocks between the company and the funds would not compromise the independence of the boards of the funds or permit the FBO to control the funds. The Board concluded that the proposal was consistent with the Glass-Steagall Act. The notice was approved on June 16, 1997. See 1997 FRB 679, 1998 FRB 1075–77, 1998 FRB 852–853, and 1998 FRB 680–82.

6. See 1996 FRB 1129.

A bank holding company gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its intention to engage de novo through its mortgage subsidiary in providing employment histories to third parties for a fee.

The employment histories to be provided by the mortgage subsidiary would include the names of past and current employers of an individual and the salary and length of employment for each position, if the individual has consented to the release of such information. The mortgage subsidiary would compile an individual's employment history from information available from state departments of employment services and other similar sources. This information would be provided for a fee to any third-party credit grantor for the purpose of assessing the creditworthiness of a prospective borrower.[1]

3600.29.1 CREDIT-RELATED EMPLOYMENT HISTORIES

The mortgage subsidiary will provide employment histories to third-party credit grantors, including depository and nondepository grantors, for use in making decisions to extend credit only with the express consent of the individual involved. The bank holding company committed that the mortgage subsidiary will comply with the Fair Credit Reporting Act (15 U.S.C. 1681 et seq.) (FCRA) and all applicable state and federal laws and regulations.

In the normal course of their lending activities, banks collect and analyze employment and salary information, including names of past and current employers and salary histories. The Board previously determined that providing past credit information, which includes employment history information, to a credit grantor who is considering a borrower's application for credit is an activity that is closely related to banking and permissible for bank holding companies.[2] Accordingly, the Board concluded that providing employment histories to third-party credit grantors for use in making decisions to extend credit is an activity that is closely related to banking.

3600.29.2 NON-CREDIT-RELATED EMPLOYMENT HISTORIES

The bank holding company also intends to provide employment histories to third-party depository institutions and their affiliates, including credit unions and their affiliates, for use in the regular course of their business, including the hiring of employees. The mortgage subsidiary would provide this information to such entities only with the express consent of the individual involved. Regardless of whether the customer is a third-party depository institution or other credit grantor, the activity would only involve providing employment information. The bank holding company does not plan to provide any additional service, such as analyzing an individual's creditworthiness. The bank holding company committed that its mortgage subsidiary will comply with the FCRA and all applicable state and federal laws and regulations in performing the proposed activity.

The Board had not previously determined whether providing such employment information to third parties for a fee is closely related to banking under section 4 of the BHC Act and, therefore, permissible for bank holding companies. The Board had previously permitted bank holding companies to provide employment information, including employment histories, to depository institutions and their affiliates in connection with the provision of career counseling services (see section 3600.15.1.1).[3] To the extent that these organizations use the information to be provided by the mortgage subsidiary for other purposes, it will only be used in connection with the operation of their banking business.

The Board thus concluded that providing employment histories for use by depository institutions and their affiliates in the regular course of their business is an activity that is closely related to banking. For these reasons, the Board, on May 8, 1995, approved the bank holding company's notice to provide such employment information (1995 FRB 732). The

1. Credit grantors could include lessors if the leasing transaction was the functional equivalent of an extension of credit.

2. See Regulation Y, section 225.25(b)(24) (12 C.F.R. 225.25(b)(24)). The bank holding company committed that it would not promote its mortgage subsidiary as a provider of employment information to non–depository institutions for general business purposes unrelated to credit decisions.

3. See 1994 FRB 51.

approval was specifically conditioned on compliance with the commitments made in connection with the notice.

3600.30.1 REAL ESTATE TITLE ABSTRACTING ACTIVITIES

A bank holding company (the notificant) gave notice under section 4(c)(8) of the Bank Holding Company Act (the BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its intention to acquire a title abstracting company (the company) and thereby engage in real estate title abstracting in the state of Iowa.[1] Real estate title abstracting, as proposed by the notificant, is limited to reporting factual information concerning the interests or ownership of selected real property. An abstracter obtains this information by performing a title search of records maintained at a local public records office to determine the ownership history of the property, including any liens, encumbrances, mortgages, or future interests affecting it. The abstracter then prepares a written report, also known as an "abstract of title," that recites the results of the title search. Because Iowa state law does not permit the sale of title insurance, real estate lenders obtain the opinion of an attorney certifying that title to a particular parcel of real property is free of defects. The abstract of title provides the factual information necessary for the attorney to determine whether a lender would have an unencumbered security interest in the property to be mortgaged.

The notificant proposes to provide real estate title abstracting services to affiliated and unaffiliated lenders in an Iowa county. The company would perform the proposed activities in connection with real estate loans made by affiliates or unaffiliated companies and, in certain cases, when no financing is provided, such as in connection with intrafamily transfers of real estate and property distributed as part of estate planning.

The notificant would not provide any insurance against title defects, guarantee any title, or provide any certification with respect to a title. The notificant would be liable for damages caused by negligence in performing a title search but would not be responsible for any defects in the title.[2] The equivalent of title insurance in Iowa is provided by the attorney who certifies that the title is free from defects. The Board has not previously determined that providing real estate title abstracting is closely related to banking under section 4(c)(8) of the BHC Act and, therefore, permissible for bank holding companies.

The Board believes that the proposed real estate title abstracting activities are integrally related to the provision of loans secured by real estate. A bank must be aware of any encumbrances on property that serves as collateral for a loan made by the bank. Banks in the state typically rely on an attorney's opinion, based on information in an abstract of title, to determine that they have a secured position in real estate serving as collateral. The abstract of title provides information necessary to determine the adequacy of the real estate collateral for the loan and is an integral part of secured real estate lending in Iowa. Thus, the bank has a particular need for the information in the abstract of title. Accordingly, the Board believes that the proposed activities are integrally related to the provision of secured real estate lending and, therefore, are closely related to banking.

The Office of the Comptroller of the Currency (OCC) has authorized national banks to conduct this activity.[3] The OCC has concluded that the performance of a title search and the preparation of an abstract of title are necessary parts of the real estate lending process and that it would be convenient and useful under the applicable standards in the National Bank Act for national banks to be able to perform these tasks themselves.[4]

The proposed activities are not equivalent to providing title insurance—an activity that is not generally permissible under section 4(c)(8) of the BHC Act.[5] Title insurance generally includes providing an indemnification against losses resulting from a title defect discovered after the conveyance of property. Title insurance typically protects a purchaser or lender against claims not identified by a title search or claims not specifically exempted by the title insurance policy. The notificant does not propose to certify or guarantee title and would not be liable to the purchaser or the lender for any title defects.

1. The notificant would merge the company into its wholly owned leasing subsidiary.
2. Title abstracters may insure against liability for negligence by purchasing an errors and omissions policy.
3. OCC Interpretative Letter No. 450, September 22, 1988.
4. National banks are not permitted to sell title insurance.
5. Section 4(c)(8) provides that insurance agency, brokerage, and underwriting activities are not "closely related to banking" and, thus, are not permissible activities for bank holding companies, unless the activities are included within one of seven specific exemptions (A through G) in section 4(c)(8) (12 U.S.C. 1843(c)(8)(A)–(G)).

The Board concluded, based on all the facts of record, that the proposed activities are closely related to banking and approved the notice on June 30, 1995. (See 1995 FRB 805.) Approval of the proposal was specifically conditioned on the notificant's compliance with the commitments made in connection with the notice.

3600.30.2 AIRCRAFT TITLE ABSTRACTING ACTIVITIES

An attorney representing a bank holding company (BHC) requested an opinion as to whether the providing of title abstracts on U.S.-registered aircraft would be a permissible activity for a new subsidiary of a BHC. The aircraft title abstracting activities would be limited to reporting factual information concerning the ownership history of the relevant aircraft and the existence of liens or encumbrances affecting the aircraft. The information would be obtained by performing a title search of records. The title search would be documented in a written report, known as an "abstract of title," describing the factual information located by the title search concerning the existing title owner of the aircraft, previous transfers of the aircraft's title, and the existence of any liens or encumbrances affecting title to the aircraft.[6] The subsidiary would provide the information to affiliated and unaffiliated lenders and other parties in connection with aircraft financing and sales transactions. The aircraft title abstracting activities would not include providing insurance against defects in the title of any aircraft, guarantee any aircraft title, or provide any certification with respect to an aircraft title. Based on facts and information provided and other facts, the Legal Division staff issued an opinion on October 7, 2002, that concluded that the proposed aircraft title abstracting to be conducted by the subsidiary would be within the scope of the title abstracting activities previously authorized by the Board on June 30, 1995. (See 1995 FRB 805, 806.)

6. The attorney requesting the opinion reported that federal law requires that all changes in title of, and liens and encumbrances affecting, U.S.-registered aircraft must be filed with the Federal Aviation Administration.

A bank holding company (BHC), that has elected to be a financial holding company within the meaning of the Bank Holding Company Act of 1956 (12 U.S.C. 1841 et seq.) (the BHC Act) inquired if it would be permissible under the BHC Act and the Board's Regulation Y (12 C.F.R. 225) for the BHC to engage in ''commodity purchase and forward sale'' (CPFS) transactions as a method of financing the commodity inventories of its customers.[1]

Two alternative structures were described for the CPFS transactions. In the first structure, the BHC would purchase a commodity from its customer and simultaneously enter into a forward sale agreement under which the customer would be obligated to repurchase the commodity from the BHC at a predetermined price on a predetermined future date. The second structure is similar to the first structure except that it would involve a third party, either as the initial seller of the commodity to the BHC or as the ultimate purchaser of the commodity from the BHC. During the term of a CPFS transaction, the BHC would hold title to the underlying commodity, would mark the commodity to market on a daily basis, and would call for additional margin if the market value of the commodity falls below a specific collateral threshold.

The BHC Act permits bank holding companies to engage in any activity that the Board had determined by regulation or order as of November 11, 1999, ''to be so closely related to banking as to be a proper incident thereto.''[2] The Board had determined by regulation issued prior to November 11, 1999, that ''[m]aking, acquiring, brokering, or servicing loans or other extensions of credit (including factoring, issuing letters of credit and accepting drafts) for the company's account or for the account of others'' is such an activity.[3]

Under the proposed CPFS transactions, the BHC would earn a fixed return on a CPFS transaction, just as it would on an ordinary secured loan, and its risk exposure would effectively be limited to counterparty credit risk. The BHC would subject any prospective CPFS counterparty to the same credit-review process used for loan applicants, and the BHC's internal credit-review personnel would also review outstanding CPFS arrangements. As proposed, the BHC would never enter into an agreement to purchase a commodity unless it simultaneously enters into an agreement to sell the commodity to a creditworthy counterparty on a fixed future date at a fixed price. The BHC indicated that a fixed future sale price would be equal to the initial purchase price plus a fixed interest component (and thus would not vary based on movements in the price of the commodity). In other words, unless the ultimate purchaser defaults, the BHC would be repaid its principal plus a fixed amount of interest at maturity of the transaction. In addition, the BHC would not bear any commodity price risk; the price it would receive for the commodities on the maturity date of the transaction would be fixed on the date it enters into the transaction. If the ultimate purchaser defaults on its obligation to purchase the underlying commodity upon maturity, the BHC would have a claim against this purchaser to recover the equivalent of principal and interest. The BHC could then sell the commodity into the market to mitigate credit losses in the same manner as it would liquidate any collateral supporting a loan in default. Any commodities acquired by the BHC as a result of counterparty default would be held in accordance with the limits applicable to assets acquired by a BHC in the course of collecting a debt previously contracted.[4]

Moreover, the BHC represented that all non-price risks and costs of owning the commodity during the term of the CPFS transaction, such as storage risk and the cost of insurance, would be borne by the ultimate purchaser. In all cases, although the BHC would take title to the underlying commodity at the inception of a CPFS transaction, it would take title in the form of a warehouse receipt only; that is, the commodity would continue to be stored in a licensed warehouse owned and operated by an entity other than the BHC. The commodity would not be physically moved as a result of the transaction. The BHC would acquire title to the underlying commodity in a CPFS transaction as an incident

1. The BHC indicated that the commodities involved in these transactions would include agricultural commodities (such as corn, wheat, soybeans and other legumes, cotton, cocoa, coffee, sugar, various oilseeds and oils, and dairy products), live cattle, timber, and exchange-traded metals. The BHC's CPFS transactions would, in all cases, involve commodities (1) for which contracts have been approved for trading on a U.S. futures exchange by the Commodity Futures Trading Commission or (2) which the BHC can show, to Board staff's satisfaction, have readily-available price quotes and are traded regularly in global commodity markets.

2. See 12 U.S.C. 1843(c)(8).

3. See 12 C.F.R. 225.28(b)(1).

4. See 12 C.F.R. 225.22(d)(1).

to the financing it provides to its customers and not for speculative purposes. The BHC represented that the BHC does not and will not hold itself out as making a market in the commodity. In addition, the BHC also represented that the BHC does not and will not (1) own, operate, or invest in facilities for the extraction, transportation, storage, or distribution of commodities or (2) process, refine, or otherwise alter commodities.

The BHC would account for the CPFS transaction as an ''asset purchased under an agreement to resell'' and would recognize profit and loss on the transaction on an accrual basis, in a manner similar to a traditional loan. During the term of the transaction, the ultimate purchaser counterparty in a CPFS transaction would generally record the underlying commodity as an asset on its balance sheet and would record its obligation to purchase the commodity as a short-term debt liability.

The interpretation noted that the Board had previously found a three-party commodity financing arrangement similar to the BHC's proposed three-party CPFS transactions to be an extension of credit permissible for BHCs under Regulation Y. In a 1973 order, the Board approved as a permissible lending activity for bank holding companies an arrangement under which a BHC would finance a utility's coal purchases by purchasing from a third party, and taking title to, a quantity of coal on a monthly basis at the direction of the utility customer. (See 1973 FRB 698.) The BHC would store the coal on the premises of the utility under a lease arrangement with the utility. The utility would use the coal continuously throughout the following month and would pay the BHC monthly for the amount of coal used, at a price equal to the BHC's acquisition cost for the coal plus a fixed amount of interest. The utility explicitly bore the risk of loss or damage to the coal during storage. If the utility defaulted, the BHC had the right to sell the coal to cover its losses and the right to sue the utility for any shortfall in the liquidation proceeds. As with the proposed CPFS transactions, the utility's motive for the transaction was to obtain financing for its commodities inventory.

Based on the information the BHC provided and the Board's precedents, Board legal staff opined that the proposed CPFS transactions are within the scope of permissible lending activities for BHCs under section 225.28(b)(1) of Regulation Y. The BHC should have policies and procedures to identify whether a CPFS transaction would create heightened legal or reputational risk to the BHC, and to manage any such risk. In particular, the BHC should have policies and procedures to identify whether a particular CPFS transaction (1) lacks economic substance or business purpose; (2) may be designed by the counterparty for questionable accounting, regulatory, or tax purposes; or (3) may be accounted for or disclosed by the counterparty in a way that is misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements.

The Board legal staff's opinion is limited solely to the permissibility of the proposed CPFS activities described above under Regulation Y and does not address the permissibility of any other activities or authorize the BHC to engage in any other activities in the United States. (See the Board's staff legal interpretation dated May 15, 2006.)

A foreign bank (that qualifies as a financial holding company under section 4(k) of the BHC Act and is treated as a bank holding company (BHC) under section 4(c)(9) of the BHC Act requested a confirmation from the Board's legal staff on whether certain volumetric-production-payment (VPP) transactions involving physical commodities would be considered as extensions of credit that are permissible for a BHC under section 4(c)(8) of the BHC Act and section 225.28(b)(1) of the Board's Regulation Y.[1]

In 2004, the Board approved a proposal by the BHC to engage in physical-commodity trading as an activity that is complementary to the BHC's commodity derivatives activities.[2] The order limited the value of physical commodities that the BHC may hold under this authority to 5 percent of the BHC's tier 1 capital. The BHC also requested confirmation that VPP transactions and any physical commodities delivered to the BHC under a VPP would not count against the 5 percent of tier 1 capital limit.

A VPP is a royalty interest, typically in a hydrocarbon (such as oil or natural gas) reserve that entitles the VPP holder, in exchange for an upfront payment, to receive specified quantities of hydrocarbons on a regular basis during the life of the VPP transaction. A VPP is considered to be a real property interest in most states. Relying on its physical-commodity trading authority, the BHC had already entered into two VPP transactions in the United States. In each of these transactions, a wholly owned, consolidated, U.S. special-purpose-vehicle subsidiary of the BHC (the SPV) had acquired a VPP from a hydrocarbon producer (the customer) in exchange for cash.[3] The VPP transactions are designed to provide funding to the customers. The VPP does not give the BHC the right to control production of the oil or gas, and the BHC is therefore dependent on the customer meeting its contractual obligation to produce the agreed-upon volume of oil or gas according to the agreed-upon schedule.

Simultaneously with its purchase of the VPP interest from the customer, the SPV and the BHC enter into an agreement under which the BHC makes an upfront payment to the SPV and the SPV agrees to deliver to the BHC the volumes of oil or gas to be received by the SPV from the customer under the VPP. As the SPV delivers the oil or gas to the BHC under this agreement, the BHC arranges to sell it, either back to the customer or into the marketplace, at the then-current market price for the commodity.

The BHC also may decide to temporarily retain hydrocarbons it acquires pursuant to a VPP in order, for example, to take advantage of an anticipated rise in price for the relevant commodity. The BHC agreed that any hydrocarbons acquired under a VPP will be counted against the BHC's 5 percent of tier 1 capital limit under the order if they are not immediately sold to a third party. The BHC represented that it hedges its commodity-price risk from the VPP by entering into a fixed-rate commodity swap with a third party (which may be the customer) that converts the BHC's variable proceeds from the periodic sale of the oil or gas into fixed-rate payments. Accordingly, in the absence of counterparty defaults, by the end of the VPP term the BHC will have recouped the original amount advanced to the customer plus a fixed return.

The BHC stated that the VPP transactions generally are treated as loans for U.S. federal income tax purposes. In addition, the BHC indicated that it will treat VPP transactions as loans for accounting purposes. Board staff stated that it expects (1) the BHC will follow generally accepted accounting principles in reporting any VPP transactions and (2) all of the BHC's VPP transactions will be entered into for legitimate business purposes.

The BHC argued that a VPP transaction is very similar to a traditional lending arrangement because the discounted present value of the hydrocarbons to be delivered to the BHC over the life of a VPP transaction is estimated to equal the purchase price paid by the BHC for the VPP interest plus a margin meant to cover the BHC's cost of funds, risk associated with the transaction, and a fixed profit. Importantly, the VPP does not give the BHC any variable upside potential if there is excess production from the producer's hydrocarbon reserve.[4] Moreover, the commodity-price swap hedges the BHC's commodity-price risk associated with the VPP, thus guaranteeing the BHC a return of principal and a fixed amount of interest if nei-

3. [TEXT REDACTED]

4. If the reserve produces more hydrocarbons than are subject to the VPP, the production is for the benefit of the producer. If the reserve underproduces in a given period during the life of the VPP, the BHC would be entitled to an appropriate amount of overproduction in subsequent months (and extra reimbursement to reflect default interest).

ther the producer nor the swap counterparty defaults. Accordingly, the VPP transactions are not designed to serve as a vehicle for the BHC to take on commodity-price risk, own commodities, or engage in commodity dealing.[5]

As described above, as part of a VPP transaction, the BHC will hold a royalty interest in a hydrocarbon reserve and will periodically take title, if only momentarily, to physical commodities. The Board has previously concluded, however, that ownership of commodities in connection with a financing transaction does not prevent the transaction from being treated as a form of credit extension permissible for a BHC if the economics of the transaction are substantially the same as those of a loan.[6]

Based on the information provided by the BHC's counsel, Board legal staff opined that the above-described VPP transactions are a form of permissible lending activity for BHCs under section 225.28(b)(1) of Regulation Y when entered into for the purpose of providing financing to a third-party customer. Any commodities that the BHC receives pursuant to a VPP transaction and that are not immediately sold to third parties would be subject to the 5 percent of tier 1 capital limit on the value of commodities that the BHC may hold under its physical-commodity-trading authority.

The staff opinion informed the BHC that it should have in place policies and procedures to (1) identify whether a VPP transaction would create heightened legal or reputational risk to the BHC and (2) manage any such risk. In particular, the BHC should have policies and procedures to identify whether a particular VPP transaction (1) lacks economic substance or business purpose; (2) may be designed by the counterparty for questionable accounting, regulatory, or tax purposes; or (3) may be accounted for or disclosed by the counterparty in a way that is misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements.

The staff opinion is limited solely to the permissibility of the VPP transactions described in the opinion under Regulation Y. The opinion does not address the permissibility of any other activities or authorize the BHC to engage in any other activities in the United States. (See the Board legal staff's opinion dated May 15, 2006.)

5. As noted above, the BHC has the authority to engage in physical-commodity trading, including making and taking delivery of physical commodities, and may use this authority to retain ownership of hydrocarbons delivered under a VPP in order to benefit from anticipated changes in hydrocarbon prices.

Impermissible Activities

Section 3700.0

The BHC Act states that a nonbank activity is impermissible unless explicitly exempt from the general prohibition of section 4. While this could cause an unlimited list of impermissible activities, the Board has compiled a list of activities which have been specifically determined to be impermissible (see Manual section 3000.0, Appendix 3).

The inspection objective is to determine whether a specific activity conducted by a bank holding company or its subsidiary is permissible for the bank holding company. The Board has ruled specific activities to be impermissible although it has stated also that certain impermissible activities may be engaged in under limited special circumstances.

In addition, a bank holding company may be entitled to grandfather privileges which are considered as either permanent (where there is no deadline for termination of an activity) or temporary, in which case the activity must have been terminated prior to December 31, 1980. A holding company may be granted an exemption from section 4 of the Act (i.e., family, hardships, etc.) which allows it to engage in activities that would otherwise be impermissible. Because of the variety of factors which must be considered, the examiner should exercise care when determining the permissibility of an activity for a bank holding company.

The subsections of this chapter present a *selected number* of those activities which have been determined to be impermissible for bank holding companies. While an activity is permissible only after it has been determined as such by the Board, it must be remembered that in determining permissibility, the Board has in some instances (i.e., data processing services, courier services, etc.) included restrictions which would limit the overall nature or performance of the activity. Therefore, even the permissible activities may become impermissible if the actions of the bank holding company are not in accordance with the stated restrictions.

The Board of Governors has ruled that land development[1] is impermissible for bank holding companies. However, for land acquired through foreclosure, a limited amount of development may be allowed in an effort to minimize the potential loss on the project. Each case must be considered separately to determine if it warrants additional development.

The basic determination of impermissibility was established by the Board in denying a portion of the application by UB Financial Corp., Phoenix, Arizona, to retain the H. S. Pickrell Company, Phoenix, Arizona (1972 FRB 429). The order stated in part, "The Board is of the opinion that the activities of purchasing and selling of land or participating as a joint venturer in real estate development are not so closely related to banking as to be a proper incident thereto, and that insofar as the application pertains to those activities, it should be denied."

The determination that limited development for land acquired through foreclosure is permissible is contained in a Board order dated November 1, 1973, in connection with an application by Liberty National Corporation, Oklahoma City, Oklahoma, to retain Liberty Mortgage Company, Oklahoma City, Oklahoma (1973 FRB 919), in which it is indicated that a limited amount of real estate development might be permissible if necessary to minimize losses on real estate acquired in connection with debts previously contracted.

1. The Board, by specific order, has permitted a limited incursion into this area as an accommodation to BHCs acquiring thrifts or to thrifts that qualify as "banks" and seek to form bank holding companies (1986 FRB 487, 731)

3700.2.1 PREMIUM FUNDING

Insurance premium funding, sometimes known as equity funding, is the financing of the sales of mutual fund shares and life insurance policies as a package. It should not be confused with loans made to an insured for the purpose of paying premiums on hazard insurance (insurance premium financing); in that case the lender may be named loss payee or owner of the policy and the lender has the right to submit the policy for cancellation in order to collect the amount owed. Insurance premium financing is a permissible activity pursuant to Section 225.25(b)(1) of Regulation Y (Refer to 1974 FRB 310).

The Board has determined insurance premium funding to be impermissible for bank holding companies (12 C.F.R. 225.126). This determination is based on the policies contained in sections 20, 21, and 32 of the Banking Act of 1933 (the Glass–Steagall Act Provisions) as described in the opinion of the United States Supreme Court in Investment Company Institute v. Camp, 401 U.S. 617 (1971).

"In the Board's opinion, the Glass–Steagall Act provisions, as interpreted by the U.S. Supreme Court, forbid a bank holding company to sponsor, organize or control a mutual fund" (12 C.F.R. 225.125). In enacting the Glass–Steagall Act, Congress indicated that affiliations of commercial banks and securities companies give rise to a potential conflict of interest and unsound banking practices. Pursuant to section 4(c)(8) of the Act, the Board is required to consider whether the performance of a particular nonbank activity by a holding company produces benefits to the public that outweigh possible adverse effects, such as potential conflict of interest and unsound banking practices. Therefore, the potential conflict of interest and unsound banking practices arising in the affiliation of commercial banks and mutual funds precludes the Board from approving insurance premium funding as a permissible banking activity.

3700.2.2 LIFE INSURANCE UNDERWRITING

The life insurance discussed in this section is that life insurance which is not sold in connection with a credit transaction by a bank holding company or its subsidiary. The Board has ruled that this activity is impermissible for bank holding companies (12 C.F.R. 225.126). The Board developed its position during consideration of the application of First Oklahoma Bancorporation, Inc., Oklahoma City, Oklahoma, for prior approval pursuant to section 4(c)(8) of the Act to acquire sufficient additional shares of Underwriters Life Insurance Company, Oklahoma City, Oklahoma, so as to own at least 80 per cent of the outstanding shares and thereby to engage in the activity of underwriting life insurance not sold in connection with a credit transaction by a bank holding company or a subsidiary.

In acting on the First Oklahoma application, the Board relied on an earlier decision denying an application by Transamerica Corporation, San Francisco, California, to retain its shares of Occidental Life Insurance Company of California (1957 FRB 1014). In the Transamerica case, a hearing examiner found that the life insurance underwriting activities of Occidental were not so closely related to banking to be a proper incident to managing and controlling banks. In the First Oklahoma case, the application was presented on the question of whether the activities of Underwriters Life were so closely related to banking or managing or controlling banks as to be a proper incident thereto. The Board determined in First Oklahoma, that there was no reasonable basis for the contention that the activities of Underwriters Life were permissible.

The activity of acting as an underwriter (reinsurer) for credit life and credit accident and health (disability) insurance is, however, considered a permissible activity (12 C.F.R. 225.135).

3700.2.3 SALE OF LEVEL-TERM LIFE INSURANCE

The Board has stated that the sale of level-term life insurance is not covered by section 225.25(b)(8)(ii) of Regulation Y. This position was stated in its order approving the application by Fidelity Corporation of Pennsylvania, Rosemount, Pennsylvania, to acquire Local Finance Corporation, Providence, Rhode Island, excepting those proposed activities of level-term life insurance sales (1973 FRB 472). Insurance that does not decline in coverage as the outstanding loan balance is reduced results in the insured party carrying more insurance than is necessary to cover the outstanding loan balance. Because of this position, the Board would not allow the sale of this type of insurance by the applicant and its subsidiary.

3700.2.4 UNDERWRITING REAL ESTATE MORTGAGE GUARANTEE INSURANCE

Mortgage guaranty insurance is essentially a limited guarantee of a mortgage loan. Such insurance typically covers the top 20 or 25 percent of a mortgage loan. In the event of default by the borrower, the lender acquires title to the property and then submits a claim to the insurer. The insurer then has a choice of two options: (1) take title to the property and pay the lender the unpaid principal and interest; or (2) pay the lender the 20 or 25 percent insured portion of the loan, with the lender retaining title to the property.

The Board has determined that "the underwriting of mortgage guarantee insurance is principally a credit determination, similar to those made by banks in their regular course of business" (1974 FRB 727). Therefore, this activity is considered closely related to banking for purposes of permissibility under section 4(c)(8) of the Act. However, the Board noted that the private mortgage insurance industry was relatively young and still developing with a limited, untested, operating history. In addition, the Board believed that the times were such that it was "desirable for bank holding companies generally to slow their present rate of expansion and direct their energies toward strong and efficient operations within their existing activities, rather than toward expansion into new activities" (the go-slow policy), and, therefore, concluded that it would not be appropriate to adopt the underwriting of mortgage guarantee insurance as permissible for bank holding companies.

3700.2.5 UNDERWRITING PROPERTY AND CASUALTY INSURANCE

On May 12, 1978, the Board denied NCNB Corporation's application to retain its indirect subsidiaries, Superior Insurance Company and Superior Claim Service, both of Florence, North Carolina. These companies engaged, respectively in the activities of underwriting property and casualty insurance related to extensions of credit by NCNB's affiliates, in adjusting insurance claims and in appraising and valuing property in connection therewith. Neither of these activities had previously been determined by the Board to be closely related to banking. The Board concluded that the circumstances presented did not provide a reasonable basis for believing that the proposed activity was closely related to banking or managing and controlling banks (1978 FRB 506).

3700.2.6 TITLE INSURANCE

The Board issued a letter (See Board letter re Independence Bancorp, Inc., dated 3/17/86) to a bank holding company which filed an application with the Board to acquire a *de novo* title abstract company which planned to engage in, among other things, the sale of title insurance. The sale of title insurance had not been previously approved by the Board as a permissible nonbanking activity. In responding to the application, the Board determined that the proposed title insurance activities were not closely related to banking.

The Board's discretion to decide what types of insurance activities are closely related to banking was removed by the Garn–St Germain Depository Institutions Act of 1982 ("Garn Act"), which amended section 4(c)(8) of the BHC Act. The Garn Act stated that "it is not closely related to banking or managing or controlling banks for a bank holding company to provide insurance as a principal, agent, or broker. . . ." The Garn Act lists certain specific exceptions to this general prohibition, none of which permits the sale of title insurance. The Board thus concluded that the Garn Act does not allow it the discretion to approve this type of nonbanking activity.

3700.3.1 BROKERAGE

Real estate brokerage is the negotiating of a real estate contract between a buyer and seller for which the broker receives a fee or commission and in which the broker takes no possessory interest in the subject matter of the contract. The Board has stated that this activity is considered impermissible for bank holding companies. The Board's position was expressed in its order approving an application by Boatmen's Bancshares, Inc., St. Louis, Missouri, to acquire Williams, Kurrus and Company, St. Louis, Missouri (1972 FRB 428). The Board stated that it had determined that real estate brokerage activities were not so closely related to banking or managing or controlling banks as to be a proper incident thereto. Since Boatman's had not demonstrated to the Board's satisfaction that the real estate brokerage field activities are so closely related to banking or managing or controlling banks as to be a proper incident thereto, the Board approved the Boatman's application on the condition that Boatman's terminate its real estate brokerage activities.

3700.3.2 SYNDICATION

The Board ruled that this activity is not permissible for bank holding companies. The Board's position was developed during consideration of the application of BankAmerica Corporation, San Francisco, California, for prior Board approval to engage *de novo* under section 4(c)(8) of the Act in the activity of real estate syndication through a subsidiary, BankAmerica Realty Services, Inc., San Francisco, California. The Board concluded that the subsidiary's proposed activities of organizing, promoting, selling partnership interests, and acting as the sole general partner of real estate syndicates went beyond the functions performed by an advisory company to a real estate investment trust permissible under section 225.25(b)(4) of Regulation Y.

The Board also stated that it felt that the policies contained in sections 20 and 32 of the Banking Act of 1933 (the Glass–Steagall Act Provisions) must be considered in conjunction with section 4(c)(8) of the Act. These policies, described in the opinion of the United States Supreme Court in Investment Company Institute v. Camp, 401 U.S. 617 (1971), forbid a bank holding company to sponsor, organize or control an open-ended investment company (mutual fund) or a closed-end investment company primarily or frequently engaged in the issuance, sale and distribution of securities. Because the activities of real estate syndication resemble the issuance, sale and distribution of securities of a closed-end investment company, this activity is not permissible for a bank holding company (12 C.F.R. 225.125).

The Board has stated that general management consulting is not so closely related to banking or managing or controlling banks as to be a proper incident thereto. This ruling is contained in the Board's order denying the application of First Commerce Corporation, New Orleans, Louisiana, to acquire W. R. Smolkin & Associates, Inc., New Orleans, Louisiana. In its order the Board describes general management consulting as follows:

". . . including, but not limited to, the provision of analysis or advice as to a firm's (i) purchasing operations, such as inventory control, sources of supply, and cost minimization subject to constraints; (ii) production operations, such as quality control, work measurement, product methods, scheduling shifts, time and motion studies, and safety standards; (iii) marketing operations, such as market testing, advertising programs, market development, packaging, and brand development; (iv) planning operations, such as demand and cost projections, plant location, program planning, corporate acquisitions and mergers, and determination of long-term and short-term goals; (v) personnel operations, such as recruitment, training, incentive programs, employee compensation, and management-personnel relations; (vi) internal operations, such as taxes, corporate organization, budgeting systems, budget control, data processing systems evaluation, and efficiency evaluation; or (vii) research operations, such as product development, basic research, and product design and innovation." (1972 FRB 674) The Board denied the case and determined that the activity of providing general management consulting services could lead to unwanted conflict of interest situations for BHCs that advised clients that were also customers of its own subsidiary banks. The Board also desired to maintain a distinct separation between banking and commerce.

In its order denying the application of Marine Midland Banks, Inc., Buffalo, New York, to acquire Carter H. Golembe Associates, Inc., Washington, D.C., the Board further defines the concept of management consulting by stating that Golembe, ". . . provides consulting services on a confidential basis to banks, bank holding companies and bankers' associations. It makes bank feasibility studies and renders advice with respect to geographic expansion, product extension, mergers and acquisitions and applications to State and federal regulatory agencies. A portion of Golembe's consulting services also relates to internal bank operations, such as marketing, trust and bank credit card operations and loan or interest rate policies. Other studies and analyses are performed upon request of individual banks. Golembe also provides advice with respect to the organization and operation of State Bankers' associations and serves as a consultant to various banking groups with respect to legislative and regulatory matters affecting the banking industry. The foregoing consulting services furnished by Golembe are considered by the Board to be but a specialized form of management consulting." (1972 FRB 676)

Management consulting to nonaffiliated commercial banks and nonbank depository institutions has been determined by the Board to be a permissible activity for bank holding companies under section 4(c)(8) of the Act (Regulation Y, section 225.25(b)11, as amended).

The Board has ruled that this activity is impermissible for bank holding companies. However, bank holding companies may conduct property management activities for three types of property as follows:

1. Property held in a fiduciary capacity;
2. Property owned by the holding company or its subsidiary for its own bank and bank-related operations;
3. Property acquired by the holding company or its subsidiary as a result of a default on a debt previously contracted.

The Board announced on June 30, 1972, that it would not include this general activity on the list of permissible activities. Because the Board did not intend to limit any authority given by statute or regulation to a holding company or its subsidiary concerning property management, the Board described in its order the three types of property, as shown above, for which a holding company or its subsidiary could engage in property management activities (1972 FRB 652).

In addition to the prohibition of property management activities in general, the Board has ruled that the operation of a commercial parking lot is impermissible. In its order approving the application by Multibank Financial Corporation, Boston, Massachusetts, to acquire the B. M. C. Durfee Trust Company, Fall River, Massachusetts, a commercial bank, the Board stated that operating a commercial parking lot was not considered closely related to banking and conditioned its approval on divestment of the parking lot operation (1973 FRB 679).

The Board through its rulemaking authority did not include operating a travel agency on the list of permissible activities for bank holding companies. This activity is considered not to be closely related to banking or managing or controlling banks (1976 FRB 148). The Board referenced a decision of the United States Court of Appeals for the District of Columbia, Courier Association vs. Board, 516 F. 2d 1229 (1975).

The Board felt the only relevant criteria for this activity was whether banks have generally provided the service. The Board noted that there were few bank-affiliated travel agencies, most of which had only been recently established. The Board concluded that operating a travel agency was not closely related to banking.

On June 1, 1978, the Comptroller of the Currency issued Banking Circular No. 108, which requested all national banks then operating travel agencies, to divest themselves of those agencies within a reasonable period of time not to exceed three years. The Comptroller's office concluded that the continued operation of a travel agency by a national bank is inappropriate and may expose the bank to a substantial risk of loss by litigation. This action by the Comptroller precludes bank holding companies from relying on section 4(c)(5) of the Act to conduct travel agencies. Thus, holding companies have no authority to engage in travel agency activities under the Act unless grandfathered.

On April 2, 1979, the Board issued a letter, a copy of which went directly to all bank holding companies engaging in the activity of operating a travel agency pursuant to section 4(c)(5) of the Act, indicating that no bank holding companies could engage in the activity solely pursuant to section 4(c)(5) and that those engaged in such activity had to terminate the activity by December 31, 1980 (Z–8421 on office copy only).

Subsequently, a bank holding company applied to the Board to acquire a company (''Company'') that engages in a variety of data processing and data transmission activities for customers. The Company's data bases that are provided to customers included a program by which customers could receive airline and hotel information and could make airline and hotel reservations. The Board determined that the receipt of such information and the ability to make airline and hotel reservations was not closely related to banking. Accordingly, the Board required, as a condition for approval of the application, the bank holding company to eliminate the travel reservation service from the roster of third party data base programs provided by Company (Refer to 1986 FRB 497).

As part of the Security Pacific Corporation's (bank holding company) application to acquire Duff & Phelps, Inc. (Company), which engaged in investment advisory, investment management, and financial advisory services, the Board, on December 11, 1984, denied the Applicant's request to engage in the activity of providing credit ratings on bonds, preferred stock and commercial paper. Private credit ratings were included as part of the investment research reports sold to institutional investors. The Company also provided credit ratings on a fee basis for companies that request public disclosure. As part of the public rating process, the rated company is given the opportunity to make a presentation to the Company's Credit Rating Committee.

In this situation, the Security Pacific Corporation had a vested interest in the ratings of the corporations to which it lends in the ratings of municipal bonds it underwrites, in the ratings of the commercial paper and municipal bonds for which it provides backup lines of credit, and in the ratings of fixed-income securities which it holds for trades. Numerous potential conflicts existed such as: possible inadvertent releases of confidential information obtained during the credit rating process; the advance release to the Applicant of credit ratings for companies to which the Applicant had very large loans outstanding; the potential for pressures by the Applicant on the Company to modify favorably the credit rating of one of the Applicant's major customers; and the subtle pressure on the Company's staff resulting from ownership by Applicant about companies in which the Applicant had a substantial interest. Similar conflicts could have also arisen between the Company's credit rating function and the Applicant's investment of trust assets.

The Applicant acknowledged the potential conflicts but argued that various steps could be taken to ameliorate them and bring them within a manageable framework. The Applicant therefore proposed a number of techniques for isolating the credit rating activities of the Company from influence by the Applicant, including the establishment of a separate corporation with a number of independent directors, a prohibition on contacts between the Applicant and the members of the Company's Credit Rating Committee, and also certain record keeping requirements for that committee.

The Board considered these positive suggestions as well as others to assure full disclosure of the relationships between the Applicant and any of the companies that would be rated by the Company as well as a prohibition on the Company rating the Applicant's securities, securities which the Applicant has underwritten, or securities for which the Applicant provided a guarantee or backup letter of credit. The Board, however, believed that the conflicts in the relationship between a major lender and a credit rating company were so pervasive that they could not be overcome through adoption of an information barrier. The employees of the Company would inevitably be aware of interests of the Applicant in firms being rated by them and, it seems reasonable to assume that this knowledge could, at times, influence their decisions.

The Board's concerns regarding conflicts of interest with respect to the credit rating activity were not based on any doubts regarding the integrity of the parties to the application, but rather were based on the Board's responsibility to assess the possible adverse effects that might be associated with an affiliation between a bank holding company and a public credit rating organization. Thus the Board was acting in furtherance of one of the general purposes of the Bank Holding Company Act, "to prevent possible future problems rather than to solve existing ones." The Board, in view of the pervasive conflicts of interest between the Applicant's existing operations and the Company's credit rating business, decided against approving the performance of public credit ratings.

Currency options are a new and innovative aspect of foreign exchange. A currency option represents the contractual right (but not the obligation) to purchase or sell a predetermined amount of currency at a specific price at any time before a specific date. Currency-options advocates argue that currency options eliminate the risk of a loss due to exchange movements and give the holder a chance to profit if the currency fluctuation is favorable. They require a premium to be paid when the contract is entered into. The premiums can run from about 1.5 percent to 5 percent, depending on the expiration date and the exercise price of the option.

Currency options are traded on two types of markets: the over-the-counter, or interbank market, and on three regulated exchanges, the Chicago Mercantile Exchange (CME), the Chicago Board Options Exchange (CBOE), and the Philadelphia Exchange (PHLX). The CBOE, a securities exchange, uses multiple "market makers" instead of specialist positions; the CME, a commodities exchange, like other commodities exchanges, does not use specialist positions.

Most of the writing of currency options is currently done by banks which will customize the option, with maturity dates and currency values in excess of the standardized exchange contracts. Banks developed the over-the-counter market where they trade currency options among themselves, and banks are also the largest customers on the exchanges where they hedge the risks associated with their foreign-exchange positions.

In general, the specialist system is unique to securities exchanges, and specialists exist for the purpose of achieving certain market results. Commodity exchanges do not use the services of specialists. The rules of the Securities and Exchange Commission permit the designation of specialists to "engage in a course of dealings for . . . their . . . own account to assist in the maintenance, so far as practicable, of a fair and orderly market . . ." provided that the securities exchanges adopt the following types of rules governing specialists: minimum capital requirements, rules to suspend or remove specialists if they fail to perform their designated market functions, rules restricting dealing activities to those reasonably necessary to permit the specialist to maintain a fair and orderly market or necessary to permit him or her to act as an odd-lot dealer, provisions governing his or her brokerage activities in specialist securities, and procedures to provide for the effective and systematic surveillance of the activities of specialists (17 C.F.R. 240.11(b)(1)). In addition, the IRS formerly granted special tax treatment to specialists transactions.

The rules of the PHLX require that odd-lot orders must be given to the specialist. The specialist functions as a broker with respect to certain transactions that cannot be executed by floor traders immediately, for example, stop-loss orders and limit orders. All such orders are given to the specialist for execution and become part of his "book"; PHLX rules address priority of orders (customers' orders receive priority) and conflicts of interest by governing specialists' trades and those of affiliated persons and firms in "securities" in which the person is designated as specialist.

There is one specialist position for each currency option traded on the PHLX, and the primary function of a specialist is to act as market maker, as necessary, for its assigned currency option. The specialist thus undertakes all activity, including dealing for its own account, to the extent necessary, as required to maintain a fair and orderly market in options on a particular currency. In essence, the specialist makes a continuous two-sided market in the assigned currency option when market forces do not.

Although currency options are functionally equivalent to other instruments which banks regularly deal in for their own account, the applicant's proposed activities were not considered as closely related to banking. The applicant's analysis did not focus on the critical components of the proposed specialist activities, which are distinct from the foreign-exchange brokerage and dealing activities generally conducted by banks. Because the proposed specialist activities are to be carried out in the context of market making on a regulated exchange, they were significantly different from the foreign-exchange activities currently conducted by banks. When a bank engages in foreign-exchange trading, it does so to service the needs of its customers and to generate trading profits. However, unlike traditional foreign-exchange trading, bank customers are not serviced directly by a specialist. Instead, the exchange benefits from the specialist's efforts if markets are perceived to be deep and liquid. Depth and liquidity make the contracts viable and the exchange profitable, and do not directly benefit the bank's customers.

The applicant's original proposal implicitly acknowledged that banks have not traditionally been involved with trading on stock exchanges, and thus have not generally possessed the experience and expertise in trading, hedging, and managing aggregate exposure required for the successful operation of a specialist position. The applicants originally proposed to engage in the activities through a joint venture because they lacked the requisite trading expertise to profitably undertake the activity alone. In its discussion of the management of risk exposure of the specialist, the applicants originally stated, "The choice of the appropriate hedge to start with and the monitoring over the life of the option of that hedge are specialized and difficult tasks that require expertise and experience." Conducting exchange specialist activities requires the floor-trading experience and back-office capabilities of an experienced exchange member.

As of December 1984, only one commercial bank, Bank of America, acted as a specialist in exchange-traded currency options. In January 1984, the Office of the Comptroller of the Currency granted permission for Bank of America to act as the specialist in PHLX-traded options on the Deutschemark through a joint venture subsidiary with Tague Securities Corporation. The Board, however, was not bound to a determination that specialist activities were closely related to banking simply because one bank engages in the activity. Bank of America apparently considered it necessary to conduct its specialist activity through a joint venture with a securities firm, which reinforced the view that the activity requires experience and expertise not generally possessed by banks.

Given the applicant's acknowledgment of the importance of floor-trading expertise and experience to the specialist function, and the substantive absence of bank involvement in such an activity, the Board concluded that the proposed activities were not closely related to banking and thus denied the applicant's request.

A bank holding company applied to acquire all the voting shares of a company ("Company") that engages in a variety of data processing and data transmission activities for customers such as securities and commodities exchanges, brokerage firms, commercial banks, savings and loan associations, insurance companies, and investment managers. In addition to engaging in other nonbanking activities, the company designs and assembles the hardware that is used in connection with the services it provides. The Board had not previously considered whether the assembly of hardware designed for the processing and transmission of banking, financial and economic data is closely related to banking or permissible as an incidental activity.

The bank holding company stated that Company's assembly of hardware was incidental to its provision of data processing services because such assembly was necessary to assure the availability, reliability, and quality of components used by Company, and that stock quotation firms like Company could only assure such product characteristics by the design and assembly of the hardware that provides the quotation information. In support of the argument, the bank holding company asserted that competitors of Company also design and assemble the hardware that provides the Company service.

In view of the fact that finished hardware of the type provided by Company is available, and, in fact, is marketed by companies providing services similar to Company, the Board found that the continuation of Company's design and assembly of hardware activities could not be considered "necessary" to the Company's provision of its permissible data processing services, and thus could not be considered incidental to Company's provision of permissible services. As a condition for approval of the bank holding company's application to acquire all of the voting shares of Company, the Board required the bank holding company to divest of Company's hardware assembly activities within two years of the acquisition (Refer to 1986 FRB 497).

In 1971 and again in 1984, the Board issued for public comment proposals to expand the activities permissible to bank holding companies under section 4(c)(8). Included in those proposals was the provision of armored car services. The proposals would have authorized bank holding companies to provide fully insured transportation of cash, securities, and valuables (primarily between commercial customers and financial institutions) and such ancillary services as coin wrapping, change delivery, mail delivery, payroll-check cashing, servicing of automatic teller machines, and leasing safes to commercial customers.

In response to both the 1971 and 1984 proposals, the Board received various comments against adding this activity to the Regulation Y list of permissible nonbanking activities, primarily from armored car operators and their trade associations. The commenters maintained that the activity is not closely related to banking but, rather, is essentially a transportation activity requiring no banking expertise.

In view of the issues raised by the comments on this activity and the minimal interest by bank holding companies, the Board decided not to add the activity to the Regulation Y list of permissible activities. However, the Board stated it would consider individual applications for this activity (1973 FRB 898); 51 *Federal Register* 39,999 (1986). The Board expressed no opinion as to whether the activity would meet the *National Courier* test and would be a proper incident to banking.

In 1988, a bank holding company (the applicant) filed an application to engage in armored car activities through a de novo nonbank subsidiary. After notice of the application was published, the Board received comments opposing the proposal and was requested to order a formal hearing. In response, the Board published an order requiring a formal public administrative hearing on the application. One issue, among others, that the Board directed to be considered was whether the proposed armored car services were "so closely related to banking or managing or controlling banks as to be a proper incident thereto" under section 4(c)(8) of the BHC Act.

An administrative hearing was held on June 16 and July 11, 1989, before an administrative law judge (ALJ). The ALJ issued a recommended decision in which he concluded that the proposed armored car activities were not "closely related to banking" and recommended that the Board deny the application. The ALJ found that none of the *National Courier* criteria were demonstrated by the record. The ALJ's conclusion relied on certain operational distinctions between the proposed armored car services and the services banks traditionally perform themselves.

Following receipt of exceptions to the recommended decision, the Board reviewed the entire record of the proceedings and determined that the ALJ had erred in concluding that armored car services were not "closely related to banking." The Board concluded that, even accepting the factual findings, the slight operational distinctions cited in the recommended decision were not significant. The Board found that although there may be some distinctions between bank-provided armored car services and the proposed full-service, for-hire armored car service, the nature of the customers served and the economic basis of the services provided do not fundamentally alter the nature of the services. It was therefore clear to the Board that the services then provided by the applicant as well as other banks and bank holding companies to themselves and their customers are sufficiently "operationally and functionally similar" to the proposed service as to equip banking organizations particularly well to perform the proposed service, and hence fulfill the second *National Courier* test.

The Board also noted that bank holding companies are permitted to provide courier services for unaffiliated parties under section 225.25(b)(10) of Regulation Y. The only essential difference between the two services relates to the intrinsic value of the materials transported. The Board concluded that the services themselves were certainly functionally and operationally similar, thereby lending additional support to its favorable finding under the second *National Courier* test.

The Board also found that the third *National Courier* test was met, that the applicant had demonstrated "the dependence of banks on a specialized form of the proposed services." The Board found that the record amply demonstrated that banks are highly dependent upon the specialized transportation services provided by armored cars, which transport cash and valuables with a high degree of security. The applicant was proposing to engage in just those specialized services; it did not propose to start a general moving or trucking service. The record therefore supported a determination that the third *National Courier* test was also satisfied. Accordingly, the Board found, based on the record before it, that providing for-hire armored car services to the general public was an activity that is closely related to banking.

This determination, however, is only one of two steps needed for the Board to approve a nonbank activity for a bank holding company. The Board must also find that the activity is a "proper incident thereto." On this issue, the ALJ declined to make any factual or legal determinations concerning the proper-incident test or state branching laws. However, under the Board's rules (12 C.F.R. 262.4 (1990)), the ALJ was required to provide a recommended decision with regard to *all* unresolved issues prior to a final Board determination (12 C.F.R. 263.11). A final disposition on the application therefore was not possible at that juncture, and the Board remanded the case to the ALJ for a recommended decision on the proper-incident standard and other unresolved issues (see 1990 FRB 676).

In accordance with the Board's remand order, a second formal hearing was held before the ALJ. Additional evidence and post-hearing briefs were submitted, including evidence on the proper-incident test, in support of this and other unresolved issues. The ALJ then issued his supplemental decision, which again recommended denial of the application. The ALJ found that, in this case, the applicant's record failed to provide a definitive proposal on which the Board could make a determination under the proper-incident test. The ALJ found that the applicant had offered only a skeletal structure and operation plan that was fleshed out only to a limited extent at the hearings. In addition, the ALJ found the application and other facts of record to be deficient with regard to possible public benefits and adverse effects. The ALJ further determined that the record had not shown that the proposed activity, as structured, would be lawful under the branch-banking laws of the states in which the applicant proposed to operate.

Based on its review of the ALJ's supplemental decision and the remainder of the record, the Board determined that the record failed to support a finding that the proposed armored car activities, in this particular instance, would be a "proper incident" to banking. The Board therefore adopted the ALJ's recommendation to deny the application, but only on the narrow grounds of inconsistency of the proposal, as then structured, with section 23B of the Federal Reserve Act.

In its order, the Board stressed that the burden of proof is upon an applicant to establish that the nonbanking activity it proposes to conduct—in this case the provision of armored car services—is *not only* closely related to banking, *but also* a "proper incident thereto." The Board's review of the entire proceeding disclosed certain aspects of the application that appeared on its face to violate the arm's-length transaction requirement of section FRA 23B. In the Board's view, a proposal to engage in nonbanking activities pursuant to section 4(c)(8) will not produce net benefits to the public, as required under the public-benefit test, if it violates the kind of statutory requirement, such as section 23B, that was specifically intended to prevent unsafe or unsound banking practices when a bank affiliate engages in nonbanking activities.

The first potential violation would arise from the fact that the proposed service by the bank holding company's nonbank subsidiary to its bank affiliate would cost more than the bank was paying for similar armored car services provided by an unaffiliated provider. The Board noted that although there may be a justification for the higher pricing structure that would meet the standards set forth in section 23B, no justification appeared in the record. The Board could therefore only conclude that the bank may not be obtaining services from the nonbank provider "on terms . . . at least as favorable to such bank . . . as those prevailing for comparable transactions with or involving other nonaffiliated companies," as required by section 23B.

The second potential violation of section 23B arose from the absence of a "precise breakdown of the services the nonbank subsidiary will purchase from the bank holding company's subsidiary bank and the projected cost of those services," as called for in the Board's prior order in this matter. The applicant provided no detailed cost figures for the wide variety of services the applicant's banking subsidiary was to provide to the nonbank subsidiary. The bank holding company proposed to charge the bank subsidiary an "estimated" percentage (the fee was admitted to have had no "factual basis" reflected in the record) of the nonbank subsidiary's direct operating expenses to cover all of the services provided by the bank holding company's banking subsidiary to its nonbanking subsidiary. Under section 23B, the provision of services by a bank to an affiliate must be paid for on an arm's-length basis. This requires, where there are no comparable transactions between a bank and a nonaffiliate, that the bank's provision of services to its affiliate be on terms that in good faith would be offered to, or would apply to, nonaffiliated companies. The Board found that the banking subsidiary would not in good faith have provided back-office services to an unaffiliated armored car company by charging a flat fee that had no factual basis and without determining the relationship of the fee to the actual costs of providing the services. Therefore, the potential violations of section 23B, on their face, constrained the Board to deny the application as it was structured (see 1993 FRB 352).

The Board noted its denial did not affect the Board's prior ruling in the case that armored car services are closely related to banking, and was without prejudice to the filing of a new proposal from which a favorable proper-incident finding could be made.

Impermissible Activities (Computer Output Microfilm Service) Section 3700.11

The authority of bank holding companies under section 225.25(b) of the Board's Regulation Y to engage in data processing activities is intended to limit those activities to providing facilities that perform banking functions, such as check collection, or other similar functions for customers that are depository or other similar institutions, such as mortgage companies. With respect to this activity, the Board issued an interpretation that authorizes bank holding companies to provide the formatting for computer output microfilm only as an output option for data otherwise permissibly processed by the holding company system (1982 FRB 552).

A foreign banking organization subject to the BHC Act applied for the Board's approval under section 4(c)(8) to engage *de novo* through its subsidiary (Company), in the exchange and clearance of: (1) exchange traded securities options and other securities and (2) futures and options on futures that relate to financial instruments. The proposed customer base was comprised primarily of market makers and other professional floor traders dealing for their own accounts. Most of the professional traders were expected to be market makers and specialists, including individuals, small partnerships, or small corporations, that were to trade primarily on the Chicago Board of Options Exchange (CBOE).[1]

Previously, the Board approved the execution and clearance of financial instruments as a permissible nonbanking activity.[2] Under Board precedent, the nonbanking subsidiary engaged in such services has generally serviced a broad range of retail and/or institutional customers. Under this proposal, Company was to clear trades for a specialized customer base comprised primarily of professional floor traders that executed trades for their own accounts.

Nonbanking subsidiaries of BHCs, operating in accordance with prior Board approvals, have generally performed both execution and clearance services. By performing both services, the nonbank subsidiary is able to control risk because it executes the majority of the transactions that it clears. The nonbank subsidiary can refuse to execute an order that it deems inappropriate or it can require additional funds or collateral from the customer *in advance of* and as a condition to executing the transaction.

Unlike prior Board cases, Company plans to provide primarily clearing services. As a clearing agent, it would guarantee the financial performance of its customers to the clearing organization of the exchanges on which it operates.[3]

After the start of trading on any day, Company would be obligated to settle each trade entered into by its customers even when the customer may not have the financial resources to honor its obligation. Since the trades have already been executed by the time that they would be presented to Company by these professional floor traders, Company would be unable to decline transactions that posed unacceptable risk. On an intraday basis, professional traders, who are not employees of Company and who trade in relatively volatile instruments, could expose Company to financial risks beyond the trader's capacity to repay and beyond Company's own resources.

The applicants proposed to limit the risk exposure created by Company's activities through the establishment of risk guidelines and procedures that were intended to monitor the intraday trading activities of its floor traders. No such system had been developed for the industry for monitoring the intraday activities of floor traders on a real-time basis. Most of Company's traders would primarily operate on exchanges that used an open outcry system rather than an electronic trading system. As a result, Company may not know its real-time committed positions until the end of the trading day and therefore the possibility existed that a floor trader could exceed Company's risk limits and incur substantial losses before Company could act to mitigate its credit risk exposure. Professional floor traders generally operate with much higher levels of leverage than the average brokerage customer of a securities firm. Since most of Company's customers were to be market makers, such traders could at times take positions contrary to the market.

1. Market makers on the CBOE are floor traders that perform a dealer function by trading for their own accounts, at their own risk, and for their own profit. Market makers compete with other market makers assigned to the same class of options. In contrast, floor brokers on the CBOE generally act only as an agent, executing customer and firm proprietary orders.

2. Refer to sections 225.25(b)(3) (trust companies engaging in agency activities related to the clearing of securities); 225.25(b)(15) (securities brokerage activities); 225.25(b)(18) (execution and clearance of futures and options on futures) of the Board's Regulation Y.

3. With this arrangement clearing firms may also be liable for the obligations of other members of the exchange. Generally, losses of a failed member firm are covered in the following order:

1. by the assets of the failed firm;
2. by the excess capital of the clearing organization;
3. by the guarantee fund of the clearing organization; and
4. by direct assessments made on surviving member firms.

Since member clearing firms are the ultimate source of capital for both the clearing association and the guarantee fund, the surviving firms will bear the ultimate burden of any loss.

Such circumstances potentially expose the clearing firms to substantial losses. If the clearing firm exhausts all or most of its capital in funding the obligations of floor traders that have lost substantial amounts of money in trading, parent companies of the clearing firm may have to cover the firm's remaining contingent liabilities. Such risks may be acceptable for some nonbanking institutions currently providing these services, but they may be inappropriate for U.S. domiciled banking organizations.

The Board carefully considered the benefits of the proposal, including the Applicants entry into a concentrated market, its experience with similar activities on foreign exchanges, and Company's proposed risk management systems. The Board concluded that the proposal, as it was currently structured (including the absence of an effective means to monitor and limit the potential credit risk exposure to the parent bank holding company) involved potential adverse effects that outweighed the potential public benefits. The Board thus determined that the balance of public interest factors that it is required to consider under section 4(c)(8) of the BHC Act were not favorable. The application was denied by the Board on January 9, 1991 (1991 FRB 189).

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, footnote 1 is revised to indicate that SR-12-17/CA-12-14 supersedes SR-99-15. See section 2124.05 of this manual.

The Gramm-Leach-Bliley Act (the GLB Act) became effective on March 11, 2000. The GLB Act authorized affiliations among banks, securities firms, insurance firms, and other financial companies. To further this goal, the GLB Act amended section 4 of the BHC Act to allow a bank holding company (BHC) or foreign bank that qualifies as a financial holding company (FHC) to engage in a broad range of activities that (1) the GLB Act defines as financial in nature or incidental to a financial activity, or (2) the Board, in consultation with the Secretary of the Treasury, determines to be financial in nature or incidental to a financial activity. Furthermore, section 4 of the BHC Act authorizes an FHC to engage in designated financial activities, including insurance and securities underwriting and agency activities, merchant banking, and insurance company portfolio investment activities.

The GLB Act includes conditions that must be met for a BHC or a foreign bank to be deemed a "financial holding company" and engage in expanded activities. The GLB Act also allows an FHC to seek Board approval to engage in any activity that the Board determines (1) is complementary to a financial activity and (2) does not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. BHCs that do not qualify as FHCs are limited to engaging in those nonbanking activities that were permissible under section 4(c)(8) of the BHC Act before enactment of the GLB Act.

The GLB Act provides that, in most cases, an FHC may engage in or acquire the shares of a company that is engaged in financial activities without obtaining prior approval from the Board. An FHC is instead required to provide a *post-commencement* notice to the Board within 30 days after commencing a financial activity or acquiring a company. See section 4(k) of the BHC Act. Prior approval from the Board is required to acquire or engage in the activities of a savings association.

3900.0.1 FHC SUPERVISORY OVERSIGHT AUTHORITY

Under the GLB Act, the Federal Reserve has supervisory oversight authority and responsibility for BHCs, including BHCs that operate as FHCs. The GLB Act sets forth parameters for operating relationships between the Federal Reserve and other regulators. The statute differentiates between the Federal Reserve's relations with (1) depository institution regulators and (2) functional regulators, which include insurance, securities, and commodities regulators. There should be minimal, if any, noticeable change in the well-established relationships between the Federal Reserve as BHC (including FHC) supervisor and the bank and thrift supervisors (federal and state). The Federal Reserve's relationships with functional regulators will, in practice, depend on the extent to which an FHC is engaged in functionally regulated activities; those relationships will also be influenced by existing working arrangements.

The Federal Reserve's supervisory oversight role is that of an umbrella supervisor concentrating on a consolidated or group-wide analysis of an organization. Umbrella supervision is not an extension of more traditional bank-like supervision throughout an FHC. The FHC framework is consistent with and incorporates principles that are well established for BHCs. The FHC supervisory policy focuses on addressing supervisory practice for and relationships with FHCs, particularly those that are engaged in securities or insurance activities. See SR-00-13.

3900.0.2 ROLES OF SUPERVISORS

The Federal Reserve is responsible for the consolidated supervision of FHCs. In this regard, the Federal Reserve will assess the holding company on a consolidated or group-wide basis with the objective of ensuring that the holding company does not threaten the viability of its depository institution subsidiaries. The manner in which the Federal Reserve fulfills this role will likely evolve along with the activities and structure of FHCs, and it may differ depending on the mix of banking, securities, and insurance activities of an FHC.

Depository institution subsidiaries of FHCs are supervised by their appropriate primary bank or thrift supervisor (federal and state). The GLB Act did not alter the role of the Federal Reserve, as holding company supervisor, vis-a-vis the primary supervisors of FHC-associated bank and thrift subsidiaries. Traditionally, the Federal Reserve has relied to the fullest extent possible on those supervisors.

Nonbank (or nonthrift) subsidiaries engaged in securities, commodities, or insurance activities are supervised by their appropriate functional regulators. Such functionally regulated subsidiaries include a broker, dealer, investment adviser, and investment company registered with and regulated by the Securities and Exchange Commission (SEC) (or, in the case of an investment adviser, registered with any state); an insurance company or insurance agent subject to supervision by a state insurance regulator; and a nonbank subsidiary engaged in activities regulated by the Commodity Futures Trading Commission (CFTC).

3900.0.3 FHC SUPERVISION OBJECTIVES

The Federal Reserve, as umbrella supervisor, will seek to determine that FHCs are operated in a safe and sound manner so that their financial condition does not threaten the viability of affiliated depository institutions. Oversight of FHCs (particularly those engaged in a broad range of financial activities) at the consolidated level is important because the risks associated with those activities can cut across legal entities and business lines. The purpose of FHC supervision is to identify and evaluate, on a consolidated or group-wide basis, the significant risks that exist in a diversified holding company to assess how these risks might affect the safety and soundness of depository institution subsidiaries.

Accordingly, the Federal Reserve will focus on the financial strength and stability of FHCs, their consolidated risk-management processes, and overall capital adequacy. The Federal Reserve will review and assess the internal policies, reports, and procedures and the effectiveness of the FHC consolidated risk-management process. The appropriate bank, thrift, or functional regulator will continue to have primary responsibility for evaluating risks, hedging, and risk management at the legal-entity level for the entity or entities that it supervises.

FHC supervision is not intended to impose bank-like supervision on FHCs, nor is it intended to duplicate or replace supervision by the primary bank, thrift, or functional regulators of FHC subsidiaries. Rather, FHC supervision seeks to protect the depository institution subsidiaries of increasingly complex organizations with significant interrelated activities and risks, while not imposing an unduly duplicative or onerous burden on the subsidiaries of the organization. Effective financial holding company supervision requires—

1. strong, cooperative relationships between the Federal Reserve and primary bank, thrift, and functional regulators and foreign supervisors (these relationships respect the individual statutory authorities and responsibilities of the respective supervisors, but also allow for enhanced information flows and coordination so that individual responsibilities can be carried out effectively without creating duplication or excessive burden);
2. substantial reliance by the Federal Reserve on reports filed with or prepared by bank, thrift, and functional regulators, as well as on publicly available information for both regulated and nonregulated subsidiaries; and
3. continued reliance on the risk-focused supervision and examination process and on market discipline.

3900.0.4 FHC SUPERVISION IN PRACTICE

The supervisory activities of the Federal Reserve fall into three broad categories: (1) information gathering, assessments, and supervisory cooperation; (2) ongoing supervision; and (3) promotion of sound practices and improved disclosure.

3900.0.4.1 Information Gathering, Assessments, and Supervisory Cooperation

To fulfill its GLB Act responsibilities, the Federal Reserve needs to interact closely and exchange information with the primary bank, thrift, and functional regulators. The Federal Reserve will foster strong relationships with senior management and the boards of directors of FHCs, and have access to timely information from FHCs. These relationships will need to include heads of significant business lines and key internal-audit, control, and risk-management officials in order to understand how risk-management and internal-control policies and procedures established at the consolidated level are being implemented and assessed. To achieve these objectives, Federal Reserve supervisory staff will take the following actions:

1. *Regularly assess an FHC's centralized risk-management and control processes.* Such assessments are necessary to understand an organization's overall risk profile, identify material contributions to core risks, and determine how such risks are being managed and controlled on a consolidated basis.
2. *Perform limited, targeted transaction testing.* The purpose of this transaction testing is to verify that the risk-management systems of the FHC are adequately and appropriately measuring and managing areas of risk for the organization, and to confirm that laws and regulations applicable to the FHC and within the jurisdiction of the Federal Reserve are being observed.
3. *Have periodic discussions with FHC senior management and boards of directors.* Such discussions will enable the Federal Reserve to build relationships with key personnel and to understand changing activities and the evolving risk profile of the consolidated organization. Periodic discussions also will provide a forum for supervisory staff to present any findings or concerns related to the activities of the group as a whole or to business lines that cut across legal entities.
4. *Have periodic discussions with key personnel.* Discussions will be held with the personnel responsible for corporate management and control functions, such as heads of business lines, risk management, internal audit, and internal control.

When performing the above tasks, Federal Reserve supervisory staff, to the extent possible, will coordinate their actions with those of the primary bank, thrift, and functional regulators of the FHC's subsidiaries. For example, to understand the risks and risk-management systems of an FHC at the consolidated level, the Federal Reserve will need information concerning assets or liabilities booked in significant bank, thrift, and functionally regulated subsidiaries within the FHC group. The primary bank, thrift, and functional regulators of such subsidiaries also may need information from the FHC to perform their respective statutory mandates. To assist in sharing needed information, Federal Reserve supervisory staff should do the following:

1. *Have periodic meetings with the primary bank, thrift, and functional regulators of an FHC's subsidiaries.* The purpose of these meetings is to develop an understanding of the risk profiles of the individual regulated legal entities and their relation to the FHC's overall risk profile. These meetings also should be used, when appropriate, to share information regarding supervisory plans and to coordinate supervisory activities and follow-up, as needed.
2. *Review the examination findings of primary bank, thrift, and functional regulators (and their self-regulatory organizations) together with other relevant information.* The purpose of this review is to develop a consolidated picture of the FHC's financial condition and risk profile, the effectiveness of risk-management and internal-control policies, and the implications for the affiliated depository institutions.
3. *Make available to primary bank, thrift, and functional regulators, to the extent permissible, pertinent information regarding the FHC.* Included is information on the financial condition, risk-management policies, and operations of an FHC that may have a material impact on individual regulated subsidiaries, as well as information concerning transactions or relationships between the regulated subsidiaries and other subsidiaries within the FHC group. This process will assist supervisors in performing their statutory and supervisory responsibilities over regulated subsidiaries.
4. *Participate in the sharing of information among international supervisors, consistent with applicable law.* The purpose of this exchange is to ensure that an FHC's global activities are supervised on a consolidated basis and to minimize material gaps in supervision.
5. *Review internal-audit and management reports and publicly available information (including market information on equity and debt prices of the consolidated organization), as well as reports and statistics collected by other regulators, including regulators of depository institution subsidiaries.* To limit regulatory burden, this information should be obtained, to the fullest extent possible, from (1) the parent organization; (2) primary bank, thrift, and functional regulators of the FHC's regulated subsidiaries; and (3) publicly available sources, such as externally audited financial statements.

3900.0.4.2 Ongoing Supervision

3900.0.4.2.1 FHC Structure, Management, and the Applications Process

The Federal Reserve is responsible for understanding the consolidated organization's legal, organizational, and risk-management structure; major business activities; and risk exposures and risk-management systems. The Federal Reserve needs to understand the nature and degree of involvement of the board of directors in overseeing their organization's risk-management and control process at the consolidated group level. The Federal Reserve, when considering any formal application, declaration, or notification at the FHC level, will coordinate, as appropriate, with primary bank, thrift, and functional regulators.

3900.0.4.2.2 Reporting and Examination

The Federal Reserve will rely, to the fullest extent possible, on reports that an FHC or its subsidiaries are required to file with federal or state authorities (or self-regulatory organizations) or on reports that are prepared by the federal or state authorities. The Federal Reserve will rely on routinely prepared management reports, publicly reported information, and externally audited financial statements. The Federal Reserve also will rely to the fullest extent possible on the examination of an FHC's bank and nonbank subsidiaries by their appropriate primary bank, thrift, and functional regulators (and their self-regulatory organizations).

If supervisory staff requires a specialized report from a functionally regulated subsidiary of an FHC, staff will first request it from the subsidiary's appropriate functional regulator. In the event that the report is not made available to the Federal Reserve, supervisory staff may obtain the report directly from the functionally regulated subsidiary if it is necessary to assess—

1. a material risk to the FHC or any of its depository institution subsidiaries;
2. compliance with any federal law that the Federal Reserve has specific jurisdiction to enforce against the FHC or a subsidiary; or
3. the FHC's systems for monitoring and controlling financial and operational risks that may pose a safety-and-soundness threat to a depository institution subsidiary.

The Federal Reserve may examine a functionally regulated subsidiary under certain circumstances. Before examining a functionally regulated subsidiary, supervisory staff should first seek to obtain the necessary information from the appropriate functional regulator. If an examination is determined to be necessary, the Federal Reserve should coordinate its actions with the appropriate functional regulator. An examination may be conducted when the Federal Reserve has reasonable cause to believe (or reasonably determines) that—

1. the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution,
2. the examination is necessary to be adequately informed about the FHC's systems for monitoring and controlling the financial and operational risks that may pose a safety-and-soundness risk to a depository institution subsidiary; or
3. the subsidiary is not in compliance with any federal law that the Board has specific jurisdiction to enforce (and the Board cannot determine compliance by examining the FHC or its affiliated depository institutions).

The Federal Reserve, consistent with its current practice, will continue relying to the fullest extent possible on the work performed by bank, thrift, and functional regulators to validate that material risks are measured and managed adequately at the regulated subsidiary level. Where necessary and appropriate, and consistent with (1) through (3) immediately above, the Federal Reserve may conduct or participate in reviews at banks, thrifts, or functionally regulated subsidiaries to validate that risk-management and internal-control policies established at the consolidated level are being implemented effectively.

For an FHC subsidiary that is not supervised by a bank, thrift, or functional regulator, the Federal Reserve will obtain information from the subsidiary, as appropriate and necessary, to assess the financial condition of the FHC as a whole. In addition, the Federal Reserve will conduct examinations of such subsidiaries, if necessary, to be informed about (1) the nature of the subsidiary's operations and financial condition, (2) the subsidiary's financial and operational risks that may pose a threat to the safety and soundness of any depository institution subsidiary of the FHC, and (3) the systems for monitoring and controlling such risks. Under the GLB Act, the Federal Reserve may not examine any subsidiary of an FHC that is an investment company registered with the SEC and that is not itself a BHC.

3900.0.4.2.3 Capital Adequacy

The Federal Reserve is responsible for assessing consolidated capital adequacy for FHCs, with the ultimate objective of protecting the insured depository subsidiaries from the effects of disruptions in the nonbank portions of the organization. Capital adequacy will be assessed in relation to the risk profile of the consolidated organization. The Federal Reserve will review the FHC's internal risk assessment and related capital-analysis process for determining the adequacy of its overall capital position. Such a review will include consideration of current and future economic conditions, business-development plans for the future, possible stress scenarios, and internal risk-control and audit procedures. As BHCs, FHCs are subject to the Federal Reserve's holding company capital guidelines, which set forth minimum capital ratios that serve as tripwires for additional supervisory scrutiny and corrective action. The Federal Reserve will review these requirements as they apply to FHCs and may, if warranted, adapt the manner in which they apply to FHCs that engage in a broad range of financial activities.

Although the Federal Reserve is responsible for assessing the consolidated capital adequacy of FHCs, the primary bank, thrift, or functional regulators of FHC subsidiaries will continue to set and enforce applicable capital requirements for the regulated entities within their jurisdiction. Under the GLB Act, the Federal Reserve may not establish separate capital adequacy requirements for an FHC subsidiary that is in compliance with the capital requirements of its functional regulator.

Consistent with current practice, the Federal Reserve will continue to place significant reliance on the primary bank, thrift, or functional regulator's analysis of the capital adequacy of a regulated subsidiary. That analysis will be a significant input in the Federal Reserve's assessment of an FHC's consolidated capital adequacy, especially when a securities broker-dealer or insurance company is a predominant part of an FHC.

Several issues become particularly important when assessing the consolidated capital adequacy of FHCs with functionally regulated subsidiaries. The capital adequacy requirements that have been established for banking, securities, and insurance entities by their respective regulators reflect varying definitions of the elements of capital and varying approaches to asset and liability valuations. Yet techniques for assessing capital adequacy must be able to identify situations such as double or multiple leverage or double-gearing. In such cases, the actual capital protection may be overstated.

3900.0.4.2.4 Intra-Group Exposures and Concentrations

Intra-group exposures, including servicing arrangements and risk concentrations, have the potential to threaten the condition of regulated entities. Intra-group exposures may be significant at large, complex FHCs, especially those that operate their businesses on global lines that cut across legal entities within the firm. The Federal Reserve's focus in this area is the potential impact of intra-group exposures and concentrations on insured depository institution subsidiaries of an FHC.

Risk concentrations can take many forms, including exposures to one or more counterparties or related entities, industry sectors, and geographic regions. For risk concentrations, the holding company supervisor is uniquely positioned to understand the combinations of exposures within an organization across all legal entities. This understanding is critical at the group level—risk concentrations that are prudent on a legal-entity basis may aggregate to an unsafe level for the consolidated organization. The Federal Reserve will monitor intra-group exposures and risk concentrations as follows:

1. The appropriate primary bank and thrift regulators will continue to monitor and enforce section 23A and 23B restrictions at the bank or thrift level. The Federal Reserve will focus on assessing whether the FHC monitors and ensures compliance with these statutory requirements. The Federal Reserve plans to begin collecting data from each depository institution subsidiary of BHCs, including FHCs, on their covered transactions with affiliates that are subject to sections 23A and 23B and will share that data with primary bank and thrift regulators.
2. Functional regulators will continue to monitor and enforce any intra-group exposure restrictions that may apply to the regulated entities under their jurisdictions.
3. The Federal Reserve will focus on understanding and monitoring related-party expo-

sures at the group level (including areas such as servicing agreements, derivatives exposures, and payments-system exposures). An important emphasis will be the extent to which risk management in a group's subsidiary depository instutions depends on transactions with affiliates.

4. The Federal Reserve will focus on management's effectiveness in monitoring and controlling intra-group exposures and risk concentrations. The Federal Reserve will consider how an organization's risk-management processes measure and manage group-wide risk concentrations.

3900.0.4.2.5 Enforcement Powers

The Federal Reserve is authorized generally to take enforcement action against FHCs and their nonbank subsidiaries. The primary bank and thrift supervisors have the authority to take enforcement action against the banks and thrifts under their respective jurisdictions. Under the GLB Act, the Federal Reserve may take enforcement action against a functionally regulated subsidiary of an FHC, but only when such action is necessary to prevent or redress an unsafe or unsound practice or breach of fiduciary duty that poses a material risk either to (1) the financial safety, soundness, or stability of an affiliated depository institution or (2) the domestic or international payments system. In such circumstances, the Federal Reserve may only take the action if it is not reasonably possible to protect effectively against the material risk through an action directed at or against an affiliated depository institution.

Under any circumstances, the Board may take enforcement action against a functionally regulated subsidiary to enforce compliance with any federal law that the Federal Reserve has specific jurisdiction to enforce against the subsidiary. If the Federal Reserve believes that an enforcement action against a functionally regulated entity is necessary, the Federal Reserve will notify the entity's appropriate functional regulator and, whenever practical, will coordinate such an action with any action taken by the functional regulator. It is expected that the Federal Reserve will not take an enforcement action against a functionally regulated subsidiary (or a person associated with the subsidiary) if the problem involves factors and statutes that are the primary responsibility of the functional regulator.

Under the existing bank holding company framework, the Federal Reserve coordinates enforcement actions with the primary bank and thrift regulators, possibly with some adaptation of the action for the holding company context (such as limitations on parent company debt or dividends). The Federal Reserve will continue to coordinate enforcement actions with these regulators. Similarly, the Federal Reserve will coordinate with functional regulators when formulating and issuing enforcement actions that involve or may have an impact on functionally regulated subsidiaries.

