- Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.
- Review the interest and fee income accounts associated with the lending process to ensure that the institution's net income is not materially misstated.

When assessing the appropriateness of the ALLL, examiners should evaluate an institution's related process, methodology, and underlying assumptions that require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, examiners should not use an institution's estimate of credit losses as a single precise amount due to the wide range of qualitative or environmental factors that should be considered.

An institution's ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management's estimates when they assess the appropriateness of the institution's ALLL, and not seek adjustments to the ALLL, when management has

- maintained effective loan review systems and controls for identifying, monitoring and addressing asset quality problems in a timely manner.
- analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner.
- established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL.
- incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the level of ALLL is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, the examiner should include recommendations for correcting these deficiencies in their communications to the institution and its board of directors. Additional supervisory action may be necessary to address the weaknesses in the ALLL process, including the materiality of errors in the institution's reported ALLL.

2065.2.6.1 ALLL Level Reflected in Regulatory Reports

When the reported amount of an institution's ALLL is not appropriate, examiners will require an institution to adjust its ALLL by an amount sufficient to bring the ALLL reported on its regulatory reports to an appropriate level as of the balance sheet's evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.

2065.3.1 BACKGROUND ON CURRENT EXPECTED CREDIT LOSSES METHODOLOGY

The Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2016–13, *Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments*, as well as amendments since June 2016. These updates are codified in Accounting Standards Codification (ASC) Topic 326, *Financial Instruments—Credit Losses* (FASB ASC Topic 326). FASB ASC Topic 326 introduces the current expected credit losses methodology (CECL), which replaces the incurred loss methodology for financial assets measured at amortized cost; introduces the term "purchased credit-deteriorated (PCD) assets," which replaces the term "purchased credit-impaired (PCI) assets"; and modifies the treatment of credit losses on available-for-sale (AFS) debt securities.

The allowance for credit losses or ACL is a valuation account that is deducted from, or added to, the amortized cost basis of financial assets to present the net amount expected to be collected over the contractual term of the assets, considering expected prepayments. Renewals, extensions, and modifications are excluded from the contractual term of a financial asset for purposes of estimating the ACL, unless there is a reasonable expectation of executing a troubled debt restructuring or the renewal and extension options are part of the original or modified contract and are cancellable by the institution based on the contractual terms in the loan agreement.

In estimating the net amount expected to be collected, management should consider the effects of past events, current conditions, and reasonable and supportable forecasts on the collectibility of the institution's financial assets. FASB ASC Topic 326 requires management to use relevant forward-looking information and expectations drawn from reasonable and supportable forecasts when estimating expected credit losses.

As of the end of each quarter, or more frequently if warranted, each holding company should evaluate the collectibility of its financial assets measured at amortized cost, including, if applicable, any recorded accrued interest receivable (that is, not already reversed or charged off, as applicable), and make adjusting entries to maintain the appropriate balance of each of the separate ACLs reported on the balance sheet. A holding company should measure expected credit losses on a collective or pool basis when financial assets share similar risk characteristics. If a financial asset does not share similar risk characteristics with other assets, expected credit losses for that asset should be evaluated individually. Individually evaluated assets should not be included in a collective assessment of expected credit losses. If a financial asset ceases to share similar risk characteristics with other assets in its pool, the asset should be moved to a different pool with assets sharing similar risk characteristics, if such a pool exists. For more information on ACLs, see the glossary to the Consolidated Financial Statements for Holding Companies (FR Y-9C).

The ACL also is a component for calculating tier 2 capital, as set forth in Regulation Q (12 CFR 217.20(d)). Tier 2 capital includes surplus related to the issuance of tier 2 capital instruments; limited amounts of total capital minority interest not included in a banking organization's tier 1 capital; and limited amounts of the allowance for loan and lease losses (ALLL), or adjusted allowances for credit losses (AACL), as applicable, less applicable regulatory adjustments and deductions. A banking organization calculating its total capital ratio using the standardized approach may include in tier 2 capital the amount of ALLL or AACL that does not exceed 1.25 percent of its standardized total risk-weighted assets.

2065.3.2 APPLICABILITY

FASB ASC Topic 326 applies to all banks, savings associations, credit unions, and financial institution holding companies, regardless of size, that file regulatory reports for which the reporting requirements conform to U.S. generally accepted accounting principles (GAAP).[1]

Further, FASB ASC Topic 326 applies to all financial assets carried at amortized cost (including loans held for investment (HFI) and held-to-maturity (HTM) debt securities, as well as trade

1. See section 37(a) of the Federal Deposit Insurance Act. Under these statutory provisions, the accounting principles are applicable to reports or statements required to be filed by all insured depository institutions with the federal banking agencies (the Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation).

Table 1. Summary Scope of CECL

Financial assets within the scope of CECL	The CECL methodology does *not* apply to the following financial assets
• Financing receivables such as loans held-for-investment • Overdrawn deposit accounts (i.e., overdrafts) that are reclassified as held-for-investment loans • Held-to-maturity debt securities • Receivables that result from revenue transactions within the scope of Topic 606 on revenue from contracts with customers and Topic 610 on other income, which applies, for example, to the sale of foreclosed real estate • Reinsurance recoverables that result from insurance transactions within the scope of Topic 944 on insurance • Receivables related to repurchase agreements and securities lending agreements within the scope of Topic 860 on transfers and servicing • Net investments in leases recognized by a lessor in accordance with Topic 842 on leases • Off-balance-sheet credit exposures including off-balance-sheet loan commitments, standby letters of credit, financial guarantees not accounted for as insurance, and other similar instruments except for those within the scope of Topic 815 on derivatives and hedging	• Financial assets measured at fair value through net income, including those assets for which the fair value option has been elected • Available-for-sale debt securities • Loans held-for-sale • Policy loan receivables of an insurance entity • Loans and receivables between entities under common control • Receivables arising from operating leases.

receivables, reinsurance recoverables, and receivables that relate to repurchase agreements and securities lending agreements), a lessor's net investments in leases, and off-balance-sheet credit exposures not accounted for as insurance or as derivatives, including loan commitments, standby letters of credit, and financial guarantees.

FASB ASC Topic 326 does not apply to trading assets, loans held for sale, financial assets for which the fair value option has been elected, or loans and receivables between entities under common control. Table 1 provides a high-level overview of the scope of key financial assets covered and excluded from CECL.

2065.3.3 KEY ELEMENTS OF THE ACCOUNTING STANDARD

ASU 2016–13 and subsequent amendments revise U.S. GAAP and, consequently, affect regulatory reports based on U.S. GAAP. CECL differs from the incurred loss methodology in several key respects. First, for financial assets measured at amortized cost, CECL requires institutions to recognize lifetime expected credit losses, not just credit losses incurred as of the reporting date. CECL requires the incorporation of reasonable and supportable forecasts in developing an estimate of lifetime expected credit losses, while also maintaining the current requirement that institutions consider past events and current conditions. Furthermore, the probable threshold for recognition of allowances in accordance with the incurred loss methodology is removed under CECL. Taken together, estimating expected credit losses over the life of an asset under CECL, including consideration of reasonable and supportable forecasts but without applying the probable threshold that exists under the incurred loss methodology, results in earlier recognition of credit losses.

CECL replaces multiple impairment approaches in existing U.S. GAAP. CECL allowances generally cover a broader range of financial assets than the ALLL under the incurred loss methodology. Under the incurred loss methodology, ALLL generally covers credit losses on loans held for investment and lease financing receivables, with additional allowances for certain other extensions of credit and allowances for credit losses on certain off-balance-sheet credit exposures (with the latter allowances presented as liabilities).[2] These exposures will be within the scope of CECL.

As previously mentioned, FASB ASC Topic 326 introduces the term PCD assets, which replaces the term PCI assets. The PCD asset definition covers a broader range of assets than the PCI asset definition. CECL requires institutions to estimate and record a credit loss allowance for a PCD asset at the time of purchase. This credit loss allowance is then added to the purchase price to determine the purchase date amortized cost basis of the asset for financial reporting purposes. Post-acquisition changes in credit loss allowances on PCD assets will be established through earnings. This is different from the treatment of PCI assets, for which institutions are not permitted to estimate and recognize credit loss allowances at the time of purchase. Rather, institutions generally estimate credit loss allowances for PCI assets subsequent to the purchase only if there is deterioration in the expected cash flows from such assets.

FASB ASC Topic 326 also introduces new requirements for AFS debt securities. The accounting standard requires that an institution recognize credit losses on individual AFS debt securities through credit loss allowances, rather than through direct write-downs, as was required under U.S. GAAP prior to the adoption of FASB ASC Topic 326. AFS debt securities continue to be measured at fair value, with changes in fair value not related to credit losses recognized in other comprehensive income. Credit loss allowances on an AFS debt security are limited to the amount by which the security's fair value is less than its amortized cost.

2065.3.4 INTERAGENCY POLICY STATEMENT ON ALLOWANCES FOR CREDIT LOSSES

In June 2020, the Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) issued an interagency policy statement on allowances for credit losses (ACLs).[3] The agencies issued the policy statement in response to changes to U.S. GAAP as promulgated by the FASB in FASB ASC Topic 326.

The interagency policy statement on ACLs describes

- the measurement of expected credit losses under the CECL methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB ASC Topic 326;
- the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes;
- the maintenance of appropriate ACLs;
- the responsibilities of boards of directors and management; and
- examiner reviews of ACLs.

The interagency policy statement becomes applicable to an institution upon that institution's adoption of FASB ASC Topic 326. The following policy statements are no longer effective for an institution upon its adoption of FASB ASC Topic 326: the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses;[4] and the July 2001 Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.[5] The agencies will rescind the ALLL Policy Statements once FASB ASC Topic 326 is effective for all institutions.

2065.3.5 TRANSITION FROM ALLOWANCE FOR LOAN LEASE LOSSES

For all holding companies, early application of the credit losses standard is permitted for fiscal years beginning after December 15, 2018,

2. "Other extensions of credit" includes trade and reinsurance receivables, and receivables that relate to repurchase agreements and securities lending agreements. "Off-balance-sheet credit exposures" includes off-balance-sheet credit exposures not accounted for as insurance, such as loan commitments, standby letters of credit, and financial guarantees. Credit losses for off-balance-sheet credit exposures that are unconditionally cancellable by the issuer are not recognized under CECL.

3. The policy statement in its entirety is available at 85 Fed. Reg. 32,991 (June 1, 2020) and SR-20-12, "Interagency Policy Statement on Allowances for Credit Losses."

4. See SR-06-17, "Interagency Policy Statement on the Allowance for Loan and Lease Losses (ALLL)." The final policy statement attached to SR-20-12 does not affect Attachment 1 to SR-06-17. Attachment 1 has been revised through a separate interagency notice published at 85 Fed. Reg. 33,278 (June 1, 2020). See also SR-20-13, "Interagency Guidance on Credit Risk Review Systems."

5. See SR-01-17, "Final Interagency Policy Statement on Allowance for Loan and Lease Losses (ALLL) Methodologies and Documentation for Banks and Savings Institutions."

including interim financial reporting periods within that fiscal year. On November 15, 2019, the FASB issued ASU No. 2019-10 to defer the effective dates of ASU 2016-13 for certain holding companies. Under this ASU, for holding companies that are Securities and Exchange Commission (SEC) filers, excluding those that are eligible to be "smaller reporting companies" as defined in the SEC's rules, FASB ASC Topic 326 continues to be effective for fiscal years beginning after December 15, 2019, including interim financial reporting periods within those fiscal years (that is, January 1, 2020, for such entities with calendar year fiscal years). For all other holding companies, including those SEC filers that are eligible to be smaller reporting holding companies, FASB Topic 326 will take effect for fiscal years beginning after December 15, 2022, including interim financial reporting periods within those fiscal years (that is, January 1, 2023, for such entities with calendar year fiscal years).

Holding companies must apply FASB ASC Topic 326 for completing the FR Y-9C in accordance with the U.S. GAAP effective dates. A holding company that early adopts FASB ASC Topic 326 for U.S. GAAP financial reporting purposes should also early adopt the standard in the same period for FR Y-9 purposes. Section 4014 of the CARES Act, as amended by section 540 of the Consolidated Appropriations Act, 2021, allows a holding company to delay the adoption of ASC Topic 326 until the earlier of (1) January 1, 2022, or (2) the first day of the institution's fiscal year that begins after the date of the termination of the national emergency concerning the coronavirus outbreak declared by the President on March 13, 2020, under the National Emergencies Act.

The agencies have adopted rules providing institutions the option to phase in the day-one adverse effects on regulatory capital that may result from the adoption of the CECL accounting standard.[6] For institutions that are phasing in the capital impact of implementing the CECL accounting standard, the denominator for concentration calculations is tier 1 capital plus allowance for loan and lease losses or allowance for credit losses adjusted for the amount of CECL phase-in capital included in both allowance and tier 1 capital.[7]

For purposes of determining whether an institution phasing in the capital impact of implementing the CECL methodology is in compliance with its regulatory capital requirements (including capital buffer and prompt corrective action requirements, which apply to state member banks), the agencies will use the institution's regulatory capital ratios as adjusted by the CECL transition provision.[8] Through the supervisory process, the agencies will continue to examine institutions' credit loss estimates and allowance balances regardless of whether the institution has elected to use the CECL transition provision. In addition, the agencies may examine whether the electing institution will have adequate amounts of capital at the expiration of their CECL transition provision period. After all institutions have adopted the CECL methodology and have exited their CECL transition provision periods, it will no longer be necessary to adjust for the amount of CECL phase-in capital included in both the allowance and tier 1 capital.

For the purposes of measuring concentrations at institutions that are phasing in the adoption of the CECL accounting standard, examiners should evaluate the appropriateness of the amounts included in the denominator for the tier 1 capital calculation and confirm that the CECL transitioned amounts, if elected, plus the allowance for credit losses related to loans and leases have been excluded. To calculate the amount to be excluded from tier 1 capital, examiners should use the difference between "retained earnings" as reported on item 26.a of Schedule HC to the Y-9C Report and "retained earnings" as reported on item 2 Schedule HC-R, Part I, to the Y-9C. This resulting difference is the amount of retained earnings that should have been used to calculate tier 1 capital for purposes of measuring concentrations and should equal the retained earnings on the institution's balance sheet.

2065.3.6 SUPERVISORY CONSIDERATIONS FOR ASSESSING ACL

Examiners are expected to assess the appropriateness of management's loss estimation pro-

6. See 84 Fed. Reg. 4222 (February 14, 2019); 85 Fed. Reg. 17,723 (March 31, 2020); and 85 Fed. Reg. 61,577 (September 30, 2020).

7. For more information, see SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach."

8. See 84 Fed. Reg. 4222 (February 14, 2019).

cesses and the appropriateness of the institution's ACL balances as part of their supervisory activities. The review of ACLs, including the depth of the examiner's assessment, should be commensurate with the institution's size, complexity, and risk profile. As part of their supervisory activities, examiners generally assess the credit quality and credit risk of an institution's financial asset portfolios, the adequacy of the institution's credit loss estimation processes, the adequacy of supporting documentation, and the appropriateness of the reported ACLs and provisions for credit losses in the institution's regulatory reports and financial statements, if applicable. Examiners may consider the significant factors that affect collectibility, including the value of collateral securing financial assets and any other repayment sources. Supervisory activities may include evaluating management's effectiveness in assessing credit risk for debt securities (both prior to purchase and on an on-going basis). The *Commercial Bank Examination Manual* provides specific examination objectives and procedures to assist examiners in reviewing the appropriateness of an institution's ACL.

Incentive compensation practices in the financial industry were one of many factors that contributed to the financial crisis that began in mid-2007. Banking organizations too often rewarded employees for increasing the organization's revenue or short-term profit without adequate recognition of the risks the employees' activities posed to the organization.[1] These practices exacerbated the risks and losses at a number of banking organizations and resulted in the misalignment of the interests of employees with the long-term well-being and safety and soundness of their organizations. This section provides guidance on sound incentive compensation practices to banking organizations supervised by the Federal Reserve (also the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision (collectively, the "Agencies")).[2] This guidance is intended to assist banking organizations in designing and implementing incentive compensation arrangements and related policies and procedures that effectively consider potential risks and risk outcomes.[3]

Alignment of incentives provided to employees with the interests of shareholders of the organization often also benefits safety and soundness. However, aligning employee incentives with the interests of shareholders is not always sufficient to address safety-and-soundness concerns. Because of the presence of the federal safety net, (including the ability of insured depository institutions to raise insured deposits and access the discount window and payment services of the Federal Reserve), shareholders of a banking organization in some cases may be willing to tolerate a degree of risk that is inconsistent with the organization's safety and soundness. Accordingly, the Federal Reserve expects banking organizations to maintain incentive compensation practices that are consistent with safety and soundness, even when these practices go beyond those needed to align shareholder and employee interests.

To be consistent with safety and soundness, incentive compensation arrangements[4] at a banking organization should:

1. Provide employees incentives that appropriately balance risk and reward;
2. Be compatible with effective controls and risk-management; and
3. Be supported by strong corporate governance, including active and effective oversight by the organization's board of directors.

These principles, and the types of policies, procedures, and systems that banking organizations should have to help ensure compliance with them, are discussed later in this guidance.

The Federal Reserve expects banking organizations to regularly review their incentive compensation arrangements for all executive and non-executive employees who, either individually or as part of a group, have the ability to expose the organization to material amounts of risk, as well as to regularly review the risk-management, control, and corporate governance processes related to these arrangements. Banking organizations should immediately address any identified deficiencies in these arrangements or processes that are inconsistent with safety and soundness. Banking organizations are responsible for ensuring that their incentive compensation arrangements are consistent with the principles described in this guidance and that they do not encourage employees to expose the organization to imprudent risks that may pose a threat to the safety and soundness of the organization.

1. Examples of risks that may present a threat to the organization's safety and soundness include credit, market, liquidity, operational, legal, compliance, and reputational risks.

2. As used in this guidance, the term "banking organization" includes national banks, state member banks, state nonmember banks, savings associations, U.S. bank holding companies, savings and loan holding companies, Edge and agreement corporations, and the U.S. operations of foreign banking organizations (FBOs) with a branch, agency, or commercial lending company in the United States. If the Federal Reserve is referenced, the reference is intended to also include the other supervisory Agencies.

3. This guidance (see 75 *Fed. Reg.* 36395, June 25, 2010, for the entire text) and the principles reflected herein are consistent with the *Principles for Sound Compensation Practices* issued by the Financial Stability Board (FSB) in April 2009, and with the FSB's *Implementation Standards* for those principles, issued in September 2009.

4. In this guidance, the term "incentive compensation" refers to that portion of an employee's current or potential compensation that is tied to achievement of one or more specific metrics (e.g., a level of sales, revenue, or income). Incentive compensation does not include compensation that is awarded solely for, and the payment of which is solely tied to, continued employment (e.g., salary). In addition, the term does not include compensation arrangements that are determined based solely on the employee's level of compensation and does not vary based on one or more performance metrics (e.g., a 401(k) plan under which the organization contributes a set percentage of an employee's salary).

The Federal Reserve recognizes that incentive compensation arrangements often seek to serve several important and worthy objectives. For example, incentive compensation arrangements may be used to help attract skilled staff, induce better organization-wide and employee performance, promote employee retention, provide retirement security to employees, or allow compensation expenses to vary with revenue on an organization-wide basis. Moreover, the analysis and methods for ensuring that incentive compensation arrangements take appropriate account of risk should be tailored to the size, complexity, business strategy, and risk tolerance of each organization. The resources required will depend upon the complexity of the firm and its use of incentive compensation arrangements. For some, the task of designing and implementing compensation arrangements that properly offer incentives for executive and non-executive employees to pursue the organization's long-term well-being and that do not encourage imprudent risk-taking is a complex task that will require the commitment of adequate resources.

While issues related to designing and implementing incentive compensation arrangements are complex, the Federal Reserve is committed to ensuring that banking organizations move forward in incorporating the principles described in this guidance into their incentive compensation practices.[5]

As discussed further below, because of the size and complexity of their operations, Large complex banking organizations (LCBOs)[6] should have and adhere to systematic and formalized policies, procedures, and processes. These are considered important in ensuring that incentive compensation arrangements for all covered employees are identified and reviewed by appropriate levels of management (including the board of directors where appropriate and control units), and that they appropriately balance risks and rewards. In several places, this guidance specifically highlights the types of policies, procedures, and systems that LCBOs should have and maintain, but that generally are not expected of smaller, less complex organizations. LCBOs warrant the most intensive supervisory attention because they are significant users of incentive compensation arrangements and because flawed approaches at these organizations are more likely to have adverse effects on the broader financial system. The Federal Reserve will work with LCBOs as necessary through the supervisory process to ensure that they promptly correct any deficiencies that may be inconsistent with the safety and soundness of the organization.

The policies, procedures, and systems of smaller banking organizations that use incentive compensation arrangements[7] are expected to be less extensive, formalized, and detailed than those of LCBOs. Supervisory reviews of incentive compensation arrangements at smaller, less-complex banking organizations will be conducted by the Federal Reserve as part of the evaluation of those organizations' risk-management, internal controls, and corporate governance during the regular, risk-focused examination process. These reviews will be tailored to reflect the scope and complexity of an organization's activities, as well as the prevalence and scope of its incentive compensation arrangements. Little, if any, additional examination work is expected for smaller banking organizations that do not use, to a significant extent, incentive compensation arrangements.[8]

For all banking organizations, supervisory findings related to incentive compensation will be communicated to the organization and included in the relevant report of examination or inspection. In addition, these findings will be incorporated, as appropriate, into the organiza-

5. In December 2009 the Federal Reserve, working with the other Agencies, initiated a special horizontal review of incentive compensation arrangements and related risk-management, control, and corporate governance practices of large banking organizations (LBOs). This initiative was designed to spur and monitor the industry's progress towards the implementation of safe and sound incentive compensation arrangements, identify emerging best practices, and advance the state of practice more generally in the industry.

6. For supervisory purposes, the Federal Reserve (as well as the other federal bank regulatory agencies) segments the organizations it supervises into different supervisory portfolios based on, among other things, size, complexity, and risk profile. For purposes of this guidance, the LBOs referred to in the guidance are identified in this section as large complex banking organizations to be consistent with the Federal Reserve's other supervisory policies. LBOs are designated by (1) the OCC as the largest and most complex national banks as defined in the Large Bank Supervision booklet of the Comptroller's Handbook; (2) the FDIC, large, complex insured depository institutions (IDIs); and (3) the OTS, the largest and most complex savings associations and savings and loan holding companies.

7. This guidance does not apply to banking organizations that do not use incentive compensation.

8. To facilitate these reviews, where appropriate, a smaller banking organization should review its compensation arrangements to determine whether it uses incentive compensation arrangements to a significant extent in its business operations. A smaller banking organization will not be considered a significant user of incentive compensation arrangements simply because the organization has a firm-wide profit-sharing or bonus plan that is based on the bank's profitability, even if the plan covers all or most of the organization's employees.

tion's rating component(s) and subcomponent(s) relating to risk-management, internal controls, and corporate governance under the relevant supervisory rating system, as well as the organization's overall supervisory rating.

The Federal Reserve (or the organization's appropriate federal supervisor) may take enforcement action against a banking organization if its incentive compensation arrangements or related risk-management, control, or governance processes pose a risk to the safety and soundness of the organization, particularly when the organization is not taking prompt and effective measures to correct the deficiencies. For example, the appropriate federal supervisor may take an enforcement action if material deficiencies are found to exist in the organization's incentive compensation arrangements or related risk-management, control, or governance processes, or the organization fails to promptly develop, submit, or adhere to an effective plan designed to ensure that its incentive compensation arrangements do not encourage imprudent risk-taking and are consistent with principles of safety and soundness. As provided under section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818), an enforcement action may, among other things, require an organization to take affirmative action, such as developing a corrective action plan that is acceptable to the appropriate federal supervisor to rectify safety-and-soundness deficiencies in its incentive compensation arrangements or related processes. Where warranted, the appropriate federal supervisor may require the organization to take additional affirmative action to correct or remedy deficiencies related to the organization's incentive compensation practices.

Effective and balanced incentive compensation practices are likely to evolve significantly in the coming years, spurred by the efforts of banking organizations, supervisors, and other stakeholders. The Federal Reserve will review and update this guidance as appropriate to incorporate best practices that emerge from these efforts.

2068.0.1 SCOPE OF APPLICATION

The incentive compensation arrangements and related policies and procedures of banking organizations should be consistent with principles of safety and soundness.[9] Incentive compensation arrangements for executive officers as well as for non-executive personnel who have the ability to expose a banking organization to material amounts of risk may, if not properly structured, pose a threat to the organization's safety and soundness. Accordingly, this guidance applies to incentive compensation arrangements for:

1. Senior executives and others who are responsible for oversight of the organization's firm-wide activities or material business lines;[10]
2. Individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk (e.g., traders with large position limits relative to the organization's overall risk tolerance); and
3. Groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk, even if no individual employee is likely to expose the organization to material risk (e.g., loan officers who, as a group, originate loans that account for a material amount of the organization's credit risk).

For ease of reference, these executive and non-executive employees are collectively referred to hereafter as "covered employees" or "employees." Depending on the facts and circumstances of the individual organization, the types of employees or categories of employees that are outside the scope of this guidance because they do not have the ability to expose the organization to material risks would likely include, for example, tellers, bookkeepers, couriers, or data processing personnel.

In determining whether an employee, or group of employees, may expose a banking organization to material risk, the organization

9. In the case of the U.S. operations of FBOs, the organization's policies, including management, review, and approval requirements for its U.S. operations, should be coordinated with the FBO's group-wide policies developed in accordance with the rules of the FBO's home country supervisor. The policies of the FBO's U.S. operations should also be consistent with the FBO's overall corporate and management structure, as well as its framework for risk-management and internal controls. In addition, the policies for the U.S. operations of FBOs should be consistent with this guidance.

10. Senior executives include, at a minimum, "executive officers" within the meaning of the Federal Reserve's Regulation O (see 12 CFR 215.2(e)(1)) and, for publicly traded companies, "named officers" within the meaning of the Securities and Exchange Commission's rules on disclosure of executive compensation (see 17 CFR 229.402(a)(3)). Savings associations should also refer to OTS's rule on loans by saving associations to their executive officers, directors, and principal shareholders. (12 CFR 563.43).

should consider the full range of inherent risks arising from, or generated by, the employee's activities, even if the organization uses risk-management processes or controls to limit the risks such activities ultimately may pose to the organization. Moreover, risks should be considered to be material for purposes of this guidance if they are material to the organization, or are material to a business line or operating unit that is itself material to the organization.[11]

For purposes of illustration, assume that a banking organization has a structured-finance unit that is material to the organization. A group of employees within that unit who originate structured-finance transactions that may expose the unit to material risks should be considered "covered employees" for purposes of this guidance even if those transactions must be approved by an independent risk function prior to consummation, or the organization uses other processes or methods to limit the risk that such transactions may present to the organization.

Strong and effective risk-management and internal control functions are critical to the safety and soundness of banking organizations. However, irrespective of the quality of these functions, poorly designed or managed incentive compensation arrangements can themselves be a source of risk to a banking organization. For example, incentive compensation arrangements that provide employees strong incentives to increase the organization's short-term revenues or profits, without regard to the short- or long-term risk associated with such business, can place substantial strain on the risk-management and internal control functions of even well-managed organizations.

Moreover, poorly balanced incentive compensation arrangements can encourage employees to take affirmative actions to weaken or circumvent the organization's risk-management or internal control functions, such as by providing inaccurate or incomplete information to these functions, to boost the employee's personal compensation. Accordingly, sound compensation practices are an integral part of strong risk-management and internal control functions. A key goal of this guidance is to encourage banking organizations to incorporate the risks related to incentive compensation into their broader risk-management framework. Risk-management procedures and risk controls that ordinarily limit risk-taking do not obviate the need for incentive compensation arrangements to properly balance risk-taking incentives.

11. Thus, risks may be material to an organization even if they are not large enough themselves to threaten the solvency of the organization.

2068.0.2 PRINCIPLES OF A SOUND INCENTIVE COMPENSATION SYSTEM

2068.0.2.1 Principle 1: Balanced Risk-Taking Incentives

Incentive compensation arrangements should balance risk and financial results in a manner that does not encourage employees to expose their organizations to imprudent risks.

Incentive compensation arrangements typically attempt to encourage actions that result in greater revenue or profit for the organization. However, short-run revenue or profit can often diverge sharply from actual long-run profit because risk outcomes may become clear only over time. Activities that carry higher risk typically yield higher short-term revenue, and an employee who is given incentives to increase short-term revenue or profit, without regard to risk, will naturally be attracted to opportunities to expose the organization to more risk.

An incentive compensation arrangement is balanced when the amounts paid to an employee appropriately take into account the risks (including compliance risks), as well as the financial benefits, from the employee's activities and the impact of those activities on the organization's safety and soundness. As an example, under a balanced incentive compensation arrangement, two employees who generate the same amount of short-term revenue or profit for an organization should not receive the same amount of incentive compensation if the risks taken by the employees in generating that revenue or profit differ materially. The employee whose activities create materially larger risks for the organization should receive less than the other employee, all else being equal.

The performance measures used in an incentive compensation arrangement have an important effect on the incentives provided employees and, thus, the potential for the arrangement to encourage imprudent risk-taking. For example, if an employee's incentive compensation payments are closely tied to short-term revenue or profit of business generated by the employee, without any adjustments for the risks associated with the business generated, the potential for the arrangement to encourage imprudent risk-taking may be quite strong. Similarly, traders who work with positions that close at year-end could have an incentive to take large risks toward the end of a year if there is no mechanism for factoring how such positions perform over a longer period of time. The same result could ensue if the performance measures themselves lack integrity or can be manipulated inappropriately by the employees receiving incentive compensation.

On the other hand, if an employee's incentive compensation payments are determined based on performance measures that are only distantly linked to the employee's activities (e.g., for most employees, organization-wide profit), the potential for the arrangement to encourage the employee to take imprudent risks on behalf of the organization may be weak. For this reason, plans that provide for awards based solely on overall organization-wide performance are unlikely to provide employees, other than senior executives and individuals who have the ability to materially affect the organization's overall risk profile, with unbalanced risk-taking incentives.

Incentive compensation arrangements should not only be balanced in design, they also should be implemented so that actual payments vary based on risks or risk outcomes. If, for example, employees are paid substantially all of their potential incentive compensation even when risk or risk outcomes are materially worse than expected, employees have less incentive to avoid activities with substantial risk.

- *Banking organizations should consider the full range of risks associated with an employee's activities, as well as the time horizon over which those risks may be realized, in assessing whether incentive compensation arrangements are balanced.*

The activities of employees may create a wide range of risks for a banking organization, such as credit, market, liquidity, operational, legal, compliance, and reputational risks, as well as other risks to the viability or operation of the organization. Some of these risks may be realized in the short term, while others may become apparent only over the long term. For example, future revenues that are booked as current income may not materialize, and short-term profit-and-loss measures may not appropriately reflect differences in the risks associated with the revenue derived from different activities (e.g., the higher credit or compliance risk associated with subprime loans versus prime loans).[12] In addition, some risks (or combinations of risky strategies and positions) may have a low probability of being realized, but would have highly adverse effects on the organization if they were to be realized ("bad tail risks"). While shareholders may have less incentive to guard against bad tail risks because of the infrequency of their realization and the existence of the federal safety net, these risks warrant special attention for safety-and-soundness reasons given the threat they pose to the organization's solvency and the federal safety net.

Banking organizations should consider the full range of current and potential risks associated with the activities of covered employees, including the cost and amount of capital and liquidity needed to support those risks, in developing balanced incentive compensation arrangements. Reliable quantitative measures of risk and risk outcomes ("quantitative measures"), where available, may be particularly useful in developing balanced compensation arrangements and in assessing the extent to which arrangements are properly balanced. However, reliable quantitative measures may not be available for all types of risk or for all activities, and their utility for use in compensation arrangements varies across business lines and employees. The absence of reliable quantitative measures for certain types of risks or outcomes does not mean that banking organizations should ignore such risks or outcomes for purposes of assessing whether an incentive compensation arrangement achieves balance. For example, while reliable quantitative measures may not exist for many bad-tail risks, it is important that such risks be considered given their potential effect on safety and soundness. As in other risk-management areas, banking organizations should rely on informed judgments, supported by available data, to estimate risks and risk outcomes in the absence of reliable quantitative risk measures.

Large complex banking organizations. In designing and modifying incentive compensation arrangements, LCBOs should assess in advance of implementation whether such

12. Importantly, the time horizon over which a risk outcome may be realized is not necessarily the same as the stated maturity of an exposure. For example, the ongoing reinvestment of funds by a cash management unit in commercial paper with a one-day maturity not only exposes the organization to one-day credit risk, but also exposes the organization to liquidity risk that may be realized only infrequently.

arrangements are likely to provide balanced risk-taking incentives. Simulation analysis of incentive compensation arrangements is one way of doing so. Such analysis uses forward-looking projections of incentive compensation awards and payments based on a range of performance levels, risk outcomes, and levels of risks taken. This type of analysis, or other analysis that results in assessments of likely effectiveness, can help an LCBO assess whether incentive compensation awards and payments to an employee are likely to be reduced appropriately as the risks to the organization from the employee's activities increase.

- *An unbalanced arrangement can be moved toward balance by adding or modifying features that cause the amounts ultimately received by employees to appropriately reflect risk and risk outcomes.*

If an incentive compensation arrangement may encourage employees to expose their banking organization to imprudent risks, the organization should modify the arrangement as needed to ensure that it is consistent with safety and soundness. Four methods are often used to make compensation more sensitive to risk. These methods are:

1. *Risk Adjustment of Awards:* The amount of an incentive compensation award for an employee is adjusted based on measures that take into account the risk the employee's activities may pose to the organization. Such measures may be quantitative, or the size of a risk adjustment may be set judgmentally, subject to appropriate oversight.
2. *Deferral of Payment:* The actual payout of an award to an employee is delayed significantly beyond the end of the performance period, and the amounts paid are adjusted for actual losses or other aspects of performance that are realized or become better known only during the deferral period.[13] Deferred payouts may be altered according to risk outcomes either formulaically or judgmentally, subject to appropriate oversight. To be most effective, the deferral period should be sufficiently long to allow for the realization of a substantial portion of the risks from employee activities, and the measures of loss should be clearly explained to employees and closely tied to their activities during the relevant performance period.
3. *Longer Performance Periods:* The time period covered by the performance measures used in determining an employee's award is extended (for example, from one year to two or more years). Longer performance periods and deferral of payment are related in that both methods allow awards or payments to be made after some or all risk outcomes are realized or better known.
4. *Reduced Sensitivity to Short-Term Performance:* The banking organization reduces the rate at which awards increase as an employee achieves higher levels of the relevant performance measure(s). Rather than offsetting risk-taking incentives associated with the use of short-term performance measures, this method reduces the magnitude of such incentives. This method also can include improving the quality and reliability of performance measures in taking into account both short-term and long-term risks, for example improving the reliability and accuracy of estimates of revenues and long-term profits upon which performance measures depend.[14]

These methods for achieving balance are not exclusive, and additional methods or variations may exist or be developed. Moreover, each method has its own advantages and disadvantages. For example, where reliable risk measures exist, risk adjustment of awards may be more effective than deferral of payment in reducing incentives for imprudent risk-taking. This is because risk adjustment potentially can take account of the full range and time horizon of risks, rather than just those risk outcomes that occur or become more evident during the deferral period. On the other hand, deferral of payment may be more effective than risk adjustment in mitigating incentives to take hard-to-measure risks (such as the risks of new activities

13. The deferral-of-payment method is sometimes referred to in the industry as a "clawback." The term "clawback" also may refer specifically to an arrangement under which an employee must return incentive compensation payments previously received by the employee (and not just deferred) if certain risk outcomes occur. Section 304 of the Sarbanes-Oxley Act of 2002 (15 U.S.C. 7243), which applies to chief executive officers and chief financial officers of public banking organizations, is an example of this more specific type of "clawback" requirement.

14. Performance targets may have a material effect on risk-taking incentives. Such targets may offer employees greater rewards for increments of performance that are above the target or may provide that awards will be granted only if a target is met or exceeded. Employees may be particularly motivated to take imprudent risk in order to reach performance targets that are aggressive, but potentially achievable.

or products, or certain risks such as reputational or operational risk that may be difficult to measure with respect to particular activities), especially if such risks are likely to be realized during the deferral period. Accordingly, in some cases two or more methods may be needed in combination for an incentive compensation arrangement to be balanced.

The greater the potential incentives an arrangement creates for an employee to increase the risks associated with the employee's activities, the stronger the effect should be of the methods applied to achieve balance. Thus, for example, risk adjustments used to counteract a materially unbalanced compensation arrangement should have a similarly material impact on the incentive compensation paid under the arrangement. Further, improvements in the quality and reliability of performance measures themselves, for example improving the reliability and accuracy of estimates of revenues and profits upon which performance measures depend, can significantly improve the degree of balance in risk-taking incentives.

Where judgment plays a significant role in the design or operation of an incentive compensation arrangement, strong policies and procedures, internal controls, and ex post monitoring of incentive compensation payments relative to actual risk outcomes are particularly important to help ensure that the arrangements as implemented are balanced and do not encourage imprudent risk-taking. For example, if a banking organization relies to a significant degree on the judgment of one or more managers to ensure that the incentive compensation awards to employees are appropriately risk-adjusted, the organization should have policies and procedures that describe how managers are expected to exercise that judgment to achieve balance and that provide for the manager(s) to receive appropriate available information about the employee's risk-taking activities to make informed judgments.

Large complex banking organizations. Methods and practices for making compensation sensitive to risk are likely to evolve rapidly during the next few years, driven in part by the efforts of supervisors and other stakeholders. LCBOs should actively monitor developments in the field and should incorporate into their incentive compensation systems new or emerging methods or practices that are likely to improve the organization's long-term financial well-being and safety and soundness.

- *The manner in which a banking organization seeks to achieve balanced incentive compensation arrangements should be tailored to account for the differences between employees—including the substantial differences between senior executives and other employees—as well as between banking organizations.*

Activities and risks may vary significantly both across banking organizations and across employees within a particular banking organization. For example, activities, risks, and incentive compensation practices may differ materially among banking organizations based on, among other things, the scope or complexity of activities conducted and the business strategies pursued by the organizations. These differences mean that methods for achieving balanced compensation arrangements at one organization may not be effective in restraining incentives to engage in imprudent risk-taking at another organization. Each organization is responsible for ensuring that its incentive compensation arrangements are consistent with the safety and soundness of the organization.

Moreover, the risks associated with the activities of one group of non-executive employees (e.g., loan originators) within a banking organization may differ significantly from those of another group of non-executive employees (e.g., spot foreign exchange traders) within the organization. In addition, reliable quantitative measures of risk and risk outcomes are unlikely to be available for a banking organization as a whole, particularly a large, complex organization. This factor can make it difficult for banking organizations to achieve balanced compensation arrangements for senior executives who have responsibility for managing risks on an organization-wide basis solely through use of the risk-adjustment-of-award method.

Furthermore, the payment of deferred incentive compensation in equity (such as restricted stock of the organization) or equity-based instruments (such as options to acquire the organization's stock) may be helpful in restraining the risk-taking incentives of senior executives and other covered employees whose activities may have a material effect on the overall financial performance of the organization. However, equity-related deferred compensation may not be as effective in restraining the incentives of lower-level covered employees (particularly at large organizations) to take risks because such employees are unlikely to believe that their actions will materially affect the organization's stock price.

Banking organizations should take account of these differences when constructing balanced compensation arrangements. For most banking organizations, the use of a single, formulaic approach to making employee incentive compensation arrangements appropriately risk-sensitive is likely to result in arrangements that are unbalanced at least with respect to some employees.[15]

Large complex banking organizations. Incentive compensation arrangements for senior executives at LCBOs are likely to be better balanced if they involve deferral of a substantial portion of the executives' incentive compensation over a multi-year period in a way that reduces the amount received in the event of poor performance, substantial use of multi-year performance periods, or both. Similarly, the compensation arrangements for senior executives at LCBOs are likely to be better balanced if a significant portion of the incentive compensation of these executives is paid in the form of equity-based instruments that vest over multiple years, with the number of instruments ultimately received dependent on the performance of the organization during the deferral period.

The portion of the incentive compensation of other covered employees that is deferred or paid in the form of equity-based instruments should appropriately take into account the level, nature, and duration of the risks that the employees' activities create for the organization and the extent to which those activities may materially affect the overall performance of the organization and its stock price. Deferral of a substantial portion of an employee's incentive compensation may not be workable for employees at lower pay scales because of their more limited financial resources. This may require increased reliance on other measures in the incentive compensation arrangements for these employees to achieve balance.

- *Banking organizations should carefully consider the potential for "golden parachutes" and the vesting arrangements for deferred compensation to affect the risk-taking behavior of employees while at the organizations.*

Arrangements that provide for an employee (typically a senior executive), upon departure from the organization or a change in control of the organization, to receive large additional payments or the accelerated payment of deferred amounts without regard to risk or risk outcomes can provide the employee significant incentives to expose the organization to undue risk. For example, an arrangement that provides an employee with a guaranteed payout upon departure from an organization, regardless of performance, may neutralize the effect of any balancing features included in the arrangement to help prevent imprudent risk-taking.

Banking organizations should carefully review any such existing or proposed arrangements (sometimes called "golden parachutes") and the potential impact of such arrangements on the organization's safety and soundness. In appropriate circumstances an organization should consider including balancing features—such as risk adjustment or deferral requirements that extend past the employee's departure—in the arrangements to mitigate the potential for the arrangements to encourage imprudent risk-taking. In all cases, a banking organization should ensure that the structure and terms of any golden parachute arrangement entered into by the organization do not encourage imprudent risk-taking in light of the other features of the employee's incentive compensation arrangements.

Large complex banking organizations. Provisions that require a departing employee to forfeit deferred incentive compensation payments may weaken the effectiveness of the deferral arrangement if the departing employee is able to negotiate a "golden handshake" arrangement with the new employer.[16] This weakening effect can be particularly significant for senior executives or other skilled employees at LCBOs whose services are in high demand within the market.

Golden handshake arrangements present special issues for LCBOs and supervisors. For example, while a banking organization could adjust its deferral arrangements so that departing employees will continue to receive any accrued deferred compensation after departure

15. For example, spreading payouts of incentive compensation awards over a standard three-year period may not appropriately reflect the differences in the type and time horizon of risk associated with the activities of different groups of employees, and may not be sufficient by itself to balance the compensation arrangements of employees who may expose the organization to substantial longer-term risks.

16. Golden handshakes are arrangements that compensate an employee for some or all of the estimated, non-adjusted value of deferred incentive compensation that would have been forfeited upon departure from the employee's previous employment.

(subject to any clawback or malus[17]), these changes could reduce the employee's incentive to remain at the organization and, thus, weaken an organization's ability to retain qualified talent, which is an important goal of compensation, and create conflicts of interest. Moreover, actions of the hiring organization (which may or may not be a supervised banking organization) ultimately may defeat these or other risk-balancing aspects of a banking organization's deferral arrangements. LCBOs should monitor whether golden handshake arrangements are materially weakening the organization's efforts to constrain the risk-taking incentives of employees. The Federal Reserve will continue to work with banking organizations and others to develop appropriate methods for addressing any effect that such arrangements may have on the safety and soundness of banking organizations.

- *Banking organizations should effectively communicate to employees the ways in which incentive compensation awards and payments will be reduced as risks increase.*

In order for the risk-sensitive provisions of incentive compensation arrangements to affect employee risk-taking behavior, the organization's employees need to understand that the amount of incentive compensation that they may receive will vary based on the risk associated with their activities. Accordingly, banking organizations should ensure that employees covered by an incentive compensation arrangement are informed about the key ways in which risks are taken into account in determining the amount of incentive compensation paid. Where feasible, an organization's communications with employees should include examples of how incentive compensation payments may be adjusted to reflect projected or actual risk outcomes. An organization's communications should be tailored appropriately to reflect the sophistication of the relevant audience(s).

17. A malus arrangement permits the employer to prevent vesting of all or part of the amount of a deferred remuneration award. Malus provisions are invoked when risk outcomes are worse than expected or when the information upon which the award was based turns out to have been incorrect. Loss of unvested compensation due to the employee voluntarily leaving the firm is not an example of malus as the term is used in this guidance.

2068.0.2.2 Principle 2: Compatibility with Effective Controls and Risk-Management

A banking organization's risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

In order to increase their own compensation, employees may seek to evade the processes established by a banking organization to achieve balanced compensation arrangements. Similarly, an employee covered by an incentive compensation arrangement may seek to influence, in ways designed to increase the employee's pay, the risk measures or other information or judgments that are used to make the employee's pay sensitive to risk.

Such actions may significantly weaken the effectiveness of an organization's incentive compensation arrangements in restricting imprudent risk-taking. These actions can have a particularly damaging effect on the safety and soundness of the organization if they result in the weakening of risk measures, information, or judgments that the organization uses for other risk-management, internal control, or financial purposes. In such cases, the employee's actions may weaken not only the balance of the organization's incentive compensation arrangements, but also the risk-management, internal controls, and other functions that are supposed to act as a separate check on risk-taking. For this reason, traditional risk-management controls alone do not eliminate the need to identify employees who may expose the organization to material risk, nor do they obviate the need for the incentive compensation arrangements for these employees to be balanced. Rather, a banking organization's risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

- *Banking organizations should have appropriate controls to ensure that their processes for achieving balanced compensation arrangements are followed and to maintain the integrity of their risk-management and other functions.*

To help prevent damage from occurring, a banking organization should have strong controls governing its process for designing, implementing, and monitoring incentive compensation arrangements. Banking organizations should create and maintain sufficient documentation to permit an audit of the effectiveness of the organization's processes for establishing, modifying, and monitoring incentive compensation arrangements. Smaller banking organizations should incorporate reviews of these processes into their overall framework for compliance monitoring (including internal audit).

Large complex banking organizations. LCBOs should have and maintain policies and procedures that (1) identify and describe the role(s) of the personnel, business units, and control units authorized to be involved in the design, implementation, and monitoring of incentive compensation arrangements; (2) identify the source of significant risk-related inputs into these processes and establish appropriate controls governing the development and approval of these inputs to help ensure their integrity; and (3) identify the individual(s) and control unit(s) whose approval is necessary for the establishment of new incentive compensation arrangements or modification of existing arrangements.

An LCBO also should conduct regular internal reviews to ensure that its processes for achieving and maintaining balanced incentive compensation arrangements are consistently followed. Such reviews should be conducted by audit, compliance, or other personnel in a manner consistent with the organization's overall framework for compliance monitoring. An LCBO's internal audit department also should separately conduct regular audits of the organization's compliance with its established policies and controls relating to incentive compensation arrangements. The results should be reported to appropriate levels of management and, where appropriate, the organization's board of directors.

- *Appropriate personnel, including risk-management personnel, should have input into the organization's processes for designing incentive compensation arrangements and assessing their effectiveness in restraining imprudent risk-taking.*

Developing incentive compensation arrangements that provide balanced risk-taking incentives and monitoring arrangements to ensure they achieve balance over time requires an understanding of the risks (including compliance risks) and potential risk outcomes associated with the activities of the relevant employees. Accordingly, banking organizations should have policies and procedures that ensure that risk-management personnel have an appropriate role in the organization's processes for designing incentive compensation arrangements and for assessing their effectiveness in restraining imprudent risk-taking.[18] Ways that risk managers might assist in achieving balanced compensation arrangements include, but are not limited to

1. reviewing the types of risks associated with the activities of covered employees;
2. approving the risk measures used in risk adjustments and performance measures, as well as measures of risk outcomes used in deferred-payout arrangements; and
3. analyzing risk-taking and risk outcomes relative to incentive compensation payments.

Other functions within an organization, such as its control, human resources, or finance functions, also play an important role in helping ensure that incentive compensation arrangements are balanced. For example, these functions may contribute to the design and review of performance measures used in compensation arrangements or may supply data used as part of these measures.

- *Compensation for employees in risk-management and control functions should be sufficient to attract and retain qualified personnel and should avoid conflicts of interest.*

The risk-management and control personnel involved in the design, oversight, and operation of incentive compensation arrangements should have appropriate skills and experience needed to effectively fulfill their roles. These skills and experiences should be sufficient to equip the personnel to remain effective in the face of challenges by covered employees seeking to increase their incentive compensation in ways that are inconsistent with sound risk-management or internal controls. The compensation arrangements for employees in risk-management and control functions thus should be sufficient to attract and retain qualified per-

18. Involvement of risk-management personnel in the design and monitoring of these arrangements also should help ensure that the organization's risk-management functions can properly understand and address the full range of risks facing the organization.

sonnel with experience and expertise in these fields that is appropriate in light of the size, activities, and complexity of the organization.

In addition, to help preserve the independence of their perspectives, the incentive compensation received by risk-management and control personnel staff should not be based substantially on the financial performance of the business units that they review. Rather, the performance measures used in the incentive compensation arrangements for these personnel should be based primarily on the achievement of the objectives of their functions (e.g., adherence to internal controls).

- *Banking organizations should monitor the performance of their incentive compensation arrangements and should revise the arrangements as needed if payments do not appropriately reflect risk.*

Banking organizations should monitor incentive compensation awards and payments, risks taken, and actual risk outcomes to determine whether incentive compensation payments to employees are reduced to reflect adverse risk outcomes or high levels of risk taken. Results should be reported to appropriate levels of management, including the board of directors where warranted and consistent with Principle 3 below. The monitoring methods and processes used by a banking organization should be commensurate with the size and complexity of the organization, as well as its use of incentive compensation. Thus, for example, a small, noncomplex organization that uses incentive compensation only to a limited extent may find that it can appropriately monitor its arrangements through normal management processes.

A banking organization should take the results of such monitoring into account in establishing or modifying incentive compensation arrangements and in overseeing associated controls. If, over time, incentive compensation paid by a banking organization does not appropriately reflect risk outcomes, the organization should review and revise its incentive compensation arrangements and related controls to ensure that the arrangements, as designed and implemented, are balanced and do not provide employees incentives to take imprudent risks.

2068.0.2.3 Principle 3: Strong Corporate Governance

Banking organizations should have strong and effective corporate governance to help ensure sound compensation practices, including active and effective oversight by the board of directors.

Given the key role of senior executives in managing the overall risk-taking activities of an organization, the board of directors of a banking organization should directly approve the incentive compensation arrangements for senior executives.[19] The board also should approve and document any material exceptions or adjustments to the incentive compensation arrangements established for senior executives and should carefully consider and monitor the effects of any approved exceptions or adjustments on the balance of the arrangement, the risk-taking incentives of the senior executive, and the safety and soundness of the organization.

The board of directors of an organization also is ultimately responsible for ensuring that the organization's incentive compensation arrangements for all covered employees are appropriately balanced and do not jeopardize the safety and soundness of the organization. The involvement of the board of directors in oversight of the organization's overall incentive compensation program should be scaled appropriately to the scope and prevalence of the organization's incentive compensation arrangements.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should actively oversee the development and operation of the organization's incentive compensation policies, systems, and related control processes. The board of directors of such an organization should review and approve the overall goals and purposes of the organization's incentive compensation system. In addition, the board should provide clear direction to management to ensure that the goals and policies it establishes are carried out in a manner that

19. As used in this guidance, the term "board of directors" is used to refer to the members of the board of directors who have primary responsibility for overseeing the incentive compensation system. Depending on the manner in which the board is organized, the term may refer to the entire board of directors, a compensation committee of the board, or another committee of the board that has primary responsibility for overseeing the incentive compensation system. In the case of FBOs, the term refers to the relevant oversight body for the firm's U.S. operations, consistent with the FBO's overall corporate and management structure.

achieves balance and is consistent with safety and soundness.

The board of directors of such an organization also should ensure that steps are taken so that the incentive compensation system—including performance measures and targets—is designed and operated in a manner that will achieve balance.

• *The board of directors should monitor the performance, and regularly review the design and function, of incentive compensation arrangements.*

To allow for informed reviews, the board should receive data and analysis from management or other sources that are sufficient to allow the board to assess whether the overall design and performance of the organization's incentive compensation arrangements are consistent with the organization's safety and soundness. These reviews and reports should be appropriately scoped to reflect the size and complexity of the banking organization's activities and the prevalence and scope of its incentive compensation arrangements.

The board of directors of a banking organization should closely monitor incentive compensation payments to senior executives and the sensitivity of those payments to risk outcomes. In addition, if the compensation arrangement for a senior executive includes a clawback provision, then the review should include sufficient information to determine if the provision has been triggered and executed as planned.

The board of directors of a banking organization should seek to stay abreast of significant emerging changes in compensation plan mechanisms and incentives in the marketplace as well as developments in academic research and regulatory advice regarding incentive compensation policies. However, the board should recognize that organizations, activities, and practices within the industry are not identical. Incentive compensation arrangements at one organization may not be suitable for use at another organization because of differences in the risks, controls, structure, and management among organizations. The board of directors of each organization is responsible for ensuring that the incentive compensation arrangements for its organization do not encourage employees to take risks that are beyond the organization's ability to manage effectively, regardless of the practices employed by other organizations.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of an LCBO or other organization that uses incentive compensation to a significant extent should receive and review, on an annual or more frequent basis, an assessment by management, with appropriate input from risk-management personnel, of the effectiveness of the design and operation of the organization's incentive compensation system in providing risk-taking incentives that are consistent with the organization's safety and soundness. These reports should include an evaluation of whether or how incentive compensation practices may increase the potential for imprudent risk-taking.

The board of such an organization also should receive periodic reports that review incentive compensation awards and payments relative to risk outcomes on a backward-looking basis to determine whether the organization's incentive compensation arrangements may be promoting imprudent risk-taking. Boards of directors of these organizations also should consider periodically obtaining and reviewing simulation analysis of compensation on a forward-looking basis based on a range of performance levels, risk outcomes, and the amount of risks taken.

• *The organization, composition, and resources of the board of directors should permit effective oversight of incentive compensation.*

The board of directors of a banking organization should have, or have access to, a level of expertise and experience in risk-management and compensation practices in the financial services industry that is appropriate for the nature, scope, and complexity of the organization's activities. This level of expertise may be present collectively among the members of the board, may come from formal training or from experience in addressing these issues, including as a director, or may be obtained through advice received from outside counsel, consultants, or other experts with expertise in incentive compensation and risk-management. The board of directors of an organization with less complex and extensive incentive compensation arrangements may not find it necessary or appropriate to require special board expertise or to retain and use outside experts in this area.

In selecting and using outside parties, the board of directors should give due attention to potential conflicts of interest arising from other dealings of the parties with the organization or for other reasons. The board also should exercise caution to avoid allowing outside parties to obtain undue levels of influence. While the retention and use of outside parties may be helpful, the board retains ultimate responsibility for ensuring that the organization's incentive compensation arrangements are consistent with safety and soundness.

Large complex banking organizations and organizations that are significant users of incentive compensation. If a separate compensation committee is not already in place or required by other authorities,[20] the board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should consider establishing such a committee—reporting to the full board—that has primary responsibility for overseeing the organization's incentive compensation systems. A compensation committee should be composed solely or predominantly of non-executive directors. If the board does not have such a compensation committee, the board should take other steps to ensure that non-executive directors of the board are actively involved in the oversight of incentive compensation systems. The compensation committee should work closely with any board-level risk and audit committees where the substance of their actions overlap.

- *A banking organization's disclosure practices should support safe and sound incentive compensation arrangements.*

If a banking organization's incentive compensation arrangements provide employees incentives to take risks that are beyond the tolerance of the organization's shareholders, these risks are likely to also present a risk to the safety and soundness of the organization.[21] To help promote safety and soundness, a banking organization should provide an appropriate amount of information concerning its incentive compensation arrangements for executive and non-executive employees and related risk-management, control, and governance processes to shareholders to allow them to monitor and, where appropriate, take actions to restrain the potential for such arrangements and processes that encourage employees to take imprudent risks. Such disclosures should include information relevant to employees other than senior executives. The scope and level of the information disclosed by the organization should be tailored to the nature and complexity of the organization and its incentive compensation arrangements.[22]

- *Large complex banking organizations should follow a systematic approach to developing a compensation system that has balanced incentive compensation arrangements.*

At banking organizations with large numbers of risk-taking employees engaged in diverse activities, an ad hoc approach to developing balanced arrangements is unlikely to be reliable. Thus, an LCBO should use a systematic approach—supported by robust and formalized policies, procedures, and systems—to ensure that those arrangements are appropriately balanced and consistent with safety and soundness. Such an approach should provide for the organization effectively to:

1. Identify employees who are eligible to receive incentive compensation and whose activities may expose the organization to material risks. These employees should include
   a. senior executives and others who are responsible for oversight of the organization's firm-wide activities or material business lines;
   b. individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk; and
   c. groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk;
2. Identify the types and time horizons of risks to the organization from the activities of these employees;
3. Assess the potential for the performance measures included in the incentive compensation arrangements for these employees to encourage the employees to take imprudent risks;

20. See New York Stock Exchange Listed Company Manual Section 303A.05(a); Nasdaq Listing Rule 5605(d); Internal Revenue Code section 162(m) (26 U.S.C. 162(m)).

21. On the other hand, as noted previously, compensation arrangements that are in the interests of the shareholders of a banking organization are not necessarily consistent with safety and soundness.

22. A banking organization also should comply with the incentive compensation disclosure requirements of the federal securities law and other laws as applicable. See, for example, Proxy Disclosure Enhancements, SEC Release Nos. 33-9089, 34-61175, 74 F.R. 68334 (Dec. 23, 2009) (to be codified at 17 C.F.R. 229 and 249).

4. Include balancing elements, such as risk adjustments or deferral periods, within the incentive compensation arrangements for these employees that are reasonably designed to ensure that the arrangement will be balanced in light of the size, type, and time horizon of the inherent risks of the employees' activities;
5. Communicate to the employees the ways in which their incentive compensation awards or payments will be adjusted to reflect the risks of their activities to the organization; and
6. Monitor incentive compensation awards, payments, risks taken, and risk outcomes for these employees and modify the relevant arrangements if payments made are not appropriately sensitive to risk and risk outcomes.

2068.0.3 CONCLUSION ON SOUND INCENTIVE COMPENSATION

Banking organizations are responsible for ensuring that their incentive compensation arrangements do not encourage imprudent risk-taking behavior and are consistent with the safety and soundness of the organization. The Federal Reserve expects banking organizations to take prompt action to address deficiencies in their incentive compensation arrangements or related risk-management, control, and governance processes.

The Federal Reserve intends to actively monitor the actions taken by banking organizations in this area and will promote further advances in designing and implementing balanced incentive compensation arrangements. Where appropriate, the Federal Reserve will take supervisory or enforcement action to ensure that material deficiencies that pose a threat to the safety and soundness of the organization are promptly addressed. The Federal Reserve also will update this guidance as appropriate to incorporate best practices as they develop over time.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2014, this section is revised to include a June 13, 2014, interagency Addendum to the 1998 "Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure" (Addendum). The Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (Agencies) announced the issuance of the Addendum to ensure that insured depository institutions (IDIs) in a consolidated group maintain an appropriate relationship regarding the payment of taxes and treatment of tax refunds. The purpose of the Addendum is to ensure that tax allocation agreements expressly acknowledge an agency relationship between a holding company[1] and its subsidiary IDI to protect the IDI's ownership rights in tax refunds. State member banks and holding companies should implement the guidance as soon as reasonably possible, which the Agency expect would not be later than October 31, 2014. This Addendum clarifies and supplements but does not replace the 1998 Interagency Policy Statement. (Refer to SR-14-6.)

A holding company and its depository institution subsidiaries may generally file a consolidated group income tax return. For bank regulatory purposes, however, each depository institution is viewed as, and reports as, a separate legal and accounting entity. Each holding company subsidiary that participates in filing a consolidated tax return should record its tax expenses or tax benefits as though it had filed a tax return as a separate entity. The amount and timing of any intercompany payments or refunds to the subsidiary that result from its being a part of the consolidated return group should be no more favorable than if the subsidiary was a separate taxpayer. A consolidated return permits the parent's and other subsidiaries' taxable losses to be offset against other subsidiaries' taxable income, with the parent most often providing the principal loss. This can be illustrated with the following example:

1. For the purpose of this guidance, the term, "holding company" refers to a bank holding company or a savings and loan holding company.

	Parent Only	*Bank*	*Non-bank A*	*Non-bank B*	*Consolidated*
Contribution to consolidated net taxable income (loss):	$(100)	$2,000	$500	$(50)	$2,350
Assumed tax rate	40%	40%	40%	40%	40%
Tax payment/ (benefit)	$(40)	$ 800	$200	$(20)	$ 940

In this example, the parent, as the representative of the consolidated group to the Internal Revenue Service, would collect $800 from the bank subsidiary and $200 from Nonbank Subsidiary A, and pay $20 to Nonbank Subsidiary B. In return, the parent would remit to the tax authorities $940, resulting in a net cash retention of $40 by the parent.

Bank holding companies employ numerous methods to determine the amount of estimated payments to be received from their subsidiaries. Although the tax-accounting methods to be used by bank holding companies are not prescribed by the Federal Reserve System, the method employed must afford subsidiaries equitable treatment compared with filing separate returns. In general terms, tax transactions between any subsidiary and its parent should be conducted as though the subsidiary was dealing directly with state or federal taxing authorities.

The tax structure of holding companies becomes more complicated when deferred taxes are considered in the intercorporate tax settlements.[2] Deferred taxes occur when taxable income, for financial reporting purposes, differs from taxable income as reported to the taxing authorities. This difference is due to timing differences between financial-statement income and tax income for loan-loss provisions and other items, such as foreign tax credits. In addition, differences result from the use of the cash basis of accounting for tax purposes, as opposed to the accrual basis of accounting used in finan-

2. The issue becomes more complex because of GAAP-based tax expenses versus actual taxes paid under relevant tax laws (the difference between the two expenses is either a deferred tax liability or asset on the balance sheet). If the sharing agreement is based on the tax expense on the statement of income, more funds may be transferred to the paying agent than are required to settle the actual taxes owed.

cial reporting. The different bases are chosen by management.

An example of deferred income taxes follows, using an estimated tax rate of 40 percent.

	Financial Reporting	*Tax Return*
Pre-tax income	$200	$150
Currently payable	60	60
Deferred portion	20	—
TOTAL	80	60
Net income	$120	$90

The deferred portion represents the tax effect of delaying the recognition of income or taking more of a deduction for tax-return purposes (40% x $50). This is a temporary difference since over the "life" of the holding company, income and deductions should theoretically equalize for both book and tax purposes.

Financial Accounting Standards Board Accounting Standards Codification 740-10 Statement No. 109 (FAS 109), "Accounting for Income Taxes," provides guidance on many aspects of accounting for income taxes, including the accounting for deferred tax liabilities and assets. FAS 109 describes how a bank holding company should record (1) taxes payable or refundable for the current year and (2) deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the banking organization's financial statements or tax returns.

Generally, all bank and other holding companies file annual income tax returns. The holding company pays the entire amount of tax (that is, the amount still due after estimated tax payments) on or before the due date for filing, or it can elect to pay by the extension deadline if one is granted. Bank holding companies may receive extensions from taxing authorities to file their returns later. For the federal tax return, a six-month extension may be granted.

Bank holding companies generally pay estimated taxes throughout the year. The most common payment dates will be as follows (assuming calendar period):

April 15 —first estimate (25%)
June 15 —second estimate (25%)
September 15 —third estimate (25%)
December 15 —fourth estimate (25%)
March 15 —Due date for income tax return for U.S. corporations or foreign corporations with offices in the United States. Last day for filing for the automatic six-month extension.
September 15 —Due date of return if six-month extensions were granted.

Bank holding companies have engaged in intercorporate income tax settlements that have the effect of transferring assets and income from a bank subsidiary to the parent company. The Board will apply appropriate supervisory remedies to situations that are considered inequitable or improper. These remedies may include, under certain circumstances, the Board's cease-and-desist powers.

On occasion, bank holding companies have used deferred tax assets as a vehicle to transfer cash or other earning assets of subsidiaries, principally from the bank, into the parent company. The Board's opinion is that each deferred tax asset or liability must remain on the books of the subsidiary. If deferred tax assets have been transferred to the parent, regardless of when the transfer may have occurred, immediate arrangements must be made to return the asset to the appropriate subsidiary. Instances of transferring deferred tax assets to the parent are worthy of inclusion in the Examiner's Comments and Matters Requiring Special Board Attention section or page of the inspection report.

2070.0.1 INTERAGENCY POLICY STATEMENT ON INCOME TAX ALLOCATION IN A HOLDING COMPANY STRUCTURE

In 1998, the federal bank and savings association's regulatory agencies (the agencies) issued the following policy statement to provide guidance to banking organizations and savings associations regarding the allocation and payment of taxes among a holding company and its subsidiaries. A holding company and its subsidiaries will often file a consolidated group income tax return. However, for bank regulatory purposes, each depository institution of the consolidated group is viewed as, and reports as, a separate legal and accounting entity. Accordingly, each depository institution's applicable income taxes, reflecting either an expense or benefit, should be recorded as if the institution had filed as a separate tax-paying entity.[3] The amount and timing of payments or refunds should be no less favorable to a subsidiary than if it was a separate taxpayer. Any practice that is not consistent with this policy statement may be viewed as an unsafe and unsound practice prompting either informal or formal corrective action. See SR-98-38.

2070.0.1.1 Tax-Sharing Agreements

A holding company and its subsidiary institutions are encouraged to enter into a written comprehensive tax-allocation agreement tailored to their specific circumstances. The agreement should be approved by the respective boards of directors. Although each agreement will be different, tax-allocation agreements usually address certain issues common to consolidated groups.

Therefore, such an agreement should—

1. require a subsidiary depository institution to compute its income taxes (both current and deferred) on a separate-entity basis;
2. discuss the amount and timing of the institution's payments for current tax expense, including estimated tax payments;
3. discuss reimbursements to an institution when it has a loss for tax purposes; and
4. prohibit the payment or other transfer of deferred taxes by the institution to another member of the consolidated group.

2070.0.1.2 Measurement of Current and Deferred Income Taxes

Generally accepted accounting principles, instructions for the preparation of the federally supervised bank Consolidated Reports of Condition and Income, and other guidance issued by the agencies require depository institutions to account for their current and deferred tax liability or benefit.

When the depository-institution members of a consolidated group prepare separate bank regulatory reports, each subsidiary institution should record current and deferred taxes as if it files its tax returns on a separate-entity basis, regardless of the consolidated group's tax-paying or -refund status. Certain adjustments for statutory tax considerations that arise in a consolidated return, e.g., application of graduated tax rates, may be made to the separate-entity calculation as long as they are made on a consistent and equitable basis among the holding company affiliates.

In addition, when an organization's consolidated income tax obligation arising from the alternative minimum tax (AMT) exceeds its regular tax on a consolidated basis, the excess should be consistently and equitably allocated among the members of the consolidated group. The allocation method should be based upon the portion of tax preferences, adjustments, and other items generated by each group member which causes the AMT to be applicable at the consolidated level.

2070.0.1.3 Tax Payments to the Parent Company

Tax payments from a subsidiary institution to the parent company should not exceed the amount the institution has properly recorded as its current tax expense on a separate-entity basis. Furthermore, such payments, including estimated tax payments, generally should not be made before the institution would have been obligated to pay the taxing authority had it filed as a separate entity. Payments made in advance may be considered extensions of credit from the subsidiary to the parent and may be subject to affiliate transaction rules, i.e., sections 23A and 23B of the Federal Reserve Act.

A subsidiary institution should not pay its deferred tax liabilities or the deferred portion of its applicable income taxes to the parent. The deferred tax account is not a tax liability required to be paid in the current reporting period. As a result, the payment of deferred income taxes by an institution to its holding company is considered a dividend subject to dividend restrictions,[4] not the extinguishment of a liability. Furthermore, such payments may constitute an unsafe and unsound banking practice.

3. Throughout the policy statement, the terms "separate entity" and "separate taxpayer" are used synonymously. When a depository institution has subsidiaries of its own, the institution's applicable income taxes on a separate-entity basis include the taxes of the subsidiaries *of the institution* that are included with the institution in the consolidated group return.

4. These restrictions include the prompt-corrective-action provisions of section 38(d)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831o(d)(1)) and its implementing regulations: for insured state nonmember banks, 12 CFR 325, subpart B; for national banks, 12 CFR section 6.6; for savings associations, 12 CFR 565; and for state member banks, 12 CFR 208.45.

2070.0.1.4 Tax Refunds from the Parent Company

An institution incurring a loss for tax purposes should record a current income tax benefit and receive a refund from its parent in an amount no less than the amount the institution would have been entitled to receive as a separate entity. The refund should be made to the institution within a reasonable period following the date the institution would have filed its own return, regardless of whether the consolidated group is receiving a refund. If a refund is not made to the institution within this period, the institution's primary federal regulator may consider the receivable as either an extension of credit or a dividend from the subsidiary to the parent. A parent company may reimburse an institution more than the refund amount it is due on a separate-entity basis. Provided the institution will not later be required to repay this excess amount to the parent, the additional funds received should be reported as a capital contribution.

If the institution, as a separate entity, would not be entitled to a current refund because it has no carry-back benefits available on a separate-entity basis, its holding company may still be able to utilize the institution's tax loss to reduce the consolidated group's current tax liability. In this situation, the holding company may reimburse the institution for the use of the tax loss. If the reimbursement will be made on a timely basis, the institution should reflect the tax benefit of the loss in the current portion of its applicable income taxes in the period the loss is incurred. Otherwise, the institution should not recognize the tax benefit in the current portion of its applicable income taxes in the loss year. Rather, the tax loss represents a loss carry-forward, the benefit of which is recognized as a deferred tax asset, net of any valuation allowance.

Regardless of the treatment of an institution's tax loss for regulatory reporting and supervisory purposes, a parent company that receives a tax refund from a taxing authority obtains these funds as agent for the consolidated group on behalf of the group members.[5] Accordingly, an organization's tax-allocation agreement or other corporate policies should not purport to characterize refunds attributable to a subsidiary depository institution that the parent receives from a taxing authority as the property of the parent.

5. See 26 CFR 1.1502-77(a).

2070.0.1.5 Income-Tax-Forgiveness Transactions

A parent company may require a subsidiary institution to pay it less than the full amount of the current income tax liability that the institution calculated on a separate-entity basis. Provided the parent will not later require the institution to pay the remainder of the current tax liability, the amount of this unremitted liability should be accounted for as having been paid with a simultaneous capital contribution by the parent to the subsidiary.

In contrast, a parent cannot make a capital contribution to a subsidiary institution by "forgiving" some or all of the subsidiary's deferred tax liability. Transactions in which a parent "forgives" any portion of a subsidiary institution's deferred tax liability should not be reflected in the institution's regulatory reports. These transactions lack economic substance because each member of the consolidated group is jointly and severally liable for the group's potential future obligation to the taxing authorities. Although the subsidiaries have no direct obligation to remit tax payments to the taxing authorities, these authorities can collect some or all of a group liability from any of the group members if tax payments are not made when due.

2070.0.1.6 Appendix — 2014 Addendum to 1998 Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure

Since the issuance of the 1998 Interagency Policy Statement, courts have reached varying conclusions regarding whether tax allocation agreements create a debtor-creditor relationship between a holding company and its IDI.[6] Some courts have found that the tax refunds in question were the property of the holding company in bankruptcy (rather than property of the sub-

6. Case law on this issue is mixed. *Compare Zucker v. FDIC, as Receiver for BankUnited,* 727 F.3d 1100, 1108-09 (11th Cir. Aug. 15, 2013) ("The relationship between the Holding Company and the Bank is not a debtor-creditor relationship. When the Holding Company received the tax refunds it held the funds intact—as if in escrow—for the benefit of the Bank and thus the remaining members of the Consolidated Group.") with *F.D.I.C. v. Siegel (In re IndyMac Bancorp, Inc.),* F. ____ App'x ____ , 2014 WL 1568759, *2 (9th Cir. Apr. 21, 2014) *(per curiam)* ("The TSA does not create a trust relationship. The absence of language creating a trust relationship is explicitly an indication of a debtor-creditor relationship in California").

sidiary IDI) and held by the holding company as the IDI's debtor.[7]

On June 13, 2014, an Addendum to the 1998 Interagency Policy Statement (Addendum) was issued by the Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (Agencies). It explains that Consolidated Groups should review their tax allocation agreements to ensure the agreements achieve the objectives of the Interagency Policy Statement. This Addendum also clarifies how certain of the requirements of sections 23A and 23B of the Federal Reserve Act (FRA) apply to tax allocation agreements between IDIs and their affiliates.

In reviewing their tax allocation agreements, Consolidated Groups should ensure the agreements: (1) clearly acknowledge that an agency relationship exists between the holding company and its subsidiary IDIs with respect to tax refunds, and (2) do not contain other language to suggest a contrary intent.[8] In addition, all Consolidated Groups should amend their tax allocation agreements to include the following paragraph or substantially similar language:

The [holding company] is an agent for the [IDI and its subsidiaries] (the "Institution") with respect to all matters related to consolidated tax returns and refund claims, and nothing in this agreement shall be construed to alter or modify this agency relationship. If the [holding company] receives a tax refund from a taxing authority, these funds are obtained as agent for the Institution. Any tax refund attributable to income earned, taxes paid, and losses incurred by the Institution is the property of and owned by the Institution, and shall be held in trust by the [holding company] for the benefit of the Institution. The [holding company] shall forward promptly the amounts held in trust to the Institution. Nothing in this agreement is intended to be or should be construed to provide the [holding company] with an ownership interest in a tax refund that is attributable to income earned, taxes paid, and losses incurred by the Institution. The [holding company] hereby agrees that this tax sharing agreement does not give it an ownership interest in a tax refund generated by the tax attributes of the Institution.

Going forward, the Agencies generally will deem tax allocation agreements that contain this or similar language to acknowledge that an agency relationship exists for purposes of the Interagency Policy Statement, this Addendum, and sections 23A and 23B of the FRA.

All tax allocation agreements are subject to the requirements of section 23B of the FRA, and tax allocation agreements that do not clearly acknowledge that an agency relationship exists may be subject to additional requirements under section 23A of the FRA.[9] In general, section 23B requires affiliate transactions to be made on terms and under circumstances that are substantially the same, or at least as favorable to the IDI, as comparable transactions involving nonaffiliated companies or, in the absence of comparable transactions, on terms and circumstances that would in good faith be offered to nonaffiliated companies.[10] Tax allocation agreements should require the holding company to forward promptly any payment due the IDI under the tax allocation agreement and specify the timing of such payment. Agreements that allow a holding company to hold and not promptly transmit tax refunds received from the taxing authority and owed to an IDI are inconsistent with the requirements of section 23B and subject to supervisory action. However, an Agency's determination of whether such provision, or the tax allocation agreement in total, is consistent with section 23B will be based on the facts and circumstances of the particular tax allocation agreement and any associated refund.

State member banks and holding companies should implement this 2014 Addendum guidance as soon as reasonably possible, which the Agencies expect would not be later than October 31, 2014. See 79 *Fed. Reg.* 35230, June 19, 2014, and SR-14-6, July 15, 2014, "Addendum to the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure."

7. *See e.g., F.D.I.C. v. Siegel (In re IndyMac Bancorp, Inc.),* F. ____ App'x ____, 2014 WL 1568759 (9th Cir. Apr. 21, 2014) *(per curiam).*

8. This Addendum clarifies and supplements but does not replace the Interagency Policy Statement.

9. Section 23A requires, among other things, that loans and extensions of credit from a bank to its affiliates be properly collateralized. 12 U.S.C. 371c(c).

10. 12 U.S.C. 371c-1(a). Transactions subject to section 23B include the payment of money by a bank to an affiliate under contract, lease, or otherwise and transactions in which the affiliate acts as agent of the bank. *Id.* at § 371c-1(a)(2) & (a)(4).

2070.0.2 Qualifying Subchapter S Corporations

The Small Business Job Protection Act of 1996 made changes to the Internal Revenue Code (the code). On October 29, 1996, the FFIEC issued a bulletin notifying all federally insured banks and thrifts of the impact of these changes. Thrift organizations may qualify for Subchapter S corporation[11] status under the code's revisions and could generally receive pass-through tax treatment for federal income tax purposes if certain criteria are met.

The bulletin states that no formal application is required to be filed with the federal bank and thrift regulatory agencies merely as a result of an election by a bank, thrift, or parent holding company to become a Subchapter S corporation. However, if an institution takes certain steps to meet the criteria to qualify for this tax status, particularly the code's limitations on the number and types of shareholders, applications or notices to the agencies may be required.

The FFIEC bulletin also states that any distributions made by the Subchapter S banking organization to its shareholders, including distributions intended to cover shareholders' personal tax liabilities for their shares of the income of the institution, will continue to be regarded as dividends and subject to any limitations under relevant banking law. See SR-96-28.

2070.0.3 Inspection Objectives

1. To determine whether the supervisory and accounting guidance set forth in ASC 740-10 (FASB 109), other tax-accounting standards, and the 1998 interagency policy statement on income tax allocation has been appropriately, equitably, and consistently applied.
2. To verify that the parent's intercorporate tax policy contains a provision requiring the subsidiaries to receive an appropriate refund from the parent when they incur a loss, and that such a refund would have been receivable from the tax authorities if the subsidiary was filing a separate return.
3. To ascertain that tax payments and tax refunds between financial institution subsidiaries and the parent company have been limited to no more than what the institution might have paid to or received from the tax authorities, if it had filed its tax returns on a timely, separate-entity basis.[12]
4. To determine that no deferred tax liability, corresponding asset, or the deferred portion of its applicable income taxes has been transferred from a bank subsidiary to the parent company.
5. To verify that there has been proper accountability for tax-forgiveness transactions between the parent company and its financial institution subsidiaries.
6. To substantiate that corporate practices are consistent with corporate policies.

2070.0.4 Inspection Procedures

1. Obtain and discuss with the holding company's management its intercorporate income tax policies and tax-sharing agreements. Obtain and retain a copy of the intercorporate tax policies and agreements in the workpaper files. Review the written intercorporate tax-settlement policy and ascertain that it includes the following:
   a. a description of the method(s) used in determining the amount of estimated taxes paid by each subsidiary to the parent
   b. an indication of when payments are to be made
   c. a statement that deferred taxes are maintained on the affiliate's general ledger
   d. procedures for handling tax claims and refunds

   Holding companies of depository institutions should also have written tax-sharing agreements with their subsidiaries that specify intercorporate tax-settlement policies. The Board encourages these holding companies to develop such agreements. For tax-sharing agreements, the following inspection procedures should be followed:
   a. Determine whether each subsidiary is required to compute its income taxes (current and deferred) on a separate-entity basis.
   b. Ascertain if the amount and timing of payments for current tax expense, including estimated tax payments, are discussed.
   c. Determine if reimbursements are discussed when an institution has a loss for

11. Subchapter S corporations are corporations that elect to pass corporate income tax losses, deductions, and credit through to their shareholders for federal income tax purposes.

12. The term "separate-entity basis" recognizes that certain adjustments, in particular tax elections in a consolidated return, may, in certain periods, result in higher payments by the depository institution than would have been made if the depository institution was unaffiliated.

tax purposes.
   d. Determine if there is a prohibition on the payment or other transfer of deferred taxes by an institution to another member of the consolidated group.
2. Review briefly the parent's intercompany transaction report; general ledger income tax accounts; cash receipts and disbursements; and, if necessary, tax-return workpapers and other pertinent corporate documents.
   a. Ascertain that the taxes collected by the parent company from each depository institution subsidiary do not exceed the amount that would have been paid if a separate return had been filed.
   b. When depository institution subsidiaries are making their tax payments directly to the taxing authorities, determine whether other subsidiaries are paying their proportionate share.
3. Review the separate regulatory reports for depository institution members of the holding company that are included in the filing of a consolidated tax return.
   a. Verify that each subsidiary institution is recording current and deferred taxes as if it was filing its own tax returns on a separate-entity basis.
   b. Ascertain that any adjustments for statutory tax considerations, arising from filing a consolidated return, are also made to the separate-entity calculations consistently and equitably among the holding company affiliates.
4. Determine if any excess amounts (tax benefits), resulting from the filing of a consolidated return, are consistently and equitably allocated among the members of the consolidated group.
5. Review the tax payments that are made from the bank and the nonbank subsidiaries to the parent company.
   a. Determine that payments, including estimated payments that are being requested, do not significantly precede the time that a consolidated or estimated current tax liability would be due and payable by the parent to the tax authorities.
   b. Verify with management that the tax payments to the parent company were not in excess of the amounts recorded by its depository institution subsidiaries as current tax expense on a separate-entity basis.
   c. Determine that subsidiary institutions are not paying their deferred tax liabilities on the deferred portions of their applicable income taxes to the parent company.
   d. Ascertain that the parent company is not deriving tax monies from depository institution subsidiaries that are used for other operating needs.
6. When a subsidiary incurs a loss, review the tax system to determine that bank and nonbank subsidiaries are receiving an appropriate refund from the parent company, that is, an amount that is no less than what would have been received if the tax return had been filed on a separate-entity basis.
   a. Verify that refunds are received no later than the date the institutions would have filed their own returns and that no refund is characterized as the parent company's property.
   b. If the parent company does not require a subsidiary to pay its full amount of current tax liability, and the parent will not later require the institution to pay the remainder of the current tax liability, ascertain that the amount of the tax liability is recorded as having been paid and that the corresponding credit is recorded as a capital contribution from the parent to the subsidiary.
7. Determine that the deferred tax accounts of each bank subsidiary are maintained on its books and that they are not transferred to the parent organization.
8. Determine if the Internal Revenue Service or other tax authorities have assessed any additional tax payments on the consolidated group, and whether the holding company has provided an additional reserve to cover the assessment.
9. Complete the Other Supervisory Issues page or section of the Report of Bank Holding Company Inspection (FR 1225 or FR 1241).

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The purpose of this Section is to discuss the types of funding ordinarily found in holding companies and to analyze their respective characteristics. It is not intended that this section include an analysis of the inter-relationships of these factors because that will be addressed in the various subsections of Section 4000 of the Manual.

The three major types of funding are short-term debt, long-term debt and equity. The ideal ''hypothetical'' holding company balance sheet would reflect sufficient equity to fund total bank and nonbank capital needs.

The complexity of the debt and/or equity financing will depend greatly upon the size and financial status of the holding company as well as the access to certain capital markets. The small holding company will be limited in the type and/or sophistication of financing instruments available for its use, and probably would look to local sources for its debt and equity needs. This would include sale of equity and debt instruments to owners of the holding company. The medium-sized holding company has access to public markets through investment bankers and occasionally may issue its own corporate notes in the commercial paper market. The large holding company has a wide range of choices depending upon its financial condition and the economic climate at the time of any offering. It also has the ability to place debt privately as an alternate to dealing with public markets. In summary, the type of financing needed by a holding company will vary with the size and nature of its banking and nonbanking operations. The following subsections address those issues.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2010, this section was revised to include a cross reference to section 4066.0 of this manual, which provides the March 17, 2010, interagency policy statement on "Funding and Liquidity Risk Management."

A key principle underlying the Federal Reserve's supervision of bank holding companies (BHCs) is that such companies should be operated in a way that promotes the soundness of their subsidiary banks. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Consequently, BHCs should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent company and its nonbank subsidiaries.

For more information regarding the Federal Reserve's supervisory expectations on liquidity risk management for BHCs, see section 4066.0, "Consolidated (Funding and Liquidity Risk Management)." This section provides the March 17, 2010, interagency policy statement on "Funding and Liquidity Risk Management." (see also SR-10-6 and its attachment.)

2080.05.1 FUNDING AND LIQUIDITY

A principal objective of a parent BHC's funding strategy should be to support capital investments in subsidiaries and long-term assets with capital and long-term sources of funds. Long-term or permanent financing not only reduces funding and liquidity risks, but also provides an organization with investors and lenders that have a long-run commitment to its viability. Long-term financing may take the form of term loans, long-term debt securities, convertible debentures, subordinated debt, and equity.

In general, liquidity can be measured by the ability of an organization to meet its maturing obligations, convert assets into cash with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations. A major determinant of a BHC's liquidity position is the level of liquid assets available to support maturing liabilities. The use of short-term debt, including commercial paper, to fund long-term assets can result in unsafe and unsound banking conditions, especially if a BHC does not have alternative sources of liquidity or other reliable means to refinance or redeem its obligations. In addition, commercial paper proceeds should not be used to fund corporate dividends or pay current expenses. Funding mismatches can exacerbate an otherwise manageable period of financial stress or, in the extreme, undermine public confidence in an organization's viability. For this reason, BHCs, in managing their funding positions, should control liquidity risk by maintaining an adequate cushion of liquid assets to cover short-term liabilities. Holding companies should, at all times, have sufficient liquidity and funding flexibility to handle any runoff, whether anticipated or unforeseen, of commercial paper or other short-term obligations—without having an adverse impact on their subsidiary banks.

This objective can best be achieved by limiting the use of short-term debt to fund assets that can be readily converted to cash without undue loss. It should be emphasized, however, that the simple matching of the maturity of short-term debt with the stated or nominal maturity of assets does not, by itself, adequately ensure an organization's ability to retire its short-term obligations if the condition of the underlying assets precludes their timely sale or liquidation. In this regard, it is particularly important that parent company advances to subsidiaries be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can readily be converted to cash. Consequently, effective procedures to monitor and ensure on an ongoing basis the quality and liquidity of the assets being funded by short-term debt are critical elements of a holding company's overall funding program.

BHCs should establish and maintain reliable funding and contingency plans to meet ongoing liquidity needs and to address any unexpected funding mismatches that could develop over time. Such plans could include reduced reliance on short-term purchased funds, greater use of longer-term financing, appropriate internal limitations on parent company funding of long-term assets, and reliable alternate sources of liquidity. It is particularly important that BHCs have reliable plans or backup facilities to refinance or redeem their short-term debt obligations in the event assets being funded by these obligations cannot be liquidated in a timely manner when the debt must be repaid. In this connection, holding companies relying on backup lines of credit for contingency plan purposes should seek to arrange standby facilities that will be reliable during times of financial stress, rather than facilities that contain clauses which may relieve the lender of the obligation to fund the borrower in the event of a deterioration in the borrower's financial condition.

In developing and carrying out funding programs, BHCs should avoid overreliance or excessive dependence on any single short-term or potentially volatile source of funds, such as commercial paper, or any single maturity range. Prudent internal liquidity policies and practices should include specifying limits for, and monitoring the degree of reliance on, particular maturity ranges and types of short-term funding. Special attention should be given to the use of overnight money since a loss of confidence in the issuing organization could lead to an immediate funding problem. BHCs issuing overnight liabilities should maintain, on an ongoing basis, a cushion of superior quality assets that can be immediately liquidated or converted to cash with minimal loss. The absence of such a cushion or a clear ability to redeem overnight liabilities when they become due should generally be viewed as an unsafe and unsound banking practice.

2080.05.2 ADDITIONAL SUPERVISORY CONSIDERATIONS

BHCs and their nonbank affiliates should maintain sufficient liquidity and capital strength to provide assurance that outstanding debt obligations issued to finance the activities of these entities can be serviced and repaid without adversely affecting the condition of the affiliated bank(s). In this regard, BHCs should maintain strong capital positions to enable them to withstand potential losses that might be incurred in the sale of assets to retire holding company debt obligations. It is particularly important that a BHC not allow its liquidity and funding policies or practices to undermine its ability to act as a source of strength to its affiliated bank(s).

The principles and guidelines outlined above constitute prudent financial practices for BHCs and most businesses in general. Holding company boards of directors should periodically assure themselves that funding plans, policies, and practices are prudent in light of their organizations' overall financial condition. Such plans and policies should be consistent with the principles outlined above, including the need for appropriate internal limits on the level and type of short-term debt outstanding and the need for realistic and reliable contingency plans to meet any unanticipated runoff of short-term liabilities without adversely affecting affiliated banks.

2080.05.3 EXAMINER'S APPLICATION OF PRINCIPLES IN EVALUATING LIQUIDITY AND IN FORMULATING CORRECTIVE ACTION PROGRAMS

Reserve Bank examiners should be guided by these principles in evaluating liquidity and in formulating corrective action programs for BHCs that are experiencing earnings weaknesses or asset-quality problems, or that are otherwise subject to unusual liquidity pressures. In particular, BHCs with less than satisfactory supervisory ratings—composite (C) and the potential impact (I) of the parent company and nondepository entities—(that is, 3 or worse), or any other holding companies subject to potentially serious liquidity or funding pressures, should be asked to prepare a realistic and specific action plan for reducing or redeeming entirely their outstanding short-term obligations without directly or indirectly undermining the condition of their affiliated bank(s).[1] Such contingency plans should be reviewed and evaluated by Reserve Bank supervisory personnel during or subsequent to on-site inspections. Any deficiencies in the plan, if not addressed by management, should be brought to the attention of the organization's board of directors. If the liquidity or funding position of such a company appears likely to worsen significantly, or if the company's financial condition worsens to a sufficient degree, the company should be expected to implement, on a timely basis, its plan to curtail or eliminate its reliance on commercial paper or other volatile, short-term sources of funds. Any decisions or steps taken by Reserve Banks in this regard should be discussed and coordinated with Board staff.

Reference should also be made to other manual sections that address funding, cash flow, or liquidity (for example, 2010.1, 2080.0, 2080.1, 2080.2, 2080.4, 2080.5, 2080.6, 4010.0, 4010.1, 4010.2, 5010.27, and 5010.28).

1. It is important to note that there are securities registration requirements under the Securities Act of 1933 related to the issuance of commercial paper. A BHC should have procedures in place to ensure compliance with all applicable securities and SEC requirements. Refer to manual section 2080.1.

Commercial paper is a generic term that is generally used to describe short-term unsecured promissory notes issued by well-recognized and generally financially sound corporations. The largest commercial paper issuers are finance companies and bank holding companies which use the proceeds as a source of funds in lieu of fixed rate borrowing.

Generally accepted limitations on issuances and uses of commercial paper derive from Section 3(a)(3) of the Securities Act of 1933 (1933 Act). Section 3(a)(3) exempts from the registration requirements of the 1933 Act "any note . . . which arises out of a current transaction or the proceeds of which have been or are to be used for current transactions and which has a maturity at the time of issuance not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited. . . ." The Securities and Exchange Commission (SEC) has rulemaking authority over the issuance of commercial paper.

The five criteria, as set forth in an SEC interpretation (SA Release #33–4412, September 20, 1961), that are deemed necessary to qualify securities for the commercial paper exemption are that the commercial paper must:

- Be of prime quality and negotiable;
- Be of a type not ordinarily purchased by the general public;
- Be issued to facilitate current operational business requirements;
- Be eligible for discounting by a Federal Reserve Bank;
- Have a maturity not exceeding nine months.

2080.1.1 MEETING THE SEC CRITERIA

The above criteria are discussed below.

2080.1.1.1 Nine-Month Maturity Standard

Although roll-over of commercial paper proceeds on maturity is common, the SEC has stated that obligations that are payable on demand or have provisions for automatic rollover do not satisfy the nine-month maturity standard. However, the SEC staff has issued "no action" letters for commercial paper master note agreements which allow eligible investors to make daily purchases and withdrawals (subject to a minimum amount of $25,000) as long as the note and each investor's interest therein, does not exceed nine months. Such master note agreements may permit prepayment by the issuer, or upon demand of the investor, at any time.

2080.1.1.2 Prime Quality

Most commercial paper is rated by at least one of five nationally recognized statistical rating organizations. The SEC has not clearly articulated the line at which it will regard a specific rating of commercial paper as being "not prime" and, indeed, there is no requirement that a rating be obtained at all in order to qualify. SEC staff has issued a series of "no-action" letters to individual bank holding companies based on specific facts and circumstances even where it does not appear that a rating was obtained. However, where commercial paper is downgraded to below what is generally regarded as "investment quality" (ratings of less than medium grade—refer to the *Commercial Bank Examination Manual*, section 203.1), or a rating is withdrawn, BHCs may not be able to issue commercial paper based on the Section 3(a)(3) exemption, in the absence of a marked significant improvement in the issuer's financial condition.

2080.1.1.3 Current Transactions

There have been considerable interpretative problems arising out of the current transactions concept. The SEC staff has issued a partial laundry list of activities which would not be deemed suitable for investment of commercial paper proceeds, namely:

1. The discharge of existing indebtedness, unless such indebtedness is itself exempt under section 3(a)(3) of the 1933 Act;
2. The purchase or construction of a plant or the purchase of durable machinery or equipment;
3. The funding of commercial real estate development or financing;
4. The purchase of real estate mortgages or other securities;
5. The financing of mobile homes or home improvements; or

6. The purchase or establishment of a business enterprise.

The SEC has opined that commercial paper, which is used as bridge financing by a bank holding company to fund a permanent acquisition within the 270-day maturity period of the paper, will meet the current transactions criterion. The amount of a bank holding company's commercial paper cannot exceed the aggregate amount of "current transactions" of the bank holding company and its subsidiaries *on a consolidated basis*. For this purpose, "current transactions" include dividends, interest, taxes and short-term loan repayments. In summary, in most cases, the "current transactions" requirement will not be a significant limitation on issuances of commercial paper by bank holding companies.

In addition to meeting SEC requirements, a bank holding company must meet funding and liquidity criteria prescribed by the Board. For a detailed discussion on acceptable use of commercial paper in connection with a bank holding company overall funding strategies, see Sections 2080.05 and 2080.6.

2080.1.1.4 Sales to Institutional Investors

Commercial paper is generally marketed only to institutional investors (corporations, pension funds, insurance companies, etc.) although sales to individuals are not prohibited. It is clear, however, from the legislative history of the Section 3(a)(3) exemption that commercial paper was not to be marketed for sale to the general public. Currently, SEC staff will not issue a no-action letter if the minimum denomination of the commercial paper to be issued is less than $25,000. One of the underlying premises of the Section 3(a)(3) exemption is that purchasers of commercial paper have sufficient financial sophistication to make informed investment decisions without the benefit of the information provided by a registration statement. It is, therefore, generally recognized today that any individual purchaser of commercial paper should meet the "accredited investor" criteria of commercial paper set forth in SEC Regulation D (17 C.F.R 230.501(a)). To qualify as an "accredited investor", an individual can meet one of two tests—a net worth test or an income test. To qualify under the net worth test, an individual or an individual and his or her spouse must have a net worth at the time of purchase in excess of $1 million. The alternative test requires $200,000 in income for each of the last two years ($300,000 if the spouse's income is included) and a reasonable expectation of reaching the same income level in the current year.

For additional information on marketing of commercial paper, see the next subsection.

2080.1.2 MARKETING OF COMMERCIAL PAPER

The sale of bank holding company (or nonbank subsidiary) commercial paper by an affiliated bank to depositors or other investors raises a number of supervisory issues. Of particular concern is the possibility that individuals may purchase holding company paper with the misunderstanding that it is an insured deposit or obligation of the subsidiary bank. The probability of this occurring is increased when a bank subsidiary is actively engaged in the marketing of the paper of its holding company or nonbank affiliate, or when the holding company or nonbank affiliate has a name similar to the name of the commercial bank subsidiary.

It is a long-standing policy of the Federal Reserve (refer to letters SR 90–19 and SR–620) that debt obligations of a bank holding company or a nonbank affiliate should not be issued, marketed or sold in a way that conveys the misimpression or misunderstanding that such instruments are either: 1) federally-insured deposits, or 2) obligations of, or guaranteed by, an insured depository institution. The purchase of such holding company obligations by retail depositors of an affiliated depository institution can, in the event of default, result in losses to individuals who believed that they had acquired federally-insured or guaranteed instruments. In addition to the problems created for these individuals, such a situation could impair public confidence in the affiliated depository institution and lead to unexpected withdrawals or liquidity pressures.

Events surrounding the sale of uninsured debt obligations of holding companies to retail customers of affiliated depository institutions have focused attention on the potential for problems in this area. In view of these concerns, the Federal Reserve emphasizes that this policy applies to the sale of both long- and short-term debt obligations of a bank holding company and any nonbank affiliate, as well as to the sale of uninsured debt securities issued by a state member bank or its subsidiaries. Debt obligations covered by this supervisory policy include commercial paper and all other short-term and long-term debt securities, such as thrift notes and subordinated debentures.

Bank holding companies and nondepository affiliates that have issued or plan to issue uninsured obligations or debt securities should not market or sell these instruments in any public area of an insured depository institution where retail deposits are accepted, including any lobby area of the depository institution. Bank holding companies and any affiliates that are engaged in issuing debt obligations should establish appropriate policies and controls over the marketing and sale of the instruments. In particular, internal controls should be established to ensure that the promotion, sale, and subsequent customer relationship resulting from the sale of uninsured debt obligations is separated from the retail deposit-taking functions of affiliated depository institutions.

State member banks, including their subsidiaries, may also be engaged in issuing nondeposit debt securities (such as subordinated debt), and it is equally important to ensure that such securities are not marketed or sold in a manner that could give the purchaser the impression that the obligations are federally-insured deposits. Consequently, state member banks and their subsidiaries that have issued or plan to issue nondeposit debt securities should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank. Consistent with long-standing Federal Reserve policy, debt obligations of bank holding companies or their nonbank affiliates, including commercial paper and other short- or long-term debt securities, should prominently indicate that: 1) they are not obligations of an insured depository institution; and 2) they are not insured by the Federal Deposit Insurance Corporation. In cases where purchasers do not take physical possession of the obligation, the purchasers should be provided with a printed advice that conveys this information. Employees engaged in the sale of bank holding company debt obligations should be instructed to relate this information verbally to potential purchasers. In addition, with respect to the sale of holding company debt obligations, the instruments or related documentation should not display the name of the affiliated bank in such a way that could create confusion among potential purchasers about the identity of the obligor. State member banks involved in the sale of uninsured nondeposit debt securities of the bank should establish procedures to ensure that potential purchasers understand that the debt security is not federally-insured or guaranteed.

Federal Reserve examiners are responsible for monitoring compliance with this supervisory policy; and, as part of the examination of state member banks and bank holding companies, are expected to continue to review the polices and internal controls relating to the marketing and sale of debt obligations and securities. Examiners should determine whether the marketing and sale of uninsured nondeposit debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function of the insured depository affiliate.

In determining whether the activities are sufficiently separated, examiners should take into account: 1) whether the sale of uninsured debt obligations of a holding company affiliate or uninsured nondeposit debt securities of a state member bank is physically separated from the bank's retail-deposit taking function, including the general lobby area[1]; 2) whether advertisements that promote uninsured debt obligations of the holding company also promote insured deposits of the affiliated depository institution in a way that could lead to confusion; 3) whether similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor; 4) whether retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate; 5) whether information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and 6) whether retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

The Board's policy is that the manner in which commercial paper is sold should not lead bank customers or investors to construe commercial paper as an insured obligation or an instrument which may be higher in yield but equal in risk to insured bank deposits. All purchasers of commercial paper should clearly understand that such paper is an obligation of the parent company or nonbank subsidiary and

1. This policy is not intended to preclude the sale of holding company affiliate obligations from a bank's money market desk, provided that the money market function is separate from any public area where retail deposits are accepted, including any lobby area.

not an obligation of the bank and that the quality of the investment depends on the risks and operating characteristics associated with the overall holding company and its nonbanking activities.

2080.1.3 THRIFT NOTES AND SIMILAR DEBT INSTRUMENTS

In the event a bank holding company or nonbanking affiliate issues thrift notes or other debt obligations which do not fall within the generally accepted definition of commercial paper, examiners should be guided by the Board's 1978 position on the issuance of small denomination debt obligations by bank holding companies and their nonbanking affiliates. At that time, the Board was considering thrift notes issued by a nonbanking subsidiary of a bank holding company and concluded that such obligations should prominently indicate in bold type on their face that the obligations are not obligations of a bank and are not FDIC insured. The Board also stated that the obligations should not be sold on the premises of affiliated banks. Where there is substantial reliance on the sale of thrift notes to fund the operations of a bank holding company or nonbanking subsidiary, other than an industrial bank, a violation of the Glass–Steagall Act may be involved. Such cases should be discussed with Reserve Bank counsel.

2080.1.4 OTHER SHORT-TERM INDEBTEDNESS

A company's access to bank credit is almost universal, and most small to medium-sized companies will reflect this type of debt on their balance sheets. An important point to remember about bank debt is that maturities of the bank notes are usually short-term while the proceeds of the borrowings are often applied to long-term assets, that is, investment in the bank's capital and/or long-term debt accounts. The note may be subject to renewal on an annual basis, and the creditor may have the opportunity to call the note at renewal if the financial condition of the company has deteriorated. Rates of interest on short- term bank notes are usually pegged to the creditor's prime rate plus some fraction thereof. The principal is often repaid over a period of years as the notes are rolled over despite their short-term maturity.

2080.1.5 CURRENT PORTION OF LONG-TERM DEBT

This type of debt has many of the short-term characteristics of bank debt, with possibly one additional important feature. Such debt is usually tied to a written agreement between creditor and debtor, and encompasses certain minimum standards of performance to be adhered to by the company. The examiner must review the agreement to determine that the company is operating within the parameters of the covenants laid out in the agreement. Failure to abide by the covenants can trigger default provisions of the agreement and escalate the repayment of the total loan balance outstanding.

2080.1.6 INSPECTION OBJECTIVES

1. To determine the company's policy and actual practices with respect to the sale of uninsured debt obligations and securities issued by bank holding companies, nonbank affiliates or State member banks. More often than not, an informal policy evolves from practice. It then becomes important to interview senior officers in charge of this function to determine if they are adequately aware of the statutory and regulatory constraints with respect to appropriate usage of commercial paper.
2. To review the company's funding and liquidity strategy with a view to determining whether it has sufficient liquid assets to support maturing liabilities and whether there are any funding mismatches. (See Manual sections 2080.05, 4010.2.3, 4010.2.7, and 5010.24.1)
3. To determine compliance with the Federal Reserve System's supervisory policy with regard to the marketing of commercial paper, thrift notes or similar type debt instruments (refer to Board letter S 2427 dated June 27, 1980, and supervisory letters SR 90–19 and SR 620).
4. To identify potential weaknesses in corporate policy and practices.

2080.1.7 INSPECTION PROCEDURES

1. Review the bank holding company's procedures for authorizing the issuance of commercial paper and other uninsured debt obligations and securities of the holding company and/or its nonbank affiliates.

2. Review the board of directors' resolution authorizing the issuance of commercial paper and other uninsured debt obligations and securities.

3. Determine whether the company has sought a "no action" letter from the SEC. A "no action" letter indicates the SEC has reviewed the company's issuance of commercial paper and plans "no action" to require the registration of the commercial paper as "securities." Some companies rely on the opinion of their own counsel that their paper is not subject to SEC registration requirements. If the company does not have a "no action" letter there should be a legal opinion on file from the holding company's attorney regarding exemption from registration under section 5 of the 1933 Act.

4. Obtain a copy of the holding company's written policy on paper usage to compare with resolution and practice.

5. Review to determine the extent to which the commercial paper and other uninsured debt obligations are supported by back-up lines of credit provided by unaffiliated banks. These lines are established to cover any unexpected run-off of paper at maturity. Commitments for lines of credit should be in writing and have expiration dates. Commitment fees substantiate the enforceability of the commitment whereas compensating balances tend to indicate that the lending commitment is less formal. The examiner should determine whether material adverse change clauses exist in back-up line of credit agreements which may affect their reliability. Comment if it appears that those provisions might be utilized.

Compensating balance arrangements should be disclosed. A company may commit to a compensating balance, but if it relies on its bank subsidiary to provide the funds the bank should be compensated for utilization of its funds.

Reciprocal back-up lines may be established. This may eliminate the need for fees or compensating balances and may provide a certain comfort level for company management.

6. Obtain a listing of commercial paper and other uninsured debt obligation holders from management to the extent known. In the case of larger BHCs, there is a choice between issuing paper on a local level or placing it nationally through the auspices of an investment banking firm. In the latter case, there is likely to be no record of who purchases the paper because the paper is usually sold on a bearer basis. Holding companies looking for a wider market, national recognition, and higher ratings place their paper through an investment banking firm. However, it should be recognized that the market for commercial paper placed in this manner is more sophisticated and knowledgeable and therefore more sensitive to adverse developments than a local market. The smaller company can be content to sell its paper on a local level through its corporate headquarters, knowing its customer profile and limiting the amount to any one paperholder, thereby limiting its exposure to refinancing problems caused by large scale redemptions.

7. Review for potential weaknesses in corporate policy and practices. Any amounts in excess of 10 percent in the hands of one paperholder should be discussed with management and noted in the report. A large paperholder could refuse to purchase new paper at maturity (rollover) and place the company in a liquidity squeeze, requiring sell-off of assets or draw down of back-up lines.

Rollovers are prohibited under the 1933 Act. The instrument must have a definite date of maturity with no automatic provision for reinvestment of proceeds. Companies must abide by the 270-day provision and if the paperholder elects to reinvest the funds, a new instrument should be executed.

8. Request a copy of the commercial paper, thrift note or similar type instrument, and any printed advice to the purchasing customer for review. These documents should be checked for compliance with the standards set forth under the captions "Marketing of Commercial Paper" and "Thrift Notes and Similar Debt Instruments" in this section of the Manual.

9. If a bank sells the commercial paper and/or other uninsured debt obligations of its holding company or nonbanking affiliate, review the procedures to separate their sale from the retail operations of the bank.

This segregation should be reviewed as part of all holding company inspections. Examiner judgment must be relied upon, to a large extent, to determine whether the marketing activities of commercial bank subsidiaries for the bank holding company's commercial paper and other uninsured debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit- taking function. In making this determination, the examiner should consider whether:

a. The sale of uninsured debt obligations of a holding company affiliate or uninsured nondeposit debt securities of a state member bank is physically separated from the bank's retail-deposit taking function, including the general lobby area;

b. Advertisements that promote uninsured debt obligations of the holding company also promote insured deposits of the affiliated depository institution in a way that could lead to confusion;

c. Similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor;

d. Retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate;

e. Information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and

f. Retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

In those cases where the bank holding company or nonbanking affiliates issue thrift notes or similar type debt instruments, ascertain that these obligations are not being sold on the premises of affiliated banks.

10. The procedures in Nos. 8 and 9 address the manner in which bank holding companies (or nonbanking subsidiaries) market their commercial paper, thrift notes or similar type debt instruments; consequently, implementation will necessitate review of marketing procedures of all holding companies (or nonbanking subsidiaries), regardless of the type of charter or the identity of the primary supervisor of the subsidiary (affiliate) bank. Exceptions to the policies on the marketing of such paper should be noted on the ''Commercial Paper and Lines of Credit'' pages and discussed on the ''Examiner's Comments'' page of the inspection report. The managements of all bank holding companies must be fully informed of the Federal Reserve's policy with respect to the marketing of holding company debt obligations, as in SR Letter 90–19, and exceptions should be addressed in the supervisory follow-up process.

Long-term debt represents an alternative financing method to short-term debt and equity funds. Before choosing this type of funding the bank holding company will need to determine how the advantages and disadvantages of long-term debt apply to its financial position and funding needs. Interest on long-term debt is an expense item and therefore is tax deductible. The company issuing debt effectively pays approximately ''half-price'' (interest expense net of tax deduction) on debt while the company issuing equity pays the full dividend rate without a tax benefit. Counterbalancing the tax advantage is the fact that long-term debt must be serviced and retired to prevent default and cannot be used as an offset for losses.

The issuance of long-term debt will be relatively advantageous to the holding company whose price/earnings ratio is low and whose stock is selling significantly below book value. In this instance, the cost to the company of equity funding rises proportionately to the drop in the price of the stock since less funds are obtained for an equal number of shares, yet the dividend per share remains the same.

A major factor influencing a bank holding company's decision to issue long-term debt instead of equity is the dilution impact of new equity. Straight debt will not dilute ownership and is typically retired from cash flow, whereas new equity dilutes earnings per share (more so than the impact of the debt's interest expense on earnings).

Preferred stock can be retired through a sinking fund and is sometimes convertible to common shares. Convertible stock adds to the dilution effect when the conversion is exercised and prior to conversion, ''fully diluted'' earnings per share must be reported that assume full conversion. The bank holding company will consider both stockholder and market reaction to any dilution effects of long-term financing. The BHC may view debt financing as the best alternative if it feels that a diluted earnings per share would drive down the market price of its stock and contribute to stockholder discontent.

Inherent in any financing are intangible costs. While it is evident that on the surface debt financing is cheaper than equity financing, it would be hard to quantify the effects of potential missed interest payment or default associated with debt instruments. The bank holding company also will be concerned with its additional ''debt capacity'' if the present issuance of debt pushes the debt/equity ratio beyond acceptable limits.

Theoretically, ''straight debt'' is a direct secured or unsecured obligation requiring repayment at maturity and generally taking a senior position in the claim on assets. Principal is sometimes payable in a lump sum, often through the use of a sinking fund, while interest is paid at stated periods throughout the life of the note.

2080.2.1 CONVERTIBLE SUBORDINATED DEBENTURE

A convertible subordinated debenture is an unsecured debt that is subordinate to other debt and convertible to common stock at a certain date or price. The essential provision of this debt is that it may eventually be retired by equity and inherently has the potential for dilution. With this type of financing, the creditor typically has the right to convert the bond into a stated number of shares of common stock at some future time. Usually the conversion price is 10 to 15 percent above the market price of the stock. This encourages the bondholder to keep the bond until the market price meets or surpasses the conversion price. In many convertible debt agreements, the bank holding company issuing debt will have the option to call the issue when the conversion price equals the market price.

The bank holding company will issue a convertible subordinated debenture when its stock price is depressed. The convertibility provision is added as a ''sweetner'' to the issue and counteracts the negative aspect of its subordinated position. The subordinated nature of this issue will help a bank holding company with prior debt which includes covenants that dictate against additional senior debt.

2080.2.2 CONVERTIBLE PREFERRED DEBENTURE

This debt instrument is similar to straight convertible debt except it is convertible into preferred stock. This alternative is open to the bank holding company which needs to add a ''sweetner'' to this issue in order to market it, but does not want dilution of ''common'' ownership.

2080.2.3 NEGATIVE COVENANTS

The lender will be concerned with the borrower's debt structure when offering financing. If the borrower's debt/equity ratio is approaching an unacceptable level, the lender will try to assure that the bank holding company does not overextend itself. While the lender may demand the right to approve future equity issues, the lender is likely to be more willing to give such approval than to allow more debt because the equity issue adds to the capital base, and this base is a possible source of funds for the payment of debt.

Closely related to the restriction on further debt is the position of the lender in the liquidation of assets. The holder of a straight debt issue will usually demand to be senior to other debt holders. This characteristic is particularly suited to straight debt because straight debt is more vulnerable to default than convertible debt and doesn't have other sweetners such as a conversion right or a right to participate in distributions of earnings. The examiner will want to determine how the covenants affect future debt financing and if the effect is positive or negative.

The lender is likely to seek to insure that neither the structure nor policies of the bank holding company are altered without its approval during the life of the debt. The lender can insure this through other negative covenants attached to the debt. Some common covenants of this type include (1) limitations on capital expenditures and on the sale of assets, (2) restrictions on the BHC's redemption of its own stock, (3) restrictions on investments in general, (4) restrictions on dividend payment without prior approval, and (5) the imposition of loan to capital ratios, deposit to capital ratios and asset to capital ratios.

2080.2.4 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to policies on long-term debt.
2. To review the use of long-term funds.
3. To determine the existence of debt covenants and compliance by the holding company.

2080.2.5 INSPECTION PROCEDURES

1. Review the parent-only balance sheet and income statement for debt and interest expense captions.
2. Review the consolidated balance sheet and income statement for debt and interest expense captions.
3. Review any written policies and procedures available as part of an overall capital plan. If no plan or policies exist, the examiner should encourage management to develop them, and in large BHCs, to put them in writing.
4. Determine that the bank holding company does not finance long-term assets with short-term debt, as this leaves the holding company vulnerable to rising interest rates and the possibility of a credit crunch. On the other hand, it may be beneficial for the holding company to finance short-term assets with long-term debt. This is particularly true during periods of rising interest rates because the bank holding company can get higher yields on loans financed by lower cost long-term debt, than it can with commercial paper that has to be turned over at generally increasing rates. In any event, the bank holding company will need to insure that it has ample capacity to finance additional long-term assets with long-term debt when the opportunity presents itself.
5. Review any sinking fund provisions usually found with straight debt and straight preferred issues if the issue is not going to be refinanced by further debt or by an equity issue. Since payments to the fund will directly drain cash reserves, it is imperative that the bank holding company have adequate annual cash flow to service both the interest and add to the sinking fund. The larger the debt, the more the lender will look for a sinking fund feature as a means of precluding a default when maturity occurs and refinancing is not available. When a sinking fund exists the examiner will need to analyze the parent's cash flow statement to see that payments do not produce an adverse cash drain.

The capacity of the holding company to serve as a source of financial strength to its bank subsidiaries is a major consideration of the Federal Reserve Board in supervising a bank holding company. The cornerstone of this financial strength is capital adequacy.

The financial structure of banking organizations allows for the use of substantial leverage. If capital is large in relation to debt, additional borrowing is relatively inexpensive. However, because of added risk to lenders, the cost of borrowing increases as new obligations are assumed. At some point, therefore, equity financing becomes less costly and may become the only alternative available for needed funds.

Basically, a holding company's financial structure can be viewed in two ways: the ''single entity'' approach, whereby the holding company is considered an integrated entity and financial strength is assessed on the basis of its consolidated totals, and the ''building block'' approach, wherein the holding company is seen as a collection of individual components. In the latter view, the company's financial strength is assessed primarily in terms of the financial structure of each component.

When applying the ''building block'' approach, the liability and capital structure of each subsidiary is compared to the norm of its particular industry. The use of the ''building block'' approach has some advantages:

1. Comparative statistics are usually available to measure the performance and strength of the individual subsidiaries.
2. It permits comparison of capitalization between holding companies engaged in differing activities.
3. It identifies the degree of leveraging within a single subsidiary of a bank holding company.

The parent should maintain a favorable balance of debt and equity so that it will be able to assist its subsidiaries when necessary through contributions of its own capital or through additional funds generated from debt or equity financing.

At times, however, sale of additional stock may not be a viable alternative for capital formation, even when a company can show a favorable debt/equity balance. Reluctance to enter into a new stock offering may stem from a desire to avoid further dilution of existing ownership interest or from an unfavorable market price of outstanding stock in relation to book value. In these instances, long-term quasi-capital funds may sometimes be obtained through other sources, such as convertible securities or subordinated debt.

2080.3.1 PREFERRED STOCK

Preferred stock is becoming a more acceptable alternative due to certain advantages. Through contracted covenants, it is senior to common stock because it usually has no voting voice in management as does common stock. Preferred stock usually carries a fixed dividend rate that is either cumulative or noncumulative. Cumulative preferred provides that unpaid dividends in prior years must be paid to preferred shareholders before common dividends can be paid. A noncumulative feature provides that dividends foregone during lean years are lost permanently. From the viewpoint of the bank holding company, a noncumulative preferred issue is more desirable, while investors would desire a cumulative feature.

Perpetual preferred stock does not have a stated maturity date and it may not be redeemed at the option of the holder. Advantages that preferred stock can offer the bank holding company are (1) avoidance of dilution of earnings per common share and (2) absence of voting rights. On the other hand, dividend payments, particularly cumulative dividends, are expensive since they are not a tax-deductible expense as is interest on debt. Cumulative dividends can be particularly draining on cash when they are declared after several years of suspended dividends and payment is then made in a lump sum.

Preferred stock is usually retired by refinancing with debt or through its own conversion feature. If the bank holding company feels that it can afford an equity issue in the future but not at present, it can issue a convertible preferred debenture to postpone the equity issue until a later date. On the other hand, if debt is the desired method of financing but the present debt/equity ratio is not acceptable, the bank holding company will issue preferred and refinance with debt at a more opportune time. However, the Board has expressed concern that in applications to form a BHC, preferred stock not be used as a debt substitute resulting in circumvention of its debt guidelines. On applications with preferred stock which has debt-like characteristics, such stock may be treated as debt in the financial analysis.