3900.0.4.3 Promotion of Sound Practices and Improved Disclosure

The Federal Reserve can promote sound practices in a number of ways, such as by monitoring trends in risk exposures and risk-management practices across the FHC population through a combination of efforts, including—

1. regular discussions, centered on specific issues and emerging risks, with FHC management;
2. regular meetings with primary bank, thrift, and functional regulators to explore and discuss issues of mutual interest or concern;
3. interagency working groups or specialty teams to gain early insight into risks that cut across the various entities of a conglomerate or groups of conglomerates; and
4. industry conferences on relevant topics of interest.

These initiatives will contribute to the development of sound practices that the Federal Reserve and the primary bank, thrift, and functional regulators can communicate to the senior management and boards of directors of the FHCs, as well as to the senior management of their bank and nonbank subsidiaries.

Improved transparency and public disclosure can meaningfully supplement the efforts of supervisors to monitor the increasingly complex and global activities of diversified banking organizations. Consistent with sound accounting principles, practices, and depository institution safety-and-soundness practices, the Federal Reserve will participate in efforts to enhance disclosures that will illuminate group-wide activities, risk exposures, risk management, controls, and intra-group exposures.

3900.0.4.4 Supervisory Response to Challenges Posed by FHCs

The Federal Reserve's response to the supervisory challenges of FHCs has been in the context of the consolidated supervision of BHCs.[1] Examples include greater reliance on risk-focused supervision; strengthening relationships with senior management; improving coordination with other federal, state, and international regulatory and supervisory authorities; greater reliance on specialty teams, sound-practices papers, and public disclosures; and simplification of the applications process.

The more diversified FHCs present new supervisory challenges. To address these challenges, the Federal Reserve will continue to strengthen—

1. cooperative arrangements with bank and thrift regulators, the SEC, the CFTC, state insurance and securities regulators, and foreign supervisors;
2. relationships with the FHC management and personnel responsible for significant risk-management functions and, when necessary, the management of the organization's nonbank subsidiaries;
3. information flows that provide supervisors with relevant, up-to-date information without imposing an unwarranted burden on financial organizations;
4. techniques for evaluating capital adequacy for FHCs engaged in an expanded range of nonbank financial activities;
5. public disclosures and market discipline;
6. techniques for assessing the overall risk profile of FHCs and the implications for affiliated depository institutions; and
7. incentives for FHCs to continually review and improve their risk-management processes, internal controls, and audit practices.

The Federal Reserve is committed to working constructively and cooperatively with all regulators involved in overseeing the activities of FHCs and their bank and nonbank subsidiaries.

1. The Federal Reserve's framework for supervising large complex banking organizations (LCBOs) is described in SR-12-17/CA-12-14, "Consolidated Supervision for Large Financial Institutions." See section 2124.05.

To become a financial holding company (FHC), a domestic bank holding company (BHC) must file a written declaration with the appropriate Federal Reserve Bank. This declaration should contain the following information:

1. A statement that the BHC elects to be an FHC.
2. The name and head-office address of the company and each depository institution controlled by the company. For purposes of the election process for both domestic BHCs and foreign banks, the term "depository institution" here means any national bank, state-chartered bank, federal branch of a foreign bank, insured branch of a foreign bank, savings association, savings bank, and industrial bank. It also includes any trust company that engages in the business of receiving deposits other than trust funds. (See 12 U.S.C. 1813.) A depository institution does not have to have FDIC insurance.
3. A certification that all depository institutions controlled by the company are well capitalized as of the date the company files its declaration.
4. The capital ratios for all relevant capital measures (as defined in section 38 of the Federal Deposit Insurance Act), as of the close of the previous quarter, for each depository institution controlled by the company on the date the company files its declaration.
5. A certification that all depository institutions controlled by the company are well managed as of the date the company files its declaration.

A depository institution is well managed if, at the most recent inspection or examination or subsequent review by its appropriate federal banking agency, the institution received (1) at least a satisfactory composite rating and (2) at least a satisfactory rating for management, if such a rating is given. In the case of a depository institution that has not received an inspection or examination rating, a depository institution is well managed if the Board has determined, after a review of the depository institution's managerial and other resources and after consulting with the depository institution's appropriate federal and state banking agency, that the institution is well managed. In addition, a depository institution that results from the merger of two or more depository institutions that are well managed will be considered to be well managed unless the Board determines otherwise after consulting with the appropriate federal banking agency for each depository institution involved in the merger.

A depository institution that results from the merger of a depository institution that is well managed with one or more depository institutions that are not well managed or that have not been examined will be considered to be well managed, if the Board determines that the resulting institution is well managed. The Board makes this determination after a review of the managerial and other resources of the resulting institution and after consulting with the appropriate federal and state banking agencies for the institutions involved in the merger, as applicable.

The Gramm-Leach-Bliley Act (the GLB Act) also requires that all the insured depository institutions controlled by the FHC at the time of the declaration must be rated satisfactory or better under the Community Reinvestment Act (CRA). When determining whether the insured depository institutions controlled by a BHC meet the CRA requirement, the Federal Reserve excludes an institution that was acquired during the 12 months preceding the date the company filed its declaration. To qualify for this exception, (1) the company must have submitted the depository institution's affirmative correction plan to the appropriate federal banking agency and (2) the agency must have accepted the plan.

A BHC must file its declaration to become an FHC with the appropriate responsible Reserve Bank. A BHC's election to become an FHC is effective on the thirty-first day after the date that a complete declaration was received, unless the Board notifies the company before that time that the election is ineffective. The Board or the appropriate Federal Reserve Bank also may notify a BHC in writing that its election to become an FHC is effective before the thirty-first day after the date that a complete declaration was filed.

When an FHC's declaration becomes effective, it may engage in the expanded financial activities available to such companies. If, however, the Board has timely notified a BHC that its declaration is ineffective, the BHC will not be considered an FHC and may not begin to engage in any expanded activities.

A company that is not a BHC may simultaneously submit an application under section 3(a)(1) of the Bank Holding Company Act (BHC

Act) to become a BHC and to request to become an FHC on consummation of that transaction. The company must (1) state that it seeks to become an FHC on consummation of its section 3 proposal to become a BHC and (2) certify that each depository institution that would be controlled by the company on consummation of the section 3 proposal will be both well capitalized and well managed on the date of consummation. To coordinate action on these two requests, the acceptance of the declaration as complete does not occur until the date the company lawfully consummates its section 3 proposal and becomes a BHC. A simultaneous declaration will not be effective if the Board notifies the company at any time before consummation that (1) any depository institution that would be controlled by the company on consummation will not be well capitalized and well managed or (2) any insured depository institution that would be controlled by the company on consummation has not achieved at least a satisfactory rating at its most recent CRA examination. An insured depository institution that is controlled or would be controlled by a company filing a simultaneous declaration and section 3(a)(1) application to become a BHC may not be excluded for the purposes of evaluating the CRA performance record under this provision or the general FHC certification requirements of section 225.82(d) of Regulation Y.

In most cases, an FHC may, without providing prior notice to or obtaining prior approval from the Board, conduct an activity that is financial in nature or incidental to a financial activity (a financial activity). (See section 225.85(a)(1) of Regulation Y.) An FHC may conduct a financial activity by engaging directly in the activity or by acquiring and retaining the shares of any company that is engaged exclusively in one or more financial activities. An FHC may conduct a financial activity at any location inside or outside of the United States, subject to the laws of the jurisdiction in which the activity is conducted. A company acquired or to be acquired by an FHC also may engage in other activities that are permissible for an FHC, in accordance with any applicable notice, approval, or other requirements.

An FHC may acquire more than 5 percent of the voting shares or control of a company that is not engaged exclusively in activities that are financial in nature, incidental to financial activities, or otherwise permissible for the acquiring FHC. (See section 225.85(a)(3) of Regulation Y.) To do so, the acquisition must meet three requirements:

1. The company to be acquired must be substantially engaged in activities that are financial in nature, incidental to a financial activity, or otherwise permissible for the FHC under section 4(c) of the BHC Act. A company is considered to be substantially engaged in permissible activities if at least 85 percent of the company's consolidated total annual gross revenues is derived from and at least 85 percent of the company's consolidated total assets is attributable to the conduct of activities that are financial in nature, incidental to a financial activity, or otherwise permissible for an FHC under section 4(c) of the BHC Act. An FHC's management should consult with Board staff if they are uncertain whether a proposed acquisition meets this standard.
2. The FHC must comply with the notice requirements of section 225.87 of Regulation Y. The acquired company must conform, terminate, or divest, within two years of the date the FHC acquires shares or control of the company, all activities that are not financial in nature, incidental to a financial activity, or otherwise permissible for the FHC under section 4(c) of the BHC Act. Although an FHC may acquire any percentage of shares or control of a company engaged in limited impermissible activities, the FHC needs only to provide a post-transaction notice if such an acquisition results in control of the company.
3. After being acquired by an FHC, the company engaged in impermissible activities may not engage in or acquire a company engaged in any activity that is not permissible for the FHC.

Section 225.85(c) of Regulation Y identifies two circumstances in which Board approval is still required to engage in financial activities. First, prior approval in accordance with section 4(j) of the BHC Act and section 225.24 of Regulation Y is required to acquire more than 5 percent of the voting shares or control of a savings association or any company that owns, operates, or controls a savings association. Second, the Board may, in the exercise of its supervisory authority, require an FHC to provide it with prior notice or obtain prior Board approval if circumstances warrant. The GLB Act did not change in any way the requirement that a company receive prior Board approval under section 3 of the BHC Act before acquiring shares or control of a bank.

Section 225.87(a) of Regulation Y requires an FHC that commences an activity, or that acquires control or shares of a company engaged in an activity under section 225.86 of Regulation Y, to provide written notice to the appropriate Reserve Bank within 30 calendar days after commencing the activities or consummating the acquisition. The notice must be provided on the FR Y-10 form, obtained from the Board or any Reserve Bank. This requirement also applies to an activity that the FHC may engage in under section 4(c)(8) of the BHC Act that is incorporated under section 4(k) of the act.

There are two circumstances in which notice to the Board is not required to engage in an activity: (1) when an FHC acquires shares of a company without acquiring control of the company, or (2) when an FHC is engaged in securities underwriting, dealing, or market-making activities described in section 4(k)(4)(E), merchant banking investment activities conducted pursuant to section 4(k)(4)(H), or insurance company investment activities conducted pursuant to section 4(k)(4)(I) of the BHC Act, and has provided the System with the appropriate notice regarding the relevant activity. (See section 225.87(b) of Regulation Y.) Under these circumstances, the FHC must provide written notice to the Board within 30 days after acquiring, as part of a merchant banking activity under section 4(k)(4)(H) or an insurance company investment activity under section 4(k)(4)(I) of the BHC Act, more than 5 percent of any company at a cost that exceeds 5 percent of the FHC's tier 1 capital or $200 million, whichever is less.

3901.0.1 SUPERVISORY CONCERNS

In some instances, a U.S. BHC or a foreign bank may meet the statutory requirements to be an FHC, but its capital strength and managerial resources are less than satisfactory on a consolidated basis. In this situation, the Federal Reserve may have supervisory concerns about the consolidated entity although it technically qualifies as an FHC. The Federal Reserve may, in the exercise of its supervisory authority, restrict or limit the conduct of new activities or future acquisitions of an FHC, or take other appropriate action, if it finds that the FHC does not have the financial or managerial resources to conduct the activity or make the acquisition. This supervisory action could be based, for example, on a determination that the company does not have adequate capital or risk-management systems to conduct a specific activity in a safe and sound manner and may involve the issuance of cease-and-desist orders, the execution of written agreements, or other appropriate supervisory action.

3901.0.2 HOLDING COMPANY FAILS TO CONTINUE MEETING FHC CAPITAL AND MANAGEMENT REQUIREMENTS

If a domestic bank holding company has made an effective election to be an FHC, and the Board finds that any depository institution subsidiary owned or controlled by the company ceases to be well capitalized or well managed, the company must execute an agreement acceptable to the Federal Reserve Board to comply with all applicable capital and management requirements. This agreement should be executed within 45 days after the Board notifies the company that it is not in compliance with the applicable requirements for an FHC. (See section 225.83 of Regulation Y.)

At the request of the bank holding company, the Federal Reserve Board may extend the 45-day period. The request should state why an extension is necessary. The agreement must explain the specific actions that the bank holding company will take to correct all areas of noncompliance, provide a schedule for all such actions, and provide any other information the Board may require, and be acceptable to the Board.

During the period of noncompliance, the Federal Reserve Board may impose limitations or conditions on the activities of the company. In addition, the company must obtain the Board's approval before conducting any of the activities that are newly authorized for FHCs by the GLB Act. Section 225.83 of Regulation Y also sets forth the consequences of failing to correct the noncompliance within a period of 180 days. Such consequences may include divestiture of ownership or control of any depository institution the company owns or controls, or the cessation of the expanded activities permitted for FHCs.

3901.0.3 DEPOSITORY INSTITUTION SUBSIDIARY FAILS TO MAINTAIN A SATISFACTORY OR BETTER CRA RATING

The Federal Reserve Board prohibits an FHC from engaging in any additional activity[1] or acquiring control of a company engaged in any activity under section 4(k) and 4(n) of the BHC Act if any insured depository institution controlled by the FHC fails to maintain a satisfactory or better CRA rating.

1. With respect to engaging in any additional activities, see section 225.84 of Regulation Y for the exceptions.

3901.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
BHCs and foreign banks that qualify as FHCs can engage in financial activities and those incidental thereto	1843			
Definition of an FHC		225.81	4-056	
Election to become an FHC		225.82	4-056.1	
Failure to meet applicable capital and management requirements		225.83	4-056.2	
Consequences of the failure to maintain at least a satisfactory CRA rating		225.84	4-056.3

3903.0.1 FINANCIAL HOLDING COMPANY QUALIFICATION REQUIREMENTS FOR FOREIGN BANKS

A foreign bank that owns or controls a U.S. bank (and any company that controls the foreign bank) must comply with the same requirements as a domestic bank holding company (BHC) that elects to be treated as a financial holding company (FHC). Either entity is thus able to engage in authorized financial activities under the Gramm-Leach-Bliley Act (GLB Act). If a foreign bank does not own a subsidiary bank in the United States, but instead operates through a branch, agency, or commercial lending company located in the United States, the foreign bank (and any company that controls the foreign bank) is subject to the Bank Holding Company Act (BHC Act) as if the foreign bank or company were a BHC. Such foreign banks may, like U.S. BHCs, also elect to be treated as FHCs. Foreign banks electing to be treated as FHCs must meet ‘‘well-capitalized’’ and ‘‘well-managed’’ standards comparable to those that are applicable to U.S. depository institutions. Futher, any U.S. branches of the foreign bank that are FDIC-insured must be rated satisfactory or better under the Community Reinvestment Act (CRA).[1] (See section 225.90 of Regulation Y.)

To be treated as an FHC, a foreign bank (or a company that owns or controls a foreign bank) that operates in the United States only through U.S. branches, agencies, or commercial lending subsidiaries must file a written declaration with the appropriate Reserve Bank. This declaration must contain items 1 through 6 below. Foreign banks or companies that operate in the United States through U.S. branches, agencies, or commercial lending companies and through a U.S. subsidiary bank are not required to provide item 1, but they must provide the items domestic BHCs are to provide.

1. a statement that the foreign bank or company elects to be treated as an FHC
2. the risk-based capital ratios and the amounts of tier 1 capital and total assets of the foreign bank as of the close of the most recent quarter, and as of the close of the most recent audited reporting period
3. a certification that the foreign bank meets the standards to be well capitalized that are set out in section 225.90(b)(1)(i) and (ii) or section 225.90(b)(2) of Regulation Y, as of the date the foreign bank or company files its election
4. a certification that the foreign bank is well managed, as defined in section 225.90(c)(1) of Regulation Y, as of the date the foreign bank or company files its election
5. a certification that all U.S. depository institutions controlled by the foreign bank or company (including thrifts and nonbank trust companies) are well capitalized and well managed as of the date the foreign bank or company files its election
6. the capital ratios and all relevant capital measures (as defined in section 38 of the Federal Deposit Insurance Act) for all U.S. depository institution subsidiaries of the foreign bank or company as of the end of the previous quarter

The well-capitalized and well-managed tests in items 2, 3, and 4 above apply to each foreign bank that has U.S. operations in the form of a branch, agency, or commercial lending company subsidiary that is part of a foreign banking organization seeking certification as an FHC.

For those foreign banks whose home-country supervisors have adopted risk-based capital standards consistent with the Basel Accord, their tier 1 and total risk-based capital ratios, as calculated under the home-country standard, must be at least 6 percent and 10 percent, respectively. The Board will determine the comparability of the foreign bank’s capital under the listed comparability factors in section 225.92(e) of Regulation Y. Among these factors are the composition of the foreign bank’s capital, accounting standards, long-term debt ratings, the ratio of tier 1 capital to total assets, reliance on government support to meet capital requirements, the foreign bank’s anti–money laundering procedures, whether the foreign bank is subject to comprehensive consolidated supervision, and other factors that may affect the analysis of capital and management.[2] For those foreign banks whose

1. Under the GLB Act, the capital and management standards the Board must apply to foreign banking organizations that elect to become FHCs should be comparable to the standards applied to domestic institutions, giving due regard to the principle of national treatment and equality of competitive opportunity.

2. The Board may consider whether the overall level of the foreign bank’s capital and other factors indicate that addi-

home-country supervisors have not adopted the Basel Accord and for any other foreign banking organizations that otherwise do not meet the capital standards noted above, the foreign bank may be considered well capitalized by obtaining from the Board a prior determination that its capital is otherwise comparable to the capital that would be required of a U.S. banking organization to become an FHC. The pre-clearance process provided by section 225.91(c) of Regulation Y can be used to obtain this determination.

A foreign bank will be considered well managed if—

1. the branches, agencies, and commercial lending subsidiaries of the foreign bank have received at least a satisfactory composite rating at their most recent examination;[3]
2. the home-country supervisor of the foreign bank consents to the foreign bank expanding its activities in the United States to include FHC activities;[4] and
3. the Board determines that the management of the foreign bank meets standards comparable to those required of a U.S. bank owned by an FHC.

The Board believes that, as a general rule, the top tier foreign bank in a foreign banking group that requests an FHC determination should be subject to comprehensive consolidated supervision by the home-country supervisor.

As a general matter, a foreign bank will *not* be determined to be well capitalized and well managed when it is not subject to comprehensive consolidated supervision. When a foreign bank has not been determined by the Board to be subject to comprehensive consolidated supervision, and the Board has not deemed any other bank from the country where the foreign bank is chartered to be subject to comprehensive consolidated supervision, the foreign bank must use the pre-clearance process provided by section 225.91(c) of Regulation Y—even if it otherwise meets the objective screening criteria. The Board may review a foreign bank's home-country supervision through the pre-clearance process and make a comprehensive consolidated supervision determination in that context. The Board will try to make a determination on pre-clearance requests within 30 days of receipt.[5]

There may be limited situations when an exceptionally strong bank from a country that has not yet fully implemented comprehensive consolidated supervision should be considered for FHC status. Such a foreign bank can qualify for FHC status if (1) the home-country supervisor has made significant progress in adopting and implementing arrangements for the consolidated supervision of its banks, and (2) the foreign bank demonstrates significant financial strength, such as through high levels of capital or exceptional asset quality. The Board anticipates, however, that a foreign bank that is not subject to comprehensive consolidated supervision will be granted FHC status only in rare instances.

As in the case of domestic BHCs, each U.S. depository institution subsidiary of a foreign bank is required to meet all the well-capitalized and well-managed standards in order for the foreign bank or company to obtain FHC status in the same manner as required for U.S. BHCs. In addition, all the U.S. insured depository institutions controlled by the foreign bank or company must be rated satisfactory or better under the CRA. If the foreign bank operates a U.S. branch that is FDIC-insured, the branch must be rated satisfactory or better under the CRA.

tional analysis should be undertaken to assess comparability. The Board will not impose a specific standard for the foreign bank's ratio of tier 1 capital to total assets (the leverage ratio), but a foreign bank's leverage ratio may be among the factors taken into account in the comparability review.

3. The Federal Reserve's foreign bank examination process includes the assignment of a combined assessment (the combined ROCA rating) of a foreign banking organization's (FBO's) U.S. branch, agency, and commercial lending operations through the regular examination cycle. (See SR-00-14.) The combined ROCA rating will be factored into the FBO's overall combined U.S. operations rating, which will continue to be a single composite rating that reflects the U.S. supervisors' collective assessment of all operations (that is, banking and nonbanking) of the FBO in the United States. If a foreign bank wishes to obtain FHC status, but does not have the assignment of a combined U.S. banking assessment as part of the regular examination cycle, the foreign bank can contact its responsible Federal Reserve Bank or engage in the pre-clearance process. If a foreign banking group contains more than one foreign bank with U.S. banking offices, each such foreign bank in the group must have a satisfactory composite U.S. banking assessment in order for the foreign banking group or any of its subsidiaries to obtain FHC status.

4. The home-country supervisor should consider the FBO's consolidated capital and management before providing its consent to the expansion. If the home country has no formal consent process, the Board will consult with the supervisor to assure itself that the supervisor considers the capital and management of the bank to satisfy its home-country standards and that the supervisor has no objections to the expansion.

5. If the Board makes an affirmative comprehensive consolidated supervision determination through the FHC pre-clearance process, the determination will be relied on for the foreign bank to establish additional branches and agencies under the Foreign Bank Supervision Enhancement Act.

An election by a foreign bank or company to be treated as an FHC will become effective on the thirty-first day after the date that an election was received by the appropriate Reserve Bank, unless the Board notifies the foreign bank or company before that time that the election is ineffective or unless the period for the Board's determination is extended with the consent of the foreign bank or company making the election. The date the Federal Reserve Bank receives the declaration should be considered the first day of the 30-day review period. The Board or the Reserve Bank also may notify a foreign bank or company in writing that its election to become an FHC is effective before the thirty-first day after the election was filed. A foreign bank or company should file the declaration (or pre-clearance request) with the responsible Reserve Bank.

If the election is determined to be effective, the foreign bank or company may engage in the financial activities available to FHCs. The GLB Act requires that an FHC that engages in an activity, or that acquires control or shares of a company engaged in an activity, under section 4(k) of the BHC Act provide written notice to the appropriate Reserve Bank within 30 calendar days after commencing the activities or acquisition. The notice should describe the activity commenced or identify the name of the company acquired and describe its activities.

3903.0.2 FOREIGN BANK FAILS TO CONTINUE MEETING FHC CAPITAL AND MANAGEMENT REQUIREMENTS

If a foreign bank or company has made an effective election, and the Board finds that the foreign bank; any foreign bank that is controlled by the foreign bank and maintains a U.S. branch, agency, or commercial lending company; or any U.S. depository institution owned or controlled by the foreign bank or company ceases to be well capitalized or well managed, the foreign bank or company must execute an agreement acceptable to the Federal Reserve Board to comply with all applicable capital and management requirements. This agreement should be executed within 45 days after the Board notifies the foreign bank or company that it is not in compliance with the applicable requirements for an FHC. (See section 225.93 of Regulation Y.) At the request of the foreign bank or company, the Board may extend the 45-day period. (The request should state why an extension is necessary.) The agreement must explain the specific actions that the foreign bank or company will take to correct all areas of noncompliance, provide a schedule for all such actions, provide any other information the Board may require, and be acceptable to the Board. During the period of noncompliance, the Board also may impose limitations or conditions on the U.S. activities of the foreign bank or company. Section 225.93 of Regulation Y also sets forth the consequences of failing to correct the noncompliance within a period of 180 days. Such consequences may include termination of the foreign bank's U.S. branches and agencies and divestiture of its commercial lending company subsidiaries, or cessation of the expanded activities permitted for FHCs. The foreign bank may also choose to cease engaging in activities not permitted for a foreign bank under sections 2(h) and 4(c) of the BHC Act.

3903.0.3 INSURED BRANCH FAILS TO MAINTAIN A SATISFACTORY OR BETTER CRA RATING

When an insured branch of a foreign bank, or an insured depository institution controlled by a foreign bank, fails to maintain a satisfactory or better CRA rating, section 225.94 of Regulation Y applies the provisions of section 225.84 to the foreign bank and to any company that owns or controls the foreign bank. For these purposes, the insured branch is treated as an "insured depository institution." An FHC is thus prohibited by the Board from engaging in any additional activity or acquiring control of a company engaged in activities under section 4(k) or 4(n) of the BHC Act.(See section 225.84 of Regulation Y.)

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section was revised to include the Board's September 7, 2007, determination, by order, at the FDIC's request, that disease management and mail-order pharmacy activities complement the financial activity of underwriting and selling health insurance; permissible for an FHC under section 4 (k) of the BHC Act, as amended by the Gramm-Leach-Bliley (GLB) Act (see 2007 FRB C133). (An applicant had filed an application with the FDIC for deposit insurance for a proposed de novo industrial loan company.) The Board determined the activities to be financial in nature under section 4(k) of the BHC Act and complementary to a financial activity. The Board's determination is conditioned and based on the limitations it placed on the activities in the aggregate (that is, the specified percentages of the applicants' consolidated total assets, consolidated total annual revenues, and total capital).

The section is also amended for the Board's approvals of FHC notices, under section 4 of the BHC Act, to provide energy management services under energy management agreements and also, energy tolling. On December 4, 2007, the Board determined, by order, that an FHC's provision of energy management services is complementary to the financial activities of engaging as principal in physical commodity derivatives and the providing of financial and investment advisory services for derivative transactions. (See 2008 FRB C20.) On March 27, 2008, the Board also determined, by order, that an FHC's providing energy tolling is complementary to the financial activity of engaging in commodity derivatives activities (see 2008 FRB 60).

The section has been revised to also delete a reference to an interim Board rule that is final. See 225.4(g) of Regulation Y (12 C.F.R. 225.4(g)). This rule pertains to nonbank activities involving the underwriting and dealing in, or making a market in, bank-ineligible securities under section 4(k)(4)(E) of the BHC Act.

3905.0.1 NONBANK ACTIVITY AUTHORIZATIONS FOR FHCS

The Gramm-Leach-Bliley Act (the GLB Act) amended the Bank Holding Company Act (the BHC Act) to allow a BHC or foreign bank that qualifies as a financial holding company (FHC) to engage in a broad range of activities that the GLB Act defines as "financial in nature." Section 4(k)(4)(A)–(E) of the BHC Act defines the following activities as financial in nature:

1. lending, exchanging, transferring, investing for others, or safeguarding money or securities
2. insuring, guaranteeing, or indemnifying against loss, harm, damage, illness, disability, or death, or providing and issuing annuities, and acting as principal, agent, or broker for purposes of the foregoing, in any state
3. providing financial, investment, or economic advisory services, including advising an investment company (as defined in section 3 of the Investment Company Act of 1940)
4. issuing or selling instruments representing interests in pools of assets permissible for a bank to hold directly
5. underwriting, dealing in, or making a market in securities

The Board had previously determined that some of these activities were impermissible for BHCs, such as acting as principal, agent, or broker for purposes of insuring, guaranteeing, or indemnifying against loss, harm, damage, illness, disability, or death, and issuing annuity products. Permissible insurance activities as principal include reinsuring insurance products.

An FHC acting under section 4(k)(4)(B) of the BHC Act may conduct insurance activities without regard to the restrictions on the insurance activities imposed on BHCs under section 4(c)(8).

Providing claims-administration and risk-management services. Legal counsel representing an FHC sought an opinion as to whether an insurance agency owned by an FHC may engage in certain insurance claims activities, as described below, under section 4(k)(4)(B) of the BHC Act. In particular, it was asked whether such an insurance agency may engage in the following claims-administration activities in connection with its insurance sales activities: (1) collecting insurance premiums; (2) holding insurance premiums in trust; (3) establishing an insurance claims–paying account; (4) adjusting insurance claims (which would include obtaining facts about claims, investigating the veracity of claims, and estimating losses relating to claims);

(5) negotiating with insureds and their representatives concerning insurance claims; and (6) paying and settling insurance claims. A representation was made that insurance agents typically perform these claims-administration services for an insurance underwriter in connection with insurance policies sold by the agents on behalf of an insurance underwriter.

With respect to the insurance risk-management activities provided in connection with insurance sales activities, a legal opinion was requested as to whether an insurance agency or broker owned by an FHC could engage in the following activities: (1) assessing the risks of a client seeking insurance and identifying the client's exposures to loss; (2) designing programs, policies, and systems (such as workplace safety programs) to reduce the client's risks; (3) advising clients about risk-management alternatives to insurance (such as self-insurance, securitization, or derivatives); and (4) negotiating insurance coverages, deductibles, and premiums for an insurance client. It was represented that insurance agents and brokers provide these risk-management services to their customers in connection with the sale of insurance products, including, in particular, commercial property and casualty insurance, and other insurance activities. It also was understood that the proposed risk-management services would (1) be related to managing insurable risks, (2) be advisory in nature, and (3) not allow the risk manager to control or perform operations of its clients.

Board staff noted that most states require a person performing one or more of the insurance claims–administration services listed above to be licensed by, or registered with, the appropriate insurance authority of the state as an insurance company, an insurance agent, or a third-party administrator (TPA).[1] The legislative history of the GLB Act also suggests that the Congress believed that insurance-related claims-administration services are a necessary part of the insurance sales and underwriting activities authorized by section 4(k)(4)(B).[2]

State insurance laws generally do not require companies that provide insurance risk-management services to obtain a special insurance license. However, states generally do require a license of any person who negotiates insurance coverages, deductibles, and premiums for another.[3]

In a legal opinion dated July 10, 2002, Board staff opined that the specific insurance claims–administration services listed above are encompassed within the insurance activities authorized by section 4(k)(4)(B) of the BHC Act and that the services may be conducted by an FHC when they are provided by an insurance agent or broker in connection with its other insurance sales activities. In addition, Board staff believes that the specific insurance risk-management services listed above are encompassed within section 4(k)(4)(B) insurance activities and that the services may be conducted by an FHC if they (1) are provided by an insurance agent or broker in connection with its other insurance sales activities, (2) involve managing insurable risks, (3) are advisory in nature, and (4) do not allow the FHC to control, or perform operations of, the person to whom the services are provided.[4]

Acting as a third-party administrator. Other legal counsel representing a BHC that had elected to become an FHC requested an opinion on whether acting as a TPA on behalf of an insurance company is an activity that is permissible for an FHC under the BHC Act. The BHC proposed to invest in a company that acts as a TPA for licensed insurance companies that underwrite and sell credit life insurance. A TPA provides one or more insurance companies with administrative and related services that support and assist the sale of insurance products by the

1. For example, the Model Third Party Administrator Statute adopted by the National Association of Insurance Commissioners (NAIC) requires a person who collects premiums or adjusts or settles claims for an insurer in connection with the sale of life or health insurance policies or annuities to register with the relevant state insurance authority as a TPA if the person is not already registered with the state as an insurance company, agent, or broker. See the NAIC Model Third Party Administrator Statute, sections 1.A and 11 (1996).

The NAIC's Model Managing General Agents Act also requires a person to register with the relevant state insurance authority if the person adjusts or pays claims for an insurer and engages in certain other activities on behalf of an insurer. See NAIC Model Managing General Agents Act, sections 2.C and 3 (1993).

2. See H.R. Rep. No. 106-74, part I, p. 122 (1999) ("Activities such as administering, marketing, advising or assisting with . . . claim administration or similar programs shall be deemed to be incidental to insurance activities as described in [section 4(k)(4)(B)].").

3. See NAIC Producer Licensing Model Act, sections 2.K and 3 (2000).

4. A BHC or an FHC may provide advice to customers concerning financial matters, including insurance, self-insurance, securitizations, and derivatives, under 12 C.F.R. 225.28(b)(6), and may provide management consulting advice to customers regarding nonfinancial equity matters, such as workplace safety, subject to Regulation Y's limits and restrictions. See 12 C.F.R. 225.28(b)(9) (management consulting activities permissible for all bank holding companies) and 225.86(b)(1) (management consulting activities permissible for all FHCs).

insurance company. A TPA may provide some or all of the following services to an insurance company: (1) assisting the insurance company in designing its insurance programs (which would include policy and certificate development and issuance); (2) determining whether a prospective insured meets the insurance company's established underwriting guidelines; (3) collecting and processing insurance premiums; (4) processing, adjudicating, and paying claims on behalf of the insurance company; (5) investing excess cash and maintaining bank accounts for the insurance company; (6) establishing risk reserves for the insurance company; (7) advising on, and arranging for, reinsurance or stop-loss insurance for the insurance company; (8) preparing and filing tax returns and regulatory reports for the insurance company and providing other related services designed to ensure that the insurance company remains properly licensed and in compliance with applicable government regulations; (9) providing accounting and recordkeeping services to the insurance company in connection with its insurance activities; and (10) providing insurance-product sales training to employees of the insurance company. It was represented that the BHC may engage in some, but not all, of the activities in its capacity as a TPA.

The Board's staff noted that the activities listed above are directly related to the provision and sale of insurance by a third-party insurance company and constitute an integral part of the regulated insurance activities of the third-party insurance company. Consequently, most states require a person performing one or more of these services for an insurance company to be licensed by, or registered with, the appropriate insurance authority of the state either as an insurance company or agent or as a TPA. In addition to the previously stated requirements, the Model Third Party Administrator Statute (Model TPA Statute) requires a person to register as a TPA if the person accepts insurance contracts for an insurer that meet the insurer's underwriting guidelines, assists an insurer in the overall planning and coordination of its insurance program, or collects premiums or adjusts claims for an insurer.[5]

In a legal opinion dated July 10, 2002, the Board staff opined that the above-listed services are encompassed within the insurance activities authorized by section 4(k)(4)(B) of the BHC Act when provided to, or on behalf of, an insurance company in connection with the sale or underwriting of insurance. Staff concluded that an FHC could, under section 4(k)(4)(B) of the BHC Act, provide these services to a third-party insurance company.

Section 4(k)(4)(F) of the BHC Act also defines as ''financial in nature'' any activity that the Board determined to be closely related to banking under section 4(c)(8) of the BHC Act by a regulation or order that was in effect on November 12, 1999. Section 225.86(a)(1) of Regulation Y cross-references the long-standing ''laundry list'' of nonbanking activities (at section 225.28(b)) permissible by regulation for BHCs. Section 225.86(a)(2) lists nonbanking activities approved for BHCs by Board order as of November 12, 1999.[6] All activities an FHC may engage in pursuant to section 225.86(a) must be conducted subject to the terms and conditions in Regulation Y and the Board orders authorizing those activities.

Section 4(k)(4)(G) of the BHC Act also defines ''financial in nature'' as any activity (1) in which a BHC may engage outside the United States and (2) that the Board has determined, by regulation or interpretations issued under section (4)(c)(13) of the BHC Act that were in effect on November 11, 1999, to be usual in conducting banking or other financial services abroad.[7] Section 225.86(b) lists three activities that the Board has found to be usual in connection with the transaction of banking or other financial operations abroad. These activities are—

1. providing management consulting services, including services to any person with respect to nonfinancial matters, as long as the services are advisory and do not allow the FHC to control the person to whom the services are provided (these services go beyond the

5. See the NAIC Model TPA Statute, sections 1.A and 11 (1996). A person generally does not have to register as a TPA if the person is currently registered with the state as an insurer or as an insurance agent or broker. See Model TPA Statute, section 1.A.(3) and (4).

Similarly, the NAIC's Model Managing General Agents Act requires a person to register with the relevant state insurance authority if the person manages all or part of the business of an insurer or, subject to certain conditions, accepts or rejects policies for the insurer and either adjusts or pays claims for the insurer or negotiates reinsurance for the insurer. See the NAIC Model Managing General Agents Act, sections 2.C and 3 (1993).

6. Section 20 company activities are not included in this list. Section 4(k)(4)(E) of the BHC Act authorizes FHCs to engage in securities underwriting, dealing, and market-making activities in a broader form than was previously authorized by Board order.

7. See sections 211.8 and 211.10 of Regulation K (12 C.F.R. 211.8 and 211.10).

management consulting services that are allowed under section 225.28(b)(9) of Regulation Y and are incorporated by reference at section 225.86(a)(1));
2. operating a travel agency in connection with financial services offered by the FHC or others; and
3. organizing, sponsoring, and managing a mutual fund, as long as the fund does not exercise managerial control over the companies in which it invests and the FHC reduces its ownership, if any, of the fund to less than 25 percent of the equity of the fund within one year (or such longer time as the Board permits) after sponsoring the fund.

The activities that a BHC is authorized to engage in outside the United States under sections 211.8 and 211.10 of Regulation K have been either (1) authorized for FHCs in a broader form by the GLB Act (for example, underwriting, distributing, and dealing in securities and underwriting various types of insurance) or (2) authorized in the same or a broader form in Regulation Y (for example, data processing activities; real and personal property leasing; and acting as agent, broker, or adviser in leasing property).[8] The remaining activities authorized by section 4(k)(4) of the BHC Act are defined to be "financial in nature" under section 4(k)(4)(H) and (I). These are merchant banking activities conducted under section 4(k)(4)(H) through a securities affiliate or an affiliate thereof, or through an affiliate of an insurance company (as defined in section 4(k)(4)(I)(ii)) when the affiliate is registered under the Investment Advisers Act of 1940 and provides investment advice to an insurance company or is an affiliate of such a registered company. Under section 4(k)(4)(I), these merchant banking activities may be conducted by an insurance company. These activities must be conducted in accordance with the restrictions and limitations under subpart J of Regulation Y, sections 225.170 through 225.177.

Section 4(k)(1)(A) of the BHC Act also allows FHCs to engage in activities that the Board, in coordination with the Secretary of the Treasury, determines to be financial in nature or incidental to such financial activity (section 4(k)(2)(A)). Section 225.86(d) of Regulation Y lists only one activity, acting as a finder, that has been authorized under this provision. (See section 3910.0 of this manual.)

The Board, in consultation with the Secretary of the Treasury, authorizes an FHC to engage in activities by Board order that are determined and approved to be financial in nature or incidental to a financial activity (section 228.86(e)). Only one activity has been approved by Board order under 225.86(e) in consultation with the Secretary of the Treasury: the acquisition, management, and operation in the United Kingdom of certain defined-benefit pension plans that are established by nonaffiliated third parties. This order was approved by the Board on October 12, 2007. (See section 3912.0 of this manual.)

Section 4(k)(1)(B) of the BHC Act allows FHCs to seek Board approval to engage in any activity that the Board determines to be complementary to a financial activity and does not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. Also with regard to section 4(k)(1)(B) of the BHC Act that an activity is complementary to a financial activity, the Board determined on September 7, 2007, by order, at the FDIC's request, that disease management and mail-order pharmacy activities complement the financial activity of underwriting and selling health insurance. (See 2007 FRB C133). An applicant had filed an application with the FDIC for deposit insurance for a proposed de novo industrial loan company. The Board determined the disease management and mail-order pharmacy activities to be financial in nature under section 4(k) of the BHC Act and activities that are complementary to a financial activity. The Board conditioned its determination based on the limitations it placed on the activities in the aggregate (that is, the specified percentages of the applicants' consolidated total assets, consolidated total annual revenues, and total capital).

Also with regard to other activities that are deemed to be complementary to a financial activity, the Board approved, on December 4, 2007, an FHC's request to provide energy management services to owners of power generation facilities under energy management agreements. This is an activity that is complementary to the financial activities of engaging as principal in commodity derivatives and providing financial and investment advisory services for derivatives transactions. (See 2008 FRB C20.) In addition, the Board, on March 27, 2008, determined that providing energy tolling services is complementary to the financial activity of engaging in

8. The Board also has approved, under section 4(c)(13) of the BHC Act, activities in individual orders. Section 4(k)(4)(G) of the BHC Act does not authorize an FHC to engage in activities that the Board has authorized a BHC to provide in individual orders.

commodity derivatives activities. (See 2008 FRB C60).

Previously, the Board had approved physical commodity trading in commodities that were CFTC-approved for trading on a U.S. futures exchange (unless specifically excluded by the Board) or that were specifically approved by the Board. With the Board's approval of its March 27, 2008, order (2008 FRB C60), the Board specifically approved physical commodity trading in commodities not CFTC-approved for trading on a U.S. futures exchange. The Board recognized that a market-maker may not seek CFTC approval for a particular commodity if there is already an established foreign trading market, which may deter a U.S. exchange from listing a product. A derivatives contract that is based on a commodity that trades on a non-U.S. exchange may be subject to a regulatory structure comparable to the one administered by the CFTC (trading on a non-U.S. exchange that may be sufficient to demonstrate that a market for the commodity in financially settled contracts exists, that the commodity is fungible, and that it has a reasonably liquid market). Within this order, the Board approved the FHC's request to take and make physical delivery of nickel, a metal that is traded on the London Metal Exchange. Within the same Board order, the Board recognized that many commodities for which derivatives contracts have not been approved for trading by the CFTC or that are not traded on a non-U.S. exchange but that trade on established alternative trading platforms may also be commodities that have viable markets with financially settled contracts on the commodities and that satisfy fungibility and liquidity concerns. Standards were established to receive Board approval to engage in physical commodity trading in non-CFTC-approved commodities traded on alternative trading platforms in the U.S. or on certain non-U.S. exchanges. The standards are consistent with the Board's existing limited physical commodity trading authority. (See section 3920.0 for more information on Board orders approving limited physical-commodity-trading activities that are complementary to a financial activity.)

Other permissible activities under section 4(k)(4)(E) of the BHC Act are underwriting and dealing in or making a market in securities without any limitation on revenues that can be derived from bank-ineligible securities. These activities must be conducted in accordance with applicable restrictions and limitations found in the BHC Act and any regulations or supervisory guidance adopted by the Board. The Board adopted a rule pertaining to these activities.[9] It imposed two restrictions on FHCs engaged in securities underwriting, dealing, or market-making activities. All intraday extensions of credit by a bank, thrift, or U.S. branch or agency of a foreign bank to an affiliated company engaged in these activities under section 4(k)(4)(E) must be on market terms consistent with section 23B of the Federal Reserve Act (FRA). In addition, a foreign bank that is an FHC must ensure that its U.S. branch or agency making a loan to, or purchasing securities as a principal or fiduciary from, such an affiliated company complies with sections 23A and 23B of the FRA as if the branch or agency were a member bank.

Section 4(k)(5) of the BHC Act requires the Board and the Secretary of the Treasury to define three categories of activities as financial in nature, as well as the extent to which these activities are financial in nature or incidental to a financial activity. These three categories encompass a wide range of activities:

1. lending, exchanging, transferring, investing for others, or safeguarding financial assets other than money or securities
2. providing any device or other instrumentality for transferring money or other financial assets
3. arranging, effecting, or facilitating financial transactions for the account of third parties

The above categories include activities in which FHCs and national banks and their financial subsidiaries are already permitted to engage. For example, the categories include safe deposit services, electronic funds transfer activities, credit and stored-value card activities, securities brokerage, and finder activities. The categories are intended to allow FHCs and financial subsidiaries to engage in activities that were not otherwise permitted for these companies. The procedure below allows an FHC or financial subsidiary to obtain a determination from the Board and the Secretary of the Treasury that an activity is financial in nature or incidental to a financial activity pursuant to section 4(k)(5).

An FHC's request for the Board to determine whether an activity falls within one of the three categories listed above must be in writing. The request must—

1. identify and define the activity for which the

9. See section 225.4(g) of Regulation Y.

determination is sought, specifically describing what the activity would be and how the activity would be conducted, and
2. provide information that supports the requested determination, including information on how the proposed activity falls into one of the three categories, as well as any other information the Board requires concerning the proposed activity.

In making its determination, the Board will take into account the same factors that it must consider when determining whether an activity is financial in nature or incidental to a financial activity. These factors include, among other things, changes in the marketplaces in which FHCs and banks compete, changes in technology for delivering financial services, and whether the activity is necessary or appropriate to allow FHCs and their affiliates, or banks and their subsidiaries, to compete effectively with any company seeking to provide financial services in the United States.

If an activity is listed in more than one provision of section 4 of the BHC Act, the FHC may choose to conduct the activity under any applicable provision. The FHC is subject only to the procedures and limitations that the chosen source of authority imposes on the activity.

3905.0.2 ACTIVITIES THAT ARE PERMISSIBLE FOR FHCs UNDER SECTION 225.86(a) OF REGULATION Y

Activities That Are Financial in Nature or That Are Incidental to a Financial Activity	*Manual Section 3600.*
1. Nonbanking activities listed in section 225.28(b) of Regulation Y that have been determined to be so closely related to banking as to be a proper incident thereto (see section 3000.0.2).	
2. Any nonbanking activity that the Board has determined by order (those in effect on November 12, 1999) to be so closely related to banking as to be a proper incident thereto. The activities are—	
a. providing administrative and other services to mutual funds;	27
b. owning shares of a securities exchange;	6
c. acting as a certification authority for digital signatures, and authenticating the identity of persons conducting financial and nonfinancial transactions (includes transactions abroad);	7
d. providing employment histories to third parties for use in making credit decisions and to depository institutions and their affiliates for use in the ordinary course of business;	29
e. check-cashing and wire-transmission services;[1]	
f. in connection with offering banking services, providing notary public services, selling postage stamps and postage-paid envelopes, providing vehicle-registration services, and selling public-transportation tickets and tokens; and	25
g. real estate title abstracting.	30

1. See 1990 FRB 860 and 1995 FRB 1130.

An FHC or other interested party may request that the Board, in consultation with the Secretary of the Treasury, determine that an additional activity is financial in nature or incidental to a financial activity. The written request should (1) identify and define the activity, specifically describing what the activity would involve and how the activity would be conducted; (2) explain in detail why the activity should be considered financial in nature or incidental to a financial activity; and (3) provide information supporting the request and any other information the Board requests concerning the proposed activity. (See section 225.88(b) of Regulation Y.)

An FHC may request an advisory opinion from the Board on whether a proposed specific activity falls within the scope of an activity already determined to be a financial activity and listed in section 225.86 of Regulation Y. The request must be in writing and provide (1) a detailed description of the activity, product, or service about which the company proposes to engage in or provide; (2) an explanation supporting an interpretation on the scope of the permissible financial activity; and (3) any other information the Board requests. (See section 225.88(e) of Regulation Y.)

An FHC may request approval to engage in an activity that is complementary to a financial activity. The written request must (1) identify the proposed complementary activity, specifically describing what the activity would involve and how it would be conducted; (2) identify the financial activity for which the proposed activity would be complementary and provide information to support a finding that the proposed activity should be considered complementary to the identified financial activity; (3) describe the scope and relative size of the proposed activity, as a percentage of projected FHC revenues and on the basis of assets associated with conducting the activity; (4) discuss the risks that conducting the proposed activity pose to the subsidiary depository institutions of the FHC and the financial system in general; (5) describe the potential adverse effects of conducting the activity and explain the proposed measures the FHC would take to address these potential effects; and (6) provide any other information the Board requests. (See section 225.89(a) of Regulation Y.)

3905.0.3 SECURITIES UNDERWRITING, DEALING, AND MARKET-MAKING ACTIVITIES

The GLB Act also authorizes securities underwriting, dealing, and market making without regard to whether such securities may be sold by a bank. This activity includes underwriting or distributing shares of open-end investment companies commonly referred to as mutual funds.

Securities underwriting activities conducted under section 4(k)(4)(E) of the BHC Act may be conducted without regard to the 25 percent revenue limitation that is applicable to section 20 nonbank subsidiaries of BHCs engaged in securities underwriting and dealing, as authorized by Board order under section 4(c)(8). In addition, dealing may be done without regard to the 5 percent limitation on ownership of voting securities.

The operating standards applicable to section 20 companies do not apply to FHCs that engage in securities underwriting, dealing, and market making under section 4(k)(4)(E) of the BHC Act, with two exceptions. First, intraday extensions of credit to a securities firm from an affiliated bank or thrift or U.S. branch or agency of a foreign bank must be on market terms consistent with section 23B of the FRA. Second, foreign banks that are FHCs or that are treated as FHCs are required to comply with the restrictions of sections 23A and 23B of the FRA with respect to lending and securities-purchase transactions between the U.S. branch or agency of a foreign bank and a U.S. securities affiliate. The operating standards and revenue limit continue to apply to BHCs that are not FHCs and to FHCs that continue to conduct securities activities pursuant to section 4(c)(8) of the BHC Act.

3905.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

3. *Federal Reserve Regulatory Service* reference.

In 2007, the Federal Deposit Insurance Corporation (FDIC) requested the Board to determine whether the disease management and mail-order pharmacy activities are permissible for a financial holding company (FHC) under the Bank Holding Company Act (BHC Act), as amended by the Gramm-Leach-Bliley Act (GLB Act). WP had filed an application with the FDIC to obtain deposit insurance for AFB, a proposed U.S.-based de novo industrial loan company (ILC).[1]

Section 4(k) (see 12 U.S.C. 1843(k)(4)) of the BHC Act permits a bank holding company (BHC) that qualifies to be an FHC to engage in a broad range of activities that are defined by statute to be financial in nature. The FDIC requested that the Board determine the permissibility of WP's disease management and mail-order pharmacy activities under the BHC Act, as amended by the GLB Act, in connection with the FDIC's moratorium then in place on actions on ILC applications by companies engaged in any nonbanking activity *not* permissible for an FHC.

WP is principally engaged in underwriting and selling health insurance and related activities. Underwriting and selling health insurance as principal, agent, or broker are activities deemed by Congress in the GLB Act to be financial in nature.[2] WP, through its regulated insurance company subsidiaries, provides health insurance. WP's insurance offerings include preferred provider, health maintenance, point of service, Medicare and Medicaid health plans; vision, dental, pharmacy benefit, life, disability, and long-term care insurance products; and consumer-directed, high-deductible, and limited-service health insurance products. WP also engages in a variety of related activities, including claims processing.

WP also provides disease management and mail-order pharmacy services through subsidiaries to persons who obtain health insurance from WP or another insurance company. Through its disease management services, WP provides insurance plan members with access to a variety of tools and resources designed to help them maintain healthy lifestyles and properly manage their medical conditions. These disease management services typically are provided by, or under the direction of, licensed health-care professionals (including doctors and nurses) employed by WP. WP's subsidiaries engage in providing mail-order pharmacy services, fill prescriptions for customers who have pharmacy benefit insurance coverage from WP or another insurance company, provide drug-related information to customers, and track potential issues with customer prescriptions, such as drug interactions. WP's mail-order pharmacy subsidiaries are state-licensed and employ state-licensed pharmacists.

WP's disease management and mail-order pharmacy activities are not within the scope of activities that the Board previously determined to be financial in nature, incidental to a financial activity, or complementary to a financial activity under the provisions of the BHC Act. The activities do not themselves involve providing insurance, are not regulated as insurance by state insurance authorities, and are not provided by an affiliate that is licensed as an insurance company or as an insurance agent or broker. Both activities involve the provision of health-care services that, while related to insurance underwriting activities, are themselves nonfinancial activities. The Board concluded, however, for the reasons set forth below, that there is a reasonable basis for construing these activities as complementary to a financial activity within the meaning of the GLB Act.

WP's disease management and mail-order pharmacy services help employers that obtain health insurance from an insurance company to manage and reduce the risks and costs of providing health insurance to employees. In its submissions to the Board, WP provided data demonstrating that many of the largest health insurers in the U.S. provide these services to their own customers and those of other health insurance companies and that employer-customers of heath insurance companies often demand such services.

Based on the foregoing, the information provided by WP, and other facts of record, the Board concluded that disease management and mail-order pharmacy activities complement the financial activity of underwriting and selling health insurance. Section 4(k)(1)(B) of the BHC Act requires that the Board determine that any proposed complementary activity does not pose a substantial risk to the safety or soundness of depository institutions or the financial system

1. Under section 4(c)(2)(H) of the BHC Act, an exemption is provided from the definition of "bank" for ILCs. A BHC may own, control, or operate an ILC, provided that it is not a bank. Under section 225.28(b)(4) of the Board's Regulation Y, a BHC may acquire or retain an industrial bank to the extent authorized by state law.

2. See section 4(k)(4)(B) of the BHC Act (12 U.S.C. 1843(k)(4)(B)).

generally.[3] Moreover, the Board previously has stated that complementary activities should be limited in size and scope relative to the financial activities that they complement.[4] As a condition of its determination that the proposed activities are complementary to a financial activity, the Board required that these activities in the aggregate not account for more than 2 percent of WP's consolidated total assets or 5 percent of its consolidated total annual revenues. In addition, the total assets of WP's subsidiaries engaged in disease management or mail-order pharmacy activities in the aggregate could not exceed 5 percent of the total capital (calculated in accordance with applicable statutory accounting principles) of all regulated insurance company subsidiaries and health plans of WP. The Board also considered how WP managed and addressed the risks posed by the activities through insurance training and other measures. The Board also stated that any future extensions of credit by AFB to, or other covered transactions by AFB with, these or other affiliates, including any covered transaction with an unaffiliated person the proceeds of which are transferred to or used for the benefit of an affiliate, must comply with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.[5] For these reasons, the Board concluded that the proposed activities would not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. The Board approved the order on September 7, 2007 (The previous discussion is only a summary. See the full text of the Board order at 2007 FRB C133).

3907.0.1 MERCHANT BANKING INVESTMENT AUTHORITY

The Gramm-Leach-Bliley Act (GLB Act) and the Board's Regulation Y permit financial holding companies (FHCs) (but not bank holding companies (BHCs) generally) to make investments as part of a bona fide securities underwriting or merchant or investment banking activity.[1] These investments may be made in any type of ownership interest in any type of nonfinancial entity (portfolio company), and they may include any amount up to all of the ownership interests in the company. The investments that may be made are substantially broader in scope than the investment activities that are otherwise permissible for BHCs.

The authority section 4(k)(4)(H) of the Bank Holding Company Act (BHC Act) grants to FHCs to make merchant banking investments (MBIs) is an alternative to any other authority that the FHC may have to make investments in nonfinancial companies under other provisions of the BHC Act, except as specifically noted in the rule. For example, the rule's provisions do not apply to investments acquired as part of securities underwriting, dealing, or market-making activities conducted under section 4(k)(4)(E) of the BHC Act; investments made by insurance underwriting subsidiaries of an FHC in accordance with section 4(k)(4)(I) of the BHC Act; investments made under section 4(c)(6) or (7) of the BHC Act; or investments made overseas under the Board's Regulation K (12 C.F.R. 211).[2] As described below, the BHC Act allows an FHC to make MBIs if it controls a securities affiliate or controls both an insurance underwriter and a registered investment adviser. The GLB Act does contain certain limitations on MBIs made by FHCs, and it provides a framework for MBIs that is designed to help maintain the separation between banking and commerce to ensure the safety and soundness of depository institutions. All MBIs made by an FHC under section 4(k)(4)(H) must comply with the Board's rule.

1. Unless stated otherwise in this section, the ''merchant banking statutory provisions'' refer to section 4(k)(4)(H) of the Bank Holding Company Act, and references to the ''rule'' or ''regulatory provisions'' pertain to Regulation Y and are found in sections 225.170 through 225.177.

2. Although the rule does not apply to investments held under section 4(c)(6) or (7) of the BHC Act or the Board's Regulation K, those authorities are only available if the FHC's aggregate investment in the relevant company under a combination of authorities, including any investment made under the merchant banking authority, is within the applicable investment limitations and restrictions set forth in section 4(c)(6) or (7) or Regulation K.

3907.0.2 PERMITTED INVESTMENTS

Under section 4(k)(4)(H) of the BHC Act and the Board's rule, an FHC may acquire or control *any* amount of shares, assets, or a full range of ownership interests in a company or other entity that is engaged in an activity that is *not* financial in nature, incidental to a financial activity, or otherwise permissible for the FHC under section 4 of the BHC Act. The interests an FHC may acquire include securities, warrants, partnership interests, trust certificates, other instruments representing an ownership interest in a company, and instruments convertible into a security or other ownership interest whether the interest is voting or nonvoting. An FHC can acquire *any amount* of ownership interests in the company or other entity, whether or not that amount results in control for purposes of the BHC Act. An FHC must file a notice with the Board under section 4(k)(6) of the BHC Act and section 225.87 of Regulation Y (12 C.F.R. 225.87) within 30 days after commencing MBI activities or acquiring any company that makes MBIs.[3]

An FHC also can acquire and control ''assets'' other than debt or equity securities or other ownership interests of a company. For example, assets acquired as an MBI may include real estate or the assets of a division of an operating company. To be permissible, the assets must be acquired through or promptly transferred to a portfolio company that has and maintains a separate corporate existence, management, and operations to the extent required by the rule. (See section 225.170(e)(3) of Regulation Y.)

3907.0.2.1 Securities Affiliate

A BHC may make MBIs only if it becomes an FHC.[4] The FHC must either (1) control or be a ''securities affiliate'' or (2) control both an insurance underwriter affiliate and an invest-

3. See section 4(k)(6)(A) of the BHC Act (12 U.S.C. 1843(k)(6)(A)) and section 225.87(a) of Regulation Y (12 C.F.R. 225.87(a)).

4. The Board's Regulation Y sets forth the procedures and qualification criteria applicable to BHCs that seek to elect to become an FHC. See section 225.81 et seq. of Regulation Y (12 C.F.R. 225.81 et seq.).

ment adviser affiliate registered under the Investment Advisers Act of 1940 that provides investment advice to an insurance company. The GLB Act and the rule, however, do *not* require that the FHC make its MBIs *through* such a securities, insurance underwriting, or investment adviser affiliate. Instead, an FHC may make MBIs directly or through any affiliate other than a depository institution or a subsidiary of a depository institution.

The rule defines a "securities affiliate" to include any broker or dealer registered with the Securities and Exchange Commission (SEC) under the Securities Exchange Act of 1934 (Exchange Act). The definition also includes an SEC-registered municipal securities dealer, including a separately identifiable division or department of a bank that is registered as a municipal securities dealer under the Exchange Act. An FHC may make MBIs if the holding company is itself a registered securities broker or dealer.

3907.0.2.2 Investments in Companies Engaged in Nonfinancial Activities

An FHC is authorized under section 4(k)(4)(H) of the BHC Act to acquire or control a company or entity "engaged in any activity not authorized pursuant to [section 4 of the BHC Act]." An FHC may not make MBIs in financial companies under section 4(k)(4)(H) or the rule. FHCs have separate authority under other provisions of the BHC Act to make investments in companies engaged in financial activities. However, a company held as an MBI may be engaged in both nonfinancial and financial activities, and an FHC may retain an MBI in a nonfinancial company even if the company subsequently commences a financial activity. An FHC also is not prohibited from using a combination of authorities to invest, through the same subsidiary or fund, in ownership interests of both nonfinancial and financial companies.

Investments in financial companies are not authorized in section 4(k)(4)(H) of the BHC Act. The rule's restrictions, such as those for holding periods and cross-marketing, therefore do not apply to FHC investments in financial companies that are made under other provisions of the BHC Act and the Board's Regulation Y—even if such investments are made for strategic reasons or for reselling the investment. An FHC may not, however, use the merchant banking authority to evade restrictions, such as consent or approval requirements or restrictions that address conflicts of interest or that govern the acquisition of financial companies.[5] In addition, nothing in section 4(k)(4)(H) or the rule overrides the prior-approval requirements of section 3 of the BHC Act, which governs the acquisition of shares of a bank or BHC, or the provisions of section 4(k)(6) and (j) of the BHC Act, which governs the acquisition of shares of a savings association or a company that controls a savings association.

3907.0.2.3 Bona Fide Underwriting or Merchant Banking or Investment Activity

An FHC may only make MBIs as part of a bona fide underwriting or merchant banking or investment banking activity.[6] An FHC is not authorized to make an investment in a nonfinancial company for the purpose of engaging in the activities of the nonfinancial company, such as real estate investment or development or other activities that have not been found to be financial in nature. This "bona fide" requirement thus preserves the financial nature of MBI activities and the separation of banking from commerce.

The bona fide requirement does not prohibit an FHC from specializing in making MBIs in particular industries or from making its first MBI in a company engaged in real estate investment or development. However, such investments should be made only for investment as part of an ongoing underwriting or investment or merchant banking activity, and they should be held in accordance with the Board's rules.[7]

3907.0.2.3.1 Investments Made Directly or Through Funds

An FHC may acquire or control MBIs directly or through any subsidiary *other than* a depository institution or subsidiary of a depository institution. An FHC also may *not* acquire or control MBIs on behalf of a depository institution or subsidiary of a depository institution. A

5. See section 4(*l*)(2) of the BHC Act (12 U.S.C. 1843(*l*)(2)) and section 225.84 of Regulation Y (12 C.F.R. 225.84).

6. See section 4(k)(4)(H) of the BHC Act (12 U.S.C. 1843(k)(4)(H)).

7. Concentration in particular industries or in individual investments may present supervisory concerns. The Board expects all FHCs that engage in MBI activities to establish policies governing portfolio diversification and to maintain capital that is adequate, considering the FHC's investment portfolio. See section 3900.0 of this manual and SR-00-9.

U.S. branch or agency of a foreign bank is considered a "depository institution" for purposes of the merchant banking rule and its related restrictions. Accordingly, a U.S. branch or agency of a foreign bank may not acquire or control MBIs, and MBIs may *not* be acquired or controlled on behalf of a U.S. branch or agency of a foreign bank.

An FHC is allowed to make MBIs through a private equity fund or other investment fund that, in turn, invests in nonfinancial companies. When an FHC makes such an investment, the holding company's investment in the fund is considered an MBI that must comply with the rule. Certain benefits for investments in or held through a qualifying private equity fund are provided, including an extended holding period and certain relief from the rule's cross-marketing restrictions. Investments in funds that do not qualify as private equity funds are treated as any other type of MBI.

3907.0.2.3.2 Definition of Portfolio Company and Financial Holding Company

Some of the rule's requirements—such as the restrictions on routine management and operation—apply only to portfolio companies. A "portfolio company" means any company or entity that is directly or indirectly held, owned, or controlled by an FHC that is using the merchant banking authority, and the company or entity is engaged in an activity that is not authorized for the FHC under section 4 of the BHC Act. (See section 225.177 of Regulation Y.)

The term "financial holding company," as used in the rule, refers to the FHC and any direct or indirect subsidiary of the holding company (including a private equity fund or other fund controlled by the FHC). The term does not include—

1. a portfolio company that is controlled by the FHC or
2. any depository institution controlled by the FHC or any subsidiary of such a depository institution, unless otherwise provided in the rule.

3907.0.3 LIMITS ON MANAGING OR OPERATING A PORTFOLIO COMPANY HELD AS A MERCHANT BANKING INVESTMENT

The GLB Act prohibits an FHC from routinely managing or operating a portfolio company, except as may be necessary or required to obtain a reasonable return on the resale or disposition of the investment. (See section 225.171 of Regulation Y.)

3907.0.3.1 Relationships That Involve Routine Management or Operation

An FHC routinely manages or operates a portfolio company if any director, officer, or employee of the FHC serves as or has the responsibilities of an executive officer of the portfolio company. The term "executive officer" has the same meaning as used in the Board's Regulation O. This definition includes any person who participates or has the authority to participate (other than in the capacity of a director) in major policymaking functions of the portfolio company, whether or not the officer has an official title, the title designates the officer as an assistant, or the officer serves without salary or other compensation.[8] (See section 225.177(d) of Regulation Y and 12 C.F.R. 215.2(e)(1).) An FHC is also considered to routinely manage or operate a portfolio company if an executive officer of the parent FHC or certain of its major subsidiaries serves as (or has the responsibilities of) an officer or employee of the portfolio company. For the purposes of these restrictions, an FHC's major subsidiaries include any subsidiary that is (1) a depository institution, (2) an SEC-registered broker-dealer, (3) engaged in MBI activities or insurance company investment activities under section 4(k)(4)(H) or (I) of the BHC Act, (4) a small business investment company, or (5) engaged in significant equity investment activities that are subject to a special capital charge under the Board's capital guidelines (for example, a company engaged in investment activities under section 4(c)(6) or (7) of the BHC Act). An FHC also is considered to routinely manage or operate a portfolio company if

8. An executive officer does not include a person who may exercise a certain measure of discretion in the performance of his or her duties, including the discretion to make decisions in the ordinary course of business, but who does not participate in the determination of major policies of the company and whose decisions are limited by policy standards fixed by senior management. In addition, the term does not include any person who is excluded from participating (other than in the capacity of a director) in major policymaking functions of the company by resolution of the board of directors or by the bylaws of the company, provided the person does not in fact participate in such policymaking functions.

it restricts, by covenants, agreements, or otherwise, the portfolio company's ability to make routine business decisions. Covenants or agreements that involve routine business decisions include covenants that restrict the portfolio company's ability to enter into transactions in the ordinary course of business or to hire nonexecutive officers or employees. As described below, an FHC may have covenants and agreements that restrict actions that are outside the ordinary course of business.

In addition, an FHC is presumed to be involved in the day-to-day management or operations of a portfolio company if a director, officer, or employee of the FHC serves as a nonexecutive officer or employee of the portfolio company or if an officer or employee of the portfolio company is supervised by or reports to an officer or employee of the FHC. An FHC may rebut this presumption by presenting specific facts demonstrating that the junior-officer or employee interlock with the portfolio company would not involve the investing FHC in the routine management and operating of the company.[9] Any request to rebut a presumption must be made to the Board and should fully describe all the facts and circumstances related to the FHC's investment in and relationships with the portfolio company.

3907.0.3.2 Relationships That Do Not Constitute Routine Management or Operation

The rule identifies several relationships that an FHC may have with a portfolio company that would *not* involve the FHC in routinely managing or operating the portfolio company.[10] The following relationships allow the FHC to monitor and provide strategic and financial advice to a portfolio company without becoming involved in the day-to-day management or operations of the company:

1. *Director interlocks.* An FHC may have one or more representatives on the board of directors of a portfolio company. The Board considers the selection of the partners (including the general partner) of a partnership to be the equivalent of selecting the directors of a company. An FHC representative who serves as a director of a portfolio company may participate fully in those matters that are typically presented to directors of a company, whether the director participates in these matters at a meeting of the board, at meetings of committees of the board, through written votes, through meetings with officers or employees of the portfolio company, or in other ways. The FHC's director representatives, however, may not participate in the day-to-day operations of the portfolio company or in management decisions that are made in the ordinary course of business and that are not customarily presented to the directors of a company. The portfolio company also must have officers and employees that routinely manage and operate the company, and the FHC must not have other arrangements or relationships with the portfolio company that would involve the FHC in the routine management or operation of the portfolio company.
2. *Covenants concerning actions outside the ordinary course of business.* An FHC may restrict, by covenant or otherwise, the ability of a portfolio company to take actions that are outside the ordinary course of business. Some examples of actions that are outside the ordinary course of business and that may be subject to these types of covenants or agreements are—
   a. the acquisition of significant assets or control of another company by the portfolio company or any of its subsidiaries;
   b. the removal or selection of the portfolio company's independent accountant or investment banker;
   c. significant changes to the portfolio company's business plan or accounting methods or policies;
   d. the removal or replacement of any or all of the executive officers of the portfolio company;
   e. the redemption, authorization, or issuance of any equity or debt securities of the portfolio company;
   f. any borrowing by the portfolio company that is outside the ordinary course of business;
   g. the amendment of the portfolio company's articles of incorporation, bylaws, or similar governing documents; and
   h. the sale, merger, consolidation, spin-off, recapitalization, liquidation, dissolution, or sale of substantially all of the assets of the portfolio company or any of its significant subsidiaries.

9. See section 225.171(c) of Regulation Y (12 C.F.R. 225.171(c)).
10. See section 225.171(d) of Regulation Y (12 C.F.R. 225.171(d)).

3. *Providing advisory and underwriting services to and consulting with a portfolio company.* An FHC also may provide financial, investment, or management consulting advisory services to the portfolio company in accordance with applicable limitations under Regulation Y.[11] Any management consulting services provided to a portfolio company must remain solely advisory, and the FHC may not assume responsibility for decision making or for the day-to-day management or operations of the portfolio company.[12] An FHC may also underwrite or act as placement agent for the securities of a portfolio company and provide assistance to the portfolio company in connection with the underwriting or placement of its securities without being considered to be involved in routinely managing or operating the company. An FHC also may have regular or periodic meetings with the officers or employees of a portfolio company to monitor and provide advice regarding the portfolio company's performance or activities, so long as the FHC, through such meetings or otherwise, does not routinely manage or operate the portfolio company.

3907.0.3.2.1 Other Permissible Covenants Not Involving the FHC in Routinely Managing and Operating a Portfolio Company

Listed below are some additional examples of covenants that an FHC may have with a portfolio company without routinely managing or operating the portfolio company.[12a] In particular, an FHC may, consistent with the GLB Act and section 225.171(d) of Regulation Y, have covenants with a portfolio company that restrict the ability of the portfolio company to—

1. alter its capital structure through the issuance, redemption, authorization, or sale of any equity or debt securities of the portfolio company;[12b]
2. establish the general purpose for funds sought to be raised through the issuance or sale of any equity or debt securities of the portfolio company (for example, retirement of existing debt, acquisition of another company, or general corporate use);
3. amend the terms of any equity or debt securities issued by the company;
4. declare a dividend on any class of securities of the portfolio company or change the dividend-payment rate on any class of securities of the portfolio company;
5. engage in a public offering of securities of the portfolio company;
6. register a class of securities of the portfolio company under federal or state securities laws;
7. list (or de-list) any securities of the portfolio company on a securities exchange;
8. create, incur, assume, guarantee, refinance, or prepay any indebtedness outside the ordinary course of business of the portfolio company;
9. voluntarily file for bankruptcy, or consent to the appointment of a receiver, liquidator, assignee, custodian, or trustee of the portfolio company for purposes of winding up its affairs;
10. significantly alter the regulatory, tax, or liability status of the portfolio company (examples of actions that would significantly alter the regulatory, tax, or liability status of the portfolio company include the registration of the portfolio company as an investment company under the Investment Company Act of 1940, or the conversion of the portfolio company from a corporation to a partnership or limited-liability company);
11. make, or commit to make, any capital expenditure that is outside the ordinary course of business of the portfolio company, such as the purchase or lease of a significant manufacturing facility, an office building, an asset, or another company;
12. engage in, or commit to engage in, any purchase, sale, lease, transfer, or other transaction outside the ordinary course of business of the portfolio company, which may include for example—
    a. entering into a contractual arrangement (including a property lease or consulting agreement) that imposes significant financial obligations on the portfolio company;
    b. the sale of a significant asset of the portfolio company (for example, a signifi-

11. See sections 225.28(b)(6) and 225.86(b)(1) of Regulation Y (12 C.F.R. 225.28(b)(6) and 12 C.F.R. 225.86(b)(1)).

12. See sections 225.28(b)(9) and 225.86(b)(1) of Regulation Y (12 C.F.R. 225.28(b)(9) and 12 C.F.R. 225.86(b)(1)).

12a. See letter from Virgil Mattingly, the Federal Reserve Board's general counsel, to Peter T. Grauer, Credit Suisse First Boston, dated December 21, 2001.

12b. For these purposes, the phrase "equity and debt securities" includes options, warrants, obligations, or other instruments that give the holder the right to acquire securities of the portfolio company.

cant patent, manufacturing facility, or parcel of real estate);
   c. the establishment of a significant new subsidiary by the portfolio company;
   d. the transfer by the portfolio company of significant assets to a subsidiary or to a person affiliated with the portfolio company; or
   e. the establishment by the portfolio company of a significant new joint venture with a third party;
13. hire, remove, or replace any or all of the executive officers of the portfolio company;[12c]
14. establish, accept, or modify the terms of an employment agreement with an executive officer of the portfolio company, including the terms setting forth the executive officer's salary, compensation, and severance;
15. adopt or significantly modify the portfolio company's policies or budget concerning the salary, compensation, or employment of the officers or employees of the portfolio company generally;
16. adopt or significantly modify any benefit plan covering officers or employees of the portfolio company, including defined benefit and defined contribution retirement plans, stock option plans, profit sharing, employee stock ownership plans, or stock appreciation rights plans;
17. alter significantly the business strategy or operations of the portfolio company, for example, by entering or discontinuing a significant line of business or by altering significantly the tax, cash-management, dividend, or hedging policies of the portfolio company; or
18. establish, dissolve, or materially alter the duties of a committee of the board of directors of the portfolio company.

Some of the above actions by their very nature are outside the ordinary course of business of a portfolio company and, thus, may be subject to a covenant with the portfolio company. For example, covenants restricting the ability of a portfolio company to issue or redeem its equity or debt securities or hire or fire its executive officers are unusual actions that typically are taken only by or in consultation with the company's board of directors.

12c. The term "executive officer" is defined in section 225.171 of Regulation Y.

Covenants concerning other types of actions may, or may not, involve the FHC in routine business decisions of the portfolio company, depending on the specific scope of actions covered by the covenant and the size and characteristics of the portfolio company. To provide FHCs maximum flexibility in structuring their relationships with portfolio companies to the extent permitted by the GLB Act, several of the examples included above permit an FHC to restrict the ability of a portfolio company to take certain actions whenever the actions are significant.

The measure of "significant" in this context would depend on the size, capital, condition, business, and other characteristics of the portfolio company. In determining what is significant for a particular portfolio company, one rule of thumb is that any action that would, under ordinary business practices, be presented to the board of directors of the portfolio company for approval or consideration may also be subject to a covenant that requires review and approval of the action by the financial holding company investor. In this way, the rule permits a financial holding company investor to exercise the same type of review and approval rights through a covenant that the FHC could exercise directly through representation on the board of directors of the portfolio company. As with a director representative, however, an FHC may not use a covenant as a means to become involved in routine business decisions made in the ordinary course of the portfolio company's day-to-day business activities.

There also may be situations in which a covenant is permissible even though the actions involved are ones that, under ordinary business practices, would not be considered by the board of directors of the portfolio company. It is expected that these situations would be unusual and the permissibility of such a covenant would likely depend on the particular facts and circumstances involved in the case.

3907.0.3.2.2 FHC May Routinely Manage or Operate a Portfolio Company in Special Circumstances

An FHC may routinely manage or operate a portfolio company only when such action is "necessary or required to obtain a reasonable return on [the] investment upon resale or disposition." Examples of situations in which intervention may be needed would be when the portfolio company experiences a significant operating loss or when there is a loss of senior management. Once the FHC has taken appropriate action to obtain a reasonable return on the resale or disposition of the investment, the GLB Act requires the FHC to cease routinely managing or operating the portfolio company. The FHC may routinely manage or operate a portfolio company only for the period of time that may be necessary to address the cause of the holding company's involvement in the routine management or operations of the portfolio company, to obtain suitable management arrangements, to dispose of the investment, or to otherwise obtain a reasonable return on the resale or disposition of the investment. The determination of whether and how long FHC intervention is necessary or required will depend on the facts and circumstances of the particular investment.

Two requirements in the rule assist the Federal Reserve in monitoring the interventions of FHCs in the routine management or operations of portfolio companies. These requirements ensure that such actions are consistent with the GLB Act's limitations. First, FHCs are required to maintain and make available to the Board on request a written record describing the company's involvement in routinely managing or operating any portfolio company.[13] Second, an FHC is required to provide the Board with written notice if the company routinely manages or operates a portfolio company for more than nine months.[14] The notice may be in the form of a letter and should identify the portfolio company, the date on which the FHC first became involved in the routine management or operations of the portfolio company, the reasons for the involvement, and the actions that the FHC has taken to address the circumstances giving rise to the intervention, as well as provide an estimate of when the FHC anticipates it will cease routinely managing or operating the portfolio company.

3907.0.3.3 Depository Institutions Prohibited from Managing or Operating Portfolio Companies

A depository institution or a subsidiary of a depository institution may not routinely manage or operate a portfolio company held by an FHC. As noted above, U.S. branches and agencies of foreign banks are considered depository institutions for purposes of the rule. A director, officer, or employee of a depository institution or its subsidiary, as well as a U.S. branch or agency, however, is not prohibited from serving as a director of a portfolio company to the same extent as would be permitted for a director, officer, or employee of an FHC. Such director, officer, or employee is also not prohibited from taking other actions that the rule does not define to be routine management or operation. In addition, a depository institution is not prevented from having covenants or from taking actions pursuant to covenants that are typically found in credit agreements to ensure repayment of extensions of credit in the ordinary course of business, provided the covenant or action is not an attempt to evade the rule's restrictions.

The rule also does not apply the prohibition on a depository institution routinely managing or operating a portfolio company to a financial subsidiary of a bank that is held in accordance with section 5136A of the Revised Statutes (12 U.S.C. 24a) or section 46 of the Federal Deposit Insurance Act (FDI Act). The prohibition also does not apply to a small business investment company subsidiary of a bank held in accordance with the Small Business Investment Act of 1958. These subsidiaries may, however, exercise routine management or operation only in accordance with the limitations that apply to FHCs.

3907.0.4 HOLDING PERIODS FOR MERCHANT BANKING INVESTMENTS

The GLB Act requires that any shares, assets, and ownership interests acquired as an MBI be held only for a period of time that enables the sale or disposition of the interest on a reasonable basis, consistent with the financial viability of the FHC's merchant banking activity. The rule permits an FHC to hold any MBI for a period of up to 10 years. In addition, the rule allows an FHC to own or control an MBI in or through a private equity fund (as defined below) for the life of the fund, up to 15 years.[15]

An FHC may hold an MBI beyond the rule's specified time periods only with the Board's prior approval. A request by an FHC for an extension of the applicable holding period must be filed at least 90 days before the expiration of the holding period. An extension request must provide the reasons for the request (including

13. See section 225.171(e)(4) of Regulation Y (12 C.F.R. 225.171(e)(4)).

14. See section 225.171(e)(3) of Regulation Y (12 C.F.R. 225.171(e)(3)).

15. See section 225.172 of Regulation Y (12 C.F.R. 225.172).

the factors listed below), explain the FHC's plan for divesting the investment, and discuss the factors that the Board may consider in reviewing the request. Factors to be included in the extension request are the cost to the FHC of disposing of the investment within the applicable time period, the total exposure of the FHC to the portfolio company and the risks that disposing of the investment without an extension may pose to the FHC, market conditions, the nature of the portfolio company's business, the extent and history of the FHC's involvement in the management and operations of the portfolio company, and the average holding period of the FHC's MBIs. The Board may also consider any other relevant information related to the investment.

If an FHC receives permission to hold an MBI beyond the applicable holding period, a special capital charge applies to the investment. The Board must set this charge at a rate that is above the highest marginal tier 1 capital charge applicable under the Board's capital guidelines for MBIs held by that FHC, but the rate may not be below 25 percent of the adjusted carrying value of the investment as reflected on the FHC's balance sheet. The Board may also impose other restrictions it determines to be appropriate in connection with granting the extension request.

3907.0.4.1 Holding-Period Tacking Provisions

The rule includes special "tacking" provisions to prevent an FHC from circumventing the holding periods on MBIs by transferring an MBI from one company or fund to another.[16] The rule also provides that, for purposes of calculating compliance with the merchant banking holding periods, an investment the FHC acquires under another authority that imposes a restriction on the amount of time that the FHC may hold the investment is considered to have been acquired on the original acquisition date.

3907.0.5 PRIVATE EQUITY FUNDS

As noted above, the rule permits an FHC to make MBIs directly or through funds that pool the firm's capital with capital provided by third-party investors, such as investment companies, pension funds, endowments, financial institutions or corporations, and sophisticated individual investors who have a high net worth. Frequently, these pooled investment vehicles have characteristics (such as limited terms, manager-compensation arrangements, and the presence of third-party investors that monitor investments) that encourage the fund to dispose of its investments in a relatively short period of time. Considering such characteristics, and to

16. See section 225.172(b)(2) and (3) of Regulation Y (12 C.F.R. 225.172(b)(2) and (3)).

accommodate industry practice on investment funds, the rule includes several special provisions for MBI activities conducted through a qualifying "private equity fund." The provisions include a longer holding period for private equity fund investments, a higher aggregate investment threshold for review of an organization that makes investments in or through private equity funds, and streamlined reporting and recordkeeping provisions for investments in or held through private equity funds.

3907.0.5.1 Definition of Private Equity Fund

To qualify as a "private equity fund" under the rule, the fund must have a fixed duration of not more than 15 years including all potential extensions, and the FHC (including its officers, directors, employees, and principal shareholders) may not own more than 25 percent of the total equity of the fund. There are no limits on advisory fees or on the various types of incentive compensation that the FHC may receive for services rendered to the fund, provided such fees do not increase the FHC's equity stake in the fund above the 25 percent threshold.

A private equity fund also may not be an operating company and must be engaged exclusively in the business of investing in financial and nonfinancial companies for resale or other disposition. In addition, the fund may not be established or operated for the purpose of making investments that are inconsistent with section 4(k)(4)(H) of the BHC Act or evading the limitations of the GLB Act or the rule.

A private equity fund can be organized in any form, including a partnership, corporation, or limited-liability company. In addition, the fund may, but need not be, registered as an investment company under the federal securities laws.

3907.0.5.2 Permissible Holding Period for Private Equity Fund Investments

As noted above, an FHC, without Board approval, may own or control an investment in a private equity fund that makes MBIs for the duration of the fund, which may be up to 15 years. A qualifying private equity fund may therefore hold investments in portfolio companies for up to 15 years, and it is not required to dispose of its investments within the 10-year period applicable to other types of MBIs. In special circumstances, an FHC may seek the Board's approval to retain an investment in a qualifying private equity fund or to extend the duration of a private equity fund for a period longer than 15 years.[17] (See section 3907.0.5 of this manual for a discussion of how an FHC may request an extension of this holding period.)

3907.0.5.3 Routine Management and Operation Restrictions for Private Equity Funds

The GLB Act and the rule generally prohibit an FHC from routinely managing or operating any portfolio company—that is, any company engaged in nonfinancial activities.[18] These restrictions apply regardless of whether the FHC owns or controls its interest in the portfolio company directly or through a private equity fund. Accordingly, an FHC may not routinely manage or operate a portfolio company that is owned or controlled by a private equity fund in which the FHC owns or controls any ownership interest, except in the limited circumstances permitted by the rule.[19] In addition, if an FHC controls a private equity fund, the private equity fund is a subsidiary of the FHC and the *private equity fund* must abide by the rule's limits on routine management and operation of portfolio companies. An FHC, however, is not prohibited from routinely managing or operating the private equity fund itself.

An FHC is considered to control a private equity fund for the purpose of the rule if the FHC or any director, officer, employee or principal shareholder of the company (1) serves as a general partner, managing member, or trustee of the private equity fund; (2) owns or controls in the aggregate 25 percent or more of any class of voting shares or similar interests in the fund; (3) selects, controls, or constitutes a majority of the directors, trustees, or management of the fund; or (4) owns or controls more than 5 percent of any class of voting shares or similar ownership interests in the fund and serves as the fund's investment adviser.

17. The holding-period tacking rules in section 225.172(b)(2) and (3) of Regulation Y must be applied when a private equity fund investment has been held longer than the permitted time.

18. See sections 225.177(c) and 225.171(a) of Regulation Y (12 C.F.R. 225.177(c) and 225.171(a)).

19. See section 225.171(e) of Regulation Y (12 C.F.R. 225.171(e)).

3907.0.5.4 Other Matters Related to Private Equity Funds

When an FHC has a passive (that is, noncontrolling) investment in a private equity fund that is advised and controlled by an unaffiliated entity, any shares owned by the fund generally are not considered to be owned or controlled by the passive FHC investor.[20] Therefore, the rule's cross-marketing restrictions on the products or services of a portfolio company, the limitations of sections 23A and 23B of the FRA, and the rule's reporting and recordkeeping requirements *do not apply* to investments in portfolio companies that are held by a private equity fund and that are not controlled by the FHC. These restrictions and requirements (other than the cross-marketing restrictions) would, however, apply to the FHC's investment in the private equity fund and would govern the relationship of the FHC with the private equity fund.

3907.0.5.4.1 Funds That Are Not Qualifying Private Equity Funds

An FHC is permitted to invest in and control a fund that does not meet the private equity fund definition. If the FHC controls the nonqualifying fund, then the provisions of the rule, including the holding-period provisions for portfolio companies, the routine-management restrictions, the risk-management and recordkeeping requirements, the cross-marketing provisions, and the section 23A provisions, apply to investments made by the nonqualifying fund in the same manner as those provisions would apply if the investment in the portfolio company were held directly by the FHC. If the FHC owns a noncontrolling interest in the fund, then the fund is itself considered to be a portfolio company.

An FHC may thus own more than 25 percent of the equity of a fund that has an unlimited life (and, consequently, is not a qualifying private equity fund), so long as the fund does not hold investments in portfolio companies for more than 10 years, and the FHC and the fund comply with the routine management and other restrictions of the rule. Similarly, an FHC may invest in a fund that, in addition to making MBIs, engages in other businesses (and, consequently, is not a qualifying private equity fund), so long as the FHC does not control the fund, divests its interest in the fund within 10 years, and complies with the other provisions of the rule that apply to investments in a portfolio company.

20. See section 2(g)(1) of the BHC Act (12 U.S.C. 1841(g)(1)) and section 225.2(e)(2)(i) of Regulation Y (12 C.F.R. 225.2(e)(2)(i)).

3907.0.6 TEMPORARY AGGREGATE INVESTMENT THRESHOLDS FOR MBIs

To allow the Federal Reserve to review the risk-management policies, procedures, and systems of an FHC that seeks to devote a significant portion of its capital to MBIs, temporary investment thresholds on MBIs are included in the rule. An FHC may not, without the Board's prior approval, make additional MBIs if the aggregate carrying value of its existing MBIs exceeds either of the two thresholds. The first threshold prevents an FHC from making additional MBIs (including making additional capital contributions to a company held under the rule) if the aggregate carrying value of the FHC's MBIs exceeds 30 percent of the FHC's tier 1 capital. A second threshold applies if the aggregate carrying value of the FHC's MBIs, *excluding* investments in private equity funds, exceeds 20 percent of the FHC's tier 1 capital. An FHC may exceed either threshold with the prior approval of the Board.

The investment thresholds were adopted as sunset provisions until the Board adopts a final rule specifically addressing the regulatory capital treatment for MBIs and that rule becomes effective. In February 2001, the Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation jointly requested comment on proposed rules that would establish special capital requirements for MBIs and similar equity investments held by BHCs and banks. (See 66 *Federal Register* 10, 212 (February 14, 2001).)

The investment thresholds discussed above apply only to MBIs made by FHCs under section 4(k)(4)(H) of the BHC Act and under the rule. They do not apply to or restrict investments made by BHCs or FHCs under other authorities, such as investments made through small business investment companies (SBICs), investments made in less than 5 percent of the voting shares of a company under section 4(c)(6) or (7) of the BHC Act, or investments made overseas under Regulation K.

3907.0.7 RISK-MANAGEMENT, REPORTING, AND RECORDKEEPING POLICIES

3907.0.7.1 Policies, Procedures, Systems, and Reports

An FHC must maintain policies, procedures, and systems that are reasonably designed to manage the risks associated with making MBIs and to monitor compliance with the statutory and regulatory provisions governing such investments. The rule identifies the major areas that must be addressed by the internal policies and controls of an FHC engaged in making MBIs. In particular, an FHC engaged in merchant banking activities must have policies, procedures, records, and systems that are reasonably designed to—

1. monitor and assess the carrying value, market value, and performance of MBIs and of the company's aggregate MBI portfolio;
2. identify and manage the market, credit, concentration, and other risks associated with MBIs;
3. identify, monitor, and assess the terms, amounts, and risks arising from transactions and relationships (including contingent fees or contingent interests) with each company in which the FHC has an MBI;
4. ensure the maintenance of corporate separateness between the FHC and each company in which the FHC holds an interest under the rule, and protect the FHC and its depository institution subsidiaries from legal liability for the operations conducted and financial obligations of any such company; and
5. ensure compliance with the rule, including the rule's holding-period, routine management and operation, and cross-marketing restrictions, as well as with any other applicable provisions of law governing transactions and relationships with companies in which the FHC holds an interest under the rule, such as fiduciary principles and sections 23A and 23B of the FRA.

This list of policies, procedures, records, and systems identifies only some of the most important elements of a sound approach to monitoring MBI activities. The Board has issued supervisory guidance (see SR-00-9) that provides additional detail concerning the internal controls, policies, and systems that any BHC engaged in equity investment activities is expected to have and maintain to engage in such activities in a safe and sound manner. (See section 3900.0 of this manual for more detail on this guidance.)

If the FHC controls a private equity fund or other fund that makes MBIs, the FHC must ensure that the fund has the types of policies, procedures, and systems for making and monitoring MBIs that are required for FHCs. The FHC may satisfy these requirements by ensuring that the private equity fund or other fund is subject to the FHC's merchant banking policies, procedures, and systems. If an FHC does not control the fund, then the fund is not subject to the recordkeeping and risk-management provisions of the rule. Nevertheless, an FHC must apply its merchant banking policies, procedures, and systems to any investment made by the company in any fund that is controlled by an unaffiliated entity.

It is anticipated that FHCs will be able to satisfy the rule's recordkeeping requirements by using the internal reports and records it prepares in the ordinary course of making an MBI or controlling a private equity fund. Similarly, if an FHC makes a noncontrolling investment in a private equity fund, the FHC should be able to use information provided by the fund's adviser or sponsor to satisfy the rule's recordkeeping requirements.

3907.0.7.2 Notice of Commencement of Merchant Banking Activities

An FHC must notify the Board within 30 days of commencing merchant banking activities under section 4(k)(4)(H) of the BHC Act. (See section 225.87(a) of Regulation Y.) For a domestic FHC, this notice should be provided on the Federal Reserve's reporting form, the FR Y-6A (which is expected to be replaced by the FR Y-10). For qualifying foreign banking organizations, the notice should be provided on the FR Y-7 (which is expected to be replaced by the FR Y-10F).

The appropriate Reserve Bank, in coordination with Board staff, should schedule a review of the investment and risk-management policies, procedures, and systems of an FHC that files a notification indicating that it has commenced merchant banking activities. The review may be conducted either off- or on-site, depending on the expected level and complexity of the FHC's MBIs and the company's previous experience in making equity investments under other legal authorities. This review may be deferred until the next regularly scheduled inspection or examination, if the FHC has significant experience in making equity investments under preexisting authorities and if the Federal Reserve has recently reviewed the company's policies, procedures, and systems for managing and controlling the risks associated with equity investment activities.

3907.0.7.3 Quarterly and Annual Reporting Requirements

The Federal Reserve has instituted two periodic reporting requirements relating to MBIs. The first is a quarterly report (FR Y-12) that seeks aggregate information on the cost and carrying values of an FHC's MBIs. This report also collects information on nonfinancial equity investments made by BHCs and their subsidiaries under other legal authorities, including investments made through SBICs and investments made in less than 5 percent of the voting shares of a company under section 4(c)(6) or (7) of the BHC Act. This quarterly report assists the Federal Reserve in monitoring the exposure of BHCs to MBIs and similar types of equity investments. The second report is an annual report, the FR Y-12A, that will collect basic information on MBIs held by an FHC for an extended time period. The FR Y-12A annual report collects information on MBIs that are approaching the end of their applicable holding period.

3907.0.7.4 Notice of Large Merchant Banking Acquisitions

After an FHC has provided notice to the Federal Reserve that it has commenced merchant banking activities, the FHC generally is *not* required to file a notice after acquiring the shares of a company under its merchant banking investment authority. However, an FHC must file a post-transaction notice with the Federal Reserve within 30 days after making an MBI in a company if (1) the investment represents more than 5 percent of the voting shares, assets, or ownership interests of the company, and (2) the total cost of the investment to the FHC exceeds the lesser of 5 percent of the tier 1 capital of the FHC or $200 million. This notice must be provided on the forms discussed above.

3907.0.8 CROSS-MARKETING RESTRICTIONS

The GLB Act prohibits a depository institution subsidiary of an FHC from marketing or offering any product or service of a company in which the FHC has an MBI. Similarly, the GLB Act prohibits a company held by an FHC as an MBI from marketing or offering any product or service of a depository institution subsidiary of the FHC. U.S. branches and agencies of a foreign bank that conduct BHC activities in the United States or through a U.S. company are considered depository institutions under the rule. Thus, a U.S. branch or agency of a foreign bank may not cross-market the products or services of a company that is owned or controlled by the foreign bank or an affiliate of the foreign bank under section 4(k)(4)(H) of the BHC Act. In addition, the cross-marketing restrictions generally apply to any *subsidiary* of a depository institution controlled by an FHC.

The cross-marketing restrictions, however, do not apply to certain subsidiaries of a depository institution that Congress has expressly authorized the parent institution to own or control. In particular, the cross-marketing restrictions do *not* apply to (1) a financial subsidiary of a depository institution held in accordance with section 5136A of the Revised Statutes (12 U.S.C. 24a) or section 46 of the FDI Act, (2) any company held by an Edge Act or agreement subsidiary of the depository institution that is controlled pursuant to section 25 or 25A of the FRA, or (3) any company held by an SBIC subsidiary of the depository institution that is controlled in accordance with the Small Business Investment Act.

The cross-marketing restrictions of the GLB Act and the rule also do *not* apply to nondepository affiliates of FHCs. Accordingly, a nondepository holding company affiliate of an FHC may engage in cross-marketing activities with a portfolio company held by the FHC under section 4(k)(4)(H) of the BHC Act. In addition, these restrictions do not apply to (1) portfolio companies in which the FHC, either directly or indirectly, owns less than 5 percent of the voting shares or ownership interests; (2) portfolio companies that are held by a private equity fund the FHC does not control; and (3) interests in a private equity fund (whether or not the FHC controls the fund). Accordingly, a depository institution subsidiary of an FHC may engage in cross-marketing activities with such a company, or it may market the shares of a private equity fund.

3907.0.8.1 Marketing Products or Services Involving a Portfolio Company

As noted above, the GLB Act prohibits any depository institution controlled by an FHC from (1) marketing or offering any product or service of a portfolio company held by the FHC under section 4(k)(4)(H) of the BHC Act or (2) allowing any product or service of the depository institution to be offered or marketed by or through any portfolio company held by the FHC under that section. A depository institution or subsidiary of a depository institution is *not* prohibited from marketing its own products or services—such as deposit, lending, and advisory products or services—to a portfolio company so long as the portfolio company does not then market those products or services to its customers or others. A depository institution subsidiary of an FHC also may purchase the products or services of a portfolio company—such as data processing hardware, software, or services to support the depository institution's own operations—provided that the institution does not, directly, indirectly, or through any arrangement, market the portfolio company's products or services to the institution's customers or others. Likewise, the cross-marketing restrictions would not prohibit a depository institution controlled by an FHC from engaging in cross-marketing activities with a company that is a co-investor with the FHC in a portfolio company, so long as those activities do not involve products or services of the portfolio company.

3907.0.9 PRESUMPTION OF CONTROL UNDER SECTIONS 23A AND 23B OF THE FRA

Sections 23A and 23B of the FRA impose specific quantitative, qualitative, and collateral requirements on certain types of transactions between an insured depository institution and its affiliates, that is, companies that are under common control with the insured depository institution. Typically, a company owned by an FHC is considered to be an affiliate of the FHC's subsidiary insured depository institution for the purposes of sections 23A and 23B, if the FHC owns or controls 25 percent or more of any class of the company's voting securities. The GLB Act, however, includes a presumption that an FHC controls a company for purposes of sections 23A and 23B if the FHC directly or indirectly, or acting through one or more other persons, owns or controls 15 percent or more of the equity capital of the company under the merchant banking authority of section 4(k)(4)(H) of the BHC Act.[21] Thus, a company is presumed to be a section 23A affiliate of a subsidiary insured depository institution of an FHC if the FHC owns or controls more than 15 percent of the total equity of the company under section 4(k)(4)(H).

An FHC can rebut the presumption by providing information to the Board demonstrating that the FHC does not control the company.[22] In the three situations identified below, the presumption of control under the GLB Act will be considered rebutted. In each situation, the FHC is assumed to own more than 15 percent of the total equity of the portfolio company under section 4(k)(4)(H) of the BHC Act (thereby triggering the statutory presumption) and less than 25 percent of any class of voting securities of the portfolio company (thereby not meeting the statutory definition of control). In particular, absent evidence to the contrary, an FHC will *not* be presumed to control a portfolio company if—

1. no officer, director, or employee of the FHC serves as a director, trustee, or general partner (or as an individual exercising similar functions) of the portfolio company;
2. a person that is not affiliated or associated with the FHC owns or controls a greater percentage of the equity capital of the portfolio company than the FHC, and no more than one officer or employee of the holding company serves as a director or trustee (or as an individual exercising similar functions) of the portfolio company; or
3. a person that is not affiliated or associated with the FHC owns or controls more than 50 percent of the voting shares of the portfolio company, and officers and employees of the FHC do not constitute a majority of the directors or trustees (or of individuals exercising similar functions) of the portfolio company.

21. Equity capital includes voting and nonvoting shares, warrants, options, and other instruments convertible into equity capital.

22. The presumption applies only when an FHC owns or controls 15 percent or more of the total equity of a portfolio company under section 4(k)(4)(H) of the BHC Act and the rule. Under existing Board precedents, an FHC may not own any shares of a company in reliance on section 4(c)(6) or (7) of the BHC Act when the company owns or controls, in the aggregate under a combination of authorities, more than 5 percent of any class of voting securities of the company.

These safe harbors do not require Board review or approval under the provisions allowing rebuttal of the presumptions. An FHC also may request the Board's approval to rebut a presumption of control under other circumstances.

The rule's presumption of control is independent from the general definition of control in section 23A of the FRA.[23] A portfolio company, under the statute, is per se a section 23A affiliate of any insured depository institution subsidiary of an FHC if the FHC owns 25 percent or more of a class of voting securities of the portfolio company, even if the FHC owns or controls less than 15 percent of the portfolio company's *total equity* or is within one of the rule's safe harbors.

For the purpose of applying the presumption of control, an FHC that has an investment in a private equity fund will not be considered to indirectly own the equity capital of a portfolio company held by the fund *unless* the FHC controls the private equity fund. For example, if an FHC has a noncontrolling investment in a private equity fund that, in turn, owns 20 percent of the total equity of a portfolio company, the portfolio company is not presumed to be an affiliate of the insured depository institution subsidiaries of the FHC. On the other hand, if an FHC acts as general partner of a private equity fund and thus controls the fund, and if the private equity fund owns or controls more than 15 percent of the total equity of any portfolio company, the portfolio company is presumed to be an affiliate of the insured depository institution subsidiaries of the FHC.

To ensure competitive equity, the Board's rule applies sections 23A and 23B of the FRA to covered transactions between a U.S. branch or agency of a foreign bank and (1) any portfolio company controlled by the foreign bank or an affiliate of the foreign bank under the merchant banking authority of section 4(k)(4)(H) of the BHC Act, and (2) any company controlled by the foreign bank or an affiliate if the company is engaged in making MBIs under section 4(k)(4)(H) and the proceeds of the covered transaction are used for the purpose of funding the company's merchant banking activities. In determining if a portfolio company is controlled by a foreign bank or an affiliate of a foreign bank for these purposes, the rebuttable presumption of control and the three safe harbors discussed above apply to the foreign bank and affiliate in the same manner that the presumption and safe harbors apply to domestic FHCs. The rule does not restrict lending by a foreign bank's U.S. branches and agencies to parent companies or other affiliated companies unless the proceeds of such lending would be used by these companies to make or fund the making of MBIs.

23. See 12 U.S.C. 371c(3)(A).

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Investments in the equity of nonfinancial companies as well as lending to private-equity-financed companies are sources for earnings and business relationships for supervised financial institutions.[1] These equity investments in nonfinancial companies, however, can entail significant market, liquidity, and other risks to an institution. Equity investments can also give rise to increased volatility of an institution's earnings and capital. Accordingly, sound investment and risk-management practices and strong capital positions are critical when an institution engages in these activities.

In supervisory guidance issued in 2000, the Board addresses sound practices that a firm should consider in its equity investment activities. Federal Reserve-supervised institutions (i.e., financial holding companies (FHCs), bank holding companies (BHCs), state member banks, and their affiliates, regardless of the authority under which the investments are made) should consider this guidance in establishing their risk-management practices for equity investment activities.[2] This manual section is based on this 2000 guidance. Therefore, for a more complete discussion, see SR-00-9, "Supervisory Guidance on Equity Investment and Merchant Banking Activities."

3909.0.1 LEGAL AND REGULATORY AUTHORITY FOR EQUITY INVESTMENTS

FHCs, BHCs, and depository institutions (hereafter referred to as "firms" or a "firm") are able to make equity investments under several statutory and regulatory authorities. Under section 4(c)(6) and (7) of the Bank Holding Company Act (BHC Act), BHCs may make passive investments in up to 5 percent of the outstanding voting shares of any company and up to 25 percent of the total equity of the company. Under this authority, there is no aggregate limit on the total dollar amount of equity investments that a BHC may hold.

Firms can make equity investments through a small business investment corporation (SBIC), which can be a subsidiary of a bank or holding company. Investments made by SBIC subsidiaries are allowed up to a total of 50 percent of a portfolio company's outstanding shares, but can only be made in companies defined as a small business according to SBIC rules issued by the Small Business Administration. A bank's aggregate investment in the stock of SBICs is limited to 5 percent of the bank's capital and surplus. In the case of BHCs, the aggregate investment is limited to 5 percent of the BHC's proportionate interest in the capital and surplus of its subsidiary banks.

Under Regulation K, which implements sections 25 and 25A of the Federal Reserve Act (FRA) and section 4(c)(13) of the BHC Act, a firm may, with Board approval, make portfolio investments in foreign companies that in the aggregate do not exceed 25 percent of the firm's tier 1 capital. In addition, individual investments must be less than 20 percent of a portfolio company's voting shares and must not exceed 40 percent of the portfolio company's total equity.[3]

FHCs are also permitted to acquire any amount of the shares, assets, or ownership interests of a nonfinancial company under the merchant banking investment authority of section 4(k)(4)(H) of the BHC Act, as amended by the Gram-Leach-Bliley Act (GLB Act). The GLB Act places certain limits on the holding period of merchant banking investments and on the ability of an FHC to routinely manage or operate a portfolio company held as a merchant banking investment. Subpart J of the Board's Regulation Y (12 CFR 225.170–225.177) implements these and other restrictions applicable to merchant banking investments.

1. Nonfinancial companies include companies that engage in activities other than financial activities that a financial holding company may conduct pursuant to section 4 of the Bank Holding Company Act (12 U.S.C. 1843), as amended by the Gramm-Leach-Bliley Act, and the regulations and interpretations thereunder. Equity investments include merchant banking investments made by financial holding companies under the regulations adopted by the Board of Governors (12 CFR part 225, subpart J, sections 225.170 through 225.177) and the Treasury Department (12 CFR part 1500, sections 1500.1 through 1500.8). The term "private equity" refers to shared-risk investments outside of publicly quoted securities and also activities such as venture capital, leveraged buyouts, mezzanine financing, and holdings of publicly quoted securities obtained through these activities.

2. The 2000 supervisory guidance on various sound practices related to the equity investment activities also applies to savings and loan holding companies (SLHCs). See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

3. Also included in calculating a firm's investment are shares of the corporation held in trading or dealing accounts or under any other authority. The 25 percent of tier 1 capital limitation increases to 100 percent of tier 1 capital for certain non-BHC investors. See Regulation K for more detailed information.

Equity investments made under any of the authorities described above may be in publicly traded securities or privately held equity interests. The investment may be made as a direct investment in a specific portfolio company, or it may be made indirectly through a pooled investment vehicle, such as a private equity fund. In general, private equity funds are investment companies, typically organized as limited partnerships, that pool capital from third-party investors to invest in shares, assets, and ownership interests in companies for resale or other disposition.[4] Private equity fund investments may provide seed or early-stage investment funds to start-up companies, or they may finance changes in ownership, middle-market business expansions, and mergers and acquisitions.

The supervisory guidance applies to all equity investments a BHC, SLHC, or FHC holds in nonfinancial companies, public or private, regardless of the authority under which such investments are made. A firm is expected to control aggregate risk exposures on a consolidated basis, while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries and affiliates. Also, the basic principles set forth in this guidance should be incorporated into the U.S. operations of foreign banking organizations, with appropriate adaptations to reflect the fact that (1) those operations are an integral part of a foreign bank, which should be managing its risks on a consolidated basis, and (2) the foreign bank is subject to overall supervision by its home authorities.

3909.0.2 SOUND PRACTICES FOR EQUITY INVESTMENTS

High returns in both equity investments and lending to private-equity-financed companies can spur an increased flow of funds into this market segment. As in other rapidly expanding and highly profitable business lines, business and competitive pressures can lead to compromises in due diligence, the use of overly optimistic assumptions, and breakdowns in internal controls. Sound investment and risk-management practices are crucial to the success of equity investment activities. As with any financial activity, sound management practices for these activities involve—

1. active involvement by senior management;
2. appropriate policies, limits, procedures, and management information systems that govern all elements of the investment decision-making and management process; and
3. adequate internal controls.

As with all financial activities, supervised institutions should ensure that they have sufficient capital for conducting equity investment activities. Supervised institutions that are conducting material equity investment activities are expected to have an internal capital-allocation system that meaningfully links the identification, monitoring, and evaluation of the risks of the institution's equity investment activities to the determination of its needs for economic capital.[5] A review of these systems should be an important part of a firm's investment-management process. When a firm is engaged in this activity, examiners should monitor the risk of this business line to a firm and perform a supervisory review based on this risk assessment.

Supervisory approach. Examiners and supervisory staff should review each of the three areas listed above to identify any management deficiencies. The supervisory efforts should be targeted appropriately in accordance with Federal Reserve policies on risk-focused supervision, taking into account both (1) the findings of internal audit and other independent reviews and (2) the materiality of equity investment activities to the institution. Consistent with the Federal Reserve's role as umbrella supervisor, reviews of a firm's merchant banking activities and the equity investment activities should focus on the potential exposure these activities may pose to insured depository affiliates and should, where appropriate and available, use the findings of primary bank supervisors and functional regulators of holding company affiliates. At the same time, supervisory and examination staff should conduct sufficient and targeted transaction testing across legal-entity lines if necessary to fully assess the adequacy of business-line risk management. Transaction testing should be consistent with the risk profile of the institution and the materiality of the activity to the institution's financial condition.

3909.0.2.1 Role of Senior Management

Senior management should establish portfolio objectives, overall investment strategies, and

4. For a detailed definition of "private equity funds," see the merchant banking rule (12 CFR 225.170 et seq.).

5. For more information on the assignment of risk weights for equity exposures, see Regulation Q (12 CFR part 217).

general investment policies that are consistent with the institution's financial condition, risk profile, and risk tolerance. Portfolio objectives should address the types of investments, expected business returns, desired holding periods, diversification parameters, and other elements of sound investment-management oversight. These objectives, strategies, policies, and procedures should be documented and clearly communicated to all the personnel involved in their implementation. Senior management should actively monitor the performance and risk profile of equity investment business lines in light of the established objectives, strategies, and policies.

Senior management should ensure that there are adequate policies, procedures, and management information systems for managing equity investment activities on a day-to-day and longer-term basis. Senior management should also ensure that there is an effective management structure for conducting the institution's equity activities, including adequate systems for measuring, monitoring, controlling, and reporting on the risks of equity investments. Senior management should implement policies that specify lines of authority and responsibility for both acquisitions and sales of investments and ensure that an institution's equity investment activities are conducted by competent staff whose technical knowledge and experience is consistent with the scope of the institution's activities. Senior management should also adopt limits on aggregate investment and exposure amounts, the types of investments (for example, direct and indirect, mezzanine financing, startups, or seed financing) and appropriate diversification-related aspects of equity investments such as industry, sector, and geographic concentrations.

3909.0.2.2 Management of the Investment Process

Institutions engaging in equity investment activities should have a sound process for executing all elements of investment management, including initial due diligence, periodic reviews of holdings, investment valuation, and realization of returns. This process requires appropriate policies, procedures, and management information systems, the formality of which should be commensurate with the scope, complexity, and nature of an institution's equity investment activities. A sound investment process should be applied to all equity investment activities, regardless of the legal entity in which investments are booked.

Supervisory approach. Any supervisory reviews of equity investment activities should be risk-focused. The review should consider the institution's stated tolerance for risk, the ability of senior management to govern these activities effectively, the materiality of activities in light of the institution's risk profile, and its capital position.

3909.0.2.2.1 Equity Investment Policies and Limits

Effective policies for institutions engaging in equity investment —

1. govern the types and amounts of investments that may be made,
2. provide guidelines on appropriate holding periods for different types of investments, and
3. establish parameters for portfolio diversification.

Investment strategies and permissible types of investments should be clearly identified. Portfolio-diversification policies should identify factors pertinent to the risk profile of the investments being made, such as industry, sector, geographic, and market factors. Policies establishing expected holding periods should specify the general criteria for liquidation of investments, as well as guidelines for the divestiture of underperforming investments. Decisions to liquidate underperforming investments are necessarily made on a case-by-case basis, considering all relevant factors. However, policies and procedures that stipulate more frequent review and analysis are generally used to address investments that are performing poorly or that have been in portfolio for a considerable length of time.

Policies should identify the aggregate exposure that the institution is willing to accept by the type and nature of investment (for example, direct or indirect, in an industry or sector). When adhering to those limits, institutions should consider unfunded and funded commitments. Where hedging activities are conducted, formal and clearly articulated hedging policies and strategies should identify limits on hedged exposures and permissible hedging instruments.

Management and staff compensation play a critical role in providing incentives and controlling risks within a private equity business line.

Clear policies should govern compensation arrangements, including co-investment structures and sales of portfolio company interests by an institution's employees.

3909.0.2.2.2 Equity Investment Procedures

As they do with investment policies, many institutions have different procedures for assessing, approving, and reviewing investments based on their size, nature, and risk profile. Often, procedures used for direct investments are different than those used for indirect investments made through private equity funds. For example, different levels of due diligence and senior management approvals may be required. The management infrastructures that have been constructed for conducting these activities should ensure that operating procedures and internal controls appropriately reflect the diversity of investments.

Supervisory approach. Supervisors should recognize the potential diversity of practice when conducting reviews of the equity investment process. They should focus on the appropriateness of the process employed relative to the risk of the investments made and the materiality of this business line to an institution's overall soundness and the potential impact on affiliated depository institutions.

3909.0.2.2.2.1 Investment Analysis and Approvals

Well-founded analytical assessments of investment opportunities and formal processes for approving investments are critical in conducting equity investment activities. While analyses and approval processes may differ by individual investments and across institutions, the methods and types of analyses conducted should be appropriately structured to adequately assess the specific risk profile, industry dynamics, management, and specific terms and conditions of the investment opportunity, as well as other relevant factors. All elements of the analytical and approval processes, from initial review through the formal investment decision, should be documented and clearly understood by the staff who are conducting these activities. An institution's evaluation of potential investments in private equity funds, as well as its reviews of existing fund investments, should assess the adequacy of a fund's structure, with due consideration given to the following:

1. management fees
2. carried interest[6] and its computation on an aggregate portfolio basis
3. the sufficiency of the general partners' capital commitments in providing management incentives
4. contingent liabilities of the general partner
5. distribution policies and wind-down provisions
6. performance benchmarks and return calculation methodologies

3909.0.2.2.2.2 Investment-Risk Ratings

It is a sound practice to establish a system of internal risk-ratings for equity investments. The system should assign each investment a rating based on factors such as the nature of the company, strength of management, industry dynamics, financial condition, operating results, expected exit strategies, market conditions, and other pertinent factors. Different rating factors may be appropriate for indirect investments and direct investments. For example, rating factors for investments in private equity funds could include an assessment of the fund's diversification, management experience, liquidity, and actual and expected performance. An institution's rating systems can cover an assessment of both new investment opportunities and existing portfolio investments.

3909.0.2.2.2.3 Periodic Reviews

Senior management should ensure the periodic and timely review of the institution's equity investments. Reviews should be conducted at both individual investment and portfolio levels. Depending on the size, complexity, and risk profile of the investment, reviews should, where appropriate, include factors such as—

1. the history of the investment, including the total funds approved;
2. commitment amounts, principal-cash investment amounts, cost basis, carrying value, major-investment cash flows, and supporting information, including valuation rationales and methodologies;

6. The carried interest is the share of a partnership's return that is received by general partners or investment advisers.

3. the current actual percentage of ownership in the portfolio company on both a diluted and undiluted basis;
4. a summary of recent events and current outlook;
5. the recent financial performance of portfolio companies, including summary compilations of performance and forecasts, historical financial results, current and future plans, key performance metrics, and other relevant items;
6. internal investment-risk ratings and rating-change triggers;
7. exit strategies, both primary and contingent, and expected internal rates of return on exit; and
8. other pertinent information for assessing the appropriateness, performance, and expected returns of investments.

Portfolio reviews should include an aggregation of individual investment-risk and performance ratings, as well as an analysis of appropriate industry, sector, geographic, and other pertinent concentrations, and total portfolio valuations. Portfolio reports containing the cost basis, carrying values, estimated fair values, valuation discounts, and other factors summarizing the status of individual investments are integral tools for conducting effective portfolio reviews. Reports containing the results of all reviews should be available to supervisors for their inspection.

Given the inherent uncertainties in equity investment activities, institutions should include in their periodic review consideration of best case, worst case, and probable case assessments of investment performance. The reviews should evaluate changes in market conditions and alternative assumptions used to value investments—including expected and contingent exit strategies. Major assumptions used in valuing investments and forecasting performance should be identified. The assessments need not be confined to quantitative analyses of potential losses, but may also include qualitative analyses. The formality and sophistication of investment reviews should be appropriate for the overall level of a firm’s risk from this business line.

3909.0.2.2.2.4 Valuation and Accounting

Valuation and accounting policies and procedures can have a significant impact on the earnings of institutions engaged in equity investment activities. Many equity investments are made in privately held companies, for which independent price quotations are either unavailable or not available in sufficient volume to provide meaningful liquidity or a market valuation. Valuations of some equity investments may involve a high degree of judgment on the part of management or require the skillful use of peer comparisons. Similar circumstances may exist for publicly traded securities that are thinly traded or subject to resale and holding-period restrictions, or when the institution holds a significant block of a company’s shares. Accordingly, clearly articulated policies and procedures on the accounting and valuation methodologies used for equity investments are of paramount importance.

Several methods are used in accounting for equity investments. Under generally accepted accounting principles (GAAP), equity investments held by investment companies, held by broker-dealers, or maintained in the trading account[7] are reported at fair value, with any unrealized appreciation or depreciation included in earnings and flowing to tier 1 capital. For some holdings, fair value may reflect adjustments for liquidity and other factors.

Equity investments not held in investment companies, by broker-dealers, or in the trading account and that have a readily determinable fair value (quoted market price) are generally reported as available-for-sale (AFS). They are marked to market with unrealized appreciation or depreciation recognized in GAAP-defined “comprehensive income,” but not earnings. Appreciation or depreciation flows to equity but, for regulatory capital purposes only, depreciation is included in tier 1 capital.[8] Equity investments without readily determinable fair values generally are held at cost, subject to write-downs due to impairments in the value of the asset. As is the case with all assets, impairments in value should be promptly addressed. Institutions should ensure that they have taken write-downs in a timely manner and in an appropriate amount.

In determining fair value, the valuation methodology is critical. Clearly articulated methods for valuing investments are critical to the effective management of equity investments. Formal

7. Equity investments in nonfinancial companies held under the authorities discussed previously would not normally be held in the trading account, as they are not intended to be traded actively.

8. For a Board-regulated institution that makes an accumulated other comprehensive income opt-out election, tier 2 capital may include up to 45 percent of pretax net unrealized gains on AFS preferred stock classified as an equity security under GAAP and AFS equity exposures. See 12 CFR 217.20(d)(5).

valuation and accounting policies should be established for investments in public companies; direct private investments; indirect fund investments; and, where appropriate, other types of investments with special characteristics. In establishing valuation policies, institutions should consider market conditions, taking into account the lockout provisions, the restrictions of Securities and Exchange Commission Rule 144, liquidity features, the dilutive effects of warrants and options, and industry characteristics and dynamics.

For institutions acting as general partners of private equity funds, "clawback," or "lookback," provisions of partnership agreements can pose additional challenges when accounting for and valuing the distributions received from funds managed by the institution. Clawback provisions are promises general partners make to repay limited partners at the end of the term of a fund, if the general partner has received more than its contractually defined compensation or "carried interest" over the life of the fund. Clawback provisions can come into play when the liquidation and associated disposition of both limited-partner and general-partner returns on well-performing investments in a fund occur before the liquidation of poorer-performing investments. Often, escrow accounts are established to hold a portion of the general partners' carried interest during the life of the fund. When applicable, institutions should appropriately recognize the estimated impact of these provisions in accounting for and valuing general-partner activities, including the earnings derived from those activities.

The accounting and valuation of equity investments should be subject to regular periodic reviews. In all cases, valuation reviews should produce documented audit trails that are available to supervisors and auditors. These reviews should assess the consistency of the methodologies used to estimate fair value.

Accounting and valuation treatments should be assessed in light of their potential for abuse through the inappropriate management or manipulation of reported earnings on equity investments. For example, high valuations may produce overstatements of earnings through gains and losses on investments reported at "fair value." On the other hand, inappropriately understated valuations can be vehicles for "smoothing earnings" by recognizing gains on profitable investments when an institution's earnings are otherwise under stress. While reasonable people may disagree on the valuations given to illiquid private equity investments, institutions should have rigorous valuation procedures that are applied consistently.

Given the uncertainties in valuation methodologies and the relatively high volatility of the equity market, equity investments that are reported at fair value can contribute to earnings volatility in the institutions where they play a major role. As equity investments contribute to a firm's earnings, the potential impact of these investments on the composition, quality, and sustainability of an institution's overall earnings should be appropriately assessed by both a firm's senior management and supervisors.

3909.0.2.2.2.5 Exit Strategies

Returns and reported earnings on equity investments are highly affected by assumed and actual exit strategies. The principal means of exiting an equity investment in a privately held company include initial public stock offerings, sales to other investors, and share repurchases. An institution's assumptions regarding exit strategies can significantly affect the valuation of the investment. The importance of reasonable and comprehensive primary and contingent take-out strategies for equity investments should be emphasized. Senior management should periodically review investment exit strategies, particularly focusing on larger or less liquid investments.

3909.0.2.2.2.6 Disposition of Investments

An institution should have policies and procedures to govern the sale, exchange, transfer, or other disposition of the institution's investments. These policies and procedures should state clearly the levels of approval required for the disposition of investments. In the case of investments held under the merchant banking provisions of the GLB Act, such policies and procedures should take into account and comply with the time limits for holding merchant banking investments.[9]

3909.0.2.2.2.7 Capital

Given the potential volatility of returns on equity investments, the risks associated with private equity investment and merchant banking business lines can exceed those of many more tradi-

10. See 12 CFR 225.172.

tional banking activities. Supervised institutions that are conducting material equity investment activities should have internal methods for allocating economic capital based on the risk inherent in those activities. These methods should identify all material risks and their potential impact on the safety and soundness of the institution. The amount and percentage of capital that is dedicated to this business line should be appropriate to the size, complexity, and financial condition of the supervised institutions. Institutions substantially engaged in equity investment and merchant banking activities should have strong capital positions supporting their equity investments, and they should allocate economic capital to these investments that is well in excess of the current regulatory minimums applied to lending activities.

Supervisory approach. Assessments of capital adequacy by supervisors should include not only the institution's compliance with regulatory capital requirements and the quality of regulatory capital, but also its methodologies for internally allocating economic capital to this business line.

3909.0.2.3 Internal Controls

An adequate system of internal controls, with appropriate checks and balances and clear audit trails, is critical to conducting equity investment activities effectively. Appropriate internal controls should address all of the elements of the investment-management process, and they should focus on the appropriateness of existing policies and procedures; adherence to policies and procedures; and the integrity and adequacy of investment valuations, risk identification, regulatory compliance, and management reporting. An institution's policies and procedures should address a departure from policy, documentation of the reason for the departure, and the review by senior management.

Assessments of an institution's compliance with both written and implied policies and procedures should be conducted by institution employees who are independent of line decision-making functions to the fullest extent possible. Large complex banking institutions with material equity investment activities should have internal auditors or independent outside parties conduct periodic independent reviews of their investment process and valuation methodologies. In smaller, less complex institutions, where limited resources may preclude independent review, alternative checks and balances should be established. These checks and balances may include random internal audits, reviews by senior management who are independent of the function, or the use of outside third parties.

3909.0.2.3.1 Documentation of the Investment Process

Documentation of key elements of the investment process, including initial due diligence, approval reviews, valuations, and dispositions, is an integral part of any private equity investment internal-control system. Accordingly, institutions should appropriately document their policies, procedures, and investment activities.

Institutions should be aware that the statutory and regulatory authority under which some equity investment activities are conducted may impose specific documentation and recordkeeping requirements. For example, merchant banking regulations require an FHC to maintain a written record any time it becomes involved in the routine management or operation of a portfolio company and to notify the Board if it routinely manages or operates a portfolio company for more than nine months.

Supervisory approach. Review internal controls policies over the key elements of the equity investment process. If senior management has authorized and reviewed any departures from policies and procedures, examiners should review the firm's justifications for those departures.

3909.0.2.3.2 Legal Compliance

Compliance with all federal statutes and regulations that are applicable to the institution's investment activities should be addressed in an institution's system of internal controls. Regulatory compliance requirements, in particular, should be incorporated into internal controls so managers outside of the compliance or legal functions understand the parameters of permissible investment activities.

Private equity and merchant banking activities are subject to different statutes and regulations, depending on the authority under which the activities are conducted. For example, the merchant banking investments of an FHC are subject to holding period limits and restrictions on the FHC's involvement in the routine management or operation of the portfolio company. Accordingly, management should have a system in place, consistent with applicable statutes and regulations, to ensure that impermissible control is not exercised over portfolio companies held under this authority and that merchant banking investments are disposed of within the time periods required by the rule. Limiting a supervised institution's involvement in the portfolio company's day-to-day management and operation is also important to protect the institution from lender-liability claims.

Likewise, certain cross-marketing restrictions apply to subsidiary depository institutions of FHCs and to portfolio companies controlled by the FHC under statutory merchant banking authority. Management should ensure that these limits are observed. When a banking organization owns or controls a significant percentage of a company's voting securities, the company may be an affiliate of the organization's depository institution subsidiaries for the purposes of the affiliate transaction limits of sections 23A and 23B of the Federal Reserve Act, as well as the Federal Reserve's Regulation W (12 CFR part 223). Also, the section 23A and 23B limitations on transactions between a depository institution and its affiliates are presumed by the GLB Act to apply to certain transactions between a depository institution subsidiary of an FHC and any portfolio company in which the FHC owns at least a 15 percent equity interest under the merchant banking authority. This ownership threshold is lower than the ordinary definition of an affiliate for section 23A purposes, which is typically 25 percent.

Moreover, to ensure compliance with federal securities laws, institutions should establish policies, procedures, and other controls addressing insider trading. A restricted list of securities for which the institution has inside information is one widely used mechanism for controlling the risk of insider trading. In addition, the institution should have control procedures in place to ensure that appropriate reports are filed with functional regulators.

3909.0.2.3.3 Compensation

Often, key employees in the private equity investment units of a supervised institution may co-invest in the direct or fund investments made by the unit. The return on this co-investment, which the FHC may underwrite, may constitute a significant portion of the compensation of these employees. These co-investment arrangements can be an important incentive mechanism and risk-control technique and can help to attract and retain qualified management. However, "cherry picking," or selecting only certain investments for employee participation while excluding others, should be discouraged.

In many cases, the employees' co-investment may be funded through loans from affiliates of the supervised institution, which, in turn, hold a lien against the employees' interests. The administration of the compensation plan should be appropriately governed pursuant to formal agreements, policies, and procedures. Among other matters, policies and procedures should address the terms and conditions of employee loans and sales of participants' interests before the release of the lien.

3909.0.3 DISCLOSURE OF EQUITY INVESTMENT ACTIVITIES

Given the important role that market discipline plays in controlling risk, institutions should ensure that they adequately disclose the information necessary for the markets to assess the institution's risk profiles and performance in the equity investment business line. Indeed, it is in the institution's interest, as well as that of its creditors and shareholders, to disclose publicly information about earnings and risk profiles. Institutions are encouraged to disclose in public filings information on the type and nature of investments, portfolio concentrations, returns, and their contributions to reported earnings and capital. The following topics are relevant for public disclosure, though disclosures of each of these topics may not be appropriate, relevant, or sufficient in every case:

1. the size of the portfolio
2. the types and nature of investments (for example, direct or indirect, domestic or international, public or private, equity or debt with conversion rights)
3. the initial cost, carrying value, and fair value of investments, and, where applicable, comparisons to publicly quoted share values of portfolio companies
4. the accounting techniques and valuation methodologies, including key assumptions and practices affecting valuation and changes in those practices
5. the realized gains (or losses) arising from sales and unrealized gains (or losses)
6. insights regarding the potential performance of equity investments under alternative market conditions

Supervisory approach. Supervisors should fully use the disclosures in public filings, as well as the periodic regulatory reports filed by publicly held institutions, as part of the information that they review routinely. Supervisors should encourage supervised institutions to make adequate disclosures or to improve their public disclosures of equity investment and merchant banking activities (these disclosures should include the items listed above).

3909.0.4 INSTITUTIONS LENDING TO OR ENGAGING IN OTHER TRANSACTIONS WITH PORTFOLIO COMPANIES

Additional risk-management issues may arise when a bank or an affiliate lends to or has other business relationships with (1) a company in which the supervised institution or an affiliate has invested (that is, a portfolio company); (2) the general partner or manager of a private equity fund that has also invested in a portfolio company; or (3) a private-equity-financed company in which the supervised institution does not hold a direct or indirect ownership interest, but which is an investment or portfolio company of a general partner or fund manager with which the institution has other investments. Given the potentially higher than normal risk attributes of these lending relationships, institutions should devote special attention to ensuring that the terms and conditions of these relationships are at arm's length and are consistent with the lending policies and procedures of the institution. Similar issues may arise in the context of derivatives transactions with or guaranteed by portfolio companies and general partners.

Lending and other business transactions between an insured depository institution and a portfolio company that meets the definition of an affiliate must be negotiated on an arm's length basis, in accordance with section 23B of the Federal Reserve Act. The holding company also should have systems and policies in place to monitor transactions between the holding company, or a nondepository institution subsidiary of the holding company, and a portfolio company. (These transactions are not typically governed by section 23B.) A holding company should ensure that the risks of these transactions, including exposures of the holding company on a consolidated basis to a single portfolio company, are reasonably limited and that all transactions are on reasonable terms. Special attention should be paid to transactions that are not on market terms.

A supervised institution may lend to a private-equity-financed company in which it has no equity interest. When the borrowing company is a portfolio investment of private equity fund managers or general partners with which the institution may have other private-equity-related relationships, the extension of credit should be conducted on reasonable terms. In some cases, supervisors have found that lenders may wrongly assume that the general partners or another third party implicitly guarantees or stands behind such credits. Reliance on implicit guarantees or comfort letters should not substitute for reliance on an institution's own assessment of the borrower and the borrower's ability to service its debt with its own resources. As with any type of credit extension, absent a written contractual guarantee, the credit quality of a private equity fund manager, general partner, or other third party should not be used to upgrade the internal credit-risk rating of the borrower company or to prevent the classification or special mention of a loan. Any tendency to relax this requirement when the general partners or sponsors of private-equity- financed companies have significant business dealings with the supervised institution should be strictly avoided.

When an institution lends to a portfolio company in which it has a direct or indirect interest, implications arise under sections 23A and 23B of the Federal Reserve Act, which govern credit-related transactions and asset purchases between a depository institution and its affiliates. Section 23A applies to transactions between a depository institution and any company when the institution's holding company or shareholders own at least 25 percent of the company's voting shares. The Gramm-Leach-Bliley (GLB Act) extended this coverage by establishing a presumption that a portfolio company is an affiliate of a depository institution subsidiary of an FHC if the FHC uses the merchant banking authority of the GLB Act to own or control more than 15 percent of the total equity of the company. Institutions should obtain the assistance of counsel to determine whether such issues exist or would exist if loans were extended to a portfolio company, general partner, or manager.

In addition to limiting and monitoring the exposure to portfolio companies that arises from traditional banking transactions, a supervised institution should adopt policies and practices that limit their legal liability, and that of their affiliates, for the financial obligations and liabilities of portfolio companies. These policies and practices include, for example, the use of limited-liability corporations or special-purpose vehicles to hold certain types of investments, the insertion of corporations that insulate liability between the supervised institution and a partnership controlled by the institution, and contractual limits on liability. Supervised institutions that extend credit to companies in which the institution has made an equity investment should also be aware of the potential for equitable subordination of the lending arrangements.

Supervisory approach. Supervisors should assess whether the institution has conducted a proper review of section 23A and 23B compliance issues to avoid violations of law or regulations. Supervisors should also ascertain that internal controls limit and monitor the exposures to portfolio companies in which the institution has a direct or indirect interest. Further, supervisors should determine whether the supervised institution has adopted policies and practices that limit its legal liability and that of its affiliates for the financial obligations and liabilities of the portfolio companies.

A finder brings together one or more buyers and sellers of any product or service for transactions that the parties themselves negotiate and consummate. National banks and state banks have been permitted to act and have acted as a finder in nonfinancial transactions for many years. Banking organizations have served as a finder by providing enclosures (or "statement stuffers") and other marketing materials from sellers of various products and services. Banking organizations have also helped to identify service providers as an accommodation to their customers. Financial holding companies (FHCs) have argued that acting as a finder, particularly in an electronic form, offers them increased opportunities to cross-sell financial products and services or to enhance the attractiveness of their electronic web site to customers. BHCs and foreign banks that qualify as FHCs may engage in finder activities (as authorized by section 225.86(d)(1) of Regulation Y) by providing the post-transaction notice stipulated in section 225.87(a) of Regulation Y.

An FHC may act as a finder for financial and nonfinancial products or services.[1] A finder includes providing any or all of the following services:

1. identifying potential parties, making inquiries as to their interest, introducing and referring potential parties to each other, and arranging contacts between and meetings of interested parties
2. conveying between interested parties expressions of interest, bids, offers, orders, and confirmations relating to a transaction
3. transmitting information concerning products and services to potential parties in connection with the activities described in this section

Some examples of finder services that may be provided by a finder, in accordance with section 225.86(d) of the rule, include—

1. hosting an electronic marketplace on the FHC's Internet web site by providing hypertext or similar links to the web sites of third-party buyers or sellers;
2. hosting, on the FHC's servers, the Internet web site of—
   - a buyer (or seller) that provides information concerning the buyer (or seller) and the products or services it seeks to buy (or sell) and allows sellers (or buyers) to submit expressions of interest, bids, offers, orders, and confirmations relating to those products or services; or
   - a government or government agency that provides information concerning its services or benefits, assists persons in completing applications to receive such government or agency services or benefits, and allows persons to transmit their applications for services or benefits to the government or agency;
3. operating an Internet web site that allows multiple buyers and sellers to (1) exchange information concerning the products and services that they are willing to purchase or sell, (2) locate potential counterparties for transactions, (3) aggregate orders for goods or services with those made by other parties, and (4) enter into transactions between themselves; or
4. operating a telephone call center that provides permissible finder services.

An FHC that acts as a finder for a buyer or seller may also provide the buyer or seller with any combination of other services that are permissible under Regulation Y, so long as the finder and other services are provided in accordance with any applicable limitations under the finder provisions of Regulation Y. For example, a finder for a merchant may, in addition to acting as a finder, make, acquire, broker, or service loans or other extensions of credit to or for the merchant or merchant's customers; provide the merchant with check-verification, check-guaranty, collection agency, and credit bureau services; provide financial investment advice to the merchant or its customers (within the parameters of Regulation Y); act as a certification authority for digital signatures and thereby authenticate the identity of persons conducting business with the merchant over electronic networks; and process and transmit financial, economic, and banking data on behalf of the merchant, such as processing the merchant's accounts receivable and debit and credit card transactions. The FHC may also provide the merchant

1. An FHC is permitted to act as a finder for financial products and services as part of other permissible financial activities. For example, an FHC may act as a finder (1) in the purchase and sale of securities under authority to act as a securities broker under section 225.86(a) of Regulation Y or (2) in the purchase or sale of insurance products as an insurance agent under section 225.86(c) of Regulation Y.

with bill-payment and billing services, as well as processing order, distribution, accounting, settlement, collection, and payment information for the merchant's transactions.

Furthermore, an FHC may market and provide its own financial products and services in conjunction with acting as a finder for buyers and sellers of nonfinancial products and services. For example, an FHC may use its finder services to promote a company's products and services and, in connection with that activity, may negotiate on its own behalf and bind itself to transactions.

3910.0.1 LIMITATIONS ON AN FHC THAT ACTS AS A FINDER

A finder cannot serve as a principal in the underlying transaction. A finder may act only as an intermediary between a buyer and a seller. A finder may not negotiate for or bind any buyer or seller to the terms of a specific transaction or negotiate the terms of a specific transaction on behalf of a buyer or seller. However, a finder may—

1. arrange for buyers to receive preferred terms from sellers so long as the terms are not negotiated as part of any individual transaction, are provided generally to customers or broad categories of customers, and are made available by the seller (and not by the FHC), and
2. establish rules of general applicability governing the use and operation of the finder service, including rules that—
   - govern the submission of bids and offers by buyers and sellers that use the finder service and the circumstances under which the finder service will match bids and offers submitted by buyers and sellers, and
   - govern the manner in which buyers and sellers may bind themselves to the terms of a specific transaction.

A finder may not (1) take title to or acquire or hold an ownership interest in any product or service offered or sold through the finder service; (2) provide distribution services for physical products or services offered or sold through the finder service; (3) own or operate any real or personal property that is used for the purpose of manufacturing, storing, transporting, or assembling physical products offered or sold by third parties; or (4) own or operate any real or personal property that serves as a physical location for the physical purchase, sale, or distribution of products or services offered or sold by third parties. Further, a finder cannot engage in any activity that would require the company to register or obtain a license as a real estate agent or broker under applicable law.

3910.0.2 REQUIRED DISCLOSURES

A finder is required to distinguish the products and services offered by the FHC from those offered by a third party through the finder service. Because an FHC may act as a finder for third parties through varied technological means and in a wide variety of circumstances, FHCs are not required to provide specific disclosures. The Board expects FHCs to provide disclosures that, given the medium employed and type of buyers and sellers using the service (for example, consumers or corporations), are reasonably designed to ensure that users are not led to believe that the FHC is providing the products or services offered or sold by third parties through the finder service. An FHC could provide such notice by identifying those products or services that are offered or sold by the FHC (with a corresponding notice that all other products or services are provided by third parties), or by identifying those products or services that are offered and sold by third parties and not by the FHC.

A financial holding company (FHC), a bank holding company (BHC) that meets the requirements of 4(l)(1) of the Bank Holding Company Act (the BHC Act),[1] proposed to acquire, manage, and operate in the United Kingdom defined benefit pension plans established and maintained by unaffiliated third parties (third-party UK pension plans). The activities would be conducted by or through a nonbank subsidiary of the FHC. The FHC would acquire third-party UK pension plans in standalone transactions and not as part of the acquisition of all or part of the ongoing business operations of the third parties.

Section 4 of the BHC Act generally prohibits a BHC, including an FHC, from directly or indirectly engaging in, or acquiring the shares of a company engaged in, any nonbanking activity unless the activity is otherwise permissible under the act. Section 4(k) of the BHC Act, as amended by the Gramm-Leach-Bliley Act (the GLB Act), permits a BHC that qualifies to be an FHC to engage in, and acquire and retain shares of any company engaged in, a broad range of activities that are defined by statute to be financial in nature.[2] The BHC Act also permits an FHC to engage in, and acquire and retain shares of any company engaged in, any activity that the Board determines, by order or regulation and in consultation with the Secretary of the Treasury, to be financial in nature or incidental to a financial activity.[3]

A defined benefit pension plan generally is a plan established by or on behalf of an employer (the plan "sponsor"). The plan provides for the payment of benefits to employees, typically beginning on their retirement or other termination of service, in an amount that is specified in and determinable under the plan, typically through a formula that takes into account the employee's pay, years of employment, age at retirement, and other factors.[4] The terms of the plan itself also typically specify (1) the circumstances under which benefits will be paid under the plan to an employee, a former employee, or a related person (such as a spouse) (collectively, a beneficiary) and (2) the length of time such payments will be made to a beneficiary. The benefits payable under a plan typically take the form of a specified stream of payments that begin on retirement or, at the employee's option, a lump sum payable at retirement; plan rules may also provide for other ancillary benefits, such as spousal or survivor benefits.[5] The nonbank subsidiary of the FHC that directly acquires a third-party UK pension plan would assume the responsibilities of the plan's sponsor under applicable UK law. In the United Kingdom, defined benefit pension plans are regulated by the UK Pensions Regulator under the Pensions Act of 1995, the Pensions Act of 2004, and the general law of trusts. These laws provide that pension plans must be managed and administered by a trustee that is independent of the plan sponsor. Plan sponsors must also provide sufficient assets to a pension plan to pay all benefits under the plan,[6] consult with the trustees for the pension plan concerning the investment strategy of the plan, and agree with the plan trustees on a statement of funding principles that sets out the plan's funding target, methods, and assumptions. In addition, trustees and plan sponsors must agree on amendments to any part of the plan.

As proposed, the FHC would acquire a third-party UK pension plan only if no additional beneficiaries may be added to the plan and existing beneficiaries may not accrue additional benefits under the plan (a hard-frozen plan). In addition, the FHC would acquire a third-party UK pension plan only if the plan, at the time of its acquisition, is fully funded by the selling sponsor, based on the plan's assets and projected liabilities (using appropriate actuarial assumptions).[7] The FHC indicated that, as part of its due-diligence process for each transaction,

1. 12 U.S.C. 1841 et seq.
2. See 12 U.S.C.1843(k)(4).
3. 12 U.S.C. 1843(k)(1)(A) and (2). In addition, the BHC Act permits an FHC to engage in any activity that the Board (in its sole discretion) determines, by regulation or order, is "complementary to a financial activity and does not pose a substantial risk to the safety or soundness of depository institutions or the financial system generally" (12 U.S.C. 1843(k)(1)(B)).
4. A defined contribution plan is a benefit plan under which an individual account is established for each participant and the benefits payable to each participant are based on the amount contributed to the participant's account, plus or minus income, gains, expenses, and losses allocated to that account.
5. "Defined benefit pension plan" does not include a plan that provides health insurance to employees or that guarantees or indemnifies employees for health care costs.
6. The sponsor may recover assets contributed to or held on behalf of a plan after all of the plan's obligations to beneficiaries have been satisfied and the plan is closed out.
7. The term "fully funded" means that, at the time of acquisition, the current value of the plan's assets is at least equal to the present value of the plan's projected liabilities. The selling sponsor may issue debt to the plan or the FHC to fully fund the plan at acquisition. In some situations, the requirement that a plan be fully funded may require funding

it would employ qualified actuaries to review and analyze the present value of benefits owed to plan beneficiaries to ensure that all pension plans acquired are fully funded by the selling sponsor.

The activity of acquiring, operating, and managing third-party pension plans had not been previously determined to be financial in nature or incidental to a financial activity for purposes of the BHC Act. The activity proposed is broader than the pension plan activities that FHCs are currently permitted to conduct for third parties. For example, as discussed above, a nonbank subsidiary of the FHC would assume the rights and obligations of the sponsor of an acquired third-party UK pension plan and would do so in transactions that do not represent the acquisition of a going concern or ongoing business operations by the FHC. In addition, the assets and liabilities of an acquired third-party UK pension plan (unlike assets held by an FHC as trustee for third parties or assets held by the pension plans maintained for the FHC's own employees) would be fully consolidated with the assets and liabilities of the FHC on its balance sheet.[8]

The Board concluded, for the reasons set forth below, that there is a reasonable basis for determining that the acquisition, management, and operation by the FHC of hard-frozen, fully funded third-party UK pension plans is an activity that is financial in nature within the meaning of the BHC Act. The activity involves, at its core, the types of investment advisory and investment management skills that are routinely exercised by banking organizations and also involves the types of operational and investment risks that banking organizations routinely incur and manage.

FHCs are currently permitted by the BHC Act to engage in activities that are related or operationally and functionally similar to the proposed activity and that involve similar risks. For example, an FHC is already permitted to provide a wide variety of services to third-party pension plans, including acting as trustee, custodian, or investment adviser (with or without investment discretion) for a third-party benefit plan, as well as designing, assisting in the implementation of, providing administrative services to, and developing employee communication programs for third-party benefit plans.[9] FHCs engaged in these activities have gained substantial expertise with the laws, regulations, and fiduciary obligations associated with providing fiduciary, custodial, and administrative services to pension plans. Moreover, FHCs engaged in these plan-related activities have developed risk-management systems and internal controls to monitor, manage, and address the legal, operational, and reputational risks associated with managing the investments of and administering third-party pension plans.

The proposed activity also bore a strong functional resemblance to the issuance of a group annuity contract. The BHC Act, as amended by the GLB Act, expressly states that providing and issuing annuities is an activity that is financial in nature.[10] A company that issues a fixed annuity becomes obligated to make periodic payments to the annuitant during his or her lifetime and to pay any death or survivor benefits in accordance with the terms of the annuity contract. The company that issues a fixed annuity assumes responsibility for investing and managing the funds received from the annuitant and bears the risk that such funds and the returns earned on the funds will not be sufficient to pay out the full amount of benefits promised under the annuity contract. The company also assumes responsibility for administering the annuity contract both before and during its payout period.

In connection with these activities, the issuer of fixed annuities is exposed to certain types of risks, which are part of the activity determined to be financial in the GLB Act. These risks include the risk that (1) the life expectancy of annuitants, on average, will exceed the actuarial estimates used in establishing the terms of and funding for the annuities; (2) the inflation rate and other assumptions used to determine the expected obligations under the annuity contracts underestimate these obligations; and (3) payments from the annuitant and the return obtained through the investment of such payments will fall short of estimates.

The FHC would perform essentially the same financial functions and assume essentially the same financial obligations and risks through the

in excess of the statutory funding requirements of the relevant jurisdiction.

8. Since the FHC would acquire each third-party UK pension plan in a standalone transaction, and not as part of a business combination involving it and the selling sponsor, the FHC stated that it will fully reflect the assets and liabilities of an acquired plan as assets and liabilities of the FHC on its balance sheet. This treatment differs from the manner in which the assets and liabilities of an internal pension plan of an employer typically are accounted for on the balance sheet of the employer under U.S. generally accepted accounting principles. See Statement of Financial Accounting Standards No. 158 (FAS 158), "Accounting for Defined Benefit Pension and Other Post Retirement Plans."

9. See 12 C.F.R. 225.28(b)(5), (6), and (9)(ii).

10. 12 See 12 U.S.C. 1843(k)(4)(B).

acquisition of a third-party UK pension plan as an insurance company would perform and assume in connection with the issuance of fixed annuities. The functional similarity between a plan sponsor's obligations under a defined benefit pension plan and an insurance company's obligations under an annuity contract is especially close when the pension plan is both fully funded and hard-frozen, as it is in the FHC's proposed activity. When a pension plan's obligations to plan beneficiaries are hard-frozen and the plan is fully funded, one method commonly used by a plan sponsor to close out a plan is to purchase a terminal funding group annuity contract from an insurance company. Through such an annuity contract, the provider of the annuity becomes obligated to satisfy the responsibility to pay the benefits promised under the plan to the plan's beneficiaries. The FHC's proposed activities would be specifically permitted under the BHC Act if they were provided through an annuity contract or other form of insurance.

When evaluating this proposal, the Board considered that, under UK law, the nonbank subsidiary established by the FHC to acquire a third-party UK pension plan will generally bear sole responsibility for making additional contributions to the plan if the plan assets are not sufficient to meet the plan's expected or actual liabilities. However, UK law also permits the UK Pensions Regulator in certain circumstances to commence proceedings to hold an affiliate of a plan sponsor (including a depository institution affiliate) responsible for the sponsor's obligations to the plan.[11]

Generally, the Board has taken the position that, when a depository institution is secondarily liable for a financial obligation of an affiliate, even if the depository institution's liability is created by statute or regulatory action, the institution has issued a guarantee on behalf of an affiliate for purposes of section 23A of the Federal Reserve Act and the Board's Regulation W. Section 23A and Regulation W impose quantitative and qualitative limits on covered transactions between a depository institution and its affiliates.[12] The limitations in section 23A and Regulation W provide important protections against a depository institution suffering losses due to covered transactions with its affiliates and also limit the ability of a depository institution to transfer to its affiliates the subsidy arising from the institution's access to the federal safety net.

To address the potential section 23A and Regulation W issues presented by its initial proposed transaction, and in accordance with UK law,[13] the FHC obtained written assurances from the UK Pensions Regulator that it will not seek to hold any of the FHC's depository institution subsidiaries that are subject to section 23A responsible for any shortfalls that may occur in the pension plan proposed to be acquired by the FHC in this initial transaction. As a condition of this order, the FHC must obtain similar written assurances from the UK Pensions Regulator before acquiring any additional third-party UK pension plan.[14]

Based on the foregoing and other facts of record, the Board concluded that the acquisition, management, and operation by the FHC of hard-frozen, fully funded third-party UK pension plans, when conducted in accordance with the conditions and limitations set forth in the order, is an activity that is financial in nature within the meaning of section 4(k) of the BHC Act. Any investment made by a third-party UK pension plan acquired by the FHC must otherwise be permissible for an FHC under the BHC Act and the Board's Regulation Y.[15] The authorization and determination granted by the Board's order is limited to the acquisition, management,

11. See the UK Pensions Act of 2004, section 38 (contribution notices) and section 43 (financial support directives). The UK Pensions Regulator may issue a contribution notice or financial support directive to an affiliate of a sponsor only if, among other things, the Pensions Regulator determines that it is reasonable to impose the proposed financial obligations on the affiliate.

12. See 12 U.S.C. 371c(b)(7) and 12 C.F.R. 223.3(h).

13. The Pensions Act of 2004 expressly authorizes the UK Pensions Regulator, on application by a plan or other person, to issue a "clearance statement" that determines that it would be unreasonable to issue a contribution notice or financial support directive to the plan or person under the circumstances described in the application. See Pensions Act of 2004, sections 42 and 46. The FHC received such a clearance statement with respect to its initial proposed acquisition of a third-party pension plan in the United Kingdom.

14. The FHC has indicated that the written assurances provided by the UK Pensions Regulator are subject to review and renewal by the regulator no later than five years after issuance. Before the expiration of any written assurances provided by the UK Pensions Regulator in connection with the acquisition by the FHC of a third-party UK pension plan, the FHC must either ensure that its activities conform with those permitted under section 23A and Regulation W or obtain an exemption from the Board from the limitations of section 23A and Regulation W with respect to the plan. The Board has not determined that section 23A applies to the contingent liabilities that may arise under applicable pension law from the establishment or operation by an affiliate of a depository institution of employee benefit plans in the ordinary course of its other business to provide benefits to the employees or former employees of the affiliate.

15. See, for example, 12 U.S.C. 1843(c)(5), (c)(6), and (k)(4)(H).

and operation by the FHC of third-party pension plans in the United Kingdom.[16]

Under the BHC Act, the Board may not determine, by regulation or order, that an activity is financial in nature or incidental to a financial activity if the Secretary of the Treasury (the Secretary) notifies the Board in writing that the Secretary believes the activity is not financial in nature, incidental to a financial activity, or otherwise permissible under section 4 of the BHC Act.[17] The Board provided the Secretary of the Treasury with notice of the FHC's proposal in accordance with the BHC Act, and the Secretary informed the Board in writing that the Secretary did not intend to prevent the Board from authorizing the FHC to engage in the proposed UK pension activities, subject to the conditions and limitations in the Board's order.

16. Other FHCs may seek approval to engage in similar activities by requesting a determination with respect to their own proposed activities under section 4(k)(2)(A) of the BHC Act and section 225.88 of the Board's Regulation Y (12 C.F.R. 225.88).

17. See 12 U.S.C. 1843(k)(2)(A).

The Board's determination and approval is subject to all the conditions set forth in Regulation Y, including those in section 225.7,[18] and to the Board's authority to require modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to ensure compliance with, or to prevent evasion of, the provisions and purposes of the BHC Act and the Board's regulations and orders. The Board's decision is specifically conditioned on compliance with all the commitments made to the Board in connection with the request, including the commitments and conditions discussed in the order. The Board's order was approved and effective on October 12, 2007.[18]

18. 12 C.F.R. 225.7.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, a brief discussion of a Board order in which the Board considered under section 4(k) of the Bank Holding Company (BHC) Act, and approved, a financial holding company (FHC)'s limited trading in certain physical commodities that are not approved by the Commodities Futures and Trading Commission (CFTC) for trading in the U.S. or on non-U.S. futures exchanges. To trade in such commodities, the FHC must be able to demonstrate that the derivative contracts on the commodity satisfy the specified standards that are stated in the order. The section also discusses the Board's approval of the same FHC's request to make and take delivery in nickel, a metal that is traded on the London Metal Exchange (LME)—a CFTC-comparable regulatory entity. Members of the LME can conduct brokerage activities for U.S. customers without being registered with the FTC as a futures commission merchant.

An FHC's Board-approved request to permit the refining, blending, or altering of approved commodities by a third party is reviewed within the section along with the use of recognized alternate trading platforms. The same Board order includes the Board's approval of the FHC's request to engage in limited physically settled energy tolling by entering into tolling agreements with power plant owners. The Board determined that the activity is complementary to the financial activity of engaging as principal in commodity derivatives transactions. The FHC nonbank activity had not *been previously approved by the Board. (See 2008 FRB C60.)*

For another Board order, the section discusses the Board's approval of an FHC's request to engage in providing Energy Management Services (EMS) to owners of power generation facilities. The EMS are to be provided under energy management agreements as a complement to the financial activities of engaging as principal in commodity derivatives and providing financial and investment advisory services for derivative transactions. (See 2008 FRB C20.)

3920.0.1 ENGAGING IN LIMITED FHC COMMODITY-TRADING ACTIVITIES INVOLVING A PARTICULAR COMMODITY AS A COMPLEMENT TO THE BHC-PERMISSIBLE FINANCIAL ACTIVITY OF ENGAGING REGULARLY IN COMMODITY DERIVATIVES BASED ON THAT COMMODITY

An FHC requested the Board's approval under section 4(k) of the Bank Holding Company Act (the BHC Act) to retain all of the shares of a company that engaged in a variety of commodity-related activities in the United States, including trading in physical commodities, an activity not previously approved under the BHC Act.

Regulation Y authorizes bank holding companies (BHCs) to engage as principal in forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on a rate, price, financial asset, nonfinancial asset, or group of assets (other than a bank-ineligible security) (commodity derivatives). A BHC may conduct commodity-derivatives activities under Regulation Y subject to certain restrictions that are designed to limit the BHC's activity to trading and investing in financial instruments rather than dealing directly in physical nonfinancial commodities. Under these restrictions, a BHC may take and make delivery of physically settled derivatives involving commodities that a state member bank is permitted to own.[1] For all other types of physically settled derivatives,[2] a BHC must make reasonable efforts to avoid delivery on such derivatives or must take and make delivery only on an instantaneous, pass-through basis. (See section 3260.0.4.6.) Other than in the limited circumstances described above in connection with commodity derivatives, Regulation Y generally does not permit BHCs to take or make delivery of nonfinancial commodities underlying commodity derivatives. In addition, BHCs are generally not permitted to purchase or sell nonfinancial commodities in the spot market.

1. State member banks may own, for example, investment-grade corporate debt securities, U.S. government and municipal securities, foreign exchange, and certain precious metals.

2. These derivative contracts would include instruments based on, for example, energy-related and agricultural commodities.

The FHC requested that the Board expand the authority of FHCs to purchase and sell commodities in the spot market and to take and make delivery of physical commodities to settle commodity derivatives (commodity-trading activities), by determining that these activities are ‘‘incidental’’ to a financial activity (pursuant to section 4(k) of the BHC Act). Commodity-trading activities typically involve the commercial activities of physically owning and disposing of assets such as oil, natural gas, agricultural products, and other nonfinancial commodities. Moreover, the risks associated with conducting these activities are commercial risks not traditionally incurred or managed to a material extent by banking organizations. Accordingly, the Board did not believe that commodity-trading activities could be construed as incidental to a financial activity within the meaning of the Gramm-Leach-Bliley Act (the GLB Act) or the BHC Act. The Board concluded, however, for the reasons set forth below, that there was a reasonable basis for construing these activities as complementary to a financial activity within the meaning of the GLB Act or the BHC Act.

Section 4(k)(1)(B) of the BHC Act permits FHCs to seek Board approval to engage in any activity the Board determines (1) to be complementary to a financial activity and (2) not to pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. FHCs must submit a written request for the Board's approval to engage in a complementary activity through the filing of a notice under section 4 of the BHC Act. The Board considers each request on a case-by-case basis. (Subsection 3905.0.1 provides a list of the information that needs to be included with such a request.)

A number of considerations supported a Board determination that commodity trading activities are complementary to a financial activity. (See 2003 FRB 508.) Commodity-trading activities can flow from the existing financial activities of FHCs. In particular, commodity-trading activities provide FHCs with an alternative method of fulfilling their obligations under otherwise BHC-permissible commodity derivatives. For example, if warranted by market conditions, an FHC would be able to use commodity-trading-activity authority to take a commodity derivative to physical settlement rather than terminating, assigning, offsetting, or otherwise cash-settling the contract.

The Board also noted that the applicant contended that the existing restrictions of Regulation Y place FHCs at a significant bargaining disadvantage when operating in physically settled over-the-counter (OTC) derivatives markets. According to the applicant, counterparties to FHCs in these markets are aware of the regulatory impediments that inhibit BHCs and FHCs from taking derivative contracts to physical settlement. As a consequence, BHCs and FHCs that participate in these markets can be forced to terminate or offset their derivative contracts on uneconomic terms. Allowing BHCs and FHCs to engage in commodity-trading activities would permit FHCs to compete in physically settled OTC derivatives markets more economically.

The Board concluded that commodity trading activities involving a particular commodity complement the financial activity of engaging regularly as principal in BHC-permissible commodity derivatives based on that commodity.[3] In order to authorize FHCs to engage in commodity-trading activities as a complementary activity under the GLB Act, the Board must also determine that those activities do not pose a substantial risk to the safety or soundness of depository institutions or the U.S. financial system generally.[4] To limit the potential safety-and-soundness risks of commodity-trading activities, the applicant proposed to engage in only a limited amount of commodity-trading activities. As a condition of the Board's order, the market value of commodities held by the applicant as a result of commodity-trading activities must not exceed 5 percent of the applicant's consolidated tier 1 capital.[5] The applicant also must notify its designated supervising Federal Reserve Bank if the market value of commodities held by the applicant as a result of its commodity-trading activities exceeds 4 percent of its tier 1 capital.