2080.3.2 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to parent company policies on capital adequacy within the subsidiaries and for the consolidated organization.
2. To review the use of proceeds of equity capital financings.
3. To review any debt covenants that pertain to a minimum acceptable capital position.

2080.3.3 INSPECTION PROCEDURES

1. Review any existing BHC policies regarding capital adequacy or capital planning.
2. Request any plans regarding proposed capital issues.

Earnings retention provides the most immediate source of capital formation and growth. Earnings retained after dividend payout can often be sufficient to keep pace with asset growth, thereby preserving the balance or relationship between equity capital and total assets. Often referred to as ‘‘internal funding,’’ earnings retention should be carefully reviewed to assure that the BHC's capital base is keeping pace with asset growth.

Bank earnings retention should be reviewed carefully due to the dividend requirements often imposed on banks by their parent companies. Although a bank's board of directors must approve the declaration and payment of any bank dividend, often the bank's board is actually ratifying a decision determined at the parent level. The need for bank retention of earnings is particularly pronounced either during periods of expansion or periods of declining earnings or losses.

Parent company management may be under pressure from shareholders or ‘‘the market’’ to increase dividends or to maintain dividends at historic levels despite reversals in consolidated earnings trends. Examiners should be careful to point out to management that dividend pressures often serve to the detriment of the bank subsidiary(ies) which is often asked to supply the proceeds via a dividend to the parent company. As a regulator of banks (and bank holding companies), the Federal Reserve System is concerned with the preservation and maintenance of a sound banking system and in particular, soundly capitalized banks. Earnings retention contributes to capital growth and should be encouraged. For additional information on earnings retention and dividends see sections 2020.5.1, 4010.1, 4020.1, and 4060.9. See section 4070.1 of the *Commercial Bank Examination Manual*.

2080.4.1 PAYMENT OF DIVIDENDS BY BANK SUBSIDIARIES

Bank dividends can be determined to be excessive if they exceed the limitations imposed by either section 5199(b) or 5204 (also referred to as sections 56 and 60(b)) of the Revised Statutes and accordingly, should be reviewed with regard to those limitations. The Federal Reserve Board amended Regulation H regarding the payment of dividends by state member banks on December 20, 1990, [12 C.F.R. 208.19(a) and 208.19(b)]. The rule was revised, effective October 1, 1998, and replaced as renumbered section 208.5 (see 12 C.F.R. 208.5), ‘‘Dividends and other distributions.’’ It sets forth the ‘‘Limitation on withdrawal of capital by dividend or otherwise,’’ in subsection 208.5(d). The regulation discusses the elements that are taken into account in determining a state member bank's dividend paying capacity. Two different calculations are performed to measure the amount of dividends that may be paid, a Net Income Test and an Undivided Profits Test.

2080.4.1.1 Net Income Test

The approval of the Federal Reserve is required for dividends declared by a member bank that in any calendar year exceeds the net income of the current year, combined with retained net income for the two preceding years (the ‘‘Net Income Test’’).

2080.4.1.2 Undivided Profits Test

A member bank must receive prior approval of the Federal Reserve, and of at least two-thirds of the shareholders of each class of stock outstanding, before paying dividends in amounts greater than undivided profits.

Holding companies have turned to employee pension plans and, to a lesser degree, stock option plans as ways to provide added capital for holding company operations. While there may be a number of reasons for implementing such programs, one of the by-products is the flow of working capital into the holding company. The program usually involves a pre-tax contribution by the holding company to an employee benefit plan (e.g., profit sharing plan) and the resulting purchase by such plan of common or preferred shares of the holding company's stock. The holding company benefits through the use of the funds for working capital, and the plan provides for retirement benefits for employees as shareholders in the company. Since ESOPs are administered under the Employees Retirement Income Security Act of 1974 (ERISA), the guidelines delineated in SR 85–21 should be followed in determining whether possible ERISA violations exist. Reference should also be made to Manual section 4010.1.1.

2080.5.1 STOCK OPTION PROGRAMS

Employee stock option programs generate a nominal percentage of a holding company's financing needs to reward key employees for service rendered via the reduced price of the company's stock. While such programs constitute one method of available funding for a holding company, they generally may not be expected to add any capital amounts beyond nominal levels.

2080.5.2 EMPLOYEE STOCK OWNERSHIP PLANS (ESOPS)

Employee Stock Ownership Plans (ESOP) are an alternative holding company funding tool. An ESOP is a tax-qualified employee benefit plan which is designed to be invested primarily in employer stock. The concept of an ESOP is to encourage the establishment of employee benefit programs which expand the employees' share in company stock ownership. Participation in an ESOP may also significantly enhance employee motivation. The essential differences between an ESOP and other qualified stock bonus plans are that an ESOP is permitted, in certain circumstances, to incur liabilities in the acquisition of employer securities, and that an employer may receive additional tax credits for amounts contributed to ESOPs. Under limited circumstances, lenders to ESOP's may also receive benefits that result in reduced borrowing costs to the ESOP. As long as ESOP meets the IRS requirements for a qualified employee plan, it may invest up to 100% of its assets in "qualifying" employer securities. It is exempt from some of the self-dealing limitations applicable to most employee benefit plans, as it is viewed as a means of providing stock ownership interests for employees rather than as strictly a retirement plan. Furthermore, an ESOP may purchase the stock either from the employer company or from shareholders. Therefore, in addition to use as a tool of corporate finance, an ESOP may serve as a ready purchaser for outstanding stock, without a corresponding loss of voting control.

ESOPs are in some ways similar to deferred profit sharing plans. ESOPs are authorized under the same section, namely, section 401 of the Internal Revenue Code. Employer contributions (within limits based on a percentage of eligible payroll) are allowable deductions from the employer's pre-tax income. Contributions are held in trust, and benefits when paid out upon an employee's retirement, death, or termination of service, must be paid in company stock. The distinguishing feature of an ESOP lies in the fact that the direct purpose of the plan is to invest employer contributions in the stock of the company.

2080.5.2.1 Accounting Guidelines for Leveraged ESOP Transactions

Newly issued or existing shares of BHC stock are sometimes sold to the ESOP and paid for with money borrowed from a third party; these types of ESOPs are commonly referred to as "leveraged ESOPs." The borrowings are generally serviced with contributions by the employer, which are a tax deductible expense. The borrowing arrangement by the ESOP often includes a guarantee or commitment by the employer (the BHC or the subsidiary bank) to make future contributions to the ESOP sufficient to meet debt service requirements.

When this occurs, questions arise involving the appropriate accounting for the leveraged ESOP transaction. The Accounting Standards Executive Committee of the American Institute of CPAs has issued a Statement of Position

(SOP) 72–3 which discusses ESOP borrowing situations. Since the Federal Reserve applies generally accepted accounting principles, banks and bank holding companies should follow SOP 76–3. The SOP statement covers cases where the employer either guarantees the ESOP loan or commits to make future ESOP contributions sufficient to service the debt. For such cases, the SOP indicates that the employer should credit a liability account for the amount of the ESOP debt and offset that entry by reducing shareholders' equity. The liability recorded by the employer should be reduced as the ESOP makes payments on the debt. This liability is recorded because the guarantee or commitment is in substance the employer's debt. When there is no guarantee, the ESOP is treated like any other shareholder.

In other words, where there is a leveraged ESOP which has purchased BHC stock, and there is a guarantee, commitment, or other arrangement which is in effect a guarantee relative to the debt service of the ESOP, for analytical purposes the amount of ESOP debt will be considered as parent debt and thus parent equity will be reduced accordingly. This will affect debt to equity ratios as well as consolidated capital ratios, where applicable.

2080.5.2.2 Fiduciary Standards under ERISA Pertaining to ESOPs

There are also general fiduciary standards under ERISA pertaining to ESOPs which have been delineated largely through court decisions rather than issuance of regulations. Although exempted from ERISA's asset diversification requirement, ESOP transactions are still required to meet fiduciary standards of prudence, and must be designed and administered for the ''exclusive benefit'' of plan employees. (ERISA §404(a) and 29 CFR 2550.407d–6). Yet, as stated above, ESOPs may have distinct advantages which inure primarily to the sponsoring company, its management and large shareholders. Due to these potential or actual conflicts of interest, it is important that the sponsoring employer and any other fiduciaries of a plan undertake every effort to assure full consideration of the best interests of plan employees.

The safeguarding of the statutory ''exclusive'' interests of plan employees pursuant to ERISA is within the jurisdiction of the IRS and the Department of Labor. The bank regulatory agencies also have some responsibility in their review and examination activities where employee benefit plans such as ESOPs are involved. In this connection, a Uniform Interagency Referral Agreement mandated by statute, has been in effect since 1980 whereby certain possible violations of the provisions of ERISA are referred to the DOL by the Division of Banking Supervision and Regulation, pursuant to delegated authority. SR 81–697 (SA) contains the procedures for making referrals to the Department of Labor. Attached to the SR letter is an exhibit, *ERISA Referral Format,* which lists the information necessary when making referrals. Holding company examiners can expedite the ERISA referral process by including that information in their reports.

2080.5.3 STATUS OF ESOP'S UNDER THE BHC ACT

On August 6, 1985, the Board determined (1985 FRB 804) that an ESOP that controls more than 25 percent of the voting shares of a bank or bank holding company is a bank holding company. The Board determined that the underlying trust which held the shares of the bank holding company is a ''business trust'' as defined in the BHC Act and was thus not excluded from the definition of a ''company'' under the terms of the Act.

2080.5.4 INSPECTION CONSIDERATIONS

Examiners should review unfunded pension liabilities of the BHC to determine their potential impact on the organization. In addition, examiners should review the soundness of any borrowings used to fund ESOP purchases of BHC stock. ESOP borrowings from an affiliated bank used to purchase BHC shares may result in an apparent increase in BHC capital which in fact turns out to have been funded with subsidiary bank funds, a practice considered suitable for in-depth review by examination staff. Section 401 (of the Internal Revenue Code) plan holdings of BHC stock need to be evaluated under the ''content'' provisions of the BHC Act, change in Bank Control Act, and Regulation Y.

When an ESOP is subject to the Change in Bank Control Act, this fact should be brought to the attention of a BHC's management. Section 225.41 of Regulation Y specifies transactions—acquisitions—that would require providing the Board with 60 days prior written notice before acquiring control of a bank holding company (or a state member bank), unless the transaction is exempt under section 225.42 of the Regulation. In addition to the above, a determination should be made as to whether the ESOP is a bank holding company. The examiner may also refer to the Financial Accounting Standards Board's Statement No. 87, ''Employers' Accounting for Pensions.''

A key principle underlying the Federal Reserve's supervision of bank holding companies and savings and loan holding companies (collectively, "holding companies") is that such holding companies should be operated in a way that promotes the safety and soundness of their subsidiary depository institutions. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their depository institutions. Consequently, holding companies should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent holding company and its nonbank subsidiaries.

2080.6.1 FUNDING BY SWEEPING DEPOSIT ACCOUNTS

A principal objective of a holding company's funding strategy should be to maintain an adequate degree of liquidity at the parent company and its subsidiaries. Funding mismatches can exacerbate an otherwise manageable period of financial stress and, in the extreme, undermine public confidence in an organization's viability. In developing and carrying out funding programs, holding companies should give special attention to the use of overnight or extremely short-term liabilities since a loss of confidence in the issuing organization could lead to an immediate funding problem. Accordingly, holding companies relying on overnight or extremely short-term funding sources should maintain a level of superior quality assets, namely, assets that can be immediately liquidated or converted to cash with minimal loss, that is at least equal to the amount of those funding sources.

A potential source of funding mismatch arises from deposit sweeps. This practice is based upon an agreement with a subsidiary bank's deposit customers (typically corporate accounts) which permits these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent holding company. These obligations include such instruments as commercial paper, program notes, and master notes.

In view of the extremely short-term maturity of most sweep arrangements, firms should exercise great care when investing the proceeds. In general, appropriate uses of the proceeds of deposit sweep arrangements include short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment grade assets that can be disposed of with minimal loss of principal. Use of such proceeds to finance mismatched asset positions, such as those involving leases, loans, or loan participations, can lead to liquidity problems at the parent holding company that examiners would view as unsafe and unsound. The absence of a clear ability to redeem overnight or extremely short-term liabilities when they become due would also be viewed as an unsafe and unsound banking activity.

Reserve Bank supervisory and examination personnel should consider the guidance in this section as well as SR-90-31, "Bank Holding Company Funding from Sweep Accounts," in determining whether holding companies engaged in sweep arrangements with their subsidiary banks are doing so in a safe and sound manner.[1]

1. The applicability of the guidance in SR 90-31 was extended to savings and loan holding companies. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

This manual presents several sections on control and ownership, which describe the concept of control as it is applied by the Federal Reserve under the relevant banking and/or savings and loan-related statutes.

This section defines control and explains why control is important from a supervisory perspective. Specifically, control is a threshold issue that is used to determine which companies and individuals (whether domestic or foreign) are subject to Federal Reserve regulatory oversight due to their relationships with, including ownership interests in, U.S. federally insured depository institutions. The Federal Reserve is responsible for evaluating the control relationships affecting bank holding companies (BHCs), savings and loan holding companies (SLHCs) (including banks and other subsidiaries), and banks. The following subsections specifically address control as it applies to companies, qualified family partnerships, individuals and certain companies, and BHC formations.[1]

2090.0.1 GOVERNING FRAMEWORK FOR COMPANIES

The Bank Holding Company Act (BHC Act) and the Home Owners' Loan Act (HOLA), and the Board's implementing regulations, Regulation Y (12 CFR part 225) and Regulation LL (12 CFR part 238) set forth the standards for what constitutes "control."[2] The standards are substantially similar under both statutes and their respective implementing regulations. Importantly, these control standards apply only to companies and other legal entities, not to individuals.[3] This section will largely focus on the BHC Act and Regulation Y for BHCs, although a similar set of principles and requirements apply under HOLA and Regulation LL for SLHCs. Therefore, the inspection procedures at the end of this section can be used in inspections of both BHCs and SLHCs.

Key definitions under the BHC Act and Regulation Y:

Company—any corporation, partnership, business trust, association, or similar organization, or any other trust unless by its terms it must terminate either within 25 years, or within 21 years and 10 months after the death of individuals living on the effective date of the trust.[4] "Company" does not include any corporation that is majority owned by the United States or any state, or any qualified family partnership.[5]

Bank holding company or BHC—any company that has control over any bank or over any company that is or becomes a BHC.[6]

Bank—includes an insured bank as defined in section 3(h) of the Federal Deposit Insurance Act (12 U.S.C. § 1813(h)); or an institution organized under certain laws specified by statute, which both (1) accepts demand deposits or deposits that the depositor may withdraw by check or similar means for payment to third parties or others; and (2) is engaged in the business of making commercial loans.[7] The statute includes several exceptions from the definition of "bank."[8]

Subsidiary—a bank or other company that is controlled by a BHC.[9]

2090.0.2 IMPORTANCE OF CONTROL

A company that is a BHC is subject to the supervisory and regulatory oversight of the Federal Reserve. Such oversight covers the direct

1. Appendix 1 provides additional information on regulations, interpretations, and orders related to controls and ownership.

2. BHC Act (12 U.S.C. § 1841 et seq.); HOLA (12 U.S.C. § 1467 et seq.).

3. Control is also determined under the Change in Bank Control Act or the CBC Act (see the section of this manual entitled, "Control and Ownership (Change in Control)"). The CBC Act applies to individuals, companies, and other legal entities. The CBC Act's definition of control has elements of the other two statutes, with "control" meaning "the power, directly or indirectly, to direct the management or policies of an insured depository institution or to vote 25 percent or more of any class of voting securities of an insured depository institution." Under the CBC Act, a prior notice generally is required for individuals or companies that seek to control 10 percent or more of a BHC's or SLHC's voting securities. For a bank or thrift that has no parent holding company, the notice is filed with the bank or thrift's primary federal banking regulator. As with the BHC Act and HOLA, exemptions from the prior notice requirements are available under certain circumstances under the CBC Act.

4. The exemption for trusts is narrower for SLHCs due to differences between HOLA and the BHC Act. See 12 CFR 238.2(m)(2)(ii).

5. 12 CFR 225.2(d)1.

6. 12 CFR 225.2(c)(1).

7. 12 U.S.C. § 1841(c)(1); 12 CFR 225.2(b)(1).

8. 12 U.S.C. § 1841(c)(2).

9. 12 CFR 225.2(o).

activities of the BHC, as well as those activities conducted by the BHC through its bank and nonbank subsidiaries. When designated a BHC, various requirements and restrictions come into effect, including examinations and regulatory reporting requirements, capital and liquidity requirements, source of strength obligations, cross-guarantee liability obligations among affiliated insured depository subsidiaries, activity restrictions, and restrictions on certain affiliate transactions involving insured depository subsidiaries.

The Board's authority over BHCs is guided by two key purposes of the BHC Act: (1) to ensure that companies that acquire control of banks (and other insured depository institutions, as under HOLA) have the financial strength and managerial ability to exercise control in a safe and sound manner; and (2) to separate banking from commerce by restricting the nonbanking activities of BHCs and by preventing companies with commercial interests from exercising control over banking organizations.[10]

A company must first obtain the prior approval of the Federal Reserve before becoming a BHC (see section 2090.2 for BHC Formations). In cases where control of a bank is obtained without prior approval of the Federal Reserve (whether intentionally or inadvertently), the controlling company must be brought into conformance with the BHC Act as soon as possible. Such a company will have to apply for BHC status (which may require the company to modify its activities) and/or divest some, or all, of its investment in the acquired bank.

2090.0.3 INVESTMENTS INVOLVING BANKING ORGANIZATIONS

A company (that is not a bank or BHC) can make an investment in a bank or BHC or receive an investment from a bank or BHC. An existing BHC can make an investment in another company, bank, or BHC. Accordingly, investments can be made according to the following scenarios:

Scenario 1: by a company (that is not a bank or BHC) in a bank or BHC,

Scenario 2: by a BHC in a company (that is not a bank or BHC), or

Scenario 3: by a BHC in a bank or BHC.

If the investment is deemed to be a *controlling* investment, then under

Scenario 1: the company (investing company/investor/acquirer) would be required to seek prior Federal Reserve approval to become a BHC,

Scenario 2: the company (investee company/investee/target) would become a subsidiary of a BHC, and

Scenario 3: the target bank or BHC would become a subsidiary of the acquiring BHC.

If the investment is deemed to be a *noncontrolling* investment, then under

Scenario 1: the company (investing company/investor/acquirer) would *not* be required to seek prior Federal Reserve approval to become a BHC,

Scenario 2: the company (investee company/investee/target) would *not* become a subsidiary of a BHC, and

Scenario 3: the target bank or BHC would *not* become a subsidiary of the investing BHC.

Investors and investees often seek to structure their investments in, or by, banks or BHCs in a manner to avoid a determination of control. Otherwise, if control exists, status as a BHC or a subsidiary thereof would result, subjecting the company to the Federal Reserve's oversight, as well as restrictions on certain activities.

An investing company/acquirer that proposes to invest in a bank or BHC often seeks a control determination from the Federal Reserve to understand whether the transaction will result in the company becoming a BHC, and therefore subject to the BHC Act. An existing BHC also may seek a control determination to limit its obligations to the investee company/target in which an investment is being made.

2090.0.4 DEFINITION OF CONTROL

Under section 2(a)(2) of the BHC Act, control is defined by a three-pronged test. A company has "control" of a bank or BHC, if any one of the following three prongs are met:

10. For the purposes of this section, "banking organizations" is a general term that applies to a BHC or an SLHC, and their related subsidiaries.

1. the company directly or indirectly owns, controls, or has power to vote 25 percent or more of any class of voting securities of a bank or a company that is a BHC;
2. the company controls in any manner the election of a majority of the directors or trustees of a bank or a company that is a BHC; or
3. the company directly or indirectly exercises a controlling influence over the management or policies of a bank or a company that is a BHC.

The first and second prongs of the control test are generally straightforward. The third prong, or the "controlling influence" prong, is largely based on a set of tiered presumptions of control (discussed below).

2090.0.5 BACKGROUND ON CONTROLLING INFLUENCE

Under the BHC Act and HOLA, investing companies that own less than 5 percent are presumed not to control, whereas investing companies that own 25 percent or more, absolutely control for purposes of the statute. As a result, evaluation of the controlling influence prong arises for ownership levels in the range of 5 percent to less than 25 percent.

Typically, large noncontrolling investors seek to protect or enhance their investments through multiple forms of engagement with the target company. This approach provides the investor with an opportunity to monitor and influence the target company.

Based on the review of many individual cases over the years, the Board has developed standards that cover the most common factors or investment features that may give rise to controlling influence concerns. For example, these may include

- the size and structure of a company's voting and total equity investment;
- a company's rights to director representation;
- common management, employees, or directors between companies;
- restrictive covenants;
- business relationships; and
- other indicia of the ability or incentive of a company to exercise a controlling influence over a bank or BHC.[11]

In 2020, the Board issued a rule on Control and Divesture Proceedings (2020 rule),[12] which was subsequently codified in Regulations Y and LL. The 2020 rule sets forth standards for investors to rebut the presumption of control under the controlling influence prong, along with other important control-related items. The Board's 2020 rule expands substantially the number of control presumptions and makes some targeted adjustments from past practices. For example, noncontrolling investors may have a greater number of director representatives at their investee company, and investors can terminate an existing control relationship at greater levels of ownership. In addition, the use of passivity commitments are no longer needed, generally.[13] Overall, the 2020 rule provides the banking industry with greater transparency of the Federal Reserve's application of its control rules. As such, the 2020 rule is intended to facilitate and expedite permissible investments in and by banking organizations. Such investments may raise capital for the banking organization or form some type of strategic alliance.

2090.0.6 PRESUMPTIONS OF CONTROL

The 2020 rule establishes and describes a series of tiered presumptions of control based on voting securities and other important relationships or factors. These tiered presumptions and additional presumptions of control are listed in paragraphs (b) through (j) of section 225.32 of Regulation Y and section 238.22 of Regulation LL. See appendix 2 to this section for a summary of tiered presumptions.

The level of investment and all other aspects of the investor/investee relationship are to be considered in the aggregate when determining whether there is a presumption of control. Different standards apply once a company's level of voting securities exceeds 5 percent, 10 percent, and 15 percent. As an investing company's

11. Some of these standards have been codified in the Board's Regulation Y (see e.g., 12 CFR 225.138 and 12 CFR 225.139). In addition, the Board issued guidance through policy statements (see the section of this manual entitled, "Control and Ownership (Policy Statements on Equity Investments in Banks and Bank Holding Companies))."

12. 85 Fed. Reg. 12,398 (March 2, 2020).

13. Passivity commitments are a set of standardized restrictions that are used to support an absence of controlling influence entered between the investing company and the Board. Federal Reserve staff generally had requested passivity commitments when an investing company proposes to control 10 percent or more of a class of voting securities of a BHC or SLHC.

percentage of voting securities increases, the significance of the other relationships generally must decrease to avoid triggering controlling influence concerns.

The subsections below describe some of these investor/investee relationships and how they can represent a controlling influence over the target company.

2090.0.6.1 Director Representation

A company's level of representation on the board of directors of a target company is an important factor for controlling influence. The second prong of the control test (controlling in any manner the election of the majority of the board of directors of a target company) reinforces the importance that director representation has on determining a controlling influence. In addition to the share of director representatives that one company has on the board of directors of a target company, there may be a controlling influence if a particular director representative has an outsized ability to affect the decisions of the target company. For instance, the chair of the board of directors of a company is generally recognized as a leader of the company and its board of directors. Further, the chair may have additional powers, such as the ability to set the agenda for meetings of the board of directors. Similarly, certain committees of the board of directors may have the power to take actions that bind the company without the need for approval by the full board of directors. In these circumstances, such a committee is nearly equivalent to the full board of directors with respect to those decisions that it is empowered to make unilaterally.

2090.0.6.2 Business Relationships

A company's business relationships with another company provide a mechanism through which the investing company could exercise a controlling influence over the target company. For example, a business relationship between an investor and another company that accounts for a substantial portion of the revenues or expenses of the target company may provide a lever by which the investor could attempt to influence the target company. In addition, if a company can enter into a business relationship with a target company on terms that are not market terms, it is likely that the investing company has a significant level of influence over the target company. Business relationship thresholds generally are based on the size of these relationships as compared to total consolidated annual revenues and expenses. The Board also may consider other factors such as relationships that are difficult to replace and are necessary for core functions.

2090.0.6.3 Senior Management Interlocks

The officers of a company wield significant power over the company because they implement the major policies set by the board of directors, make the ancillary policy decisions necessary for implementation of a policy, and operate the company on a day-to-day basis. In addition, officers often make influential recommendations to the board of directors regarding major policy decisions. As a result of this substantial degree of influence, situations where an agent of a significant investor company serves as a management official of another company may provide a considerable avenue for the first company to exercise a controlling influence over the target company.

2090.0.6.4 Contractual Limits on Major Operational or Policy Decisions

A company that controls a material amount of voting securities of a target company also may have contractual arrangements with the target company, such as investment agreements, debt relationships, service agreements, or agreements related to other business relationships. Contractual rights often raise controlling influence concerns as an investor may have the ability to restrict significantly, directly or indirectly, the discretion of another company over operational or policy decisions, whether such decisions are made by management or by the other company's board of directors. The ability of an investor to significantly restrict an important business decision of a company generally provides the investor with the ability to exercise a significant influence over the company.

2090.0.6.5 Total Equity

The overall size of an equity investment, including both voting and nonvoting equity, is an important indicator of the degree of influence an investor may have. A company is likely to pay heed to its large shareholders in order to maintain stability in its capital base, enhance its ability to raise future equity capital, and to prevent the negative market signal that may be created by the sale of a large block of equity by an unhappy shareholder. Under the Board's Regulation Y, a company will be presumed to control a target company when the first company controls one-third or more of the total equity of the target company.[14]

2090.0.6.6 Divestiture

The Board historically has taken the position that a company that has controlled another company may be able to exert a controlling influence over that company even after a substantial divestiture. The 2020 rule establishes that a company that previously controlled a target company during the preceding two years is presumed to continue to control the target company if the first company owned 15 percent or more of any class of voting securities of the target company. The divestiture presumption does not apply if a majority of each class of voting securities of the target company is controlled by a single unaffiliated individual or company after the divestiture by the investor company. Further, the divestiture presumption generally does not apply in cases where a company sells a subsidiary to a third company and receives stock of the third company as consideration for the sale.

2090.0.7 SUPERVISORY CONSIDERATIONS

The determination of whether an investment, or proposed investment, is a controlling or noncontrolling investment is separate and independent from the analysis of whether the investment raises safety-and-soundness concerns. Examiners should review terms of the investment, including all existing or planned relationships, in connection with the review of the investment. While the table in appendix 2 to this section provides guidance as to what is indicative of control, it can be used as a starting point to understand the details or additional elements surrounding an investment and any related relationships or rights between the investor and investee companies that may raise safety-and-soundness concerns. For example, business relationships may be a cause of concern when one company is dependent on the other for funding, regardless of whether it triggers any presumption of control. Similarly, a bank director or management official appointed by the investor company to serve at the target banking organization potentially could wield significant influence over deliberations and decisions of the target perhaps resulting in misaligned interests or new operational risks.

2090.0.8 INSPECTION OBJECTIVES

1. To confirm all 5 percent or greater shareholders (including the combined ownership interests of related parties) at an existing BHC or SLHC.
2. To determine whether any change in control has resulted in a company becoming a BHC in violation of section 3(a)(1) of the BHC Act (or HOLA for SLHCs), or an individual acquiring significant ownership interests in violation of the Change in Bank Control (CBC) Act.
3. To ascertain whether an existing BHC or SLHC has acquired either directly or indirectly additional banking assets in violation of section 3(a)(3) of the BHC Act (or HOLA for SLHCs).
4. To establish whether a BHC which has purchased its own stock is in compliance with section 225.4(b) of Regulation Y. (See this manual's section entitled, "Control and Ownership (Treasury Stock Redemptions).")

2090.0.9 INSPECTION PROCEDURES

1. Review the holding company's stock records and the company's investment portfolio. Also review the holding company's annual filing of form FR Y-6.
2. To assess compliance with the BHC Act, HOLA, and the CBC Act, review transactions involving an equity investment by a BHC or SLHC or by an individual or other company (investments into a BHC, SLHC, bank, or other company) that result in the investor owning 5 percent or more of the voting securities of the target company. Consider whether any such investments raise any safety-and-soundness concerns for the affected parties.

14. 12 CFR 225.32(c). For SLHCs, a lower standard of 25 percent of total equity applies under HOLA. See 12 U.S.C. § 1467a(a)(2)(B).

3. If the holding company has any subsidiaries that are indirectly owned or controlled, determine whether such shares are held in a trust and, if so, whether the trust agreement contains any provisions that could potentially expose the holding company or any of its subsidiaries to financial or other liabilities.

APPENDIX 1: REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Regulations*[1]	*Interpretations*[2]	*Orders*[3]

APPENDIX 2: SUMMARY OF TIERED PRESUMPTIONS

Presumption of control	*Less than 5% voting*	*5–9.99% voting*	*10–14.99% voting*	*15–24.99% voting*
Directors	Less than half	Less than a quarter	Less than a quarter	Less than a quarter
Director Service as Board Chair	N/A	N/A	N/A	No director representative is chair of the board
Director Service on Board Committees	N/A	N/A	A quarter or less of a committee with power to bind the company	A quarter or less of a committee with power to bind the company
Business Relationships	N/A	Less than 10% of revenues or expenses of the second company	Less than 5% of revenues or expenses of the second company	Less than 2% of revenues or expenses of the second company
Business Terms	N/A	N/A	Market terms	Market terms
Officer/ Employee Interlocks	N/A	No more than 1 interlock, never chief executive officer (CEO)	No more than 1 interlock, never CEO	No interlocks
Contractual Powers	No management agreements	No rights that significantly restrict discretion	No rights that significantly restrict discretion	No rights that significantly restrict discretion
Proxy Contests (Directors)	N/A	N/A	No soliciting proxies to replace more than permitted number of directors	No soliciting proxies to replace more than permitted number of directors
Total Equity	BHCs – Less than 1/3 SLHCs – 25% or less	BHCs – Less than 1/3 SLHCs – 25% or less	BHCs – Less than 1/3 SLHCs – 25% or less	BHCs – Less than 1/3 SLHCs – 25% or less

Note: Presumption triggered if any relationship exceeds the amount in the table.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to include a Board staff interpretation, pertaining to a qualified family partnership (QFP), that was issued on May 10, 2010. The interpretation considered whether a proposed assignment of an economic interest in the partnership interests of a partnership that is a QFP under section 2(o)(10) of the Bank Holding Company Act would cause the partnership to lose its status as a QFP.

2090.05.1 QUALIFIED FAMILY PARTNERSHIP EXEMPTION

Under the Bank Holding Company Act (the Act), any "company" (including a partnership) that controls a bank is considered a bank holding company (BHC).[1] Section 2(o) of the Act (as amended by section 2610 of the Economic Growth and Regulatory Paperwork Reduction Act of 1996),[2] however, provides a limited exemption from the definition of company for a "qualified family partnership" (QFP), and accordingly, a partnership that qualifies as a QFP is not considered a BHC under the Act.[3] A QFP, under the Act, is able to own and control a BHC without the partnership becoming subject to the registration, source of strength, approval, reporting, and other requirements imposed on a BHC.

In order to qualify for the Act's exemption for a QFP, all the partners of the QFP must be individuals related to each other by blood, marriage, or adoption; or trusts for the primary benefit of those individuals (collectively, "qualified parties"). In addition, the partnership must

- control any bank (its bank investments) through a single registered BHC that remains subject to all of the provisions of the Act;
- control only one registered BHC;
- not engage in any business activity except indirectly through ownership of other business entities (that is, the partnership must be an investment vehicle for the family and may not be an operating company);
- limit its investments to those permitted for a BHC under section 4(c) of the Act; and
- not be obligated on any debt, either directly or as a guarantor.[4]

Any partnership requesting qualification as a QFP must commit (1) to be subject to Federal Reserve Board examination to ensure compliance with the conditions for eligibility and (2) to be treated as a BHC for purposes of enforcement actions by the Board. In addition, while a QFP is exempt from the prior-approval requirements of section 3 of the Act in connection with a bank acquisition, the partnership continues to be subject to the notice provisions of the Change in Bank Control Act.

As noted above, the primary benefits to becoming a QFP are (1) exemption from the capital requirements applicable to BHCs, (2) exemption from the reporting requirements applicable to a BHC, and (3) the freedom to make permissible nonbanking investments without prior Board approval. Because the QFP must use a single registered BHC to hold all of its bank investments, there continues to be a BHC subject to the requirements of the Act in every case. This structure ensures that the cross-guarantee provisions of the Federal Deposit Insurance Act continue to apply to all banks controlled by a QFP.

2090.05.2 ASSIGNMENT OF ECONOMIC PARTNERSHIP INTEREST THAT IS A QFP

Board staff issued a May 10, 2010, interpretation on whether a proposed assignment of an economic interest in the partnership interests of a partnership that is a QFP under section 2(o)(10) of the Act would cause the partnership to lose its status as a QFP.[5] Board staff noted that the QFP exemption does not distinguish between the legal and beneficial ownership of such partnership interest. An assignment of the economic interests in a QFP interest, especially in the case of a limited partnership interest, would effectively give the assignee a beneficial interest in the QFP. Where the assignee is not a family member, Board staff believes that such

1. 12 U.S.C. 1841(a)(1).
2. Pub. L. 104-2089, section 2610; 110 Stat. 3009.
3. 12 U.S.C. 1841(b).
4. The QFP also must commit to examination by the Board and to the notice requirements of the Change in Bank Control Act if it acquires an additional bank.
5. 12 U.S.C. 1841(o)(10).

an assignment would undermine the ‘‘family relationship’’ requirement of the Act and would expand the exemption beyond its limited scope. Accordingly, Board staff believes that an assignment of the economic interests in the partnership interest of a QFP to a non-qualified person would be inconsistent with the ‘‘relationship’’ requirement of the statute. The partnership would not be in compliance with the statutory requirements of a QFP and would be required to register as a BHC.

The Change in Bank Control Act of 1978 (the CBC Act), title VI of the Financial Institutions Regulatory and Interest Rate Control Act of 1978, gives the federal bank supervisory agencies the authority to disapprove changes in control of insured depository institutions.[1] The Federal Reserve Board is the responsible federal banking agency for changes in control of bank holding companies and state member banks, and the Federal Deposit Insurance Corporation and the Office of the Comptroller of the Currency are responsible for insured state nonmember and national banks respectively.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifically exempts transactions that are subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act because those transactions are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and changes in control of insured depository institutions resulting from mergers, consolidations, or other similar transactions are not covered by the CBC Act.

The CBC Act describes the factors that the Federal Reserve and the other federal banking agencies are to consider in determining whether a transaction covered by the CBC Act should be disapproved. These factors include the financial condition, competence, experience, and integrity of the acquiring person (or persons acting in concert); the effect of the transaction on competition; whether the acquiring persons have provided all required information; and whether the proposed transaction would result in an adverse effect on the Bank Insurance Fund or the Savings Association Insurance Fund. The Federal Reserve Board's objectives in its administration of the CBC Act are to enhance and maintain public confidence in the banking system by preventing identifiable, serious adverse effects resulting from anticompetitive combinations of interests, inadequate financial support, and unsuitable management in the institutions. The Board will review each notice to acquire control of a state member bank or bank holding company and will disapprove transactions that are likely to have serious harmful effects. The Board's intention is to administer the CBC Act in a manner that will minimize delays and government regulation of private-sector transactions.

If the Board disapproves a change-in-control filing, the Board will notify the proposed acquiring party in writing within three days after its decision. The notice of disapproval will include a statement of the basis for disapproval. The CBC Act provides that the acquiring party may request a hearing by the Board in the event of a disapproval and provides a procedure for further review by the courts.

Forms for filing notices of proposed transactions covered by the CBC Act are available from the Federal Reserve Banks. Persons contemplating an acquisition that would result in a change in control of a BHC or state member bank should request the appropriate forms and instructions from the Reserve Bank in whose District the affected institution is located. Forms and instructions may also be accessed from the Federal Reserve Board's public web site (www.federalreserve.gov). The primary forms to be completed are the Interagency Biographical and Financial Report and the Interagency Notice of Change in Control. Filers are requested to consult with the appropriate Reserve Bank to confirm what specific information should be included in a particular notice. The Reserve Bank can provide specialized publication material that will assist the filers in placing a complete announcement of the proposed acquisition in the appropriate newspaper of general circulation. The Board of Governors also will publish the notices in the *Federal Register*. (See SR-03-19.)

When a substantially complete notice is received by the Federal Reserve Bank, a letter of acknowledgment will be sent to the acquiring person indicating the date of receipt. After reviewing the submitted information, the Federal Reserve may initiate name checks with certain other U.S. government agencies (including law enforcement) on some or all of the individuals related to the proposal. The information received from those name checks will be used to further the assessment of the relevant statutory factors, including the competence,

1. The term *insured depository institution* includes any depository institution holding company and any *other* company that controls an insured depository institution. The CBC Act is found in 12 U.S.C. 1817(j)(1)–(18).

experience, integrity, and financial ability of the individual filers.

2090.1.1 COMMITMENTS AND CONDITIONS FOR APPROVAL

Approvals granted by the Federal Reserve under the CBC Act may be subject to commitments or conditions that require the filer to consult with appropriate Federal Reserve staff before acquiring further shares of the subject banking organization. The Board or the Reserve Bank may also impose restrictions on the acquisition of additional shares by any person who already controls an institution. The imposition of such commitments, conditions, or limitations is intended to ensure that statutory factors remain consistent with approval.

2090.1.2 COMPLETION OF THE TRANSACTION

The transaction may be completed 61 days after the date of receipt stated in the acknowledgment letter, unless the acquiring person has been notified by the Board that the acquisition has been disapproved or that the 60-day period has been extended as provided for in subparagraph (j)(1) of the CBC Act. To avoid undue interference with normal business transactions, the Board may issue a notice of its intention not to disapprove a proposal, after consulting with the relevant state banking authorities as the CBC Act requires.

2090.1.3 INFORMATION TO BE INCLUDED IN NOTICES

The CBC Act requires a person proposing to acquire control of a bank holding company or state member bank to file a notice with the Federal Reserve Board that includes biographical and financial information on the filers; details of the proposed acquisition; information on any proposed structural, managerial, or financial changes that would affect the banking organization to be acquired; and other relevant information required by the Board.

A current statement of assets and liabilities, a brief income summary, and a statement of any material changes since the effective date of this financial-statement information is required. The Board reserves the right to require up to five years of financial data from any acquiring person. For complete details on the informational requirements of a change-in-control filing, see the Board's public web site at www.federalreserve.gov/generalinfo/applications/afi/. In particular, review the System's Form FR 2081a, Interagency Notice of Change in Control.

2090.1.4 TRANSACTIONS REQUIRING SUBMISSION OF PRIOR NOTICE

The CBC Act defines *control* as the power, directly or indirectly, to vote 25 percent or more of any class of voting securities or to direct the management or policies of a bank holding company or insured depository institution. Therefore, unless exempted by the CBC Act, any transaction that results in the acquiring party having voting control of 25 percent or more of any class of voting securities or that results in the power to direct the management or policies of such an institution would trigger the notice requirement. However, any person who on March 9, 1979, controlled a bank holding company or state member bank shall not be required to file a notice to maintain or increase control positions in the same institution. In addition, the Board's regulation on a rebuttable presumption of control allows persons who on March 9, 1979, fell within a presumption to acquire additional shares of an institution without filing notice so long as they will not have voting control of 25 percent or more of the institution (Regulation Y, 12 C.F.R. 225.41). In connection with transactions that would result in greater voting control, such persons may file the required notice or request that the Board make a determination that they already control the institution.

Section 225.41 of Regulation Y sets forth the specific types of transactions that require prior notice under the CBC Act. Prior notice is required by any person (acting directly or indirectly) that seeks to acquire control of a state member bank or bank holding company. A *person* may include an individual, a group of individuals acting in concert, or certain entities (for example, corporations, partnerships, or trusts) that own shares of banking organizations but that do not qualify as bank holding companies. A person acquires *control* of a banking organization whenever the person acquires ownership, control, or the power to vote 25 percent or more of any class of voting securities of the institution.

2090.1.4.1 Rebuttable Presumption of Control

Persons who have the power to vote less than 25 percent of an institution's shares may be required to file notice under the Board's rebuttable presumption of control, found in section 225.41 of Regulation Y. The Board presumes that an acquisition of voting securities of a state member bank or bank holding company constitutes the acquisition of control under the CBC Act, requiring prior notice to the Board, if, immediately after the transaction, the acquiring person (or persons acting in concert) will own, control, or hold with power to vote 10 percent or more of any class of voting securities of the institution, and if—

1. the institution has registered securities under section 12 of the Securities Exchange Act of 1934 (15 U.S.C. 78*l*); or
2. no other person will own, control, or hold the power to vote a greater percentage of that class of voting securities immediately after the transaction.[2]

Other transactions resulting in a person's control of less than 25 percent of a class of voting shares of a bank holding company or state member bank would not result in control for purposes of the CBC Act. In addition, customary one-time proxy solicitations and the receipt of pro rata stock dividends are not subject to the CBC Act's notice requirements.

In some cases, corporations, partnerships, certain trusts, associations, and similar organizations that are not already bank holding companies may be uncertain whether to proceed under the CBC Act or under the Bank Holding Company Act with respect to a particular acquisition. These organizations should comply with the notice requirements of the CBC Act if they are not required to secure prior Board approval under the Bank Holding Company Act. However, some transactions (described in sections 2(a)(5)(D) and 3(a)(5)(A) and (B) of the Bank Holding Company Act), particularly foreclosures by institutional lenders, fiduciary acquisitions by banks, and increases of majority holdings by bank holding companies, do not require the Board's prior approval. They are considered subject to section 3 of the Bank Holding Company Act and, therefore, do not require notices under the CBC Act.

2090.1.4.2 Rebuttable Presumption of Concerted Action

The following persons are presumed to be acting in concert[3] and must file a CBC Act notice if their share of ownership reaches the required levels:

1. a company and any controlling shareholder, partner, trustee, or management official of the company, if both the company and the person own voting shares of the state member bank or bank holding company
2. an individual and the individual's immediate family
3. companies under common control
4. persons that are parties to an agreement, contract, understanding, relationship, or other arrangement, whether written or otherwise, regarding the acquisition, voting, or transfer of control of voting securities of a state member bank or bank holding company, other than through a revocable proxy
5. persons who have made or propose to make a joint filing under sections 13 and 14 of the Securities Exchange Act of 1934 (15 U.S.C. 78m), and the rules promulgated thereunder by the Securities and Exchange Commission
6. any person and any trust for which the person serves as trustee

If there is any doubt whether a proposed transaction requires a notice, the acquiring person should consult the Federal Reserve Bank for guidance. The CBC Act places the burden of providing notice on the prospective acquiring person.

2090.1.5 TRANSACTIONS NOT REQUIRING ANY NOTICE

Section 225.42 of Regulation Y sets forth the transactions that do not require any notice under the CBC Act or that require after-the-fact notice. The following transactions do not require any notice to the Federal Reserve:

2. If two or more persons, not acting in concert, each propose to acquire simultaneously equal percentages of 10 percent or more of a class of voting securities of the state member bank or bank holding company, each person must file prior notice to the Board.

3. *Acting in concert* includes knowing participation in a joint activity or parallel action towards a common goal of acquiring control of a state member bank or bank holding company whether or not pursuant to an express agreement.

1. *Existing control relationships.* The acquisition of additional shares if the acquirer is deemed to already have control of the banking organization.
2. *An increase in previously authorized acquisitions.* The acquisition of additional shares of a class of voting securities of a state member bank or bank holding company by any person (or persons acting in concert) who acquired and maintained control of the institution after complying with federal requirements.
3. *Any acquisition subject to approval under the Bank Holding Company Act or the Bank Merger Act.* Any acquisition of voting securities subject to approval under section 3 of the BHC Act or under the Bank Merger Act (section 18(c) of the Federal Deposit Insurance Act).
4. *Transactions exempt under the BHC Act.*
5. *A proxy solicitation.* Receipt of a revocable proxy in connection with a proxy solicitation for the purpose of conducting business at a regular or special meeting of the institution if the proxy terminates within a reasonable time.
6. *Stock dividends.* Receipt of voting securities as a result of a stock dividend (if the proportional interest of the recipient remains substantially the same).
7. *Acquisition of voting securities of a foreign banking organization.* The acquisition of voting securities of a qualifying foreign banking organization.

2090.1.6 TRANSACTIONS NOT REQUIRING PRIOR NOTICE

The transactions that require after-the-fact notice include the acquisition of voting securities (1) through inheritance, (2) as a bona fide gift, or (3) in satisfaction of a debt previously contracted in good faith. In these situations, the appropriate Reserve Bank must be notified within 90 days after the acquisition, and the acquirer must provide any relevant information requested by the Reserve Bank.

2090.1.7 UNAUTHORIZED OR UNDISCLOSED CHANGES IN BANK CONTROL

In some instances, a person acquires control of a banking organization without submitting the prior or after-the-fact notice required by Regulation Y. These unauthorized or undisclosed changes in bank control may not be known to the person, the state member bank, or the bank holding company but are discovered by Reserve Bank examiners during an inspection or examination of the affected institution. In most cases, such a violation of the CBC Act is addressed by having the person immediately file a notice with the Federal Reserve requesting authority to retain the acquired shares.[4] The filing should include an explanation of the circumstances that resulted in the violation and a description of the actions that have been (or will be) taken by the filers to ensure no further violations of the statute. Although the burden to file a timely change in bank control notice is on the persons who are acquiring control or causing a change in control of a banking organization, an acquired banking organization or a banking organization undergoing a change in control may have better information regarding current ownership positions, including shareholder lists, than the acquiring individuals or individuals who propose a change in control. Therefore, it is important that state member banks and bank holding companies be familiar with the regulations and policies governing changes in bank control and, when possible, share such information with shareholders who have significant ownership positions.

2090.1.8 CHANGES OR REPLACEMENT OF AN INSTITUTION'S CHIEF EXECUTIVE OFFICER OR ANY DIRECTOR

Institutions must report promptly any changes or replacement of its chief executive officer or of any director, in accordance with paragraph 12 of the CBC Act. Under section 225.42(a)(7) of Regulation Y, acquisitions of control of foreign bank holding companies are also exempt from the prior-notice requirements of the CBC Act,

4. A violation may be addressed through two other means. The affected party may either (1) submit, for the Federal Reserve's approval, a specific plan for the prompt termination of the control relationship or (2) contest the preliminary determination of a control relationship by filing a response that sets forth the facts and circumstances in support of the party's position that no control exists or, if appropriate, presenting such views orally to Federal Reserve staff.

but this exemption does not extend to the reports and information required under paragraphs 9, 10, and 12 of the act. (See section 2090.1.5.)

2090.1.9 DISAPPROVAL OF CHANGES IN CONTROL

The CBC Act sets forth various factors to be considered in the evaluation of a proposal. The Board is required to review the competitive impact of the transaction; the financial condition of the acquiring person; and the competence, experience, and integrity of that person and the proposed management of the institution. In assessing the financial condition of the acquiring person, the Board will weigh any debt-servicing requirements in light of the acquiring person's overall financial strength and the institution's earnings performance, asset condition, capital adequacy, and future prospects, as well as the likelihood of an acquiring party making unreasonable demands on the resources of the institution.

2090.1.10 ADDITIONAL REPORTING REQUIREMENTS

Paragraph 12 of the CBC Act requires that whenever a change in control of a bank holding company occurs, each insured depository institution is required to report promptly to the appropriate federal banking agency any changes or replacement of its chief executive officer or of any director occurring in the next 12-month period. A statement of the past and current business and professional affiliations of the new chief executive officer or directors should be included in each institution's report.

Paragraph 9 of the CBC Act indicates that whenever any insured depository institution makes a loan secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company), the president or other chief executive officer of the lending bank shall promptly report such fact to the appropriate federal banking agency of the bank (or bank holding company) whose stock secures the loan. However, no report need be made when the borrower has been the owner of record of the stock for a period of one year or more or when the stock is that of a newly organized bank before its opening. Reports required by this paragraph shall contain information similar to the informational requirements of the Notice of Change in Control.

2090.1.11 STOCK REDEMPTIONS

A stock redemption by a BHC may result in an existing shareholder (or shareholders) owning 25 percent or more of a class of voting securities, which would require the filing of both a change-in-control and treasury stock notification. Furthermore, a stock redemption by a BHC may result in an existing shareholder (or shareholders) owning between 10 percent and 25 percent of the outstanding shares and being the largest shareholder, thereby resulting in a rebuttable presumption of control. For additional information, see section 2090.3 "Treasury Stock Redemptions."

2090.1.12 CORRECTIVE ACTION

The Federal Reserve has enforcement jurisdiction over those persons who file or *should file* notices under the CBC Act. Accordingly, violations of the requirement to file a change in bank control notice may result in the Federal Reserve taking enforcement action against the relevant persons in appropriate circumstances, including those involving willful or negligent misconduct. Violations may result in the persons being subject to a variety of sanctions, including the assessment of a civil money penalty.

Violations of the CBC Act are addressed through the same type of investigative and enforcement authority and formal corrective actions that are used in other administrative remedies (12 U.S.C. 1818(b)–(n)). The CBC Act also authorizes the assessment of civil money penalties for any violation of the CBC Act (12 U.S.C. 1817(j)(16)) and allows the Board to seek divestiture of a BHC or bank from any person or company who violates the CBC Act (12 U.S.C. 1817(j)(15)).

2090.1.13 INSPECTION OBJECTIVES

1. To determine that the BHC has complied with the prior-notification requirements of the CBC Act and that changes in ownership between 10 percent and 25 percent have been reviewed for *rebuttable presumption* considerations.
2. To determine that the BHC has complied with the reporting requirements of paragraph 12 of the CBC Act regarding changes in its

board of directors or its chief executive officer that occur within 12 months of a change in control.

3. To determine that the BHC has complied with the reporting requirements of paragraph 9 of the CBC Act regarding loans made directly by the BHC secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company).

2090.1.14 INSPECTION PROCEDURES

1. Review the BHC's stock certificate register or log to determine if any person (or group of persons acting in concert) has acquired 10 percent or more of any class of voting securities.
2. Review changes in control of between 10 percent and 25 percent of any class of voting securities to determine if the controlling party is the single largest shareholder.
3. When inspecting a BHC that was the subject of a change in control and when a prior notification was filed, review the notification to determine that information submitted on the management of the BHC is still valid. When changes in directors or the chief executive officer occurred within 12 months of the change in control, determine if the BHC has reported such changes in compliance with paragraph 12 of the CBC Act.
4. When inspecting a BHC that has redeemed any of its own shares subsequent to March 9, 1979, thereby lowering the number of shares outstanding, determine whether the holdings of any individual shareholder have increased proportionally to greater than 10 percent, which might trigger the rebuttable presumption of control and may require prior notification of a change in control.
5. Review any loans made directly by the BHC that are secured by 25 percent or more of the outstanding shares of a bank (or bank holding company) and determine if the BHC has complied with the reporting requirements of paragraph 9 of the CBC Act.

2090.2.1 FORMATION OF A BANK HOLDING COMPANY AND CHANGES IN OWNERSHIP

The formation of a bank holding company (BHC) and certain changes in the ownership of banks owned by a BHC come under the provisions of section 3 of the BHC Act. Section 3(a)(1) prohibits the formation of a BHC without prior Board approval. A company may receive approval pursuant to section 3(a)(1) to become either a one-bank holding company or a multibank holding company.

Historically, there have been various tax benefits associated with forming a one-bank holding company, such as offsetting operating/capital losses of one corporation against the profits/capital gains of another.

Once a company becomes a BHC , either by the formation of a one-bank or multibank holding company, section 3(a)(3) of the act prohibits the direct or indirect acquisition of over 5 percent of any additional bank's or BHC's shares without prior Board approval. In addition to the above, section 3(a)(3) serves to prevent an existing BHC from increasing, without prior Board approval, its ownership in an existing subsidiary bank unless the BHC already owns 50 percent of the shares of the bank (section 3(a)(5)(B)). A BHC that owns more than 50 percent of a bank's shares may buy and sell those shares freely without Board approval, provided the ownership remains above 50 percent. If a BHC owns less than 50 percent of a bank's shares, prior Board approval is required before each additional acquisition of shares until the BHC's ownership of the bank reaches more than 50 percent.

2090.2.2 HISTORY OF THE POLICY STATEMENT ON SMALL BANK HOLDING COMPANIES

The Board issued the policy statement in 1980 to facilitate the transfer of ownership of small community-based banks in a manner consistent with bank safety and soundness. The Board has generally discouraged the use of debt by BHCs to finance the acquisition of banks or other companies because high levels of debt can impair the ability of the holding company to serve as a source of strength to its subsidiary banks. The Board has recognized, however, that small BHCs have less access to equity financing than larger BHCs and that the transfer of ownership of small banks often requires the use of acquisition debt. Accordingly, the Board adopted the policy statement to permit the formation and expansion of small BHCs with debt levels that are higher than typically permitted for larger BHCs. The policy statement, which is in an appendix of Regulation Y (12 C.F.R. 225, appendix C), contains several conditions and restrictions designed to ensure that small BHCs that operate with the higher levels of debt permitted by the policy statement do not present an undue risk to the safety and soundness of their subsidiary banks.

2090.2.3 SMALL BANK HOLDING COMPANY AND SAVINGS AND LOAN HOLDING COMPANY POLICY STATEMENT

In acting on applications filed under the BHC Act, the Board has adopted and continues to follow the principle that BHCs should serve as a source of strength for their subsidiary banks. When BHCs incur debt and rely on the earnings of their subsidiary banks as the means of repaying such debt, a question arises as to the probable effect on the financial condition of the holding company and its subsidiary bank or banks.

The Board believes that a high level of debt at the parent holding company level impairs the ability of a BHC to provide financial assistance to its subsidiary bank(s), and, in some cases, the servicing requirements on such debt may be a significant drain on the resources of the bank(s). For these reasons, the Board has not favored the use of acquisition debt in the formation of BHCs or in the acquisition of additional banks. Nevertheless, the Board has recognized that the transfer of ownership of small banks often requires the use of acquisition debt. The Board therefore has permitted the formation and expansion of small BHCs with debt levels higher than would be permitted for larger BHCs. Approval of these applications has been given on the condition that the small BHCs demonstrate the ability to service the acquisition debt without straining the capital of their subsidiary banks and, further, that such companies restore their ability to serve as a source of strength for their subsidiary banks within a relatively short period of time.

In the interest of continuing its policy of facilitating the transfer of ownership in banks without compromising bank safety and soundness, the Board has, as described below, adopted the following procedures and standards for the formation and expansion of small BHCs subject to this policy statement.

2090.2.3.1 Applicability of Policy Statement

The policy statement applies only to BHCs with *pro forma* consolidated assets of less than $3 billion that (1) are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary; (2) do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and (3) do not have a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission. The Board may in its discretion exclude any BHC, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes. With the exception of section 4 (Additional Application Requirements for Expedited/Waived Processing), the policy statement applies to savings and loan holding companies (SLHCs) as if they were BHCs. While this policy statement primarily applies to the formation of small BHCs, it also applies to existing BHCs that wish to acquire an additional bank or company and to transactions involving changes in control, stock redemptions, or other shareholder transactions.[1] The criteria are described below.

2090.2.3.2 Ongoing Requirements

The following guidelines must be followed on an ongoing basis for all organizations operating under this policy statement.

2090.2.3.2.1 Reduction in Parent Company Leverage

Small BHCs are to reduce their parent company debt consistent with the requirement that all debt be retired within 25 years of being incurred. The Board expects that these BHCs reach a debt-to-equity ratio of .30 to 1 or less within 12 years after incurrence of the debt.[2] The BHC must also comply with debt-servicing and other requirements imposed by its creditors.

Subordinated debt associated with trust preferred securities generally would be treated as debt for purposes of paragraphs 2.C. (dividend restrictions), 3.A. (minimum down payment), 4.A.i (expedited treatment of certain filings), and 4.B.i (stock redemption filing requirements) of the policy statement. A BHC, however, may exclude from debt an amount of subordinated debt associated with trust preferred securities that is up to 25 percent of the BHC's equity (as defined below) less goodwill on the parent company's balance sheet, in determining compliance with the requirements of such paragraphs of the policy statement. In addition, a BHC subject to the policy statement that has not issued subordinated debt associated with a new issuance of trust preferred securities after December 31, 2005, may exclude from debt any subordinated debt associated with trust preferred securities until December 31, 2010. BHCs subject to this policy statement may also exclude from debt until December 31, 2010, any subordinated debt associated with refinanced issuances of trust preferred securities originally issued on or prior to December 31, 2005, provided that the refinancing does not increase the BHC's outstanding amount of subordinated debt. Subordinated debt associated with trust preferred securities will not be included as debt in determining compliance with any other requirements of this policy statement.

In addition, notwithstanding any other provision of the policy statement and for purposes of compliance with paragraphs 2.C., 3.A., 4.A.i., and 4.B.i. of the policy statement, both a BHC that is organized in mutual form and a BHC that has made a valid election to be taxed under Subchapter S of Chapter 1 of the U.S. Internal Revenue Code may exclude from debt subordinated debentures issued to the United States Department of the Treasury under (1) the

1. The appropriate Reserve Bank should be contacted to determine the manner in which a specific situation may qualify for treatment under this policy statement.

2. The term *debt* as used in the ratio of debt to equity, means any borrowed funds (exclusive of short-term borrowings that arise out of current transactions, the proceeds of which are used for current transactions) and any securities issued by, or obligations of, the holding company that are the functional equivalent of borrowed funds.

Troubled Asset Relief Program established by the Emergency Economic Stabilization Act of 2008. (See 74 Fed. Reg. 26,077 (June 1, 2009), Division A of Public Law 110-343, 122 Stat. 3765 (2008)), and (2) the Small Business Lending Fund established by the Small Business Jobs Act of 2010, title IV of Public Law 111-240, 124 Stat. 2504 (2010).

The term *equity* as used in the ratio of debt to equity, means the total stockholders' equity of the BHC, as defined in accordance with generally accepted accounting principles. In determining the total amount of stockholders' equity, the BHC should account for its investments in the common stock of subsidiaries by the equity method of accounting.[3]

Ordinarily, the Board does not view redeemable preferred stock as a substitute for common stock in a small BHC. Nevertheless, to a limited degree and under certain circumstances, the Board will consider redeemable preferred stock as equity in the capital accounts of the holding company if the following conditions are met: (1) the preferred stock is redeemable only at the option of the issuer and (2) the debt-to-equity ratio of the holding company would be at or remain below .30:1 following the redemption or retirement of any preferred stock. Preferred stock that is convertible into common stock of the holding company may be treated as equity.

2090.2.3.2.2 Capital Adequacy

Each insured depository subsidiary of a small BHC is expected to be well capitalized. Any institution that is not well capitalized is expected to become well capitalized within a brief period of time.

2090.2.3.2.3 Dividend Restrictions

A small BHC whose debt to equity ratio is greater than 1.0:1 is not expected to pay corporate dividends until such time as it reduces its debt to equity ratio to 1.0:1 or less and other wise meets the criteria set forth in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.[4]

Small BHCs that become newly subject to the policy statement may switch to a plan that adheres to the intent of the policy statement provided they comply with the requirements set forth above.[5]

2090.2.3.3 Core Requirements for All Applicants

In assessing applications or notices by organizations subject to the policy statement, the Board will continue to take into account a full range of financial and other information about the applicant, and its current and proposed subsidiaries, including the recent trend and stability of earnings, past and prospective growth, asset quality, the ability to meet debt servicing requirements without placing an undue strain on the resources of the bank(s), and the record and competency of management. In addition, the Board will require applicants to meet the following requirements:

2090.2.3.3.1 Minimum Down Payment

The amount of acquisition debt should not exceed 75 percent of the purchase price of the bank(s) or company to be acquired. When the owner(s) of the holding company incurs debt to finance the purchase of the bank(s) or company, such debt will be considered acquisition debt even though it does not represent an obligation of the BHC, unless the owner(s) can demon-

3. For additional information on calculating equity, the denominator of the debt-to-equity ratio, see the instructions for calculating total equity capital in the Parent Company Only Financial Statements for Small Holding Companies (FR Y-9SP) report. Total equity capital includes perpetual preferred stock (including related surplus), common stock (including related surplus), retained earnings, accumulated other comprehensive income, and all other equity capital components including the total carrying value (at cost) of treasury stock and unearned Employee Stock Ownership Plan (ESOP) shares.

4. Dividends may be paid by small BHCs with debt to equity at or below 1.0:1 and otherwise meeting the requirements of sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) if the dividends are reasonable in amount, do not adversely affect the ability of the BHC to service its debt in an orderly manner, and do not adversely affect the ability of the subsidiary banks to be well-capitalized. It is expected that dividends will be eliminated if the holding company is (1) not reducing its debt consistent with the requirement that the debt to equity ratio be reduced to .30:1 within 12 years of consummation of the proposal or (2) not meeting the requirements of its loan agreement(s).

5. On May 24, 2018, the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) was enacted. See Public Law 115-174 (May 24, 2018). Section 207 of EGRRCPA directed the Federal Reserve Board to revise the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement to raise the consolidated assets threshold from less than $1 billion to less than $3 billion within 180 days of the enactment of EGRRCPA. For the interim final rule, see 83 Fed. Reg. 44,195 (August 30, 2018).

strate that such debt can be serviced without reliance on the resources of the bank(s) or BHC.

2090.2.3.3.2 Ability to Reduce Parent Company Leverage

The BHC must clearly be able to reduce its debt-to-equity ratio and comply with its loan agreement(s) as stated within the ongoing requirements for reduction in parent company leverage, discussed under "Minimum Down Payment." Failure to meet the criteria would normally result in denial of an application.

2090.2.3.4 Additional Application Requirements for Expedited/Waived Processing

2090.2.3.4.1 Expedited Notices under Sections 225.14 and 225.23 of Regulation Y

A small BHC proposal will be eligible for the expedited processing procedures set forth in sections 225.14 and 225.23 of Regulation Y if (1) the BHC is in compliance with the ongoing requirements of this policy statement, (2) the BHC meets the previously discussed core requirements for all applicants noted above, and (3) the following requirements are met:

1. The parent BHC has a pro forma debt-to-equity ratio of 1.0:1 or less.
2. The BHC meets all the criteria for expedited action of sections 225.14 and 225.23 of Regulation Y.

2090.2.3.4.2 Waiver of Stock-Redemption Filing

A small BHC will be eligible for the stock-redemption filing exemption for well-capitalized BHCs that is found in section 225.4(b)(6) if the following requirements are met:

1. The parent BHC has a *pro forma* debt-to-equity ratio of 1.0:1 or less.
2. The BHC is in compliance with the ongoing requirements of this policy statement and meets the requirements of sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

2090.2.4 INSPECTION OBJECTIVES

1. To determine compliance with all commitments made in the application/notification process.
2. To determine whether the BHC or SLHC is in compliance with the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (Regulation Y, appendix C), including whether the BHC's debt is being reduced within the required or expected time periods.

2090.2.5 INSPECTION PROCEDURES

1. Review all commitments made by the company and its shareholders to determine compliance therewith.
2. Determine whether the BHC or SLHC is in compliance with the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (Regulation Y, appendix C) by—
   a. verifying that the board of directors and senior management have established and regularly maintain a plan to
      - retire the BHC's or the SLHC's debt within 25 years of incurring the debt and
      - reach a debt-to-equity ratio of .30:1 or less within 12 years of incurring the debt.
3. Ascertain if the BHC uses a regular periodic monitoring process to ensure the full retirement of the holding company's debt within the above-stated required or expected periods.
4. Determine whether each insured depository subsidiary of a small BHC is well capitalized or, if not, whether it will be well capitalized within a brief period of time.
5. Determine whether the payment of corporate dividends has been restricted until the BHC's debt-to-equity ratio is 1.0:1 or less and until the BHC otherwise meets the criteria set forth in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

2090.2.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Capital adequacy guidelines of BHCs, SLHCs, and state member banks (Regulation Q)		217	3–2100

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

"Bootstrapping" is the term generally used to describe a treasury stock transaction in which a company incurs debt to purchase or redeem its own outstanding shares. Bootstrapping is often used to facilitate a change in control whereby a shareholder or shareholder group need only buy few or no shares in order to gain control. The repurchase or redemption is often made in accordance with a written agreement made between a former controlling shareholder(s) and the new controlling shareholder(s).

Section 225.4(b) of Regulation Y requires a bank holding company to file prior written notice with the Board before a purchase or redemption of any of its own equity securities if the gross consideration for the purchase or redemption, when aggregated with the net consideration paid by the company for all such purchases or redemptions during the preceding 12 months, is equal to 10 percent or more of the company's consolidated net worth. (Net consideration is the gross consideration paid by the company for all of its equity securities purchased or redeemed during the period minus the gross consideration received for all of its equity securities sold during the period other than as a part of a new issue.)

Each notice shall furnish the following information:

- The purpose of the transaction, a description of the securities to be purchased or redeemed, the total number of each class outstanding, the gross consideration to be paid, and the terms of any debt incurred in connection with the transaction.
- A description of all equity securities redeemed within the preceding 12 months, the net consideration paid, and the terms of any debt incurred in connection with those transactions.
- A current and pro forma consolidated balance sheet if the bank holding company has total assets of over $150 million, or a current and pro forma parent-company-only balance sheet if the bank holding company has total assets of $150 million or less.

2090.3.1 CHANGE IN CONTROL ACT CONSIDERATIONS

As indicated earlier, treasury stock redemptions are often intended to facilitate a change in control of a bank holding company. By redeeming the shares held by an existing shareholder(s), the remaining shareholder(s) increases his proportionate ownership. If a "person's" share ownership should rise above 25 percent or more of the remaining outstanding shares (subsequent to March 9, 1979), that person would then "control" the BHC. Under these circumstances, a change in control notification would have to be filed. If the treasury stock redemption is for an amount sufficient to trigger the requirement for a prior notification of redemption, then dual notifications are called for (change in control and redemption of treasury shares).

Similarly, prior notification is also required if a treasury stock redemption should result in a shareholder's holdings rising to between 10 percent and 25 percent of the remaining outstanding shares, and if (a) that shareholder is the firm's largest single shareholder immediately after the acquisition; or (b) the institution is registered under section 12 of the Securities Exchange Act of 1934 (i.e., corporations having assets exceeding $1 million, more than 500 shareholders, and securities that are publicly traded). For additional information on change in control notification requirements, see section 2090.1.

Additional notices under the CIBC Act do not have to be filed if regulatory clearance had already been received to acquire 10 percent or more of the voting shares of a bank holding company, and subsequent treasury stock redemptions resulted in ownership of between 10 and 25 percent of the shares of the bank holding company. Refer to section 225.41(a)(2) of Regulation Y.[1]

2090.3.2 INSPECTION OBJECTIVES

1. To determine that a BHC that has redeemed shares of its own stock has complied with section 225.4(b) of Regulation Y.

2. To determine that any new controlling shareholder of a BHC that has redeemed shares of its own stock has complied with section 225.41(a) of Regulation Y.

3. To determine if a treasury stock transaction has taken place for the purpose of depleting the original 25 percent equity investment in the purchase price.

1. Revised by the Board, effective November 9, 1990.

2090.3.3 INSPECTION PROCEDURES

1. Review the BHC's reconcilement of stockholders' equity to determine if shares have been redeemed.
2. If shares have been redeemed, review for compliance with treasury stock redemption approval and reporting requirements.
3. Determine whether the BHC is using, repeatedly, the less than 10 percent ownership exemption to avoid notice requirements, thus undermining the capital position of the banking organization, resulting in an unsafe and unsound practice.
4. Determine if the less than 10 percent ownership exemption is being used by the bank holding company when it does not satisfy the requirements of the Board's capital guidelines for redemptions.

   The exemption should not be used by a bank holding company that does not meet the Board's capital guidelines for redemptions. Redemptions of permanent equity or other capital instruments before stated maturity could have a significant impact on an organization's overall capital structure. Use of the exemption could significantly reduce its capital. Consequently, an organization considering such a step should consult with the Federal Reserve before redeeming any equity (prior to maturity) if such redemption could have a material effect on the level or composition of the organization's capital base.

   The exemption should not be used by a small one-bank holding company if it would increase its debt-to-equity ratios significantly above those relied on by the Board in approving its application to become a bank holding company.
5. If shares have been redeemed, determine if any shareholder's holdings have risen to 25 percent or more of the outstanding shares.
6. If shares have been redeemed, determine if any shareholder's holdings have risen to between 10 percent and 25 percent of the outstanding shares. Furthermore, determine whether the shareholder is then the largest shareholder or the institution has registered securities under section 12 of the Securities Exchange Act of 1934.
7. If a stock redemption occurred recently in a bank holding company, determine if the shareholders have maintained a 25 percent equity investment.

Control and Ownership (Policy Statements on Equity Investments in Banks and Bank Holding Companies) Section 2090.4

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to incorporate the Board's September 21, 2008, "Policy Statement on Equity Investments in Banks and Bank Holding Companies." (See the Board's September 22, 2008, Press Release and section 2090.4.4.) The policy statement provides additional guidance on the Board's position on minority equity investments in banks and bank holding companies that generally do not constitute "control" for purposes of the Bank Holding Company Act. This policy updates the guidance found in the Board's July 1982 "Policy Statement on Nonvoting Equity Investments by Bank Holding Companies."

2090.4.1 OVERVIEW AND GUIDING PRINCIPLES

For many years, bank holding companies, nonbank financial companies, private equity funds, and other firms made minority equity investments in banks and bank holding companies. These investments often raised questions about the extent to which the investment would cause the investor to become subject to supervision, regulation, and the other requirements applicable to bank holding companies under the Bank Holding Company Act (BHC Act or the Act) and the Board's Regulation Y. In general, the BHC Act applies to any company that controls a bank or bank holding company (banking organization). The BHC Act provides that a company has control over a banking organization if (1) the company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the banking organization; (2) the company controls, in any manner, the election of a majority of the directors or trustees of the banking organization; or (3) the Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the banking organization.[1] Minority equity investments in banking organizations are designed not to trigger either of the first two prongs of the definition of control. These investments often raised questions, however, regarding whether the investor would be able to exercise a controlling influence over the management or policies of a banking organization.[2]

The text and legislative history of the control definition in the BHC Act make manifest that possession by an investor of a modicum of influence over a banking organization would not amount to a controlling influence. At the same time, the definition does not require that an investor have absolute control over the management and policies of a banking organization. Instead, the Act requires that an investor be able to exercise an amount of influence over a banking organization's management or policies that is significant but less than absolute control in fact of the banking organization. Notably, the primary definition of control in the Act is based on ownership of 25 percent or more of the voting shares of a banking organization—an amount that does not provide an investor in most cases with complete control over decisions but would allow the investor to play a significant role in the decision-making process.

In assessing whether an investor has the ability to exercise a controlling influence over a banking organization, the Board has been especially mindful of two key purposes of the BHC Act. First, the BHC Act was intended to ensure that companies that acquire control of banking organizations have the financial and managerial strength, integrity, and competence to exercise that control in a safe and sound manner. The BHC Act is premised on the principle that a company that controls a banking organization may reap the benefits of its successful management of the banking organization but also must be prepared to provide additional financial and managerial resources to the banking organization to support the company's exercise of control. In this way, the Act ties the potential upside benefits of having a controlling influence over the management and policies of a banking organization to responsibility for the potential downside results of exercising that controlling influence. By tying control and responsibility together, the Act ensures that

1. 12 U.S.C. 1841(a)(2).

2. Contemporaneous minority investments in the same banking organization by multiple different investors also often raise questions about whether the multiple investors are a group acting in concert for purposes of the Change in Bank Control Act or are a single association for purposes of the BHC Act. These questions are beyond the scope of the 2008 Policy Statement.

companies have positive incentives to run a successful banking organization but also bear the costs of their significant involvement in the banking organization's decision-making process, thus protecting taxpayers from imprudent risk taking by companies that control banking organizations. Minority investors in banking organizations typically seek to limit their potential downside financial exposure in the event of the failure of the banking organization. Concomitantly, the BHC Act requires that minority investors seeking this protection limit their influence over the management and policies of the banking organization.

Second, the BHC Act was intended to limit the mixing of banking and commerce. In particular, the Act effectively prevents commercial firms and companies with commercial interests from also exercising a controlling influence over a banking organization. Many minority investors in banking organizations own commercial investments that conflict with this limitation.

2090.4.2 BOARD'S 1982 POLICY STATEMENT ON NONVOTING EQUITY INVESTMENTS BY BANK HOLDING COMPANIES

On July 8, 1982, the Board issued a Policy Statement on Nonvoting Equity Investments by Bank Holding Companies (the 1982 Policy Statement) to provide guidance on the Board's interpretation of the ''controlling influence'' prong of the control definition in the BHC Act.[3] That statement for the first time outlined the policies that the Board would consider in reviewing whether a minority investment in a banking organization would result in the exercise by the investor of a controlling influence over the management or policies of the banking organization. The 1982 Policy Statement focused on issues of particular concern in the 1980s in the context of investments by bank holding companies in out-of-state banking organizations. For example, the 1982 Policy Statement primarily addressed investments that included a long-term merger or stock purchase agreement between the investor and the banking organization that would be triggered on a change in the interstate banking laws, and so-called ''lock-up'' arrangements designed to prevent another company from acquiring the banking organization without the permission of the investor.

The 1982 Policy Statement sets out the Board's concerns with these investments, the considerations the Board will take into account in determining whether the investments are consistent with the Act, and the general scope of arrangements to be avoided by bank holding companies. The Board recognized that the complexity of legitimate business arrangements precludes rigid rules designed to cover all situations and that decisions regarding the existence or absence of control in any particular case must take into account the effect of the combination of provisions and covenants in the agreement as a whole and the particular facts and circumstances of each case.

2090.4.2.1 Statutory and Regulatory Provisions

Under section 3(a) of the Act, a bank holding company may not acquire direct or indirect ownership or control of more than 5 percent of the voting shares of a bank without the Board's prior approval (12 U.S.C. 1842(a)(3)). In addition, this section of the Act provides that a bank holding company may not, without the Board's prior approval, acquire control of a bank: that is, in the words of the statute, ''for any action to be taken that causes a bank to become a subsidiary of a bank holding company'' (12 U.S.C. 1842(a)(2)). Under the Act, a bank is a subsidiary of a bank holding company if

1. The company directly or indirectly owns, controls, or holds with power to vote 25 percent or more of the voting shares of the bank;
2. The company controls in any manner the election of a majority of the board of directors of the bank; or
3. The Board determines, after notice and opportunity for hearing that the company has the power, directly or indirectly, to exercise a controlling influence over the management or policies of the bank (12 U.S.C. 1841(d)).

2090.4.2.2 Review of Agreements

Prior to the permissibility of interstate banking, bank holding companies sought to make substantial equity investments in other bank holding companies across state lines, but without obtaining more than 5 percent of the voting shares or control of the acquiree. These invest-

3. See 1982 FRB 413, 12 C.F.R. 225.143, or the *F.R.R.S* at 4-172.1.

ments involved a combination of the following arrangements:

1. Options on, warrants for, or rights to convert nonvoting shares into substantial blocks of voting securities of the acquiree bank holding company or its subsidiary bank(s);
2. Merger or asset acquisition agreements with the out-of-state bank or bank holding company that are to be consummated in the event interstate banking is permitted;
3. Provisions that limit or restrict major policies, operations, or decisions of the acquiree; and
4. Provisions that make acquisitions of the acquiree or its subsidiary bank(s) by a third party either impossible or economically impracticable.

The various warrants, options, and rights were not exercisable by the investing bank holding company until interstate banking was permitted. They were transferred by the investor either immediately or after the passage of a period of time or upon the occurrence of certain events.

After a careful review of a number of these arrangements, the Board concluded that investments in nonvoting stock, absent other arrangements, could be consistent with the Act. Some of the agreements reviewed appeared consistent with the Act because they were limited to investments of relatively moderate size in nonvoting equity that may become voting equity. . .

However, other agreements reviewed by the Board raised substantial problems of consistency with the control provisions of the Act because the investors. . . sought to assure the soundness of their investments, prevent takeovers by others, and allow for sale of their options, warrants, or rights to a person of the investor's choice in the event a third party obtains control of the acquiree or the investor otherwise becomes dissatisfied with its investment. Since the Act precludes the investors from protecting their investments through ownership or use of voting shares or other exercise of control, the investors substituted contractual agreements for rights normally achieved through voting shares.

For example, various covenants in certain of the agreements sought to assure the continuing soundness of the investment by substantially limiting the discretion of the acquiree's management over major policies and decisions, including restrictions on entering into new banking activities without the investor's approval and requirements for extensive consultations with the investor on financial matters. By their terms, these covenants suggested control by the investing company over the management and policies of the acquiree.

Similarly, certain of the agreements deprived the acquiree bank holding company, by covenant or because of an option, of the right to sell, transfer, or encumber a majority or all of the voting shares of its subsidiary bank(s) with the aim of maintaining the integrity of the investment and preventing takeovers by others. These long-term restrictions on voting shares were within the presumption in the Board's Regulation Y that attributes control of shares to any company that enters into any agreement placing long-term restrictions on the rights of a holder of voting securities (12 C.F.R. 225.31(d)(2).

Finally, investors wished to reserve the right to sell their options, warrants or rights to a person of their choice to prevent being locked into what may become an unwanted investment. The Board took the position that the ability to control the ultimate disposition of voting shares to a person of the investor's choice and to secure the economic benefits therefrom indicates control of the shares under the Act.[4] The Board concluded that the ability to transfer rights to large blocks of voting shares, even if nonvoting in the hands of the investing company, could result in such a substantial position of leverage over the management of the acquiree as to involve a structure that would inevitably result in control prohibited by the Act.

2090.4.2.3 Provisions that Avoid Control

In 1982, the context of any particular agreement, provisions of the type described above were acceptable if combined with other provisions that serve to preclude control. The Board believed that such agreements would not be consistent with the Act unless provisions are included that will preserve management's discretion over the policies and decisions of the acquiree and avoid control of voting shares.

As a first step towards avoiding control, management had to be free to conduct banking and permissible nonbanking activities. Another step to avoid control included the right of the acquiree to ''call'' the equity investment and

4. See Board letter dated March 18, 1982, to C.A. Cavendes, Sociedad Financiera.

options or warrants to assure that covenants that may become inhibiting can be avoided by the acquiree. This right made such investments or agreements more like a loan in which the borrower has a right to escape covenants and avoid the lender's influence by prepaying the loan.

A measure to avoid problems of control arising through the investor's control over the ultimate disposition of rights to substantial amounts of voting shares of the acquiree might have included a provision granting the acquiree a right of first refusal before warrants, options, or other rights may be sold and requiring a public and dispersed distribution of those rights if the right of first refusal is not exercised.

The Board concluded that agreements that involve rights to less than 25 percent of the voting shares, with a requirement for a dispersed public distribution in the event of sale, have a much greater prospect of achieving consistency with the Act than agreement involving a greater percentage. This guideline was drawn by analogy from the provision in the Act that ownership of 25 percent or more of the voting securities of a bank constitutes control of the bank.

One effect of the guideline was to hold down the size of the nonvoting equity investment by the investing company relative to the acquiree's total equity, thus avoiding the potential for control because the investor holds a very large proportion of the acquiree's total equity. Observance of the 25 percent guideline also made provisions in agreements providing for a right of first refusal or a public and widely dispersed offering of rights to the acquiree's shares more practical and realistic.

Finally, acquirers were to avoid certain arrangements regardless of other provisions in the agreement that were designed to avoid control. These are

1. Agreements that enabled the investing bank holding company (or its designee) to direct in any manner the voting of more than 5 percent of the voting shares of the acquiree;
2. Agreements whereby the investing company had the right to direct the acquiree's use of the proceeds of an equity investment by the investing company to effect certain actions, such as the purchase and redemption of the acquiree's voting shares; and
3. The acquisition of more than 5 percent of the voting shares of the acquiree that "simultaneously" with their acquisition by the investing company become nonvoting shares, remain nonvoting shares while held by the investor, and revert to voting shares when transferred to a third party.

2090.4.2.4 Review by the Board

The 1982 Policy Statement did not constitute the exclusive scope of the Board's concerns, nor were the considerations with respect to control outlined in this statement an exhaustive catalog of permissible or impermissible arrangements. The Board instructed its staff to review agreements of the kind discussed in this statement and to bring to the Board's attention those that raise problems of consistency with the Act.

2090.4.3 ACTIVITIES OF BANKING ORGANIZATIONS AND BOARD DETERMINATIONS SUBSEQUENT TO THE 1982 POLICY STATEMENT

Many aspects of the 1982 Policy Statement have broader applicability and have served as the foundation for the Board's review more generally of whether a minority investment in a banking organization would give the investor a controlling influence over the management or policies of the banking organization. In this regard, the 1982 Policy Statement identified a number of structural measures that the Board believed would limit the ability of an investor to exercise a controlling influence over a banking organization. These included restricting the use of covenants that constrain the discretion of banking organization management, limiting the amount of voting and nonvoting shares of the banking organization acquired by the investor, and limiting the ability of the investor to transfer large blocks of voting shares.

The Board made clear in the 1982 Policy Statement that the complexity of legitimate business arrangements precluded establishing rigid rules designed to cover all situations and that decisions regarding the presence or absence of control must take into account the specific facts and circumstances of each case. Accordingly, since the 1982 Policy Statement, the Board has determined whether an equity investor in a banking organization has a controlling influence over the management or policies of the banking organization by considering carefully all the facts and circumstances surrounding the investor's investment in, and relationship with, the banking organization. Large minority investors in a banking organization typically have avoided acquiring a controlling influence over the banking organization by providing the Board with a set of passivity commitments and by avoiding certain control-enhancing mechanisms. Specifically, minority investors have avoided acquiring control over a banking organization by, among other things

- restricting the size of their voting and total equity investment in the banking organization;
- avoiding covenants that would enable the investor to restrict the ability of the banking organization's management to determine the major policies and operations of the banking organization;
- not attempting to influence the banking organization's process for making decisions about major policies and operations;
- limiting director and officer interlocks with the banking organization; and
- limiting business relationships between the investor and the banking organization.

2090.4.4 BOARD'S 2008 POLICY STATEMENT ON EQUITY INVESTMENTS IN BANKS AND BANK HOLDING COMPANIES

Since issuing the 1982 Policy Statement, the Board has reviewed a significant number of noncontrolling investments in banking organizations. The Board believed that it would be useful and appropriate to update its guidance in this area and therefore issued its Policy Statement on Equity Investments in Banks and Bank Holding Companies (the 2008 Policy Statement) on September 21, 2008. (See the Board's September 22, 2008, Press Release.)

2090.4.4.1 Specific Approaches to Avoid Control

The 2008 Policy Statement discusses the Board's views on specific approaches to avoid control.[5]

2090.4.4.1.1 Director Representation

The Board generally has not permitted a company that acquires between 10 and 24.9 percent of the voting stock of a banking organization (a minority investor) to have representation on the board of directors of the banking organization. The principal exception to this guideline has been in situations in which the investor owns less than 15 percent of the voting stock of the banking organization and another person (or group of persons acting together) owns a larger block of voting stock of the banking organization.

The Board has reexamined its precedent in this area and, based on its experience with minority investors and director representation, believes that a minority investor generally should be able to have a single representative on the board of directors of a banking organization without acquiring a controlling influence over the management or policies of the banking organization. Typically, boards of directors of banking organizations have 9 or 10 members. Although having a representative on the board of the banking organization enhances the influence of a minority investor, the Board's experience has shown that, in the absence of other indicia of control, it would be difficult for a minority investor with a single board seat to have a *controlling* influence over the management or policies of the banking organization.[6]

Moreover, a minority investor that has up to two representatives on the board of directors of the banking organization is unlikely, absent other indicia of control, to be able to exercise a controlling influence over the banking organization when the investor's aggregate director representation is proportionate to its total interest in the banking organization[7] but does not exceed 25 percent of the voting members of the board,[8]

5. See the 2008 Policy Statement at 12 C.F.R. 225.144, beginning at paragraph (c).

6. In addition to formal representation on the board of directors of a banking organization, minority investors also frequently seek to have a representative attend meetings of the board of directors of the banking organization in the capacity of a nonvoting observer. Attendance by a representative of a minority investor as an observer at meetings of the board of directors of a banking organization allows the investor access to information and a mechanism for providing advice to the banking organization but has not in previous situations allowed the investor to exercise a controlling influence over the management or policies of the banking organization as long as the observer does not have any right to vote at meetings of the board.

7. An investor's total interest is equal to the greater of the investor's voting interest or total equity interest in the banking organization.

8. For example, an investor with a 10 percent voting interest and a 20 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor's director representation does not exceed 20 percent of the board seats. On the other hand, an investor with a 15 percent voting interest and a 33 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor's director representation does not exceed 25 percent

and another shareholder of the banking organization is a bank holding company that controls the banking organization under the BHC Act.[9] The presence of another larger, controlling shareholder of the banking organization that has been approved by the Board, is subject to supervision and regulation by the Board, and is obligated to serve as a source of strength for the banking organization should serve as a powerful countervailing force to whatever influence the minority investor may have as a result of its investment and proportional director representation.

The Board continues to believe that a representative of a minority investor that serves on the board of directors of the banking organization should not serve as the chairman of the board of the banking organization or as the chairman of a committee of the board of the banking organization. The Board generally believes, however, that representatives of a noncontrolling minority investor may serve as members of committees of the board of the banking organization when those representatives do not occupy more than 25 percent of the seats on any committee and do not have the authority or practical ability unilaterally to make (or block the making of) policy or other decisions that bind the board or management of the banking organization.

2090.4.4.1.2 Total Equity

The three-prong control test in the BHC Act makes no explicit reference to nonvoting equity investments. Nevertheless, the Board has long subscribed to the view that the overall size of an equity investment, including both voting and nonvoting equity, is an important indicator of the degree of influence an investor may have. Accordingly, the Board traditionally has taken account of the presence and size of nonvoting equity investments in its controlling influence analysis. For example, in the 1982 Policy Statement, the Board set forth a guideline that nonvoting equity investments that exceed 25 percent of the total equity of a banking organization generally raise control issues under the BHC Act.[10] The Board has recognized in a few limited circumstances, however, that ownership by a minority investor of 25 percent or more of a banking organization's total equity may not confer a controlling influence, usually in situations when another controlling investor is present or other extenuating circumstances indicate that the exercise of a controlling influence by the minority investor is unlikely.

The Board continues to believe that an investor that makes a very large equity investment in a banking organization is likely to have a controlling influence over the banking organization's management or policies. Investors with large equity investments have a powerful incentive to wield influence over the banking organization in which they have invested. They have a substantial amount of money at stake in the enterprise, are among the first to absorb losses if the banking organization has financial difficulties, and participate in the profits of the banking organization going forward. Moreover, a banking organization is likely to pay heed to its large shareholders to help ensure it has the ability to raise equity capital in the future and to prevent the negative market signal that would be created by the sale of a large block of equity by an unhappy existing shareholder.

On the other hand, the Board recognizes that nonvoting equity does not provide the holder with voting rights that empower the holder to participate directly in the selection of banking organization management or otherwise in the banking organization's decision-making process. Moreover, as noted above, the BHC Act defines control in terms of ownership of 25 percent or more of a class of voting securities but does not impose an express limit on ownership of nonvoting shares. The Board continues to believe that, in most circumstances, an investor that owns 25 percent or more of the total equity of a banking organization owns enough of the capital resources of a banking organization to have a controlling influence over the management or policies of the banking organization. The Board continues to recognize, however, that the ability of an investor to exercise a controlling influence through nonvoting equity instruments depends significantly on the nature and extent of the investor's overall investment in the banking organization and on the capital structure of the banking organization.

(rather than 33 percent) of the board seats.

9. In determining what amount of director representation is proportional to an investor's voting interest in a banking organization, the investor should round to the nearest whole number. For example, the Board would consider a minority investor that owns 15 percent of the voting stock of a banking organization to have proportionate director representation if it had two representatives on a board of directors with 10 or more members (but not on a board of directors with 9 or fewer members).

10. 12 C.F.R. 225.143(d)(4) and (d)(5).

In particular, the Board would not expect that a minority investor would have a controlling influence over a banking organization if the investor owns a combination of voting shares and nonvoting shares that, when aggregated, represents less than one-third of the total equity of the organization (and less than one-third of any class of voting securities, assuming conversion of all convertible nonvoting shares held by the investor) and does not allow the investor to own, hold, or vote 15 percent or more of any class of voting securities of the organization. In these situations, the limitation on voting rights reduces the potential that the investor may exercise influence that is controlling.

In previous cases, investors that have acquired nonvoting shares often have sought the right to convert those shares to voting shares under various circumstances. The Board continues to believe that nonvoting shares that may be converted into voting shares at the election of the holder of the shares, or that mandatorily convert after the passage of time, should be considered voting shares at all times for purposes of the BHC Act. However, in previous cases, the Board has recognized that nonvoting shares that are convertible into voting shares carry less influence when the nonvoting shares may not be converted into voting shares in the hands of the investor and may only be transferred by the investor: (1) to an affiliate of the investor or to the banking organization; (2) in a widespread public distribution; (3) in transfers in which no transferee (or group of associated transferees) would receive 2 percent or more of any class of voting securities of the banking organization; or (4) to a transferee that would control more than 50 percent of the voting securities of the banking organization without any transfer from the investor. Ownership of this form of nonvoting, convertible shares, within the limits discussed above, allows investors to provide capital to a banking organization in a way that is useful to the organization, minimizes the opportunity for the investor to exercise a controlling influence over the organization, and allows the investor to exit the investment without conveying control to another party outside the parameters of the BHC Act.

2090.4.4.1.3 Consultations with Management

In many previous cases, minority investors have agreed not to attempt to influence the operations, management, or strategies of the banking organization in which they have invested; not to threaten to sell their shares in the banking organization as a method for influencing decisions of banking organization management; and not to solicit proxies on any matter from the other shareholders of the banking organization. These commitments were designed to limit the exercise by a minority investor of a controlling influence over the management or policies of a banking organization.

The Board believes that it would be useful to provide additional guidance on the extent of communications between a minority investor and a banking organization's management that would be consistent with a noncontrol determination. The Board believes that a noncontrolling minority investor, like any other shareholder, generally may communicate with banking organization management about, and advocate with banking organization management for changes in, any of the banking organization's policies and operations. For example, an investor may, directly or through a representative on a banking organization's board of directors, advocate for changes in the banking organization's dividend policy; discuss strategies for raising additional debt or equity financing; argue that the banking organization should enter into or avoid a new business line or divest a material subsidiary; or attempt to convince banking organization management to merge the banking organization with another firm or sell the banking organization to a potential acquirer. These communications also generally may include advocacy by minority investors for changes in the banking organization's management and recommendations for new or alternative management.[11] Although these types of discussions represent attempts by an investor to influence the management or policies of the banking organization, discussions alone are not the type of controlling influence targeted by the BHC Act.

To avoid the exercise of a controlling influence, in all cases, the decision whether or not to adopt a particular position or take a particular action must remain with the banking organization's shareholders as a group, its board of directors, or its management, as appropriate. The role of the minority investor in these decisions must be limited to voting its shares in its discretion at a meeting of the shareholders of the banking

11. As discussed later in the 2008 Policy Statement, a minority investor may not have a contractual right to determine (or a veto right over) any of the major policies and operations of the bank or the composition of the bank's management team.

organization (directly or by proxy, including in connection with a proxy solicitation launched by another shareholder), and by exercising voting privileges as a member of the board of directors of the banking organization (to the extent permitted as discussed above). Importantly, communications by minority investors should not be accompanied by explicit or implicit threats to dispose of shares in the banking organization or to sponsor a proxy solicitation as a condition of action or non-action by the banking organization or its management.

2090.4.4.1.4 Other Indicia of Control

2090.4.4.1.4.1 Business Relationships

The Board traditionally has prohibited a noncontrolling minority investor in a banking organization from having any material business transactions or relationships with the banking organization. The Board historically has taken the view that a major supplier, customer, or lender to a banking organization can exercise considerable influence over the banking organization's management and policies—especially when coupled with a sizeable voting stock investment—by threatening to terminate or change the terms of the business relationship.

The Board has recognized over the years, however, that not all business relationships—even when accompanied by a material investment—provide the investor a controlling influence over the management or policies of the banking organization. Accordingly, the Board has frequently allowed business relationships that were quantitatively limited and qualitatively nonmaterial, particularly in situations where an investor's voting securities percentage in the banking organization was closer to 10 percent than 25 percent. The Board continues to believe that business relationships should remain limited and will continue to review business relationships on a case-by-case basis within the context of the other elements of the investment structure. In that review, the Board will pay particular attention to the size of the proposed business relationships and to whether the proposed business relationships would be on market terms, non-exclusive, and terminable without penalty by the banking organization.

2090.4.4.1.4.2 Covenants

Because the BHC Act explicitly defines control (and many of its other thresholds) in terms that include a percentage of voting securities, companies often have structured their investments in banking organizations in the form of nonvoting securities and have attempted to substitute contractual agreements for the rights that normally are obtained through voting securities. The Board has taken and continues to hold the view that covenants that substantially limit the discretion of a banking organization's management over major policies and decisions suggest the exercise of a controlling influence.[12] In particular, the Board has been concerned about covenants or contractual terms that place restrictions on, or otherwise inhibit, the banking organization's ability to make decisions about the following actions: (1) hiring, firing, and compensating executive officers; (2) engaging in new business lines or making substantial changes to its operations; (3) raising additional debt or equity capital; (4) merging or consolidating; (5) selling, leasing, transferring, or disposing of material subsidiaries or major assets; or (6) acquiring significant assets or control of another firm.[13]

On the other hand, the Board generally has not viewed as problematic for control purposes those covenants that give an investor rights permissible for a holder of nonvoting securities as described in section 2(q)(2) of Regulation Y.[14] These would include covenants that prohibit the banking organization from issuing senior securities or borrowing on a senior basis, modifying the terms of the investor's security, or liquidating the banking organization. Noncontrolling covenants also could include covenants that provide the investor with limited financial information rights and limited consultation rights.

12. See 12 C.F.R. 225.143(d)(2).

13. For an investment to be eligible for inclusion in a banking organization's regulatory capital, it must not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices, see 12 C.F.R. 208, Appendix A, II and 12 C.F.R. 225, Appendix A, II.(i). As described in 12 C.F.R. 250.166(b)(3), such provisions include terms that could adversely affect the banking organization's liquidity or unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty, or that could limit the regulator's ability to resolve problem bank situations.

14. 12 C.F.R. 225.2(q)(2).

2090.4.4.2 Conclusion of the 2008 Policy Statement

As noted above, whether a minority investor in a banking organization has a controlling influence over the management or policies of the banking organization depends on all the facts and circumstances surrounding the investor's investment in, and relationship with, the banking organization. This policy statement sets forth some of the most significant factors and principles the Board will consider in determining whether investments in a banking organization are noncontrolling for purposes of the BHC Act.

Importantly, controlling-influence determinations depend not just on the contractual rights and obligations of the investor and the banking organization; they also depend on the amount of influence the investor, in fact, exercises over the banking organization. Accordingly, the Board has and will continue to monitor carefully minority investments in banking organizations to ensure that investors do not, in fact, exercise a controlling influence over the management or policies of the banking organizations in which they invest. The Board also continues to evaluate its policies in this area and will modify them as appropriate going forward to ensure that minority investments in banking organizations remain consistent with the BHC Act.

2090.4.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Required Federal Reserve approval if a BHC acquires more than 5 percent (direct or indirect control) of voting shares of a bank	1842(a)(3)			
Federal Reserve approval of a BHC acquiring control of a bank	1842(a)(2)			
BHCs and direct or indirect controlling influence over a bank	1841(d)			
Acquiring a bank outside of the home state of the investing bank holding company	1842(d)(1)			
Long-term restrictions on the rights of a holder of voting securities		225.31(d)(2)		
Specific approaches that avoid control		225.144(c)		
Nonvoting equity investments as a percent of total equity and control issues		225.143(d)(4) and (d)(5)		
Covenants and controlling influence issues		225.143(d)(2)

Nonvoting Equity Investments by BHCs (1982 Policy Statement)		225.143	4-172.1	
Equity investments in banks and BHCs (2008 Policy Statement)		225.144		

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Pursuant to Section 3 of the Bank Holding Company Act, a bank holding company, directly or through its subsidiary banks, may not acquire more than 5 percent of the shares of an additional bank without the Board's prior approval. However, it is recognized that banks acting as trustee may acquire such shares without prior notice. Therefore, the Act requires a bank or banks which are subsidiaries of bank holding companies and acquire in excess of the 5 percent threshold limit, to file an application with the Board within 90 days after the shares exceeding the limit are acquired. The limit generally applies *only* to other bank shares over which the acquiring fiduciary exercises sole discretionary voting authority. Nevertheless, the Board has waived this application requirement under most circumstances in Section 225.12 of Regulation Y, unless—

1. the acquiring bank or other company has sole discretionary authority to vote the securities and retains the authority for more than two years; or
2. the acquisition is for the benefit of the acquiring bank or other company, or its shareholders, employees, or subsidiaries.

In determining whether the threshold limits have been reached, shares acquired prior to January 1, 1971 can ordinarily be excluded. On the other hand, shares of another bank held under the following circumstances should, in certain instances, be included in the 5 percent threshold, even though sole discretionary voting authority is not held:

1. Shares held by a trust which is a "company", as defined in Section 2(b) of the Bank Holding Company Act; and,
2. Shares held as trustee for the benefit of the acquiring bank or bank holding company, or its shareholders, employees or subsidiaries.

A bank holding company should have procedures for monitoring holdings of the stock of other banks and bank holding companies for compliance with the foregoing application requirements of the Act, for compliance with reporting requirements on form Y–6, and for compliance with certain similar reporting requirements under the federal securities laws. A general 5 percent threshold applies in all three situations, although differing requirements and exemptions apply.

Examiners specifically trained in trust examinations may need to conduct this portion of an inspection and, in appropriate circumstances, the examiner may need to consult with Federal Reserve Bank legal counsel. Trust examiners routinely review such matters in connection with individual trust examinations. The inspection objectives will be to determine whether the holdings of shares of other banks or bank holding companies, in a fiduciary capacity, are appropriately monitored to comply with section 3(a) of the Bank Holding Company Act with other reporting requirements for such holdings.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2010, this section was revised to delete a discussion of, and references to, section 2(g)(3) of the BHC Act. Section 2(g)(3) was repealed by section 2610 of the Economic Growth and Regulatory Paperwork Reduction Act of 1996 (Public Law No. 104-208).

2090.6.05 CONTROL DETERMINANTS

The spin-off or sale of property by a bank holding company may not sever the bank holding company's control relationship over such property for purposes of the Bank Holding Company Act. The factors which are normally considered in determining whether control has ceased include the presumptions of control listed in section 225.31(a) of Regulation Y and in sections 2(a)(2) and 2(g) of the Act, and certain ownership and voting rights.

Most of the irrebuttable and rebuttable presumptions of control were written to establish initially a control relationship between two companies. All of the presumptions of control must be considered before presuming that a divestiture is effective. Irrebuttable control relationships are established, or continue to be recognized, when any of the conditions listed in section 225.2(e) of Regulation Y or sections 2(a)(2)(A), 2(a)(2)(B), 2(g)(1), or 2(g)(2) of the Act exist. Thus, a company is assumed to have irrebuttable control over a bank or another company without a Board determination if:

1. The company directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of the voting securities of the bank or company;
2. The company controls in any manner the election of a majority of the directors, trustees, or general partners (individuals exercizing similar functions) of the bank or other company;
3. The Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the bank or company.

Rebuttable presumptions of control are listed in section 225.31(d) of Regulation Y and in sections 2(a)(2)(C) of the Act. These sections describe situations which are not as clearly defined as the irrebuttable presumptions. For example, a company which enters into a management contract that gives the company significant control over the operations or management of a bank or other company may be deemed to exercise a controlling influence over that bank or other company. Section 225.31(c) of Regulation Y and section 2(a)(2)(C) of the Act require a Board determination to establish that a company directly or indirectly exercises a controlling influence over the management or policies of a bank or other company.

2090.6.1 INSPECTION OBJECTIVES

1. To determine whether or not a significant voting or ownership interest exists.
2. To determine whether any rebuttable presumptions of control raise any control issues (see section 225.31(d) of Regulation Y).
3. To determine whether section 2(g)(2) of the Act or any of the other irrebuttable presumptions of control listed in section 225.2(e) of Regulation Y raise any control issues.

2090.6.2 INSPECTION PROCEDURES

The examiner should review the stock records of the transferor, the transferee, and the transferred entity, if possible. Management contracts, trust agreements, and any pertinent agreements among these parties also should be reviewed for any evidence of a control relationship. When following these procedures for a bank holding company which has divested or will divest of property, the examiner should be aware that the criteria for establishing a continuing control relationship are more stringent than those for establishing an initial control relationship. Thus, the examiner should review all ownership and voting rights rather than just those above 5 or 25 percent.

The examiner should review the records of the bank holding company, its parents, and its subsidiaries as well as the records of any company being divested and the company (and its parent and subsidiaries) acquiring divested property for evidence of a continuing control relationship. If the transferee is an individual or if the records of the transferee are not available, the examiner should inquire whether any of the specific control relationships exist. Specifically, the examiner should determine whether the transferee, its parent, or its subsidiaries, are indebted to or have common personnel (officers, directors, trustees, beneficiaries, policy making employees, consultants, etc.) with the transferor, its parent, or its subsidiaries.

Board staff letter on a determination of control after a spin-off transaction				Imperial Bancorp; August 19, 1998

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to include a March 21, 2006, Board staff legal opinion that confirms that a direct conversion from a state-chartered bank to a national bank would not, by itself, cause a parent company to lose its grandfather rights maintained under section 4(f) of the BHC Act. The BHC Act prevents a grandfathered nonbank BHC from acquiring control of an additional bank or thrift as a limited-purpose trust company, which would not be a bank *for the purposes of the BHC Act.*

2090.7.1 CEBA AND FIRREA PROVISIONS FOR NONBANK BANKS

The Competitive Equality Banking Act (CEBA), effective August 10, 1987, amended section 2(c) of the BHC Act by expanding the definition of *bank* to include all FDIC-insured depository institutions. The definition also includes any other institution that (1) accepts demand deposits or other deposits that the depositor may make payable to third parties (demand deposits) and (2) is engaged in the business of making commercial loans. The new definition covers institutions that were not previously covered by the BHC Act (nonbank banks). Thrift institutions that remain primarily residential mortgage lenders continue to be excepted from the definition of bank.

CEBA amended section 4 of the BHC Act by adding a grandfather provision that permits a nonbanking company that on March 5, 1987, controlled an institution that became a bank under CEBA to retain the institution and not be treated as a bank holding company. A grandfathered company will lose its exemption, however, if it violates any of several prohibitions governing its activities. Among these prohibitions, a grandfathered company may not acquire control of an additional bank or a thrift institution or acquire more than 5 percent of the assets or shares of an additional bank or thrift.[1] In addition, no bank subsidiary of the grandfathered company may commence to accept demand deposits and engage in the business of making commercial loans. A bank subsidiary of the grandfathered company may also not permit an overdraft[2] (including an interday overdraft) or incur an overdraft on behalf of an affiliate[3] at a Federal Reserve Bank.[4]

If a grandfathered company no longer qualifies for an exemption, the company must divest control of all the banks it controls within 180 days after the date that the company receives notice from the Board that it no longer qualifies for the exemption. The exemption may be reinstated if, before the end of the 180-day notice period, the company (1) corrects the condition or ceases the activity that caused its exemption to end or submits a plan to the Board for approval to correct the condition or cease the activity within one year and (2) implements procedures reasonably adapted to avoid a recurrence of the condition or activity.

The Board may examine and require reports of grandfathered companies and of the nonbank banks they control but only to monitor or enforce compliance with the grandfather restrictions. The Board also may use civil enforcement powers, including cease-and-desist orders, to enforce compliance.

Grandfathered companies, their affiliates, and their nonbank banks are also subject to the

1. An exception to this prohibition is made for cases involving the acquisition of a failing thrift provided that (1) the thrift is acquired in an emergency acquisition and is either located in a state where the grandfathered company already controls a bank or has total assets of $500 million or more at the time of the acquisition or (2) the thrift is acquired from the RTC, FDIC, or director of the OTS in an acquisition in which federal or state authorities find the institution to be in danger of default.

2. Section 225.52 of Regulation Y further defines the restrictions on overdrafts.

3. Section 225.52(b)(2)(ii) of Regulation Y provides that a nonbank bank (or an industrial bank) incurs an overdraft on behalf of an affiliate when (1) the nonbank bank holds an account at a Federal Reserve bank for an affiliate from which third-party payments can be made and (2) the posting of an affiliate's transactions to the nonbank bank's or industrial bank's account creates an overdraft or increases the amount of an existing overdraft in the account.

4. The overdraft prohibition does not apply if the overdraft (1) results from an inadvertent computer or accounting error that is beyond the control of both the bank and the affiliate; (2) is permitted or incurred on behalf of an affiliate that is monitored by, reports to, and is recognized as a primary dealer by the Federal Reserve Bank of New York and is fully secured, as required by the Board, by direct U.S. obligations, obligations fully guaranteed as to principal and interest by the United States, or securities or obligations eligible for settlement by the Federal Reserve book-entry system; or (3) is permitted or incurred by or on behalf of an affiliate in connection with an activity that is financial in nature or incidental to a financial activity and does not cause the bank to violate any provision of sections 23A or 23B of the Federal Reserve Act directly or indirectly or by virtue of section 18(j) of the Federal Deposit Insurance Act.

anti-tying restrictions of the BHC Act and to the insider-lending restrictions of section 22(h) of the FRA and in Regulation O. Thus, for example, a nonbank bank may not condition a grant of credit on the purchase of a product or service from its grandfathered holding company, or vice versa, and it may not extend credit to insiders of the nonbank bank or its grandfathered holding company on preferential terms.

A bank holding company that controls a nonbank bank may retain it as long as the nonbank bank does not (1) engage in an activity[5] that would have caused it to be a bank before the effective date of CEBA or (2) increase the number of locations from which it does business after March 5, 1987. These limitations do not apply if (1) the nonbank bank is viewed as an additional bank subsidiary of the bank holding company and (2) the BHC's acquisition of the nonbank bank would be permissible under the interstate banking provisions of the BHC Act.

2090.7.2 RETAINING GRANDFATHER RIGHTS UNDER SECTION 4(F) OF THE BHC ACT

A state nonmember bank (Bank A) that became a "bank" for purposes of the BHC Act as a result of CEBA requested a determination that its conversion to a national bank and merger with a limited-purpose trust company would not cause its parent company to lose certain grandfather rights that it maintains under section 4(f) of the BHC Act. (See 12 U.S.C. 1843(f).)

The parent company could retain ownership of Bank A and not be treated as a bank holding company, but only if it and Bank A abided by the conditions set forth in section 4(f) of the BHC Act. One of these conditions generally prohibits the parent company from acquiring control of more than 5 percent of the shares or assets of an additional bank or savings association. (See 12 U.S.C. 1843(f)(2)(A)(i) and (ii).)

The parent company wished to convert Bank A into a national bank. The conversion would be effected directly, and the parent company would not establish, or acquire any shares of, a separate bank or savings association as part of the conversion process. Simultaneously with the conversion process, however, the parent company would establish a new, limited-purpose national bank trust company (trust company). It was represented that the trust company would comply with the limitations and restrictions in, and would qualify for, the trust company exception from the definition of *bank* under section 2(c)(2)(D) of the BHC Act. (See 12 U.S.C. 1841.) The parent company would then cause the trust company to merge into Bank A, with Bank A being the entity that survives the merger. Bank A would then change its name (new bank) and the location of its headquarters.

Under the proposed transaction, the parent company would remain the sole shareholder of new bank. It was represented that, prior to its merger with Bank A, the trust company would not be an operating company and would have no assets or liabilities. It was also represented that the proposal would not result in any change in ownership or control of Bank A.

The Board's legal staff concluded that the direct conversion of Bank A from a state-chartered bank to a national bank would not, by itself, cause the parent company to lose its grandfather rights under section 4(f) of the BHC Act.[6] Also, the BHC Act would not prevent the parent company from chartering the trust company. Although the BHC Act prevents a grandfathered nonbank bank from acquiring control of an additional bank or thrift (12 U.S.C. 1843(f)(2)(A)), the trust company as a limited-purpose trust company would not be a *bank* for the purposes of the BHC Act.

The Board's Legal Division staff stated that it would not recommend that the Board determine that the transactions described in the request would cause the parent company to lose its grandfather rights under section 4(f) of the BHC Act. New bank is required to comply with the conditions applicable to a nonbank bank and a grandfathered holding company, respectively, under the BHC Act. (See the Board staff legal opinion dated March 21, 2006.)

5. Previously, a nonbank bank could accept demand deposits *or* engage in the business of making commercial loans, but could not engage in both activities.

6. See letter from the general counsel of the Board, dated October 12, 2004.

2090.7.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws*[1]	*Regulations*[2]	*Interpretations*[3]	*Orders*
Limitations on nonbank banks	1843(f)	225.52		

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), effective August 9, 1990, provided [12 U.S.C. 1815 (e)] that any insured depository institution will be liable for any actual or reasonably anticipated loss incurred or to be incurred by the FDIC in connection with:

1. The default of a commonly controlled[1] depository institution; or
2. Any assistance provided by the FDIC to any commonly controlled insured depository institution.

2090.8.1 FIVE YEAR PROTECTION FROM LIABILITY (5-YEAR TRANSITION RULE)

Sister banks, for five years from the enactment of the law, are protected against losses due to the default of a thrift acquired before enactment. The law also grants a five- year protection to thrifts for loss due to the default of a bank acquired before the law's enactment.

2090.8.2 CROSS-GUARANTEE PROVISIONS

FIRREA contains cross-guarantee provisions. These provisions enable the FDIC to obtain reimbursement from insured depository institutions, in the event that the FDIC incurs a loss due to any assistance provided to, or a default of, a commonly controlled bank or thrift.

The FDIC will provide written notice when an insured depository institution is being held liable for losses sustained by the FDIC in connection with assistance to a commonly controlled bank or thrift. Upon receipt of the written notice from the FDIC, the insured depository institution is required to pay the amount specified. An insured depository institution is not liable for losses incurred by the FDIC, in connection with a commonly controlled institution, if the written notice is not received within two years from the date of the FDIC's loss.

The liability the insured depository institution has to the FDIC is senior to shareholders' claims and any obligation or liability owed to any affiliate of the depository institution.[2] Claims of the FDIC against the depository institution are subordinate to any deposit liabilities, secured obligations and obligations that are subordinated to depositors (i.e. subordinated debt).

The FDIC may grant an insured depository institution a waiver of the cross-guarantee provisions, if it determines that such an exemption is in the best interests of the either the Bank or Savings Association Insurance Funds. Limited partnerships and affiliates of limited partnerships (other than an insured depository institution, which is a majority owned subsidiary of such partnership) may also be exempted from the provisions, if the limited partnership or its affiliate has filed a registration statement with the Securities and Exchange Commission, on or before April 10, 1989. The registration statement must indicate that as of the date of the filing, the partnership intended to acquire one or more insured depository institutions. If an insured depository institution is granted an exemption from the cross-guarantee provisions, then the institution and all of its insured depository institution affiliates must comply with the restrictions of sections 23A and 23B of the Federal Reserve Act without regard to section 23A(d)(1) which provides for certain exemptions.

2090.8.3 EXCLUSION FOR INSTITUTIONS ACQUIRED IN DEBT COLLECTIONS

FIRREA provides an exclusion from the cross-guarantee provisions for an institution acquired in securing or collecting a debt previously contracted in good faith. However, during the entire exclusion period, the controlling bank and all of its insured depository institution affiliates must comply with sections 23A and 23B of the Federal Reserve Act (FRA),[3] for transactions with the insured depository institution involving acquisitions as a result of debts previously contracted in good faith.

1. Depository institutions are commonly controlled if:
 a. Such institutions are controlled by the same depository institution holding company (including any company, such as nonbank banks, that are required to file reports under [12 U.S.C. 1843(f)(6)]; or
 b. One depository institution is controlled by another depository institution.

2. Does not apply to any obligation to affiliates secured as of May 1, 1989.

3. Without regard to section 23A(d)(1) of the FRA.

The Federal Reserve has observed an increase in interest by some holding companies to establish arrangements that are designed to benefit certain shareholders, enhance short-term investor returns, and/or provide a distinct disincentive for investors to acquire or increase ownership in a holding company's common stock and other capital instruments. In some instances, supervisory staff has found that these shareholder protection arrangements would have negative implications on a holding company's capital or financial position, limit a holding company's financial flexibility and capital-raising capacity, or otherwise impair a holding company's ability to raise additional capital. These arrangements impede the ability of a holding company to serve as a source of strength to its insured depository subsidiaries[1] and were considered unsafe and unsound.

In December 2015, the Federal Reserve issued the following guidance to explain supervisory concerns related to arrangements structured by bank and savings and loan holding companies (collectively, "holding companies") to protect the financial investments made by shareholders (collectively, "shareholder protection arrangements"). In particular, such arrangements raise concerns because they could have negative implications on a holding company's capital or financial position, or limit the holding company's ability to raise capital in the future.[2] A holding company, regardless of its asset size, should be aware that the Federal Reserve may object to a shareholder protection arrangement based on the facts and circumstances and the features of the particular arrangement. Therefore, a holding company that is engaged in capital raising efforts or is considering the implementation or modification of a shareholder protection arrangement should review this guidance to help ensure that supervisory concerns are addressed. (Refer to SR-15-15)

1. Pursuant to section 616(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act and the Board's Regulations Y and LL, a holding company is required to serve as a source of financial strength for its insured depository subsidiaries and should not conduct its operations in an unsafe or unsound manner. Specifically, a holding company should stand ready to use available resources to provide adequate capital funds to its subsidiary banks and thrifts during periods of financial stress or adversity. See 12 U.S.C. 1831o-1; 12 C.F.R. 225.4(a); and 12 C.F.R. 238.8(a).

2. As discussed further below, these arrangements may come in many different forms, including all or portions of agreements between shareholders (or other relevant parties), company plans, organizing documents, and other contractual provisions that provide shareholder protections.

2093.0.1 SHAREHOLDER PROTECTION ARRANGEMENTS—SUPERVISORY ISSUES

Examples of shareholder protection arrangements that have raised supervisory issues include, but are not limited to, provisions whereby:

- The holding company agrees to provide an investor with cash payments reflecting the difference between the price paid by the investor and a lower price per share paid by investors in subsequent transactions;[3]
- The holding company agrees to provide an investor with additional shares of stock for minimal or no additional cost in the event that the holding company issues shares at a price below the price paid by the investor;
- Existing shareholders of the holding company are able to acquire additional shares at significant discounts to market value in a new offering if any shareholder crosses a specific ownership threshold;[4]
- Investors with less-than-majority control are granted the contractual right to restrict or prevent the holding company from issuing additional shares; or

3. Provisions of this type and the next example are often referred to as "down-round" provisions. Down-round provisions can take many forms, but all are designed to protect existing shareholders in the event a holding company's stock price declines in a subsequent effort to raise capital or sell the holding company.

4. Provisions of this type are often referred to as "poison pills" and were originally developed as defenses against contested acquisitions. There are multiple common forms, but these provisions generally operate by increasing the ownership interest of shareholders other than a buyer of a significant block of shares, thereby diluting the buyer and preventing the takeover bid.

Poison pill structures have also been applied in the context of tax benefit preservation plans (TBPPs), which, in general terms, are designed to preserve net operating losses within the requirements of section 382 of the Internal Revenue Code. Under section 382, the use of deferred tax assets can be restricted by an "ownership change." Thus, TBPPs and poison pills use similar mechanisms to restrict changes in ownership, despite different underlying purposes. TBPPs may also take forms different from traditional poison pills.