In addition, the Board's order permitted the applicant to take and make delivery of only physical commodities for which derivative contracts have been approved for trading on a U.S. futures exchange by the Commodity Futures Trading Commission (CFTC) (unless specifically excluded by the Board) or that have been specifically approved by the Board.[6] This

3. For example, commodity-trading activities involving all types of crude oil would be complementary to engaging regularly as principal in BHC-permissible commodity derivatives based on Brent crude oil.

4. 12 U.S.C. 1843(k)(1)(B).

5. The applicant is required to include in this 5 percent limit the market value of any commodities it holds as a result of a failure of its reasonable efforts to avoid taking delivery under section 225.28(b)(8)(ii)(B) of Regulation Y.

6. The particular commodity-derivative contract that the applicant takes to physical settlement need not be exchange-traded, but (in the absence of specific Board approval) futures

requirement is designed to prevent the applicant from becoming involved in dealing in finished goods and other items, such as real estate, that lack the fungibility and liquidity of exchange-traded commodities.

The Board concluded that permitting the applicant to buy and sell commodities in the spot market or physically settle commodity derivatives would not appear to increase significantly the organization's potential exposure to commodity-price risk.

The Board's order acknowledged that adding commodity-trading activities would expose the applicant to additional risks, including, but not limited to, storage risk, transportation risk, and legal and environmental risks. To minimize these risks, the applicant was not authorized to (1) own, operate, or invest in facilities for the extraction, transportation, storage, or distribution of commodities or (2) process, refine, or otherwise alter commodities. In conducting its commodity-trading activities, the applicant was expected to use appropriate storage and transportation facilities owned and operated by third parties.[7]

The applicant indicated that it will mandate that the commodity-storage facilities it uses have all required governmental permits and provide the applicant with a certificate to that effect. The applicant further stated that all commodity-storage facilities will be inspected by or on its behalf before use and that it will physically inspect any commodity in storage every six months.

The applicant also stated that it would adopt additional standards for commodity-trading activities that involve environmentally sensitive products, such as oil or natural gas. For example, the applicant will require that the owner of every vessel that carries oil on its behalf be a member of a protection and indemnity club and carry the maximum insurance for oil pollution available from the club. Every such vessel will be required to carry substantial amounts of additional oil-pollution insurance from creditworthy insurance companies. The applicant will place age limitations on vessels and will require vessels to be approved by a major international oil company and have appropriate response plans and equipment for oil spills. The applicant will also have a comprehensive backup plan in the event any vessel owner fails to respond adequately to an oil spill and will hire inspectors to monitor the loading and discharging of vessels.

The applicant also represented that it will have in place specific policies and procedures for the storage of oil. In addition, the applicant will require all oil-storage facilities it uses to carry a significant amount of oil-pollution insurance from a creditworthy insurance company and to have appropriate spill-response plans and equipment. The applicant will also follow a comprehensive backup plan in the event the storage facility owner fails to respond adequately to an oil spill.

The Board determined that the applicant had the managerial expertise and internal control framework to manage the risks of taking and making delivery of physical commodities. It also concluded that the applicant had the expertise and internal controls to integrate effectively the risk management of commodity-trading activities into its overall risk-management framework, which includes managing on a consolidated basis the overall exposure arising from the applicant's commodity-related activities.

For these reasons, and based on the applicant's policies and procedures for monitoring and controlling the risks of commodity-trading activities, the Board concluded that consummation of the proposal did not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally and could reasonably be expected to produce benefits to the public that outweighed any potential adverse effects. (See 2003 FRB 508.)

In another Board order (2004 FRB 215), a foreign bank (the FB) that is treated as a financial holding company (FHC) for purposes of the Bank Holding Company Act (the BHC Act), requested the Board's approval under section 4 of the BHC Act (12 U.S.C. 1843) and the Board's Regulation Y (12 C.F.R. 225) to retain all the voting shares of FB Energy, LLC, located in Connecticut (FB Energy) and to continue engaging in physical-commodity trading in the United States. The FB conducts physical-

or options on futures on the commodity underlying the derivative contract must have been approved for exchange trading by the CFTC. The CFTC publishes annually a list of the CFTC-approved commodity contracts. See, for example, Commodity Futures Trading Commission, *FY 2002 Annual Report to Congress* 124 and *FY 2003 Annual Report to Congress* 109.

With respect to granularity, the Board intends this requirement to permit commodity-trading activities involving all types of a listed commodity. For example, commodity-trading activities involving any type of coal or coal-derivative contract would be permitted, even though the CFTC list specifically approves only Central Appalachian coal.

7. The Board's approval of commodity-trading activities as a complementary activity, subject to the limits and conditions, did not restrict the existing authority of the applicant to deal in foreign exchange, precious metals, or any other bank-eligible commodity.

commodity trading in the United States pursuant to temporary grandfather authority provided by the BHC Act and Regulation Y.[8]

The FB requested that the Board permit it to purchase and sell physical commodities in the spot market and to take and make delivery of physical commodities to settle commodity derivatives (commodity-trading activities). As noted in the 2003 Board order (2003 FRB 508), the Board had previously determined that commodity-trading activities involving a particular commodity complement the financial activity of engaging regularly as principal in BHC-permissible commodity derivatives based on that commodity. The FB regularly engages as principal in BHC-permissible commodities derivatives based on a variety of commodities, including natural gas and electricity. The Board determined that the commodity-trading activities are complementary to the commodity-derivatives activities of the FB.

The FB has established and maintained policies for monitoring, measuring, and controlling the credit, market, settlement, reputational, legal, and operational risks involved in its commodity-trading activities. These policies address key areas such as counterparty credit risk, value-at-risk methodology and internal limits with respect to commodity trading, new-business and new-product approvals, and identification of transactions that require higher levels of internal approval. The policies also describe critical internal control elements, such as reporting lines, and the frequency and scope of internal audit of commodity-trading activities.

The FB is subject to the same commitments and restrictions set forth in the previously discussed Board order (2003 FRB 508). The FB and its commodity-trading activities also remain subject to the general securities, commodities, and energy laws and to the rules and regulations (including the anti-fraud and anti-manipulation rules and regulations) of the Securities and Exchange Commission, the CFTC, and the Federal Energy Regulatory Commission.

The Board concluded that permitting the FB to engage in the limited amount and types of commodity-trading activities described previously, on the terms described in the order, would not appear to pose a substantial risk to the FB, depository institutions, or the U.S. financial system generally. Because of its existing authority to engage in commodity derivatives, the FB could already incur the price risk associated with commodities. Therefore, permitting the FB to buy and sell commodities in the spot market or to physically settle commodity derivatives did not appear to increase significantly the organization's potential exposure to commodity-price risk.

Based on the reasons stated in the Board's order, and based on the FB's policies and procedures for monitoring and controlling the risks of commodity-trading activities, the Board concluded that consummation of the proposal did not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally and that it could reasonably be expected to produce benefits to the public that outweigh any potential adverse effects.

Based on all the facts of record, including the representations and commitments made by the FB in connection with the notice, and subject to the terms and conditions set forth in the order, the Board approved the notice on January 27, 2004. (See 2004 FRB 215 and the notice approved by the Board at 2004 FRB 511; both FHCs were approved by the Board to engage in limited physical-commodity trading involving such commodities as natural gas and electricity.) Also see the approvals for FHCs to engage in limited commodities trading that included certain energy-related commodities, such as natural gas, crude oil, electricity, and emissions allowances.[9] These Board orders were approved on November 18, 2005 (2006 FRB C57), December 19, 2005 (2006 FRB C54), and March 15, 2006 (2006 FRB C113). Subsequently, the Board delegated its authority to approve notices by FHCs to engage in physical-commodity trading as a complementary activity to the director of the Division of Banking Supervision and Regulation, with the concurrence of the General Counsel, when the proposal meets the conditions imposed by the Board in approving previous requests and when the specific proposal raises no significant legal, policy, or supervisory issues.

8. The FB's grandfather rights were scheduled to expire on February 8, 2004. The FB conducts its U.S. energy trading business through FB Energy and FB's London branch.

9. An emission allowance is an intangible right to emit certain pollutants during a given year or any year thereafter that is granted by the U.S. Environmental Protection Agency or comparable foreign regulatory authority to an entity—such as a power plant or other industrial concern—affected by environmental regulation aimed at reducing emission of pollutants. An allowance can be bought, sold, or exchanged by individuals, brokers, corporations, or government entities that establish an account at the relevant governmental authority.

Emissions allowances are stored and tracked in the records of the relevant government authority. Accordingly, there is no transportation, environmental, storage, or insurance risk associated with ownership of emissions allowances.

3920.0.2 TRADING IN CERTAIN PHYSICAL COMMODITIES NOT APPROVED BY THE CFTC FOR TRADING ON A FUTURES EXCHANGE

The Board had previously conditioned its notice approvals to engage in physical commodity trading (PCT) based on commitments made by the FHCs to trade only in commodities for which derivative contracts had been approved for trading on a futures exchange by the CFTC, unless the commodity was specifically excluded or approved by the Board (Approved Commodities Commitment). This commitment provided a means to ensure that the PCT remained complementary to the financial activity of commodity derivatives activities (CDAs) because it helped demonstrate that there was a derivatives market for the underlying commodity. This commitment also was intended to prevent FHCs from dealing in finished goods and other items, such as real estate or industrial products that lacked the fungibility and liquidity of exchange-traded commodities.

In another request, a foreign-domiciled FHC, RB, requested the Board's approval under section 4 of the BHC Act, and the Board's Regulation Y, to engage in limited PCT. That request led to the Board's decisions with regard to trading of certain physical commodities, which are *not* CFTC-approved for trading on a futures exchange. The Board determined that, subject to certain requirements, an FHC may take delivery of certain commodities that have *not* been approved by the CFTC, if those commodities are similarly fungible and liquid, and do not expose the FHC to significant additional risk.

3920.0.2.1 Commodities Approved for Trading on Non-U.S. Exchanges.

The Board has previously used CFTC-approval of a commodity for trading on a U.S. futures exchange as a test to determine whether a derivative or the underlying commodity is liquid and fungible. For some liquid and fungible commodities, however, no market-maker had sought CFTC approval because of the presence of an established foreign trading market, which could deter a U.S. exchange from listing a similar product. The absence of CFTC approval, in those cases, generally would *not* indicate that taking and making physical delivery of the commodity would entail substantially greater risks than taking and making delivery of a CFTC-approved commodity. A derivatives contract that is based on a commodity that trades on a non-U.S. exchange may be subject to a regulatory structure comparable to the one administered by the CFTC. Such a structure generally should be sufficient to demonstrate that (1) there is a market in financially settled contracts on the commodities, (2) the commodity is fungible, and (3) a reasonably liquid market for the commodity exists.

3920.0.2.1.1 Take and Make Delivery of Nickel

RB specifically requested the Board's approval to take and make physical delivery of nickel, which is a metal that is widely and actively traded on the London Metal Exchange (LME). The LME offers futures and options contracts for aluminum, copper, nickel, tin, zinc, and certain aluminum alloy contracts. The CFTC has determined that the LME is subject to a regulatory structure comparable to that administered by the CFTC under the Commodity Exchange Act. As a result, members of the LME may conduct brokerage activities for U.S. customers without having to register with the CFTC as a futures commission merchant or otherwise comply with certain of the CFTC's consumer protection rules.[10] Given the nature of the LME trading market and the CFTC's determination that LME members are subject to comparable regulatory oversight, the Board determined that FHCs that receive approval to engage in PCT may take and make delivery of nickel. The Board determined that other FHCs that had already received approval to engage in PCT could also make and take delivery of nickel, consistent with the Approved Commodities Commitment, as a commodity that has been specifically approved by the Board.

3920.0.2.2 Commodities That Are Not Approved for Trading in the U.S. or on Certain Non-U.S. Exchanges

Many commodities for which derivatives con-

10. The CFTC's Rule 30.10 permits a person affected by the requirements contained in Part 30 of the CFTC's rules, which relate to registration as a futures commission merchant, to petition the CFTC for an exemption from the requirements based on the person's substituted compliance with a foreign regulatory structure found comparable to that administered by the CFTC under the Commodities Exchange Act.

tracts have not been approved for trading by the CFTC or that are not traded on a non-U.S. exchange may also be commodities that have viable markets with financially settled contracts on the commodities and that satisfy fungibility and liquidity concerns. In many cases, the existence of an established over-the-counter market obviates the need to seek CFTC approval for listing on a futures exchange. In addition, the particular commodity may be similar to a CFTC-approved commodity, such as a product that is derived from a CFTC- approved commodity. In which case, the separate listing may be excessive because market participants can use derivatives contracts on the CFTC-approved commodity to hedge their positions in the non-CFTC-approved derivative product.

The Board believes that taking and making physical delivery of non-CFTC-approved commodities may be consistent with the PCT authority if an FHC can demonstrate that (1) there is a market in financially settled contracts on those commodities in addition to the physically settled contracts, (2) the particular commodity is fungible, and (3) the market for the commodity is sufficiently liquid. In addition, the FHC must demonstrate that it has established trading limits in place that address both concentration risk and overall exposure to the commodity to ensure that the FHC could physically trade in these commodities without incurring significant additional risk.

RB requested the Board's approval to trade in certain natural gas liquids, oil products, and petrochemicals. The natural gas liquids consisted of butane, ethane, and natural gasoline; the proposed oil products were asphalt, condensate, boiler cutter, residual fuel oil no. 6, kerosene, straight run, marine diesel, and naphtha; and the proposed petrochemicals were ethylene, paraxylene, styrene, propylene, and toluene (collectively, PCs). Contracts on those PCs are not approved by the CFTC for trading on a U.S. futures exchange or on a major non-U.S. exchange. Nonetheless, the following considerations provided the Board support for making a determination that trading in the PCs should be permitted as part of the PCT authority.

3920.0.2.2.1 Market in Financially Settled Contracts

Many commodities trade on established alternative trading platform(s) or ATPs that are used by a wide variety of market participants, rather than on a futures exchange. If derivatives contracts on a commodity trade on a recognized ATP, that activity could serve as sufficient evidence that a market in financially settled contracts on the particular commodity exists. Financially and physically settled contracts for all the PCs trade on recognized ATPs.

The natural gas liquids are traded on the Intercontinental Exchange ("ICE") and on the New York Mercantile Exchange ("NYMEX") electronic trading platforms; the distillate and residual oil products trade on ICE and NYMEX; and the petrochemicals are traded on the Chemconnect electronic trading platform. These ATPs are major platforms that are widely used by a variety of producers, consumers, and traders of the PCs.

3920.0.2.2.2 Fungibility

To ensure that a commodity is fungible, an FHC must demonstrate that no specification of exact product or lot would be included for contracts on the commodity. The physical asset that may be delivered to satisfy a contract would be, by nature or usage of trade, the equivalent of any other unit of the asset. The PCs, which trade on ICE, NYMEX, and Chemconnect, are fungible because market participants contract for specific quantities of the commodity but cannot specify the particular product they will receive.

3920.0.2.2.3 Liquidity

To ensure that the market for a particular commodity is sufficiently liquid, an FHC must demonstrate that an active trading market in the commodity exists that would allow the institution to limit its position in the commodity relative to the volume that trades in the market generally. The following factors indicate that a reasonably liquid market exists: (1) reliable trading volume in the commodity or production statistics exist that demonstrate the size of the market in the commodity; (2) daily or intraday price data on the commodity are published; and (3) a number of market makers in the commodity stand ready to buy or sell the commodity each day at published bid and offer quotations. Each of the PCs is derived from CFTC-approved commodities (natural gas and oil) and is used, similar to CFTC approved commodities, as fuel or as inputs for finished products. The PCs are traded widely through brokers on the previously discussed ATPs and are physically traded at various hubs in the U.S. and abroad.[11] The ATPs post daily prices for both the buy and sell offers on which the PCs trade.

3920.0.2.2.4 Trading Limits

An FHC that proposes to trade in a new commodity must demonstrate that it has established appropriate limits on its trading in the commodity and has a risk-management program in place to monitor compliance with those limits, which must include both concentration limits and overall exposure limits. RB represented that as part of its risk-management program relating to the PCs, it would impose appropriate concentration and overall exposure limits for each of the PCs.

In light of the characteristics of the PCs and based on all the facts of record, the Board has determined that taking physical delivery of the PCs is consistent with the complementary nature of PCT and does not present undue safety and soundness concerns for RB.[12]

3920.0.2.2.5 Altering Commodities.

Previously, the Board approved PCT, on a limited basis, subject to a number of commitments, including that the FHC not process, refine, or otherwise alter a commodity. RB intends to engage third parties to refine, blend, or otherwise alter commodities for which it is permitted to take and make physical delivery.

A number of considerations supported the Board's determination that engaging a third party to alter a commodity is consistent with the existing PCT authority. Permitting RB to engage a third party to alter a commodity would not significantly increase the risks to the institution from PCT. Under this authority, an FHC may already engage a third party to store commodities, which exposes an FHC to substantially the same types of risks as engaging a third party to alter a commodity. Also, an FHC could sell a commodity to a refinery and buy back the refined commodity if both the commodity sold to and bought from the refinery were permissible commodities. Permitting an FHC to engage third parties to alter commodities also would enhance an FHC's ability to meet its customers' needs.

To ensure that the activity remains consistent with the scope of PCT, RB made the following commitments: (1) RB will not alter commodities itself; (2) both the commodity input and the resulting altered commodity will be permissible commodities under the Board's decisions; and (3) RB will not have exclusive rights to use the alteration facility. Requiring that both the commodity input and the altered commodity be permissible commodities under the Board's decisions helps ensure that RB would not assume the risk of taking and making physical delivery of commodities that the Board has not yet evaluated. In addition, preventing RB from having the exclusive right to use an alteration facility should reduce RB's exposure to the potential risks associated with operating commodity-altering facilities.

3920.0.2.2.6 Risks of Proposed Physical Commodity Trading Activities.

Permitting RB to engage in the limited amount and types of PCT described above would not appear to pose a substantial risk to RB, depository institutions, or the U.S. financial system generally. RB made commitments relating to its PCT that are designed to address the risks involved in the proposed activities. In addition to the commitments discussed previously, RB provided substantially the same commitments and agreed to the same limitations as those provided by other FHCs in connection with the Board's approvals of their proposals to engage in PCT. With regard to RB and its Board order, see also subsection 3920.0.4.

3920.0.3 ENERGY MANAGEMENT SERVICES AS A COMPLEMENT TO A FINANCIAL ACTIVITY

A foreign-owned FHC, for the purposes of the BHC Act, a directly owned foreign bank, and its other directly owned foreign companies (all collectively referred to as "F"), requested the Board's approval under section 4 of the BHC Act (12 U.S.C. 1843) and the Board's Regulation Y to provide energy management services (EMS) to owners of power generation facilities

11. Natural gas liquids are physically traded in the U.S. at hubs in Texas and Kansas; the distillate and residual oil products are physically traded at various points in the United States as well as the Caribbean, Africa, Europe, and Singapore; and the petrochemicals are physically traded at various points in the U.S., South Korea, and Thailand.

12. Because trading of the proposed commodities might require that an FHC adapt a particular risk-management program beyond what would be required to trade in the commodities that are currently permissible, the Board's order does not grant authority to take and make delivery of the proposed commodities to all FHCS with PCT authority.

under energy management agreements (EMAs); an activity that is complementary to the financial activities of engaging as principal in commodity derivatives and providing financial and investment advisory services for derivatives transactions.[13] Providing EMS generally involves acting as a financial intermediary for a power plant owner to facilitate transactions relating to the acquisition of fuel and the power plant owner's sale of power. Such services may also consist of providing advice to assist the owner in developing its risk-management plan.

3920.0.3.1 Provision of Energy Management Services

Under its EMAs, EMT, as energy manager, assists power plant owners by providing transactional and advisory services. The transactional services consisted primarily of EMT acting as a financial intermediary, substituting its credit and liquidity for those of the owner to facilitate the owner's purchase of fuel and sale of power. EMT's advisory services include providing market information to assist the owner in developing and refining a risk-management plan for the plant.

When providing EMS, EMT will provide services under an EMA based on a strategic framework that will be established by the owner. The owner, in consultation with EMT, establishes an energy management plan and risk-management policy to govern how the generation facility should be operated. The energy management plan establishes the amount of power the plant should generate and determines how the plant will meet its reliability obligations to the power transmission grid. The plant owner must approve all commodity contracts, including all contracts for the purchase of fuel or the sale of electricity. The authority to enter into power or fuel contracts, in some cases, may be delegated to EMT, if the contracts satisfy specific criteria that are established by the owner; other contracts must be approved by the owner. The owner also maintains the right, subject to EMT's right of first refusal, to market and sell power directly to third parties. The owner ultimately retains all decision-making authority, including decisions relating to the facility's generation output and, in particular, whether the facility should be shut down for any period of time.

An EMA's compensation structure includes this allocation of responsibilities. When the facility is in operation, EMT is typically compensated on a monthly basis at the greater of a monthly fixed fee or a stated percentage of the spread between delivered fuel prices and the realized power revenues (adjusted to reflect certain fees and costs). When the facility is not in operation, EMT is not responsible for the fixed costs of the facility and is not entitled to revenues or other compensation, apart from the monthly fees.

EMT is not involved in providing day-to-day operational services to the facility. Those tasks are generally performed by the owner or by an operator who is hired directly by the owner and is not affiliated with EMT. The operator manages and maintains the facility on a daily basis, which typically includes providing labor and support services. The operator is to provide EMT with information on the operating status of the facility, maintenance issues that might affect the availability of the facility to generate power, and scheduled outage and maintenance periods.

EMT may buy fuel for the facility from third parties and enter into a mirror transaction for the fuel with the owner. The owner may then sell the power generated by the facility to EMT, and then EMT generally resells the power in the market. EMT would thus be acting as the financial intermediary for the owner, providing credit and liquidity support, including posting any required collateral for transactions. Because EMT is able to substitute its name and credit rating for the owner's, the terms of the transactions may be generally more favorable than what the owner could negotiate on its own.

EMT assumes responsibility for administrative tasks related to the fuel and power transactions so that the owner does not have to maintain an administrative infrastructure to support its transactions with third parties. The services include (1) arranging for third parties to provide fuel transportation or power transmission services, (2) scheduling those services, and resolving any resulting imbalances; (3) ensuring that fuel deliveries and power sales are properly coordinated; (4) negotiating contracts with, and monitoring the credit support and collateral requirements of, the owner's counterparties; (5) assisting in complying with power tariffs; and (6) paying fuel suppliers. EMT also may enter into transactions with third parties as nec-

13. In connection with an acquisition of a marketing and trading entity, F received approval to engage in the U.S. in limited PCT activities, as an activity that is complementary to a financial activity of engaging in CDAs. The marketing and trading entity, now EMT, also served as an energy manager under EMAs with several power generators.

essary to ensure that the owner meets its power generation obligations to the power grid in accordance with the energy-management plan.

Risk-management and hedging services may also be provided by EMT to the owner in connection with both the purchase of fuel and the sale of power. These transactions may be entered into with third parties back to back (with EMT in the middle) or may consist of direct hedging transactions between the owner and EMT. EMT would retain the risk that the owner is hedging. For the first type of transaction, the owner would inform EMT of its intention to hedge the price of fuel or power for a specified term, and EMT would then solicit bids or offers. After reviewing the competing bids or offers, the owner would make a selection and direct EMT to enter into the transaction with that counterparty. EMT and the owner then would enter into a mirror transaction so that EMT would not retain any risk exposure on the overall transaction. For the second type of transaction, EMT would submit the offer for a hedging transaction to the owner, who can accept or reject the offer. If the owner accepts, EMT may enter into the transaction directly with the owner. All these transactions would be governed by the International Swaps and Derivatives Association's master agreements between the owner and EMT. The owner may also enter into hedging transactions directly with a third party without EMT's involvement.

EMT may generally provide two types of market information services to the owner. First, EMT may provide market and risk information to assist the owner in developing its risk-management plan and strategy. As a direct market participant, EMT has access to information that may help the owner refine its risk-management strategies. Second, EMT may provide the owner with day-to-day market information that the owner, in consultation with the operator of the power facility, may use to determine its short-term dispatch guidelines (that is, the amount of power the facility should generate to meet its contractual requirements and reliability obligations).

3920.0.3.2 Energy Management Services is Complementary

The Board concluded that the provision of EMS is complementary, within the meaning of the GLB Act, to the financial activities of providing commodity derivatives activities (CDAs) and Derivatives Advisory Services (DAS). EMS would add to these financial activities a number of agency and administrative services that would facilitate providing CDAs and DAS on behalf of a plant owner. The combination of services complements and enhances F's CDAs and DAS by allowing F to offer power plant owners an integrated approach to managing the commodity-related aspects of their business. Some non-BHC participants in the energy trading markets, including diversified financial services companies, offer EMS to clients in connection with their commodity derivatives business. Those companies can, and regularly do, provide EMS to owners. The Board's permitting FHCs to provide EMS would enable FHCs to offer the same integrated services that are provided by a number of their competitors. The Board thus concluded that F's EMS complement its CDAs and DAS.

3920.0.3.3 Limitations on Energy Management Services

In order to limit the size, scope, and safety and soundness risks of EMS, F committed that the revenues attributable to EMS would not exceed 5 percent of F's total consolidated operating revenues.[14] In addition, F's authority to provide EMS is subject to several conditions that limit F's responsibilities and potential liabilities it may assume under an EMA. Specifically, F may only act as energy manager if the relevant EMA provides that:

- the owner retains the right to market and sell power directly to third parties, which may be subject to the energy manager's right of first refusal;
- the owner retains the right to determine the level at which the facility will operate (i.e., to dictate the power output of the facility at any given time);
- neither the energy manager nor its affiliates guarantee the financial performance of the facility; and
- neither the energy manager nor its affiliates bear any risk of loss if the facility is not profitable.

The Board determined that permitting F to engage in EMS in the limited amounts and situations described previously would not appear

14. Total operating revenues are defined as net income and all non-interest revenue, net securities gains and losses but excluding extraordinary income.

to pose a substantial risk to F, depository institutions, or the U.S. financial system generally. F, acting as an energy manager, would enter into the same type of commodity derivatives transactions that other FHCs had been permitted to enter into; only it would enter into these transactions to facilitate the business strategies of a third-party owner.

Based on all the facts of record that were presented, including the representations and commitments made by F within its notice to the Board, and those commitments and conditions contained in the order, the Board approved the notice on December 4, 2007. (The previous discussion is only a summary. See the full text of the Board order at 2008 FRB C20.)

3920.0.4 Energy Tolling Services As A Complement To A Financial Activity

A foreign bank, R Bank (RB), a financial holding company (''FHC'') for purposes of the Bank Holding Company Act (''BHC Act''), requested the Board's approval under section 4 of the BHC Act (12 U.S.C. 1843) and the Board's Regulation Y (12 C.F.R. 225) to engage in limited PCT and the providing of EMS for owners of power generation facilities under EMAs. RB has requested the Board's approval to engage in physically settled energy tolling (ET) by entering into tolling agreements (TAs) with power plant owners as an activity that is complementary to the financial activity of engaging as principal in commodity derivatives transactions. The Board previously determined PCT and EMS to be activities that are complementary to the financial activity of engaging as principal in commodity derivative transactions, and in the case of EMS, also complementary to providing financial and investment advisory services for derivative transactions. The Board has not previously considered whether the requested ET is complementary to a financial activity under section 4 of the BHC Act for a FHC. RB intends to engage in such complementary activities through a joint venture company (JV) formed with SE, to be located in the U.S. and to operate as an energy services company. Certain existing TAs would be transferred to the JV.

3920.0.4.1 FHC'S Proposal

RB operates in the U.S. through CFG Corp., a multibank holding company, as well as through U.S. domiciled branches and representative offices.[15] RB also operates U.S. domiciled nonbanking companies in the United States, including a broker-dealer subsidiary, RB-GC.

3920.0.4.2 Physical Commodity Trading

RB intends to expand its commodity-related activities by forming a JV with S Corp. (S). A subsidiary of S, TE Corp. (TE), which engages in commodity derivatives transactions and PCT, would be transferred to the JV.[16] TE acts as principal in commodity transactions in and outside the U.S., taking and making physical delivery of commodities in connection with those transactions. TE also acts as an energy manager and enters into TAs with power plant owners. RB plans to engage in PCT, EMS, and ET under the complementary activity authority of section 4 of the BHC Act so that the ET companies transferred to the JV can continue to conduct those activities.[17] RB engages in CDAs in the U.S. and plans to expand those activities and engage in PCT through the JV. The JV's activities would include taking or making delivery of permissible commodities pursuant to physically settled commodity derivatives; taking inventory positions in natural gas, oil, emissions allowances, and other permissible commodities; and engaging in other spot market trading activities. RB has also indicated that JV might engage in commodity-related financing transactions, including volumetric production payment transactions (VPPs).[18]

15. RB holds a 38 interest in RF, an FHC formed by a group of banking organizations, including F and certain of its affiliates.

16. JV plans to purchase TE and its related energy trading subsidiaries and affiliates (″TE Companies″), which would become JV's subsidiaries.

17. RB committed that within two years of consummation of the transaction, it will conform, including by divestiture if necessary, any activities that are impermissible for an FHC under the BHC Act or that are inconsistent with the activities permitted under this order.

18. RB may engage in VPPs on oil and gas as permissible credit transactions if it agrees to sell the oil or gas it receives under the VPP to third parties before delivery. VPPs are a means of financing oil and gas exploration and production. Under a VPP, the lender or VPP holder provides an up-front payment in exchange for a royalty interest that entitles the VPP holder to receive hydrocarbons on a regular basis during the life of the VPP transaction in quantities that will allow the VPP holder to recover its up-front payment and a specified return. The Board's General Counsel has determined that VPPs generally are considered extensions of credit permis-

The Board had previously determined that PCT is a permissible activity because it complements the financial activity of engaging in CDAs. Most of the transactions in which RB is to engage as part of PCT would not differ from transactions that the Board has previously approved. RB plans to engage, however, in a wider set of transactions under the PCT authority and therefore requested confirmation that those activities are within the scope of that authority. Specifically, RB plans to enter into long-term power supply contracts with large commercial and industrial (C&I) end-users; to engage in PCT for which derivatives contracts have *not* been approved by the CFTC for trading on a U.S. exchange or specifically approved by the Board; and to enter into contracts with third parties to process, refine, or otherwise alter commodities.

3920.0.4.3 Long-Term Electricity Supply Contracts

RB plans, as part of its energy trading business, to enter into long-term electricity supply contracts with large C & I customers. The current PCT authority permits an FHC to take a position in a commodity and does not limit the duration of, or counterparties to, an FHC's contracts. Most commodities in which an FHC may trade under the PCT authority tend by their nature to be limited to the wholesale market. Electricity, however, has a greater potential to be sold not only to end-users generally but also to small retail customers who are unlikely to be participants in the market for energy related derivatives products.

To ensure that RB's activities remain consistent with the general complementary nature of the activities permitted, RB committed to enter into long-term supply contracts only with large C & I customers. The market risk relating to these long-term contracts would be handled using the same methodologies that are used for other electricity trades. RB represented that in all states where the electricity market has been deregulated, state regulations distinguish among types of end-users, generally relying on the customer's typical electricity consumption level. To ensure that RB contracts only with customers who are sufficiently large and sophisticated, RB committed that it will enter into long-term electricity supply contracts only with C & I customers that consume electricity at a rate of at least (1) 800 megawatt-hours/year ("MWHrs/year") or (2) the minimum consumption level for large C & I customers under applicable state law, whichever is greater. This restriction should be sufficient to ensure that RB transacts with financially sophisticated purchasers (and not with retail purchasers) and thus RB would remain essentially a wholesale intermediary.

sible for a BHC under section 225.28(b)(1) of Regulation Y, if the BHC agrees to sell the commodities before delivery.

3920.0.4.4 Energy Tolling Agreements

TE, as toller, pays the plant owner a fixed periodic payment that compensates the owner for its fixed costs ("capacity payments"), usually monthly, in exchange for the right to all or part of the plant's power output. The plant owner, however, retains control over the day-to-day operations of the plant and physical plant assets at all times.[19] The toller provides (or pays for) the fuel needed to produce the power that it directs the owner to produce. The fuel and energy transactions that the toller enters into in these circumstances are generally physically settled.[20] The agreements also generally provide that the owner will receive a marginal payment for each megawatt hour produced by the plant to cover the owner's variable costs plus a profit margin. The toll is similar to a call option on the power produced by the plant with a strike price linked to fuel and power prices. In general, the toller would direct the operator to run the plant (i.e., the toller would exercise its option) when the price of power exceeds the cost of producing that amount of power. Some TAs may also give the toller the right to a plant's excess capacity, which the toller may sell to the market or use to meet reliability obligations to the power grid.

3920.0.4.5 Risks of Energy Tolling

The primary risk to a toller is that the plant proves to be uneconomical to operate, which can occur when the cost of producing power is greater than the power's market price. In those cases, the toller has no ability to recover its

19. RB has indicated that TE's TAs are all medium term (generally two to five years), although some market participants enter into longer-term agreements. TE has not entered into longer-term contracts because it can be difficult to hedge exposure over a longer period of time.

20. Because an FHC would generally take or make physical delivery of fuel and electricity in connection with a TA, an FHC would need approval to engage in PCT to engage in ET.

capacity payments. To limit the potential safety and soundness risks of ET, RB has committed that it will limit the amount of its ET activities. Currently, all PCT activities are limited to a maximum of 5 percent of the FHC's tier 1 capital. RB committed to include the present value of its future committed capacity payments under a TA in calculating the value of commodities held by RB under its Physical Commodity Trading authority to determine compliance with the cap of 5 percent of tier 1 capital. As a result, allowing RB to engage in ET activities would not increase the overall position that it may take in physical commodities. This limit would also ensure that ET remains limited in size and scope relative to RB's financial activities.

3920.0.4.6 Energy Tolling is Complementary

Energy Tolling is an outgrowth of the existing financial activity of a BHC-FHC engaging in CDAs. Energy tolling complements CDAs by allowing an FHC to hedge its own, or assist its clients to hedge, positions in energy. An FHC engaging in authorized energy tolling would also provide an FHC with additional information on the energy markets that would help the FHC manage its own commodity risks. The Board also notes that financial institution competitors of RB that are not FHCs engage in tolling activities as part of their energy trading operations. Based on the foregoing and all other facts of record, the Board concluded that RB's ET activities complement its CDAs.

Based on all the facts of record, including RB's representations and commitments that were made to the Board in connection with its notice, and the terms and conditions set forth in the Board's order, the Board approved the FHC's notice. The Board's determination is also subject to all the conditions set forth in Regulation Y. The Board order was approved on March 27, 2008. (The previous discussion is only a summary. See the full text of the Board order at 2008 FRB C60.)

3920.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Limited commodity-trading activities involving a particular commodity, such as natural gas and electricity, that complement the financial activity of engaging regularly as principal in BHC-permissible commodity derivatives based on that commodity.	1843(k)(1)(B)	225.89	4-056.8	2003 FRB 508 2004 FRB 215 2004 FRB 511

2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Banking organizations have long been engaged in the sale of insurance products and annuities, although these activities historically have been subject to several restrictions. For example, until recently, national banks could sell most types of insurance, but only through an agency located in a small town. Bank holding companies were also permitted to engage in only limited insurance agency activities under the Bank Holding Company Act. State-chartered banks, on the other hand, generally have been permitted to engage in insurance sales activities as agent to the extent permitted by state law.

The Gramm-Leach-Bliley Act of 1999 (the GLB Act), however, authorized bank holding companies that make an effective election to become a financial holding company (FHC) to *underwrite* and *sell* any type of insurance nationwide. In addition, the GLB Act authorized national banks and state-chartered member banks to sell all types of insurance products through a financial subsidiary. *The GLB Act generally did not change the powers of banks to sell insurance directly.* As a result of the GLB Act and marketplace developments, many banking organizations are increasing the range and volume of their insurance and annuities sales activities.

To the extent permitted by applicable law, banking organizations may conduct insurance and annuity sales activities through a variety of structures and delivery channels, including ownership of an insurance underwriter or an insurance agency or broker, the employment by a bank of licensed agents, a joint marketing arrangement with a producer,[1] independent agents located at a bank's office, direct mail, telemarketing, and Internet marketing.

A banking organization may also conduct insurance or annuity sales activities through a managing general agent (MGA). An MGA is a wholesaler of insurance products and services to insurance agents. The MGA has a contractual agreement with an insurance carrier to assume functions for the carrier, which may include marketing, accounting, data processing, policy recordkeeping, and monitoring or processing claims. The MGA may rely on various local agents or agencies to sell the carrier's products. Most states require an MGA to be licensed.

3950.0.1 OVERVIEW AND SCOPE

The following guidance pertains to bank holding companies (BHCs) (including FHCs) and state member banks that are either directly or indirectly engaged in the sale of insurance or annuity products as agents. As noted above, the GLB Act amended the BHC Act to allow a BHC or foreign bank that qualifies as an FHC to engage in a broad range of insurance activities, including underwriting or selling (as agent or broker) any type of insurance and issuing and selling annuities, in any state.

BHCs that are not FHCs may sell or underwrite insurance as a principal, agent, or broker only to the limited extent authorized, before the GLB Act, under section 4(c)(8) of the BHC Act and section 225.28(b)(11) of Regulation Y. For example, a BHC that is not an FHC may underwrite and sell insurance (including home mortgage redemption insurance) that is directly related to an extension of credit by the BHC or any of its subsidiaries and that is limited to ensuring repayment of the outstanding balance due on the extension of credit in the event of the death, disability, or involuntary unemployment of the debtor. A BHC that is not an FHC can also sell any type of insurance as agent in a town if the town has a population of 5,000 or less and the BHC or a subsidiary has a lending office in the small town. (See section 3170.0.)

The GLB Act permits state member banks that are not authorized by applicable state law to sell insurance directly through a financial subsidiary.[2] A financial subsidiary engaged in insurance sales may be located wherever state law permits the establishment and operation of an insurance agency. Such subsidiaries, however, would be subject to state licensing and other requirements. The examination guidance found in this section is limited to insurance and annu-

1. The term "producer" refers broadly to persons, partnerships, associations, limited liability corporations, etc., that hold a license to sell or solicit contracts of insurance to the public. Insurance agents and agencies are producers who, through a written contractual arrangement known as a direct appointment, represent one or more insurance underwriters. Independent agents and agencies are those producers that sell products underwritten by one or more insurance underwriters. Captive agents and agencies represent a specific underwriter and sell only its products. Brokers are producers that represent the purchaser of insurance and obtain bids from competing underwriters on behalf of their clients. State insurance laws and regulations often distinguish between an insurance agent and a broker; in practice, the terms are often used interchangeably.

2. Rules pertaining to state member bank financial subsidiaries are found in the Board's Regulation H (12 C.F.R. 208.71–77).

ity *sales* activities. Because this section focuses only on insurance sales activities, it does *not* address insurance underwriting (that is, as principal) activities of FHCs or the limited insurance-underwriting powers of BHCs or state member banks. Examiner guidance on performing appropriate risk assessments for insurance and annuity sales activities of BHCs (including FHCs) and state member banks is included.[3]

Additionally, guidance is provided for examining a state member bank for compliance with the consumer protection rules relating to insurance and annuities sales activities that are contained in the Board's December 2000 revisions to Regulation H (subpart H) (12 C.F.R. 208.81–86), "Consumer Protection in Sales of Insurance" (CPSI). Subpart H, which became effective October 1, 2001, implements the insurance consumer protection requirements of the GLB Act, which are codified at 12 U.S.C. 1831x. (See 65 *Fed. Reg.* 75841 (December 4, 2000)). The regulation applies not only to the sale of insurance products or annuities by the state member bank but also to activities of any person engaged in insurance product or annuity sales on behalf of the state member bank, as discussed in this guidance. The guidance is generally not applicable to debt-cancellation contracts and debt-suspension agreements, unless these products are considered to be insurance products by the state in which the sales activities are conducted.

The Federal Reserve is responsible for evaluating the consolidated risk profile of a BHC or state member bank, including determining the risks posed to the BHC or state member bank from the insurance sales activities it conducts, directly or indirectly, and determining the effectiveness of its risk-management systems. The GLB Act also established a regulatory framework that is designed to ensure that the Federal Reserve coordinates with, and relies to the extent possible on information from, the state insurance authorities when it is supervising the insurance activities conducted by a BHC or state member bank through a functionally regulated subsidiary.

3. The term "risk assessment" denotes the work product described in SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions," and entails an analysis of (1) the level of inherent risk by type of risk (operational, legal, market, liquidity, credit, and reputation risk) for a business line or business function, (2) the adequacy of management controls over that business line or business function, and (3) the direction of the risk (increasing, decreasing, or stable).

Consistent with the Federal Reserve's risk-focused framework for supervising banking organizations, resources allocated to the review of insurance sales activities should be commensurate with the significance of the activities and the risk they pose to the banking organization. The scope of the review depends on the significance of the activity to the BHC or state member bank and on the extent to which the bank is directly involved in the activity. Examiner judgment is required to tailor the reviews, as appropriate, on the basis of the legal, organizational, and risk-management structure of the BHC's or state member bank's insurance sales activities and on other relevant factors.[4]

3950.0.2 SUPERVISORY APPROACH FOR THE REVIEW OF INSURANCE AND ANNUITY SALES ACTIVITIES

3950.0.2.1 Supervisory Objective

The primary objective of the review is to determine the level and direction of risk to a BHC or state member bank from its insurance sales activities, including insurance sales activities conducted directly, by or in conjunction with a subsidiary or affiliate, or through a third-party arrangement. Primary risks that may arise from insurance sales activities include operational, legal, and reputational risk. If the BHC or state member bank does not adequately manage these risks, they could have an adverse impact on a BHC's or state member bank's earnings and capital. The examiner should produce (1) a risk assessment that summarizes the level of inherent risk to the BHC or state member bank by risk category and (2) an assessment of the adequacy of board of directors and management oversight of the activity, including the activity's internal control framework. For those state member banks selling insurance or annuity products, or that enter into arrangements under which another party sells insurance or annuity products at the bank's offices or on behalf of the bank, a second objective of the review is to determine the bank's compliance with the consumer protection provisions of the GLB Act and the CPSI regulation.

4. See SR-02-01, "Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of $5 Billion or Less," and section 1000.1 of the *Commercial Bank Examination Manual* for a discussion of the Federal Reserve's risked-focused examinations and the risk-focused supervision program for community banking organizations. See also SR-97-24.

3950.0.2.2 State Regulation of Insurance Activities

Historically, insurance activities have primarily been regulated by the states. In 1945, Congress passed the McCarran-Ferguson Act, which granted states the power to regulate most aspects of the insurance business. The McCarran-Ferguson Act states that "no act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any state for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, provided the Act shall be applicable to the business of insurance to the extent that such business is not regulated by State law" (15 U.S.C. 1012(b)).

State regulation of insurance producers is centered on the protection of the consumer and consists primarily of licensing and continuing education requirements for producers. A producer generally must obtain a license from each state in which it sells insurance and for each product sold. Each state in which a producer sells insurance has regulatory authority over the producer's activities in the state.

The GLB Act does include several provisions that are designed to keep states from (1) unfairly regulating a BHC or bank to prevent it from engaging in authorized insurance activities or (2) otherwise discriminating against BHCs and banks engaged in insurance activities. These provisions are complex and beyond the scope of this guidance. It should be noted, however, that the GLB Act generally does not prohibit a state from requiring a BHC or bank, or its employees engaged in insurance sales, solicitation, or cross-marketing activities, to be licensed within the state.

State insurance regulatory authorities do not conduct routine, periodic examinations of an insurance producer. A state examination of an insurance producer is generally conducted only on an ad hoc basis and is primarily based on the volume and severity of consumer complaints. The state examination may also be based in part on the producer's market share and on previous examination findings. Additionally, a review of a producer would typically not assess its financial condition.

State market conduct examinations of *insurance sales practices* are focused at the insurance-underwriter level.[5] The insurance underwriter is generally held accountable for compliance with state insurance laws to protect the consumer from the unfair sales practices of any producer that markets the insurance underwriter's products. Market conduct examinations of an insurance underwriter may potentially uncover a concern about a particular producer, such as a bank-affiliated producer.[6] However, in the past, a state insurance regulatory authority has not typically examined a producer unless the insurance underwriter owns the producer.

Generally, market conduct examinations include reviews of insurance underwriters' complaint handling, producer licensing, policyholder service, and marketing and sales practices. Typically, a state authority will direct a corrective action for insurance sales activity at the underwriter. The states generally have specific guidance for their market conduct examinations of life, health, and property/casualty[7] lines of business guidance that corresponds to regulations related to advertising, misrepresentations, and disclosures for these different business lines. The reports of examination issued by the state insurance departments are usually available to the public.

Because the underwriter, not the producer, is liable to the insured, the failure of an insurance producer generally would not result in financial loss to consumers or state guarantee funds. Consequently, there are no regulatory capital requirements for insurance producers, nor do states require regulatory reporting of financial statement data on insurance producers. While the underwriter is ultimately liable to the insured, in some instances a producer and its owner may be held liable for misrepresentations, as well as for violations of laws and regulations.

5. Generally, market conduct reviews of *insurance underwriters* are conducted on an ad hoc basis, triggered primarily by the volume and severity of consumer complaints, and are based on the underwriter's market share or on previous examination findings. In some states, however, market conduct reviews of insurance underwriters are conducted on a periodic, three- to five-year schedule.

6. The terms "insurance underwriter," "insurer," "insurance carrier," and "insurance company" are industry terms that apply similarly to the party to an insurance arrangement who undertakes to indemnify for losses, that is, the party that assumes the principal risk under the contract.

7. Property insurance indemnifies a person who has an interest in a physical property for loss of the property or the loss of its income-producing abilities. Casualty insurance is primarily concerned with the legal liability for losses caused by injury to persons or damage to the property of others. It may also include such diverse forms of insurance as crime insurance, boiler and machinery insurance, and aviation insurance. Many casualty insurers also underwrite surety bonds.

3950.0.2.3 Functional Regulation

Under the GLB Act, reviews by banking supervisors of insurance or securities activities conducted in a BHC's or bank's functionally regulated subsidiary are not to be extensions of more traditional bank-like supervision. Rather, to the extent possible, bank supervisors are to rely on the functional regulators to appropriately supervise the insurance and securities activities of a functionally regulated subsidiary. A functionally regulated subsidiary includes any subsidiary of a BHC or bank that (1) is engaged in insurance activities and subject to supervision by a state insurance regulator or (2) is registered as a broker-dealer with the Securities and Exchange Commission. The GLB Act does *not* limit the Federal Reserve's supervisory authority with respect to a BHC or state member bank or the insurance activities conducted by either of them. The functional regulators for insurance sales activities, including the activities of insurance producers, consist of the insurance departments in each of the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, American Samoa, and Guam.

The GLB Act places certain limits on the ability of the Federal Reserve to examine, obtain reports from, or take enforcement action against a functionally regulated nondepository subsidiary of a BHC or state member bank. For purposes of these limitations, a subsidiary licensed by a state insurance department to conduct insurance sales activities is considered functionally regulated only with respect to its insurance activities and any activities incidental to those activities.[8]

The GLB Act indicates that the Federal Reserve must rely, to the fullest extent possible, on information obtained by the appropriate state insurance authority of a nondepository insurance agency subsidiary of a BHC or state member bank. In addition, the Federal Reserve may examine a functionally regulated subsidiary of a BHC or state member bank only in the following situations:

1. The Federal Reserve has reasonable cause to believe that the subsidiary is engaged in activities that pose a material risk to an affiliated depository institution, as determined by the responsible Reserve Bank and Board staff.
2. After reviewing relevant information available at the BHC or state member bank level (including information obtained from the appropriate functional regulator), it is determined that an inspection or examination is necessary to adequately understand and assess the banking organization's systems for monitoring and controlling the financial and operational risks that may pose a threat to the safety and soundness of an affiliated depository institution.
3. On the basis of reports and other available information (including information obtained from the appropriate functional regulator), there is reasonable cause to believe that the subsidiary is not in compliance with a federal law that the Federal Reserve has specific jurisdiction to enforce with respect to the subsidiary (including limits relating to transactions with affiliated depository institutions), and the Federal Reserve cannot assess such compliance by examining the BHC or state member bank or other affiliated depository institution.

Other similar restrictions limit the ability of the Federal Reserve to obtain a report directly from, or take enforcement action against, a functionally regulated nonbank subsidiary of a BHC or state member bank. As noted above, these GLB Act limitations do *not* apply to a BHC parent company or state member bank even if the BHC parent company or state member bank is itself licensed by a state insurance regulatory authority to conduct insurance sales activities.

Staff who are conducting reviews of BHC or state member bank insurance or annuity sales activities should be thoroughly familiar with SR-00-13, which provides guidance on reviews of functionally regulated BHC or state member bank subsidiaries. Reserve Bank staff may conduct an examination of a functionally regulated subsidiary, or request a specialized report from a functionally regulated subsidiary, only after obtaining approvals from the appropriate staff of the Board's Division of Banking Supervision and Regulation.

When preparing or updating the risk assessment of a BHC's or state member bank's insurance or annuity sales activities, Federal Reserve staff, when appropriate, should coordinate their activities with the appropriate state insurance authorities. The Federal Reserve's supervision of BHCs or state member banks engaged in insurance sales activities is not intended to replace or duplicate the regulation of insurance

8. For example, if a BHC's nonbank subsidiary engages in mortgage lending and is also licensed as an insurance agency, it would be considered a functionally regulated subsidiary only to the extent of its insurance sales activities.

activities by the appropriate state insurance authorities.

3950.0.2.4 Information Sharing with the Functional Regulator

The Federal Reserve and the National Association of Insurance Commissioners (NAIC) approved a model memorandum of understanding (MOU) on the sharing of confidential information between the Federal Reserve and individual state insurance departments.[9] The Board also approved the delegation of authority to the Board's general counsel to execute agreements with individual states, based on this MOU. Examiners should follow required Board administrative procedures before sharing any confidential information with a state insurance regulator. (These procedures generally require Federal Reserve staff to identify and forward to Board staff for review any confidential information that may be appropriate to share with the applicable state insurance regulator concerning insurance sales activities conducted by BHCs or state member banks.) The Board's Division of Consumer and Community Affairs' CP Letter 2001-11 outlines the procedures for sharing consumer complaint information with state insurance regulators.

3950.0.3 STATUTORY AND REGULATORY REQUIREMENTS AND POLICY GUIDANCE

3950.0.3.1 Privacy Rule and the Fair Credit Reporting Act

BHCs, state member banks, and the subsidiaries of both (other than subsidiaries that are subject to the privacy rules of another financial regulator such as a broker-dealer or insurance company) that sell insurance to consumers must comply with the privacy provisions under title V of the GLB Act (12 U.S.C. 6801–6809), as implemented by the Board's Regulation P (12 C.F.R. 216) (the privacy rule). Functionally regulated BHC and state member bank nonbank insurance agency subsidiaries are not covered by the Federal Reserve's privacy rule; however, they must comply with the privacy regulations (if any) issued by their relevant state insurance regulator.

9. The NAIC is the organization of insurance regulators from the 50 states, the District of Columbia, and the four U. S. territories. The NAIC provides a forum for the development of uniform policy among the states and territories. The NAIC is not a governmental or regulatory body.

The privacy rule regulates a BHC's or state member bank's treatment of nonpublic personal information about a "consumer," that is, an individual that obtains a financial product or service (such as insurance) from the institution for personal, family, or household purposes. The privacy rule generally requires a BHC or bank to provide a notice to each of its customers that describes the privacy policies and practices of the BHC or bank no later than when the BHC or bank establishes a business relationship with the customer. The privacy rule also generally prohibits a BHC or bank from disclosing any nonpublic personal information about a consumer to any nonaffiliated third party, unless the BHC or bank first provides to the consumer a privacy notice and a reasonable opportunity to prevent (or "opt out" of) the disclosure, and the consumer does not opt out. The privacy rule permits a BHC or bank to provide a joint notice with one or more of its affiliates or other financial institutions, as identified in the privacy notice itself, provided that the notice is accurate with respect to the institution and the other institutions.

While the privacy rule applies to the sharing of nonpublic personal information by a BHC or bank with nonaffiliated third parties, the sharing of certain consumer information with affiliates or nonaffiliates may be subject to the Fair Credit Reporting Act (FCRA) as well. For example, under the FCRA, if a BHC or bank wants to share with its insurance subsidiary information from a credit report or from a consumer application for credit (such as the consumer's assets, income, or marital status), the BHC or bank must first notify the consumer about the intended sharing and give the consumer an opportunity to opt out. The same rules would apply to an insurance company that wants to share information from credit reports or from applications for insurance with an affiliate or a third party.

3950.0.3.2 Anti-Tying Prohibitions

Federal law (section 106(b) of the BHC Act Amendments of 1970 (12 U.S.C. 1972(b)) generally prohibits a bank from requiring that a customer purchase a product or service from the bank or an affiliate as a prerequisite to obtaining another product or service (or a discount on the other product or service) from the bank. This prohibition applies whether the customer is retail or institutional, or whether the transaction is on bank premises or off premises. For example, a state member bank may not require that a customer purchase insurance from the bank or a subsidiary or an affiliate of the bank in order to obtain a loan from the bank (or a reduced interest rate on the loan).[10] The special anti-tying rules in section 106 do not apply to tying arrangements imposed by a BHC or a nonbank affiliate of a BHC.

3950.0.3.3 Policy Statement on Income from Sale of Credit Life Insurance

This Federal Reserve Board policy statement (see the *Federal Reserve Regulatory Service* at 3-1556) sets forth the principles and standards that apply to a bank's sales of credit life insurance and the limitations that apply to the receipt of income from those sales by certain individuals and entities associated with the bank. (See section 3170.0.4.1 and the inspection procedure related to this policy statement in section 3170.0.6.)

3950.0.4 RISK-MANAGEMENT PROGRAM

3950.0.4.1 Elements of a Sound Insurance or Annuity Sales Program

A BHC or state member bank engaged in insurance or annuity sales activities should—

1. conduct insurance sales programs in a safe and sound manner;
2. have appropriate written policies and procedures in place that are commensurate with the volume and complexity of its insurance sales activities;
3. obtain its board of directors' approval of the scope of the insurance and annuity sales program and of written policies and procedures for the program;
4. effectively oversee the sales program activities, including third-party arrangements;
5. have an effective, independent internal audit and compliance program;
6. appropriately train and supervise the employees conducting insurance and annuity sales activities;
7. take reasonable precautions to ensure that disclosures to customers for insurance and annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations;
8. ensure compliance with all applicable federal, state, or other jurisdiction regulations, including compliance with sections 23A and 23B of the Federal Reserve Act as that act applies to affiliate transactions; and
9. have controls in place to ensure accurate and timely financial reporting.

Every banking organization conducting insurance or annuity sales activities should have appropriate, board-approved policies, procedures, and controls in place to monitor and ensure that it complies with both federal and state regulatory requirements. Consistent with the principle of functional regulation, the Federal Reserve will rely primarily on the appropriate state insurance authorities to monitor and enforce compliance with applicable state insurance laws and regulations, including state consumer protection laws and regulations governing insurance sales.

3950.0.4.1.1 Sales Practices and Handling of Customer Complaints

Every component of a banking organization that engages in insurance or annuity sales activities should have board-approved policies and procedures for handling customer complaints related to these sales. The customer complaint process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. A BHC's or state member bank's board of directors and senior management should also review complaints if the complaints involve significant compliance issues that may pose a risk to the organization.

3950.0.4.1.2 Third-Party Arrangements

BHCs and state member banks, to the extent permitted by applicable law, may enter into agreements with third parties, including unaffiliated agents or agencies, to sell insurance or annuities or provide expertise and services that otherwise would have to be developed in-house. Many banks hire third parties to assist in establishing an insurance program or to train their own insurance staff. A bank may also find it advantageous to offer more specialized insurance products through a third-party arrangement.

A BHC's or state member bank's management should conduct a comprehensive review of an unaffiliated third party before entering into

10. See section 3500.0.

any arrangement to conduct insurance or annuity sales with the third party. The review should include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the BHC or state member bank, which includes compliance with applicable consumer protection laws and regulations.

The BHC's or state member bank's board of directors or its designated committee should approve any agreements with third parties. Agreements should outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the BHC's or state member bank's office space, equipment, and personnel. If an arrangement includes dual employees (for example, bank employees who are also employed by an independent third party), the agreement must provide for written employment contracts that specify the duties of these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable. The agreement should authorize the banking organization to monitor the third party's compliance with its agreement, as well as authorize the banking organization to have access to third-party records considered necessary to evaluate compliance. A BHC or state member bank that contracts with a functionally regulated third party should obtain from and review, as appropriate, any relevant, publicly available regulatory reports of examination of the third party.[11] Finally, the agreement should provide for indemnification of the institution by the unaffiliated third party for any losses caused by the conduct of the third party's employees in connection with its sales activities.

A BHC or state member bank is responsible for ensuring that any third party or dual employee selling insurance at or on behalf of the organization is appropriately trained either by the banking organization or the third party with respect to compliance with the minimum disclosures and other requirements of the CPSI regulation and applicable state regulations. The banking organization should obtain and review copies of third-party training and compliance materials to monitor the third party's performance on its disclosure and training obligations.

3950.0.4.1.3 Designation, Training, and Supervision of Personnel

A banking organization hiring personnel to sell insurance or annuities should investigate the backgrounds of the prospective employees. When a candidate for employment has previous insurance industry experience, the banking organization should have procedures to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators.[12]

The banking organization should require its own insurance or annuity sales personnel or third-party sales personnel selling at or on behalf of the bank to receive appropriate training and licensing. Training should cover appropriate policies and procedures for the organization's sales of insurance and annuity products. Personnel who are referring potential or established customers to a licensed insurance producer should also be trained to ensure that referrals are made in conformance with the CPSI regulation, if applicable. The training should also include procedures and guidance to ensure that an unlicensed or referring individual cannot be deemed to be acting as an insurance agent that is subject to licensing requirements.

When insurance or annuities are sold by a banking organization or by third parties at an office of, or on behalf of, the organization, the institution should have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as for supervising the referral activities of bank employees not authorized to sell these products. A banking organization also should designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as a state member bank's compliance with the CPSI regulation, if applicable.

3950.0.4.1.4 Compliance

Banking organizations should have policies and procedures to ensure that insurance or annuity

11. The reports of examination issued by state insurance regulators are generally public documents. Many states do not conduct periodic examinations of insurance sales activities.

12. Information from the states on the issuance and termination of producer licenses and on producers' compliance with continuing education requirements is available from the NAIC database known as the National Insurance Producer Registry (NIPR).

sales activities are conducted in compliance with applicable laws and regulations (including the CPSI regulation for sales conducted by or on behalf of a state member bank) and the institution's internal policies and procedures. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. For example, sales-compensation programs should be conducted in a manner that would not expose the BHC or state member bank to undue legal or reputation risks. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the banking organization.

The compliance function should be conducted independently of the insurance and annuity product sales and management activities. Compliance personnel should determine the scope and frequency of their reviews, and findings of compliance reviews should be reported directly to the banking organization's board of directors or to its designated board committee.

3950.0.5 RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

A risk assessment of insurance activities may be accomplished (1) in the course of conducting a regularly scheduled BHC inspection or state member bank examination or (2) as a targeted review. The purpose of preparing the risk assessment is to determine the level and direction of risk to the BHC or bank arising from its insurance and annuity sales activity. The risks to banking organizations engaged in insurance sales programs consist primarily of legal, reputational, and operational risk, all of which may lead to financial loss. After completing the risk assessment, if material concerns remain, the Board's Division of Banking Supervision and Regulation staff should be consulted for further guidance.

Legal and reputational risk may arise from a variety of sources, such as fraud; noncompliance with statutory or regulatory requirements, including those pertaining to the handling of premiums collected on behalf of the underwriter; claims processing; insurance and annuity sales practices; and the handling of "errors and omissions" claims.[13] Other sources of legal and reputational risk may arise from failing to safeguard nonpublic customer information; a high volume of customer complaints; or public regulatory sanctions against a producer.

Legal and reputational risks may also arise from an agent's obligation to provide a customer with products that are suited to the customer's particular needs and are priced and sold in accordance with state regulations. Additionally, an agent or agency may be liable for failing to carry out the appropriate paperwork to bind a policy that it has sold to a customer, or for making an error in binding the policy. State insurance departments generally are permitted by law to suspend or revoke a producer's license and assess monetary penalties against a producer if warranted.

Operational risk may arise from errors in processing sales-related information or from lack of appropriate controls over systems or staff responsible for carrying out the insurance or annuity sales activities. Additionally, banking organizations that have recently commenced insurance or annuity sales activities, or that are expanding their insurance sales business, are exposed to risk arising from inadequate strategic and financial planning associated with the activities, which could result in financial loss. Examiners should be attuned to risks that may arise from inadequate controls over insurance activities, a rapid expansion of the insurance or annuity sales programs offered by banking organizations, the introduction of new products or delivery channels, and legal and regulatory developments.

Operational risk may arise from inadequate premium-payment procedures and trust-account-balance administration by an agency. When the insurance agency bills the insured, the agent must comply with requirements for forwarding the payments to the insurer and for safekeeping the funds. Inadequate internal controls over this activity may result in the inappropriate use of these funds by the agent or agency. The banking organization should ensure that appropriate controls are in place to verify that all funds that are owed to the insurer or the insured are identified in the trust account and that the account is in balance.

When conducting a risk assessment, the examiner should first obtain relevant information to determine the existence and scale of

13. Errors and omissions insurance indemnifies the insured against loss sustained because of an error or oversight by the insured. For instance, an insurance agency generally purchases this type of coverage to protect itself against such things as failing to issue a policy.

insurance or annuity sales activity. Such information is available in the BHC's Bank Holding Company Performance Report or the state member bank's Uniform Bank Performance Report (UBPR) and in other System reports on insurance activities. Relevant reports, including applicable balance sheets and income statements for the insurance and annuity sales activities, may also be obtained from the BHC or state member bank. When preparing a risk assessment for an insurance or annuity sales activity that is conducted by a functionally regulated nonbank subsidiary of a BHC or state member bank, examiners should rely, to the fullest extent possible, on information available from the BHC or state member bank and the appropriate state insurance regulator for the subsidiary. If information that is needed to assess the risk cannot be obtained from the BHC or state member bank, or from the applicable functional regulator, the examiner should consult with the appropriate designated Board staff. Requests should not be made directly to a functionally regulated nonbank insurance and annuity sales subsidiary of a BHC or state member bank without first obtaining approval from the appropriate Board staff.

3950.0.6 CONSUMER PROTECTION IN SALES OF INSURANCE RULES

3950.0.6.1 Overview of the CPSI Regulation

The CPSI regulation is only applicable to all insured depository institutions, including state member banks.[14] The regulation, however, generally *does not* apply to nonbank affiliates or subsidiaries of a state member bank unless the company engages in the retail sale of insurance products or annuities at an office of, or on behalf of, an insured depository institution. Interpretations of the regulation, issued by the federal banking agencies, are found in appendix A of this section. Federal Reserve examiners are responsible for reviewing state member banks' compliance with the regulation. A BHC's board of directors and senior management are responsible for overseeing its depository institution subsidiaries' compliance with the CPSI regulation.

The regulation applies to the retail sale of insurance products and annuities by banks or by any other person at an office of a bank, or acting on behalf of a bank. For purposes of the CPSI regulation, "office" means the premises of the bank where retail deposits are accepted. The regulation applies only to the retail sale of insurance or annuity products—that is, when the insurance is sold or marketed to an individual primarily for personal, family, or household purposes.

14. The CPSI regulation applies to all federally insured depository institutions, including all federally chartered U.S. branches and state-chartered insured U.S. branches of foreign banking organizations.

3950.0.6.2 Misrepresentations Prohibited

The regulation prohibits a bank or other covered person from engaging in any practice or using any advertisement at any office of, or on behalf of, the bank or a subsidiary of the bank if the practice or advertisement could mislead any person or otherwise cause a reasonable person to erroneously believe—

1. that the insurance product or annuity is backed by the federal government or the bank, or is insured by the Federal Deposit Insurance Corporation (FDIC);
2. that an insurance product or annuity does not have investment risk, including the potential that principal may be lost and the product may decline in value, when in fact the product or annuity does have such risks; or
3. in the case of a bank or subsidiary of the bank at which insurance products or annuities are sold or offered for sale, that (1) the bank may condition approval of an extension of credit to a consumer by the bank or subsidiary on the purchase of an insurance product or annuity from the bank or a subsidiary of the bank and (2) the consumer is not free to purchase the insurance product or annuity from another source.

The regulation also incorporates the anti-tying provisions of section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 U.S.C. 1972). Additionally, banks are prohibited from selling life or health insurance products if the status of the applicant or insured as a victim of domestic violence or as a provider of services to domestic violence victims is considered as a factor in decision making on the product, except as expressly authorized by state law.

3950.0.6.3 Insurance Disclosures

The regulation also requires that a bank or a person selling insurance at an office of, or on behalf of, a bank make the following affirmative disclosures (to the extent accurate), both orally and in writing, before the completion of the initial sale of an insurance product or an annuity to a consumer. However, sales by mail or, if the consumer consents, via electronic media (such as the Internet) do not require oral disclosure.

1. The insurance product or annuity is not a deposit or other obligation of, or guaranteed by, the bank or an affiliate of the bank.
2. The insurance product or annuity is not insured by the FDIC or any other U.S. government agency, the bank, or (if applicable) an affiliate of the bank.
3. The insurance product or annuity, if applicable, has investment risk, including the possible loss of value.

For telephone sales, written disclosures must be mailed within three business days. The above disclosures must be included in advertisements and promotional materials for insurance products and annuities, unless the advertisements or promotional materials are of a general nature and describe or list the nature of services or products offered by the bank. Disclosures must be conspicuous and readily understandable.

3950.0.6.4 Credit Disclosures

When an application for credit is made in connection with the solicitation, offer, or sale of an insurance product or annuity, the consumer must be notified that the bank may not condition the extension of credit on either (1) the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates or (2) the consumer's agreement not to obtain, or a prohibition on the consumer from obtaining, an insurance product or annuity from an unaffiliated entity. These disclosures must be made both orally and in writing; however, applications taken by mail or, if the consumer consents, via electronic media do not require oral disclosure. For telephone applications, the written disclosure must be mailed within three business days. The disclosures must be conspicuous and readily understandable.

3950.0.6.5 Consumer Acknowledgment

The bank must obtain written or electronic acknowledgments of the consumer's receipt of the disclosures described above at the time they are made or at the completion of the initial purchase. For telephone sales, the bank must receive an oral acknowledgment and make a reasonable effort to obtain a subsequent written or electronic acknowledgment.

3950.0.6.6 Location

Insurance and annuity sales activities must take place, to the extent practicable, in an area physically segregated from one where retail deposits are routinely accepted from the general public (such as teller windows). The bank must clearly identify and delineate areas where insurance and annuity sales activities occur.

3950.0.6.7 Referrals

Any person who accepts deposits from the public in an area where deposits are routinely accepted may refer a consumer to a qualified person who sells insurance products or annuities only if the person making the referral receives no more than a one-time, nominal fee of a fixed dollar amount for the referral. The amount of the referral fee may not depend on whether a sale results from the referral.

3950.0.6.8 Qualifications

A bank may not permit any person to sell or offer insurance products or annuities at its office or on its behalf, unless that person is at all times properly qualified and licensed under applicable state law for the specific products being sold or recommended.

3950.0.6.9 Relationship of the CPSI Regulation to State Regulation

The GLB Act contains a legal framework for determining the effect of the CPSI regulation on state laws governing the sale of insurance, including state consumer protection standards. In general, if a state has legal requirements that are inconsistent with, or contrary to, the CPSI regulation, initially the federal regulation does not apply in the state. However, the federal banking agencies may, after consulting with the state involved, decide to preempt any inconsistent or contrary state laws if the agencies find that the CPSI regulation provides greater protections than the state laws. It is not expected that there will be significant conflict between state and federal laws in this area. If the consumer protection laws of a particular state appear to be inconsistent with and less stringent (that is, provide less consumer protection) than the CPSI regulation, examiners should inform the staff of the Board's Division of Banking Supervision and Regulation.

3950.0.6.10 Relationship to Federal Reserve Guidance on the Sale of Nondeposit Investment Products

When a bank sells insurance products or annuities that also are securities (such as variable life insurance annuities), it must conform with the applicable Federal Reserve and interagency guidance pertaining to a bank's retail sales of nondeposit investment products (NDIPs).[15] If the CPSI regulation and the guidance pertaining to NDIPs conflict, the CPSI regulation prevails.

3950.0.6.11 Examining a State Member Bank for Compliance with the CPSI Regulation

Examinations for compliance with the CPSI regulation should be conducted consistent with the risk-focused supervisory approach when a state member bank sells insurance products or annuities directly, or when a third party sells insurance or annuities at or on behalf of a state member bank. To the extent practicable, the examiner should conduct the review at the state member bank. In certain instances, however, the examiner's review at the state member bank may identify potential supervisory concerns about the state member bank's compliance with the CPSI regulation as it pertains to insurance or annuities sales conducted by a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance products or annuities at or on behalf of the state member bank.

If the examiner determines that an on-site review of a functionally regulated nonbank affiliate or subsidiary of the state member bank is appropriate to adequately assess the state member bank's compliance with the CPSI regulation, the examiner should discuss the situation with staff of the Board's Division of Banking Supervision and Regulation. The approval of the Division of Banking Supervision and Regulation's officer that is responsible for the supervisory policy and examination guidance pertaining to insurance and annuity sales activities should be obtained before examining or requesting any information directly from a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance or annuity products at or on behalf of the state member bank.

The state member bank examination procedures described in section 3950.0.10.2 apply to retail sales, solicitations, advertisements, or offers of insurance products and annuities by any state member bank or any other person that is engaged in such activities at an office of the bank, or on behalf of the state member bank. For purposes of the CPSI regulation, activities "on behalf of a state member bank" include activities in which a person, whether at an office of the bank or at another location, sells, solicits, advertises, or offers an insurance product or annuity and in which at least one of the following applies:

1. The person represents to a consumer that the sale, solicitation, advertisement, or offer of any insurance product or annuity is by or on behalf of the bank.
2. The bank refers a consumer to a seller of insurance products or annuities, and the bank has a contractual arrangement to receive commissions or fees derived from the sale of an insurance product or annuity resulting from the bank's referral.
3. Documents evidencing the sale, solicitation, advertising, or offer of an insurance product or annuity identify or refer to the bank.

3950.0.7 APPENDIX A—JOINT INTERPRETATIONS OF THE CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

In response to a banking association's inquiries, the federal banking agencies jointly issued interpretations regarding the Consumer Protection in Sales of Insurance (CPSI) regulation.[16] A joint statement, issued on August 17, 2001, contains responses to a set of questions relating to disclosure and acknowledgment, the scope of applicability of the regulation, and compliance. Additionally, a February 28, 2003, joint statement

15. Interagency Statement on Retail Sales of Nondeposit Investment Products, February 17, 1994. See SR-94-11.

16. These letters, issued jointly by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, may be accessed on these agencies' web sites.

responded to a request to clarify whether the disclosure requirements apply to renewals of pre-existing insurance policies sold before October 1, 2001, the effective date of the regulation. The issues raised and the banking agencies' responses are summarized below.

3950.0.7.1 Disclosures

3950.0.7.1.1 Credit Disclosures

A bank or other person who engages in insurance sales activities at an office of, or on behalf of, a bank ("a covered person") must make the credit disclosures set forth in the regulation if a consumer is solicited to purchase insurance while the consumer's loan application is pending. A consumer's application for credit is still "pending" for purposes of the regulation if the depository institution has approved the consumer's loan application but not yet notified the consumer. Until the consumer is notified of the loan approval, the covered person must provide the credit disclosures if the consumer is solicited, offered, or sold insurance.

3950.0.7.1.2 Disclosures for Sales by Mail and Telephone

The regulation requires a covered person to provide oral disclosures and to obtain an oral acknowledgment of these disclosures when sales activities are conducted by telephone. This requirement applies regardless of whether the consumer will also receive and acknowledge written disclosures in person, through the mail, or electronically.

3950.0.7.1.3 Use of Short-Form Insurance Disclosures

There is no short form for the credit disclosures. A depository institution, however, may use the short-form insurance disclosures set forth below in visual media (such as television broadcasting, ATM screens, billboards, signs, posters, and written advertisements and promotional materials):

- NOT A DEPOSIT
- NOT FDIC-INSURED
- NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY
- NOT GUARANTEED BY THE BANK
- MAY GO DOWN IN VALUE

3950.0.7.2. Acknowledgment of Disclosures

3950.0.7.2.1 Reasonable Efforts to Obtain Written Acknowledgment

The banking agencies have not prescribed any steps that must be taken for a depository institution's efforts to obtain a written acknowledgment to be deemed "reasonable" in a transaction conducted by telephone. Examples of reasonable efforts, however, include:

1. providing the consumer with a return-addressed envelope or similar means to facilitate the consumer's return of the written acknowledgment,
2. making a follow-up phone call or contact,
3. sending a second mailing, or
4. similar actions.

The covered person should (1) maintain documentation that the written disclosures and the request for written acknowledgment of those disclosures were mailed to the consumer and (2) record his or her efforts to obtain the signed acknowledgment. The "reasonable efforts" policy exception for telephone sales does not apply to other types of transactions, such as mail solicitations, in which a covered person must obtain from the consumer a written (in electronic or paper form) acknowledgment.

3950.0.7.2.2 Appropriate Form or Format for Acknowledgment Provided Electronically

Electronic acknowledgments are not required to be in a specific format but must be consistent with the provisions of the CPSI regulation applicable to acknowledgments. That is, the electronic acknowledgment must establish that the consumer has acknowledged receipt of the credit and insurance disclosures, as applicable.

3950.0.7.2.3 Retention of Acknowledgments by an Insurance Company

If an insurance company provides the disclosures and obtains the acknowledgment on behalf of a depository institution, the insurance company may retain the acknowledgment. The depository institution is responsible for ensuring that sales made "on behalf of" the depository institution are in compliance with the CPSI regulation. An insurance company may maintain documentation showing compliance with the CPSI regulation, but the depository institution should have access to such records and the records should be readily available for review by examiners.

3950.0.7.2.4 Form of Written Acknowledgment

There is no prescribed form for the written acknowledgment. The regulation requires, however, that a covered person obtain the consumer's acknowledgment of receipt of the complete insurance and credit disclosures.

3950.0.7.2.5 Timing of Acknowledgment Receipt

A covered person must obtain the consumer's acknowledgment either at the time a consumer receives disclosures *or* at the time of the initial purchase of an insurance product. The CPSI regulation does not prescribe any specific wording for an oral acknowledgment. However, if a covered person has made the insurance and credit disclosures orally, an affirmative response to the question "Do you acknowledge that you received this disclosure?" is acceptable.

3950.0.7.3 Scope of the CPSI Regulation

3950.0.7.3.1 Applicability to Private Mortgage Insurance

Depending on the nature of a depository institution's involvement in an insurance sales transaction, the CPSI regulation may cover sales of private mortgage insurance. If the depository institution itself purchases the insurance to protect its interest in mortgage loans it has issued and merely passes the costs of the insurance on to the mortgage borrowers, then the transaction is not covered by the regulation. If, however, a consumer has the option of purchasing the private mortgage insurance and (1) the depository institution offers the private mortgage insurance to a consumer or (2) any other person offers the private mortgage insurance to a consumer at an office of a depository institution, or on behalf of a depository institution, the transaction would be covered by the regulation.

3950.0.7.3.2 Applicability to Federal Crop Insurance

The CPSI regulation does not apply to federal crop insurance that is sold for commercial or business purposes. However, if the crop insurance is purchased by an individual primarily for family, personal, or household purposes, it would be covered.

3950.0.7.3.3 Solicitations and Applications Distributed Before, but Returned After, the Effective Date of the CPSI Regulation

Direct-mail solicitations and "take-one" applications that are distributed on or after October 1, 2001, must comply with the CPSI regulation. If a consumer seeks to purchase insurance after the effective date of the regulation in response to a solicitation or advertisement that was distributed *before* that date, the depository institution would be in compliance with the regulation if the institution provides the consumer, before the initial sale, with the disclosures required by the regulation. These disclosures must be both written and oral, except that oral disclosures are not required if the consumer mails in the application.

3950.0.7.4 Renewals of Insurance

Renewals of insurance are not subject to the disclosure requirements (see the 3950.0.7.1 sections above), but are subject to other requirements of the CPSI regulation. A "renewal" of insurance means continuation of coverage involving the same type of insurance for a consumer as issued by the same carrier. A renewal need not be on the same terms and conditions as the original policy, provided that the renewal does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the time of the initial sale. An upgrade in coverage at a time when a policy is not up for renewal would be treated as a renewal, provided that the solicitation and sale of the upgrade do not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the initial sale.

3950.0.7.4.1 Disclosures Required with Renewals of Insurance Coverage

The banking agencies' interpretations clarified that the CPSI regulation does not *mandate* disclosures for renewals of policies sold before October 1, 2001. Accordingly, the CPSI regulation does not require the disclosures to be furnished at the time of renewal of a policy, including a pre-existing policy. However, renewals are subject to the other provisions of the CPSI regulation. Moreover, the banking agencies would expect that, consistent with applicable safety-and-soundness requirements, depository institutions would take reasonable steps to avoid customer confusion in connection with renewals of pre-existing policies.

3950.0.7.4.2 "On-Behalf-of" Test and Use of Corporate Name or Logo

Under the CPSI regulation, an affiliate of a bank is not considered to be acting "on behalf of" a bank simply because the affiliate's marketing or other materials use a corporate name or logo that is common to the bank and the affiliate. In general, this exclusion applies even if a bank and its parent holding company have a similar, but not identical, name. For example, if the names of all of the affiliates of a bank holding company share the words "First National," an affiliate would not be considered to be engaged in an activity "on behalf of" an affiliated bank simply by using the terms "First National" as part of a corporate logo or identity. The affiliate would, however, be considered to be acting "on behalf of" an affiliated bank if the name of the bank (for example, "First National Bank") appears in a document as the seller, solicitor, advertiser, or offeror of insurance. A transaction also would be covered if it occurs on the premises of a depository institution or if one of the other prongs of the "on-behalf-of" test is met.

3950.0.7.5 Compliance

3950.0.7.5.1 Appropriate Documentation of an Oral Disclosure or Oral Acknowledgment

There is no specific documentation requirement for oral disclosures or acknowledgments. However, other applicable regulatory reporting standards would apply. Appropriate documentation of an oral disclosure would clearly show that the covered person made the credit and insurance disclosures to a consumer. Similarly, appropriate documentation of an oral acknowledgment would clearly show that the consumer acknowledged receiving the credit and insurance disclosures. For example, a tape recording of the conversation (where permitted by applicable laws) in which the covered person made the oral disclosures and received the oral acknowledgment would be acceptable. Another example would be a contemporaneous checklist completed by the covered person to indicate that he or she made the oral disclosures and received the oral acknowledgment. A contemporaneous note to the consumer's file would also be adequate. The documentation should be maintained in the consumer's file so that it is accessible to examiners.

3950.0.7.5.2 Setting for Insurance Sales

A depository institution must identify the areas where insurance sales occur and must clearly delineate and distinguish those areas from areas where the depository institution's retail deposit-taking activities occur. Although the banking agencies did not define how depository institutions could "clearly delineate and distinguish" insurance areas, signage or other means may be used.

3950.0.8 APPENDIX B—GLOSSARY

See section 4040.1 of the Commercial Bank Examination Manual *for additional definitions of insurance terms.*

Accident and health insurance. A type of coverage that pays benefits in case of sickness, accidental injury, or accidental death. This coverage may provide for loss of income when the insured becomes disabled and provides reimbursement for medical expenses when the insured is ill. The insurance can provide for debt payment if it is taken out in conjunction with a loan. (See *Credit life insurance*.)

Actuary. A professional whose function is to calculate statistically various estimates for the field of insurance, including the estimated risk of loss on an insurable interest and the appropriate level for premiums and reserves.

Admitted insurer. An insurance company licensed by a state insurance department to underwrite insurance products in that state.

Agency contract (or agreement). An agreement that establishes the contractual relationship between an agent and an insurer.

Agent. A licensed insurance company representative under contract to one or more insurance companies. Depending on the line of insurance represented, an agent's power may include soliciting, advertising, and selling insurance; collecting premiums; claims processing; and effecting insurance coverage on behalf of an insurance underwriter. Agents are generally compensated by commissions on policies sold, although some may receive salaries.

1. *Captive or exclusive agent.* An agent who represents a single insurer.
2. *General agents.* An agent who is contractually awarded a specific geographic territory for an individual insurance company. General agents are responsible for building their own agency and usually represent only one insurer. Unlike exclusive agents, who usually receive a salary in addition to commissions, general agents are typically compensated on a commission basis only.
3. *Independent agent.* An agent who is under contractual agreements with at least two different insurers. Typically, all of the independent's agent's compensation originates from commissions.

Aggregate excess-of-loss reinsurance. A form of "excess-of-loss" reinsurance that indemnifies the ceding company against the amount by which all of the ceding company's losses incurred during a specific period (usually 12 months) exceed either (1) a predetermined dollar amount or (2) a percentage of the company's subject premiums. This type of contract is also commonly referred to as stop-loss reinsurance or excess-of-loss ratio reinsurance.

Allied lines. Various insurance coverages for additional types of losses and against losses by additional perils. The coverages are closely associated with and usually sold with fire insurance. Examples include coverage against loss by perils other than fire, coverage for sprinkler-leakage damage, and business-interruption coverage.

Annuity. A contract that provides for a series of payments payable over an individual's life span or other term, on the basis of an initial lump-sum contribution or series of payments made by the annuitant into the annuity during the accumulation phase of the contract.

1. *Fixed-annuity contracts* provide for payments to annuitants at fixed, guaranteed minimum rates of interests.
2. *Variable-annuity contracts* provide for payments based on the performance of annuity investments. Variable-annuity contracts are usually sold based on a series of payments and offer a range of investment or funding options such as stocks, bonds, and money market fund investments. The annuity principal and the investment return are not guaranteed as they depend on the performance of the underlying funding option.

Annuity payments may commence with the execution of the annuity contract (*immediate annuity*) or may be deferred until some future date (*deferred annuity*).

Assigned risk. A risk that is not usually acceptable to insurers and is therefore assigned to a group of insurers who are required to share in the premium income and losses, in accordance with state requirements, in order for the insurer to sell insurance in the state.

Assignment. The legal transfer of one person's interest in an insurance policy to another person or business.

Bank-owned life insurance (BOLI). Life insurance purchased and owned by a BHC or bank to fund its exposure arising from employee compensation and benefit programs. In a typical BOLI program, a BHC or bank insures a group of employees; pays the life insurance policy premiums; owns the cash values of the policies, which are booked on the BHC's or bank's balance sheet as "other assets"; and is the beneficiary of the policies upon the death of any insured employee or former employee.

Beneficiary. The person or entity named in an insurance policy as the recipient of insurance proceeds upon the policyholder's death or when an endorsement matures. A revocable beneficiary can be changed by the policyholder at any time. An irrevocable beneficiary can be changed by the policyholder only with the written permission of the beneficiary.

Binder. A written or oral agreement, typically issued by an insurer, agent, or broker for property and casualty insurance, to indicate acceptance of a person's application for insurance and to provide interim coverage pending the insurance company's issuance of a binding policy.

Blanket bond. Coverage for an employer for loss incurred as a result of employee dishonesty.

Boiler and machinery insurance. Insurance against the sudden and accidental breakdown of boilers, machinery, and electrical equipment, including coverage for damage to the equipment and property damage, including the property of others. Coverage can be extended to cover consequential losses, including loss from interruption of business.

Broker. A person who represents the insurance buyer in the purchase of insurance. Brokers do not have the power to bind an insurance company to an insurance contract. Once a contract is accepted, the broker is compensated for the transaction through a commission from the insurance company. An individual may be licensed as both a broker and an agent.

Bulk reinsurance. A transaction sometimes defined by statute as any quota-share, surplus aid, or portfolio reinsurance agreement through which an insurer assumes all or a substantial portion of the liability of the reinsured company.

Captive insurer. An insurance company established by a parent firm to insure or reinsure its own risks or the risks of affiliated companies. A captive may also underwrite insurable risks of unaffiliated companies, typically the risks of its customers or employees. For example, a BHC or bank may form a captive insurance company to underwrite its own directors' and officers' risks or to underwrite credit life or private mortgage insurance (third-party risks) related to its lending activities.

Cash surrender value of life insurance. The amount of cash available to a life insurance policyholder upon the voluntary termination of a life insurance policy before it becomes payable by death or maturity.

Casualty insurance. Coverage for the liability arising from third-party claims against the insured for negligent acts or omissions causing bodily injury or property damage.

Cede. To transfer to a reinsurer all or part of the insurance or reinsurance risk underwritten by an insurance company.

Ceding commission. The fee paid to a reinsurance company for assuming the risk of a primary insurance company.

Ceding company (also cedant, reinsured, reassured). The insurer that transfers all or part of the insurance or reinsurance risk it has underwritten to another insurer or reinsurer via a reinsurance agreement.

Cession. The amount of insurance risk transferred to the reinsurer by the ceding company.

Churning. The illegal practice wherein a customer is persuaded to unnecessarily cancel one insurance policy in favor of buying a purportedly superior policy, often using the cash surrender value of the existing policy to pay the early premiums of the new policy. In such a transaction, the salesperson benefits from the additional commission awarded for booking a new policy.

Claim. A request for payment of a loss under the terms of a policy. Claims are payable in the manner suited to the insured risk. Life, property, casualty, health, and liability claims generally are paid in a lump sum after the loss is incurred. Disability and loss-of-time claims are paid periodically during the period of disability or through a discounted lump-sum payment.

Coinsurance. A provision in property and casualty insurance that requires the insured to maintain a specified amount of insurance based on the value of the property insured. Coinsurance clauses are also found in health insurance and require the insured to share a percentage of the loss.

Combination-plan reinsurance. A reinsurance agreement that combines the excess-of-loss and the quota-share forms of coverage within one contract, with the reinsurance premium established as a fixed percentage of the ceding company's subject premium. After deducting the excess recovery on any one loss for one risk, the reinsurer indemnifies the ceding company on the basis of a fixed quota-share percentage. If a loss does not exceed the excess-of-loss retention level, only the quota-share coverage applies.

Commission. The remuneration paid by insurance carriers to insurance agents and brokers for the sale of insurance and annuity products.

Comprehensive personal liability insurance. A type of insurance that reimburses the policyholder if he or she becomes liable to pay money for damage or injury he or she has caused to others. This coverage does not include automobile liability but does include almost every activity of the policyholder, except business operations.

Contractholder. The person, entity, or group to whom an annuity is issued.

Credit for reinsurance. A statutory accounting procedure, set forth under state insurance regulations, that permits a ceding company to treat amounts due from reinsurers as assets, or as offsets to liabilities, on the basis of the reinsurer's status.

Credit life insurance. A term insurance product issued on the life of a debtor that is tied to repayment of a specific loan or indebtedness. Proceeds of a credit life insurance policy are used to extinguish remaining indebtedness at the time of the borrower's death. The term is applied broadly to other forms of credit-related insurance that provide for debt satisfaction in the event of a borrower's disability, accident or illness, and unemployment. Credit life insurance has historically been among the most common BHC and bank insurance products.

Credit score. A number that is based on an analysis of an individual's credit history and that insurers may consider as an indicator of risk for purposes of underwriting insurance. Where not prohibited by state law, insurers may consider a person's credit history when underwriting personal lines.

Debt-cancellation contract/debt-suspension agreement. A loan term or contract between a lender and borrower whereby, for a fee, the lender agrees to cancel or suspend payment on the borrower's loan in the event of the borrower's death, serious injury, unemployment, or other specified events. The Office of the Comptroller of the Currency considers these products to be banking products. State law determines whether these products are bank or insurance products for state-chartered banks and insurance companies.

Deductible. The amount a policyholder agrees to pay toward the total amount of insurance loss. The deductible may apply to each claim for a loss occurrence, such as each automobile accident, or to all claims made during a specified period, as with health insurance.

Directors' and officers' liability insurance. Liability insurance covering a corporation's obligation to reimburse its directors or officers for claims made against them for alleged wrongful acts. It also provides direct coverage for company directors and officers themselves in instances when corporate indemnification is not available.

Direct premiums written. Premiums received by an underwriter for all policies written during a given time period by the insurer, excluding those received through reinsurance assumed.

Direct writer. An insurance company that deals directly with the insured through a salaried representative, as opposed to those insurers that use agents. This term refers to insurers that operate through exclusive agents. In reinsurance, a direct writer is the company that originally underwrites the insurance policies ceded.

Disability income insurance. An insurance product that provides income payment to the insured when his or her income is interrupted or terminated because of illness or accident.

Endowment insurance. A type of life insurance contract under which the insured receives the face value of the policy if he or she survives the endowment period. Otherwise, the beneficiary receives the face value of the policy upon the death of the insured.

Errors and omissions (E&O) liability insurance. Professional liability insurance that covers negligent acts or omissions resulting in loss. Insurance agents are continually exposed to the claim that inadequate or inappropriate coverage was recommended resulting in a lack of coverage for losses incurred. The agent or the carrier may be responsible for coverage for legitimate claims.

Excess-of-loss reinsurance. A form of reinsurance whereby an insurer pays the amount of each claim for each risk up to a limit determined in advance, and the reinsurer pays the amount of the claim above that limit up to a specific sum. It includes various types of reinsurance, such as catastrophe reinsurance, per-risk reinsurance, per-occurrence reinsurance, and aggregate excess-of-loss reinsurance.

Excess-per-risk reinsurance. A form of excess-of-loss reinsurance that, subject to a specified limit, indemnifies the ceding company against the amount of loss in excess of a specified retention for each risk involved in each occurrence.

Excess and surplus lines. Property/casualty coverage that is unavailable from insurers licensed by the state (admitted insurers) and must be purchased from a nonadmitted underwriter.

Exposure. The aggregate of all policyholder limits of liability arising from policies written.

Face amount. The amount stated on the face of the insurance policy to be paid, depending on the type of coverage, upon death or maturity. It does not include dividend additions or additional amounts payable under accidental death or other special provisions.

Facultative reinsurance. Reinsurance of individual risks by offer and acceptance wherein the reinsurer retains the faculty to accept or reject each risk offered by the ceding company.

Financial guarantee insurance. Financial guarantee insurance is provided for a wide array of financial risks. Typically, coverage is provided for the fulfillment of a specific financial obligation originated in a business transaction. The insurer, in effect, is lending the debtor its own credit rating to enhance the debtor's creditworthiness.

Financial strength rating. Opinion as to an insurance company's ability to meet its senior policyholder obligations and claims. For many years, the principal rating agency for property and casualty insurers and life insurers has been A.M. Best. Other rating agencies, such as Fitch, Moody's, Standard and Poor's, and Weiss, also rate insurers.

Fixed annuity. See annuity.

Flood insurance. A special insurance policy to protect against the risk of loss or damage to property caused by flooding. Regular homeowners' policies do not pay for damages caused by flooding.

General liability insurance. A broad commercial policy that covers all business liability exposures, such as product liability, completed operations, premises and operations, independent contractors, and other exposures that are not specifically excluded.

Gross premiums written. Total premiums for insurance written during a given period, before deduction for reinsurance ceded.

Group insurance. Insurance coverage typically issued to an employer under a master policy for the benefit of employees. The insurer usually does not condition coverage of the people that make up the group upon satisfactory medical examinations or other requirements. The individual members of the group hold certificates as evidence of their insurance.

Health insurance. An insurance product that provides benefits for medical expenses incurred as a result of sickness or accident. This product may be in the form of traditional indemnity insurance or managed-care plans and may be underwritten on an individual or group basis.

Incurred but not reported (IBNR). The loss-reserve value established by insurance and reinsurance companies in recognition of their liability for future payments on losses that have occurred but have not yet been reported to them. This definition is often erroneously expanded to include adverse loss development on reported claims. The term incurred but not enough reported (IBNER) is being increasingly used to reflect more accurately the adverse development on inadequately reserved reported claims.

Inland marine insurance. A broad field of insurance that covers cargo being shipped by air, truck, or rail. It includes coverage for most property involved in transporting cargo as well as for bridges, tunnels, and communications systems.

Key person life insurance. Life insurance designed to cover the key employees of an employer. It may be written on a group- or an individual-policy basis.

Lapse. The termination or discontinuance of a policy resulting from the insured's failure to pay the premium due.

Liability insurance. Protects policyholders from financial loss due to liability resulting from injuries to other persons or damage to their property.

Lines. A term used in insurance to denote insurance business lines, as in ''commercial lines'' and ''personal lines.''

Long-term care insurance. Health insurance designed to supplement the cost of nursing home care or other care facilities in the event of a long-term illness or permanent disability or incapacity.

Managing general agent. A managing general agent (MGA) is a wholesaler of insurance products and services to insurance agents. An MGA receives contractual authority from an insurer to assume many of the insurance company's functions. The MGA may provide insurance products to the public through local insurance agents as well as provide services to an insurance company, including marketing, accounting, data processing, policy maintenance, and claims-monitoring and -processing services. Many insurance companies prefer the MGA distribution and management system for their insurance products because it avoids the high cost of establishing branch offices. Most states require that an MGA be licensed.

Manuscript policy. A policy written to include specific coverage or conditions not provided in a standard policy.

Morbidity. The incidence and severity of illness and disease in a defined class of insured persons.

Mortality. The rate at which members of a group die in a specified period of time or die from a specific illness.

Mortgage guarantee insurance. A product that insures lenders against nonpayment by borrowers. The policies are issued for a specified time period. Lenders who finance more than 80 percent of the property's fair value generally require such insurance.

Mortgage insurance. Life insurance that pays the balance of a mortgage even if the borrower dies. Coverage typically is in the form of term life insurance, with the coverage declining as the debt is paid off.

Multiperil insurance. An insurance contract providing coverage against many perils, usually combining liability and physical damage coverage.

Net premiums written. The amount of gross premiums written, after deduction for premiums ceded to reinsurers.

Ninety-day loss rule. A state requirement for an insurer to establish a loss provision for reinsurance recoverables over 90 days past due.

Obligatory treaty. A reinsurance contract under which business must be ceded in accordance with contract terms and must be accepted by the reinsurer.

Policyholder. The person or entity who owns an insurance policy. This is usually the insured person, but it may also be a relative of the insured, a partnership, or a corporation.

Premium. The payment, or one of the periodic payments, a policyholder agrees to make for insurance coverage.

Private mortgage insurance (PMI). Coverage for a mortgage lender against losses due to a collateral shortfall on a defaulted residential real estate loan. Most BHCs and banks require borrowers to take out a PMI policy if a downpayment of less than 20 percent of a home's value is made at the time the loan is originated. PMI does not directly benefit a borrower, although its existence provides the opportunity to purchase a home to many people who otherwise would not qualify for a loan.

Producer. A person licensed to sell, solicit, or negotiate insurance.

Professional designations and organizations. Three of the most common insurance professional designations are Chartered Life Underwriter (CLU), Chartered Property Casualty Underwriter (CPCU), and Chartered Financial Consultant (ChFC). Insurance agents also join professional organizations such as the American Society of Chartered Life Underwriters, the International Association of Financial Planning, the National Association of Life Underwriters, the National Association of Health Underwriters, the American Council of Life Insurance, the Life Insurance Marketing and Research Association, the Life Underwriter Training Council, and the Million Dollar Round Table.

Property insurance. Coverage for physical damage or destruction of real property (building, fixtures, and permanently attached equipment) and personal property (movable items that are not attached to land) that occurs during the policy period as a result of, for example, fire, windstorm, explosion, and vandalism.

Pro rata reinsurance. A generic term describing all forms of "quota-share" and "surplus reinsurance," in which the reinsurer shares a pro rata portion of the losses and premiums of the ceding company.

Protected cell. A structure available to captive insurers underwriting risks of unaffiliated companies whereby the assets associated with the self-insurance program of one organization are segregated to provide legal-recourse protection from creditors of protected cells providing insurance coverage to other organizations.

Quota-share reinsurance. A form of pro rata reinsurance indemnifying the ceding company for a fixed percent of loss on each risk covered in the contract in consideration of the same percentage of the premium paid to the ceding company.

Rebating. Directly or indirectly giving or offering to give any portion of the premium or any other consideration to an insurance buyer as an inducement to purchase or renew the insurance. Rebates are forbidden under most state insurance codes.

Reinsurance. Insurance placed by an underwriter (the ceding company or reinsured) in another company to transfer or reduce the amount of the risk assumed under the original insurance policy (or group of policies).

Reinsurance premium. The consideration paid by a ceding company to a reinsurer for the coverage provided by the reinsurer.

Residual market. Also known as the shared market, it covers applications for insurance that were rejected by underwriters in the voluntary market that is covered by agency direct-marketing systems, perhaps because of high loss experience by the insured party. The residual market includes government insurance programs, specialty pools, and shared market mechanisms such as assigned-risk plans.

Retrocession. A reinsurance transaction whereby a reinsurer (the retrocedant) cedes all or part of the reinsurance risks it has assumed to another reinsurer (the retrocessionaire).

Retrospective rating. An insurance plan in which the current year's premium is based on the insured's own loss experience for that same period, subject to a maximum and minimum.

Rider. A written attachment, also known as an endorsement, to an insurance policy that changes the original policy to meet specific requirements, such as increasing or decreasing benefits or providing coverage for specific property items beyond that provided for under the insurance company's standard contract terms.

Self-insured retention (SIR). The percentage of a risk or potential loss assumed by an insured, whether in the form of a deductible, self-insurance, or no insurance at all.

Separate accounts. Certain life insurance assets and related liabilities that are segregated and maintained to meet specific investment objectives of contract holders, particularly those assets and liabilities associated with pension plans and variable products offered by life insurers, wherein the customer and not the insurer retains most of the investment and interest-rate risk.

Split-dollar life insurance. An arrangement that typically involves an agreement between an employer and an employee whereby the premium payment, cash values, policy ownership, and death benefits may be split. There are many variations of split-dollar arrangements, including arrangements in which a trust is created to facilitate estate planning. Split-dollar life insurance is designed to serve as a supplemental benefit to a particular company executive. The arrangement typically involves the payment of the insurance premium by the employer, with the death benefit accruing to the employee.

Subrogation. An insurance carrier may reserve the "right of subrogation" in the event of a loss. This means that the company may choose to take action to recover the amount of a claim paid to a covered insured if a third party caused the loss. After expenses, the amount recovered must be divided proportionately with the insured to cover any deductible for which the insured was responsible.

Term life insurance. An insurance product that provides, for a specified period of time, death coverage only. Typically, it has no savings component and, therefore, no cash value. Because term insurance provides only mortality protection, it generally provides the most coverage per premium dollar. Most term life insurance policies are renewable for one or more time periods up to a stipulated maximum age; however, premiums generally increase with the age of the policyholder.

Title insurance. Insurance that protects BHCs, banks, and mortgagees against unknown encumbrances against real estate by indemnifying the mortgagor and property owner in the event that clear ownership of the property is clouded by the discovery of faults in the title. Title insurance policies may be issued to either the mortgagor or the mortgagee or both. Title insurance is written largely only by companies specializing in this class of insurance.

Treaty reinsurance. A reinsurance contract under which the reinsured company agrees to cede, and the reinsurer agrees to assume, risks of a particular class or classes of business.

Twisting. In insurance, twisting involves making misrepresentations to a policyholder to induce the policyholder to terminate one policy and to take out another policy with another company, when it is not to the insured's benefit. Twisting is a violation of the Unfair Trade Practices Act. Twisting is similar to the ‘‘churning’’ concept in securities sales, and it results in increased commissions for the inducing agent.

Umbrella liability insurance. This type of liability insurance provides excess liability protection over the ‘‘underlying’’ liability insurance coverage to supplement underlying policies that have been reduced or exhausted by loss.

Underwriting. The process by which a company determines whether it can accept an application for insurance and by which it may charge an appropriate premium for those applications selected. For example, the underwriting process for life insurance classifies applicants by identifying such characteristics as age, sex, health, and occupation.

Unearned reinsurance premium. The part of the reinsurance premium that is applicable to the unexpired portion of the policies reinsured.

Universal life insurance. A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a high cash surrender value. Alternatively, the policyholder can make minimal payments in an amount only large enough to cover mortality and other expense charges.

Variable annuity. See Annuity.

Variable life insurance. A form of whole life, or universal life, insurance in which the policyholder's cash value is invested in ‘‘separate accounts’’ of the insurer. These accounts are segregated from the insurance carrier's other asset holdings. Such separate account investments are generally not available to a carrier's general creditors in the event of the carrier's insolvency. The policyholder assumes the investment and price risk. Because variable life policies have investment features, life insurance agents selling these policies must be registered representatives of a broker-dealer licensed by the National Association of Securities Dealers and registered with the Securities and Exchange Commission.

Vendors' single-interest insurance. A form of force-placed insurance that is typically purchased by the BHC or bank to protect against loss or damage to loan collateral in which the BHC or bank has a security interest. The banking organization passes its expense for this insurance on to the consumer who has either refused or is unable to obtain property insurance.

Viatical settlement. The cashing in of a life insurance policy at a discount from face amount by policyholders who are often terminally ill and need the money for medical care. The purchaser becomes the policyholder as well as the beneficiary and assumes the premium payments of the policy.

Whole life insurance. A fixed-rate insurance product, with premiums and death benefits guaranteed over the duration of the policy. There is a cash value (essentially a savings account) that accrues to the policyholder tax deferred. A policyholder receives the cash value in lieu of death benefits if the policy matures or lapses before the insured's death. A policyholder also may borrow against the policy's accumulated cash value or use it to pay future premiums. For most whole life insurance policies, premiums are constant for the life of the insured's contract.

3950.0.9 INSPECTION OBJECTIVES

1. To understand the volume and complexity of the banking organization's insurance or annuity program and insurance sales strategy.
2. To assess the financial results of the activity compared with planned results.
3. To determine if the insurance and annuity sales activities are effectively integrated into

the banking organization's risk-management, audit, and compliance functions and if the control environment is adequate.
4. To assess the adequacy of the banking organization's controls to ensure compliance with the applicable state and federal laws and regulations.
5. To assess the level and direction of operational, legal, and reputational risks to the consolidated banking organization and the bank from the insurance or annuity sales activity.

The following objectives apply if insurance products or annuities are sold by another person at an office of, or on behalf of, a state member bank subsidiary of the BHC.

6. To assess the adequacy of the BHC's oversight program for ensuring a state member bank's compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation. (See section 3950.0.1.)
7. To assess the effectiveness of the BHC's oversight of a state member bank's compliance and audit programs with respect to the CPSI regulation.
8. To assess the BHC's oversight of a state member bank's compliance with the CPSI regulation.
9. To obtain commitments for a BHC's oversight for needed corrective action when a state member bank is in violation of the CPSI regulation or when applicable policies, procedures, practices, or management oversight to protect against violations is deficient.

3950.0.10 INSPECTION PROCEDURES

3950.0.10.1 Risk Assessment of Insurance and Annuity Sales Activities

The examiner should consider the following procedures, as appropriate, when conducting a risk assessment to determine the level and direction of risk exposure to the BHC that is attributable to insurance or annuity sales activity. If there are specific areas of concern, the examiner should focus primarily on those areas.

1. *Scope of activities and strategies.* Assess the significance and complexity of the insurance or annuity sales program.
   a. Obtain a general overview of the scope of the BHC's insurance or annuity sales activities and any anticipated or recent change in or expansion of such activities.
   b. Determine the BHC's strategy for insurance or annuity sales, including strategies for cross-selling and referrals of insurance and banking products. Determine the institution's experience with any cross-marketing programs for both insurance business generated by the BHC and business generated by insurance producers.
   c. Obtain two years' worth of income statements, balance sheets, and budget documents for the agency's activities. Compare the expected budget items with their actual results.
   d. Determine the volume and type of insurance or annuity products and services sold or solicited.
   e. Determine what other related services the BHC provides in connection with its insurance or annuity sales activities, such as providing risk-management services to clients seeking advice on appropriate insurance coverages, claims processing, and other activities.
   f. If the BHC is not an FHC, confirm that any insurance sales activities conducted by the BHC or a nonbank subsidiary are within the limited scope of activities permissible for BHCs that are not FHCs.
2. *Insurance sales products and concentrations.*
   a. Determine the composition of sales—
      - by line of business, such as property/casualty insurance, life insurance including annuities, and health insurance;
      - by the proportion of sales to commercial and retail customers; and
      - by the portion of sales that is credit related, such as credit life and credit health insurance.
   b. Determine any sales concentrations to particular entities, industries, or BHC customers.
   c. Note any concentrations to large commercial accounts.
   d. Determine what insurance services are provided to the BHC, its employees, and BHC or bank affiliates.
3. *Legal-entity and the risk-management structure for insurance or annuity sales.*
   a. Obtain an organizational chart for the legal-entity and risk-management structure for the insurance or annuity sales activities.
   b. Determine—

- whether the insurance or annuity sales activity is conducted in an affiliated producer, by the BHC itself, through another distribution arrangement, or by a combination of these entities;
- the names of any affiliated insurance agencies and the states where the affiliated insurance agencies are licensed; and
- the locations outside of the United States where insurance or annuities are sold or solicited.

c. Determine if the insurance or annuity producer is acting as a managing general agent (MGA).[17] If so, determine —
- the scope of the MGA activities;
- the BHC management's assessment of the risk associated with the MGA activity; and
- what risk controls are in place to protect the BHC from potential loss that may arise from the MGA's activities, such as loss arising from legal liability.

4. *Strategic and financial plans.* Assess management controls over the insurance annuity sales activities.
   a. Ascertain the BHC management's strategic and financial plans and goals for the insurance or annuity sales activity.
   b. Review the BHC's due-diligence process for acquiring and pricing agencies, if applicable.
   c. Review the BHC's financial budgets and forecasts for the activity, particularly plans for new products, marketing strategies, and marketing arrangements, and the rate of actual and expected growth for the activity.
   d. Determine the cause for significant deviations from the plan.
   e. Determine if any agency acquired by the state member bank is providing the expected return on investment and if the agency's revenues are covering the debt servicing associated with the purchase, if applicable.
5. *Review of board and committee records and reports.*
   a. Review the reports of any significant BHC oversight committees, including relevant board of directors' and board committees' minutes and risk-management reports.
   b. Determine if the BHC's board of directors, a board committee, or senior management reviews reports pertaining to consumer complaints and complaint resolution, information pertaining to litigation and associated losses, and performance compared with the organization's plan for the insurance and annuity sales activities.
6. *Policies and procedures.*
   a. Determine—
      - the adequacy of the BHC's policies and procedures for conducting and monitoring insurance or annuity sales activities, including those policies designed to ensure adherence with federal and state laws and regulations pertaining to consumer protection;
      - whether there are appropriate policies and procedures for the handling of customer funds collected on behalf of the underwriter; accurate and timely financial reporting; complaint monitoring and resolution; effective system security and disaster-recovery plans; and policy-exception tracking and reporting, and
      - if the board of directors or a designated committee of the board has formally approved the policies.
   b. Obtain a detailed balance sheet for agency subsidiaries, and determine if the assets held by insurance or annuity agency subsidiaries of BHCs and banks are all eligible investments.
   c. Determine the independence of the BHC's audit program applicable to the insurance and annuity sales activity. Ascertain if the audit program's scope, frequency, and resources are commensurate with the insurance and annuity activities conducted.
   d. Determine how the BHC selects insurance underwriters with whom to do business, as well as how the banking organization monitors the continuing performance of the underwriters.
   e. Determine the adequacy of the BHC board of directors' oversight of the insurance management team's qualifications, the training and licensing of personnel, and general compliance with state insurance regulations.

17. MGAs do not assume underwriting risk. Through contractual arrangements with an insurer, MGAs have the authority to write policies on behalf of the insurer in certain instances, thereby binding the insurer to the policy. Certain minimum provisions governing MGA agreements are delineated in the applicable National Association of Insurance Commissioners (NAIC) model law.

f. Review the internal controls of the BHC related to third-party arrangements, including arrangements for sales, processing, and auditing of insurance and annuity activities.

7. *Claims, litigation, and functional regulator supervision.* Assess legal and reputational risk.
   a. Identify any significant litigation against the BHC arising from its insurance or annuity sales activity and the likely impact of the litigation on the BHC.
   b. Obtain the insurance agency's errors and omissions claims records for the past several years, including a listing of claims it has made and the amount of claims, the claim status, and the amount of claim payments.
   c. Review the BHC's policies and procedures for tracking and resolving claims. Determine if the policies and procedures appear adequate and if they are adhered to.
   d. Determine if the applicable functional regulator has any outstanding supervisory issues with the insurance agency.
8. *Consumer complaints.*
   a. Determine if the BHC's management has policies and procedures in place to assess whether consumer complaints received are likely to expose the BHC to regulatory action, litigation, reputational damage, or other significant risk.
   b. Obtain applicable consumer complaint files, and evaluate internal control procedures to ensure the complaints are being adequately addressed.
9. *Audit and compliance functions.*
   a. Determine the date of the most recent review of the insurance or annuity sales activities by the audit and compliance functions.
   b. Determine the adequacy of the BHC's management policies and procedures for ensuring that any deficiencies noted in such reviews are corrected, and ascertain whether any such deficiencies are being adequately addressed.[18]
10. *Insurance underwriter oversight of agent/agency activities.*
   a. Determine if the banking organization has adequate policies and procedures to review and resolve any issues or concerns raised by an insurance underwriter regarding the producers used by, or affiliated with, the BHC.[19]
   b. Determine whether any of the insurance underwriters conducted a periodic review of producers that they engaged to sell insurance.
11. *State supervisory insurance authorities.*
   a. During discussions with the BHC's management, determine whether state insurance regulators have raised any issues or concerns in correspondence or reports.
   b. Consult with the state insurance regulator (or regulators), as appropriate, to determine any significant supervisory issues, actions, or investigations. (For multistate agencies, contacts with states may be prioritized on basis of the location of the agency's head office or by a determination of the significance of sales by state. Both financial examinations and market conduct examinations conducted by the state insurance departments are targeted at insurance underwriters, not agencies. Therefore, information available from the states pertaining to agencies may be very limited.)
12. *Operational risk assessment.* Ascertain from BHC management whether there are—
   a. any significant operational problems or concerns relating to insurance or annuity sales activities;
   b. policies and procedures in place to ensure accurate and timely reporting to the BHC's management of insurance or annuity sales activity plans, financial results, and significant consumer complaints or lawsuits or compliance issues, such as errors and omissions claims;[20]
   c. appropriate policies and procedures at the BHC to ensure accurate reporting of

18. Enforcement of the privacy provisions of the GLB Act as they relate to state member banks is the responsibility of the Board's Division of Consumer and Community Affairs. However, enforcement of the privacy provisions of the GLB Act with respect to the insurance activities of nondepository subsidiaries of a state member bank is the responsibility of the state insurance regulators.

19. Insurance underwriters generally have procedures to determine whether individual producers affiliated with agencies are selling the underwriters' products in conformance with applicable laws and regulations. These reviews' findings and conclusions should be available to the state member bank's management.

20. Errors and omissions insurance should be in place to protect the state member bank against loss sustained because of an error or oversight, such as failure to issue an insurance policy. A tracking system to monitor errors and omission claims should be in place and monitored by the state member bank, as appropriate. See section 4040.1, "Management of Insurable Risks," of the *Commercial Bank Examination Manual*.

insurance or annuity sales activity on Federal Reserve regulatory reports (Determine from applicable Board or Reserve Bank contacts if there are any outstanding issues with respect to potential reporting errors on submitted Federal Reserve reports, BHC and bank call reports, or other applicable reports. If so, seek resolution of the issues); and

d. adequate disaster-recovery plans and procedures to protect the BHC from loss of data related to insurance or annuity sales activities.

3950.0.10.2 Consumer Protection in Sales of Insurance Regulation

These examination procedures apply only to the examination of state member banks. The procedures are provided for the BHC examiner's information only.

The following procedures should be risk-focused in accordance with the Federal Reserve's risk-focused framework for supervising banking organizations. The procedures should be carried out as necessary to adequately assess the state member bank's compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation.

1. Determine the role of the state member bank's board of directors and management in ensuring compliance with the CPSI regulation and applicable state consumer regulations.
2. Evaluate the management information system (MIS) reports the state member bank's board or designated committee relies on to monitor compliance with the consumer regulations and to track complaints and complaint resolution.
3. Review the state member bank's policies and procedures to ensure they are consistent with the CPSI regulation, and conduct transaction testing, as necessary, in the following areas:[21]
   a. disclosures, advertising, and promotional materials
   b. consumer acknowledgments
   c. physical separation from areas of deposit-taking activities
   d. qualifications and licensing for insurance personnel
   e. compliance programs and internal audits
   f. hiring, training, and supervision of insurance or annuity sales personnel employed directly by the state member bank, or of third parties selling insurance or annuity products at a state member bank office or on behalf of the state member bank
   g. compensation practices and training for personnel making referrals
4. If a third party sells insurance or annuities at the state member bank's offices or on behalf of the state member bank, review the state member bank's policies and procedures for ensuring that the third party complies with the CPSI regulation and other relevant policies and procedures of the bank.
5. Review the state member bank's process for identifying and resolving consumer complaints related to the sale of insurance products and annuities.
6. Obtain and review the record of consumer complaints related to the CPSI regulation. These records are available from the Board's Division of Consumer and Community Affairs' database. (See CP letter 2001-11.)
7. Include examination findings, as appropriate, in the commercial bank examination report or in other communications to the bank, as appropriate, that pertain to safety-and-soundness reviews of the bank.

21. If the examiner determines that transaction testing of a functionally regulated nonbank affiliate of the state member bank is appropriate in order to determine the state member bank's compliance with the CPSI regulation, the examiner should first consult with and obtain approval from appropriate staff of the Board's Division of Banking Supervision and Regulation.

3950.0.11 INTERNAL CONTROL QUESTIONNAIRE

3950.0.11.1 Risk Assessment of Insurance and Annuity Sales Activities

3950.0.11.1.1 Program Management

1. Does the BHC have a comprehensive program to ensure that its insurance and annuity sales activities are conducted in a safe and sound manner?
2. Does the BHC have appropriate written policies and procedures commensurate with the volume and complexity of the insurance or annuity sales activities?
3. Has management obtained the approval of the board of directors for the program scope and the associated policies and procedures?
4. Have reasonable precautions been taken to ensure that disclosures to customers for

insurance or annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations?
5. Does the BHC's management effectively oversee the insurance or annuity sales activities, including those involving third parties?
6. Does the BHC have an effective independent internal audit and compliance program in place to monitor retail sales of insurance or annuity products?
7. Does the BHC appropriately train and supervise employees conducting insurance or annuity sales activities?

3950.0.11.1.2 Management Information Systems

8. Does the BHC's insurance program management plan establish the appropriate management information systems (MIS) necessary for the banking organization's board of directors to properly oversee the insurance or annuity sales activities?
9. Does the MIS provide sufficient information to allow for the evaluation and measurement of the effect of actions taken to identify, track, and resolve any issues relative to compliance with the CPSI regulation?
10. Does the MIS include sales volumes and trends, profitability, policy exceptions and associated controls, customer complaints, and other information providing evidence of compliance with laws and established policies?

3950.0.11.1.3 Compliance Programs and Internal Audits

11. Are there policies and procedures in place to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations?
12. Do compliance procedures identify potential conflicts of interest and how such conflicts should be addressed?
13. Do the compliance procedures provide a system to monitor customer complaints and track their resolution?
14. When applicable, do compliance procedures call for verification that third-party sales are being conducted in a manner consistent with the agreement governing the third party's arrangement with the BHC?
15. Is the compliance function conducted independently of the insurance or annuity sales and management activities?
16. Do compliance personnel determine the scope and frequency of the insurance-product review?
17. Are findings of insurance or annuity sales activity compliance reviews periodically reported directly to the BHC's board of directors or a designated committee thereof?

3950.0.11.2 Consumer Protection in Sales of Insurance Regulation

This internal control questionnaire applies only to the examination of state member banks. It is provided for the BHC examiner's information only.

If applicable, review the state member bank's internal controls, policies, practices, and procedures for retail insurance or annuity sales activities conducted by the bank on bank premises or on behalf of the bank. The bank's program management for such activities should be well documented and should include appropriate personnel training, as well as compliance and audit-function coverage of all efforts to ensure compliance with the provisions of the Board's CPSI regulation.

3950.0.11.2.1 Advertising and Promotional Materials

1. Do advertising materials associated with the insurance or annuity sales program create an erroneous belief that—
   a. an insurance product or annuity sold or offered for sale by the state member bank, or on behalf of the bank, is backed by the federal government or the bank, or that the product is insured by the FDIC?
   b. an insurance product or annuity that involves investment risk does not, in fact, have investment risk, including the potential that principal may be lost and the product may decline in value?
2. Does a review of advertising for insurance products or annuities sold or offered for sale create an erroneous impression that—
   a. the state member bank or an affiliate or subsidiary may condition the grant of an extension of credit to a consumer on the purchase of an insurance product or

annuity by the consumer from the bank or an affiliate or subsidiary of the bank?
b. the consumer is not free to purchase an insurance product or annuity from another source?

3950.0.11.2.2 Disclosures

3. In connection with the initial purchase of an insurance product or annuity by a consumer, does the initial disclosure to the consumer, except to the extent the disclosure would not be accurate, state that—
   a. the insurance product or annuity is not a deposit or other obligation of, or is not guaranteed by, the state member bank or an affiliate of the bank?
   b. the insurance product or annuity is not insured by the FDIC or any other agency of the United States, the state member bank, or (if applicable) an affiliate of the bank?
   c. in the case of an insurance product or annuity that involves an investment risk, there is risk associated with the product, including the possible loss of value?
4. In the case of an application for credit, in connection with which an insurance product or annuity is solicited, offered, or sold, is a disclosure made that the state member bank may not condition an extension of credit on either—
   a. the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates?
   b. the consumer's agreement not to obtain, or a prohibition on the consumer's obtaining, an insurance product or annuity from an unaffiliated entity?
5. Are the disclosures under question 3 above provided orally and in writing before the completion of the initial face-to-face sale of an insurance product or annuity to a consumer?
6. Are the disclosures under question 4 above made orally and in writing at the time the consumer applies in a face-to-face interaction for an extension of credit in connection with which insurance is solicited, offered, or sold?
7. If a sale of an insurance product or annuity is conducted by telephone, are the disclosures under question 3 above provided in writing, by mail, within three business days?
8. If an application for credit is made by telephone, are the disclosures under question 4 above provided by mail to the consumer within three business days?
9. Are the disclosures under questions 3 and 4 above provided through electronic media instead of on paper, only if the consumer affirmatively consents to receiving the disclosures electronically, and only if the disclosures are provided in a format that the consumer may retain or obtain later?
10. Are disclosures made through electronic media, for which paper or oral disclosures are not required, presented in a meaningful form and format?
11. Are disclosures conspicuous, simple, direct, readily understandable, and designed to call attention to the nature and significance of the information provided?
12. Are required disclosures presented in a meaningful form and format?

3950.0.11.2.3 Consumer Acknowledgment

13. At the time a consumer receives the required disclosures, or at the time of the consumer's initial purchase of an insurance product or annuity, is a written acknowledgment from the consumer that affirms receipt of the disclosures obtained?
14. If the required disclosures are provided in connection with a transaction that is conducted by telephone—
    a. has an oral acknowledgment of receipt of the disclosures been obtained and is sufficient documentation maintained to show that the acknowledgment was given?
    b. have reasonable efforts to obtain a written acknowledgment from the consumer been made?

3950.0.11.2.4 Physical Separation from Deposit Activities

15. Does the state member bank, to the extent practicable—
    a. keep the area where the bank conducts transactions involving the retail sale of insurance products or annuities physically segregated from the areas where retail deposits are routinely accepted from the general public?
    b. identify the areas where insurance product or annuity sales activities occur?
    c. clearly delineate and distinguish insurance and annuity sales areas from the

areas where the bank's retail deposit-taking activities occur?

3950.0.11.2.5 Qualifications and Licensing

16. Does the state member bank permit any person to sell or offer for sale any insurance product or annuity in any part of its office or on its behalf, only if the person is at all times appropriately qualified and licensed under applicable state insurance licensing standards for the specific products being sold or recommended?

3950.0.11.2.6 Hiring, Training, and Supervision

17. Have background investigations of prospective employees that will sell insurance products or annuities been completed?
18. When a candidate for employment has previous insurance experience, has a review to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators been completed?
19. Do all insurance or annuity sales personnel or third-party sales personnel conducting sales activities at or on behalf of the state member bank receive appropriate training and continue to meet licensing requirements?
20. Does training address policies and procedures for sales of insurance and annuity products, and does it cover personnel making referrals to a licensed insurance producer?
21. Does training ensure that personnel making referrals about insurance products or annuities are properly handling all inquiries so as not to be deemed to be acting as unlicensed insurance agents or registered (or equivalently trained) securities sales representatives (for insurance products that are also securities) if they are not qualified?
22. When insurance products or annuities are sold by the bank or third parties at an office of, or on behalf of, the organization, does the institution have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as the referral activities of bank employees not authorized to sell these products?
23. Does the bank designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation?

3950.0.11.2.7 Referrals

24. Are fees paid to nonlicensed personnel who are making referrals to qualified insurance or annuity salespersons limited to a one-time, nominal fee of a fixed dollar amount for each referral, and is the fee unrelated to whether the referral results in a sales transaction?

3950.0.11.2.8 Third-Party Agreements

25. Does the state member bank's management conduct a comprehensive review of a third party before entering into any arrangement to conduct insurance or annuity sales activities through the third party?
26. Does the review include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with applicable consumer protection laws and regulations?
27. Does the board of directors or a designated committee thereof approve any agreement with the third party?
28. Does the agreement outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the bank's office space, equipment, and personnel?
29. Does the third-party agreement specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable?
30. Does the agreement authorize the bank to monitor a third party's compliance with the agreement, as well as to have access to third-party records considered necessary to evaluate compliance?
31. Does the agreement provide for indemnification of the institution by the third party for any losses caused by the conduct of the third party's employees in connection with its insurance or annuity sales activities?
32. If an arrangement includes dual employees, does the agreement provide for written employment contracts that specify the duties of these employees and their compensation arrangements?

33. If the bank contracts with a functionally regulated third party, does the bank obtain, as appropriate, any relevant regulatory reports of examination of the third party?
34. How does the bank ensure that a third party selling insurance or annuity products at or on behalf of the bank complies with all applicable regulations, including the CPSI regulation?
35. How does the bank ensure that any third party or dual employee selling insurance or annuity products at or on behalf of the bank is appropriately trained to comply with the minimum disclosures and other requirements of the Board's CPSI regulation and applicable state regulations?
36. Does the bank obtain and review copies of third-party training and compliance materials to monitor the third party's performance regarding its disclosure and training obligations?

3950.0.11.2.9 Consumer Complaints

37. Does the state member bank have policies and procedures for handling customer complaints related to insurance and annuity sales?
38. Does the customer complaint process provide for the recording and tracking of all complaints?
39. Does the state member bank require periodic reviews of complaints by compliance personnel? Is a review by the state member bank's board and senior management required for significant compliance issues that may pose risk to the bank?

3980.0.1 ADDITIONAL BOARD AUTHORITY FOR CERTAIN NONBANK FINANCIAL COMPANIES AND BANK HOLDING COMPANIES

3980.0.1.1 Establishment of an Intermediate Holding Company

3980.0.1.1.1 Action the Board May Require

Pursuant to 12 U.S.C. 5667, if a nonbank financial company supervised by the Board of Governors of the Federal Reserve System (Board) conducts activities other than those that are determined to be financial in nature or incidental thereto under section 4(k) of the BHC Act (12 U.S.C. 1843 (k)), the Board is authorized to require the company to establish and conduct all or a portion of such activities that are determined to be financial in nature or incidental thereto in or through an intermediate holding company. The intermediate holding company must be established in accordance with the Board's regulation no later than 90 days (or other longer appropriate time), after the date on which the Board notifies the nonbank financial company of the determination.

3980.0.1.1.2 Required Board Actions

The Board must require a nonbank financial company to establish an intermediate holding company, if it makes a determination that the establishment of such an intermediate holding company is necessary to

- appropriately supervise activities that are determined to be financial in nature or incidental thereto or
- ensure that supervision by the Board does not extend to the commercial activities of the nonbank financial company.

3980.0.2 Internal Financial Activities

Activities that are determined to be financial in nature or incidental thereto under section 4(k) of the BHC Act do not include internal financial activities, including internal treasury, investment, and employee benefit functions. If an internal financial activity was engaged in for the company or an affiliate and a non-affiliate of such company during the year prior to July 21, 2010, the company (or an affiliate of an intermediate holding company or subsidiary of an intermediate holding company) may continue to engage in such activity, provided that not less than 2/3 of the assets or 2/3 of the revenues generated from the activity are from or attributable to the company or an affiliate. These prior-engaged activities are subject to the Board's determination of whether engaging in such an activity presents undue risk to the company or to the financial stability of the United States.

3980.0.3 Source of Strength

A company that directly or indirectly controls an intermediate holding company shall serve as a source of strength to its subsidiary intermediate holding companies.

3980.0.4 Parent Company Reports

The Board is authorized to require reports under oath from a company that controls an intermediate company and from its appropriate officers or directors, solely for the purpose of ensuring compliance with the provisions of section 12 U.S.C. 5667, including assessing the ability of the company to (1) serve as a source of strength to its subsidiary intermediate holding company and (2) enforce compliance.

3980.0.5 Limited Parent Company Enforcement

The Board may enforce compliance with the provisions of 12 U.S.C. 5667 that are applicable to any company that controls an intermediate holding company under section 8 of the Federal Deposit Insurance Act (FDI Act) (see 12 U.S.C. 1818), and the company will be subject to each such section in the same manner and to the same extent as if the company were a bank holding company.

3980.0.5.1 Application of Other Act

Any violation of 12 U.S.C. 5667 by any company that controls and intermediate holding company also may be treated as a violation of the FDI Act.

Financial Factors (Introduction)

Section 4000.0

The analysis of financial factors should be conducted in four primary parts, namely: (1) parent only, (2) banking subsidiary(ies), (3) nonbank subsidiary(ies), and (4) consolidated organization. In view of the fact that all BHCs are not structured in the same organizational and financial manner, it is important that examiners be flexible in their approach and be judicious in their use of ratio analysis and peer group comparisons. There is no substitute for using sound judgment and creativity while performing an analysis, providing all of the pertinent information is available. The summary and conclusions should follow from the information presented in the analysis.

The analysis is intended to determine the financial strengths and weaknesses of an organization and the impact of conditions at the parent company and nonbank subsidiary which could adversely affect the condition of the banking subsidiary. As a regulatory agency, a goal of the Federal Reserve System is to safeguard and protect the soundness of commercial banks. The System oversees holding company banking and nonbanking activities to assure the continued safety and soundness of individual banks and the industry as a whole.

The analysis of financial factors resulting from the inspection of a bank holding company is essentially a finding of facts and an expression of judgment. In conducting an appraisal of a holding company's condition, the financial analysis of the organization, based on a ‘‘building block’’ or ‘‘component’’ approach, should provide the examiner with a solid foundation from which to proceed. In order to complete the analysis it is first necessary to accumulate sufficient information concerning the parent company, bank and nonbanking subsidiary(ies) and the consolidated organization. A final analysis should not be attempted until these integral parts have been thoroughly reviewed.

4010.0.1 INTRODUCTION AND SCOPE OF THE ANALYSIS

The cash flow analysis is *applicable to all bank holding companies with consolidated assets in excess of $1 billion, those that have substantive fixed charges or debt outstanding,* as well as select others at the option of the Reserve Bank. Key parts of the analysis involve the use of:

1. A standardized ''Cash Flow Statement (Parent)'' page (refer to manual sections 5010.23 and 5020.13 for the illustrated pages) which includes computation of the cash earnings coverage ratios and analyses; regarding the results;
2. Earnings cash flow coverage ratios to measure the parent company's ability:
   a. To pay its fixed charges, including interest costs, lease expense, income taxes, retirement of long-term debt (including sinking fund provisions), and preferred stock cash dividends, and
   b. To pay common stock cash dividends.
3. Guidelines for supervisory determination of parent company debt servicing capacity.

The cash flow statement page of the inspection report presents the cash earnings and the cash expenditures of the parent company. Within the statement are the key components to be used in the ''Fixed Charge Coverage Ratio,'' which measures the parent company's ability to meet its fixed obligations, and a ''Common Stock Cash Dividend Coverage Ratio'' which measures the ability of the remaining, or residual, earnings to cover common stock dividends.

4010.0.2 CASH FLOW STATEMENT

The cash flow statement is an effective tool used in understanding how a particular bank holding company operates. Its primary objective is to summarize the financing and investing activities of the holding company, including the extent to which the entity has generated funds (externally and internally) during the period. The cash flow statement is related to both the income statement and the balance sheet and provides information that otherwise can be obtained only partially by interpreting each of those statements.

An analysis of past cash flow statements can supply important information regarding the uses of funds, such as internal asset growth or acquisitions, as well as data on the sources of funds used and the financing needs of management. A projected cash flow statement will focus on the need for future funds, its applications, and the sources from which they are likely to be available.

Specifically, the analysis of the cash flow statement is necessary for a thorough understanding of a bank holding company and the nature of its operations to the extent that it provides information on such areas as:

1. Utilization of funds provided by operations;
2. Use of funds from a new debt issue or sale of stock;
3. Source of funds used for acquisitions or additional capital contributions;
4. Means of payment of a dividend in the face of an operating loss;
5. Means of debt repayment and stock redemption.

While the cash flow statement provides an overall perspective of a holding company's utilization of available funds, it does not, by itself, indicate possible or actual difficulties the parent company may have in meeting its fixed obligations from internally generated funds. Fixed obligations or fixed charges are those recurring expenses which must be paid as they fall due, which includes interest expense, lease expense, sinking fund requirements, scheduled debt repayments and preferred dividends.

One ratio that may be used to calculate the strength of a parent company's earnings to meet its fixed charges or obligations is the *Fixed Charge Coverage Ratio* (FCCR). The components of the ratio are included on the ''Cash Flow Statement (Parent)'' page. The Fixed Charge Coverage Ratio (FCCR) measures the parent company's ability to pay for *fixed* contractual obligations if management is to *retain control of the organization,* thereby satisfying the expectation of creditors and preferred stockholders. Net income *after taxes* is used in the formula. Interest and lease expenses are already deducted to arrive at the net income figure and must be added back to obtain the earnings available to pay such charges. Interest expense is usually the largest component among all ''fixed charges,'' and the ability to pay this expense from earnings cash flow is critical to an assurance of continued refunding of the parent company's debt. It measures not only the extent to which net cash operating earnings covers the debt servicing requirements of the parent company, but the capacity to pay income taxes and preferred stock cash dividends as well, thereby meeting the expectations that creditors and preferred shareholders have for the protection of their respective interests. The need for *better than a 1:1* coverage is therefore critical.

Another important formula, required to be calculated is the *Common Stock Cash Dividend Coverage Ratio* (CSCDCR) which measures the ability of the parent company to pay common stock cash dividends. The CSCDCR will show, in turn, whether the residual cash earnings of the parent company are sufficient to pay the common stock cash dividend and, if not, the amount that must be provided from other sources of cash, such as the liquidation of assets or additional borrowings, to cover the shortfall.

Significant shortfalls in the CSCDCR are to be scrutinized in light of the Board's November 1985 Policy Statement on "Cash Dividends Not Fully Covered by Earnings." According to the statement, a bank holding company should not maintain its existing rate of cash dividends on common stock unless:

1. The holding company's net income available to common stockholders over the past year has been sufficient to fully fund the dividends; *and*

2. The prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition.

A bank holding company whose cash dividends are inconsistent with the above criteria is to give serious consideration to cutting or eliminating its dividends. The need for *at least a 1:1 coverage* is therefore critical.

The two ratios[1] are calculated as follows:

$$\text{FCCR} = \frac{\text{After tax cash income (1) + interest expense (2) + lease \& rental expense (3)}}{\text{interest expense (2) + lease \& rental expense (3) + contractual long-term debt retired (4) + preferred stock dividend payments (5)}}$$

$$\text{CSCDCR} = \frac{\text{After tax cash income (1)} - [\text{Contractual long-term debt retired (4) + preferred stock dividend payments (5)}]}{\text{Common Stock Dividend Payments (6)}}$$

Note that the Cash Flow Statement (Parent) page presents only cash items included in the parent's income and therefore the analyst can use its income figures without any need to adjust for noncash items.

Both the Fixed Charge Coverage and the Common Stock Cash Dividends Coverage ratios are considered inadequate at less than 1:1. If a holding company is generating funds which provide at least dollar-for-dollar coverage, no criticism need be made. However, the examiner should be aware that these ratios, as well as others, are merely guidelines and good judgment must prevail. A ratio of 1.02:1 may pass the test, but it is only barely adequate. No criticism may necessarily be warranted for the period covered by the 1.02:1 ratio, but it may be indicative of a deteriorating trend over the past few years. Accordingly, an appropriate comment concerning the trend may be warranted.

When reviewing these ratios, it should be kept in mind that certain components in the numerator can to some degree be altered at the discretion of management. For example, by altering the dividends paid by bank subsidiaries, the amount of funds available to the parent to cover fixed charges can be increased or decreased. For this reason, the fixed charge and funds flow ratios should be analyzed in conjunction with a review of the dividend payout ratios of the subsidiary banks. Cash flow ratios that otherwise appear adequate may be a cause for concern if the banks are paying out dividends that are too high in relation to capital or overall condition. Analysts should evaluate the bank dividend payout ratios in light of the bank's capital and financial condition. Only in this way can the analyst gain a better understanding of the quality of the parent's cash flow and its potential effect on bank subsidiaries.

Ratios of less than 1:1 coverage show that internally generated funds are not sufficient to meet a parent company's needs. In many cases, the examiner may find low coverage ratios yet all fixed charges were paid as agreed. Had they not been, the company would have incurred severe financial difficulties long before the start of the inspection. Therefore, when less than adequate ratios appear and obligations are paid

1. The numbered ( ) items correspond to the numbered lines on the "Cash Flow Statement (Parent)" page.

on time, the examiner must determine what other source of funds was utilized to make up the shortfall and to permit the timely payment of obligations.

4010.0.3 SUPERVISORY DETERMINATION AS TO ADEQUACY OF PARENT COMPANY CASH FLOW

A supervisory determination about the adequacy of parent company cash flow, and its use as a measure of parent company debt servicing capacity, requires more information than just the results of the Fixed Charge Coverage and Common Stock Cash Dividend Coverage Ratios. The typical major parent company does not generate an earnings cash flow by conducting banking operations itself, although it nevertheless may incur a heavy external debt on behalf of its operating subsidiaries which are the generators of the actual earnings cash flow. Therefore, the parent company earnings cash flow may not be indicative of the *actual* earnings power of the entire banking organization. For example, the cash earnings of the parent company may be kept low by management to avoid State or local income tax liability and/or to increase leveraged lending volumes at the subsidiary level. Conversely, cash earnings may be forced to the parent company through imprudent levels of upstream cash dividend payments which eventually will endanger the operating subsidiaries and the parent itself.

A supervisory determination about the adequacy of parent company cash flow must take place at *two levels:* (1) by analyzing the results of the two coverage ratios using the net earnings cash flow *realized* by the parent company, *and* (2) by analyzing the effect that upstream cash flow to the parent company has had, and can be expected to have, on the financial condition of the bank subsidiaries and the significant nonbank subsidiaries. The latter focus should be on significant nonbank subsidiaries whose capital and dividend policies are subject to separate regulation—such as thrifts—or subsidiaries with significant external funding, whose creditors presumably monitor capital and dividend policies of the subsidiary.

4010.0.4 SPECIFIC GUIDELINES FOR DEBT SERVICING CAPACITY

The specific guidelines for debt servicing capacity are as follows:

1. The adequacy or inadequacy of parent company cash flow, and thereby the capacity to sustain the parent company's debt, is determined ultimately from the results of the Fixed Charge and Common Stock Cash Dividend Coverage Ratios, and the related analysis of the effects of upstream cash flow on the financial condition of the key subsidiaries.

2. For those parent companies with material amounts of long-term debt, coverage ratios in excess of 1:1 will not necessarily be considered sufficient to sustain the parent company's leverage *unless: first,* the Tier 1 capital positions of the bank subsidiaries are considered adequate; *second,* that the bank holding company's consolidated Tier 1 capital position is considered adequate; and *third,* the parent's liquidity is judged adequate. If that is not the case, then a critical comment on the ''Examiner's Comments'' page should be made regarding the potentially excessive leverage of the parent, as well as that of its subsidiaries. A specific period of time should be established for the management of the bank holding company to submit a capital improvement program acceptable to the System. *Moreover,* where the capital positions, bank and consolidated, are considered adequate but the dividend payout ratios are excessive, it is indicative of a potential future debt servicing problem and should be brought to management's attention. Since the earnings level may not be sustainable, corrective action must be taken within a specified period of time.

3. For coverage ratios of less than 1:1, there is a presumption of a critical comment on the ''Examiner's Comments'' page of the inspection report *unless* the shortfall is prudently planned,[2] insignificant in amount and/or the trend of earnings cash flow and dividend policies clearly point toward a return to sufficient parent company earnings cash flow coverage.

   a. In circumstances where the Tier 1 capital position of *any bank subsidiary* is considered inadequate, a written program of corrective action should be required, including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

   b. In circumstances where the Tier 1 *consolidated* capital position of the holding company is considered inadequate, a written program of corrective action should be required,

2. A planned cash flow shortfall might typically occur when the parent elects to reduce (or not increase) dividends from subsidiaries because it anticipated an excess cash or liquid asset position from certain *external sources* (i.e., stock or debt issuance, dividend reinvestment plans, or tax refunds) sufficient to cover the deficiency.

including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

c. In circumstances where the Tier 1 capital position of *each bank subsidiary* and the consolidated Tier 1 capital position of the bank holding company is considered adequate, but there is a developed trend of inadequate earnings cash flow coverage at the parent company level or excessive dividend payouts from the subsidiaries, a written program of corrective action should be required to reestablish and maintain a positive earnings cash flow at the parent company.

4010.0.5 SOURCES OF FUNDS TO MAKE UP SHORTFALLS

Basically, there are three source categories, other than current earnings, that could be used to make up any deficit: (1) liquidation of assets, (2) proceeds from a stock offering, or (3) borrowed funds. These sources must be thoroughly analyzed to determine the extent they were and could still be utilized. It must be kept in mind that the use of these sources cannot permanently eliminate a shortfall in the flow of funds from current operations. These alternative sources only alleviate temporarily the effects of a shortfall. Nevertheless, a deficit could have been intentionally allowed to occur because the holding company knew of funds coming from these alternate sources. For example, the parent knew of an impending stock sale and cut dividends from subsidiaries significantly. In future years, dividends from subsidiaries could be restored to normal proportions, bringing the ratios up to adequate levels.

At this point, it must be determined what, if any, criticism is necessary when an unplanned shortfall is made up by any of these alternate sources. The necessity of liquidating assets to meet cash needs may warrant a critical comment. The parent's advances to subsidiaries and its investment in marketable securities are considered temporary investments. That is, the holding company may reasonably expect to sell its securities and be repaid on its advances to subsidiaries within a reasonably short period of time. In the case of advances to a problem subsidiary, repayments may not be forthcoming. Nevertheless, if the parent does receive partial payments, such funds are available to meet cash needs. The concern to the examiner is the extent to which such temporary investments can be relied upon before they are fully exhausted. If the continued liquidation of those investments to meet cash needs has fully exhausted the assets or will do so in the near future, then appropriate critical comments are warranted. Such comments should stress that the liquidation of the investment portfolio and the advances to subsidiaries can no longer be considered a reliable source of funds.

Another method which may be used by a holding company to overcome a flow of funds deficiency is the sale of capital stock which is an effective source for generating permanent funds for the parent. However, it must be recognized that the primary reason for the stock offering was something other than covering the shortfall (i.e., debt repayment, capital contributions to subsidiaries, acquisitions). Therefore, it cannot be relied upon as a consistent annual source to supplement internally generated funds from operations. Also, it should be realized that the sale of stock will increase future funding requirements as additional dividends will have to be paid. Consequently, where no significant improvement in internal operations is contemplated in future periods, an appropriate comment is warranted indicating the potential problem.

Holding companies also compensate for inadequate funds flow with borrowed money. Although not a permanent source of funds, long-term debt is a source similar to the sale of stock. Its main purpose, however, was not to cover the shortfall. Long-term debt cannot be considered as a reliable, consistent annual source, and moreover, its existence creates new funding requirements.

Short-term debt is perhaps the most commonly used source to cover a deficit cash flow from operations and its use is of serious concern from a supervisory viewpoint. Unlike long-term debt and equity issues, short-term borrowings (i.e., bank loans, commercial paper) are readily available to holding companies which can and do rely on this source year after year for support. As a consequence, this indebtedness increases fixed charges and where material improvement in earnings does not develop, the shortfall could increase in subsequent periods thereby necessitating even larger borrowing requirements. This practice may jeopardize the parent's liquidity position since short-term liabilities rise without a corresponding increase in liquid assets as the borrowed funds are used to pay expenses. Here, an appropriate comment is warranted indicating the problems.

4010.0.6 REPORTING THE RESULTS

If the coverage ratios are less than 1:1, then appropriate comments are necessary to explain the external source utilized to make up the shortfall. The supporting details may be shown within the comments section of the Cash Flow Statement. More significant comments should be included on the "Analysis of Financial Factors" page or the "Examiner's Comments" page. The examiner may include prior years' results for comparative purposes.

4010.0.7 INSPECTION OBJECTIVES

1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements.
2. To measure the parent's ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs.
3. To determine if the parent company's dividends to stockholders are covered by residual cash earnings.
4. To analyze any cash flow transaction which may adversely affect the financial stability of the parent.
5. To discuss with parent company management:

   a. Deficit cash flows arising from internal operations;

   b. Steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.

   c. Any parent company borrowings or restructurings needed to sustain dividend payments to shareholders; and

   d. The need to increase cash flow although there may be no deficit in current cash flow coverage.

4010.0.8 INSPECTION PROCEDURES

1. Prepare the "Cash Flow Statement (Parent)" FR 1225.

   a. Analyze each item of the parent company's comparative balance sheet and income statement. Since accrual figures may be used for all accounts except tax and dividend payments, adjustment to the figures may be necessary for the difference between accrual and cash basis accounting.

   b. Examine the underlying nature of period increases or decreases for the balances listed on the financial statements, particularly any material transactions that aided in averting coverage ratio shortfalls.

   c. Note contractual long-term debt retired (net decrease in borrowed funds, including sinking fund provisions) as a memo item on the bottom of the page, where indicated.

   d. Compute the fixed charge and common stock cash dividend coverage ratios as illustrated on the page. *The numbered items in the formula correspond with the numbered items on the "Cash Flow Statement (Parent)" page.*

   e. Answer the six questions on the "Cash Flow Statement (Parent)" page that prompt an analysis.
2. Analyze the Results.

   a. If there is full coverage, no problem should be assumed. However, *the underlying assets and transactions that provided for the coverage should be examined to make certain that "no problem" does, in fact, exist.*

   b. If a shortfall exists, provide guidelines to the parent company's management for developing a workable contingency plan, using your "good examiner judgement", considering the viability of all sources in resolving the shortfall.

   - Review the *sources* for making up shortfalls:
     - — Liquidation or sale of assets, *giving full consideration to external market concerns and losses that may result from the sales.*
     - — Proceeds from stock offerings.
     - — Increase in borrowed funds, including a restructuring of short term debt to long term debt.
     - — Sale of capital stock.
     - — Payments from subsidiaries on advances in the form of amortization or interest.
     - — Short term debt.
3. Report the Results.

   a. *When an "engineered" (planned) shortfall exists,* indicate that one does exist, the reasons therefore, and the degree of severity to which it should be addressed, either as part of the answers to the questions on the "Cash Flow Statement (Parent)", the "Analysis of Financial Factors" page, or the "Examiner's Comments" page. Provide management's assessment as to whether planned short falls will occur in the future.

b. When an *unplanned shortfall exists,* determine the extent of criticism that is to be made when short falls are lessened or corrected by an imprudent use of *alternative sources.* Based on the severity of the situation, determine whether the comments will be provided in the inspection report as answers to the questions on the Cash Flow Statement, or within the content of the ‘‘Analysis of Financial Factors’’ page, or the ‘‘Examiner’s Comments’’ page.

BHC financial leverage is the use of debt to supplement the equity in a company's capital structure. It is anticipated that funds generated through borrowings will be invested and earn a rate of return above their cost so that the net interest margin generated will improve the company's net income, providing a higher rate of return on stockholders' equity which has otherwise remained constant. Since no creditor or lender would be willing to extend credit without the cushion and safety provided by the stockholders' equity, this borrowing process is also referred to as "trading on equity." That is, utilizing the existence of a given amount of equity capital as a borrowing base. Stockholders and management often view leveraging as a favorable financial alternative because if owners have provided only a small portion of total financing, much of the financial risk will be borne by the lenders, alleviating the need of the stockholders to assume the total risk. In addition, by raising funds through long-term debt, the owners gain the benefits of maintaining control of the firm with a limited investment rather than diluting existing ownership via the sale of additional capital stock.

There are, however, some unfavorable aspects in this type of financing. As a holding company substitutes debt for equity, keeping its asset size constant, its leverage ratio will increase. The increase in leverage increases the probability that a company may go into default since a larger portion of the income stream generated by earning assets must then be used to meet increased fixed charges (interest expense). (This assumes that increases in future earnings are not anticipated. While earnings may be sufficient to meet fixed interest expenses at the time the debt is issued, it is possible that future earnings will not be sufficient to meet the increased expenses.) In addition, utilization of leverage reduces management flexibility in making future decisions because lenders impose restrictive covenants that may limit future debt issues, limit dividend payments, or impose constraints on specific operating ratios. However, not all of the effects of increased leverage are unfavorable. Additional long-term debt may have the favorable effect of extending maturities on obligations and may improve liquidity.

Leverage ratios measure the contribution of owners compared with the financing provided by lenders. Companies with low leverage ratios generally have less exposure to loss when the economy is in a recession, but they may also have lower expected returns when the economy booms. Firms with high leverage ratios run the risk of large losses but also have a chance of earning high rates of return on equity and assets. Thus, if a company earns more on the borrowed funds than it pays in interest, the return to the owners is increased. For example, if the company earns 10 percent on assets and debt costs 8 percent, there is a 2 percent differential accruing to the stockholders. However, if the return on assets falls to 7 percent, the differential between that figure and the cost of debt must be made up from total profits.

A bank holding company is composed of at least two tiers, parent and subsidiary, and each tier may issue long-term debt in its own name. Several different types of long-term debt instruments are utilized by holding companies. Corporations make use of instruments such as debentures, convertible debentures, term loans, capital notes and mortgage notes. (See Manual section 2080.0—"Funding"). While most issues are generally sold to the public, in some cases, issues of subsidiaries have been placed directly with another subsidiary, the parent company, or perhaps with an unaffiliated banking institution. Alternatively, issues presently held on the books of the parent may have been originally issued by one of the subsidiaries and later transferred to the parent. These transfers have often occurred at the time of the formation of the holding company when debt of the subsidiaries was assumed by the parent.

The proceeds of parent company long-term debt may be advanced to banking subsidiaries as debt or invested in banking subsidiaries as equity. When parent debt is issued, and the proceeds are advanced to subsidiaries as debt, a condition of "***simple leverage***" exists. When such proceeds are invested in subsidiaries as equity, a condition of "***double leverage***" is said to exist since the increase in the subsidiary bank's capital base will allow the bank to increase its own borrowings.[1] In effect, the

1. Parent company "***total leverage***" may be defined as the relationship between equity at the parent level and the total assets of the parent company. Such assets typically consist of investments in bank and nonbank subsidiaries, advances to affiliates, deposits with bank affiliates and securities. A useful related measure of parent company leverage is "***investment leverage***" which may be defined as the relationship between parent equity and its equity investments in subsidiaries. Since the equity which has been invested in subsidiaries can, and often is, further leveraged by external borrowings of such subsidiaries, this type of parent company investment leverage

parent's capital injection which was funded by debt, provides the bank with greater debt capacity, thereby allowing the bank to borrow additional funds on its own. Therefore, the original borrowing by the parent has, in effect, been compounded when the bank borrows based on its newly injected equity.

If the parent debt is reinvested as equity in a bank, the servicing of interest and principal is usually provided by dividends paid to the parent by the bank subsidiaries. The bank dividends, however, may become restricted based on the bank's earning power which may not provide for sufficient retention of earnings to support its asset growth. Problems may be less severe when parent debt is downstreamed as debt to the bank subsidiary. When the terms and maturities of the indentures match, the obligation of a bank to meet its interest and principal payments to the parent are contractual and represent fixed charges (interest is tax deductible) which will continue up to the maturity of the note. When funds are downstreamed as equity and the bank typically issues dividends to its parent, it is easier to restrict the flow of funds from the bank than if the funds were downstreamed as debt which results in bank payments of interest expense. Bank dividend declarations are subject to limitations imposed by sections 5199(b) (12 U.S.C. 60) and 5204 (12 U.S.C. 56) of the United States Revised Statutes, while interest payments are not subject to such restrictions.

4010.1.1 ACQUISITION DEBT

Some holding companies use debt for the acquisition of subsidiary banks. The Board believes that a high level of acquisition debt can impair the holding company's ability to act as a source of strength to its bank subsidiaries, and thus does not favor the use of a substantial amount of acquisition debt in bank holding company formations. However, the Board recognizes that the use of acquisition debt in the formation of certain holding companies may be necessary, particularly when transferring the ownership of small community banks (approximately $150 million or less), and the maintenance of local ownership in those banks. To this end, and in the interest of maintaining a safe and sound banking system, the Board has adopted a policy for assessing financial factors in the formation of small one-bank holding companies. (see Manual section 2090.2)

4010.1.2 INSPECTION CONSIDERATIONS

Generally, it is not the examiner's responsibility to criticize the method of term financing used by a bank holding company. The examiner, however, should be familiar with the various types of leveraging and the possible ramifications that they may have on a holding company structure. While the use of ratios may show an excessive leverage position, indicating vulnerability, it is primarily the corporation's earning power that dictates the acceptable level of debt. Accordingly, the examiner should compute a holding company's ability to meet its fixed charges (as detailed in the preceding section) to determine the appropriateness of the leverage position. If the company's earnings do not support the present fixed charge requirements, or if a declining trend is noted, appropriate comments are warranted.

can lead to what is referred to as "***double leverage***."

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to incorporate a reference to the ''Liquidity Risk'' sections (3005.1 to 3005.5) of the Federal Reserve System's Trading and Capital-Markets Activities Manual. *These sections provide additional guidance on evaluating a banking organization's liquidity management.*

4010.2.1 INTRODUCTION

Liquidity is generally defined as the ability of a company to meet its short-term obligations, to convert assets into cash or to obtain cash, or to roll over or issue new short-term debt. ''Short-term'' is generally viewed as a time span of up to a year. Since a bank holding company does not have the full range of asset and liability management options available to it that a bank does in managing its liquidity position, a BHC needs to have a sufficient cushion of liquid assets to support maturing liabilities. Certain assets that would not normally be considered current may be readily sold to avert a liquidity squeeze. For example, a holding company may be participating in long-term loans originated by a small business investment company (SBIC) subsidiary. If these loans are of good quality, the parent's share may be sold at little or no discount to that SBIC subsidiary, another subsidiary, or an unaffiliated company to obtain the needed cash. Consequently, the breakdown of assets segregating those that are current would not necessarily be indicative of liquid assets, given the nature of bank holding company investments. Therefore, liquid assets are defined as those assets that are readily available as cash or that can be converted into cash on an arm's-length basis without considerable loss.

Liquidity problems are usually a matter of the degree of severity. A less serious liquidity problem may mean that the company is unable to take advantage of profitable business opportunities. A more serious lack of liquidity may mean that a company is unable to pay its short-term obligations and is in default—this can lead to the forced sale of long-term investments and assets and, in its most severe form, to insolvency and bankruptcy. (See SR-86-17 and SR-85-37.) See also the ''Liquidity Risk'' sections (3005.1 to 3005.5) of the Federal Reserve System's *Trading and Capital-Markets Activities Manual.* These sections provide additional guidance on evaluating a banking organization's liquidity management.

4010.2.2 SUPERVISORY APPROACH TO ANALYZING PARENT COMPANY LIQUIDITY

For bank holding companies with consolidated assets in excess of $1 billion or material amounts of debt outstanding, or others, at the option of the Reserve Bank, the analytical approach to parent company liquidity will include the following key elements:

1. Evaluate parent company liquidity by analyzing the *contractual* maturity structure of assets and liabilities, extending this analysis to consider the underlying liquidity of the parent's intercompany advances and deposits. Any judgment of *adequate* parent company liquidity must be keyed to a finding that the parent has adequate liquid assets, on an underlying basis, to meet its short-term debt obligations.
2. Estimate the underlying liquidity of parent liabilities and assets, giving particular attention to interest-bearing deposits in and advances to subsidiaries. Emphasis should be placed on asset quality and the liquidity profile of the bank and key nonbank subsidiaries. The estimates are to be reflected in a statement of ''Parent Company Liquidity Position'' as restated data, with appropriate explanations as to the basis for the restatement.
3. Use the five contractual and estimated underlying maturity categories on the statement of ''Parent Company Liquidity Position'' to slot in data. The data categories are—
   a. up to 30 days,
   b. up to 90 days,
   c. up to one year,
   d. one to two years, and
   e. beyond two years.

   The schedule provides for the use of effective remaining maturity categories for the parent company's short-term assets and liabilities, highlighting funding surpluses or deficits at key specified periods of time. *Examiners have the option of including the statement in the inspection report in order to substantiate or clarify particular judgments.*
4. Use the conclusions drawn from the statement of ''Parent Company Liquidity Posi-

tion" as a basis for discussions with management. Examiners should also comment on their findings in detail on the "Analysis of Financial Factors" page in the inspection report.
5. Ascertaining whether an organization with significant funding activities has in place—
   a. internal parent liquidity management policies that address and limit the use of short-term funding sources to support various subsidiaries, and
   b. an internal contingency plan for maintaining parent liquidity under adverse situations.