As an example, a TBPP or poison pill may provide all shareholders, other than the shareholder crossing the relevant threshold, the right to acquire shares of the holding company at a substantial discount, reducing the incentive of shareholders to acquire more shares at or above the threshold. These rights may or may not terminate within a set amount of time.

- The holding company's board of directors has the authority to nullify share purchases under certain circumstances, require the holding company to repurchase the shares of the company from a new owner of the shares, or take other actions that would significantly inhibit secondary market transactions in the shares of the holding company.[5]

Arrangements of these types (in whatever form) have the potential to impose additional financial obligations on a holding company or restrict in some way the primary or secondary market for the holding company's shares. Often, these arrangements serve to protect the value of the initial investment made by a particular subset of shareholders rather than the viability of the issuing holding company, or, in other ways, provide current shareholders with an advantage over future, similarly situated, investors.[6]

2093.0.2 SUPERVISORY OVERSIGHT

If supervisory or applications staff determine that a particular shareholder protection arrangement impairs the ability of a holding company to raise or maintain capital, particularly during a period of stress on the firm, or that provisions of the arrangement are in violation of applicable supervisory enforcement actions, Federal Reserve staff should consult with appropriate Federal Reserve Board supervisory staff to determine the appropriate action. This can occur when:

- *Federal Reserve staff become aware of a proposed shareholder protection arrangement (for example, as part of an effort to raise capital or a proposal to expand):* Federal Reserve staff should incorporate a review of such arrangements during consideration of the specific proposal, whether or not there is a formal application or other approval requirement.
- *Federal Reserve staff become aware of an existing shareholder protection arrangement during the course of a supervisory activity (for example, in discussions with the holding company's management):* Federal Reserve staff should incorporate a review of such arrangements in the examination scope or supervisory plan for the holding company and, on limited occasions, in connection with an application filing.[7]

The Federal Reserve may direct a holding company's board of directors to modify or remove a shareholder protection arrangement that gives rise to safety-and-soundness concerns. The corrective actions, if any, will vary depending on the facts and circumstances of the holding company, as well as applicable state and federal laws and regulations, corporate charter and by-laws, and other considerations.[8] The Reserve Bank's communications with the holding company should comply with applicable supervisory guidance, including SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings." If a holding company has questions regarding the removal or modification of a shareholder protection arrangement, the holding company should consult with the appropriate Federal Reserve Bank.

5. These arrangements could include complete prohibitions on share transfers, as well as certain forms of buy-sell agreements, rights of first refusal, or similar arrangements that sufficiently restrict the transfer of shares as to effectively prohibit most, if not all, transfers.

6. In general, the right to participate in subsequent offerings to prevent dilution of ownership, when fully paid for, has not raised concerns.

7. This guidance is focused on supervisory actions going forward and is not intended to require active confirmation by a holding company or Federal Reserve staff on a routine basis that a shareholder protection issue does not exist. To facilitate the identification of shareholder protection arrangements that raise supervisory concern, the management and other representatives of holding companies are encouraged to bring all such existing or proposed arrangements to the attention of relevant supervisory and applications staff when appropriate.

8. Holding companies subject to the Board's Regulation Q (12 C.F.R. 217) are subject to additional regulatory requirements that should be considered in connection with shareholder protection arrangements. In particular, common equity tier 1 capital instruments and additional tier 1 capital instruments are required to satisfy eligibility criteria that effectively disqualify instruments with certain features used in some shareholder protection arrangements, such as features that limit or discourage future capital issuances, compensate existing investors if new instruments are issued at a lower price, create incentives to redeem, or interfere with the full discretion of the issuer to cancel dividend payments except under limited circumstances. See 12 C.F.R. 217.20. Further, the Board may require a holding company to exclude capital instruments from regulatory capital if such instruments have characteristics or terms that diminish the instrument's ability to absorb losses, or otherwise present safety-and-soundness concerns. See 12 C.F.R. 217.1(d)(2).

2100.0.1 FOREIGN OPERATIONS OF U.S. BANKING ORGANIZATIONS

U.S. banking organizations may conduct a wide range of overseas activities. The Federal Reserve has broad discretionary powers to regulate the foreign activities of member banks and bank holding companies (BHCs) so that, in financing U.S. trade and investments abroad, these U.S. banking organizations can be competitive with institutions of the host country without compromising the safety and soundness of their U.S. operations.

Some of the Federal Reserve's responsibilities over the international operations of member banks (national and state member banks) and BHCs include

- authorizing the establishment of foreign branches of national banks and state member banks and regulating the scope of their activities;
- chartering and regulating the activities of Edge Act and agreement corporations, which are specialized institutions used for international and foreign business;
- authorizing foreign investments of member banks, Edge Act and agreement corporations, and BHCs and regulating the activities of foreign firms acquired by such investors; and
- establishing supervisory policy and practices regarding foreign lending by state member banks.

The Federal Reserve examines the international operations of state member banks, Edge Act and agreement corporations, and BHCs principally at the U.S. head offices of these organizations. When appropriate, the Federal Reserve conducts examinations at the foreign operations of a U.S. banking organization in order to review the accuracy of financial and operational information maintained at the head office as well as to test the organization's adherence to safe and sound banking practices and to evaluate its efforts to implement corrective measures. Examinations abroad are conducted in cooperation with the responsible host-country supervisor.

2100.0.2 EDGE ACT AND AGREEMENT CORPORATIONS

Edge Act and agreement corporations are U.S. financial institutions that carry out international banking and financing operations, some of which the parent banks themselves are not permitted to undertake under existing laws. These corporations may act as holding companies, provide international banking services, and finance industrial and financial projects abroad, among other activities.

Sections 25 and 25A of the Federal Reserve Act grant Edge Act and agreement corporations authority to engage in international banking and foreign financial transactions. The Board's Regulation K (12 CFR 211.6) also outlines the permissible activities of Edge and agreement corporations in the United States. Among other activities, these corporations may (1) make foreign investments that are broader than those permissible for member banks, and (2) conduct a deposit and loan business in states, including those where the parent of the Edge or agreement corporation does not conduct such banking activities, provided that the business is strictly related to international or foreign business. Foreign banks may own Edge Act and agreement corporations. These corporations are examined by the Federal Reserve annually.[1]

2100.0.3 SUPERVISION OF FOREIGN BANKING ORGANIZATIONS OPERATING IN THE UNITED STATES

Although foreign banks have been operating in the United States for more than a century, before 1978 the U.S. branches and agencies of these banks were not subject to supervision or regulation by any federal banking agency. The International Banking Act of 1978 (IBA) created a federal regulatory structure for the activities of foreign banks with U.S. branches and agencies. The IBA also established a policy of "national treatment" for foreign banks operating in the United States to promote competitive equality between them and domestic institutions. This policy generally gives foreign banking organizations operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations that apply to the domestic operations of U.S. banking organizations.

1. 12 CFR 211.13(b). See also SR letter 90-21, "Rating System for International Examinations."

The Foreign Bank Supervision Enhancement Act of 1991 (FBSEA) increased the responsibility and the authority of the Federal Reserve to regularly examine the U.S. operations of foreign banks. Under the FBSEA, U.S. branches and agencies of foreign banks must be examined on-site at least once every 12 months, although this period may be extended to 18 months if the branch or agency meets certain criteria.[2] Supervisory actions resulting from examinations may be taken by the Federal Reserve alone or in conjunction with other agencies. Representative offices of these institutions are also subject to examination by the Federal Reserve.[3]

The Federal Reserve coordinates the supervisory program for the U.S. operations of foreign banking organizations with other federal and state banking agencies. Since a foreign banking organization may have both federally chartered and state-chartered offices in the United States, the Federal Reserve plays a key role in assessing the condition of the organization's entire U.S. operations and the foreign banking organization's ability to support its U.S. operations.

In 2014, the Federal Reserve Board approved a final rule required by section 165 of the Dodd-Frank Act (which also requires enhanced prudential standards for large U.S. BHCs) to strengthen supervision and regulation of foreign banking organizations.[4] The final rule recognized that the U.S. operations of foreign banking organizations had become increasingly complex, interconnected, and concentrated, and established a number of enhanced prudential standards for foreign banking organizations to help increase the resiliency of their operations. The requirements of the final rule will bolster the capital and liquidity positions of the U.S. operations of foreign banking organizations and promote a level playing field among all banking firms operating in the United States. A foreign banking organization with U.S. non-branch assets of $50 billion or more is required to establish an intermediate holding company over its U.S. subsidiaries, which will facilitate consistent supervision and regulation of the U.S. operations of the foreign bank.[5] The foreign-owned U.S. intermediate holding company is generally subject to the same risk-based and leverage capital standards applicable to U.S. BHCs. The intermediate holding companies are also subject to the Federal Reserve's rules pertaining to regular capital plans and stress testing.

2. 12 CFR 211.26(c).
3. 12 CFR 211.26(a)2.

4. See 79 Fed. Reg. 17,240 (March 27, 2014) and the Federal Reserve Board's Regulation YY (12 CFR part 252); and Dodd-Frank Act, Pub. L. No. 111-203, July 21, 2010; 124 Stat. 1376.

5. The Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) increases the $50 billion asset threshold in section 165 in two stages. Immediately on the date of enactment, bank holding companies with total consolidated assets of less than $100 billion were no longer subject to section 165.6. Eighteen months after the date of enactment, the threshold is raised to $250 billion. EGRRCPA also provides that the Board may apply any enhanced prudential standard to bank holding companies between $100 billion and $250 billion in total consolidated assets. See the Board's July 6, 2018, "Statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA)."

2120.0.1 INTRODUCTION

On January 17, 1978, the three federal bank supervisory agencies issued a joint policy statement to address their concern with regard to the potential for improper payments by banks and bank holding companies in violation of the Foreign Corrupt Practices Act and the Federal Election Campaign Act.

While not widespread, the federal bank supervisory agencies were concerned that such practices could reflect adversely on the banking system and constitute unsafe and unsound banking practices in addition to their possible illegality.

The potential devices for making political payments in violation of the law could include compensatory bonuses to employees, designated expense accounts, fees or salaries paid to officers, and preferential interest rate loans. In addition, political contributions could be made by providing equipment and services without charge to candidates for office. Refer to F.R.R.S. at 3–447.1 and 4–875.

2120.0.2 SUMMARY OF THE FEDERAL ELECTION CAMPAIGN ACT

The Federal Election Campaign Act (FECA), enacted in 1971, was designed to curb potential abuses in the area of federal election financing. In general, FECA regulates the making of campaign contributions and expenditures in connection with primary and general elections to federal offices. Since 1907, federal law has prohibited national banks from making contributions in connection with political elections. FECA does not specifically address the making of contributions and expenditures by banks or other corporations to advocate positions on issues that are the subjects of public referenda. As originally enacted, FECA required disclosure of contributions received or expenditures made; however, amendments to the law in 1974 and 1976 imposed additional limitations on contributions and expenditures as well. The 1974 amendments also established the Federal Election Commission (Commission) to administer FECA's provisions. The Commission is responsible for adopting rules to carry out FECA, for rendering advisory opinions, and for enforcing the Act. The Commission was reorganized as a result of the FECA Amendments of 1976, and it has issued regulations interpreting the statute (11 C.F.R.).

2120.0.3 BANKS AND THE FECA

National banks and other federally chartered corporations are specifically prohibited from making contributions or expenditures in connection with *any* election; other corporations, including banks and bank holding companies, may not make contributions or expenditures in connection with *federal* elections. However, corporations may establish and solicit contributions to ''separate segregated funds'' to be used for political purposes; these are discussed in greater detail below.

State member banks and bank holding companies may make contributions or expenditures that are consistent with state and local law in connection with state or local elections. Because many states have laws that prohibit or limit political contributions or expenditures by banks, familiarization with applicable state and local laws is a necessity. According to the joint policy statement of the three banking agencies, a political contribution must meet not only the requirement of legality but also the standards of safety and soundness. Thus, a contribution or expenditure, among other things, must be recorded properly on the bank's books, may not be excessive relative to the bank's size and condition, and may not involve self-dealing.

Banks may make loans to political candidates provided the loans satisfy the requirements set out below.

2120.0.4 CONTRIBUTIONS AND EXPENDITURES

The words ''contribution'' and ''expenditure'' are defined broadly by FECA and the Commission's regulations to include any loan, advance, deposit, purchase, payment, distribution, subscription or gift of money or anything of value which is made for the purpose of influencing the nomination or election of any person to federal office. The payment by a third party of compensation for personal services rendered without charge to a candidate or political committee is also treated as a contribution by FECA, although the term does *not* include the value of personal services provided by an individual without compensation on a volunteer basis.

Although loans are included in the definitions of contribution and expenditure under FECA, a specific exemption is provided for bank loans made in the ordinary course of business and in accordance with applicable banking laws and regulations. The Commission's regulations provide, further, that in order for extensions of credit to a candidate, political committee or other person in connection with a federal election to be treated as a loan and not a contribution, they must be on terms substantially similar to those made to non-political debtors and be similar in risk and amount. The regulations also provide that a debt may be forgiven only if the creditor has treated it in a commercially reasonable manner, including making efforts to collect the debt which are similar to the efforts it would make with a non-political debtor. In considering whether a particular transaction is a contribution or a loan, it is expected that a factor would be the extent to which the creditor may have departed from its customary credit risk analysis.

FECA and the implementing regulation permit certain limited payments to candidates or their political committees. For example, payment of compensation to a regular employee who is providing a candidate or political committee with legal or accounting services which are solely for the purpose of compliance with the provisions of the FECA is exempt from the definitions of contribution and expenditure. The Commission's regulations also permit occasional use of a corporation's facilities by its shareholders and employees for volunteer political activity; however, reimbursement to the corporation is required for the normal rental charge for anything more than occasional or incidental use.

2120.0.5 SEPARATE SEGREGATED FUNDS AND POLITICAL COMMITTEES

FECA allows the establishment and administration by corporations of "separate segregated funds" to be utilized for political purposes. While corporate monies may not be used to make political contributions or expenditures, corporations may bear the costs of establishing and administering these separate segregated funds, including payment of rent for office space, utilities, supplies and salaries. These costs need not be disclosed under FECA. Commission regulations also permit a corporation to exercise control over its separate segregated fund.

In practice, most corporate segregated funds are administered by a group of corporate personnel, which, if the fund receives any contributions or makes any expenditures during a calendar year, constitutes a "political committee," as defined by FECA. As such, it is required to file a statement of organization with the Commission, to keep detailed records of contributions and expenditures, and to file with the Commission reports identifying contributions in excess of $200 and candidates who are recipients of contributions from the fund.

Solicitation of contributions to corporate segregated funds by political committees must be accomplished within the precise limits established by FECA. All solicitations directed to corporate employees must satisfy the following requirements: (1) the contribution must be entirely voluntary; (2) the employee must be informed of the political purposes of the fund at the time of the solicitation; and (3) the employee must be informed of his right to refuse to contribute without reprisal. Beyond those basic requirements, FECA distinguishes between "executive and administrative" personnel and other employees. The former and their families may be solicited any number of times, while the latter and their families may only be solicited through a maximum of two written solicitations per year, and these solicitations must be addressed to the employees at their homes. Solicitations may also be directed to corporate stockholders and their families in the same manner as to executive and administrative personnel.

Although a corporation, or a corporation and its subsidiaries, may form several political committees, for purposes of determining the statutory limitations on contributions and expenditures, all committees established by a corporation and its subsidiaries are treated as one. Thus, the total amount which all political committees of a corporation and its subsidiaries may make to a single candidate is $5,000 in any federal election (provided that the committees are qualified multicandidate committees under FECA).

2120.0.6 INSPECTION OBJECTIVES

1. To determine if the company has made improper or illegal payments in violation of either of these statutes, and regardless of legality, and whether they constitute an unsafe and unsound banking practice.

2. To determine if controls have been established to prevent unproper payments in violation of these statutes.

2120.0.7 INSPECTION PROCEDURES

1. Determine whether the company and its nonbank subsidiaries have a policy prohibiting improper or illegal payments, bribes, kickbacks, or loans covered by either the Foreign Corrupt Practices Act or the Federal Election Campaign Act.

2. Determine how the policy, if any, has been communicated to officers, employees, or agents of the organization.

3. Review any investigation or study performed by, or on behalf of, the board of directors that evaluates policy or operations associated with the advancement of funds in possible violation of the statutes mentioned above. In addition, ascertain whether the organization has been investigated by any other government agency in connection with possible violations of the statutes and, if this is the case, review available materials associated with the investigation.

4. Review and analyze any internal or external audit program employed by the organization to determine whether the internal and external auditors have established appropriate routines to identify improper or illegal payments under the statutes. In connection with the evaluation of the adequacy of any audit program, the examiner should:

a. Determine whether the auditor is aware of the provisions of the Foreign Corrupt Practices Act and the Federal Election Campaign Act and whether audit programs are in place which check for compliance with these laws;

b. Review such programs and the results of any audits; and

c. Determine whether the program directs the auditor to be alert to unusual entries or charges which might indicate that improper or illegal payments have been made to persons or organizations covered by the statutes.

5. Analyze the general level of internal control to determine whether there is sufficient protection against improper or illegal payments being irregularly recorded on the organization's books.

6. Both the examiner and assistants should be alert in the course of their usual inspection procedures for any transactions, or the use of organization services or equipment, which might indicate a violation of the statutes. Examination personnel should pay particular attention to:

a. Commercial and other loans (including participations), which may have been made in connection with a political campaign, to assure that any such loans were made in the ordinary course of business in accordance with applicable laws.

b. Income and expense ledger accounts for unusual entries including unusual debit entries (reductions) in income accounts or unusual credit entries (reductions) in expense accounts, significant deviations from the normal amount of recurring entries, and significant entries from an unusual source, such as a journal entry.

Procedure 7, following here, should only be undertaken in cases in which the examiner believes that there is some sufficient evidence indicating that improper or illegal payments have occurred. Such evidence would justify the implementation of these additional procedures.

7. Verification of audit programs and internal controls.

a. Randomly select charged-off loan files and determine whether any charged-off loans were made to (i) foreign government officials or other persons or organizations covered by the Foreign Corrupt Practices Act, or (ii) persons or organizations covered under the Federal Election Campaign Act.

b. For those significant income and expense accounts on which verification procedures have not been performed: (i) prepare an analysis of the account for the period since the last examination, preferably by month, and note any unusual fluctuations for which explanations should be obtained, and (ii) obtain an explanation for significant fluctuations or any unusual items through discussions with organization personnel and review of supporting documents.

2120.0.8 APPARENT VIOLATIONS OF THE STATUTES

Where violations of law or unsafe and unsound banking practices result from improper payments, the Federal Reserve System should exercise its full legal authority, including cease-and-desist proceedings and referral to the appropriate law enforcement agency for further action, to ensure that such practices are terminated. In appropriate circumstances, the fact that such payments have been made may reflect so adversely on an organization's management as to be a relevant factor in connection with the consideration of applications submitted by the organization.

In addition, the Reserve Bank should forward any information on apparent violations of the Federal Election Campaign Act to the Federal Election Commission. The Federal Election Commission is authorized to enforce FECA. The Commission may be prompted to investigate possible illegal payments by either a sworn statement submitted by an individual alleging a violation of the law, or on its own initiative based on information it has obtained in the course of carrying out its supervisory responsibilities. When the Commission determines that there is probable cause to believe a violation has occurred or is about to occur, it endeavors to enter into a conciliation agreement with the violator. If, however, it finds probable cause to believe that a willful violation has occurred or is about to occur, it may refer the matter directly to the Department of Justice for possible criminal prosecution, without having first attempted conciliation.

If informal means of conciliation fail, the Commission may begin civil proceedings to obtain relief. Should the Commission prevail, a maximum penalty of a fine equal to the greater of $10,000 or 200 percent of the amount of the illegal payment may be imposed. Knowing and willful violations involving over $1,000 may subject the violator to a fine, up to the greater of $25,000 or 300 percent of the illegal payment, and imprisonment for up to one year.

2120.0.9 ADVISORY OPINIONS

Any person, including a bank or a corporation, may request an advisory opinion concerning the application of FECA or of the Commission's regulations to a specific transaction or activity in which that person wishes to engage. The Commission must render such advisory opinion within 60 days from receipt of a complete request. Banks or bank employees wishing to engage in activity which may be regulated by FECA are encouraged to request advisory opinions from the Commission.

Techniques, practices, and tools for credit-risk management evolve with the challenges that firms face in their business-lending activities. For larger firms, the number and geographic dispersion of their borrowers make it increasingly difficult for such firms to manage their loan portfolios simply by remaining closely attuned to the performance of each borrower. As a result, one increasingly important component of the systems for controlling credit risk at larger firms is the identification of gradations in credit risk among their commercial loans, and the assignment of internal credit-risk ratings to loans that correspond to these gradations. The use of an internal rating process is appropriate and important for sound risk management at large firms. See SR-98-25, "Sound Credit Risk Management and the Use of Internal Credit Risk Ratings at Large Banking Organizations."

Effective internal rating systems support sophisticated credit-risk management. Supervisors and examiners, both in their inspections and other contacts with firms, should emphasize the importance of development and implementation of effective internal credit-rating systems and the critical role such systems should play in a firm's credit-risk-management process.

Internal rating systems are used at large firms for a range of purposes. At one end of this range, they are primarily used to determine approval requirements and identify problem loans. At the other end, the internal rating systems are an integral element of credit-portfolio monitoring and management, capital allocation, the pricing of credit, profitability analysis, and the detailed analysis to support the allowance. Internal rating systems being used for these latter purposes should be significantly richer and more robust than systems used for the purposes such as approval requirements and identifying problem loans.

A sound risk-management process should adequately illuminate the risks being taken to enable management to initiate and apply appropriate controls that balance risks against returns. Furthermore, the process should provide information as to the firm's overall appetite for risk, considering the uncertainties faced by lenders and the long-term viability of the firm. Accordingly, large firms should have strong risk-rating systems that address the range of lending activity and provide timely and accurate information for the firm's management to monitor, manage, and control credit risk. The rating system should also consider (1) the overall composition of the various portfolios by loan type, terms, and tenure, (2) an assessment of the risk exposure and credit concentrations to a particular type of loan, borrower, market, or industry and (3) information on risk profiles of individual borrowers. Moreover, such rating systems have an important role in (1) establishing an appropriate level for the allowance, (2) conducting internal analyses of loan and relationship profitability, (3) assessing capital adequacy, and possibly (4) administering performance-based compensation.[1]

Examiners should evaluate the adequacy of internal credit-risk-rating systems, including ongoing development efforts, when assessing both asset quality and the overall strength of a firm's risk management. In doing so, examiners should be cognizant that an internal risk-identification and -monitoring system should be consistent with the nature, size, and complexity of the firm's activities.

2122.0.1 APPLICATION TO LARGE HOLDING COMPANIES

The guidance provided in this section should be considered in scoping supervisory activities at "large" bank holding companies and savings and loan holding companies (collectively referred to as "firms" or "large firms").[2] In this context, those firms with significant involvement in relevant secondary-market credit activities, such as securitization of business loans or credit derivatives, should have more elaborate and formal approaches for managing the risks associated with these activities.[3] Structured and sophisticated arrangements for managing credit risk are more appropriate for larger firms than for smaller and less complex institutions. In performing their evaluation, examiners should also consider whether other elements of the risk-management process might compensate for any specific weaknesses attributable to an inadequate rating system.

1. See the Board's Regulation Q (12 CFR part 217) for more information on capital requirements.

2. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program," for more information.

3. Secondary-market credit activities generally include loan syndications, loan sales and participations, credit derivatives, and asset securitizations, as well as the provision of credit enhancements and liquidity facilities to such transactions. Such activities are described further in section 2129.05.

In addition, examiners should review a firm's internal management information system reports to determine whether the portion of loans in lower-quality pass grades has grown significantly over time, and whether any such change might have negative implications for the adequacy of a firm's risk management or capital. Examiners should also consider whether a significant migration to higher-risk pass grades, or an overall large proportion of loans in a higher-risk pass grade, could have negative implications for the firm's asset-quality, including the adequacy of the allowance. Examiners should evaluate trends in categories associated with problem assets.

Examiners should discuss these issues, including a firm's plans to enhance existing credit-rating systems, with management. Inspection comments on the adequacy of risk-rating systems and the credit quality of the pass portfolio should be incorporated within the inspection report, noting deficiencies where appropriate.

2122.0.2 SOUND PRACTICES IN FUNCTION AND DESIGN OF INTERNAL RATING SYSTEMS

A consistent and meaningful internal risk-rating system is useful for differentiating the degree of credit risk in loans and other sources of credit exposure. Although assigning such risk ratings necessarily involves subjective judgment and experience, a properly designed rating system will allow this judgment to be applied in a structured and consistent manner.

Credit-risk ratings are designed to reflect the quality of a loan or other credit exposure, and thus, explicitly or implicitly, the loss characteristics of that loan or exposure. In many instances, large firms link ratings' definitions to one or more measurable outcomes such as the probability of a borrower's default or expected loss, which couples the probability of default with some estimate of the amount of loss to be incurred in the event that a default occurs. In addition, credit-risk ratings may reflect the likelihood or severity of loss as well as the variability of loss over time, particularly as this relates to the effect of the business cycle. Linkage to these measurable outcomes gives greater clarity to risk-rating analysis and allows for more consistent evaluation of performance against relevant benchmarks.

A firm may distinguish the risks associated with the borrowing entity (essentially default risk) from the risks stemming from a particular transaction or structure (more oriented to loss in event of default). In documenting its credit-administration procedures, a firm should clearly identify whether risk ratings reflect the risk of the borrower or the risk of the specific transaction. In this regard, a firm may assign both a borrower and facility rating, based on an analysis of the loan's obligor and the structure and terms of the particular loan (that is, collateral or guarantees) which may strengthen or weaken the quality of the loan.

An effective rating scale should distinguish gradations of risk within a firm's portfolio so that there is clear linkage to loan quality (and/or loss characteristics), rather than just to levels of administrative attention.[4] Therefore, the rating system should be designed to address the range of risks typically encountered in the underlying businesses in the firm's loan portfolio. One reflection of this degree of meaning is that there should be a fairly wide distribution of a portfolio's outstanding loans or exposures across the rating grades, unless the loan portfolio is genuinely homogeneous. Many rating systems include grades intended solely to capture credits needing heightened administrative attention, such as so-called "watch" grades. Prompt and systematic tracking of credits requiring such attention is an essential element of risk management. However, to the extent such loans vary in the risk characteristics, isolating these loans in a single grade may detract from the rating system's ability to indicate risk. Therefore, a firm may use separate or auxiliary indicators to monitor risks in these loans.

Risk-rating systems that only identify loans that are classified for supervisory purposes or that require additional monitoring (that is, "watch" loans) generally are not sufficiently comprehensive in distinguishing risks. Such systems contribute little or nothing to evaluating the majority of loans in the portfolio—that is, loans for which no specific difficulties are present or foreseen. In some cases, these firms might also establish one or two risk grades for loans with limited perceived risk, such as those collateralized by cash or liquid securities. A conse-

4. See SR-20-13, "Interagency Guidance on Credit Risk Review Systems," for more information. Internal risk-rating systems and/or supporting documentation should be sufficient to enable examiners to reconcile the totals for the various internal risk ratings under the institution's system to the federal banking agencies' categories for those loans graded below "pass" (that includes special mention, substandard, doubtful, or loss).

quence of the ineffective rating systems described above is that the bulk of the loan portfolio falls into one or two remaining broad risk grades—representing "pass" loans that are neither extremely low risk nor current or emerging problem credits—even though such grades may encompass many different levels of underlying credit risk.

2122.0.3 SOUND PRACTICES IN ASSIGNING AND VALIDATING INTERNAL RISK RATINGS

Objective ratings criteria as well as experience and judgment are critical both in making the credit decision and in assigning internal risk grades. Firms should develop clear and explicit criteria for each risk grade in their credit policies to promote consistency in assigning and reviewing grades. Criteria should be specified, even when addressing subjective or qualitative considerations, that allow for consistent assignment of risk grades to transactions with similar risk characteristics. Such criteria should include guidance both on the factors that should be considered in assigning a grade and how these factors should be weighed in arriving at a final grade.

Establishing clear rating criteria can promote consistency in assessing the financial condition of the borrower and other objective indicators of a transaction's risk. One vehicle for enhancing the degree of consistency and accuracy is the use of "guidance" or "target" financial ratios or other objective indicators of the borrower's financial performance as a point of comparison when assigning grades. Firms may also provide explicit linkages between internal grades and credit ratings issued by external parties as a reference point, for example, senior public debt ratings issued by one or more major ratings agencies. The use of default probability models, bankruptcy scoring, or other analytical tools can also be useful as supporting analysis. However, firms employing such techniques should identify the probability of default that is "typical" of each grade. The borrower's primary industry may also be considered, both in terms of establishing the broad characteristics of borrowers in an industry (for example, degree of vulnerability to economic cycles or long-term favorable or unfavorable trends in the industry) as well as a borrower's market share or competitive position in the industry.

In addition to quantitative indicators and tools, credit policies and ratings definitions should also cite qualitative factors that are incorporated into the assignment of a loan's rating. This might include (1) the strength and experience of the borrower's management, (2) the quality of financial information provided, and (3) the access of the borrower to alternative sources of funding. Addressing qualitative considerations in a structured and consistent manner when assigning a risk rating often requires experience and business judgment. Nonetheless, adequate consideration of these factors is important to assessing the risk of a transaction appropriately. In this regard, firms may choose to cite significant and specific points of comparison for qualitative factors in describing how such considerations can affect the rating (for example, whether a borrower's financial statements have been audited or merely compiled by its accountants, or whether collateral has been independently valued).

Some formalization of the rating process can be helpful in promoting accuracy and consistency. For example, the use of a "risk-ratings analysis form" can be utilized to (1) provide structure for identifying and addressing the relevant qualitative and quantitative elements for determining internal risk grades, and (2) document a loan's rating and the analysis or discussion of key quantitative and qualitative information utilized in assigning the rating.

Risk ratings should be reviewed, if not assigned, by independent credit-risk management or loan-review personnel both at the time the transaction is consummated and periodically over the life of the loan.[5] Such independent reviewers should reflect a level of experience and business judgment that is comparable to that of the line staff responsible for assigning and reviewing initial risk grades. An effective independent review should assess whether risk-rating changes (and particularly downgrades) have been timely and appropriate. Independent reviews of individual ratings support the discipline of the rating assignments by allowing management to evaluate the performance of those individuals assigning and reviewing risk ratings. If a firm relies on outside consultants, auditors, or other third parties to perform all or part of this review role, such individuals should have appropriate credit assessment experience and have a clear understanding of the firm's policies and its risk-rating process.

Finally, firms should track performance or effectiveness of grades over time to gauge the

5. See section 2010.10 regarding internal loan review.

adequacy of its internal rating system. This may encompass the migration, consistency, and default/loss characteristics of assigned risk grades. Such tracking also allows for ex post analysis of the loss characteristics of loans in each risk grade.

Because ratings are typically applied to different types of loans—for example, to both commercial real estate and commercial loans—it is important that each grade retains the same meaning to the firm (in terms of overall risk) across the exposure types. Such comparability allows management to treat loans in high-risk grades as a potential concentration of credit risk and to manage them accordingly. It also allows management to monitor the overall degree of risk, and changes in the risk makeup, of the portfolio. Such consistency further permits risk grades to become a reliable input into portfolio credit-risk models.[6]

2122.0.4 APPLICATION OF INTERNAL RISK RATINGS TO INTERNAL MANAGEMENT AND ANALYSIS

As noted earlier, robust internal credit-rating systems are an important element in several key areas of the risk-management process. A firm should periodically assess and modify its system to confirm that credit ratings provide accurate and consistent indications of risk and are sufficiently granular to distinguish the degree of risk, especially for riskier assets. Described below are examples of risk management and analysis approaches for internal risk-rating systems.

2122.0.4.1 Limits and Approval Requirements

Many large firms have different approval requirements and thresholds for each internal grade, allowing less scrutiny and greater latitude in decision making for loans with a lower grade. While this appears reasonable, firms should also consider whether the level of intensity in approval process (or the degree to which limits are higher) is supported by the degree of a loan's risk and uncertainty associated with the future performance of the loan. If not, lower approval requirements may provide incentives to rate loans too favorably with resulting underassessment of a loan's risk.

2122.0.4.2 Reporting to Management on Credit-Risk Profile of the Portfolio

Reports that analyze the overall credit risk in a firm's loan portfolios should include information on the profile of actual outstanding balances, exposures, or both by internal risk grade.[7] Further, to aid a firm to evaluate its risk appetite, the information should address concentrations in particular industries or borrower types. Portfolio analysis may range from aggregating loans by risk grade to risk modeling the potential behavior of a loan portfolio. Such analysis should consider the interaction between loans by type of credit and industry of borrowers. Gradations of risk reflect only one among many dimensions of portfolio risk, along with potential industry concentrations, exposure to an unfavorable turn in the business cycle, geographical concentrations, and other factors.

2122.0.4.3 Allowance

The makeup of the loan portfolio and the loss characteristics of each grade—including individual pass grades—should be considered, along with other factors, in determining the adequacy of an institution's allowance.

2122.0.4.4 Pricing and Profitability

To remain competitive, a firm will consider the appropriateness of loan pricing, particularly with regard to any single transaction or group of transactions. One way that some firms choose to enhance the discipline in their overall pricing practices across their portfolio is by incorporating risk-rating-specific loss factors in the determination of the minimum profitability requirements (that is, "hurdle rates"). Following this practice may render such firms less likely to price loans well below the level indicated by the long-term risk of the transaction.

6. See SR 11-7, "Guidance on Model Risk Management."

7. See section 2010.2 regarding a holding company's supervision of its subsidiaries and loan administration.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, footnote 2 was revised to include a reference to SR-14-4, "Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Banking Organizations with $10–$50 Billion in Total Consolidated Assets." This guidance within SR-14-4 supersedes the guidance within SR-94-13, "Loan Review Requirements for On-Site Examinations" for the specified banking organizations.

2124.0.1 FULL-SCOPE INSPECTIONS AND TRANSACTION TESTING

Full-scope inspections under a risk-focused approach must be performed to fulfill the objectives of a full-scope inspection. Inspections can be adjusted, depending on the circumstances of the banking organization being evaluated. At a minimum, full-scope inspections should include sufficient procedures to reach an informed judgment on the assigned ratings for the factors addressed by the bank holding company RFI/C(D) rating system. The business of banking is fundamentally predicated on taking risks, and the components of the supervisory rating system are strongly influenced by risk exposure. Consequently, the procedures for full-scope inspections focus to a large degree on assessing the types and extent of risks to which a bank holding company and its subsidiaries are exposed, evaluating the organization's methods of managing and controlling its risk exposures, and ascertaining whether management and directors fully understand and are actively monitoring the organization's exposure to those risks. Given the Federal Reserve's responsibility for ensuring compliance with banking laws and regulations, inspections also include an appropriate level of compliance testing. (See SR-96-14.)

Historically, Federal Reserve examinations and inspections have placed significant reliance on transaction-testing procedures. For example, to evaluate the adequacy of the credit-administration process, assess the quality of loans, and ensure the adequacy of the allowance for loan and lease losses (ALLL), a high percentage of large loan amounts have traditionally been reviewed individually. Similarly, the assessment of the accuracy of regulatory reporting often has involved extensive review of reconciliations of a bank holding company's general ledger to the FR Y-9C report and other FR Y-series reports. Other similar procedures typically have been completed to ascertain compliance with applicable laws and regulations, to determine whether the banking and nonbank subsidiaries are following their internal policies and procedures and those of the bank holding company, and to evaluate the adequacy of internal control systems.

Transaction testing remains a reliable and essential inspection technique for assessing a banking organization's condition and verifying its adherence to internal policies, procedures, and controls. In a highly dynamic banking market, however, such testing is not sufficient for ensuring continued safe and sound operations. As evolving financial instruments and markets have enabled banking organizations to rapidly reposition their portfolio risk exposures, periodic assessments of a banking organization's condition, based on transaction testing alone, cannot keep pace with the moment-to-moment changes occurring in financial risk profiles.

To ensure that banking organizations have in place the processes necessary to identify, measure, monitor, and control their risk exposures, inspections must focus more on evaluating the appropriateness of a very high degree of transaction testing. Under a risk-focused approach, the degree of transaction testing should be reduced when internal risk-management processes are determined to be adequate or risks are considered minimal. However, when an organization's risk-management processes or internal controls are considered inappropriate (such as when there is an inadequate segregation of duties or when on-site testing determines that such processes or controls are lacking), additional transaction testing sufficient to fully assess the degree of risk exposure in that function or activity must be performed. In addition, if an examiner believes that a banking organization's management is being less than candid, has provided false or misleading information, or has omitted material information, then substantial on-site transaction testing should be undertaken and appropriate follow-up actions should be initiated, including the requirement of additional audit work and appropriate enforcement actions.

In most cases, full-scope inspections are conducted on or around a single date. This approach is appropriate for the vast majority of banking organizations supervised by the Federal Reserve. However, as the largest banking organizations have undergone considerable geographic expansion and the range of their products has become more diversified, coordinating the efforts of the large number of examiners necessary to conduct inspections at a single point in time has become more difficult. To avoid causing undue burden on these banking organizations, full-scope inspections for many large companies are conducted over the course of a year, rather than over a span of weeks, in a series of targeted reviews focusing on one or two significant aspects of the bank holding company's operations. This approach to conducting full-scope inspections provides more-continuous supervisory contact with the largest bank holding companies and facilitates improved coordination of inspection efforts with other federal banking agencies. It also provides more flexibility in the allocation of examiner resources, which has been especially important as the complexity of banking markets and products has increased and led to the development of cadres of examiners with specialized skills.

2124.0.2 RISK-FOCUSED INSPECTIONS

Developments in the business of banking have increased the range of banking activities, heightening demands on examiner resources and making the need for examiners to effectively focus their activities on areas of the greatest risk even more crucial. Improved in-office planning can result in more efficient and effective on-site inspections that are focused on risks particular to specific organizations of the bank holding company. Such improved planning minimizes supervisory burden and provides for the close coordination of the supervisory efforts of the Federal Reserve with those of the other state and federal banking agencies. Improved planning also allows information requests to be better tailored to the specific organizations.

2124.0.2.1 Risk Assessment

To focus procedures on the areas of greatest risk, a risk assessment should be performed before on-site supervisory activities. The risk-assessment process highlights both the strengths and vulnerabilities of a bank holding company and provides a foundation from which to determine the procedures to be conducted during an inspection. Risk assessments identify the financial activities in which a banking organization has chosen to engage, determine the types and quantities of risks to which these activities expose the organization, and consider the quality of management and control of these risks. At the conclusion of the risk-assessment process, a preliminary supervisory strategy can be formulated for the bank holding company and its subsidiaries and for each of their major activities. Naturally, those activities that are most significant to the organization's risk profile or that have inadequate risk-management processes or rudimentary internal controls represent the highest risks and should undergo the most rigorous scrutiny and testing.

Identifying the significant activities of a bank holding company, including those activities conducted off-balance-sheet, should be the first step in the risk-assessment process. These activities may be identified through the review of prior bank examination and bank holding company inspection reports and workpapers, surveillance and monitoring reports generated by Board and Reserve Bank staffs, Uniform Bank Performance Reports and Bank Holding Company Performance Reports, regulatory reports (for example, bank Call Reports and the FR Y-9C and FFIEC 002 reports), and other relevant supervisory materials. When appropriate, the following information should be reviewed: strategic plans and budgets, internal management reports, board of directors information packages, correspondence and minutes of meetings between the bank holding company and the Reserve Bank, annual reports and quarterly SEC filings, press releases and published news stories, and stock analysts' reports. In addition, examiners should hold periodic discussions with management to gain insight into their latest strategies or plans for changes in activities or management processes.

Once significant activities have been identified, the types and quantities of risks to which these activities expose the bank holding company should be determined. This allows examiners to identify high-risk areas that should be emphasized in conducting inspections. The types of risk that may be encountered in banking activities individually or in various combinations include, but are not limited to, credit, market, liquidity, operational, legal, and reputational risks.[1] For example, lending activities are a primary source of credit and liquidity risks.

1. Appendix A defines these primary risk types.

They may also present considerable market risk (if the bank holding company or its subsidiaries are originating mortgage loans for later resale), interest-rate risk (if fixed-rate loans are being granted), or legal risk (if loans are poorly documented). Similarly, the asset-liability management function has traditionally been associated with exposures to interest-rate and liquidity risks. Operational risks are also associated with many of the transactions undertaken by this function, and market risks are associated with the investments and hedging instruments commonly used by the asset-liability management function. The quantity of risks associated with a given activity may be indicated by the volume of assets and off-balance-sheet items that the activity represents or by the portion of revenue for which the activity accounts. Activities that are new to an organization or for which exposure is not readily quantified may also represent high risks that should be evaluated during inspections.

A number of analytical techniques may be used to estimate the quantity of risk exposure, depending on the activity or risk type being evaluated. For example, to assess the quantity of credit risk in loans and commitments, the level of past-due loans, internally classified or watch list loans, nonperforming loans, and concentrations of credit exposure to particular industries or geographic regions should be considered (see section 2010.2). In addition, as part of the assessment of credit risk, the adequacy of the overall ALLL can be evaluated by considering trends in past-due, special-mention, and classified loans; historic charge-off levels; and the coverage of nonperforming loans by the ALLL. Analytical techniques for gauging the exposure of a bank holding company and its subsidiaries to interest-rate risk, as part of the evaluation of asset-liability management practices, can include a review of the historical performance of net interest margins, as well as the results of internal projections of future earnings performance or net economic value under a variety of plausible interest-rate scenarios. The measurement of the quantity of market risk arising from trading in cash and derivative instruments may take into account the historic volatility of trading revenues, the results of internal models calculating the level of capital and earnings at risk under various market scenarios, and the market value of contracts relative to their notional amounts.

Once the types and quantities of risk in each activity have been identified, a preliminary assessment of the banking organization's process to identify, measure, monitor, and control these risks should be completed. This evaluation should be based on findings from previous examination and inspection activities conducted by the Reserve Bank or other banking agencies, supplemented by the review of internal policies and procedures, management reports, and other documents that provide information on the extent and reliability of internal risk-management systems. Sound risk-management processes vary from one banking organization to another, but generally include four basic elements for each individual financial activity or function and for the organization in aggregate. These elements are (1) active board and senior management oversight; (2) adequate policies, procedures, and limits; (3) adequate risk-measurement, risk-monitoring, and management information systems; and (4) comprehensive internal audits and controls. (See sections 4070.1 (SR-95-51) and 4071.0 (SR-16-11).)

The preliminary evaluation of the risk-management process for each activity or function also helps determine the extent of transaction testing that should be planned for each area. If the organization's risk-management process appears appropriate and reliable, then a limited amount of transaction testing may well suffice. If, on the other hand, the risk-management process appears inappropriate or inadequate to the types and quantities of risk in an activity or function, examiners should plan a much higher level of transaction testing. They should also plan to conduct the most testing in those areas that comprise the most significant portions of a bank holding company's activities and, thus, typically represent high potential sources of risk.

2124.0.2.2 Preparation of a Scope Memorandum

Once the inspection planning and risk-assessment processes are completed, a scope memorandum should be prepared. A scope memorandum provides a detailed summary of the supervisory strategy for a bank holding company and assigns specific responsibilities to inspection team members. A scope memorandum should be tailored to the size and complexity of the bank holding company that is subject to review, define the objectives of each inspection, and generally include—

1. a summary of the results of the prior inspection;
2. a summary of the strategy and significant activities of the banking organization, including its new products and activities;
3. a description of the bank holding company's organization and management structure;
4. a summary of performance since the prior inspection;
5. a statement of the objectives of the current inspection;
6. an overview of the activities and risks to be addressed by the inspection; and
7. a description of the procedures that are to be performed at the inspection.

For large complex organizations operating in a number of states or internationally, the planning and risk-assessment processes are necessarily more complicated. The traditional scope memorandum may have to be broadened into a more extensive set of planning documents to reflect the unique requirements of complex bank holding companies. Examples of these planning documents include annual consolidated analyses, periodic risk assessments, and supervisory plans.

2124.0.2.3 On-Site Procedures

The amount of review and transaction testing necessary to evaluate particular functions or activities of a bank holding company generally depends on the quality of the process the company uses to identify, measure, monitor, and control the risks of an activity. When the risk-management process is considered sound, further procedures are limited to a relatively small number of tests of the integrity of the management system. Once the integrity of the management system is verified through limited testing, conclusions on the extent of risks within the function or activity are drawn based on internal management assessments of those risks rather than on the results of more-extensive transaction testing by examiners. On the other hand, if initial inquiries into the risk-management system—or efforts to verify the integrity of the system—raise material doubts as to the system's effectiveness, no significant reliance should be placed on the system. A more extensive series of tests should be undertaken to ensure that the banking organization's exposure to risk from a given function or activity can be accurately gauged and evaluated. More-extensive transaction testing is also generally completed for activities that are much more significant to a bank holding company than is completed for other areas, although the actual level of testing for these significant activities may be reduced commensurate with the quality of internal risk-management processes.

Consider, as an example, the risk exposure associated with commercial lending activities. Traditionally, examiners have reviewed a relatively high number and dollar volume of real estate–associated loans.[2] If, however, credit-administration practices are considered satisfactory, fewer loans may need be reviewed to verify that this is the case (that is, fewer loans than would be reviewed if deficiencies in credit-administration practices were suspected). This review may be achieved through a valid statistical sampling technique, when appropriate. It should be noted that if credit-administration practices are initially considered sound, but if loans reviewed to verify this raise doubts about the accuracy of internal assessments or the compliance with internal policies and procedures, the number and volume of loans subject to review should generally be expanded. Examiners should thus review a sufficient number of loans in order to ensure that the level of risk is clearly understood, an accurate determination of the adequacy of the ALLL can be made, and the deficiencies in the credit risk-management process can be comprehensively detailed.

2124.0.2.4 Evaluation of Audit Function as Part of Assessment of Internal Control Structure

A bank holding company's internal control structure is critical to its safe and sound functioning in general and to its risk-management system in particular. When properly structured, internal controls promote effective operations and reliable financial and regulatory reporting; safeguard assets; and help to ensure compliance with laws, regulations, and internal policies and procedures. In many banking organizations, internal controls are tested by an independent

2. Guidance on the selection of loans for review is provided in SR-94-13, "Loan Review Requirements for On-Site Examinations." The guidance within SR-94-13 is superseded by SR-14-4, "Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Banking Organizations with $10–$50 Billion in Total Consolidated Assets," but only for these banking organizations. SR-14-4 clarifies expectations for the assessment of material retail credit portfolios for these institutions (see appendix 1 at section 2010.2.11).

internal auditor who reports directly to the board of directors or its audit committee. However, in some smaller banking organizations whose size and complexity of operations do not warrant an internal audit department, reviews of internal controls may be conducted by other personnel independent of the area subject to review.

Because the audit function is an integral part of a bank holding company's assessment of its internal control system, examiners must include a review of the organization's control-assessment activities in every inspection. Such reviews help identify significant risks and facilitate a comprehensive evaluation of the organization's internal control structure and also provide information to determine the inspection procedures that should be completed in assessing internal controls for particular functions and activities and for the bank holding company overall. When conducting this review, examiners should evaluate the independence and competence of the personnel conducting control assessments and the effectiveness of the assessment program in covering the bank holding company's significant activities and risks. In addition, examiners should meet with the internal auditors or other personnel responsible for evaluating internal controls. Examiners should review internal control risk assessments, work plans, reports, workpapers, and related communications with the audit committee or board of directors.

Depending on the size and complexity of the activities conducted by a bank holding company, the examiner should also consider conducting a similar review of the work performed by the company's external auditors. Such a review often provides added insight into key risk areas by detailing the nature and extent of the external auditors' testing of those areas.

2124.0.2.5 Evaluation of Overall Risk-Management Process

To highlight the importance of a banking organization's risk-management process, bank holding companies are assigned a risk-management rating on a five-point scale as a significant part of the evaluation of the management components of the bank holding company RFI/C(D) rating system. (See section 4070.0.) In addition, U.S. branches and agencies of foreign banking organizations are assigned a similar rating under the ROCA rating system.[3] These risk-management ratings encompass evaluations of the quality of risk-management processes for all significant activities and all types of risks. As such, they should largely summarize conclusions on the adequacy of risk-management processes for each individual function or activity evaluated.

In assigning risk-management ratings, it is important that examiners consider the quality of the risk-management process for the bank holding company overall, as well as for each individual function. At smaller bank holding companies engaged in traditional banking and nonbanking activities, relatively basic risk-management processes established for each significant activity, such as lending or asset-liability management, may be adequate to allow senior management to effectively manage the organization's overall risk profile. On the other hand, at larger bank holding companies that are typically engaged in more-complex and widely diversified activities, effective risk-management systems must evaluate various functional management processes in combination so that aggregate risk exposures can be identified and monitored by senior management. Management information reports should typically be generated for the overall organization, as well as for individual functional areas. Some aggregate or specific company-wide limits may also be needed for the principal types of risks that are relevant to the company's activities.

A critical aspect of ensuring that a bank holding company's risk-management and control procedures remain adequate is the ongoing testing of the strength and integrity of these procedures and the extent to which the procedures are understood and followed throughout the organization. When assigning a risk-management rating, examiners should assess the adequacy of the company's efforts to ensure that its procedures are being followed. The company's validation efforts must be conducted by individuals who have proper levels of organizational independence and expertise, such as internal or external auditors, internal risk-management units, or managers or other professionals of the bank holding company who have no direct connection to the activities for which procedures are being assessed.

3. U.S. branches and agencies of foreign banking organizations are assigned separate ROCA ratings for risk management, operational controls, compliance, and asset quality, under guidance included in SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

2124.0.2.6 Evaluation of Compliance with Laws and Regulations

Compliance with relevant laws and regulations should be assessed at every inspection. The steps taken to complete these assessments, however, will vary depending on the circumstances of the bank holding company being reviewed. When an organization has a history of satisfactory compliance with relevant laws and regulations or an effective compliance function, only a relatively limited degree of transaction testing need be conducted to assess compliance. For example, when evaluating compliance with the appraisal requirements of Regulation Y at a bank holding company with a formal compliance function, compliance may be ascertained by reviewing the scope and findings of internal and external audit activities, evaluating the internal appraisal-ordering and -review processes, and sampling a selection of appraisals for compliance, as part of the supervisory loan-review process. On the other hand, at bank holding companies that have a less satisfactory compliance record or that lack a compliance function, more appraisals would naturally need to be tested to assess the overall compliance with the appraisal requirements of Regulation Y.

2124.0.2.7 Documentation of Supervisory Findings

The examiners' workpaper documentation of supervisory findings is necessary for Reserve Bank management to objectively verify the inspection work performed. Such documentation also provides a source of information on the condition and prospects of a bank holding company that is invaluable for planning future reviews. Most important, examiners' workpaper documentation provides support for the conclusions and recommendations detailed in the inspection report.

2124.0.2.8 Communication of Supervisory Findings

Effective and open communication between bank supervisory agencies and the board of directors and management of bank holding companies is essential to ensuring that the results of inspections are fully understood; the directorship and management are aware of any identified deficiencies; and, when necessary, they take appropriate corrective actions.

2124.0.3 INSPECTION OBJECTIVES

1. To ensure that the bank holding company has in place the processes necessary to identify, measure, monitor, and control its risk exposures for each of its activities or functions.
2. To improve inspection efficiencies by stressing increased in-office planning of inspections, using a risk-focused emphasis.
3. To identify and assess significant on- and off-balance-sheet activities and the greatest types and quantities of risk exposures and vulnerabilities to the bank holding company, tailoring the extent of transaction testing to the results of this review and other inspections' findings.
4. To review and assess the effectiveness and adequacy of documentation of the bank holding company's control and assessment activities and arrangements, including its internal control structure, and the qualifications of internal and external auditors and other independent personnel involved in the program.
5. To emphasize the preparation of a risk-focused scope memorandum that is tailored to the size and complexity of the bank holding company under inspection.
6. To evaluate compliance with laws and regulations.
7. To adequately document and communicate inspection supervisory findings, recommendations, and conclusions.

2124.0.4 INSPECTION PROCEDURES

1. Identify the significant on- and off-balance-sheet activities of the bank holding company.
   a. Review prior inspection reports and workpapers, surveillance and monitoring reports generated by the Board and Reserve Bank staff, Uniform Bank Performance Reports and Bank Holding Company Performance Reports, regulatory reports (for example, bank Call Reports and FR Y-series and other FFIEC reports), and other relevant supervisory materials.
   b. Review strategic plans and budgets; internal management reports; board of directors information packages; correspondence and minutes, including minutes of meetings held between the bank holding company and the Reserve Bank; annual reports and quarterly SEC filings; press releases and published news stories; and stock analysts' reports.

2. Hold periodic discussions with management to gain insight into recently adopted strategies or plans to change activities or management processes.
3. Once the significant activities have been identified, determine and analyze the types (for example, credit, market, liquidity, operational, legal, and reputational) and quantities of risks to which those activities expose the bank holding company, placing greater inspection emphasis on the high-risk areas.
4. Develop an assessment of the processes that are used to identify, measure, monitor, and control the risks. Focus on the extent of board and senior management oversight; the adequacy of policies, procedures, limits, risk-measurement, risk-monitoring, and management information systems; and the existence of adequately documented internal audits and controls.
5. Prepare a scope memorandum tailored to the size and complexity of the bank holding company under inspection.
6. Conduct limited tests of the integrity of the risk-management system. Conduct more-extensive transaction testing for those areas of a bank holding company that are very significant compared with other areas, adjusting the level of transaction testing to the quality of internal risk-management processes. If initial inquiries or efforts to verify the system raise material doubts as to its effectiveness, place no reliance on the integrity of the bank holding company's risk-management system and conduct more-extensive transaction testing.
7. Review the bank holding company's risk-assessment control activities, including an assessment of internal controls for particular functions and activities and for the bank holding company overall.
   a. Evaluate the independence and competence of the personnel conducting control assessments and the effectiveness of the assessment program in covering the bank holding company's significant activities and risks.
   b. Meet the independent external and internal auditors and other personnel responsible for evaluating internal controls and review the internal control risk assessments, work plans, reports, workpapers, and related communications with the audit committee or the board of directors.
8. Assess the adequacy of efforts to ensure that the current risk-management and control procedures are being followed.
9. Assess compliance with laws and regulations, adjusting the extent of transaction testing with the organization's history of satisfactory compliance.
10. Document all work performed and the supervisory findings. Include information on the condition and prospects of the bank holding company and its significant subsidiaries, as well as the inspection's conclusions and recommendations.

2124.0.5 APPENDIX A—DEFINITIONS OF RISK TYPES EVALUATED AT INSPECTIONS

1. *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
2. *Market risk* is the risk to a bank holding company's condition resulting from adverse movements in market rates or prices, such as interest rates, foreign-exchange rates, or equity prices.
3. *Liquidity risk* is the potential that a bank holding company will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions ("market liquidity risk").
4. *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.
5. *Legal risk* arises from the potential that unenforceable contracts, lawsuits, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a bank holding company.
6. *Reputational risk* is the potential that negative publicity on a bank holding company's business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions.

What's New In This Revised Section

Effective July 2014, this section was revised to include Appendix B — Managing Foreign Exchange Settlement Risks for Physically Settled Transactions. See SR-13-24. This guidance sets forth seven principles or "guidelines" for managing foreign exchange transaction settlement risks. The Federal Reserve supports these principles as part of its continuing effort to promote the global financial system's ability to withstand severe market disruptions. Institutions covered by SR-13-24 should apply the seven guidelines to their foreign exchange activities with the stated clarifications regarding application of the guidance in the United States.

The Federal Reserve adopted a new framework for the consolidated supervision of large financial institutions on December 17, 2012.[1] The framework strengthens traditional microprudential supervision and regulation to enhance the safety and soundness of individual firms. It also incorporates macroprudential considerations to reduce potential threats to the stability of the financial system and to provide insights into financial market trends. The consolidated supervision framework has two primary objectives:

- *Enhancing resiliency of a firm to lower the probability of its failure or inability to serve as a financial intermediary.*
  Each firm is expected to ensure that the consolidated organization (or the combined U.S. operations in the case of foreign banking organizations) and its core business lines[2] can survive under a broad range of internal or external stresses. This requires financial resilience by maintaining sufficient capital and liquidity, and operational resilience by maintaining effective corporate governance, risk management, and recovery planning.
- *Reducing the impact on the financial system and the broader economy in the event of a firm's failure or material weakness.*
  Each firm is expected to ensure the sustainability of its critical operations[3] and banking offices[4] under a broad range of internal or external stresses. This requires, among other things, effective resolution planning that addresses the complexity and the interconnectivity of the firm's operations.

These objectives are consistent with key provisions of the 2010 Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). These provisions include enhanced prudential standards, which provide the Federal Reserve with the flexibility to tailor the application of these standards to individual firms or groups of firms.[5] (See SR-12-17/CA-12-14 and the supplemental guidance in SR-13-23.)

2124.05.1 FRAMEWORK APPLICABILITY

The new framework is designed to support a tailored supervisory approach that accounts for the unique risk characteristics of each firm, including the nature and degree of potential systemic risks inherent in a firm's activities and operations, as well as broader trends across firms. This framework applies to the following institutions:

- *Large Institution Supervision Coordinating Committee (LISCC) firms:* the largest, most complex U.S. and foreign financial organizations subject to consolidated supervision by the Federal Reserve. Nonbank financial companies designated by the Financial Stability Oversight Council (FSOC) for supervision by the Federal Reserve are included in the LISCC portfolio. LISCC firms are considered to pose the greatest systemic risk to the U.S. economy.
  The LISCC is a multidisciplinary body that

1. The previous framework, SR-99-15, "Risk-Focused Supervision of Large Complex Banking Organizations," is superseded. In addition, for the firms described in subsection 2124.05.1, "Framework Applicability," the framework for consolidated supervision set forth in SR-08-9/CA-08-12, "Consolidated Supervision of Bank Holding Companies and the Combined U.S. Operations of Foreign Banking Organizations," is no longer applicable.
2. "Core business lines" are those business lines (including associated operations, services, functions, and support) that, in the firm's view, upon failure would result in a material loss of revenue, profit, or franchise value.
3. "Critical operations" are those operations (including associated services, functions, and support) that if they were to fail or be discontinued could pose a threat to the financial stability of the United States.
4. "Banking offices" are defined as U.S. depository institution subsidiaries, as well as the U.S. branches and agencies of foreign banking organizations.
5. 12 U.S.C. 5365 and 12 U.S.C. 5365(a)(2).

oversees supervision and evaluates conditions of supervised firms. The committee also develops cross-firm perspectives and monitors interconnectedness and common practices that could lead to greater systemic risk.

- *Large Banking Organizations (LBOs):* domestic bank and savings and loan holding companies with consolidated assets of $50 billion or more that are not included in the LISCC portfolio.
- *Large Foreign Banking Organizations (Large FBOs):* foreign banking organizations with combined assets of U.S. operations of $50 billion or more that are not included in the LISCC portfolio.

In certain instances, the framework applies to the intermediate holding company that is the primary focus of regulations and supervisory activities for the consolidated entity.

2124.05.2 FRAMEWORK OVERVIEW

The supervisory framework comprises the framework's sections' A, B, and C. Sections A and B specifies the Federal Reserve's expectations across the following core areas of supervisory focus:

A. Enhancing Resiliency of a Firm
   (1) Capital and Liquidity Planning and Positions
   (2) Corporate Governance
   (3) Recovery Planning
   (4) Management of Core Business Lines
B. Reducing the Impact of a Firm's Failure
   (1) Management of Critical Operations
   (2) Support for Banking Offices
   (3) Resolution Planning
   (4) Additional Macroprudential Supervisory Approaches to Address Risks to Financial Stability
C. Conduct of Supervisory Activities

The Federal Reserve may periodically identify additional supervisory priorities beyond these core areas of focus as necessary to enhance firm-specific supervision and develop cross-firm perspectives.

Subsection 2124.05.5, "Conduct of Supervisory Activities," (framework section C) outlines the conduct of supervisory activities used to maintain a comprehensive understanding and assessment of each firm. Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other bank supervisors and functional regulators. The Federal Reserve generally relies to the fullest extent possible on the information and assessments provided by other supervisors and regulators to support effective supervision. Supervisory agencies engaged in the supervision of large financial institutions continue to enhance formal and informal discussions to jointly identify and address key vulnerabilities, and to coordinate supervisory strategies for these firms.

As a general matter, this framework is applicable in circumstances when the consolidated organization and its banking offices are in at least satisfactory condition and there are no material weaknesses or risks across these core areas of supervisory focus. The Federal Reserve applies additional supervisory expectations, and undertakes related activities, to address identified concerns including areas subject to formal or informal enforcement action.

2124.05.3 ENHANCING RESILIENCY OF A FIRM

2124.05.3.1 Capital and Liquidity Planning and Positions

The financial crisis demonstrated the need for stronger regulatory and supervisory assessments of firms' financial resiliency.[6] The Federal Reserve noted significant weaknesses in the adequacy of firms' point-in-time regulatory capital to cover accumulated and prospective risks, as well as in firms' liquidity buffers and risk-management practices.[7] These weaknesses contributed to the failure or near failure of many financial firms and exacerbated the crisis. To support effective capital and liquidity planning, and the adequacy of capital and liquidity positions, each firm should:

a) Maintain strong capital and liquidity positions that not only comply with regulatory requirements, but also support the firm's ongoing ability to meet its obligations to creditors and other counterparties, as well as

6. See the Board's final rule on capital plan requirements for large bank holding companies (76 Fed. Reg. 74631, December 1, 2011); SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management" (75 *Fed. Reg.* 13656, March 22, 2010); and section 4066.0 of this manual.

7. The capital components of this framework, including those related to stress testing, will apply to savings and loan holding companies after they become subject to minimum regulatory capital requirements.

continue to serve as a financial intermediary through periods of stress.

b) Have in place robust internal processes that enable the firm to maintain capital and liquidity commensurate with its unique risks under normal and stressful conditions, and to provide timely restoration of financial buffers in the event of drawdown.

c) Maintain processes that enable the identification and measurement of potential risks to asset quality, earnings, cash flows, and other primary determinants of capital and liquidity positions.

d) Utilize comprehensive projections of the level and composition of capital and liquidity resources, supported by rigorous and regular stress testing to assess the potential impact of a broad range of expected and potentially adverse scenarios.

e) Maintain sound risk measurement and modeling capabilities, supported by comprehensive data collection and analysis, independent validation, and effective governance, policies, and controls.[8]

f) Establish goals for capital and liquidity positions that are approved by the firm's board of directors and reflect the potential impact of legal or regulatory restrictions on the transfer of capital or liquidity between legal entities.

g) Maintain independent internal audit and other review functions with appropriate staff expertise, experience, and stature in the organization to monitor the adequacy of capital and liquidity risk measurement and management processes.

2124.05.3.2 Corporate Governance

In order for a firm to be sustainable under a broad range of economic, operational, legal or other stresses, its board of directors (or equivalent for the U.S. operations of FBOs) should provide effective corporate governance with the support of senior management. The board is expected to establish and maintain the firm's culture, incentives, structure, and processes that promote its compliance with laws, regulations, and supervisory guidance. Each firm's board of directors and committees, with support from senior management, should:

a) Maintain a clearly articulated corporate strategy and institutional risk appetite. The board should set direction and oversight for revenue and profit generation, risk management and control functions, and other areas essential to sustaining the consolidated organization.

b) Ensure that the firm's senior management has the expertise and level of involvement required to manage the firm's core business lines, critical operations, banking offices, and other material entities.[9] These areas should receive sufficient operational support to remain in a safe and sound condition under a broad range of stressed conditions.

c) Maintain a corporate culture that emphasizes the importance of compliance with laws and regulations and consumer protection, as well as the avoidance of conflicts of interest and the management of reputational and legal risks.

d) Ensure the organization's internal audit, corporate compliance, and risk management and internal control functions are effective and independent, with demonstrated influence over business-line decision making that is not marginalized by a focus on short-term revenue generation over longer-term sustainability.[10]

e) Assign senior managers with the responsibility for ensuring that investments across business lines and operations align with corporate strategies, and that compensation arrangements and other incentives are consistent with the corporate culture and institutional risk appetite.[11]

f) Ensure that management information systems (MIS) support the responsibilities of the board of directors to oversee the firm's core business lines, critical operations, and other core areas of supervisory focus.

2124.05.3.3 Recovery Planning

Robust recovery planning is central to ensuring the ongoing resiliency of a firm's consolidated operations as well as its core business lines, critical operations, banking offices, and other material entities. Each firm should plan for potential financial or operational weaknesses

8. See SR-11-7, and section 2126.0 of this manual.

9. "Material entities" are subsidiaries or foreign offices of the firm that are significant to the activities of a core business line or critical operation.

10. See SR-08-8/CA-08-11, and section 2124.07 of this manual.

11. Refer to "Guidance on Sound Incentive Compensation Policies" (75 Fed. Reg. 36395, June 25, 2010) and section 2068.0 of this manual.

and identify actions to correct those weaknesses. Therefore, each firm should:

a) Maintain clearly documented quantitative and qualitative criteria that would trigger timely implementation of specific elements of the firm's recovery plan and provide for more rigorous remediation activities if initial actions prove insufficient.
b) Ensure that trigger events reflect a sufficiently broad range of market- and firm-specific stresses across financial, operational, reputational, legal, and compliance risks.
c) Ensure that recovery planning reflects a holistic view of sustainability and resiliency. Recovery planning should be closely integrated with resolution planning, capital and liquidity planning, and other aspects of financial contingency, crisis management, and business continuity planning.[12]
d) Undertake recovery testing and training exercises that consider a broad range of internal and external risk scenarios and account for interconnectivities across operations and legal entities.
e) Ensure that the recovery plan is updated as needed, and reflects lessons learned from reviews of trigger events, testing, and training exercises.
f) Ensure that recovery planning is sufficiently integrated into corporate governance structures and processes, subject to independent validation, and effectively supported by related MIS reporting to the board and its committees.

2124.05.3.4 Management of Core Business Lines

Effective management of core business lines is essential to ensuring the resilience of the consolidated organization, as these activities are the primary drivers of the firm's revenue generation, profitability, and franchise value. For this reason, a firm's corporate governance should extend (as discussed in subsection 2124.05.3.2, "Corporate Governance" (*framework section A.2*)) to the management of each core business line. Each core business line should have:

- Business-line senior management with qualifications and experience commensurate with the size and complexity of related activities and operations;
- A strategic planning process that ensures areas of growth and innovation are effectively managed;
- Appropriate compensation and other incentives that are consistent with the institutional risk appetite and in compliance with laws and regulations;
- An independent and strong risk-management framework that supports identification, measurement, assessment, and control of the full spectrum of risks; and
- Timely identification and resolution of audit, compliance, and regulatory issues

2124.05.4 REDUCING THE IMPACT OF A FIRM'S FAILURE

2124.05.4.1 Management of Critical Operations

The failure or discontinuance of any of a firm's critical operations could weaken the U.S. economy or pose a threat to the financial stability of the United States. Each of the supervisory expectations outlined around management of core business lines (see subsection 2124.05.3.4, "Management of Core Business Lines" (*framework section A.4*)) applies equally to management of critical operations to ensure their financial and operational resilience. Additionally, each firm should ensure that critical operations are sufficiently resilient to be maintained, continued, and funded even in the event of failure or material financial or operational distress. These expectations should be fully reflected in recovery and resolution planning.

2124.05.4.2 Support for Banking Offices

The Federal Reserve's consolidated supervision program has historically focused on protecting the safety and soundness of U.S. depository institution subsidiaries of bank holding companies and the U.S. branches and agencies of foreign banking organizations (collectively defined as banking offices). This is due to the risks posed by banking offices' access to the federal safety net. Specifically, these offices pose risks to the payment system, the Federal Reserve's discount window, and—in the case of most U.S. depository institutions—federal deposit insurance funds.

12. Business continuity expectations include adherence with expectations set forth in SR-03-9, including the geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

A consolidated organization should serve as a source of financial and managerial strength to its banking offices. The activities of the parent company and affiliated nondepository subsidiaries should not present material risks to affiliated banking offices, the consolidated organization itself, or to the consolidated organization's ability to support its banking offices.[13] Each firm should:

a) Provide for the strength and resiliency of its banking offices, ensuring prompt financial and operational support so that each office remains in a safe and sound condition under a broad range of stressed conditions.
b) Ensure that the activities of the parent company and nondepository institution subsidiaries do not present undue direct or indirect risks to the safety and soundness of banking offices. This includes the transmission of financial, operational, legal, compliance, or reputational risks that may undermine public confidence in the financial strength of its banking offices.
c) Maintain sufficient liquidity, cash flow, and capital strength at the parent company and nondepository institution subsidiaries to service debt obligations and cover fixed charges. The parent company needs to consider whether there are any legal or regulatory restrictions on financial transfers between legal entities within the organization.
d) Implement and maintain effective policies, procedures, and systems to ensure compliance with applicable laws and regulations. This includes compliance with respect to covered transactions subject to the Board's Regulation W, which implements sections 23A and 23B of the Federal Reserve Act and limits a bank's transactions with its affiliates.[14]

13. Due to structural differences, there are important distinctions in the forms of support provided to U.S. depository institution subsidiaries versus those provided to the U.S. branches and agencies of foreign banks. For example, branches/agencies do not hold capital and have differing business and liquidity profiles, governance mechanisms, and regulatory requirements than depository institutions. Therefore, the Federal Reserve will consider these differences in its implementation of this supervisory framework for the U.S. branches and agencies of FBOs, and expects parent FBOs and their U.S. branches and agencies to do the same. The extent of supervisory activity undertaken to assess the adequacy of parent company support for U.S branches and agencies of FBOs is scaled to the condition, size, and interconnectedness of these offices.

14. See SR-03-2, and section 2020.1 of this manual.

2124.05.4.3 Resolution Planning

To promote financial stability, the Dodd-Frank Act requires each bank holding company with consolidated assets of $50 billion or more, as well as nonbank financial companies designated by the FSOC, to develop and maintain plans for rapid and orderly resolution in the event of material financial distress or failure. These plans should be utilized as an element of the firm's strategic planning and address the complexity and interconnectivity of the firm's operations.[15]

The Federal Reserve and the FDIC jointly review a firm's resolution plan relative to supervisory requirements, including:

a) The firm's strategic analysis describing its plans for rapid and orderly resolution under the U.S. Bankruptcy Code (or other relevant insolvency regimes). This strategy must not pose systemic risk and must exclude reliance on extraordinary support from the United States or any other government to prevent failure of the firm.
b) The firm's strategy for maintaining and funding material entities, critical operations, and core business lines in the event of material financial distress.
c) Analysis of potential impediments to resolution, and actions to make the firm more resolvable or otherwise reduce its complexity and interconnectivity.
d) Analysis of whether the failure of a major counterparty would likely result in the material financial distress or failure of the firm.
e) The manner and extent to which an insured depository subsidiary is adequately protected from risks arising from the activities of nondepository subsidiaries.
f) For a U.S. firm with foreign operations, its strategy for addressing the risks arising from these foreign operations to its U.S. operations, and its ability to maintain core business lines and critical operations in foreign jurisdictions.
g) Analysis of whether resolution planning is sufficiently integrated into corporate governance structures and processes, subject to independent validation, and effectively supported by related MIS reporting to the board of directors and its committees.

15. Refer to 12 C.F.R. 243 (Federal Reserve) and 12 C.F.R. 381 (FDIC) for the "Resolution Plans Required" regulations. See also, 76 *Fed. Reg.* 67323, November 1, 2011.

2125.05.4.4 Additional Macroprudential Supervisory Approaches to Address Risks to Financial Stability

The financial crisis demonstrated that too narrow a focus on the safety and soundness of individual firms can result in a failure to detect and address emerging threats to financial stability that arise across many firms. The Dodd-Frank Act requires the Federal Reserve to consider the broader risks to financial stability posed by individual companies and through the interconnectedness among these companies. See section 1040.0.3 of this manual.

The Federal Reserve aims to reduce systemic risks by increasing the capacity of firms and markets to absorb shocks when problems occur, and by reducing potential costs in the event of financial distress or failure of a systemically important institution. Supervision carried out under this framework will support a variety of macroprudential supervisory approaches beyond those already discussed, including:

a) Using insights developed through microprudential supervision and related data collection and analysis to identify, understand, and assess potential systemic risks. Areas of review could include, for example, emerging trends in critical operations, interconnectedness, rapidly expanding markets, cyclical industries, and financial products lacking substitutes or effecting large market segments.
b) Identifying potential risks to financial stability indicated by the information in supervisory stress tests and through trends in scenarios employed by firms in their internal stress tests.
c) Using comparative and aggregate analysis to monitor industry practices, common investment or funding strategies, changes in degree or form of financial interconnectedness, or other developments with implications for financial stability.
d) Coordinating with the Federal Reserve's supervision of systemically important financial market utilities to identify and address risks related to payment, clearing, and settlement activities, as well as to identify potential structural vulnerabilities.
e) Working closely with the FSOC and other regulators and supervisors to support the designation and supervision of systemically important nonbank firms, and to enhance the monitoring of systemic risk.
f) Enhancing international coordination with foreign counterparts, including national supervisors and international bodies such as the Basel Committee on Bank Supervision, the Financial Stability Board, and the Senior Supervisors Group. These activities focus on enhancing oversight of internationally active financial firms and markets and on minimizing the opportunities for firms to take advantage of weaker or inconsistent regulations.

2124.05.5 CONDUCT OF SUPERVISORY ACTIVITIES

The Federal Reserve uses a range of supervisory activities to maintain a comprehensive understanding and assessment of each firm, including:

a) Coordinated horizontal reviews involve examination of several institutions simultaneously, encompassing firm-specific supervision and the development of cross-firm perspectives. The Federal Reserve recognizes the priority of these reviews through the dedication of multidisciplinary skills and experienced staff. Examples include analysis of capital adequacy and planning via the Comprehensive Capital Analysis and Review (CCAR), as well as horizontal evaluations of resolution plans and incentive compensation practices.
b) Firm-specific examination and continuous monitoring activities[16] are undertaken to maintain an understanding and assessment across the core areas of supervisory focus for each firm. These activities include review and assessment of changes in strategy, inherent risks, control processes, and key personnel, and follow-up on previously identified concerns (for example, areas subject to enforcement actions or other supervisory issues, or emerging vulnerabilities).
c) In developing and executing a detailed supervisory plan for each firm, the Federal Reserve generally relies to the fullest extent possible on the information and assessments provided by other relevant supervisors and functional regulators. The Federal Reserve

16. "Continuous monitoring activities" include meetings with a banking organization's management; analysis of internal MIS reports, market indicators, and other internal and external information; review of internal and external audit findings; and coordination with other relevant supervisors and functional regulators and utilization of their work as appropriate.

actively participates in interagency information sharing and coordination, consistent with applicable laws, to promote comprehensive and effective supervision and limit unnecessary duplication of information requests. Supervisory agencies continue to enhance formal and informal discussions to jointly identify and address key vulnerabilities, and to coordinate supervisory strategies for large financial institutions.

d) In certain instances, supervisors may be able to rely on a firm's internal audit or internal control functions in developing a comprehensive understanding and assessment.

2124.05.6 APPENDIX A

2124.05.6.1 Risk Transfer Considerations When Assessing Capital Adequacy

The following discussion, SR-13-23, provides supplemental guidance to SR-12-17/CA letter 12-14 pertaining to its supervisory focus on an institution's capital adequacy and liquidity sufficiency. The supplemental guidance centers on how certain risk transfer transactions affect assessments of capital adequacy at large financial institutions (hereafter referred to as firms).[17] It provides clarification on supervisory expectations when assessing a firm's capital adequacy in certain circumstances when the risk-based capital framework may not fully capture the residual risks of a transaction.[18]

Risk mitigation techniques can reduce a firm's level of risk. In general, the Federal Reserve views a firm's engagement in risk-reducing transactions as a sound risk-management practice. There are, however, certain risk-reducing transactions for which the risk-based capital framework may not fully capture the residual risks that a firm faces on a post-transaction basis. As a result of inquiries and discussions with market participants, the Federal Reserve has identified specific characteristics of risk transfer transactions that give rise to this concern and on which further guidance is needed, including cases in which

- A firm transfers the risk of a portfolio to a counterparty (which may be a thinly capitalized special purpose vehicle (SPV)) that is unable to absorb losses equal to the risk-based capital requirement for the risk transferred; or
- A firm transfers the risk of a portfolio to an unconsolidated, "sponsored" affiliate entity of the firm (which also may be an SPV).

In cases involving unaffiliated counterparties, while the transactions may result in a significant reduction in a firm's risk-weighted assets and associated capital requirements under the regulatory capital framework, the firm may nonetheless face residual risks. These residual risks arise because the effectiveness of a firm's hedge involving a thinly capitalized SPV counterparty would be limited to the loss absorption capacity of the SPV itself. In cases involving unconsolidated "sponsored" affiliates of the firm, the residual risk arises from the implicit obligation the sponsoring firm may have to provide support to the affiliate in times of stress. SR-13-23 addresses how the Federal Reserve supervisory staff will view such risk-reducing transactions[19] in evaluating a firm under the Board's capital plan rule and the associated annual Comprehensive Capital Analysis and Review (CCAR).[20]

In the case of a risk transfer transaction with a non-affiliated, limited-recourse SPV or other counterparty with limited loss-absorption capacity, Federal Reserve supervisory staff will evaluate the difference between the amount of capital required for the hedged exposures before the risk transfer transaction and the counterparty's loss-absorbing resources. When evaluating capital adequacy, including in the context of CCAR, supervisory staff will evaluate whether a firm holds sufficient capital in addition to its minimum regulatory capital requirements to cover this difference.[21] In addition, when a firm engages in such a risk transfer transaction, the

17. This guidance applies to large financial institutions that are domestic bank and savings and loan holding companies with consolidated assets of $50 billion or more and foreign banking organizations with combined assets of U.S. operations of $50 billion or more.

18. See 12 CFR 217. The risk-based capital framework establishes risk-based and leverage capital requirements for banking organizations, including top-tier savings and loan holding companies, except those that are substantially engaged in insurance underwriting or commercial activities. This guidance would apply to such entities at such time as risk-based and leverage capital requirements become applicable to them.

19. While the cases described are examples, the principles set forth should apply to other transactions that call into question the degree to which risk transfer has occurred.

20. See 12 CFR 225.8(d)(2)(i). For additional guidance on CCAR, refer to the Federal Reserve's website at www.federalreserve.gov/bankinforeg/ccar.htm. The capital plan rule and CCAR apply only to bank holding companies with total consolidated assets of $50 billion or more.

21. Supervisory staff may also analyze whether the counterparty has liabilities in addition to the specific risk transfer transaction.

firm should be able to demonstrate that it reflects the residual risk in its internal assessment of capital adequacy and maintains sufficient capital to address such risk. In this regard, a commitment by a third party to provide additional capital in a period of financial stress would not be counted toward the loss-absorbing capacity of the counterparty.

Example: A firm has a $100 portfolio that has a capital requirement of $8. If the firm undertakes a transaction to transfer the risk of this portfolio to an unaffiliated SPV with paid-in capital of $3, then the firm would need to be able to demonstrate that, in addition to meeting its minimum regulatory capital requirements, the firm has sufficient capital to cover the $5 difference between the SPV's capital and the capital requirement associated with the portfolio.

In the case of risk transfer to an unconsolidated, ‘‘sponsored’’ affiliated entity, the nature of the firm's relationship with the entity calls into question the degree of risk transfer in the transaction. Firms are discouraged from entering into such transactions, which generally do not involve effective risk transfer because of the sponsored entity's ongoing relationship with the firm and, as noted above, the implicit obligation that the firm may have to provide capital to the sponsored entity in a period of financial stress affecting the sponsored entity. Firms engaging in such transactions should presume for the purpose of their internal capital adequacy assessment as well as for capital planning purposes that no risk transfer has occurred.

Supervisors will strongly scrutinize risk transfer transactions that result in substantial reductions in risk-weighted assets, including in supervisors' assessment of a firm's overall capital adequacy, capital planning, and risk management through CCAR. Based on an assessment of the risks retained by the firm, the Board may in particular cases determine not to recognize a transaction as a risk mitigant for risk-based capital purposes.[22] Firms should bring these types of risk transfer transactions to the attention of their senior management and supervisors. Supervisors will evaluate whether a firm can adequately demonstrate that the firm has taken into account any residual risks in connection with the transaction.

2124.05.7 APPENDIX B—MANAGING FOREIGN EXCHANGE SETTLEMENT RISKS FOR PHYSICALLY SETTLED TRANSACTIONS

The Federal Reserve notes that the Basel Committee on Banking Supervision (Committee), with input from the Federal Reserve,[23] published ‘‘Supervisory Guidance for Managing Risks Associated with the Settlement of Foreign Exchange Transactions’’ (guidance) in February 2013. This guidance sets forth seven principles or ‘‘guidelines’’ for managing foreign exchange transaction-settlement risks. The Federal Reserve considers this guidance on foreign exchange settlement risks to be a component of its current, broad-based focus on banking institutions' foreign exchange activities.

The Federal Reserve supports these principles as part of its continuing effort to promote the global financial system's ability to withstand severe market disruptions, and has determined that the institutions subject to SR-13-24 (covered institutions)[24] should apply the seven guidelines, which are summarized below (see sections 3.1 through 3.7 of the guidance), to their foreign exchange activities, with the following clarifications regarding application of the guidance in the United States.[25]

22. See generally 12 CFR 217.1(d)(1), (d)(3), and (d)(5). In addition, under the Board's current capital adequacy guidelines for bank holding companies and state member banks (banking organizations), the Board may determine that the regulatory capital treatment for a banking organization's exposure or other relationship to an entity not consolidated on the banking organization's balance sheet is not commensurate with the actual risk relationship of the banking organization to the entity. In making this determination, the Board may require the banking organization to treat the entity as if it were consolidated onto the balance sheet of the banking organization for risk-based capital purposes and calculate the appropriate risk-based capital ratios accordingly, all as specified by the Board. See 12 CFR parts 208 and 225, Appendix A, section I.

23. This guidance applies to large financial institutions supervised by the Federal Reserve, as defined in SR-12-17/CA-12-14. This guidance does not apply to community and regional banking organizations, defined as those with less than $50 billion in total consolidated assets, unless the banking organization engages in significant foreign exchange activities.

24. While the Committee's guidance uses the term ‘‘bank,’’ for purposes of SR-13-24, ‘‘covered institutions’’ are those defined in SR-12-17/CA-12-14 as Large Institution Supervision Coordinating Committee (LISCC) firms, large banking organizations (LBOs), and U.S operations of large foreign banking Organizations (large FBOs), as well as any other banking organization that engages in significant foreign exchange activities.

25. The guidance applies to foreign exchange transactions that consist of two settlement payment flows. This includes spot transactions, forwards, swaps, deliverable options, and

- *Guideline 1—Governance.* A bank should have strong governance arrangements over its foreign exchange settlement-related risks, including a comprehensive risk-management process and active engagement by the board of directors.

  Paragraph 3.1.8 of the guidance states that the board of directors of a covered institution should oversee the management of the compliance function associated with settling foreign exchange transactions. For purposes of the application of the guidelines by covered institutions, senior management should routinely communicate significant compliance matters to the board of directors. The board of directors may choose to delegate regular oversight to a single board member or a committee of the board.
- *Guideline 2—Principal risk.* A bank should use financial market infrastructures that provide payment-versus-payment settlement to eliminate principal risk when settling foreign exchange transactions. Where payment-versus-payment settlement is not practicable, a bank should properly identify, measure, control, and reduce the size and duration of its remaining principal risk.
- *Guideline 3—Replacement-cost risk.* A bank should employ prudent risk-mitigation regimes to properly identify, measure, monitor, and control replacement-cost risk for foreign exchange transactions until settlement has been confirmed and reconciled.

  Paragraph 3.3.7 of the guidance refers to transactions with affiliates. Covered institutions are encouraged to exchange variation margin for inter-affiliate transactions as a matter of sound business practice.
- *Guideline 4—Liquidity risk.* A bank should properly identify, measure, monitor, and control its liquidity needs and risks in each currency when settling foreign exchange transactions.
- *Guideline 5—Operational risk.* A bank should properly identify, assess, monitor, and control its operational risks. A bank should ensure that its systems support appropriate risk-management controls, and have sufficient capacity, scalability, and resiliency to handle foreign exchange volumes under normal and stressed conditions.
- *Guideline 6—Legal risk.* A bank should ensure that agreements and contracts are legally enforceable for each aspect of its activities in all relevant jurisdictions.

  Paragraph 3.6.2 of the guidance states that institutions conducting business in multiple jurisdictions should identify, measure, monitor, and control for the risks arising from conflicts of laws across jurisdictions and suggests accomplishing these objectives by obtaining legal opinions from qualified internal or external counsel. The Federal Reserve does not expect a covered institution to obtain a legal opinion for every transaction; rather, management should seek legal advice that addresses standardized terms, master netting and other significant agreements, and individual transactions as appropriate.
- *Guideline 7—Capital for foreign exchange transactions.* When analyzing capital needs, a bank should consider all foreign exchange settlement-related risks, including principal risk and replacement-cost risk. A bank should ensure that sufficient capital is held against these potential exposures, as appropriate.

While the Federal Reserve acknowledges the principles set forth in section 3.7 of the guidance, and in particular that all risks related to the settlement of foreign exchange transactions should be considered in determining capital needs under the applicable capital framework, the guidance does not and is not intended to modify the calculation of regulatory capital requirements for covered institutions.

currency swaps involving exchange of principal. It excludes instruments that involve one-way settlement payments, such as non-deliverable forwards, non-deliverable options, and contracts for difference. The Federal Reserve expects that the guidance will be applied broadly by the covered institutions and notes that there may be limited instances in which an institution need not apply this guidance to an insignificant currency exposure.

Banking organizations have greatly expanded the scope, complexity, and global nature of their business activities. At the same time, compliance requirements associated with these activities have become more complex. As a result, organizations have confronted significant risk management and corporate governance challenges, particularly with respect to compliance risks that transcend business lines, legal entities, and jurisdictions of operation.[1] To address these challenges, many banking organizations have implemented or enhanced firmwide compliance risk-management programs and program oversight.

While the guiding principles of sound risk management are the same for compliance as for other types of risk, the management and oversight of compliance risk presents certain challenges. For example, quantitative limits reflecting the firm's risk appetite can be established for market and credit risks, allocated to the various business lines within the organization, and monitored by units independent of the business line. Compliance risk does not lend itself to similar processes for establishing and allocating overall risk tolerance, in part because organizations must comply with applicable rules and standards. Additionally, existing compliance risk metrics are often less meaningful in terms of aggregation and trend analysis as compared with more traditional market- and credit-risk metrics. These distinguishing characteristics of compliance risk underscore the need for a firmwide approach to compliance risk management and oversight for large, complex organizations. A firmwide compliance function that plays a key role in managing and overseeing compliance risk while promoting a strong culture of compliance across the organization is particularly important for large, complex organizations that have a number of separate business lines and legal entities that must comply with a wide range of applicable rules and standards.

The Federal Reserve strongly encourages large banking organizations with complex compliance profiles to ensure that the necessary resources are dedicated to fully implementing effective firmwide compliance risk-management programs and oversight in a timely manner.[2]

The Federal Reserve's expectations for all supervised banking organizations are consistent with the principles outlined in a paper issued in April 2005 by the Basel Committee on Banking Supervision, entitled *Compliance and the compliance function in banks* (Basel compliance paper). The principles in the Basel compliance paper have become widely recognized as global sound practices for compliance risk management and oversight, and the Federal Reserve endorses these principles. This section provides clarification as to the Federal Reserve's views regarding certain compliance risk management and oversight matters with regard to banking organizations with complex compliance profiles in the specific areas addressed within this section (see SR-08-8/CA-08-11):

1. organizations that should implement a firmwide approach to compliance risk management and oversight;
2. independence of compliance staff;
3. compliance monitoring and testing; and
4. responsibilities of boards of directors and senior management regarding compliance risk management and oversight.

2124.07.1 FIRMWIDE COMPLIANCE RISK MANAGEMENT AND OVERSIGHT

2124.07.1.1 Overview

Organizations supervised by the Federal Reserve, regardless of size and complexity, should have effective compliance risk-management programs that are appropriately tailored to the organizations' risk profiles.[3] The

1. Compliance risk is the risk of legal or regulatory sanctions, financial loss, or damage to reputation resulting from failure to comply with laws, regulations, rules, other regulatory requirements, or codes of conduct and other standards of self-regulatory organizations applicable to the banking organization (applicable rules and standards). (See, generally, *Compliance and the compliance function in banks*, Basel Committee on Banking Supervision, April 2005, www.bis.org.)

2. Effective compliance risk-management programs incorporate controls designed to maintain compliance with applicable rules and standards, including safety and soundness and consumer protection guidance issued by supervisory authorities.

3. See SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies." This letter provides general guidance on risk-management processes and internal controls for consolidated organizations and discusses the elements of a sound risk-management system. SR-95-51 states that bank

manner in which the program is implemented and the type of oversight needed for that program can vary considerably, depending upon the scope and complexity of the organization's activities, the geographic reach of the organization, and other inherent risk factors. Larger, more complex banking organizations tend to conduct a wide range of business activities that are subject to complex compliance requirements that frequently transcend business lines and legal entities and, accordingly, present risk-management and corporate governance challenges. Consequently, these organizations typically require a firmwide approach to compliance risk management and oversight that includes a corporate compliance function. In contrast, smaller, less-complex banking organizations are not generally confronted with the types of compliance risks and challenges that require a comprehensive firmwide approach to effectively manage and oversee compliance risk. The following discussion, therefore, is *not* directed at smaller, less-complex banking organizations.

Firmwide compliance risk management refers to the processes established to manage compliance risk across an entire organization, both within and across business lines, support units, legal entities, and jurisdictions of operation. This approach ensures that compliance risk management is conducted in a context broader than would take place solely within individual business lines or legal entities. The need for a firmwide approach to compliance risk management at larger, more complex banking organizations is well demonstrated in areas such as anti-money-laundering, privacy, affiliate transactions, conflicts of interest, and fair lending, where legal and regulatory requirements may apply to multiple business lines or legal entities within the banking organization. Certain other compliance risks may also warrant a firmwide risk-management approach to address similar rules and standards that apply to the organization's operations across different jurisdictions. In all such instances, compliance risk management benefits from an aggregate view of the organization's compliance risk exposure and an integrated approach to managing those risks.

holding companies should be able to assess the major risks of the consolidated organization. See also 12 CFR 208, appendix D-1, "Interagency Guidelines Establishing Standards for Safety and Soundness."

The processes established for managing compliance risk on a firmwide basis should be formalized in a compliance *program* that establishes the framework for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risks across the organization, and for providing compliance training throughout the organization. A banking organization's compliance risk-management program should be documented in the form of compliance policies and procedures and compliance risk-management standards.[4]

Firmwide compliance oversight refers to the processes established to oversee compliance risk management across the entire organization, both within and across business lines, legal entities, and jurisdictions of operation. In larger, more complex banking organizations, a key component of firmwide compliance oversight is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the implementation of the organization's firmwide compliance risk-management program, and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation. Board oversight of such functions are often carried out by the board's risk committee or a committee or subcommittee primarily dedicated to oversight of compliance.

4. Compliance policies refer to both (1) firmwide compliance policies that apply to all employees throughout the organization as they conduct their business and support activities and (2) the more detailed, business-specific policies that are further tailored to, and more specifically address, compliance risks inherent in specific business lines and jurisdictions of operation, and apply to employees conducting business and support activities for the specific business line and/or jurisdiction of operation. Compliance procedures refer to the control procedures that are designed to implement compliance policies. Compliance risk-management standards refer to policies and procedures applicable to compliance staff as they fulfill their day-to-day compliance responsibilities. Compliance standards should clearly articulate expectations regarding the processes to be followed in implementing the organization's firmwide compliance risk-management program, including the processes and criteria to be utilized in identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and in providing compliance training. Compliance standards should also clearly articulate the roles and responsibilities of the various committees, functions, and staff with compliance support and oversight responsibilities.

2124.07.1.2 Federal Reserve Supervisory Policies on Compliance Risk Management and Oversight

2124.07.1.2.1 Large Banking Organizations with Complex Compliance Profiles

Although balance sheet size is not the defining indication of a banking organization's compliance risk-management needs, experience has demonstrated that banking organizations with $50 billion or more in consolidated total assets typically have multiple legal entities that pose the type of compliance risks and challenges that call for a comprehensive firmwide approach to appropriately control compliance risk and provide effective oversight. Accordingly, such organizations should generally implement firmwide compliance risk-management programs and have a corporate compliance function.

Compliance programs at such organizations should include more robust processes for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and for providing compliance training throughout the organization in order to appropriately control the heightened level and complexity of compliance risk. The corporate compliance function should play a key role in overseeing and supporting the implementation of the compliance risk-management program and in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.[5]

2124.07.1.2.2 Large Banking Organizations with Less-Complex Compliance Profiles

In some instances, banking organizations that meet the $50 billion asset threshold may have few legal entities, may be less complex in nature, and may engage in only a very limited range of business activities. Such organizations may be able to effectively manage and oversee compliance risk without implementing a comprehensive firmwide approach. Alternatively, these organizations may choose to implement a firmwide approach whose scope is highly risk-focused on particular compliance risks that exist throughout the organization. In lieu of relying on a corporate compliance function to play a key role in providing day-to-day oversight of the compliance program, these organizations may rely on executive and management committees that are actively involved in providing ongoing corporate oversight of the compliance risk-management program. An organization that adopts this approach, however, should ensure that its compliance program incorporates controls that effectively address compliance risks that transcend business lines, legal entities, and jurisdictions of operation; that appropriate firmwide standards are established for the business lines to follow in managing compliance risk and reporting on key compliance matters; and that the organization is appropriately overseeing the implementation of its compliance risk-management program.

2124.07.1.2.3 Foreign Banking Organizations

Each foreign banking organization supervised by the Federal Reserve should implement a compliance program that is appropriately tailored to the scope, complexity, and risk profile of the organization's U.S. operations. The program should be reasonably designed to ensure that the organization's U.S. operations comply with applicable U.S. rules and standards and should establish effective controls over compliance risks that transcend business lines or legal entities. Foreign banking organizations with large, complex U.S. operations should implement compliance programs for these operations that have more robust processes for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and for providing compliance training, than would be appropriate for foreign banking organizations with smaller, less-complex U.S. operations.[6]

5. While the corporate compliance function is generally responsible for overseeing and supporting the compliance risk-management program, it is recognized that the primary responsibility for aspects of the compliance program may be assigned to other units within the organization (e.g., finance, information technology, and human resources). The corporate compliance function, therefore, may or may not have responsibility for monitoring and testing the controls over certain compliance activities embedded within these units, such as those over regulatory reporting and regulatory capital. Nevertheless, it is important that an organization's compliance program incorporates appropriate controls over these risks and that proper oversight of the management of these risks is conducted.

6. Foreign banking organizations with $50 billion or more in U.S. third-party assets will generally be considered as large banking organizations with complex compliance profiles for purposes of SR-08-8/CA-08-1, unless their U.S. activities are less complex in nature as described in subsection 2124.07.1. The Federal Reserve's views on compliance risk-management

With respect to oversight, foreign banking organizations should provide effective oversight of compliance risks within their U.S. operations, including risks that transcend business lines or legal entities. A foreign banking organization, however, has flexibility in organizing its oversight structure. Compliance oversight of U.S. activities may be conducted in a manner that is consistent with the foreign banking organization's broader compliance risk-management framework. Alternatively, a separate function may be established specifically to provide compliance oversight of the organization's U.S. operations. Regardless of the oversight structure utilized by a foreign banking organization, its established oversight mechanisms, governing policies and procedures, and supporting infrastructure for its U.S. operations should be sufficiently transparent for the Federal Reserve to assess their adequacy.

2124.07.2 INDEPENDENCE OF COMPLIANCE STAFF

Federal Reserve supervisory findings at large, complex banking organizations consistently reinforce the need for compliance staff to be appropriately independent of the business lines for which they have compliance responsibilities. Compliance independence facilitates objectivity and avoids inherent conflicts of interest that may hinder the effective implementation of a compliance program. A particular challenge for many organizations is attaining an appropriate level of independence with respect to compliance staff operating within the business lines.

The Federal Reserve does not prescribe a particular organizational structure for the compliance function. Large banking organizations with complex compliance profiles are encouraged, however, to avoid inherent conflicts of interest by ensuring that accountability exists between the corporate compliance function and compliance staff within the business lines. Such accountability would provide the corporate compliance function with ultimate authority regarding the handling of compliance matters, personnel decisions, and actions relating to compliance staff, including retaining control over the budget for, and remuneration of, all compliance staff.[7] Compliance independence should not, however, preclude compliance staff from working closely with the management and staff of the various business lines. To the contrary, compliance functions are generally more effective when strong working relationships between compliance and business line staff exist.

The Federal Reserve recognizes, however, that many large, complex banking organizations have chosen to implement an organizational structure in which compliance staff within a business line have a reporting line into the management of the business. In these circumstances, compliance staff should also have a reporting line through to the corporate compliance function with respect to compliance responsibilities. In addition, a banking organization that chooses to implement such a dual reporting structure should ensure that the following minimum standards are observed in order to minimize potential conflicts of interest associated with this approach:

1. In organizations with dual reporting-line structures, the corporate compliance function should play a key role in determining how compliance matters are handled and in personnel decisions and actions (including remuneration) affecting business-line compliance and local compliance staff, particularly senior compliance staff. Furthermore, the organization should have in place a process designed to ensure that disputes between the corporate compliance function and business-line management regarding compliance matters are resolved objectively. Under such a process, the final decision-making authority should rest either with the corporate compliance function or with a member or committee of senior management that has no business-line responsibilities.
2. Compensation and incentive programs should be carefully structured to avoid undermining the independence of compliance staff. Compliance staff should not be compensated on the basis of the financial performance of the business line. Such an arrangement creates an improper conflict of interest.
3. Banking organizations with dual reporting-line structures should implement appropriate controls and enhanced corporate oversight to identify and address issues that may arise from conflicts of interest affecting compli-

programs apply equally to the large, complex U.S. operations of foreign banking organizations.

7. The reference to all compliance staff includes corporate, business-line, and local compliance staff.

ance staff within the business lines. For example, in these circumstances, the process for providing corporate oversight of monitoring and testing activities performed by compliance staff within the business lines should be especially robust.

2124.07.3 COMPLIANCE MONITORING AND TESTING

Robust compliance monitoring and testing play a key role in identifying weaknesses in existing compliance risk-management controls and are, therefore, critical components of an effective firmwide compliance risk-management program.

2124.07.3.1 Risk Assessments and Monitoring and Testing Programs

Risk assessments are the foundation of an effective compliance monitoring and testing program. The scope and frequency of compliance monitoring and testing activities should be a function of a comprehensive assessment of the overall compliance risk associated with a particular business activity.[8] Large complex banking organizations should ensure that comprehensive risk-assessment methodologies are developed and fully implemented, and that compliance monitoring and testing activities are based upon the resulting risk assessments.

2124.07.3.2 Testing

Compliance testing is necessary to validate (1) that key assumptions, data sources, and procedures utilized in measuring and monitoring compliance risk can be relied upon on an ongoing basis and (2) in the case of transaction testing, that controls are working as intended. The testing of controls and remediation of deficiencies identified as a result of testing activities are essential to maintaining an effective internal control framework.

The scope and frequency of compliance testing activities should be based upon the assessment of the specific compliance risks associated with a particular business activity. Periodic testing of compliance controls by compliance staff is strongly encouraged as this practice tends to result in an enhanced level of compliance testing. If, however, compliance testing is performed exclusively by the internal audit function, particular care should be taken to ensure that high-risk compliance elements are not otherwise obscured by a lower overall risk rating of a broadly defined audit entity. Otherwise, the scope and frequency of audit coverage of higher-risk compliance elements tend to be insufficient.

2124.07.4 RESPONSIBILITIES OF THE BOARD OF DIRECTORS AND SENIOR MANAGEMENT

The primary responsibility for complying with applicable rules and standards rests with the individuals within the organization as they conduct their day-to-day business and support activities. Under the board's oversight, senior management, and the corporate compliance function are responsible for establishing and implementing a comprehensive and effective compliance risk-management program and oversight framework that is reasonably designed to prevent and detect compliance breaches and issues.

To achieve its objectives, a sound and effective firmwide compliance risk-management program should have the support of both the board and senior management. Both board and management should encourage ethical conduct and compliance with applicable rules and standards through the firm's culture. A strong compliance culture reinforces the principle that an organization must conduct its activities in accordance with applicable rules and standards, and encourages employees to conduct all activities in accordance with both the letter and the spirit of applicable rules and standards.

As set forth in applicable law and supervisory guidance, the board and senior management of a banking organization have different, but complementary, roles with respect to compliance risk.[9] The following discussion is intended to clarify existing Federal Reserve supervisory

8. Risk assessments should be based upon firmwide standards that establish the method for, and criteria to be utilized in, assessing risk throughout the organization. Risk assessments should take into consideration both the risk inherent in the activity and the strength and effectiveness of controls designed to mitigate the risk.

9. See, for example, the Basel compliance paper; SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 Billion"; and SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"; and the United States Sentencing

views with regard to responsibilities of the board related to compliance risk management and oversight, and to differentiate these responsibilities from those of senior management.

2124.07.4.1 Boards of Directors

The board should oversee the development of, review, approve, and periodically monitor the firm's compliance strategy and its alignment with the overall strategy of the firm.[10] The board should direct senior management on the board's information needs regarding the types of compliance risks to which the organization is exposed, any significant compliance matters, and the effectiveness of the compliance risk-management program. The board should oversee and hold senior management accountable for the effective implementation of the compliance risk-management program and for the appropriate and timely resolution of compliance issues. The board should hold senior management accountable for the implementation of performance management and compensation programs that promote sound risk management, compliance with laws, regulations, and internal standards, including for conduct.

The board should promote the stature and independence of the corporate compliance function within the organization and provide the appropriate level of resources to conduct their activities effectively.

2124.07.4.2 Senior Management

Senior management is responsible for communicating, implementing, and reinforcing the organization's compliance culture. Senior management also should implement and enforce the compliance policies and compliance risk-management standards. Senior management of the corporate compliance function should establish, support, and oversee the organization's compliance risk-management program. The corporate compliance function should report to the board, or a committee thereof, on significant compliance matters and the effectiveness of the compliance risk-management program.

Senior management should be fully capable, qualified, and properly motivated to manage the compliance risks arising from the organization's business activities. Senior management should communicate the importance of compliance across, and at all levels of, the organization through ongoing training and other means. Under board oversight, senior management should establish appropriate incentives to integrate compliance objectives into the management goals and compensation structure across the organization, and implement appropriate disciplinary actions and other measures for serious compliance and compliance risk-management failures. Senior management within the corporate compliance function and senior compliance personnel within individual business lines should have the appropriate authority, independence, and access to personnel and information within the organization, and appropriate resources to conduct their activities effectively.

Senior management of a foreign banking organization's U.S. operations should provide sufficient information to governance or control functions in its home country and should ensure that responsible senior management, including in the home country, maintain a thorough understanding of the risk and control environment governing U.S. operations. U.S. management should assess the effectiveness of established governance and control mechanisms on an ongoing basis, including processes for reporting and escalating areas of concern and implementation of corrective action as necessary.

Commission's *Federal Sentencing Guidelines Manual*, chapter eight, "Sentencing of Organizations."

10. Foreign banking organizations should ensure that, with respect to their U.S. operations, the responsibilities of the board described in this section are fulfilled in an appropriate manner through their oversight structure and risk-management framework.

The Federal Reserve utilizes risk-focused supervision frameworks for the various supervisory portfolios, based on the asset size of an institution. These frameworks incorporate a methodology to assess an organization's risks and business activities and to tailor supervisory activities to its risk profile. These frameworks aim to sharpen the focus of supervisory activities on areas that pose the greatest risk to the safety and soundness of banking organizations and on management processes to identify, measure, monitor, and control risks.[1]

The Federal Reserve recognizes that the use of information technology can greatly affect a banking organization's financial condition and operating performance.[2] With the dependency of banking organizations on the use of information technology, the Federal Reserve expects an organization's board of directors to oversee and senior management to effectively manage the risks associated with information technology. Accordingly, examiners must consider the risks associated with information technology in their evaluations of an organization's significant business activities and assess the effectiveness of the risk-management process that the organization applies to information technology. See SR-98-9, "Assessment of Information Technology in the Risk-Focused Frameworks for the Supervision of Community Banks and Large Complex Banking Organizations."

This manual section provides additional guidance for examiners on supervisory objectives—

1. highlighting the critical dependence of the financial services industry on information technology and its potential effect on safety and soundness,
2. reinforcing the concept that the risk-focused supervisory process and related products (risk assessments, supervisory plans, and scope memoranda) for an organization should address the risks associated with its use of information technology,[3] and
3. providing a basic framework and a common vocabulary to evaluate the effectiveness of processes used to manage the risks associated with information technology.

2124.1.1 CHANGING ROLE OF INFORMATION TECHNOLOGY

Financial institutions' use of information technology has evolved over time from the automation of routine transactions and preparation of financial reports to the use of artificial intelligence and online banking services. Some decision-making processes such as credit scoring and securities trading have been fully automated. Complex financial products also rely on technology because of the great use of valuation models. Moreover, technological advances in communications and connectivity have minimized geographic constraints within the industry.

While information technology enables banking organizations to carry out their activities more efficiently and effectively, information technology also can be a source of risk to the industry. The operational concerns associated with information processing, traditionally the domain of the "back office," have assumed critical importance during banking mergers and consolidations.

Banking organizations, recognizing the dependency of their operations and decision-making processes on efficient and effective use of information technology, devote significant resources to the management of their information technology resources. In large banking organizations, the positions of the chief information officer and chief technology officer have become more visible executives. In addition, managers of activities that rely on end-user computing and distributed processing systems have been assigned more direct responsibility for the information technology used in their activities. As a result, the management of the risks associated with information technology

1. The types of risk may be categorized according to those presented in the guidelines for rating risk management (that is, credit, market, liquidity, operational, legal, and reputational) or by categories defined by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, those categories may be used if all relevant types of risks are captured. See SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies."

2. Information technology refers to a business resource that is the combination of computers (hardware and software), telecommunications, and information.

3. Refer to the FFIEC IT Examination Handbook Infobase at: https://ithandbook.ffiec.gov.

should be evaluated for each significant business activity as well as for the overall organization.

Notwithstanding the move towards decentralized management of information technology, large centralized computer systems are still an integral part of the information technology on which many large banking organizations rely. This includes systems critical to the access to payments systems platforms and to the transfer and custody of securities. Similarly, with the continued growth of outsourcing, many third-party information technology service centers also perform a vital role in the banking industry. Therefore, the supervisory review of the effectiveness and reliability of the critical management information systems and third-party processors will continue to be included in the Federal Reserve's supervisory review of a firm's operational resiliency.

2124.1.2 IMPLICATIONS FOR RISK-FOCUSED SUPERVISION

The risk-focused supervisory process evolves and adapts in response to the changing role of information technology in firms' operations, with a greater emphasis being placed on an evaluation of the adequacy of a firm's information technology resources and an assessment of a firm's operational resiliency and risks to its safety and soundness. Accordingly, examiners consider information technology when developing their risk assessments and supervisory plans. Examiners are expected to exercise appropriate judgment in determining the level of review, given the characteristics, size, and business activities of the organization. Moreover, to determine the scope of supervisory activities, the general safety-and-soundness examiners and information technology specialists coordinate their risk assessment, supervisory plan, and scope of the examination or inspection. In general, examiners will

1. Develop a broad understanding of the organization's approach, strategy, and structure with regard to information technology. This requires a determination of the role and importance of information technology to the organization and any unique characteristics or issues.
2. Incorporate an analysis of information technology systems into risk assessments, supervisory plans, and scope memoranda. The analysis should include identification of critical information technology systems, related management responsibility, and the major technology components. An organization's information technology systems should be considered in relation to the size, activities, and complexity of the organization, as well as the degree of reliance on these systems.
3. Assess the organization's critical systems, that is, those that support its major business activities, and the degree of reliance those activities have on information technology systems. The level of review should be sufficient to determine that the systems are delivering the services necessary for the organization to conduct its business safely and soundly.
4. Determine whether senior management is adequately identifying, measuring, monitoring, and controlling the significant risks associated with information technology for the overall organization and its major business activities.

2124.1.3 FRAMEWORK FOR EVALUATING INFORMATION TECHNOLOGY

In order to provide a common terminology and consistent approach for evaluating the adequacy of an organization's information technology, five information technology elements are introduced and defined below. These elements may be used to evaluate the information technology processes at the functional business level or for the organization as a whole. They may also be applied to a variety of information technology management structures: centralized, decentralized, or outsourced.[4]

Although deficiencies in information technology appear to be most directly related to operational risk, information technology also can affect the other business risks (credit, market, liquidity, legal, and reputational), depending on the specific circumstances. Examiners should view the information technology elements in an integrated manner with the overall business risks of the organization or business activity; a deficiency in any one of these five elements could have a substantive adverse effect on the organization's or an activity's business risks.

4. When banking organizations outsource operations, they delegate a certain level of responsibility and authority to an outside party (depending on the contractual arrangements). However, ultimate accountability remains with the banking organization.

Moreover, the elements below do not replace or independently add to the business risks described in SR-95-51. Rather, these elements should be assessed in relation to all of the organization's business risks.

These elements are to be used as a flexible tool to facilitate discussion between the organization and examiners about the risks associated with information technology. Where an organization uses different terminology to describe information technology elements, examiners may use the organization's terminology provided the organization adequately addresses the five elements discussed below. Regardless of the terminology employed, examiners should focus on those systems and issues that are considered critical to the organization.

The five information technology elements are

1. *Management processes*. Management processes[5] encompass planning, investment, development, execution, and staffing of information technology from a corporate-wide and business-specific perspective. Management processes over information technology are effective when they are adequately and appropriately aligned with, and supportive of, the organization's mission and business objectives. Management processes include strategic planning, management and reporting hierarchy, management succession, and a regular independent review function. Examiners should determine if the information technology strategy for the business activity or organization is consistent with the organization's mission and business objectives and whether the information technology function has effective management processes to execute that strategy.
2. *Architecture*. Architecture[6] refers to the underlying design of an automated information system and its individual components. The underlying design encompasses both physical and logical architecture, including operating environments, as well as the organization of data. The individual components refer to network communications, hardware, and software, which includes operating systems, communications software, database management systems, programming languages, and desktop software. Effective architecture meets current and long-term organizational objectives, addresses capacity requirements to ensure that systems allow users to easily enter data at both normal and peak processing times, and provides satisfactory solutions to problems that arise when information is stored and processed in two or more systems that cannot be connected electronically. In assessing the adequacy of information technology architecture, examiners should consider the hardware's capability to run the software, the compatibility and integration with other systems and sources of data, the ability to upgrade to higher levels of performance and capacity, and the adequacy of controls.
3. *Integrity*. Integrity refers to the reliability, accuracy, and completeness of information delivered to the end-user. An information technology system has an effective level of integrity when the resulting information flows are accurate and complete. Insufficient integrity in an organization's systems could adversely affect day-to-day reliability, processing performance, input and output accuracy, and the ease of use of critical information. Examiners should review and consider whether the organization relies upon information system audits or independent application reviews to ensure the integrity of its systems. To assess the integrity of an organization's systems, examiners should review the reliability, accuracy, and completeness of information delivered.
4. *Security*. Security refers to the safety afforded to information assets and their data processing environments, using both physical and logical controls to achieve a level of protection commensurate with the value of the assets. Information technology has effective security when controls prevent unauthorized access; modification; destruction; or disclosure of information assets during their creation, transmission, processing, maintenance, or storage. Examiners should ensure that operating procedures and controls are commensurate with the potential for and risks associated with security breaches, which may be either physical or electronic, inadvertent or intentional, or internal or external.
5. *Availability*. Availability refers to the delivery of information to end-users. Information technology has effective availability when information is consistently delivered on a timely basis in support of business and decision-making processes. In assessing the adequacy of availability, examiners should consider the capability of information tech-

5. Also referred to as "organization" or "strategic."
6. Sometimes referred to as "infrastructure."

nology to provide information from either primary or secondary sources to the end-users, as well as the ability of back-up systems, presented in contingency plans, to mitigate business disruption. Contingency plans should set out a process for an organization to restore or replace its information-processing resources, reconstruct its information assets, and resume its business activity from disruption caused by human error or intervention, natural disaster, or infrastructure failure (including the loss of utilities and communication lines and operational failure of hardware, software, and network communications).

Appendix A provides a table with examples of situations where deficiencies in information technology elements potentially have a negative effect on the business risks of an organization. The table also provides possible actions that an organization could take in these situations to mitigate its risks. The examples in this table are representative and should not be viewed as an exhaustive list of the risks associated with information technology.

2124.1.4 ALIGNING EXAMINER STAFFING WITH THE TECHNOLOGY ENVIRONMENT

Complex computer systems are an integral part of the information technology for large organizations. Information technology processes have become embedded in the various business activities of a banking organization—particularly with the increased use of local area networks and personal computers. Many community and regional banks continue to rely on third-party information technology service providers. Therefore, the level of technical expertise needed for a particular examination or inspection will vary and should be identified during examination planning. For example, a specialist in information technology or the particular business activity may be the most appropriate person to review an institution's information technology integrity, while general safety-and-soundness examiners may be better suited to review management processes related to information technology.

Development of the overall supervisory approach for an organization requires collaboration between general safety-and-soundness examiners and information technology specialists. Accordingly, a discussion of information technology should be integrated into the supervisory process and products. That is, examiners should consider and comment on the risks associated with information technology when developing an understanding of an organization, assessing an organization's risks, and preparing a scope memorandum.

Appendix A—Examples of Information Technology Elements that Should Be Considered in Assessing Business Risks of Particular Situations

Situation	*IT elements to be considered*	*Potential effect on business risks*	*Risk mitigants*
A bank holding company expands very rapidly via acquisition into new product lines and geographic areas.	*Management processes.* Lack of clear, cohesive strategies could result in dependence on different systems that are incompatible and fragmented. *Integrity.* Unreliable information could be produced due to incompatible systems. *Availability.* Critical information may not be available to management when needed.	*Credit risk.* Exposure to less creditworthy borrowers may increase. *Liquidity risk.* Depositors may withdraw funds or close accounts due to unreliable account information. *Operational risk.* Controls may be inadequate to address the increase in manual interventions to correct incompatibility problems between affiliates' systems, leading to a greater potential for fraudulent transactions.	Develop a well-thought-out plan for integrating acquired systems, mapping data flows and sources, and ensuring reliability of systems.
A bank's consumer loan division inputs erroneous entries into the general-ledger system.	*Integrity.* Billing errors and unwarranted late-payment fees could occur due to the inaccurate loan information maintained by the system.	*Reputational risk.* Knowledge of errors could become widespread resulting in adverse public opinion. *Operational risk.* Increased expenditures may be required to resolve accounting operations problems. *Legal risk.* Litigation could arise because of errors in customer accounts due to processing deficiencies.	Improve policies and procedures related to input of accounting entries. Ensure internal audit considers system aspects of accounting operations.
Substantial turnover occurs in bank's wire-transfer department.	*Security.* Security procedures could be compromised due to inadequate training and lack of qualified personnel. *Integrity.* System may not be able to provide "real-time" funds availability.	*Operational risk.* Financial losses could occur due to fraud or incorrectly sent wire transfers. *Legal risk.* Litigation could arise as a result of errors in customer accounts and fraudulent wire transfers. *Reputational risk.* Knowledge of fraudulent or erroneous wire operations could result in adverse public opinion.	Increase and strengthen procedural and access controls for wire operations. Implement security measures such as passwords and firewalls. Develop and monitor appropriate audit trails. Provide for adequate training program and staffing levels.