4010.2.3 STATEMENT OF PARENT COMPANY LIQUIDITY POSITION

The purpose of the statement of "Parent Company Liquidity Position" is to provide a consistent method for analyzing parent liquidity. The schedule is *not* intended to address the issue of interest sensitivity. While only conclusions drawn from the schedule of estimated effective maturities are to appear in the inspection report, examiners should also collect data on contractual (remaining life) maturities of parent assets and liabilities. Examiners will treat all externally funded nonbank entities of the parent company in a similar fashion.

The maturity categories appearing on the schedule are a basic analytical framework for looking at funding mismatches and are not necessarily appropriate for all organizations. As such, categories can be adjusted to fit particular circumstances. On a conceptual basis, the 30-day period corresponds to a period during which markets might be in temporary disarray due to an external shock. For the largest companies with substantial overnight and very short-term funding operations, an additional 1- to 7-day category may be needed. The 31- to 90-day period allows for gauging the parent's ability to withstand internal adversity and demonstrate a return to "normal" business operations. The 91-day to one-year period is a reasonable planning horizon over which an organization might be able to readjust its internal funding policies substantially. In addition, the up-to-one-year categories, as a group, complement the cash-flow analysis of debt-servicing capacity by specifically addressing maturing debt that must be either paid or rolled over at prevailing rates. The one- to two-year category provides an early indication of any funding imbalances that management would have to address in the reasonably near term. As a practical matter, the over-two-year category has limited analytical value in most cases and is included principally to make certain that all deposits and advances are accounted for.

Using these categories, funding surpluses or deficits can be identified for specific maturity intervals. For examiners evaluating gaps based on estimated "underlying" maturities, guidelines on acceptable practices for funding surpluses and shortfalls are set. Examiners would be expected to place particular emphasis on the up-to-30-day period, in which a net liquidity surplus would be expected to provide at least that much time for a parent to ride out a shock. Similarly, the up-to-90-day period would be viewed as the relevant time to demonstrate to the market that problems are being addressed appropriately and are being brought under control. Imbalances in the 91-day to one-year categories would generally have less significance due to greater uncertainty regarding the assumptions that would go into any adjustments.

A logical point for assessing parent liquidity is an assessment of the contractual maturity structure of the holding company's balance sheet. Contractual maturities of assets and normal run-off of liabilities are to be slotted into the five maturity categories depicted. Once completed, the examiner is provided with an initial indication of whether the parent has an adequate cushion of short-term liquid assets within the 0- to 30-day and the 0- to 90-day categories to cover short-term liabilities or whether a pattern of significant short-term funding gaps exists. Certainly, the identification of such gaps gives guidance on obvious areas for further analysis. However, the absence of short-term funding shortfalls on a strictly contractual basis gives only limited comfort, as the parent's underlying liquidity still must be analyzed more deeply.

4010.2.4 ANALYSIS OF UNDERLYING SOURCES TO FUND DEBT AND MEET OTHER OBLIGATIONS

Adjustments to the schedule that better reflect the parent's liquidity position will be made as the next step in the analysis. These adjustments require the examiner's judgment on the underlying liquidity of the parent's assets and liabilities; particular emphasis placed on interest-bearing deposits with bank subsidiaries and advances to both bank and nonbank subsidiaries.

4010.2.4.1 Interest-Bearing Deposits with Subsidiary Banks

The parent's interest-bearing deposits[1] with the subsidiary bank(s) may represent either the temporary placement of idle funds or a more permanent source of bank funding. Temporary deposits typically are structured to mature in 90 days or less, are generally not substantial in relation to the overall size of the bank, are usually supported by substantial holdings of highly liquid bank assets, and could be repaid without triggering marketplace concerns regarding the organization's overall funding needs. Therefore, if this pattern exists, the temporary deposits may be considered highly liquid and slotted in the 0- to 30-day (or 0- to 7-day) period on the schedule, regardless of their contractual maturity dates.

Interest-bearing deposits with the subsidiary bank(s) that serve as a permanent source of bank funds are typically substantial in relation to the size of the bank and are usually placed to fund bank expansion without additional bank borrowings. Here, judgments regarding underlying liquidity should be keyed to the CAMELS ratings on the bank's liquidity and asset quality, as well as reasoned judgments on the bank's ability to liquidate assets or replace the funds in the marketplace through additional borrowings. Asset quality is critical, as it is a leading indicator of bad news that will ultimately pull down earnings and undermine market confidence. As a general principle, the liquidity of the parent's deposits in bank(s) should be no better than the liquidity of the bank(s) and should be subject to downgrading if bank asset quality is suspect. If bank asset quality is worse than fair, the liquidity of these funds should be downgraded. For banks with asset quality rated fair, the parent's deposits might still be considered liquid, but a closer analysis of the particular situation would be warranted.

Under the assumption that the bank's asset quality and liquidity positions do not negatively impact the bank's ability to liquidate or replace these funds, such deposits may be slotted in the 0- to 30-day (or 0- to 7-day for large institutions) period on the schedule, regardless of the contractual maturity. However, if these deposits are substantial, their replacement may trigger market concerns. At this point, the examiner's judgment is necessary to determine an acceptable level at which a portion of the deposits could be replaced in the marketplace without triggering such concerns. A starting point for the examiner should be to evaluate the funding gaps appearing on the contractual maturity schedule with particular attention paid to the 0- to 90-day period (0 to 30 days for large institutions). While it may be impossible for the bank(s) to replace all the parent's deposits without triggering concerns, the bank(s) may be able to replace only the portion necessary to eliminate the negative cumulative funding gap in the given time period. If even this amount is deemed to be substantial, the examiner may have no other alternative but to treat the deposits in accordance with the contractual maturity. For clarification, the following example is provided.

The contractual maturity schedule of a large holding company reflects a negative cumulative gap of $400 million in the 0- to 30-day time frame. The company's balance sheet includes $2.5 billion in interest-bearing deposits at the subsidiary bank(s), with $1 billion maturing in 30 days and $1.5 billion in 31 to 90 days.

In the examiner's judgment, the entire $1.5 billion due in over 30 days qualifies to be slotted in the under-30-day category,[2] but the bank would face liquidity pressures to replace this amount prior to its original maturity. However, $400 million, the amount needed to eliminate the negative cumulative gap position, could be replaced by the bank without undue market concern. Therefore, $400 million from the 31- to 90-day period should be re-slotted in the appropriate under 30-day-period.

4010.2.5 ADVANCES TO SUBSIDIARIES

Given the typical composition of bank holding company assets, the examiner is likely to have difficulty determining the degree of liquidity inherent in advances to subsidiaries.

For those subsidiaries with satisfactory asset quality, the examiner can usually assume the subsidiary could sell qualifying assets to affiliate bank(s) up to the quantitative limitations of section 23A, as long as the affiliated bank(s) are judged to have adequate liquidity. The examiner can also assume that a subsidiary that has an

1. In concept, the parent could also have advances to bank subsidiaries. Such advances are either booked as deposits (typically off-shore time deposits to avoid reserve requirements) or as instruments qualifying as tier 1 or tier 2 capital. To the extent that advances to banks are encountered, the analysis follows the same approach used with deposits.

2. Subject to early withdrawal penalties, which will be eliminated in consolidation.

established program of secondary-market asset sales could at least continue or even modestly expand the scope of the program. For subsidiaries without a program of asset sales, but whose assets are of the type that are readily marketable in the secondary market, a *limited* asset-sale program could be considered to provide some asset liquidity. However, caution should be used in estimating the magnitude of such sales, particularly because large transactions could not be accomplished quickly without risking market visibility and without broadcasting concerns about the corporation's funding.

When nonbank advances are substantial, the parent has little or no practical access to the funds advanced. While an arm's-length sale of such a subsidiary or a large portion of its assets to a bank affiliate may not generate a loss, the funding requirements for a large transaction at the bank level would probably initiate marketplace concerns.[3] Similarly, asset sales to an unaffiliated party that are significantly above normal would not only trigger market concerns but would probably also result in a significant discount. Furthermore, although it is possible that another nonbank subsidiary may act as the funding vehicle, the subsidiary's ability to generate the required funds may be restricted at best. Such restrictions may include marketplace concerns, as well as limitations on the maximum leverage positions or on the creation of senior debt embedded in debt covenants.

Advances to a subsidiary may be either short term or long term and are made for a variety of reasons, including providing a temporary source of income for the parent, enhancing a subsidiary's liquidity position, and supporting a subsidiary's operations. Therefore, the purpose of the loan, its maturity, and the degree to which high-quality assets of a subsidiary cover the amount due to the parent should also be considered in order to properly categorize advances.

4010.2.6. LIQUIDITY AND LIABILITIES OF THE PARENT

For liabilities of the parent, the policy presumption should be that their contractual maturity reflects the underlying availability of funds. Exceptions will reflect special circumstances, such as funding from foreign ownership interests or partners in joint ventures who have equity interests and an ongoing business relationship. The presence of backup lines of credit for commercial paper, while especially desirable in the case of regional companies, should not, by itself, cause an examiner to assume that the underlying maturity of a parent's short-term debt is materially longer than its contractual term or that these lines will always be readily available. In fact, organizations experiencing considerable problems, particularly asset-quality and liquidity problems, may find that these facilities are no longer available.

The examiner should thus review backup lines on a case-by-case basis and be aware of any escape clauses in interbank agreements. Specifically, for companies with a composite 3 or worse bank holding company RFI/C(D) rating or lead banks whose asset quality is a declining 3 or worse *or* whose asset quality *and* liquidity are rated 3 or worse, it is recommended that backup lines with "material adverse change" or similar escape clauses *not* be regarded as satisfactory support to an imbalanced parent company funding position.

Furthermore, certain holding companies' liabilities may often include unamortizing debt instruments. The company's ability to retire or replace such issues at maturity should be evaluated as part of the organization's overall liquidity analysis. If management intends to roll over the maturing issues, the evaluation should be based on the company's ability to do so. When debt retirement is the route chosen by management, the examiner's evaluation and judgment should focus on the company's ability to generate the necessary funds, either through asset liquidation or the issuance of equity instruments.

The unamortizing portion of debt issues is to be slotted in the appropriate maturity column of long-term debt. If the maturity of such issues falls due within the 0- to 90-day time frame, the examiner should comment on the organization's ability to replace the maturing issues or retire them by the deployment of funds from other sources in a footnote on the schedule. If the maturity of such debt is longer, the replacement or retirement should be addressed in the corporation's funding plan.

3. Underlying liquidity estimates should follow the approach previously stated for deposits.

4010.2.7 ANALYZING FUNDING MISMATCHES

After adjustments for the underlying liquidity of the parent's interest-bearing deposits and advances to subsidiaries and the underlying maturity of its liabilities, the resulting schedule should provide the examiner with the framework for looking at funding mismatches as a tool for assessing the parent's overall liquidity position. The position may be evaluated by the analysis of the underlying liquidity gaps (appearing on the bottom of the schedule). In the 0- to 30-day time frame, a net positive gap is expected and reflects the parent's ability to ride out a temporary market disarray. Although a negative gap in the 8- to 30-day period may be evident in larger organizations, the overall 30-day interval is expected to be positive. Similarly, for most organizations, the 0- to 90-day period is expected to reflect a positive position, regardless of a shortfall in the 31- to 90-day period. Failure to meet these conditions requires appropriate examiner comments on the "Examiner's Comments" page of the report.

The 91-day to one-year time frame (as well as the 31- to 90-day period for certain larger organizations) is less critical, and negative cumulative funding positions of modest size may be tolerated if the organization has demonstrated an ability to tap the funding markets, has readily available backup lines of credit, has a reasonable earnings-retention policy, has adequate funds-flow coverage, and has other fund-generating programs (such as a dividend reinvestment plan). Judgments on the reasonableness of any imbalances in these longer-term categories should be weighed against the examiners' estimates of the adequacy of these sources. In addition, the examiner should view these longer periods as a reasonable planning horizon over which the organization should be able to readjust its funding policies. These longer periods also provide an early indication of how management may address funding imbalances that may develop.

A significant shortfall in the 91-day to one-year period is expected to be covered by a contingency funding plan. While no single formula for such plans is recommended or possible, each organization needs to address its particular situation and the options it faces. At a minimum, the organization needs to address possible market shocks, whether they are caused by its own actions or by external events. Funding markets should be addressed individually and as a group, both as to their likely resiliency and the particular organization's position within each market. The viability of contingency sources should be tested periodically. The examiner should review the reasonableness of assumptions and the adequacy of alternative courses as part of the company's liquidity analysis. If no plan exists, a plan acceptable to the corporation's directors should be required. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.

In analyzing liquidity, the examiner will encounter the least difficulty when liquid assets equal or exceed short-term liabilities. In those instances, the liquidity position is considered adequate. If the examiner notes a declining trend in the liquidity position, an appropriate comment may be warranted, even though sufficient liquidity exists at that time.

Conversely, the examiner will encounter the most difficulty in analyzing liquidity when liquid assets are not sufficient to cover short-term obligations. When this situation exists, it is not necessarily indicative of an inadequate liquidity position. At that point, the examiner must consider other readily available sources of cash that are not shown on the balance sheet (for example, unused bank lines, dividends from subsidiaries).

Footnotes to financial statements may also play an important role in liquidity analysis. One such footnote may describe indenture restrictions on long-term debt. While a company may temporarily alleviate a liquidity bind by paying off its commercial paper with short-term bank loans, it may be faced with the problem of paying off the bank debt if it is precluded from issuing additional long-term debt.

4010.2.8 REPORTING THE RESULTS OF THE ANALYSIS

In the normal course of the inspection, the examiner should present his conclusions concerning liquidity to management. When there is an indication of some vulnerability, the examiner should solicit management's opinion and any corrective action plans being considered. If it appears that management has not addressed itself to the vulnerable or inadequate situation, an appropriate comment should be made. The results of this analysis should be discussed in the parent company section on the "Analysis of Financial Factors" page in the inspection report. In addition, the examiner has the option of incorporating the liquidity schedule in the report in order to substantiate or clarify particular judgments. Criticism with respect to a liquidity shortfall anywhere within the 0- to 90-day time frame or, in most cases, the absence of a contingency plan to cover shortfalls in the under-one-year time frame, should be carried forward to the "Examiner's Comments" page and the transmittal letter. These concerns should also be discussed with management.

4010.2.9 INSPECTION OBJECTIVES

1. To analyze the contractual maturity structure of assets and liabilities, and then extend the analysis to the underlying liquidity of intercompany advances and deposits—considering whether the underlying liquidity is short term or long term.
2. To estimate the underlying liquidity of parent liabilities and assets, paying particular attention to interest-bearing deposits in and advances to subsidiaries. Give particular attention to—
   a. asset quality, and
   b. the liquidity profile of the bank and key nonbank subsidiaries.
3. To restate, on the "Parent Company Liquidity Position" report page (see section 5030.0, pages 33–34), the estimates, using the suggested five broad contractual and underlying maturity categories.
4. To judge the adequacy of parent company liquidity, keying it to a finding as to whether the parent has adequate liquid assets, on an underlying-liquidity basis, to meet its short-term debt obligations.
5. For BHCs that have significant funding activities at the parent level, to determine if the parent company has in place—
   a. internal parent liquidity management policies that address and limit the use of short-term funding sources to support subsidiaries, and
   b. an internal contingency plan for maintaining parent liquidity in the face of adversity.
6. To draw conclusions from the estimated remaining effective maturities that appear in the report.

4010.2.10 INSPECTION PROCEDURES

1. Assess the contractual maturities of the parent company's balance sheet.
2. Slot the contractual maturities of assets and the normal runoff of liabilities into the five categories on the "Parent Company Liquidity Position" report page.
3. On the schedule, make adjustments as to the underlying maturity of the parent company's assets and liabilities.
4. Review funding mismatches.
5. Review the reasonableness of the contingency plan's assumptions and the adequacy of alternative sources.
   a. If no plan exists, a plan acceptable to the corporation's directors should be required.
   b. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.
6. Discuss the results in the parent company section of the "Analysis of Financial Factors" page in the inspection report.
7. Include in the "Examiner's Comments," page 1, criticism of liquidity shortfalls within the 0- to 90-day period or the absence of a contingency plan to cover shortfalls in the under-one-year time frame that were discussed with management.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2011, this section was revised to provide an introduction to the principal areas of concern when examining a bank, such as the CAMELS components.

In making the determination as to the condition of the holding company under inspection, an examiner must, as part of the inspection procedures, analyze the financial condition of the bank(s) owned by the holding company. Such an appraisal is obviously of paramount importance when one considers that the bulk of the consolidated assets and earnings of a holding company are represented by the bank(s). The examiner must incorporate in the analysis, results of the most recent commercial examination of the subsidiary bank(s).

Therefore, for meaningful results, the analysis of the subsidiary bank(s) should commence after the results of the latest examination of the bank(s) have been obtained. The primary areas of concern are (1) the quality and adequacy of the bank's capital (C); (2) the quality of the bank's assets (A); (3) the capability of the board of directors and management (M) to identify, measure, monitor, and control the risks of the bank's activities and to ensure that the bank has a safe, sound, and efficient operation that is in compliance with applicable laws and regulations; (4) the quantity, sustainability, and trend of the bank's earnings (E); (5) the adequacy of the bank's liquidity (L) position; and (6) the bank's sensitivity (S) to market risk—the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect the bank's earnings, capital, and liabilities that are subject to market risk. See SR-96-38, "Uniform Financial Institutions Rating System," and section A.5020.1 in the *Commercial Bank Examination Manual.* The examiner's analysis of the bank must consider and determine whether certain key facets of a bank's operations meet minimum standards and conform, where required, to bank regulatory restrictions. The examiner should be especially alert to any exceptions or violations of applicable statutes or regulations that could have a materially adverse effect upon the financial condition of the organization. In addition, the examiner should also consider the conclusions drawn as to the extent of compliance and the adequacy of internal bank policies that contribute to the overall analysis of the bank's condition.

Inspection personnel should use the examination ratings of the other federal agencies (where appropriate) when completing the inspection report. However, if substantive differences of opinion exist as to the bank's composite rating, adjustments to the rating may be made and footnoted to indicate the change.

One area of vital importance in the evaluation of a bank's condition is capital adequacy. Consideration should be given by the examiner whether the bank has sufficient capital to provide an adequate base for growth and a cushion to absorb possible losses, thereby providing protection to depositors. In that regard, the Board, has adopted capital adequacy guidelines, that include risk-based and leverage measures which apply to state member banks. The examiner should refer to section 3020.1 of the *Commercial Bank Examination Manual* for guidance on evaluating the capital adequacy of state member banks.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2011, this section was revised to more clearly explain the components in calculating the total classification ratio and the weighted classification ratio, which are used in determining the asset quality of subsidiary banks. This section was also revised to include references to SR-93-30 and SR-96-38.

The quality of a bank's assets is another area of major supervisory concern. Supervisors consider the appraisal and evaluation of a bank's assets to be one of the most important examination procedures. It will be established by the bank examiner during the examination of a subsidiary bank to what degree its funds have been invested in assets of good quality that afford reasonable assurance of ultimate collectability and regularity of income. The examiner should have further determined that a subsidiary bank's asset composition is compatible with the nature of the business conducted by the bank, the type of customer served, and the locality. The holding company examiner is expected to comment upon the total classifications determined by the bank examiner in relation to the bank's capital.[1] Consideration should also be given to the severity of the classifications. If the classified assets are considered not to possess a significant loss potential, favorable consideration should be accorded this factor.

Past due ratios should also be evaluated. In this respect, it is essential that trends be observed. Although a particular lending department's delinquent outstandings or an institution's overall past due percentage is presently considered reasonable, a noticeable upward trend may be worthy of comment to management. Excessive arrearages in any area warrant an examiner's comment in the inspection report. Management should take appropriate action to improve any undesirable past due levels.

In determining an organization's asset quality, the total classification ratio is an important indicator to review. The total classification ratio is calculated by adding the total dollar value of classified assets divided by the sum of tier 1 risk-based capital plus the allowance for loans and lease losses (ALLL). Another yardstick employed by examiners is the weighted classification ratio, which takes into consideration the severity of a bank's classified assets. In rating asset quality, the weighted classification ratio is designed to distinguish the degree of risk inherent in classified assets by ascribing weights to each category of classification thereby providing another measure of the impact of risk on bank capital.

The following weights are to be used:

Classification	*Weights*
Substandard	20%
Doubtful	50%
Loss	100%

The weighted classification ratio is calculated by taking the aggregate of 20 percent of assets classified substandard and value impaired (net of allocated transfer risk reserve), 50 percent of doubtful, and 100 percent of loss divided by the sum of tier 1 risk-based capital plus the ALLL. In addition to the total and weighted classifications ratios, examiners should also evaluate the adequacy of loan loss valuation reserves as compared to weighted classifications. Loss potential inherent in weighted classified assets must be offset by valuation reserves and equity capital or appropriate comments should be made.

Another tool that should be considered in evaluating asset quality is the bank's internal classification list, if the bank's lending procedures and management are adequate. Additional information on rating a bank's asset quality is available in the Uniform Interagency Bank Rating System. See SR 96-38, "Uniform Financial Institutions Rating System," and section A.5020.1 in the *Commercial Bank Examination Manual.*

1. See SR-93-30, specifically the attachment entitled, "Interagency Statement on the Supervisory Definition of Special Mention Assets." See also SR-04-9 on the attached "Revised Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts," which defines classified assets.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2016, this section was revised to include footnote 1.

Comparison of earnings trends with other banks of similar size, along with an analysis of the quality of those earnings, is an effective initial approach in determining whether or not a bank's earnings are satisfactory. Comprehensive surveys of bank earnings by peer group size are tabulated by the Board and many of the Reserve Banks. The results are sufficiently detailed to permit various methods of comparison of the earnings of a specific bank with those in its peer group.

One ratio used as a means of measuring the quality of a bank's earnings is its return on average assets (net income after taxes divided by average total assets). If the ratio is low or declining rapidly, it could signal, among other things, that the bank's net interest income or margin is declining or that the bank is experiencing increased loan losses.

A bank's current earnings should be sufficient to allow for ample provisions to offset anticipated losses. Various factors to be considered in the determination of such losses include a bank's historic loss experience, the adequacy of the valuation reserve, the quality and strength of its existing loans and investments and the soundness of the loan and administrative policies of management.

In assessing a bank's earnings performance capabilities and the quality of those earnings, an examiner should give consideration to any special factors that may affect a particular bank's earnings. For example, a bank located in an urban area of a large city may find it difficult to earn as much as a bank of similar size located in a rural community or a small city. The urban bank is usually subjected to a higher level of operating expenses, particularly in salaries and local taxes. Moreover, its proximity to the large city and the competition afforded by bigger banks may necessitate lower rates of interest on loans as well as higher rates of interest on deposits. Consideration should also be given to the adequacy of the loan loss provisions as referred to above, the inclusion of any capitalized accrued interest into interest income, or the nature of any large nonoperating gains when analyzing earnings. Further consideration should be given to the general nature of a bank's business or management's mode of operation. A bank's deposit structure and its resulting average interest paid per dollar of deposits may differ widely from that of other banks of a similar size and consequently, its earnings may be substantially below average as a direct result of the difference. For example, the maintenance of a high volume of interest bearing time accounts in relation to total deposits is a major expense and is quite often the cause for certain banks falling below the average earnings of comparably sized banks.

A bank's earnings should also be more than sufficiently adequate in relation to its current dividend rate. It is particularly important that a bank's dividend rate is prudent relative to its financial position and not be based on overly optimistic earnings scenarios. See SR-09-4, "Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies."[1] Also see section 2020.5 and its discussion of the Board's "Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies."

The percentage that should be retained in the capital accounts is not clearly established. One thing is certain, the need for retained earnings to augment capital will depend on the adequacy of the existing capital structure as well as the bank's asset growth rate. Dividend payout rates may be regarded as exceeding prudent banking practices if capital growth does not keep pace with asset growth. Prudent management dictates that a curtailment of the dividend rate be considered if capital inadequacy is obvious and greater earnings retention is required. Apparently excessive dividend payouts or a record of recent operating losses should lead the bank or BHC examiner to refer to sections 5199(b) and 5204 of the United States Revised Statutes and

1. SR-09-4 is superseded for a U. S bank holding company or an intermediate holding company of a foreign banking organization with $50 billion or more in total consolidated assets as stated in SR-15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms," and SR-15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms."

section 208.19 of Regulation H which restrict state member bank dividends.

Analysis of net interest margins is of growing importance. A comparison should be made of a bank's ability to generate interest income on earning assets relative to the interest expenses associated with the funds used to finance the earning assets.

Additional information on rating bank earnings is available in the Uniform Interagency Bank Rating System. See SR-96-38 "Uniform Financial Institutions Rating System," and section A.5020.1 in the *Commercial Bank Examination Manual.*

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to incorporate a reference to the "Liquidity Risk" sections (4020.1 to 4020.4) of the Federal Reserve System's Commercial Bank Examination Manual. This section has also been revised to include a reference to the March 2010, "Interagency Policy Statement on Funding and Liquidity-Risk Management."

Liquidity is generally defined as the ability to meet short-term obligations, to convert assets into cash or obtain cash, or to roll over or issue new short-term debt. Various techniques are employed to measure a bank's (depository institution) liquidity position. The bank examiner considers the bank's location and the nature of its operations. For example, a small rural bank has far different needs than a multibillion dollar money market institution.

In addition to cash assets, a bank will hold for liquidity purposes a portion of its investment portfolio of securities that are readily convertible into cash. Loan and investment maturities are generally matched to certain deposit or other liability maturities. However, the individual responsible for a bank's money management must be extremely flexible and have alternate means to meet unanticipated changes in liquidity needs. To offset these needs, other means of increasing liquidity may be needed, which might include increasing temporary short-term borrowings, selling longer-term assets, or a combination of both. Factors that the "money management" officer will consider include the availability of funds, the market value of the saleable assets, prevailing interest rates and the susceptibility to interest-rate risk, and the bank's earnings position and related tax considerations. Although most small banks may not have a "money manager," they too must monitor their liquidity carefully.

One of the most common methods used by large banks to increase liquidity is to use additional borrowings. Some of the other basic means of improving liquidity include the use of direct short-term credit available through the discount window from Reserve Banks, the use of Federal funds purchases, and the use of loans from correspondent banks.

4020.4.1 SOUND LIQUIDITY-RISK MANAGEMENT

All banks are affected by changes in the economic climate, and the monitoring of economic and money market trends is crucial to liquidity planning. Sound financial management can minimize the negative effects of these trends while accentuating the positive ones. Sound liquidity-risk management requires the following elements:[1]

- Effective corporate governance consisting of oversight by the board of directors and active involvement by management in an institution's control of liquidity risk.
- Appropriate strategies, policies, procedures, and limits used to manage and mitigate liquidity risk.
- Comprehensive liquidity-risk measurement and monitoring systems (including assessments of the current and prospective cash flows or sources and uses of funds) that are commensurate with the complexity and business activities of the institution.
- Active management of intraday liquidity and collateral.
- An appropriately diverse mix of existing and potential future funding sources.
- Adequate levels of highly liquid marketable securities free of legal, regulatory, or operational impediments that can be used to meet liquidity needs in stressful situations.
- Comprehensive contingency funding plans (CFPs) that sufficiently address potential adverse liquidity events and emergency cash flow requirements.
- Internal controls and internal audit processes sufficient to determine the adequacy of the institution's liquidity-risk management process.

Information that a bank's management should consider in liquidity planning includes—

1. internal costs of funds,
2. maturity and repricing mismatches in the balance sheet,

1. See the March 10, 2010, "Interagency Policy Statement on Funding and Liquidity-Risk Management." (See section 4066.0, appendix A.) See also the guidance published by the Basel Committee on Banking Supervision, Bank for International Settlements, "Principles for Sound Liquidity-Risk Management and Supervision."

3. anticipated funding needs, and
4. economic and market forecasts.

In addition, bank management must have an effective CFP that identifies minimum and maximum liquidity needs and weighs alternative courses of action designed to meet those needs. Some factors that may affect a bank's liquidity include—

1. a decline in earnings,
2. an increase in nonperforming assets,
3. deposit concentrations,
4. a downgrade by a rating agency,
5. expanded business opportunities,
6. acquisitions,
7. new tax initiatives, and
8. assured accessibility to diversified funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings.

Adequate liquidity contingency planning is critical to the ongoing maintenance of the safety and soundness of any depository institution. Contingency planning starts with an assessment of the possible liquidity events that an institution might encounter. The types of potential liquidity events considered should range from high-probability/low-impact events that can occur in day-to-day operations to low-probability/high-impact events that can arise through institution-specific or systemic market or operational circumstances. Responses to these events should be assessed in the context of their implications for an institution's short-term, intermediate-term, and long-term liquidity profile. A fundamental principle in designing a CFP that addresses each of these liquidity tenors is to ensure adequate diversification in the potential sources of funds that could be used to provide liquidity under a variety of circumstances. Such diversification should focus not only on the number of potential funds providers but also on the underlying stability, availability, and flexibility of funds sources in the context of the type of liquidity event these sources are expected to address.

See also the "Liquidity Risk" sections (4020.1 to 4020.4) of the Board of Governors of the Federal Reserve System's *Commercial Bank Examination Manual.* These sections provide additional guidance on evaluating a banking organization's liquidity management.

4020.4.2 LIQUIDITY-RISK MANAGEMENT USING THE FEDERAL RESERVE'S PRIMARY CREDIT PROGRAM

The Federal Reserve's primary credit program (a type of discount window lending) offers generally sound depository institutions an additional source of available funds, although such funds are lent for managing short-term liquidity risks (at a rate above the target federal funds rate).[2] Management should fully assess the potential role that the Federal Reserve's primary credit program might play in managing the institution's liquidity. The primary credit program can be a viable source of very short-term backup funds. Management may find it appropriate to incorporate the availability of the primary credit program into their institution's diversified liquidity-management policies, procedures, and CFPs. The primary credit program has the following attributes that make it a viable source of backup or contingency funding for short-term purposes:

1. Primary credit is extended, with minimal administrative burden, to eligible discount window participants.
2. Primary credit is available only to financially sound depository institutions, as determined by the lending Federal Reserve Bank.
3. Primary credit can enhance diversification in short-term CFPs.
4. Borrowings can be secured with an array of collateral that is acceptable to the lending Federal Reserve Bank, including consumer and commercial loans.
5. Requests for primary credit advances can be made anytime during the day.[3]
6. There are generally no restrictions on the use of short-term primary credit.

If an institution incorporates primary credit into its CFP, the institution should ensure that it has in place with the appropriate Reserve Bank the necessary borrowing documentation and collateral arrangements. This is particularly impor-

2. The Federal Reserve's secondary credit program provides loans to qualifying depository institutions (for example, those depository institutions that are not eligible for the primary credit program) at an interest rate that is above the primary credit program's interest rate. See section 3010.1 of the *Commercial Bank Examination Manual* and SR-03-15, "Interagency Advisory on the Use of the Federal Reserve's Primary Credit Program in Effective Liquidity Management," for a further discussion of the Federal Reserve's credit programs.

3. Advances generally are booked at the end of the business day.

tant when the intended collateral consists of loans or other assets that may involve significant processing or lead time for pledging to the Reserve Bank.

It is a long-established sound practice for institutions to periodically test all sources of contingency funding. Accordingly, if an institution includes the Federal Reserve's primary and other credit programs, along with borrowing from other lenders, in its contingency plans, management should occasionally test the institution's ability to borrow from all the funding sources covered by the plan. The goal of such testing is to ensure that there are no unexpected impediments or complications in the case that such contingency lines need to be used.

Institutions should ensure that any planned use of primary credit is consistent with the stated purposes and objectives of the program. Under the primary credit program, the Federal Reserve generally expects to extend funds on a very short-term basis, usually overnight. Therefore, as with any other type of short-term contingency funding, institutions should ensure that any use of primary credit facilities for short-term liquidity contingencies is accompanied by viable take-out or exit strategies to replace this funding expeditiously with other sources of funding. Institutions should factor into their CFPs an analysis of their eligibility for primary credit under various scenarios, recognizing that if their financial condition were to deteriorate, primary credit may not be available. Under those scenarios, secondary credit may be available.

Secondary credit is available at a rate above that of primary credit. Secondary credit is available to meet short-term needs (when the borrowing is constant and there is a prompt return to market funding sources) or to resolve financial difficulties. The preparations made by a bank to access primary credit (the documentation and collateral requirements) will also support the borrowing of secondary credit.

Another critical element of liquidity management is an appropriate assessment of the costs and benefits of various sources of potential liquidity. This assessment is particularly important in managing short-term and day-to-day sources and uses of funds. Given the above-market rates charged on primary credit, institutions should ensure that they adequately assess the higher costs of this form of credit relative to other available sources. Extended use of any type of relatively expensive source of funds can give rise to significant earnings implications that, in turn, may lead to supervisory concerns.

It is also important to note that the Federal Reserve's primary credit facility is only one of many tools institutions may use in managing their liquidity-risk profiles. An institution's management should ensure that the institution maintains adequate access to a diversified array of readily available and confirmed funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings. (See SR-03-15.)

4020.4.2.1 Supervisory and Examiner Considerations

Because primary credit can serve as a viable source of backup, short-term funds, supervisors and examiners should view the occasional use of primary credit as appropriate and unexceptional. At the same time, however, supervisors and examiners should be cognizant of the implications that too-frequent use of this source of relatively expensive funds may have for the earnings, financial condition, and overall safety and soundness of the institution. Overreliance on primary credit borrowings, or any other single source of short-term contingency funds, regardless of the relative costs, may be symptomatic of deeper operational or financial difficulties. The use of primary credit, as with the use of any potential sources of contingency funding, is an important management decision that must be made in the context of safe and sound banking practices.

4020.4.3 ANALYSIS OF LIQUIDITY

A bank's liquidity must be evaluated on the basis of the bank's capacity to satisfy promptly its financial obligations and its ability to fulfill the reasonable borrowing needs of the communities it serves. An examiner's assessment of a bank's liquidity management should not be restricted to its liquidity position on any particular date. Indeed, the examiner should also focus his or her efforts toward determining the bank's liquidity position over a specific time period. The examiner's evaluation should also encompass the overall effectiveness of the institution's asset-liability management and liquidity risk-management strategies. Factors such as the nature, volume, and anticipated takedown of a bank's credit commitments should also be considered in arriving at an overall rating for liquidity.

If the bank examiner has commented on a

liquidity deficiency at a subsidiary bank, the bank holding company examiner should consider these findings in the overall analysis of financial factors. Additional information on rating a bank's liquidity is available in the Uniform Interagency Bank Rating System. See SR-96-38, "Uniform Financial Institutions Rating System," and section A.5020.1 in the *Commercial Bank Examination Manual.*

The condition of a bank provides important insight regarding the quality of bank management. An appraisal of management's performance should be measured in terms of long-term profitability, risk exposure, liquidity, and solvency; all geared toward assuring the bank's continued profitability and overall sound financial condition. Management must meet the bank's challenges and position in the market place among its competitors. It must make plans which will achieve the objectives established by the bank's directors. Management must be constantly alert to the need for continued upgrading and expanding of services and facilities to advance, support, and encourage the bank's growth.

Just as sound management decision making will generally produce banks that are free from serious problems, ineffective management has invariably been a prominent factor in almost every serious problem bank situation. An examiner must consider the degree and severity of problems that exist in the bank under examination and attempt to establish the responsibility for such. The examiner should seek to determine to what degree the bank's problems are attributable to questionable management judgment as opposed to outside factors, such as unfavorable economic conditions.

The major portion of a bank holding company's consolidated assets are held in the bank subsidiaries. Furthermore, at the parent level, the major asset is generally the investment in subsidiaries, the principal portion of which is the investment in the bank(s). Therefore, with few exceptions, it is the overall condition of the bank subsidiaries that reflects the condition of the parent company. As the bank holding company examiner reviews the examination report(s) for each bank subsidiary, a decision must be made with respect to the general condition of each bank. When all the bank subsidiaries have been reviewed, the examiner must put these findings within their proper perspective. For example, if four of five bank subsidiaries comprise less than 10 percent of the combined banking assets, it is the condition of the fifth bank subsidiary that will weigh heavily in the analysis. In other words, if the fifth bank comprises 90 percent of the combined banking assets, the parent's investment in that bank also comprises most of the holding company's assets. Thus, the quality of the parent's assets would be reflected in the general condition of that bank and appropriate comments are warranted. It should be noted, however, that regardless of relative size, a bank experiencing problems should be commented upon in the summary analysis.

4020.9.1 DE NOVO BANK DEFINITION AND SUPERVISION POLICY

The term "de novo bank" refers to a state member bank that has been in operation for three years or less. Experience has shown that pronounced problems often surface in the early years of a de novo bank. Problems observed by supervisors have included a lack of experienced management, a revolving door in staffing and directors, dissension among directors, a lack of involvement of directors in strategic planning, and poor lending practices.

Because of the unique challenges faced by de novo state member banks, the Federal Reserve has provided guidance regarding supervisory expectations for such institutions, which are found in SR-20-16, "Supervision of De Novo State Member Banks." SR-20-16 applies to de novo insured depository institutions seeking to become state member banks, as well as to any commercial bank, thrift, Edge Act corporation, or industrial bank that has been in existence for less than three years and is converting to become a state member bank.

This section explains supervisory expectations for a de novo state member bank's capital positions and capital distributions. For more information on submitting a de novo bank application as well as the examination frequency and scope for de novo banks, see SR-20-16, the *Commercial Bank Examination Manual's* section entitled, "Examination Strategy and Risk-Focused Examinations," as well as SR-08-5, "Processing of De Novo Bank Membership Applications."

4020.9.2 CAPITAL STANDARDS FOR SUBSIDIARY BANKS OF BANK HOLDING COMPANIES

A de novo state member bank subsidiary of a bank holding company should maintain capital ratios commensurate with its risk profile and, generally, well in excess of regulatory minimums. The Federal Reserve typically requires a de novo bank to maintain a tier 1 leverage ratio of at least 8 percent for the first three years of operation. The Reserve Bank should consult Board supervision staff when the tier 1 leverage ratio of a de novo falls below 8 percent. Examiners should also scrutinize de novos that rely on additional capital infusions to meet this minimum requirement and understand the stability of the capital source.

Any exceptions to this policy that are being considered for converting banks should be discussed with Board staff.

4020.9.3 CAPITAL DISTRIBUTIONS

A de novo state member bank should generally ensure that it has sufficient earnings and capital to support its growth projections and any capital distributions, as well as its ongoing capital needs. As described in SR-20-16, a de novo should receive two consecutive CAMELS ratings of "1" or "2," based on full-scope examinations, before making such distributions. Further, the de novo's parent bank holding company (if applicable) should assess the risk associated with taking on significant debt that is solely reliant on dividends from the de novo bank subsidiary to service the debt obligation. This guideline is not intended to discourage dividends used by a parent bank holding company to pay the de novo bank's income taxes.[1]

See also the Board's "Small Bank Holding Company and Savings and Loan Holding Company Policy Statement" (12 CFR part 225, appendix C), which permits the formation and expansion of small holding companies with debt levels that are higher than typically permitted for larger holding companies. The policy statement contains several conditions and restrictions designed to ensure that small holding companies that operate with the higher levels of debt permitted by the policy statement do not present an undue risk to the safety and soundness of their subsidiary banks.

1. Refer to SR-98-38, "Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure," and SR-14-6, "Addendum to the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure." See also this manual's section entitled, "Taxes (Consolidated Tax Filing)."

4030.0.1 INTRODUCTION

Generally, a subsidiary of a bank holding company is not liable for debts of any other subsidiary of the holding company unless it is contractually obligated through guarantees, endorsements, or other similar instruments. This apparent legal separation may induce false confidence that banks are insulated from problems that may befall other subsidiaries of the holding company. If a nonbank subsidiary of a bank holding company finds itself in serious financial trouble, several results are possible. The holding company may work as it was intended, in that debts of the failing subsidiary are isolated and not transferred to other subsidiaries so that at worst, the subsidiary and the parent (the holding company) fail. In this instance, other subsidiaries, including bank subsidiaries, are unharmed, and after a change in management or ownership, they continue in operation. There is no loss of confidence in the bank by its depositors. However, this is not necessarily the result.

Failure of a nonbank subsidiary may lead to a lack of confidence in the affiliated bank's ability to continue in business, which might precipitate a run on the bank's deposits. The failure of a major nonbank subsidiary then may place its affiliated bank in serious financial trouble. The examiner should assess the impact that the failure or the potential failure of a nonbank subsidiary may have on an affiliated bank with a similar name.

Usually, a financially distressed nonbank subsidiary is aided by the holding company, which will do everything in its power to rescue it from failure. At a minimum, refusal to do so would undermine confidence in the strength of the holding company. Refusal to aid its nonbank subsidiary might even result in a rise in the interest cost of the holding company's future debt in the capital markets and, more than likely, preclude issuance of commercial paper.

A holding company has considerable discretion in choosing how to assist one of its troubled subsidiaries. Because the bank is usually the largest subsidiary, the holding company may attempt to draw upon the resources of the bank to aid the nonbank subsidiary. The bank can transfer a substantial portion of its capital through dividends to the parent company, which may pass these funds on to the troubled nonbank subsidiary. Also, the nonbank may attempt to sell part of its portfolio to the bank subsidiary to improve liquidity. The Board's Interpretation 12 C.F.R. 250.250 (at FRRS 3–1133) limits the sale of nonbank subsidiary loans to the bank affiliate unless the bank had an opportunity to appraise the credit at the inception of the loan. Therefore, the examiner should closely analyze the off-balance-sheet activity of the nonbank subsidiary, particularly activity relating to the sale of loans shortly after they are made. Reference should also be made to section 2020.7, regarding the transfer of low-quality loans or other assets to avoid classification.

4030.0.2 ANALYSIS OF FINANCIAL CONDITION AND RISK ASSESSMENT

Because of the potentially damaging effect on the parent company or its bank subsidiary, the examiner should conduct a detailed analysis of the financial condition and perform a risk assessment of the nonbank subsidiaries. The loss to the holding company may not be confined to the equity in and advances to the subsidiary. The contingent liabilities arising from the nonbank subsidiary's external borrowings are quite often a large multiple of the parent's investment. Particular attention should be directed to holding companies that have made massive capital injections in order to rescue a failing subsidiary or to satisfy the external debt obligations of the subsidiary.

For each bank holding company with nonbank activities, examiners should prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below.[1] This assessment should be performed with the same frequency required for full-scope inspections. The purpose of this assessment is to identify subsidiaries with a risk profile that warrants an on-site presence, even if the subsidiary does not meet the minimum criteria set forth in section 5000.0.4.4.1, "On-site Reviews of Nonbank Subsidiaries." In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

- ongoing monitoring efforts of surveillance and financial analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and,
- reports of internal and external auditors.

The risk assessment should address each nonbank subsidiary's funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. The examiner should give particular attention to appraising the quality of a nonbank subsidiary's assets because asset problems therein may lead to other financial problems in the nonbank subsidiary and the parent company or bank affiliates. Examiners are expected to document in the inspection workpapers their assessment of the overall risk posed by each nonbank subsidiary and to summarize their assessment of nonbank activities in the bank holding company inspection report.

Nonbanks: Credit Extending (Classifications)

The examiner has four alternatives with respect to asset classifications. An appraisal of the degree of risk involved in a given asset leads to a selection. The examiner can either ''pass'' the asset or adversely classify the asset ''substandard,'' ''doubtful'' or ''loss,'' depending on the severity of deterioration noted.

Since the preponderance of all loans are subject to some degree of risk, the following question arises: To what point, or degree, must a given credit deteriorate to warrant a scheduled criticism in the report of inspection? Generally, a passed credit has those characteristics which are recognized as being part of a normal risk asset; the degree of risk is not unreasonable, the loan is being properly serviced, and is either adequately secured or repayment is reasonably assured from a specific source.

Classification units are designated as ''substandard,'' ''doubtful,'' and ''loss.'' A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the nonbank subsidiary will sustain some loss if the deficiencies are not corrected. An asset classified doubtful has all the weaknesses inherent in one classified substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Assets classified loss are considered uncollectible and of such little value that their continuance as recordable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer reserving against this basically worthless asset even though partial recovery may be effected in the future.

Although the System does not apply bank standards when classifying nonbank assets, the classification categories are the same. Examiners of BHC nonbank subsidiaries must appraise the assets in light of industry standards and conditions inherent in the market.

For information on classifying a parent's investment in and advances to a noncredit-extending subsidiary, see Manual section 4070.0, BHC Rating System.

For information on the sufficiency of nonbank valuation reserves, see Manual section 4030.4.

Nonbanks: Credit Extending (Earnings) Section 4030.2

When analyzing the earnings of a nonbank subsidiary, the examiner should address two primary questions: (1) Is the return on assets commensurate with the risk associated with the assets? (2) What is the impact of earnings and trends on the parent company and affiliate banks? While a nonbank subsidiary operating at a loss may be in less than satisfactory condition, the loss may not necessarily result in a major adverse impact on the consolidated earnings. The nonbank subsidiary's total assets may be insignificant in relation to the consolidated assets of the BHC, but operating losses may result in a significant reduction in its consolidated earnings position.

In some cases, industry statistics will be available for comparative purposes. However, a favorable comparison should not necessarily be taken as depicting a satisfactory earnings condition. Actions by the parent company could influence the earnings of its subsidiaries. For example, management and/or service fees can be adjusted in order to alter the subsidiary's earnings to desired levels. Also, if the parent company is funding the subsidiary, the cost of funds to the subsidiary can be adjusted above or below the parent's cost of funds thus affecting net income. In addition, an undercapitalized subsidiary with only a marginal return on assets could show a better return on equity than the adequately capitalized independent counterpart experiencing a good return on its assets. As important as return on equity is as a measure of performance, for nonbank subsidiaries, particularly those that are thinly capitalized, absolute level of earnings or return on assets provide a more meaningful measure of earnings performance.

The cash return to the parent from its investment in and advances to a subsidiary less its costs to carry the assets and related expenses should exceed the cash return available from an investment of a similar amount in securities in order to justify retaining the subsidiary. If it seems that an alternative employment of funds would be more rational, the examiner should inquire as to management's plans to improve subsidiary earnings.

Questions to be answered in analyzing the earnings of credit-extending nonbank subsidiaries include:

1. What is the impact on the parent company and affiliate banks of a nonbank subsidiary operating at a loss?
2. Is the return on assets commensurate with the risk inherent in the asset portfolios for those nonbank subsidiaries operating profitably?
3. Are intercompany management/service fees appropriate? From a supervisory perspective, management and service fees should have a direct relationship to and be based solely upon the fair value of goods and services received.
4. Is the subsidiary required to reimburse the parent for the parent's interest expense on borrowed funds, the proceeds of which have been treated as "advances to subsidiaries?"
5. Is the quality of the subsidiary's earnings sound? For example, is the company understating the provision for loan losses, relying upon nonoperating gains or capitalization of accrued interest?

Special attention should be directed by the examiner to the computation of the company's net interest margin (interest income–interest expense, divided by average earning assets). A study of company yields on investments should provide a measure of the company's ability to invest its funds in earning assets that provide a rate of return above the company's cost of funds. As net interest margins narrow, the company may find it more difficult to generate sufficient income to meet operating expenses.

When discussing growth in earnings, the examiner should clearly differentiate between increases due to increased net interest income on a constant base of earning assets as compared to an increase in the earning asset base with a concurrent proportional increase in net interest income. Any improvement in net interest income as a percentage of earning assets may reflect favorably on management's ability to invest its funds at favorable yields or its ability to find less expensive sources of funds.

Nonbanks: Credit Extending (Leverage) Section 4030.3

As a general rule, credit-extending nonbank subsidiaries are funded by the proceeds of parent company borrowings through instruments such as commercial paper or medium to long-term debt or a combination thereof. Equity generally represents only a small portion of funding resources. There are instances, however, where the nonbank subsidiary will arrange direct funding from external sources. This is especially true in certain States where there are tax advantages associated with direct external funding.

Heavy reliance on borrowed funds by a nonbank subsidiary together with its limited capital position often results in a highly leveraged financial condition that is quite sensitive to changes in money market cost of funds. An examiner should consider what a change in the company's cost of funds might do to its net interest margin and earnings.

Many BHCs operate on the premise that a nonbank subsidiary needs little capital of its own as long as the parent company is adequately capitalized. Implicit in this operating practice is management's belief that the parent could act as a source of financial strength to its subsidiary in the event of difficulty at the subsidiary level. However, experience has indicated that in many cases, once trouble has developed in the subsidiary, the parent is hesitant to direct additional funds to the subsidiary, arguing that it is best to limit losses and exposure and it is imprudent for the parent to inject additional capital at this time. Given this experience, it is often considered appropriate for an examiner to comment on a subsidiary's extended leveraged position, indicating to management that the company has little, if any, capital "cushion" with which to absorb any asset "shrinkage" or loss. The examiner may then conclude and possibly recommend that additional capital be provided for the credit-extending nonbank subsidiary so that its leverage may be reduced and its capital structure altered to reflect more closely an independent organization in the same or similar industry.

Funding should be reviewed to determine that the subsidiary (or the parent) is not mismatching maturities by borrowing short-term funds and applying them to long-term assets that are not readily convertible into cash. A mismatch of maturities can lead to serious liquidity problems.

A primary concern of the holding company examiner is to determine whether the nonbank subsidiary has the capacity to service its debt in an orderly manner. Does the credit-extending nonbank subsidiary have sufficient liquidity and how much will it have to rely on the parent company for funds to retire debt to unaffiliated parties? Factors to be considered include:

1. The subsidiary's asset quality and its ability to convert assets into cash at or near current carrying value. Consider the maturities of borrowings and whether they align with the scheduled assets that will be converted to cash.
2. The subsidiary's and the parent's back-up bank lines of credit available in the event commercial paper cannot be refinanced.
3. The parent company's ability to require its bank or other nonbank subsidiaries to upstream extra dividends to support the illiquid position of one or more of its nonbank subsidiaries.

Nonbanks: Credit Extending (Reserves)

The purpose of a credit-extending nonbank subsidiary's reserve for bad debts is to provide for known and potential losses in its assets. Although there is no specific formula for measuring the adequacy of a reserve for bad debts, prudence dictates that the reserve account should be maintained at a "reasonable" level. What is reasonable depends on the quality of the subsidiary's assets, its collection history and other facts. However, from a supervisory perspective, the reserve for bad debts should at least provide total coverage for all assets classified "loss" and still be sufficient to absorb future, unidentified, "normal" losses, that are estimated based on the "doubtful" and "substandard" classifications and the company's historic experience. Valuation reserves for a going concern are not considered adequate unless they can absorb 100 percent of identified losses and still have a balance sufficient to absorb future losses from continued operations.

Examiners should recommend the maintenance of valuation reserves sufficient to offset classified losses and may recommend (as opposed to require) that management charge-off the losses to the reserve account. The charge-off of classified losses is considered appropriate in order to assure that financial statements accurately reflect the company's financial condition. The Federal Reserve System has the responsibility to monitor the bank holding company's nonbank subsidiary statements for accuracy and completeness. Failure by management to reflect accurately the financial condition of the subsidiary and/or parent company could result in a formal corrective action to require charge-offs or other adjustments to financial statements.

For additional information, see Manual section 4030.1, "Classifications."

The noncredit-extending nonbank subsidiaries provide services or financial products other than extensions of credit. Some of these companies are insurance agencies, credit life and credit accident and health insurance underwriting companies, electronic data processing centers, management consulting firms and advisory companies.

The operations of some insurance agencies are conducted on the premises of the bank subsidiary(ies) by personnel who often serve as officers or employees of the bank. These companies usually incur little or no liabilities and require only nominal capitalization because risk is limited. However, their commission income is often substantial and a steady source of funds for the parent company. Nevertheless, insurance ''underwriters'' typically have strong capital bases, good liquidity and profitable operations. Furthermore, their operating risks are generally stable and predictable.

Electronic data processing centers are often established under section 4(c)(8) of the Act, which permits them to sell their services to affiliated and unaffiliated customers. Section 4050.0 of this Manual cites examples of how an EDP servicer can have an unfavorable impact on the parent company or its affiliates. Management consulting firms and advisory companies usually require little capitalization and no funding and generate favorable earnings. Of the noncredit-extending subsidiaries, insurance underwriters and EDP servicers are generally the only companies requiring capital and funding in significant amounts.

However, all subsidiaries are subject to some level of risk, which could impact on the BHC. In the case of insurance underwriters, insurance benefits paid could exceed actuarial estimates. Such a situation, however rare, could necessitate financial support from the parent company. EDP servicers could, as a result of excessive computer down-time or equipment obsolescence, impact on consolidated earnings or require additional capital contributions. In addition, contingent liabilities, resulting from legal actions or failure to perform, could be a large multiple of a subsidiary's capital and may affect the parent.

4040.0.1 EARNINGS

In analyzing these subsidiaries, the examiner should consider the following:

1. Are any noncredit-extending subsidiaries operating at a loss or incurring low levels of earnings? If so, what is the cause and does it have a material impact on consolidated earnings?
2. Does the loss result in the subsidiary's reliance on the parent company or bank subsidiary(ies) for financial support? If so, in what form is the support provided?
3. If a loss has been incurred, has management initiated corrective measures? If not, why not?
4. Are the fees charged by the parent for services rendered limited to their *fair market value*? The answer to this question will almost always depend on information supplied by management. Management should be aware of the fair market rates charged by their competitors for similar services rendered.
5. Are the rates charged affiliates commensurate with the services provided and similar to rates charged nonaffiliated customers?

4040.0.2 RISK EXPOSURE

In noncredit-extending subsidiaries, risk exposure, of any meaningful magnitude, is often related to possible losses arising from legal actions for failure to perform services as contracted. The examiner should determine that the subsidiaries are being operated effectively by experienced and competent personnel under the direction of satisfactory management. The examiner should further determine that parent company management exercises appropriate controls over the activities of the subsidiary. Because of potential liability, the examiner should ascertain whether the subsidiaries have adequate insurance coverage (i.e., errors and omissions, public liability, etc.). The examiner should be alert to any contingent liabilities that would have a significant impact of the parent company. For example, the parent company might guarantee the payment of debt or leases for the subsidiary.

The internal services subsidiaries generally derive their business only from the parent company and its affiliates. Examples of such companies include forms printing firms, owners and operators of banking premises, and EDP servicing companies. Banking premises subsidiaries are established to hold or operate properties used wholly or substantially by the parent's subsidiary for its banking business. Generally, their operations do not impact unfavorably on the parent company. However, in instances where the banking premises are not wholly occupied by a banking subsidiary, the examiner should ascertain that the excess space is fully leased/ rented. A high vacancy level could result in unprofitable operations or result in an abnormal rental charge to the banking subsidiary in order to operate the subsidiary on a profitable, or break even, basis.

EDP service centers provide bookkeeping or data processing services for the internal operations of the holding company and its subsidiaries, and store and process other banking, financial or related economic data. Generally, these service centers do not have a material effect on consolidated earnings performance as they provide essential services at costs comparable or below their independent counterparts. They usually operate on a break-even basis or at a nominal profit. However, there are some subsidiaries, including EDP servicers, which also provide services indirectly to unaffiliated concerns. EDP servicers operating under section 4(c)(1)(C) of the Act, may provide services to customers of its bank affiliates, provided that the service contract is between the bank and the customer. EDP servicers that operate as independent subsidiaries under section 4(c)(8) of the Act are not similarly restricted and are not considered ''not for profit'' organizations.

A financial analysis of a ''not for profit'' service subsidiary should concentrate on the organization's ability to control its expenses and its ability to provide its services to its affiliates at fair market value. Failure to control expenses may result in excessive charges to affiliates to the detriment of the affiliate.

For purposes of an analysis of earnings, analysts of bank holding companies have placed considerable weight on consolidated BHC financial data. Consolidated data, however, can be very misleading since bank assets and revenues are large in relation to their profit margins. On the other hand, the volume of nonbank assets is generally not nearly as large, but profit margins (or losses) tend to be much more substantial. The organizational structure of a holding company is of prime importance and must first be taken into consideration before attempting to analyze consolidated earnings. As an example, in the case of nonoperating shell bank holding companies with no nonbank subsidiaries, the earnings of the bank subsidiary should be nearly identical with consolidated earnings for the organization. Therefore, in these instances, the views and ratings of the applicable bank regulatory agency would normally be accepted and would apply to consolidated earnings of the BHC. This treatment would not apply to one-bank and multi-bank holding companies with substantial credit-extending nonbank subsidiaries. These holding companies require an in-depth analysis of earnings because of the adverse impact that a poorly operated subsidiary can have upon the consolidated earnings of the BHC.

In order to properly analyze consolidated earnings, it is best to review and study a consolidating statement of income and expense for the purpose of determining each entity's contribution to earnings. It is important to recognize that there need be no direct correlation between the asset size of a subsidiary and its relative contribution to total consolidated earnings. For example, a subsidiary accounting for a minute portion of consolidated assets could substantially negate satisfactory earnings of its larger asset base affiliates because of poor operations and sizeable losses.

When evaluating consolidated earnings, it is important to review the component parts of earnings for prior interim or fiscal periods for comparative purposes in order to determine trends. Considerable attention is to be focused on the various income and expense categories. The net interest income (difference between interest income and interest expense) of a company is highly revealing as it will give an indication of management's ability to borrow at attractive rates and employ those funds with maximum profitable results.

Items having a significant impact on earnings include the noncash charge, "provisions for loan losses" and the volume of nonaccrual and renegotiated or restructured credits. A large provision for loan losses is made necessary by poor quality assets which result in large charge-offs to valuation reserves. In order to replenish the reserve for loan losses to adequate levels to provide ample coverage against known and potential losses, large amounts of revenues must be "set aside." Nonperforming and renegotiated credits either provide no income or provide a reduced rate of income to the extent that the assets are no longer profitable relative to the cost of funds and the cost of doing business. In situations where earnings are below average or unsatisfactory, a comment concerning the amount of provision for loan losses and volume of nonperforming loans is warranted in the financial analysis.

Other items of significance include taxes, particularly where tax credits are indicative of loss operations, and extraordinary or nonrecurring items. Extraordinary gains or losses are not the result of the normal operations of a company and should be analyzed independently from operating earnings. Generally, extraordinary items result from the sale of current or fixed assets. When significant amounts are involved, examiners should determine the underlying reasons behind such transactions.

After an analysis has been made of the pertinent components of earnings, analyze the "bottom line" or net income of the consolidated company. Generally, analysts relate net income to several benchmarks in order to evaluate performance. The ratios of earnings as a percentage of average equity capital or average assets are most widely used. Conclude the analysis with a comparison of a company's ratios in relation to its peer group.

Comparatively low earnings relative to its peer group may be a reflection of problems and weaknesses such as lax or speculative credit practices (resulting in nonearning assets or loan losses), high interest costs resulting from excessive debt, or rapid expansion into competitive industries subject to wide variations in income potential.

Earnings on a consolidated basis are the best measure of performance. Moreover, while the earnings of individual subsidiaries must not be ignored, the ability of holding company management to control the level of reported earnings in any one subsidiary reaffirms the practicality of using the consolidated approach to analyze holding company profitability.

Essentially, the following points summarize areas which should be considered when analyzing consolidated earnings:

1. The return on consolidated assets and equity capital, as well as historical trends and peer group comparisons.

2. The ability of earnings to provide for capital growth, especially when taking into consideration recent and planned asset and deposit growth.

3. The "quality" of earnings is affected by the sufficiency of the provision to loan loss reserves and the asset quality of the organization. A high level of earnings that did not include sufficient provisions to the loan loss reserve during a period of high charge-offs may result in reductions in the reserve balance and thereby call to question the merits of high earnings in the face of declining reserve balances.

4. The ability of management to prepare realistic earnings projections in light of the risk structure and quality of assets.

The evaluation of asset quality based on classifications of ‘‘substandard, doubtful and loss,’’ is one of the most important elements to be taken into consideration when performing a financial analysis of a holding company because of the severe impact that poor quality assets can have on the overall condition of the organization. Procedures to measure asset quality of banks involve the use of the relationship of weighted classified assets to Tier 1 capital funds and total classifications to total capital funds. Accordingly, consolidated asset quality could be based on the relationship of aggregate weighted classified assets of the parent company, bank subsidiary(ies) and nonbank subsidiary(ies), to Tier 1 capital.

However, a problem encountered when viewing asset quality on a consolidated basis is the fact that in multi-bank holding companies there is usually a large timing difference between the dates of examinations of the banking subsidiaries. Therefore, the aggregating of classified bank assets from reports prepared at different times, reduces the currentness and validity of conclusions drawn. This problem can only be eliminated by using common examination and inspection dates which are not generally available.

Despite the shortcoming of using classification information from different dates, an examiner may determine that there is a sufficient measure of validity in using the data and may present an analysis based on consolidated weighted classifications. For example, if there are a small number of bank subsidiaries and if the examination dates are near a common point in time, timing differences may be inconsequential. Or, if a review of several years of a bank’s examinations reveals a relatively constant or stable level of classifications, then the timing of the most recent examination would not invalidate use of the analytical tool. As such, the technique may be employed when circumstances permit.

Other factors to be considered in determining asset quality include the levels of nonaccrual and renegotiated loans, other real estate owned and past due loans. While these assets may not be subject to classification, they usually represent former or emerging problem loans. Moreover, in the aggregate, they may represent a significant proportion of the asset portfolio. If such is the case, they should be taken into consideration when the examiner determines his overall rating of asset quality.

It is difficult to rely on the adequacy of consolidated reserves because they are ‘‘fractured’’ and protect portfolios in different organizations and may not be interchangeable or transferable. The reserve of each entity in the corporate structure must be reviewed or analyzed individually. For example, if consolidated reserves appear inadequate, there is no consolidated reserve account per se that could be increased to adequate proportions. Consequently, the inadequacy would have to be identified at the parent or subsidiary level. Conversely, if consolidated reserves appear to adequately cover the aggregate of all ‘‘loss’’ and a certain portion of ‘‘doubtful,’’ it does not insure that all subsidiaries have adequate reserves. Nevertheless, despite the shortcomings of using consolidated reserves, the analyst should not hesitate to calculate and present a measure of the relationship of consolidated reserves to consolidated loans.

4060.8.1 ASSET-BACKED COMMERCIAL PAPER PROGRAMS

Asset-backed commercial paper (ABCP) programs provide a means for corporations to obtain funding by selling or securitizing pools of homogenous assets (for example, trade receivables) to special-purpose entities (SPEs/ABCP programs). The ABCP program raises funds for purchase of these assets by issuing commercial paper into the marketplace. The commercial-paper investors are protected by structural enhancements provided by the seller (for example, overcollateralization, spread accounts, or early-amortization triggers) and by credit enhancements (for example, subordinated loans or guarantees) provided by banking organization sponsors of the ABCP program and by other third parties. In addition, liquidity facilities are also present to ensure the rapid and orderly repayment of commercial paper should cash-flow difficulties emerge. ABCP programs are nominally capitalized SPEs that issue commercial paper. A sponsoring banking organization establishes the ABCP program but usually does not own the conduit's equity, which is often held by unaffiliated third-party management companies that specialize in owning such entities, and are structured to be bankruptcy remote.

Typical Structure

ABCP programs are funding vehicles that banking organizations and other intermediaries establish to provide an alternative source of funding to themselves or their customers. In contrast to term securitizations, which tend to be amortizing, ABCP programs are ongoing entities that usually issue new commercial paper to repay maturing commercial paper. The majority of ABCP programs in the capital markets are established and managed by major international commercial banking organizations. As with traditional commercial paper, which has a maximum maturity of 270 days, ABCP is short-term debt that may either pay interest or be issued at a discount (see figure 1).

Types of ABCP Programs

Multi-seller programs generally provide working capital financing by purchasing or advancing against receivables generated by multiple corporate clients of the sponsoring banking organizations. These programs are generally well diversified across both sellers and asset types.

Single-seller programs are generally established to fund one or more types of assets originated by a single seller. The lack of diversification is generally compensated for by increased program-wide credit enhancement.

Loan-backed programs fund direct loans to corporate customers of the ABCP program's sponsoring banking organization. These loans are generally closely managed by the banking organization and have a variety of covenants designed to reduce credit risk.

Securities-arbitrage programs invest in securities that generally are rated AA- or higher. They generally have no additional credit enhancement at the seller/transaction level because the securities are highly rated. These programs are typically well diversified across security types. The arbitrage is mainly due to the difference between the yield on the securities and the funding cost of the commercial paper.

Structured investment vehicles (SIVs) are a form of a securities-arbitrage program. These ABCP programs invest in securities typically rated AA- or higher. SIVs operate on a market-value basis similar to market-value collateralized debt obligation in that they must maintain a dynamic overcollateralization ratio determined by analysis of the potential price volatility on securities held in the portfolio. SIVs are monitored daily and must meet strict liquidity, capitalization, leverage, and concentration guidelines established by the rating agencies.

Key Parties and Roles

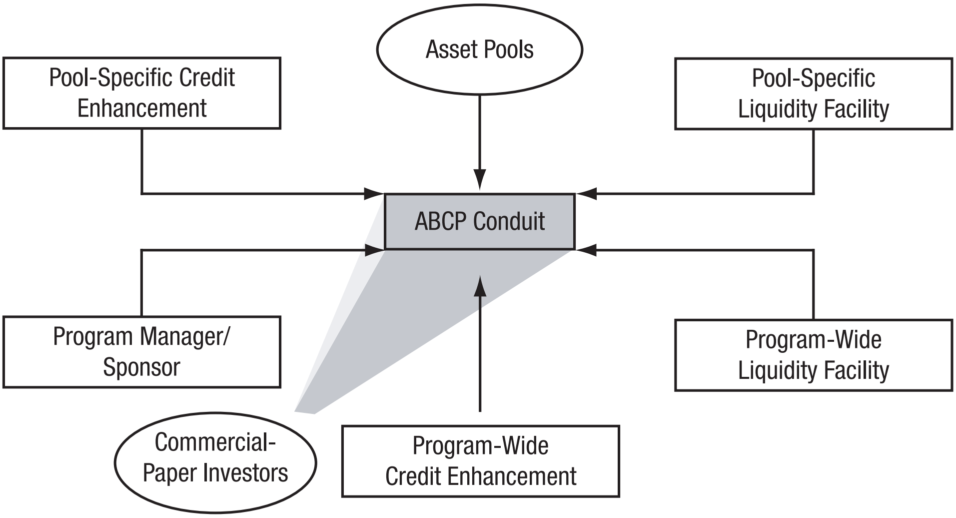
Key parties for an ABCP program include the following:

- program management/administrators
- credit-enhancement providers
- liquidity-facility providers
- seller/servicers
- commercial paper investors

Program Management

The sponsor of an ABCP program initiates the creation of the program but typically does not own the equity of the ABCP program, which is

Figure 1. Asset-backed commercial paper structure



provided by unaffiliated third-party investors. Despite not owning the equity of the ABCP program, sponsors usually retain a financial stake in the program by providing credit enhancement, liquidity support, or both, and they play an active role in managing the program. Sponsors typically earn fees—such as credit-enhancement, liquidity-facility, and program-management fees—for services provided to their ABCP programs.

Typically, an ABCP program makes arrangements with various agents/servicers to conduct the administration and daily operation of the ABCP program. This includes such activities as purchasing and selling assets, maintaining operating accounts, and monitoring the ongoing performance of each transaction. The sponsor is also actively engaged in the management of the ABCP program, including underwriting the assets purchased by the ABCP program and the type/level of credit enhancements provided to the ABCP program.

Credit-Enhancement Providers

The sponsoring banking organization typically provides pool-specific and program-wide backup liquidity facilities, and program-wide credit enhancements, all of which are usually unrated (pool-specific credit enhancement, such as overcollateralization, is provided by the seller of the assets). These enhancements are fundamental for obtaining high investment-grade ratings on the commercial paper issued to the market by the ABCP program. Seller-provided credit enhancement may exist in various forms and is generally sized based on the type and credit quality of the underlying assets as well as the quality and financial strength of seller/servicers. Higher-quality assets may only need partial support to achieve a satisfactory rating for the commercial paper. Lower-quality assets may need full support.

Liquidity-Facility Providers

The sponsoring banking organization and in some cases, unaffiliated third parties, provide pool-specific or program-wide liquidity facilities. These backup liquidity facilities ensure the timely repayment of commercial paper under certain conditions, such as when financial market disruptions or cash-flow timing mismatches were to occur, but generally not under conditions associated with the credit deterioration of the underlying assets or the seller/servicer to the extent that such deterioration is beyond what is permitted under the related asset-quality test.

Commercial Paper Investors

Commercial paper investors are typically institutional investors, such as pension funds, money market mutual funds, bank trust departments, foreign banks, and investment companies. Commercial paper maturities range from one day to 270 days, but most frequently are issued for 30 days or less. There is a limited secondary market for commercial paper since issuers can closely match the maturity of the paper to the investors' needs. Commercial paper investors are generally repaid from the reissuance of new commercial paper or from cash flows stemming from the underlying asset pools purchased by the program. In addition, to ensure timely repayment in the event that new commercial paper cannot be issued or if anticipated cash flows from the underlying assets do not occur, ABCP programs utilize backup liquidity facilities. Furthermore, the banking organization can purchase the ABCP from the conduit if the commercial paper cannot be issued. Pool-specific and program-wide credit enhancements also protect commercial paper investors from deterioration of the underlying asset pools.

4060.8.2 THE LOSS WATERFALL

The loss waterfall diagram (see figure 2) for the exposures of a typical ABCP program generally has four legally distinct layers. However, most legal documents do not specify which form of credit or liquidity enhancement is in a priority position after pool-specific credit enhancement is exhausted due to defaults. For example, after becoming aware of weakness in the seller/servicer or in asset performance, an ABCP program sponsor may purchase assets out of the conduit using pool-specific liquidity. Liquidity agreements must be subject to a valid asset-quality test that prevents the purchase of defaulted or highly delinquent assets. Liquidity facilities that are not limited by such an asset-quality test are to be viewed as credit enhancement and are subject to the risk-based capital requirements applicable to direct-credit substitutes.

Pool-Specific Credit Enhancement

The form and size of credit enhancement for each particular asset pool is dependent upon the nature and quality of the asset pool and the seller/servicer's risk profile. In determining the level of credit enhancement, consideration is given to the seller/servicer's financial strength, quality as a servicer, obligor concentrations, and obligor credit quality, as well as the historic performance of the asset pool. Credit enhancement is generally sized to cover a multiple level of historical losses and dilution for the particular asset pool. Pool-specific credit enhancement can take several forms, including overcollateralization, cash reserves, seller/servicer guarantees (for only highly rated seller/servicers), and subordination. Credit enhancement can either be dynamic (that is, increases as the asset pool's performance deteriorates) or static (that is, fixed percentage). Pool-specific credit enhancement is generally provided by the seller/servicer (or carved out of the asset pool in the case of overcollateralization) but may be provided by other third parties.

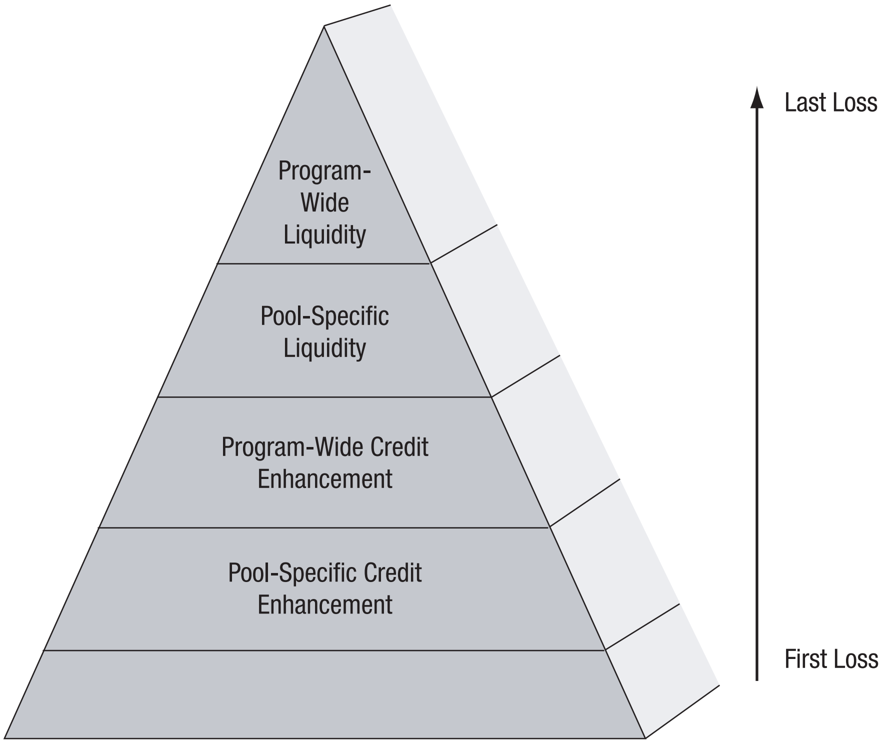
The ABCP program sponsor or administrator will generally set strict eligibility requirements for the receivables to be included in the purchased asset pool. For example, receivable eligibility requirements will establish minimum credit ratings or credit scores for the obligors and the maximum number of days the receivable can be past due.

Usually the purchased asset pools are structured (credit-enhanced) to achieve a credit-quality equivalent of investment grade (that is, BBB or higher). The sponsoring banking organization will typically utilize established rating agency criteria and structuring methodologies to achieve the desired internal rating level. In certain instances, such as when ABCP programs purchase ABS, the pool-specific credit enhancement is already built into the purchased ABS and is reflected in the security's credit rating. The internal rating on the pool-specific liquidity facility provided to support the purchased asset pool will reflect the inclusion of the pool-specific credit enhancement and other structuring protections.

Program-Wide Credit Enhancement

The second level of contractual credit protection is the program-wide credit enhancement, which may take the form of an irrevocable loan facility, a standby letter of credit, a surety bond from a monoline insurer, or an issuance of subordinated debt. Program-wide credit enhancement protects commercial paper investors if one or more of the underlying transactions exhaust the pool-specific credit enhancement and other structural protections. The sponsoring banking organization or third-party guarantors are providers of this type of credit protection. The program-wide credit enhancement is generally sized by

Figure 2. The Loss Waterfall



the rating agencies to cover the potential of multiple defaults in the underlying portfolio of transactions within ABCP conduits and takes into account concentration risk among seller/servicers and industry sectors.

Pool-Specific Liquidity

Pool-specific liquidity facilities are an important structural feature in ABCP programs because they ensure timely payment on the issued commercial paper by smoothing timing differences in the payment of interest and principal on the pooled assets and ensuring payments in the event of market disruptions. The types of liquidity facilities may differ among various ABCP programs and may even differ among asset pools purchased by a single ABCP program. For instance, liquidity facilities may be structured either in the form of (1) an asset-purchase agreement, which provides liquidity to the ABCP program by purchasing nondefaulted assets from a specific asset pool, or (2) a loan to the ABCP program, which is repaid solely by the cash flows from the underlying assets.[1] Some older ABCP programs may have both pool-specific liquidity and program-wide liquidity coverage, while more-recent ABCP programs tend to utilize only pool-specific facilities. Typically, the seller-provided credit enhancement continues to provide credit protection on an asset pool that is purchased by a liquidity banking organization so that the institution is protected against credit losses that may arise due to subsequent deterioration of the pool.

Pool-specific liquidity, when drawn prior to the ABCP program's credit enhancements, is subject to the credit risk of the underlying asset pool. However, the liquidity facility does not provide direct credit enhancement to the commercial paper holders. Thus, the pool-specific liquidity facility generally is in an economic second-loss position after the seller-provided credit enhancements and prior to the program-

1. Direct-liquidity loans to an ABCP program may be termed a *commissioning agreement* (most likely in a foreign bank program) and may share in the security interest in the underlying assets when commercial paper ceases to be issued due to deterioration of the asset pool.

wide credit enhancement even when the legal documents state that the program-wide enhancement would absorb losses prior to the pool-specific liquidity facilities. This is because the sponsor of the ABCP program would most likely manage the asset pools in such a way that deteriorating portfolios or assets would be put to the liquidity banking organizations prior to any defaults that would require a draw against the program-wide credit enhancement.[2] While the liquidity banking organization is exposed to the credit risk of the underlying asset pool, the risk is mitigated by the seller-provided credit enhancement and the asset-quality test.[3] At the time that the asset pool is put to the liquidity banking organization, the facility is usually fully drawn because the entire amount of the pool that qualifies under the asset-quality test is purchased by the banking organization. However, with respect to revolving transactions (such as credit card securitizations) it is possible to average less than 100 percent of the commitment.

Program-Wide Liquidity

The senior-most position in the waterfall, program-wide liquidity, is provided in an amount sufficient to support that portion of the face amount of all the commercial paper that is issued by the ABCP program that is necessary to achieve the desired external rating on the issued paper. In some cases, a liquidity banking organization that extends a direct liquidity loan to an ABCP program may be able to access the program-wide credit enhancement to cover losses while funding the underlying asset pool.

2. In fact, according to the contractual provisions of some conduits, a certain level of draws on the program-wide credit enhancement is a condition for unwinding the conduit program, which means that this enhancement is never meant to be used.