Banking organizations routinely rely on third parties for a range of products, services, and other activities. The use of third parties can offer banking organizations significant benefits, such as quicker and more efficient access to technologies, human capital, delivery channels, products, services, and markets. The federal banking agencies have observed an increase in the number and type of banking organizations' third-party relationships. The use of third parties, especially those using new technologies, may present elevated risks to banking organizations and their customers, including operational, compliance, and strategic risks. Importantly, the use of third parties does not diminish or remove banking organizations' responsibilities to ensure that activities are performed in a safe and sound manner and in compliance with applicable laws and regulations.

Not all relationships present the same level of risk, and therefore not all relationships require the same level or type of oversight or risk management. As part of sound risk management, a banking organization analyzes the risks associated with each third-party relationship and tailors risk-management practices, commensurate with the banking organization's size, complexity, and risk profile and with the nature of the third-party relationship.

In 2023, the Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, and Office of the Comptroller of the Currency (collectively, "the agencies") issued guidance titled, "Interagency Guidance on Third-Party Relationships: Risk Management" ("interagency guidance").[1] The interagency guidance aims to promote consistency in the agencies' third-party risk-management guidance and to clearly articulate risk-based principles for the agencies' third-party risk management. The interagency guidance also is intended to assist banking organizations in identifying and managing risks associated with third-party relationships and in complying with applicable laws and regulations.[2]

The following resources provide more information and supervisory guidance on third-party relationships and the risk management of these relationships.

- SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management" (June 2023)
  — *Third-Party Risk Management: A Guide for Community Banks* (May 2024)
- *Community Bank Access to Innovation through Partnerships* (October 2023)
- *Conducting Due Diligence on Financial Technology Companies: A Guide for Community Banks* (October 2023)
- *Commercial Bank Examination Manual*, section 4062.1, "Risk Management of Third-Party Relationships"
- Federal Financial Institutions Examination Council (FFIEC) *Information Technology Examination Handbook*, specifically the booklet on "Outsourcing Technology Services"

1. 88 Fed. Reg. 37,920 (June 9, 2023).
2. The interagency guidance is relevant to all banking organizations supervised by the agencies. For the Federal Reserve Board, this includes state member banks, bank holding companies, savings and loan holding companies, U.S. branches and agencies of foreign banking organizations, and Edge Act and agreement corporations.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2012, this section was revised to remove references to SR-97-32, "Sound Practices Guidance for Information Security Networks" and SR-00-4, "Outsourcing of Information and Transaction Processing," which were deemed inactive by SR-12-6. A reference to inactive SR-03-12, "Revisions to the Suspicious Activity Report Form," was also removed.

2124.4.1 INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

The federal banking agencies jointly issued interagency guidelines establishing information security standards (the information security standards), which became effective July 1, 2001.[1] (See appendix A, section 2124.4.5.) The Board of Governors of the Federal Reserve System approved amendments to the standards on December 16, 2004 (effective July 1, 2005). The amended information security standards implement sections of 501 and 505 of the Gramm-Leach-Bliley Act (15 U.S.C. 6801 and 6805) and section 216 of the Fair and Accurate Credit Transactions Act of 2003 (15 U.S.C. 1681w). The Gramm-Leach-Bliley Act requires the agencies to establish information standards consisting of administrative, technical, and physical safeguards for customer records and information. (See SR-01-15.) Bank holding companies and financial holding companies must comply with the information security standards (see appendix F for Regulation Y).[2] The information security standards apply to customer information maintained by or on behalf of state member banks, bank holding companies, and the nonbank subsidiaries or affiliates of each.[3] The information security standards include standards for the proper disposal of consumer and customer information and guidance on response programs for unauthorized access to customer information. (See SR-05-23/CA-05-10.) See sections 2124.4.1.1 and 2124.4.2.

Under the information security standards, each bank holding company falling within the scope of the standards must implement a comprehensive, written information security program.[4] A bank holding company's board of directors, or an appropriate committee of the board, must oversee the company's development, implementation, and maintenance of the information security program—this board oversight includes assigning specific responsibility for the program's implementation and reviewing reports received from management. The information security program should include administrative, technical, and physical safeguards appropriate to the size and complexity of the bank holding company and the nature and scope of its activities.

While all parts of a bank holding company are not required to implement a uniform information security program and set of policies, all elements of the information security program must be coordinated. A bank holding company must ensure that each of its subsidiaries is subject to a comprehensive information security program. It may fulfill this requirement either 1) by including a subsidiary within the scope of the bank's holding company's comprehensive information security program or (2) by having the subsidiary implement a separate comprehensive information security program in accordance with the information security standards and procedures of appendix F, Regulation Y.

A bank holding company's information security program must be designed to (1) ensure the security and confidentiality of customer information,[5] (2) protect against anticipated threats

1. The 2001 information security standards were titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. See 66 *Fed. Reg.* 8,616–8,641 (February 1, 2001); 69 *Fed. Reg.* 7,610–7,621 (December 28, 2004); and Regulation H, 12 CFR 208, appendix D-2; Regulation K, 12 CFR 211.9 and 211.24; and Regulation Y, 12 CFR 225, appendix F.

2. The discussion in this section applies equally to financial holding companies and bank holding companies.

3. The information security standards do not apply to brokers, dealers, investment companies, and investment advisers, or to persons providing insurance under the applicable state insurance authority of the state in which the person is domiciled. The appropriate federal agency or state insurance authority regulates these insurance entities under sections 501 and 505 of the Gramm-Leach-Bliley Act.

4. The information security standards apply to customer information; as a result, a bank holding company that does not maintain any customer information is not subject to the information security standards. In addition, when customer information is maintained only in the banking subsidiaries or functionally regulated nonbank subsidiaries of the holding company, examiners generally may rely on the primary supervisor's assessment of the subsidiaries' information security programs, if applicable, to determine the holding company's compliance with the information security standards.

5. *Customer information* is defined to include any record, whether in paper, electronic, or other form, containing *non-*

or hazards to the security or integrity of such information, (3) protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer, and (4) ensure the proper disposal of customer information and consumer information.[6] Each bank holding company must identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems. An assessment must be made of the (1) likelihood and potential damage of these threats, taking into consideration the sensitivity of the customer information, and (2) sufficiency of policies, procedures, customer information systems, and other arrangements that are in place to control risks.

Appropriate policies, procedures, training, and testing must be implemented to manage and control identified risks. Management must also report at least annually to the board of directors or an appropriate committee of the board. Management's reports should describe the overall status of the information security program and the bank holding company's compliance with the information security standards. The reports should discuss material matters related to the BHC's information security program, addressing issues such as risk assessment, risk-management and -control decisions, service-provider arrangements, results of testing, security breaches or violations and management's responses to them, and recommendations for changes in the information security program.

The information security standards outline specific information security measures that bank holding companies must consider in implementing an information security program. A bank holding company should adopt appropriate measures to manage and control identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of its activities. The measures that a bank holding company must consider and may adopt include access controls, access restrictions, encryption of electronic customer information, dual control procedures, segregation of duties, and employee background checks for employees who have responsibilities for or access to customer information. In addition, a bank holding company must have monitoring systems and response programs and measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures. Training and testing, are critical components to implement an effective information security program. Each bank holding company must regularly test the key controls, systems, and procedures. Tests should be conducted or reviewed by independent third parties or by staff who are independent of the individuals who develop or maintain the security program.

The Federal Reserve recognizes that banking organizations are highly sensitive to the importance of safeguarding customer information and the need to maintain effective information security programs. Existing examination and inspection procedures and supervisory processes already address information security. As a result, most banking organizations may not need to implement any new controls and procedures.

Examiners should assess compliance with the information security standards during each safety-and-soundness inspection, which may include targeted reviews of information technol-

public personal information, as defined in Regulation P, about a financial institution's customer that is maintained by or on behalf of the bank holding company.

6. A *customer* is defined in the same manner in Regulation P—a consumer who has established a continuing relationship with a bank holding company, under which the bank holding company provides one or more financial products or services to the consumer to be used primarily for personal, family, or household purposes. The definition of customer does not include a business, nor does it include a consumer who has not established an ongoing relationship with the bank holding company.

ogy. Ongoing compliance with the information security standards should be monitored as needed during the risk-focused inspection process. Material instances of noncompliance should be noted in the inspection report.

Bank holding companies are required to oversee their service-provider arrangements in order to (1) protect the security of customer information maintained or processed by their service providers; (2) ensure that their service providers properly dispose of customer and consumer information; and (3) whenever warranted, monitor their service providers to confirm that a provider has satisfied its contractual obligations.

A bank holding company must use appropriate due diligence in selecting its service providers. Bank holding companies should review a potential service provider's information security program or the measures the service provider will use to protect the bank holding company's customer information.[7] All contracts must require that the service provider implement appropriate measures designed to meet the objectives of the information security standards.

When indicated by the bank holding company's risk assessment, the performance of its service providers must be monitored to confirm that they have satisfied their obligations under the information security program. A bank holding company's methods for overseeing its service providers may differ depending on the type of services, the service provider, or the level of risk to the customer information. For example, if a service provider is subject to regulations or a code of conduct that imposes a duty to protect customer information consistent with the objectives of the information security standards, a bank holding company may consider that duty in exercising its due diligence and oversight of the service provider. If a service provider hires a subservicer (that is, subcontracts), the subservicer would not be considered a "service provider" under the guidelines.

2124.4.1.1 Disposal of Customer and Consumer Information

The information security standards address standards for the proper disposal of consumer information, pursuant to sections 621 and 628 of the Fair Credit Reporting Act (15 U.S.C. 1681s and 1681w). Under section 225.4 of Regulation Y, a BHC is required to properly dispose of consumer information in accordance with 16 C.F.R. 682. To address the risks associated with identity theft, a BHC and its nonbank subsidiaries and affiliates (a financial institution) is generally required to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports.

Consumer information is defined as any record about an individual, whether in paper, electronic, or other form, that is a consumer report or is derived from a consumer report and that is maintained or otherwise possessed by or on behalf of the banking organization for a business purpose. Consumer information also means a compilation of such records.

The following are examples of consumer information:

1. a consumer report that a bank obtains
2. information from a consumer report that the bank obtains from its affiliate after the consumer has been given a notice and has elected not to opt out of that sharing
3. information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
4. information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
5. information from a consumer report that the bank obtains about an employee or prospective employee

Consumer information does not include any record that does not personally identify an individual, nor does it include the following:

1. aggregate information, such as the mean credit score, derived from a group of consumer reports
2. blind data, such as payment history on accounts that are not personally identifiable, that may be used for developing credit scoring models or for other purposes

7. A *service provider* is deemed to be a person or entity that maintains, processes, or is otherwise permitted access to customer information through its direct provision of services directly to the bank holding company.

2124.4.2 RESPONSE PROGRAMS FOR UNAUTHORIZED ACCESS TO CUSTOMER INFORMATION AND CUSTOMER NOTICE

The information security standards list measures to be included in a bank holding company's information security program. These measures include "response programs that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies."[8] A response program is the principal means for a financial institution to protect against the unauthorized "use" of customer information that could lead to "substantial harm or inconvenience" for its customer. For example, customer notification is an important tool that enables a customer to take steps to prevent identity theft, such as by arranging to have a fraud alert placed in his or her credit file.

Prompt action by both the institution and the customer following any unauthorized access to customer information is crucial to preventing or limiting damages from identity theft. As a result, every financial institution should develop and implement a response program appropriate to its size and complexity and to the nature and scope of its activities. The program should be designed to address incidents of unauthorized access to customer information.

The Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice[9] (the guidance) interprets section 501(b) of the Gramm-Leach-Bliley Act (the GLB Act) and the information security standards.[10] The guidance describes the response programs, including customer notification procedures, that a financial institution should develop and implement to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer.

8. See the information security standards, 12 CFR 225, appendix F, supplement A.

9. The guidance was jointly issued on March 23, 2005 (effective March 29, 2005), by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

10. See 12 C.F.R. 225, appendix F. The Interagency Guidelines Establishing Information Security Standards were formerly known as the Interagency Guidelines Establishing Standards for Safeguarding Customer Information.

When evaluating the adequacy of an institution's required information security program, examiners are to consider whether the institution has developed and implemented a response program equivalent to the guidance. At a minimum, an institution's response program should contain procedures for (1) assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused; (2) notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined later in the guidance; (3) immediately notifying law enforcement in situations involving federal criminal violations requiring immediate attention; (4) taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, such as by monitoring, freezing, or closing affected accounts, while preserving records and other evidence; and (5) notifying customers when warranted.

The guidance does not apply to a financial institution's foreign offices, branches, or affiliates. However, a financial institution subject to the information security standards is responsible for the security of its customer information, whether the information is maintained within or outside of the United States, such as by a service provider located outside of the United States.

The guidance also applies to customer information, meaning any record containing nonpublic personal information about a financial institution's customer, whether in paper, electronic, or other form, *that is maintained by or on behalf of the institution*.[11] (See the Board's privacy rule, Regulation P, at section 216.3(n)(2) (12 C.F.R. 216.3(n)(2).) Consequently, the guidance applies only to information that is within the control of the institution and its service providers. The guidance would not apply to information directly disclosed by a customer to a third party, for example, through a fraudulent web site.

The guidance also does not apply to information involving business or commercial accounts. Instead, the guidance applies to nonpublic personal information about a "customer" as that term is used in the information security standards, namely, a consumer who obtains a financial product or service from a financial institution to be used primarily for personal, family, or

11. See the information security standards, 12 C.F.R. 225, appendix F, section I.C.2.c.

household purposes, and who has a continuing relationship with the institution.[12]

2124.4.2.1 Response Programs

Financial institutions should take preventive measures to safeguard customer information against attempts to gain unauthorized access to the information. For example, financial institutions should place access controls on customer information systems and conduct background checks on employees who are authorized to access customer information.[13] However, every financial institution should also develop and implement a risk-based response program to address incidents of unauthorized access to customer information in customer information systems[14] that occur nonetheless. A response program should be a key part of an institution's information security program. The program should be appropriate to the size and complexity of the institution and the nature and scope of its activities.

In addition, each institution should be able to address incidents of unauthorized access to customer information in customer information systems maintained by its domestic and foreign service providers. Therefore, consistent with the obligations in the information security standards that relate to these arrangements and with existing guidance on this topic issued by the agencies, an institution's contract with its service provider should require the service provider to take appropriate actions to address incidents of unauthorized access to the financial institution's customer information. These actions include notifying the institution as soon as possible of any such incident, which enables the institution to expeditiously implement its response program.

12. See the information security standards, 12 C.F.R. 225, appendix F, at section I.C.2.b. and the Board's Privacy Rule (Regulation P), section 216.3(h) (12 C.F.R. 216.3(h)).

13. Institutions should also conduct background checks on employees to ensure that they do not violate 12 U.S.C. 1829, which prohibits an institution from hiring an individual convicted of certain criminal offenses or who is subject to a prohibition order under 12 U.S.C. 1818(e)(6).

14. Under the information security standards, an institution's *customer information systems* consist of all the methods used to access, collect, store, use, transmit, protect, or dispose of customer information, including the systems maintained by its service providers. See the information security standards, 12 C.F.R. 225, appendix F, section I.C.2.d.

2124.4.2.1.1 Components of a Response Program

At a minimum, an institution's response program should contain procedures for the following:

1. assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused
2. notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined below
3. consistent with the Suspicious Activity Report (SAR) regulations,[15] notifying appropriate law enforcement authorities, in addition to filing a timely SAR in situations involving federal criminal violations requiring immediate attention, such as when a reportable violation is ongoing
4. taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, for example, by monitoring, freezing, or closing affected accounts, while preserving records and other evidence
5. notifying customers when warranted

As noted above for the second component, a financial institution and a bank holding company are to notify its primary federal regulator of a security breach involving sensitive customer information, whether or not it notifies its customers. The banking organization experiencing such a breach should promptly notify its supervisory central point of contact at its Reserve Bank and provide information on the nature of the incident and on whether law enforcement authorities were notified or a SAR was or will be filed. When reporting security breaches involving sensitive customer information, the institution should provide the central point of contact with information on the steps taken to contain and control the incident, the

15. An institution's obligation to file a SAR is set out in the SAR regulations and supervisory guidance. See 12 C.F.R. 208.62 (state member banks); 12 C.F.R. 211.5(k) (Edge and agreement corporations); 12 C.F.R. 211.24(f) (uninsured state branches and agencies of foreign banks); and 12 C.F.R. 225.4(f) (bank holding companies and their nonbank subsidiaries). See also SR-01-11, "Identity Theft and Pretext Calling."

number of customers potentially affected, whether customer notification is warranted, and whether a service provider was involved. A banking organization should not delay providing prompt initial notification to its central point of contact. (See SR-05-23/CA-05-10.)

If an incident of unauthorized access to customer information involves customer information systems maintained by an institution's service providers, the financial institution is responsible for notifying its customers and regulator. However, an institution may authorize or contract with its service provider to notify the institution's customers or regulator on its behalf.

2124.4.2.2 Customer Notice

Financial institutions have an affirmative duty to protect their customers' information against unauthorized access or use. Notifying customers of a security incident involving the unauthorized access or use of the customer information, in accordance with the standard set forth below, is a key part of that duty.

Timely notification of customers is important to managing an institution's reputation risk. Effective notice also may reduce an institution's legal risk, assist in maintaining good customer relations, and enable the institution's customers to take steps to protect themselves against the consequences of identity theft. When customer notification is warranted, an institution may not forgo notifying its customers of an incident because the institution believes that it may be potentially embarrassed or inconvenienced by doing so.

2124.4.2.2.1 Standard for Providing Notice

When a financial institution becomes aware of an incident of unauthorized access to sensitive customer information, the institution should conduct a reasonable investigation to promptly determine the likelihood that the information has been or will be misused. If the institution determines that misuse of its information about a customer has occurred or is reasonably possible, it should notify the affected customer as soon as possible.

Customer notice may be delayed if an appropriate law enforcement agency determines that notification will interfere with a criminal investigation and provides the institution with a written request for the delay. However, the institution should notify its customers as soon as notification will no longer interfere with the investigation.

2124.4.2.2.2 Sensitive Customer Information

Under the information security standards, an institution must protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer. Substantial harm or inconvenience is most likely to result from improper access to *sensitive customer information* because this type of information is most likely to be misused, as in the commission of identity theft.

For purposes of the guidance, *sensitive customer information* means a customer's name, address, or telephone number, in conjunction with the customer's Social Security number, driver's license number, account number, credit or debit card number, or with a personal identification number or password that would permit access to the customer's account. *Sensitive customer information* also includes any combination of components of customer information that would allow someone to log on to or access the customer's account, such as a user name and password or a password and an account number.

2124.4.2.2.3 Affected Customers

If a financial institution, on the basis of its investigation, can determine from its logs or other data precisely which customers' information has been improperly accessed, it may limit notification to those customers for whom the institution determines that misuse of their information has occurred or is reasonably possible. However, there may be situations in which an institution determines that a group of files has been accessed improperly but is unable to identify which specific customers' information has been accessed. If the circumstances of the unauthorized access lead the institution to determine that misuse of the information is reasonably possible, it should notify all customers in the group.

2124.4.2.2.4 Content of Customer Notice

Customer notice should be given in a clear and conspicuous manner. The notice should describe the incident in general terms and the type of customer information that was the subject of unauthorized access or use. The notice should also generally describe what the institution has done to protect the customers' information from further unauthorized access, and include a telephone number that customers can call for further information and assistance.[16] The notice should remind customers of the need to remain vigilant over the next 12 to 24 months, and to promptly report incidents of suspected identity theft to the institution. The notice should include the following additional items, when appropriate:

1. a recommendation that the customer review account statements and immediately report any suspicious activity to the institution
2. a description of fraud alerts and an explanation of how the customer may place a fraud alert in his or her consumer reports to put the customer's creditors on notice that the customer may be a victim of fraud
3. a recommendation that the customer periodically obtain credit reports from each nationwide credit reporting agency and have information relating to fraudulent transactions deleted
4. an explanation of how the customer may obtain a credit report free of charge
5. information about the availability of the Federal Trade Commission (FTC) online guidance regarding steps consumers can take to protect themselves against identity theft (The notice should encourage the customer to report any incidents of identity theft to the FTC and should provide the FTC's web site address and toll-free telephone number that customers may use to obtain the identity theft guidance and to report suspected incidents of identity theft.)[17]

Financial institutions are encouraged to notify the nationwide consumer reporting agencies before sending notices to a large number of customers when those notices include contact information for the reporting agencies.

2124.4.2.2.5 Delivery of Customer Notice

Customer notice should be delivered in any manner designed to ensure that a customer can reasonably be expected to receive it. For example, the institution may choose to contact all affected customers by telephone, by mail, or by electronic mail in the case of customers for whom it has a valid e-mail address and who have agreed to receive communications electronically.

2124.4.3 Inspection Objective

1. To review and assess the bank holding company's compliance with the Interagency Guidelines Establishing Information Security Standards, which include standards for safeguarding customer information (the examiners should thus review the BHC's information security program, including its response program for unauthorized access to customer information and customer notice and its guidelines on the proper disposal of customer information and consumer information) and all other applicable laws, rules, and regulations.

2124.4.4 Inspection Procedures

1. Referencing the "Establishment of Information Security Standards" section of the internal control questionnaire in section 4060.4 of the System's *Commercial Bank Examination Manual,* assess the BHC's compliance with the Interagency Guidelines Establishing Information Security Standards including its standards for safeguarding customer information.
2. Conduct a review that is a sufficient basis for evaluating the BHC's overall information security program and its compliance with the information security standards.

16. The institution should, therefore, ensure that it has reasonable policies and procedures in place, including trained personnel, to respond appropriately to customer inquiries and requests for assistance.

17. The FTC web site for the ID theft brochure and the FTC hotline phone number are www.ftc.gov/bcp/consumer.shtm and 1-877-IDTHEFT. The institution may also refer customers to any materials developed pursuant to section 151(b) of the FACT Act (educational materials developed by the FTC to teach the public how to prevent identity theft).

2124.4.5 APPENDIX A—INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

Sections II and III of the information security standards are provided below. For more information, see the Interagency Guidelines Establishing Information Security Standards in Regulation Y, section 225, appendix F (12 C.F.R. 225, appendix F). The guidelines were previously titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. The information security standards were amended, effective July 1, 2005, to implement section 216 of the Fair and Accurate Credit Transactions Act of 2003 (the FACT Act). To address the risks associated with identity theft, the amendments generally require financial institutions to develop, implement, and maintain, as part of their existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports. The term *consumer information* is defined in the revised rule.

II. Standards for Safeguarding Customer Information

A. Information Security Program

Each bank holding company is to implement a comprehensive, written information security program that includes administrative, technical, and physical safeguards appropriate to the size and complexity of the bank holding company and the nature and scope of its activities. While all parts of the bank holding company are not required to implement a uniform set of policies, all elements of the information security program are to be coordinated. A bank holding company is also to ensure that each of its subsidiaries is subject to a comprehensive information security program. The bank holding company may fulfill this requirement either by including a subsidiary within the scope of the bank holding company's comprehensive information security program or by causing the subsidiary to implement a separate comprehensive information security program in accordance with the standards and procedures in sections II and III that apply to bank holding companies.

B. Objectives

A bank holding company's information security program shall be designed to—

1. ensure the security and confidentiality of customer information;
2. protect against any anticipated threats or hazards to the security or integrity of such information;
3. protect against unauthorized access to or use of such information that could result in substantial harm or inconvenience to any customer; and
4. ensure the proper disposal of customer information and consumer information.

III. Development and Implementation Of Information Security Program

A. Involve the Board of Directors

The board of directors or an appropriate committee of the board of each bank holding company is to—

1. approve the bank holding company's written information security program; and
2. oversee the development, implementation, and maintenance of the bank holding company's information security program, including assigning specific responsibility for its implementation and reviewing reports from management.

B. Assess Risk

Each bank holding company is to—

1. identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems;
2. assess the likelihood and potential damage of these threats, taking into consideration the sensitivity of customer information;
3. assess the sufficiency of policies, procedures, customer information systems, and other arrangements in place to control risks; and
4. ensure the proper disposal of customer information and consumer information.

C. Manage and Control Risk

Each bank holding company is to—

1. Design its information security program to control the identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of the bank holding company's activities. Each bank holding company must consider whether the following security measures are appropriate for the bank holding company and, if so, adopt those measures the bank holding company concludes are appropriate:
   a. access controls on customer information systems, including controls to authenticate and permit access only to authorized individuals and controls to prevent employees from providing customer information to unauthorized individuals who may seek to obtain this information through fraudulent means
   b. access restrictions at physical locations containing customer information, such as buildings, computer facilities, and records storage facilities to permit access only to authorized individuals;
   c. encryption of electronic customer information, including while in transit or in storage on networks or systems to which unauthorized individuals may have access
   d. procedures designed to ensure that customer information system modifications are consistent with the bank holding company's information security program
   e. dual control procedures, segregation of duties, and employee background checks for employees with responsibilities for or access to customer Information
   f. monitoring systems and procedures to detect actual and attempted attacks on or intrusions into customer information systems
   g. response programs that specify actions to be taken when the bank holding company suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies
   h. measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures
2. Train staff to implement the bank holding company's information security program.
3. Regularly test the key controls, systems, and procedures of the information security program. The frequency and nature of such tests should be determined by the bank holding company's risk assessment. Tests should be conducted or reviewed by independent third parties or staff independent of those that develop or maintain the security programs.
4. Develop, implement, and maintain, as part of its information security program, appropriate measures to properly dispose of customer information and consumer information in accordance with each of the requirements in this section III.

D. Oversee Service-Provider Arrangements

Each bank holding company is to—

1. exercise appropriate due diligence in selecting its service providers;
2. require its service providers by contract to implement appropriate measures designed to meet the objectives of the information security standards; and
3. where indicated by the bank holding company's risk assessment, monitor its service providers to confirm that they have satisfied their obligations with regard to the requirements for overseeing provider arrangements. As part of this monitoring, a bank holding company should review audits, summaries of test results, or other equivalent evaluations of its service providers.

E. Adjust the Program

Each bank holding company is to monitor, evaluate, and adjust, as appropriate, the information security program in light of any relevant changes in technology, the sensitivity of its customer information, internal or external threats to information, and the bank holding company's own changing business arrangements, such as mergers and acquisitions, alliances and joint ventures, outsourcing arrangements, and changes to customer information systems.

F. Report to the Board

Each bank holding company is to report to its board or an appropriate committee of the board at least annually. This report should describe the overall status of the information security program and the bank holding company's compliance with the information security standards. The reports should discuss material matters related to its program, addressing issues such as risk assessment; risk management and control decisions; service-provider arrangements; results of testing; security breaches or violations and management's responses; and recommendations for changes in the information security program.

G. Implement the Standards

For effective dates, see 12 C.F.R. 225, appendix F, section III.G.

2124.5.1 IDENTITY THEFT RED FLAGS PREVENTION PROGRAM

The federal financial institution regulatory agencies[1] and the Federal Trade Commission (FTC) have issued joint regulations and guidelines on the *detection*, *prevention*, and *mitigation* of identity theft in connection with opening of certain accounts or maintaining certain existing accounts in response to the Fair and Accurate Credit Transactions Act of 2003 (The FACT Act).[2] Under the FACT Act, bank holding companies (BHCs) and their nonbank subsidiaries are subject to the FTC's regulations.[3] These regulations require financial institutions[4] or creditors[5] that offer or maintain one or more "covered accounts" to develop and implement a written Identity Theft Prevention Program (Program). A Program is to be designed to detect, prevent, and mitigate identity theft in connection with the opening of a covered account or any existing covered account. The Program must be tailored to the entity's size, complexity, and the nature and scope of its operations and activities. The regulations also require (debit and credit) card issuers to validate notifications of changes of address under certain circumstances.

The joint final rules and guidelines were effective on January 1, 2008. The mandatory compliance date for the rules was November 1, 2008.[6] (See section 681 of the FTC's Red Flags Rule (16 CFR 681) and 72 *Fed. Reg.* 63718-63775, November 9, 2007.)

This section describes the provisions of the Red Flags Rule and its guidelines (appendix A) to be used when examining a BHC and its nonbank subsidiaries over which the Federal Reserve has supervisory authority (collectively referred to as "BHC"). (See SR-08-7/CA-08-10 and its interagency attachments.)

2124.5.1.1 Risk Assessment

Prior to the development of the Program, a financial institution or creditor must initially and then periodically conduct a risk assessment to determine whether it offers or maintains covered accounts. It must take into consideration (1) the methods it provides to open its accounts, (2) the methods it provides to access accounts, and (3) its previous experiences with identity theft. If the financial institution or creditor has covered accounts, it must evaluate its potential vulnerability to identity theft. The institution should also consider whether a reasonably foreseeable risk of identity theft may exist in connection with the accounts it offers or maintains and those that may be opened or accessed remotely, through methods that do not require face-to-face contact, such as through the Internet or telephone. Financial institutions or creditors that offer or maintain business accounts that have been the target of identity theft should factor those experiences with identity theft into their determination.

If the financial institution or creditor determines that it has covered accounts, the risk assessment will enable it to identify which of its accounts the Program must address. If a financial institution or creditor initially determines that it does *not* have covered accounts, it must periodically reassess whether it must develop and implement a Program in light of changes in the accounts that it offers or maintains.

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

2. Section 111 of the FACT Act defines "identity theft" as "a fraud committed or attempted using the identifying information of another person."

3. The FACT Act gives the Board the authority to write rules for state member banks but not BHCs. Nonetheless, the Board retains its supervisory and enforcement authority over BHCs, pursuant to section 1818 of the Federal Deposit Insurance Act. The Board and FTC Red Flags Rules are substantially the same.

4. For purposes of the rule, the term "financial institution" means a "State or National bank, a State or Federal savings and loan association, a mutual savings bank . . . or any other person that, directly or indirectly, holds a transaction account . . . belonging to a consumer."

5. Under section 111 of the FACT Act, the term "creditor" means any person (a natural person, a corporation, government or governmental subdivision, trust, estate, partnership, cooperative, or association) who regularly extends, renews, or continues credit; any person who regularly arranges for the extension, renewal, or continuation of credit; or any assignee or original creditor who participates in the decision to extend, renew, or continue credit.

6. The FTC subsequently granted a six-month delay of enforcement of its Red Flags Rule until May 1, 2009. (See www2.ftc.gov/opa/2008/10/redflags.shtm.) This delay in enforcement is limited to the Identity Theft Red Flags Rule (16 CFR 681.1), and does not extend to the rule regarding changes of address applicable to card issuers (16 C.F.R. 681.2).

2124.5.1.2 Elements of the Program

The elements of the actual Program will vary depending on the size and complexity of the financial institution or creditor. A financial institution or creditor that determines that it is required to establish and maintain an Identity Theft Prevention Program must (1) identify relevant Red Flags for its covered accounts, (2) detect the Red Flags that have been incorporated into its Program, and (3) respond appropriately to the detected Red Flags. The Red Flags are patterns, practices, or specific activities that indicate the possible existence of identity theft or the potential to lead to identity theft. A financial institution or creditor must ensure (1) that its Program is updated periodically to address the changing risks associated with its customers and their accounts and (2) the safety and soundness of the financial institution or creditor from identity theft.

2124.5.1.3 Guidelines

Each financial institution or creditor that is required to implement a written Program must consider the Guidelines for Identity Theft Detection, Prevention, and Mitigation (16 C.F.R. 681, appendix A of the rule) (the Guidelines) and include those guidelines that are appropriate in its Program. Section I of the Guidelines, "The Program," discusses a Program's design that may include, as appropriate, existing policies, procedures, and arrangements that control foreseeable risks to the institution's customers or to the safety and soundness of the financial institution or creditor from identity theft.

2124.5.1.3.1 Identification of Red Flags

A financial institution or creditor should incorporate relevant Red Flags into the Program from sources such as (1) incidents of identity theft that it has experienced, (2) methods of identity theft that have been identified as reflecting changes in identity theft risks, and (3) applicable supervisory guidance.

2124.5.1.3.2 Categories of Red Flags

Section II of the Guidelines, "Categories of Red Flags," provides some guidance in identifying relevant Red Flags.[7] A financial institution or creditor should include, as appropriate,

1. alerts, notifications, or other warnings received from consumer reporting agencies or service providers, such as fraud detection services;
2. the presentation of suspicious documents;
3. the presentation of suspicious personal identifying information, such as a suspicious address change;
4. the unusual use of, or other suspicious activity related to, a covered account; and
5. notices received from customers, victims of identity theft, law enforcement authorities, or other persons regarding possible identity theft in connection with covered accounts held by the financial institution or creditor.

The above categories do not represent a comprehensive list of all types of Red Flags that may indicate the possibility of identity theft. Institutions must also consider specific business lines and any previous exposures to identity theft. No specific Red Flag is mandatory for all financial institutions or creditors. Rather, the Program should follow the risk-based, nonprescriptive approach regarding the identification of Red Flags.

2124.5.1.3.3 Detect the Program's Red Flags

In accordance with Section III of the Guidelines, each financial institution or creditor's Program should address the detection of Red Flags in connection with the opening of covered accounts and existing covered accounts. A financial institution or creditor is required to detect, prevent, and mitigate identity theft in connection with such accounts. The policies and procedures regarding opening a covered account subject to the Program should explain how an institution could identify information about, and verify the identity of, a person opening an account.[8] In the case of existing covered accounts, institutions could authenticate customers, monitor transactions, and verify the validity of change of address requests.

7. Examples of Red Flags from each of these categories are appended as supplement A to appendix A.
8. See 31 U.S.C. 5318(l) and 31 C.F.R. 103.121.

2124.5.1.3.4 Respond Appropriately to any Detected Red Flags

A financial institution or creditor should consider precursors to identity theft to stop identity theft before it occurs. Section IV of the Guidelines, "Prevention and Mitigation," states that an institution's procedures should provide for appropriate responses to Red Flags that it has detected that are commensurate with the degree of risk posed. When determining an appropriate response, the institution should consider aggravating factors that may heighten its risk of identity theft. Such factors may include (1) a data security incident that results in unauthorized disclosures of nonpublic personal information, (2) records the institution holds or that are held by another creditor or third party, or (3) notice that the institution's customer has provided information related to its covered account to someone fraudulently claiming to represent the institution or to a fraudulent website. Appropriate responses may include the following: (1) monitoring a covered account for evidence of identity theft; (2) contacting the customer; (3) changing any passwords, security codes, or other security devices that permit access to a secured account; (4) reopening a covered account with a new account number; (5) not opening a new covered account; (6) closing an existing covered account; (7) not attempting to collect on a covered account or not selling a covered account to a debt collector; (8) notifying law enforcement; or (9) determining that no response is warranted under the particular circumstances.

2124.5.1.3.5 Periodically Updating the Program's Relevant Red Flags

Section V of the Guidelines, "Updating the Program," states that a financial institution or creditor should periodically update its Program (including its relevant Red Flags) to reflect any changes in risks to its customers or to the safety and soundness of the institution from identity theft, based on (but not limited to) factors such as

1. the experiences of the institution with identity theft,
2. changes in methods of identity theft,
3. changes in methods to detect, prevent, and mitigate identity theft,
4. changes in the types of accounts that the institution offers or maintains, and
5. changes in the institution's structure, including its mergers, acquisitions, joint ventures, and any business arrangements, such as alliances and service provider arrangements.

2124.5.1.4 Administration of Program

A financial institution or creditor that is required to implement a Program must provide for the continued oversight and administration of its Program. The following are the steps that are needed in the administration of a Red Flags Program:

1. *Obtain approval from either the institution's board of directors or any appropriate committee of the board of directors of the initial written Program;*
2. *Involve either the board of directors, a designated committee of the board of directors, or a designated senior-management-level employee in the oversight, development, implementation, and administration of the Program.*[9] This includes
   - assigning specific responsibility for the Program's implementation,
   - reviewing reports prepared by staff regarding the institution's compliance (the reports should be prepared at least annually), and
   - reviewing material changes to the Program as necessary to address changing identity theft risks.
3. *Train staff.* The financial institution or creditor must train relevant staff to effectively implement and monitor the Program. Training should be provided as changes are made to the financial institution or creditor's Program based on its periodic risk assessment.
4. *Exercise appropriate and effective oversight of service provider arrangements.* Section VI of the Guidelines, "Methods for Administering the Program," indicates a financial institution or creditor is ultimately responsible for complying with the rules and guidelines for outsourcing an activity to a third-party

9. BHC subsidiaries can use the security program developed at the holding company level. However, if subsidiary institutions choose to use a security program developed at the holding company level, the board of directors or an appropriate committee at each subsidiary institution must conduct an independent review to ensure that the program is suitable and complies with the requirements prescribed by its primary regulator.

service provider. Whenever a financial institution or creditor engages a service provider to perform an activity in connection with one or more covered accounts, the institution should ensure that the activity of the service provider is conducted in accordance with reasonable policies and procedures designed to detect, prevent, and mitigate the risk of identity theft. With regard to the institution's oversight of its Program, periodic reports from service providers are to be issued on the Program's development, implementation, and administration.

2124.5.2 INSPECTION OBJECTIVES

1. To determine if the BHC has developed, implemented, and maintained a written Program for new and existing accounts that are covered by the FACT Act and the Federal Trade Commission's rules on Fair Credit Reporting, section 681, Subpart A—Identity Theft Red Flags (16 C.F.R. 681, subpart A), which implements provisions of the FACT Act.
2. To make a determination of whether the Program is
   a. designed to detect, prevent, and mitigate identity theft in connection with the opening of a new, or an existing, covered account and if the Program includes the detection of relevant "Red Flags" and
   b. appropriate to the size and complexity of the "financial institution" or "creditor" and the nature and scope of its activities.
3. To ascertain whether the BHC assesses the validity of change of address notifications that it receives for the credit and debit cards that it has issued to customers.

2124.5.3 INSPECTION PROCEDURES

1. Verify that the BHC has determined initially, and periodically thereafter, whether it offers or maintains accounts covered by the FACT Act and section 681, Subpart A—Identity Theft Red Flags (16 C.F.R. 681, subpart A).
2. Determine if the BHC has adequately developed and maintains a written Program that is designed to detect, prevent, and monitor transactions to mitigate identity theft in connection with the opening of certain new and existing accounts covered by the FACT Act.
3. Evaluate whether the Program includes reasonable policies and procedures to
   a. identify and detect relevant Red Flags for the BHC's covered accounts and whether it incorporated those Red Flags into its Program,
   b. respond appropriately to any detected Red Flags to prevent and mitigate identity theft, and
   c. ensure that the Program is updated periodically to reflect changes in identity theft risks to the customers and the safety and soundness of the institution.
4. If a required Program has been established by the BHC, ascertain if it has provided for the Program's continued administration, including
   a. involving the board of directors, an appropriate committee thereof, or a designated employee at the level of senior management in the continued oversight, development, implementation, and administration of the Program;
   b. training staff, as necessary, to effectively implement the Program; and
   c. appropriate and effective oversight of service provider arrangements.
5. If the BHC has established and maintains a required Program that applies to its covered accounts, determine if the Program includes the relevant and appropriate guidelines within the rule's appendix A (16 C.F.R. 681, appendix A).

Banking organizations should be attentive to the possible adverse consequences (including financial loss) of decisions based on models that are incorrect or misused and should address those consequences through active model risk management. The key aspects of an effective model risk-management framework are described in more detail below, including robust model development, implementation, and use; effective validation; and sound governance, policies, and controls. (See SR-11-7.)

This guidance describes the key aspects of effective model risk management. Part II explains the purpose and scope of the guidance, and part III gives an overview of model risk management. Part IV discusses robust model development, implementation, and use. Part V describes the components of an effective validation framework. Part VI explains the salient features of sound governance, policies, and controls over model development, implementation, use, and validation. Part VII concludes.

2126.0.1 INTRODUCTION—PART I

Banks rely heavily on quantitative analysis and models in most aspects of financial decision making.[1] They routinely use models for a broad range of activities, including underwriting credits; valuing exposures, instruments, and positions; measuring risk; managing and safeguarding client assets; determining capital and reserve adequacy; and many other activities. In recent years, banks have applied models to more complex products and with more ambitious scope, such as enterprise-wide risk measurement, while the markets in which they are used have also broadened and changed. Changes in regulation have spurred some of the recent developments, particularly the U.S. regulatory capital rules for market, credit, and operational risk based on the framework developed by the Basel Committee on Banking Supervision. Even apart from these regulatory considerations, however, banks have been increasing the use of data-driven, quantitative decision making tools for a number of years.

The expanding use of models in all aspects of banking reflects the extent to which models can improve business decisions, but models also come with costs. There is the direct cost of devoting resources to develop and implement models properly. There are also the potential indirect costs of relying on models, such as the possible adverse consequences (including financial loss) of decisions based on models that are incorrect or misused. Those consequences should be addressed by active management of model risk.

1. Unless otherwise indicated, *banks* refers to national banks and all other institutions for which the Office of the Comptroller of the Currency is the primary supervisor, and to bank holding companies, state member banks, and all other institutions for which the Federal Reserve Board is the primary supervisor.

2126.0.2 PURPOSE AND SCOPE—PART II

The purpose of this section is to provide comprehensive guidance for banks on effective model risk management. Rigorous model validation plays a critical role in model risk management; however, sound development, implementation, and use of models are also vital elements. Furthermore, model risk management encompasses governance and control mechanisms such as board and senior management oversight, policies and procedures, controls and compliance, and an appropriate incentive and organizational structure.

Previous guidance and other publications issued by the Office of the Comptroller of the Currency (OCC) and the Federal Reserve on the use of models pay particular attention to model validation.[2] Based on supervisory and industry experience over the past several years, this document expands on existing guidance—most importantly by broadening the scope to include all aspects of model risk management. Many banks may already have in place a large portion of these practices, but all banks should ensure that internal policies and procedures are consis-

2. For instance, the OCC provided guidance on model risk, focusing on model validation, in OCC 2000-16 (May 30, 2000), other bulletins, and certain subject matter booklets of the *Comptroller's Handbook.* The Federal Reserve issued SR-09-01, "Application of the Market Risk Rule in Bank Holding Companies and State Member Banks," which highlights various concepts pertinent to model risk management, including standards for validation and review, model validation documentation, and back-testing. The Federal Reserve's *Trading and Capital-Markets Activities Manual* also discusses validation and model risk management. In addition, the advanced-approaches risk-based capital rules (12 CFR 3, Appendix C; 12 CFR 208, Appendix F; and 12 CFR 225, Appendix G) contain explicit validation requirements for subject banking organizations.

tent with the risk-management principles and supervisory expectations contained in this guidance. Details may vary from bank to bank, as practical application of this guidance should be customized to be commensurate with a bank's risk exposures, its business activities, and the complexity and extent of its model use. For example, steps taken to apply this guidance at a community bank using relatively few models of only moderate complexity might be significantly less involved than those at a larger bank where use of models is more extensive or complex.

2126.0.3 OVERVIEW OF MODEL RISK MANAGEMENT—PART III

For the purposes of this section, the term *model* refers to a quantitative method, system, or approach that applies statistical, economic, financial, or mathematical theories, techniques, and assumptions to process input data into quantitative estimates. A *model* consists of three components: an information input component, which delivers assumptions and data to the model; a processing component, which transforms inputs into estimates; and a reporting component, which translates the estimates into useful business information. Models meeting this definition might be used for analyzing business strategies; informing business decisions; identifying and measuring risks; valuing exposures, instruments, or positions; conducting stress testing; assessing adequacy of capital; managing client assets; measuring compliance with internal limits; maintaining the formal control apparatus of the bank; meeting financial or regulatory reporting requirements; and issuing public disclosures. The definition of *model* also covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.[3]

Models are simplified representations of real-world relationships among observed characteristics, values, and events. Simplification is inevitable, due to the inherent complexity of those relationships, but also intentional, to focus attention on particular aspects considered to be most important for a given model application. Model quality can be measured in many ways: precision, accuracy, discriminatory power, robustness, stability, and reliability, to name a few. Models are never perfect, and the appropriate metrics of quality, and the effort that should be put into improving quality, depend on the situation. For example, precision and accuracy are relevant for models that forecast future values, while discriminatory power applies to models that rank order risks. In all situations, it is important to understand a model's capabilities and limitations given its simplifications and assumptions.

The use of models invariably presents model risk, which is the potential for adverse consequences from decisions based on incorrect or misused model outputs and reports. Model risk can lead to financial loss, poor business and strategic decision making, or damage to a bank's reputation. Model risk occurs primarily for two reasons:

- The model may have fundamental errors and may produce inaccurate outputs when viewed against the design objective and intended business uses. The mathematical calculation and quantification exercise underlying any model generally involves application of theory, choice of sample design and numerical routines, selection of inputs and estimation, and implementation in information systems. Errors can occur at any point from design through implementation. In addition, shortcuts, simplifications, or approximations used to manage complicated problems could compromise the integrity and reliability of outputs from those calculations. Finally, the quality of model outputs depends on the quality of input data and assumptions, and errors in inputs or incorrect assumptions will lead to inaccurate outputs.
- The model may be used incorrectly or inappropriately. Even a fundamentally sound model producing accurate outputs consistent with the design objective of the model may exhibit high model risk if it is misapplied or misused. Models by their nature are simplifications of reality, and real-world events may prove those simplifications inappropriate. This is even more of a concern if a model is used outside the environment for which it was designed. Banks may do this intentionally as they apply existing models to new products or markets, or inadvertently as market conditions or customer behavior changes. Decision makers need to understand the limitations of a model to avoid using it in ways that are not consistent with the original intent. Limitations

3. While outside the scope of this guidance, more qualitative approaches used by banking organizations—i.e., those *not* defined as models according to this guidance—should also be subject to a rigorous control process.

come in part from weaknesses in the model due to its various shortcomings, approximations, and uncertainties. Limitations are also a consequence of assumptions underlying a model that may restrict the scope to a limited set of specific circumstances and situations.

Model risk should be managed like other types of risk. Banks should identify the sources of risk and assess the magnitude. Model risk increases with greater model complexity, higher uncertainty about inputs and assumptions, broader use, and larger potential impact. Banks should consider risk from individual models and in the aggregate. Aggregate model risk is affected by interaction and dependencies among models; reliance on common assumptions, data, or methodologies; and any other factors that could adversely affect several models and their outputs at the same time. With an understanding of the source and magnitude of model risk in place, the next step is to manage it properly.

A guiding principle for managing model risk is "effective challenge" of models, that is, critical analysis by objective, informed parties who can identify model limitations and assumptions and produce appropriate changes. Effective challenge depends on a combination of incentives, competence, and influence. Incentives to provide effective challenge to models are stronger when there is greater separation of that challenge from the model development process and when challenge is supported by well-designed compensation practices and corporate culture. Competence is a key to effectiveness since technical knowledge and modeling skills are necessary to conduct appropriate analysis and critique. Finally, challenge may fail to be effective without the influence to ensure that actions are taken to address model issues. Such influence comes from a combination of explicit authority, stature within the organization, and commitment and support from higher levels of management.

Even with skilled modeling and robust validation, model risk cannot be eliminated, so other tools should be used to manage model risk effectively. Among these are establishing limits on model use, monitoring model performance, adjusting or revising models over time, and supplementing model results with other analysis and information. Informed conservatism, in either the inputs or the design of a model or through explicit adjustments to outputs, can be an effective tool, though not an excuse to avoid improving models.

As is generally the case with other risks, materiality is an important consideration in model risk management. If at some banks the use of models is less pervasive and has less impact on their financial condition, then those banks may not need as complex an approach to model risk management in order to meet supervisory expectations. However, where models and model output have a material impact on business decisions, including decisions related to risk management and capital and liquidity planning, and where model failure would have a particularly harmful impact on a bank's financial condition, a bank's model risk-management framework should be more extensive and rigorous.

Model risk management begins with robust model development, implementation, and use. Another essential element is a sound model validation process. A third element is governance, which sets an effective framework with defined roles and responsibilities for clear communication of model limitations and assumptions, as well as the authority to restrict model usage. Each of these elements is discussed in the following sections.

2126.0.4 MODEL DEVELOPMENT, IMPLEMENTATION, AND USE—PART IV

Model risk management should include disciplined and knowledgeable development and implementation processes that are consistent with the situation and goals of the model user and with bank policy. Model development is not a straightforward or routine technical process. The experience and judgment of developers, as much as their technical knowledge, greatly influence the appropriate selection of inputs and processing components. The training and experience of developers exercising such judgment affects the extent of model risk. Moreover, the modeling exercise is often a multidisciplinary activity drawing on economics, finance, statistics, mathematics, and other fields. Models are employed in real-world markets and events and, therefore, should be tailored for specific applications and informed by business uses. In addition, a considerable amount of subjective judgment is exercised at various stages of model development, implementation, use, and validation. It is important for decision makers to recognize that this subjectivity elevates the importance of sound and comprehensive model risk-management processes.[4]

2126.0.4.1 Model Development and Implementation

An effective development process begins with a clear statement of purpose to ensure that model development is aligned with the intended use. The design, theory, and logic underlying the model should be well documented and generally supported by published research and sound industry practice. The model methodologies and processing components that implement the theory, including the mathematical specification and the numerical techniques and approximations, should be explained in detail with particular attention to merits and limitations. Developers should ensure that the components work as intended, are appropriate for the intended business purpose, and are conceptually sound and mathematically and statistically correct. Comparison with alternative theories and approaches is a fundamental component of a sound modeling process.

The data and other information used to develop a model are of critical importance; there should be rigorous assessment of data quality and relevance, and appropriate documentation. Developers should be able to demonstrate that such data and information are suitable for the model and that they are consistent with the theory behind the approach and with the chosen methodology. If data proxies are used, they should be carefully identified, justified, and documented. If data and information are not representative of the bank's portfolio or other characteristics, or if assumptions are made to adjust the data and information, these factors should be properly tracked and analyzed so that users are aware of potential limitations. This is particularly important for external data and information (from a vendor or outside party), especially as they relate to new products, instruments, or activities.

An integral part of model development is testing, in which the various components of a model and its overall functioning are evaluated to determine whether the model is performing as intended. Model testing includes checking the model's accuracy, demonstrating that the model is robust and stable, assessing potential limitations, and evaluating the model's behavior over a range of input values. It should also assess the impact of assumptions and identify situations where the model performs poorly or becomes unreliable. Testing should be applied to actual circumstances under a variety of market conditions, including scenarios that are outside the range of ordinary expectations, and should encompass the variety of products or applications for which the model is intended. Extreme values for inputs should be evaluated to identify any boundaries of model effectiveness. The impact of model results on other models that rely on those results as inputs should also be evaluated. Included in testing activities should be the purpose, design, and execution of test plans, summary results with commentary and evaluation, and detailed analysis of informative samples. Testing activities should be appropriately documented.

The nature of testing and analysis will depend on the type of model and will be judged by different criteria depending on the context. For example, the appropriate statistical tests depend on specific distributional assumptions and the purpose of the model. Furthermore, in many cases statistical tests cannot unambiguously reject false hypotheses or accept true ones based on sample information. Different tests have different strengths and weaknesses under different conditions. Any single test is rarely sufficient, so banks should apply a variety of tests to develop a sound model.

Banks should ensure that the development of the more judgmental and qualitative aspects of their models is also sound. In some cases, banks may take statistical output from a model and modify it with judgmental or qualitative adjustments as part of model development. While such practices may be appropriate, banks should ensure that any such adjustments made as part of the development process are conducted in an appropriate and systematic manner and are well documented.

Models typically are embedded in larger information systems that manage the flow of data from various sources into the model and handle the aggregation and reporting of model outcomes. Model calculations should be properly coordinated with the capabilities and requirements of information systems. Sound model risk management depends on substantial investment in supporting systems to ensure data

4. Smaller banks that rely on vendor models may be able to satisfy the standards in this guidance without an in-house staff of technical, quantitative model developers. However, even if a bank relies on vendors for basic model development, the bank should still choose the particular models and variables that are appropriate to its size, scale, and lines of business and ensure the models are appropriate for the intended use.

and reporting integrity, together with controls and testing to ensure proper implementation of models, effective systems integration, and appropriate use.

2126.0.4.2 Model Use

Model use provides additional opportunity to test whether a model is functioning effectively and to assess its performance over time as conditions and model applications change. It can serve as a source of productive feedback and insights from a knowledgeable internal constituency with strong interest in having models that function well and reflect economic and business realities. Model users can provide valuable business insight during the development process. In addition, business managers affected by model outcomes may question the methods or assumptions underlying the models, particularly if the managers are significantly affected by, and do not agree with, the outcome. Such questioning can be healthy if it is constructive and causes model developers to explain and justify the assumptions and design of the models.

However, challenge from model users may be weak if the model does not materially affect their results, if the resulting changes in models are perceived to have adverse effects on the business line, or if change in general is regarded as expensive or difficult. User challenges also tend not to be comprehensive because they focus on aspects of models that have the most direct impact on the user's measured business performance or compensation, and thus may ignore other elements and applications of the models. Finally, such challenges tend to be asymmetric because users are less likely to challenge an outcome that results in an advantage for them. Indeed, users may incorrectly believe that model risk is low simply because outcomes from model-based decisions appear favorable to the institution. Thus, the nature and motivation behind model users' input should be evaluated carefully, and banks should also solicit constructive suggestions and criticism from sources independent of the line of business using the model.

Reports used for business decision making play a critical role in model risk management. Such reports should be clear and comprehensible and take into account the fact that decision makers and modelers often come from quite different backgrounds and may interpret the contents in different ways. Reports that provide a range of estimates for different input-value scenarios and assumption values can give decision makers important indications of the model's accuracy, robustness, and stability as well as information on model limitations.

An understanding of model uncertainty and inaccuracy and a demonstration that the bank is accounting for them appropriately are important outcomes of effective model development, implementation, and use. Because they are by definition imperfect representations of reality, all models have some degree of uncertainty and inaccuracy. These can sometimes be quantified, for example, by an assessment of the potential impact of factors that are unobservable or not fully incorporated in the model, or by the confidence interval around a statistical model's point estimate. Indeed, using a range of outputs, rather than a simple point estimate, can be a useful way to signal model uncertainty and avoid spurious precision. At other times, only a qualitative assessment of model uncertainty and inaccuracy is possible. In either case, it can be prudent for banks to account for model uncertainty by explicitly adjusting model inputs or calculations to produce more severe or adverse model output in the interest of conservatism. Accounting for model uncertainty can also include judgmental conservative adjustments to model output, placing less emphasis on that model's output, or ensuring that the model is only used when supplemented by other models or approaches.[5]

While conservative use of models is prudent in general, banks should be careful in applying conservatism broadly or claiming to make conservative adjustments or add-ons to address model risk, because the impact of such conservatism in complex models may not be obvious or intuitive. Model aspects that appear conservative in one model may not be truly conservative compared with alternative methods. For example, simply picking an extreme point on a given modeled distribution may not be conservative if the distribution was misestimated or misspecified in the first place. Furthermore, initially conservative assumptions may not remain conservative over time. Therefore, banks should justify and substantiate claims that model outputs are conservative with a definition and measurement of that conservatism that is communicated to model users. In some cases, sensitivity analysis or other types of stress testing can be used to

5. To the extent that models are used to generate amounts included in public financial statements, any adjustments for model uncertainty must comply with generally accepted accounting principles.

demonstrate that a model is indeed conservative. Another way in which banks may choose to be conservative is to hold an additional cushion of capital to protect against potential losses associated with model risk. However, conservatism can become an impediment to proper model development and application if it is seen as a solution that dissuades the bank from making the effort to improve the model; in addition, excessive conservatism can lead model users to discount the model outputs.

As previously explained, robust model development, implementation, and use is important to model risk management. But it is not enough for model developers and users to understand and accept the model. Because model risk is ultimately borne by the bank as a whole, the bank should objectively assess model risk and the associated costs and benefits using a sound model-validation process.

2126.0.5 MODEL VALIDATION—PART V

Model validation is the set of processes and activities intended to verify that models are performing as expected, in line with their design objectives and business uses. Effective validation helps ensure that models are sound. It also identifies potential limitations and assumptions and assesses their possible impact. As with other aspects of effective challenge, model validation should be performed by staff with appropriate incentives, competence, and influence.

All model components, including input, processing, and reporting, should be subject to validation; this applies equally to models developed in-house and to those purchased from, or developed by, vendors or consultants. The rigor and sophistication of validation should be commensurate with the bank's overall use of models, the complexity and materiality of its models, and the size and complexity of the bank's operations.

Validation involves a degree of independence from model development and use. Generally, validation should be done by people who are not responsible for development or use and do not have a stake in whether a model is determined to be valid. Independence is not an end in itself but rather helps ensure that incentives are aligned with the goals of model validation. While independence may be supported by separation of reporting lines, it should be judged by actions and outcomes, since there may be additional ways to ensure objectivity and prevent bias. As a practical matter, some validation work may be most effectively done by model developers and users; it is essential, however, that such validation work be subject to critical review by an independent party, who should conduct additional activities to ensure proper validation. Overall, the quality of the process is judged by the manner in which models are subject to critical review. This could be determined by evaluating the extent and clarity of documentation, the issues identified by objective parties, and the actions taken by management to address model issues.

In addition to independence, banks can support appropriate incentives in validation through compensation practices and performance evaluation standards that are tied directly to the quality of model validations and the degree of critical, unbiased review. In addition, corporate culture plays a role if it establishes support for objective thinking and encourages questioning and challenging of decisions.

Staff doing validation should have the requisite knowledge, skills, and expertise. A high level of technical expertise may be needed because of the complexity of many models, both in structure and in application. These staff also should have a significant degree of familiarity with the line of business using the model and the model's intended use. A model's developer is an important source of information but cannot be relied on as an objective or sole source on which to base an assessment of model quality.

Staff conducting validation work should have explicit authority to challenge developers and users and to elevate their findings, including issues and deficiencies. The individual or unit to whom those staff report should have sufficient influence or stature within the bank to ensure that any issues and deficiencies are appropriately addressed in a timely and substantive manner. Such influence can be reflected in reporting lines, title, rank, or designated responsibilities. Influence may be demonstrated by a pattern of actual instances in which models, or the use of models, have been appropriately changed as a result of validation.

The range and rigor of validation activities conducted prior to first use of a model should be in line with the potential risk presented by use of the model. If significant deficiencies are noted as a result of the validation process, use of the model should not be allowed or should be permitted only under very tight constraints until those issues are resolved. If the deficiencies are too severe to be addressed within the model's framework, the model should be rejected. If it is not feasible to conduct necessary validation activities prior to model use because of data paucity or other limitations, that fact should be documented and communicated in reports to users, senior management, and other relevant parties. In such cases, the uncertainty about the results that the model produces should be mitigated by other compensating controls. This is particularly applicable to new models and to the use of existing models in new applications.

Validation activities should continue on an ongoing basis after a model goes into use, to track known model limitations and to identify any new ones. Validation is an important check on model use during periods of benign economic and financial conditions, when estimates of risk and potential loss can become overly optimistic, and when the data at hand may not fully reflect more stressed conditions. Ongoing validation activities help to ensure that changes in markets, products, exposures, activities, clients, or business practices do not create new model limitations. For example, if credit risk models do not incorporate underwriting changes in a timely manner, flawed and costly business decisions could be made before deterioration in model performance becomes apparent.

Banks should conduct a periodic review—at least annually but more frequently if warranted—of each model to determine whether it is working as intended and if the existing validation activities are sufficient. Such a determination could simply affirm previous validation work, suggest updates to previous validation activities, or call for additional validation activities. Material changes to models should also be subject to validation. It is generally good practice for banks to ensure that all models undergo the full validation process, as described in the following section, at some fixed interval, including updated documentation of all activities.

Effective model validation helps reduce model risk by identifying model errors, corrective actions, and appropriate use. It also provides an assessment of the reliability of a given model, based on its underlying assumptions, theory, and methods. In this way, it provides information about the source and extent of model risk. Validation also can reveal deterioration in model performance over time and can set thresholds for acceptable levels of error, through analysis of the distribution of outcomes around expected or predicted values. If outcomes fall consistently outside this acceptable range, then the models should be redeveloped.

2126.0.5.1 Key Elements of Comprehensive Validation

An effective validation framework should include three core elements:

- Evaluation of conceptual soundness, including developmental evidence
- Ongoing monitoring, including process verification and benchmarking
- Outcomes analysis, including back-testing

2126.0.5.1.1 Evaluation of Conceptual Soundness

This first element involves assessing the quality of the model design and construction. It entails review of documentation and empirical evidence supporting the methods used and variables selected for the model. Documentation and testing should convey an understanding of model limitations and assumptions. Validation should ensure that judgment exercised in model design and construction is well informed, carefully considered, and consistent with published research and with sound industry practice. Developmental evidence should be reviewed before a model goes into use and also as part of the ongoing validation process, in particular whenever there is a material change in the model.

A sound development process will produce documented evidence in support of all model choices, including the overall theoretical construction, key assumptions, data, and specific mathematical calculations. As part of model validation, those model aspects should be subjected to critical analysis by both evaluating the quality and extent of developmental evidence and conducting additional analysis and testing as necessary. Comparison to alternative theories and approaches should be included. Key assumptions and the choice of variables should be assessed, with analysis of their impact on model outputs and particular focus on any potential limitations. The relevance of the data used to build the model should be evaluated to ensure that it is reasonably representative of the bank's portfolio or market conditions, depending on the type of model. This is an especially important exercise when a bank uses external data or the model is used for new products or activities.

Where appropriate to the particular model, banks should employ sensitivity analysis in model development and validation to check the impact of small changes in inputs and parameter values on model outputs to make sure they fall within an expected range. Unexpectedly large changes in outputs in response to small changes in inputs can indicate an unstable model. Varying several inputs simultaneously as part of sensitivity analysis can provide evidence of unexpected interactions, particularly if the interactions are complex and not intuitively clear. Banks benefit from conducting model stress testing to check performance over a wide range of inputs and parameter values, including extreme values, to verify that the model is robust. Such testing helps establish the boundaries of model performance by identifying the acceptable range of inputs as well as conditions under which the model may become unstable or inaccurate.

Management should have a clear plan for using the results of sensitivity analysis and other quantitative testing. If testing indicates that the model may be inaccurate or unstable in some circumstances, management should consider modifying certain model properties, putting less reliance on its outputs, placing limits on model use, or developing a new approach.

Qualitative information and judgment used in model development should be evaluated, including the logic, judgment, and types of information used, to establish the conceptual soundness of the model and set appropriate conditions for its use. The validation process should ensure that qualitative, judgmental assessments are conducted in an appropriate and systematic manner, are well supported, and are documented.

2126.0.5.1.2 Ongoing Monitoring

The second core element of the validation process is ongoing monitoring. Such monitoring confirms that the model is appropriately implemented and is being used and is performing as intended.

Ongoing monitoring is essential to evaluate whether changes in products, exposures, activities, clients, or market conditions necessitate adjustment, redevelopment, or replacement of the model and to verify that any extension of the model beyond its original scope is valid. Any model limitations identified in the development stage should be regularly assessed over time, as part of ongoing monitoring. Monitoring begins when a model is first implemented in production systems for actual business use. This monitoring should continue periodically over time, with a frequency appropriate to the nature of the model, the availability of new data or modeling approaches, and the magnitude of the risk involved. Banks should design a program of ongoing testing and evaluation of model performance along with procedures for responding to any problems that appear. This program should include process verification and benchmarking.

Process verification checks that all model components are functioning as designed. It includes verifying that internal and external data inputs continue to be accurate, complete, consistent with model purpose and design, and of the highest quality available. Computer code implementing the model should be subject to rigorous quality and change control procedures to ensure that the code is correct, that it cannot be altered except by approved parties, and that all changes are logged and can be audited. System integration can be a challenge and deserves special attention because the model processing component often draws from various sources of data, processes large amounts of data, and then feeds into multiple data repositories and reporting systems. User-developed applications, such as spreadsheets or ad hoc database applications used to generate quantitative estimates, are particularly prone to model risk. As the content or composition of information changes over time, systems may need to be updated to reflect any changes in the data or its use. Reports derived from model outputs should be reviewed as part of validation to verify that they are accurate, complete, and informative, and that they contain appropriate indicators of model performance and limitations.

Many of the tests employed as part of model development should be included in ongoing monitoring and be conducted on a regular basis to incorporate additional information as it becomes available. New empirical evidence or theoretical research may suggest the need to modify or even replace original methods. Analysis of the integrity and applicability of internal and external information sources, including information provided by third-party vendors, should be performed regularly.

Sensitivity analysis and other checks for robustness and stability should likewise be repeated periodically. They can be as useful during ongoing monitoring as they are during model development. If models only work well for certain ranges of input values, market conditions, or other factors, they should be monitored to identify situations where these constraints are approached or exceeded.

Ongoing monitoring should include the analysis of overrides with appropriate documentation. In the use of virtually any model, there will be cases where model output is ignored, altered, or reversed based on the expert judgment of model users. Such overrides are an indication that, in some respect, the model is not performing as intended or has limitations. Banks should evaluate the reasons for overrides and track and analyze override performance. If the rate of overrides is high, or if the override process consistently improves model performance, it is often a sign that the underlying model needs revision or redevelopment.

Benchmarking is the comparison of a given model's inputs and outputs to estimates from alternative internal or external data or models. It can be incorporated in model development as well as in ongoing monitoring. For credit-risk models, examples of benchmarks include models from vendor firms or industry consortia and data from retail credit bureaus. Pricing models for securities and derivatives often can be compared with alternative models that are more accurate or comprehensive but also too time-consuming to run on a daily basis. Whatever the source, benchmark models should be rigorous, and benchmark data should be accurate and complete to ensure a reasonable comparison.

Discrepancies between the model output and benchmarks should trigger investigation into the sources and degree of the differences, and examination of whether they are within an expected or appropriate range given the nature of the comparison. The results of that analysis may suggest revisions to the model. However, differences do not necessarily indicate that the model is in error. The benchmark itself is an alternative prediction, and the differences may be due to the different data or methods used. If the model and the benchmark match well, that is evidence in favor of the model, but it should be interpreted with caution so the bank does not get a false degree of comfort.

2126.0.5.1.3 Outcomes Analysis

The third core element of the validation process is outcomes analysis, a comparison of model outputs to corresponding actual outcomes. The precise nature of the comparison depends on the objectives of a model and might include an assessment of the accuracy of estimates or forecasts, an evaluation of rank-ordering ability, or other appropriate tests. In all cases, such comparisons help to evaluate model performance by establishing expected ranges for those actual outcomes in relation to the intended objectives and assessing the reasons for observed variation between the two. If outcomes analysis produces evidence of poor performance, the bank should take action to address those issues. Outcomes analysis typically relies on statistical tests or other quantitative measures. It can also include expert judgment to check the intuition behind the outcomes and confirm that the results make sense. When a model itself relies on expert judgment, quantitative outcomes analysis helps to evaluate the quality of that judgment. Outcomes analysis should be conducted on an ongoing basis to test whether the model continues to perform in line with design objectives and business uses.

A variety of quantitative and qualitative testing and analytical techniques can be used in outcomes analysis. The choice of technique should be based on the model's methodology, and its complexity, data availability, and the magnitude of potential model risk to the bank. Outcomes analysis should involve a range of tests because any individual test will have weaknesses. For example, some tests are better at checking a model's ability to rank-order or segment observations on a relative basis, whereas others are better at checking absolute forecast accuracy. Tests should be designed for each situation, as not all will be effective or feasible in every circumstance, and attention should be paid to choosing the appropriate type of outcomes analysis for a particular model.

Models are regularly adjusted to take into account new data or techniques, or because of deterioration in performance. Parallel outcomes analysis, under which both the original and adjusted models' forecasts are tested against realized outcomes, provides an important test of such model adjustments. If the adjusted model does not outperform the original model, developers, users, and reviewers should realize that additional changes—or even a wholesale redesign—are likely necessary before the adjusted model replaces the original one.

Back-testing is one form of outcomes analysis; specifically, it involves the comparison of actual outcomes with model forecasts during a sample time period not used in model development and at an observation frequency that matches the forecast horizon or performance window of the model. The comparison is generally done using expected ranges or statistical confidence intervals around the model forecasts. When outcomes fall outside those intervals, the bank should analyze the discrepancies and investigate the causes that are significant in terms of magnitude or frequency. The objective of the analysis is to determine whether differences stem from the omission of material factors from the model, whether they arise from errors with regard to other aspects of model specification such as interaction terms or assumptions of linearity, or whether they are purely random and thus consistent with acceptable model performance. Analysis of in-sample fit and of model performance in holdout samples (data set aside and not used to estimate the original model) are important parts of model development but are not substitutes for back-testing.

A well-known example of back-testing is the evaluation of value-at-risk (VaR), in which actual profit and loss is compared with a model forecast loss distribution. Significant deviation in expected versus actual performance and unexplained volatility in the profits and losses of trading activities may indicate that hedging and pricing relationships are not adequately measured by a given approach. Along with measuring the frequency of losses in excess of a single VaR percentile estimator, banks should use other tests, such as assessing any clustering of exceptions and checking the distribution of losses against other estimated percentiles.

Analysis of the results of even high-quality and well-designed back-testing can pose challenges, since it is not a straightforward, mechanical process that always produces unambiguous results. The purpose is to test the model, not individual forecast values. Back-testing may entail analysis of a large number of forecasts over different conditions at a point in time or over multiple time periods. Statistical testing is essential in such cases, yet such testing can pose challenges in both the choice of appropriate tests and the interpretation of results; banks should support and document both the choice of tests and the interpretation of results.

Models with long forecast horizons should be back-tested, but given the amount of time it would take to accumulate the necessary data, that testing should be supplemented by evaluation over shorter periods. Banks should employ outcomes analysis consisting of "early warning" metrics designed to measure performance beginning very shortly after model introduction and trend analysis of performance over time. These outcomes analysis tools are not substitutes for back-testing, which should still be performed over the longer time period, but rather are very important complements.

Outcomes analysis and the other elements of the validation process may reveal significant errors or inaccuracies in model development or outcomes that consistently fall outside the bank's predetermined thresholds of acceptability. In such cases, model adjustment, recalibration, or redevelopment is warranted. Adjustments and recalibration should be governed by the principle of conservatism and should undergo independent review.

Material changes in model structure or technique, and all model redevelopment, should be subject to validation activities of appropriate range and rigor before implementation. At times, banks may have a limited ability to use key model validation tools like back-testing or sensitivity analysis for various reasons, such as lack of data or of price observability. In those cases, even more attention should be paid to the model's limitations when considering the appropriateness of model usage, and senior management should be fully informed of those limitations when using the models for decision making. Such scrutiny should be applied to individual models and models in the aggregate.

2126.0.5.2 Validation of Vendor and Other Third-Party Products

The widespread use of vendor and other third-party products—including data, parameter values, and complete models—poses unique challenges for validation and other model risk-management activities because the modeling expertise is external to the user and because some components are considered proprietary. Vendor products should nevertheless be incorporated into a bank's broader model risk-management framework, following the same principles as applied to in-house models, although the process may be somewhat modified.

As a first step, banks should ensure that there are appropriate processes in place for selecting vendor models. Banks should require the vendor to provide developmental evidence explaining the product components, design, and intended use, to determine whether the model is appropriate for the bank's products, exposures, and risks. Vendors should provide appropriate testing results that show their product works as expected. They should also clearly indicate the model's limitations and assumptions and where the product's use may be problematic. Banks should expect vendors to conduct ongoing performance monitoring and outcomes analysis, with disclosure to their clients, and to make appropriate modifications and updates over time.

Banks are expected to validate their own use of vendor products. External models may not allow full access to computer coding and implementation details, so the bank may have to rely more on sensitivity analysis and benchmarking. Vendor models are often designed to provide a range of capabilities and so may need to be customized by a bank for its particular circumstances. A bank's customization choices should be documented and justified as part of validation. If vendors provide input data or assumptions, or use them to build models, their relevance for the bank's situation should be investigated. Banks should obtain information regarding the data used to develop the model and assess the extent to which that data are representative of the bank's situation. The bank also should conduct ongoing monitoring and outcomes analysis of vendor model performance using the bank's own outcomes.

Systematic procedures for validation help the bank to understand the vendor product and its capabilities, applicability, and limitations. Such detailed knowledge is necessary for basic controls of bank operations. It is also very important for the bank to have as much knowledge in-house as possible, in case the vendor or the bank terminates the contract for any reason, or if the vendor is no longer in business. Banks should have contingency plans for instances when the vendor model is no longer available or cannot be supported by the vendor.

2126.0.6 GOVERNANCE, POLICIES, AND CONTROLS—PART VI

Developing and maintaining strong governance, policies, and controls over the model risk-management framework is fundamentally important to its effectiveness. Even if model development, implementation, use, and validation are satisfactory, a weak governance function will reduce the effectiveness of overall model risk management. A strong governance framework provides explicit support and structure to risk-management functions through policies defining relevant risk-management activities, procedures that implement those policies, allocation of resources, and mechanisms for evaluating whether policies and procedures are being carried out as specified. Notably, the extent and sophistication of a bank's governance function is expected to align with the extent and sophistication of model usage.

2126.0.6.1 Board of Directors and Senior Management

Model risk governance is provided at the highest level by the board of directors and senior management when they establish a bank-wide approach to model risk management. As part of their overall responsibilities, a bank's board and senior management should establish a strong model risk-management framework that fits into the broader risk management of the organization. That framework should be grounded in an understanding of model risk—not just for individual models but also in the aggregate. The framework should include standards for model development, implementation, use, and validation.

While the board is ultimately responsible, it generally delegates to senior management the responsibility for executing and maintaining an effective model risk-management framework. Duties of senior management include establishing adequate policies and procedures and ensuring compliance, assigning competent staff, overseeing model development and implementation, evaluating model results, ensuring effective challenge, reviewing validation and internal audit findings, and taking prompt remedial action when necessary. In the same manner as for other major areas of risk, senior management, directly and through relevant committees, is responsible for regularly reporting to the board on significant model risk, from individual models and in the aggregate, and on compliance with policy. Board members should ensure that the level of model risk is within their tolerance and should direct changes where appropriate. These actions will set the tone for the whole organization about the importance of model risk and the need for active model risk management.

2126.0.6.2 Policies and Procedures

Consistent with good business practices and existing supervisory expectations, banks should formalize model risk-management activities with policies and the procedures to implement them. Model risk-management policies should be consistent with this guidance and also be commensurate with the bank's relative complexity, business activities, corporate culture, and overall organizational structure. The board or its delegates should approve model risk-management policies and review them annually to ensure consistent and rigorous practices across the organization. Those policies should be updated as necessary to ensure that model risk-management practices remain appropriate and keep current with changes in market conditions, bank products and strategies, bank exposures and activities, and practices in the industry. All aspects of model risk management should be covered by suitable policies, including model and model risk definitions; assessment of model risk; acceptable practices for model development, implementation, and use; appropriate model validation activities; and governance and controls over the model risk-management process.

Policies should emphasize testing and analysis and promote the development of targets for model accuracy, standards for acceptable levels of discrepancies, and procedures for review of, and response to, unacceptable discrepancies. They should include a description of the processes used to select and retain vendor models, including the people who should be involved in such decisions.

The prioritization, scope, and frequency of validation activities should be addressed in these policies. They should establish standards for the extent of validation that should be performed before models are put into production and the scope of ongoing validation. The policies should also detail the requirements for validation of vendor models and third-party products. Finally, they should require maintenance of detailed documentation of all aspects of the model risk-management framework, including an inventory of models in use, results of the modeling and validation processes, and model issues and their resolution.

Policies should identify the roles and assign responsibilities within the model risk-management framework with clear detail on staff expertise, authority, reporting lines, and continuity. They should also outline controls on the use of external resources for validation and compliance and specify how that work will be integrated into the model risk-management framework.

2126.0.6.3 Roles and Responsibilities

Conceptually, the roles in model risk management can be divided among ownership, controls, and compliance. While there are several ways in which banks can assign the responsibilities associated with these roles, it is important that reporting lines and incentives be clear, with potential conflicts of interest identified and addressed.

Business units are generally responsible for the model risk associated with their business strategies. The role of model owner involves ultimate accountability for model use and performance within the framework set by bank policies and procedures. Model owners should be responsible for ensuring that models are properly developed, implemented, and used. The model owner should also ensure that models in use have undergone appropriate validation and approval processes, promptly identify new or changed models, and provide all necessary information for validation activities.

Model risk taken by business units should be controlled. The responsibilities for risk controls may be assigned to individuals, committees, or a combination of the two, and include risk measurement, limits, and monitoring. Other responsibilities include managing the independent validation and review process to ensure that effective challenge takes place. Appropriate resources should be assigned for model validation and for guiding the scope and prioritization of work. Issues and problems identified through validation and other forms of oversight should be communicated by risk-control staff to relevant individuals and business users throughout the organization, including senior management, with a plan for corrective action. Control staff should have the authority to restrict the use of models and monitor any limits on model usage. While they may grant exceptions to typical procedures of model validation on a temporary basis, that authority should be subject to other control mechanisms, such as timelines for completing validation work and limits on model use.

Compliance with policies is an obligation of model owners and risk-control staff, and there should be specific processes in place to ensure that these roles are being carried out effectively and in line with policy. Documentation and tracking of activities surrounding model development, implementation, use, and validation are needed to provide a record that makes compliance with policy transparent.

2126.0.6.4 Internal Audit

A bank's internal audit function should assess the overall effectiveness of the model risk-management framework, including the framework's ability to address both types of model risk for individual models and in the aggregate. Findings from internal audit related to models should be documented and reported to the board or its appropriately delegated agent. Banks should ensure that internal audit operates with the proper incentives, has appropriate skills, and has adequate stature in the organization to assist in model risk management. Internal audit's role is not to duplicate model risk-management activities. Instead, its role is to evaluate whether model risk management is comprehensive, rigorous, and effective. To accomplish this evaluation, internal audit staff should possess sufficient expertise in relevant modeling concepts as well as their use in particular business lines. If some internal audit staff perform certain validation activities, then they should not be involved in the assessment of the overall model risk-management framework.

Internal audit should verify that acceptable policies are in place and that model owners and control groups comply with those policies. Internal audit should also verify records of model use and validation to test whether validations are performed in a timely manner and whether models are subject to controls that appropriately account for any weaknesses in validation activities. Accuracy and completeness of the model inventory should be assessed. In addition, processes for establishing and monitoring limits on model usage should be evaluated. Internal audit should determine whether procedures for updating models are clearly documented and test whether those procedures are being carried out as specified. Internal audit should check that model owners and control groups are meeting documentation standards, including risk reporting. Additionally, internal audit should perform assessments of supporting operational systems and evaluate the reliability of data used by models.

Internal audit also has an important role in ensuring that validation work is conducted properly and that appropriate effective challenge is being carried out. It should evaluate the objectivity, competence, and organizational standing of the key validation participants, with the ultimate goal of ascertaining whether those participants have the right incentives to discover and report deficiencies. Internal audit should review validation activities conducted by internal and external parties with the same rigor to see if those activities are being conducted in accordance with this guidance.

2126.0.6.5 External Resources

Although model risk management is an internal process, a bank may decide to engage external resources to help execute certain activities related to the model risk-management framework. These activities could include model validation and review, compliance functions, or other activities in support of internal audit. These resources may provide added knowledge and another level of critical and effective challenge, which may improve the internal model development and risk-management processes. However, this potential benefit should be weighed against the added costs for such resources and the added time that external parties require to understand internal data, systems, and other relevant bank-specific circumstances.

Whenever external resources are used, the bank should specify the activities to be conducted in a clearly written and agreed-upon scope of work. A designated internal party from the bank should be able to understand and evaluate the results of validation and risk-control activities conducted by external resources. The internal party is responsible for verifying that the agreed upon scope of work has been completed; evaluating and tracking identified issues and ensuring they are addressed; and making sure that completed work is incorporated into the bank's overall model risk-management framework. If the external resources are only utilized to do a portion of validation or compliance work, the bank should coordinate internal resources to complete the full range of work needed. The bank should have a contingency plan in case an external resource is no longer available or is unsatisfactory.

2126.0.6.6 Model Inventory

Banks should maintain a comprehensive set of information for models implemented for use, under development for implementation, or recently retired. While each line of business may maintain its own inventory, a specific party should also be charged with maintaining a firm-wide inventory of all models, which should assist a bank in evaluating its model risk in the aggregate. Any variation of a model that warrants a separate validation should be included as a separate model and cross-referenced with other variations.

While the inventory may contain varying levels of information, given different model complexity and the bank's overall level of model usage, the following are some general guidelines. The inventory should describe the purpose and products for which the model is designed, actual or expected usage, and any restrictions on use. It is useful for the inventory to list the type and source of inputs used by a given model and underlying components (which may include other models), as well as model outputs and their intended use. It should also indicate whether models are functioning properly, provide a description of when they were last updated, and list any exceptions to policy. Other items include the names of individuals responsible for various aspects of the model development and validation; the dates of completed and planned validation activities; and the time frame during which the model is expected to remain valid.

2126.0.6.7 Documentation

Without adequate documentation, model risk assessment and management will be ineffective. Documentation of model development and validation should be sufficiently detailed so that parties unfamiliar with a model can understand how the model operates, its limitations, and its key assumptions. Documentation provides for continuity of operations, makes compliance with policy transparent, and helps track recommendations, responses, and exceptions. Developers, users, control and compliance units, and supervisors are all served by effective documentation. Banks can benefit from advances in information and knowledge management systems and electronic documentation to improve the organization, timeliness, and accessibility of the various records and reports produced in the model risk-management process.

Documentation takes time and effort, and model developers and users who know the models well may not appreciate its value. Banks should therefore provide incentives to produce effective and complete model documentation. Model developers should have responsibility during model development for thorough documentation, which should be kept up-to-date as the model and application environment changes. In addition, the bank should ensure that other participants in model risk-management activities document their work, including ongoing monitoring, process verification, benchmarking, and outcomes analysis. Also, line of business or other decision makers should document information leading to selection of a given model and its subsequent validation. For cases in which a bank uses models from a vendor or other third party, it should ensure that appropriate documentation of the third-party approach is available so that the model can be appropriately validated.

Validation reports should articulate model aspects that were reviewed, highlighting potential deficiencies over a range of financial and economic conditions, and determining whether adjustments or other compensating controls are warranted. Effective validation reports include clear executive summaries, with a statement of model purpose and an accessible synopsis of model and validation results, including major limitations and key assumptions.

2126.0.7 CONCLUSION—PART VII

This section provides comprehensive guidance on effective model risk management. Many of the activities described are common industry practice. But all banks should confirm that their practices conform to the principles in this guidance for model development, implementation, and use, as well as model validation. Banks should also ensure that they maintain strong governance and controls to help manage model risk, including internal policies and procedures that appropriately reflect the risk-management principles described in this guidance. Details of model risk-management practices may vary from bank to bank, as practical application of this guidance should be commensurate with a bank's risk exposures, its business activities, and the extent and complexity of its model use.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2013, this section was revised to acknowledge and to include minor changes relating to the issuance of SR-12-15, "Investing in Securities without Reliance on Nationally Recognized Statistical Rating Organizations," and its OCC attachment . (See section 2126.2 of this manual.) The section also updates the cited accounting standards references.

2126.1.0 SOUND RISK-MANAGEMENT PRACTICES FOR PORTFOLIO INVESTMENT

On April 23, 1998, the Federal Financial Institutions Examination Council (FFIEC) issued a Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities that became effective on May 25, 1998. The statement was adopted by the Board of Governors and provides guidance on sound practices for managing the risks of investment activities. The guidance focuses on risk-management practices of state member banks and Edge corporations. The basic principles also apply to bank holding companies, which should manage and control risk exposures on a consolidated basis, recognizing the legal distinctions and potential obstacles to cash movements among subsidiaries. The statement's risk-management principles should also be incorporated into the policies of U.S. branches and agencies of foreign banks.[1]

The statement's principles set forth sound risk-management practices that are relevant to most portfolio-management endeavors. The statement places greater emphasis on a risk-focused approach to supervision. Instruments held for end-user reasons are considered, taking into consideration a variety of factors such as management's ability to manage and measure risk within the institution's holdings and the impact of those holdings on aggregate portfolio risk.

The statement focuses on managing the market, credit, liquidity, operational, and legal risks of investment and end-user activities. When managing the interest-rate-risk component of market risk, institutions are informed of the merits of developing internal policies that specify the type of pre-acquisition analysis (stress testing) that is consistent with the scope, sophistication, and complexity of their investment securities and end-user derivative holdings. Such analyses should be conducted for certain types of instruments, including those that have complex or potentially volatile risk profiles. Institutions are advised to periodically monitor the price sensitivity of their portfolios, ensuring that they meet the established limits of the board of directors. Institutions are further advised to fully assess the creditworthiness of their counterparties, including brokers and issuers. Institutions are to ensure that they take proper account of the liquidity of the instruments held. (See SR-98-12.)

2126.1.1 SUPERVISORY POLICY STATEMENT ON INVESTMENT SECURITIES AND END-USER DERIVATIVES ACTIVITIES

2126.1.1.1 Purpose

This policy statement (statement) provides guidance to financial institutions (institutions) on sound practices for managing the risks of investment securities and end-user derivatives activities.[2] The FFIEC agencies—the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the National Credit Union Administration—believe that effective management of the risks associated with securities and derivative instruments represents an essential component of safe and sound practices. This guidance describes the practices that a prudent manager normally would follow and is not intended to be a checklist. Management should establish practices and maintain documentation appropriate to the institution's individual circumstances, consistent with this statement.

1. Appropriate adaptations should be made to reflect the fact that (1) those offices are an integral part of a foreign bank that must also manage its consolidated risks and recognize possible obstacles to cash movement among branches and (2) the foreign bank is subject to overall supervision by its home-country supervisory authority.

2. The 1998 statement does not supersede any other requirements of the respective agencies' statutory rules, regulations, policies, or supervisory guidance.

2126.1.1.2 Scope

This guidance applies to all securities in *held-to-maturity* and *available-for-sale* accounts. See FASB Accounting Standards Codification section 320-10-35, ‘‘Investment Debt and Equity Securities—Overall—Subsequent Measurement’’ (formerly FAS 115, *‘‘Accounting for Certain Debt and Equity Securities’’*). It also applies to certificates of deposit held for investment purposes, and end-user derivative contracts not held in trading accounts. This guidance covers all securities used for investment purposes, including money market instruments, fixed-rate and floating-rate notes and bonds, structured notes, mortgage pass-through and other asset-backed securities, and mortgage-derivative products. Similarly, this guidance covers all end-user derivative instruments used for nontrading purposes, such as swaps, futures, and options.[3] This statement applies to all federally insured commercial banks, savings banks, savings associations, and federally chartered credit unions.

As a matter of sound practice, institutions should have programs to manage the market, credit, liquidity, legal, operational, and other risks of investment securities and end-user derivatives activities (investment activities). While risk-management programs will differ among institutions, there are certain elements that are fundamental to all sound risk-management programs. These elements include board and senior management oversight and a comprehensive risk-management process that effectively identifies, measures, monitors, and controls risk. This statement describes sound principles and practices for managing and controlling the risks associated with investment activities.

Institutions should fully understand and effectively manage the risks inherent in their investment activities. *Failure to understand and adequately manage the risks in these areas constitutes an unsafe and unsound practice.*

3. Natural-person federal credit unions are not permitted to purchase nonresidential mortgage asset-backed securities and may participate in derivative programs only if authorized by the National Credit Union Administration.

2126.1.1.3 Board and Senior Management Oversight

Board of director and senior management oversight is an integral part of an effective risk-management program. The board of directors is responsible for approving major policies for conducting investment activities, including the establishment of risk limits. The board should ensure that management has the requisite skills to manage the risks associated with such activities. To properly discharge its oversight responsibilities, the board should review portfolio activity and risk levels, and require management to demonstrate compliance with approved risk limits. Boards should have an adequate understanding of investment activities. Boards that do not should obtain professional advice to enhance its understanding of investment-activity oversight, so as to enable it to meet its responsibilities under this statement.

Senior management is responsible for the daily management of an institution’s investments. Management should establish and enforce policies and procedures for conducting investment activities. Senior management should have an understanding of the nature and level of various risks involved in the institution’s investments and how such risks fit within the institution’s overall business strategies. Management should ensure that the risk-management process is commensurate with the size, scope, and complexity of the institution’s holdings. Management should also ensure that the responsibilities for managing investment activities are properly segregated to maintain operational integrity. Institutions with significant investment activities should ensure that back-office, settlement, and transaction-reconciliation responsibilities are conducted and managed by personnel who are independent of those initiating risk-taking positions.

2126.1.1.4 Risk-Management Process

An effective risk-management process for investment activities includes (1) policies, procedures, and limits; (2) the identification, measurement, and reporting of risk exposures; and (3) a system of internal controls.

2126.1.1.4.1 Policies, Procedures, and Limits

Investment policies, procedures, and limits provide the structure to effectively manage investment activities. Policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and risk tolerance. Policies should identify relevant investment objectives, constraints, and guidelines for the acquisition and ongoing management of securities and derivative instruments. Potential investment objectives include generating earnings, providing liquidity, hedging risk exposures, taking risk positions, modifying and managing risk profiles, managing tax liabilities, and meeting pledging requirements, if applicable. Policies should also identify the risk characteristics of permissible investments and should delineate clear lines of responsibility and authority for investment activities.

An institution's management should understand the risks and cash-flow characteristics of its investments. This is particularly important for products that have unusual, leveraged, or highly variable cash flows. An institution should not acquire a material position in an instrument until senior management and all relevant personnel understand and can manage the risks associated with the product.

An institution's investment activities should be fully integrated into any institution-wide risk limits. In so doing, some institutions rely only on the institution-wide limits, while others may apply limits at the investment portfolio, subportfolio, or individual instrument level.

The board and senior management should review, at least annually, the appropriateness of its investment strategies, policies, procedures, and limits.

2126.1.1.4.2 Risk Identification, Measurement, and Reporting

Institutions should ensure that they identify and measure the risks associated with individual transactions prior to acquisition and periodically after purchase. This can be done at the institutional, portfolio, or individual-instrument level. Prudent management of investment activities entails examination of the risk profile of a particular investment in light of its impact on the risk profile of the institution. To the extent practicable, institutions should measure exposures to each type of risk, and these measurements should be aggregated and integrated with similar exposures arising from other business activities to obtain the institution's overall risk profile.

In measuring risks, institutions should conduct their own in-house pre-acquisition analyses, or to the extent possible, make use of specific third-party analyses that are independent of the seller or counterparty. Irrespective of any responsibility, legal or otherwise, assumed by a dealer, counterparty, or financial advisor regarding a transaction, the acquiring institution is ultimately responsible for the appropriate personnel understanding and managing the risks of the transaction.

Reports to the board of directors and senior management should summarize the risks related to the institution's investment activities and should address compliance with the investment policy's objectives, constraints, and legal requirements, including any exceptions to established policies, procedures, and limits. Reports to management should generally reflect more detail than reports to the board of the institution. Reporting should be frequent enough to provide timely and adequate information to judge the changing nature of the institution's risk profile and to evaluate compliance with stated policy objectives and constraints.

2126.1.1.4.3 Internal Controls

An institution's internal control structure is critical to the safe and sound functioning of the organization generally and the management of investment activities in particular. A system of internal controls promotes efficient operations; reliable financial and regulatory reporting; and compliance with relevant laws, regulations, and institutional policies. An effective system of internal controls includes enforcing official lines of authority, maintaining appropriate separation of duties, and conducting independent reviews of investment activities.

For institutions with significant investment activities, internal and external audits are integral to the implementation of a risk-management process to control risks in investment activities. An institution should conduct periodic independent reviews of its risk-management program to ensure its integrity, accuracy, and reasonableness. Items that should be reviewed include—

1. compliance with and the appropriateness of investment policies, procedures, and limits;
2. the appropriateness of the institution's risk-measurement system given the nature, scope, and complexity of its activities; and
3. the timeliness, integrity, and usefulness of reports to the board of directors and senior management.

The review should note exceptions to policies, procedures, and limits and suggest corrective actions. The findings of such reviews should be reported to the board and corrective actions taken on a timely basis.

The accounting systems and procedures used for public and regulatory reporting purposes are critically important to the evaluation of an organization's risk profile and the assessment of its financial condition and capital adequacy. Accordingly, an institution's policies should provide clear guidelines regarding the reporting treatment for all securities and derivatives holdings. This treatment should be consistent with the organization's business objectives, generally accepted accounting principles (GAAP), and regulatory reporting standards.

2126.1.1.5 Risks of Investment Activities

The following discussion identifies particular sound practices for managing the specific risks involved in investment activities. In addition to these sound practices, institutions should follow any specific guidance or requirements from their primary supervisor related to these activities.

2126.1.1.5.1 Market Risk

Market risk is the risk to an institution's financial condition resulting from adverse changes in the value of its holdings arising from movements in interest rates, foreign-exchange rates, equity prices, or commodity prices. An institution's exposure to market risk can be measured by assessing the effect of changing rates and prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution. For most institutions, the most significant market risk of investment activities is interest-rate risk.

Investment activities may represent a significant component of an institution's overall interest-rate-risk profile. It is a sound practice for institutions to manage interest-rate risk on an institution-wide basis. This sound practice includes monitoring the price sensitivity of the institution's investment portfolio (changes in the investment portfolio's value over different interest-rate/yield curve scenarios). Consistent with agency guidance, institutions should specify institution-wide interest-rate-risk limits that appropriately account for these activities and the strength of the institution's capital position. These limits are generally established for economic value or earnings exposures. Institutions may find it useful to establish price-sensitivity limits on their investment portfolio or on individual securities. These sub-institution limits, if established, should also be consistent with agency guidance.

It is a sound practice for an institution's management to fully understand the market risks associated with investment securities and derivative instruments prior to acquisition and on an ongoing basis. Accordingly, institutions should have appropriate policies to ensure such understanding. In particular, institutions should have policies that specify the types of market-risk analyses that should be conducted for various types or classes of instruments, including that conducted prior to their acquisition (pre-purchase analysis) and on an ongoing basis. Policies should also specify any required documentation needed to verify the analysis.

It is expected that the substance and form of such analyses will vary with the type of instrument. Not all investment instruments may need to be subjected to a pre-purchase analysis. Relatively simple or standardized instruments, the risks of which are well known to the institution, would likely require no or significantly less analysis than would more volatile, complex instruments.[4]

For relatively more complex instruments, less familiar instruments, and potentially volatile instruments, institutions should fully address pre-purchase analyses in their policies. Price-sensitivity analysis is an effective way to perform the pre-purchase analysis of individual instruments. For example, a pre-purchase analysis should show the impact of an immediate parallel shift in the yield curve of plus and minus 100, 200, and 300 basis points. Where appropriate, such analysis should encompass a wider range of scenarios, including nonparallel changes in the yield curve. A comprehensive analysis may also take into account other relevant factors, such as changes in interest-rate volatility and changes in credit spreads.

When the incremental effect of an investment position is likely to have a significant effect on the risk profile of the institution, it is a sound practice to analyze the effect of such a position on the overall financial condition of the institution.

Accurately measuring an institution's market risk requires timely information about the cur-

4. Federal credit unions must comply with the investment-monitoring requirements of 12 C.F.R. 703.90. See 62 *Fed. Reg.* 32,989 (June 18, 1997).

rent carrying and market values of its investments. Accordingly, institutions should have market-risk-measurement systems commensurate with the size and nature of these investments. Institutions with significant holdings of highly complex instruments should ensure that they have the means to value their positions. Institutions employing internal models should have adequate procedures to validate the models and to periodically review all elements of the modeling process, including its assumptions and risk-measurement techniques. Managements relying on third parties for market-risk-measurement systems and analyses should ensure that they fully understand the assumptions and techniques used.

Institutions should provide reports to their boards on the market-risk exposures of their investments on a regular basis. To do so, the institution may report the market-risk exposure of the whole institution. Alternatively, reports should contain evaluations that assess trends in aggregate market-risk exposure and the performance of portfolios in terms of established objectives and risk constraints. They also should identify compliance with board-approved limits and identify any exceptions to established standards. Institutions should have mechanisms to detect and adequately address exceptions to limits and guidelines. Management reports on market risk should appropriately address potential exposures to yield curve changes and other factors pertinent to the institution's holdings.

2126.1.1.5.2 Credit Risk

Broadly defined, credit risk is the risk that an issuer or counterparty will fail to perform on an obligation to the institution. For many financial institutions, credit risk in the investment portfolio may be low relative to other areas, such as lending. However, this risk, as with any other risk, should be effectively identified, measured, monitored, and controlled.

An institution should not acquire investments or enter into derivative contracts without assessing the creditworthiness of the issuer or counterparty. The credit risk arising from these positions should be incorporated into the overall credit-risk profile of the institution as comprehensively as practicable. Institutions are to meet certain creditworthiness standards for security purchases. Many institutions may maintain and update internal credit-rating reports and assessments that can be supplemented by reports from major external credit-rating services. For nonrated securities, institutions should establish guidelines to ensure that the securities meet legal requirements and that the institution fully understands the risk involved. Institutions should establish limits on individual counterparty exposures. Policies should also provide credit-risk and concentration limits. Such limits may define concentrations relating to a single or related issuer or counterparty, a geographical area, or obligations with similar characteristics.

In managing credit risk, institutions should consider settlement and presettlement credit risk. These risks are the possibility that a counterparty will fail to honor its obligation at or before the time of settlement. The selection of dealers, investment bankers, and brokers is particularly important in effectively managing these risks. The approval process should include a review of each firm's financial statements and an evaluation of its ability to honor its commitments. An inquiry into the general reputation of the dealer is also appropriate. This includes review of information from state or federal securities regulators and industry self-regulatory organizations such as the National Association of Securities Dealers concerning any formal enforcement actions against the dealer, its affiliates, or associated personnel.

The board of directors is responsible for supervision and oversight of investment portfolio and end-user derivatives activities, including the approval and periodic review of policies that govern relationships with securities dealers.

Sound credit-risk management requires that credit limits be developed by personnel who are as independent as practicable of the acquisition function. In authorizing issuer and counterparty credit lines, these personnel should use standards that are consistent with those used for other activities conducted within the institution and with the organization's overall policies and consolidated exposures.

2126.1.1.5.3 Liquidity Risk

Liquidity risk is the risk that an institution cannot easily sell, unwind, or offset a particular position at a fair price because of inadequate market depth. In specifying permissible instruments for accomplishing established objectives, institutions should ensure that they take into account the liquidity of the market for those instruments and the effect that such characteristics have on achieving their objectives. The liquidity of certain types of instruments may make them inappropriate for certain objectives. Institutions should ensure that they consider the effects that market risk can have on the liquidity of different types of instruments under various scenarios. Accordingly, institutions should articulate clearly the liquidity characteristics of instruments to be used in accomplishing institutional objectives.

Complex and illiquid instruments can often involve greater risk than actively traded, more liquid securities. Oftentimes, this higher potential risk arising from illiquidity is not captured by standardized financial modeling techniques. Such risk is particularly acute for instruments that are highly leveraged or that are designed to benefit from specific, narrowly defined market shifts. If market prices or rates do not move as expected, the demand for such instruments can evaporate, decreasing the market value of the instrument below the modeled value.

2126.1.1.5.4 Operational (Transaction) Risk

Operational (transaction) risk is the risk that deficiencies in information systems or internal controls will result in unexpected loss. Sources of operating risk include inadequate procedures, human error, system failure, or fraud. Inaccurately assessing or controlling operating risks is one of the more likely sources of problems facing institutions involved in investment activities.

Effective internal controls are the first line of defense in controlling the operating risks involved in an institution's investment activities. Of particular importance are internal controls that ensure the separation of duties and supervision of persons executing transactions from those responsible for processing contracts, confirming transactions, controlling various clearing accounts, preparing or posting the accounting entries, approving the accounting methodology or entries, and performing revaluations.

Consistent with the operational support of other activities within the financial institution, securities operations should be as independent as practicable from business units. Adequate resources should be devoted, such that systems and capacity are commensurate with the size and complexity of the institution's investment activities. Effective risk management should also include, at least, the following:

1. *Valuation.* Procedures should ensure independent portfolio pricing. For thinly traded or illiquid securities, completely independent pricing may be difficult to obtain. In such cases, operational units may need to use prices provided by the portfolio manager. For unique instruments where the pricing isbeing provided by a single source (e.g., the dealer providing the instrument), the institution should review and understand the assumptions used to price the instrument.
2. *Personnel.* The increasingly complex nature of securities available in the marketplace makes it important that operational personnel have strong technical skills. This will enable them to better understand the complex financial structures of some investment instruments.
3. *Documentation.* Institutions should clearly define documentation requirements for securities transactions, saving and safeguarding important documents, as well as maintaining possession and control of instruments purchased.

An institution's policies should also provide guidelines for conflicts of interest for employees who are directly involved in purchasing and selling securities for the institution from securities dealers. These guidelines should ensure that all directors, officers, and employees act in the best interest of the institution. The board may wish to adopt policies prohibiting these employees from engaging in personal securities transactions with these same securities firms without specific prior board approval. The board may also wish to adopt a policy applicable to directors, officers, and employees restricting or prohibiting the receipt of gifts, gratuities, or travel expenses from approved securities dealer firms and their representatives.

2126.1.1.5.5 Legal Risk

Legal risk is the risk that contracts are not legally enforceable or documented correctly. Institutions should adequately evaluate the enforceability of its agreements before individual transactions are consummated. Institutions should also ensure that the counterparty has authority to enter into the transaction and that the terms of the agreement are legally enforceable. Institutions should further ascertain that netting agreements are adequately documented, executed properly, and are enforceable in all relevant jurisdictions. Institutions should have knowledge of relevant tax laws and interpretations governing the use of these instruments.

On November 15, 2012, state member banks were advised, effective January 1, 2013, that they may no longer rely solely on credit ratings issued by nationally recognized statistical rating organizations (NRSROs) or external credit ratings to determine whether a particular security is an "investment security" that is permissible for investment by a state member bank. Under the regulations of the Office of the Comptroller of the Currency (OCC), securities qualify for investment by national banks only if they are determined by the bank to be "investment grade" and not predominantly speculative in nature. (See SR-12-15 and its attachment.) The basic sound risk-management principles of this policy and other referenced guidance that follows also applies to bank holding companies (BHCs) and savings and loan holding companies (SLHCs). They should manage and control their risk exposures on a consolidated basis and give recognition to the legal distinctions and potential obstacles to the cash movements among their financial institution subsidiaries. Since a BHC's structure can include national banks, state member banks, and other financial institution subsidiaries, the referenced statutory, regulatory, and supervisory guidance is provided.

Under the Federal Reserve Act (12 USC 335) and the Federal Reserve (FR)'s Regulation H (12 CFR 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 USC 24 (Seventh)). Therefore, when investing in securities, state member banks must comply with the provisions of the National Banking Act and the OCC regulations in 12 CFR part 1. In addition to this federal requirement, a state member bank may purchase, sell, underwrite, or hold securities and stock only to the extent permitted under applicable state law.

National banks are to assess a security's creditworthiness to determine if it is "investment grade." A security meets the "investment grade" test only if the issuer has an adequate capacity to meet its financial commitments under the security for the projected life of the asset or exposure. Under this definition, the issuer has an adequate capacity to meet financial commitments if (1) the risk of default by the obligor is low and (2) the full and timely repayment of principal and interest is expected.[1] National banks are expected to consider a number of factors, to the extent appropriate in making this determination. While a national bank may continue to take into account external credit ratings and assessments as a valuable source of information, the bank is expected to supplement these ratings with a degree of due diligence processes and additional analyses appropriate for the bank's risk profile and for the size and complexity of the instrument.[2]

The OCC issued guidance, effective January 1, 2013 (OCC investment guidance), to clarify regulatory expectations with respect to investment purchase decisions and ongoing portfolio due diligence processes. See appendix 1 below (section 2126.2.1). The guidance clarifies that generally, investment securities are expected to have good to very strong credit quality. In the case of structured securities, this determination may be influenced more by the quality of the underlying collateral, the cash flow rules, and the structure of the security itself than by the condition of the issuer.

The OCC also expects national banks to conduct an appropriate level of due diligence to understand the inherent risks of a security and determine that it is a permissible investment. The extent of the due diligence should be sufficient to support the institution's conclusion that a security meets the "investment-grade" standards. The depth of the due diligence should be a function of the security's credit quality, the complexity of the structure, and the size of the investment. Third-party analytics may be part of this analysis, although the national bank's management remains responsible for the investment decision and should ensure that prospective third parties are independent, reliable, and qualified. The guidance also sets forth an expectation that the board of directors should oversee management to make sure appropriate decisionmaking processes are in place.[3]

Investment in securities and stock by state member banks are required under the Federal Reserve Act and Regulation H to comply with the revised 12 CFR part 1 and should also meet the supervisory expectations set forth in the OCC investment guidance and this FR guidance. In addition, state member banks are expected to continue to meet long-established

1. See 77 *Fed. Reg.* 35257 (June 13, 2012).

2. See 77 *Fed. Reg.* 35254 (June 13, 2012).

3. See 77 *Fed. Reg.* 35259 (June 13, 2012).

supervisory expectations for risk-management processes to ensure that the credit risk of the bank, including the credit risk of the investment portfolio, is effectively identified, measured, monitored, and controlled.

2126.2.1 APPENDIX 1—OCC GUIDANCE ON DUE DILIGENCE REQUIREMENTS IN DETERMINING WHETHER SECURITIES ARE ELIGIBLE FOR INVESTMENT

The guidance below was issued by the Office of the Comptroller of the Currency (OCC) on June 13, 2012, and is being included for ease of reference. The official guidance was published in the Federal Register (77 Fed. Reg. 35259), and is available as an attachment to OCC Bulletin 2012-18. As discussed in SR-12-15, the Federal Reserve also expects that state member banks (SMBs) will meet the supervisory expectations set forth in the OCC guidance as this guidance provides further clarification to the OCC rule with which SMBs must comply. (See 12 CFR part 1, and 77 Fed. Reg. 35253, June 13, 2012.)

Purpose

The OCC has issued final rules to revise the definition of "investment grade," as that term is used in 12 CFR parts 1 and 160 in order to comply with section 939A of the Dodd-Frank Act. Institutions, effective January 1, 2013, are to ensure that existing investments comply with the revised "investment grade" standard, as applicable based on investment type, and safety and soundness practices described in 12 CFR 1.5 and this guidance. This implementation period also will provide management with time to evaluate and amend existing policies and practices to ensure new purchases comply with the final rules and guidance. National banks that have established due diligence review processes, and that have not relied exclusively on external credit ratings, should not have difficulty establishing compliance with the new standard.

The OCC is issuing this guidance (Guidance) to clarify steps national banks ordinarily are expected to take to demonstrate they have properly verified their investments meet the newly established credit-quality standards under 12 CFR part 1 and steps national banks are expected to take to demonstrate they are in compliance with due diligence requirements when purchasing investment securities and conducting ongoing reviews of their investment portfolios. The standards below describe how national banks may purchase, sell, deal in, underwrite, and hold securities consistent with the authority contained in 12 U.S.C. 24 (Seventh). The activities of national banks must be consistent with safe and sound banking practices, and this Guidance reminds national banks of the supervisory risk-management expectations associated with permissible investment portfolio holdings under parts 1 and 160.

Background

Parts 1 and 160 provide standards for determining whether securities have appropriate credit quality and marketability characteristics to be purchased and held by national banks. These requirements also establish limits on the amount of investment securities an institution may hold for its own account. As defined in 12 CFR part 1, an "investment security" must be "investment grade." For the purpose of part 1, "investment grade" securities are those where the issuer has an adequate capacity to meet the financial commitments under the security for the projected life of the investment. An issuer has an adequate capacity to meet financial commitments if the risk of default by the obligor is low and the full and timely repayment of principal and interest is expected. Generally, securities with good to very strong credit quality will meet this standard. In the case of a structured security (that is, a security that relies primarily on the cash flows and performance of underlying collateral for repayment, rather than the credit of the entity that is the issuer), the determination that full and timely repayment of principal and interest is expected may be influenced more by the quality of the underlying collateral, the cash flow rules, and the structure of the security itself than by the condition of the issuer.

National banks must be able to demonstrate that their investment securities meet applicable credit-quality standards. This Guidance provides criteria that national banks can use in meeting part 1 credit-quality standards and that national banks can use in meeting due diligence requirements.

Determining Whether Securities Are Permissible Prior to Purchase

The OCC's elimination of references to credit ratings in its regulations, in accordance with the Dodd-Frank Act, does not substantively change the standards institutions should use when deciding whether securities are eligible for purchase under part 1. The OCC's investment securities regulations generally require a national bank to determine whether or not a security is ''investment grade'' in order to determine whether purchasing the security is permissible. Investments are considered ''investment grade'' if they meet the regulatory standard for credit quality. To meet this standard, a national bank must be able to determine that the security has (1) low risk of default by the obligor and (2) the expectation of full and timely repayment of principal and interest over the expected life of the investment.

For national banks, Type I securities, as defined in part 1, generally are government obligations and are not subject to investment grade criteria for determining eligibility to purchase. Typical Type I obligations include U.S. Treasuries, agencies, municipal government general obligations, and for well-capitalized institutions, municipal revenue bonds. While Type I obligations do not have to meet the investment grade criteria to be eligible for purchase, all investment activities should comply with safe and sound banking practices as stated in 12 CFR 1.5 and in previous regulatory guidance. Under OCC rules, Treasury and agency obligations do not require individual credit analysis, but bank management should consider how those securities fit into the overall purpose, plans, and risk and concentration limitations of the investment policies established by the board of directors. Municipal bonds should be subject to an initial credit assessment and then ongoing review consistent with the risk characteristics of the bonds and the overall risk of the portfolio.

Financial institutions should be well acquainted with fundamental credit analysis as this is central to a well-managed loan portfolio. The foundation of a fundamental credit analysis-character, capacity, collateral, and covenants-applies to investment securities just as it does to the loan portfolio. Accordingly, the OCC expects national banks to conduct an appropriate level of due diligence to understand the inherent risks and determine that a security is a permissible investment. The extent of the due diligence should be sufficient to support the institution's conclusion that a security meets the investment grade standards. This may include consideration of internal analyses, third party research and analytics including external credit ratings, internal risk ratings, default statistics, and other sources of information as appropriate for the particular security. Some institutions may have the resources to do most or all of the analytical work internally. Some, however, may choose to rely on third parties for much of the analytical work. While analytical support may be delegated to third parties, management may not delegate its responsibility for decisionmaking and should ensure that prospective third parties are independent, reliable, and qualified. The board of directors should oversee management to assure that an appropriate decisionmaking process is in place.

The depth of the due diligence should be a function of the security's credit quality, the complexity of the structure, and the size of the investment. The more complex a security's structure, the more credit-related due diligence an institution should perform, even when the credit quality is perceived to be very high. Management should ensure it understands the security's structure and how the security may perform in different default environments, and should be particularly diligent when purchasing structured securities.[4] The OCC expects national banks to consider a variety of factors relevant to the particular security when determining whether a security is a permissible and sound investment. The range and type of specific factors an institution should consider will vary depending on the particular type and nature of the securities. As a general matter, a national bank will have a greater burden to support its determination if one factor is contradicted by a finding under another factor.

The following matrix provides examples of factors for national banks to consider as part of a robust credit-risk assessment framework for designated types of instruments. The types of securities included in the matrix require a credit-focused pre-purchase analysis to meet the investment grade standard or safety and soundness standards. Again, the matrix is provided as a guide to better inform the credit-risk assessment process. Individual purchases may require more or less analysis dependent on the security's risk characteristics, as previously described.

4. For example, a national bank should be able to demonstrate an understanding of the effects on cash flows of a structured security assuming varying default levels in the underlying assets.

Key factors	Corporate bonds	Municipal government general obligations	Revenue bonds	Structured securities
Confirm spread to U.S. Treasuries is consistent with bonds of similar credit quality	X	X	X	X
Confirm risk of default is low and consistent with bonds of similar credit quality	X	X	X	X
Confirm capacity to pay and assess operating and financial performance levels and trends through internal credit analysis and/or other third party analytics, as appropriate for the particular security	X	X	X	X
Evaluate the soundness of a municipal's budgetary position and stability of its tax revenues. Consider debt profile and level of unfunded liabilities, diversity of revenue sources, taxing authority, and management experience		X		
Understand local demographics/economics. Consider unemployment data, local employers, income indices, and home values		X	X	
Assess the source and strength of revenue structure for municipal authorities. Consider obligor's financial condition and reserve levels, annual debt service and debt coverage ratio, credit enhancement, legal covenants, and nature of project			X	
Understand the class or tranche and its relative position in the securitization structure				X
Assess the position in the cash flow waterfall				X
Understand loss allocation rules, specific definition of default, the potential impact of performance and market value triggers, and support provided by credit and/or liquidity enhancements				X
Evaluate and understand the quality of the underwriting of the underlying collateral as well as any risk concentrations				X
Determine whether current underwriting is consistent with the original underwriting underlying the historical performance of the collateral and consider the effect of any changes				X
Assess the structural subordination and determine if adequate given current underwriting standards				X
Analyze and understand the impact of collateral deterioration on tranche performance and potential credit losses under adverse economic conditions				X

Additional Guidance on Structured Securities Analysis

The creditworthiness assessment for an investment security that relies on the cash flows and collateral of the underlying assets for repayment (i.e., a structured security) is inherently different from a security that relies on the financial capacity of the issuer for repayment. Therefore, a financial institution should demonstrate an understanding of the features of a structured security that would materially affect its performance and that its risk of loss is low even under adverse economic conditions. Management's assessment of key factors, such as those provided in this guidance, will be considered a critical component of any structured security evaluation. Existing OCC guidance, including OCC Bulletin 2002-19, "Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices," states that it is unsafe and unsound to purchase a complex high-yield security without an understanding of the security's structure and performing a scenario analysis that evaluates how the security will perform in different default environments. Policies that specifically permit this type of investment should establish appropriate limits, and prepurchase due diligence processes should consider the impact of such purchases on capital and earnings under a variety of possible scenarios. The OCC expects institutions to understand the effect economic stresses may have on an investment's cash flows. Various factors can be used to define the stress scenarios. For example, an institution could evaluate the potential impact of changes in economic growth, stock market movements, unemployment, and home values on default and recovery rates. Some institutions have the resources to perform this type of analytical work internally. Generally, analyses of the application of various stress scenarios to a structured security's cash flow are widely available from third parties. Many of these analyses evaluate the performance of the security in a base case and a moderate and severe stress case environment. Even under severe stress conditions, the stress scenario analysis should determine that the risk of loss is low and full and timely repayment of principal and interest is expected.

Maintaining an Appropriate and Effective Portfolio Risk-Management Framework

The OCC has had a long-standing expectation that national banks implement a risk-management process to ensure credit risk, including credit risk in the investment portfolio, is effectively identified, measured, monitored, and controlled. The *1998 Interagency Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities* (Policy Statement) contains risk-management standards for the investment activities of banks and savings associations.[5] The Policy Statement emphasizes the importance of establishing and maintaining risk processes to manage the market, credit, liquidity, legal, operational, and other risks of investment securities. Other previously issued guidance that supplements OCC investment standards are OCC 2009-15, "Risk Management and Lessons Learned" (which highlights lessons learned during the market disruption and re-emphasizes the key principles discussed in previously issued OCC guidance on portfolio risk management); OCC 2004-25, "Uniform Agreement on the Classification of Securities" (which describes the importance of management's credit-risk analysis and its use in examiner decisions concerning investment security risk ratings and classifications); and OCC 2002-19, "Supplemental Guidance, Unsafe and Unsound Investment Portfolio Practices" (which alerts banks to the potential risk to future earnings and capital from poor investment decisions made during periods of low levels of interest rates and emphasizes the importance of maintaining prudent credit, interest rate, and liquidity risk-management practices to control risk in the investment portfolio).

National banks must have in place an appropriate risk-management framework for the level of risk in their investment portfolios. Failure to maintain an adequate investment portfolio risk-management process, which includes understanding key portfolio risks, is considered an unsafe and unsound practice.

Having a strong and robust risk-management framework appropriate for the level of risk in an institution's investment portfolio is particularly critical for managing portfolio credit risk. A key role for management in the oversight process is to translate the board of directors' tolerance for risk into a set of internal operating policies and procedures that govern the institution's investment activities. Policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and

5. On April 23, 1998, the FRB, FDIC, NCUA, and OCC issued the "Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities."

risk tolerance. Institutions should ensure that they identify and measure the risks associated with individual transactions prior to acquisition and periodically after purchase. This can be done at the institutional, portfolio, or individual instrument level. Investment policies also should provide credit-risk concentration limits. Such limits may apply to concentrations relating to a single or related issuer, a geographical area, and obligations with similar characteristics. Safety-and-soundness principles warrant effective concentration risk-management programs to ensure that credit exposures do not reach an excessive level.

The aforementioned risk-management policies, principles, and due diligence processes should be commensurate with the complexity of the investment portfolio and the materiality of the portfolio to the financial performance and capital position of the institution. Investment review processes, following the pre-purchase analysis, may vary from institution to institution based on the individual characteristics of the portfolio, the nature and level of risk involved, and how that risk fits into the overall risk profile and operation of the institution. Investment portfolio reviews may be risk-based and focus on material positions or specific groups of investments or stratifications to enable analysis and review of similar risk positions.

As with pre-purchase analytics, some institutions may have the resources necessary to do most or all of their portfolio reviews internally. However, some may choose to rely on third parties for much of the analytical work. Third-party vendors offer risk analysis and data benchmarks that could be periodically reviewed against existing portfolio holdings to assess credit-quality changes over time. Holdings where current financial information or other key analytical data is unavailable should warrant more frequent analysis. High-quality investments generally will not require the same level of review as investments further down the credit-quality spectrum. However, any material positions or concentrations should be identified and assessed in more depth and more frequently, and any system should ensure an accurate and timely risk assessment and reporting process that informs the board of material changes to the risk profile and prompts action when needed. National banks should have investment portfolio review processes that effectively assess and manage the risks in the portfolio and ensure compliance with policies and risk limits. Institutions should reference existing regulatory guidance for additional supervisory expectations for investment portfolio risk-management practices.

2126.2.2 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
State member banks are subject to same limitations and conditions for investments activities as national banks	24 (Seventh), 335	1, 208.21

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

Bank holding companies should directly manage and control their aggregate risk exposures on a consolidated basis and, if appropriate, for individual subsidiaries, in view of the distinct legal existence of various subsidiaries and possible obstacles to moving cash, other assets, and contractual agreements among subsidiaries.[1] See SR-99-3.

2126.3.1 FUNDAMENTAL ELEMENTS OF COUNTERPARTY CREDIT RISK MANAGEMENT

When conducting bank holding company inspections and supervisory contacts, and when monitoring trading and derivatives activities, supervisors and examiners should fully evaluate the integrity of certain key elements of a banking organization's (BO) counterparty credit risk management process, such as the following:

1. The BO's assessment of counterparty creditworthiness, both initially and on an ongoing basis. A counterparty's creditworthiness can be evidenced by its capital strength, leverage, any on- and off-balance-sheet risk factors, and contingencies. Creditworthiness can also be evidenced by the counterparty's liquidity, operating results, reputation, and ability to understand and manage the risks inherent in its line of business, as well as the risks involved in the particular products and transactions that define a particular customer relationship.
2. The standards, methodologies, and techniques used in measuring counterparty-credit-risk exposures on an individual instrument, counterparty, and portfolio basis.
3. The use and management of credit enhancements to mitigate counterparty credit risks, including collateral arrangements and collateral-management systems, contractual downgrades or material-change triggers, and contractual "option-to-terminate" or close-out provisions.
4. The risk-limit and -monitoring systems that involve (1) setting meaningful limits on counterparty credit risk, (2) monitoring exposures against those limits, and (3) initiating meaningful risk assessments and risk-controlling actions in the event that exposures exceed limits.

The confluence of competitive pressures, pursuit of earnings, and overreliance on customer reputation can lead to substantive lapses in fundamental risk-management principles regarding counterparty risk assessment, exposure monitoring, and the management of credit-risk limits. Policies governing these activities may be unduly general so as to compromise their usefulness in managing the risks involved with particular types of counterparties. Practices may not conform to the stated policies or their intent. Situations may also exist where internal controls, including documentation and independent review, may be inadequate or lack rigor. For some larger BOs, regimes for measuring and monitoring counterparty-credit-risk exposure may be effective in more traditional areas of credit extension, but may need enhancements when used in trading and derivatives activities.

2126.3.2 TARGETING SUPERVISORY RESOURCES

When risk focusing their supervisory initiatives, examiners should continue to target those activities and areas with significant growth and above-normal profitability profiles—especially in trading and derivatives activities where the press of business and competitive pressures may invite a BO to offer new product lines before the approval of counterparties and the necessary risk-management infrastructure or procedures are fully in place. Supervisors and examiners should encourage a BO to adopt growth, profitability, and size criteria for their audit and independent risk-management functions to use in targeting their reviews.

1. These basic principles are also to be employed in the supervision of U.S. branches and agencies of foreign banks, with appropriate adaptations to reflect that (1) those offices are an integral part of a foreign bank that should be managing its risks on a consolidated basis and recognizing possible obstacles to cash movements among branches, and (2) the foreign bank is subject to overall supervision by its home-country authorities.

2126.3.3 ASSESSMENT OF COUNTERPARTY CREDITWORTHINESS

Supervisors and examiners should increase their focus on the appropriateness, specificity, and rigor of the policies, procedures, and internal controls that a BO currently uses to assess the counterparty credit risks arising from its trading and derivatives activities. BOs should have extensive written policies covering their assessment of counterparty creditworthiness for both the initial due-diligence process (that is, before conducting business with a customer) and for ongoing monitoring. Examiners should focus particular attention on how such policies are structured and implemented. Broadly structured, general policies that apply to all types of counterparties may prove inadequate for directing staff in the proper review of the risks posed by particular types of counterparties. For example, although most policies call for the assessment and monitoring of the capital strength and leverage of customers, the assessment of hedge-fund counterparties should not rely exclusively on simple balance-sheet measures and traditional assessments of financial condition. This information may be insufficient for those counterparties whose off-balance-sheet positions are a source of significant leverage and whose risk profiles are narrowly based on concentrated business lines (such as with hedge funds and similar institutional investors). General policies calling for periodic counterparty credit reviews over significant intervals (such as annually) are another example of broad policies that may compromise the integrity of the assessment of individual counterparties or types of counterparties—a counterparty's risk profile can change significantly over much shorter time horizons.

Credit-risk-assessment policies should also properly define the types of analyses to be conducted for particular types of counterparties based on the nature of their risk profiles. Stress testing and scenario analysis may be needed, in addition to customizing fundamental analyses based on industry and business-line characteristics. Customized analyses are particularly important when a counterparty's creditworthiness may be adversely affected by short-term fluctuations in financial markets, especially when potential credit exposure to a counterparty increases at the same time the counterparty's credit quality deteriorates.

Examiners should continue to pay special attention to areas where banking organization practices may not conform to stated policies. Such supervisory efforts may be especially difficult when the BO's policies are not specificic enough for it to properly focus its counterparty risk assessments. Therefore, examiners must ensure that the banking organization's policies sufficiently address the risk profiles of particular types of counterparties and instruments. The policies should specify (1) the types of counterparties that may require special consideration; (2) the types and frequency of information to be obtained from such counterparties; (3) the types and frequency of analyses to be conducted, including the need for and type of any stress-testing analysis; and (4) how such information and analyses appropriately address the risk profile of the particular type of counterparty. This specificity in credit-assessment policies is particularly important when limited transparency may hinder market discipline on the risk-taking activities of counterparties—as may be the case with hedge funds.

Examiners should also place increasing emphasis on ensuring that a BO's existing practice conforms both with its stated objectives and the intent of its established policies. For example, some BOs may not obtain and evaluate all the information on the financial strength, condition, and liquidity of some types of counterparties that may be required by their own policies. In highly competitive and fast-moving transaction areas, organizations should be sufficiently rigorous in conducting the analyses specified in their policies, such as the review of a counterparty's ability to manage the risks of its business.

Necessary internal controls for ensuring that practices conform with stated policies include actively enforced documentation standards and periodic independent reviews by internal auditors or other risk-control units, particularly for business lines, products, and exposures to particular groups of counterparties and individual customers that exhibit significant growth or above-normal profitability. Using targeted inspections and reviews, examiners should evaluate the integrity of a BO's internal controls. Examiners should thus conduct their own transaction testing of such situations. This testing should include robust sampling of transactions with major counterparties in the targeted area, as well as sufficient stratification to ensure that practices involving smaller relationships also adhere to stated policies.

2126.3.4 CREDIT-RISK-EXPOSURE MEASUREMENT

Financial market turbulence emphasizes the important interrelationships between market movements and the credit-risk exposures involved in derivatives activities. Accordingly, supervisors and examiners should be alert to situations where a BO may need to be more diligent in conducting current computations of the loan equivalents and potential future exposures (PFE) that are used to measure, monitor, and control its derivatives counterparty credit exposure.

Most BOs fully recognize that the credit risk of derivatives positions includes both the current replacement cost of a contract as well as the contract's PFE. PFEs are generally calculated using statistical techniques to estimate the worst potential loss over a specified time horizon at some specified confidence interval (for example, 95 percent, 97.5 percent, and 99 percent), which is generally derived in some manner from historically observed market fluctuations. Together with the current replacement cost, such PFEs are used to convert derivatives contracts to "loan equivalents" for aggregating credit exposures across products and instruments.

The time horizon used to calculate PFEs can vary depending on the banking organization's risk tolerance, collateral protection, and ability to terminate its credit exposure. Some BOs may use a time horizon equal to the life of the respective instrument. While such a time horizon may be appropriate for unsecured positions, for collateralized exposures, the use of lifetime, worst-case-estimate PFEs may be ineffective to measure the true nature of counterparty risk exposure. While life-of-contract PFE measures provide an objective and conservative long-term exposure estimate, they bear little relationship to the actual credit exposures typically incurred in the case of collateralized relationships. In such cases, a banking organization's actual credit exposure is the PFE from the time a counterparty fails to meet a collateral call until the time the bank liquidates its collateral and closes out the derivative contract—a period which is typically much shorter than the contract's life. The lack of realism in conservative measurement can cause managers and traders to discount them and may result in inappropriate limits being set, thereby compromising the entire risk-management process.

More realistic measures of collateralized credit-risk exposures should also take into account the shorter time horizons over which action can be taken to mitigate losses in times of market stress. These measures should incorporate estimates of collateral-recovery rates given the potential market liquidity impacts of stress events on collateral values. Some BOs already do stress tests, calculating measures that assess the worst-case value of positions over a time horizon of one or two weeks—their estimate of a reasonable liquidation period in times of stress. They also perform scenario analyses of counterparty credit exposures. Stress testing and scenario analyses should evaluate the impact of large market moves on the credit exposure to individual counterparties, and they should assess the implications inherent in liquidating positions under such conditions. Analyses should consider the effects of market liquidity on the value of positions and any related collateral. The use of meaningful scenario analyses is particularly important since stress tests derived from simple applications of higher confidence intervals or longer time horizons to PFE, value-at-risk, and other measures may not adequately capture the market and exposure dynamics under turbulent market conditions, particularly as they relate to the interaction between market, credit, and liquidity risk.

The results of stress testing and scenario analyses should be incorporated into senior management reports. Such reports should provide sufficient information to ensure an adequate understanding of the nature of the exposure and the analyses conducted. Information should also be sufficient to trigger risk-controlling actions where necessary.

Other BOs are moving to build the capability of estimating portfolio-based PFEs by any one of several different time horizons or buckets, depending on the liquidity and breadth of the underlying instrument or risk factor. Based on management's opinion of the appropriate workout timeframe, different time horizons can be used for different counterparties, transactions, or collateral types to more precisely define exposures. Supervisors and examiners should be alert to situations where collateralized exposures may be inaccurately estimated, and should encourage management at these BOs to enhance their exposure-measurement systems accordingly.

Supervisors should also be cognizant of the manner in which the credit exposures are aggregated for individual counterparties. Some BOs may take a purely transactional approach to aggregation and *not incorporate the netting of long and short derivatives contracts*, even when legally enforceable bilateral netting agreements are available. In such cases, *simple sum estimates of positive exposures may seriously overestimate true credit exposure*, and examiners should monitor and encourage a BO's movement toward more realistic measures of counterparty exposure. Other BOs may take a portfolio approach, in which information systems allow and incorporate netting (both within and across products, business lines, or risk factors) and portfolio correlation effects to construct more comprehensive counterparty exposure measures. In such cases, supervisors should ensure that a BO has adequate internal controls governing exposure estimation, including robust model-review processes and data-integrity checks.

When stratifying samples and selecting the counterparties and transactions to use for their targeted testing of practices and internal controls, supervisors and examiners should incorporate measures of potential future exposure regardless of the collateralization of current market-value exposures. As recent events have shown, meaningful counterparty credit risks that surface during periods of stress can go undetected when too much emphasis is placed on collateralization of current market values and only unsecured current market exposures are used for targeting transaction testing.

2126.3.5 CREDIT ENHANCEMENTS

BOs continue to rely increasingly on different types of credit enhancements to mitigate counterparty credit risks. These enhancements include the use of collateral arrangements, contractual downgrades or material-change triggers that enable the alteration of collateral or margining arrangements, or the activation of contractual "option to terminate" or closeout provisions.

Collateralization of exposures has become an industry standard for many types of counterparties. Collateralization mitigates but does not eliminate credit risks. BOs therefore should ensure that overreliance on collateral does not compromise other elements of sound counterparty credit-risk management, such as the due-diligence process. Clear policies should govern the determination of loss thresholds and margining requirements for derivatives counterparties of BOs. Such policies should not be so broad that they compromise the risk-reducing nature of collateral agreements with specific types of counterparties. Policies governing collateral arrangements should specifically define those cases in which initial and variation margin is required, and they should explicitly identify situations in which the lack of transparency, business-line risk profiles, and other counterparty characteristics merit special treatment—as may be the case with some highly leveraged counterparties such as hedge funds. Where consistent with the risk profile of the counterparty and instruments involved, policies should specify when margining requirements based on estimates of potential future exposures might be warranted.

Adequate policies should also govern the use of material-change triggers and closeout provisions, which should take into account counterparty-specific situations and risk profiles. For example, closeout provisions based on annual events or material-change triggers based on long-term performance may prove ineffective for counterparties whose risk profiles can change rapidly. Also, such material-change triggers, closeout provisions, and related covenants should be designed to adequately protect against deterioration in a counterparty's creditworthiness. They should ensure that a BO is made aware of adverse financial developments on a timely basis and should facilitate action as counterparty risk increases—well in advance of the time when termination of a relationship is appropriate.

Internal assessments of potential risk exposures sometimes dictate loss thresholds, margining requirements, and closeout provisions with some counterparties. Insufficient internal controls may unduly expose certain BOs to these as well as other types of trading and derivatives counterparties. When evaluating the management of collateral arrangements and other credit enhancements, examiners should not only assess the adequacy of a banking organization's policies but should also determine whether internal controls are sufficient to ensure that practices comply with these policies. Examiners should identify the types of credit enhancements and contractual covenants that are being used when reviewing areas of counterparty risk management, and then determine whether the banking organization has sufficiently assessed the adequacy of these enhancements and covenants relative to the risk profile of the counterparty.

2126.3.6 CREDIT-RISK-EXPOSURE LIMIT-SETTING AND MONITORING SYSTEMS

Exposure-monitoring and limit systems are critical to the effective management of counterparty credit risk. Examiners should focus special attention on the policies, practices, and internal controls employed within such systems at large, complex BOs. An effective exposure-monitoring system consists of (1) establishing meaningful limits on the risk exposures a BO is willing to take, (2) independent, ongoing monitoring of exposures against such limits, and (3) adequate controls to ensure that meaningful risk-controlling action takes place when limits are exceeded. An effective exposure-monitoring and limit process depends on meaningful exposure-measurement methodologies, so supervisors should closely evaluate measurement methodologies, especially for the estimation of PFEs. Inaccurate measurement can easily compromise well-structured policies and procedures. Such situations can lead to limits driven primarily by customer demand and used only to define and monitor customer facilities, rather than limits that serve as strict levels defined by credit management and that initiate risk-controlling actions.

Supervisors and examiners should also assess the procedures used for controlling credit-risk exposures when they become large, when a counterparty's credit standing weakens, or when the market comes under stress. Management should demonstrate its clear ability to reduce large positions. Such actions can include "capping" current exposures, curtailing new business, assigning transactions to another counterparty (where feasible), and restructuring the transaction to limit potential exposure or make it less sensitive to market volatility. BOs can also use various credit-enhancement tools to manage exposures that have become unduly large or highly sensitive to market volatility.

2126.3.7 INSPECTION OBJECTIVES

1. To determine if sufficient resources are devoted and adequate attention is given to the management of the risks involved in growing, highly profitable, or potentially high-risk activities and product lines.
2. To ascertain if the banking organization's internal audit and independent risk-management functions adequately focus on growth, profitability, and risk criteria when targeting their reviews.
3. To determine if there is an appropriate balance among all elements of credit-risk management. This balance includes both qualitative and quantitative assessments of counterparty creditworthiness; measurement and evaluation of on- and off-balance sheet exposures, including potential future exposure; adequate stress testing; reliance on collateral and other credit enhancements; and the monitoring of exposures against meaningful limits.
4. To ascertain whether the banking organization employs policies that are sufficiently calibrated to the risk profiles of particular types of counterparties and instruments, which ensures adequate credit-risk assessment, exposure measurement, limit setting, and use of credit enhancements.
5. To ensure that the banking organization's actual business practices conform with their stated policies and the intent of these policies.
6. To establish if the banking organization is moving in a timely fashion to enhance its measurement of counterparty credit-risk exposures, including refining potential future exposure measures and establishing stress-testing methodologies to better incorporate the interaction of market and credit risks.
7. To accomplish the above inspection objectives by using sufficient, targeted transaction testing on those activities, business lines, and products experiencing significant growth, above-normal profitability, or large potential future exposures.

2126.3.8 INSPECTION PROCEDURES

1. Give increased focus to the adequacy, appropriateness, specificity, and rigor of the policies, procedures, and internal controls that a BO currently uses to assess the counterparty credit risks arising from its trading and derivatives activities.
   a. Determine if sufficient written policies cover the assessment of counterparty creditworthiness for the initial due-diligence process (that is, before conducting business with a customer) and for ongoing monitoring.
   b. Give particular attention to how such policies are structured, their adequacy, and how they are implemented.

2. Focus special attention on areas where a BO's practices may not conform to its stated policies.
   a. Determine if the banking organization's policies sufficiently address the risk profiles of its particular types of counterparties and instruments.
   b. Ascertain whether existing practices conform to the stated objectives and the intent of the organization's established policies.
3. Evaluate the banking organization's documentation standards.
4. Determine whether the internal reviews are adequately conducted for business lines, products, and exposures to particular groups of counterparties and individual customers that exhibit significant growth or above-normal profitability.
5. Evaluate the integrity of the internal controls that the banking organization uses to assess its own transaction testing during internal reviews.
6. Conduct independent targeted reviews of the internal controls.
   a. Use robust sampling when testing transactions of major counterparties within a targeted area.

   b. Employ sufficient stratification to ensure that practices involving smaller relationships also adhere to stated policies.
   c. Be alert to situations whereby the current computations of loan equivalents and potential exposures—that are used to measure, monitor, and control derivatives counterparty credit exposures—could be deliberately enhanced.
7. Determine if the banking organization needs to develop more meaningful measures of credit-risk exposures, such as using stress testing and scenario analyses, under volatile market conditions.

2126.5.1 PURPOSE AND BACKGROUND

Section 619 of the Dodd-Frank Wall Street Reform and Consumer Protection Act added a new section 13 to the Bank Holding Company Act of 1956 (BHC Act),[1] commonly referred to as the Volcker rule, which generally prohibits any banking entity from engaging in proprietary trading or from acquiring or retaining an ownership interest in, sponsoring, or having certain relationships with a hedge fund or private equity fund (covered fund), subject to certain exemptions. In 2014, the Board, Office of the Comptroller of the Currency (OCC), Federal Deposit Insurance Corporation (FDIC), Securities and Exchange Commission, and Commodity Futures Trading Commission (collectively, the agencies) jointly adopted a final rule implementing these provisions.

The term "banking entity" is defined by statute to include, with limited exceptions

1. any insured depository institution (IDI) (as defined in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813));
2. any company that controls an IDI (including a bank holding company (BHC), savings and loan holding company (SLHC), and any other company that controls an IDI but that is not a BHC or SLHC, such as the parent company of an industrial loan company);
3. any company that is treated as a BHC for purposes of section 8 of the International Banking Act of 1978 (for example, any foreign bank operating a branch or agency in the United States); and
4. any affiliate or subsidiary of any of the foregoing (for example, a broker-dealer subsidiary of a BHC) (12 U.S.C. 1851(h)(1)).[2]

The enactment of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) in 2018 amended the statutory definition of banking entity to exclude certain community banks and their affiliates from the Volcker rule restrictions. Accordingly, in 2019, the agencies adopted amendments to their regulations to exclude IDIs that do not have, and are not controlled by a company that has (1) more than $10 billion in total consolidated assets; and (2) total trading assets and liabilities, as of the most recent calendar quarter, that are more than 5 percent of total consolidated assets.[3]

In 2019 and 2020, the agencies amended their regulations to clarify the proprietary trading and compliance program requirements of the rule, and to clarify the covered funds requirements of the rule, respectively.[4]

2126.5.2 REGULATION VV

Regulation VV, "Proprietary Trading and Certain Interests in and Relationships with Covered Funds," (12 CFR part 248) is the Board's implementing regulation for the Volcker rule. The regulation defines terms used in the statute and related terms, establishes general prohibitions and restrictions on proprietary trading and on investments in or relationships with covered funds, and provides certain compliance program requirements.

Consistent with the statute, Regulation VV exempts from the general prohibitions of the Volcker rule certain activities (for example, market making, underwriting, risk-mitigating hedging, trading in certain government obligations, and organizing and offering a covered fund). However, both the statute and Regulation VV prohibit a banking entity from relying on any exemption to the prohibition on proprietary trading if the permitted activity would involve or result in a material conflict of interest, result in a material exposure to high-risk assets or trading strategies, or pose a threat to the safety and soundness of the banking entity or to the financial stability of the United States.

1. The BHC Act is codified at 12 U.S.C. 1851.

2. Section 13 of the BHC Act also provides that a nonbank financial company designated by the Financial Stability Oversight Council for supervision by the Board (while not a banking entity under section 13 of the BHC Act) would be subject to additional capital requirements, quantitative limits, or other restrictions if the company engages in certain proprietary trading or covered fund activities.

3. See 84 Fed. Reg. 35,008 (July 22, 2019). Consistent with EGRRCPA, the regulation permits an investment adviser that is a banking entity to share a name with a hedge fund or private equity fund that the banking entity organizes and offers under certain circumstances.

4. See 84 Fed. Reg. 61,974 (November 14, 2019) and 85 Fed. Reg. 46,422 (July 31, 2020).

2126.5.3 CAPITAL RULE IMPLICATIONS

Regulation VV provides that a banking entity's aggregate investments in all covered funds pursuant to the exemption for organizing and offering a covered fund may not exceed 3 percent of the banking entity's applicable tier 1 capital (the aggregate funds limitation). Additionally, and consistent with the statute, the regulation requires that a banking entity's investment in a covered fund, including retained earnings, be deducted from tier 1 capital of the banking entity for purposes of determining compliance with applicable regulatory capital standards (the capital deduction requirement).[5] In 2015, the Board, OCC, and FDIC issued guidance to clarify the interaction between the agencies' regulatory capital rules and their regulations implementing the Volcker rule. Refer to SR-15-13, "Supervisory Guidance on the Capital Treatment of Certain Investments in Covered Funds under the Regulatory Capital Rule and the Volcker Rule," and its attachment, "Deduction Methodology for Investments in Covered Funds."

2126.5.4 REQUESTING AN EXTENDED TRANSITION PERIOD FOR ILLIQUID FUNDS

The Board's July 7, 2016, statement entitled, "Order Approving Extension of Conformance Period Under Section 13 of the Bank Holding Company Act," explains that the Board would generally follow a simplified and streamlined process for granting extensions of the holding period for "illiquid funds," as described in this subsection.[6] That process is outlined in SR-16-18, "Procedures for a Banking Entity to Request an Extended Transition Period for Illiquid Funds."

As discussed in the statement, the restrictions and prohibitions of the Volcker rule became effective on July 21, 2012;[7] however, the statute provided banking entities a period of two years until July 21, 2014, to conform their activities and investments to the requirements of the statute and any rule issued by the agencies. Further, the statute provides that the Board may, by rule or order, extend this general conformance period "for not more than one year at a time," up to three times, if in the judgment of the Board, an extension would be consistent with the purposes of the Volcker rule and would not be detrimental to the public interest.[8] On July 7, 2016, the Board issued an order extending the final one-year conformance period for banking entities to conform investments in and relationships with covered funds and foreign funds that were in place prior to December 31, 2013 (legacy covered funds) until July 21, 2017.

The Board also is permitted, upon the application of a banking entity, to provide an additional transition period of up to five years to conform investments in a limited class of legacy illiquid funds.[9] An illiquid fund is defined by the statute as a fund that is "principally invested" in illiquid assets and holds itself out as employing a strategy to invest principally in illiquid assets.[10] The statute provides that this extension applies only to the extent that the banking entity's retention of the ownership interest in the fund, or provision of additional capital to the fund, is necessary to fulfill a contractual obligation of the banking entity that was in effect on May 1, 2010.[11] The statute provides that the Board may grant an extension for each illiquid fund only once and for a period of up to five years.[12] The Board's conformance rule sets forth provisions governing the submission and review of extension requests.[13]

2126.5.5 REQUESTING AN EXTENSION OF THE ONE-YEAR SEEDING PERIOD FOR A COVERED FUND

In 2017, the Board provided guidance to banking entities on the procedures for submitting an application for an extension of the one-year seeding period for a covered fund under the

5. 12 U.S.C. 1851(d)(4)(B); see also 12 CFR 248.12.
6. See Board press release and attachment from July 7, 2016.
7. See 12 U.S.C. 1851(c)(1).

8. See 12 U.S.C. 1851(c)(2). The Board issued rules implementing the Volcker rule conformance provisions in 2011. See "Conformance Period for Entities Engaged in Prohibited Proprietary Trading or Private Equity Fund or Hedge Fund Activities," 76 Fed. Reg. 8265 (February 14, 2011) (12 CFR part 225, subpart K, "Proprietary Trading and Relationships With Hedge Funds and Private Equity Funds," referred to as the "conformance rule").
9. See 12 U.S.C. 1851(c)(3)-(4) and (h)(7).
10. See 12 U.S.C. 1851(h)(7).
11. See 12 U.S.C. 1851(c)(3)(A). In addition, the statute provides that a banking entity may not engage in a prohibited covered fund investment after the date on which the contractual obligation to invest in the illiquid fund terminates. See 12 U.S.C. 1851(c)(4)(A).
12. See 12 U.S.C. 1851(c)(3)(B).
13. See 12 CFR part 225, subpart K.

Volcker rule. Under the statute, a banking entity, regardless of its primary federal financial regulatory agency, must apply to the Board for an extension of the seeding period.

Under the Volcker rule, a banking entity is permitted to acquire and retain an ownership interest in a covered fund in connection with organizing and offering the covered fund as long as certain requirements are met.[14] Section 13(d)(4)(A) of the BHC Act and the Board's Regulation VV permit a banking entity to acquire and retain an ownership interest in a covered fund that the banking entity organizes and offers for the purpose of (1) establishing the fund and providing the fund with sufficient initial equity for investment to permit the fund to attract unaffiliated investors, or (2) making a de minimis investment, subject to several limitations.[15]

The statute and Regulation VV require a banking entity to actively seek unaffiliated investors to reduce its investment in the covered fund, no later than one year after the date of establishment of the fund,[16] to an amount that is not more than 3 percent of the total outstanding ownership interests in the fund (the per-fund limitation).[17] A banking entity may request the Board's approval for an extension of time beyond the one-year period, for up to two additional years, to conform an investment to the per-fund limitation (the seeding period).[18] Under the statute, the Board may grant an extension of the seeding period if the Board finds that the extension would be consistent with safety and soundness and in the public interest.[19]

SR-17-5, "Procedures for a Banking Entity to Request an Extension of the One-Year Seeding Period for a Covered Fund," provides more detailed information on the requirements for submitting such requests and procedures for filing an extension request.

14. See 12 U.S.C. 1851(d)(1)(G) and (d)(4); 12 CFR 248.11(a)-(b).

15. 12 U.S.C. 1851(d)(4)(A); 12 CFR 248.12(a)(1).

16. Regulation VV defines "date of establishment" of a covered fund to mean the date on which the investment adviser or similar entity to the covered fund begins making investments pursuant to the written investment strategy for the fund. In the case of an issuing entity of asset-backed securities, the date of establishment is the date on which the assets are initially transferred into the issuing entity of the asset-backed securities. See 12 CFR 248.12(a)(2)(iv).

17. See 12 U.S.C. 1851(d)(4)(B); see 12 CFR 248.12(a)(2). Regulation VV permits a banking entity to hold a greater amount of a covered fund under the per-fund limitation if required in order to meet the risk retention requirements of section 15G of the Securities Exchange Act and implementing regulations. See 12 CFR 248.12(a)(2)(ii)(B).

18. See 12 U.S.C. 1851(d)(4)(C); 12 CFR 248.12(e).

19. See 12 U.S.C. 1851(d)(4)(C). In their regulations, the agencies recognized the potential for evasion of the restrictions contained in the Volcker rule through misuse of requests for extensions of the seeding period for covered funds and stated that the Board and the other agencies would monitor requests for extensions of the seeding period for activity in covered funds that is inconsistent with the requirements of the Volcker rule. See 79 Fed. Reg. 5725 and 5736 (January 31, 2014).

WHAT NEW IN THIS REVISED SECTION

Effective January 2010 this section was revised to include a brief overview of the January 6, 2010, interagency advisory on interest-rate risk management that targets interest-rate risk management at insured depository institutions. The advisory does not constitute new guidance. The principles and supervisory expectations discussed within the guidance apply also to bank holding companies, which should manage and control aggregate risk exposures on a consolidated basis. See SR-10-1.

2127.0.1 ASSESSING THE MANAGEMENT AND INTERNAL CONTROLS OVER INTEREST-RATE RISK

Interest-rate risk (IRR) is the exposure of a banking organization's financial condition to adverse movements in interest rates. Accepting this risk can be an important source of profitability and shareholder value. However, excessive levels of IRR can pose a significant threat to a bank's or bank holding company's (BHC's) earnings and capital base. Accordingly, effective risk management that maintains IRR at prudent levels is essential to the organization's safety and soundness.

Evaluating a BHC's exposure to changes in interest rates is an important element of any full-scope inspection and may be the sole topic for specialized or targeted inspections. This evaluation includes assessing both the adequacy of the management process used to control IRR and the organization's quantitative level of exposure. When assessing the IRR management process, examiners should ensure that appropriate policies, procedures, management information systems, and internal controls are in place to maintain IRR at prudent levels with consistency and continuity. Evaluating the quantitative level of IRR exposure requires examiners to assess the existing and potential future effects of changes in interest rates on a BHC's consolidated financial condition including its capital adequacy; earnings; liquidity; and, where appropriate, asset quality. To ensure that these assessments are both effective and efficient, examiner resources must be appropriately targeted at those elements of an organization's IRR that pose the greatest threat to its financial condition. This targeting requires an inspection process built on a well-focused assessment of IRR exposure before the on-site engagement, a clearly defined inspection scope, and a comprehensive program for following up on inspection findings and ongoing monitoring.

2127.0.2 JOINT AGENCY POLICY STATEMENT: INTEREST-RATE RISK

The Board, together with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, adopted a May 23, 1996, Joint Agency Policy Statement on Interest-Rate Risk, effective June 26, 1996. (See SR-96-13.) It provides guidance to examiners and bankers on sound practices for managing IRR, which form the basis for ongoing evaluation of the adequacy of IRR management at supervised institutions.

The policy statement outlines fundamental elements of sound management that have been identified in prior Federal Reserve guidance and discusses the importance of these elements in the context of managing IRR.[1] Specifically, the guidance emphasizes the need for active board and senior management oversight and a comprehensive risk-management process that effectively identifies, measures, and controls IRR.

Although the guidance targets IRR management at commercial banks and Edge Act corporations, the basic principles presented in the policy statement are to be applied to bank holding companies (BHCs). BHCs should manage and control aggregate risk exposure on a consolidated basis by recognizing legal distinctions and possible obstacles to cash movements among subsidiaries. The assessment of interest-rate risk management made by examiners in accordance with the 1996 Joint Policy Statement will be incorporated into a BHC's overall

1. Guidance to examiners identifying fundamental elements of sound risk management includes SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations"; SR-96-14 (see section 2124.0), "Risk-Focused Safety and Soundness Examinations and Inspections"; SR-96-13, "Joint Policy Statement on Interest-Rate Risk"; SR-96-10, "Risk-Focused Fiduciary Examinations"; SR-95-51 (see section 4070.1), "Rating the Adequacy of Risk-Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"; and SR-93-69 (see section 2125.0), "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations."

risk-management rating. BHC examiners should refer to section 4090.1 of the *Commercial Bank Examination Manual* for more detailed inspection guidance on the joint policy statement on IRR.

2127.0.3 INTERAGENCY ADVISORY ON INTEREST RATE RISK MANAGEMENT

A January 6, 2010, interagency advisory was issued by the Board of Governors of the Federal Reserve System and other federal regulators[2] that reminds institutions of supervisory expectations on sound practices for managing IRR. The advisory does not constitute new guidance. It reiterates basic principles of sound IRR management that each of the regulators has codified in its existing guidance, as well as in the interagency guidance on IRR management issued by the banking agencies in SR-96-13. The advisory highlights also the need for active board and senior management oversight and a comprehensive risk-management process that effectively measures, monitors, and controls IRR.

The advisory targets IRR management at insured depository institutions. However, the principles and supervisory expectations articulated also apply to BHCs, which are reminded of long-standing supervisory guidance that they should manage and control aggregate risk exposures on a consolidated basis while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries. See SR-10-1.

2 The other financial regulators include the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), and the Federal Financial Institutions Examination Council (FFIEC) State Liaison Committee (collectively, the regulators).

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2009, this section was revised to delete a reference to SR-95-17 that was superseded by SR-98-12 (see section 2126.1).

2128.0.1 SUPERVISORY POLICY—STRUCTURED NOTES

This section discusses supervisory policy with regard to structured notes and their increased use by banking organizations. Examiners should be mindful of these instruments, whether they are used in the banking organization's trading, investment, or trust activities. Some of these instruments can expose investors to significant losses as interest rates, foreign-exchange rates, and other market indices change. Consequently, during examinations or inspections, examiners need to ensure that banks and bank holding companies that hold structured notes do so according to their own investment policies and procedures and with a full understanding of the risks and price sensitivity of these instruments under a broad range of market conditions.

Structured notes, many of which are issued by U.S. government agencies, government-sponsored entities, and other organizations with high credit ratings, are debt securities whose cash flows are dependent on one or more indices in ways that create risk characteristics of forwards or options. They tend to have medium-term maturities and reflect a wide variety of cash-flow characteristics that can be tailored to the needs of individual investors.

As such, these notes may offer certain advantages over other financial instruments used to manage market risk. In particular, they may reduce counterparty credit risk, offer operating efficiencies and lower transaction costs, require fewer transactions, and more specifically address an institution's risk exposures. Risk to principal is typically small. Accordingly, when structured notes are analyzed and managed properly, they can be acceptable investments and trading products for banks.

However, structured notes can also have characteristics that cause them to be inappropriate holdings for many banking organizations, including depository institutions. They can have substantial price sensitivity; they can be complex and difficult to evaluate; and they may also reflect high amounts of leverage relative to fixed-income instruments with comparable face values. Their customized features and embedded options may also make them difficult to price and can reduce their liquidity. Consequently, banking organizations considering the purchase of structured notes should determine whether these factors are compatible with their investment horizons and with their overall portfolio strategies.

There are a wide variety of structured notes, with names such as single- or multi-index floaters, inverse floaters, index-amortizing notes, step-up bonds, and range bonds. These simple, though sometimes cryptic, labels can belie the potential complexity of these notes and their possibly volatile and unpredictable cash flows, which can involve both principal and interest payments. Some notes employ "trigger levels" at which cash flows can change significantly, or caps or floors, which can also substantially affect their price behavior.

The critical factor for examiners to consider is the ability of management to understand the risks inherent in these instruments and to satisfactorily manage the market risks of their institution. Therefore, examiners should evaluate the appropriateness of these securities institution by institution, with a knowledge of management's expertise in evaluating such instruments, the quality of the relevant information systems, and the nature of its overall exposure to market risk. This evaluation may include a review of the stress-test capabilities. Failure of management to adequately understand the dimensions of the risks in these and similar financial products can constitute an unsafe and unsound practice for banking organizations.

When making investment decisions, some banking organizations may focus only on the low credit risk and favorable yields of structured notes and either overlook or underestimate their market and liquidity risks. Consequently, where these notes are material, examiners should discuss their role in the organization's risk-management process and assess management's recognition of their potential volatility.

The risks inherent in such complex instruments and relevant risk-management standards have been addressed in a variety of previously issued supervisory guidance, including SR-letters and supervisory manuals. This guidance includes SR-90-16, standards for investing in asset-backed securities (see section 2128.02);

SR-93-69 (see section 2125.0) and SR-98-12 (see section 2126.1), examination guidance for reviewing investment securities and end-user derivatives activities and the *Trading and Capital-Markets Activities Manual.* Although these documents may not specifically cite structured notes, they all help to highlight the following important supervisory and risk-management practices that are relevant to these instruments:

1. the importance of policies, approved by the board of directors, that address the goals and objectives expected to be achieved with such products and that set limits on the amount of funds that may be committed to them
2. the need for management to fully understand the risks these instruments can present, including their potentially reduced liquidity in secondary markets and the price volatility that any embedded options, leveraging, or other characteristics can create
3. the need for adequate information systems and internal controls for managing the risks under changing market conditions
4. the importance of clear lines of authority for making investment decisions and for evaluating and managing the institution's securities activities that involve such instruments

For additional information, see SR-97-21 and SR-91-4. See also sections 3010.3 and 4040.1 of the *Trading and Capital-Markets Activities Manual* for more-detailed guidance.

Asset securitization typically involves the transfer of potentially illiquid on-balance-sheet assets (for example, mortgages, loans, leases, other assets) to a third party or trust who, in turn, issues certificates or notes to investors. The cash flow from the transferred assets supports repayment of the certificates or notes issued by the trust. Firms use asset securitization to access alternative funding sources, manage loan concentrations, improve financial-performance ratios, and more efficiently meet customers' financing needs. Assets that typically are securitized include credit card receivables and automobile receivable paper, commercial and residential first mortgages, commercial loans, home-equity loans, and student loans.

See section 4030.1, "Asset Securitization," of the *Commercial Bank Examination Manual* for more information on

- why firms engage in securitization activities;
- the securitization process;
- the risks associated with various types of asset securitizations;
- risk-management concerns associated with asset securitizations;
- capital considerations related to asset securitizations;
- accounting and reporting considerations (see also the instructions for completing the FR Y-9C, "Consolidated Financial Statements for Holding Companies"); and
- supervisory considerations.

For community and regional banking organizations, the Securitization Examination Documentation (ED) module provides more detailed examination procedures for examination staff.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2015, section 2128.03.3.3 is revised to delete a footnote reference to SR-05-13 and its attachment, "Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Program Liquidity Facilities and the Resulting Risk-Based Capital Treatment," which is superseded by SR-15-6, "Interagency Frequently Asked Questions on the Regulatory Capital Rule." Subsection 2128.03.4 is also revised to delete a reference to SR-05-13.

2128.03.1 CREDIT-SUPPORTED AND ASSET-BACKED COMMERCIAL PAPER AS AN ALTERNATIVE FUNDING SOURCE

The issuance of commercial paper provides an alternative to bank borrowing for large corporations (nonfinancial and financial) and municipalities. Generally, commercial paper issuers are those with high credit ratings. Some corporations with lower credit ratings have been able to issue commercial paper by obtaining credit enhancements[1] (credit support from a firm with a high credit rating) or other high-quality asset collateral (asset-backed commercial paper) to allow them to enter the market as issuers. An example of credit-supported commercial paper is one supported by a letter of credit (LOC), the terms of which specify that the bank issuing the LOC guarantees that the bank will pay off the commercial paper if the issuer fails to pay off the commercial paper upon maturity.[2] A credit enhancement could also consist of a surety bond from an insurance company.

2128.03.2 COMMERCIAL BANK INVOLVEMENT IN CREDIT-ENHANCED AND ASSET-BACKED COMMERCIAL PAPER

A number of commercial banks have become involved in credit-enhanced and asset-backed commercial paper programs. These securitization programs enable banks to help arrange short-term financing support for their customers without having to extend credit directly. This arrangement provides borrowers with an alternative source of funding and allows banks to earn fee income for managing the programs. Fees are earned for providing credit and liquidity enhancements to these programs.

Involvement in credit-enhanced and asset-backed commercial paper programs, however, can have potentially significant implications for organizations' credit- and liquidity-risk exposure. Therefore, examiners need to be fully informed on the fundamentals of these programs, on the risks associated with these programs, and on the examination and inspection procedures for banking organizations engaged in this activity.

Asset-backed commercial paper programs have been in existence since the early 1980s and have grown substantially since then. These programs use a special-purpose entity (SPE) to acquire receivables generally originated either by corporations or sometimes by the advising bank itself.[3] The SPEs, which are owned by third parties,[4] fund their acquisitions of receivables by issuing commercial paper that is to be repaid from the cash flow of the receivables.

Bank involvement in an ABCP program can range from advising the program to advising and providing all of the required credit and liquidity enhancements in support of the SPE's commercial paper. Typically, the advising bank or an affiliate performs a review to determine if the receivables of potential program participants (that is, corporate sellers) are eligible for purchase by the SPE. The scope of the review is similar to that used in structuring securitizations collateralized by credit card receivables or automobile-secured loans.

Once the bank (or its affiliate) determines that a receivables portfolio has an acceptable credit-risk profile, it approves the purchase of the portfolio at a discounted price by the SPE. The bank or its affiliate may also act as the operating agent for the SPE, which entails structuring the sale of receivable pools to the SPE and then

1. This paper is usually called *credit-supported commercial paper.*
2. This arrangement is usually referred to as *LOC paper.*

3. To date, the type of receivables that have been included in the programs are trade receivables, installment sales contracts, financing leases, and noncancelable portions of operating leases and credit card receivables.
4. Employees of an investment banking firm or some other third party generally own the equity of the SPE. The advising bank can specifically avoid owning the stock if it does not want to raise the issue of whether it must consolidate the SPE for accounting purposes.

overseeing the performance of the pools on an ongoing basis.

The SPE pays for the receivables by issuing commercial paper in an amount equal to the discounted price paid for the receivables. The difference between the face value of the receivables and the discounted price paid provides, as discussed below, the first level of credit protection for the commercial paper. The individual companies selling their receivables traditionally act as the servicer for receivables sold to an SPE; that is, they are responsible for collecting principal and interest payments from the obligors and passing these funds on to the SPE on a periodic basis. The SPE then distributes the proceeds to the holders of the commercial paper.

Asset-backed commercial paper programs typically have several levels of credit enhancement cushioning the commercial paper purchaser from potential loss. As noted above, the first level of loss protection is provided by the difference between the face value of the receivables purchased and the discounted price paid for them, known as "holdback" or "overcollateralization." In some cases, the terms of the sale also give the SPE recourse back to the seller if there are defaults on the receivables. The amount of overcollateralization and recourse varies from pool to pool and depends, in part, on the quality of the receivables in the pool and the desired credit rating for the paper to be issued. Usually, the level of credit protection provided by overcollateralization is specified in terms of some multiple of historical loss experience for similar assets.

In addition to overcollateralization and recourse, secondary credit enhancements are also customarily provided. Secondary credit enhancements include letters of credit, surety bonds, or other backup facilities that obligate a third party to purchase pools of receivables from the SPE at a specified price. In addition to credit enhancements, the programs generally have liquidity enhancements to ensure that the SPE can meet maturing-paper obligations.

The rating agencies typically require an SPE's commercial paper to have secondary enhancements aggregating 100 percent of the amount outstanding in order to receive the highest credit rating. These enhancements are generally structured in one of two ways. In the first, a commercial bank enters into a single agreement under which it is unconditionally obligated to provide funding for all or any portion of maturing commercial paper that an SPE cannot pay from other sources. The obligation to fund may be triggered by credit losses, a liquidity shortfall, or both. In the second, two separate agreements that jointly cover 100 percent of an SPE's outstanding commercial paper are established.

The first agreement, typically an irrevocable letter of credit, is primarily intended to absorb credit losses that exceed the first tier of credit enhancement for the commercial paper. The second arrangement is a "liquidity" facility that may or may not provide credit support. This second structure will often have a letter of credit equaling 10 percent to 15 percent of outstandings, with the liquidity facility covering the remaining 90 to 85 percent.

2128.03.3 RISK-BASED CAPITAL ASSET-BACKED COMMERCIAL PAPER PROGRAM ASSETS

An asset-backed commercial paper (ABCP) program typically is a program through which a banking organization provides funding to its corporate customers by sponsoring and administering a bankruptcy-remote special-purpose entity that purchases asset pools from, or extends loans to, those customers.[5] The asset pools in an ABCP program might include, for example, trade receivables, consumer loans, or asset-backed securities. The ABCP program raises cash to provide funding to the banking organization's customers through the issuance of externally rated commercial paper into the market. Typically, the sponsoring banking organization provides liquidity and credit enhancements to the ABCP program. These enhancements aid the program in obtaining high credit ratings that facilitate the issuance of the commercial paper.[6] (See SR-05-13 and SR-92-11.)

On June 12, 2009, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards no. 166, "Accounting for Transfers of Financial Assets, an Amendment of FASB Statement No. 140" (FAS 166) and Statement of Financial Account-

5. The definition of *ABCP program* generally includes structured investment vehicles (entities that earn a spread by issuing commercial paper and medium-term notes and using the proceeds to purchase highly rated debt securities) and securities arbitrage programs.

6. A bank is considered the "sponsor of an ABCP program" if it establishes the program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program's credit and investment policy.

ing Standards no. 167, "Amendments to FASB Interpretation no. 46 (R)" (FAS 167). FAS 166 and FAS 167 modified the accounting treatment under U.S. generally accepted accounting principles (GAAP) of certain structured financing transactions involving a special purpose entity. Under FAS 167, banking organizations should consolidate assets, liabilities, and equity in certain variable interest entities (VIEs) that were not consolidated under the standards that FAS 166 and FAS 167 replaced, or FIN 46 (January 2003) and FIN 46-R (December 2003).[7] The agencies'[8] risk-based capital and leverage rules require banking organizations to include consolidated assets that are held by VIEs under the leveraged and risk-based capital rules and, therefore, included in their leveraged and risk-based capital ratios. FIN 46-R required the consolidation of many ABCP programs onto the balance sheets of banking organizations. Banking organizations that are required to consolidate ABCP program assets must include all of the program assets (mostly receivables and securities) and liabilities (mainly commercial paper) on their balance sheets for purposes of the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C Report) or the bank Reports of Condition and Income (Call Reports).

An ABCP program is defined as a program that primarily issues (that is, more than 50 percent) externally rated commercial paper backed by assets or other exposures held in a bankruptcy-remote, special-purpose entity. Thus, a banking organization sponsoring a program issuing ABCP must continue to include the program's assets on a consolidated basis in the institution's risk-weighted asset base.

2128.03.3.1 Liquidity Facilities Supporting ABCP

Liquidity facilities supporting ABCP often take the form of commitments to lend to, or to purchase assets from, the ABCP programs in the event that funds are needed to repay maturing commercial paper. Typically, this need for liquidity is due to a timing mismatch between cash collections on the underlying assets in the program and scheduled repayments of the commercial paper issued by the program.

7. These standards are now included in the FASB Accounting Standards Codification Topic 810, "Consolidation."

8. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

A banking organization that provides liquidity facilities to ABCP is exposed to credit risk regardless of the term of the liquidity facilities. For example, an ABCP program may require a liquidity facility to purchase assets from the program at the first sign of deterioration in the credit quality of an asset pool, thereby removing such assets from the program. In such an event, a draw on the liquidity facility exposes the banking organization to credit risk.

Short-term commitments with an original maturity of one year or less expose banking organizations to a lower degree of credit risk than longer-term commitments. This difference in the degree of credit risk is reflected in the risk-based capital requirement for the different types of exposures through liquidity facilities. The Board's risk-based capital guidelines impose a 10 percent credit-conversion factor on unused portions of eligible short-term liquidity facilities supporting ABCP. A 50 percent credit-conversion factor applies to eligible ABCP liquidity facilities having a maturity of greater than one year. To be an eligible ABCP liquidity facility and qualify for the 10 or 50 percent credit-conversion factor, the facility must be subject to an asset-quality test at the time of inception that does not permit funding against (1) assets that are 90 days or more past due, (2) assets that are in default, and (3) assets or exposures that are externally rated below investment grade at the time of funding if the assets or exposures were externally rated at the inception of the facility. However, a liquidity facility may also be an eligible liquidity facility if it funds against assets that are guaranteed—either conditionally or unconditionally—by the U.S. government, U.S. government agencies, or by an OECD central government, regardless of whether the assets are 90 days past due, in default, or externally rated investment grade.

The 10 or 50 percent credit-conversion factor applies regardless of whether the structure issuing the ABCP meets the rule's definition of an ABCP program. For example, a capital charge would apply to an eligible short-term liquidity facility that provides liquidity support to ABCP when the ABCP constitutes less than 50 percent of the securities issued by the program, thus causing the issuing structure not to meet the rule's definition of an ABCP program. If a banking organization (1) does not meet this definition, it must include the program's assets in its risk-weighted asset base or (2) it chooses to include the program's assets in risk-weighted assets, then no risk-based capital requirement will be assessed against any liquidity facilities provided by the banking organization that supports the program's ABCP. Ineligible liquidity facilities will be treated as recourse obligations or direct-credit substitutes for the purposes of the Board's risk-based capital guidelines.

The resulting credit-equivalent amount would then be risk-weighted according to the underlying assets or the obligor, after considering any collateral or guarantees, or external credit ratings, if applicable. For example, if an eligible short-term liquidity facility providing liquidity support to ABCP covered an asset-backed security (ABS) externally rated AAA, then the notional amount of the liquidity facility would be converted at 10 percent to an on-balance-sheet credit-equivalent amount and assigned to the 20 percent risk-weight category appropriate for AAA-rated ABS.[9]

2128.03.3.2 Overlapping Exposures to an ABCP Program

A banking organization may have multiple overlapping exposures to a single ABCP program (for example, both a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program that is not consolidated for risk-based capital purposes). A banking organization must hold risk-based capital only once against the assets covered by the overlapping exposures. Where the overlapping exposures are subject to different risk-based capital requirements, the banking organization must apply the risk-based capital treatment that results in the highest capital charge to the overlapping portion of the exposures.

For example, assume a banking organization provides a program-wide credit enhancement that would absorb 10 percent of the losses in all of the underlying asset pools in an ABCP program and also provides pool-specific liquidity facilities that cover 100 percent of each of the underlying asset pools. The banking organization would be required to hold capital against 10 percent of the underlying asset pools because it is providing the program-wide credit enhancement. The banking organization would also be required to hold capital against 90 percent of the liquidity facilities it is providing to each of the underlying asset pools. For risk-based capital purposes, the banking organization would not be required to hold capital against any credit enhancements or liquidity facilities that compromise the same program assets.

If different banking organizations have overlapping exposures to an ABCP program, however, each organization must hold capital against the entire maximum amount of its exposure. As a result, while duplication of capital charges will not occur for individual banking organizations, some systemic duplication may occur where multiple banking organizations have overlapping exposures to the same ABCP program.

2128.03.3.3 Asset-Quality Test

In order for a liquidity facility, either short- or long-term, that supports ABCP *not* to be considered a recourse obligation or a direct-credit substitute, it must meet the rule's risk-based capital definition of an *eligible ABCP liquidity facility*. An eligible ABCP liquidity facility must meet a reasonable asset-quality test that, among other things, precludes funding assets that are 90 days or more past due or in default. When assets are 90 days or more past due, they typically have deteriorated to the point where there is an extremely high probability of default. Assets that are 90 days past due, for example, often must be placed on nonaccrual status in accordance with the agencies' Uniform Retail Credit Classification and Account Management Policy.[10] Further, they generally must also be classified Substandard under that policy.

In addition to the above, if the assets covered by the liquidity facility are initially externally rated (at the time the facility is provided) the facility can be used to fund only those assets that are externally rated investment grade at the time of funding. The practice of purchasing assets that are externally rated below investment grade out of an ABCP program is considered to be the equivalent of providing credit protection to the commercial paper investors. Thus, liquidity facilities permitting purchases of below-investment-grade securities will be considered either recourse obligations or direct-credit substitutes.

However, neither the "90-days-past-due" limitation nor the "investment grade" limitation apply to the asset-quality test with respect to assets that are conditionally or unconditionally guaranteed by the U.S. government or its agencies or by another OECD central government.

9. See section III.B.3.c. of the guidelines (12 C.F.R. 225, appendix A).

10. See 65 *Fed. Reg.* 36904 (June 12, 2000).

An ABCP liquidity facility is considered to be in compliance with the requirement for an asset-quality test if (1) the liquidity provider has access to certain types of acceptable credit enhancements and (2) the notional amount of such credit enhancements available to the liquidity facility provider exceeds the amount of underlying assets that are 90 days or more past due, defaulted, or below investment grade for which the liquidity provider may be obligated to fund under the facility. In this circumstance, the liquidity facility may be considered "eligible" for purposes of the risk-based capital rule because the provider of the credit enhancement generally bears the credit risk of the assets that are 90 days or more past due, in default, or below investment grade rather than the banking organization providing liquidity.

The following forms of credit enhancements are generally acceptable for purposes of satisfying the asset quality test:

- "funded" credit enhancements that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets, such as overcollateralization, cash reserves, subordinated securities, and funded spread accounts;
- surety bonds and letters of credit issued by a third party with a nationally recognized statistical rating organization rating of single A or higher that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets, provided that the surety bond or letter of credit is irrevocable and legally enforceable; and
- one month's worth of excess spread that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets if the following conditions are met: (1) excess spread is contractually required to be trapped when it falls below 4.5 percent (measured on an annualized basis) and (2) there is no material adverse change in the banking organization's ABCP underwriting standards. The amount of available excess spread may be calculated as the average of the current month's and the two previous months' excess spread.

Recourse directly to the seller, other than the funded credit enhancements enumerated above, regardless of the seller's external credit rating, is not an acceptable form of credit enhancement for purposes of satisfying the asset quality test. Seller recourse—for example, a seller's agreement to buy back nonperforming or defaulted loans or downgraded securities—may expose the liquidity provider to an increased level of credit risk. A decline in the performance of assets sold to an ABCP conduit may signal impending difficulties for the seller.

If the amount of acceptable credit enhancement associated with the pool of assets is less than the current amount of assets that are 90 days or more past due, in default, or below investment grade that the liquidity facility provider may be obligated to fund against, the liquidity facility should be treated as recourse or a direct credit substitute. The full amount of assets supported by the liquidity facility would be subject to a 100 percent credit conversion factor.[12] The Federal Reserve Board reserves the right to deem an otherwise eligible liquidity facility to be, in substance, a direct credit substitute if a banking organization uses the liquidity facility to provide credit support.

The banking organization is responsible for demonstrating to the Federal Reserve Board whether acceptable credit enhancements cover the 90 days or more past due, defaulted, or below-investment-grade assets that the organization may be obligated to fund against in each seller's asset pool. If the banking organization cannot adequately demonstrate satisfaction of the conditions in the above-referenced interagency guidance, the Federal Reserve Board further reserves the right to determine that a credit enhancement is unacceptable for purposes of the requirement for an asset quality test and, therefore, it may deem the liquidity facility to be ineligible.

2128.03.3.4 Market Risk Capital Requirements for ABCP Programs

Any facility held in the trading book whose primary function, in form or in substance, is to provide liquidity to ABCP—even if the facility does not qualify as an eligible ABCP liquidity facility under the rule—will be subject to the banking-book risk-based capital requirements. Specifically, banking organizations are required to convert the notional amount of all trading-book positions that provide liquidity to ABCP to credit-equivalent amounts by applying the appropriate banking-book credit-conversion factors. For example, the full amount of all eligible

11. Reserved footnote.

12. See 12 CFR 208, appendix A, section III.B.3.b.i.

ABCP liquidity facilities with an original maturity of one year or less will be subject to a 10 percent conversion factor, regardless of whether the facility is carried in the trading account or the banking book.

2128.03.4 BOARD-OF-DIRECTORS POLICIES PERTAINING TO CREDIT-ENHANCED OR ASSET-BACKED COMMERCIAL PAPER

A banking organization (that is, a bank or a bank holding company) participating in an asset-backed commercial paper program should ensure that such participation is clearly and logically integrated into its overall strategic objectives. Furthermore, management should ensure that the risks associated with the various roles that the institution may play in such programs are fully understood and that safeguards are in place to manage the risks properly.

Appropriate policies, procedures, and controls should be established by a banking organization before it participates in asset-backed commercial paper programs. Significant policies and procedures should be approved and reviewed periodically by the organization's board of directors. These policies and procedures should ensure that the organization follows prudent standards of credit assessment and approval regardless of the role an institution plays in an asset-backed commercial paper program. Such policies and procedures would be applicable to all pools of receivables to be purchased by the SPE as well as to the extension of any credit enhancements and liquidity facilities. Procedures should include an initial, thorough credit assessment of each pool for which the banking organization had assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. Furthermore, the policies and procedures should outline the credit-approval process and establish in-house exposure limits, on a consolidated basis, with respect to particular industries or organizations, that is, companies from which the SPE purchased the receivables as well as the receivable obligors themselves. Controls should include well-developed management information systems and monitoring procedures.

Institutions should analyze the receivables pools underlying the commercial paper as well as the structure of the arrangement. This analysis should include a review of—

1. the characteristics, credit quality, and expected performance of the underlying receivables;
2. the banking organization's ability to meet its obligations under the securitization arrangement; and
3. the ability of the other participants in the arrangement to meet their obligations.

Banking organizations providing credit enhancements and liquidity facilities should conduct a careful analysis of their funding capabilities to ensure that they will be able to meet their obligations under all foreseeable circumstances. The analysis should include a determination of the impact that fulfillment of these obligations would have on their interest-rate risk exposure, asset quality, liquidity position, and capital adequacy.

Examiners should carefully review the asset-backed commercial paper facilities provided by banking organizations to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting asset-backed commercial paper programs. In addition, examiners should determine whether the previously discussed policies are operative and that institutions are adequately managing their risk exposure. If not appropriate for the open section, a discussion of the size, effectiveness, and risks associated with asset-backed commercial paper programs should be included in the confidential section of the examination or inspection report. See SR-92-11.

2128.03.5 INSPECTION OBJECTIVES

1. To determine whether the banking organization (that is, a bank or a bank holding company) participating in an asset-backed commercial paper program has included this participation in its overall strategic objectives.
2. To determine whether management fully understands the risks associated with the banking organization's involvement in credit-enhancement and asset-backed commercial paper programs and whether appropriate safeguards are in place to properly manage those risks.
3. To ascertain that the appropriate policies, procedures, and controls have been established by the banking organization before participating in asset-backed commercial paper programs.
4. To verify whether existing managerial and internal controls include well-developed

management information systems and monitoring procedures.
5. To determine whether the banking organization has conducted a careful analysis of its funding capabilities to ensure that it will be able to meet its obligations under all foreseeable circumstances.
6. To ensure that all asset-backed securities owned, any assets sold with recourse, retained interests, and variable interest entities (VIEs) (for example, asset-backed commercial paper [ABCP] programs, those that are defined as VIEs under generally accepted accounting principles) are properly accounted for on the banking organization's books and are correctly reported on its regulatory reports.
7. To determine that capital is commensurate with, and that there are accurate determinations of the risk weights for, the risk exposures arising from recourse obligations, direct-credit substitutes, asset- and mortgage-backed securities, ABCP programs and ABCP liquidity facilities, and other asset-securitization transactions.

2128.03.6 INSPECTION PROCEDURES

1. Review the minutes of board of directors or executive committee meetings. Establish whether the significant policies and procedures for credit-enhanced or asset-backed commercial paper have been approved and reviewed periodically by the organization's board of directors.
   a. Determine whether the policies are operative and whether institutions are adequately managing their risk exposure.
   b. Determine whether the policies and procedures are applicable to all pools of receivables to be purchased by the SPE as well as to the extension of any credit enhancements and liquidity facilities.
2. Determine if the organization follows prudent standards of credit assessment and approval.
   a. Ascertain whether the procedures include an initial, thorough credit assessment of each pool for which the organization had assumed credit risk. The initial review should be followed by periodic credit reviews to monitor performance throughout the life of the exposure.
   b. Determine if the policies and procedures outline the credit-approval process and establish in-house exposure limits, on a consolidated basis, with respect to particular industries or organizations, that is, companies from which the SPE purchased the receivables as well as the receivable obligors themselves.
   c. Determine whether the organization analyzes the receivables pools underlying the commercial paper as well as analyzes the structure of the arrangement. Does the analysis include a review of—
      - the characteristics, credit quality, and expected performance of the underlying receivables;
      - the ability of the banking organization to meet its obligations under the securitization arrangement; and
      - the ability of the other participants in the arrangement to meet their obligations?
3. Review the organization's funding obligations and commitments, and determine whether there is sufficient liquidity to satisfy those funding requirements. Include a determination of the impact that fulfillment of these obligations would have on their interest-rate risk exposure, asset quality, liquidity position, and capital adequacy.
4. Review carefully the risk-based capital calculations for ABCP facilities to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting the asset-backed commercial paper programs.
5. Determine if the banking organization consolidates, in accordance with GAAP, the assets of any ABCP program or other such program that it sponsors.
   a. Determine if the banking organization's ABCP program met the definition of a sponsored ABCP program under the risk-based capital guidelines.
   b. Verify that the assets of the banking organization's eligible ABCP program and any associated minority interest were included in the banking organization's calculation of its risk-based capital ratios.
   c. Ascertain whether the liquidity facilities the banking organization extends to the ABCP program satisfy the risk-based capital requirements, including the appropriate asset-quality test, of an eligible ABCP program liquidity facility. (See 12 C.F.R. 225, appendix A, section III.B.3.a.iv.)
   d. Determine whether the banking organization applied the correct credit-conversion

factor to the eligible ABCP liquidity facilities when it determined the amount of risk-weighted assets for its risk-based capital ratios. (See 12 C.F.R. 225, appendix A, section III.D.)

e. Determine if all ineligible ABCP liquidity facilities were treated as either direct-credit substitutes or as recourse obligations, as required by the risk-based capital guidelines.

f. If the banking organization had multiple overlapping exposures, determine if the banking organization applied the risk-based capital treatment that resulted in the highest capital charge. (See 12 CFR 225, appendix A, section III.B.6.c.)

6. Include in the inspection report a discussion of the size, effectiveness, and risks associated with ABCP programs (include the discussion in the confidential section of the inspection report if not appropriate for the open section).

Implicit recourse arises when a bank holding company[1] provides credit support to one of more of its securitizations beyond its contractual obligation. Implicit recourse, like contractual recourse, exposes a bank holding company to the risk of loss arising from deterioration in the credit quality of the underlying assets of the securitization. Implicit recourse is of supervisory concern because it demonstrates that the securitizing bank holding company is reassuming risk associated with the securitized assets—risk that the bank holding company initially transferred to the marketplace. For risk-based capital purposes, bank holding companies deemed to be providing implicit recourse are generally required to hold capital against the entire outstanding amount of assets sold, as though the assets remained on the bank holding company's books.

Banking organizations have typically provided implicit recourse in situations where the originating banking organization perceived that the failure to provide this support, even though not contractually required, would damage its future access to the asset-backed securities market. An originating bank holding company can provide implicit recourse in a variety of ways. The ultimate determination as to whether implicit recourse exists depends on the facts. The following actions point to a finding of implicit recourse:

1. selling assets to a securitization trust or other special-purpose entity (SPE) at a discount from the price specified in the securitization documents, which is typically par value
2. purchasing assets from a trust or other SPE at an amount greater than fair value
3. exchanging performing assets for nonperforming assets in a trust or other SPE
4. funding credit enhancements[2] beyond contractual requirements

By providing implicit recourse, a bank holding company signals to the market that it still holds the risks inherent in the securitized assets, and, in effect, the risks have not been transferred. Accordingly, examiners must be attentive to bank holding companies that provide implicit support, given the risk these actions pose to a bank holding company's financial condition. Increased attention should be given to situations where a bank holding company is more likely to provide implicit support.

Particular attention should be paid to revolving securitizations, such as those used for credit card lines and home equity lines of credit, in which receivables generated by the lines are sold into the securitizations. These securitizations typically provide that, when certain performance criteria hit specified thresholds, no new receivables can be sold into the securitization, and the principal on the bonds issued will begin to pay out. These early-amortization events are intended to protect investors from further deterioration in the underlying asset pool. Once an early-amortization event has occurred, the bank holding company could have difficulties using securitization as a continuing source of funding and, at the same time, have to fund the new receivables generated by the lines of credit on its balance sheet. Thus, bank holding companies have an incentive to avoid early amortization by providing implicit support to the securitization.

Examiners should be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread[3] below a certain threshold or an increase in delinquencies beyond a certain rate. Providing implicit recourse can pose a degree of risk to a bank holding company's financial condition and to the integrity of its regulatory and public financial statements and reports. Examiners should review securitization documents (for example, pooling and servicing agreements) to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents. Examiners should also review a sample of receivables transferred between the seller and the trust to ensure that these transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated. While bank hold-

1. The reference to implicit-recourse activities of bank holding companies is intended to include all of a bank holding company's domestic and foreign subsidiaries supervised by the Federal Reserve, as well as its federally insured depository institutions and other entities that are subject to this interpretation and guidance of the Federal Financial Institutions Examination Council (FFIEC).

2. Credit enhancements include retained subordinated interests, asset-purchase obligations, overcollateralization, cash-collateral accounts, spread accounts, and interest-only strips.

3. Excess spread generally is defined as finance-charge collections minus certificate interest, servicing fees, and charge-offs allocated to the series.

ing companies are not prohibited from providing implicit recourse, such support will generally result in higher capital requirements.

Examiners should recommend that prompt supervisory action be taken when implicit recourse is identified. To determine the appropriate action, examiners need to understand the bank holding company's reasons for providing support and the extent of the impact of this support on the bank holding company's earnings and capital. As with contractual recourse, actions involving noncontractual post-sale credit enhancement generally result in the requirement that the bank holding company hold risk-based capital against the entire outstanding amount of the securitized assets. The Federal Reserve may require the bank holding company to bring all assets in existing securitizations back on the balance sheet for risk-based capital purposes, as well as require the bank holding company to increase its minimum capital ratios. The Federal Reserve may prevent a bank holding company from removing assets from its risk-weighted asset base on future transactions until the bank holding company demonstrates its intent and ability to transfer risk to the marketplace. The Federal Reserve may consider other actions to ensure that the risks associated with implicit recourse are adequately reflected in the capital ratios. For example, supervisors may require the bank holding company to deduct residual interests from tier 1 capital as well as hold risk-based capital on the underlying assets. (See SR-02-15.)

The following examples illustrate post-sale actions that banking organizations may take with respect to assets they have securitized. These examples are intended to provide guidance on whether these actions would be considered implicit recourse for risk-based capital and other supervisory purposes. A key factor in each scenario and analysis is the potential risk of loss a bank holding company's earnings and capital may be exposed to as a result of its actions.

Account Removal: Example 1a

Facts. A bank holding company originates and services credit card receivables throughout the country. The bank holding company decides to divest those credit card accounts of customers who reside in specific geographic areas where the bank holding company lacks a significant market presence. To achieve the maximum sales price, the sale must include both the credit card relationships and the receivables. Because many of the credit card receivables are securitized through a master-trust structure, the bank holding company needs to remove the receivables from the trust. The affected receivables are not experiencing any unusual performance problems. In that respect, the charge-off and delinquency ratios for the receivables to be removed from the trust are substantially similar to those for the trust as a whole.

The bank holding company enters into a contract to sell the specified credit card accounts before the receivables are removed from the trust. The terms of the transaction are arm's length, wherein the bank holding company will sell the receivables at market value. The bank holding company separately agrees to purchase the receivables from the trust at this same price. Therefore, no loss is incurred as a result of removing the receivables from the trust. The bank holding company will remove from the trust only those receivables that are due from customers located in the geographic areas where the bank holding company lacks a significant market presence, and it will remove all such receivables from the trust.

Analysis. The removal of the above-described receivables from the trust does not constitute implicit recourse for regulatory capital purposes. Supporting factors for this conclusion include the following:

1. The bank holding company's earnings and capital are not exposed to actual or potential risk of loss as a result of removing the receivables from the trust.
2. There is no indication that the receivables are removed from the trust because of performance concerns.
3. The bank holding company is removing the receivables from the trust for a legitimate business purpose other than to systematically improve the quality of the trust's assets. The legitimate business purpose is evidenced by the bank holding company's prearranged, arm's-length sale agreement that facilitates exiting the business in identified geographic locations.

Examiners should review the terms and conditions of the transaction to ensure that the market value of the receivables is documented and well supported before concluding that this transaction does not represent implicit recourse. Examiners should also ensure that the selling bank holding company has not provided the purchaser with any guarantees or credit enhancements on the sold receivables.

Account Removal: Example 1b

Facts. After the establishment of a master trust for a pool of credit card receivables, the receivables in the trust begin to experience adverse performance. A combination of lower-than-expected yields and higher-than-anticipated charge-offs on the pool causes spreads to compress significantly (although not to zero). The bank holding company's internally generated forecasts indicate that spreads will likely become negative in the near future. Management takes action to support the trust by purchasing the low-quality (delinquent) receivables from the trust at par, although their market value is less than par. The receivables purchased from the trust represent approximately one-third of the trust's total receivables. This action improves the overall performance of the trust and avoids a potential early-amortization event.

Analysis. The purchase of low-quality receivables from a trust at par constitutes implicit recourse for regulatory capital purposes. The purchase of low-quality receivables at an above-market price exposes the bank holding company's earnings and capital to potential future losses from assets that had previously been sold. Accordingly, the bank holding company is required to hold risk-based capital for the remaining assets in the trust as if they were retained on the balance sheet, as well as hold capital for the assets that were repurchased.

Additions of Future Assets or Receivables: Example 2a

Facts. Months after the issuance of credit card asset-backed securities, charge-offs and delinquencies on the underlying pool of receivables rise dramatically. A rating agency places the securities on watch for a potential rating downgrade. The securitization documents require the bank holding company to transfer new receivables to the securitization trust at par value. However, to maintain the rating on the securities, the bank holding company begins to sell replacement receivables into the trust at a discount from par value.

Analysis. The sale of receivables to the trust at a discount constitutes implicit recourse for regulatory capital purposes. The sale of assets at a discount from the price specified in the securitization documents, par value in this example, exposes the bank holding company's earnings and capital to future losses. The bank holding company must hold regulatory capital against the outstanding assets in the trust.

Additions of Future Assets or Receivables: Example 2b

Facts. A bank holding company established a credit card master trust. The receivables from the accounts placed in the trust were, on average, of lesser quality than the receivables from certain affinity accounts retained on the bank holding company's balance sheet. Under the criteria for selecting the receivables to be transferred to the master trust, the bank holding company was prevented from including the better-performing affinity accounts in the initial pool of accounts because the affinity-relationship contract was expiring. The bank holding company and the affinity client subsequently revised the terms of their contract, enabling the affinity accounts to meet the selection criteria and be included in future securitization transactions. Later, rising charge-offs within the pool of receivables held by the trust caused spread compression in the trust. To improve the performance of the assets in the trust, the bank holding company begins to include the better-performing and now-eligible receivables from the affinity accounts among the receivables sold to the trust. This action improves the trust's performance, including its spread levels and charge-off ratios. However, the replacement assets were sold at par in accordance with the terms of the trust agreement, so no current or future charge to the bank holding company's earnings or capital will result from these asset sales. As another result of this action, the performance of the trust's assets closely tracks the credit card receivables that remain on the bank holding company's balance sheet.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. The bank holding company did not incur any additional risk to earnings or capital after the affinity accounts met the selection criteria for replacement assets and after the associated receivables were among the receivables sold to the trust. The replacement assets were sold at par in accordance with the terms of the trust agreement, so no future charge to earnings or capital will result from these asset sales. The sale of replacement assets into a master-trust structure is part of normal trust management.

In this example, the credit card receivables that remain on the bank holding company's balance sheet closely track the performance of the trust's assets. Nevertheless, examiners should ascertain whether a securitizing bank holding company sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books. If a bank holding company engages in this practice, examiners should consider its effect on the bank holding company's capital adequacy.

Additions of Future Assets or Receivables: Example 2c

Facts. A bank holding company establishes a credit card master trust composed of receivables from accounts that were generally of lower quality than the receivables retained on the bank holding company's balance sheet. The difference in the two portfolios is primarily due to logistical and operational problems that prevent the bank holding company from including certain better-quality affinity accounts in the initial pool from which accounts were selected for securitization. Rising charge-offs and other factors later result in margin compression on the assets in the master trust, which causes some concern in the market regarding the stability of the outstanding asset-backed securities. A rating agency places several tranches of the securities on its watch list for a potential rating downgrade. In response to the margin compression, as part of the bank holding company's contractual obligations, spread accounts are increased for all classes by trapping excess spread in conformance with the terms and conditions of the securitization documents. To stabilize the quality of the receivables in the master trust, as well as to preclude a downgrade, the bank holding company takes several actions beyond its contractual obligations:

1. Affinity accounts are added to the pool of receivables eligible for inclusion in the trust. This change results in improved overall trust performance. However, these receivables are sold to the trust at par value, consistent with the terms of the securitization documents, so no current or future charge to the bank holding company's earnings or capital will result from these asset sales.
2. The charge-off policy for cardholders that have filed for bankruptcy is changed from criteria that were more conservative than industry standards, the applicable Federal Reserve classification policy for bank holding companies, and the FFIEC Uniform Retail Credit Classification and Account Management Policy to criteria that conform to industry standards, the Federal Reserve's standards, and the FFIEC's policy.
3. Charged-off receivables held by the trust are sold to a third party. The funds generated by this sale, effectively accelerating the recovery on these receivables, improve the trust's spread performance.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. None of the noncontractual actions result in a loss or expose the bank holding company's earnings or capital to the risk of loss. Because of the margin compression, the bank holding company is obligated to increase the spread accounts in conformance with the terms and conditions of the securitization documents. To the extent this results in an increase in the value of the subordinated spread accounts (residual interests) on the bank holding company's balance sheet, the bank holding company will need to hold additional capital on a dollar-for-dollar basis for the additional credit risk it retains. In contrast, if the bank holding company increased the spread accounts beyond its contractual obligation under the securitization documents, this action would be considered a form of implicit recourse. None of the other actions the bank holding company took would affect its earnings or capital:

1. Like other additions to credit card trusts, the additions of receivables from the new affinity accounts were made at par value, in accordance with the securitization documents. Therefore, the additions of receivables from the new affinity accounts would not affect the bank holding company's earnings or capital.
2. The trust's policy on the timing of charge-offs on accounts of cardholders who have filed for bankruptcy was changed to meet the less stringent standards of the industry and those required under the Federal Reserve's policy in order to improve trust performance, at least temporarily. Nonetheless, this would not affect the bank holding company's earnings or capital.

3. In accordance with the securitization documents, proceeds from recoveries on charged-off accounts are the property of the trust. These and other proceeds would continue to be paid out in accordance with the pooling and servicing agreement. No impact on the bank holding company's earnings or capital would result.

Modification of Loan-Repayment Terms: Example 3

Facts. In performing the role of servicer for its securitization, a bank holding company is authorized under its pooling and servicing agreement to modify loan-repayment terms when it appears that this action will improve the likelihood of repayment on the loan. These actions are part of the bank holding company's process of working with customers who are delinquent or otherwise experiencing temporary financial difficulties. All of the modifications are consistent with the bank holding company's internal loan policy. However, in modifying the loan terms, the contractual maturity of some loans may be extended beyond the final maturity date of the most junior class of securities sold to investors. When this occurs, the bank holding company repurchases these loans from the securitization trust at par.

Analysis. The combination of the loan-term modification for securitized assets and the subsequent repurchase constitutes implicit recourse for regulatory capital purposes. While the modification of loan terms is permitted under the pooling and servicing agreement, the repurchase of modified loans with extended maturities at par exposes the bank holding company's earnings and capital to potential risk of loss.

Servicer's Payment of Deficiency Balances: Example 4

Facts. A wholly owned subsidiary of a bank holding company originates and services a portfolio of home equity loans. After liquidation of the collateral for a defaulted loan, the subsidiary makes the trust whole in terms of principal and interest if the proceeds from the collateral are not sufficient. However, there is no contractual commitment that requires the subsidiary to support the pool in this manner. The payments made to the trust to cover deficient balances on the defaulted loans are not recoverable under the terms of the pooling and servicing agreement.

Analysis. The subsidiary's action constitutes implicit recourse to the bank holding company for regulatory capital purposes. This action is considered implicit recourse because it adversely affects the bank holding company's earnings and capital since the bank holding company absorbs losses on the loans resulting from the actions taken by its subsidiary. Further, no mechanism exists to provide for and ensure that the subsidiary will be reimbursed for the payments made to the trust. In addition, examiners will consider any servicer advance a credit enhancement if the servicer is not entitled to full reimbursement[4] or if the reimbursement is subordinate to other claims.

Reimbursement of Credit Enhancer's Actual Losses: Example 5

Facts. A bank holding company sponsoring a securitization arranges for an unrelated third party to provide a first-loss credit enhancement, such as a financial standby letter of credit, that will cover losses up to the first 10 percent of the securitized assets. The bank holding company agrees to pay a fixed amount as an annual premium for this credit enhancement. The third party initially covers actual losses that occur in the underlying asset pool in accordance with its contractual commitment under the letter of credit. Later, the bank holding company agrees not only to pay the credit enhancer the annual premium on the credit enhancement, but also to reimburse the credit enhancer for the losses it absorbed during the preceding year. This reimbursement for actual losses was not originally provided for in the contractual arrangement between the bank holding company and the credit-enhancement provider.

Analysis. The bank holding company's subsequent reimbursement of the credit-enhancement provider's losses constitutes implicit recourse because the bank holding company's reimbursement of losses went beyond its contractual obligations. Furthermore, the Federal Reserve would consider any requirement contained in the original credit-enhancement contract that obligates the bank holding company to reim-

4. A servicer advance will also be considered a form of credit enhancement if, for any one loan, nonreimbursable advances are not contractually limited to an insignificant amount of that loan's outstanding principal.

burse the credit-enhancement provider for its losses to be a recourse arrangement.

2128.04.1 INSPECTION OBJECTIVES

1. To identify asset-securitization transactions in which the bank holding company has provided implicit recourse.
2. To ascertain whether implicit recourse provided to asset-securitization transactions may be detrimental to the bank holding company's earnings performance, capital adequacy, and financial condition.
3. To initiate quick supervisory action, which may include increased minimum-capital requirements, when implicit recourse is identified.

2128.04.2 INSPECTION PROCEDURES

1. Be attentive to situations in which the bank holding company may have provided implicit support to an asset-securitization transaction.
2. Be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread below a certain threshold or an increase in delinquencies beyond a certain rate.
3. Review securitization documents to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents.
4. Review a sample of receivables transferred between the seller and the trust to ensure that the transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated.
5. Review the terms and conditions of the securitization transactions reviewed to ensure that the market value of the receivables is documented and well supported.
6. Ascertain that the selling bank holding company has not provided a purchaser with any guarantees or credit enhancements on the sold receivables.
7. Ascertain whether a securitizing bank holding company sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books. Evaluate the effect of this practice on the bank holding company's earnings and capital adequacy.
8. Provide appropriate written documentation and recommend that prompt supervisory action be taken when implicit recourse is identified.

A bank holding company's board of directors and senior management are responsible for initiating policies and procedures, and for monitoring processes and internal controls, that will provide reasonable assurance that the bank holding company's contracts and commitments do not include detrimental covenants that affect its safety and soundness. When examiners review a bank holding company's securitization contracts and related documentation, they should be alert to any covenants that use adverse supervisory actions or the breach of supervisory thresholds as triggers for early-amortization events or the transfer of servicing. Examples of such supervisory actions can include a downgrade in the banking organization's RFI/C(D) or CAMELS rating, an enforcement action, or a downgrade in a depository institution's prompt-corrective-action capital category. The inclusion of supervisory-linked covenants in securitization documents is considered to be an "unsafe and unsound banking practice" that undermines the objective of supervisory actions and thresholds. An early amortization or transfer of servicing triggered by such events can create or exacerbate liquidity and earnings problems for a bank holding company that may lead to further deterioration in its financial condition.

Covenants that contain triggers tied, directly or indirectly, to supervisory actions or thresholds can also result in the early amortization of a securitization at a time when the sponsoring organization's ability to access other funding sources is limited. If an early-amortization event occurs, investors may lose confidence in the stability of the sponsoring organization's asset-backed securities, thus limiting its ability to raise new funds through securitization. At the same time, the organization must fund new receivables on the balance sheet, potentially resulting in liquidity problems. Moreover, the existence of a supervisory-linked trigger potentially could inhibit supervisors from taking action intended to address problems at a troubled organization because the action could trigger an event that worsens its condition or causes its failure.

The Federal Reserve is concerned that covenants related to supervisory actions may obligate a bank holding company's management to disclose confidential information, such as RFI/C(D) or CAMELS ratings. Disclosure of such information by a banking organization's directors, officers, employees, attorneys, or independent auditors, without explicit authorization by its primary regulator, violates supervisory information disclosure rules and policies and may result in follow-up supervisory action.

Because of the supervisory concerns about covenants that are linked to supervisory actions, a federal bank interagency advisory was issued on May 23, 2002. (See SR-02-14.) The advisory emphasizes that a banking organization's management and board of directors should ensure that covenants related to supervisory actions or thresholds are not included in securitization documents. Covenants that provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event will be criticized, under appropriate circumstances, as an unsafe and unsound banking practice. The Federal Reserve (and other supervisors) may also take other supervisory actions, such as requiring additional capital or denying capital relief for risk-based capital calculations, regardless of the treatment under generally accepted accounting principles (GAAP).

Examiners should consider the potential impact of such covenants in existing transactions when evaluating both the overall condition of the bank holding company and the specific component ratings of capital, liquidity, and management. Early-amortization triggers will specifically be considered in the context of the bank holding company's overall liquidity position and contingency funding plan. For organizations with limited access to other funding sources or a significant reliance on securitization, the existence of these triggers presents a greater degree of supervisory concern. Any bank holding company that uses securitization as a funding source should have a viable contingency funding plan in the event it can no longer access the securitization market. Examiners should encourage bank holding company management to amend, modify, or remove covenants linked to supervisory actions from existing transactions. Any impediments a bank holding company may have to taking such actions should be documented and discussed with the appropriate supervisory staff of its responsible Reserve Bank.

2128.05.1 INSPECTION OBJECTIVES

1. During the review of securitization activities and contracts, to be alert to securitization

documents containing covenants that have triggers tied, directly or indirectly, to supervisory actions or thresholds.
2. Under appropriate circumstances, to criticize as an unsafe and unsound banking practice the inclusion of covenants in a securitization-transaction document when the covenants provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event.
3. To determine if the bank holding company has a viable contingency funding plan that it can use if it can no longer access the securitization market.

2128.05.2 INSPECTION PROCEDURES

1. Review a sample of the bank holding company's securitization contracts and related documentation.
2. Evaluate the overall condition of the bank holding company, as well as the specific component ratings of capital, liquidity, and management.
3. If the bank holding company uses securitization as a funding source, determine its overall liquidity position and whether it has an adequate and viable contingency funding plan that can be used if the bank holding company can no longer access the securitization market.
4. Determine the potential impact of any early-amortization triggers or transfer of servicing within the asset-securitization contracts (any covenants that use adverse supervisory actions or the crossing of supervisory thresholds as triggers for early-amortization events or the transfer of servicing).
5. Encourage bank holding company management to amend, modify, or remove from existing transactions any securitization covenants linked to supervisory actions.
6. Report to and consult with Reserve Bank supervisory staff on any impediments the directors and senior management of the bank holding company have to amending, modifying, or removing any such detrimental securitization convenants.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to replace, as appropriate, the references to FAS 125 with either FAS 140 or FAS 157. The Financial Accounting Standards Board (FASB), issued in September 2000, FAS 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FAS No. 125)." FAS 157, "Fair Value Measurements," was issued in September 2006 and was made effective on November 15, 2007.

2128.06.05 RETAINED INTERESTS FROM SECURITIZATION ACTIVITIES

Securitization activities present unique and sometimes complex risks that require the attention of senior management and the board of directors. Retained interests from securitization activities, including interest-only strips receivable, arise when a banking organization (BO) keeps an interest in the assets sold to a securitization vehicle that, in turn, issues bonds to investors.[1]

The methods and models BOs use to value retained interests and the difficulties in managing exposure to these volatile assets can raise supervisory concerns. Under generally accepted accounting principles (GAAP), a BO recognizes an immediate gain (or loss) on the sale of assets, in part, by recording its retained interest at fair value. The valuation of the retained interest is based on the present value of future cash flows in excess of the amounts needed to service the bonds and cover credit losses and other fees of the securitization vehicle.[2]

Determinations of fair value should be based on reasonable assumptions about factors such as discount rates, projected credit losses, and prepayment rates. Bank supervisors expect retained interests to be supported by verifiable documentation of fair value in accordance with GAAP. In the absence of such support, the retained interests, for regulatory reporting purposes, should not be carried as assets on a BO's books, but should be charged off. Other supervisory concerns include failure to recognize and hold sufficient capital against recourse obligations generated by securitizations, and the absence of an adequate independent audit function.

The supervisory guidance focuses on and incorporates important fundamental concepts of risk-management and risk-focused supervision: active oversight by senior management and the board of directors, the use of effective policies and limits, accurate and independent procedures to measure and assess risk, and the maintenance of strong internal controls.[3] The guidance stresses sound risk-management, modeling, valuation, and disclosure practices for asset securitization; complements previous supervisory guidance issued on this subject; and supplements existing policy statements and examination-inspection procedures.[4] Emphasis is placed on the expectation that a BO's securitization-related retained interest must be supported by documentation of the interest's fair value, using reasonable valuation assumptions that can be objectively verified. Retained interests that lack such objectively verifiable support or that fail to meet these supervisory standards will be classified as loss and disallowed for inclusion as assets of the BO for regulatory capital purposes. See SR-99-37 and the more complete text of its referenced interagency guidance on the risk mangement and valuation of retained interests arising from asset securitization activities. See also SR-03-4 and its attachment and section 3071.0.

Examiners will review a BO's valuation of retained interests and the concentration of these assets relative to capital. Consistent with existing supervisory authority, BOs may be required, on a case-by-case basis, to hold additional capital commensurate with their risk exposures.[5] An

1. The term "banking organization" (BO) refers to any federally supervised banking organization. This includes federally insured, federally chartered financial institutions that are supervised by a federal bank or savings association supervisory authority, as well as bank holding companies and their nonbank subsidiaries.

2. See Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standard No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FASB Statement No. 125)."

3. See SR-96-14, "Risk-Focused Safety-and-Soundness Examinations and Inspections" (section 2124.0 of this manual), and SR-95-51, "Rating the Adequacy of Risk-Management Processes and Internal Controls at State Member Banks and Bank Holding Companies" (section 4070.1 of this manual).

4. See SR-97-21, "Risk Management and Capital Adequacy of Exposures Arising from Secondary-Market Credit Activities," and SR-96-30, "Risk-Based Capital Treatment for Spread Accounts That Provide Credit Enhancement for Securitized Receivables."

5. For instance, a BO has high concentrations of retained

excessive dependence on securitizations for day-to-day core funding can present significant liquidity problems during times of market turbulence or if there are difficulties specific to the BO.

2128.06.1 ASSET SECURITIZATION

Asset securitization typically involves the transfer of on-balance-sheet assets to a third party or trust. In turn, the third party or trust issues certificates or notes to investors. The cash flow from the transferred assets supports repayment of the certificates or notes. BOs use asset securitization to access alternative funding sources, manage concentrations, improve financial-performance ratios, and more efficiently meet customer needs. Assets typically securitized include credit card receivables, automobile receivable paper, commercial and residential first mortgages, commercial loans, home equity loans, and student loans.

Senior management and directors must have the requisite knowledge of the effect of securitization on the BO's risk profile and must be fully aware of the accounting, legal, and risk-based capital nuances of this activity. BOs must fully and accurately distinguish and measure the risks that are transferred versus those retained, and must adequately manage the retained portion. It is essential that BOs engaging in securitization activities have appropriate front- and back-office staffing, internal and external accounting and legal support, audit or independent review coverage, information systems capacity, and oversight mechanisms to execute, record, and administer these transactions correctly.

Appropriate valuation and modeling methodologies must be used. They must be able to determine the initial and ongoing value of retained interests. Accounting rules provide a method to recognize an immediate gain (or loss) on the sale, in part, through booking a "retained interest." The carrying value, however, of that interest must be fully documented, based on reasonable assumptions, and regularly analyzed for any subsequent impairment in value. The best evidence of fair value is a quoted market price in an active market. When quoted market prices are not available, accounting rules allow fair value to be estimated. This estimate must be based on the "best information available in the circumstances."[6] An estimate of fair value must be supported by reasonable and current assumptions. If a best estimate of fair value is not practicable, the asset is to be recorded at zero in financial and regulatory reports. (See FAS 140, para. 71.)

Unforeseen market events that affect the discount rate or performance of receivables supporting a retained interest can swiftly and dramatically alter its value. Without appropriate internal controls and independent oversight, a BO that securitizes assets may inappropriately generate "paper profits" or mask actual losses through flawed loss assumptions, inaccurate prepayment rates, and inappropriate discount rates. Liberal and unsubstantiated assumptions can result in material inaccuracies in financial statements; substantial write-downs of retained interests; and, if retained interests represent an excessive concentration of the sponsoring BO's capital, the BO's demise. BO managers and directors need to ensure the following:

1. Independent risk-management processes are in place to monitor securitization-pool performance on an aggregate and individual transaction level. An effective risk-management function includes appropriate information systems to monitor securitization activities.
2. Appropriate valuation assumptions and modeling methodologies are used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.
3. Audit or internal review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets the BO retains. The findings of such reviews should be reported directly to the board or an appropriate board committee.
4. Accurate and timely risk-based capital calculations are maintained, including recognition and reporting of any recourse obligation resulting from securitization activity.
5. Internal limits are in place to govern the maximum amount of retained interests as a percentage of total equity capital.
6. A realistic liquidity plan is in place for the BO in case of market disruptions.

interests relative to its capital or is otherwise at risk from impairment of these assets.

6. See FAS 157, "Fair Value Measurements."

2128.06.2 INDEPENDENT RISK-MANAGEMENT FUNCTION

BOs engaged in securitizations should have an independent risk-management function commensurate with the complexity and volume of their securitizations and their overall risk exposures. The risk-management function should ensure that securitization policies and operating procedures, including clearly articulated risk limits, are in place and appropriate for the BO's circumstances. A sound asset securitization policy should include or address, at a minimum—

1. a written and consistently applied accounting methodology;
2. regulatory reporting requirements;
3. valuation methods, including FAS 157 valuation assumptions, and procedures to formally approve changes to those assumptions;
4. a management reporting process; and
5. exposure limits and requirements for both aggregate and individual transaction monitoring.

It is essential that the risk-management function monitor origination, collection, and default-management practices. This includes regular evaluations of the quality of underwriting, soundness of the appraisal process, effectiveness of collections activities, ability of the default-management staff to resolve severely delinquent loans in a timely and efficient manner, and the appropriateness of loss-recognition practices. Because the securitization of assets can result in the current recognition of *anticipated income*, the risk-management function should pay particular attention to the types, volumes, and risks of assets being originated, transferred, and serviced. Senior management and the risk-management staff must be alert to any pressures on line managers to originate abnormally large volumes or higher-risk assets to sustain ongoing income needs. Such pressures can lead to a compromise of credit-underwriting standards. This may accelerate credit losses in future periods, impair the value of retained interests, and potentially lead to funding problems.

The risk-management function should also ensure that appropriate management information systems (MIS) exist to monitor securitization activities. Reporting and documentation methods must support the initial valuation of retained interests and ongoing impairment analyses of these assets. Pool-performance information will help well-managed BOs ensure, on a qualitative basis, that a sufficient amount of economic capital is being held to cover the various risks inherent in securitization transactions. The absence of quality MIS will hinder management's ability to monitor specific pool performance and securitization activities.

At a minimum, MIS reports should address the following:

1. *Securitization summaries for each transaction.* The summary should include relevant transaction terms such as collateral type, facility amount, maturity, credit-enhancement and subordination features, financial covenants (termination events and spread-account capture "triggers"), right of repurchase, and counterparty exposures. Management should ensure that the summaries for each transaction are distributed to all personnel associated with securitization activities.
2. *Performance reports by portfolio and specific product type.* Performance factors include gross portfolio yield, default rates and loss severity, delinquencies, prepayments or payments, and excess spread amounts. The reports should reflect the performance of assets, both on an individual-pool basis and total managed assets. These reports should segregate specific products and different marketing campaigns.
3. *Vintage analysis for each pool using monthly data.* Vintage analysis will help management understand historical performance trends and their implications for future default rates, prepayments, and delinquencies, and therefore retained interest values. Management can use these reports to compare historical performance trends with underwriting standards, including the use of a validated credit-scoring model, to ensure loan pricing is consistent with risk levels. Vintage analysis also helps in the comparison of deal performance at periodic intervals and validates retained-interest valuation assumptions.
4. *Static-pool cash-collection analysis.* A static-pool cash-collection analysis involves reviewing monthly cash receipts relative to the principal balance of the pool to determine the cash yield on the portfolio, comparing the cash yield to the accrual yield, and tracking monthly changes. Management should compare monthly the timing and amount of cash flows received from the trust with those projected as part of the FAS 157 retained-interest valuation analysis. Some master-trust structures allow excess cash flow to be

shared between series or pools. For revolving-asset trusts with this master-trust structure, management should perform a cash-collection analysis for each master-trust structure. These analyses are essential in assessing the actual performance of the portfolio in terms of default and prepayment rates. If cash receipts are less than those assumed in the original valuation of the retained interest, this analysis will provide management and the board with an early warning of possible problems with collections or extension practices, and impairment of the retained interest.

5. *Sensitivity analysis.* A sensitivity analysis measures the effect of changes in default rates, prepayment or payment rates, and discount rates to assist management in establishing and validating the carrying value of the retained interest. Stress tests should be performed at least quarterly. Analyses should consider potential adverse trends and determine ''best,'' ''probable,'' and ''worst case'' scenarios for each event. Other factors that need to be considered are the impact of increased defaults on collections staffing, the timing of cash flows, spread-account capture triggers, overcollateralization triggers, and early-amortization triggers. An increase in defaults can result in higher-than-expected costs and a delay in cash flows, thus decreasing the value of the retained interests. Management should periodically quantify and document the potential impact to both earnings and capital, and report the results to the board of directors. Management should incorporate this analysis into their overall interest-rate risk measurement system.[7] Examiners will review the BO-conducted analysis and the volatility associated with retained interests when assessing the Sensitivity to Market Risk component rating (the ''S'' in the CAMELS rating system for banks or the ''M'' for the BHC rating system[8]).
6. *Statement of covenant compliance.* Ongoing compliance with deal-performance triggers as defined by the pooling and servicing agreements should be affirmed at least monthly. Performance triggers include early amortization, spread capture, changes to overcollateralization requirements, and events that would result in servicer removal.

2128.06.3 VALUATION AND MODELING PROCESSES

The method and key assumptions used to value the retained interests and servicing assets or liabilities must be reasonable and fully documented. The key assumptions in all valuation analyses include prepayment or payment rates, default rates, loss-severity factors, and discount rates. BOs are expected to take a logical appropriate approach when developing securitization assumptions and capitalizing future income flows. It is important that management quantifies the assumptions at least quarterly on a pool-by-pool basis and maintains supporting documentation for all changes to the assumptions as part of the valuation. Policies should define the acceptable reasons for changing assumptions and require appropriate management approval.

An exception to this pool-by-pool valuation analysis may be applied to revolving-asset trusts if the master-trust structure allows excess cash flows to be shared between series. In a master trust, each certificate of each series represents an undivided interest in all of the receivables in the trust. Therefore, valuations are appropriate at the master-trust level.

To determine the value of the retained interest at inception, and make appropriate adjustments going forward, the BO must implement a reasonable modeling process to comply with FAS 157. Management is expected to employ appropriate valuation assumptions and projections, and to maintain verifiable objective documentation of the fair value of the retained interest. Senior management is responsible for ensuring that the valuation model accurately reflects the cash flows according to the terms of the securitization's structure. For example, the model should account for any cash collateral or overcollateralization triggers, trust fees, and insurance payments if appropriate. The board and management are accountable for the model builders' possessing the necessary expertise and technical proficiency to perform the modeling process. Senior management should ensure that internal controls are in place to provide for the ongoing integrity of MIS associated with securitization activities.

As part of the modeling process, the risk-management function should ensure that periodic validations are performed to reduce vulner-

7. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13 and section 2127.0) advises institutions with a high level of exposure to interest-rate risk relative to capital that they will be directed to take corrective action.
8. See sections 4070.0 and 4070.1.

ability to model risk. Validation of the model includes testing the internal logic, ensuring empirical support for the model assumptions, and back-testing the models using actual cash flows on a pool-by-pool basis. The validation process should be documented to support conclusions. Senior management should ensure the validation process is independent from line management and from the modeling process. The audit scope should include procedures to ensure that the modeling process and validation mechanisms are both appropriate for the BO's circumstances and executed consistent with its asset securitization policy.

2128.06.4 USE OF OUTSIDE PARTIES

Third parties are often engaged to provide professional guidance and support regarding a BO's securitization activities, transactions, and valuing of retained interests. The use of outside resources does not relieve directors of their oversight responsibility, or relieve senior management of its responsibilities to provide supervision, monitoring, and oversight of securitization activities, particularly the management of the risks associated with retained interests. Management is expected to have the experience, knowledge, and abilities to discharge its duties and understand the nature and extent of the risks retained interests present, and to have the policies and procedures necessary to implement an effective risk-management system to control such risks. Management must have a full understanding of the valuation techniques employed, including the basis and reasonableness of underlying assumptions and projections.

2128.06.5 INTERNAL CONTROLS

Effective internal controls are essential to a BO's management of the risks associated with securitization. When properly designed and consistently enforced, a sound system of internal controls will help management safeguard the BO's resources; ensure that financial information and reports are reliable; and comply with contractual obligations, including securitization covenants. It will also reduce the possibility of significant errors and irregularities, and assist in their timely detection. Internal controls typically (1) limit authorities; (2) safeguard access to and use of records; (3) separate and rotate duties; and (4) ensure both regular and unscheduled reviews, including testing.

Operational and managerial standards have been established for internal control and information systems.[9] A system of internal controls should be maintained that is appropriate to the BO's size and the nature, scope, and risk of its activities.[10]

2128.06.6 AUDIT FUNCTION OR INTERNAL REVIEW

A BO's board of directors is responsible for ensuring that its audit staff or independent review function is competent regarding securitization activities. The audit function should perform periodic reviews of securitization activities, including transaction testing and verification, and report all findings to the board or appropriate board committee. The audit function also may be useful to senior management in identifying and measuring risk related to securitization activities. Principal audit targets should include compliance with securitization policies, operating and accounting procedures (FAS 140), deal covenants, and the accuracy of MIS and regulatory reports. The audit function also should confirm that the BO's regulatory reporting process is designed and managed to facilitate timely and accurate report filing. Furthermore, when a third party services loans, the auditors should perform an independent verification of the existence of the loans to ensure that balances reconcile to internal records.

2128.06.7 REGULATORY REPORTING OF RETAINED INTERESTS

The securitization and subsequent removal of assets from a BO's balance sheet requires additional reporting as part of the regulatory reporting process. Common regulatory reporting errors stemming from securitization activities may include—

9. See the safety-and-soundness standards for national banks at 12 CFR 30 (OCC), and for savings associations at 12 CFR 570 (OTS).

10. BOs that are subject to the requirements of FDIC regulation 12 CFR 363 should include an assessment of the effectiveness of internal controls over their asset securitization activities as part of management's report on the overall effectiveness of the system of internal controls over financial reporting. This assessment implicitly includes the internal controls over financial information that is included in regulatory reports.

1. failure to include off-balance-sheet assets subject to recourse treatment when calculating risk-based capital ratios;
2. failure to recognize retained interests and retained subordinate security interests as a form of credit enhancement;
3. failure to report loans sold with recourse in the appropriate section of the regulatory report; and
4. overvaluing retained interests.

A BO's directors and senior management are responsible for the accuracy of its regulatory reports. Because of the complexities associated with securitization accounting and risk-based capital treatment, attention should be directed to ensuring that personnel who prepare these reports maintain current knowledge of reporting rules and associated interpretations. This often will require ongoing support by qualified accounting and legal personnel.

2128.06.8 MARKET DISCIPLINE AND DISCLOSURES

Transparency through public disclosure is crucial to effective market discipline and can reinforce supervisory efforts to promote high standards in risk management. Timely and adequate information on the BO's asset securitization activities should be disclosed. The information in the disclosures should be comprehensive; however, the amount of disclosure that is appropriate will depend on the volume of securitizations and complexity of the BO. Well-informed investors, depositors, creditors, and other counterparties can provide a BO with strong incentives for maintaining sound risk-management systems and internal controls. Adequate disclosure allows market participants to better understand the BO's financial condition and apply market discipline, creating incentives to reduce inappropriate risk taking or inadequate risk-management practices. Examples of sound disclosures include—

1. accounting policies for measuring retained interests, including a discussion of the impact of key assumptions on the recorded value;
2. the process and methodology used to adjust the value of retained interests for changes in key assumptions;
3. risk characteristics, both quantitative and qualitative, of the underlying securitized assets;
4. the role of retained interests as credit enhancements to special-purpose entities and other securitization vehicles, including a discussion of techniques used for measuring credit risk; and
5. sensitivity analyses or stress-testing conducted by the BO, showing the effect of changes in key assumptions on the fair value of retained interests.

2128.06.9 RISK-BASED CAPITAL FOR RECOURSE AND LOW-LEVEL-RECOURSE TRANSACTIONS

For regulatory purposes, recourse is generally defined as an arrangement in which an institution retains the risk of credit loss in connection with an asset transfer, if the risk of credit loss exceeds a pro rata share of its claim on the assets.[11] In addition to broad contractual language that may require the seller to support a securitization, recourse can arise from retained interests, retained subordinated security interests, the funding of cash-collateral accounts, or other forms of credit enhancements that place a BO's earnings and capital at risk. These enhancements should generally be *aggregated* to determine the extent of a BO's support of securitized assets. Although an asset securitization qualifies for sales treatment under GAAP, the underlying assets may still be subject to regulatory risk-based capital requirements. Assets sold with recourse should generally be risk-weighted as if they had not been sold.

Securitization transactions involving recourse may be eligible for ''low-level-recourse'' treatment.[12] Risk-based capital standards provide that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a BO is contractually liable. The low-level-recourse treatment applies to transactions accounted for as sales under GAAP in which a BO contractually limits its recourse exposure to less than the full risk-based capital requirements for the assets transferred. Under the low-level-recourse principle, the BO holds

11. See the risk-based capital treatment for sales with recourse at 12 CFR 3, appendix A, section (3)(b)(1)(iii) (OCC), and 12 CFR 567.6(a)(2)(i)(c) (OTS). For a further explanation of recourse, see the glossary of the Call Report instructions, ''Sales of Assets for Risk-Based Capital Purposes.''

12. See 60 *Fed. Reg.* 8177, February 13, 1995 (FRB).

capital on approximately a dollar-for-dollar basis up to the amount of the aggregate credit enhancements.

If a BO does not contractually limit the maximum amount of its recourse obligation, or if the amount of credit enhancement is greater than the risk-based capital requirement that would exist if the assets were not sold, the low-level-recourse treatment does not apply. Instead, the BO must hold risk-based capital against the securitized assets as if those assets had not been sold. Retained interests that lack objectively verifiable support or that fail to meet the supervisory standards set forth in this section will be classified as loss and disallowed as assets of the BO for regulatory capital purposes.

2128.06.10 CONCENTRATION LIMITS IMPOSED ON RETAINED INTERESTS

The creation of a retained interest asset (the debit) typically also results in an offsetting "gain on sale" (the credit). BOs that securitize high-yielding assets with long durations may create a retained-interest asset value that exceeds the risk-based capital charge that would be in place if it had not sold the assets (under the existing risk-based capital guidelines, capital is not required for the amount over 8 percent of the securitized assets). Serious problems can arise for those BOs that distribute contrived earnings only later to be faced with a downward valuation and charge-off of part or all of the retained interests.

As an example, a BO could sell $100 in subprime home-equity loans and book a retained interest of $20 using innapropriate valuation assumptions. Under the current capital rules, the BO is required to hold approximately $8 in capital. This $8 is the current capital requirement if the loans were never removed from the balance sheet (8 percent of $100 = $8). However, the institution is still exposed to substantially all the credit risk, plus the additional risk to earnings and capital from the volatility of the retained interest. If the value of the retained interest decreases to $10 due to the inappropriate assumptions or changes in market conditions, the $8 in capital is insufficient to cover the entire loss.

Normally, the sponsor will eventually receive any excess cash flow remaining from securitizations after investor interests have been met. However, recent experience has shown that retained interests are vulnerable to sudden and sizeable write-downs that can hinder a BO's access to the capital markets; damage its reputation in the marketplace; and, in some cases, threaten its solvency. A BO's board of directors and management is expected to develop and implement policies that limit the amount of retained interests that may be carried as a percentage of total equity capital, based on the results of their valuation and modeling processes. Well-constructed internal limits also lessen the incentives for a BO's personnel to engage in activities designed to generate near-term "paper profits" that may be at the expense of its long-term financial position and reputation.

2128.06.11 INSPECTION OBJECTIVES

1. To determine whether the BO's retained interests from asset securitization are properly documented, valued, and accounted for.
2. To verify that the amount of those retained interests not supported by adequate documentation has been charged off for regulatory reporting purposes and that the involved assets are not used for risk-based calculation purposes.
3. To ascertain the existence of sound risk modeling, management information systems (MIS), and disclosure practices for asset securitization.
4. To obtain assurances that the board of directors and management oversee sound policies and internal controls concerning the recording and valuation of retained interests derived from asset securitization activities.
5. To determine if liquidity problems may arise as the result of an overdependence on asset securitization activities for day-to-day core funding.
6. To determine that sufficient capital is held commensurate with the risk exposures arising from recourse obligations generated by asset securitizations.
7. To determine whether there is an independent audit function that is capable of evaluating retained interests involving asset securitization activities.

2128.06.12 INSPECTION PROCEDURES

1. Determine the existence of independent risk-management processes and MIS, and whether they are being used to monitor

securitization-pool performance on an aggregate and individual transaction level.

2. Review the MIS reports and determine whether the reports provide—
   a. securitization summaries for each transaction;
   b. performance reports by portfolio and specific product type;
   c. vintage analysis for each pool using monthly data;
   d. static-pool cash-collection analysis;
   e. sensitivity analysis; and
   f. a statement of covenant compliance.
3. Review the BO's valuation assumptions and modeling methodologies, and determine if they are appropriate and are being used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.
4. Determine if audit or internal review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets that the BO retains.
5. Review the risk-based capital calculations, and determine if they include recognition and reporting of any recourse obligation resulting from securitization activities.
6. Ascertain that internal limits govern the amount of retained interests held as a percentage of total equity capital.
7. Establish that an adequate liquidity contingency plan is in place and that it will be used in the event of market disruptions. Determine further whether liquidity problems may arise as the result of an overdependence on asset securitization activities for day-to-day core funding.
8. Determine whether consistent, conservative accounting practices are in place that satisfy the reporting requirements of regulatory supervisors, GAAP reporting requirements, and valuation assumptions and methods. Ascertain that adequate disclosures of asset securitization activities are made commensurate with the volume of securitizations and the complexities of the BO.
9. Establish that risk-exposure limits and requirements exist and are adhered to on an aggregate and individual transaction basis.

Subprime lending presents unique and significantly greater risk to banking organizations (BOs) associated with the activity,[1] raising issues about how well they are prepared to manage and control those risks. Subprime-lending institutions need strong risk-management practices and internal controls, as well as board-approved policies and procedures that appropriately identify, measure, monitor, and control all associated risks. BOs considering or engaging in this type of lending should recognize the additional risks inherent in this activity and determine if these risks are acceptable and controllable, given their organization's financial condition, asset size, level of capital support, and staff size.

In response to concerns about subprime lending, the statement Interagency Guidance on Subprime Lending was issued on March 1, 1999.[2] The statement's objective is to increase awareness among examiners and financial institutions of some of the pitfalls and hazards of this type of lending. (See SR-99-06.) Additional interagency examination guidance was issued on January 31, 2001, to further strengthen the supervision of certain institutions, primarily those institutions having subprime-lending programs with an aggregate credit exposure equaling or exceeding 25 percent of their tier 1 capital.[3] (See SR-01-04.) The aggregate credit exposure includes principal outstanding and committed, accrued and unpaid interest, and any retained residual interests[4] relating to securitized subprime loans. The Federal Reserve may also apply the additional guidelines to certain smaller subprime portfolios, such as those experiencing rapid growth or adverse performance trends, those administered by inexperienced management, and those with inadequate or weak controls. The subprime-lending policy statements are directed primarily to insured depository institutions and their subsidiaries. As such, the guidance applies to bank holding companies with regard to their oversight and supervision of insured depository institutions. Bank holding companies should also consider the statements' guidance as they supervise the lending activities of their nonbanking subsidiaries. Bank holding company examiners should consider this guidance in conjunction with the loan-administration and lending-standards inspection guidance in section 2010.2 and with the guidance for asset securitization in section 2128.02. The interagency subprime-lending policy statements are described below.

2128.08.1 INTERAGENCY GUIDANCE ON SUBPRIME LENDING

Insured depository institutions traditionally avoided lending to customers with poor credit histories because of the higher risk of default and resulting loan losses. However, some lenders[5] extend their risk-selection standards to attract lower-credit-quality accounts. Moreover, previous turmoil in the equity and asset-backed securities markets has caused some nonbank subprime specialists to exit the market, which created increased opportunities for financial institutions to enter, or expand their participation in, the subprime-lending business

The term ''subprime lending'' is defined for this statement as extending credit to borrowers who exhibit characteristics indicating a significantly higher risk of default than traditional bank lending customers.[6] Subprime borrowers represent a broad spectrum of debtors, ranging from those who have repayment problems because of an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They

1. The term ''banking organizations'' refers to bank holding companies and their banking and nonbanking subsidiaries.

2. The statement was adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

3. The March 1999 and January 2001 subprime-lending interagency guidance is consolidated within this section. To focus on the supervisory guidance that applies primarily to institutions having subprime-lending programs equaling or exceeding 25 percent of tier 1 capital, see the January 2001 release specifically. The March 1999 interagency supervisory guidance applies to all institutions that engage in subprime lending.

4. Residual interests are on-balance-sheet assets that represent interests (including beneficial interests) in transferred financial assets retained by a seller (or transferor) after a securitization or other transfer of financial assets. They are structured to absorb more than a pro rata share of credit loss related to the transferred assets through subordination provisions or other credit-enhancement techniques.

5. The terms ''lenders,'' ''financial institutions,'' and ''institutions'' refer to insured depository institutions and their subsidiaries.

6. For purposes of this statement, loans to customers who are not subprime borrowers are referred to as ''prime.''

may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories. Generally, subprime borrowers will display a range of one or more credit-risk characteristics, such as—

1. two or more 30-day delinquencies in the last 12 months, or one or more 60-day delinquencies in the last 24 months;
2. judgment, foreclosure, repossession, or charge-off in the prior 24 months;
3. bankruptcy in the last five years;
4. relatively high default probability as evidenced by, for example, a credit bureau risk score (FICO) of 660 or below (depending on the product or collateral), or by other bureau or proprietary scores with an equivalent default-probability likelihood; or
5. debt-service-to-income ratio of 50 percent or greater, or an otherwise limited ability to cover family living expenses after deducting total monthly debt-service requirements from monthly income.

Subprime loans are loans to borrowers displaying one or more of these characteristics at the time of origination or purchase.

This guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing "paper" from lenders or dealers; and the purchase of loan companies that originate subprime loans. Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. Also, the subprime-lending guidance does not generally apply to prime loans that develop credit problems after acquisition; loans initially extended in subprime programs that are later upgraded, as a result of their performance, to programs targeted to prime borrowers; and community development loans as defined in the Community Reinvestment Act (CRA) regulations that may have some higher risk characteristics, but are otherwise mitigated by guarantees from government programs, private credit enhancements, or other appropriate risk-mitigation techniques.

Subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. Subprime loans can be profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. The ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights has made subprime lending attractive to a larger number of institutions, further increasing the number of subprime lenders and loans. Some financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. The losses have attracted greater supervisory attention to subprime lending and the ability of an insured depository institution to manage the unique risks associated with this activity.

Institutions should recognize the additional risks inherent in subprime lending and determine if these risks are acceptable and controllable given the institution's staff, financial condition, size, and level of capital support. Institutions that engage in a small volume of subprime lending should have systems in place commensurate with their level of risk.

2128.08.1.1 Risk Management

The following items are essential components of a well-structured risk-management program for subprime lenders:

1. *Planning and strategy.* Before engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution's overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets or customers, as well as set performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and

cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal-control problems and to determine if favorable initial profitability estimates are realistic and sustainable.

2. *Staff expertise*. Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus, it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possess sufficient expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. The experience, or seasoning, of staff and loans should be taken into account as performance is assessed over time.
3. *Lending policy*. A subprime-lending policy should be appropriate to the size and complexity of the institution's operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:
   a. types of products offered as well as those that are not authorized
   b. portfolio targets and limits for each credit grade or class
   c. lending and investment authority clearly stated for individual officers, supervisors, and loan committees
   d. a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative or servicing costs, expected charge-offs, and capital
   e. evaluation of collateral and appraisal standards
   f. well-defined and specific underwriting parameters (that is, acceptable loan term, debt-to-income ratios, and loan-to-collateral-value ratios for each credit grade and a minimum acceptable credit score) that are consistent with any applicable supervisory guidelines[7]
   g. procedures for separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
   h. credit-file documentation requirements, such as applications, offering sheets, loan and collateral documents, financial statements, credit reports, and credit memoranda to support the loan decision
   i. a correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution's lending standards

   If the institution elects to use credit scoring (including applications scoring) for approvals or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.
4. *Purchase evaluation*. As they evaluate expected profits, institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and to the loan losses that may be experienced. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides an incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution's lending area, are at special risk for fraud or misrepresentation (that is, the quality of the loan may be less than the loan documents indicate).

   Institutions should perform a thorough due-diligence review before committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and they should regularly review loans offered to ensure that loans purchased continue to meet

7. Extensions of credit secured by real estate, whether the credit is subprime or otherwise, are subject to the Interagency Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution's aggregate investment in loans that exceed the supervisory LTV limits. (See 12 C.F.R. 208, appendix C.)

those criteria. Deterioration in the quality of purchased loans or in the portfolio's actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution's criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or terminate the correspondent relationship or to adjust underwriting and dealer or lender selection criteria.