3. An asset-quality test or liquidity-funding formula determines how much funding the liquidity banking organization will extend to the conduit based on the quality of the underlying asset pool at the time of the draw. Typically, liquidity banking organizations will fund against the conduit's purchase price of the asset pool less the amount of defaulted assets in the pool.

WHAT'S NEW IN THIS REVISED SECTION

The guidance in this section does not apply to U.S. bank holding companies (BHCs) or intermediate holding companies of foreign banking organizations with $50 billion or more in total consolidated assets. See SR letter 15-18, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms" (section 4063.0.1) and SR letter 15-19, "Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms" (section 4065.0.1) for more information. In addition, inactive guidance references in this section have been updated.

This supervisory guidance provides direction to supervisory staff and BHCs on the declaration and payment of dividends,[1] capital redemptions, and capital repurchases by BHCs in the context of their capital planning processes. The guidance establishes Federal Reserve expectations that a BHC will inform and consult with Federal Reserve supervisory staff sufficiently in advance of (1) declaring and paying a dividend that could raise safety-and-soundness concerns (e.g., declaring and paying a dividend that exceeds earnings for the period for which the dividend is being paid); (2) redeeming or repurchasing regulatory capital instruments when the BHC is experiencing financial weaknesses; or (3) redeeming or repurchasing common stock or perpetual preferred stock that would result in a net reduction as of the end of a quarter in the amount of such equity instruments outstanding compared with the beginning of the quarter in which the redemption or repurchase occurred.

While these principles (as stated in SR-09-4) are applicable to all BHCs, they are especially relevant for BHCs that are experiencing financial difficulties and/or receiving public funds. Supervisory staff should document their analyses of the issues discussed below and include such documentation in workpapers related to supervisory activities.[2] Such documentation not only provides a basis for constructive dialogue with an organization's management, but also supports current and future supervisory actions or initiatives. Reserve Bank and Board staff will develop a supervisory response in all instances where concerns regarding depletion of capital arise for a BHC that is experiencing financial difficulties.[3]

4060.9.1 REVIEW OF CAPITAL ADEQUACY MANAGEMENT

A fundamental principle underlying the Federal Reserve's supervision and regulation of BHCs is that a BHC should serve as a source of managerial and financial strength to its subsidiary banks.[4] Consistent with this premise, the Federal Reserve expects an organization to hold capital commensurate with its overall risk profile. The risk-based capital rules state that the capital requirements are minimum standards based primarily on broad credit-risk considerations. The risk-based capital ratios do not take explicit account of the quality of individual asset portfolios or the range of other types of risk to which banking organizations may be exposed (e.g., interest-rate, liquidity, market, and operational risks). For this reason, banking organizations are generally expected to operate with capital positions well above the minimum ratios, with the amount of capital held by a banking organization corresponding to its broad risk exposure. Because an overall assessment of capital adequacy must take into account factors

1. The term "dividends" as used in SR-09-4 refers to dividends on common stock and preferred stock, as well as dividends or interest on the subordinated notes underlying trust preferred securities and other tier 1 capital instruments, in cash or other value (collectively, "dividends"). Stock dividends (i.e., dividends in the form of common stock) are excluded. The priority of payment of dividends is based on the level of seniority of the instrument, which is established by contract between an issuer and its investors.

2. As discussed in SR-13-21, "Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less," risk-focused supervision of certain noncomplex BHCs with consolidated assets of less than $1 billion relies extensively on off-site monitoring, surveillance, and the assessments of primary banking supervisors of holding company subsidiaries. For such BHCs, supervisory staff generally will be able to rely to a large extent on off-site surveillance and monitoring activities to identify potential supervisory issues related to capital adequacy as discussed in SR-09-4. Expectations for related documentation are likewise commensurate with the size and complexity of the BHC.

3. Notwithstanding the general guidance in SR-09-4, the Federal Reserve may establish more stringent institution-specific requirements under its supervisory or enforcement authority. To the extent those requirements are more stringent than this guidance, those requirements supersede this guidance.

4. See 12 CFR 225.4(a)(1).

beyond those reflected in the minimum regulatory capital ratios, supervisory assessments of capital adequacy may differ significantly from conclusions based solely on the level of an organization's risk-based capital ratio.

Consequently, an organization's internal process for assessing capital adequacy should reflect a full understanding of its risks and ensure that it holds capital corresponding to those risks to maintain overall capital adequacy. Key among these risks is the risk of illiquidity, particularly that a perceived lack of financial strength (e.g., a capital shortfall relative to potential losses in a stress scenario) may lead investors and counterparties to withhold funds or otherwise cease engaging in business with the organization. This is particularly important for a banking organization that is a core clearing and settlement organization or that has a significant presence in critical financial markets; such an organization is expected to have especially rigorous and effective internal processes for assessing capital adequacy.[5]

In addition to evaluating the appropriateness of a BHC's capital level given its overall risk profile, supervisory staff should focus on the quality of a BHC's capital and trends in its capital composition. In this regard, the Board's risk-based capital rules state that voting common stockholders' equity, which is the most desirable capital element from a supervisory standpoint, generally should be the dominant element within tier 1 capital, and that banking organizations should avoid overreliance on non-common-equity capital elements.[6] Accordingly, a BHC should place primary reliance on its common equity, followed by perpetual preferred stock, which is included in equity under generally accepted accounting principles (GAAP) and absorbs losses on a going-concern basis (that is, helps a BHC avoid insolvency despite losses on its assets). Tax-deductible hybrid capital instruments, such as trust preferred securities, provide a limited supplement within tier 1 capital to a BHC's common stock and preferred stock.

In assessing a BHC's capital adequacy, supervisory staff should evaluate the comprehensiveness and effectiveness of management's capital planning. An effective capital planning process requires a banking organization to assess the risks to which it is exposed and its processes for managing and mitigating those risks, evaluate its capital adequacy relative to its risks, and consider the potential impact on its earnings and capital base from current and prospective economic conditions. A BHC's capital planning process should be commensurate with the BHC's size, complexity, and risk profile[7] and should entail consideration of a variety of factors. The supervisory guidance within SR-09-4 is not intended to describe comprehensively all elements of a BHC's capital planning process, but rather to focus on those factors that a BHC's board of directors should take into account when considering the payment of dividends, stock redemptions, or stock repurchases. Factors that the BHC's board of directors should consider include the following:

1. overall asset quality, potential need to increase reserves and write down assets, and concentrations of credit;
2. potential for unanticipated losses and declines in asset values;
3. implicit and explicit liquidity and credit commitments, including off-balance-sheet and contingent liabilities;
4. quality and level of current and prospective earnings, including earnings capacity under a number of plausible economic scenarios;
5. current and prospective cash flow and liquidity;
6. ability to serve as an ongoing source of financial and managerial strength to depository institution subsidiaries insured by the Federal Deposit Insurance Corporation, including the extent of double leverage[8] and the condition of subsidiary depository institutions;

5. As discussed in SR-03-9, "Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System," core clearing and settlement organizations are defined as large-value payment system operators and market utilities that provide critical clearing and settlement services for critical financial markets. The term also includes firms that provide clearing and settlement services that are integral to a critical financial market (i.e., their market share is significant enough to present systemic risk in the event of their sudden failure to carry on those activities because there are no immediately viable alternatives). Firms that play significant roles in critical financial markets are those that consistently clear or settle at least five percent of the value of transactions in a critical market.

6. See 12 CFR 225, appendix A, section II.A.1.c.(3).

7. Large BHCs and others with complex risk profiles should have in place robust internal capital adequacy assessment processes. (See sections 4063.0.1 and 4065.0.1 of this manual for more information.) BHCs that use the advanced approaches in the risk-based capital framework may be subject to further requirements in this regard.

8. Double leverage refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity. In this regard, supervisory staff should also consider the impact of any potential overreliance a BHC may have on dividends received from subsidiaries as a source of payment for its liabilities.

7. other risks that affect the BHC's financial condition and are not fully captured in regulatory capital calculations;
8. level, composition, and quality of capital; and
9. ability to raise additional equity capital in prevailing market and economic conditions.

Supervisory findings in the areas discussed in SR-09-4 should be incorporated into the assessment of the "Capital" subcomponent for the BHC's "Financial Condition" rating component in the RFI (Risk Management, Financial Condition, and Impact) rating[9] assigned to a BHC. See section 4060.9.3 for information that supervisory staff should seek from BHCs in developing this assessment.

4060.9.1.1 Dividends in Cash or Other Value

Crucial to any capital plan are the effects on a BHC's financial condition of the payment of dividends on common stock[10] and other tier 1 capital instruments, as described previously in footnote 1. Consistent with the Board's November 14, 1985, ''Policy Statement on the Payment of Cash Dividends'' (see section 2020.5, or the *FRRS* at 4-185), a banking organization should have comprehensive policies on dividend payments that clearly articulate the organization's objectives and approaches for maintaining a strong capital position and achieving the objectives of the policy statement. These policies should take into account the potential drain on a BHC's resources posed by the payment not just of cash dividends, but also of non-cash dividends, which can take many different forms (e.g., the distribution of assets to shareholders, particularly insiders, or the assumption or guarantee of certain shareholders' liabilities), other than those in the form of common stock, which generally do not raise supervisory concerns.

When a BHC's board of directors is deciding on the level of dividends to declare,[11] it should consider, among other things, the factors discussed above in 4060.9.1. It is particularly important for a banking organization's board of directors to ensure that the dividend level is prudent relative to the organization's financial position and is not based on overly optimistic earnings scenarios. Supervisory staff should engage in discussions with a BHC on its overall dividend policies and practices as part of the ongoing supervisory assessment of capital adequacy. Moreover, because the period between declaration of a dividend and the payment date may be as much as 60 days, in making a declaration, the board of directors should consider any potential events that may occur before the payment date that could affect its ability to pay while still maintaining a strong financial position.[12]

While many organizations place great importance on consistently paying dividends, a board of directors should strongly consider, after careful analysis of the factors described above under "Review of Capital Adequacy Management" (see section 4060.9.1), reducing, deferring, or eliminating dividends when the quantity and quality of the BHC's earnings have declined or the BHC is experiencing other financial problems, or when the macroeconomic outlook for the BHC's primary profit centers has deteriorated.[13] As a general matter, the board of directors of a BHC should inform the Federal Reserve and should eliminate, defer, or significantly reduce the BHC's dividends if

1. The BHC's net income available to shareholders for the past four quarters, net of dividends previously paid during that period, is not sufficient to fully fund the dividends;
2. The BHC's prospective rate of earnings retention is not consistent with the BHC's capital needs and overall current and prospective financial condition; or
3. The BHC will not meet, or is in danger of not meeting, its minimum regulatory capital adequacy ratios.

Failure to do so could result in a supervisory finding that the organization is operating in an unsafe and unsound manner.

Moreover, a BHC should inform the Federal

9. See SR-04-18, "Bank Holding Company Rating System" and section 4070.0.

10. This includes dividends paid on common stock by BHCs qualifying under Subchapter S of Chapter 1 of the Internal Revenue Code. For regulatory and supervisory purposes, such dividends are treated the same as those paid by other BHCs.

11. As a general matter, the declaration of a dividend to shareholders establishes a legal obligation to pay that dividend and is recorded as a liability on the balance sheet.

12. Payments on trust preferred securities are not declared. Rather, the BHC must make a decision not to make a payment; typically, this decision must be made 15 days before payment is due.

13. Contractual arrangements typically dictate that a banking organization may not defer dividends on senior instruments (e.g., preferred stock) unless dividends have been fully deferred on more junior instruments (e.g., common stock).

Reserve reasonably in advance of declaring or paying a dividend that exceeds earnings for the period (e.g., quarter) for which the dividend is being paid or that could result in a material adverse change to the organization's capital structure. Declaring or paying a dividend in either circumstance could raise supervisory concerns. Likewise, a BHC should apprise the Federal Reserve reasonably in advance of declaring any material increase in its common stock dividend to ensure that it does not raise safety-and-soundness concerns.

4060.9.1.2 Stock Redemptions and Repurchases

It is an essential principle of safety and soundness that a banking organization's redemption of instruments included in regulatory capital and repurchases of common stock, preferred stock, and other regulatory capital instruments from investors be consistent with the organization's current and prospective capital needs. In assessing such needs, the board of directors and management of a BHC should consider the factors discussed above in section 4060.9.1.

Federal Reserve supervisory staff should continue exercising their supervisory oversight and regulatory authority in evaluating BHCs' capital planning processes, as discussed above, and consulting with BHCs regarding their proposed redemptions and repurchases of common stock, preferred stock, and other regulatory capital instruments. There are explicit regulatory requirements for Federal Reserve review of such transactions in several situations:

1. Certain non-exempted BHCs are required under section 225.4(b)(1) of Regulation Y to notify the Federal Reserve of actions that would reduce a BHC's consolidated net worth by 10 percent or more.[14]
2. Under the Board's risk-based capital rule for BHCs, most instruments included in tier 1 capital[15] with features permitting redemption at the option of the issuing BHC (e.g., perpetual preferred stock and trust preferred securities) may qualify as regulatory capital only if redemption is subject to prior Federal Reserve approval.[16]
3. The risk-based capital rule directs BHCs to consult with the Federal Reserve before redeeming any equity or other capital instrument included in tier 1 or tier 2 capital prior to stated maturity, if such redemption could have a material effect on the level or composition of the organization's capital base.[17]

In addition, Federal Reserve supervisory staff should exercise the above regulatory authorities, as well as the Federal Reserve's general supervisory and enforcement authority, to prevent a BHC from repurchasing its common stock, preferred stock, trust preferred securities, and other regulatory capital instruments in the market, if such action would be inconsistent with the BHC's prospective capital needs and continued safe and sound operation. BHCs experiencing financial weaknesses, or that are at significant risk of developing financial weaknesses, should consult with the appropriate Federal Reserve supervisory staff before redeeming or repurchasing common stock or other regulatory capital instruments for cash or other valuable consideration. Similarly, any BHC considering expansion, either through acquisitions or through new activities, also generally should consult with the appropriate Federal Reserve supervisory staff before redeeming or repurchasing common stock or other regulatory capital instruments for cash or other valuable consideration.

In evaluating the appropriateness of a BHC's proposed redemption or repurchase of capital instruments, Federal Reserve supervisory staffs

14. Section 225.4(b)(1) of Regulation Y requires that a BHC that is not well capitalized or well managed, or that is subject to any unresolved supervisory issues, provide prior notice to the Federal Reserve for any repurchase or redemption of its equity securities for cash or other value that would reduce by 10 percent or more the BHC's consolidated net worth aggregated over the preceding 12-month period. All repurchases and redemptions within a 12-month period are aggregated for the application of this rule, regardless of any other approval or supervisory consultation process that was followed by the BHC with regard to its repurchases and redemptions of equity securities.

15. See 12 CFR 217.

16. Unlike the process noted above for transactions requiring notification of the Federal Reserve under Regulation Y, such approvals and the consultative process for other repurchases and redemptions are part of the Federal Reserve's general supervisory processes and do not, therefore, require formal applications.

17. See 12 CFR 225, appendix A, section II.(iii). Such consultation by small BHCs subject to the Board's Small Bank Holding Company and Savings and Loan Holding Company Policy Statement ("Small BHC Policy Statement"; see Regulation Y: 12 CFR 225, appendix C), however, is only required for the redemption of instruments included in equity as defined under GAAP—such as common and perpetual preferred stock—and not for other instruments included in regulatory capital solely under the risk-based capital rule.

are directed to consider:

1. the potential losses that a BHC may suffer from the prospective need to increase reserves and write down assets from continued asset deterioration and
2. the BHC's ability to raise additional common stock and other tier 1 capital to replace capital instruments that are redeemed or repurchased.

In addition, supervisory staff should consider the potential negative effects on capital of a BHC

1. replacing common stock with lower-quality forms of regulatory capital (e.g., hybrids or subordinated debt) or
2. redeeming or repurchasing equity and other capital instruments from investors, including selective repurchases or redemptions from insiders, with cash or other value that could be better used to strengthen the BHC's regulatory capital base or its overall financial condition.

Furthermore, to facilitate such supervisory oversight, a BHC should inform Federal Reserve supervisory staff of a redemption or repurchase[18] of common stock or perpetual preferred stock for cash or other value resulting in a net reduction of a BHC's outstanding amount of common stock or perpetual preferred stock below the amount of such capital instrument outstanding at the beginning of the quarter in which the redemption or repurchase occurs. It is not necessary to inform supervisory staff pursuant to SR-09-4 when reductions in a BHC's tier 1 capital during a quarter will result from other causes, such as a reduction of the BHC's retained earnings due to negative earnings.

BHCs should advise Federal Reserve supervisory staff sufficiently in advance of such redemptions and repurchases to provide reasonable opportunity for supervisory review and possible objection should Federal Reserve supervisory staff determine a transaction raises safety-and-soundness concerns. When informing Federal Reserve supervisory staff of redemptions and repurchases, including requests for approval of redemptions under the risk-based capital rule as discussed above, a BHC may provide information either for a proposed transaction or for a number of transactions within a given quarter on its tier 1 capital composition. Such information should include the dollar amount and percentage breakdown of the BHC's tier 1 capital components (that is, common equity, perpetual preferred stock, and other tier 1 capital instruments), as well as its regulatory capital ratios, at the beginning of the previous quarter and most recent four-quarter period, as well as pro forma changes to its capital composition and ratios resulting from its proposed redemptions or repurchases.

18. Redemptions of most instruments (e.g., preferred stock or trust preferred securities) included in regulatory capital require Federal Reserve approval under the risk-based capital rule, but such redemptions by small BHCs are not required under the small BHC policy statement.

4060.9.2 INSPECTION OBJECTIVES

1. To analyze and document issues discussed above that are present at the BHC and include such documentation in the inspection's workpapers, including those related to supervisory activities.
2. To evaluate the quality of a BHC's capital and the trends in its capital composition.
3. To determine if the BHC has informed and consulted with Federal Reserve supervisory staff sufficiently in advance of
   a. declaring and paying a dividend that could raise safety-and-soundness concerns (for example, declaring and paying a dividend that exceeds earnings for the period for which the dividend is being paid);
   b. redeeming or repurchasing regulatory capital instruments when the BHC is experiencing financial weaknesses; or
   c. redeeming or repurchasing any common stock or perpetual preferred stock that would result in a net reduction as of the end of a quarter in the amount of such equity instruments outstanding compared with the beginning of the quarter in which the redemption or repurchase occurred.
4. To evaluate the comprehensiveness and effectiveness of management's capital planning.

4060.9.3 INSPECTION PROCEDURES[19]

Capital Planning

1. Determine if the existing capital level is

19. These procedures are not intended to encompass comprehensively a BHC's capital planning, and are focused on information that may be useful in reviewing the impact of dividends and repurchases or redemptions on capital adequacy. More comprehensive inspection procedures for assessing capital adequacy of BHCs are available in section 4060.3.11.

adequate for the BHC's risk profile when considering the following items:
   a. the level and trend of adversely classified assets;
   b. the adequacy of the allowance for loan and lease losses;
   c. the volume of charged-off loans and recoveries;
   d. the balance sheet structure and liquidity needs;
   e. the level and type of concentrations;
   f. compliance with state and federal capital requirements; and
   g. composition of elements of capital.
2. Determine if earnings performance enables the BHC to fund its growth, remain competitive in the marketplace, and support its overall risk profile. Consider the level and trend of equity capital to total assets as well as asset and equity growth rates.
   a. Review the current level of the provision for loan and lease losses.
   b. Review whether the bank is relying on core earnings or income from nonrecurring events.
   c. Determine if dividends are excessive when compared to current earnings or potential capital needs, or could otherwise result in a material adverse change to the organization's capital structure.
3. Determine the effect of current capital levels on the future viability of the BHC and its subsidiary depository institutions.
   a. Assess management's ability to reverse deteriorating trends and to augment capital through earnings.
   b. Assess the ability of the BHC to raise capital from existing shareholders, issue new capital instruments, or access alternative sources of capital.
   c. Assess the reasonableness of capital plans.

Dividend in Cash or Other Value

4. Determine whether the BHC has a comprehensive dividend policy at the holding company and for each of its subsidiaries that help it in its capital planning processes.
5. Assess whether provisions contained in the policies and practices conform to the guidance outlined in the Federal Reserve Board's 1985 dividend policy statement.
6. Determine whether, and if so, how, the BHC has changed in any way its dividend policy to accommodate the current economic environment.
7. Assess whether dividends in cash or other value are consistent with the BHC's current and prospective capital needs, including likely future reserve increases and asset write-downs, as well as the feasibility in the near term of the BHC raising additional capital in the market.

Stock Repurchases and Redemptions

8. Review schedule HI-A (Changes in Equity Capital) of the BHC's FR Y-9C report for any changes in components of capital.
9. Review any correspondence from the BHC to the Federal Reserve that indicates any plans to initiate common or preferred stock repurchases or redemptions in the foreseeable future.
10. Review the BHC's strategic plan for any mention of stock repurchases or redemptions.
11. Review the BHC's capital plan for any mention of stock repurchases or redemptions.
12. Discuss with management whether they are in any other way contemplating stock repurchases or redemptions, and if so, what the likely magnitude and timeline of such repurchases will be.
13. Assess whether such repurchases or redemptions foster sound capital positions, especially if the organization is (or could be) experiencing financial weakness.

WHAT'S NEW IN THIS REVISED SECTION

This section is being revised to include the March 1, 2016, "Interagency Guidance on Funds Transfer Pricing Related to Funding Contingency Risks." The guidance was issued to address weaknesses observed in large financial institutions' funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. The interagency guidance builds on the principles of sound liquidity risk management that are described below. FTP is an important tool for managing a firm's balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. If done effectively, FTP promotes more resilient, sustainable business models. (Refer to SR-16-03.)

The March 17, 2010, interagency policy statement on "Funding and Liquidity Risk Management" targets funding and risk-management principles for insured depository institutions, including state member banks. The basic principles presented in this policy statement also apply to bank holding companies (BHCs). The Federal Reserve expects supervised financial institutions and BHCs to manage liquidity risk using processes and systems that are commensurate with their complexity, risk profile, and scope of operations. Liquidity risk-management processes and plans should be well documented and available for supervisory review. (See SR-10-6 and its attachment.)

BHCs are expected to manage and control aggregate risk exposures on a consolidated basis, while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries. Appropriate liquidity risk management is especially important for BHCs since liquidity difficulties can easily spread to both depository and non-depository subsidiaries, particularly in cases of similarly named companies where customers may not always understand the legal distinctions between the holding company and subsidiaries. For this reason, BHCs should ensure that liquidity is sufficient at all levels of the organization to fully accommodate funding needs during periods of stress.

Liquidity risk-management processes and funding programs should take into full account the institution's lending, investment, and other activities and should ensure that adequate liquidity is maintained at the parent holding company and each of its subsidiaries. These processes and programs should fully incorporate real and potential constraints, including legal and regulatory restrictions, on the transfer of funds among subsidiaries and between subsidiaries and the parent holding company. BHC liquidity should be maintained at levels sufficient to fund holding company and affiliate operations for an extended period of time in a stressed environment when access to normal funding sources are disrupted, without having a negative impact on insured depository institution subsidiaries.

Material nonbank subsidiaries, such as broker-dealers, are expected to have liquidity-management processes and funding programs that reflect the principles outlined in the interagency policy statement guidance below (section 4066.0.1) and are consistent with the subsidiaries' complexity, risk profile, and scope of operations. A nonbank subsidiary that directly accesses market sources of funding and/or manages specific funding programs should pay particular attention to

- maintaining sufficient liquidity, cash flow, and capital strength to service its debt obligations and cover fixed charges;
- assessing the potential that funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions; and
- ensuring the adequacy of policies and practices that address the stability of funding and integrity of the institution's liquidity risk profile as evidenced by funding mismatches and the degree of dependence on potentially volatile sources of short-term funding.

For guidance on liquidity risk-measurement techniques, see section 4020.1, Appendix 1, of the *Commercial Bank Examination Manual*. For the supervisory plans (areas of focus) for BHCs that are designed to help ensure that the funding and liquidity practices of the parent company and its nonbank subsidiaries do not have an adverse impact on the organization's depository institution subsidiaries, see SR-08-8 and section 1050.1.3.3.2 for large complex banking organizations. For the similar supervisory plans for regional banking organizations, see SR-08-9 and section 1050.2.3.3.2. Both manual sections are titled "Parent Company and Nonbank Funding and Liquidity."

4066.0.1 APPENDIX A—INTERAGENCY POLICY STATEMENT ON FUNDING AND LIQUIDITY RISK MANAGEMENT

The Board of Governors of the Federal Reserve System (FRB)[1] issued this guidance to provide consistent interagency expectations on sound practices for managing funding and liquidity risk. The guidance summarizes the principles of sound liquidity risk management that the agencies have issued in the past[2] and, where appropriate, harmonizes these principles with the international statement recently issued by the Basel Committee on Banking Supervision titled "Principles for Sound Liquidity Risk Management and Supervision."[3]

Recent events illustrate that liquidity risk management at many financial institutions is in need of improvement. Deficiencies include insufficient holdings of liquid assets, funding risky or illiquid asset portfolios with potentially volatile short-term liabilities, and a lack of meaningful cash flow projections and liquidity contingency plans.

1. The policy statement in section 4066.0.1 is slightly amended to address those institutions supervised by the Federal Reserve. The interagency policy statement was also issued by the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA) (collectively, the agencies)—and the depository institutions those agencies supervise—in conjunction with the Conference of State Bank Supervisors (CSBS). For the complete text of the interagency policy statement see 75 *Fed. Reg.*13656. The various state banking supervisors may implement this policy statement through their individual supervisory process.

2. For national banks, see the *Comptroller's Handbook on Liquidity*. For state member banks and bank holding companies, see the Federal Reserve's *Commercial Bank Examination Manual* (section 4020), *Bank Holding Company Supervision Manual* (section 4010), and *Trading and Capital Markets Activities Manual* (section 2030). For state non-member banks, see the FDIC's *Revised Examination Guidance for Liquidity and Funds Management* (Trans. No. 2002-01) (Nov. 19, 2001) as well as Financial Institution Letter 84-2008, *Liquidity Risk Management* (August 2008). Also see Basel Committee on Banking Supervision, "Principles for Sound Liquidity Risk Management and Supervision," (September 2008).

3. Basel Committee on Banking Supervision, "Principles for Sound Liquidity Risk Management and Supervision," September 2008. See www.bis.org/publ/bcbs144.htm.

The following guidance reiterates the process that institutions should follow to appropriately identify, measure, monitor, and control their funding and liquidity risk. In particular, the guidance re-emphasizes the importance of cash flow projections, diversified funding sources, stress testing, a cushion of liquid assets, and a formal well-developed contingency funding plan (CFP) as primary tools for measuring and managing liquidity risk. The agencies expect every depository financial institutions[4] to manage liquidity risk using processes and systems that are commensurate with the institution's complexity, risk profile, and scope of operations. Liquidity risk management processes and plans should be well documented and available for supervisory review. Failure to maintain an adequate liquidity risk management process will be considered an unsafe and unsound practice.

Liquidity and Liquidity Risk

Liquidity is a financial institution's capacity to meet its cash and collateral obligations at a reasonable cost. Maintaining an adequate level of liquidity depends on the institution's ability to efficiently meet both expected and unexpected cash flows and collateral needs without adversely affecting either daily operations or the financial condition of the institution.

Liquidity risk is the risk that an institution's financial condition or overall safety and soundness is adversely affected by an inability (or perceived inability) to meet its obligations. An institution's obligations, and the funding sources used to meet them, depend significantly on its business mix, balance-sheet structure, and the cash flow profiles of its on- and off-balance-sheet obligations. In managing their cash flows, institutions confront various situations that can give rise to increased liquidity risk. These include funding mismatches, market constraints on the ability to convert assets into cash or in accessing sources of funds (i.e., market liquidity), and contingent liquidity events. Changes in economic conditions or exposure to credit, market, operation, legal, and reputation risks also can affect an institution's liquidity risk profile and should be considered in the assessment of liquidity and asset/liability management.

4. Unless otherwise indicated, this interagency guidance uses the term "depository financial institutions" or "institutions" to include banks and saving associations.

Sound Practices of Liquidity Risk Management

An institution's liquidity management process should be sufficient to meet its daily funding needs and cover both expected and unexpected deviations from normal operations. Accordingly, institutions should have a comprehensive management process for identifying, measuring, monitoring, and controlling liquidity risk. Because of the critical importance to the viability of the institution, liquidity risk management should be fully integrated into the institution's risk management processes. Critical elements of sound liquidity risk management include:

1. Effective corporate governance consisting of oversight by the board of directors and active involvement by management in an institution's control of liquidity risk.
2. Appropriate strategies, policies, procedures, and limits used to manage and mitigate liquidity risk.
3. Comprehensive liquidity risk measurement and monitoring systems (including assessments of the current and prospective cash flows or sources and uses of funds) that are commensurate with the complexity and business activities of the institution.
4. Active management of intraday liquidity and collateral.
5. An appropriately diverse mix of existing and potential future funding sources.
6. Adequate levels of highly liquid marketable securities, which are free of legal, regulatory, or operational impediments, that can be used to meet liquidity needs in stressful situations.
7. Comprehensive contingency funding plans (CFPs) that sufficiently address potential adverse liquidity events and emergency cash flow requirements.
8. Internal controls and internal audit processes sufficient to determine the adequacy of the institution's liquidity risk management process.

Supervisors will assess these critical elements in their reviews of an institution's liquidity risk management process in relation to its size, complexity, and scope of operations.

Corporate Governance

The board of directors is ultimately responsible for the liquidity risk assumed by the institution. As a result, the board should ensure that the institution's liquidity risk tolerance is established and communicated in such a manner that all levels of management clearly understand the institution's approach to managing the trade-offs between liquidity risk and short-term profits. The board of directors or its delegated committee of board members should oversee the establishment and approval of liquidity management strategies, policies and procedures, and review them at least annually. In addition, the board should ensure that it:

- Understands the nature of the liquidity risks of its institution and periodically reviews information necessary to maintain this understanding.
- Establishes executive-level lines of authority and responsibility for managing the institution's liquidity risk.
- Enforces management's duties to identify, measure, monitor, and control liquidity risk.
- Understands and periodically reviews the institution's CFPs for handling potential adverse liquidity events.
- Understands the liquidity risk profiles of important subsidiaries and affiliates as appropriate.

Senior management is responsible for ensuring that board-approved strategies, policies, and procedures for managing liquidity (on both a long-term and day-to-day basis) are appropriately executed within the lines of authority and responsibility designated for managing and controlling liquidity risk. This includes overseeing the development and implementation of appropriate risk measurement and reporting systems, liquid buffers (e.g., cash, unencumbered marketable securities, and market instruments), CFPs, and an adequate internal control infrastructure. Senior management is also responsible for regularly reporting to the board of directors on the liquidity risk profile of the institution.

Senior management should determine the structure, responsibilities, and controls for managing liquidity risk and for overseeing the liquidity positions of the institution. These elements should be clearly documented in liquidity risk policies and procedures. For institutions comprised of multiple entities, such elements should be fully specified and documented in policies for each material legal entity and subsidiary. Senior management should be able to monitor liquidity risks for each entity across the institution on an ongoing basis. Processes should be in place to ensure that the group's senior management is actively monitoring and quickly responding to all material developments and reporting to the boards of directors as appropriate.

Institutions should clearly identify the individuals or committees responsible for implementing and making liquidity risk decisions. When an institution uses an asset/liability committee (ALCO) or other similar senior management committee, the committee should actively monitor the institution's liquidity profile and should have sufficiently broad representation across major institutional functions that can directly or indirectly influence the institution's liquidity risk profile (e.g., lending, investment securities, and wholesale and retail funding). Committee members should include senior managers with authority over the units responsible for executing liquidity-related transactions and other activities within the liquidity risk management process. In addition, the committee should ensure that the risk measurement system adequately identifies and quantifies risk exposure. The committee also should ensure that the reporting process communicates accurate, timely, and relevant information about the level and sources of risk exposure.

Strategies, Policies, Procedures, and Risk Tolerances

Institutions should have documented strategies for managing liquidity risk and clear policies and procedures for limiting and controlling risk exposures that appropriately reflect the institution's risk tolerances. Strategies should identify primary sources of funding for meeting daily operating cash outflows, as well as seasonal and cyclical cash flow fluctuations. Strategies should also address alternative responses to various adverse business scenarios.[5] Policies and procedures should provide for the formulation of plans and courses of actions for dealing with potential temporary, intermediate-term, and long-term liquidity disruptions. Policies, procedures, and limits also should address liquidity separately for individual currencies, legal entities, and business lines, when appropriate and material, and should allow for legal, regulatory, and operational limits for the transferability of liquidity as well. Senior management should coordinate the institution's liquidity risk management with disaster, contingency, and strategic planning efforts, as well as with business line and risk management objectives, strategies, and tactics.

Policies should clearly articulate a liquidity risk tolerance that is appropriate for the business strategy of the institution, considering its complexity, business mix, liquidity risk profile, and its role in the financial system. Policies should also contain provisions for documenting and periodically reviewing assumptions used in liquidity projections. Policy guidelines should employ both quantitative targets and qualitative guidelines. For example, these measurements, limits, and guidelines may be specified in terms of the following measures and conditions, as applicable:

1. Cash flow projections that include discrete and cumulative cash flow mismatches or gaps over specified future time horizons under both expected and adverse business conditions.
2. Target amounts of unencumbered liquid asset reserves.
3. Measures used to identify unstable liabilities and liquid asset coverage ratios. For example, these may include ratios of wholesale funding to total liabilities, potentially volatile retail (e.g., high-cost or out-of-market) deposits to total deposits, and other liability dependency measures, such as short-term borrowings as a percent of total funding.
4. Asset concentrations that could increase liquidity risk through a limited ability to convert to cash (e.g., complex financial instruments,[6] bank-owned (corporate-owned) life insurance, and less marketable loan portfolios).
5. Funding concentrations that address diversification of funding sources and types, such as large liability and borrowed funds dependency, secured versus unsecured funding sources, exposures to single providers of funds, exposures to funds providers by market segments, and different types of brokered deposits or wholesale funding.
6. Funding concentrations that address the term, re-pricing, and market characteristics of funding sources with consideration given to the nature of the assets they fund. This may include diversification targets for short-, medium-, and long-term funding; instrument type and securitization vehicles; and guid-

5. In formulating liquidity management strategies, members of complex banking groups should take into consideration their legal structures (e.g., branches versus separate legal entities and operating subsidiaries), key business lines, markets, products, and jurisdictions in which they operate.

6. Financial instruments that are illiquid, difficult to value, or marked by the presence of cash flows that are irregular, uncertain, or difficult to model.

ance on concentrations for currencies and geographical markets.

7. Contingent liability exposures such as unfunded loan commitments, lines of credit supporting asset sales or securitizations, and collateral requirements for derivatives transactions and various types of secured lending.
8. Exposures of material activities, such as securitization, derivatives, trading, transaction processing, and international activities, to broad systemic and adverse financial market events. This is most applicable to institutions with complex and sophisticated liquidity risk profiles.
9. Alternative measures and conditions that may be appropriate for certain institutions.

Policies also should specify the nature and frequency of management reporting. In normal business environments, senior managers should receive liquidity risk reports at least monthly, while the board of directors should receive liquidity risk reports at least quarterly. Depending upon the complexity of the institution's business mix and liquidity risk profile, management reporting may need to be more frequent. Regardless of an institution's complexity, it should have the ability to increase the frequency of reporting on short notice, if the need arises. Liquidity risk reports should impart to senior management and the board a clear understanding of the institution's liquidity risk exposure, compliance with risk limits, consistency between management's strategies and tactics, and consistency between these strategies and the board's expressed risk tolerance.

Institutions should consider liquidity costs, benefits, and risks in strategic planning and budgeting processes. Significant business activities should be evaluated for both liquidity risk exposure and profitability. More complex and sophisticated institutions should incorporate liquidity costs, benefits, and risks in the internal product pricing, performance measurement, and new product approval process for all material business lines, products, and activities. Incorporating the cost of liquidity into these functions should align the risk-taking incentives of individual business lines with the liquidity risk exposure their activities create for the institution as a whole. The quantification and attribution of liquidity risks should be explicit and transparent at the line management level and should include consideration of how liquidity would be affected under stressed conditions.

Liquidity Risk Measurement, Monitoring, and Reporting

The process of measuring liquidity risk should include robust methods for comprehensively projecting cash flows arising from assets, liabilities, and off-balance-sheet items over an appropriate set of time horizons. For example, time buckets may be daily for very short timeframes or extend out to weekly, monthly, and quarterly for longer time frames. Pro forma cash flow statements are a critical tool for adequately managing liquidity risk. Cash flow projections can range from simple spreadsheets to very detailed reports depending upon the complexity and sophistication of the institution and its liquidity risk profile under alternative scenarios. Given the critical importance that assumptions play in constructing measures of liquidity risk and projections of cash flows, institutions should ensure that the assumptions used are reasonable, appropriate, and adequately documented. Institutions should periodically review and formally approve these assumptions. Institutions should focus particular attention on the assumptions used in assessing the liquidity risk of complex assets, liabilities, and off-balance-sheet positions. Assumptions applied to positions with uncertain cash flows, including the stability of retail and brokered deposits and secondary market issuances and borrowings, are especially important when they are used to evaluate the availability of alternative sources of funds under adverse contingent liquidity scenarios. Such scenarios include, but are not limited to, deterioration in the institution's asset quality or capital adequacy.

Institutions should ensure that assets are properly valued according to relevant financial reporting and supervisory standards. An institution should fully factor into its risk management practices the consideration that valuations may deteriorate under market stress and take this into account in assessing the feasibility and impact of asset sales on its liquidity position during stress events.

Institutions should ensure that their vulnerabilities to changing liquidity needs and liquidity capacities are appropriately assessed within meaningful time horizons, including intraday, day-to-day, short-term weekly and monthly horizons, medium-term horizons of up to one year, and longer-term liquidity needs of one year or more. These assessments should include vulnerabilities to events, activities, and strategies that can significantly strain the capability to generate internal cash.

Stress Testing

Institutions should conduct stress tests regularly for a variety of institution-specific and marketwide events across multiple time horizons. The magnitude and frequency of stress testing should be commensurate with the complexity of the financial institution and the level of its risk exposures. Stress test outcomes should be used to identify and quantify sources of potential liquidity strain and to analyze possible impacts on the institution's cash flows, liquidity position, profitability, and solvency. Stress tests should also be used to ensure that current exposures are consistent with the financial institution's established liquidity risk tolerance. Management's active involvement and support is critical to the effectiveness of the stress testing process. Management should discuss the results of stress tests and take remedial or mitigating actions to limit the institution's exposures, build up a liquidity cushion, and adjust its liquidity profile to fit its risk tolerance. The results of stress tests should also play a key role in shaping the institution's contingency planning. As such, stress testing and contingency planning are closely intertwined.

Collateral Position Management

An institution should have the ability to calculate all of its collateral positions in a timely manner, including the value of assets currently pledged relative to the amount of security required and unencumbered assets available to be pledged. An institution's level of available collateral should be monitored by legal entity, jurisdiction, and currency exposure, and systems should be capable of monitoring shifts between intraday and overnight or term collateral usage. An institution should be aware of the operational and timing requirements associated with accessing the collateral given its physical location (i.e., the custodian institution or securities settlement system with which the collateral is held). Institutions should also fully understand the potential demand on required and available collateral arising from various types of contractual contingencies during periods of both marketwide and institution-specific stress.

Management Reporting

Liquidity risk reports should provide aggregate information with sufficient supporting detail to enable management to assess the sensitivity of the institution to changes in market conditions, its own financial performance, and other important risk factors. The types of reports or information and their timing will vary according to the complexity of the institution's operations and risk profile. Reportable items may include but are not limited to cash flow gaps, cash flow projections, asset and funding concentrations, critical assumptions used in cash flow projections, key early warning or risk indicators, funding availability, status of contingent funding sources, or collateral usage. Institutions should also report on the use of and availability of government support, such as lending and guarantee programs, and implications on liquidity positions, particularly since these programs are generally temporary or reserved as a source for contingent funding.

Liquidity across Currencies, Legal Entities, and Business Lines

A depository institution should actively monitor and control liquidity risk exposures and funding needs within and across currencies, legal entities, and business lines. Also, depository institutions should take into account operational limitations to the transferability of liquidity, and should maintain sufficient liquidity to ensure compliance during economically stressed periods with applicable legal and regulatory restrictions on the transfer of liquidity among regulated entities. The degree of centralization in managing liquidity should be appropriate for the depository institution's business mix and liquidity risk profile.[7] The agencies expect depository institutions to maintain adequate liquidity both at the consolidated level and at significant legal entities.

Regardless of its organizational structure, it is important that an institution actively monitor and control liquidity risks at the level of individual legal entities, and the group as a whole, incorporating processes that aggregate data across multiple systems in order to develop a groupwide view of liquidity risk exposures. It is also important that the institution identify constraints on the transfer of liquidity within the group.

7. Institutions subject to multiple regulatory jurisdictions should have management strategies and processes that recognize the potential limitations of liquidity transferability, as well as the need to meet the liquidity requirements of foreign jurisdictions.

Assumptions regarding the transferability of funds and collateral should be described in liquidity risk management plans.

Intraday Liquidity Position Management

Intraday liquidity monitoring is an important component of the liquidity risk management process for institutions engaged in significant payment, settlement, and clearing activities. An institution's failure to manage intraday liquidity effectively, under normal and stressed conditions, could leave it unable to meet payment and settlement obligations in a timely manner, adversely affecting its own liquidity position and that of its counterparties. Among large, complex organizations, the interdependencies that exist among payment systems and the inability to meet certain critical payments has the potential to lead to systemic disruptions that can prevent the smooth functioning of all payment systems and money markets. Therefore, institutions with material payment, settlement and clearing activities should actively manage their intraday liquidity positions and risks to meet payment and settlement obligations on a timely basis under both normal and stressed conditions. Senior management should develop and adopt an intraday liquidity strategy that allows the institution to:

1. Monitor and measure expected daily gross liquidity inflows and outflows.
2. Manage and mobilize collateral when necessary to obtain intraday credit.
3. Identify and prioritize time-specific and other critical obligations in order to meet them when expected.
4. Settle other less critical obligations as soon as possible.
5. Control credit to customers when necessary.
6. Ensure that liquidity planners understand the amounts of collateral and liquidity needed to perform payment-system obligations when assessing the organization's overall liquidity needs.

Diversified Funding

An institution should establish a funding strategy that provides effective diversification in the sources and tenor of funding. It should maintain an ongoing presence in its chosen funding markets and strong relationships with funds providers to promote effective diversification of funding sources. An institution should regularly gauge its capacity to raise funds quickly from each source. It should identify the main factors that affect its ability to raise funds and monitor those factors closely to ensure that estimates of fund raising capacity remain valid.

An institution should diversify available funding sources in the short-, medium-, and long-term. Diversification targets should be part of the medium- to long-term funding plans and should be aligned with the budgeting and business planning process. Funding plans should take into account correlations between sources of funds and market conditions. Funding should also be diversified across a full range of retail as well as secured and unsecured wholesale sources of funds, consistent with the institution's sophistication and complexity. Management should also consider the funding implications of any government programs or guarantees it uses. As with wholesale funding, the potential unavailability of government programs over the intermediate- and long-term should be fully considered in the development of liquidity risk management strategies, tactics, and risk tolerances. Funding diversification should be implemented using limits addressing counterparties, secured versus unsecured market funding, instrument type, securitization vehicle, and geographic market. In general, funding concentrations should be avoided. Undue over-reliance on any one source of funding is considered an unsafe and unsound practice.

An essential component of ensuring funding diversity is maintaining market access. Market access is critical for effective liquidity risk management as it affects both the ability to raise new funds and to liquidate assets. Senior management should ensure that market access is being actively managed, monitored, and tested by the appropriate staff. Such efforts should be consistent with the institution's liquidity risk profile and sources of funding. For example, access to the capital markets is an important consideration for most large complex institutions, whereas the availability of correspondent lines of credit and other sources of wholesale funds are critical for smaller, less complex institutions.

An institution should identify alternative sources of funding that strengthen its capacity to withstand a variety of severe institution-specific and marketwide liquidity shocks. Depending upon the nature, severity, and duration of the liquidity shock, potential sources of funding include, but are not limited to, the following:

1. Deposit growth.
2. Lengthening maturities of liabilities.
3. Issuance of debt instruments.
4. Sale of subsidiaries or lines of business.
5. Asset securitization.
6. Sale (either outright or through repurchase agreements) or pledging of liquid assets.
7. Drawing down committed facilities.
8. Borrowing.

Cushion of Liquid Assets

Liquid assets are an important source of both primary (operating liquidity) and secondary (contingent liquidity) funding at many institutions. Indeed, a critical component of an institution's ability to effectively respond to potential liquidity stress is the availability of a cushion of highly liquid assets without legal, regulatory, or operational impediments (i.e., unencumbered) that can be sold or pledged to obtain funds in a range of stress scenarios. These assets should be held as insurance against a range of liquidity stress scenarios including those that involve the loss or impairment of typically available unsecured and/or secured funding sources. The size of the cushion of such high-quality liquid assets should be supported by estimates of liquidity needs performed under an institution's stress testing as well as aligned with the risk tolerance and risk profile of the institution. Management estimates of liquidity needs during periods of stress should incorporate both contractual and noncontractual cash flows, including the possibility of funds being withdrawn. Such estimates should also assume the inability to obtain unsecured and uninsured funding as well as the loss or impairment of access to funds secured by assets other than the safest, most liquid assets.

Management should ensure that unencumbered, highly liquid assets are readily available and are not pledged to payment systems or clearing houses. The quality of unencumbered liquid assets is important as it will ensure accessibility during the time of most need. An institution could use its holdings of high-quality securities, for example, U.S. Treasury securities, securities issued by U.S. government-sponsored agencies, excess reserves at the central bank or similar instruments, and enter into repurchase agreements in response to the most severe stress scenarios.

Contingency Funding Plan[8]

All financial institutions, regardless of size and complexity, should have a formal CFP that clearly sets out the strategies for addressing liquidity shortfalls in emergency situations. A CFP should delineate policies to manage a range of stress environments, establish clear lines of responsibility, and articulate clear implementation and escalation procedures. It should be regularly tested and updated to ensure that it is operationally sound. For certain components of the CFP, affirmative testing (e.g., liquidation of assets) may be impractical. In these instances, institutions should be sure to test operational components of the CFP. For example, ensuring that roles and responsibilities are up-to-date and appropriate; ensuring that legal and operational documents are up-to-date and appropriate; ensuring that cash and collateral can be moved where and when needed; and ensuring that contingent liquidity lines can be drawn when needed.

Contingent liquidity events are unexpected situations or business conditions that may increase liquidity risk. The events may be institution-specific or arise from external factors and may include:

1. The institution's inability to fund asset growth.
2. The institution's inability to renew or replace maturing funding liabilities.
3. Customers unexpectedly exercising options to withdraw deposits or exercise off-balance-sheet commitments.
4. Changes in market value and price volatility of various asset types.
5. Changes in economic conditions, market perception, or dislocations in the financial markets.
6. Disturbances in payment and settlement systems due to operational or local disasters.

Insured institutions should be prepared for the specific contingencies that will be applicable to them if they become less than Well Capitalized pursuant to Prompt Correction Action (PCA) provisions under the Federal Deposit Insurance Corporation Improvement Act.[9] Contingencies may include restricted rates paid for deposits, the need to seek approval from the FDIC/NCUA to accept brokered deposits, and the inability to

8. Financial institutions that have had their liquidity supported by temporary government programs administered by the Department of the Treasury, Federal Reserve, and/or FDIC should not base their liquidity strategies on the belief that such programs will remain in place indefinitely.

9. See 12 USC 1831o, 12 CFR 6 (OCC), 12 CFR 208.40 (FRB), and 12 CFR 325.101 (FDIC).

accept any brokered deposits.[10]

A CFP provides a documented framework for managing unexpected liquidity situations. The objective of the CFP is to ensure that the institution's sources of liquidity are sufficient to fund normal operating requirements under contingent events. A CFP also identifies alternative contingent liquidity resources[11] that can be employed under adverse liquidity circumstances. An institution's CFP should be commensurate with its complexity, risk profile, and scope of operations. As macroeconomic and institution-specific conditions change, CFPs should be revised to reflect these changes.

Contingent liquidity events can range from high-probability/low-impact events to low-probability/high-impact events. Institutions should incorporate planning for high-probability/low-impact liquidity risks into the day-to-day management of sources and uses of funds. Institutions can generally accomplish this by assessing possible variations around expected cash flow projections and providing for adequate liquidity reserves and other means of raising funds in the normal course of business. In contrast, all financial institution CFPs will typically focus on events that, while relatively infrequent, could significantly impact the institution's operations. A CFP should:

1. *Identify Stress Events*. Stress events are those that may have a significant impact on the institution's liquidity given its specific balance-sheet structure, business lines, organizational structure, and other characteristics. Possible stress events may include deterioration in asset quality, changes in agency credit ratings, PCA capital categories and CAMELS ratings downgrades, widening of credit default spreads, operating losses, declining financial institution equity prices, negative press coverage, or other events that may call into question an institution's ability to meet its obligations.
2. *Assess Levels of Severity and Timing.* The CFP should delineate the various levels of stress severity that can occur during a contingent liquidity event and identify the different stages for each type of event. The events, stages, and severity levels identified should include temporary disruptions as well as those that might be more intermediate term or longer-term. Institutions can use the different stages or levels of severity identified to design early-warning indicators, assess potential funding needs at various points in a developing crisis, and specify comprehensive action plans. The length of the scenario will be determined by the type of stress event being modeled and should encompass the duration of the event.
3. *Assess Funding Sources and Needs.* A critical element of the CFP is the quantitative projection and evaluation of expected funding needs and funding capacity during the stress event. This entails an analysis of the potential erosion in funding at alternative stages or severity levels of the stress event and the potential cash flow mismatches that may occur during the various stress levels. Management should base such analysis on realistic assessments of the behavior of funds providers during the event and incorporate alternative contingency funding sources. The analysis also should include all material on-and off-balance-sheet cash flows and their related effects. The result should be a realistic analysis of cash inflows, outflows, and funds availability at different time intervals during the potential liquidity stress event in order to measure the institution's ability to fund operations. Common tools to assess funding mismatches include:
   a. *Liquidity gap analysis*—A cash flow report that essentially represents a base case estimate of where funding surpluses and shortfalls will occur over various future time frames.
   b. *Stress tests*—A pro forma cash flow report with the ability to estimate future funding surpluses and shortfalls under various liquidity stress scenarios and the institution's ability to fund expected asset growth projections or sustain an orderly liquidation of assets under various stress events.
4. *Identify Potential Funding Sources.* Because liquidity pressures may spread from one funding source to another during a significant liquidity event, institutions should identify alternative sources of liquidity, and ensure ready access to contingent funding sources. In some cases, these funding sources may rarely be used in the normal course of busi-

10. Section 38 of the FDI Act (12 USC 1831o) requires insured depository institutions that are not well capitalized to receive approval prior to engaging in certain activities. Section 38 restricts or prohibits certain activities and requires an insured depository institution to submit a capital restoration plan when it becomes undercapitalized.

11. There may be time constraints, sometimes lasting weeks, encountered in initially establishing lines with FRB and/or FHLB. As a result, financial institutions should plan to have these lines set up well in advance.

ness. Therefore, institutions should conduct advance planning and periodic testing to ensure that contingent funding sources are readily available when needed.

5. *Establish Liquidity Event Management Processes.* The CFP should provide for a reliable crisis management team and administrative structure, including realistic action plans used to execute the various elements of the plan for given levels of stress. Frequent communication and reporting among team members, the board of directors, and other affected managers optimize the effectiveness of a contingency plan during an adverse liquidity event by ensuring that business decisions are coordinated to minimize further disruptions to liquidity. Such events may also require the daily computation of regular liquidity risk reports and supplemental information. The CFP should provide for more frequent and more detailed reporting as the stress situation intensifies.
6. *Establish a Monitoring Framework for Contingent Events.* Institution management should monitor for potential liquidity stress events by using early-warning indicators and event triggers. The institution should tailor these indicators to its specific liquidity risk profile. The early recognition of potential events allows the institution to position itself into progressive states of readiness as the event evolves, while providing a framework to report or communicate within the institution and to outside parties. Early-warning signals may include, but are not limited to, negative publicity concerning an asset class owned by the institution, increased potential for deterioration in the institution's financial condition, widening debt or credit default swap spreads, and increased concerns over the funding of off-balance-sheet items.

To mitigate the potential for reputation contagion, effective communication with counterparties, credit-rating agencies, and other stakeholders when liquidity problems arise is of vital importance. Smaller institutions that rarely interact with the media should have plans in place for how they will manage press inquiries that may arise during a liquidity event. In addition, groupwide contingency funding plans, liquidity cushions, and multiple sources of funding are mechanisms that may mitigate reputation concerns.

In addition to early-warning indicators, institutions that issue public debt, use warehouse financing, securitize assets, or engage in material over-the-counter derivative transactions typically have exposure to event triggers embedded in the legal documentation governing these transactions. Institutions that rely upon brokered deposits should also incorporate PCA-related downgrade triggers into their CFPs since a change in PCA status could have a material bearing on the availability of this funding source. Contingent event triggers should be an integral part of the liquidity risk monitoring system. Institutions that originate and/or purchase loans for asset securitization programs pose heightened liquidity risk concerns due to the unexpected funding needs associated with an early amortization event or disruption of warehouse funding. Institutions that securitize assets should have liquidity contingency plans that address these risks.

Institutions that rely upon secured funding sources also are subject to potentially higher margin or collateral requirements that may be triggered upon the deterioration of a specific portfolio of exposures or the overall financial condition of the institution. The ability of a financially stressed institution to meet calls for additional collateral should be considered in the CFP. Potential collateral values also should be subject to stress tests since devaluations or market uncertainty could reduce the amount of contingent funding that can be obtained from pledging a given asset. Additionally, triggering events should be understood and monitored by liquidity managers.

Institutions should test various elements of the CFP to assess their reliability under times of stress. Institutions that rarely use the type of funds they identify as standby sources of liquidity in a stress situation, such as the sale or securitization of loans, securities repurchase agreements, Federal Reserve discount window borrowing, or other sources of funds, should periodically test the operational elements of these sources to ensure that they work as anticipated. However, institutions should be aware that during real stress events, prior market access testing does not guarantee that these funding sources will remain available within the same time frames and/or on the same terms.

Larger, more complex institutions can benefit by employing operational simulations to test communications, coordination, and decision making involving managers with different responsibilities, in different geographic locations, or at different operating subsidiaries. Simulations or tests run late in the day can highlight specific problems, such as difficulty in selling assets or borrowing new funds at a time when business in the capital markets may be less active.

Internal Controls

An institution's internal controls consist of procedures, approval processes, reconciliations, reviews, and other mechanisms designed to provide assurance that the institution manages liquidity risk consistent with board-approved policy. Appropriate internal controls should address relevant elements of the risk management process, including adherence to policies and procedures, the adequacy of risk identification, risk measurement, reporting, and compliance with applicable rules and regulations.

Management should ensure that an independent party regularly reviews and evaluates the various components of the institution's liquidity risk management process. These reviews should assess the extent to which the institution's liquidity risk management complies with both supervisory guidance and industry sound practices, taking into account the level of sophistication and complexity of the institution's liquidity risk profile.[12] Smaller, less-complex institutions may achieve independence by assigning this responsibility to the audit function or other qualified individuals independent of the risk management process. The independent review process should report key issues requiring attention, including instances of noncompliance, to the appropriate level of management for prompt corrective action consistent with approved policy.

4066.0.2 APPENDIX B—INTERAGENCY GUIDANCE ON FUNDS TRANSFER PRICING RELATED TO FUNDING AND CONTINGENT LIQUIDITY RISKS

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) issued this guidance on funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk at large financial institutions (hereafter referred to as "firms") to address weaknesses observed in some firms' FTP practices.[13] The guidance builds on the principles of sound liquidity risk management described in the "Interagency Policy Statement on Funding and Liquidity Risk Management,"[14] and incorporates elements of the international statement issued by the Basel Committee on Banking Supervision titled "Principles for Sound Liquidity Risk Management and Supervision."[15] Refer to SR-16-03.

Background

For purposes of this guidance, FTP refers to a process performed by a firm's central management function that allocates costs and benefits associated with funding and contingent liquidity risks (FTP costs and benefits), as measured at transaction or trade inception, to a firm's business lines, products, and activities. While this guidance specifically addresses FTP practices related to funding and contingent liquidity risks, firms may incorporate other risks in their overall FTP frameworks.

FTP is an important tool for managing a firm's balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. This process helps align a firm's funding and contingent liquidity risk profile and risk appetite and complements, but does not replace, broader liquidity and interest rate risk management programs (for example, stress testing) that a firm uses to capture certain risks (for example, basis risk). If

12. This includes the standards established in this interagency guidance as well as the supporting material each agency provides in its examination manuals and handbooks directed at their supervised institutions. Industry standards include those advanced by recognized industry associations and groups.

13. For purposes of this guidance, large financial institutions include: national banks, federal savings associations and state-chartered banks with consolidated assets of $250 billion or more, domestic bank and savings and loan holding companies with consolidated assets of $250 billion or more or foreign exposure of $10 billion or more, and foreign banking organizations with combined U.S. assets of $250 billion or more.

14. Refer to: FRB's SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management"; FDIC's FIL-13-2010, "Funding and Liquidity Risk Management Interagency Guidance"; and OCC Bulletin 2010-13, "Final Policy Statement: Interagency Policy Statement on Funding and Liquidity Management."

15. The Basel Committee on Banking Supervision statement on "Principles for Sound Liquidity Risk Management and Supervision" (September 2008) is available at www.bis.org/publ/bcbs144.htm.

done effectively, FTP promotes more resilient, sustainable business models. FTP is also an important tool for centralizing the management of funding and contingent liquidity risks for all exposures. Through FTP, a firm can transfer these risks to a central management function that can take advantage of natural offsets, centralized hedging activities, and a broader view of the firm.

Failure to consistently and effectively apply FTP can misalign the risk-taking incentives of individual business lines with the firm's risk appetite, resulting in a misallocation of financial resources. This misallocation can arise in new business and ongoing portfolio composition where the business metrics do not reflect risks taken, thereby undermining the business model. Examples include entering into excessive off-balance sheet commitments and on-balance sheet asset growth because of mispriced funding and contingent liquidity risks.

The 2008 financial crisis exposed weak risk management practices for allocating liquidity costs and benefits across business lines. Several firms "acknowledged that if robust FTP practices had been in place earlier, and if the systems had charged not just for funding but for liquidity risks, they would not have carried the significant levels of illiquid assets and the significant risks that were held off-balance sheet that ultimately led to sizable losses."[16]

Funds Transfer Pricing Principles

A firm should have an FTP framework to support its broader risk management and governance processes that incorporates the general principles described in this section and is commensurate with its size, complexity, business activities, and overall risk profile. The framework should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities to align risk-taking incentives with the firm's risk appetite.

Principle 1: A firm should allocate FTP costs and benefits based on funding risk and contingent liquidity risk.

A firm should have an FTP framework that allocates costs and benefits based on the following risks.

- *Funding risk,* measured as the cost or benefit (including liquidity and interest rate components) of raising funds to finance ongoing business operations, should be allocated based on the characteristics of the business lines, products, and activities that give rise to those costs or benefits (for example, higher costs allocated to assets that will be held over a longer time horizon and greater benefits allocated to stable sources of funding).
- *Contingent liquidity risk,* measured as the cost of holding standby liquidity composed of unencumbered, highly liquid assets, should be allocated to the business lines, products, and activities that pose risk of contingent funding needs during a stress event (for example, draws on credit commitments, collateral calls, deposit run-off, and increasing haircuts on secured funding).

Principle 2: A firm should have a consistent and transparent FTP framework for identifying and allocating FTP costs and benefits on a timely basis and at a sufficiently granular level, commensurate with the firm's size, complexity, business activities, and overall risk profile.

FTP costs and benefits should be allocated based on methodologies that are set forth by a firm's FTP framework. The methodologies should be transparent, repeatable, and sufficiently granular such that they align business decisions with the firm's desired funding and contingent liquidity risk appetite. To the extent a firm applies FTP at an aggregated level to similar products and activities, the firm should include the aggregating criteria in the report on FTP.[17] Additionally, the senior management group that oversees FTP should review the basis for the FTP methodologies. The attachment to this interagency guidance describes illustrative FTP methodologies that a firm may consider when implementing its FTP framework.[18]

A firm should allocate FTP costs and benefits, as measured at transaction or trade inception, to the appropriate business line, product, or activity. If a firm retains any FTP costs or benefits in a centrally managed pool pursuant to its FTP framework, it should analyze the implications of

16. Senior Supervisors Group report on "Risk Management Lessons from the Global Financial Crisis of 2008" (October 21, 2009) is available at https://www.newyorkfed.org/medialibrary/media/newsevents/news/banking/2009/SSG_report.pdf.

17. See Principle 3 for a discussion of the report on FTP.

18. The FRB, the FDIC, and the OCC will monitor evolving FTP practices in the market and may update or add to the illustrative methodologies in the interagency guidance attachment.

such decisions on business line incentives and the firm's overall risk profile. The firm customarily would include its findings in the report on FTP.

The FTP framework should be implemented consistently across the firm to appropriately align risk-taking incentives. While it is possible to apply different FTP methodologies within a firm due to, among other things, legal entity type or specific jurisdictional circumstances, a firm should generally implement the FTP framework in a consistent manner across its corporate structure to reduce the likelihood of misaligned incentives. If there are implementation differences across the firm, management should analyze the implications of such differences on business line incentives and the firm's overall funding and contingent liquidity risk profile. The firm customarily would include its findings in the report on FTP.

A firm should allocate, report, and update data on FTP costs and benefits at a frequency that is appropriate for the business line, product, or activity. Allocating, reporting, and updating of data should occur more frequently for trading exposures (for example, on a daily basis). Infrequent allocation, reporting, or updating of data for trading exposures (for example, based on month-end positions) may not fully capture a firm's day-to-day funding and contingent liquidity risks. For example, a firm should monitor the age of its trading exposures, and those held longer than originally intended should be reassessed and FTP costs and benefits should be reallocated based on the modified holding period.

A firm's FTP framework should address derivative activities commensurate with the size and complexity of those activities. The FTP framework may consider the fair value of current positions, the rights of rehypothecation for collateral received, and contingent outflows that may occur during a stress event.

To avoid a misalignment of risk-taking incentives, a firm should adjust its FTP costs and benefits as appropriate based on both market-wide and idiosyncratic conditions, such as trapped liquidity, reserve requirements, regulatory requirements, illiquid currencies, and settlement or clearing costs. These idiosyncratic conditions should be contemplated in the FTP framework, and the firm customarily would include a discussion of the implications in the report on FTP.

Principle 3: A firm should have a robust governance structure for FTP, including the production of a report on FTP and oversight from a senior management group and central management function.

A firm should have a senior management group that oversees FTP, which should include a broad range of stakeholders, such as representatives from the firm's asset-liability committee (if separate from the senior management group), the treasury function, and business line and risk management functions. This group should develop the policy underlying the FTP framework, which should identify assumptions, responsibilities, procedures, and authorities for FTP. The policy should be reviewed and updated on a regular basis or when the firm's asset-liability structure or scope of activities undergoes a material change. Further, senior management with oversight responsibility for FTP should periodically, but no less frequently than quarterly, review the report on FTP to ensure that the established FTP framework is being properly implemented.

A firm should also establish a central management function tasked with implementing the FTP framework. The central management function should have visibility over the entire firm's on- and off-balance sheet exposures. Among its responsibilities, the central management function should regularly produce and analyze a report on FTP generated from accurate and reliable management information systems. The report on FTP should be at a sufficiently granular level to enable the senior management group and central management function to effectively monitor the FTP framework (for example, at the business line, product, or activity level, as appropriate). Among other items, all material approvals, such as those related to any exception to the FTP framework, including the reason for the exception, would customarily be documented in the report on FTP. The report on FTP may be standalone or included within a broader risk management report.

Independent risk and control functions and internal audit should provide oversight of the FTP process and assess the report on FTP, which should be reviewed as appropriate to reflect changing business and financial market conditions and to maintain the appropriate alignment of incentives. Lastly, consistent with existing supervisory guidance on model risk management,[19] models used in FTP implementation should be independently validated and regularly reviewed to ensure that the models continue to

19. Refer to: FRB's SR-11-7, "Guidance on Model Risk Management"; OCC Bulletin 2011-12, "Supervisory Guidance on Model Risk Management." Refer to section 2126.0 of this manual.

perform as expected, that all assumptions remain appropriate, and that limitations are understood and appropriately mitigated.

Principle 4: A firm should align business incentives with risk management and strategic objectives by incorporating FTP costs and benefits into product pricing, business metrics, and new product approval.

Through its FTP framework, a firm should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities (both on- and off-balance sheet). The framework, the report on FTP, and any associated management information systems should be designed to provide decision makers sufficient and timely information about FTP costs and benefits so that risk-taking incentives align with the firm's strategic objectives.

The information may be either at the transaction level or, if the transactions have homogenous funding and contingent liquidity risk characteristics, at an aggregated level. In deciding whether to allocate FTP costs and benefits at the transaction or aggregated level, firms should consider advantages and disadvantages of both approaches when developing the FTP framework. Although transaction-level FTP allocations may add complexity and involve higher implementation and maintenance costs, such allocations may provide a more accurate measure of risk-adjusted profitability. A firm assigning FTP allocations at an aggregated level should have aggregation criteria based on funding and contingent liquidity risk characteristics that are transparent.

There should be ongoing dialogue between the business lines and the central function responsible for allocating FTP costs and benefits to ensure that funding and contingent liquidity risks are being captured and are well-understood for product pricing, business metrics, and new product approval. The business lines should understand the rationale for the FTP costs and benefits, and the central function should understand the funding and contingent liquidity risks implicated by the business lines' transactions. Decisions by senior management to incentivize certain behaviors through FTP costs and benefits customarily would be documented and included in the report on FTP.

Conclusion

A firm should use the principles laid out in this guidance to develop, implement, and maintain an effective FTP framework. In doing so, a firm's risk-taking incentives should better align with its risk management and strategic objectives. The framework should be adequately tailored to a firm's size, complexity, business activities, and overall risk profile.

Interagency Guidance Attachment Illustrative Funds Transfer Pricing Methodologies

March 1, 2016

The Funds Transfer Pricing (FTP) methodologies described below are intended for illustrative purposes only and provide examples for addressing principles set forth in the guidance. A firm's FTP framework should be commensurate with its size, complexity, business activities, and overall risk profile. In designing its FTP framework, a firm may utilize other methodologies that are consistent with the principles set forth in the guidance. Therefore, these illustrative methodologies should not be interpreted as directives for implementing any particular FTP methodology.

Non-Trading Exposures

For non-trading exposures, a firm's FTP methodology may vary based on its business activities and specific exposures. For example, certain firms may have higher concentrations of exposures that have less predictable time horizons, such as non-maturity loans and non-maturity deposits.

Matched-Maturity Marginal Cost of Funding

Matched-maturity marginal cost of funding is a commonly used methodology for non-trading exposures. Under this methodology, FTP costs and benefits are based on a firm's market cost of funds across the term structure (for example, wholesale long-term debt curve adjusted based on the composition of the firm's alternate sources of funding such as Federal Home Loan Bank advances and customer deposits). This methodology incentivizes business lines to generate stable funding (for example, core deposits) by crediting them the benefit or premium associated with such funding. It also ensures that business lines are appropriately charged the cost of funding for the life of longer-dated assets (for example, a five-year commercial loan). Given that funding costs can change over time, the market cost of funds across the term structure should be derived from reliable and readily available data sources and be well understood by FTP users.

FTP rates should, as closely as possible, match the characteristics of the transaction or the aggregated transactions to which they are applied. In determining the appropriate point on the derived FTP curve for a transaction or pool of transactions, a firm could consider a variety of characteristics, including the holding period, cash flow, re-pricing, prepayments, and expected life of the transaction or pool. For example, for a five-year commercial loan that has a rate that resets every three months and will be held to maturity, the interest rate component of the funding risk could be based on a three-month horizon for determining the FTP cost, and the liquidity component of the funding risk could be based on a five-year horizon for determining the FTP cost. Thus, the total FTP cost for holding the five-year commercial loan would be the combination of these two components.

Contingent Liquidity Risk

A firm may calculate the FTP cost related to non-trading exposure contingent liquidity risk using models based on behavioral assumptions. For example, charges for contingent commitments could be based on their modeled likelihood of drawdown, considering customer drawdown history, credit quality, and other factors; whereas, credits applied to deposits could be based on volatility and modeled behavioral maturity. A firm should document and include all modeling analyses and assumptions in the report on FTP. If behavioral assumptions used in a firm's FTP framework do not align with behavioral assumptions used in its internal stress test for similar types of non-trading exposures, the firm should document and include in the report on FTP these inconsistencies.

Trading Exposures

For trading exposures, a firm could consider a variety of factors, including the type of funding source (for example, secured or unsecured), the market liquidity of the exposure (for example, the size of the haircut relative to the overall exposure), the holding period of the position, the prevailing market conditions, and any potential impact the chosen approach could have on firm incentives and overall risk profile. If a firm's trading activities are not material, its FTP framework may require a less complex methodology for trading exposures. The following FTP methodologies have been observed for allocating FTP costs for trading exposures.

Weighted Average Cost of Debt (WACD)

WACD is the weighted average cost of outstanding firm debt, usually expressed as a spread over an index. Some firms' practices apply this rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using WACD should analyze whether the methodology misaligns risk-taking incentives and document such analyses in the report on FTP.

Marginal Cost of Funding

Marginal cost of funding sets the FTP costs at the appropriate incremental borrowing rate of a firm. Some firms' practices apply a marginal secured borrowing rate to the amount of an asset expected to be funded secured and a marginal unsecured borrowing rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using marginal cost of funding should analyze whether the methodology misaligns risk-taking incentives, considering current market rates compared to historical rates, and document such analyses in the report on FTP.

Contingent Liquidity Risk

A firm may calculate the FTP costs related to contingent liquidity risk from trading exposures by considering the unencumbered liquid assets that are held to cover the potential for widening haircuts of trading exposures that are funded secured. If haircuts used in a firm's FTP framework do not align with haircuts used in its internal stress test for similar types of trading exposures, the firm should document and include in the report on FTP these inconsistencies. Haircuts should be updated at a frequency that is appropriate for a firm's trading activities and market conditions.

A firm may also include the FTP costs related to contingent liquidity risk from potential derivative outflows in stressed market conditions, which may be due to, for example, credit rating downgrades, additional termination rights, or market shocks and volatility.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to recognize the supervisory guidance contained in SR-08-12 and its interagency attachment, "Changes to the Interagency Country Exposure Review Committee (ICERC) Process." A significant change was made to the ICERC rating process—ICERC will only rate countries that are in default.[1]

4090.0.05 DEFINITION, COMPOSITION, AND EXPOSURES OF COUNTRY RISK AND EVALUATING THE ADEQUACY OF COUNTRY-RISK MANAGEMENT

Apart from the consideration of the creditworthiness of individual borrowers, holding companies engaged in international activities are subject to elements of country risk. Country risk encompasses the entire spectrum of risks arising from the economic, social, and political environments of a foreign country, as well as the governmental policies structured to respond to these conditions. These factors may have potentially favorable or adverse consequences for foreigners' debt and equity investments in a particular country. The Federal Reserve, along with the Office of the Comptroller of the Currency and Federal Deposit Insurance Corporation, have issued supervisory guidance concerning the elements of an effective country-risk management process for banking organizations. (See SR-02-05 and SR-08-12, including their attachments.)

Country risk is the risk that economic, social, or political conditions in a foreign country might adversely affect an organization's financial condition, primarily through impaired credit quality or transfer risk.[2] Country risk is also an important consideration when evaluating the level of credit risk associated with individual counterparties in a country. Regardless of the availability of foreign exchange, macroeconomic conditions and events that are beyond the control of individual borrowers can strain or impair the financial capacity of otherwise sound borrowers. Significant depreciation of a country's exchange rate, for example, increases the cost of servicing external debt and can adversely affect not only transfer risk for the country, but also the credit risk associated with even the strongest counterparties in the country.

Country risk can occur in many different forms, and the nature of specific risks can change over time. It is essential that a U.S. banking organization with significant direct or indirect international exposure have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. More specifically, country risk focuses on a borrower's capacity to obtain the foreign exchange required to service cross-currency debt. A borrower's debt-service capacity may also be affected by the risks of political and social upheaval, nationalization and expropriation, governmental repudiation of external indebtedness, exchange controls, and devaluation. Events such as these may materially affect the condition of investments and the profitability of lending activities overseas; examiners must alert management to those risks that may be difficult for the holding company and its subsidiaries to absorb.

Using uniform examination procedures and techniques for evaluating country-risk exposures for domestic banks, examiners segregate country-risk factors from the evaluation of other lending risks. The procedures emphasize diversification of exposure to individual countries as the primary method of moderating country risk in international portfolios. The approach generally consists of three parts:

1. measuring exposure in each country where a business relationship exists
2. analyzing exposure in relation to the bank's capital resources and the economic and financial conditions of each country in which the bank has outstanding credits
3. evaluating the risk-management system used by the bank in relation to the size and nature of its foreign lending activities

Examiners should evaluate the adequacy of the country-risk management process at internationally active bank holding companies. This risk-assessment process should include, at a

1. With the adoption of revised ICERC procedures in November 2008, the Federal Reserve and the other banking agencies eliminated the rating categories of Other Transfer Risk Problems, Weak, Moderately Strong, and Strong.

2. Transfer risk is the possibility that an asset cannot be serviced in the currency of payment because of a lack of, or restraints on the availability of, needed foreign exchange in the country of the obligor. For more information, see the "Guide to the Interagency Country Exposure Review Committee Process" (SR-08-12's attachment).

minimum, effective oversight by the board of directors, adequate risk-management policies and procedures, an accurate country-exposure reporting system, an effective country-risk analysis process, a country-risk rating system, country-exposure limits, ongoing monitoring of country conditions, periodic stress testing of foreign exposures, and adequate internal controls and an audit function. A bank holding company's country-risk management process should give particular attention to any concentrations of country risk, first at the consolidated level and then within the parent company and nonbank subsidiaries, as well as to any concentrations reported by supervisors at the bank subsidiaries.

4090.0.1 COUNTRY RISKS AND FACTORS

Country or sovereign risk encompasses the entire spectrum of risks and factors that arise from the economic, social, and political environments of a foreign country that may have potential consequences for foreigners' debt and equity investments in that country. A detailed description of these factors is described below.

4090.0.1.1 Macroeconomic Factors

The first factor affecting country risk is the size and structure of a country's external debt in relation to its economy, more specifically—

1. the current level of short-term debt and the potential effect that a liquidity crisis would have on the ability of otherwise creditworthy borrowers in the country to continue servicing their obligations, and
2. to the extent the external debt is owed by the public sector, the ability of the government to generate sufficient revenues, from taxes and other sources, to service its obligations.

The condition and vulnerability of the country's current account is also an important consideration, including—

1. the level of international reserves, including forward market positions of the country's monetary authority (especially when the exchange rate is fixed);
2. the level of import coverage provided by the country's international reserves;
3. the importance of commodity exports as a source of revenue, the existence of any price-stabilization mechanisms, and the country's vulnerability to a downturn in either its export markets or the price of an exported commodity; and
4. the potential for sharp movements in exchange rates and the effect on the relative price of the country's imports and exports.

The role of foreign sources of capital in meeting the country's financing needs is another important consideration in the analysis of country risk, including—

1. the country's access to international financial markets and the potential effects of a loss of market liquidity;
2. the country's relationships with private-sector creditors, including the existence of loan commitments and the attitude among bankers toward further lending to borrowers in the country;
3. the country's current standing with multilateral and official creditors, including the ability of the country to qualify for and sustain an International Monetary Fund or other suitable economic adjustment program;
4. the trend in foreign investments and the country's ability to attract foreign investments in the future; and
5. the opportunities for privatization of government-owned entities.

Past experience has highlighted the importance of a number of other important macroeconomic considerations, including—

1. the degree to which the country's economy may be adversely affected through the contagion of problems in other countries;
2. the size and condition of the country's banking system, including the adequacy of the country's system for bank supervision and any potential burden of contingent liabilities that a weak banking system might place on the government;
3. the extent to which state-directed lending or other government intervention may have adversely affected the soundness of the country's banking system, or the structure and competitiveness of the favored industries or companies; and
4. for both in-country and cross-border exposures, the degree to which macroeconomic conditions and trends may have adversely affected the credit risk associated with counterparties in the country.

4090.0.1.2 Social, Political, and Legal Climate

The analysis of country risk should also consider the country's social, political, and legal climate, including—

1. the country's natural- and human-resource potential;
2. the willingness and ability of the government to recognize economic or budgetary problems and implement appropriate remedial action;
3. the degree to which political or regional factionalism or armed conflicts are adversely affecting the government of the country;
4. any trends toward government-imposed price, interest-rate, or exchange controls;
5. the degree to which the country's legal system can be relied on to fairly protect the interests of foreign creditors and investors;
6. the accounting standards in the country and the reliability and transparency of financial information;
7. the extent to which the country's laws and government policies protect parties in electronic transactions and promote the development of technology in a safe and sound manner;
8. the extent to which government policies promote the effective management of the bank holding company's exposures; and
9. the level of adherence to international legal and business-practice standards.