5. *Loan-administration procedures*. After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger collection efforts, such as calling delinquent borrowers frequently, investing in technology (for example, using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program's success. To a large extent, the cost of such efforts can be a tradeoff with future loss expectations, when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business. Subprime-loan-administration procedures should be in writing and at a minimum should detail—
   a. billing and statement procedures;
   b. collection procedures;
   c. content, format, and frequency of management reports;
   d. asset-classification criteria;
   e. methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
   f. criteria for allowing loan extensions, deferrals, and re-agings;
   g. foreclosure and repossession policies and procedures; and
   h. loss-recognition policies and procedures.
6. *Loan review and monitoring*. Once an institution books the loans, designated staff must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Information systems should be in place to segment and stratify the institution's portfolio (for example, by originator, loan-to-value, debt-to-income ratios, or credit scores), and assigned staff should produce reports that management can use to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

   When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and ALLL-adequacy models. Models driven by the volume and severity of historical losses experienced during an economic expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.
7. *Consumer protection*. Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory "steering" of borrowers to subprime products for reasons other than the borrower's underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

   Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 C.F.R. 226.32), Regulation X, and the Real Estate Settlement Procedures Act (RESPA) (12 U.S.C. 2601) and should adopt policies and implement practices that ensure compliance.

   The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate against an applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate–related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited-basis characteristic (for example, race, sex, or age). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

8. *Securitization and sale*. To increase their loan-production and -servicing income, some subprime lenders originate loans and then securitize and sell them in the asset-backed securities market. Strong demand from investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risk, that are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution's assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

   Institutions should recognize the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans originally intended for sale, these loans may strain an institution's liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses back-up purchasers of the securities or the attendant servicing functions, alternate funding sources, and measures for raising additional capital.

   Institutions should refer to the Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," for guidance on accounting for these transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights/obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular, management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as by predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime lending pools. Institutions should also consult with their auditors as necessary to ensure their accounting for securitizations is accurate.

9. *Reevaluation*. Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause, and the program should be modified appropriately. If the program falls far short of the institution's expectations, management should consider terminating it. Questions that management and the board need to ask may include the following:
   a. Have cost and profit projections been met?
   b. Have projected loss estimates been accurate?
   c. Has the institution been called upon to provide support to enhance the quality

and performance of loan pools it has securitized?

d. Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?

e. Has the program met the credit needs of the community that it was designed to address?

2128.08.1.2 Examination Review and Analysis

The following supervisory guidance (up to the inspection objectives) applies only to the examination of a bank holding company's federally insured subsidiary banks that have subprime-lending programs equaling or exceeding 25 percent of tier 1 capital and to those insured banks that have other designated subprime programs referenced in SR-01-4.

The heightened risk levels and potential volatility in delinquency and loss rates posed by subprime-lending programs warrant examiners' increased ongoing attention. The risks inherent in subprime-lending programs call for frequent reviews. There are generally two levels of review appropriate for subprime activities:

1. *Portfolio-level reviews* include assessments of underwriting standards, marketing practices, pricing, management information and control systems (quality control, audit and loan review, vendor management, compliance), portfolio performance, and the appropriate application of regulatory and internal allowance and capital policies.
2. *Transaction-level testing* includes the testing of individual loans for compliance with underwriting and loan-administration guidelines; the appropriate treatment of loans under delinquency, re-aging, and cure programs; and the appropriate application of regulatory and internal allowance and capital policies.

Examiners should perform a portfolio-level review and some transaction testing at each institution engaged in subprime lending, during each regularly scheduled examination cycle. The Federal Reserve will perform regular off-site supervisory monitoring and may require subprime lenders to supply supplementary information about their subprime portfolios between examinations. The examiner's findings from transaction-level testing and portfolio-level reviews should be incorporated into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.

2128.08.1.2.1 Transaction-Level Testing

Subprime-loan portfolios contain elevated risks, and actual subprime-lending practices often can deviate from stated policy and procedural guidance. Therefore, examiners should supplement the portfolio-level examination procedures with transaction-level testing to determine whether—

1. individual loans adhere to existing policy, underwriting, risk-selection, and pricing standards;
2. individual loans and portfolios are classified in accordance with the subprime-lending guidelines described in this section, or in other Federal Reserve credit-extending supervisory guidance;
3. management, board, and regulatory reporting is accurate and timely;
4. existing loans conform to specified account-management standards (such as over-limits, line increases, reductions, cancellations, re-scoring, or collections);
5. key risk controls and control processes are adequate and functioning as intended;
6. roll rates and other loss-forecasting methods used to determine ALLL levels are accurate and reliable; and
7. lending practices exist that may appear unsafe, unsound, or abusive and unfair.

2128.08.1.3 Adequacy of the ALLL

Examiners should assess the adequacy of the ALLL to ensure that the portion allocated to the subprime portfolio is sufficient to absorb estimated credit losses for this portfolio. Consistent with interagency policy,[8] the term "estimated credit losses" means an estimate of the amount that is not likely to be collected; that is, net charge-offs that are likely to be realized given the facts and circumstances as of the evaluation date.[9] These estimated losses should meet the

8. The Interagency Policy Statement on the Allowance for Loan and Lease Losses was issued December 21, 1993, and the ALLL methodologies and documentation standards were issued July 2, 2001.

9. Estimates of credit losses should include accrued interest and other accrued fees (for example, uncollected credit card fees or uncollected late fees) that have been added to the

criteria for accrual of loss contingency, as set forth under generally accepted accounting principles (GAAP), consistent with supervisory ALLL policy.

2128.08.1.3.1 New Entrants to the Business

In some instances, an institution (for example, a newly chartered institution or an existing institution entering the subprime-lending business) may not have sufficient previous loss experience to estimate an allowance for subprime-lending activities. In such cases, industry statistics or another institution's loss data for similar loans may be a better starting point to determine the ALLL than the institution's own data for developing loss rates. When an institution uses loss rates developed from industry statistics or from other institutions to determine its ALLL, it should demonstrate and document that the attributes of the loans in its portfolio or portfolio segment are similar to those in the other institution's (or industry's) portfolio.

2128.08.1.3.2 Pools of Subprime Loans—Not Classified

The ALLL required for subprime loans should be sufficient to absorb at least all estimated credit losses on outstanding balances over the current operating cycle, typically 12 months. The board of directors and management are expected to ensure that the institution's process for determining an adequate level for the ALLL is based on a comprehensive and adequately documented analysis of all significant factors. The consideration factors should include historical loss experience, ratio analysis, peer-group analysis, and other quantitative analysis as a basis for the reasonableness of the ALLL. To the extent that the historical net charge-off rate is used to estimate expected credit losses, it should be adjusted for changes in trends, conditions, and other relevant factors, including business volume, underwriting, risk selection, account-management practices, and current economic or business conditions that may alter such experience. The allowance should represent a prudent, conservative estimate of losses that allows a reasonable margin for imprecision. Institutions should clearly document loss estimates and the allowance methodology in writing. This documentation should describe the analytical process used, including—

1. portfolio-segmentation methods applied;
2. loss-forecasting techniques and assumptions employed;
3. definitions of terms used in ratios and model computations;
4. relevance of the baseline loss information used;
5. rationale for adjustments to historical experience; and
6. a reconciliation of forecasted loss rates to actual loss rates, with significant variances explained.

2128.08.1.4 Classification Guidelines for Subprime Lending

Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well before the time frames outlined in the retail classification policy issued by the Federal Financial Institutions Examination Council (FFIEC) on June 12, 2000. Examiners should classify subprime loans and portfolios in accordance with the guidelines in this section and other applicable Federal Reserve supervisory guidelines. Classified loans are loans that are not protected adequately by the current sound worth and paying capacity of the borrower or the collateral pledged. As such, full liquidation of the debt may be in jeopardy. Pools of classified subprime loans (to include, at a minimum, all loans past due 90 days or more) should be reviewed for impairment, and an adequate allowance should be established consistent with existing interagency policy.

2128.08.1.4.1 Individual Loans

Examiners should not automatically classify or place loans in special mention merely because they are subprime. Rather, classifications should

loan balances and, as a result, that are reported as part of the institution's loans on the balance sheet. An institution may include these types of estimated losses in either the ALLL or a separate valuation allowance, which would be netted against the aggregated loan balance for regulatory reporting purposes. When accrued interest and other accrued fees are not added to the loan balances and are not reported as part of loans on the balance sheet, the collectibility of these accrued amounts should nevertheless be evaluated to ensure that the institution's income is not overstated.

reflect the borrower's capacity and willingness to repay and the adequacy of collateral pledged. Loans to borrowers that do not have the capacity to service their loans generally will be classified substandard. When repayment capacity is insufficient to support the orderly liquidation of the debt, and the collateral pledged is insufficient to mitigate risk of loss, then a more severe classification and nonaccrual is warranted. Subprime loans that are past due 90 days or more should be classified at least substandard based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay. A more stringent classification approach may be appropriate based on the historical loss experience of a particular institution. Classification of other subprime loans as doubtful or loss will be based on examiners' analysis of the borrower's capacity to repay, and on the quality of institution underwriting and account-management practices as evidenced in the loan file or by other documentation.

In some cases, the repayment of principal, interest, and fees on some subprime loans may be overly dependent on collateral pledged. This occurs when the risk of default is so high that an abundance of collateral is taken to mitigate risk of loss in the event of default. From a safety-and-soundness perspective, institutions should be discouraged from lending solely on the basis of collateral pledged. Such loans will generally be classified substandard. Further, when the borrower does not demonstrate the capacity to service the loan from sources other than collateral pledged, the loan may be placed on nonaccrual.

2128.08.1.4.2 Portfolios

When the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality, examiners should consider classifying or criticizing the entire portfolio or segments of the portfolio. Such a decision may be appropriate in cases where risk is inordinately high or delinquency reports reflect performance problems. Some subprime-lending portfolios may pose very high risk. These may include portfolios of unsecured loans or secured, high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame. Most such portfolios should be classified at least substandard.

2128.08.1.5 Required Documentation for Cure Programs

Cure programs, including such practices as re-aging, extensions, renewals, rewrites, or other types of account restructuring, are subject to the standards outlined in the retail classification policy. In accordance with that policy, cure programs should be used only when the institution has substantiated the customer's renewed willingness and ability to repay. Examiners will expect institutions to maintain documentation supporting their analysis of the customer's renewed ability and willingness to repay the loan at the time it is extended, renewed, or deferred. When the institution cannot demonstrate both the willingness and ability of the customer to repay, the loan should not be renewed, extended, deferred, or rewritten, and the loan should be moved back to its pre-cure delinquency status. Documentation should include one or more of the following:

1. a new verification of employment
2. a recomputed debt-to-income ratio indicating sufficient improvement in the borrower's financial condition to support orderly repayment
3. a refreshed credit score or updated bureau report
4. a file memo evidencing discussion with the customer

When documentation of the customer's renewed willingness and ability to repay the loan is absent or deficient, management practices should be criticized.

2128.08.1.6 Predatory or Abusive Lending Practices

The term ''subprime'' is often misused to refer to certain predatory or abusive lending practices. Lending practices can be designed to responsibly provide service to customers and enhance credit access for borrowers with special credit needs. Subprime lending that is appropriately underwritten, priced, and administered can serve these goals.

Some forms of subprime lending may be abusive or predatory, however. Lending practices may be designed to transfer wealth from the borrower to the lender or loan originator without a commensurate exchange of value. This is sometimes accomplished when the lender structures a loan to a borrower who has little or no ability to repay the loan from sources other than the collateral pledged. When default occurs, the lender forecloses or otherwise takes possession of the borrower's property (generally the borrower's home or automobile). In other cases, the lender may use the threat of foreclosure or repossession to induce duress on the borrower for payment. Typically, predatory lending involves at least one, and perhaps all three, of the following elements:

1. making unaffordable loans based on the assets of the borrower rather than on the borrower's ability to repay an obligation
2. inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced (that is, ''loan flipping'')
3. engaging in fraud or deception to conceal the true nature of the loan obligation or ancillary products from an unsuspecting or unsophisticated borrower

Loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Such lending practices should be criticized in the examination report as imprudent. Further, examiners should refer any loans with the aforementioned characteristics to Federal Reserve consumer compliance/fair lending specialists for additional review.

2128.08.1.7 Capitalization

The Federal Reserve's minimum capital requirements generally apply to portfolios that exhibit substantially lower risk profiles than those that exist in subprime-loan programs. Therefore, these requirements may not be sufficient to reflect the risks associated with subprime portfolios.

Subprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. Each subprime lender is responsible for quantifying the amount of capital needed to offset the additional risk in subprime-lending activities and for fully documenting the methodology and analysis supporting the amount specified.

The amount of additional capital necessary will vary according to the volume and type of subprime activities conducted and the adequacy of the institution's risk-management program. An institution's overall capital adequacy will be evaluated on a case-by-case basis through on-site examinations and off-site monitoring procedures, considering, among other factors, the institution's own documented analysis of the capital needed to support subprime lending. Institutions that are determined to have insufficient capital must correct the deficiency within a reasonable time frame or be subject to supervisory action. In light of the higher risks associated with this type of lending, higher minimum-capital requirements may be imposed on institutions engaging in subprime lending.

The sophistication of this analysis should be commensurate with the size, concentration level, and relative risk of the institution's subprime-lending activities and should consider the following elements:

1. portfolio-growth rates
2. trends in the level and volatility of expected losses
3. the level of subprime-loan losses incurred over one or more economic downturns, if such data or analyses are available
4. the impact of planned underwriting or marketing changes on the credit characteristics of the portfolio, including the relative levels of risk of default, loss in the event of default, and the level of classified assets
5. any deterioration in the average credit quality over time due to adverse selection or retention
6. the amount, quality, and liquidity of collateral securing the individual loans
7. any asset, income, or funding-source concentrations
8. the degree of concentration of subprime credits
9. the extent to which current capitalization consists of residual assets or other potentially volatile components
10. the degree of legal or reputation risk associated with the subprime business lines pursued
11. the amount of capital necessary to support the institution's other risks and activities

Given the higher risk inherent in subprime-lending programs, examiners should reasonably expect, as a starting point, that an institution would hold capital against such portfolios in an amount that *is one and one-half to three times greater* than what is appropriate for nonsubprime assets of a similar type. Refinements should depend on the factors analyzed above, with particular emphasis on the trends in the level and volatility of loss rates, and on the amount, quality, and liquidity of collateral securing the loans. Institutions should have capital ratios that are well above the averages for their traditional peer groups or other similarly situated institutions that are not engaged in subprime lending.

Some subprime asset pools warrant increased supervisory scrutiny and monitoring, but not necessarily additional capital. For example, well-secured loans to borrowers who are slightly below what is considered prime quality may entail minimal additional risks compared with prime loans, and they may not require additional capital if adequate controls are in place to address the additional risks. On the other hand, institutions that underwrite higher-risk subprime pools, such as unsecured loans or high loan-to-value second mortgages, may need significantly higher levels of capital, perhaps as high as 100 percent of the loans outstanding, depending on the level and volatility of risk.

2128.08.1.7.1 Stress Testing

An institution's capital adequacy analysis should include stress testing as a tool for estimating unexpected losses in its subprime-lending pools. Institutions should project the performance of their subprime-loan pools under conservative stress-test scenarios, including an estimation of the portfolio's susceptibility to deteriorating economic, market, and business conditions. Portfolio stress testing should include "shock" testing of basic assumptions, such as delinquency rates, loss rates, and recovery rates on collateral. Stress tests should also consider other potentially adverse scenarios, such as changing attrition or prepayment rates; changing utilization rates for revolving products; changes in credit score distribution; and changes in the capital-market demand for whole loans or asset-backed securities supported by subprime loans. These are representative examples; actual factors will vary by product, market segment, and the size and complexity of the portfolio relative to the institution's overall operations. Whether stress tests are performed manually, or through automated modeling techniques, it is expected that—

1. the process is clearly documented, rational, and easily understood by the institution's board and senior management;
2. the inputs are reliable and relate directly to the subject portfolios (for example, baseline loss history or default probabilities should reflect each segment of the institution's portfolio and not just a blend of prime and subprime borrowers);
3. assumptions are well documented and conservative; and
4. any models are subject to a comprehensive validation process.

The results of the stress-test exercises should be a documented factor in the analysis and determination of capital adequacy for the subprime portfolios.

Institutions that engage in subprime-lending programs without adequate procedures to estimate and document the level of capital necessary to support their activities should be criticized. Where capital is deemed inadequate to support the risk in subprime-lending activities, examiners should consult with their Reserve Bank supervisory official to determine the appropriate course of action. Such actions may include requiring additional capital in accordance with the Federal Reserve's capital adequacy rules or requiring the institution to submit an acceptable capital plan in accordance with safety-and-soundness guidelines.

2128.08.1.8 Subprime-Lending Examiner Responsibilities

Using the interagency guidance and any supplemental Federal Reserve guidelines, examiners should assess carefully management's ability to administer the higher risk in subprime portfolios. The examiner should judge management's ability to manage the risk involved in the subprime-lending program, in particular, the quality of the risk-management and control processes in place, and more importantly, the extent to which management is adhering to those processes. When examiners determine that risk-management practices are deficient, they should criticize management and initiate corrective action. Such actions may include formal or informal enforcement actions or a plan to achieve adequate capitalization. When a primary supervisor determines that an institution's risk-management practices are materially deficient, the primary supervisor may instruct the institution to discontinue its subprime-lending programs.

2128.08.1.9 Appendix—Questions and Answers for Examiners Regarding the Expanded Guidance for Subprime-Lending Programs

To assist examiners who review subprime-lending activities, the following questions and answers were developed to provide additional guidance on the expanded interagency guidance that was issued on January 31, 2001.

2128.08.1.9.1 Applicability of the Guidance

Question 1: Does the guidance apply to all institutions?

No. The guidance will not affect the vast majority of insured institutions engaged in traditional consumer lending. The guidance applies to institutions that systematically target the subprime market through programs that employ tailored marketing, underwriting standards, and risk selection.

The guidance does not address traditional consumer lending that has historically been the mainstay of community banking. It does not apply to institutions extending credit to subprime borrowers as part of their standard community-lending process, or making loans to subprime borrowers as an occasional exception to a prime-lending program, even if the aggregate of these loans totals more than 25 percent of tier 1 capital. Such institutions continue to be subject to the normal supervisory process.

Institutions engaging in subprime-lending programs generally have knowingly and purposefully focused on the subprime-lending markets through planned business strategies, tailored products, and explicit borrower targeting. In instances where significant exposures to subprime borrowers are identified, examiners should consider the institution's marketing program, loan products, pricing, underwriting standards and practices, and portfolio performance to determine if the institution has a program that warrants the supervision and safeguards outlined in the guidance.

Question 2: Does the guidance apply when an institution offers a product that attracts a disproportionate number of subprime borrowers, but which the institution does not explicitly identify as subprime?

A subprime program commonly features products specifically tailored to borrowers with weakened credit histories. Such products often differ substantially in pricing and terms from products offered to prime borrowers, and they usually have separate and distinctly different underwriting standards. An institution offering a product that attracts a disproportionate number of borrowers with weakened credit histories likely has a subprime program whether or not the activity is called a subprime program. The guidance will apply to these programs when the resultant aggregate credit exposure is at least 25 percent of the institution's tier 1 capital.

Institutions with significant programs are expected to have the necessary risk-management and internal-control systems in place to properly identify, measure, monitor, and control the inherent risks in their subprime portfolios. Risk management and controls for these programs typically involve enhanced performance monitoring, intensive collection activities, and other loss-mitigation strategies. If an institution systematically targets the subprime market but does not segregate these loans from its prime portfolio, it is doubtful that the institution has the necessary risk-management and control systems in place to safely engage in the activity.

2128.08.1.9.2 Subprime Characteristics

Question 3: Why does the Expanded Guidance for Subprime Lending Programs use a credit bureau risk score (FICO) of 660 as a cutoff point for subprime lending?

The guidance does not use credit scores, or any other single risk factor, as a definitive cutoff point for subprime lending. The characteristics listed are not explicit, bright-line definitions. The range of credit characteristics used to describe subprime borrowers is intended to help examiners identify lenders that are engaged in subprime-lending programs. These characteristics describe borrowers with varying, but significantly higher, probabilities of default than prime borrowers. The guidance states that "this list is illustrative rather than exhaustive and is not meant to define specific parameters for all borrowers."

A credit bureau score of 660 (FICO) is used only as an example to illustrate a credit score that generally indicates a higher default probability. The guidance indicates the probability of default, as evidenced by the credit score, will vary by product and collateral. The subprime guidance lists several characteristics that denote a higher probability of default. Examiners are directed to use these characteristics as a starting point to expand their review of lending programs targeting subprime borrowers in accordance with risk-focused examination procedures. The severity of risk may vary significantly for the different characteristics listed, as well as for the type and quality of collateral. Examiners should take this into consideration when reviewing the portfolio and determining the adequacy of loan-loss reserves and capital.

The characteristics used in the guidance are well recognized in the investment and lending industries. A number of public debt rating agencies and financial institutions, including the government-sponsored enterprises (GSEs), use similar credit characteristics to differentiate risk among borrowers. Specific examples include the following:

1. Fitch defines a subprime borrower as "...one with a credit profile worse than that of a prime A quality borrower, whose credit report would typically reveal no recent mortgage delinquencies and whose credit profile would yield a credit score in the range above 680." Fitch's mortgage credit grade matrix lists the following credit-history elements for A- the highest subprime grade: one 30-day delinquency in the last 12 months on a mortgage debt; one 30-day delinquency in the last 24 months on installment debt, or two 30-day delinquencies in the last 24 months on revolving debt; bankruptcy in past five years; chargeoff or judgments exceeding $500 in the past 24 months; and/or a debt-to-income ratio of 45 percent.[10]
2. Standard & Poor's subprime-mortgage underwriting guidelines define subprime A- characteristics as two or more 30-day delinquencies on mortgage and consumer credit, one 60-day delinquency on consumer credit, debt-to-income ratio of 45 percent, and no bankruptcy in the past five years. Standard & Poor's also "...considers subprime borrowers to have a FICO credit score of 659 or below."[11]
3. Standard & Poor's has classified nonprime B auto securitization pools as having occasional delinquencies and minor charge-offs on revolving debt, static pool net losses of 3.1 percent to 7.5 percent, and FICO credit scores ranging from 620–679.[12]
4. Freddie Mac has used the FICO score of 660 or below to designate higher-risk borrowers requiring more comprehensive review. Freddie Mac views a score in the 620–660 range as an indication that the "borrower's willingness to repay debt as agreed is uncertain." FICO scores below 620 are placed in the "cautious-review category," and Freddie Mac considers scores below 620 "as a strong indication that the borrower's credit reputation is not acceptable..."[13]

2128.08.1.9.3 Capital Guidance

Question 4: If an institution is engaged in subprime lending as described by the guidance, does the 1.5-to-3-times capital described in the guidance automatically apply?

No. The expanded interagency guidance on subprime lending is flexible examination guidance; the capital range does not automatically apply because the guidance is not a capital rule or regulation. Rather, the guidance describes an expectation that subprime lenders hold sufficient loan-loss reserves and capital to offset the additional risks that may exist in subprime activities. The agencies expect institutions to have methodologies and analyses in place to support and document the level of reserves and capital needed for the additional risks assumed. The higher the risk, the more reserves and capital needed to support the activity. Institutions with lower-risk subprime portfolios may not need additional reserves and capital. In addition, examiners are reminded that subprime lending is only one element in the evaluation of the institution's overall capital adequacy. If the analysis shows that the institution has adequate capital for all its assets and activities, including subprime lending, there is no additional capital requirement arising from the guidance.

Examiners are instructed not to unilaterally require additional reserves and capital based on the guidance. Any determination made by an examiner that an institution's reserves or capital are deficient will be discussed with the institu-

tion's management and with each agency's appropriate supervisory office before a final decision is made.

Question 5: Are the regulatory expectations for higher capital levels consistent with capital levels supporting subprime assets outside the insured banking industry?

Yes. The regulatory expectations of higher capital maintenance are consistent with expectations in the capital markets. The 1.5-to-3-times-capital multiple is risk based, for example, the level of additional capital varies by relative loan quality and is applied only to the subprime portfolio, not the institution's entire asset structure. This is consistent with the financial marketplace's assessment of relative risk in subprime assets outside the banking industry. For example, the amount of credit enhancement required for subprime securitization structures varies according to the level and volatility of perceived credit risk in the underlying assets. In addition, publicly traded subprime-finance companies (that are not currently suffering from adverse ratings) maintain equity-capital-to-managed-asset ratios that are 1.5 to as much as 6 times (depending on loan type and relative quality) those of finance companies that do not specialize in subprime loans.

2128.08.2 INSPECTION OBJECTIVES

1. To assess and evaluate the extent of subprime-lending activities; whether management has adequately planned for these activities; and whether management has developed and maintains board-approved policies and procedures, systems, and internal controls that identify, measure, monitor, and control the additional risks in a manner that is commensurate with the risks associated with the subprime-lending program.
2. To conduct portfolio-level reviews and transaction-level testing of the subprime-lending activities, assessing the quality and performance of the subprime-loan portfolios and subprime-lending program, including its profitability, delinquency, and potential and actual loss experience.
3. To assess the adequacy of the ALLL for the subprime-loan portfolio.

2128.08.3 INSPECTION PROCEDURES

1. Determine whether the subprime-lending activities are consistent with the bank holding company's overall business strategy and risk tolerances, and that critical business risks have been identified and considered.
2. Assess whether the bank holding company has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely, without any undue concentrations of credit.
3. Ascertain if management has committed the necessary resources, including, in particular, technology and skilled personnel, to manage and control the risks associated with the volume and complexity of the bank holding company's subprime-lending programs.
4. Determine whether the bank holding company's contingency plans (including those of its banking and nonbanking subsidiaries) are adequate to address alternative funding sources, including back-up purchasers of any subprime loan–backed securities issued by the bank holding company or of the attendant servicing functions, and methods of raising additional capital during an economic downturn or when financial markets become volatile.
5. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the bank holding company's operations, including those of its subsidiaries, and if management is maintaining proper controls over the program. (See in section 2128.08.1.1 for the lending standards that should be included in the subprime-loan program.)
6. Incorporate the results of the loan-administration portfolio-level and transaction-level testing reviews into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.
7. Review securitization transactions for compliance with FAS 140 and this guidance, including whether the bank holding company and its subsidiaries have provided any support to maintain the credit quality of loan pools they have securitized.
8. Evaluate the ALLL and regulatory capital allocated to support subprime-lending programs, including whether the total protection for subprime-asset programs and the levels for each component are adequate.
9. Ascertain that a sound risk-management program exists that includes the ability of

management to determine and quantify appropriate levels for each component of the program.

10. Evaluate the bank holding company's documented analysis of the capital needed to support its subprime-lending activities. Ascertain whether the capital levels are risk sensitive, that is, does allocated capital reflect the level and variability of loss estimates within reasonably conservative parameters? Determine if there is a direct link between the expected loss rates used to determine the required ALLL and the unexpected loss estimates used to determine capital. Document and reference the bank holding company's overall subprime capital evaluation in the inspection comments and conclusions regarding capital adequacy.
11. Analyze the performance of the subprime-lending program, including its profitability, delinquency, and loss experience.
12. Consider management's response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.
13. Determine if the bank holding company's subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.
14. Classify loans of the parent bank holding company and its nonbank subsidiaries according to the following criteria:
    a. Classify as substandard loans to borrowers that do not have the capacity to service their loans.
    b. Classify as at least substandard subprime loans that are 90 days or more past due based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay.
    c. Consider classifying or criticizing the entire portfolio or segments of the portfolio when the portfolio review or loan sample indicates serious concerns with credit-risk-selection practices, underwriting standards, or loan quality.
    d. Classify as substandard high-risk unsecured loan portfolios or secured high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame.
15. Report as unsafe and unsound imprudent loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the pledged collateral.
16. Carefully assess the ability of the parent bank holding company's board of directors and management to oversee and administer the higher risk in subprime portfolios, including those of its nonbank subsidiaries. If risk-management practices are deficient, criticize management and reach specific agreements with the board of directors and senior management to initiate corrective action.

When a financial institution participates in a complex structured finance transaction (CSFT), it bears the usual market, credit, and operational risks associated with the transaction.[1] In some circumstances, a financial institution may also face heightened legal or reputational risks due to its involvement in a CSFT. For example, a financial institution may face heightened legal or reputational risks if a customer's regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer's public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles.

The agencies have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities.[2] Financial institutions must also conduct their activities in accordance with applicable statutes and regulations. Therefore, financial institutions engaged in CSFTs are expected to have policies and procedures that are designed to allow the institution to effectively manage and address the full range of risks associated with its CSFT activities, including the elevated legal or reputational risks that may arise in connection with certain CSFTs. The agencies continue to believe that this is important.

This section sets forth the Interagency Statement on Sound Practices Concerning Elevated-Risk Complex Structured Finance Activities, issued January 11, 2007. The supervisory guidance addresses risk-management principles that should assist institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in CSFTs. The guidance is focused on those CSFTs that may present heightened levels of legal or reputational risk to the institution and are defined as "elevated-risk CSFTs." Such transactions are typically conducted by a limited number of large financial institutions.[3] (See SR-07-05 and 72 *Fed. Reg.* 1,372, January 11, 2007.)

2128.09.1 INTERAGENCY STATEMENT ON SOUND PRACTICES CONCERNING ELEVATED-RISK COMPLEX STRUCTURED FINANCE ACTIVITIES

Financial markets have grown rapidly over the past decade, and innovations in financial instruments have facilitated the structuring of cash flows and allocation of risk among creditors, borrowers, and investors in more efficient ways.

Financial derivatives for market and credit risk, asset-backed securities with customized cash-flow features, specialized financial conduits that manage pools of assets, and other types of structured finance transactions serve important business purposes, such as diversifying risks, allocating cash flows, and reducing cost of capital. As a result, structured finance transactions have become an essential part of U.S. and international capital markets. Financial institutions have played and continue to play an active and important role in the development of structured finance products and markets, including the market for the more complex variations of structured finance products.

When a financial institution participates in a complex structured finance transaction (CSFT), it bears the usual market, credit, and operational risks associated with the transaction. In some circumstances, a financial institution may also face heightened legal or reputational risks due to its involvement in a CSFT. For example, in some circumstances, a financial institution may face heightened legal or reputational risk if a customer's regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer's public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles. Indeed, in some instances, CSFTs have been used to misrepresent a customer's financial condition to investors, regulatory authorities, and others. In these situations, investors have been harmed and financial institutions

1. The term *financial institutions* is not limited to federally insured depository institutions. It refers broadly to bank holding companies (other than foreign banks), national banks, state banks, federal and state savings associations, savings and loan holding companies, U.S. branches and agencies of foreign banks, and SEC-registered broker-dealers and investment advisors.

2. The agencies are the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), the Office of Thrift Supervision (OTS), and the Securities and Exchange Commission (SEC).

3. The statement will not affect or apply to the vast majority of financial institutions, including most small institutions.

have incurred significant legal and reputational exposure. In addition to legal risk, reputational risk poses a significant threat to financial institutions because the nature of their business requires them to maintain the confidence of customers, creditors, and the general marketplace.

The agencies have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities. Financial institutions must also conduct their activities in accordance with applicable statutes and regulations.

2128.09.2 SCOPE AND PURPOSE OF STATEMENT

This statement was issued to describe the types of risk-management principles that the agencies believe may help a financial institution to identify CSFTs that may pose heightened legal or reputational risks to the institution and to evaluate, manage, and address these risks within the institution's internal control framework.[4]

Structured finance transactions encompass a broad array of products with varying levels of complexity. Most structured finance transactions, such as standard public mortgage-backed securities transactions, public securitizations of retail credit cards, asset-backed commercial paper conduit transactions, and hedging-type transactions involving "plain vanilla" derivatives and collateralized loan obligations, are familiar to participants in the financial markets, and these vehicles have a well-established track record. These transactions typically would not be considered CSFTs for the purpose of this statement.

Because this statement focuses on sound practices related to CSFTs that may create heightened legal or reputational risks—transactions that typically are conducted by a limited number of large financial institutions—it will not affect or apply to the vast majority of financial institutions, including most small institutions. As in all cases, a financial institution should tailor its internal controls so that they are appropriate in light of the nature, scope, complexity, and risks of its activities. Thus, for example, an institution that is actively involved in structuring and offering CSFTs that may create heightened legal or reputational risk for the institution should have a more formalized and detailed control framework than an institution that participates in these types of transactions less frequently. The internal controls and procedures discussed in this statement are not all inclusive, and, in appropriate circumstances, an institution may find that other controls, policies, or procedures are appropriate in light of its particular CSFT activities.

Because many of the core elements of an effective control infrastructure are the same regardless of the business line involved, this statement draws heavily on controls and procedures that the agencies previously have found to be effective in assisting a financial institution to manage and control risks and identifies ways in which these controls and procedures can be effectively applied to elevated-risk CSFTs. Although this statement highlights some of the most significant risks associated with elevated-risk CSFTs, it is not intended to present a full exposition of all risks associated with these transactions. Financial institutions are encouraged to refer to other supervisory guidance prepared by the agencies for further information concerning market, credit, operational, legal, and reputational risks, as well as internal audit and other appropriate internal controls.

This statement does not create any private rights of action and does not alter or expand the legal duties and obligations that a financial institution may have to a customer, its shareholders, or other third parties under applicable law. At the same time, adherence to the principles discussed in this statement would not necessarily insulate a financial institution from regulatory action or any liability the institution may have to third parties under applicable law.

2128.09.3 IDENTIFICATION AND REVIEW OF ELEVATED-RISK COMPLEX STRUCTURED FINANCE TRANSACTIONS

A financial institution that engages in CSFTs should maintain a set of formal, written, firmwide policies and procedures that are designed to allow the institution to identify, evaluate,

4. As used in this statement, the term *financial institution* or *institution* refers to state member banks and bank holding companies (other than foreign banking organizations) in the case of the FRB, national banks in the case of the OCC, federal and state savings associations and savings and loan holding companies in the case of the OTS, state nonmember banks in the case of the FDIC, and registered broker-dealers and investment advisors in the case of the SEC. The U.S. branches and agencies of foreign banks supervised by the FRB, the OCC, and the FDIC also are considered to be financial institutions for purposes of this statement.

assess, document, and control the full range of credit, market, operational, legal, and reputational risks associated with these transactions. These policies may be developed specifically for CSFTs or included in the set of broader policies governing the institution generally. A financial institution operating in foreign jurisdictions may tailor its policies and procedures as appropriate to account for, and comply with, the applicable laws, regulations, and standards of those jurisdictions.[5]

Financial institution's policies and procedures should establish a clear framework for the review and approval of individual CSFTs. These policies and procedures should set forth the responsibilities of the personnel involved in the origination, structuring, trading, review, approval, documentation, verification, and execution of CSFTs. Financial institutions may find it helpful to incorporate the review of new CSFTs into their existing new product policies. In this regard, a financial institution should define what constitutes a "new" complex structured finance product and establish a control process for the approval of such new products. In determining whether a CSFT is new, a financial institution may consider a variety of factors, including whether it contains structural or pricing variations from existing products; whether the product is targeted at a new class of customers; whether it is designed to address a new need of customers; whether it raises significant new legal, compliance, or regulatory issues; and whether it or the manner in which it would be offered would materially deviate from standard market practices. An institution's policies should require new complex structured finance products to receive the approval of all relevant control areas that are independent of the profit center before the product is offered to customers.

2128.09.3.1 Identifying Elevated-Risk CSFTs

As part of its transaction and new product approval controls, a financial institution should establish and maintain policies, procedures, and systems to identify elevated-risk CSFTs. Because of the potential risks they present to the institution, transactions or new products identified as elevated-risk CSFTs should be subject to heightened reviews during the institution's transaction or new product approval processes. Examples of transactions that an institution may determine warrant this additional scrutiny are those that (either individually or collectively) appear to the institution during the ordinary course of its transaction approval or new product approval process to—

1. lack economic substance or business purpose;
2. be designed or used primarily for questionable accounting, regulatory, or tax objectives, particularly when the transactions are executed at year end or at the end of a reporting period for the customer;
3. raise concerns that the client will report or disclose the transaction in its public filings or financial statements in a manner that is materially misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements;
4. involve circular transfers of risk (either between the financial institution and the customer or between the customer and other related parties) that lack economic substance or business purpose;
5. involve oral or undocumented agreements that, when taken into account, would have a material impact on the regulatory, tax, or accounting treatment of the related transaction, or the client's disclosure obligations;[6]
6. have material economic terms that are inconsistent with market norms (for example, deep "in the money" options or historic rate rollovers); or
7. provide the financial institution with compensation that appears substantially disproportionate to the services provided or investment made by the financial institution or to the credit, market, or operational risk assumed by the institution.

The examples listed previously are provided for illustrative purposes only, and the policies and procedures established by financial institu-

5. In the case of U.S. branches and agencies of foreign banks, these policies, including management, review, and approval requirements, should be coordinated with the foreign bank's group-wide policies developed in accordance with the rules of the foreign bank's home country supervisor and should be consistent with the foreign bank's overall corporate and management structure as well as its framework for risk management and internal controls.

6. This item is not intended to include traditional, nonbinding "comfort" letters or assurances provided to financial institutions in the loan process where, for example, the parent of a loan customer states that the customer (that is, the parent's subsidiary) is an integral and important part of the parent's operations.

tions may differ in how they seek to identify elevated-risk CSFTs. The goal of each institution's policies and procedures, however, should remain the same: to identify those CSFTs that warrant additional scrutiny in the transaction or new product approval process due to concerns regarding legal or reputational risks.

Financial institutions that structure or market, act as an advisor to a customer regarding, or otherwise play a substantial role in a transaction may have more information concerning the customer's business purpose for the transaction and any special accounting, tax, or financial disclosure issues raised by the transaction than institutions that play a more limited role. Thus, the ability of a financial institution to identify the risks associated with an elevated-risk CSFT may differ depending on its role.

2128.09.3.2 Due-Diligence, Approval, and Documentation Process for Elevated-Risk CSFTs

Having developed a process to identify elevated-risk CSFTs, a financial institution should implement policies and procedures to conduct a heightened level of due diligence for these transactions. The financial institution should design these policies and procedures to allow personnel at an appropriate level to understand and evaluate the potential legal or reputational risks presented by the transaction to the institution and to manage and address any heightened legal or reputational risks ultimately found to exist with the transaction.

2128.09.3.2.1 Due Diligence

If a CSFT is identified as an elevated-risk CSFT, the institution should carefully evaluate and take appropriate steps to address the risks presented by the transaction with a particular focus on those issues identified as potentially creating heightened levels of legal or reputational risk for the institution. In general, a financial institution should conduct the level and amount of due diligence for an elevated-risk CSFT that is commensurate with the level of risks identified. A financial institution that structures or markets an elevated-risk CSFT to a customer, or that acts as an advisor to a customer or investors concerning an elevated-risk CSFT, may have additional responsibilities under the federal securities laws, the Internal Revenue Code, state fiduciary laws or other laws or regulations and, thus, may have greater legal and reputational risk exposure with respect to an elevated-risk CSFT than a financial institution that acts only as a counterparty for the transaction. Accordingly, a financial institution may need to exercise a higher degree of care in conducting its due diligence when the institution structures or markets an elevated-risk CSFT or acts as an advisor concerning such a transaction than when the institution plays a more limited role in the transaction.

To appropriately understand and evaluate the potential legal and reputational risks associated with an elevated-risk CSFT that a financial institution has identified, the institution may find it useful or necessary to obtain additional information from the customer or to obtain specialized advice from qualified in-house or outside accounting, tax, legal, or other professionals. As with any transaction, an institution should obtain satisfactory responses to its material questions and concerns prior to consummation of a transaction.[7]

In conducting its due diligence for an elevated-risk CSFT, a financial institution should independently analyze the potential risks to the institution from both the transaction and the institution's overall relationship with the customer. Institutions should not conclude that a transaction identified as being an elevated-risk CSFT involves minimal or manageable risks solely because another financial institution will participate in the transaction or because of the size or sophistication of the customer or counterparty. Moreover, a financial institution should carefully consider whether it would be appropriate to rely on opinions or analyses prepared by or for the customer concerning any significant accounting, tax, or legal issues associated with an elevated-risk CSFT.

2128.09.3.2.2 Approval Process

A financial institution's policies and procedures should provide that CSFTs identified as having elevated legal or reputational risk are reviewed and approved by appropriate levels of control and management personnel. The designated approval process for such CSFTs should include representatives from the relevant business line(s) and/or client management, as well as from appropriate control areas that are indepen-

7. Of course, financial institutions also should ensure that their own accounting for transactions complies with applicable accounting standards, consistently applied.

dent of the business line(s) involved in the transaction. The personnel responsible for approving an elevated-risk CSFT on behalf of a financial institution should have sufficient experience, training, and stature within the organization to evaluate the legal and reputational risks, as well as the credit, market, and operational risks to the institution.

The institution's control framework should have procedures to deliver the necessary or appropriate information to the personnel responsible for reviewing or approving an elevated-risk CSFT to allow them to properly perform their duties. Such information may include, for example, the material terms of the transaction, a summary of the institution's relationship with the customer, and a discussion of the significant legal, reputational, credit, market, and operational risks presented by the transaction.

Some institutions have established a senior management committee that is designed to involve experienced business executives and senior representatives from all of the relevant control functions within the financial institution (including such groups as independent risk management, tax, accounting, policy, legal, compliance, and financial control) in the oversight and approval of those elevated-risk CSFTs that are identified by the institution's personnel as requiring senior management review and approval due to the potential risks associated with the transactions. While this type of management committee may not be appropriate for all financial institutions, a financial institution should establish processes that assist the institution in consistently managing the review and approval of elevated-risk CSFTs on a firmwide basis.[8]

If, after evaluating an elevated-risk CSFT, the financial institution determines that its participation in the CSFT would create significant legal or reputational risks for the institution, the institution should take appropriate steps to address those risks. Such actions may include declining to participate in the transaction or conditioning its participation upon the receipt of representations or assurances from the customer that reasonably address the heightened legal or reputational risks presented by the transaction. Any representations or assurances provided by a customer should be obtained before a transaction is executed and be received from, or approved by, an appropriate level of the customer's management. A financial institution should decline to participate in an elevated-risk CSFT if, after conducting appropriate due diligence and taking appropriate steps to address the risks from the transaction, the institution determines that the transaction presents unacceptable risk to the institution or would result in a violation of applicable laws, regulations, or accounting principles.

8. The control processes that a financial institution establishes for CSFTs should take account of, and be consistent with, any informational barriers established by the institution to manage potential conflicts of interest, insider trading, or other concerns.

2128.09.3.2.3 Documentation

The documentation that financial institutions use to support CSFTs is often highly customized for individual transactions and negotiated with the customer. Careful generation, collection, and retention of documents associated with elevated-risk CSFTs are important control mechanisms that may help an institution monitor and manage the legal, reputational, operational, market, and credit risks associated with the transactions. In addition, sound documentation practices may help reduce unwarranted exposure to the financial institution's reputation.

A financial institution should create and collect sufficient documentation to allow the institution to—

1. Document the material terms of the transaction,
2. Enforce the material obligations of the counterparties,
3. Confirm that the institution has provided the customer any disclosures concerning the transaction that the institution is otherwise required to provide, and
4. Verify that the institution's policies and procedures are being followed and allow the internal audit function to monitor compliance with those policies and procedures.

When an institution's policies and procedures require an elevated-risk CSFT to be submitted for approval to senior management, the institution should maintain the transaction-related documentation provided to senior management as well as other documentation, such as minutes of the relevant senior management committee, that reflect senior management's approval (or disapproval) of the transaction, any conditions imposed by senior management, and the factors considered in taking such action. The institution should retain documents created for elevated-risk CSFTs in accordance with its record retention policies and procedures as well as applicable statutes and regulations.

2128.09.3.3 Other Risk-Management Principles for Elevated-Risk CSFTs

2128.09.3.3.1 General Business Ethics

The board and senior management of a financial institution also should establish a "tone at the top" through both actions and formalized policies that sends a strong message throughout the financial institution about the importance of compliance with the law and overall good business ethics. The board and senior management should strive to create a firm-wide corporate culture that is sensitive to ethical or legal issues as well as the potential risks to the financial institution that may arise from unethical or illegal behavior. This kind of culture coupled with appropriate procedures should reinforce business-line ownership of risk identification, and encourage personnel to move ethical or legal concerns regarding elevated-risk CSFTs to appropriate levels of management. In appropriate circumstances, financial institutions may also need to consider implementing mechanisms to protect personnel by permitting the confidential disclosure of concerns.[9] As in other areas of financial institution management, compensation and incentive plans should be structured, in the context of elevated-risk CSFTs, so that they provide personnel with appropriate incentives to have due regard for the legal, ethical, and reputational risk interests of the institution.

2128.09.3.3.2 Reporting

A financial institution's policies and procedures should provide for the appropriate levels of management and the board of directors to receive sufficient information and reports concerning the institution's elevated-risk CSFTs to perform their oversight functions.

9. The agencies note that the Sarbanes-Oxley Act of 2002 requires companies listed on a national securities exchange or inter-dealer quotation system of a national securities association to establish procedures that enable employees to submit concerns regarding questionable accounting or auditing matters on a confidential, anonymous basis. (See 15 U.S.C. 78j-1(m).)

2128.09.3.3.3 Monitoring Compliance with Internal Policies and Procedures

The events of recent years evidence the need for an effective oversight and review program for elevated-risk CSFTs. A financial institution's program should provide for periodic independent reviews of its CSFT activities to verify and monitor that its policies and controls relating to elevated-risk CSFTs are being implemented effectively and that elevated-risk CSFTs are accurately identified and received proper approvals. These independent reviews should be performed by appropriately qualified audit, compliance, or other personnel in a manner consistent with the institution's overall framework for compliance monitoring, which should include consideration of issues such as the independence of reviewing personnel from the business line. Such monitoring may include more frequent assessments of the risk arising from elevated-risk CSFTs, both individually and within the context of the overall customer relationship, and the results of this monitoring should be provided to an appropriate level of management in the financial institution.

2128.09.3.3.4 Audit

The internal audit department of any financial institution is integral to its defense against fraud, unauthorized risk taking, and damage to the financial institution's reputation. The internal audit department of a financial institution should regularly audit the financial institution's adherence to its own control procedures relating to elevated-risk CSFTs, and further assess the adequacy of its policies and procedures related to elevated-risk CSFTs. Internal audit should periodically validate that business lines and individual employees are complying with the financial institution's standards for elevated-risk CSFTs and appropriately identifying any exceptions. This validation should include transaction testing for elevated-risk CSFTs.

2128.09.3.3.5 Training

An institution should identify relevant personnel who may need specialized training regarding CSFTs to be able to effectively perform their oversight and review responsibilities. Appropriate training on the financial institution's policies and procedures for handling elevated-risk CSFTs is critical. Financial institution personnel involved in CSFTs should be familiar with the institution's policies and procedures concerning elevated-risk CSFTs, including the processes established by the institution for identification and approval of elevated-risk CSFTs and new complex structured finance products and for the elevation of concerns regarding transactions or products to appropriate levels of management. Financial institution personnel involved in CSFTs should be trained to identify and properly handle elevated-risk CSFTs that may result in a violation of law.

2128.09.4 CONCLUSION

Structured finance products have become an essential and important part of the U.S. and international capital markets, and financial institutions have played an important role in the development of structured finance markets. In some instances, however, CSFTs have been used to misrepresent a customer's financial condition to investors and others, and financial institutions involved in these transactions have sustained significant legal and reputational harm. In light of the potential legal and reputational risks associated with CSFTs, a financial institution should have effective risk-management and internal control systems that are designed to allow the institution to identify elevated-risk CSFTs; to evaluate, manage, and address the risks arising from such transactions; and to conduct those activities in compliance with applicable law.

Banking organizations must establish and maintain sound risk-management policies and procedures and effective internal controls over their use of credit derivatives. Credit derivatives are off-balance-sheet financial instruments that are used to assume or lay off credit risk on loans and other assets, some only to a limited extent. They allow one party (the beneficiary) to transfer the credit risk of a "reference asset," which it often actually owns, to another party (the guarantor).[1] This arrangement allows the guarantor party to assume the credit risk associated with the reference asset without directly purchasing it. Unlike traditional guarantee arrangements, credit-derivative transactions often are documented using master agreements developed by the International Swaps and Derivatives Association (ISDA) that are similar to those governing swaps or options. Since credit derivatives are privately negotiated financial contracts, they expose the user to credit risk as well as liquidity risk (thin secondary market for credit derivatives), operational risk (instruments used for speculation rather than hedging), counterparty risk (default), and legal risk (the contracts may be deemed illegal).

Banking organizations use credit-derivative instruments either as end-users, purchasing credit protection from or providing credit protection to third parties, or as dealers intermediating such protection. Credit derivatives are used to manage overall credit-risk exposure. A banking organization may use credit derivatives to mitigate its concentration to a particular borrower or industry without severing the customer relationship. In addition, organizations that are approaching established in-house limits on counterparty credit exposure could continue to originate loans to a particular industry, using credit derivatives to transfer the credit risk to a third party.

Banking organizations may also use credit derivatives to diversify their portfolios by assuming the associated credit exposures and revenue returns to different borrowers or industries without actually purchasing the underlying assets. Nonbank companies may serve as counterparties to credit-derivative transactions with banks to gain access to the commercial bank loan market. Such entities may not lend or may not have the facilities or staff to adequately administer a loan portfolio.

Under some credit-derivative arrangements, a beneficiary may pay a fee to the guarantor in exchange for a guarantee against any loss that may occur, usually in excess of a prespecified amount, if the reference asset defaults (a "credit-default swap"). Alternatively, the beneficiary may pay the total return on a reference asset, including any appreciation in the asset's price, to a guarantor in exchange for a spread over funding costs plus any depreciation in the value of the reference asset (a "total-rate-of-return swap").

Credit derivatives and their market are likely to take on various forms, such as the market for put options on specific corporate bonds or loans. While the payoffs of these puts are expressed in terms of a strike price, rather than a default event, if the strike price is sufficiently high, credit risk effectively could be transferred from the buyer of the put to the writer of the put. See SR-96-17.

2129.0.1 SUPERVISORY AND EXAMINER GUIDANCE

In reviewing credit derivatives, examiners should consider the credit risk associated with the reference asset as the primary risk, as they do for loan participations or guarantees. A banking organization providing credit protection through a credit derivative may be as exposed to the credit risk of the reference asset as it would be if the asset were on its own balance sheet. Thus, for supervisory purposes, the exposure generally should be treated as if it were a letter of credit or other off-balance-sheet guarantee.[2] This treatment would apply, for example, in determining a banking organization's overall credit exposure to a borrower for purposes of evaluating concentrations of credit. The overall exposure should include exposure it assumes

1. For purposes of this supervisory guidance, when the beneficiary owns the reference asset, it will be referred to as the "underlying" asset. However, in some cases, the reference asset and the underlying asset are not the same. For example, the credit-derivative contract may reference the performance of an ABC Company bond, while the beneficiary banking organization may actually own an ABC Company loan. The use of the term "guarantor" does not necessarily refer to a guarantor involving a suretyship contract. The transferred risk can be in a primary liability of the acquiring party that assumes the credit risk.

2. Credit derivatives that are based on a broad-based index, such as the Lehman Brothers Bond Index or the S&P 500 stock index, could be treated for capital and other supervisory purposes as a derivative contract. This determination should be made on a case-by-case basis.

by acting as a guarantor in a credit-derivative transaction where the borrower is the obligor of the reference asset.

Banking organizations providing credit protection through a credit derivative should hold capital and reserves against their exposure to the reference asset.[3] This broad principle holds for all credit derivatives, except for credit-derivative contracts that incorporate periodic payments for depreciation or appreciation, including most total-rate-of-return swaps. For these transactions, the guarantor can deduct the amount of depreciation paid to the beneficiary from the notional amount of the contract in determining the amount of reference exposure subject to a capital charge.

In some cases (for example, total-rate-of-return swaps), the guarantor also is exposed to the credit risk of the counterparty, which for derivative contracts generally is measured as the replacement cost of the credit-derivative transaction plus an add-on for the potential future exposure of the derivative to market price changes. For banking organizations acting as dealers that have matching offsetting positions, the counterparty risk stemming from credit-derivative transactions could be the principal risk to which the dealer banks are exposed.

In reviewing a credit derivative entered into by a beneficiary banking organization, the examiner should review the organization's credit exposure to the guarantor, as well as to the reference asset—if the asset is actually owned by the beneficiary. The degree to which a credit derivative, unlike most other credit-guarantee arrangements, transfers the credit risk of an underlying asset from the beneficiary to the guarantor may be uncertain or limited. The degree of risk transference depends on the terms of the transaction. For example, some credit derivatives are structured so that a payout only occurs when a predefined event of default or a downgrade below a prespecified credit rating occurs.[4] Others may require a payment only when a defined default event occurs *and* a predetermined materiality (or loss) threshold is exceeded. Default payments themselves may be based on an average of dealer prices for the reference asset during some period of time after default using a prespecified sampling procedure or may be specified in advance as a set percentage of the notional amount of the reference asset. Finally, the term of many credit-derivative transactions is shorter than the maturity of the underlying asset and, thus, provides only temporary credit protection to the beneficiary.

Examiners must ascertain whether the amount of credit protection a beneficiary receives by entering into a credit derivative is sufficient to warrant treatment of the derivative as a guarantee for regulatory capital and other supervisory purposes. Those arrangements that provide virtually complete credit protection to the underlying asset will be considered effective guarantees for purposes of asset classification and risk-based capital calculations. On the other hand, if the amount of credit risk transferred by the beneficiary is severely limited or uncertain, then the limited credit protection provided by the derivative should not be taken into account for these purposes.

In this regard, examiners should carefully review credit-derivative transactions in which the reference asset is not identical to the asset actually owned by the beneficiary banking organization. For the derivative contract to be considered as providing effective credit protection, the examiner must review the arrangement and be satisfied that the reference asset is an appropriate proxy for the loan or other asset, whose credit exposure the banking organization intends to offset. To determine this, examiners should consider, among other factors, whether the reference asset and owned asset have the same obligor and seniority in bankruptcy and whether both contain mutual cross-default provisions.

A banking organization's management should not enter into credit-derivative transactions unless it has the ability to understand and manage the credit and other risks associated with these instruments in a safe and sound manner. Accordingly, examiners should determine the appropriateness of these instruments on an entity-by-entity basis, taking into account management's expertise in evaluating the instruments used; the adequacy of relevant policies, including position limits; and the quality of the banking organization's relevant information systems and internal controls.[5]

3. For guidance on risk-based capital treatment of credit derivatives, see section 4060.3.5.3.9.

4. It may also be necessary to review the credit documentation of the primary obligor to determine the degree of transferred risk.

5. For further guidance on examining the risk-management practices of banking organizations, including guidance on derivatives, that examiners may find helpful in reviewing an organization's management of its credit-derivative activity, see sections 2125.0, 2126.0, 2128.0, and 4070.1. See also the *Commercial Bank Examination Manual* and the *Trading and Capital-Markets Activities Manual*.

2129.0.2 TYPES OF CREDIT DERIVATIVES

The most widely used types of credit derivatives are credit-default swaps and total-rate-of-return (TROR) swaps.[6] While the timing and structure of the cash flows associated with credit default and TROR swaps differ, the economic substance of both arrangements is that they seek to transfer the credit risk on the asset(s) referenced in the transaction.

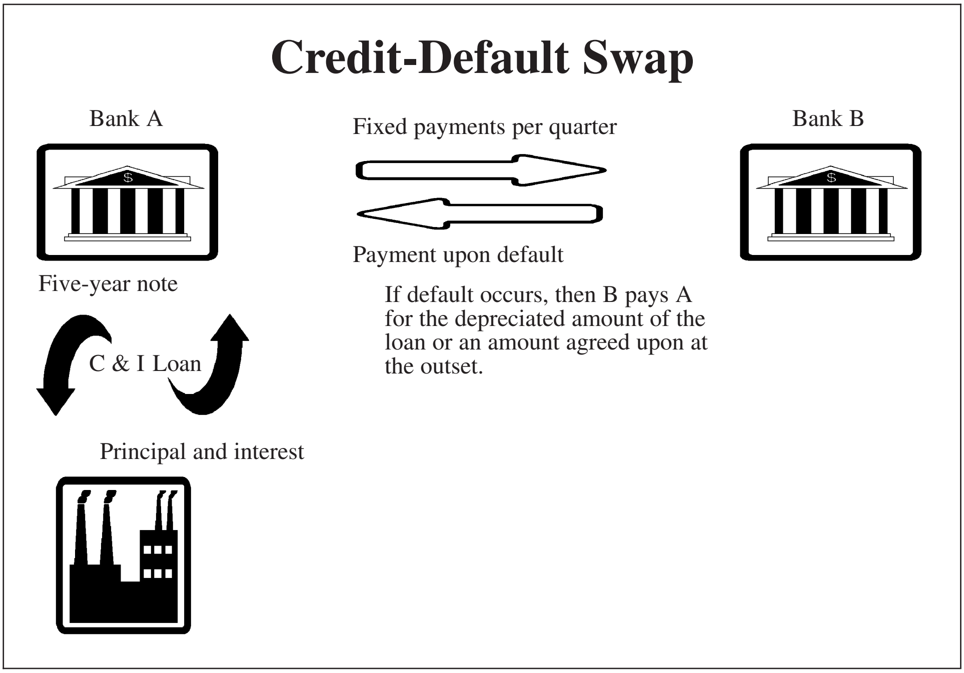
6. Another less common form of credit derivative is the *credit-linked note*, which is an obligation that is based on a reference asset. Credit-linked notes are similar to structured notes with embedded credit derivatives. If there is a credit event, the repayment of the bond's principal is based on the price of the reference asset. A credit-linked note may be a combination of a regular bond and a credit option. The note can promise to make periodic interest payments and a large lump-sum payment when the bond matures. The credit option on the note may allow the issuer to reduce the note's payments if a primary financial indicator or variable deteriorates. When reviewing these transactions, examiners should consider the purchasing banking organization's exposure to the underlying reference asset as well as the exposure to the issuing entity.

2129.0.2.1 Credit-Default Swaps

The purpose of a credit-default swap is to provide protection against credit losses associated with a default on a specified reference asset. The swap purchaser (the beneficiary) "swaps" the credit risk with the provider of the swap (the guarantor). The transaction is very similar to a guarantee or financial standby letter of credit.

In a credit-default swap, illustrated in figure 1, the beneficiary (Bank A) agrees to pay to the guarantor (Bank B) a quarterly or annual fee, typically amounting to a certain number of basis points on the par value of the reference asset. In return, the guarantor agrees to pay the beneficiary an agreed-upon, market-based, post-default amount or a predetermined fixed percentage of the value of the reference asset if there is a default. The guarantor makes no payment until there is a default. A default is strictly defined in the contract to include, for example, bankruptcy, insolvency, or payment default, and the event of default itself must be publicly verifiable. The guarantor may not be obliged to

Figure 1
Credit-Default Swap Cash-Flow Diagram



make any payments to the beneficiary until a preestablished amount of loss has been exceeded in conjunction with a default event (called a materiality threshold).

The swap is terminated if the reference asset defaults before the maturity of the swap. The amount owed by the guarantor is the difference between the reference asset's initial principal (or notional) amount and the actual market value of the defaulted, reference asset. The methodology for establishing the post-default market value of the reference asset should be set out in the contract. Often, the market value of the defaulted reference asset may be determined by sampling dealer quotes. The guarantor may have the option to purchase the defaulted, underlying asset and pursue a workout with the borrower directly, an action it may take if it believes that the "true" value of the reference asset is higher than that determined by the swap-pricing mechanism. Alternatively, the swap may call for a fixed payment in the event of default, such as a percentage of the notional value of the reference asset.

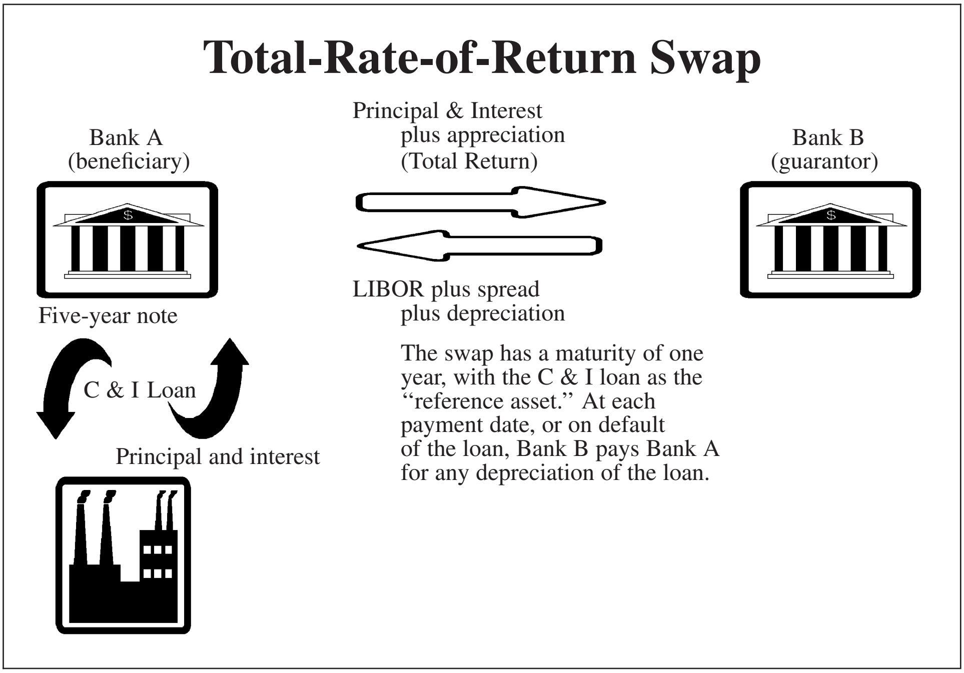
2129.0.2.2 Total-Rate-of-Return Swaps

In a total-rate-of-return (TROR) swap, illustrated in figure 2, the beneficiary (Bank A) agrees to pay the guarantor (Bank B) the "total return" on the reference asset, which consists of all contractual payments, as well as any appreciation in the market value of the reference asset. To complete the swap arrangement, the guarantor agrees to pay LIBOR plus a spread and any depreciation to the beneficiary.[7] Since it bears the risks and rewards of ownership over the term of the swap, the guarantor in a TROR swap could be viewed as having synthetic ownership of the reference asset.

At each payment-exchange date (including when the swap matures) or on default, at which point the swap may terminate, any depreciation

7. The reference asset is often a floating-rate instrument, for example, a prime-based loan. Thus, if both sides of a TROR swap are based on floating rates, interest-rate risk is effectively eliminated with the exception of some basis risk.

Figure 2
Total-Rate-of-Return Swap Cash-Flow Diagram



or appreciation in the amortized value of the reference asset is calculated as the difference between the notional principal balance of the reference asset and the "dealer price."[8] The dealer price is generally determined either by referring to a market quotation source or by polling a group of dealers, and the price reflects changes in the credit profile of the reference obligor and reference asset.

If the dealer price is less than the notional amount of the contract (the hypothetical original price of the reference asset), then the guarantor must pay the difference to the beneficiary, absorbing any loss caused by a decline in the credit quality of the reference asset.[9] Thus, a TROR swap differs from a standard direct credit substitute in that the guarantor is guaranteeing not only against default of the reference obligor, but also against a deterioration in that obligor's credit quality, which can occur even if there is no default.

TROR swaps allow banking organizations to diversify credit risk and at the same time maintain confidentiality of their client's financial records since the borrowing entity's financial records are held by the originating lender. When the loans are sold, the records are transferred to the new acquiring lender. TROR swaps generally involve fewer administrative costs than those involved in a loan-sales transaction. Risk diversification can thus be achieved at a reduced cost.

2129.0.3 OTHER SUPERVISORY ISSUES

The decision to treat credit derivatives as guarantees could have significant supervisory implications for the way examiners treat concentration risk, classified assets, the adequacy of the allowance for loan and lease losses (ALLL),[10] and transactions involving affiliates. Examples of how credit derivatives that effectively transfer credit risk could affect supervisory procedures are discussed below.

2129.0.3.1 Credit Exposure

For internal purposes of managing credit risk, banking organizations are encouraged to develop policies to determine how credit-derivative activity will be used to manage credit exposures. For example, a banking organization's internal credit policies may set forth situations in which it is appropriate to reduce credit exposure to an underlying obligor through credit-derivative transactions. Such policies need to address when credit exposure is effectively reduced and how all credit exposures will be monitored, including those resulting from credit-derivative activities.

2129.0.3.2 Concentrations of Credit

Concentrations of credit may be defined as—

- loans collateralized by a common security;
- loans to one borrower or related group of borrowers;
- loans that depend on a particular agricultural commodity;
- aggregate loans to major employers, their employees, and their major suppliers;
- loans within industry groups;
- out-of-territory loans;
- the aggregate amount of paper purchased from any one source; or
- those loans that often have been included in other homogeneous risk groupings.

Credit concentrations, by their nature, depend on common key factors, and when weaknesses develop, they have an adverse impact on each individual loan making up the concentration.[11] Generally, examiners should not consider a banking organization's asset concentration to a particular borrower reduced because of the existence of a nongovernment guarantee on one of the borrower's loans since the underlying concentration to the borrower still exists. However, examiners should consider how the banking organization manages the concentration, which could include the use of nongovernmental guarantees. Asset concentrations are to be listed in the confidential "Administrative and Other Matters" page D of the inspection report to highlight that the ultimate risk to the banking organization stems from these concentrations,

8. Depending on contract terms, a TROR swap may not terminate on default of the reference asset. Instead, payments would continue to be made on subsequent payment dates based on the reference asset's post-default prices until the swap's contractual maturity.

9. As in a credit-default swap, the guarantor may have the option of purchasing the underlying asset from the beneficiary at the dealer price and trying to collect from the borrower directly.

10. See sections 2010.7 and 2065.2.

11. See sections 2010.2, 2010.7, and 2065.2.

although the associated credit risk may be mitigated by the existence of nongovernmental guarantees.

Any nongovernment guarantee will be included with other exposures to the guarantor to determine if there is an asset concentration with respect to the guarantor. Thus, the use of credit derivatives will increase the beneficiary's concentration exposure to the guarantor without reducing the concentration risk of the underlying borrower. Similarly, a guarantor banking organization's exposure to all reference assets will be included in its overall credit exposure to the reference obligor.

2129.0.3.3 Classification of Assets

The criteria used to classify assets are primarily based on their degree of risk and the likelihood of repayment, as well as on the potential effect of the assets on the bank's safety and soundness.[12] When evaluating the quality of a loan, examiners should review the overall financial condition of the borrower; the borrower's credit history; any secondary sources of repayment, such as guarantees; and other factors. The primary focus in the review of a loan's quality is the original source of payment. The assessment of the credit quality of a troubled loan, however, should take into account support provided by a "financially responsible guarantor."[13]

The protection that a credit derivative from a financially responsible guarantor provides on an underlying asset may be sufficient to preclude classification of the underlying asset or reduce the severity of classification. Sufficiency *depends on the extent of credit protection that is provided*. To be considered a guarantee for purposes of determining the classification of assets, a credit derivative must transfer the credit risk from the beneficiary to the financially responsible guarantor; the financially responsible guarantor must have *both* the financial capacity and willingness to provide support for the credit; the guarantee (the credit-derivative contract) must be legally enforceable; and the guarantee must provide support for repayment of the indebtedness, in whole or in part, during the remaining term of the underlying asset.

However, credit derivatives tend to have a shorter maturity than the underlying asset being protected. Furthermore, it is uncertain whether the credit derivative will be renewed once it matures. Thus, when determining whether to classify an underlying asset protected by a credit derivative, examiners need to consider the *term* of the credit derivative in relation to the maturity of the protected underlying asset, the probability that the protected underlying asset will default while the guarantee is in force, and whether the credit risk has actually been transferred. In general, the beneficiary banking organization continues to be exposed to the credit risk of the classified underlying asset when the maturity of the credit derivative is shorter than the underlying asset. Thus, in these situations of maturity mismatch, the examiner's presumption may be against a diminution of the severity of the underlying asset's classification.

For guarantor banking organizations, examiners should review the credit quality of individual reference assets in derivative contracts in the same manner as other credit instruments, such as standby letters of credit. Thus, examiners should evaluate a credit derivative in which a banking organization provides credit protection based on the overall financial condition and resources of the reference obligor; the obligor's credit history; and any secondary sources of repayment, such as collateral. As a rule, exposure from providing credit protection through a credit derivative should be classified if the reference asset is classified.[14]

2129.0.3.4 Transactions Involving Affiliates

Credit-derivative transactions can involve two or more legal entities (affiliates) within the same banking organization. Thus, transactions between or involving affiliates raise important supervisory issues, especially whether such arrangements are effective guarantees of affiliate obligations or transfers of assets and their related credit exposure between affiliates. Banking organizations should carefully consider existing supervisory guidance on interaffiliate

12. Loans that exhibit potential weaknesses are categorized as "substandard," while those with well-defined weaknesses and a distinct possibility of loss are either "doubtful" or "loss."

13. See section 5010.10 of this manual and section 2060.1 of the *Commercial Bank Examination Manual*.

14. A guarantor banking organization providing credit protection through the use of a credit derivative on a classified asset of a beneficiary bank may preclude classification of *its derivative contract* by laying off the risk exposure to another financially responsible guarantor. This could be accomplished through the use of a second offsetting credit-derivative transaction.

transactions before entering into credit-derivative arrangements involving affiliates, particularly when substantially the same objectives could be met using traditional guarantee instruments.

2129.0.4 INSPECTION OBJECTIVES

1. To determine if the banking organization is providing credit protection through a credit derivative.
2. To ascertain whether the banking organization has and maintains sound risk-management policies and procedures and effective internal controls over the use of credit derivatives.
3. To review and evaluate existing risk involving credit-derivative arrangements.
4. To ascertain whether adequate capital and reserves are held against exposures to reference assets, including whether risk-based capital computations have accounted for any additional risk resulting from derivative arrangements.

2129.0.5 INSPECTION PROCEDURES

1. Consider credit risk associated with reference assets as primary risks. Determine whether the credit-risk exposure is treated as if it was a letter of credit or other off-balance-sheet guarantee.
2. Review the organization's credit exposure to the guarantor, as well as to the reference asset. Determine if the asset is actually owned by the beneficiary.
3. Ascertain whether the amount of credit protection a beneficiary receives when entering into a credit derivative is sufficient to warrant treatment of the derivative as a guarantee for regulatory capital and other supervisory purposes.
4. Review credit-derivative transactions in which the reference asset is not identical to the asset actually owned by the beneficiary banking organization.
    a. Ascertain if the reference asset is an appropriate proxy for loans or other assets whose credit exposure the banking organization intends to offset.
    b. Consider whether the reference asset and owned asset have the same obligor and seniority in bankruptcy and whether both contain mutual cross-default provisions.
5. Determine whether management has the ability to understand and manage the credit and other risks associated with credit derivatives in a safe and sound manner. Consider management's expertise in evaluating the instruments; the adequacy of relevant policies, including position limits; and the quality of the banking organization's relevant management information systems and internal controls.
6. Evaluate the management of a banking organization's asset concentration to a particular borrower, which could include the use of non-governmental guarantees on one or more of the borrower's loans. List the asset concentrations in the confidential ''Administrative and Other Matters'' page D of the inspection report.
7. Review the quality of loans and the overall financial condition of the borrower; the borrower's credit history; any secondary sources of repayment, such as financially responsible guarantors; and other factors.
8. When determining whether to classify an underlying asset protected by a credit derivative, compare the *term* of the credit derivative in relation to the maturity of the protected underlying asset, the probability that the protected underlying asset will default while the guarantee is in force, and whether the credit risk has actually been transferred.
9. For guarantor banking organizations, review the credit quality of individual reference assets in derivative contracts in the same manner as other credit instruments, such as standby letters of credit.
    a. Evaluate a credit derivative in which a banking organization provides credit protection based on the overall financial condition and resources of the reference obligor; the obligor's credit history; and any secondary sources of repayment, such as collateral.
    b. If the reference asset is classified, classify the exposure from providing credit protection through a credit derivative.

2129.05.05 RISK IDENTIFICATION AND RISK MANAGEMENT OF SECONDARY MARKET CREDIT ACTIVITIES

A firm engages secondary-market credit activities, such as loan syndications, loan sales and participations, credit derivatives, and asset securitizations. These activities can enhance both credit availability and a firm's profitability, but managing the risks of these activities poses increasing challenges. The risks involved, while not new to banking, may be less obvious and more complex than the risks of traditional lending activities. Concentrations in certain secondary-market credit activities involve credit, liquidity, operational, legal, and reputational risks that may not be fully recognized by management or adequately incorporated in a firm's risk-management systems. In reviewing these activities, examiners should assess whether a firm fully understands and adequately manages the full range of the risks involved in secondary-market credit activities.

Improvements in technology, greater standardization of lending products, and the use of credit enhancements have helped to increase dramatically the volume of loan syndications, loan sales, loan participations, asset securitizations, and credit guarantees undertaken by commercial banks, affiliates of holding companies, and some U.S. branches and agencies of foreign banks. In addition, credit derivatives permit firms to trade credit risk, manage it in isolation from other types of risk, and maintain credit relationships while transferring the associated credit risk. If appropriately managed, such relationships can improve the availability of credit to businesses and consumers, allow management to better tailor the mix of credit risk within loan and securities portfolios, and improve overall bank profitability.

This section identifies some of the important risks involved in several of the more common types of secondary-market credit activities. Guidance is provided on sound risk-management practices, along with special considerations that examiners should consider in assessing the risk-management systems for these activities. A firm's failure to adequately understand the risks inherent in secondary market credit activities and the failure to incorporate such risk within its risk-management systems and internal capital allocations may constitute an unsafe and unsound banking practice.

A firm should incorporate the full range of risks of their secondary-market credit activities into their overall risk-management systems. In particular, examiners should determine whether firms are recognizing the risks of secondary-market credit activities by

(1) adequately identifying, quantifying, and monitoring these risks;
(2) providing sufficient information on the extent and depth of these risks to senior management and the firm's board of directors;
(3) conducting ongoing stress testing to identify potential losses and liquidity needs under adverse circumstances; and
(4) setting adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding.

Incorporating secondary-market credit activities into a firm's risk-management systems and internal capital adequacy allocations is particularly important.[1]

Certain credit and liquidity enhancements that a firm requires for its secondary-market credit activities can make the evaluation of risks less straightforward than evaluating the risks involved in traditional on-balance-sheet lending activities. These enhancements, or guarantees, generally include recourse provisions; securitization structures that entail credit-linked early amortization and collateral-replacement events; and direct-credit substitutes, such as letters of credit and subordinated interests that, in effect, provide credit support to secondary-market instruments and transactions.[2]

The transactions involving credit and liquidity enhancements tend to be complex and may expose a firm to additional obligations that may not become evident until a transaction has dete-

1. For a more general discussion of risk management, see SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies" and SR-98-12, "Investment Securities and End-User Derivatives Activities."

2. Examiners should also refer to the Board's regulatory capital rules at 12 CFR part 217 (Regulation Q). In addition, firms have retained the risk of loss, that is, recourse, on sales and securitizations of assets when, in accordance with generally accepted accounting principles, they record on their balance sheets interest-only strips receivables or other assets that serve as credit enhancements. For more information, see the instructions to the Reports of Condition and Income and the FR-Y9 series reports.

riorated. In substance, such activities move the credit risk off the balance sheet by shifting risks associated with traditional on-balance-sheet assets into off-balance-sheet contingent liabilities. Given the potential complexity and, in some cases, the indirect nature of these enhancements, the actual credit-risk exposure can be difficult to assess, especially in the context of traditional credit-risk limit, measurement, and reporting systems.

Moreover, many secondary-market credit activities involve reputational, liquidity, operational, and legal risks that are not readily identifiable and may be difficult to control. For example, recourse provisions and certain asset-backed security structures can give rise to significant reputational- and liquidity-risk exposures, and ongoing management of underlying collateral in securitization transactions can expose a firm to unique operating and legal risks.

For a firm providing credit enhancements in connection with loan sales and securitizations, and a firm involved in credit derivatives and loan syndications, examiners should assess whether the firm's systems and processes adequately identify, measure, monitor, and control the risks involved in the secondary-market credit activities. In particular, the risk-management systems employed should include the identification, measurement, and monitoring of these risks, as well as an appropriate methodology for the internal allocation of capital and reserves. The stress testing conducted within the risk-measurement element of the management system should fully incorporate the risk exposures of these activities under various scenarios in order to identify their potential effect on a firm's liquidity, earnings, and capital adequacy. Moreover, senior management should have sufficient information to assess the risks associated with these activities, as well as whether contingency plans are adequate to deal with possible adverse conditions.

2129.05.1 CREDIT RISKS IN SECONDARY-MARKET CREDIT ACTIVITIES

A firm should be aware that the credit risk involved in many secondary-market credit activities may not always be obvious. For certain types of loan sales and securitization transactions, a firm may actually be exposed to essentially the same credit risk that arises from traditional lending activities, even though a particular transaction may, superficially, appear to have isolated the firm from credit risk. For instance, an off-balance-sheet transaction may not result in a commensurate reduction in credit risk. Such transactions include loan sales with recourse; credit derivatives; direct-credit substitutes, such as letters of credit; liquidity facilities extended to securitization programs; and certain asset-securitization structures (for example, securitized credit card receivables).

2129.05.1.1 Loan Syndications

A firm should periodically review syndication underwriting standards and pricing practices to verify that they remain consistent over time with (1) the degree of risk associated with the activity and (2) the potential for unexpected economic developments to adversely affect borrower creditworthiness.

A firm may be asked to make a commitment to participate in a loan syndication within a shorter period of time that may limit the time for the firm to conduct its risk assessment. Therefore, examiners will periodically review underwriting standards and consider whether a firm performs an independent credit analysis of the syndicated credit instead of placing undue reliance on the analysis of the lead underwriter or on commercial-loan credit ratings. A firm should avoid making an irrevocable commitment to participate in a syndication until the firm completes its own risk assessment.

2129.05.1.2 Credit Derivatives

Credit derivatives are generally off-balance-sheet financial instruments that are used by a firm to assume or mitigate the credit risk of loans and other assets.[3] A firm employs these instruments, either as end-users, purchasing credit protection from—or providing credit protection to—third parties, or as dealers intermediating such protection. In reviewing credit derivatives, supervisors should consider the credit risk associated with the referenced asset, as well as general market risk and the risk of the counterparty to the contract.

With respect to credit-derivative transactions in which a firm is mitigating the credit risk of its assets, examiners will review those situations in which the referenced assets are not identical to

3. Credit-linked notes are on-balance-sheet instruments.

the assets actually owned by the firm. Examiners should consider whether the referenced asset is an appropriate proxy for the risks posed by the underlying loan or other assets of the derivative transaction.

2129.05.1.3 Recourse Obligations, Direct-Credit Substitutes, and Liquidity Facilities

2129.05.1.3.1 Recourse Obligations

Partial, first-loss recourse obligations retained when selling assets, as well as the extension of partial credit enhancements (for example, 10 percent letters of credit), can be a source of concentration credit risk by exposing a firm to the full amount of expected losses on the protected assets. For instance, the credit risk associated with whole loans or a pool of loans that are sold to secondary-market investors can often be concentrated within the partial, first-loss recourse obligations retained by the firm selling and securitizing the assets. In these situations, even though a firm may have reduced its exposure to catastrophic loss on the assets sold, the firm generally retains the same credit-risk exposure as if the firm continued to hold the loans or assets on its balance sheet.

2129.05.1.3.2 Direct-Credit Substitutes

A firm should consider the level of credit concentration risk that arise from the extension of partial direct-credit substitutes, such as the purchase of subordinated interests and the extension of letters of credit. For example, a firm that sponsors certain asset-backed commercial paper programs, or so-called remote-origination conduits, can be exposed to a high degree of credit risk even though its notional exposure is minimal. In these situations, the sponsoring firm refers an existing corporate customer to the conduit, which becomes the new lender to that customer. The conduit funds this lending activity by issuing commercial paper that, in turn, is guaranteed by the sponsoring firm. The net result is that the sponsoring firm has much the same credit-risk exposure through its guarantee as it would have on a direct loan to that corporate borrower and held on-balance-sheet. However, this credit extension is an off-balance-sheet transaction, and the associated risks may not be fully addressed in the firm's risk-management system.

2129.05.1.3.3 Liquidity Facilities

A firm that extends liquidity facilities to securitized transactions, particularly asset-backed commercial paper programs, may be exposed to a high degree of credit risk that may be embedded within a facility's provisions. Liquidity facilities are commitments to extend short-term credit to cover temporary shortfalls in cash flow of an asset-backed commercial paper. While all commitments embody some degree of credit risk, certain commitments extended to asset-backed commercial paper programs to provide liquidity may subject a firm to the credit risk of the underlying asset pool, often trade receivables, or to the credit risk of a specific company using the program for funding. Often the stated purpose of such liquidity facilities is to provide funds to the program to retire maturing commercial paper when a mismatch occurs in the maturities of the underlying receivables and the commercial paper, or when a disruption occurs in the commercial paper market. However, depending on the provisions of the facility—such as whether the facility covers dilution of the underlying receivable pool—credit risk can be shifted from the program's explicit credit enhancements to the liquidity facility.[4] Such provisions may enable certain programs to fund riskier assets and yet maintain the credit rating on the program's commercial paper without increasing the program's credit-enhancement levels.

2129.05.1.4 Asset-Securitization Structures

The structure of various securitization transactions can result in a firm retaining the underlying credit risk for a pool of assets that the firm securitized. An example of this contingent credit-risk retention is credit card securitizations in which the securitizing organization explicitly sells the credit card receivables to a master trust but, in practice, retains the majority of the economic risk of loss associated with the assets—because of the credit protection provided to investors by the excess yield, spread accounts, and structural provisions of the securitization.

4. Dilution essentially occurs when the receivables in the underlying asset pool—before collection—are no longer viable financial obligations of the customer. For example, dilution can arise from returns of consumer goods or unsold merchandise by retailers to manufacturers or distributors.

Excess yield provides the first level of credit protection that can be drawn upon to cover cash shortfalls between the principal and coupon owed to investors and the investors' pro rata share of the master trust's net cash flows. The excess yield is equal to the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses.[5] The second level of credit protection is provided by the spread account, which is essentially a reserve funded initially from the excess yield.

The structural provisions of credit card securitizations generally provide credit protection to investors through the triggering of early-amortization events. Such an event usually is triggered when the underlying pool of credit card receivables deteriorates beyond a certain point and requires that the outstanding credit card securities begin amortizing early to pay off investors before the prior credit enhancements are exhausted. As the early amortization accelerates the redemption of principal (paydown) on the security, the credit card accounts that were assigned to the master credit card trust return to the securitizing institution more quickly than had originally been anticipated, thus exposing the firm to liquidity pressures and to further credit losses on the returned accounts.

2129.05.2 REPUTATIONAL RISKS

A firm's secondary-market credit activities give rise to reputational risks. Loan-syndication underwriting may present significant reputational-risk exposure to lead underwriters because syndicate participants may seek to hold the lead underwriter responsible for actual or perceived inadequacies in the loan's underwriting practices, even though participants are responsible for conducting an independent due-diligence in evaluating the credit.

There is the possibility that pressure may be brought to bear on the lead participant to repurchase portions of the syndication if the credit deteriorates in order to protect its reputation in the market, even though the syndication was sold without recourse. In addition, when there is deterioration in the syndicated credit, a participant may pursue legal action against the lead organization. One way to mitigate reputational risk in a syndication is for a firm to determine whether a possible participant in the syndication is able to conduct its own evaluation of the credit risks involved in the transaction.

A firm that sponsors an asset-backed security may also be acting as the servicer, administrator, or liquidity provider in the securitization transaction. Therefore, a firm should assess the potential losses and risk exposure associated with reputational risk arising from these activities. An asset securitization with deterioration of performance may result in a negative market reaction that could increase the spreads on a firm's future issuances. In order to avoid potentially adverse implications on future issuances, a firm may provide support to its securitization transactions by improving the performance of the securitized asset pool. For example, a firm may sell discounted receivables or add higher-quality assets to the securitized asset pool. Thus, a firm's voluntary support of its securitization in order to protect the firm's reputation can adversely affect the sponsoring or issuing organization's earnings and capital. A firm may take these actions to avoid either a rating downgrade or an early amortization of the outstanding asset-backed securities.

2129.05.3 LIQUIDITY RISKS

The existence of recourse provisions in asset sales, the extension of liquidity facilities to securitization programs, and the early-amortization triggers of certain asset-securitization transactions can involve significant liquidity risk to institutions engaged in these secondary-market credit activities. A firm should consider whether its liquidity contingency plans fully incorporate the potential risk posed by its secondary-market credit activities. With the issuance of new asset-backed securities, the issuing firm should determine the potential effect on its liquidity at the inception of each transaction and throughout the life of the securities to better ascertain its future funding needs.

A firm's contingency plans should consider the need to obtain replacement funding and specify the possible alternative funding sources, addressing the amortization of outstanding asset-backed securities. This is particularly important for securitizations with revolving receivables, such as credit cards, when an early amortization of the asset-backed securities could

5. The monthly excess yield is the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses. It is calculated by subtracting from the gross portfolio yield the (1) coupon paid to investors; (2) charge-offs for that month; and (3) servicing fee, usually 200 basis points paid to the firm sponsoring the securitization.

unexpectedly return the outstanding balances of the securitized accounts to the issuing firm's balance sheet. An early amortization of a firm's asset-backed securities could impede its ability to fund itself—either through reissuance or other borrowings—since the firm's reputation with investors and lenders may be adversely affected.

2129.05.4 INCORPORATING THE RISKS OF SECONDARY-MARKET CREDIT ACTIVITIES INTO RISK MANAGEMENT

Supervisors should verify that a firm incorporates the risks involved in its secondary-market credit activities in its overall risk-management system. The system should entail

(1) information on risk exposures for the firm's senior management;
(2) review, approval, and adoption of appropriate policies, procedures, and guidelines to manage the risks involved;
(3) appropriate processes to measure and monitor risks; and
(4) appropriate internal controls to verify the integrity of the management process with respect to these activities.

The formality and sophistication with which the risks of these activities are incorporated into a firm's risk-management system should be commensurate with the nature and volume of its secondary-market credit activities. A firm with significant secondary-market activity should have a more robust risk-management process to monitor and control the risks of this activity.

2129.05.4.1 Role of the Board of Directors

The board of directors should consider the capacity of the firm's risk management framework when overseeing aspects of the firm's strategy arising from the firm's secondary-market credit activities. The board should also review any corresponding risk management or controls enhancements that are necessary to align with the risk appetite. The board should review and approve all significant policies relating to the management of risk arising from secondary-market credit activities based on the firm's strategy, risk appetite, risk-management capacity, and structure.

A firm involved in securitization activities should have appropriate policies, procedures, and controls with respect to underwriting asset-backed securities; funding the possible return of revolving receivables (for example, credit card receivables and home equity lines); and establishing limits on exposures to individual institutions, types of collateral, and geographic and industrial concentrations. A lead firm in a loan syndication should have policies and procedures in place describing the instances when portions of syndications may be repurchased. Furthermore, a firm participating in a loan syndication should not place undue reliance on the credit analysis performed by the lead organization. Rather, the participant should have clearly defined policies and procedures addressing its own due diligence in analyzing the risks inherent in the transaction.

2129.05.4.2 Role of Senior Management

Senior management is responsible for understanding the credit, market, liquidity, operational, legal, and reputational risks arising from the firm's secondary-market credit activities. Senior management is also responsible for implementing a risk-management structure that is commensurate with the level of the organization's activities. Senior management should confirm that the risk exposures are fully incorporated into information provided to the firm's board of directors. Senior management is responsible for ensuring that the risks arising from secondary-market credit activities are adequately managed on both a short-term and long-term basis. Senior management should establish adequate policies and procedures for incorporating the risk of these activities into the overall risk-management process of the institution. Such policies should clarify that the economic substance of the risk exposures generated by these activities is identified, monitored, and controlled. Senior management should provide the institution's board of directors with sufficient, timely, and well-organized information about secondary-market activities so that the board can understand the risks posed by secondary-market credit activities.

2129.05.4.3 Management Information and Risk-Measurement Systems

A firm's management information and risk-measurement systems should fully incorporate the risks involved in its secondary-market credit activities. A firm should be able to identify credit exposures from all secondary-market credit activities and be able to measure, quantify, and control those exposures on a fully consolidated basis. The economic substance of the credit exposures of secondary-market credit activities should be fully incorporated into the firm's efforts to quantify its credit risk, including efforts to establish more formal grading of credits to allow for statistical estimation of loss-probability distributions. Secondary-market credit activities should also be included in any aggregations of credit risk by borrower, industry, or economic sector.

It is particularly important that a firm's information systems can identify and segregate those credit exposures arising from the firm's loan-sale and securitization activities. Such exposures include the sold portions of participations and syndications, exposures arising from the extension of credit-enhancement and liquidity facilities, the effects of an early-amortization event, and the investment in asset-backed securities. The information that senior management provides to the board of directors should be appropriately tailored in order to enable the board to make sound, well-informed decisions, and consider potential risk.

2129.05.4.4 System of Internal Controls

The board oversees and holds senior management accountable for establishing and maintaining an effective system of internal controls that, among other things, enforces the official lines of authority and the appropriate separation of duties in managing the firm's risks. These internal controls should be commensurate with the firm's activities and associated risks. Moreover, these internal controls should provide reasonable assurance of reliable financial reporting (in published financial reports and regulatory reports), including adequate allowances or liabilities for expected losses.

2129.05.5 STRESS TESTING

The use of stress testing, including consideration of multiple market events that could affect a firm's credit exposures and securitization activities, is another important element of risk management. Stress testing involves identifying possible events or changes in market behavior that could have unfavorable effects on the firm and assessing its ability to withstand them. Stress testing should consider the probability of adverse events, as well as likely worst-case scenarios. Such an analysis should be done on a consolidated basis and consider, for instance, the effect of higher-than-expected levels of delinquencies and defaults, as well as the consequences of early-amortization events with respect to credit card securities that could raise concerns regarding the firm's capital adequacy and its liquidity and funding capabilities. Stress-test analyses should also include contingency plans regarding the actions management might take, given certain situations.

2129.05.6 CAPITAL ADEQUACY

A firm should fully support the risk exposures of its secondary-market credit activities with adequate capital. A firm should validate that its capital position is sufficiently strong to support the risks associated with these activities on a fully consolidated basis and should maintain adequate capital in affiliated entities engaged in these activities. The Federal Reserve's Regulation Q (12 CFR part 217) establishes minimum capital ratios, and a firm exposed to high or above-average degrees of risk is therefore expected to operate above the minimum capital standards.

Examiners should review the substance of secondary-market transactions when assessing underlying risk exposures. For example, partial, first-loss direct-credit substitutes providing credit protection to a securitization transaction can, in substance, involve much the same credit risk as that involved in holding the entire asset pool on the firm's balance sheet. Examiners should assess whether banking organizations have appropriately allocated capital against the economic substance of credit exposures arising from early-amortization events and liquidity facilities associated with securitized transactions.[6]

If, in the examiner's judgment, a firm's capital level is not sufficient to absorb potential losses from such credit exposures, examiners should reflect this deficiency in the firm's report of examination and supervisory ratings, as appropriate. Furthermore, examiners should discuss the capital deficiency with the firm's management and, if necessary, its board of directors.

6. For further information, refer to the Board's regulatory capital rule at 12 CFR part 217 (Regulation Q).

In these situations, a firm will be expected to develop and implement a plan for strengthening its overall capital adequacy to levels deemed appropriate given the firm's risk exposure.

2129.05.7 INSPECTION OBJECTIVES

1. To determine whether a firm's risk-management systems accurately identify the risk exposures stemming from secondary-market activities.
2. To determine whether there has been a lowering of credit standards as a result of the firm's secondary-market credit activities.
3. To determine whether the firm's management system performs stress testing to evaluate the risk exposures of secondary-market credit activities under various scenarios and to evaluate the potential effect of the activities on the firm's liquidity, earnings, and capital adequacy.
4. To assess the effectiveness of any liquidity contingency plans as the plans relate to secondary-market credit activities, including the need to obtain replacement funding.
5. To determine whether the board of directors is fully informed of the risks involved in secondary-market activities and whether it approves policies, to mitigate credit, liquidity, operational, legal, reputational, and other risks.
6. To determine whether the firm's capital planning and positions support the risks associated with secondary-market credit activities.
7. To ascertain whether there is an effective system of internal controls to monitor and contain the risks associated with secondary-market activities.

2129.05.8 INSPECTION PROCEDURES

1. Determine whether the firm's senior management
   a. adequately identifies, quantifies, and monitors risks involved in secondary-market credit activities;
   b. clearly communicates the extent and depth of those risks in discussions, presentations, and inspection reports that are delivered to the board of directors and senior officials of the institution;
   c. presents to the board of directors, for its approval, all significant policies relating to the risk management of secondary-market activities;
   d. conducts periodic stress testing to identify potential losses and liquidity needs under adverse and worst-case scenarios; and
   e. has set adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding.
2. Assess whether the firm's risk-management systems and processes adequately identify, measure, monitor, and control all of the risks involved in the firm's secondary-market credit activities.
3. Determine whether the various risks associated with secondary-market activities are incorporated into contingency plans, including replacement funding plans and identified alternative funding sources, to lessen the impact of those risks.
4. Assess the appropriateness of loan-syndication contract agreements, underwriting documentation, and relevant correspondence with loan-syndication contractual parties to establish whether
   a. the firm's management has performed adequate credit investigations and evaluations of the syndicate loans, the syndicate participants, and the extent of the firm's credit-risk exposures;
   b. the syndication customers are in a position to evaluate the credit risks involved in the transaction; and
   c. undue reliance is placed on the lead underwriter, the participants, or on commercial-loan credit ratings of the participants.
5. For credit derivatives—
   a. analyze the credit risk associated with the reference asset, the general market risk, and the counterparty risk; and
   b. determine, for those reference assets that are not identical assets actually owned, whether the reference asset is an appropriate proxy for the loan or other assets whose credit exposure is to be offset.
6. Review the substance of secondary-market transactions, when evaluating and analyzing underlying risk exposures.
7. Assess the appropriateness of the firm's methods for internally allocating capital against the economic substance of credit exposures that arise from amortization events and liquidity facilities associated with securitized transactions.

8. Incorporate the evaluation of potential risks and losses from credit exposures, including management deficiencies, into the report of examination and the firm's supervisory ratings, as appropriate.

2130.0.1 INTRODUCTION

Effective March 1, 1983, the Board issued an amended bank holding company policy statement entitled "Futures, Forward and Options on U.S. Government and Agency Securities and Money Market Instruments." Bank holding companies are now required to furnish written notification to their District Federal Reserve Banks within 10 days after financial contract activities are begun by the parent or a nonbank subsidiary. The policy is consistent with the joint policy statement previously issued by the three federal bank regulators with regard to banks participating in financial contracts, and reflects the Board's judgment that bank holding companies, as sources of strength for their subsidiary banks, should not take speculative positions in such activities.

If a bank holding company or nonbank subsidiary is taking or intends to take positions in financial contracts, that company's board of directors should approve written policies and establish appropriate limitations to ensure that the activity is conducted in a safe and sound manner. Also, appropriate internal control and audit procedures should be in place to monitor the activity. The following discussion and inspection procedures apply to futures contract activity generally, but are intended to focus specifically on financial futures contracts. For a discussion of currency futures and options and the examination procedures for those instruments, see sections F and G in the Merchant and Investment Bank Examination Manual.

Information, instructions, and inspection procedures have been provided for verifying compliance with the Board's policy statement. It is intended that the policy statement will ensure that contract activities are conducted in accordance with safe and sound banking practices. The task of evaluating BHC contract activities is the responsibility of System examiners. The following information and inspection procedures are intended to serve as a guide for Federal Reserve Bank staff in that effort.

2130.0.2 DEFINITIONS

Basis—Basis is defined as the difference between the futures contract price and the cash market price of the same underlying security, money market instrument, or commodity.

Call Option—A contract that gives the buyer (holder) the right, but not the obligation to buy (call), a specified quantity of an underlying security, money market instrument or commodity at or before the stated expiration of the contract. At expiration, if the value of the option increases, the holder will exercise the option or close it at a profit. If the value of the option does not increase, the holder would probably let the option expire (or close it out at a profit) and, consequently, will lose the cost (premium paid) of (for) the option. Alternatively, the option may be sold prior to expiration.

Clearing Corporation—A corporation organized to function as the clearing house for an exchange. The clearing house registers, monitors, matches and guarantees trades on a futures market, and carries out financial settlement of futures transactions. The clearing house acts as the central counterparty to all trades executed on the exchange. It substitutes as a seller to all buyers and as a buyer to all sellers. In addition, the clearing corporation serves to insure that all contracts will be honored in the event of a counterparty default.

Clearing Member—A member firm of the clearing house or corporation. Membership in clearing associations or corporations is restricted to members of the respective commodity exchanges, but not all exchange members are clearing house members. All trades of a nonclearing member must be registered with, and eventually settled through, a clearing member.

Commodities Futures Trading Commission—The CFTC is a federal regulatory agency charged with regulation of futures trading in all commodities. It has broad regulatory authority over futures trading. It must approve all future contracts traded on U.S. commodity exchanges, ensure that the exchanges enforce their own rules (which it must review and approve), and direct an exchange to take any action needed to maintain orderly markets whenever it believes that an "emergency" exists.

Contract Activities—This term is used in this manual to refer to banking organization participation in the futures, forward, standby contract, or options markets to purchase and sell U.S. government and agency securities or money market instruments, foreign currencies and other financial instruments.

Convergence—The process by which the futures market price and the cash market price of a financial instrument or commodity converge as the futures contract approaches expiration.

Covered Call Options—This term refers to the issuance or sale of a call option where the option seller owns the underlying deliverable security or financial instrument.

Cross Hedging—The process of hedging a ‘‘cash’’ or derivative instrument position with another cash or derivative instrument that has significantly different characteristics. For example, an investor who wants to hedge the sales price of long-term corporate bonds might hedge by establishing a short position in a treasury bond or treasury bond futures contract, but since the corporate bonds cannot be delivered to satisfy the contract, the hedge would be a cross hedge. To be successful, the price movements of the hedged instrument must be highly correlated to that of the position being hedged.

Difference Check—A difference check is sent by the party which recognizes a loss when a forward contract is closed out by the execution of an offsetting forward contract pursuant to a pair-off clause. In essence, the difference check represents a net cash settlement on offsetting transactions between the same two parties and replaces a physical delivery and redelivery of the underlying securities pursuant to offsetting contracts.

Financial Contract—This term is used in the manual to refer to financial futures, forward, standby contracts, and options to purchase and sell U.S. government and agency securities, money market instruments, foreign currency futures and other financial instruments.

Firm Forward Contract—This term is used to describe a forward contract under which delivery of a security is mandatory. See ‘‘Standby Contract’’ for a discussion of optional delivery forward contracts.

Forward Contracts—Over-the-counter contracts for forward placement or delayed delivery of securities in which one party agrees to purchase and another to sell a specified security at a specified price for future delivery. Contracts specifying settlement in excess of 30 days following trade date shall be deemed to be forward contracts. Forward contracts are usually nonstandardized and are not traded on organized exchanges, generally have no required margin payments, and can only be terminated by agreement of both parties to the transaction. The term also applies to derivative contracts such as swaps, caps, and collars.

Futures Contracts—Standardized contracts traded on organized commodity exchanges to purchase or sell a specified financial instrument or commodity on a future date at a specified price. While futures contracts traditionally specified a deliverable instrument, newer contracts have been developed that are based on various indexes. Futures contracts based on indexes settle in cash and never result in delivery of an underlying instrument; some traditional contracts that formerly specified delivery of an underlying instrument have been redesigned to specify cash settlement. New financial futures contracts are continually being proposed and adopted for trading on various exchanges.

Futures Commission Merchant (FCM)—An FCM functions like a broker in securities. An FCM must register with the Commodities Futures Trading Commission (CFTC) in order to be eligible to solicit or accept orders to buy or sell futures contracts. The services provided by an FCM include a communications system for transmittal of orders, and may include research services, trading strategy suggestions, trade execution, and recordkeeping services.

Financial Futures Contracts—Standardized contracts traded on organized exchanges to purchase or sell a specified security, money market instrument, or foreign currency on a future date at a specified price on a specified date. Futures contracts on GNMA mortgage-backed securities and Treasury bills were the first interest rate futures contracts. Other financial futures contracts have been developed, including contracts on Eurodollars, currencies, and Euro-Rate differentials. It is anticipated that new and similar financial futures contracts will continue to be proposed and adopted for trading on various exchanges.

Futures Exchange—Under the Commodities Exchange Act (CEA), a ‘‘board of trade’’ designated by the Commodity Futures Trading Commission as a contract market. Trading occurs on the floor of the exchange and is conducted by open auction in designated trading areas.

GNMA or GINNIE MAE—Either term is used to refer to the Government National Mortgage Association. Ginnie Mae is a government corporation within the U.S. Department of Housing and Urban Development. In creating GNMA, Congress authorized it to grant a full faith and credit guaranty of the U.S. government to mortgage-backed securities issued by private sector organizations.

Hedge—The process of entering transactions that will protect against loss through compensatory price movement. A hedge transaction is one which reduces the organization's overall level of risk.

Initial Futures Margin—In the futures market, a deposit held by an FCM on behalf of a client against which daily gains and losses on futures positions are added or subtracted. A futures margin represents a good-faith deposit or performance bond to guarantee a participant's performance of contractual obligations.

Interest Rate Cap—A multi-period interest rate option for which the buyer pays the seller a fee to receive, at predetermined future times, the excess, if any, of a specified floating interest rate index above a specified fixed per annum rate (cap or strike rate). Caps can be sold separately or may be packaged with an interest rate swap.

Interest Rate Collar—the combination, in single contract, of a simultaneous sale of a cap and the purchase of a floor, or, a purchase of a cap and sale of a floor. The buyer of the collar is a buyer of a cap and the seller of a floor. By selling the floor, the collar buyer gives up the possibility of benefiting from a decline in interest rates below the strike rate in the floor component. On the other hand, the fee earned in selling the floor lowers the cost of protection against interest rate reversal.

Interest Rate Floor—is the reverse of an interest rate cap. The buyer pays a premium to obtain protection against a decline in interest rates below a specified level.

Long Contract—A financial contract to buy securities or money market instruments at a specified price on a specific future date.

Long Hedge—The long hedge, also called the *anticipatory hedge* is the process by which a market participant protects a cash or risk position by buying a futures or forward contract, i.e. taking a long financial contract position.

Maintenance Margin—Maintenance margin is the minimum level to which an equity position can decline as a result of a price decline before additional margin is required. In other words, it is the minimum margin which a customer must keep on deposit with a member at all times. Each futures contract has specified maintenance margin levels. A margin call is issued when a customer's initial margin balance falls below the maintenance margin level specified by the exchange. Maintenance margin must be satisfied by the deposit of cash or agreed upon cash equivalents. The amount of cash required is that amount which is sufficient to restore the account balance to the initial margin level.

Mandatory Delivery—See "Firm Forward Contract."

Mark-to-market—The process by which the carrying value (market value or fair value) of a financial instrument is revalued, and which is recognized as the generally accepted accounting principle for determining profit or loss on securities positions in proprietary trading and investment accounts. Futures positions are typically marked-to-market at the end of each trading session.

Naked Call Option—Refers to the issuance or sale of a call option where the option seller does not own the underlying deliverable security or instrument.

Open Interest—Refers to the number of futures contracts outstanding for a given delivery month in an individual futures contracts. The mechanics of futures trading require that for every open long futures contract there is an open short futures contract. For example, an open interest of 10,000 futures contracts means that there are 10,000 long contract holders and 10,000 short contract holders.

Options Contracts—Option contracts require that the buyer of the option pay the seller (or writer) of the option a premium for the right, but not the obligation, to exercise an option to buy (call option) or sell (put option) the instrument underlying the option at a stated price (strike or exercise price) on a stated date (European style option) or at any time before or on the stated expiration date (American style option). There are also exchange traded options contracts: (1) put and call options on futures contracts that are traded on commodities exchanges; and (2) put and call options that specify delivery of securities or money market instruments (or that are cash settled) that are traded on securities exchanges. The key economic distinction between options on futures and options on securities, is that the party who exercises an option on a futures contract receives a long or short futures position rather than accepting or making delivery of the underlying security or financial instrument.

Pair-Off Clause—A pair-off clause specifies that if the same two parties to a forward contract trade should subsequently execute an offsetting trade (e.g. a long contract against an outstanding short contract), settlement can be effected by one party sending the other party a difference check rather than having physical delivery and redelivery of securities.

Par Cap—This term refers to a provision in the contract of sale for Ginnie Mae mortgage-backed securities which restricts delivery only to pools which bear an interest rate sufficiently high so that the securities would trade at or below par when computed based on the agreed to yield.

Put Option—An option contract which gives the holder the right, but not the obligation, to sell (put) a specified quantity of a financial instrument (money market) or commodity at a specified price on or before the stated expiration date of the contract. If price of the underlying instrument occurs, the purchaser will exercise or sell the option. If a decline in price of the underlying instrument does not occur, the option purchaser will let it expire and will lose only the cost (premium paid) of (for) the option.

Round Turn—Commissions for executing futures transactions are charged on a round turn basis. A round turn constitutes opening a futures position and closing it out with an offsetting contract, i.e. executing a short contract and closing out the position with a long contract or vice-versa.

Short Contract—A financial contract to sell securities or money market instruments at a specified price on a specified future date.

Short Hedge—The process by which a customer protects a cash or risk position by selling a futures or forward contract, i.e. taking a short financial contract position. The purpose of the short hedge is to lock in a selling price.

Standby Contract—Optional delivery forward contracts on U.S. government and agency securities arranged between securities dealers and customers that do not involve trading on organized exchanges. The buyer of a standby contract (put option) acquires, upon paying a fee, the right to sell securities to the other party at a stated price at a future time. The seller of a standby (the issuer) receives the fee, and must stand ready to buy the securities at the other party's option. See the fuller discussion of Standby Contracts under 2130.0.3.1.2)

TBA (To Be Announced) Trading—TBA is the abbreviation used in trading Ginnie Mae securities for forward delivery when the pool number of securities bought or sold is "to be announced" at a later date.

Variation Margin—is when, in very volatile markets, additional funds are required to be deposited to bring the account back to its initial margin level, while trading is in progress. Variation margin requires that the needed funds be deposited within the hour, or when reasonably possible. If the customer does not satisfy the variation or maintenance margin call(s), the futures position is closed. Unlike initial margin, variation margin must be in cash. Also refer to "Maintenance Margin".

Weighted Hedge—a hedge that is used to compensate for a greater decline in the dollar value of a cash bond as compared to a price decline of an accessible T-bond futures contract.

Yield Maintenance Contract—This is a forward contract written with terms which maintain the yield at a fixed rate until the delivery date. Such a contract permits the holder of a short forward contract to deliver a different coupon security at a comparable yield.

2130.0.3 FINANCIAL CONTRACT TRANSACTIONS

Futures, forward and options contracts are merely other tools for use in asset–liability management. These contracts are neither inherently a panacea nor a speculative vehicle for use by banks and bank holding companies. Rather, the benefit or harm resulting from engaging in financial contract activities results from the manner in which contracts are used. Proper utilization of financial contracts can reduce the risks of interest or exchange rate fluctuations. On the other hand, financial contracts can serve as leverage vehicles for speculation on rate movements.

2130.0.3.1 Markets and Contract Trading

Forward contract (OTC) trading of Government National Mortgage Association ("GNMA") or "Ginnie Mae" Mortgage-Backed Securities preceded exchange trading of GNMA futures contracts in 1975.

2130.0.3.1.1 Forward Contracts

Forward contracts are executed solely in an over-the-counter market. The party executing a contract to acquire securities on a specified future date is deemed to have a "long" forward contract; and the party agreeing to deliver securities on a future date is described as a party holding a "short" forward contract. Each contract is unique in that its terms are arrived at after negotiation between the parties.

For purposes of illustrating a forward contract, assume that SMC Corporation is an originator of government guaranteed mortgages and issuer of GNMA securities. SMC Corporation has a proven ability to manage and predict the volume of its loan originations over a time horizon of three to four months. To assure a profit or prevent a loss on current loan originations, SMC Corporation may enter binding over-the-counter commitments to deliver 75% of its mortgage production which will be converted into GNMA securities three months in the future. If SMC agrees to sell $3 million of GNMA securities (11% coupon) to the WP Securities Firm at par in three months, SMC Corporation is considered to have entered a "short" (commitment to sell) forward contract. Conversely, WP has entered a "long" (commitment to buy) forward contract. The two parties to the transaction are both now obligated to honor the terms of the contract in three months, unless the contract is terminated by mutual agreement.

It should be noted that executing a "short" forward contract is not the same as executing the short sale of a security. Generally, a short sale of a security is understood to represent the speculative sale of a security which is not owned by the seller. The short seller either purchases the security prior to settlement date or borrows the security to make delivery; however, a "short" forward contract merely connotes the side of the contract required to make delivery on a future date. Short forward contracts should not be considered inherently speculative, but must be considered in light of the facts surrounding the contract.

Forward trading can be done on a mandatory delivery (sometimes referred to as "firm forward" contracts) basis or on an optional delivery basis ("standby" contract). With respect to a "mandatory" trade, the contract can also be written with a "pair-off" clause. A pair-off clause specifies that if the same two parties to a trade should subsequently execute an off-setting trade (e.g., the banking organization executes a long contract against an outstanding short contract), settlement can be effected by one party sending the other party a "difference check" rather than having a physical delivery and redelivery of securities.

When a forward contract is executed by a dealer, a confirmation letter or contract is sent to the other party to the transaction. The contract will disclose pertinent data about the trade, such as the size of the trade, coupon rate, the date upon which final delivery instructions will be issued, and the yield at which the trade was effected. In addition, the contract letter will specify whether it is permissible for the "short" side of the trade to deliver a different coupon security at a comparable yield ("yield maintenance contract") if the coupon specified in the contract is not available for delivery. Contracts which prohibit the delivery of securities requiring a premium over par are considered to have a "par cap." The initial contract letter generally does not specify which specific securities (e.g., GNMA mortgage-backed securities identified by a pool number) will be delivered. Instead, such contracts generally identify the deliverable securities as having been traded on a "TBA" basis ("to be announced"). Prior to settlement, the dealer holding the short contract will send a final confirmation to the other party specifying the actual securities to be delivered, accrued interest, dollar price, settlement date, coupon rate, and the method of payment.

Forward contracts are not typically marked-to-market. Both parties in a forward contract are exposed to credit risk, since either party can default on its obligation.

2130.0.3.1.2 Standby Contracts

Standby contracts are "put options" that trade over-the-counter, with initial and final confirmation procedures that are quite similar to those on forward transactions. Standby contracts were developed to allow GNMA issuers to hedge their production of securities, especially in instances where mortgage bankers have extended loan commitments in connection with the construction of new subdivisions. When a mortgage banker agrees to finance a subdivision with conventional and government guaranteed mortgages it is difficult to predict the actual number of FHA and VA guaranteed loans which will be originated. Hence, it is risky for a GNMA issuer to enter mandatory forward contracts to deliver the entire estimated amount of loans eligible to be pooled as GNMA securities. By entering an option contract and paying a fee for the option to "put" securities to another party, a GNMA issuer or securities dealer obtains downside market protection, but remains free to obtain the benefits of market appreciation since it can "walk away" from the option contract. In addition to the flexibility of walking away and selling securities at the prevailing market price when GNMA prices are rising, a GNMA issuer avoids the potential risk of purchasing mortgages or GNMA securities to cover short forward contracts in the event that production of GNMA securities falls below anticipated levels.

When a securities dealer sells a standby contract granting a GNMA issuer the right "to put" securities to it, the dealer, in turn, will attempt to purchase a matching standby contract from an investor because the dealer does not want to shoulder all of the downside market risk. There is also potential for securities firms to deal in standby contracts having no relationship to the issuance of GNMA securities.

Some illustrations of standby contracts follow. They are intended to illustrate the mechanics of a standby contract when a banking organization has sold or issued a standby contract granting the contra party the option to "put" GNMA securities to the banking organization.

Assumptions

1. Fee paid to banking organization = 1% of contract value
2. Contract delivery price = 98
3. Coupon = 12%

Situation 1

On contract exercise date: Market Price = 100. Therefore, the dealer would sell securities at market rather than put them to the bank.

Dealer		*Banking organization*	
Sale price	100	Purchase price	N/A
Fee paid	(1)	Fee Received	1
	99		1

Result: Dealer sacrificed 1% to insure sale price.

Result: Banking organization earned 1% fee for "standing by."

Situation 2

On contract exercise date: Market price = 95. Therefore, dealer would deliver securities pursuant to the standby contract.

Dealer		*Banking organization*	
Sale price	98	Purchase price	98
Market price	95	Market price	95
Contract gain	3	Contract loss	(3)
Fee paid	(1)	Fee received	1
Actual gain	2	Actual loss	(2)

Result: Dealer paid 1% fee to avoid 3 point market loss.

Result: Banking organization received 1% fee to compensate for purchasing securities 3 points above market.

2130.0.3.1.3 Futures Contracts

Futures Contract transactions involve three types of participants: customers—the buyers or sellers of contracts, brokers, and a futures exchange. As in the forward markets, a buyer (party committed to take delivery of securities specified in the futures contract) of a futures contract has a "long" contract and the seller (party committed to deliver the underlying securities) has a "short" contract. If a customer desires to purchase (sell) a futures contract, the broker—possibly a member of a clearing house of an exchange—will take the order to the exchange floor and purchase (sell) a contract sold (bought) by another customer (through another broker).[1] All futures transactions are made through and carried on the books of clearing house member brokers, who are treated by the exchange as their own customers. Hence, there are always an equal number of long and short contracts outstanding, referred to as the "open interest," since the auction process requires a buyer and seller for every contract.

All futures contracts are obligations of an exchange's clearing association or corporation, i.e. the clearing association is on the opposite side of each long and short contract; and all transactions are guaranteed within the resources of the exchange's clearing association (on most futures exchanges a small fee is collected on each transaction and placed into an insurance fund). Should an FCM default on a futures contract, the association pays the costs of completing the contract.

2130.0.4 MARGIN REQUIREMENTS

In order to insure the integrity of futures markets, the clearing house requires that member brokers (clearing house members) deposit initial margin in connection with new futures positions carried for the firm, other brokers or FCMs for whom the clearing house member clears transactions, and public customers. The clearing house members in turn require their customers—whether they are other FCMs or public customers—to deposit margin.[2] The FCMs generally require that public customers meet initial margin requirements by depositing cash, pledging government securities, or obtaining irrevocable standby letters of credit from substantial commercial banking organizations. Daily maintenance margin or variation margin calls (deposits of cash required to keep a certain minimum balance in the margin account) based upon each day's closing futures prices are calculated pursuant to rules of the various futures exchanges, and clearing house members are required to meet daily variation margin calls on positions carried for customers and the firm. In turn, the

1. Brokers in commodities are required to register as futures commission merchants ("FCMs") with the Commodities Futures Trading Commission ("CFTC") in order to be eligible to solicit or accept orders to buy or sell futures contracts.

2. In general, the futures exchanges set different initial margin requirements based upon the types of activity engaged in by the customer. Margin requirements are higher for customer contracts characterized as "speculative" than for those contracts deemed to be "hedge" positions. The commodities industry traditionally defines someone with a business need for using the futures market as a hedger; others are defined as speculators. Therefore, in instances where there are different initial hedge and speculative margin requirements, it is assumed that banking organizations will only be required to meet margin required for hedgers.

FCMs require customers to reimburse them for posting additional margin.

Once a customer has executed a futures contract to make or accept delivery of securities in the future it is obligated to fulfill the terms of the contract. A futures contract cannot be resold over-the-counter because futures contracts are not transferable. However, a customer may terminate its obligation under a futures contract either by making or accepting delivery of the securities as specified by the contract, or by executing an offsetting futures contract (long contract to cancel a short contract or vice-versa) with the same broker to cancel the original contract on the same exchange. The overwhelming majority of futures contracts are closed out by the execution of an offsetting contract prior to expiration.

The key to understanding futures transactions is the fact that futures contract prices on U.S. government and agency securities move in the same manner as bond prices; e.g. rising interest rates result in falling futures prices and falling interest rates result in rising futures prices. Hence, the purchase of a futures contract ("long" futures contract) at a price of 98 will result in a loss if future market participants perceive rising interest rates in the month of contract expiration and act accordingly; then the offsetting of a futures contract (executing a "short" futures contract) would have to be at a lower price; e.g. 96. As in the case of any commercial transaction, the participant has a loss if the sale price is lower than the purchase price, or a gain if the sale price is higher than the purchase price.

2130.0.4.1 Variation Margin Calls

Variation margin calls for each contract and expiration month are based upon the closing futures exchange price. If there is a change from the previous day's closing prices, the long contract holders will be required to post additional margin which will be passed through via the clearing house process to short contract holders or vice-versa. Subsequent to the computation of variation margin calls, the clearing house member brokers are required to post variation margin on behalf of the clearing firm and its customer accounts prior to commencement of the next day's trading. Then, the clearing brokers call their FCM and public customers requesting more margin to bring the accounts up to the required maintenance margin level.[3] Of course, if a futures position has a gain at the end of the day, the clearing firm receives a deposit in its margin account. The firm, in turn, increases the margin account balances of customers holding contracts with gains.

For illustrative purposes, we will again assume that a customer purchased a futures contract (long contract, face value $100,000) at a price of 98. If the next closing futures price is 97, the customer will have suffered a one point margin loss (if the customer chose to offset the long contract with a short contract, the transaction would be closed out at a one point loss). Conversely, the party with a short contract executed at 98 would receive a one point margin payment to his account.

Assuming that the initial margin requirement is $1,500 and the variation margin requirement is $1,000, the following summarizes the steps followed in administering a customer's (long position) margin account in connection with the previously described transaction.

Transaction	*Margin Account Balance*
1. Deposit initial margin	$1,500
2. Purchase $100,000 contract @ 98	500
3. Day 1—Closing futures price 97 (Reduction of $1,000 in margin account to reimburse broker for posting margin with clearing corporation).	
4. FCM calls customer to request $1,000 to bring account up to required initial margin level.	
5. Reimbursement to FCM of $1,000	1,500

It is important to note that once the margin account balance falls below the variation margin level, the customer is required to deposit additional funds to replenish the account balance to

3. It should be noted that public customers generally have more time to meet maintenance margin calls than do FCMs. However, if a customer fails to meet a variation margin call within three days, the FCM must take a charge against its net capital if it fails to close out the customer's contract (17 C.F.R. 1.17(c)5(viii)).

the initial margin level. If there is a drop in the value of the contract which places the margin account balance below the initial margin level but above the variation margin level, the customer is not required to deposit additional margin monies. Alternatively, if there is a positive flow of margin monies the customer is free to withdraw any amount which exceeds the initial margin requirement.

The entire marking-to-the-market process is repeated at the close of the next business day using a comparison of the previous day's closing price (97) to the current closing price. (The preceding example is simplified because it implies that the customer deposits promptly the required margin. In reality, margin is not always deposited so quickly.)

In summary, futures trading is a "zero sum game" because of the equal number of long and short contracts outstanding, and the variation margin payments reflect this fact, i.e. for every long contract holder posting variation margin, there is a short contract holder receiving margin.

2130.0.5 THE DELIVERY PROCESS

Futures contracts are defined as "standardized contracts traded on organized exchanges to purchase or sell a specified financial instrument or physical commodity on a future date at a specified price." Even when a participant keeps a contract open for delivery, the "specified price" (which corresponds to a specified yield) is actually obtained through a combination of past futures market gains or losses (incurred through the daily mark to market process) and the current futures market price. For invoicing purposes, the actual delivery price is based upon a closing futures market "settlement price" on a date designated by the exchange. In addition, the final calculation of a delivery price on a bond contract will typically involve an adjustment reflecting the fact that the coupon issue to be delivered against the contract grade (8 percent) futures contract is not an 8 percent bond. For example, when current U.S. treasury bond coupons are 12 percent it is highly unlikely that a party with a short futures position would deliver a bond with an 8 percent coupon.

2130.0.6 MECHANICS AND OPERATION OF FUTURES EXCHANGES

Certain technical factors should be noted with respect to futures markets. First, futures markets are not totally free markets. Rules of the exchanges put artificial constraints—daily price movement limits—upon the amount of daily market movement allowed in given types of futures contracts. For example, government securities prices in the cash market will move as far as the market participants deem necessary to reflect the "market" for those securities, while the futures market specifying delivery of the underlying security will be constrained from having the same potential unlimited market movement. There have been instances where persons desiring to close out a futures contract by executing an offsetting contract have been unable to do so for one or more days until the exchange's daily trading limits allowed futures prices to "ratchet" up or down to the level that reflected the true "market" price as perceived by hedgers, speculators, and arbitragers.

Although the preceding illustrates the basic nature of futures price movements, do not assume that futures and cash market prices always move in the same direction at the same velocity. Futures prices by definition predict future events, e.g., a market participant can buy a futures contract to take delivery of a three month Treasury bill two years in the future.[4] In such an instance, the holder of a long T-bill futures contract agrees to the future purchase of a government security which has not yet been issued. There is no reason to assume that a contract with a distant maturity will move in the same manner as the cash market for a three month Treasury bill. In addition, there is a relationship between the cash market price of an existing security and the price of that security in the futures market which is called the basis. The basis can vary significantly over the life of a given futures contract. In the contract delivery month, the futures market price will converge towards the cash market price (the basis approaches zero), adjusted for technical factors that reflect the costs of processing and delivering securities. If the futures market price did not converge towards the cash market price in the delivery month, the arbitragers would take offsetting futures and cash market positions to arbitrage away any profitable discrepancies between the two markets.

4. All financial futures contracts have a number of contract expiration months extending into the future. As the near term contract expires, a contract with a more distant expiration date is added.

2130.0.7 COMPARISON OF FUTURES, FORWARD, AND STANDBY CONTRACTS

Excluding the fact that futures contracts are traded on organized exchanges, there are many similarities between contracts. Conceptually, the contracts are interchangeable; each type of contract can be utilized for hedging, speculating, or arbitrage strategies, but none of the contracts are transferable to third parties. While engaging in contract activities allows the participants to either assume or shift the risks of interest rate changes associated with the security deliverable under the contract, such contracts fail to provide the other benefits of owning the underlying security. Specifically, financial contracts do not pay interest, do not have a U.S. government guaranty of payment of principal at maturity, and cannot be pledged to secure public deposits or be used as collateral for repurchase agreements. The forward markets are perceived to be delivery markets wherein there is a high percentage of delivery of the underlying security.

As in the case of other futures markets, the financial futures markets were not designed to be delivery markets. Nevertheless, there have been a number of instances when a relatively high percentage of financial futures contracts have resulted in delivery. Some persons suggest tax reasons and the deliverable supply of securities as two factors that have contributed to the much higher delivery of securities than delivery of physical commodities. It is, of course, also easier and cheaper to make delivery of securities rather than railroad carloads of grain.

Trading units on futures exchanges are standardized. The standardized trading unit in a physical commodity which may be a railroad car of grain; the typical trading unit in a government or agency security futures contract may be $100,000 or $1 million par principal at a coupon rate (on coupon issues) fixed by the exchange. On the other hand, forward and standby contracts are not traded in standardized units with given contract maturity months. Instead, forward and standby contracts are custom made to suit the needs of the two parties to the transaction.

While all contract holders are involved with market risks, the holders of forward and standby contracts are especially prone to credit risk. Unlike futures contracts where the mechanics of exchange trading provide for the futures exchange clearing association to guaranty performance of each contract, forward and standby contracts are only as good as the entity on the other side of the contract. Anyone who reads the financial press should be aware that prior to the passage of the Government Securities Act of 1986, there were a number of defaults involving forward and standby contracts. In an effort to bring increased integrity into the unregulated forward contract markets, there has been a trend by some of the major securities dealers to require the posting of margin in connection with forward contract trading. There are no uniform margin requirements governing all aspects of forward contract trading, nor is there a uniform application of margin requirements by dealers requiring ‘‘house’’ margin (or internal margin requirements established and enforced by individual securities dealers). GNMA has established limited margin requirements (24 C.F.R. 390.52), as described below.

2130.0.8 OPTION CONTRACTS

Subsequent to the Board’s initial adoption of a policy statement governing futures, forward, and standby contracts, trading of interest rate options began on organized futures and securities exchanges. Proponents of exchange traded options argue that such instruments are attractive to users because they permit the user to obtain down side price risk protection, yet benefit from favorable price movement. In contrast, futures and forward contracts allow the user to lock in a specific price, but the user must forgo future participation if the market should experience an upward price movement. Furthermore, the purchaser of an option pays a one time premium for this protection and is spared the contingent liabilities associated with futures margin calls.

An option is a contract that gives the buyer, or holder, the right, but not the obligation, to buy or sell a specified financial instrument at a fixed price, called the exercise or strike price, before or at a certain future date. Some options, however do not provide for the delivery of the underlying financial instrument and, instead, are cash settled. Moreover, in some cases, the underlying financial instrument is an index. Options that can be exercised before or at the expiration date are referred to as American options; if an option can be exercised only on the expiration date, it is termed a European option.

There are two basic types of options: calls and puts. The *call option* is any option which obligates the writer to deliver to the buyer at a set price (exercise or strike price) within a specified time limit the underlying financial instrument. When the market price of the underlying instrument is above the exercise (strike) price of the call, the call option is "in-the-money." Conversely, when the market price of the underlying financial instrument is below the exercise (strike) price of the call option, the call is "out-of-the-money." When the market price of the underlying instrument is equal to the strike price, the option is "at-the-money." At expiration, the buyer will exercise the option if it is "in-the-money" or let it expire unexercised if it is out-of-the-money. An out-of-the-money call option has no value at expiration, since buyers will not purchase the underlying instrument at a price above the current market price. Prior to expiration, the value of an "in-the-money" call option is at least equal to the market value of the underlying instrument minus the strike price. The ownership of a call provides significant leverage, but raises the breakeven price relative to ownership of the underlying instrument. Holding the call limits the amount of potential loss and offers unlimited potential for gains.

A *put option* gives the buyer the right, but not the obligation, to *sell* the underlying instrument at a specified price (exercise or strike price), before or at expiration. When the market price of the underlying instrument is below the strike price of the put option, the put is "in-the-money," and a put option is out-of-the-money when the market price of the underlying financial instrument is above the strike price of the put option. Ownership of a put option offers leveraged profitability if the market value of the underlying instrument declines.

Some portfolio managers commonly employ "covered" call writing strategies to gain fee income from options written on securities held in the portfolio. If an option position is covered, the seller owns the underlying financial instrument or commodity or has a futures position. For example, an option position would be "covered" if a seller owns cash market U.S. Treasury bonds or holds a long position on a Treasury bond futures contract. Writing "covered calls" has only limited potential for gain. Writing "covered calls" is not a proper strategy for a market that could rise or fall by substantial amounts. It is generally used in a flat market environment.

Referring to the above example, if a seller holds neither the cash market U.S. Treasury Bonds or was not long on the Treasury bond futures contract, the writer would have an uncovered or "naked" position. In such instances, margin would be required (by the exchange, if an exchange traded option—not the case for an OTC option) since the seller would be obligated to satisfy the terms of the option contract if the option buyer exercises the contract. The risk potential for loss in writing "naked calls" (calls against which there are no securities held in portfolio) is great since the party required to deliver must purchase the required securities at current market prices. Naked "covered call" writing is generally viewed to be speculative since the risks are theoretically unlimited, particularly if it is done solely to generate fee income.

Options are purchased and traded either on organized exchanges or in the over-the-counter (OTC) market. Option contracts follow three-month expiration cycles (example: March/June/September/December). The option contracts expire on the Saturday following the third Friday in the expiration month. Thus, options are considered as "wasting assets" because they have a limited life since they expire on a certain day, even though it may be weeks, months, or years from now. The expiration date is the last day the option can be exercised. After that date the option is worthless.

Option premium valuation. The price (value) of an option premium is determined competitively by open outcry auction on the trading floor of the exchange. The premium value is affected by the inflow of buy and sell orders reaching the exchange floor. The buyer of the option pays the premium in cash to the seller of the option which is credited to the seller's account. Several factors affect the value of an option premium, as discussed below. The option premium consists of two parts, "intrinsic value" and "time value." *The intrinsic value* is the gross profit that would be realized upon immediate exercise of the option. Stated another way, it is the amount by which the option is in-the-money. It is the higher of: the value of an option if it is exercised today; or zero. For "in-the-money" *call* options, it is the difference between the price of the underlying financial instrument, and the exercise (strike) price of the option. For "in-the-money" *put* options, it is the difference of the exercise (strike) price of the put option and the price of the underlying financial instrument. The intrinsic value is zero for "at-the-money" or "out-of-the-money" options. The *time value* derives from the chance that an option will gain intrinsic value in the future or that its intrinsic value will increase before maturity of the contract. Time value is determined by subtracting intrinsic value from the option premium. For example,

Time value = Option premium − Intrinsic values

Time value = 5–10/64 − 4.00

Time value = 1.15384

The option premium is affected by several other factors. One factor involves the comparison of the underlying futures price versus the strike price of the option. An option's price is increased the more that it is in-the-money. A second factor is volatility. Volatile prices of the underlying financial instrument can help stimulate demand for the options, thus increasing the premium. A third factor that affects the premium of an option is the time until expiration. Option premiums are subject to greater price fluctuations because the underlying value of the futures contract changes more with a longer time period. Other factors that affect the option premium are the strike rate(s) and the domestic and foreign (if applicable) interest rates.

An exchange-traded option is often referred to as a ''standardized'' option, reflecting the fact that the terms of the contract are uniform with respect to the underlying instrument, amounts, exercise prices, and expiration dates. OTC options are characterized by terms and conditions which are unique to each transaction. Large financial institutions are often dealers in customized interest rate or foreign exchange options. For example, a banking organization might write a ''cap,'' or series of put option on pounds sterling to protect the dollar value of a sterling denominated receivable due in one year. In this case, an option can be tailored to fit the exact needs of the buyer.

Like futures contracts, contract performance on exchange-traded options is guaranteed by the clearing corporation which interposes itself as a central counterparty to all transactions. It substitutes itself as a seller to all buyers and as a buyer to all sellers. Standardization combined with the clearing corporation's guarantee facilitates trading and helps to insure liquidity in the market. The buyer or seller of an exchange-traded option may always close out an open position by entering into an offsetting transaction, with the same strike price and expiration date, and for the same amount. Indeed, most exchange-traded options are liquidated prior to maturity with an offsetting transaction, rather than by exercising the option in order to buy or sell the underlying instrument.

Buyers of exchange-traded options are not required to post funds to a margin account because their risk is limited to the premium paid for the option. However, writers (sellers) of options are required to maintain margin accounts because they face substantial amounts of risk. The amount of the margin varies depending upon the volatility in the price of the option. As the option moves closer and closer to being in-the-money, the writer is required to deposit more and more into his margin account, in order to guarantee his performance should the option eventually be exercised.

Options on futures contracts provide the holder with the right to purchase (call) or sell (put) a specified futures contract at the option's strike price. The difference between the strike price on the option and the quote on the futures contract represents the intrinsic value of the option. Options on futures contracts differ from traditional options in one key way: the party who exercises an option on a futures contract receives a long or short futures position (depending on whether he is exercising a call or put option) rather than accepting or making delivery of the underlying security or financial instrument. When the holder of a call option on a futures contract exercises the option and the futures contract is delivered, the option writer must pay the option holder the difference between the futures contract's current value and the strike price of the exercised call. The buyer takes on a long position, and the writer a short position in the futures contract. When a futures put option is exercised, the holder takes on a short futures position, and the writer a long position. The writer of the put pays the holder the difference between the current price of the futures contract and the strike price of the put option. The resultant futures position, like any other futures position, is subject to a daily marked-to-market valuation. In order to liquidate the futures position, both the buyer and the seller must undertake offsetting futures transactions.

2130.0.8.1 Other Option Contracts

2130.0.8.1.1 Stock Index Options

A stock index option is a call or a put that is based on a stock market index such as the S & P 500. As opposed to a regular call or put option on equity securities where there must be a sale and delivery of shares of stock, there is no delivery of the underlying instrument when an index option is exercised. Rather, settlement is in cash.

2130.0.8.1.2 Foreign Currency Options

The right to buy (call) or sell (put) a quantity of a foreign currency for a specified amount of the domestic currency is a foreign currency option. The size of the contract is standard for each currency. The contracts are quoted in cents per unit of foreign currency. As an example, one call option for the British pound is 12,500 pounds.

2130.0.8.2 Caps, Floors, and Collars

Caps, floors, and collars provide risk protection against floating interest rates. The market for these products is an outgrowth of the OTC market in fixed income (bond) options.

An interest rate cap contract pays the buyer cash if the short term interest index rises above the strike rate in the contract in exchange for a fee. In combination with a floating rate obligation, it effectively sets a maximum level on interest rate payments. If market rates are below the cap rate, no payments are made under the cap agreement. Thus, the buyer of a cap is able to place a ceiling on his floating rate borrowing costs without having to forego potential gains from any decline in market rates.

Cap agreements typically range in maturity from 6 months to as long as 12 years, with reset dates or frequencies that are usually monthly, quarterly, or semiannual. The London Interbank Offered Rate (LIBOR) is the most widely used reference rate for caps, floors, and collars. Other indexes used as reference rates are commercial paper rates, the prime interest rate, Treasury bill rates, and certain tax-exempt rates. Cap fees depend upon the cap level, the maturity of the agreement, the volatility of the index used as the reference rate, and market conditions. The higher the cap rate, the lower the premium. The fee is usually paid up front, but can be amortized.

An interest rate floor agreement is used to protect the overall desired rate of return associated with a floating-rate asset. In accordance with the agreement, the seller receives a fee for the floor agreement from the holder of the underlying asset. When interest rates fall, the holder of the floor contract is protected by the agreement, which specifies the fixed per annum rate (floor rate) that will be retained on those assets, at specified times during the life of the agreement, even though floating interest rates may decline further.

An interest rate collar is a variation of a cap-only agreement. Under this arrangement the seller of the collar, for a fee, agrees to limit the buyer's floating rate of interest within one agreement by a simultaneous sale of a cap and purchase of a floor, or purchase of a cap and sale of a floor. When the reference rate is above the cap rate the seller makes payments to the buyer sufficient to return the buyer's floating rate interest cost to the cap rate. Conversely, the buyer makes payments to the collar provider to bring its rate back to the floor whenever the reference rate falls below the floor rate. In effect, under a collar agreement the buyer is selling a string of call options (the floor) back to the provider of the cap. The premium received from selling the floor reduces the overall cost of the cap to the buyer of the collar. Thus, the premium for a floor/ceiling, or collar, agreement, is lower than for a cap-only agreement with the cap at the same level. This is because the floor sold to the provider of the collar has a certain value, which is passed along to the buyer in the form of a lower premium.

The disadvantage to collars, of course, is that they limit the buyer's ability to profit from declines in market rates below the specified floor. Clearly, one's interest rate expectations play an important role in determining whether or not to use a collar agreement. It should also be noted that collar agreements involve credit risk on both sides of the agreement, similar to the credit risk considerations found in interest rate swap agreements. The buyer of the collar is exposed to the risk that the provider may default on payments due under the cap agreement; and the provider of the collar is exposed to the risk that the buyer may default on payments due under the floor agreement.

2130.0.9 REGULATORY FRAMEWORK

GNMA has adopted limited margin requirements. Specifically, the GNMA margin requirements (12 C.F.R. 390.52) require marking-to-market and the posting of maintenance margin.[5] However, the GNMA margin requirements exclude the majority of GNMA forward contracts and only pertain to contracts involving GNMA issuers with other parties.[6]

The Commodities Futures Trading Commission (''CFTC'') is the agency authorized by Congress to supervise the trading of ''commodities,'' including financial futures. Exchanges which trade commodities must register with the CFTC. In addition, the various futures exchanges must receive CFTC approval before they can begin trading a new futures instrument. Brokers and dealers who execute futures contracts for customers must register as Futures Commission Merchants (''FCM'') with the CFTC. There are also CFTC registration requirements pertaining to firms engaging in commodities activities similar to an investment advisor or mutual fund in the securities markets. Finally, the surveillance activities of the various futures exchange examiners are subject to oversight by the CFTC.

With the exception of reporting requirements concerning persons or entities with large futures positions, the CFTC's jurisdiction generally does not extend to financial institutions. Rather, the federal and state banking agencies, state insurance commissions, and the Office of Thrift Supervision are responsible for supervising regulated entities' future activities, if permitted, under statute or regulation.

2130.0.10 EXAMPLES OF CONTRACT STRATEGIES

For purposes of reporting large positions to the CFTC a market participant defines its future activities as ''speculative'' or as ''hedging.'' Basically, CFTC rules consider a participant to be a hedger if certain facets of such person's business can be hedged in the futures markets; persons who do not have a business need for participating are deemed to be speculators. It is anticipated that bank holding companies characterize their contract activities as ''hedging'', or possibly as arbitrage between various markets. Examiners must scrutinize contract positions for purposes of evaluating risk.

The Board policy statement concerning bank holding companies[7] states:

> ''. . . the Board believes that any positions that bank holding companies or their nonbank subsidiaries take in financial contracts should reduce risk exposure, that is, not be speculative.'' It should be noted, however, that a more liberal interpretation of the policy statement has been permitted for dealer subsidiaries. For example, in a government securities dealer subsidiary, it is permissible to use related financial contracts as a substitute trading instrument for cash market instruments. Thus, the use of financial contracts is not limited solely to reducing the risk of dealing activities.

Some examples of contract strategies are provided which reduce risk when viewed in isolation. A definition of a financial hedge is:

> ''to enter transactions that will protect against loss through a compensatory price movement.''

In looking at a hedge transaction in isolation, there should be certain elements present to make a hedge workable:

1. The interest rate futures or forward contract utilized should have a high positive correlation (prices that tend to move in the same direction with similar magnitude) with the cash position being hedged. In other words, the futures or forward position taken should be structured so that an upward price movement in the contract offsets a downward price movement in the cash or risk position being hedged, and vice versa.
2. The type (e.g. T-bill, T-bond, etc.) and size of the contract position[8] taken should have a proportionate relationship to the cash or risk position being hedged, so that futures gains (losses) will approximately offset any losses (gains) on the hedged position.

5. Initial margin requirements necessitate the pledging of something of value prior to initiation of a transaction. Depositing maintenance margin refers to pledging something of value in reaction to market movements; e.g. depositing cash representing the difference between a forward contract price and its current market value.

6. See SR-625 dated July 23, 1980.

7. The Board's policy statement on engaging in futures, forwards, and option contracts.

8. Futures market participants engage in a practice, sometimes known as ''factorweighting'' or ''overhedging,'' to determine the appropriate number of futures contracts necessary to have the proper amount of compensatory price movement against a hedged cash or risk position. For example, it would require 10 mortgaged-backed futures contracts (8% coupon, $100,000 face value) to hedge an inventory of $1,000,000 mortgage-backed (8% coupon) securities. Alternatively, 14 mortgage-backed futures contracts would be required to hedge a $1 million inventory of mortgage-backed securities with a 13½% coupon. Overhedging or factor weighting is necessary in hedging securities with higher coupons than those specified in futures contracts (currently 8% on bond futures) because higher coupon securities move more in price for a given change in yield than lower coupons.

3. The contract position taken should have a life which is equal to or greater than the end of the period during which the hedge will be outstanding. For example, if interest rate protection was deemed necessary for a six-month time span, it would not ordinarily be wise to enter a contract expiring in three months.

2130.0.10.1 The Mortgage Banking Price Hedge

Assume that a mortgage banking subsidiary agrees in June to originate mortgages at a fixed yield in the following October. Unless the loan originator has a forward commitment to sell the loans to a permanent investor(s), it is exposed to a decline in the principal value of mortgages due to a rise in interest rates between the commitment date and ultimate sale of the loans. An example of a traditional "short hedge" would be the sale of futures contracts in an attempt to reduce the risk of price fluctuation and insure a profitable sale of the loans. However, in following this strategy the mortgage originator also chooses to forfeit its ability to reap a profit if interest rates should fall.

If interest rates increased, the loss on the sale of mortgages or a pool of mortgage-backed securities will probably be largely offset by a gain on the futures transaction; see example below. If interest rates fall, the mortgage originator would gain on the resale of mortgages but lose on the futures market transaction. Hence, in a true hedge, the hedger's earnings are relatively unaffected by a change in market interest rates in either direction.

Generally accepted accounting principles applicable to mortgage activity require that mortgages held for resale be periodically revalued to the lower of cost or market (Financial Accounting Standards Board Statement No. 65, "Accounting for Certain Mortgage Banking Activities"). Unrealized gains and losses on outstanding futures contracts are matched against related mortgages or mortgage commitments when the inventory is revalued to the lower of cost or market; i.e. the lower of cost or market valuation is based upon a net figure including unrealized related futures gains and losses.

2130.0.10.2 Basis

Basis is the difference between the cash (spot) price of a security (or commodity) and its futures price. In other words:

$$\text{Basis} = \text{Spot price} - \text{Future price}$$

For short-term and intermediate futures contracts, the futures price is the quoted futures price times an appropriate conversion factor. For short-term futures contracts the quoted futures price is 100 less the annualized futures interest rate. The invoice price must be determined using yield-to-price conventions for the financial instrument involved.

Basis may be expressed in terms of prices. Due to the complexities involved in determining the futures price, it is thus better to redefine price basis using actual futures delivery prices rather than quoted futures prices. Thus, the price basis for fixed income securities should be redefined as:

$$\text{Price Basis} = \text{Spot price} - \text{Futures delivery price.}$$

Basis may also be expressed in terms of interest rates. The *rate basis* is defined as:

$$\text{Rate basis} = \text{Spot rate} - \text{Futures rate}$$

The spot rate refers to the current rate on the instrument that can be held and delivered on the contract. The futures rate represents the interest rate that corresponds to the futures delivery price of the deliverable instrument.

The rate basis is useful in analyzing hedges of short-term instruments since it nets out all effects resulting from aging. For example, if a one year T-bill has a rate of 9 percent with a price of 85, and a 3-month T-bill has a rate of 9 percent and a price of 94, the price basis would be −9. If a cash security ages, it does not necessarily mean that a change in the rate basis has taken place.

2130.0.10.3 Trading Account Short Hedge

Another example of a short hedge pertains to securities dealers that maintain bond trading accounts. While bonds are held "long" (actually owned by the dealer) in trading accounts, dealers are subject to two risks. First, there is the risk that the cost can change regardless of whether the funds are generated through repurchase agreement financing or the dealer's other funding sources. When there is an inverted yield curve (short-term interest rates are higher than long-term rates), trading portfolio bonds in inventory yield less than the cost of funds required to carry them. Second, there is the risk that bond market interest rates will rise, thus forcing the dollar price of bonds down.

2130.0.10.3.1 Example 1: A Perfect Short Hedge[1]

Month	*Cash Market*	*Futures Market*
June	Mortgage department makes commitment to a builder to originate $1 million of mortgages (based on current GNMA 8's cash price) at 98-28⁄32 for $988,750	Sells 10 December mortgage-backed futures at 96-8⁄32 for $962,500 to yield 8.59 percent
October	Mortgage department originates then *sells* $1 million of pooled mortgages to investors at a price of 95-20⁄32, for $956,250	Buys 10 December mortgage-backed futures at 93, for $930,000 to yield 8.95 percent
	Loss: $32,500	Gain: $32,500

1. The effects of margin and brokerage costs on the transaction are not considered. It should be noted that "perfect hedges" generally do not occur.

The following example pertains to a bond trading account. Assume that the dealer purchases Treasury bonds on October 4 and simultaneously sells a similar amount of Treasury bond futures contracts. The illustration ignores commission charges and uses futures contracts maturing in March 19x9 because the dealer's technical analysis discovered an advantage in using the March 19x9, rather than the previous December contract as a hedge. (At that time the previous December contract was the next available contract still trading.)

	Cash Market		*Futures Market*	
10/04/1998	Purchase $5MM T-bonds maturing Aug. 2005, 8% coupon at 87-10⁄32:		Sell $5MM T-bonds futures contracts expiring Mar. 1999 at 86-21⁄32:	
	Principal =	$4,365,625	Contract value =	$4,332,813
10/23/1998	Sell $5MM T-bonds at 79.0:		Buy $5MM T-bond futures Mar. 1999 at 79-1⁄32	
	Principal =	3,950,000	Contract value =	3,951,563
	Cash loss =	($415,625)	Futures gain =	$381,250

Although the hedge did not prevent the dealer's trading account from losing money, it limited the loss to $34,375 instead of $415,625.

It is worth noting that the preceding example also illustrates some of the dangers of using interest rate futures contracts. Although the futures market proved useful to the trading department, a futures contract could have serious consequences for a dealer using an alleged "long hedge to lock-in an attractive yield."

2130.0.10.4 Long Hedge

In certain areas of the country, financial institutions desiring to hold public deposits are required to bid competitively for deposits. The case discussed below pertains to a situation where the competitive bids must be tendered one calendar quarter in advance of receiving the deposit. In this example, the asset side of the balance sheet is not discussed since it is assumed that a banking organization paying the prevailing one-year C.D. interest rate can utilize the funds at a profitable spread.

In this type of situation the bidding institutions are generally vulnerable to falling interest rates; one can safely assume that an institution selected to hold public deposits would not be dismayed to learn subsequently that interest rates had risen and it had locked-in a funding source at or below market rates. However, the funds will not be received for another 3 months. Thus, there is the possibility that interest rates could drop in the interim, leaving a reduced or possibly negative net interest margin when the funds are deployed.

There are a number of approaches available to attempt to ensure that future time deposits can be obtained without paying higher than market interest rates. One method is forecasting the appropriate interest rate to be paid on a given time deposit three months in the future. However, forecasting has become increasingly difficult to do with accuracy in the recent periods of fluctuating interest rates. An alternative approach would be to quote the current C.D. rate (adjusted slightly for competitive factors) with an intent to hedge in the futures market if the banking organization's interest rate bid is accepted. Upon receiving notification that its deposit bid has been accepted, the institution can then purchase an appropriate number of futures contracts to insure a profitable investment spread three months hence when it actually receives the deposit.

The following example on June 1, 19x0; the facts are as follows:

Size of public deposits offered	$10 million
Date of deposit	September 2, 19x0
Term	1 year
Current C.D. rate	8¼%

For purposes of this illustration, assume that a bid was submitted to pay 8¼% for one year on $10 million. The bids were due June 1 and notification was given June 2 of the intention to provide the funds on September 2; and the banking organization decided to purchase futures contracts on June 2.

A Treasury bill futures contract, expiring in 3 months, is selected as the hedging vehicle because it reflects price movement of an instrument with a comparable maturity to one-year C.D., and there was no C.D. futures contract trading. For purposes of this illustration, it is assumed that the contract offers sufficient liquidity to enable the banking organization to readily offset its open futures position when necessary. Using the bill contract is an example of "cross hedging" which is defined as the buying or selling of an interest rate futures contract to protect the value of a cash position of a similar, but not identical, instrument. This type of hedging is a measured risk since the outcome of such a transaction is a function of the price correlation of the instruments being hedged. At any given moment it is conceivable that a negative correlation could exist between two unlike instruments; despite the presence of a strong correlation over an extended time period.

Date	*C.D. Rate*	*Transactions*	*T-bill*	*Futures* [1]
June 2, 19x0	8.25%	Purchase 40 Contracts	91.84	8.16%
Sept. 2, 19x0	11.00%	Sell 40 Contracts	90.05	9.95%

1. The size of the trading unit is based upon U.S. T-bills having a face value at maturity of $250,000 (40 × 250M = 10MM). Prices are quoted in terms of an index representing the difference between the actual T-bill yield and 100.00. Every one basis point movement on a contract is equal to $25.00 per contract.

2130.0.10.4.1 Evaluation of the Hedge

Total interest (not compounded) to be paid (8¼%)	$ 825,000
Alternative C.D. interest (not compounded) at current rate (11%)	1,100,000
Difference	275,000
Futures trading loss*	(179,000)
Net difference	$ 96,000

*Computation—Purchase price 91.84
Sale price 90.05
1.79 or 179 basis points
(179 × $25.00 × 40 contracts = $179,000)

In retrospect, it would have been better if the banking organization would not have hedged. By agreeing to an interest rate on June 2, it obtained deposits on September 2 and will pay approximately $275,000 less in interest payments to the municipality than is required on an ordinary C.D.(s) issued on September 2. The $179,000 futures trading loss, of course, reduced the windfall interest income due the banking organization. A net interest income spread of approximately $96,000, instead of a $275,000, demonstrates two principles: 1) cross hedging can cause unexpected results; and 2) it is quite difficult to find perfect hedges in the real world. The hedge was structured so that a cash gain was offset by a futures loss—incorporating the offsetting principles of a hedge transaction. If the general level of interest rates had fallen, a futures gain should have occurred to offset the higher (relative to prevailing market rates) cost of funds obtained on September 2.

2130.0.10.5 Using Options to Create an Interest Rate Floor

Assume that on September 28th it is decided to rollover a $1,000,000 investment in 13-week Treasury bills on November 28, which also happens to be the expiration date for call options on the December Treasury bill futures contract. The banking organization, concerned that interest rates will fall between September 28 and the rollover date, wishes to hedge the rollover of its investment. The portfolio manager can set a minimum yield on the rollover investment by either buying a Treasury bill future call option, or by buying a Treasury bill futures contract. Further assume that the December Treasury bill futures contract can be bought for a price of 93.70 which implies a discount yield of 6.30 percent. Treasury bill futures call options with a strike price of 93.75, implying a discount yield of 6.25 percent, sell for a premium of 20 basis points, or $600 (20 basis points × $25/basis point = $500).

If the banking organization could actually buy a Treasury bill futures contract that expired on exactly November 28, then there would be a perfect hedge since the rate of return on the bills would be explicitly fixed by the futures hedging strategy. However, the closest maturing Treasury bill futures contract expires in December, several weeks after the rollover date for the banking organization's investment. Uncertainty over the actual discount yield of the Treasury bills on the rollover date and the yield produced by the hedge is known as "basis risk," the risk that the yield on the hedge may differ from the expected yield on the hedged item. For purposes of this example, assume that the yield on the futures contract equals the actual discount yield on the 13-week Treasury bills at the rollover date. Thus, the futures hedge in this example will provide an effective discount yield of 6.30 percent on the rollover of the 13-week Treasury bill investment.

Assume that rates fall after September 28 and that the discount yield on Treasury bill futures contracts declines from 6.30 percent to 6.00 percent at the November 28 expiration date of the December Treasury bill futures options contract. The option to buy the Treasury bill futures will be exercised since the strike price of 93.75 is below the market price of 94.00 for the underlying futures contract, yielding a profit of 25 basis points or $625 (25 basis points × $25/basis point). The profit must be offset by the 20 basis point cost of the option, which reduces the net profit to 5 basis points. The effective hedged discount yield is 6.05 percent (6.00 percent on the 13-week Treasury bills—assuming no basis risk—plus the 5 basis point profit from the hedge). The option hedge produces a yield that is 5 basis points higher than the unhedged yield, but 25 basis points lower than the 6.30 percent yield that would have resulted from hedging with futures.

Although the option hedge resulted in a lower effective yield than the futures hedge, it set an absolute floor on the investment. This is because any decline in the discount yield of the Treasury bills below 6.05 percent would be offset dollar for dollar by the additional profits from the hedge. The real advantage of the option hedge is that, although it establishes a floor that is lower than the rate fixed by the futures hedge, it allows the hedger to participate in any increase in interest rates above the cost of the call premium. For example, if interest rates increased such that the price on the December Treasury bill futures contract on November 28 falls to 93.00, implying a discount yield of 7.00 percent, the option would expire unexercised since the strike price is above the price of the underlying futures contract. Again, assuming that the spot price for the 13-week Treasury bills is equal to the futures price, the effective discount yield is 6.80 percent (7.00 percent minus the 20 basis point call option premium), 50 basis points higher than the yield that would have been provided by the futures hedge.

2130.0.10.6 Hedging a Borrowing with an Interest Rate Cap

In order to limit a borrower's interest rate risk, sophisticated banking institutions may offer cap agreements as part of a loan package to their clients. While such an arrangement provides some comfort that the borrower's ability to repay will not be jeopardized by a sharp increase in interest rates, it obviously transfers that interest rate risk back to the lender. Nevertheless, many banking institutions feel they are better able to manage that risk than are some of their clients. Cap agreements have also been utilized to cap the rate on issued liabilities. For example, an institution might be able to issue medium-term floating rate notes at 3-month LIBOR plus an eighth of a percent. Alternatively, that institution could issue a capped floating rate note at 3-month LIBOR plus three-eights of a percent. By subsequently selling the cap separately back into the market the institution could, achieve sub-LIBOR funding, depending on the proceeds from the sale of the cap.

A cap agreement is typically specified by following terms: notional principal amount; maturity; underlying index, frequency of reset, strike level. As an illustration, a cap agreement might have the following terms:

Notional Principal Amount	$10,000,000
Maturity	2 Years
Underlying Index	3-month LIBOR
Rate Fixing	quarterly
Payment	quarterly, in arrears, on an actual/360-day basis
Cap Level	9%
Up Front Fee	1.11% of par ($111,000)

Under the terms of this agreement, if at any of the quarterly rate fixing dates 3-month LIBOR exceeds the cap level then the seller of the cap would pay the buyer an amount equal to the difference between the two rates. For example, if at a reset date LIBOR was set at 10 percent, the payment would be:

10%(90/360 × $10,000,000)

–

9%(90/360 × $10,000,000)

=

$25,000

Thus, the writer of the cap would pay the buyer $25,000. If 3-month LIBOR for the quarter were set at or below the cap level of 9 percent, no payment would be made.

2130.0.11 ASSET-LIABILITY MANAGEMENT

Financial contracts can be used as a tool in an overall asset-liability management strategy. In order to use financial contracts in this context, a BHC or nonbank subsidiary must first identify where interest-rate exposure lies as indicated by mismatches between asset and liability structures. In those instances where the BHC or nonbank subsidiary has variable-rate assets and variable-rate liabilities with comparable maturities, there is, in theory, no need to hedge with financial contracts since that portion of the asset-liability structure is already hedged. The same holds true for fixed-rate assets and liabilities (yielding a positive interest-rate margin) of comparable maturities. Once a BHC or nonbank subsidiary has identified the undesired mismatches in assets and liabilities, financial contracts can be used to hedge against the identifiable mismatch—for example, long positions in contracts can be used as a hedge against funding interest-sensitive assets with fixed-rate sources of funds, and short positions in contracts can be used as a hedge against funding fixed-rate assets with interest-sensitive liabilities.

BHCs or nonbank subsidiaries that choose to employ financial contracts as a tool in their general asset-liability management program and properly use financial contracts are striving towards worthwhile goals. The discipline of identifying mismatches between assets and liabilities tends to focus the practitioner's attention on the entire balance sheet. Examiners should be aware that marketing efforts on behalf of the futures exchanges have attempted to focus upon just one side of the balance sheet by "pairing" a futures contract with an asset or a liability. In considering financial-contract activities, examiners need to remember that financial-contract activities must be evaluated in light of both sides of a balance sheet.

One final point should be made with respect to “hedging” based upon pairing a futures contract against a portfolio security. Since this type of “hedging” can be done while considering only the asset side of the balance sheet, it is possible that such a strategy could increase interest-rate risk rather than reduce it. For example, assume (unrealistically) that there is a perfect balance between variable-rate assets and liabilities, and the firm is evaluating fixed-rate assets and liabilities. Management determines that there is a perfect balance between fixed-rate assets and liabilities and then isolates the last fixed-rate asset and liability. Make the further assumption that the organization holds a six-month note yielding 12 percent which is financed by funds maturing in six months which costs the organization 10.5 percent. By executing a short futures contract “paired” against the six-month note, the organization would move from an overall “hedged” position to an “unhedged” position. In other words, the futures contract would move the organization from an overall neutral position and expose the organization to interest-rate risk.

It should be evident why it is more productive to consider the “big picture” in inspections rather than focusing upon individual or “paired” (futures against each position) transactions. The most meaningful approach is to evaluate hedging strategies and open financial contract positions in light of its business needs, operations, and asset-liability mix.

2130.0.12 INSPECTION OBJECTIVES

1. To determine the purpose of financial-contract positions. Any positions that bank holding companies or their nonbank subsidiaries (except certain authorized dealer subsidiaries) take in financial contracts should reduce risk exposure, that is, not be speculative.
2. To determine whether prudent written policies, appropriate limitations, and internal controls and audit programs have been established and whether management information systems are sufficiently adequate to monitor risks associated with contracts involving futures, forwards, and options (including caps, floors, and collars).
3. To determine whether policy objectives concerning the relationship of subsidiary banking organizations and the parent bank holding company specify that each banking organization in a holding company system must be treated as a separate entity.
4. To determine reporting compliance in accordance with the Board’s bank holding company policy statements. See section 2130.0.17 for the appropriate cites.

2130.0.13 INSPECTION PROCEDURES

The term “banking organization” is used generally to refer to a bank holding company, the parent company, or nonbank subsidiary.

1. Determine if the banking organization’s financial-contract activities are related to the basic business of banking.

   Consider whether the financial-contract activities are closely related to the basic business of banking; that is, taking deposits, making and funding loans, providing services to customers, and operating at a profit for shareholders without taking undue risks. Taking financial-contract positions solely to profit upon interest-rate forecasts is considered to be an unsafe and unsound practice. Profitability of contract activities is not the criterion for evaluating such activities. It is quite probable that a bona fide hedge strategy could result in a contract loss which would be offset by increased interest earnings or a higher price for an asset sold, for example, a pool of mortgages. Criticize contracts placed solely to profit upon interest-rate movements. Verify that contract activities are conducted in accordance with the Board’s policy statement. Where contract positions are of excessive size and could jeopardize the financial health of the entity under examination, the gains or losses realized because of financial-contract activities should be criticized.
2. Ascertain whether policy objectives highlight the circumstances under which financial contracts should be used.

   Determine whether management and operating personnel have received sufficient guidance. Carefully constructed policy objectives should be formulated with the knowledge that although proper utilization of financial contracts limits loss potential, such utilization also limits potentials for gains. Policy objectives should be formulated to limit required resources (margin monies, commissions, and personnel to execute, monitor, and audit contract activities). A well-constructed policy should be designed to preclude various operating areas of a banking organization from taking offsetting financial contract positions. Finally, there should be established benchmarks for determining whether financial contracts are meeting desired objectives.

3. Determine if policy objectives concerning the relationship of subsidiary banking organizations and the parent bank holding company comply with the Board's directives.

   Each banking organization in a holding company system must be treated as a separate entity. The policy statement accommodates centralized holding companies in that the holding companies are free to provide guidance to subsidiary banking organizations and execute contracts as agent on behalf of the banking organization, provided that each banking organization maintains responsibility for financial contract transactions executed on its behalf. Accordingly, a holding company that has centralized management could, and perhaps should, consider the interest-rate exposure of its subsidiary banks on a consolidated basis in determining whether future contracts can usefully be employed to reduce that exposure, but any future contracts that are executed must be recorded on the books and records of a subsidiary bank that will directly benefit from such contracts.

   The question concerning the relationship of a subsidiary bank to its holding company may also lead one to consider the relationship of a subsidiary bank with its correspondent bank or broker. One might also query to what extent may less sophisticated institutions rely upon brokers and/or correspondent banking organizations for advice in this area?

   Less sophisticated institutions can place only limited reliance on others for advice in this area. The bank holding company policy statement[9] emphasizes that responsibility for financial-contract activities rests solely with management. Additional information on securities transactions and the selections of securities dealers can be found in section 2126.1.

4. Ascertain whether policy objectives and/or position limits require prudence on the part of authorized personnel entering into these new activities. If discretion is left to senior managers, determine whether management has issued instructions to ensure that the level of financial-contract activity is prudent relative to the capabilities of persons authorized to execute and monitor contracts.

   A new activity such as financial contracts should, as a general rule, be entered slowly. In developing expertise, management should mandate a low level of activity until persons authorized to execute contracts gain sufficient expertise or until new personnel are employed that have sufficient training and experience to engage in financial-contract activities on a larger scale. Senior management must develop the expertise to understand and evaluate techniques and strategies employed to ensure that an experienced professional does not engage in improper or imprudent activities.

5. If a banking organization uses financial contracts as part of its overall asset-liability management strategy, determine whether the organization developed an adequate system for evaluating its interest-rate risk.

   Without a system for identifying and measuring interest-rate risk, it is impossible to engage in hedging activity in an informed and meaningful manner. Failure to identify the mismatches in the organization's asset-liability mix would make it difficult to select the proper number and types of financial contracts—for example, bond or bill financial contracts—to provide an appropriate amount of interest-rate-risk protection. Evaluate whether the organization's interest-rate-risk measurement techniques appear reasonable to determine whether the financial contracts employed were successful in providing the proper amount of futures gains (losses) to cover the hedged risk position.

6. Determine if the recordkeeping system is sufficiently detailed to permit personnel to document and describe in detail how financial-contract positions taken have contributed to the attainment of the banking organization's stated objectives.

   There is no universal, adequate recordkeeping system for this purpose. Examiners must evaluate each individual system relative to the organization's stated objectives and activities. If the recordkeeping system cannot be used to illustrate how financial contracts contributed to the attainment of the banking organization's stated objectives, the

9. The Board's policy statement on engaging in futures, forwards, and option contracts.

recordkeeping system is inadequate. BHCs with inadequate recordkeeping systems should be instructed to make appropriate modifications.

7. Ascertain whether the banking organization's board of directors has established written limitations with respect to financial-contract positions.

   NOTE: The bank holding company policy statement requires that the board of directors establish written policies and position limitations in connection with financial-contract activities. If a committee has been delegated similar responsibilities within the organization, and a committee makes the decision, its recommendation should be ratified by the board of directors.

8. If there is the potential to exceed the above limitations in certain instances, determine whether there are firm, written procedures in place concerning the authorizations necessary to exceed limits.
9. Determine whether the board of directors, a duly authorized committee thereof, or internal auditors review at least monthly financial-contract positions to ascertain conformance with limitations. (See item (b) of the bank holding company policy statement.)
10. Determine if the banking organization maintains general-ledger memorandum accounts or commitment registers to adequately identify and control all financial-contract commitments to make or take delivery of securities or money market instruments.
11. Determine if the banking organization issues or writes option contracts expiring in excess of 150 days which give the other party to the contract the option to deliver securities to it.

    Examiners should review the facts surrounding standby contracts issued by holding companies. Examiners should also review accounting entries connected with bank holding company standby contracts to determine whether standbys were issued to earn fee income "up front" and exploit the lack of generally accepted accounting principles.

12. Determine whether financial-contract positions are properly disclosed in notes to the statements of financial condition and income and that the contract positions have been properly reported on FR Y-9C, Schedule HC-F, "Off-Balance-Sheet Items."
13. Determine whether the banking organization has implemented a system for monitoring credit-risk exposure associated with various customers and dealers with whom operating personnel are authorized to transact business.

    All financial-contract trading involves market risks. However, forward and OTC options trading, as well as swap activities, also involve credit risk. The key concern is whether the contra party to a transaction will be ready, willing, and able to perform on contract settlement and payment dates. While maintaining control over credit-risk exposure should ensure that a financial organization will not enter excessive (relative to the financial condition of the contra party) forward or standby contracts, monitoring such exposure may not prevent default in all instances.

14. Ascertain whether the banking organization has implemented internal controls and internal audit programs to ensure adherence to written policies and prevent unauthorized trading and other abuses.
15. Determine if the Reserve Bank was notified at the inception of bank holding company futures, forward, and option activities as required by paragraph (f) of the holding company policy statement (*Federal Reserve Regulatory Service* 4–830).
16. Determine if the personnel engaged in financial-contract activities have sufficient knowledge and understanding of the markets to perform those functions.

2130.0.13.1 Evaluating the Risks of Contract Activities

Evaluating the organization's stated objectives and their effects on overall risk is a difficult task involving legitimate cause for concern because of the high degree of leverage involved in contract activities. Although there is an emerging trend towards dealers requiring margin on forward trades, forward contract transactions generally have not required margin deposits, and thus, grant users unlimited leverage. Although the amount of margin required for futures trades is extremely small (for example, \$1,500 initial margin to take a \$1 million futures position), the rules of the exchanges do require a daily mark to market and a requirement that members of the futures exchanges meet maintenance margin calls on behalf of their customers. Customers, of course, are generally required to promptly reimburse brokers for margin posted on their behalf.

Nevertheless, engaging in contract activities requires market participants to assume the market risks of either owning securities or ‘‘shorting’’ securities. Issuing (or selling) standby contracts granting the other party to the contract the option to deliver securities is a practice which results in the issuer functioning as an insurer against downside market risk for the other party; in essence, the party receiving the standby fee assumes all of the interest-rate risks of security ownership, but receives none of the benefits.

2130.0.13.2 Reviewing Financial-Contract Positions

The preceding questions were designed to focus the examiner's attention on a bank holding company's stated objectives for engaging in financial contract activities and the manner in which such activities are conducted. It is also vital to review position records with respect to financial contracts or, if necessary, prepare a schedule grouping similar contracts by maturity. Once the various positions have been scheduled it will be possible to evaluate the risk of contract positions relative to the organization under inspection.

2130.0.13.3 Factors to Consider in Evaluating Overall Risk

To determine whether contract positions are reasonable, an examiner must evaluate positions in light of certain key factors: the size of the organization, its capital structure, its business needs, and its capacity to fulfill its obligations. For example, open contracts to purchase $7 million of GNMA securities would be viewed differently in a BHC with $24 million of assets than in a BHC with $1 billion of assets.

There is no guaranty that financial contract prices and cash market prices will move in the same direction at the same velocity; however, contract prices and cash market prices ultimately move towards price convergence in the delivery month. Keeping this fact in mind, the risk evaluating process can be simplified by thinking of the securities underlying the various contracts as a frame of reference. For example, if a BHC holds ‘‘long’’ futures contracts on $10 million (par value) of Treasury bonds the examiner should first evaluate the effect (excluding tangible benefits of ownership, e.g., interest income, pledging, etc.) on the organization of holding $10 million of bonds in its portfolio and the resultant appreciation or depreciation if interest rates rise or fall by a given amount. A ‘‘short’’ contract of $10 million Treasury bonds would be evaluated as if the banking organization had executed a short sale for $10 million. In addition, the examiner would have to consider the positive or negative flow of funds received or disbursed as margin to reflect daily contract gains and losses. While commissions on futures contracts are not a major factor in hedging transactions, they also should be considered in this evaluation. Typically, commissions are charged on a ‘‘round turn’’ basis—meaning that commissions are charged based upon an assumption that each futures contract will be offset prior to maturity. Since each contract will have to be offset, or securities bought or delivered, it should be determined whether funds will be available to offset contracts or fund delivery. In the case of certain short contracts, a determination must be made as to whether deliverable securities are held or committed for purchase by the banking organization.

2130.0.13.4 Contract Liquidity

In addition to looking at the ‘‘big picture,’’ examiners should consider a position in a given contract maturity month relative to the volume of contracts outstanding. For example, in futures trading there is generally a greater open interest in the next contract maturity month and perhaps the following one or two contract maturity months. As one moves away from the near term contracts, there is generally less trading and less ‘‘open interest’’ in the more distant contracts. ‘‘Open interest’’ or the amount of contracts outstanding is reported in financial newspapers and other publications. Generally, the contracts with the largest open interest and daily trading volume are considered to be the most liquid.

To illustrate the concept discussed above, one should consider the following example. A ‘‘red flag’’ should be apparent if a contract review discloses that the organization has taken a sizeable position in a contract expiring in two years. When the examiner checks financial newspapers and other publications, he or she may discover that the BHC's position represents 20 percent of the open interest in that contract. Such a situation would clearly be unsafe and unsound because the relatively huge position coupled with the typically less liquid conditions in distant contracts makes it highly unlikely that the BHC could quickly close out its position if necessary. In addition, one should also question why the distant maturity was chosen since there is no immediate reason to expect a close correlation to the cash market for the underlying security.

With respect to forward contracts, there is an active forward market for GNMA securities specifying delivery of the underlying securities up to four or five months in the future. If a banking organization is executing contracts for more distant maturities, management should be queried as to why it is necessary to trade outside the normal trading cycle.

2130.0.13.5 Relationship to Banking Activities

In evaluating contract activities, examiners should verify that contract strategies are carried to fruition in connection with their relationship to overall objectives. Examiners may find it useful to recommend additional recordkeeping in borderline cases when they encounter situations where financial-contract positions are closed out frequently during the hedge period, but not frequently enough to be considered trading rather than hedging activities. Examiners should suggest proper documentation with regard to financial contracts executed and any additional recordkeeping as needed. Specifically, users could be requested to establish written criteria specifying what circumstances will trigger the closing of such contracts. Then users would be judged by how well they adhered to the criteria as well as whether the plan reduced risk. Hopefully, such recordkeeping would give users the latitude to close out a financial-contract position working against them (as determined by some prearranged benchmark), yet still require sufficient discipline to prevent users from selectively executing financial contracts merely to profit upon interest-rate forecasts.

The preceding discussion should reinforce the fact that the actual utilization of financial contracts is not a clear-cut issue in terms of hedging verses speculation. However, certain key concepts should be kept in mind. First, a decision to hedge with futures or forward contracts involves making a decision that one is content to lock in an effective cost of funds, a sale price of a specific asset, etc. However, the decision to hedge which gives downside protection also means forfeiting the benefits which would result from a favorable market movement. Thus, in evaluating hedge strategies, the organization should be judged as to whether it maintained hedge positions long enough to accomplish its objectives.

Caution should be employed in performing the analysis of financial contracts used to obtain targeted effective interest rates. Examiners should not evaluate transactions solely on a “paired” basis, that is, looking at paired cash market and financial-contract positions and forgetting about financial-contract positions relative to the organization’s entire balance sheet, nor should examiners fail to review the overall nature of financial-contract activities. For example, individual opening and closing of financial contracts could appear reasonable, but the aggregate activities may be indicative of an organization that is in reality operating a futures trading account solely to profit on interest-rate expectations.

2130.0.13.6 Parties Executing or Taking the Contra Side of a Financial Contract

In addition to monitoring contra-party credit risk, serious efforts should be made to ensure that the banking organization carefully scrutinizes the selection of brokers and dealers. In the case of futures contracts, the Commodity Exchange Act requires that an entity functioning as a futures commission merchant be registered with the CFTC. However, not every FCM may be a member of a commodities exchange. Members of an exchange are given additional supervision by the exchange, while nonmembers are subject to audit by the National Futures Association. In selecting any broker or dealer, an organization should give careful consideration to its reputation, financial viability, and length of time in business. If an organization intends to deal with a newly established FCM or broker-dealer, special efforts should be made to verify the reputation and integrity of its principals. (For additional discussion, see *Federal Reserve Regulatory Service* 3–1562). Although such measures cannot ensure that problems will not subsequently develop with an FCM or broker-dealer, some careful forethought can tend to ensure that relationships will not be developed with persons or firms who had serious problems in the past.

2130.0.14 ACCOUNTING FOR FUTURES CONTRACTS

All futures contracts, except for foreign-currency futures contracts, shall be reported in the Consolidated Financial Statements for Bank Holding Companies in accordance with Financial Accounting Standards Board (FASB) Statement No. 80, "Accounting for Futures Contracts." Foreign-currency futures contracts shall be reported in accordance with the guidance in FASB Statement No. 52, "Foreign Currency Translation."

2130.0.14.1 Performance Bonds under Futures Contracts

When the reporting banking organization, as either buyer or seller of futures contracts, has posted a performance bond in the form of a margin account deposited with a broker or exchange, the current balance (as of the report date) of that margin account shall be reported in Other Assets. The balance in the margin account includes the following:

1. the original margin deposit, plus (less)
2. any additions (deductions) as a result of daily fluctuations in the market value of the related contracts (i.e., "variation margin"), plus
3. any additional deposits made to the account to meet margin calls or otherwise (i.e., "maintenance margin"), less
4. any withdrawals of excess balances from the account

When the performance bond takes the form of a pledge of assets with a broker rather than a margin account, the pledged assets shall be maintained on the books of the pledging banking organization and no other balance-sheet entry is made for the performance bond. In this case, gains and losses resulting from daily fluctuations in the market value of the related contracts are generally settled with the broker in cash. However, if the pledging banking organization also maintains a working balance with the broker against which recognized daily market gains and losses are posted, the working balance should be reported in Other Assets, and treated in the same manner as a margin account.

2130.0.14.2 Valuation of Open Positions

All open positions in futures contracts must be reviewed at least monthly (or more often, if material) and their current market values determined. The market value of a futures contract is to be based on published price quotations. These futures positions must be revalued at their current market values on these valuation dates and any changes in these values reported in accordance with the guidance presented below for hedge or nonhedge contracts, as appropriate.

2130.0.14.3 Criteria for Hedge-Accounting Treatment

A futures contract shall be accounted for as a hedge when the following conditions are met:

1. The banking organization must have determined that the item or group of items to be hedged (that is, the identifiable assets, liabilities, firm commitments, or anticipated transactions) will expose it to price or interest-rate risk.
2. The futures contract must reduce the exposure to risk. This will be demonstrated if, at the inception of the hedge and *throughout the hedge period, high correlation* is expected to exist between the changes in the prices of both the contract and the hedged item or group of items.[10] In other words, the banking organization must monitor the price movements of both the hedge contract and the hedged items to determine that it is probable that changes in the market value of the futures contract will offset the effects of price changes on the hedged items.
3. The futures contract must be designated in writing as a hedge by management at the inception of the hedge.

   In order for a futures contract to qualify as a hedge of an anticipated transaction, the following two additional criteria must be met:
   a. The significant characteristics and expected terms of the anticipated transaction must be identified.
   b. The occurrence of the anticipated transaction must be probable.[11]

2130.0.14.4 Gains and Losses from Monthly Contract Valuations of Futures Contracts That Qualify as Hedges

If the hedge criteria are met, the accounting for the futures contract shall be related to the

10. Generally, banking practice maintains that correlation in the changes in the market values of the futures contract and the hedged item must be at least 80 percent for the ''high correlation'' criteria in FASB Statement No. 80 to be met.

11. It will be particularly difficult to meet this criteria when an anticipated transaction is not expected to take place in the near future.

accounting for the hedged item so that changes in the market value of the futures contract are recognized in income when the effects of related changes in the price or interest rate of the hedged item are recognized. If a banking organization must include unrealized changes in the fair value of a hedged item in income, a change in the market value of the related futures contract shall be recognized in income when the change occurs. Otherwise, a change in the market value of a futures contract that qualifies as a hedge of an existing asset or liability shall be recognized as an adjustment of the carrying amount of the hedged item. A change in the market value of a futures contract that is a hedge of a firm commitment shall be included in the measurement of the transaction that satisfies the commitment. A change in the market value of a futures contract that is a hedge of an anticipated transaction shall be included in the measurement of the subsequent transaction.

Once the carrying amount of an asset or liability has been adjusted for the change in the market value of a futures contract, the adjustment must be recognized in income in the same manner as other components of the carrying amount of that asset or liability (for example, using the interest method). If the item being hedged is an interest-bearing financial instrument otherwise reported at amortized historical cost, then the changes in the market value of the hedge contract that have been reflected as adjustments in the carrying amount of the financial instrument shall be amortized as an adjustment of interest income or expense over the expected remaining life of the hedged item.

If a futures contract that has been accounted for as a hedge of an anticipated transaction is closed before the date of the related transaction, the accumulated change in value of the contract shall be carried forward (assuming high correlation continues to exist) and included in the measurement of the related transaction. When it becomes probable that the quantity of the anticipated transaction will be less than that originally hedged, a pro rata portion of the futures results that would have been included in the measurement of the transaction shall be recognized as a gain or loss.

When futures contracts that are hedges are terminated, the gain or loss on the terminated contracts must be deferred and amortized over the remaining life of the hedged item.

2130.0.14.5 Gains and Losses from Monthly Contract Valuations of Futures Contracts That Do Not Qualify as Hedges

For futures contracts that are not accounted for as hedges, the change that has occurred in the market value of open positions since the last call report date shall be reflected in current income, either as "other noninterest income" for net gains or "other noninterest expense" for net losses.

If high correlation ceases to exist, the banking organization should discontinue accounting for a futures contract as a hedge. When this occurs, the portion of the change in the market value of the contract that has not offset the market value changes of the hedged item, since the inception of the hedge, must be reflected in the Report of Income as "other noninterest income" or "other noninterest expense," as appropriate. The contract should thereafter be accounted for as a nonhedge contract with subsequent changes in the contract's market value reflected in current period income.

When futures contracts that are not hedges are terminated, the gain or loss on the terminated contract must be recognized currently in the Report of Income as "other noninterest income" or "other noninterest expense," as appropriate.

There is the potential for holding companies and nonbank subsidiaries to follow the referenced accounting applications and break "hedges" with unrealized futures gains to recognize income, and maintain hedges with futures losses and adjust the carrying basis of the paired, that is, "hedged" asset. Examiners should look for patterns of taking gains and losses with a view to determining whether the opening and closing of contracts is consistent with the organization's risk-reducing strategies.

2130.0.15 PREPARING INSPECTION REPORTS

Unsatisfactory comments pertaining to a bank holding company's financial-contract activities should be noted on the "Examiner's Comments," "Policies and Supervision," and "Analysis of Financial Factors" or other appropriate page depending on the severity of the comments within the bank holding company inspection report.

2130.0.16 INTERNAL CONTROLS AND INTERNAL AUDIT

The following is designed to illustrate desirable internal controls and internal audit procedures applicable to the organization's activities in financial contracts. This illustration is not intended to serve as an absolute standard relating to contract activities, but is designed to supplement examiners' knowledge relating to internal controls and internal audits in this context. In evaluating internal controls and audits, the examiner will need to evaluate the scope of futures, forward, and options activities to determine whether internal controls and audit procedures are adequate in relation to the volume and nature of the activities.

2130.0.16.1 Internal Controls

It is a management's responsibility to minimize the risks inherent in financial-contract activities through the establishment of policies and procedures covering organizational structure, segregation of duties, operating and accounting system controls, and comprehensive management reporting. Formal written procedures should be in place in connection with purchases and sales, processing, accounting, clearance and safekeeping activities relating to these transactions. In general, these procedures should be designed to ensure that all financial contracts are properly recorded and that senior management is aware of the exposure and gains or losses resulting from these activities. Some examples of desirable controls follow:

1. Written documentation indicating what types of contracts are eligible for purchase by the organization, which individual persons are eligible to purchase and sell contracts, which individual persons are eligible to sign contracts or confirmations, and the names of firms or institutions with whom employees are authorized to conduct business.
2. Written position limitations for each type of contract established by the banking organization's board of directors and written procedures for authorizing trades, if any, in excess of those limits.
3. A system to monitor the organization's exposure with customers and those broker-dealers and institutions eligible to do business with it. To implement this, management must determine the amount of credit risk permissible with various parties and then institute surveillance procedures to ensure that such limits are not exceeded without written authorization from senior management.
4. Separation of duties and supervision to ensure that persons executing transactions are not involved in approving the accounting media and/or making accounting entries. Further, persons executing transactions should not have authority to sign incoming or outgoing confirmations or contracts, reconcile records, clear transactions, or control the disbursement of margin payments.
5. A clearly defined flow of order tickets and confirmations. Confirmations generated should, preferably, be prenumbered. In addition to promptly recording all commitments in a daily written commitment ledger, the related documentation should be filed separately for purposes of audit and examination. The flow of confirmations and order tickets should be designed to verify accuracy and enable reconciliations throughout the system, for example, to ensure that a person could not execute unauthorized transactions and bypass part of the accounting system, and to enable the reconcilement of traders' position reports to those positions maintained by an operating unit.
6. Procedures to route incoming confirmations to an operations unit separate from the trading unit. Confirmations received from brokers, dealers, or others should be compared to confirmations (or other control records) prepared by the banking organization to ensure that it will not accept or make delivery of securities, or remit margin payments, pursuant to contracts unless there is proper authorization and documentation.
7. Procedures for promptly resolving fails to receive or fails to deliver securities on the date securities are due to be received or sent pursuant to contracts.

8. Procedures for resolving customer complaints by someone other than the person who executed the contract.
9. Procedures for verifying brokers' reports of margin deposits and contract positions (use an outside pricing source), and reconciling such reports to the records.
10. Procedures for daily review of outstanding contracts and supervision of traders. In addition, there should be periodic reports to management reflecting the margin deposits and contract positions.
11. Selecting and training competent personnel to follow the written policies and guidelines.

2130.0.16.2 Internal Audit

The scope and frequency of the internal audit program should be designed to review the internal control procedures and verify that the internal controls purported to be in effect are being followed. Further, the internal auditor should verify that there are no material inadequacies in the internal control procedures that would permit a person acting individually to perpetrate errors or irregularities involving the records of the organization or assets that would not be detected by the internal control procedures in time to prevent material loss or misstatement of the banking organization's financial statements or serious violation of applicable banking, bank holding company, or securities rules or regulations. Any weaknesses in internal control procedures should be reported to management, along with recommendations for corrective action. If internal auditors do not report to an audit committee, the person to whom they report should not be in a position to misappropriate assets. In addition, auditors should occasionally spot-check contract prices and mark-to-market adjustments.

2130.0.17 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Financial institutions, including bank holding company subsidiaries, are lending securities with increasing frequency, and, in some instances, a financial institution may lend its own investment or trading-account securities. Financial institutions lend customers' securities held in custody, safekeeping, trust, or pension accounts. Because the securities available for lending often greatly exceed the demand for them, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers have heightened regulatory sensitivity to the potential for problems in this area.

2140.0.1 SECURITIES-LENDING MARKET

Securities brokers and commercial banks are the primary borrowers of securities. They borrow securities to cover securities fails (securities sold but not available for delivery), short sales, and option and arbitrage positions. Securities lending, which used to involve principally corporate equities and debt obligations, increasingly involves loans of large blocks of U.S. government and federal-agency securities.

Securities lending is conducted through open-ended ''loan'' agreements, which may be terminated on short notice by the lender or borrower. Repurchase agreements are generally used by owners of securities as financing vehicles and, in certain respects, are closely analogous to securities lending. The objective of securities lending, however, is to receive a safe return in addition to the normal interest or dividends. Securities loans in industry practice are generally collateralized by U.S. government or federal-agency securities, cash, or letters of credit.[1] At the outset, each loan is collateralized at a predetermined margin. If the market value of the collateral falls below an acceptable level during the time a loan is outstanding, a margin call is made by the lender institution. If a loan becomes over-collateralized because of appreciation of collateral or market depreciation of a loaned security, the borrower usually has the opportunity to request the return of any excessive margin.

When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower. Fees received on securities loans are divided between the lender and the customer account that owns the securities. In situations involving cash collateral, part of the interest earned on the temporary investment of cash is returned to the borrower, and the remainder is divided between the lender and the customer account that owns the securities.

1. Broker-dealers borrowing securities are subject to the restrictions of the Federal Reserve's Regulation T (12 C.F.R. 220.10), which specifies acceptable borrowing purposes.

2140.0.2 DEFINITIONS OF CAPACITY

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender is acting. For the purposes of these guidelines, the relevant capacities are as follows:

1. *Principal.* A lender offering securities from its own account is acting as principal. A lender institution offering customers' securities on an undisclosed basis is also considered to be acting as principal.
2. *Agent.* A lender offering securities on behalf of a customer-owner is acting as an agent. For the lender to be considered a bona fide or ''fully disclosed'' agent, it must disclose the names of the borrowers to the customer-owners (or give notice that names are available upon request), and must disclose the names of the customer-owner to borrowers (or give notice that names are available upon request). In all cases, the agent's compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, that is, ''blind brokerage'' transactions in which participants cannot determine the identity of the contra party, are treated as if the lender was the principal.
3. *Directed agent.* A lender which lends securities at the direction of the customer-owner is acting as a directed agent. The customer directs the lender in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.
4. *Fiduciary.* A lender which exercises *discretion* in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For purposes of these guidelines,

the underlying relationship may be as agent, trustee, or custodian.

5. *Finder.* A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Delivery of securities and collateral is direct between the borrower and the lender, and the finder does not become involved. The finder is simply a fully disclosed intermediary.

2140.0.3 GUIDELINES

All bank holding companies or their subsidiaries that participate in securities lending should establish written policies and procedures governing these activities. Other than commercial banks with trust departments, the bank holding company subsidiaries most likely to be engaged in securities lending are non-deposit-taking trust companies and certain discount brokers which provide custody services and make margin loans. At a minimum, policies and procedures should cover each of the topics in these guidelines.

2140.0.3.1 Recordkeeping

Before establishing a securities-lending program, a financial firm or institution must establish an adequate recordkeeping system. At a minimum, the system should produce daily reports showing which securities are available for lending, and which are currently lent, outstanding loans by borrower, outstanding loans by account, new loans, returns of loaned securities, and transactions by account. These records should be updated as often as necessary to ensure that the lender institution fully accounts for all outstanding loans, that adequate collateral is required and maintained, and that policies and concentration limits are being followed.

2140.0.3.2 Administrative Procedures

All securities lent and all securities standing as collateral must be marked to market daily. Procedures must ensure that any necessary calls for additional margin are made on a timely basis.

In addition, written procedures should outline how to choose the customer account that will be the source of lent securities when they are held in more than one account. Possible methods include loan volume analysis, automated queue, a lottery, or some combination of these. Securities loans should be fairly allocated among all accounts participating in a securities-lending program.

Internal controls should include operating procedures designed to segregate duties and timely management reporting systems. Periodic internal audits should assess the accuracy of accounting records, the timeliness of management reports, and the lender's overall compliance with established policies and the firm's procedures.

2140.0.3.3 Credit Analysis and Approval of Borrowers

In spite of strict standards of collateralization, securities-lending activities involve risk of loss. Such risks may arise from malfeasance or failure of the borrowing firm or institution. Therefore, a duly established management or supervisory committee of the lender should formally approve, in advance, transactions with any borrower.

Credit and limit approvals should be based upon a credit analysis of the borrower. A review should be performed before establishing such a relationship and reviews should be conducted at regular intervals thereafter. Credit reviews should include an analysis of the borrower's financial statement, and should consider capitalization, management, earnings, business reputation, and any other factors that appear relevant. Analyses should be performed in an independent department of the lender, by persons who routinely perform credit analyses. Analyses performed solely by the person(s) managing the securities-lending program are not sufficient.

2140.0.3.4 Credit and Concentration Limits

After the initial credit analysis, management of the lender should establish an individual credit limit for the borrower. That limit should be based on the market value of the securities to be borrowed, and should take into account possible temporary (overnight) exposures resulting from a decline in collateral values or from occasional inadvertent delays in transferring collateral. Credit and concentration limits should take into account other extensions of credit by the lender to the same borrower or related interests.

Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

2140.0.3.5 Collateral Management

Securities borrowers generally pledge and maintain collateral at a level equal to at least 100 percent of the value of the securities borrowed.[2] The minimum amount of excess collateral, or "margin," acceptable to the lender should relate to price volatility of the loaned securities and the collateral (if other than cash).[3] Generally, the minimum initial collateral on securities loans is at least 102 percent of the market value of the lent securities plus, for debt securities, any accrued interest.

Collateral must be maintained at the agreed margin. A daily "mark-to-market" or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should take into account the value of accrued interest on debt securities.

Securities should not be lent unless collateral has been received or will be received simultaneously with the loan. As a minimum step toward perfecting the lender's interest, collateral should be delivered directly to the lender or an independent third-party trustee.

2140.0.3.6 Cash as Collateral

When cash is used as collateral, the lender is responsible for making it income productive. Lenders should establish written guidelines for selecting investments for cash collateral. Generally, a lender will invest cash collateral in repurchase agreements, master notes, a short-term investment fund (STIF), U.S. or Eurodollar certificates of deposit, commercial paper, or some other type of money market instrument. If the lender is acting in any capacity other than as principal, the written agreement authorizing the lending relationship should specify how cash collateral is to be invested.

Using cash collateral to pay for liabilities of the lender or its holding company would be an improper *conflict of interest* unless that strategy was specifically authorized in writing by the owner of the lent securities.

2140.0.3.7 Letters of Credit as Collateral

If a lender plans to accept letters of credit as collateral, it should establish guidelines for their use. Those guidelines should require a credit analysis of the banks issuing the letter of credit before securities are lent against that collateral. Analyses must be periodically updated and reevaluated. The lender should also establish concentration limits for the banks issuing letters of credit, and procedures should ensure they are not exceeded. In establishing concentration limits on letters of credit accepted as collateral, the lender's total outstanding credit exposures from the issuing bank should be considered.

2140.0.3.8 Written Agreements

Securities should be lent only pursuant to a written agreement between the lender and the owner of the securities, specifically authorizing the institution to offer the securities for loan. The agreement should outline the lender's authority to reinvest cash collateral (if any) and responsibilities with regard to custody and valuation of collateral. In addition, the agreement should detail the fee or compensation that will go to the owner of the securities in the form of a fee schedule or other specific provision. Other items which should be covered in the agreement have been discussed earlier in these guidelines.

A lender must also have written agreements with the parties who wish to borrow securities. These agreements should specify the duties and responsibilities of each party. A written agreement may detail acceptable types of collateral (including letters of credit); standards for collateral custody and control, collateral valuation and initial margin, accrued interest, marking to market, and margin calls; methods for transmitting coupon or dividend payments received if a security is on loan on a payment date; conditions which will trigger the termination of a loan

2. Employee benefit plans subject to the Employee Retirement Income Security Act are specifically required to collateralize securities loans at a minimum of 100 percent of the market value of loaned securities (see section 2140.0.3.10 below).

3. The level of margin should be dictated by level of risk being underwritten by the securities lender. Factors to be considered in determining whether to require margin above the recommended minimum include the type of collateral, the maturity of collateral and lent securities, the term of the securities loan, and the costs which may be incurred when liquidating collateral and replacing loaned securities.

(including events of default); and acceptable methods of delivery for loaned securities and collateral.

2140.0.3.9 Use of Finders

Some lenders may use a finder to place securities, and some financial institutions may act as finders. A finder brings together a borrower and a lender for a fee. Finders should not take possession of securities or collateral. The delivery of securities loaned and collateral should be direct between the borrower and the lender. A finder should not be involved in the delivery process.

The finder should act only as a fully disclosed intermediary. The lender must always know the name and financial condition of the borrower of any securities it lends. If the lender does not have that information, it and its customers are exposed to unnecessary risks.

Written policies should be in place concerning the use of finders in a securities-lending program. These policies should cover circumstances in which a finder will be used, which party pays the fee (borrower or lender), and which finders the lender institution will use.

2140.0.3.10 Employee Benefit Plans

The Department of Labor has issued two class exemptions which deal with securities-lending programs for employee benefit plans covered by the Employee Retirement Income Security Act (ERISA): Prohibited Transaction Exemption 81-6 (46 FR 7527 (January 23, 1981) and correction (46 FR 10570 (February 3, 1981))), and Prohibited Transaction Exemption 82-63 (47 FR 14804 (April 6, 1982)). The exemptions authorize transactions which might otherwise constitute unintended ‘‘prohibited transactions’’ under ERISA. Any firm engaged in the lending of securities for an employee benefit plan subject to ERISA should take all steps necessary to design and maintain its program to conform with these exemptions.

Prohibited Transaction Exemption 81-6 permits the lending of securities owned by employee benefit plans to persons who could be ‘‘parties in interest’’ with respect to such plans, provided certain conditions specified in the exemption are met. Under those conditions, neither the borrower nor an affiliate of the borrower can have discretionary control over the investment of plan assets, or offer investment advice concerning the assets, and the loan must be made pursuant to a written agreement. The exemption also establishes a minimum acceptable level for collateral based on the market value of the loaned securities.

Prohibited Transaction Exemption 82-63 permits compensation of a fiduciary for services rendered in connection with loans of plan assets that are securities. The exemption details certain conditions which must be met.

2140.0.3.11 Indemnification

Certain lenders offer participating accounts indemnification against losses in connection with securities-lending programs. Such indemnifications may cover a variety of occurences including all financial loss, losses from a borrower default, or losses from collateral default. Lenders that offer such indemnification should obtain a legal opinion from counsel concerning the legality of their specific form of indemnification under federal and/or state law.

A lender which offers an indemnity to its customers may, in light of other related factors, be assuming the benefits and, more importantly, the liabilities of a principal. Therefore, lenders offering indemnification should also obtain written opinions from their accountants concerning the proper financial statement disclosure of their actual or contingent liabilities.

2140.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Securities Lending policy statement of the Federal Financial Institutions Examination Council, adopted by the Federal Reserve Board on May 6, 1985			3–1579.5	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Depository institutions and others involved with the purchase of United States Government and Agency obligations under agreements to resell (reverse repurchase agreements),[2] have sometimes incurred significant losses. The most important factors causing these heavy losses have been inadequate credit risk management and the failure to exercise effective control over securities collateralizing the transactions.[3]

The following minimum guidelines address the need for managing credit risk exposure to counterparties under securities repurchase agreements and for controlling the securities in those transactions, and should be followed when entering into repurchase agreements with securities dealers and others.

Depository institutions and nonbank subsidiaries that actively engage in repurchase agreements are encouraged to have more comprehensive policies and controls to suit their particular circumstances. The examining staffs of the Federal Reserve should review written policies and procedures of dealers to determine their adequacy in light of these minimum guidelines and the scope of each subsidiary's operations.

2150.0.1 CREDIT POLICY GUIDELINES

The apparent safety of short-term repurchase agreements which are collateralized by highly liquid, U.S. Government and Federal agency obligations has contributed to an attitude of complacency. Some portfolio managers have underestimated the credit risk associated with the performance of the counterparty to the transactions, and have not taken adequate steps to assure control of the securities covered by the agreement.

All firms that engage in securities repurchase agreement transactions should establish written credit policies and procedures governing these activities. At a minimum, those policies and procedures should cover the following:

Written policies should establish "know your counterparty" principles. Engaging in repurchase agreement transactions in volume and in large dollar amounts frequently requires the services of a counterparty who is a dealer in the underlying securities. Some firms which deal in the markets for U.S. Government and Federal agency securities are subsidiaries of, or related to, financially stronger and better known firms. However, these stronger firms may be independent of their U.S. Government securities subsidiaries and affiliates and may not be legally obligated to stand behind the transactions of related companies. Without an express guarantee, the stronger firm's financial position cannot be relied upon in assessing the creditworthiness of a counterparty.

It is important to know the legal entity that is the actual counterparty to each repurchase agreement transaction. Know about the actual counterparty's character, integrity of management, activities, and the financial markets in which it deals. Be particularly careful in conducting repurchase agreements with any firm that offers terms that are significantly more favorable than those currently prevailing in the market.

In certain situations firms may use, or serve as, brokers or finders in order to locate repurchase agreement counterparties or particular securities. When using or acting as this type of agent the names of each counterparty should be fully disclosed. Do not enter into undisclosed agency or "blind brokerage" repurchase transactions in which the counterparty's name is not disclosed.

2150.0.1.1 Dealings with Unregulated Securities Dealers

A dealer in U.S. Government and Federal agency obligations is not necessarily a Federally insured bank or thrift, or a broker/dealer registered with the Securities and Exchange Com-

1. A repurchase agreement is a transaction involving the *sale* of assets by one party to another, subject to an agreement by the seller to repurchase the assets at a specified date or in specified circumstances.

2. In order to avoid confusion among market participants who sometimes use the same term to describe different sides of the same transaction, the term "repurchase agreement" will be used in the balance of this statement to refer to both repurchase and reverse repurchase agreements. A repurchase agreement is one in which a party that owns securities acquires funds by transferring the securities to another party under an agreement to repurchase the securities at an agreed upon future date. A reverse repurchase (resale) agreement is one in which a party provides funds by acquiring securities pursuant to an agreement to resell them at an agreed upon future date.

3. Throughout this document repurchase agreements are generally discussed in terms of secured credit transactions. This usage should not be deemed to be based upon a legal determination.

mission. Therefore, the dealer firm may not be subject to any Federal regulatory oversight.

A firm doing business with an unregulated securities dealer should be certain that the dealer voluntarily complies with the Federal Reserve Bank of New York's minimum capital guideline, which currently calls for liquid capital to exceed measured risk by 20 percent (that is, the ratio of a dealer's liquid capital to risk of 1.2:1). This ratio can be calculated by a dealer using either the Securities and Exchange Commission's Net Capital Rule for Brokers and Dealers (Rule 15c31) or the Federal Reserve Bank of New York's Capital Adequacy Guidelines for United States Government Securities Dealers. To ensure that an unregulated dealer complies with either of those capital standards, it should certify its compliance with the capital standard and provide the following three forms of certification:

1. A letter of certification from the dealer that the dealer will adhere on a continuous basis to the capital adequacy standard;
2. Audited financial statements which demonstrate that as of the audit date the dealer was in compliance with the standard and the amount of liquid capital; and
3. A copy of a letter from the firm's certified public accountant stating that it found no material weaknesses in the dealer's internal systems and controls incident to adherence to the standard.[4]

Periodic evaluations of counterparty creditworthiness should be conducted by individuals who routinely make credit decisions and who are not involved in the execution of repurchase agreement transactions.

Prior to engaging in initial transactions with a new counterparty, obtain audited financial statements and regulatory filings (if any) from counterparties, and insist that similar information be provided on a periodic and timely basis in the future. Recent failures of government securities dealers have typically been foreshadowed by delays in producing these statements. Many firms are registered with the Securities and Exchange Commission as broker/dealers and have to file financial statements and should be willing to provide a copy of these filings.

The counterparty credit analysis should consider the financial statements of the entity that is to be the counterparty as well as those of any related companies that could have an impact on the financial condition of the counterparty. When transacting business with a subsidiary, consolidated financial statements of a parent are not adequate. Repurchase agreements should not be entered into with any counterparty that is unwilling to provide complete and timely disclosure of its financial condition. As part of this analysis, the firm should make inquiry about the counterparty's general reputation and whether there have been any formal enforcement actions against the counterparty or its affiliates by State or Federal securities regulators.

Maximum position and temporary exposure limits for each approved counterparty should be established based upon credit analysis performed. Periodic reviews and updates of those limits are necessary.

Individual repurchase agreement counterparty limits should consider overall exposure to the same or related counterparty. Repurchase agreement counterparty limitations should include the overall permissible dollar positions in repurchase agreements, maximum repurchase agreement maturities and limits on temporary exposure that may result from decreases in collateral values or delays in receiving collateral.

2150.0.2 GUIDELINES FOR CONTROLLING REPURCHASE AGREEMENT COLLATERAL

Repurchase agreements can be a useful asset and liability management tool, but repurchase agreements can expose a firm to serious risks if they are not managed appropriately. It is possible to reduce repurchase agreement risk by negotiating written agreements with all repurchase agreement counterparties and custodian banks. Compliance with the terms of these written agreements should be monitored on a daily basis. If prudent management control requirements of repurchase agreements are too burdensome, other asset/liability management tools should be used.

The marketplace perceives repurchase agreement transactions as similar to lending transactions collateralized by highly liquid Government securities. However, experience has shown that the collateral securities will probably *not* serve as protection if the counterparty becomes insolvent or fails, and the purchasing firm does not have control over the securities. Ultimate responsibility for establishing adequate control procedures rests with management of the firm. Management should obtain a written legal opin-

4. This letter should be similar to that which must be given to the SEC by registered broker/dealers.

ion as to the adequacy of the procedures utilized to establish and protect the firm's interest in the underlying collateral.

A written agreement specific to a repurchase agreement transaction or master agreement governing all repurchase agreement transactions should be entered into with each counterparty. The written agreement should specify all the terms of the transaction and the duties of both the buyer and seller. Senior managers should consult legal counsel regarding the content of the repurchase and custodial agreements. The repurchase and custodial agreements should specify, but should not be limited to, the following:

- Acceptable types and maturities of collateral securities;
- Initial acceptable margin for collateral securities of various types and maturities
- Margin maintenance, call, default and sellout provisions;
- Rights to interest and principal payments;
- Rights to substitute collateral; and
- The persons authorized to transact business on behalf of the firm and its counterparty.

2150.0.2.1 Confirmations

Some repurchase agreement confirmations may contain terms that attempt to change the firm's rights in the transaction. The firm should obtain and compare written confirmations for each repurchase agreement transaction to be certain that the information on the confirmation is consistent with the terms of the agreement. The confirmation should identify specific collateral securities.

2150.0.2.2 Control of Securities

As a general rule, a firm should obtain possession or control of the underlying securities and take necessary steps to protect its interest in the securities. The legal steps necessary to protect its interest may vary with applicable facts and law and accordingly should be undertaken with the advice of counsel. Additional prudential management controls may include:

- delivery of either physical securities to, or in the case of book entry securities, making appropriate entries in the books of a third party custodian designated under a written custodial agreement which explicitly recognizes the firm's interest in the securities as superior to that of any other person; or
- appropriate entries on the books of a third party custodian acting pursuant to a tripartite agreement with the firm and the counterparty, ensuring adequate segregation and identification of either physical or book-entry securities.

Where control of the underlying securities is not established, the firm may be regarded only as an unsecured general creditor of the insolvent counterparty. In such instance, *substantial losses are likely to be incurred.* Accordingly, a firm should not enter into a repurchase agreement without obtaining control of the securities unless all of the following minimum procedures are observed: (1) it is completely satisfied as to the creditworthiness of the counterparty; (2) the transaction is within credit limitations that have been pre-approved by the board of directors, or a committee of the board, for unsecured transactions with the counterparty; (3) periodic credit evaluations of the counterparty are conducted; and (4) the firm has ascertained that collateral segregation procedures of the counterparty are adequate. Unless prudential internal procedures of these types are instituted and observed, the firm may be cited for engaging in unsafe or unsound practices.

All receipts and deliveries of either physical or book-entry securities should be made according to written procedures, and third party deliveries should be confirmed in writing directly by the custodian. It is not acceptable to receive confirmation from the counterparty that the securities are segregated in a firm's name with a custodian; the firm should, however, obtain a copy of the advice of the counterparty to the custodian requesting transfer of the securities to the firm. Where securities are to be delivered, payment for securities should not be made until the securities are actually delivered to the firm or its agent. The custodial contract should provide that the custodian takes delivery of the securities subject to the exclusive direction of the firm.

Substitution of securities should not be allowed without the prior consent of the firm. The firm should give its consent before the delivery of the substitute securities to it or a third party custodian. Any substitution of securities should take into consideration the following discussion of "margin requirements."

2150.0.2.3 Margin Requirements

The amount paid under the repurchase agreement should be less than the market value of the securities, including the amount of any accrued interest, with the difference representing a predetermined margin. Factors to be considered in establishing an appropriate margin include the size and maturity of the repurchase transaction, the type and maturity of the underlying securities, and the creditworthiness of the counterparty. Margin requirements on U.S. Government and Federal agency obligations underlying repurchase agreements should allow for the anticipated price volatility of the security until the maturity of the repurchase agreement. Less marketable securities may require additional margin to compensate for less liquid market conditions. Written repurchase agreement policies and procedures should require daily mark-to-market of repurchase agreement securities to the bid side of the market. Repurchase agreements should provide for additional securities or cash to be placed with the firm or its custodian bank to maintain the margin within the predetermined level.

Margin calculations should also consider accrued interest on underlying securities and the anticipated amount of accrued interest over the term of the repurchase agreement, the date of interest payment and which party is entitled to receive the payment. In the case of pass-through securities, anticipated principal reductions should also be considered when determining margin adequacy.

Prudent management procedures should be followed in the administration of any repurchase agreement. Longer term repurchase agreements require management's daily attention to the effects of securities substitutions, margin maintenance requirements (including consideration of any coupon interest or principal payments) and possible changes in the financial condition of the counterparty. Engaging in open repurchase agreement transactions without maturity dates may be regarded as an unsafe and unsound practice unless the firm has retained rights to terminate the transaction quickly to protect itself against changed circumstances. Similarly, automatic renewal of short-term repurchase agreement transactions without reviewing collateral values and adjusting collateral margin may be regarded as an unsafe and unsound practice. If additional margin is not deposited when required, the firm's rights to sell securities or otherwise liquidate the repurchase agreement should be exercised without hesitation.

2150.0.2.4 Overcollateralization

A firm should use current market values, including the amount of any accrued interest, to determine the price of securities that are sold under repurchase agreements. Counterparties should not be provided with excessive margin. Thus, the written repurchase agreement contract should provide that the counterparty must make additional payment or return securities if the margin exceeds agreed upon levels. When acquiring funds under repurchase agreements it is prudent business practice to keep at a reasonable margin the difference between the market value of the securities delivered to the counterparty and the amount borrowed. The excess market value of securities sold may be viewed as an unsecured loan to the counterparty subject to the unsecured lending limitations for the firm and should be treated accordingly for credit policy and control purposes.

2150.0.3 OPERATIONS

A firm's operational functions should be designed to regulate the custody and movement of securities and to adequately account for trading transactions. Because of the dollar volume and speed of trading activities, operational inefficiencies can quickly result in major problems.

In some cases, a firm may not receive or deliver a security by settlement date. When a firm fails to receive a security by the settlement date, a liability exists until the transaction is consummated or cancelled. When the security is not delivered to the contra-party by settlement date, a receivable exists until that ''fail'' is resolved. ''Fails'' to deliver for an extended time, or a substantial number of cancellations, are sometimes characteristic of poor operational control or questionable trading activities.

Fails should be controlled by prompt reporting and follow-up procedures. The use of multicopy confirmation forms enables operational personnel to retain and file a copy by settlement date and should allow for prompt fail reporting and resolution.

2150.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

Risk management is an important responsibility of any bank holding company. The objective of this responsibility is to determine and limit the extent of the holding company organization's vulnerability to uncontrollable variables. While all companies perform risk evaluation in some form and exercise some degree of control over its magnitude, the precise processes used differ considerably across organizations in terms of formality, extensiveness, and effectiveness. It should be recognized that many organizations have only an implicit risk evaluation process, and that it may be appropriate to recommend that this process be formalized. Ultimately, the board of directors of the parent company should be held accountable for the consolidated risk evaluation and control.

Risk management at any level involves two basic elements: evaluation and control. Risk evaluation involves three steps: determination of exposures; specification of uncontrollable variables that have an impact on each exposure; and quantification of the expected effect of each variable on exposure. After the extent of existing or potential risk is determined, decisions to limit or control risk are made. This procedure is ever present, since most transactions create exposure, and every exposure has some element of risk. The following two sections discuss the risk evaluation and the risk control processes in very broad terms in an attempt to provide a framework that can be applied to most organizations.

2160.0.1 RISK EVALUATION

The risk identification process begins with a determination of exposures that an institution has to the environment.

Exposure conceptually occurs in every transaction undertaken by a banking organization. Because of the magnitude of the list of potential exposures, institutions generally limit their efforts to extremely large exposures, to areas where losses appear likely, and to activities where the market is changing and new exposures are created. The size of an exposure generally is dependent on the size of a transaction. This is true both for transactions recorded on accounting balance sheets and for those which occur off balance sheet. Exposure is not necessarily determined by the likelihood of loss. For example, many holding company organizations have a large "exposure" in Treasury bills, but do not consider these transactions to be risky.

The list of exposures that banks commonly identify has increased dramatically in the past decade. Historically, the primary focus has been on the exposure of the loan portfolio centering on the financial security of each individual loan; recently industry and geographical exposure of loans has increased in importance. The exposure of fixed assets, such as buildings, to fires, floods and other problems also has been recognized. In more recent years, exposure of mismatched maturities of assets and liabilities to interest rate movements has increased in importance as interest-rate movements have sharply fluctuated. While this exposure had always existed, it had not been recognized as particularly dangerous until recently. Another example of an exposure that historically was considered safe is repurchase agreements backed by government securities. When Drysdale Government Securities, Inc. failed, several risks were brought to light—whether the instrument is a loan (that would be tied up in case of bankruptcy) or a sale and potential liability when serving as an agent of a government securities firm that fails. A particularly difficult area to evaluate is exposure to legal action. For example, a suit against a bank over lending terms and representations is difficult to anticipate and the exposure could be significant.

Numerous exposures exist that many holding company organizations may not recognize. For example, the Federal Reserve System encourages evaluation of wire transfer exposure. This exposure is very large and theoretically a breakdown on the framework or compromise of internal systems could result in major failures. Exposure from foreign exchange contracts also can be large, and may not always be recognized. Fraud and exposure of management to kidnapping continue to increase in importance. And finally, some major holding company organizations have found that dependence on short-term market funds creates a risky exposure. When access to a funding market may be suddenly withdrawn, the exposure of the entire funding process is an issue.

The second step of the risk identification process is specification of the variables that could affect an exposure and determination of what the impact would be.

This process is difficult, since any number of variables may influence an exposure. Furthermore, as the environment changes new variables may appear relevant and the effects of variables may change. For example, the recent problems of public sector lending to foreign countries with loans denominated in dollars having floating interest rates during inflationary periods may not have been fully evaluated at the time of the lending process.

Determining influential variables is particularly difficult with new products. A historical examination cannot be made of these new products and questions may go unanswered regarding the stability of the new markets. For example, problems have occurred in hedging operations as underlying instruments did not move as expected, thus negating the hedging contract. Consequently, the hedge created an exposure rather than reducing an exposure.

The final step of the risk identification process is risk quantification.

Conceptually, this involves calculation of an expected loss of value related to variance of a particular environmental factor. This has two parts: (1) estimation of the probability that a given variance will occur; and (2) determination of the cost impact of each potential variance. Probabilities are often drawn up in general terms. In some cases historical records facilitate estimation of probabilities. Measurement of credit risk in an organization that specializes by industry or geography may be an example of this. In the most recent recession, however, many past records have proven not to be accurate predictors. In other situations, the holding company organization may evaluate the effect of a change but be unwilling to estimate probabilities of the change occurring. An example of this is managing asset and liability maturities. The effect of a change in interest rates on profits may be determined; but, in many cases, institutions will not derive probabilities on the direction and/or magnitude of interest rate movements.

The difficulty of quantifying costs and probabilities is exacerbated by emergence of new products and by environmental changes. With a new product, it is particularly difficult to determine the cost of a variance. For example, attention to interest rate risk has induced organizations to resort to hedging to reduce exposure. Innovative instruments are difficult to hedge, however, since the issuer may inaccurately gauge price movements. In this case, the exposure results not from price movements, but from inability to predict the relationship between market and price fluctuations. Furthermore, as the environment changes, the effect of a variable on an exposure changes as does the cost and probability of the occurrence. For example, in the 1970's the impact of inflation on the banking system would have been very different without the concurrent economic downturn and the technological advances.

2160.0.2 RISK CONTROL

After management has identified and evaluated risk, they may decide the risk or cost of an action is sufficiently low (and management is confident all possible variables have been identified) that the holding company can take on the risk as it is; if not there are a number of options that can be used to control the risk. Attempts to control risk can be accomplished through a combination of three general techniques: purchase of insurance, limitation of exposure size, and reduction of the expected cost associated with a variance. The use of insurance to decrease the effect of a loss on the corporation is common for exposure to fire, theft, kidnapping, and internal fraud. Various types of loans are underwritten by third parties. The innovative use of insurance may prove to have various applications to risk control in the banking industry. As with other contracts, the financial strength and reputation of the counterparty (the insurer) are important, and the organization's method of selecting and monitoring underwriters should be evaluated.

Management generally limits the level of exposure in relationship to the size of assets, capital or earnings. In most situations, relating the level of exposure to capital would appear appropriate. Reduction of exposure will automatically reduce risk, assuming other variables remain constant. Constraints should be determined by line management at a seniority level commensurate with the degree of perceived risk. Depending on the degree of risk, there may be a need for the board of directors to approve the constraints.

The third method of reducing the potential loss to the corporation involves decreasing the probability of a variance occurring or decreasing the probable effect when a variance occurs. This is exemplified by the exposure to fire. Installation of fire alarms and other precautions could reduce the expected loss substantially. Similarly, hedging with financial futures is a method used to reduce the effect of interest rate movement on the profits of the holding company organization when the maturities of assets and liabilities are not equal.

The final option management has, after risk has been evaluated, is simply not to participate in the activity if the risk is determined to be too high for the expected return.

The inspection procedures should include a broad-based evaluation of parent level risk management. Management's effectiveness in identifying risk, its willingness to accept risk, and its ability to control risk should be regularly evaluated. In an environment of rapid change and emerging financial instruments, there needs to be sufficient expertise to recognize the existence of ''new'' sources of risk concentration to evaluate the company's command of those sources.

2160.0.3 INSPECTION OBJECTIVES

1. To review the risk evaluation and control process.
2. To determine if management's system of identifying risks is effective, and if the parent company is adequately informed of risks throughout the organization.
3. To determine management's recognition of new risks that may arise from the changing environment.
4. To determine the reasonableness of the holding company's exposure-risk figures.
5. To assess the effect on the holding company's financial condition if the risk figures are realized.
6. To determine what actions are necessary to rebalance transactions of a holding company organization to a prudent level.

2160.0.4 INSPECTION PROCEDURES

1. Review the financial condition and the operations of the holding company organization to detect substantive exposure-risk situations.
2. Review management's policies, procedures, and practices in recognizing exposure-risk factors.
3. Determine awareness that all management levels need to be cognizant of exposures related to transactions of their respective operations.
4. Review the holding company's exposure-risk figures, or constraints placed on types of transactions.
5. Discuss with management the significance of exposure-risks facing the holding company and whether or not those risks are set at seemingly prudent levels.
6. Recommend that the organization address any areas where the holding company is perceived to have assumed an imprudent level of risk.

2175.0.1 INTRODUCTION

Banking organizations have become increasingly involved in marketing third-party uninsured annuities to their retail customers either directly or through third-party companies. As annuity sales have grown, so have concerns that some methods used to sell these instruments could give purchasers the impression that the annuities are federally insured deposits or that they are obligations of a bank. In the event of default by an annuities underwriter, this impression could cause a loss of public confidence in a depository institution, leading to unexpected withdrawals and liquidity pressures. Moreover, a bank or bank holding company that advertises or markets annuities in a way viewed as misleading could potentially be held liable for losses sustained by annuity holders.

This manual section provides guidelines to examiners for reviewing the sale of uninsured annuities by bank holding companies and banks that have legal authority to act as agent in the sale of annuities. State member banks and bank holding companies should not market, sell, or issue uninsured annuities or allow third parties to market, sell, or issue uninsured annuities on depository-institution premises in a manner that conveys the impression or suggestion that such instruments are either (1) federally insured deposits or (2) obligations of or guaranteed by an insured depository institution. Consequently, state member banks should not sell these instruments at teller windows or other areas where retail deposits are routinely accepted.

2175.0.2 PERMISSIBILITY OF UNINSURED ANNUITY SALES

The legal status of annuities under the Bank Holding Company Act is somewhat uncertain at the present time. The Office of the Comptroller of the Currency has authorized national banks to act as agent in the sale of annuities on the basis that variable-rate annuities are securities and fixed-rate annuities are financial investment instruments.[1] These determinations, however, have been challenged by insurance associations on the basis that annuities are insurance products and, therefore, may be sold by national banks only in a town of less than 5,000.[2]

State member banks generally have been permitted to engage in the brokerage of both variable- and fixed-rate annuities consistent with their general corporate powers. In order to engage in this activity without filing a formal application, staff has advised interested banks that the brokerage of annuities must be expressly authorized under state law (or by the state banking regulatory agency on a case-by-case basis) and constitute an activity incidental to the bank's banking activities.

The authority of state member banks to continue to engage in this activity, in the same manner and subject to the conditions discussed above, does not appear to depend on a resolution of the issues.[3] State member banks have been permitted to engage in general insurance agency activities since 1937,[4] and to engage in brokerage activities under the same limitations applicable to bank holding companies. In addition, the Board has determined that the nonbanking restrictions in the Bank Holding Company Act do not apply to the direct activities of banks owned by a bank holding company.[5]

The authority of bank holding companies to engage directly or through a nonbanking subsidiary in the sale of annuities has not yet been determined. In *Norwest Corporation*,[6] the Board considered a proposal by a nonbanking affiliate to engage in the sale of variable- and fixed-rate annuities. The Board concluded that, under the specific facts of that case, it was unnecessary to reach the question of whether the sale of annuities is an insurance agency activity because Norwest is one of a small number of bank holding companies entitled to act as agent in the

sale of any type of insurance pursuant to Exemption G of the Garn Act.[7]

2175.0.3 CHARACTERISTICS OF ANNUITY INSTRUMENTS

An annuity is an investment from which a person receives periodic payments based on earlier payments made to the obligor. Annuities are commonly underwritten by insurance companies, then marketed and sold either directly or through third parties, such as banks. Insurance companies retain the actuarial and underwriting risks on these annuities.

Annuities may be either variable or fixed-rate. An investor in a variable annuity contract purchases a share in an investment portfolio and then receives payments that vary according to the performance of the portfolio. A purchaser of a fixed-rate annuity contract, in contrast, receives a fixed-rate payment or minimum level of payments. Annuity payments can usually be received monthly, quarterly, semi-annually, or annually.

Variable- and fixed-rate annuities may be purchased in a single lump sum (‘‘single premium’’) or in periodic contributions (‘‘flexible premium’’). Minimum and maximum contributions to annuities vary among vendors. Some single-premium annuities have ‘‘bail-out’’ features which allow holders to withdraw all funds if the rate of return on the annuity contract falls below a specified rate.

The ability to take money out of an annuity prior to maturity varies by product, as does the imposition of a surrender penalty by the insurer when withdrawal occurs prior to maturity. When a penalty is imposed, the insurer generally calculates the penalty as a percentage of the annuity product’s accumulated value. The penalty for withdrawal generally declines with the annuity’s age. Normally, funds may not be withdrawn prior to the first anniversary date of the annuity.[8]

Annuities sold at depository institutions often include rate guarantees over the life of the instrument. They also frequently mature in one, three, or five years, similar to maturity ranges on certificates of deposit.

Insurance companies arrange for the sale of annuities on the premises of depository institutions in different ways. Some insurance companies approach banks directly. At other times, wholesalers (who market the products of a number of different insurance companies) may approach a bank. Depending on state restrictions on insurance activities, sales might be conducted by bank employees, employees of bank subsidiary insurance agencies, or by third-party insurance agents leasing space on the bank’s premises.

Sales commissions on annuities vary by the type of annuity. Commissions earned on single-premium products generally vary from 4 percent to 6 percent, but they decline sharply when the product sold includes a ‘‘bail-out’’ provision. Wholesalers may also give retailers a commission when the annuity is renewed, based on the accumulated value of the annuity. Commissions in some instances are paid on a variable basis, rising as the volume of sales increases.

2175.0.4 IMPROPER MARKETING PRACTICES

Banks have become involved in the sale of uninsured annuities through marketing programs designed to appeal specifically to their retail customers. It is important that these programs not employ marketing practices that could mislead the bank’s customers. For example, the use in annuities advertisements of terms such as ‘‘CD,’’ ‘‘deposit,’’ and ‘‘interest plan’’ to imply that the instruments are insured deposits would be inappropriate. Also, advertisements that prominently display the bank’s name and logo in a way that suggests the product is an obligation of the bank are similarly inappropriate. Disclosure that the annuities are not federally insured and are not obligations of the bank should be displayed prominently in annuity contracts and related documentation, on printed

7. The Garn Act amended section 4(c)(8) of the Bank Holding Company Act to prohibit generally bank holding companies from engaging in insurance activities as a principal, agent, or broker with certain exceptions. Under the express language of the Garn Act, the sale of insurance is not ‘‘closely related to banking’’ and is not permissible for a bank holding company unless it qualifies under one of the seven specified exceptions (Exemptions A–G) in the Garn Act. Exemption G applies to a limited number of bank holding companies that received approval from the Board prior to January 1, 1971, to conduct insurance agency activities. In order to utilize Exemption G or any other Garn Act exemptions that may be applicable, the bank holding company must file an application and would be subject to the proposed restrictions through the application process.

8. If an investor withdraws tax-deferred income from an annuity before the investor is 59½ years old, the IRS levies a tax penalty on the person equal to 10 percent of the amount of tax-deferred income withdrawn. This penalty may be avoided only if the person reinvests annuity proceeds in another tax-deferred investment within 60 days of the withdrawal.

advices, and verbally emphasized in telemarketing contacts. Finally, personnel selling uninsured annuities should be distinguishable from bank employees conducting normal retail deposit-taking operations.

2175.0.5 INSPECTION OBJECTIVES

1. To review the marketing and sale of uninsured annuities sold by the bank holding company and its member banks, or those sold through a third party.
2. To determine whether the bank holding company and its banks have adequate policies and procedures in place and if they are monitored by the parent company.
3. To determine if, prior to agreeing to sell annuities, a comprehensive financial analysis is made of the financial condition of the annuities underwriter and whether products of only financially secure underwriters are sold.
4. To determine whether the contract and advertising and related documents disclose prominently that the annuities do not represent deposits or obligations of an insured depository institution and that they are not insured by the Federal Deposit Insurance Corporation.
5. To ascertain that annuities are not sold at teller windows or other areas where deposits are routinely accepted.

2175.0.6 INSPECTION PROCEDURES

1. Determine whether the bank holding company and its banks have adequate policies and procedures in place:

a. to assess the financial condition of the annuities underwriter;

Banking organizations engaged in the sale of annuities are expected to sell only products of financially secure underwriters. Prior to agreeing to sell annuities, a comprehensive financial analysis of the obligor should be performed and reviewed with the banking organization's directors. The policies should also include a program to evaluate the underwriter's financial condition at least annually and to review the credit ratings assigned to the underwriter by the independent agencies evaluating annuity underwriters.

b. to ensure that the marketing and sale of uninsured annuities is not misleading and is separated and distinguished from routine retail deposit-taking activities.

(1) With regard to the sale of annuities, determine whether the contract, advertising, and all related documents disclose prominently in bold print that the annuities:

(a) are not deposits or obligations of an insured depository institution; and

(b) are not insured by the Federal Deposit Insurance Corporation.

(2) State member banks should not sell annuity instruments at teller windows or other areas where retail deposits are routinely accepted. In assessing the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function, examiners should take into account whether:

(a) advertisements *do not* contain words, such as ‘‘deposit’’, ‘‘CD’’, etc., or a logo that could lead an investor to believe an annuity is an insured deposit instrument;

(b) the obligor of the annuity contract is prominently disclosed, and names or logos of the insured depository institution are not used in a way that might suggest the insured depository institution is the obligor;

(c) adequate verbal disclosures are made during telemarketing contacts and at the time of sale;

(d) retail deposit-taking employees of the insured depository institution *are not engaged* in the promotion or sale of uninsured annuities;

(e) information on uninsured annuities *is not* contained in retail deposit statements of customers or in the immediate retail deposit-taking area;

(f) account information on annuities owned by customers *is not* included on insured deposit statements; and

(g) officer or employee remuneration associated with selling annuities is limited to reasonable levels in relation to the individual's salary.

(3) If a bank allows a third-party entity to market annuities on depository institution premises, examiners should take into account whether:

(a) the depository institution has assured itself that the third-party company is properly registered or licensed to conduct this activity;

(b) depository institution personnel *are not* involved in sales activities conducted by the third party;

(c) desks or offices *are not* used to market or sell annuities, are separate and distinctly identified as being used by an outside party; and

(d) depository institution personnel *do not* normally use desks or offices used by a third party for annuities sales.

2. Determine that advertisements do not prominently display the bank's name and logo that suggests the product is an obligation of a BHC bank.

3. Determine whether the banks obtain a signed statement from the customer indicating that the customer understands that the annuity is not a deposit or any other obligation of the depository institution, that the depository institution is only acting as an agent for the insurance company (underwriter), and that the annuity is not FDIC insured.

On January 5, 2004, the federal banking and thrift agencies (the agencies) issued an interagency policy to alert banking organizations, including their boards of directors and senior management, of the safety-and-soundness implications of and the legal impediments to a bank providing financial support to investment funds advised by the bank, its subsidiaries, or affiliates (that is, affiliated investment funds).[1] A banking organization's investment advisory services can pose material risks to the bank's liquidity, earnings, capital, and reputation and can harm investors, if the associated risks are not effectively controlled. In addition, bank-affiliated investment advisers are encouraged to establish alternative sources of financial support to avoid seeking support from affiliated banks. (See SR letter 04-1, "Interagency Policy on Banks/Thrifts Providing Financial Support to Funds Advised by the Banking Organization," and SR letter 94-53, "Investment Adviser Activities.")

Banks are under no statutory requirement to provide financial support to the funds they advise; however, circumstances may motivate banks to do so for reasons of reputation risk and liability mitigation. This type of support by banking organizations to funds they advise includes credit extensions, cash infusions, asset purchases, and the acquisition of fund shares. In very limited circumstances, certain arrangements between banks and the funds they advise have been expressly determined to be legally permissible and safe and sound when properly conducted and managed. However, the agencies are concerned about other occasions when emergency liquidity needs may prompt banks to support their advised funds in ways that raise prudential and legal concerns. Federal laws and regulations place significant restrictions on transactions between banks and their advised funds. In particular, sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W (12 CFR part 223) place quantitative limits and collateral and market-terms requirements on many transactions between a bank and certain of its advised funds.

2178.0.1 POLICY ON BANKS PROVIDING FINANCIAL SUPPORT TO ADVISED FUNDS

To avoid engaging in unsafe and unsound banking practices, banks should adopt appropriate policies and procedures governing routine or emergency transactions with bank-advised investment funds.[2] Such policies and procedures should be designed to ensure that the bank will *not* (1) inappropriately place its resources and reputation at risk for the benefit of the funds' investors and creditors; (2) violate the limits and requirements contained in sections 23A and 23B of the Federal Reserve Act and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or (3) create an expectation that the bank will prop up the advised fund. Further, the agencies expect banking organizations to maintain appropriate controls over investment advisory activities that include:

- Establishing alternative sources of emergency support from the parent holding company, nonbank affiliates, or external third parties prior to seeking support from the bank.
- Instituting effective policies and procedures for identifying potential circumstances triggering the need for financial support and the process for obtaining such support. In the

1. The federal banking and thrift agencies include the Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS). Title III of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) abolished the OTS, which had been responsible for regulating state and federal savings associations and their holding companies. See 12 USC 5413 (Dodd-Frank Act 313). The OTS's functions and powers were transferred to the OCC, FDIC, and the Board. The Board acquired regulatory and rulemaking authority over savings and loan holding companies. See 12 USC 5412 (Dodd-Frank Act 312). The OCC acquired supervisory and rulemaking authority over federal savings associations. The FDIC acquired supervisory and rulemaking authority over state-chartered savings associations. Bank-advised investment funds include mutual funds, alternative strategy funds, collective investment funds, and other funds where the bank, its subsidiaries, or affiliates is the investment adviser and receives a fee for its investment advice. For purposes of the guidance, "banks" includes banks and savings associations.

Bank-advised investment funds include mutual funds, alternative strategy funds, collective investment funds, and other funds where the bank, its subsidiaries, or affiliates is the investment adviser and receives a fee for its investment advice. For purposes of the guidance, "banks" includes banks and savings associations.

2. For more information on examination objectives and procedures in reviewing banks providing financial support to advised funds, see the appropriate "Investment-Funds Support" sections of the *Commercial Bank Examination Manual*.

limited instances that the bank provides financial support, the bank's procedures should include an oversight process that requires formal approval from the bank's board of directors, or an appropriate board-designated committee, independent of the investment advisory function. The bank's audit committee also should review the transaction to ensure that appropriate policies and procedures were followed.
- Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by the organization's investment advisory activities. Risk controls should include establishing appropriate risk limits, liquidity planning, performance measurement systems, stress testing, compliance reviews, and management reporting to mitigate the need for significant bank support.
- Implementing policies and procedures that ensure that the bank is in compliance with existing disclosure and advertising requirements to clearly differentiate the investments in advised funds from obligations of the bank or insured deposits.
- Ensuring proper regulatory reporting of contingent liabilities arising out of its investment advisory activities in the banking organization's published financial statements in accordance with Accounting Standards Codification (ASC) subtopic 450-20, Contingencies: Loss Contingencies, and fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities in accordance with the instructions for completing Call Report Schedule RC-T (Fiduciary and Related Services).

2178.0.2 NOTIFICATION AND CONSULTATION WITH THE PRIMARY FEDERAL REGULATOR

Because of the potential risks posed by the provision of financial support to advised funds, bank management should notify and consult with its appropriate federal banking agency prior to the bank providing material financial support to its advised funds. The appropriate federal banking agency will closely scrutinize the circumstances surrounding the transaction and will address situations that raise supervisory concerns.

Existing regulations permit banks and bank holding companies to engage in a wide range of securities activities in overseas markets. For a number of years these activities were not considered to be significant in the context of total bank and bank holding company assets. Indigenous rules and market practice served to constrain to a degree securities activities of U.S. banking organizations overseas.

Changes in local rules now make it possible for members of the London stock exchange to be wholly-owned by non-member companies and by year-end 1986 will allow stockbrokers to act as principals or market makers in securities. These new rules are expected to change significantly the complexion of the London securities market. In this context, U.S. banking organizations are making substantial investments in U.K. securities firms, and are also significantly expanding their securities business in other foreign and international markets.

The Board has expressed its concerns, in connection with an application by a banking organization to expand its securities activities overseas, that proper safeguards, limits, and controls will be exercised to protect the organization from undue risk. Applications generally state the methods through which the banking organization plans to control risk and establish oversight over securities operations. While these safeguards are initially evaluated at the time the application is made, nevertheless, examinations of bank holding companies and Edge corporations should incorporate an assessment of all overseas securities activities in order to determine the degree to which these activities conform to high standards of banking and financial prudence. The affiliation of a securities company, especially one engaged in corporate debt and equities transactions, with a banking organization raises a potential for conflict of interest and in some cases could pose substantial additional risk to the institution.

In those U.S. banking organizations where overseas securities trading and brokering are significant in scope or are prominent in the scale of the local market, examination procedures must incorporate an assessment of the controls, limits, and safeguards implemented by the organization to monitor and contain risk. Securities activities should be subject to the same degree of scrutiny and rigorous assessment of risk as bank lending activities. In addition, examiners should monitor the substance and nature of all transactions.

In particular, the following kinds of activities should be reviewed to determine whether they raise considerations of safety and soundness or otherwise do not conform to standards of prudence required of U.S. banking organizations:

- The degree of lending by a bank holding company to its securities affiliate, especially when loans are extended to support or enhance the obligations underwritten by the securities affiliate;
- The extent to which securities underwritten by an affiliate are purchased by the bank holding company as principal or trustee; and,
- The extent to which the parent is liable to an exchange for any losses incurred by the affiliate due to failure to deliver securities or settle contracts.

Targeted examinations and investigations by the Federal Reserve and the Enforcement Division of the Securities Exchange Commission (SEC), as well as court actions, have found banks in violation of Regulation U, Credit by Banks for the Purpose of Purchasing or Carrying Margin Stock, (12 C.F.R. 221) when their trust departments, using bank or other fiduciary funds, have extended credit to individuals involved in illegal day trading or free-riding schemes. These activities also involved the aiding and abetting of violations of two other securities credit regulations: Regulation T, Credit by Brokers and Dealers (12 C.F.R. 220), and Regulation X, Borrowers of Securities Credit, (12 C.F.R. 224).

Day trading and free-riding schemes involve the purchase and sale of stock on the same day (or within a very short period of time) and the funding of the purchases with the proceeds of the sale. Banking organizations[1] engaging in such illegal activities may subject themselves to disciplinary proceedings, as well as to substantial credit risk.

Federal Reserve examiners should ensure that banks and bank holding companies (including the broker-dealer and trust activities of banking and nonbanking subsidiaries of state member banks and bank holding companies) are not engaged in such illegal activities. Examiners must make certain that these entities have taken all steps necessary to prevent their customers from involving them in free-riding. Prompt enforcement action may be needed to eliminate free-riding activities. (See SR-93-13.)