4090.0.1.3 Factors Specific to Banking Organizations

Finally, a bank holding company's analysis of country risk should consider factors relating to the nature of its actual (or approved) exposures in the country, including, for example—

1. the bank holding company's business strategy and its exposure-management plans for the country;
2. the mix of exposures and commitments, including the types of investments and borrowers, the distribution of maturities, the types and quality of collateral, the existence of guarantees, whether exposures are held for trading or investment, and any other distinguishing characteristics of the portfolio;
3. the economic outlook for any specifically targeted industries within the country;
4. the degree to which political or economic developments in a country are likely to affect the bank holding company's chosen lines of business in the country (for instance, the unemployment rate or changes in local bankruptcy laws may affect certain activities more than others);
5. for a bank holding company involved in capital markets, its susceptibility to changes in value based on market movements (As the market value of claims against a foreign counterparty rise, the counterparty may become less financially sound, thus increasing the risk of nonpayment (this is especially true for over-the-counter derivative instruments.));
6. the degree to which political or economic developments are likely to affect the credit risk of individual counterparties in the country (for example, foreign counterparties with healthy export markets or whose business is tied closely to supplying manufacturing entities in developed countries may have significantly less exposure to the local country's economic disruptions than do other counterparties in the country); and
7. the bank holding company's ability to effectively manage its exposures in a country through in-country or regional representation, or by some other arrangement that ensures the timely reporting of, and response to, any problems.

4090.0.2 RISK-MANAGEMENT PROCESS FOR COUNTRY RISK

Country risk has an overarching effect on a bank holding company's international activities and should explicitly be taken into account in the risk assessment of all exposures (including off-balance-sheet) to all public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest counterparties in a country will increase if, for example, political or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise. Country risk can occur in many different forms, and the nature of specific risks can change over time. A U.S. banking organization with significant direct or indirect international exposure should have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. Examiners should be continually evaluating the adequacy of the country-risk management process at internationally active bank holding companies, and they should regularly update their assessments. A bank holding company's country-risk management process should give particular attention to any concentrations of country risk at the parent level or within its bank and nonbank subsidiaries.

Country risk is not necessarily limited to banking organizations with direct international exposures. Domestic counterparties with significant economic dependence on a foreign country or region (for example, through export dependence) can pose an indirect country risk to banking organizations that do not have direct international activity. While banking organizations are not required to incorporate indirect country risk into a formal country-risk management process, they should, nevertheless, take these country-risk factors into account, where appropriate, when assessing the creditworthiness of domestic counterparties. Examiners should ensure that the overall credit-risk management process takes into account indirect country risk where applicable in all Federal Reserve–supervised banking organizations.

To effectively control the risk associated with international activities, bank holding companies must have a risk-management process that focuses on the broadly defined concept of country risk. The elements of a sound country-risk management process are discussed in further detail below.

4090.0.2.1 Oversight by the Board of Directors

If country risk is to be managed properly, the board of directors must oversee the process effectively. The board is responsible for periodically reviewing and approving policies governing its international activities to ensure that they are consistent with the bank holding company's strategic plans and goals. The board is also responsible for reviewing and approving limits on country exposure and ensuring that management is effectively controlling the risk. When evaluating the adequacy of the bank holding company's capital and allowance for loan and lease losses (ALLL), the board should take into account the volume of foreign exposures and the ratings of the countries to which it is exposed.

4090.0.2.2 Policies and Procedures for Managing Country Risk

Bank management is responsible for implementing sound, well-defined policies and procedures for managing country risk that—

1. establish risk-tolerance limits;
2. delineate clear lines of responsibility and accountability for country-risk management decisions;
3. specify authorized activities, investments, and instruments; and
4. identify both desirable and undesirable types of business.

Management should also ensure that country-risk management policies, standards, and practices are clearly communicated to the affected offices and staff.

4090.0.2.3 Country-Exposure Reporting System

To effectively manage country risk, the bank holding company must have a reliable system for capturing and categorizing the volume and nature of foreign exposures. The reporting system should cover all aspects of the bank holding company's operations, whether conducted through paper transactions or electronically. An accurate country-exposure reporting system is also necessary to support the regulatory reporting of foreign exposures on the quarterly Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a.

The board of directors should regularly receive reports on the level of foreign exposures. If the level of foreign exposures in a bank holding company is significant,[3] or if a country to which the bank holding company is exposed is considered to be high risk, exposures should be reported to the board at least quarterly. More frequent reporting is appropriate when a deterioration in foreign exposures would threaten the soundness of the bank holding company.

3. For purposes of this guidance, concentrations of exposures to individual countries that exceed 25 percent of the bank holding company's or bank's tier 1 capital plus the ALLL are considered significant. However, in the case of particularly troubled countries, lesser degrees of exposure may also be considered to be significant.

4090.0.2.4 Country-Risk Analysis Process

Although the nature of the country-risk analysis process and the level of resources devoted to it will vary, depending on the size and sophistication of the banking organization's international operations, a number of considerations are relevant to evaluating the process in all banking organizations:

1. Is there a quantitative and qualitative assessment of the risk associated with each country in which the banking organization is conducting or planning to conduct business?
2. Is a formal analysis of country risk conducted at least annually, and does the banking organization have an effective system for monitoring developments in the interim?
3. Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the banking organization may have targeted in its business strategy?
4. Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the banking organization's exposures in a country?
5. Given the size and sophistication of the banking organization's international activities, are the resources devoted to the analysis of country risk adequate?
6. As a final check of the process, are the banking organization's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?

4090.0.2.5 Country-Risk Ratings

Country-risk ratings summarize the conclusions of the country-risk analysis process. The ratings are an important component of country-risk management because they provide a framework for establishing country-exposure limits that reflect the bank holding company's tolerance for risk.

Because some counterparties may be more exposed to local country conditions than others, it is a common and acceptable practice for banking organizations to distinguish between different types of exposures when assigning their country-risk ratings. For example, trade-related and banking-sector exposures typically receive better risk ratings than other categories of exposure because the importance of these types of transactions to a country's economy has usually moved governments to give them preferential treatment for repayment.

The risk-rating systems of some banking organizations differentiate between public-sector and private-sector exposures. In some banking organizations, a country's private-sector credits cannot be rated less severely than its public-sector credits (that is, the banking organization imposes a "sovereign ceiling" on the rating for all exposures in a country). Both are acceptable practices.

A banking organization's country-risk ratings may differ from the ICERC-assigned transfer-risk ratings because the two ratings differ in purpose and scope. A banking organization's internally assigned ratings help it to decide whether to extend additional credit, as well as how it should manage existing exposures. Such ratings should, therefore, have a forward-looking and broad country-risk focus. The ICERC's more narrowly focused transfer-risk ratings are primarily a supervisory tool to identify countries where concentrations of transfer risk might warrant greater scrutiny and to determine whether some minimum level of reserves against transfer risk should be established. The ICERC rating process only rates countries in default. Default occurs when a country is not complying with its external debt-service obligations or is unable to service the existing loan according to its terms, as evidenced by failure to pay principal and interest fully and on time, arrearages, forced restructuring, or rollovers. For more information on ICERC ratings, see section 7040.3 of the *Commercial Bank Examination Manual* and SR-08-12.

4090.0.2.6 Country-Exposure Limits

As part of their country-risk management process, internationally active bank holding companies should adopt a system of country-exposure limits. Because the limit-setting process often involves divergent interests within the banking organization (such as the country managers, the bank holding company's overall country-risk manager, and the country-risk committee), country-risk limits will usually reflect a balancing of several considerations, including—

1. the overall strategy guiding the bank holding company's international activities,
2. the country's risk rating and the bank holding company's appetite for risk,
3. perceived business opportunities in the country, and
4. the desire to support the international business needs of domestic customers.

Country-exposure limits should be approved by the board of directors, or a committee thereof, and communicated to all affected departments and staff. Exposure limits should be reviewed and approved at least annually—and more frequently when concerns about a particular country arise.

A bank holding company's board of directors and senior management should consider whether its international operations are such that it should supplement its aggregate exposure limits with more discrete controls. Such controls might take the form of limits on the different lines of business in the country, limits by type of counterparty, or limits by type or tenor of exposure. A bank holding company might also limit its exposure to local currencies. Bank holding companies that have both substantial capital-market exposures and credit-related exposures typically set separate aggregate exposure limits for each because exposures to the two lines of business are usually measured differently.

Although country-by-country exposure limits are customary, bank holding companies should also consider limiting (or at least monitoring) exposures on a broader (for example, regional) basis. A troubled country's problems often affect its neighbors, and the adverse effects may also extend to geographically distant countries with close ties through trade or investment. By monitoring and controlling exposures on a regional basis, bank holding companies are in a better position to respond if the adverse effects of a country's problems begin to spread.

For bank holding companies that are engaged primarily in direct lending activities, monthly monitoring of compliance with country-exposure limits is adequate. However, bank holding companies with more volatile portfolios, including those with significant trading accounts, should monitor compliance with approved limits more frequently. Exceptions to approved country-exposure limits should be reported to an appropriate level of management or the board of directors so that it can consider corrective measures.

4090.0.2.7 Monitoring Country Conditions

The bank holding company should have a system in place to monitor current conditions in each of the countries where it is significantly exposed. The level of resources devoted to monitoring conditions within a country should be proportionate to the bank holding company's level of exposure and the perceived level of risk. If the bank holding company maintains an in-country office, reports from the local staff are an obviously valuable resource for monitoring country conditions. In addition, periodic country visits by the regional or country manager are important to properly monitor individual exposures and conditions in a country. The bank holding company may also draw on information from rating agencies and other external sources.

Communication between senior management and the responsible country managers should be regular and ongoing. The bank holding company should not rely solely on informal lines of communication and ad hoc decision making in times of crisis. Established procedures should be in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country.

4090.0.2.8 Stress Testing

Bank holding companies should periodically stress-test their foreign exposures and report the results to the board of directors and senior management. As used here, stress testing does not necessarily refer to the use of sophisticated financial modeling tools, but rather to the need for all bank holding companies to evaluate in some way the potential impact different scenarios may have on their country-risk profiles. The level of resources devoted to this effort should be commensurate with the significance of foreign exposures in the bank holding company's overall operations.

4090.0.2.9 Internal Controls and Audit

Bank holding companies should ensure that their country-risk management process includes adequate internal controls and that an audit mechanism ensures the integrity of the information used by senior management and the board to monitor compliance with country-risk policies and exposure limits. The system of internal controls should, for example, ensure that the responsibilities of marketing and lending personnel are properly segregated from the responsibilities of personnel who analyze country risk, rate country risk, and set country limits.

4090.0.3 REPORTING REQUIREMENTS

4090.0.3.1 Country Exposure Report (FFIEC 009)

Banks and bank holding companies required to file the Country Exposure Report (Form FFIEC 009, formerly Form FR 2036) when the bank or banks have a foreign branch, a foreign subsidiary, or an Edge corporation, and when they have, on a consolidated basis, total outstanding claims on residents of foreign countries of $30 million or more. The report is to be filed quarterly within 45 days of the end of March, June, September, and December.

The report measures lending to residents of foreign countries by U.S. banking organizations. It is used to provide information on the distribution, by country, of foreign claims held by such banking organizations to (1) determine the degree of risk in bank portfolios and how adverse developments in particular countries affect the U.S. banking system; (2) assess country risk for supervisory purposes, and (3) assist the Bank for International Settlements in compiling worldwide data on cross-border claims. The report also includes information on revaluation gains for off-balance-sheet items and for securities held in trading accounts.

4090.0.3.2 Country Exposure Information Report (FFIEC 009a)

The County Exposure Information Report (Form FFIEC 009a) supplements the Country Exposure Report. The purpose of FFIEC 009a is to provide public disclosure of significant country exposures of U.S. banking institutions. Every institution that submits the FFIEC 009 and that has exposures to a country that exceed 1 percent of total assets or 20 percent of capital of the reporting institution submits the FFIEC 009a. FFIEC 009a respondents also furnish a list of countries in which exposures were between ¾ of 1 percent and 1 percent of total assets or between 15 and 20 percent of capital. Filing of the report is required.

4090.0.3.3 Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (FFIEC 019)

The Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (Form FFIEC 019) is similar to the FFIEC 009 report that is filed by U.S. banks. The FFIEC 019 report collects information, by country, on the direct claims, indirect claims, and total adjusted claims on foreign residents; information on direct claims on related non–U.S. offices domiciled in countries other than the home country of the parent bank that are ultimately guaranteed in the home country that are included in total adjusted claims on the home country; and information on the breakdown of adjusted claims on unrelated foreign residents. The data are used by the supervisory agencies to monitor significant foreign-country exposures of U.S. branches and agencies of foreign banks. The reports are also used to evaluate the financial condition of these branches and agencies.

The FFIEC 019 is collected quarterly from those branches and agencies of foreign banks that have, as of the quarterly report date, more than $30 million in total direct claims on residents of foreign countries. The FFIEC 019 provides data on the foreign-risk exposure of each reporting branch and agency.

Respondents to the FFIEC 019 must prepare the data as of the close of each calendar quarter and submit the forms to the appropriate Reserve Bank no later than 45 days following the report date. Data are due at the Board 60 days following the report date. Bank holding companies should obtain, from the management of their respective foreign bank subsidiaries, written confirmation that the FFIEC 019 and all other Federal Reserve and FFIEC reports have been filed, as required.

4090.0.4 INSPECTION OBJECTIVES

1. If the bank holding company is internationally active, to determine the nature and extent of its direct and indirect country-risk exposures.
2. If the bank holding company has significant

direct or indirect international exposure, to evaluate and determine whether it has in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities.

3. To review and determine if the bank holding company's system of policies, procedures, internal controls, rating system, and stress testing for county-risk management are adequate and reliable.
4. To determine if the bank holding company's board of directors oversees and regularly reviews its country-risk management process, approves limits on country exposure, provides for adequate capital that is commensurate with its direct and indirect country-risk exposures, and ensures that management is effectively controlling the risk.
5. To determine if management clearly communicates the bank holding company's country-risk management policies, standards, and practices to the affected offices and staff.
6. To (1) determine if the scope of the bank holding company's audit function is adequate and if the function is sufficiently comprehensive to ensure the integrity of the information senior management and the board use to monitor the bank holding company's country-risk management process, and (2) ensure that the board of directors or its audit committee has provided for adequate audit coverage of country-risk management functions.
7. To recommend corrective action if a bank holding company's country-risk management process and controls are deficient in relation to the level of country-risk exposure.
8. To determine if the bank holding company is properly preparing the Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a, both of which are required to be filed quarterly with the respective Reserve Banks, as applicable.
9. To identify and report individual exposures considered significant in relation to the bank holding company's capital and the economic performance of the country.
10. To prepare a report on the bank holding company's country-exposure management system and on any noted deficiencies.

4090.0.5 INSPECTION PROCEDURES

When performing and updating the bank holding company's risk assessment, the central point of contact for the bank holding company should include an analysis of its direct and indirect country-risk exposures (including any significant country-risk concentrations) and of the adequacy and reliability of its country-risk management. The analysis of the bank holding company's country-risk management systems should consist of three important components.

One component is the provision for evaluation of economic trends, political developments, and the social fabric within countries where the bank holding company's funds are at risk. These so-called country studies are derived from economic data supplied by the borrower or published by institutional lenders; sociopolitical commentaries; on-site reports from bank branches, subsidiaries, or affiliates; or bank-officer visits to the country.

In the second component, the board of directors and senior management define the level of country exposure the bank is willing to assume. This undertaking normally includes the establishment of limits on aggregate outstandings, maturities, and categories of risk exposures by country, which serve as a guide to operating management in the development and servicing of the bank holding company's international credit portfolio.

The third component is the bank holding company's internal reporting system, which should be designed to monitor and control country exposure. A comprehensive reporting system is required to accurately assign risk exposures to the country of risk, ensure adherence to the directives of the board of directors, provide for at least an annual review of portfolio composition in individual countries, and establish a clear-cut methodology for reporting exceptions to established limits.

A summary of the country-risk management system should be prepared. Set forth below are guidelines and procedures for examiners to use in evaluating the systems banks use to monitor and control country-risk elements in their international loan portfolios. In assessing the quality of the country-risk management system, examiners should, as a matter of course, spot-check the accuracy of the data submitted on the Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a, as applicable. The review should include a review of the exposures for at least several countries. The report page, Examiners' Comments and Matters Requiring Special Board

Attention, should be used to comment on material exceptions.

1. Obtain any written policies, procedures, or summaries of the bank holding company's country-risk management system. Determine whether the bank holding company's country-risk management system includes—
   a. effective oversight by the board of directors,
   b. adequate risk-management policies and procedures,
   c. an accurate country-exposure reporting system,
   d. an effective country-risk analysis process,
   e. a country-risk rating system,
   f. country-exposure limits,
   g. ongoing monitoring of country conditions,
   h. periodic stress testing of foreign exposures, and
   i. adequate internal controls and an audit function. (See SR-02-05.)
2. Review international-lending policies and determine—
   a. if the board of directors regularly reviews and gives final approval to the limits on country exposure at least annually (or quarterly, if the foreign exposures are high risk or the concentrations are significant);
   b. who initiates the country ratings and country limits;
   c. how frequently and by whom country ratings and limits are reviewed and changed;
   d. how the bank holding company defines the ratings assigned to the various countries;
   e. how country limits are determined;
   f. who is responsible for monitoring compliance with country limits;
   g. if country-risk limits consider—
      (1) the overall strategy guiding the institution's international activities,
      (2) the country's risk rating and the institution's appetite for risk,
      (3) perceived business opportunities in the country, and
      (4) the desire to support the international business needs of domestic customers;
   h. to what extent country limits are viewed as guidelines that may be exceeded;
   i. if the bank holding company has different sublimits for private- and public-sector credits;
   j. if separate limits are established for private- and public-sector credits;
   k. if the board of directors or a committee thereof periodically reviews country ratings and limits, and evaluates the bank holding company's performance against those standards;
   l. to what extent comments or classifications of bank supervisors are considered in establishing, increasing, or decreasing country limits;
   m. how the system has been changed since the last examination;
   n. if the bank holding company has a reliable system for capturing and categorizing the volume and nature of foreign exposures;
   o. whether the bank holding company has a system to monitor current conditions in each of the countries where it is significantly exposed;
   p. if there is regular, ongoing communication between senior management and the responsible country managers;
   q. if established procedures are in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country; and
   r. whether the bank holding company periodically conducts stress tests (financial modeling or measuring the impact of various scenarios on its country-risk profiles) of its foreign exposures, and if the results are reported to senior management and the board of directors.
3. Review reports furnished to the board or the appropriate committee to ensure that comprehensive and accurate information is being submitted on a timely basis.
4. Obtain the bank holding company's report on the general distribution and characteristics of the international loan portfolio and compare loan-category distributions for adherence to guidelines.
5. During a discussion with senior management, direct inquiries to—
   a. gain insight into general management's international-lending philosophy, and
   b. elicit management's responses for correction of deficiencies.
6. When reporting on the bank holding company's country-risk management system, consider factors such as—
   a. the quality of internal policies, practices, procedures, and controls over the international-lending functions;
   b. the scope and adequacy of the internal

loan-review system as it pertains to country risk;
c. causes of existing problems;
d. commitments from management for correction of deficiencies;
e. expectations for continued sound international lending or correction of existing deficiencies;
f. the ability of management to monitor and control transfer risk;
g. the general level of adherence to internal policies, practices, procedures, and controls; and
h. the scope and adequacy of the bank holding company's analysis of country conditions.

This part of the manual presents policies and procedures for the inspection process, the collection and presentation of data, and coordination of inspection activities of bank holding companies (BHCs).

5000.0.1 INSPECTION OF NONBANK SUBSIDIARIES OF BHCS

Notwithstanding the risk assessment that is to be performed for each nonbank subsidiary, an on-site review is required for the following nonbank subsidiaries:[1]

1. *Any individual subsidiary that meets either of the following two significance criteria or that is otherwise deemed by the Reserve Bank to have a significant impact on the BHC's condition or performance:*[2]
   - The subsidiary has total assets equal to 10 percent or more of the BHC's consolidated tier 1 capital.
   - The subsidiary's total operating revenue equals 10 percent or more of the BHC's consolidated total operating revenue.[3]
2. *Nonbank subsidiaries that are issuing debt to unaffiliated parties or relying to a significant degree on affiliated banks for funding.* "Significant" is defined as debt that exceeds the lesser of $10 million or 5 percent of the BHC's consolidated tier 1 capital.
3. *Those mortgage banking subsidiaries and other nonbank subsidiaries involved in asset securitization, and all nonbank subsidiaries that generate assets and sell them to affiliated parties.* Examiners involved in the on-site review of these subsidiaries should consider the appropriate examination guidelines for asset securitization, for example, those set forth in SR-90-16 (May 25, 1990). (See section 2128.02.)
4. *All nonbank subsidiaries that broker or deal in derivative instruments, as a principal or agent, to unaffiliated parties.*

Furthermore, for each credit-extending nonbank subsidiary that meets the above on-site review criteria, examiners are to review sufficient credit files through either judgmental or attribute sampling to assess the adequacy and accuracy of internal risk-identification systems.

5000.0.1.1 Off-Site Review of Nonbank Activities

Reserve Banks should review reports submitted to the Federal Reserve to monitor the condition and performance of significant nonbank subsidiaries between inspections. FR Y-series reports on individual and combined nonbank subsidiaries should be used for this purpose and, when available, financial statements on nonbank activities that are included with the FR Y-6 annual reports of BHCs should also be reviewed.[4]

When warranted by (1) a deterioration in the condition and performance of nonbank subsidiaries, (2) the significance of the nonbank subsidiaries (including those selected for on-site review as discussed above), or (3) other reasons, Reserve Banks should require BHCs to submit additional information (for example, balance sheets, income statements, and schedules on nonperforming assets and off-balance-sheet activities) obtained from a company's internal systems. Furthermore, on an exception basis, Reserve Banks will be expected to obtain, from a BHC's internal systems, information on the off-balance-sheet exposures of nonbank subsidiaries. When exposures are considered significant, Reserve Banks will be expected to monitor the risks posed by these exposures. If the Reserve Bank determines that a situation warrants material departure from these procedures, it should be discussed with Board staff.

1. See SR-93-19 for more information. The on-site review for these nonbank subsidiaries should be performed with the same frequency as required for a full-scope inspection but may be performed as a targeted review that is not concurrent with the full-scope inspection.

2. Generally, examiners would not be required to conduct an on-site review of those nonbank subsidiaries that hold premises that are necessary for the operation of the banks or other affiliates. Furthermore, these criteria are not intended to include nonbank subsidiaries that have been subject to recent on-site review by another federal or state banking agency in accordance with interagency agreements or Reserve Bank agreements with state banking supervisors (for example, the Interagency EDP Examination, Scheduling, and Distribution Policy). These criteria also should not limit Reserve Bank flexibility in coordinating supervisory efforts with functional regulators at the federal or state level.

3. For BHCs, "total operating revenue" is the sum of total interest income and total noninterest income (before extraordinary items).

4. See the Board's public website for more information on report forms and reporting requirements.

5000.0.2 MULTI-TIER BHC INSPECTIONS

The Federal Reserve has had longstanding supervisory guidance addressing the coordination of supervisory activities among the Reserve Banks. For banking organizations that operate in more than one district, it is particularly important that (1) all relevant and significant supervisory findings are assessed and weighed when the consolidated banking organization is being evaluated and (2) a consistent and coordinated supervisory message is communicated to the organization.

Many multi-tier BHC structures exist in which the top-tier and second-tier institutions (as well as other lower-level tiers) are in different Federal Reserve Districts. The System has long operated under the principle that there is one responsible Reserve Bank (RRB) for each fully consolidated banking organization (i.e., each top-tier consolidated banking organization). For domestic banking organizations, the RRB typically will be the district where the head office of the top-tier organization is located and its overall strategic direction is established and overseen. For foreign banking organizations, the RRB typically will be the district where the Federal Reserve has the most direct involvement in the conduct of day-to-day supervision of the U.S. banking operations of the organization. The RRB is accountable for all aspects of supervision of the fully consolidated banking organization, including all subsidiaries and affiliates (domestic, foreign, and Edge corporations) of the organization for which the Federal Reserve has supervisory oversight responsibility. (See SR-05-27/CA-05-11.)

5000.0.3 INTERAGENCY INSPECTION OR EXAMINATION AGREEMENTS

To ensure continuing close coordination and consistency in the examination and supervision of banking organizations, the three federal bank regulatory agencies, that is, the Federal Reserve System, Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), have adopted expectations intended to enhance the interagency supervision of BHCs and their bank and nonbank subsidiaries.

5000.0.3.1 Interagency Policy Statement on Examination Coordination

On June 10, 1993, an interagency policy statement was developed to strengthen coordination and cooperation among the federal banking agencies responsible for examining and supervising depository institutions and their holding companies, thus minimizing the disruptions and burdens associated with the examination process. The policy expands on existing interagency agreements. (See SR-93-30.)

5000.0.3.1.1 Primary Supervisory and Coordination Responsibility

Examinations or inspections of a particular legal entity are to be conducted by the federal regulatory agency that has primary supervisory authority for that entity. In carrying out its supervisory responsibilities for a particular entity within a banking organization, each regulatory agency, to the extent possible, is to rely on examinations or inspections conducted by the primary regulator of the affiliate, thereby avoiding unnecessary duplication and unnecessary disruption of the banking organization. In certain situations, however, it may be necessary for a regulatory agency other than the entity's primary supervisory authority to participate in the examination or inspection in order to fulfill its regulatory responsibilities.

Primary supervisory authority and coordination responsibilities are organized as follows:

OCC national banks, federal savings associations

FDIC state nonmember banks, state savings associations

FRB parent BHCs, nonbank subsidiaries of BHCs, the consolidated BHC, FHCs, SLHCs, and state member banks

The primary federal regulator is responsible for scheduling, staffing, and setting the scope of supervisory activities, including coordinating formal and informal *administrative* actions, as necessary. In fulfilling these responsibilities, the primary regulatory agency is to consult closely with the other appropriate agencies when there is need for coordination.

5000.0.3.1.2 Overview of Examination Coordination and Implementation Guidelines

The agencies are to make every effort to coordinate the examinations and the inspections of banking organizations. Coordinated examinations and inspections may not be practical in all cases because of resource constraints, serious scheduling conflicts, or geographic considerations; however, particular emphasis will be placed on coordinating examinations and inspections of banking organizations with over $10 billion in consolidated assets and those banking organizations (generally, with assets in excess of $1 billion) that exhibit financial weaknesses.

5000.0.3.1.3 Coordinating the Planning, Timing, and Scope of Examinations and Inspections

When multiple regulators have authority over a legal entity, representatives from the appropriate supervisory offices should, if necessary, meet quarterly to discuss supervisory strategies for specific banking organizations. They should meet at least annually to review and establish examination and inspection schedules, to plan for the next year, and to consider the need for coordination in the following areas:

1. sharing the strategy and scope of each examination or inspection
2. determining if agencies other than the primary regulator of a particular entity should participate in the examination or inspection of that entity
3. determining whether a consolidated request letter should be prepared to avoid duplicative information requests
4. sharing workpapers and resultant findings and conclusions from prior examinations and inspections
5. other areas as necessary

5000.0.3.1.4 Interagency Review of Bank, Nonbank, and Parent-Company Activities

Certain functions and procedures—such as internal audit, credit review, and the procedures for determining the allowance for loan and lease losses—transcend the boundaries that distinguish legal entities. Such functions and procedures may be located at the bank or holding company level. The primary regulator of the depository institution and the holding company both may have supervisory responsibility to assess such functions. In these cases, coordinated and concurrent examinations or inspections should be conducted to avoid duplicative reviews and unnecessary disruption.

The primary regulator of the entity being examined or inspected should take the lead in a coordinated examination or inspection, unless there is an agreement that another agency will serve as the lead agency. The responsibilities of the lead agency, in consultation with other appropriate agencies, include developing the scope of the examination or inspection and determining the staff requirements. The lead agency will also coordinate scheduling of the examination or inspection and the presentation of examination or inspection findings to the appropriate management.

5000.0.3.1.5 Joint Meetings Between Regulators and Bank or BHC Management

At the conclusion of examinations or inspections conducted under the guidelines, the agencies should coordinate and plan joint meetings with the board of directors to discuss the findings and conclusions. The agencies will coordinate responsibility as outlined in the guidelines.

5000.0.3.1.6 Significant Differences in Agencies' Findings, Conclusions, and Recommendations

Before examination or inspection results are forwarded to management or boards of directors, every effort should be made to resolve any significant differences in major findings, conclusions, and recommendations. These differences should be resolved by examiners or officials at the regional level within 10 business days of identification. If the regional offices cannot resolve the matter, it should be referred to the national level, where it will be resolved within a reasonable time frame.

5000.0.3.1.7 Inspection and Examination Reports

The primary regulator should prepare the formal report of examination or inspection covering the entity for which it is the primary federal regulator. The primary regulator will also prepare the report when it serves as the lead agency. The report should be addressed and transmitted to the directors of the entity for which the regulator is the primary federal supervisory authority. The report may also be sent to the directors of other entities that have a need for the information. The agencies may agree, if necessary and appropriate, to prepare a joint report.

5000.0.3.1.8 Coordinating Information Requests

Any request for information to be obtained from an entity for supervisory purposes should normally be made through the entity's primary regulator. The primary regulator should also share relevant supervisory information with the other appropriate regulatory agencies.

5000.0.3.1.9 Coordinating Enforcement Actions

When one or more regulatory agencies are contemplating an enforcement action, the agencies should consider initiating a joint enforcement action to address and correct deficiencies within a banking organization. *At a minimum,* each agency considering enforcement action should inform the other agencies. This provision reaffirms the existing interagency enforcement agreement. (See SR-18-4 / CA-18-5.)

5000.0.3.1.10 State Banking Departments

The agencies will endeavor to coordinate with state banking departments, when appropriate and feasible.

5000.0.4 POLICY FOR COMMUNICATING PROBLEMS OF SUPERVISORY CONCERN TO MANAGEMENT AND BOARDS OF DIRECTORS

5000.0.4.1 Introduction

On October 7, 1985, the Board announced a second policy to strengthen and formalize practices for communicating the findings of examinations or inspections to management and boards of directors and to set out guidelines for such meetings. The policy—

1. establishes specific criteria for determining which examination findings require follow-up meetings with boards of directors and sets out guidelines for such meetings,
2. requires that, in addition to providing a complete examination or inspection report to the bank or BHC, a written summary of findings be sent to the bank or BHC for distribution to each director, and requires that senior Reserve Bank officials become more involved in presenting examination findings to boards of directors, and
3. requires that senior Reserve Bank officials become more involved in presenting examination findings to boards of directors.

The policy was effective immediately, with initial implementation on January 1, 1986.

5000.0.4.2 Meetings with Directors

The decision to hold a meeting with the board of directors at the conclusion of a state member bank examination or a BHC inspection is to be determined on the basis of the organization's financial condition, its size, the type of examination or inspection conducted, and other factors that, in the judgment of the Reserve Bank, indicate the need for a meeting. To the extent possible, meetings with the boards of directors of state member banks should include representatives of the state banking department. When appropriate, meetings with the boards of BHCs may be held jointly with the meeting of the lead bank subsidiary's board of directors and the bank's primary federal or state bank supervisor.

5000.0.4.2.1 Criteria for Conducting Meetings

5000.0.4.2.1.1 Condition

For those BHCs with consolidated assets of $1 billion or more, a meeting with the board of directors is to be held at the conclusion of any full-scope inspection in which a BHC is rated composite 4 or 5. A meeting between Reserve Bank staff and the board of directors to communicate findings is not required for—

1. complex holding companies with consolidated assets of less than $1 billion; and
2. noncomplex holding companies with consolidated assets of less than $1 billion that have a subsidiary depository institution in less-than-satisfactory condition, or with a less-than-satisfactory risk-management rating, or where a material supervisory issue is otherwise indicated.

However, a meeting should be conducted between Reserve Bank staff and the board of directors to communicate findings when supervisory concerns warrant such action.

Except for the above situation, meetings are required if an organization is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since the previous examination or inspection in which it received a composite 3 rating.[5] A meeting should also be held with all these organizations following a limited-scope or targeted examination or inspection, if deemed appropriate and desirable by the Reserve Bank. (See SR-95-19.)

5000.0.4.2.1.2 Size

A meeting will be required at the conclusion of a full-scope examination or inspection of all multinational organizations and major regional organizations with assets in excess of $5 billion. Reserve Banks are also encouraged to conduct such meetings at the conclusion of a full-scope examination or inspection of regional institutions with assets of $1 billion or more.

5. Reserve Banks also are encouraged to hold a meeting at the conclusion of a full-scope inspection (1) for an organization with assets of $1 billion or more rated composite 2 if its condition appears to be deteriorating and (2) for an organization rated composite 3, even if showing some improvement.

5000.0.4.2.1.3 Guidelines for Meetings

Meetings with boards of directors will have to be tailored to meet the needs of each specific situation. In general, meetings with the full board are preferred, but in certain cases the Reserve Bank may determine that a meeting with a committee of the board of directors, such as the executive or audit committee, will serve adequately. In all cases, however, the written summary of examination or inspection findings is to be provided to each member of an organization's board of directors.

For BHCs with consolidated assets of $1 billion or more, the Reserve Bank's presentation to the board should ordinarily be chaired by a Reserve Bank official, with the examination staff in attendance. The larger the organization or the more serious its problem, the more senior the Federal Reserve official should be.

Reserve Bank presidents are expected to become directly involved in the supervision of multinational organizations and regional institutions with more than $5 billion in assets that have been rated composite 3, 4, or 5. Reserve Banks have the discretion to determine the circumstances under which the participation of Reserve Bank presidents is appropriate and necessary. It may be necessary for the Reserve Bank president to meet with the board of directors and become involved in other ways; the precise nature of involvement will depend on the situation.

A meeting with the board of directors should include a formal, structured presentation containing a clear statement that an institution is considered a "problem" institution or is about to become a problem institution if existing conditions deteriorate.[6] The use of slides, other visual aids, and hard-copy handouts is encouraged. Information should also be presented on financial trends and peer-group comparisons. The presentation should make clear the nature of problems uncovered, such as—

1. deficiencies in capital, asset quality, earnings, or liquidity;
2. violations of law;
3. inadequacies in policies, practices, and reporting systems necessary for the proper administration of the organization;

6. As has been long-standing Federal Reserve practice, the exact composite or component ratings assigned in the examination or inspection are not to be disclosed to persons other than the directors or senior management.

4. the lack of well-documented lending, collection, investment, and liability-management policies;
5. the failure of management to address previously discussed deficiencies;
6. the lack of reporting systems sufficient to keep senior management and the board of directors fully informed; and
7. the failure of the board of directors to participate in the active management of the organization.

5000.0.5 COMBINED EXAMINATION/INSPECTION REPORT FOR BHCs WITH LEAD STATE MEMBER BANKS

Reserve Banks are permitted, under the circumstances and procedures specified in SR-94-46, to issue a combined report for a BHC and its lead state member bank subsidiary. A letter should be sent to the qualified holding companies that explains their option of receiving a combined report. The combined report may be issued when—

1. a BHC's lead bank subsidiary is a state member bank,[7] and
2. the holding company's board of directors formally approves, by board resolution, a combined report being released to its lead state member bank subsidiary.

A combined examination/inspection report format is attached to SR-94-46. At a minimum, a combined report will contain all examination report pages required by the interagency bank examination report instructions as well as information on the parent holding company, its bank and nonbank subsidiaries, and the consolidated BHC organization. For detailed information on required and optional report pages, see the *Commercial Bank Examination Manual.*

Separate examination and inspection Supervisory Information System (SIS) entries are required for each combined report. The combined report's cover page is to be green, must provide BHC and Bank RSSD numbers, and must clearly indicate that the report is a combined report.[8]

7. In cases in which the company has more than one state member bank, separate examination reports should be prepared for all other state member bank subsidiaries.

8. Research, Statistics, Supervision and Regulation, and Discount and Credit (RSSD)

5040.0.1 OBJECTIVES

The limited-scope inspection will review all areas of activity covered by a full-scope inspection report but less intensively.

5040.0.2 IMPLEMENTATION GUIDELINES

The ultimate responsibility for determining the appropriateness of the limited scope, and the actual elements of the scope of the inspection beyond the guidelines, rests with the Reserve Bank.

Certain report pages are required to be included in the limited-scope inspection. Other pages are required when certain events trigger their applicability, "exception (E)" pages. Pages not required may be included at the Reserve Bank's option. These are labeled as "optional" pages.

5040.0.2.1 Required Report Pages

As in the full-scope inspection report,[1] the limited-scope inspection report is divided into three parts: a core section, a section consisting of report pages that provide support to the core section, and a confidential section.

Core section. The core section of the report serves as the main vehicle for communicating the results of the inspection to management. The core pages contain the scope of the inspection, comments on administration of policies and supervision over subsidiaries, and an analysis of the RFI/C(D) rating components (see section 4070.0), any or all of which could be used to support supervisory action, when necessary.

Support section. The supporting report pages contain narrative and financial and other data to support the analyses in the core section. The *required* pages provide the primary statistical support when addressing important supervisory problems or issues, and as appropriate, the RFI/C(D) rating, or supervisory action, when needed.

Confidential section. The pages in this section are also required since they address matters of supervisory importance and other matters not deemed appropriate in the open section.

For a limited-scope inspection, the following report pages are *required:*

Manual Section No.	*Page Location*	*Page Title*
5010.2		Cover (FR 1427)
5010.3	Page i	Table of Contents
5010.4	Core Page 1	Examiner's Comments
5010.5	Core Page 2	Scope of Inspection
5010.41	Confidential Page B	Condition of the BHC

The Directors' Summary Report will be required as in the full-scope inspection. Appropriate information provided by other reporting vehicles, inspection/examination activities, or other financial institution regulatory agencies should be considered. Refer to footnote 3 for further guidance as to the need for a Directors' Summary Report.

1. The basis for the limited-scope inspection report will be the "large" report, FR 1225.

5040.0.2.2 Exception Limited-Scope Report Pages

The following "exception (E)" pages should be included in the report as indicated below:

Manual Section No.	*Page Location*	*Page Title*
5010.6	Core Page 3	Structure and Abbreviations
5010.7	Core Page 4	Analysis of Financial Factors
5010.10	Core Page 7	Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems
5010.11	Core Page 8	Consolidated Comparative Balance Sheet
5010.12	Core Page 9	Comparative Statement of Income and Expenses (Consolidated)
5010.13	Core Page 11*	Capital Structure (Consolidated)[2]
5010.14	Page	Policies and Supervision
5010.15	Page	Violations
5010.16	Page	Other Matters
5010.17	Page*	Classified Assets and Capital Ratios of Subsidiary Banks
5010.19	Page*	History and Structure
5010.27	Page	Cash Flow Statement (Parent)
5010.28	Page	Parent Company Liquidity Position
5010.29	Page*	Parent Company and Nonbank Assets Subject to Classification
5010.31	Page*	Nonbank Subsidiary
5020.2	Page	Other Supervisory Issues
5010.40	Confidential Page A*	Principal Officers and Directors
5010.43	Confidential Page D	Administrative Matters

Pages with an (*) are optional if the limited-scope inspection is preceded by a full-scope inspection within the same annual period.

2. The corresponding FR 1241 page may be used if the basis is to be a lead bank subsidiary rather than on a consolidated position.

5040.0.2.2.1 Reasoning for Including "E" Pages

The "E" pages are included when the activities are present, or have been disclosed through the inspection process, or when significant findings or issues must be reported and communicated to management or to the appropriate supervising agency(ies). The limited-scope inspection report may include, at the discretion of the appropriate Reserve Bank, copies of the Bank Holding Company Financial Statements (FR Y-9) and Reports of Condition of Subsidiary Banks in place of pages containing required or optional financial statements. The FR Y-9 statements or the Reports of Condition should only be included when the financial statements accurately represent the condition of the bank holding company as determined during the inspection.

5040.0.2.3 Optional Limited-Scope Report Pages

In the limited-scope inspection, several pages have been labeled as optional because of the nonexistence of an activity or the absence of a problem in that area. Any inspection report page may be included in the report at the option of the Reserve Bank or the examiner-in-charge. Note that the "Commercial Paper" and related pages (5010.21 through 5010.23) are optional since the existence of this activity would be a "complex" organization, requiring a full-scope inspection within the same annual period.

The *optional* pages are:

Manual Section No.	*Page Location*	*Page Title*
5010.8	Core Page 5	Parent Company Comparative Balance Sheet
5010.9	Core Page 6	Comparative Statement of Income and Expenses (Parent)
5010.18	Page	Organization Chart
5010.20	Page	Investment in and Advances to Subsidiaries
5010.21	Page	Commercial Paper (Parent)
5010.22	Page	Lines of Credit (Parent)
5010.23	Page	Commercial Paper and Lines of Credit (Parent)
5010.24	Page	Contingent Liabilities and Schedule of Balance Sheet Accounts Not Detailed Elsewhere (Parent)
5010.25	Page	Statement of Changes in Stockholders' Equity
5010.26	Page	Income from Subsidiaries (Fiscal and Interim)
5010.30	Page	Bank Subsidiaries
5010.32	Page	Nonbank Subsidiary Financial Statements and Condition
5010.33	Page	Fidelity and Other Indemnity Insurance
5010.34	Page	Audit Program
5010.37	Page	Interest Rate Sensitivity—Assets and Liabilities
5010.42	Confidential Page C	Liquidity and Debt Information

5040.0.3 LIMITED-SCOPE INSPECTION PROCEDURES

Procedure:	Complete FR 1417 and indicate that the scope was limited ("L").
Nature of Inspection:	Disclose on the "Scope of Inspection" page that the scope is limited, including any additional procedures utilized for a certain area or activity during the inspection that might be comparable to a full-scope inspection.
Directors' Summary:	Required under the same conditions as in the full scope.[3]
Rating:	Assign RFI/C(D) rating (see section 4070.0) as appropriate. Indicate under what circumstances the rating was assigned and what components were changed, including the reasons why they were changed.
Inspection Cover:	Cover will designate "limited" scope (FR 1427) and will be a designated color other than the full-scope reports.

3. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the inspection finding following a full-scope inspection. Reserve Banks that have previously identified the problems and provided a report to the directors are not required to prepare the summary for the limited-scope inspection.

5040.0.4 LIMITED-SCOPE INSPECTION REPORT COVER (FR 1427)

FR 1427–Cover
(Revised 7/08)

REPORT OF
BANK HOLDING COMPANY
INSPECTION
(Limited Scope)

Name: ______________________

Location: ______________________

RSSD ID Number: ______________________

Inspection Commenced: ______________________

Inspection Concluded: ______________________

Inspection Date: ______________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

5050.0.1 OBJECTIVES OF A TARGETED INSPECTION

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a bank holding company. Such inspections may be conducted for various reasons, including serving as a complement to an annual full-scope inspection.[1] Targeted inspections are conducted as directed by the System or at the discretion of the individual Reserve Banks. As a minimum, the inspection procedures used are comparable to a full-scope inspection.

1. FR 1225 will serve as the basis for a targeted inspection.

Report Pages Included:	Cover (FR 1428)
	Table of Contents for included pages and a key for abbreviations used in the report
	Examiner's Comments
	Scope of Inspection
	Other report pages supporting the scope, and the nature of the targeted inspection, as deemed appropriate by the Reserve Bank and the examiner-in-charge.
	Confidential pages consisting of confidential page B, "Condition of the Bank Holding Company," and confidential page D, "Administrative Matters."
Nature of Inspection:	Disclose on the "Scope of Inspection" that the scope is targeted and describe the procedures utilized for the targeted areas or activities.
Directors' Summary:	Required as prescribed in the full scope.[2]
Rating:	A new RFI/C(D) *composite rating* of 1 through 5 would only be assigned if the bank holding company inspection results provide sufficient information to either reaffirm or modify the most recently assigned RFI/C(D) composite rating. At least one component area must be rated between 1 and 5 in order to assign a new composite rating; otherwise, a composite rating of 0 should be assigned.

2. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the inspection's findings following a full-scope inspection. Reserve Banks that have previously identified the problems and provided a summary report to the directors are not required to prepare the summary for the targeted inspection.

5050.0.2 TARGETED INSPECTION REPORT COVER (FR 1428)

FR 1428–Cover
(Revised 7/08)

REPORT OF BANK HOLDING COMPANY INSPECTION
(Targeted Scope)

Name: ____________________

Location: ____________________

RSSD ID Number: ____________________

Inspection Commenced: ____________________

Inspection Concluded: ____________________

Inspection Date: ____________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

A management information system (MIS) can be described as an automatic data processing system designed to aid in the performance of management functions. The MIS system is used in the decision-making process, which facilitates the collection and presentation of information to plan, organize, and control activities within the confines of the organizational culture. MIS encompasses the policies, procedures, and internal controls pertaining to management reporting which provide the information needed by the board to monitor and ensure control of operations and activities. MIS supports all levels of the organization in the execution of their duties—from the board of directors down to the lowest level of management within the company. A successful MIS will support the strategic direction of the company and promote the process by which decisions are made.

The objective of a targeted MIS inspection is to determine if the corporation has in place a management information system which is capable of providing its board of directors and senior management committees with sufficient, reliable, and timely data from which informed decisions can be made to monitor and manage risks. As a result, the targeted inspection uses a "top-down" approach, which focuses on the information used by the board and senior management committees and on the overall MIS architecture. For further inspection guidance, see the MIS sections 2060.0 to 2060.5 and SR-95-45 and its exhibits. The MIS supporting other levels of management should be reviewed during subsequent bank holding company inspections.

A targeted MIS inspection should be performed in companies in which there has been a notable alteration in the risk profile or aggressive expansion, or in which significant changes in information systems have occurred. This will ensure that executive management and the board have taken into consideration MIS and its ability to keep up with the changes in the organization. It should be noted that there is no one management reporting system. Depending on the structure of the organization, the activities that it engages in, the risk profile that results, and the technological environment that it operates under, MIS will be different in each bank holding company.

A key element of a successful MIS is the creation of the necessary technological support system. Since MIS is the primary tool for executive management and the board to monitor risk and measure performance, it is vital that the generated reports are accurate, provide sufficient information, and address all areas of the organization. Thus, data integrity is a key factor in analyzing the MIS process; inaccurate data can lead to faulty conclusions by management and the board. In addition, information flows to the top level of the organization should be comprehensive enough to allow for informed decisions. An overload of trivial information can cause confusion and slow the decision-making process.

The MIS inspection process focuses on three broad areas:

1. Relevance and Use of MIS
   - overall risk assessment of the corporation
   - identification of risk responsibilities and reporting lines within the organization
   - evaluation of the quality and relevancy of MIS reports
2. Internal Controls over MIS Integrity
   - identification of information flows and internal control points
   - evaluation of internal controls over information flows
   - evaluation of the report-development process and contingency plans
3. MIS Architecture and Planning
   - analysis of corporate strategic and technology plans, and the effect of their interrelationship on MIS
   - identification of the system architecture, including planned enhancements, and its effect on MIS
   - evaluation of the capability of system architecture to assimilate acquired organizations and the subsequent effect on MIS

The targeted MIS inspection evaluates the information flows to senior management and the computer or manual systems which support them. Bank holding company inspections place emphasis on reports generated by MIS rather than on the process by which they are created.

Management information systems are made up of various subsystems and will generally be unique to the organization. MIS will be influenced by the structure of the organization, its activities, its risk profile, and its technological capabilities. The targeted MIS inspection guidelines and procedures focus on the three broad areas outlined above and provide examiners with guidance on how to evaluate a bank holding company's MIS process.

5052.0.1 RELEVANCY AND USE OF MIS

Management information requirements will be determined by the size and complexity of an organization's operations. As an organization grows in size and its operations become more complex, management must recognize that information needs change. In addition, strategic goals may dictate a change in the focus of the company, requiring revisions in data collection and presentation. Guidelines and requirements for reports that flow to executive management and the board should be established, recognizing, however, that different levels of the organization have different informational needs.

The effectiveness of MIS has to be analyzed in terms of its ability to assist executive management and the board in identifying, monitoring, and controlling risks throughout the organization. Reports should be analyzed for quality, timeliness, and consistency. They should provide coverage of the major areas in the institution and communicate information clearly and concisely. An organization might have a comprehensive MIS, but if pertinent information is not flowing to executive management and the board of directors, the system is not effective.

Information must be presented in a summarized form, which is easy to read and understand. Procedures must be in place to allow for rapid collection and assimilation of data allowing for timely presentation to executive management and the board. The presentation of data should be consistent from one period to another to avoid any undue confusion. Changes in format need to be agreed on by all users of the report before implementation. Data should cover all areas of risk within the organization and provide comparisons to enable executive management and the board to measure performance.

An assessment of the executive management committee and board members should be performed. A review of reporting lines should also be performed. (See section 2060.4.)

5052.0.2 INTERNAL CONTROLS OVER MIS INTEGRITY

The review of data integrity of reports to the board of directors and executive management committee is essential to ensure that information flows are accurate and that reports are consistently prepared. For each report reviewed, the flow of information through MIS must be identified, including computer platforms, applications software, and interrelationships with other computer systems. Controls such as data entry and modification, data security, disaster recovery, back-up, and program changes should be assessed. Any points in the system where manual intervention occurs should be identified, and information on the flexibility of the system should be obtained.

The procedures used to assess the data integrity controls will vary depending on the nature of the computer platform and application software and on the amount of manual intervention required to produce the report. However, in all cases, the assessment of MIS data integrity controls should begin with a review of the results of prior inspections and the result of internal and external audit reports. Previously identified deficiencies that have not been corrected can affect the integrity of current data.

Reports produced by a mainframe application system should have controls within the mainframe environment and in the application system used to produce the report. These controls are reviewed during EDP examinations and periodic EDP audits. These examination and audit reports should be used as leverage during the MIS inspection, and the current status of deficiencies noted should be ascertained through discussions with internal auditors and management.

Reports may also be produced by personal computers using spreadsheet and other office-product software in a distributed processing environment. Reviews of distributed processing systems require interviews with the persons responsible for preparing the reports. Any instances of manual intervention in such an environment must be identified and evaluated. The most recent EDP examination report should also be reviewed for any deficiencies noted in the bank holding company's microcomputer policies and procedures. A review of internal audit reports for the applicable business area and discussions with audit personnel will reveal whether this PC/spreadsheet application has been audited recently.

5052.0.3 MIS ARCHITECTURE AND PLANNING

The business plan and the computer system's architecture plan should be designed to complement each other and must support the strategic plan. The business plan identifies the goals, target markets, and areas of risk of the organization. The architecture plan describes the corporate technological plans for implementing the systems that will achieve the strategic and business goals, and it should include MIS.

Information is a valuable corporate asset. In a competitive banking environment, the ability to effectively manage this asset is crucial to a bank holding company's ability to remain competitive, introduce new products and services, and achieve desired goals. Therefore, the computer system's architecture plan should be developed in conjunction with its business plan. The architecture plan should ensure that mainframe processing and MIS are appropriately integrated and in place for the banking organization to achieve its strategic goals.

The dynamic and competitive banking and technology environments make effective planning critical. Reconcilement of the business and computer system's architecture plans is necessary to determine the effectiveness of the banking organization's planning process. With the proliferation of mergers and acquisitions in the financial industry, this process becomes more complicated. It is essential that management have a clear vision of its strategic and business goals and the technology required to achieve them if it is to effectively manage the divergent technologies that may be inherited through mergers and acquisitions. Bank holding companies in this situation should decide which acquired systems will survive. Documentation should support management's decision, and formal conversion plans should be documented. Telecommunications, compatibility of systems, data integrity, capacity, contingency planning, and data security are especially critical in this situation and should be evaluated in the planning and conversion process.

Ultimately, the business and the computer system's architecture plans should support the strategic plan. If these plans do not complement one another, the ability of management to achieve its goals may be difficult.

5052.0.4 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, risk assessment, and controls, including board and executive management committees.
2. To assess the adequacy of the management reports generated for their timeliness, quality, accuracy, and coverage of crucial areas.
3. To evaluate reports in terms of their ability to measure the company's progress in meeting its financial and business goals, including the capability to produce forecasts using various scenarios.
4. To evaluate management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by the MIS, and the system's ability to adapt to change caused by regulatory and accounting issues or by other market conditions.
5. To determine if the policies, practices, procedures, and internal controls regarding management information systems and management reporting are adequate.
6. To evaluate the controls in place to ensure the integrity of the information within MIS, including data security, disaster recovery, and the system's development life cycle.
7. To determine if the functions of automated systems, reconcilement procedures, and reporting processes are completely understood by staff and that these functions are fully documented.
8. To ensure that an architecture plan exists that includes MIS and that it supports the business and strategic plans.
9. To determine if a management process exists for MIS planning, including organizational responsibility, development, and implementation.
10. To determine if a strategy exists for an effective consolidation of systems in the event of a merger or acquisition.
11. To recommend enhancements and/or corrective action when policies, practices, procedures, internal controls, or MIS are deficient.

5052.0.5 INSPECTION PROCEDURES

5052.0.5.1 General

1. Present the first-day request letter to executive management well in advance of the targeted inspection commencement date, allowing sufficient time for data collection (e.g., at least two weeks before). (See SR-95-45, exhibit A, for a sample first-day letter.) The examiner-in-charge should review the responses well in advance of the start of the inspection.
2. Solicit the cooperation of key senior officials

in organizing and conducting a meeting to discuss with them the identification, control, and reporting of identified risks within the various key operating areas of the bank holding company. Request that key senior management officials make or arrange for presentations during this meeting that will identify the major departments, functions, and activities within the organization and how MIS is used to identify and manage risk. (See SR-95-45, exhibit B.)
3. Draft the inspection report for participating examiners to review before the close of the on-site phase of the inspection, ensuring the inclusion of all relevant findings.

5052.0.5.2 Relevancy and Use of MIS

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls. Determine if there are any corporate policies specific to risk management or internal reporting requirements.
2. Review the board and executive management committee structure, including its membership, mission, and authority and the experience levels of the members.
3. Read board and committee minutes and obtain sample copies of the board and committee packets.
4. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors. Ask that copies of each of these *top-level* reports be attached to the listing.
   a. Review each listed report for timeliness, clarity, completeness, relevancy, and measurability.
   b. Analyze the management reports for information sufficient to measure the company's progress in meeting its financial and business goals, including the ability to produce various forecasting scenarios.
5. Identify management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Evaluate the system's ability to handle regulatory and accounting issues and to adapt to change.
6. Discuss the examiners' perceptions of MIS reports with executive management as to their timeliness, clarity, completeness, relevancy, and measurability.

5052.0.5.3 MIS Integrity and Internal Controls

1. Review and analyze any policies, procedures, and practices governing the corporation's MIS, including descriptions of existing controls to ensure data integrity throughout the system, disaster-recovery plans, and standardized procedures for the development and use of systems and applications.
2. Review the architecture of MIS. Determine whether there is a single MIS system or a number of related systems. Ascertain if MIS is produced by the mainframe, distributed processors, personal computers, or a combination of these systems. Identify the databases in use for MIS reporting.
3. For each board and executive management report identified, review and verify the flow of data through MIS to the reports, include all computer platforms and application software used. Identify risk points and the controls in place to ensure data integrity. (See SR-95-45, exhibit C for a suggested format.)
4. For each report, verify the controls over data input and the report-distribution process. Determine that sufficient controls are in place to reasonably ensure the accuracy and confidentiality of the data.
5. Review all internal and external audit, regulatory examination, and outside consultant reports concerning MIS since the previous inspection. Note any deficiencies and/or recommendations, and determine whether management has taken appropriate corrective action. Perform follow-up action on any unresolved issues.
6. Through discussions with management and other personnel, determine if any significant changes to MIS are planned. If so, obtain and document the details and analyze their potential effect on MIS integrity.

5052.0.5.4 MIS Architecture and Planning

1. Review the corporate strategic, business, and computer architecture plans, if applicable, to determine if the architecture plan supports the strategic and business goals. The business plan should reflect goals in support of the strategic plan, and any differences between these plans should be reconciled. If a reconcilement has not been performed, request that management complete one during the inspection. Otherwise, complete the reconcilement.

2. Request (or create) a conceptual overview model to identify the flow of information through the organization. (See SR-95-45, exhibit D.)
3. Evaluate management's conversion planning process by selecting a recently converted or consolidated MIS application for review. This application will be emphasized when completing other sections of the work program.
4. After determining the extent of merger and acquisition activity at the institution, review conversion plans and the methodology for consolidating systems and ascertain their effectiveness.
5. Review a copy of development plans for any significant MIS-related projects. Determine if they address cited MIS weaknesses, meet strategic and business goals of the organization, and are in compliance with established policies.
6. Discuss with executive management any inconsistencies among the business, system architecture, and strategic plans.

Examiners' access to automated databases that include supervisory data on state member banks (SMBs) and bank holding companies (BHCs) has been significantly enhanced. In addition, the increased availability of copiers, fax machines, and personal computers has made it possible for SMBs and BHCs to more easily transfer data to Reserve Banks. As a result, the volume of information on SMBs and BHCs available to examiners in Reserve Bank offices has been greatly augmented, and many inspection activities that have traditionally been conducted in the field can now be completed in Reserve Bank offices.

The option to complete certain inspection activities in Reserve Bank offices has various advantages. For example, examiners' ability to access automation resources, reference materials, and senior staff is much better in the office than on-site. In addition, in completing more activities off-site, Reserve Banks can reduce the burdens of on-site evaluations of SMBs and BHCs. Further, greater reliance on off-site work can allow Reserve Banks to reduce travel-related expenses.

5060.0.1 CONDUCTING INSPECTION ACTIVITIES IN RESERVE BANK OFFICES

Examiners should conduct in Reserve Bank offices all inspection activities that can be efficiently and effectively completed off-site. Activities that may be completed off-site include planning the inspection, reviewing historical information, completing preliminary financial analyses, and preparing certain report pages using data maintained at Reserve Bank offices. For additional information, see SR-95-13 (SUP) and SR 02-1.

When using this approach, examiners should contact BHCs by letter and ask them to forward to Reserve Bank offices financial and other information to be used in the off-site portion of the inspection. Most information that has traditionally been requested in first day letters and made available to examiners at the start of an inspection should be requested, with the exception of documents such as minute books or bulky printouts that would be inappropriate or impractical to have sent. While it is anticipated that this approach will be preferred to approaches that require a longer on-site examiner presence, BHCs are not required to be inspected under this approach and should be given the option to be inspected using traditional on-site approaches. Given the burdens imposed on BHCs to prepare and mail materials to Reserve Bank offices, Reserve Banks should also offer to pay the shipping costs and give adequate lead time in requesting materials.

In the cases of certain shell BHCs, Reserve Banks are authorized to complete all inspection activities off-site on an every-other-inspection basis. As noted above, however, these BHCs should be given the option to be inspected using the traditional on-site approach. Noncomplex shell bank holding companies (NCSBHCs)[1] with consolidated assets of less than $1 billion and that on their last inspection were rated RFI/C(D) 3 or better may be inspected off-site, subject to the following restrictions.

- If information becomes available to the Reserve Bank in the period between inspections suggesting that the condition of an organization is deteriorating significantly, an on-site inspection should be scheduled or commenced immediately if warranted.
- Deteriorating 3-rated BHCs are excluded and must be inspected on-site.
- When a BHC's lead bank subsidiary is an SMB, the inspection of the BHC should be carried out in the field concurrently with the examination of its lead bank.
- NCSBHCs in the same metropolitan statistical area as the Reserve Bank or its bank supervision staff should be inspected on-site unless there is good reason to do otherwise. Newly formed NCSBHCs or those that have recently undergone a change in control should also be inspected on-site.
- If a BHC is unable to forward the information necessary to conduct an off-site inspection, or if the company is assigned a RFI/C(D) rating of 4 or 5 or is determined to be a deteriorating 3-rated organization as a result of an off-site inspection, an on-site inspection should be scheduled or commenced immediately if warranted.
- Information requested from the NCSBHC should include all information typically requested in a first day letter, as well as copies from the company's general and subsidiary

1. Noncomplex shell bank holding companies are those companies with less than $1 billion in consolidated assets without credit-extending nonbank subsidiaries or debt held by the general public whose condition is predicated almost entirely on the condition of subsidiary banks.

ledgers that document all significant accounting entries made since the last on-site inspection, copies of cancelled checks written since the last on-site inspection, copies of the BHC's notes payable and receivable, copies of all agreements between the BHC and its bank subsidiaries, and any other information considered necessary to complete an off-site inspection of the institution.
- Findings on the BHC's condition and compliance with laws and regulations should be conveyed to management by telephone or, if the situation requires, in person at company or Reserve Bank offices. The examiner-in-charge should then complete an inspection report for transmission to the company.

5060.0.2 OFF- AND ON-SITE BHC INSPECTION PROCEDURES—APPENDIX 1

This appendix includes inspection procedures that can be completed in the Reserve Bank's offices and those procedures that should be conducted on-site. A sample first day letter information request form is included.

5060.0.2.1 Activities That Can Be Completed in the Office

Work to be performed in the office in preparation for a bank holding company inspection should include the—

- determination of the scope of inspection,
- completion of financial schedules and certain other pages, and
- review of historical financial and supervisory data leading to preparation of draft financial analyses (for example, parent, subsidiary banks, consolidated entity).

In addition, if centralized management functions (for example, investments, asset/liability management, internal audit, or loan review) are performed by the bank holding company, a preliminary understanding of these functions can be obtained in the office by reviewing policies, reports, and other relevant materials. Further, if the bank holding company has nonbank subsidiaries, the preliminary risk assessment mandated by SR-93-19 (see sections 5010.6.3 and 5010.31) can be performed in the office, based on information submitted by the institution.

5060.0.2.2 BHC Inspection Activities That Should Be Conducted On-Site

The following inspection activities are recommended and should continue to be performed at the bank holding company:

- review of credit and investment files at holding company and nonbank subsidiaries for quality, documentation, and compliance with policy, laws, and regulations;
- in-depth discussions with management;
- verification of selected financial information;
- review of selected tax workpapers, including the review of intercompany tax allocations;
- observation of operations and internal controls;
- collection of follow-up documentation to complete the financial analysis;
- review of documents such as minute books for the holding company and nonbank subsidiaries and bulky printouts that would be inappropriate or impractical to have sent to the Reserve Bank's office;
- exit meetings with management.

5060.0.2.3 Sample Information Request for a Bank Holding Company

Information To Be Sent to the Federal Reserve Bank

1. Exhibits A through N (See attachment #2, SR-95-13). Also, please assemble applicable workpapers that correspond to reported information for verification on-site.
2. The corporation's current legal-entity and management organization charts, detailing line and staff authority from the chairman of the board through the various division heads.
3. Copies of any strategic planning documents.
4. A copy of the most recent information package provided to the directors in connection with regular board meetings.
5. A copy of any other management reports that summarize the performance of the subsidiary banks.
6. Schedules of internal audits and internal loan reviews for the prior and current year. In addition, please furnish a copy of the most recent management letter provided to the corporation by its external auditing firm and management's formal response.
7. List of consolidated past-due, restructured, and nonaccrual loans and overdrafts; watch-list

report; and any results of internal loan-grading systems.

8. Loan-loss reserve adequacy evaluation (consolidated and lead bank). Include the most recent calculation for assessing the adequacy of the loan-loss reserve based on the organizations's internal methodology.

9. Risk-based capital analysis (consolidated and lead bank) for the most recent quarter-end and two prior year-ends, including workpapers. Break out guaranteed loans and loans secured by certificates of deposit. Also include the total amount and proportionate guarantee of each loan guaranteed by such entities as the FmHA, SBA, and VA.

10. Current and upcoming year's budgets (consolidated and lead bank).

11. A copy of any capital, dividend, or cash-flow plans or projections.

12. Most recent internal consolidated interest-rate-sensitivity analysis and liquidity analysis.

13. Parent-company consolidating entries and consolidated comparative financial statements as of the most recent quarter-end.

14. Parent-company-only comparative financial statements as of the most recent quarter-end.

15. The parent company's trial balance as of the most recent quarter-end.

16. Details of any items included in parent-company "other" assets, liabilities, income, or expense, which cannot be readily identified from the most recent quarter-end trial balance.

17. A summary of insurance coverage for the parent company and its subsidiaries. Please include a copy of the cover pages of each policy, along with the amount of coverage and expiration date. In addition, also indicate the most recent board approval of such coverage.

18. A detailed schedule of all consolidated borrowings as of the most recent quarter-end. Include the average interest rate paid on each type of borrowing.

19. For the parent company only, please provide the following information on all outstanding obligations: (a) amount outstanding, (b) lender (if publicly held, only note holders of greater than 10 percent), (c) origination and maturity dates, (d) interest rate and payable dates, (e) principal repayment schedule, and (f) reason for incurring debt.

20. A schedule of the fiduciary holdings of the parent company's stock and convertible debt by the parent's subsidiaries. Indicate the degree of investment authority the respective trust departments have over these shares.

21. Copies of all intercompany management and service agreements along with (1) the names of the staff members responsible for the administration of these activities and (2) documentation showing the basis of the assessments.

22. Litigation letter from the holding company's attornies relating to the status of all lawsuits in which the holding company or its subsidiaries is named defendant. If none, please submit a letter from an officer of the holding company indicating such.

23. A complete copy of all written policies that have been amended or adopted since the previous FRB inspection.

24. A copy of the bank's most recent Report of Condition and Income (call report), including the corresponding internal balance sheet and income statement (daily statement) for the lead bank.

25. Daily statement for the lead bank as of the inspection date.

26. Copies of any "key man" or "split-dollar" life insurance policies held at the holding company or the subsidiaries.

27. Copy of compensation agreements with subsidiary bank personnel who sell credit-related life insurance for the holding company, along with any tie-in policies, if applicable.

28. Copy of any other compensation arrangement either at the holding company or between the holding company and the subsidiary banks.

29. Most recent market-rate survey for local deposits at the lead bank.

30. For all nonbank subsidiaries, please provide (a) financial statements for the most recent quarter-end; (b) strategic plans; (c) directors' monthly reports; (d) internal audit reports; and (e) a trial balance of all credits, delinquency reports, nonperforming reports, and watch-listed loans for credit-extending subsidiaries.

Information To Be Provided at the Holding Company

31. Access to all written policies pertaining to specific operational areas (for example, due diligence/acquisitions, lending, funds management, tax allocation, and dividends).

32. Access to internal audit and internal loan review reports and workpapers.

33. Minutes of meetings of the board of directors, shareholders, and any committees. Please include a list of committees and their members, and fees paid to directors.

34. Holding company articles of incorporation and by-laws.

35. Stock register.

36. Access to federal tax returns filed since the most recent FRB inspection, along with workpapers. In addition, provide schedules of intercompany tax allocations for the corresponding periods, including projected allocations.

37. Access to parent company accounting records such as ledgers, journals, and check registers.

38. Access to monthly account-analysis statements for any parent company transaction accounts held at a subsidiary bank.

39. For all nonbank subsidiaries, please provide (a) directors' minutes; (b) annual budgets and cash flow projections; (c) checking account statements and check registers and/or cash receipts and disbursements registers; (d) a listing of directors and officers; and (e) access to credit policies and credit files for all nonbank credit-extending subsidiaries.

40. Access to due-diligence reports and workpapers and assimilation plans.

41. Any available information on local economic conditions.

5060.0.3 PROCEDURES FOR IMPLEMENTING OFF-SITE INSPECTIONS FOR CERTAIN SHELL BHCS—APPENDIX 2

This appendix includes procedures for implementing the program authorizing off-site inspections for certain shell BHCs. Listed below are general procedures that can be followed in implementing the program for off-site inspections of certain noncomplex shell bank holding companies (NCSBHCS). Sample documents are included that can be used in implementing the program, including examples of correspondence with eligible bank holding companies and a sample first day letter information request form.

5060.0.3.1 General Procedures for Off-Site Inspections

In implementing the program, Reserve banks should conform to the following procedures:

1. Senior management of bank holding companies should be notified before or early in the calendar year if their company qualifies for a full off-site inspection. They should also be informed that they may opt out of the off-site process and that, even if they choose to participate, the Reserve Bank may conduct the inspection on-site if conditions change or if, at some point during the year, examiners will be traveling to the company's vicinity to carry out other activities.

2. When the Reserve Bank is ready to conduct the off-site inspection, the holding company should be contacted by telephone, as well as by letter. An information request form should be attached to the letter.

3. After assigned examiners have reviewed information forwarded by the company, additional information may be requested by telephone or other means if deemed necessary. Once all necessary information has been received, the designated examiners should commence the off-site inspection.

4. Findings of the inspection should be conveyed to company management by telephone or, if the situation requires, at company or Reserve Bank offices.

5. The examiner-in-charge should then complete an inspection report for transmission to the company.

SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

This year, the Federal Reserve Bank of New York will conduct off-site inspections of certain bank holding companies. Your company will be inspected during 19X0 and presently qualifies for an off-site review by our office.

As part of our off-site program, you will receive an information request form which must be completed and returned to the Reserve Bank. The Reserve Bank will reimburse you for postage expenses. The form requires responses to several questions, as well as submission of copies of certain holding company financial documents. Our examiners will review the information, complete their analysis, and discuss their findings with management, either by telephone conference or, if necessary, at the offices of your bank holding company. Following the off-site review, holding company management will receive a written report which will include the following:

- a description of the scope of the inspection;
- the examiner's presentation of the financial condition and performance of the parent company and the subsidiary bank;
- an evaluation of the company's compliance with laws and regulations; and
- the examiner's comments, conclusions, and recommendations.

We have found that the off-site inspection program has proved attractive to many banking organizations. However, participation is not mandatory. Therefore, if you do not wish to participate, please sign and mail the enclosed form by DATE. We do want to make it clear, however, that while we plan to conduct an off-site review of your company if you accept this proposal, we still may conduct an on-site inspection if conditions change or if examiners are otherwise in your vicinity.

Should you have any questions concerning the off-site inspection program, please contact OFFICE STAFF MEMBER at (800) ___-____, extension ____.

Sincerely,

Officer

State: ______________________________

Signed: ____________________

Title: ____________________

SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

Pursuant to our telephone conversation of (Date), an off-site inspection of (BHC Name), will be conducted by our office. Please respond to each item of the information request form attached and complete the enclosed schedules. Please be aware that all items submitted for review will be retained by our office and not returned to the company. Therefore, it is advisable to submit copies of records rather than originals. Upon receipt of the items requested, we will reimburse your bank holding company for the postage expense.

In order for us to use the off-site program, you must submit a complete response to this information request no later than (Date). If we are unable to satisfactorily resolve any issues arising from your response to this request, or if the information contained in your response is substantially incomplete, we will schedule the company for an on-site inspection.

Upon review of the information submitted, we will contact you to schedule a meeting with our examiners. If you have any questions concerning the inspection process or the preparation of your responses, please contact (Office Staff Member) at (800) ___-____, extension ____.

Sincerely,

SAMPLE INFORMATION REQUEST FORM

BHC
OFF-SITE INSPECTION CONDUCTED AS OF
DATE __/__/__

INFORMATION REQUEST FORM

Please submit or provide responses to the following (if non-applicable, answer N/A):

1. Statements for the most recent quarter and the two latest fiscal years:

   A. Parent Company -- Balance Sheet

   B. Parent Company -- Income Statement

   C. Parent Company -- Statement of Changes in Stockholders' Equity

   D. Bank -- Reports of Condition and Income (most recent quarter only)

   E. Reconciliation of the parent company's "Investment in Bank" account to the subsidiary bank's "Stockholders' Equity" as reported in the Reports of Condition

2. The bank's daily statement and income and expense statement dated __/__/X0.

3. Projected cash flow worksheet for the year 19X1 (see attached form).

4. Excerpts from the company's general ledger and subsidiary ledgers containing all significant accounting entries since __/__/__.

5. Detail of any "other assets" or "other liabilities" accounts for the company, as well as "other income" or "other expense" items, presented in financial statements requested above IF the amounts exceed $500.

6. Details on any liabilities, contingent or otherwise, not appearing in the financial statements.

7. A copy of the company's bank statements and its check register and/or cancelled checks issued since __/__/__.

8. A copy of any notes payable and/or receivable of the bank holding company (including a copy of any related loan agreements) if they have been put in place or amended since the last inspection.*

*The last inspection of __(BHC Name)__ was conducted on __(Date)__.

SAMPLE INFORMATION REQUEST FORM—Continued

- 2 -

9. A copy of any agreements originating since the last inspection between the company and the bank, between stockholders, or between the bank holding company and the stockholders.

10. A list of changes of specific services performed by the holding company for the bank or for any other company since the last inspection. Also indicate the method for computing fees, provide copies of any relevant agreements, and provide documentation supporting any management/service fee assessments.

11. For any changes to the parent company's investments in stocks of companies OTHER THAN subsidiaries, a list of the (1) date of acquisition/sale, (2) number of shares acquired/sold, (3) resulting percentage ownership, and (4) nature of business engaged in by the subject company.

12. A copy of any internally prepared reports of problem loans and nonperforming assets for the banking organization.

13. A list of any stock issuances or redemptions by the company since the last inspection, including the issue/redemption date and price. Also, list all stockholders and their percentage interest in the holding company as of __/__/__.

14. A statement of the date and amount of any capital injections into the bank since the last inspection.

15. A copy of the minutes of all shareholders'/directors' meetings for the company held since the last inspection.

16. For each director of the holding company, provide his or her (1) date of birth, (2) date first elected to the board, (3) position in the bank holding company, (4) position in the bank, (5) principal occupation if different than bank or bank holding company officer, (6) ownership percentage in other financial institutions, and (7) positions in other financial institutions.

17. A statement of any material litigation affecting the company or the bank.

18. A list of all tax transactions since __/__/__. These transactions would include those between the bank and the holding company as well as any transactions with the tax authorities. (See attached example.)

19. A copy of the last two years' federal and state income tax returns, including any amendments.

20. A copy of your accountant's workpapers showing the calculation of the holding company tax benefit or liability for the last two years.

SAMPLE INFORMATION REQUEST FORM—Continued

- 3 -

21. If the parent company filed for a tax loss carryback in the last two years, provide documents filed with the IRS and related prior-year tax returns.

22. A copy of the tax sharing agreement between the bank holding company and its bank subsidiary if amended or redated since the last inspection.

23. The date of the last IRS audit of the bank holding company's tax returns, an identification of the tax periods covered in the audit, and an indication of whether any assessments or refunds remain unsettled.

24. A copy of the bank's current year budget and operating projections, if available.

25. If the subsidiary bank maintains a correspondent balance at any creditor bank of the holding company, copies of (1) the monthly analysis of the account provided by the correspondent for the last 12 months, (2) any agreement whereby the loan to the holding company is contingent on the subsidiary bank maintaining such a balance, and (3) an explanation if the balances maintained by the subsidiary bank exceed the level required for services received.

26. If any Employee Stock Ownership Plan (ESOP) owns stock in the holding company, provide copies of (1) the ESOP plan and trustee agreement; (2) the ESOP's current balance sheet; (3) the independent appraisal used to determine the value of the holding company stock purchased by the ESOP; (4) any note payable, security agreement, loan agreement, and guarantees. Also provide (1) the date the plan was accepted by the IRS; (2) a description of the ESOP's current investments, including the date they were purchased and their cost; (3) the names of the individuals who have the power to vote the ESOP's stock; (4) a list of individuals having the power to make investments for the ESOP; and (5) a list of the beneficiaries of the ESOP.

27. Copies of the articles of incorporation and by-laws for the bank holding company, if amended since the last inspection.

28. If the holding company is selling insurance, list the (1) licensed agents employed by the company; (2) compensation received by each agent; (3) method for determining compensation; (4) a description of how customers of the bank are informed that they are not obligated to purchase insurance from the holding company in order to obtain credit; and (5) a breakdown of insurance accounts receivable, past due more than 90 days.

SAMPLE INFORMATION REQUEST FORM—Continued

- 4 -

29. If the subsidiary bank is providing the holding company with either personnel or facilities for the sale of insurance or any noninsured investment products, a statement indicating whether the subsidiary bank is reimbursed for its expenses. If the bank is reimbursed, a description of the method used to determine such amounts. Indicate when this reimbursement method was approved by the respective boards of directors.

30. If the holding company is involved in the sale of any non-insured investment products such as annuities or mutual funds, describe the program including any arrangements that involve the use of third-party brokers. If the holding company receives any share of the related commissions or lease income or if employees of the holding company or a nonbank subsidiary of the holding company are involved in the program, please describe.

31. Copies of the dividend policies of the holding company and the subsidiary bank. If no written policy exists, provide a description of the methods used to determine the amount of dividends paid by the bank holding company or any of its subsidiaries.

32. The dates and amounts of dividends paid by the subsidiary bank since the last quarter-end.

33. A description of any changes made to the holding company's audit and/or credit review programs.

34. Details of any directors and officers liability insurance maintained by the organization or indemnification provisions adopted by the bank or bank holding company.

35. For banker's blanket bond and excess fidelity bond coverage, please provide (1) name of surety; (2) form number; (3) primary and excess amount of coverage; (4) expiration date; (5) name of insured; (6) an indication of whether all officers and employees of the holding company, bank, and any nonbank subsidiaries are covered; (7) the date the insurance coverage was last approved by the bank holding company's board of directors and the bank's board of directors; and (8) a description of how insurance premiums are allocated among the entities of the organization.

36. Details of any significant transactions since __/__/__ not already described in responses to the above questions.