2187.0.1 TYPICAL DAY TRADING OR FREE-RIDING ACTIVITIES

The free-riding conduct in question typically involves trading large amounts of securities without depositing the necessary money or appropriate collateral in their customer accounts. The customer seeks to free-ride, that is, purchase and sell the same securities and pay for the purchase with the proceeds of the sale. Often, free-riding schemes involve initial public offerings because broker-dealers are prohibited from financing these new issues. If the money to pay for the securities is not in the account when the securities are delivered in a delivery-versus-payment (DVP) transaction, a bank that permits completion of the transaction creates a temporary overdraft in the customer's account. This overdraft is an extension of credit that subjects the banks to Regulation U.

The typical free-riding scheme involves a new customer's opening a custodial agency account into which a number of broker-dealers will deliver securities or funds in DVP transactions. Although a deposit may be made into the custodial agency account, the amount of trading is greatly in excess of the original deposit, causing the financial institution to extend its own credit to meet the payment and delivery obligations of the account. Therefore, although the financial institution may be earning fees as a result of the activity in these accounts, it is subjecting itself to substantial losses if the market prices for the purchased securities fall or the transactions otherwise fail. In addition, other liabilities under federal banking and securities laws may be involved.

2187.0.2 SECURITIES CREDIT REGULATIONS

2187.0.2.1 Regulation U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks

Any extension of credit in the course of settling customer securities transactions, including those occuring in a trust department or trust subsidiary of a bank holding company, must comply with all of the provisions of Regulation U.[2] Regulation U requires all extensions of credit for the purpose of buying or carrying margin

1. The use of the term "banking organization" in this section, with regard to Regulation U, means a bank, trust department of a bank, or trust company of a bank holding company that is subject to Regulation U. Regulation U includes any nondealer nonbank subsidiary of a bank holding company that extends purpose credit by margin stock. With regard to Regulation T, it refers to any nonbank company that conducts broker-dealer activities.

2. For purposes of the regulation, the definition of "bank" specifically includes institutions "exercising fiduciary powers." (See 12 C.F.R. 221.2, 15 U.S.C. 78(c)(a)(6), and *Federal Reserve Regulatory Service* at 5–795 (1946).) When used in discussing a bank's trust department or any other type of financial institution exercising fiduciary powers, the term "extension of credit" includes overdrafts in settling customer's accounts that may be covered by advances from the banking organization, from other fiduciary customers, or from a combination of both.

stock that are secured by margin stock to be within the 50 percent limit. To avoid violations of the Board's securities credit regulations, on settlement date, the customer's account must hold sufficient funds, excluding the proceeds of the sale of the security, to pay for each security purchased. Although Regulation U applies only to transactions in margin stock, free-riding in nonmargin stocks in custodial agency accounts could result in a banking organization's aiding and abetting violations of Regulations T and X and other securities laws, and could raise financial safety-and-soundness issues.

2187.0.2.2 Regulation T, Credit by Brokers and Dealers, and Regulation X, Borrowers of Securities Credit

Because the custodial agency accounts are used to settle transactions effected by the customer at broker-dealers, a banking organization that opens this type of account should have some general understanding of how Regulation T restricts the customer's use of the account at the institution. Regulation T requires the use of a cash account for customer purchases or sales on a DVP basis. Section 220.8(a) of Regulation T specifies that cash-account transactions are predicated on the customer's agreement that the customer will make full cash payment for securities before selling them and does not intend to sell them before making such payment. Therefore, free-riding is prohibited in a cash account. A customer who instructs his or her agent financial institution to pay for a security by relying on the proceeds of the sale of that security in a DVP transaction is causing, or aiding or abetting, the broker-dealer to violate the credit restrictions of Regulation T. Regulation X, which generally prohibits borrowers from willfully causing credit to be extended in violation of Regulations T or U, also applies to the customer in such cases.

As described above, banking organizations[3] involved in customer free-riding schemes may be aiding and abetting violations of Regulation T by the broker-dealers who deliver securities or funds to the banking organization's customers' accounts. As long as a financial institution uses its funds to complete a customer's transactions, broker-dealers may not discover that they are selling securities to the customer in violation of Regulation T. A similar aiding and abetting violation of Regulation X could occur if a customer used the financial institution to induce a broker-dealer to violate Regulation T.

3. For a discussion of Regulation T as it applies to a bank holding company's broker-dealer nonbank subsidiary, see section 3230.0.

2187.0.3 NEW-CUSTOMER INQUIRIES AND WARNING SIGNALS

Examiners should make certain that all banks and other financial-institution subsidiaries of a bank holding company are administering and following appropriate written policies and procedures concerning the establishment of custodial agency accounts or any new account involving customer securities transactions. Such policies and procedures should address, among other things, ways an institution can protect itself against free-riding schemes. One way is to obtain adequate background and credit information from new clients, including whether the customer intends to obtain credit to use with the account. This type of activity requires more extensive monitoring than the typical DVP account in which no credit is extended. It would be prudent to inquire why a new customer is not using the margin-account services of its broker-dealers. If the account is to be used as a margin account, a financial institution must obtain Form FR U-1 from the customer and must sign and constantly update the form.

The financial institution should obtain from the customer a list of broker-dealers that will be sending securities to or receiving funds from the account in DVP transactions. If a number of broker-dealers may be used, the institution should obtain from the customer a written statement that all transactions with the broker-dealer will conform with Regulations T and X and that the customer is aware that a security purchased in a cash account is not to be sold until it is paid for. Similarly, when obtaining instructions for settling DVP transactions for a customer, the financial institution should clarify that it will not rely upon the proceeds from the sale of those securities to pay for the purchase of the same securities.

2187.0.4 SCOPE OF THE INSPECTION FOR FREE-RIDING ACTIVITIES

Examiners, bank holding companies, state member banks, and financial-institution and trust subsidiaries owned by bank holding companies (also U.S. branches and agencies of foreign banks exercising trust powers) should ensure that their banking organizations monitor accounts closely for an initial period to detect patterns typical of free-riding, including intraday overdrafts, and to ensure that sufficient funds or margin collateral are on deposit at all times. Frequent transactions in securities being offered in an initial public offering may suggest an avoidance of Regulations T and X. If it appears that a customer is attempting to free-ride, the financial institution should immediately alert the broker-dealers involved in transferring securities and take steps to minimize its own credit risk and legal liability.

At a minimum, examiners should also evaluate a trust institution's ability to ensure that it does not extend to a customer more credit on behalf of a bank or other financial institution than is permitted under Regulation U. If there are any questions in this regard, examiners should consult with their Reserve Bank's trust examiners. Any overdraft that is related to a purchase or sale of margin stock, and that is secured by margin stock, is an extension of credit subject to the regulation, including overdrafts that are outstanding for less than a day. Board staff have published a number of opinions discussing the application of Regulation U to various transactions relating to free-riding.

Free-riding violations that could endanger the banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits), as well as significant violations that were previously noted but have not yet been corrected, should be noted in the inspection report. Violations of the Board's Regulation T, U, or X, as applicable to the inspection, should be reported on the Examiner's Comments and Violations report pages. The report should discuss what action has or will be taken to correct those violations.

2187.0.5 SEC AND FEDERAL RESERVE SANCTIONS AND ENFORCEMENT ACTIONS

The SEC, in exercising its broad authority to enforce the Board's securities credit regulations, requires banks to (1) establish credit compliance committees to formulate written policies and procedures concerning the extension of purpose credit in their securities-clearance business, (2) establish training programs for bank personnel responsible for the conduct of their securities-clearance business, and (3) submit to outside audits to verify their compliance with the conditions of injunctions. The Board may also institute enforcement proceedings against the banking organizations it supervises and against any institution-affiliated parties involved in these activities, including cease-and-desist orders, civil money penalty assessments, and removal and permanent-prohibition actions.

2187.0.6 INSPECTION OBJECTIVES

1. To make certain that policies of the bank holding company's board, and the supervisory operating procedures, internal controls, and audit procedures will ensure, in the course of settling customers' securities transactions—
   a. that bank extensions of credit within the holding company comply with the provisions of Regulation U (including the requirement that initial extensions of credit that are secured by margin stock are within the initial 50 percent margin limit) and
   b. that customer accounts hold sufficient funds on the settlement date for each security purchased.
2. To determine—
   a. whether the banking organizations of the bank holding company can adequately monitor compliance with Regulation U through systems of internal controls, training, and compliance procedures (i.e., use of credit compliance committees) that address free-riding activities within the "back-office function"[4] and
   b. whether noncompliance is properly reported.
3. To initiate corrective action when policies, practices, procedures, or internal controls are not sufficient to prevent free-riding schemes, and when violations of the Board's regulations have been noted by bank examiners or self-regulatory organizations.

2187.0.7 INSPECTION PROCEDURES

1. Review the bank holding company's board of directors' policies for its banking institution subsidiaries regarding supervisory operational policies, procedures, and internal controls for loans extended for the purpose

4. Refers to the movement of cash and securities relating to trades and to the processing and recording of trades. This process is also called the "securities-clearance cycle."

of buying or carrying margin stock and secured directly or indirectly by margin stock.

a. Determine whether the policies require, for *each* extension of credit not specifically exempted under Regulation U, that a Form FR U-1 be executed and signed by the customer and accepted and signed by a duly authorized officer of the banking organization acting in good faith.

b. Determine whether the policies limit extensions of credit to no more than the maximum allowed loan value of the collateral, as set by section 221.7 of Regulation U, and whether those policies require adherence to margin requirements.

2. Review the bank holding company's board of directors' credit policies and operating policies, internal controls, and internal audit procedures to determine if they provide adequate safeguards against customers' free-riding practices. In so doing—

   a. determine if new-customer accounts are required to be approved by appropriate personnel; and

   b. establish whether the bank holding company's credit-system policies require—

   - controlling securities positions and financial-instrument contracts that serve as collateral for loans;
   - monitoring established restrictions and limits placed on the amounts and types of transactions to be executed with each customer and the dollar amounts placed on unsettled trades;
   - obtaining appropriate documentation consisting of essential facts pertaining to each customer, and in particular, financial information evidencing the customer's ability to pay for ordered securities, repay extensions of credit, and meet other financial commitments;
   - monitoring the location of all collateral;
   - ensuring that there are no overdrawn margin accounts; and
   - monitoring the status of failed transactions for the purpose of detecting free-riding schemes.

3. Determine if the bank holding company's audit committee or its internal or external auditors are required to review a selected random sample of individual or custodial agency accounts for customer free-riding activities.

2187.0.8 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Credit by brokers and dealers		220 (Reg. T)		
Regulation U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks		221 (Reg. U)

2220.3.1 NOTE ISSUANCE FACILITY (NIF)

One type of off-balance-sheet activity is the note issuance facility (NIF). The first public facility was arranged in 1981. A NIF is a medium-term arrangement under which a borrower can issue short-term paper. The paper is issued on a revolving basis, with maturities ranging from as low as 7 days to up to one year. Underwriters are committed either to purchasing any unsold notes or to providing standby credit. Bank borrowing usually involves commercial paper consisting of short-term certificates of deposit and for nonbank borrowers it would generally be promissory notes (Euronotes). NIF is the most common term used for this type of arrangement. Other terms include the revolving underwriting facility (RUF), and the standby note issuance facility (SNIF). NIFs, RUFs, and SNIFs are essentially the same credit product. The NIF is usually structured for 5 to 7 years.

Euronotes are denominated in US dollars and are issued with high face values (often $500,000 or more), being intended for the more sophisticated investor (professional or institutional investors). Holders of the notes show them as an asset on their balance sheets. The underwriting commitment represents an off-balance sheet item. The NIF allows the various functions performed by a single institution in a syndicated credit to be separated and performed by different institutions.

Instead of lending money, as in a syndicated credit, the NIF arranger provides a mechanism for placing notes with other investors when funds are needed. The underwriting commitment transforms the maturity, assuring the borrower access to short-term funds over the medium term, which remains off-balance sheet, unless drawn upon. The underwriters take the short-term credit risk since they face the risk of lending to a borrower that has difficulty in obtaining full confidence from investors.

NIFs can be arranged with an issuer-set margin whereby the issuer determines the margin over LIBOR (the London Interbank Offered Rate), or some other index at which notes will be offered. The issuer thus benefits from any improvement in market conditions. The notes are placed by the placing agent, but senior underwriters have the option of purchasing a prearranged share of any notes issued. Any notes not taken up at the issuer-set margin are distributed to underwriters at the pre- established maximum (cap) rate.

2220.3.2 REVOLVING UNDERWRITING FACILITY (RUF)

Another type of facility, a revolving underwriting facility (RUF), was introduced in 1982. A revolving underwriting facility is a medium-term revolving commitment to guarantee the overseas sale of short-term negotiable promissory notes (usually a fixed-spread over LIBOR) issued by the borrower at or below a predetermined interest rate. RUFs separate the roles of the medium-term risk-taker and the providers of the funding (the short-term investors). RUFs and NIFs allow access to capital sources at interest rates considerably below conventional financing rates. The savings in interest cost are derived because the borrower obtains the lower interest costs prevailing in the short-term markets, while still retaining the security of longer term financing commitments. The notes issued under RUFs are attractive for institutional investors since they permit greater diversification of risk than the certificates of deposit of only one bank. Underwriters favor them because their commitments do not appear on the statement of financial condition. RUFs are usually structured for periods of four to seven years.

A revolving underwriting facility (RUF) differs from a (NIF) in that it separates the functions of underwriting and distribution. With a RUF, the lead bank (manager or arranger) acts as the only placing agent. The arranger retains total control over the placing of the notes. The lead bank provides assistance to a borrower who forms a lending group of banks. The borrower, assisted by a lead bank (arranger), obtains a medium term revolving commitment that guarantees the sale of short-term negotiable promissory notes at or below a pre-determined interest rate. The participating group of banks arrange the funding, subject to certain lending conditions and rates, for the duration of the facility. In return, the borrower pays a facility fee to the revolving credit banks.

When the borrower desires funds, a placement agent or tender panel[1] places short-term notes with other banks and institutional investors (usually having maturities of 90 days, 180 days or 12 months). The short term notes can be issued to these investors at significantly lower interest rates than would be available from a revolving credit facility that the same banks would have been willing to provide. The note purchasers generally have a rollover option at maturity and new note purchasers are added as needed. The note purchasers bear the risk of loss in the event of default by the borrower. New note purchasers are added as needed. In the event the full line of credit is not placed with the note purchasers on any rollover date, the revolving credit banks must make funding available for the difference at the previously committed revolving credit interest rates, subject to the terms and conditions within the agreement.

With the RUF, and the use of a sole placing agent, the underwriters are not assured of securing any notes that they could place themselves nor can they benefit from any improvement in terms available in the market. The hindrance is removed by the use of NIFs with an issuer-set margin whereby the issuer determines the margin over an index at which notes will be offered.

Another form of a RUF is a transferable revolving underwriting facility (TRUF). With this arrangement the underwriter is able, with the borrower's approval, to transfer all rights and obligations under the underwriting commitment to another institution at any time during the life of the facility.

2220.3.3 RISK

The loan commitments involved in NIF and RUF transactions contain substantially the same terms as other loan commitments extended to similar borrowers. The failure of the borrower to satisfy the revolving standby agreement relieves the banks of any obligation to fund the transaction. The major source of risk is thus the liquidity risk that is derived from the uncertainty of the timing or amount of required funding. If the underlying notes cannot be marketed at or below the interest rate specified in the agreement, the bank would need to discount the notes to whatever rate would be necessary to make the notes attractive to investors, perhaps taking an up-front loss to avoid funding a low margin loan.

NIFs and RUFs involve less credit risk than extensions of credit because of the additional step that is required before funding takes place, a step that is not present with a revolving credit agreement. In other words, no funding is required until: (1) a decision is made by the borrower to issue notes; and (2) the placing agent becomes unable to place the short-term notes with short-term investors. Further, the risk of loss rests with the note investors. The underwriter's risk of nonpayment is not present until the rollover date. If there has been a significant deterioration in the issuer/borrower's financial condition on that date, the issuer/borrower may be prevented from drawing under the facility. This would be dependent on the funding conditions or the cancellation provisions stipulated in the agreement.

2220.3.4 PRICING AND FEES

The forms of compensation involving a NIF and RUF are: the underwriting and commitment fee; the one-time arrangement fee, and the periodic placement fees. An annual fixed underwriting fee is paid by the borrower on the amount of underlying commitment. This fee must be paid regardless of the frequency of usage of the facility or whether or not the underwriters are required to make any purchases of the short-term paper. This compensation is for the commitment to underwrite the issuance of the notes. The arranger receives a one-time arrangement fee based on a percentage of the amount of the facility. The issuer pays the borrowing costs on the notes issued, usually at a spread above or below an index. A portion of this borrowing fee is retained by the placement agent or the tender panel members as compensation for placing the paper.

Competitive pricing on NIFs and RUFS causes them to be very thinly margined. Commitment fees may be as low as 5 basis points for blue chip customers, while "BBB" credit-rated or equivalent borrowers might be charged as much as 20 basis points. Because of the thin spread some banks may only be serving as an

1. The tender panel was introduced in 1983. It is usually made up of several commercial investment banks and other institutional investors. The panel members bid for any notes issued, up to a predetermined maximum spread. The revolving credit banks can bid as part of the tender panel, but they are not required to do so. Any notes not bid for are purchased by the revolving credit banks or they extend credit of an equal amount. The tender panel may be a continuous tender panel whereby the underwriters are entitled to purchase notes from the lead manager up to their pro rata share at any time during the offer period, if available, at the market price.

arranger, preferring to not participate in the market. Typical fees for this service may consist of: an up-front arrangement fee of 20 basis points on the total principal amount of the facility, and an annual placement fee such as 12.5 basis points on the short-term notes sold. Revolving credit banks usually receive facility fees and annual maintenance fees.

If the underwriters have to purchase the notes, the backup rate of interest may be the index plus 10 to 15 basis points for blue chip companies to plus 37.5 basis points over the index for ''BBB'' rated borrowers. The interest rates charged (if funded) are usually lower because of market-pricing conventions (lower spreads) and the intense competition within the market.

2220.3.5 STANDBY RUFS

Some RUFS may provide for a utilization fee or may provide for a higher yield on the notes in the event that more than a nominal amount of paper is allocated to the underwriters. Such a provision would more likely be found in a standby facility. Standby facilities are backup commitments under which notes are not expected to be issued. This provision essentially protects the underwriter from having to book loans that are earning an insufficient yield. The structure of the facility generally determines its pricing depending upon the requirements of the issuer/borrower.

Standby RUFs substitute for committed bank lines which may be used, for example, as backup commitments for issuance of U.S. commercial paper. Commitment fees will be low because of the low probability that funds will need to be advanced. A standby facility will make borrowing from the underwriter very expensive in relation to what the issuer might have to pay. Otherwise, the underlying notes are issued on a regular basis, the maximum yield on the notes is set to approximate the normal market level for the issuer's short term borrowings.This facility would have a higher underwriting fee than a standby facility, because the regular issuances of notes increase the likelihood that the underwriting bank will have to purchase notes that cannot be placed.

2220.3.6 RUF DOCUMENTS

The *revolving credit agreement* is the primary document in a RUF. It includes the principal agreement of the transaction, executed by the revolving credit banks and the borrower. It contains the terms and conditions under which the borrower can draw on the facility. The document includes the financial covenants and events of default.

An *agency agreement* between the borrower and the placement agent designates the placement agent for the notes and sets forth the conditions of the agent's obligations for arranging the sale of the notes. Included are representations and warranties of the borrower regarding the authority to enter into the agreement and to issue the notes.

A description of the terms and conditions of the facility is contained within an *information memorandum*. Detail is provided with regard to the use of the proceeds, current and historical financial information, a description of the company, its finances and operations. It is distributed to prospective credit banks and note purchasers.

The *note* is the last document involving a RUF. Usually the notes will be unsecured obligations of the borrower and will include representations and warranties of the company regarding authorization and the absence of material litigation and bankruptcy proceedings. It will also contain a statement that a revolving credit facility is available to the borrower.

2231.0.1 INTRODUCTION

This manual section provides a brief summary of the Board's appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real estate appraisals and evaluations. The Board's real estate appraisal regulation is found in Regulation Y, subpart G (12 CFR 225.61–67), and applies to bank holding companies, nonbank subsidiaries of bank holding companies, and state member banks. For state member banks, there is a cross reference to the Board's appraisal regulations in Regulation H (12 CFR 208.50–51). Appraisals are also discussed in the Interagency Guidelines for Real Estate Lending Policies, which are found in appendix C to Regulation H, (appendix C to 12 CFR part 208).

Regulation H's real estate lending standards (12 CFR part 208, subpart E) direct state member banks to adopt and maintain written real estate lending policies that are consistent with safe and sound lending practices. Such policies should reflect consideration of applicable regulations and guidance pertaining to real estate appraisals when developing a loan-to-value estimate.[1] Although Regulation H applies only to state member banks, bank holding companies and their nonbank subsidiaries are expected to conduct their real estate lending activities in a prudent manner consistent with safe and sound lending standards.

2231.0.2 REGULATORY BACKGROUND FOR APPRAISALS

The Board's policy on real estate appraisals emphasizes the importance of sound appraisal policies and collateral-valuation procedures as part of a supervised financial institution's real estate lending activity.[2] The Board and other federal financial regulatory agencies adopted regulations in August 1990 on the performance and use of appraisals by federally regulated financial institutions to implement statutory changes due to the passage of title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) (12 USC 3331 et seq.).[3]

The Board's appraisal regulation requires, at a minimum, that real estate appraisals for federally related transactions be performed in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation, and that appraisals be in writing.[4] The regulation also sets forth additional appraisal standards, including that the appraisal contain sufficient information and analysis to support the supervised financial institution's decision to engage in the transaction; provide the real property's market value; be performed by state certified or licensed appraisers as required by the regulations; and analyze deductions and discounts for proposed construction projects, partially leased buildings, nonmarket lease terms, and tract developments with unsold units.

The intent of title XI and the Board's appraisal regulation is to protect federal financial and public policy interests in federally related transactions.[5] Federally related transactions are defined as those real estate-related financial transactions that an agency engages in, contracts for, or regulates and that require the services of an appraiser.[6]

Appraisals are required under the appraisal regulation for all real estate-related financial transactions unless an exemption applies. The regulation contains a set of exemptions, including dollar value thresholds at or below which an appraisal is not required. The exemptions are

1. 12 CFR part 208, appendix C, defines "value" when used to refer to "loan-to-value" as an opinion or estimate set forth in an appraisal or evaluation, whichever may be appropriate, of the market value of real property, prepared in accordance with the agency's appraisal regulations and guidance.

2. The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC) (the agencies) have promulgated appraisal regulations pursuant to Title XI. See 12 USC 3339. The agencies' title XI appraisal regulations apply to transactions entered into by the agencies or by institutions regulated by the agencies that are depository institutions or bank holding companies or subsidiaries of depository institutions or bank holding companies. OCC: 12 CFR part 34, subpart C; Board: 12 CFR part 225, subpart G; 12 CFR part 208, subpart E; and FDIC: 12 CFR part 323, subpart A. Unless otherwise stated, "supervised financial institutions" include state member banks, bank holding companies, and nonbank subsidiaries of bank holding companies.

3. In June 1994, the agencies' appraisal regulations were materially revised to clarify, amend, and add several exemptions to the appraisal requirement.

4. See 12 CFR 225.64.

5. See 12 USC 3331.

6. See 12 USC 3350(4).

identified as categories of real estate-related financial transactions that do not require the services of an appraiser in order to protect federal financial and public policy interests or to satisfy principles of safe and sound banking. As such, the exempted transactions are not federally related transactions under the statutory and regulatory definitions. Exempted transactions are not subject to title XI nor the provisions of the agencies' regulations governing appraisals. Certain exemptions, however, require the use of an evaluation consistent with safe and sound banking practices. Interagency guidance has been issued to assist financial institutions in performing evaluations consistent with such practices.

In addition to federal regulations, each state has established a program for certifying and licensing real estate appraisers who are qualified to perform appraisals in connection with federally related transactions. Title XI designated the Appraiser Qualifications Board and the ASB of the Appraisal Foundation, a nonprofit appraisal industry group, as the authority for establishing qualifications criteria for appraiser certification and licensing and the standards for the preparation of an appraisal. Title XI established the Appraisal Subcommittee (ASC) of the Federal Financial Institutions Examination Council. The ASC monitors state requirements for certifying and licensing appraisers who can perform appraisals for federally related transactions, state supervision, and registration of appraisal management companies, as well as certain title XI-related requirements established by the federal financial regulatory agencies. The ASC also monitors the Appraisal Foundation and its entities. If the ASC issues a finding that the policies, practices, or procedures of a state appraiser certifying and licensing agency are inconsistent with title XI, the services of licensed or certified appraisers from that state may not be used in connection with federally related transactions. The ASC also maintains the national registry of appraisers and appraisal management companies.[7]

7. Several provisions in title XI of FIRREA were amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act), providing additional authority to the ASC in its oversight of states' appraiser regulatory programs. (See sections 1471–1473 of Pub. L. 111-203, 124 Stat. 1376 (2010).)

2231.0.3 THE APPRAISAL REGULATION

Regulation Y, 12 CFR part 225, Subpart G, Appraisal Standards for Federally Related Transactions

The appraisal regulation sets standards for appraisals in connection with federally related transactions and also contains a lists of transactions that do not require the services of an appraiser and, therefore, are exempt from the appraisal requirement of the regulation. In reviewing a real estate loan, examiners assess whether the appraisal supports the real estate value used by the supervised financial institution in its credit decision and whether the appraisal complies with the appraisal regulation. Further, examiners assess the adequacy of an institution's appraisal program to support its real estate lending activity. There are several key sections in the appraisal regulation, which are described in greater detail below. The regulation contains the following:

- *Minimum appraisal standards, section 225.64* The regulation establishes minimum standards necessary for all appraisals that are prepared for federally related transactions. Those appraisals must
  - — conform to generally accepted appraisal standards in USPAP.
  - — be subject to appropriate review for compliance with USPAP.
  - — be written and contain sufficient information and analysis to support the credit decision.
  - — analyze and report deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms and tract developments with unsold units.
  - — be based upon the definition of market value set forth in the definition section of the regulation.
  - — be performed by state-licensed or state-certified appraisers in accordance with the regulation.
- *Independence standards for staff appraisers and fee appraisers, section 225.65*
  - — Staff appraisers must be independent of the lending, investment, and collection functions of the institution and not involved, except as an appraiser, in the federally related transaction and have no direct or indirect interest, financial or otherwise, in the property.

   — Fee appraisers must be engaged directly by the institution or its agent and have no direct or indirect interest, financial or otherwise, in the property or the transaction.
   — The regulation allows an institution to accept an appraisal prepared by an appraiser engaged by another financial services institution if the appraiser has no direct or indirect interest, financial or otherwise, in the property or transaction, and the appraisal complies with the requirements of the regulation.
- *Exemptions from the regulation, section 225.63*
   — The regulation provides a list of transactions that do not require appraisals. These transactions do not require the services of an appraiser and are, therefore, not federally related transactions. Certain of these exceptions require an evaluation in lieu of an appraisal.
- *Standards for professional association membership and competency, section 225.66*
   — A state-certified or state-licensed appraiser may not be excluded from consideration of an assignment based on membership or lack of membership in a particular appraisal organization.
   — All staff and fee appraisers performing appraisals in connection with federally related transactions must be state-certified or state-licensed as appropriate. However, any determination of competency shall be based on the individual's experience and educational background as they relate to a particular appraisal assignment.
- *Enforcement actions, section 225.67*
   — Institutions and their affiliates, including staff and fee appraisers, may be subject to removal and/or prohibition orders, cease and desist orders, and the imposition of civil money penalties.

2231.0.4 SUPERVISORY EXPECTATIONS AND FINDINGS

In conjunction with assessing the overall adequacy of a supervised financial institution's appraisal and evaluation program to support safe and sound real estate lending, examiners may cite the appropriate supervised financial institution with the following possible findings.

1. Examiners may make a finding regarding the supervised financial institution's compliance with the Board's appraisal regulation. When citing a violation of the appraisal regulation for a state member bank, an examiner should note the matter as a violation of Regulation H (12 CFR part 208, subpart E) citing the provision as codified in Regulation Y.
2. In some instances, the finding may indicate that a state member bank has failed to comply with the Board's real estate lending standards regulation. Examiners may refer to 12 CFR part 208, appendix C, "Interagency Guidelines for Real Estate Lending Policies," for guidance related to the use of appraisals in developing loan-to-value estimates according to the real estate lending standards.
3. Examiners should consider the supervisory expectations in the Interagency Appraisal and Evaluation Guidelines for guidance on safe and sound valuation policies and practices. If the institution's valuation policies and practices pose safety-and-soundness concerns for the institution, examiners could refer to 12 CFR part 208, Appendix D-1, "Interagency Guidelines Establishing Standards for Safety and Soundness," for guidance on consideration of the value of underlying collateral.

The following provides examples of possible examination findings and references to the applicable provisions in the Board's regulations.

Examples of violations of the appraisal regulation, 12 CFR 208.50 as set forth in 12 CFR 225.61–67, include

- failure to obtain an appraisal (12 CFR 225.63);
   — not obtaining an appraisal as required by the regulation
   — using an outdated appraisal for an existing transaction without meeting the regulatory criteria
   — not obtaining an appraisal due to the misapplication of an exemption, or when the transaction does not meet the specific requirements of the exemption
   — **Remedy:** Examiners should require the supervised financial institution to obtain a new appraisal.
- appraisal fails to comply with the minimum appraisal standards in the appraisal regulation;
   — violation of 12 CFR 208.50, subpart E as set forth in 12 CFR 225.64 (minimum

appraisal standards) or 12 CFR 225.65 (appraiser independence)
  - **Remedy:** Examiners should require the supervised financial institution to obtain a new appraisal.
- failure to use a state-licensed or state-certified appraiser (12 CFR 225.63);
  - engaging an appraiser with an expired license or certification
  - engaging a state-licensed appraiser when a state-certified appraiser is required
  - **Remedy:** Examiners should require the supervised financial institution to obtain a new appraisal.
- failure to maintain appraiser independence (12 CFR 225.65);
  - using a staff appraiser that is not independent of the lending function
  - allowing the borrower to hire the appraiser (the regulation requires that fee appraisers be engaged directly by the institution or its agent)
  - using an appraisal prepared by an appraiser that has an interest in the real estate
  - **Remedy:** Examiners should require the bank to obtain a new appraisal.
- failure to obtain an evaluation for certain exempt transactions (12 CFR 225.63(b)).
  - not obtaining an evaluation for a renewed loan
  - not obtaining an evaluation for a commercial or residential transaction at or under the appropriate threshold
  - not obtaining an evaluation for a business loan at or under $1 million
  - For further background, refer to the Interagency Guidelines and the section on “Transactions That Require Evaluations” as well as Appendix A—Appraisal Exemptions.
  - **Remedy:** Examiners should require the supervised financial institution to obtain an evaluation.

Examples of violations of the real estate lending regulation 12 CFR part 208, subpart E that pertain to appraisals or evaluations:

- The bank does not have adequate procedures for monitoring market conditions for its commercial real estate lending.
  - A bank must monitor real estate market conditions in its lending area and have credit administration policies that address the type and frequency of collateral valuations. Violation of 12 CFR part 208, subpart E (real estate lending standards regulation).
- Bank does not have appropriate policies establishing loan-to-value limits for real estate collateral. Violation of 12 CFR part 208, subpart E (real estate lending standards regulation).
  - **Remedy:** Examiners should require the bank to implement policies and procedures to promote compliance with the real estate lending regulation.

Examples of possible safety and soundness violations:

- The supervised financial institution’s overall appraisal function is weak.
  - The supervised financial institution’s appraisal and evaluation programs are inconsistent with safe and sound practices. Guidance on developing appraisal and evaluation programs in a safe and sound manner is provided in the Interagency Appraisal and Evaluation Guidelines.
  - The supervised financial institution’s approach to monitoring collateral values raises safety-and-soundness concerns, as an institution needs to have sufficient information to assess the real estate collateral risk in its real estate loan portfolio.
- The evaluation is inadequate.
  - The supervised financial institution has failed to satisfy supervisory expectations for evaluations.
  - For further guidance, refer to the Interagency Guidelines, the “Evaluation Development” and “Evaluation Content” subsections, and Appendix B — Evaluations Based on Analytical Methods or Technological Tools.
  - **Remedy:** Depending upon the noted deficiencies, examiners should require the supervised financial institution to perform a new evaluation or, alternatively, the institution may obtain an appraisal.
- The supervised financial institution has failed to meet independence expectations for its appraisal and evaluation program. Guidance for meeting independence expectations is set forth in the section on the Independence of the Appraisal and Evaluation Program in the Interagency Guidelines.
  - Evaluations are prepared by persons who are not independent of loan production.
  - Reporting lines of valuation program staff are not independent of loan production.

2231.0.5 INTERAGENCY APPRAISAL AND EVALUATION GUIDELINES

Over the years, the Board and the other federal banking regulatory agencies (the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation (the agencies)) have issued several appraisal-related guidance documents to assist institutions in implementing and complying with the appraisal regulation.[8] In December 2010, the agencies issued the Interagency Appraisal and Evaluation Guidelines (Interagency Guidelines) to clarify their appraisal regulations and to promote best practices in institutions' appraisal and evaluation programs. (See SR-10-16.) The Interagency Guidelines pertain to all real estate-related financial transactions originated or purchased by a regulated institution or its operating subsidiary for its own portfolio or as assets held for sale, including activities of commercial and residential real estate mortgage operations, capital markets groups, and asset securitization and sales units. The Interagency Guidelines provide a comprehensive discussion of the Board's supervisory expectations for a supervised financial institution's appraisal and evaluation program as well as background information on the technical aspects of appraisals.

The Interagency Guidelines more fully explain and clarify the requirements of the appraisal regulation. The Interagency Guidelines also contain supervisory guidance for developing and maintaining a safe and sound appraisal and evaluation program. Expectations for evaluations are addressed in the guidelines to clarify the requirement in the regulation that evaluations be performed in a safe and sound manner. For example, the appraisal regulation allows for the substitution of an "appropriate evaluation" for an appraisal under certain transactions; however, the regulation does not define what is an appropriate evaluation. The Interagency Guidelines provide guidance to assist regulated institutions in determining what an "appropriate evaluation" is. A violation of the appraisal regulation should be cited if the institution failed to obtain an evaluation, where one was required. The Interagency Guidelines may be used as guidance, for example, in determining the appropriate type of content in an evaluation. However, in making determinations about the adequacy of an institution's evaluation content, an assessment of the impact on the safety and soundness of the institution should be made and if it is determined that the evaluation was not conducted in a safe and sound manner, the evaluation requirement of the appraisal regulation should be cited. The Interagency Guidelines serve two main purposes:

1. Provides guidance regarding supervisory expectations for a supervised financial institution's appraisal and evaluation program including that
   - the institution's board of directors should provide for an effective appraisal and evaluation program;
   - the program should be independent;
   - the program should have a criteria for selection of appraisers and evaluators;
   - appraisals and evaluations should be appropriately reviewed;
   - there should be appropriate oversight of third-party arrangements;
   - the lender should have an appropriate compliance program; and
   - the lender should report appraisers that are involved in USPAP violations to state appraisal regulatory agencies.
2. Clarifies and provides guidance to assist firms in complying with the appraisal regulation, such as
   - the content expectations of an evaluation;
   - independence expectations for evaluations;
   - transactions that are exempt from the appraisal requirement;
   - situations where a real estate loan does not qualify for an exemption;
   - assessing the validity of existing appraisals and evaluations;
   - the importance of a scope of work and valuation approach in appraisal development; and
   - appraisal report options.

The Interagency Guidelines also discuss other uses for appraisals and evaluations. For example, a supervised financial institution's collateral-valuation program should consider when an appraisal or evaluation should be obtained to monitor ongoing collateral risk and to support credit analysis, including for purposes of updating risk ratings or classifying the credit. Also, when a credit becomes troubled, the primary source of repayment often shifts from the borrower's cash flow and income to the expected proceeds from the sale of the real estate collateral. Therefore, it is important that supervised financial institutions have a sound

8. For more information, see the "Real Estate" supervisory policy and guidance topic page.

and independent basis for determining the ongoing value of the real estate collateral. (See SR-09-7, "Prudent Commercial Real Estate Loan Workouts.")

2231.0.5.1 Appendixes of Interagency Appraisal and Evaluation Guidelines

Below are summaries of the four appendixes included with the guidelines found in the attachment to SR-10-16.

Appendix A—Appraisal Exemptions. A commentary on the 12 exemptions from the agencies' appraisal regulations. The appendix provides an explanation of the agencies' statutory authority to provide for appraisal regulatory exemptions and the application of these exemptions. In addition to these exemptions, note that the appraisal regulation has been amended to exempt commercial real estate transactions below $500,000 and residential real estate transactions below $400,000.[9]

Appendix B—Evaluations Based on Analytical Methods and Technological Tools. A discussion of the agencies' expectations for evaluations that are based on analytical methods and technological tools, including the use of automated valuation models and tax assessment valuations.

Appendix C—Deductions and Discounts Minimum. A discussion on appraisal standards for determining the market value of a residential tract development, including an explanation of the requirement to analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units.

9. In addition, the regulation was amended to cross reference a self-effectuating statutory exemption for rural residential real estate transactions under $400,000 that meet certain requirements, which was enacted by the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA). Supervised financial institutions are unlikely to rely on this exemption because all transactions within its scope are also exempt under the broader residential threshold exemption, which does not require the institution to meet any other criteria. An evaluation is required regardless of whether the institution relies on the general residential threshold or rural exemption. For more information on the effective dates of this amendment, see 84 Fed. Reg. 53,579 (October 8, 2019).

Appendix D—Glossary. Definitions of terms related to real estate lending, appraisals, and regulations to aid in reading the guidelines.

2231.0.6 ASSESSING THE ADEQUACY OF AN APPRAISAL

When assessing the adequacy of an appraisal and its compliance with the minimum appraisal standards, examiners should assess whether the appraisal conforms to USPAP Standard Rule 1—Real Property Appraisal Development, and USPAP Standard Rule 2—Real Property Appraisal Reporting. The Interagency Guidelines discuss the importance of the appraiser developing an appropriate "scope of work" consistent with USPAP's Scope of Work rule. An appraisal's scope of work should be clearly developed and explained in the appraisal report. Further, the appraisal report should include a copy of the supervised financial institution's engagement letter with the appraiser for the appraisal assignment.

It is important to note that some of the USPAP standards differ from aspects of the appraisal regulation, and, in such cases, the appraisal regulation should be followed with respect to appraisals for federally related transactions. For example, USPAP does not require appraiser independence and allows for appraisals to address definitions of value other than market value.

In reviewing a real estate loan and the related appraisal, examiners should consider whether the type of appraisal report is acceptable, the valuation approach is appropriate for the transaction, and the appraisal contains an estimate based on the market value definition. The appraisal should contain a clear development of the market value of the collateral and should contain sufficient information to support the real estate's market value and the supervised financial institution's credit decision. The USPAP standards discuss all of the basic components of an appraisal. Residential appraisals are commonly completed in a report format that conforms to the Uniform Residential Appraisal Report, which was developed by Fannie Mae and Freddie Mac.

Examiners should also confirm that the bank has procedures for reviewing appraisals and evaluations to determine that an appraisal or evaluation complies with the appraisal regulation and provides sufficient information to support the supervised financial institution's credit decision. The Appraisal Regulation was amended to require supervised financial institutions to subject appraisals to appropriate review for compliance with USPAP. The Interagency Guidelines provide further guidance on appropriate reviews. Not all appraisal reviews need to include the content of a USPAP Standard 3—Appraisal Review, Development, and Reporting. The depth of the appraisal review performed by the bank should consider the complexity and risk of the transaction. If deficiencies are noted in the supervised financial institution's review process, a supervised financial institution should obtain a USPAP compliant review completed by an appraiser or obtain a new compliant appraisal. Supervised financial institutions are encouraged to report to the state appraiser regulatory agency any appraiser that violates USPAP standards.

2231.0.7 APPRAISAL VALUATION APPROACHES

An appraiser typically utilizes three market-value approaches to analyze the value of property:[10]

- cost approach
- sales comparison approach
- income approach

Appraisers should consider all three approaches to value when completing an appraisal assignment. All three approaches have particular merits depending upon the type of real estate being appraised. For example, for single-family residential property, the cost and comparable sales approaches are most frequently used since the common use of the property is the personal residence of the owner. However, if a single-family residential property were intended to be used as a rental property, the appraiser would have to consider the income approach as well. Commercial properties are typically valued using all three approaches to value, whereas the income approach is heavily favored for property whose primary source of income is derived from rents. The appraiser then correlates the results of the value considerations to determine a market value for the subject real estate. For special-use commercial properties, the appraiser may have difficulty obtaining sales data on comparable properties and may have to base the value estimate on the cost and income approaches.

If an approach is not used in the appraisal, the appraiser should disclose the reason the approach was not used and whether this affects the value estimate.

2231.0.7.1 Cost Approach

The cost approach is commonly used to value construction or improvements to an existing building. In the cost approach to value estimation, the appraiser obtains a preliminary indication of value by adding the estimated depreciated reproduction cost of the improvements to the estimated land value. This approach is based on the assumption that the reproduction cost is the upper limit of value and that a newly constructed building would have functional and mechanical advantages over an existing building. The appraiser would evaluate any functional depreciation (disadvantages or deficiencies) of the existing building in relation to a new structure.

The cost approach consists of four basic steps: (1) estimate the value of the land as though vacant, (2) estimate the current cost of reproducing the existing improvements, (3) estimate depreciation and deduct from the reproduction cost estimate, and (4) add the estimate of land value and the depreciated reproduction cost of improvements to determine the value estimate.

2231.0.7.2 Sales Comparison Approach

The essence of the sales comparison approach is to determine the price at which similar properties have recently sold on the local market. Through an appropriate adjustment for differences in the subject property and the selected comparable properties, the appraiser estimates the market value of the subject property based on the sales price of the comparable properties. The process used in determining the degree of comparability of two or more properties involves judgment about their similarity with respect to age, location, condition, construction, layout, and equipment. The sales price or list price of those properties deemed most comparable tends to set the range for the value of the subject property.

10. The standards and application of valuation approaches are contained in the USPAP published by the Appraisal Standards Board of the Appraisal Foundation.

2231.0.7.3 Income Approach

The income approach estimates the real estate project's expected income over time converted to an estimate of its present value. The income approach is typically used to determine the market value of income-producing properties that receive rent, such as office buildings, apartment complexes, hotels, and shopping centers. In the income approach, the appraiser can apply several different capitalization or discounted cash-flow techniques to arrive at a market value. These techniques include the band-of-investments method, mortgage-equity method, annuity method, and land-residual method. Which method is used depends on whether there is project financing, whether there are long-term leases with fixed-level payments, and whether the value is being rendered for a component of the project, such as land or buildings.

The accuracy of the income-approach method depends on the appraiser's skill in estimating the anticipated future net income of the property and in selecting the appropriate capitalization rate and discounted cash flow. The following data are assembled and analyzed to determine potential net income and value:

- Rent schedules and the percentage of occupancy for the subject property and for comparable properties for the current year and several preceding years. This provides gross rental data and shows the trend of rentals and occupancy, which are then analyzed by the appraiser to estimate the gross income the property should produce.
- Expense data, such as taxes, insurance, and operating costs paid from revenues derived from the subject property and by comparable properties. Historical trends in these expense items are also determined.
- A time frame for achieving stabilized, or normal, occupancy and rent levels (also referred to as a holding period).

Basically, the income approach converts all expected future net operating income into present-value terms. When market conditions are stable and no unusual patterns of future rents and occupancy rates are expected, the direct capitalization method is used to value income properties. This method calculates the value of a property by dividing an estimate of its stabilized annual income by a factor called a capitalization rate or "cap rate." Stabilized income is generally defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions. The cap rate—usually defined for each property type in a market area—is viewed by some analysts as the required rate of return stated as a percentage of current income.

The use of this technique assumes that the use of either the stabilized income or the cap rate accurately captures all relevant characteristics of the property relating to its risk and income potential. If the same risk factors, required rate of return, financing arrangements, and income projections are used, explicit discounting and direct capitalization should yield the same results. For special-use properties, new projects, or troubled properties, the discounted cash flow (net present value) method is the more typical approach to analyzing a property's value. In this method, a time frame for achieving a stabilized, or normal, occupancy and rent level is projected. Each year's net operating income during that period is discounted to arrive at the present value of expected future cash flows. The property's anticipated sales value at the end of the period until stabilization (its terminal or reversion value) is then estimated. The reversion value represents the capitalization of all future income streams of the property after the projected occupancy level is achieved. The terminal or reversion value is then discounted to its present value and added to the discounted income stream to arrive at the total present market value of the property.

Most importantly, the analysis should be based on the ability of the project to generate income over time based upon reasonable and supportable assumptions. Additionally, the discount rate should reflect reasonable expectations about the rate of return that investors require under normal, orderly, and sustainable market conditions.

2231.0.7.4 Value Correlation

The three value estimates—cost, sales comparison, and income—must be evaluated by the appraiser and correlated into a final value estimate based on the appraiser's judgment. Correlation does not imply averaging the value estimates obtained by using the three different approaches. Where these value estimates are relatively close together, correlating them and setting the final market value estimate presents no special problem. It is in situations where widely divergent values are obtained by using the three appraisal approaches that the examiner must exercise judgment in analyzing the results and determining the estimate of market value.

2231.0.7.5 Other Definitions of Value

While the Board's appraisal regulation requires that the appraisal contain the market value of the real estate collateral, there are other definitions of value that are encountered in appraising and evaluating real estate transactions. These include the following:

Fair value. This is an accounting term that is generally defined as the amount in cash or cash-equivalent value of other consideration that a real estate parcel would yield in a current sale between a willing buyer and a willing seller (the selling price), that is, other than in a forced or liquidation sale.[11] According to accounting literature, fair value is generally used in valuing assets in nonmonetary transactions, troubled debt restructuring, quasi-reorganizations, and business combinations accounted for by the purchase method. An accountant generally defines fair value as market value; however, depending on the circumstances, these values may not be the same for a particular property.

Investment value. This is based on the data and assumptions that meet the criteria and objectives of a particular investor for a specific property or project. The investor's criteria and objectives are often substantially different from participants' criteria and objectives in a broader market. Thus, investment value can be significantly higher than market value in certain circumstances and should not be used in credit analysis decisions.

Liquidation value. This assumes that there is little or no current demand for the property but the property needs to be disposed of quickly, resulting in the owner sacrificing potential property appreciation for an immediate sale.

Going-concern value. This is based on the value of a business entity rather than the value of just the real estate. The valuation is based on the existing operations of the business that has a proven operating record, with the assumption that the business will continue to operate.

Tax-assessed value. This represents the value on which a taxing authority bases its assessment. The assessed value and market value may differ considerably due to tax assessment laws, timing of reassessments, and tax exemptions allowed on properties or portions of a property.

Net realizable value (NRV). This is recognized under generally accepted accounting principles as the estimated selling price in the ordinary course of business less estimated costs of completion (to the stage of completion assumed in determining the selling price), holding, and disposal. The NRV is generally used to evaluate the carrying amount of assets being held for disposition and properties representing collateral. While the market value or future selling price are generally used as the basis for the NRV calculation, the NRV also reflects the current owner's costs to complete the project and to hold and dispose of the property. For this reason, the NRV will generally be less than the market value.

11. See Accounting Standards Codification (ASC) Topic 820, "Fair Value Measurements and Disclosures" (formerly FASB Statement No. 157, "Fair Value Measurements"). It defines fair value and establishes a framework for measuring fair value. ASC Topic 820 should be applied when other accounting topics require or permit fair value measurements. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the asset's or liability's principal (or most advantageous) market at the measurement date. This value is often referred to as an "exit" price. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced liquidation or distressed sale.

These guidelines are designed to in ensure that troubled real estate loans receive consistent treatment nationwide. The guidelines are not intended to be a substitute for the examiner's judgment or for careful analysis of applicable credit and collateral factors. Use of the word "institution" in these guidelines refers to any lending source within the bank holding company organization, whether the lender is the parent company, a bank, thrift, or nonbanking subsidiary.

2240.0.1 EXAMINER REVIEW OF COMMERCIAL REAL ESTATE LOANS

2240.0.1.1 Loan Policy and Administration Review

As part of the analysis of an institution's commercial real estate loan portfolio, examiners review lending policies, loan administration procedures, and credit risk control procedures. The maintenance of prudent written lending policies, effective internal systems and controls, and thorough loan documentation are essential to the institution's management of the lending function.

The policies governing an institution's real estate lending activities must include prudent underwriting standards that are periodically reviewed by the board of directors and clearly communicated to the institution's management and lending staff. The institution must also have credit risk control procedures that include, for example, prudent internal limits on exposure, an effective credit review and classification process, and a methodology for ensuring that the allowance for loan and lease losses is maintained at an adequate level. The complexity and scope of these policies and procedures should be appropriate to the size of the institution and the nature of the institution's activities, and should be consistent with prudent banking practices and relevant regulatory requirements.

2240.0.1.2 Indicators of Troubled Real Estate Markets and Projects, and Related Indebtedness

In order to evaluate the collectibility of an institution's commercial real estate portfolio, examiners should be alert for indicators of weakness in the real estate markets served by the institution. They should also be alert for indicators of actual or potential problems in the individual commercial real estate projects or transactions financed by the institution.

There are several warning signs that real estate markets or projects are experiencing problems that may result in real estate values decreasing from original appraisals or projections. Adverse economic developments and/or an overbuilt market can affect a project's economic feasibility and may cause a real estate project and the loan to become troubled. Available indicators, such as permits for—and the value of—new construction, absorption rates, employment trends, and vacancy rates, are useful in evaluating the condition of commercial real estate markets. Weaknesses disclosed by these types of statistics may indicate that a real estate market is experiencing difficulties that may result in cash flow problems for individual real estate projects, declining real estate values, and ultimately, in troubled commercial real estate loans.

Indicators of potential or actual difficulties in commercial real estate projects may include:

- An excess of similar projects under construction.
- Construction delays or other unplanned adverse events resulting in cost overruns that may require renegotiation of loan terms.
- Lack of a sound feasibility study or analysis that reflects current and reasonably anticipated market conditions.
- Changes in concept or plan (for example, a condominium project converted to an apartment project because of unfavorable market conditions).
- Rent concessions or sales discounts resulting in cash flow below the level projected in the original feasibility study or appraisal.
- Concessions on finishing tenant space, moving expenses, and lease buyouts.
- Slow leasing or lack of sustained sales activity and increasing sales cancellations that may reduce the project's income potential, resulting in protracted repayment or default on the loan.
- Delinquent lease payments from major tenants.
- Land values that assume future rezoning.
- Tax arrearages.

As the problems associated with a commercial real estate project become more pronounced, problems with the related indebtedness may also arise. Such problems include diminished cash flow to service the debt and delinquent interest and principal payments.

While some commercial real estate loans become troubled because of a general downturn in the market, others become troubled because they were originated on an unsound or a liberal basis. Common examples of these types of problems include:

- Loans with no or minimal borrower equity.
- Loans on speculative undeveloped property where the borrowers' only source of repayment is the sale of the property.
- Loans based on land values that have been driven up by rapid turnover of ownership, but without any corresponding improvements to the property or supportable income projections to justify an increase in value.
- Additional advances to service an existing loan that lacks credible support for full repayment from reliable sources.
- Loans to borrowers with no development plans or noncurrent development plans.
- Renewals, extensions and refinancings that lack credible support for full repayment from reliable sources and that do not have a reasonable repayment schedule.[1]

2240.0.1.3 Examiner Review of Individual Loans, Including the Analysis of Collateral Value

The focus of an examiner's review of a commercial real estate loan, including binding commitments, is the ability of the loan to be repaid. The principal factors that bear on this analysis are the income-producing potential of the underlying collateral and the borrower's willingness and capacity to repay under the existing loan terms from the borrower's other resources if necessary. In evaluating the overall risk associated with a commercial real estate loan, examiners consider a number of factors, including the character, overall financial condition and resources, and payment record of the borrower; the prospects for support from any financially responsible guarantors; and the nature and degree of protection provided by the cash flow and value of the underlying collateral.[2] However, as other sources of repayment for a troubled commercial real estate loan become inadequate over time, the importance of the collateral's value in the analysis of the loan necessarily increases.

The appraisal regulations of the federal bank and thrift regulatory agencies require institutions to obtain appraisals when certain criteria are met.[3] Management is responsible for reviewing each appraisal's assumptions and conclusions for reasonableness. Appraisal assumptions should not be based solely on current conditions that ignore the stabilized income-producing capacity of the property.[4] Management should adjust any assumptions used by an appraiser in determining value that are overly optimistic or pessimistic.

An examiner analyzes the collateral's value as determined by the institution's most recent appraisal (or internal evaluation, as applicable). An examiner reviews the major facts, assumptions, and approaches used by the appraiser (including any comments made by management on the value rendered by the appraiser). Under the circumstances described below, the examiner may make adjustments to this assessment of value. This review and any resulting adjustments to value are solely for purposes of an examiner's analysis and classification of a credit and do not involve actual adjustments to an appraisal.

A discounted cash flow analysis is an appropriate method for estimating the value of income-producing real estate collateral.[5] This analysis should not be based solely on the current performance of the collateral or similar properties; rather, it should take into account, on

1. As discussed more fully in Manual section 2240.0.2, the refinancing or renewing of loans to sound borrowers would not result in a supervisory classification or criticism unless well-defined weaknesses exist that jeopardize repayment of the loans. Consistent with sound banking practices, institutions should work in an appropriate and constructive manner with borrowers who may be experiencing temporary difficulties.

2. The treatment of guarantees in the classification process is discussed in subsection 2240.0.3.

3. Department of the Treasury, Office of the Comptroller of the Currency, 12 CFR Part 34 (Docket No. 90–16); Board of Governors of the Federal Reserve System, 12 CFR Parts 208 and 225 (Regulation H and Y; Docket No. R–0685); Federal Deposit Insurance Corporation, 12 CFR 323 (RIN 3064–AB05); Department of the Treasury; Office of Thrift Supervision, 12 CFR Part 564 (Docket No. 90–1495).

4. Stabilized income generally is defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions.

5. The real estate appraisal regulations of the federal bank and thrift regulatory agencies include a requirement that an appraisal (a) follow a reasonable valuation method that addresses the direct sales comparison, income, and cost approaches to market value; (b) reconcile these approaches; and (c) explain the elimination of each approach not used. A discounted cash flow analysis is recognized as a valuation method for the income approach.

a discounted basis, the ability of the real estate to generate income over time based upon reasonable and supportable assumptions.

When reviewing the reasonableness of the facts and assumptions associated with the value of the collateral, examiners may evaluate:

- Current and projected vacancy and absorption rates;
- Lease renewal trends and anticipated rents;
- Volume and trends in past due leases;
- Effective rental rates or sale prices (taking into account all concessions);
- Net operating income of the property as compared with budget projections; and
- Discount rates and direct capitalization (''cap'') rates.

The capacity of a property to generate cash flow to service a loan is evaluated based upon rents (or sales), expenses, and rates of occupancy that are reasonably estimated to be achieved over time. The determination of the level of stabilized occupancy and rental rates should be based upon an analysis of current and reasonably expected market conditions, taking into consideration historical levels when appropriate. The analysis of collateral values should not be based upon a simple projection of current levels of net operating income if markets are depressed or reflect speculative pressures but can be expected over a reasonable period of time to return to normal (stabilized) conditions. Judgment is involved in determining the time that it will take for a property to achieve stabilized occupancy and rental rates.

Examiners do not make adjustments to appraisal assumptions for credit analysis purposes based on worst case scenarios that are unlikely to occur. For example, an examiner would not necessarily assume that a building will become vacant just because an existing tenant who is renting at a rate above today's market rate may vacate the property when the current lease expires. On the other hand, an adjustment to value may be appropriate for credit analysis purposes when the valuation assumes renewal at the above-market rate, unless that rate is a reasonable estimate of the expected market rate at the time of renewal.

When estimating the value of income-producing real estate, discount rates and ''cap'' rates should reflect reasonable expectations about the rate of return that investors require under normal, orderly and sustainable market conditions. Exaggerated, imprudent, or unsustainably high or low discount rates, ''cap'' rates, and income projections should not be used. Direct capitalization of nonstabilized income flows should also not be used.

Assumptions, when recently made by qualified appraisers (and, as appropriate, by institution management) and when consistent with the discussion above, should be given a reasonable amount of deference. Examiners should not challenge the underlying assumptions, including discount rates and ''cap'' rates used in appraisals, that differ only in a limited way from norms that would generally be associated with the property under review. The estimated value of the underlying collateral may be adjusted for credit analysis purposes when the examiner can establish that any underlying facts or assumptions are inappropriate and can support alternative assumptions.

2240.0.2 CLASSIFICATION GUIDELINES

As with other types of loans, commercial real estate loans that are adequately protected by the current sound worth and debt service capacity of the borrower, guarantor, or the underlying collateral generally are not classified. Similarly, loans to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards, including loans to creditworthy commercial or residential real estate developers, should not be classified or criticized unless well-defined weaknesses exist that jeopardize repayment. An institution will not be criticized for continuing to carry loans having weaknesses that result in classification or criticism as long as the institution has a well-conceived and effective workout plan for such borrowers, and effective internal controls to manage the level of these loans.

In evaluating commercial real estate credits for possible classification, examiners apply standard classification definitions. In determining the appropriate classification, consideration should be given to all important information on repayment prospects, including information on the borrower's creditworthiness, the value of, and cash flow provided by, all collateral supporting the loan, and any support provided by financially responsible guarantors.

The loan's record of performance to date is important and must be taken into consideration. As a general principle, a performing commercial real estate loan should not automatically be classified or charged-off solely because the value of the underlying collateral has declined to an amount that is less than the loan balance. However, it would be appropriate to classify a performing loan when well-defined weaknesses exist that jeopardize repayment, such as the lack of credible support for full repayment from reliable sources.

These principles hold for individual credits, even if portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each credit should be based upon the fundamental characteristics affecting the collectibility of the particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits that are not affected by the problems of the troubled sectors.

2240.0.2.1 Classification of Troubled Project-Dependent Commercial Real Estate Loans[6]

The following guidelines for classifying a troubled commercial real estate loan apply when the repayment of the debt will be provided solely by the underlying real estate collateral, and there are no other available and reliable sources of repayment. The guidelines are not intended to address loans that must be treated as ''Other Real Estate Owned'' for bank and BHC reporting purposes.

As a general principle, for a troubled project-dependent commercial real estate loan, any portion of the loan balance that exceeds the amount that is adequately secured by the value of the collateral, and that can clearly be identified as uncollectible, should be classified ''loss.''[7] The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than ''substandard.'' The amount of the loan balance in excess of the value of the collateral, or portions thereof, should be classified ''doubtful'' when the potential for full loss may be mitigated by the outcomes of certain pending events, or when loss is expected but the amount of the loss cannot be reasonably determined.

If warranted by the underlying circumstances, an examiner may use a ''doubtful'' classification on the entire loan balance. However, this would occur infrequently.

6. The discussion in this section is not intended to address loans that must be treated as ''other real estate owned'' for bank regulatory reporting purposes or ''real estate owned'' for thrift regulatory reporting purposes. Guidance on these assets is presented in supervisory and reporting guidance of the agencies.

7. For purposes of this discussion, the ''value of the collateral'' is the value used by the examiner for credit analysis purposes, as discussed in a previous section of this policy statement.

2240.0.2.2 Guidelines for Classifying Partially Charged-off Loans

Based upon consideration of all relevant factors, an evaluation may indicate that a credit has well-defined weaknesses that jeopardize collection in full, but that a portion of the loan may be reasonably assured of collection. When an institution has taken a charge-off in an amount sufficient that the remaining recorded balance of the loan (a) is being serviced (based upon reliable sources) and (b) is reasonably assured of collection, classification of the remaining recorded balance may not be appropriate. Classification would be appropriate when well-defined weaknesses continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally be classified no more severely than ''substandard.''

A more severe classification than ''substandard'' for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, e.g., where significant risk exposures are perceived, such as might be the case for bankruptcy situations or for loans collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

2240.0.2.3 Guidelines for Classifying Formally Restructured Loans

The classification treatment previously discussed for a partially charged off loan would also generally be appropriate for a formally restructured loan when partial charge-offs have been taken. For a formally restructured loan, the focus of the examiner's analysis is on the ability of the borrower to repay the loan in accordance with its modified terms. Classification of a formally restructured loan would be appropriate, if, after the restructuring, well-defined weaknesses exist that jeopardize the orderly repayment of the loan in accordance with reasonable modified terms.[8] Troubled commercial real estate loans whose terms have been restructured should be identified in the institution's internal credit review system, and closely monitored by management.

2240.0.3 TREATMENT OF GUARANTEES IN THE CLASSIFICATION PROCESS

Initially, the original source of repayment and the borrower's intent and ability to fulfill the obligation without reliance on third party guarantors will be the primary basis for the review and classification of assets.[9] The federal bank and thrift regulatory agencies will, however, consider the support provided by guarantees in the determination of the appropriate classification treatment for troubled loans. The presence of a guarantee from a ''financially responsible guarantor,'' as described below, may be sufficient to preclude classification or reduce the severity of classification.

For purposes of this discussion, a guarantee from a ''financially responsible guarantor'' has the following attributes:

- The guarantor must have both the financial capacity and willingness to provide support for the credit;
- The nature of the guarantee is such that it can provide support for repayment of the indebtedness, in whole or in part, during the remaining loan term; and[10]
- The guarantee should be legally enforceable.

The above characteristics generally indicate that a guarantee may improve the prospects for repayment of the debt obligation.

2240.0.3.1 Considerations Relating to a Guarantor's Financial Capacity

The lending institution must have sufficient information on the guarantor's financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor's financial capacity to fulfill the obligation. Also, it is important to consider the number and amount of guarantees currently extended by a guarantor, in order to determine that the guarantor has the financial capacity to fulfill the contingent claims that exist.

2240.0.3.2 Considerations Relating to a Guarantor's Willingness to Repay

Examiners normally rely on their analysis of the guarantor's financial strength and assume a willingness to perform unless there is evidence to the contrary. This assumption may be modified based on the ''track record'' of the guarantor, including payments made to date on the asset under review or other obligations.

Examiners give due consideration to those guarantors that have demonstrated their ability and willingness to fulfill previous obligations in their evaluation of current guarantees on similar assets. An important consideration will be whether previously required performance under guarantees was voluntary or the result of legal or other actions by the lender to enforce the guarantee. However, examiners give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee obligation under review.

Examiners also consider the economic incentives for performance from guarantors:

- Who have already partially performed under the guarantee or who have other significant investments in the project;
- Whose other sound projects are cross-collateralized or otherwise intertwined with the credit; or
- Where the guarantees are collateralized by readily marketable assets that are under the control of a third party.

8. An example of a restructured commercial real estate loan that does *not* have reasonable modified terms would be a ''cash flow'' mortgage which requires interest payments *only* when the underlying collateral generates cash flow but provides no substantive benefits to the lending institution.

9. Some loans are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the loan based upon the guarantor's ability to repay the loan.

10. Some guarantees may only provide for support for certain phases of a real estate project. It would not be appropriate to rely upon these guarantees to support a troubled loan after the completion of these phases.

2240.0.3.3 Other Considerations as to the Treatment of Guarantees in the Classification Process

In general, only guarantees that are legally enforceable will be relied upon. However, all legally enforceable guarantees may not be acceptable. In addition to the guarantor's financial capacity and willingness to perform, it is expected that the guarantee will not be subject to significant delays in collection, or undue complexities or uncertainties about the guarantee.

The nature of the guarantee is also considered by examiners. For example, some guarantees for real estate projects only pertain to the development and construction phases of the project. As such, these limited guarantees would not be relied upon to support a troubled loan after the completion of those phases.

Examiners also consider the institution's intent to enforce the guarantee and whether there are valid reasons to preclude an institution from pursuing the guarantee. A history of timely enforcement and successful collection of the full amount of guarantees will be a positive consideration in the classification process.

In June 2000, the Federal Financial Institutions Examination Council (FFIEC), on behalf of the Board of Governors of the Federal Reserve System (Federal Reserve), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC), collectively referred to as "the agencies," published revisions to the Uniform Retail Credit Classification and Account Management Policy.[1] The purpose of the 2000 revision was to clarify certain provisions, especially regarding the re-aging of open-end accounts and extensions, deferrals, renewals, and rewrites of closed-end loans. The revised policy provides supervisory guidance for residential and home equity loans; fraudulent loans; loans to deceased persons; loans to borrowers in bankruptcy; treatment of partial payments involving past-due loans; and re-aging, deferrals, renewals, or rewrites of open-end and closed-end credit. The agencies are to use this expanded supervisory guidance when applying the uniform classifications to retail-credit loans extended by depository institutions. See SR-00-8, "Revised Uniform Retail Credit Classification and Account Management Policy."

While the terms of the revised policy apply only to federally insured depository institutions, the Federal Reserve believes the guidance is broadly relevant to bank holding companies (BHCs) and their nonbank lending subsidiaries, as well as savings and loan holding companies (SLHCs).[2] Accordingly, examiners should consider the revised policy, as appropriate, in the inspection of consumer finance subsidiaries of BHCs and SLHCs.

The following subsection presents the Uniform Retail Credit Classification and Account Management Policy with minor clarifying edits and updated references. See 65 Fed. Reg. 36,903, (June 12, 2000) for the original statement issued by the FFIEC.

2241.0.1 UNIFORM RETAIL CREDIT CLASSIFICATION AND ACCOUNT MANAGEMENT POLICY

The Uniform Retail Credit Classification and Account Management Policy establishes standards for the classification and treatment of retail credit in financial institutions. The agencies' classifications used for retail credit are *Substandard, Doubtful,* and *Loss.*[3] These are defined as follows:

- **Substandard:** A *Substandard* asset is inadequately protected by the current sound worth and paying capacity of the obligor, or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.
- **Doubtful:** An asset classified *Doubtful* has all the weaknesses inherent in one classified *Substandard* with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.
- **Loss:** Assets classified *Loss* are considered uncollectible, and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value; but rather, it is not practical or desirable to defer writing off this basically worthless asset, even though partial recovery may be effected in the future.

Retail credit consists of open- and closed-end credit extended to individuals for household, family, and other personal expenditures, including consumer loans and credit cards. For purposes of this policy, retail credit also includes loans to individuals secured by their personal residence, including first mortgage, home equity, and home-improvement loans. Because a retail-credit portfolio generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail-credit port-

1. While the former Office of Thrift Supervision also adopted the Uniform Retail Credit Classification and Account Management Policy, the National Credit Union Administration, also a member of the FFIEC, did not.

2. See SR-14-9, "Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program."

3. Although the Federal Reserve, FDIC, and OCC do not require institutions to adopt identical classification definitions, institutions should classify their assets using a system that can be easily reconciled with the regulatory classification system.

folio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and for examiners.

Actual credit losses on individual retail credits should be recorded when the institution becomes aware of the loss, but in no case should the charge-off exceed the time frames stated in this policy. This policy does not preclude an institution from adopting a more conservative internal policy. Based on collection experience, when a portfolio's history reflects high losses and low recoveries, more conservative standards are appropriate and necessary.

The quality of retail credit is best indicated by the repayment performance of individual borrowers. Therefore, in general, retail credit should be classified based on the following criteria:

1. Open- and closed-end retail loans past due 90 cumulative days from the contractual due date should be classified as *Substandard.*
2. Closed-end retail loans that become past due 120 cumulative days, and open-end retail loans that become past due 180 cumulative days, from the contractual due date should be classified as *Loss* and charged off.[4] In lieu of charging off the entire loan balance, a loan with non-real estate collateral may be written down to the value of the collateral, less cost to sell, if repossession of collateral is assured and in process.
3. One- to four-family residential real estate loans and home equity loans that are past due 90 days or more with loan-to-value ratios greater than 60 percent should be classified as *Substandard.* Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent need not be classified. However, home equity loans where the institution does not hold the senior mortgage, that are past due 90 days or more, should be classified as *Substandard,* even if the loan-to-value ratio is equal to or less than 60 percent.

   For open- and closed-end loans secured by residential real estate, a current assessment of value should be made no later than 180 days past due. Any outstanding loan balance in excess of the value of the property, less cost to sell, should be classified as *Loss* and charged off.
4. Loans in bankruptcy should be classified as *Loss* and charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the time frames specified in this classification policy, whichever is shorter, unless the institution can clearly demonstrate and document that repayment is likely to occur. Loans with collateral may be written down to the value of the collateral, less cost to sell. Any loan balance not charged off should be classified as *Substandard* until the borrower re-establishes the ability and willingness to repay for a period of at least six months.
5. Fraudulent loans should be classified as *Loss* and charged off no later than 90 days of discovery or within the time frames adopted in this classification policy, whichever is shorter.
6. Loans of deceased persons should be classified as *Loss* and charged off when the loss is determined or within the time frames adopted in this classification policy, whichever is shorter.

4. For operational purposes, whenever a charge-off is necessary under this policy, it should be taken no later than the end of the month in which the applicable time period elapses. Any full payment received after the 120- or 180-day charge-off threshold, but before month-end charge-off, may be considered in determining whether the charge-off remains appropriate. Open-end retail accounts that are placed on a fixed repayment schedule should follow the charge-off time frame for closed-end loans.

2241.0.1.1 Other Considerations for Classification

If an institution can clearly document that a past-due loan is well secured and in the process of collection, such that collection will occur regardless of delinquency status, then the loan need not be classified. A well-secured loan is collateralized by a perfected security interest in, or pledges of, real or personal property, including securities with an estimable value, less cost to sell, sufficient to recover the recorded investment in the loan, as well as a reasonable return on that amount. "In the process of collection" means that either a collection effort or legal action is proceeding and is reasonably expected to result in recovery of the loan balance or its restoration to a current status, generally within the next 90 days.

2241.0.1.2 Partial Payments on Open- and Closed-End Credit

An institution should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing past-due status. Alternatively, an institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is \$300 and the borrower makes payments of only \$150 per month for a six-month period, the institution could aggregate the payments received (\$150 × 6 payments, or \$900). The institution could then give credit for three full months (\$300 x 3 payments) and thus treat the loan as three full months past due. An institution may use either or both methods in its portfolio, but may not use both methods simultaneously with a single loan.

2241.0.1.3 Re-aging, Extensions, Deferrals, Renewals, and Rewrites

Re-aging of open-end accounts, and extensions, deferrals, renewals, and rewrites of closed-end loans can be used to help borrowers overcome temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member.[5] A permissive policy on re-agings, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use is acceptable when it is based on a renewed willingness and ability to repay the loan, and when it is structured and controlled in accordance with sound internal policies.

Management should ensure that comprehensive and effective risk management and internal controls are established and maintained so that re-ages, extensions, deferrals, renewals, and rewrites can be adequately controlled and monitored by management and verified by examiners. The decision to re-age, extend, defer, renew, or rewrite a loan, like any other modification of contractual terms, should be supported in the institution's management information systems. Adequate management information systems usually identify and document any loan that is re-aged, extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that the institution's personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower has the ability to repay the loan. To be effective, management information systems should also monitor and track the volume and performance of loans that have been re-aged, extended, deferred, renewed, or rewritten and/or placed in a workout program.

5. These terms are defined as follows. **Re-age:** Returning a delinquent, open-end account to current status without collecting (at the time of aging) the total amount of principal, interest, and fees that are contractually due. **Extension:** Extending monthly payments on a closed-end loan and rolling back the maturity by the number of months extended. The account is shown current upon granting the extension. If extension fees are assessed, they should be collected at the time of the extension and not added to the balance of the loan. **Deferral:** Deferring a contractually due payment on a closed-end loan without affecting the other terms, including maturity, (or the due date for subsequently scheduled payments,) of the loan. The account is shown current upon granting the deferral. **Renewal:** Underwriting a matured, closed-end loan generally at its outstanding principal amount and on similar terms. **Rewrite:** Underwriting an existing loan by significantly changing its terms, including payment amounts, interest rates, amortization schedules, or its final maturity.

2241.0.1.4 Open-End Accounts

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. To be considered for re-aging, an account should exhibit the following:

1. The borrower has demonstrated a renewed willingness and ability to repay the loan.
2. The account has existed for at least nine months.
3. The borrower has made at least three consecutive minimum monthly payments or the equivalent cumulative amount. Funds may not be advanced by the institution for this purpose.

Open-end accounts should not be re-aged more than once within any 12-month period and no more than twice within any 5-year period. Institutions may adopt a more conservative re-aging standard; for example, some institutions allow only one re-aging in the lifetime of an open-end account. Additionally, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees), provided that no new credit is extended to the borrower until the balance falls below the predelinquency credit limit.

Institutions may re-age an account after it enters a workout program, including internal and third-party debt-counseling services, but only after receipt of at least three consecutive minimum monthly payments or the equivalent cumulative amount, as agreed upon under the workout or debt-management program. Re-aging for workout purposes is limited to once in a 5-year period and is in addition to the once-in-12-months/twice-in-5-years limitation described above. To be effective, management information systems should track the principal reductions and charge-off history of loans in workout programs by type of program.

2241.0.1.5 Closed-End Loans

Institutions should adopt and adhere to explicit standards that control the use of extensions, deferrals, renewals, and rewrites of closed-end loans. The standards should exhibit the following:

1. The borrower should show a renewed willingness and ability to repay the loan.
2. The standards should limit the number and frequency of extensions, deferrals, renewals, and rewrites.
3. Additional advances to finance unpaid interest and fees should be prohibited.

Management should ensure that comprehensive and effective risk management, reporting, and internal controls are established and maintained to support the collection process and to ensure timely recognition of losses. To be effective, management information systems should track the subsequent principal reductions and charge-off history of loans that have been granted an extension, deferral, renewal, or rewrite.

2241.0.1.6 Examination Considerations

Examiners should assess whether an institution adheres to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The Uniform Retail Credit Classification and Account Management Policy does not preclude examiners from classifying individual retail-credit loans that exhibit signs of credit weakness regardless of delinquency status. Similarly, an examiner may also classify retail portfolios, or segments thereof, where underwriting standards are weak and present unreasonable credit risk, and may criticize account management practices that are deficient.

In addition to reviewing loan classifications, the examiner should assess whether the institution's allowance provides adequate coverage for probable losses inherent in the portfolio. Sound risk- and account-management systems, including a prudent retail-credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. A bank's internal controls should also confirm adherence to its retail-credit lending policies. Institutions that lack sound policies or fail to implement or effectively adhere to established policies will be subject to criticism as an unsafe and unsound practice.

In carrying out its regulatory and supervisory responsibilities, the Board requires the submission of various reports from bank holding companies. These reports are an integral part of the Board's supervision, monitoring, and surveillance functions. Information from these reports is used to evaluate the performance of bank holding companies, appraise their financial condition, and determine their compliance with applicable laws and regulations. The examiner must review the reports (submitted to the Federal Reserve System) for accuracy and timeliness and insist on their being amended if material errors are found. If inaccurate data are submitted, the resulting ratios could conceal deteriorating trends in the company's financial condition and performance. Bank holding companies should maintain sufficient internal systems and procedures to ensure that reporting is accomplished according to appropriate regulatory requirements. Clear, concise, and orderly workpapers should support the data presented and provide a logical tie between report data and the financial records. For detailed current information on who must submit reports and what the reporting requirements are, see the Board's public site on the Internet at the following address: www.federalreserve.gov/boarddocs/reportforms.

2250.0.1 PENALTIES FOR ERRORS IN REPORTS

Section 8 of the Bank Holding Company Act (the act) was amended to provide for the assessment of civil money penalties for the submission of late, false, or misleading reports filed by bank holding companies that are required by the act and Regulation Y and for the failure to file the required regulatory reports. Financial institutions that have adequate procedures to avoid any inadvertent errors but that unintentionally submit incorrect information or are minimally late in publishing or transmitting the reports can be fined up to $2,000 per day. The financial institution has the burden of proving that the error was inadvertent. If the error was not inadvertent, a penalty of up to $20,000 per day can be assessed. If the submission was done in a knowing manner or with reckless disregard for the law, a fine of up to $1 million or 1 percent of the institution's assets can be assessed for each day of the violation. Institution-affiliated parties who participate in any manner in the filing of an institution's false or misleading required regulatory report, or who cause the failure to file or a late filing of a required regulatory report, may be assessed a civil money penalty of up to $25,000 per day.

2250.0.2 APPROVAL OF DIRECTORS AND SENIOR OFFICERS OF DEPOSITORY INSTITUTIONS

The Federal Deposit Insurance Act (12 U.S.C. 1811) was amended to require each insured depository institution and depository institution holding company to give 30 days' prior notification to the federal banking authority of (1) the proposed addition of any individual to its board of directors or (2) the employment of any individual as a senior executive officer. This requirement applies to the following institutions:

1. institutions that have been chartered less than two years
2. institutions that have undergone a change in control within the preceding two years
3. institutions that are in a troubled condition or whose capital is below minimum standards

The agencies have the authority to issue a notice of disapproval to stop the appointment or employment of an individual if they feel that appointing or employing the person would not be in the interests of the public, taking into account that individual's competence, experience, character, and integrity.

2250.0.3 INSPECTION OBJECTIVES

1. To determine that required reports are being filed on time.
2. To determine that the contents of reports are accurate and complete.
3. To recommend corrective and, if needed, formal enforcement action when official reporting practices, policies, or procedures are deficient.

2250.0.4 INSPECTION PROCEDURES

1. A bank holding company's historical record concerning the timely submission of reports should be ascertained by reviewing relevant

Reserve Bank files. The examiner should determine, from documentation in the files, which reports should have been filed because of the passage of time or the occurrence of an event. If a report is delinquent, the bank holding company should be instructed to prepare and submit the report expeditiously.

2. Copies of regulatory reports filed since the prior inspection should be reviewed and compared with company records on a random, line-by-line basis, using a significance test. In some cases, the review will necessarily extend to supporting schedules and workpapers that substantiate the data reflected in the reports. If the initial reports reviewed are found to be substantially correct, then the scope of subsequent reviews may be curtailed. If the reports are found to be incorrect, the overall review procedures should be intensified. When an error or misstatement is considered significant, the matter should be brought to management's attention and the bank holding company should be required to submit adjusted data. Improper methods used in preparing reports should be called to management's attention. The examiner should explain all changes carefully and assist bank holding company personnel in whatever way possible to ensure proper reporting in future reports.
3. At the conclusion of the review process, the examiner should discuss the following with management, when applicable:
   a. inaccuracies found in reports and the need for submission of amended pages or reports
   b. violations of law, rulings, or regulations
   c. recommended corrective action when policies or procedures have contributed to deficiencies noted in the reports or the untimely submission of report(s)
4. Details concerning the late or inaccurate preparation of reports should be listed in the inspection report on the Other Supervisory Issues report page. If the matter is considered significant, it should be noted on the Examiner's Comments and Matters Requiring Special Board Attention report page, as well. When the exceptions are considered minor and have been discussed with management and corrected, it will suffice to state this on the Other Supervisory Issues workpaper supporting page.
5. When it is determined that false, misleading, or inaccurate information is contained in financial statements or reports, consider whether formal enforcement action is needed to ensure that the offending bank holding company, financial institution, or other entity under the holding company structure will correct the statements and reports.

2250.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Submission of reports concerning compliance with the act, or regulations or orders under it	1844(c)

2260.0.1 INTRODUCTION

Venture capital activities are usually conducted through one or more of the following types of entities: Small Business Investment Companies (SBIC); Minority Enterprise Small Business Investment Companies (MESBIC); Non-licensed Venture Capital Companies; and Partnerships or Venture Capital Funds. SBIC's and MESBIC's are licensed and regulated by the Small Business Administration (SBA); the other types are not. Both SBIC's and MESBIC's are limited by regulation to investing in and lending to small businesses; whereas, non-licensed venture capital companies and partnerships have greater latitude. The activities of MESBIC's (section 103d companies) are specifically limited to small firms owned by socially or economically disadvantaged persons. Most banks and bank holding companies engage in venture capital activities through an SBIC because of its broad ability to take equity positions in other companies. SBIC's are permitted to own up to 49.9 percent of the voting shares of a company. By contrast, a non-licensed venture capital company that is a subsidiary of a bank holding company may not own more than 4.9 percent of the voting shares of a business. To escape from this limitation some bank holding companies have formed partnerships or venture capital funds. However, a bank holding company can only participate as a limited partner with an ownership interest not to exceed 24.9 percent. Limited partnerships are preferred by those bank holding companies who do not possess the expertise for this type of activity but seek the potential opportunity for high returns.

Through the use of private capital and, in some cases, borrowed money, venture capital companies invest in and lend to new and growing business enterprises. They prefer to invest in and lend to companies that exhibit strong management talent and clearly defined strategies. Many of the companies are yet unknown to the public. Their products either have been introduced to the market or are due to arrive in the next few years. Venture capital companies do not favor pioneering research. Instead, they are interested in financing innovative products, i.e., those next in generation to existing ones, that have a wide market appeal and the potential for strong growth. Such products are preferred because of their shorter development time and possible faster realization of profits. One of the ways a venture capital company makes money is by purchasing the common stock of an emerging company and selling it when the company has grown and the stock has appreciated in value. It also generates earnings by making convertible preferred stock investments and by lending money in the form of subordinated debentures and term loans. Usually lending agreements contain provisions which enable a venture capital company to acquire shares or increase existing holdings through the exercise of warrants or stock options at a later date. Although in most cases some equity interest is taken, venture capital companies, generally, do not acquire a controlling interest in a business they finance.

Once financing commences, venture capital companies typically take an active role in the management of the companies. They usually receive representation on the company's board of directors, which enables them to review budgets and assist in structuring the company's long-range strategic plan. Guiding a company through its developing stages is considered essential for the achievement of equity appreciation and realization of the high returns sought by venture capital companies.

2260.0.2 LOANS AND INVESTMENTS

Investments and lending philosophy may differ among venture capital companies. Some choose to be equity-oriented; that is, they look for higher returns on investments through capital appreciation, while others favor lending in the form of loans or convertible debt securities which provide cash flow to fund operations and service debt. However, most companies will strive for a diversified portfolio in terms of the type of investment and industry mix. The range of financing possibilities associated with lending and/or investing is as follows:

First Step Financing	Funds needed for seed capital to help develop an idea.
Start-up Financing	Funds needed to cover the cost of preparing a business plan, conducting market studies and opening a business.
First Stage Financing	Funds needed to start manufacturing and selling the product(s).
Second Stage Financing	Funds needed for working capital to expand production and build inventories. Company is operating but not yet profitable.
Third Stage Financing	Funds needed to improve the product, build working capital and expand marketing and production facilities. At this point, the company should be generating a profit.
Fourth Stage Financing	Additional working capital funds needed prior to initial public offering which may be as much as a year later.

In addition to the above, venture capital companies will consider financing leveraged buyouts and turnaround situations.

The degree of risk assumed varies according to the stage of financing, i.e., lower stages contain greater risk because of the requirement for longer-term investment discipline than higher stages. Investments in start-up companies typically take five to seven years or more to mature. Because of the high risk involved, most bank-affiliated venture capital companies will avoid the earlier or lower stages of financing. Newly established venture capital companies and especially those that use leverage tend to focus on the intermediate and latter stages of financing. These stages are represented primarily by debenture financing, preferred stock investments, and straight term loans. In structuring a portfolio, a venture capitalist should consider both liquidity and capital protection. The ideal financing mix might entail a limited amount of money invested in common stock with the remainder distributed between debentures, loans, and preferred stock. These instruments will provide income to cover operating expenses and service debt as well as give some protection should the business start to decline. Limited holdings of common stock give the company the opportunity to enhance earnings through capital gains without adversely effecting cash flow. Regardless of the type of financing offered, the ability to exist from an investment or loan through either the issuance of public stock or a cash buyout by a larger company is the goal of a venture capital company.

2260.0.3 FUNDING

A venture capital company may use private capital, leverage, or a combination of both to fund its portfolio of loans and investments. Venture capital companies obtain private capital from their parent organization, either banks or bank holding companies. Generally, private capital is used to fund high-risk, lower-stage investments, although some companies may diversify their portfolio and deploy a portion of capital in loans, debentures and preferred stock. Leverage may be derived from internal and external borrowings. SBIC's that are banking subsidiaries may receive funding in the form of loans from their parent bank. For those companies that are a subsidiary of a bank holding company, internal funding may be provided by the bank holding company from internal cash flow or its external borrowing sources. A bank holding company might borrow from its available bank lines or other borrowing sources to fund venture capital operations. There is, however, one exception; that is, the use of commercial paper proceeds to fund venture capital investments and loans does not appear to qualify under the exemptive provisions of section 3(a)(3) of the Securities Act of 1933. SBIC's and MESBIC's can obtain external financing from the U.S. government and the private sector, while, non-licensed venture capital companies are limited to only private sources for their external financing. Under current SBA regulations, an SBIC can borrow up to $35 million from the federal financing bank with no limit as to the aggregate amount of private debt. Because of the investment restrictions on MESBIC's, the SBA allows them to incur higher leverage.

MESBIC's are permitted to borrow up to four times their capital base and issue preferred stock to the SBA up to two times their capital base. MESBIC's also have no limit on the aggregate amount of private debt. All government borrowings ings are through the federal financing bank and carry the guarantee of the SBA. Such borrowings are classified as senior debt.

2260.0.4 PROFITABILITY

Earnings of venture capital companies can fluctuate widely depending on the nature of their activities. Those companies that blend their portfolios with loans, debentures and preferred stock investments tend to be more predictable and less erratic in earnings performance than companies that are strictly equity-oriented. The difference being that loans, debentures and preferred stock provide income to cover operating expenses and debt service requirements, while common stock investments may not yield positive returns for several years. Portfolio diversification tends to smooth out earnings, although the potential for major fluctuations in earnings exists in the future should capital gains be realized on equity investments. In measuring earnings performance, one should consider the combination of net realized earnings (net investment income plus net realized gains (losses) on sale of investments) and net unrealized appreciation or depreciation on investment holdings found in the capital structure of the balance sheet. It is not uncommon to see aggregate returns on capital reach 50

or more. Typically, returns of this magnitude are influenced by either large gains realized on the sale of investments or a substantial amount of unrealized appreciation on investments held or a combination of both. Appreciation or depreciation in portfolio investments represents potential realized gains or losses and, therefore, should be considered in evaluating the company's earnings performance. Specifically, the change in year-to-year net unrealized appreciation or depreciation is a factor that should be considered in analyzing results. When measuring the company's contribution to consolidated earnings, net unrealized appreciation or depreciation should be ignored.

2260.0.5 CAPITALIZATION

In addition to the usual equity components of capital stock, surplus and retained earnings, the capital structure of a venture capital company includes a separate category for net unrealized appreciation (depreciation) on equity interests. Net unrealized appreciation (depreciation) on equity interests represents the gross amount reported under loans and investments less an appropriate provision for taxes. Since unrealized appreciation (depreciation) on equity interests represents future profits (losses) they are measured separately in the equity account rather than in earnings.

There are no industry norms with which to measure capital adequacy. What is known, however, is that the SBA requires a minimum capital investment of $1,000,000 to establish an SBIC. Moreover, regulations governing SBIC's limit the dollar amount of investments and/or loans to a single customer to 20 percent of an SBIC's capital base. Although banks are limited by statute to a maximum capital investment in an SBIC of 4.9 percent of their primary capital, statistics show that SBIC's have substantially less than this limit. By contrast, there are no restrictions as to the amount of capital that a bank holding company may invest in a nonbank affiliated venture capital company. Dependence on capital to fund portfolio loans and investments seems to be preferred as the cost of leverage, at present, cannot provide meaningful spreads. It can be assumed that the larger the capital position the higher the dollar amount available for investing and/or lending to a single customer.

Sustained profitability and satisfactory asset quality are required to maintain financial soundness and capital adequacy. The SBA will consider an SBIC's capital as impaired if net unrealized depreciation and/or operating losses equal 50 percent or more of its capital base. It would seem appropriate to use this guideline for measuring the adequacy of capital of non-licensed venture capital companies that are affiliated with a bank holding company.

2260.0.6 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.

2. To determine whether transactions with affiliates, especially banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios and whether the allowance for losses is

adequate in relation to portfolio risk and whether the nonaccrual policy is appropriate.

4. To determine the viability of the company as a going concern, and whether its affiliate status represents a potential or actual adverse influence upon the parent holding company and its affiliated bank and nonbank subsidiaries and the condition of the consolidated corporation.

5. To determine whether the company has formal written policies and procedures relating to lending and investing.

6. To determine if such policies and procedures are adequate and that management is operating in conformance with the established policies.

7. To assess management's ability to operate the company in a safe and sound manner.

8. To suggest corrective action when policies, practices or procedures are deficient, or when asset quality is weak, or when violations of laws or regulations have been noted.

2260.0.7 INSPECTION PROCEDURES

2260.0.7.1 Pre-Inspection

All SBIC's and MESBIC's are subject to comprehensive regulations and annual examinations administered by the SBA. Therefore, it is not necessary to conduct a full scope inspection of these subsidiaries. The bank holding company inspection should focus on the quality of assets, as disclosed in the annual director's valuation and financial statements submitted to the SBA on an annual basis, transactions with affiliates and an overall financial evaluation.

The decision whether the operations of a non-licensed venture capital company will be inspected "on-site" is based on the availability and adequacy of data from either the parent holding company or that which is obtained upon request from the subsidiary. The following information should be obtained and thoroughly reviewed prior to making a decision to go "on-site":

1. Minutes of the board and executive committee meetings since inception of company or the date of the previous inspection;

2. Comparative interim and fiscal financial statements containing value accounting adjustments, including the year-end filing with the SBA;

3. Listing of contingent liabilities, including any pending material litigation;

4. Latest director's valuation of loans and investments and results of latest internal loan or credit review;

5. Copies of the most recent internal and external audit reports;

6. Trial balance of all loans and investments, indicating the percent ownership of a company involving an equity interest;

7. Listing of loans, debentures and preferred stock on which scheduled payments are in arrears 30 days or more or on which payments are otherwise not being made according to original terms;

8. Details of internal and external borrowing arrangements; and

9. Any agreements, guarantees or pledges between the subsidiary and its parent holding company or affiliates.

After reviewing the above information, a decision whether or not to conduct an on-site inspection must be made. Some of the determinants of this decision would include: relative size; current level and trend of earnings; asset quality as indicated in the director's valuation of loans and investments; and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would warrant a visit even though a satisfactory condition had been determined during the previous inspection. All non-licensed venture capital companies should be inspected on-site at least once every three years.

2260.0.7.2 On-Site Inspection

If the decision was made to conduct an "on-site" inspection of the subsidiary, the examiner should expand the scope of the review to include these additional procedures:

1. Hold a brief meeting with the chief executive officer of the company to establish contact and present a brief indication of the scope of the inspection;

2. Review the company's policy statements for loans, investments, nonaccruals, and charge-offs;

3. Review the latest internal review by the company's directors or the loan review department of the bank affiliate or bank holding company;

4. Conduct an independent review of the portfolio;

a. Establish the minimum dollar of loans and investments to be reviewed to achieve at least 70 percent coverage of the portfolio;

b. Review loans and investments in sample, giving consideration to the following:

- Latest balance sheet and income data;
- Profitability projections;
- Product(s) being produced by customer and their market acceptance;
- Business plan;
- Extent of relationship with customer;
- Funding sources; and
- Ultimate source of repayment.

c. Discuss the more serious problem loans and investments with management;

d. Classify, if necessary, those loans and investments that exhibit serious weaknesses where collectibility is problematical or worse. Lower classification criteria must accompany these assets, which possess a higher degree of credit risk than found in other types of nonbank lending;

e. Determine the diversification of risk within the portfolio, i.e., the mix of loans and investments and the type of industries financed;

f. Review the adequacy of the allowance for loan losses and determine the reasonableness of the amount of unrealized appreciation or depreciation reported on the balance sheet in conjunction with the asset evaluation; and

g. Determine whether the board of directors or parent holding company has established credit limits for the maximum amount of loans and investments to be extended to a single customer. Verify adherence to the limits.

5. Review equity investments for compliance with the 4.9 percent maximum limitation to any one customer;

6. Verify office locations and activities with system approvals;

7. Compare company's general ledger with statements prepared for the latest FR Y–6;

8. Review the quality and liquidity of other investment holdings;

9. Review and classify, if necessary, assets acquired in liquidation of a customer's business due to default. Determine compliance of divestiture period with section 4(c)(2) of The Bank Holding Company Act;

10. Review the manner and frequency in which subsidiary management reports to the parent holding company;

11. Follow-up on matters criticized in the most recent audit reports and the previous inspection report on the subsidiary; and

12. Assess the expertise of subsidiary management and awareness of subsidiary directors.

2260.0.7.3 Matters Warranting Recommendation in Inspection Report

Deficiencies or concerns that warrant citation in the inspection report for the attention of management are:

1. Lack of policies and/or controls in the lending and investing functions;
2. Improper diversification of risk in the loan and investment portfolio;
3. Adverse tie-in arrangements with the affiliate bank(s):
4. Lack of management expertise;
5. Impairment of capital as a result of operating losses or high unrealized depreciation on equity interests or a combination of both; and
6. Lack of adequate reporting procedures to parent holding company management.

2260.0.8 LAWS, REGULATIONS, INTERPRETATIONS AND ORDERS

Subject	*Laws* [1]	*Regulations* [1]	*Interpretations* [3]	*Orders*

Realized gain (loss) on sale of securities, net of tax	XXX
Net income	XXX

WHAT'S NEW IN THIS REVISED SECTION

Section 604(e) of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, Pub. L. No. 111–203, 124 Stat. 1601 (2010), (Dodd-Frank Act), added the "...risk to the stability of the United States banking or financial system..." to the example listing of possible adverse effects. The amendment is included below. See 12 U.S.C. 1843(j)(2)(A).

The Bank Holding Company Act of 1956 (BHC Act) was enacted to limit the expansion of banking institutions into nonbanking activities. A bank holding company was defined in the BHC Act as an entity that owned or controlled 25 percent or more of the voting shares of two or more banks; companies owning only one bank were exempted from regulation under the BHC Act.

During the 1960s, the number of commercial enterprises that purchased one bank, engaged in nonbanking activities, and remained exempt from regulation grew dramatically. As a result of this change in the structure of bank ownership, Congress enacted the Bank Holding Company Act Amendments of 1970. Of these amendments, the most significant is the extension of the act to grant to the Federal Reserve Board the authority to regulate the activities of one-bank holding companies.

In 1978, Congress passed the International Banking Act (IBA). Section 8 of the IBA expanded the nonbanking prohibitions of the BHC Act to foreign banks that engage in the business of banking in the United States directly through a branch or agency or indirectly through a subsidiary commercial lending company. This expanded the nonbanking restrictions beyond simply covering foreign banks that own or control U.S. banks or bank holding companies. However, section 2(h) of the BHC Act provides foreign organizations that are principally engaged in the business of banking outside the United States with exemptions from the nonbanking prohibitions of the BHC Act. Further exemptions have been granted by the Board's discretionary authority under section 4(c)(9) when such exemptions were in the public interest and were consistent with the purposes of the BHC Act.

Under section 4(c) of the BHC Act, Congress exempted a limited number of investments from the general prohibition against owning or controlling shares of nonbank concerns. Section 4(c)(8) permitted investment in shares of any company the activities of which the Board after due notice and opportunity for hearing has determined—pursuant to section 225.28 of Regulation Y or Board order issued prior to November 12, 1999—to be so closely related to banking or managing or controlling banks as to be a proper incident thereto. The act also provided that any bank holding company might apply to the Board for permission to engage in an activity that had not yet been determined to be permissible if the applicant was of the opinion that the activity in its particular circumstances was closely related to banking or managing or controlling banks. Section 225.28(b) of the Board's Regulation Y lists permissible nonbanking activities that the Board has deemed to meet these criteria. (See appendix 1.) The list of permissible nonbanking activities has been expanded at various times.

The Board also has permitted by order, on an individual basis, certain activities that it has considered to be closely related to banking under section 4(c)(8) of the BHC Act. In doing so, the Board did not expand the list of permissible activities under section 225.28(b) of Regulation Y. (For a list of such activities, see appendix 2.)

In determining whether the performance of a nonbank activity by a bank holding company or the acquisition of a nonbank firm by a bank holding company was a proper incident to banking, the Board applies a "public interest test." The Board must consider whether performance of a nonbank activity by a bank holding company or a subsidiary of such company can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, unsound banking practices, or risk to the stability of the United States banking or financial system. (See 12 U.S.C. 1843(j)(2)(A).)

An interpretation of Regulation Y (12 C.F.R. 225.126) dated April 28, 1972, and amended September 20, 1972, listed activities that the Board determined do not satisfy the "so closely related" test under section 4(c)(8). The Board subsequently determined that a number of other activities do not satisfy the closely related test. (For a complete list of these impermissible activities, see appendix 3, and, for a brief description of a selected number of the activities denied by the Board, see section 3700.0 et seq.)

As the primary regulator for bank holding companies and their directly held nonbank subsidiaries, the Federal Reserve System conducts inspections of their operations, financial condition, and compliance with appropriate banking and other related statutes and regulations. Inspection personnel are called upon to evaluate the current condition of the organizations, as well as their future prospects.

On August 10, 1987, the Competitive Equality Banking Act of 1987 was signed into law. This act redefined the definition of "bank" in section 2 of the BHC Act so that an FDIC-insured institution is deemed a bank. An "insured bank" is defined in section 3(h) of the Federal Deposit Insurance Act (12 U.S.C. 1813(h)).

State-Authorized Activities of Savings Banks

A special rule was established for qualified savings banks (state-chartered, FDIC-insured institutions organized before March 5, 1987) that are subject to the BHC Act. (See section 2090.7.) In accordance with section 3 of the BHC Act, a qualified savings bank may engage in any nonbanking activity, except insurance activities, either directly or through a subsidiary, that it is permitted to conduct directly as a state-chartered savings bank, even if those activities are not otherwise permissible for bank holding companies. To engage in those activities, however, a qualified savings bank must remain a savings bank and a subsidiary of a savings bank holding company (a company that controls one or more qualified savings banks whose total aggregate assets, upon formation and at all times thereafter, constitute at least 70 percent of the assets of the holding company). With respect to insurance activities, qualified savings banks may engage in underwriting and selling savings bank life insurance if the savings bank is located in Connecticut, Massachusetts, or New York, and if certain other conditions are met.

BHCs Engaging in Nonbanking Activities in Foreign Countries

A bank holding company has greater leeway to perform nonbanking activities abroad than in the United States in that it may engage in nonbanking activities abroad that would not be permissible in the United States. However, activities abroad are subject to limitations. Section 211.8 of Regulation K requires a bank holding company to limit its direct and indirect activities abroad to those usual in connection with banking and financial activities and to necessary related activities. Section 211.10 also lists particular activities that are permissible abroad and provides rules regarding when a bank holding company must submit an application to engage in such activities directly or through investments.

Edge Act or Agreement Corporations

A bank holding company may own an Edge Act or agreement corporation. The Federal Reserve Act and Regulation K govern the permissible activities of Edge Act or agreement corporations. An Edge Act or agreement corporation is an international banking vehicle that may only engage in listed or approved activities that are incidental to international or foreign business. (See 12 C.F.R. 211.6) The restriction generally permits an Edge Act or agreement corporation to engage only in international banking or financial activities. (See 12 C.F.R. 211.8.)

Companies that own only an Edge Act or agreement corporation. Any company, other than a bank, that acquired an Edge Act or agreement corporation after March 5, 1987, must conform its activities to section 4 of the BHC Act.

Underwriting and Dealing in Debt and Equity Securities

Beginning in January 1989, certain nonbanking subsidiaries of bank holding companies were approved to underwrite and deal in debt or equity securities (excluding open-end investment companies), subject to the prohibition on affiliation with an organization dealing in securities under section 20 of the Glass-Steagall Act. (See 1989 FRB 192.) The Board delayed commencement of the activity by each applicant until it determined that the applicant had established the necessary managerial and operational infrastructure to commence the expanded underwriting and dealing activity and to comply with the Board order. The applicant's capital plan had to be determined to be adequate along with the necessary policies and procedures needed to comply with the Board's order. The Board's order requires that loans to and capital investments in the underwriting subsidiary be deducted from the bank holding company's capital, as provided for in the Board's capital adequacy guidelines. The Board further confirmed that the activities could not be conducted in any other subsidiary other than the Board-approved section 20 subsidiary. (See section 3600.21.4.)

As for underwriting and dealing in equity securities, the Board stated in the order that it would review within a year whether applicants could commence the activity. The first Board authorization to commence underwriting and dealing in equity securities was given on September 20, 1990, subject to the commitments given by the bank holding company in connection with its respective Board order, including its commitment to maintain the capital of its section 20 subsidiary at levels necessary to support its activities and commensurate with industry standards, and to increase the capital of the section 20 subsidiary accordingly as it grew.

Modifications to the Board's Orders Authorizing BHC Subsidiaries to Underwrite and Deal in Bank-Ineligible Securities Consistent with Section 20 of the Glass-Steagall Act

The Board announced its approval of modifications to its previous section 20 authorizations by order on September 21, 1989 (1989 FRB 751). The modifications (1) raised from 5 percent to 10 percent (currently 25 percent) the revenue limit on the amount of total revenues a section 20 subsidiary might derive from bank-ineligible securities underwriting and dealing activities, and (2) permitted underwriting and dealing in the securities of affiliates, consistent with section 20 of the Glass-Steagall Act, if the securities were rated by an unaffiliated, nationally recognized statistical rating organization or were issued or guaranteed by the Federal National Mortgage Association (Fannie Mae), the Federal Home Loan Mortgage Corporation (FHLMC), or the Government National Mortgage Association (GNMA), or if they represented interests in such obligations.

Acting as Agent in the Private Placement of All Types of Securities and Acting as Riskless Principal in Buying and Selling Securities

In another Board order, the Board authorized a bank holding company to transfer its private-placement activities from its commercial bank subsidiary to its section 20 subsidiary. The section 20 subsidiary would act as agent in the private placement of all types of securities, including the provision of related advisory services, and would buy all types of securities on the order of investors as a "riskless principal." The Board concluded that the section 20 subsidiary's private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities for the purposes of section 20 of the Glass-Steagall Act. The revenues derived therefrom should not be subject to the 25 percent revenue limitation placed on bank-ineligible securities activities. (See section 3230.4.)

Foreign Banks Authorized to Operate Section 20 Subsidiaries to Underwrite and Deal in Corporate Debt, Commercial Paper, and Other Securities

In a Board order (1990 FRB 158), the Board authorized a foreign bank to operate a section 20 subsidiary under the bank to underwrite and deal in corporate debt, commercial paper, and other securities. (Securities issued by open-end investment companies are not included.) The foreign bank operated outside the United States but owned a subsidiary bank in the United States. To achieve equality between the domestic and foreign banking operations in the United States and in an effort to negate any advantages that a foreign bank might have over a domestic bank, the Board considered the foreign bank as a bank holding company even though the bank was not part of a bank holding company structure. In so doing, the Board imposed restrictions on the section 20 subsidiary. The foreign bank might fund the section 20 subsidiary, but that action required prior Board approval. In addition, the section 20 subsidiary might not borrow from its parent bank. Any loans to, transfers of assets to, or investments in the section 20 subsidiary also required Board approval. (See 1990 FRB 158, 455, 554, 568, 573, 652, and 683.)

Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA)

FIRREA became law on August 9, 1989. The law revised section 4(c)(8) of the BHC Act and authorized the Board to approve applications from bank holding companies for the acquisitions of savings associations. The Board thus revised section 225.28(b)(4)(i) of Regulation Y to include as a permissible nonbanking activity the owning, controlling, or operating of a savings association, if the savings association engaged only in deposit-taking, lending, and other activities permissible for bank holding companies. The legislation required the Board to remove tandem restrictions found in previous Board orders that were not prohibited by FIRREA and, in approving applications, to confine limitations on transactions between the savings association and its bank holding company affiliates to those required by sections 23A and 23B of the Federal Reserve Act. FIRREA made sections 23A and 23B applicable to savings associations as though they were member banks. Two exceptions apply: (1) no extensions of credit may be granted by a savings association to an affiliate unless the affiliate is engaged only in activities permissible for bank holding companies under the BHC Act, and (2) savings associations may not purchase or invest in securities of an affiliate other than shares of a subsidiary. The legislation also provided for a "sister-bank" exemption from the provisions of sections 23A and 23B of the Federal Reserve Act. (See sections 2020.1.1.6 and 2090.8.1.)

1992 Revisions to the Regulation Y List of Nonbanking Activities—the "Laundry List"

During 1992, the Board initiated several actions that affected certain nonbanking activities. The first action, effective May 18, 1992, amended section 225.28(b) of Regulation Y with regard to tangible personal property leases. Subject to the stated limitations, a bank holding company can rely on estimated residual values of up to 100 percent of the acquisition costs of the leased property in order to recover the bank holding company's leasing costs. Previously, the nonbanking activity had only been approved by Board order. (See the initial Board order at 1990 FRB 462 and the subsequent Board orders at 1990 FRB 960 and 1991 FRB 187 and 490.)

The Board issued a revised interpretive rule, effective August 10, 1992, regarding investment advisory activities of bank holding companies to expressly provide that a bank holding company or its nonbank subsidiary may act as agent for customers in the brokerage of shares of an investment company advised by the holding company or any of its subsidiaries. In addition, the revision provided that a bank holding company or its nonbank subsidiary may provide investment advice to customers regarding the purchase or sale of shares of an investment company advised by an affiliate. In both instances, the Board requires certain disclosures to be made to address potential conflicts of interest or adverse effects. (See 12 C.F.R. 225.125(h) of Regulation Y.)

Effective September 10, 1992, the Board added two nonbanking activities to Regulation Y that were previously approved by Board order. The two activities dealt with full brokerage services and financial advisory services. (See 12 C.F.R. 225.28(b)(6) and (7).)

Comprehensive Revision of Regulation Y

In August 1996, the Board proposed comprehensive revisions to Regulation Y that were designed to significantly reduce regulatory burden, improve efficiency, and eliminate unwarranted constraints on credit availability. The proposal followed a Board review of its regulations that was required by the Riegle Community Development and Regulatory Improvement Act of 1994. The changes (1) removed a number of restrictions on the permissible nonbanking activities of BHCs, (2) expanded and reorganized the regulatory list of permissible nonbanking activities to include numerous nonbanking activities that had been previously approved only by Board order,[1] (3) streamlined the application/notice process for BHCs and the procedures governing change in bank control notices, and (4) revised the tying rules to enhance banking organizations' ability to provide customer discounts on services. Included were changes that streamlined the procedures for well-run BHCs to seek Federal Reserve System approval to acquire additional banks within certain limits. The Board approved these revisions to Regulation Y, effective April 21, 1997.

1. See subsection 3000.0.2, appendix 1. See also section 225.28(b) of Regulation Y. In addition to these activities, other activities have been approved by Board order. For a list of those activities, see subsection 3000.0.3, appendix 2.

Limitation on Board-Approved Nonbanking Activities

The Gramm-Leach-Bliley Act (the GLB Act) amended the BHC Act to limit bank holding companies that are not financial holding companies to engaging only in "activities which had been determined by the Board by regulation or order under section 4(c)(8) of the BHC Act and section 225.28 of Regulation Y before November 12, 1999 (the approval date of the GLB Act), to be so closely related to banking as to be a proper incident thereto (subject to such terms and conditions contained in such regulation or order, unless modified by the Board)" (12 U.S.C. 1843(c)(8)). Prior to November 12, 1999, the Board had determined that "[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board" is closely related to banking. Accordingly, the Board retains authority after the GLB Act to define the scope of this section 4(c)(8) activity and to modify the terms and conditions that apply to the activity.

Financial Holding Companies

The GLB Act, approved in November 1999, amended section 4 of the BHC Act and expanded the powers of qualifying BHCs and foreign banks that elect to become financial holding companies (FHCs). An FHC is defined in the GLB Act as a BHC that meets certain eligibility requirements. The law repealed those provisions of the Glass-Steagall Act and the BHC Act that restricted the ability of BHCs to affiliate with securities firms and insurance companies. For a bank holding company to become an FHC and be eligible to engage in new activities authorized under the GLB Act, the GLB Act requires that all depository institutions controlled by the BHC be well capitalized and well managed. With regard to a foreign bank that operates a branch or agency or that owns or controls a commercial lending company in the United States, the GLB Act requires the Board to apply comparable capital and management standards that give due regard to the principle of national treatment and equality of competitive opportunity.

Qualifying BHCs that elect to become FHCs can engage in a broad array of financially related activities, including (1) securities underwriting and dealing, (2) insurance agency and insurance underwriting activities, and (3) merchant banking activities. With respect to merchant banking, the GLB Act (1) permits an FHC to retain a merchant banking investment only as long as necessary to dispose of the investment on a reasonable basis consistent with the financial viability of its merchant banking activities, and (2) provides that an FHC may not routinely manage or operate a company held as a merchant banking investment except as necessary to obtain a reasonable return on the investment.

The statute also sets forth parameters for the relationships between the Federal Reserve and other regulators. The statute differentiates between the Federal Reserve's relations with regulators of depository institutions and functional regulators, such as those for nonbanking or nonfinancial activities such as insurance, securities, and commodities activities.

An FHC may engage in any other activities that the Board and the Secretary of the Treasury jointly determine to be financial in nature or incidental to financial activities. An FHC may also engage in any nonfinancial activity that the Board determines (1) is complementary to a financial activity and (2) does not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. The activities of BHCs and foreign banks that are not FHCs continue to be limited to activities currently authorized under section 4(c) of the BHC Act to be closely related to banking and permissible for BHCs. No additional activities may be found to be so closely related to banking as to be a proper incident thereto after November 11, 1999, thus limiting the ability of BHCs and foreign banks that are not FHCs to expand their activities.

In this manual, the sections in the 3900 series have been designated for FHCs. Those sections discuss FHC qualification requirements (domestic and foreign); permissible nonbanking FHC activities designated by statute (for example, merchant banking activities) or regulation, including activities jointly approved by the Board and the Secretary of the Treasury; and the supervisory approach and guidance for FHCs.

To implement the provisions of the GLB Act that govern FHCs, the Board amended Regulation Y by adding subpart I for FHCs. The provisions of an interim rule became effective March 11, 2000, and the Board approved a final rule effective December 21, 2000. Key provisions of the final rule are discussed within the 3900 sections of this manual. With respect to permissible activities of FHCs, the rule includes activities that previously were determined to be closely related to banking under section 225.28 of Regulation Y, activities that are usual in connection with transactions of banking abroad (including those in section 211.10 of Regulation K), and other activities defined as financial in nature by the GLB Act.

3000.0.1 CATEGORIES OF NONBANKING ACTIVITIES

Section 4(c)(8) of the BHC Act authorizes bank holding companies to engage directly or through a subsidiary in activities that the Board determined before November 12, 1999, to be so closely related to banking or managing or controlling banks as to be a proper incident thereto. The Board and the courts established the following guidelines for determining whether a nonbanking activity is closely related to banking:[2]

1. whether banks have generally provided the service
2. whether banks generally provide services that are operationally or functionally so similar to the proposed service as to equip them particularly well to provide the proposed service
3. whether banks generally provide services that are so integrally related to the proposed service as to require their provision in specialized form

In addition, before November 12, 1999, the Board considered other factors in deciding what activities were closely related to banking.[3] For those activities found to be closely related to banking or to managing or controlling banks, the Board also must find that the proposed activity is a "proper incident" to banking and that performance of an activity by a bank holding company could reasonably be expected to produce benefits to the public (such as greater convenience, increased competition, or gains in efficiency) that outweigh possible adverse effects (such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices). The following describes three categories of bank holding company nonbanking activities:

1. those that have been found to be permissible and are listed in Regulation Y, the so-called laundry list activities (see appendix 1)
2. those that are permissible by Board order only (see appendix 2)
3. those that have been denied by the Board (see appendix 3)

2. *National Courier Association v. Board of Governors,* 516 F. 2d 1229 (D.C. Cir. 1975).

3. *Alabama Association of Insurance Agents v. Board of Governors,* 533 F.2d 224 (5th Cir. 1976), *cert. denied,* 435 U.S. 904 (1978).

3000.0.2 APPENDIX 1—Activities Approved by the Board as Being Considered "Closely Related to Banking" Under Section 4(c)(8) of the Bank Holding Company Act (Section 225.28(b) of Regulation Y)

Permitted by Regulation[1]	*Year Added to Regulation Y*
Note: The bulleted items in this appendix are provided for historical reference only. The narrative before the bulleted items reflects the current Regulation Y authorization.	
1. Extending credit and servicing loans	1971
Making, acquiring, brokering, or servicing loans or other extensions of credit (including factoring, issuing letters of credit, and accepting drafts) for the company's account or the account of others.	
2. Activities related to extending credit[2]	
a. Appraising	
(1) Real estate appraising	1980
(2) Personal property appraising	1986
b. Arranging commercial real estate equity financing	1983
c. Check-guaranty services	1986
d. Collection agency services	1986
e. Credit bureau services	1986
f. Asset management, servicing, and collection activities	1997
g. Acquiring debt in default	1995
h. Real estate settlement servicing	1997
3. Leasing personal or real property or acting as agent, broker, or adviser in leasing such property	
• Personal property leasing[3]	1971
• Real property leasing	1974
4. Operating nonbank depository institutions	
a. Owning, controlling, or operating an industrial bank, Morris Plan bank, or industrial loan company so long as the institution is not a bank	1971
b. Owning, controlling, or operating a savings association, if the savings association engages in deposit-taking activities, lending, and other activities that are permissible for bank holding companies	1989
5. Trust company functions or activities	1971
6. Financial and investment advisory activities: acting as an investment adviser or financial adviser to any person, including (without limiting these activities in any way)—	1971

Permitted by Regulation[1]	*Year Added to Regulation Y*
a. Serving as an investment adviser to an investment company registered under the Investment Company Act of 1940, including sponsoring, organizing, and managing a closed-end investment company	1972
• Investment or financial advising	1971
• Advisory services to open-end (mutual fund) investment companies	1972
b. Furnishing general economic information and advice, general economic statistical forecasting services, and industry studies	1984
c. Providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, reorganizations, recapitalizations, capital structurings, financing transactions, and similar transactions,[4] and conducting financial feasibility studies[5]	1992
• Financial futures and options on futures	1986
d. Providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments	1992
• Financial futures and options on futures	1986
• Providing financial advice to—	
— state and local governments and	1973
— foreign governments, including foreign municipalities and agencies of foreign governments, such as with respect to the issuance of their securities	1992
• Inclusion of any investment or financial advisory activity without restriction	1997
• Discretionary investment advice to be provided to any person (includes investment advice regarding derivative transactions to institutional or retail customers as an investment, commodity trading, or other adviser) regarding contracts related to financial or nonfinancial assets (such advice is no longer restricted to institutional customers)	1997
• Financial and investment advice (or any permissible nonbanking activity) can be provided in any combination of permissible nonbanking activities listed in Regulation Y	1997
e. Providing educational courses and instructional materials to consumers on individual financial-management matters	1986
f. Providing tax-planning and tax-preparation services	1986
7. Agency transactional services for customer investments (principal positions)	
a. Securities brokerage services (including securities clearing and/or securities execution services on an exchange) for the account of customers and does not include securities underwriting or dealing	
(1) Securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or	1982
(2) In combination with advisory services and incidental activities (including related securities credit activities and custodial services)	1992
b. Riskless-principal transactions	1997
c. Private-placement services	1997
d. Futures commission merchant activities	1984
• A nonbanking subsidiary may act as an FCM with respect to any exchange-traded futures contract and options on a futures contract based on a financial or nonfinancial commodity	1997

Permitted by Regulation[1]	Year Added to Regulation Y
e. Other transactional services such as providing to customers as agent transactional services with respect to the following:	1997
(1) Swaps and similar transactions	
(2) Investment transactions as principal[6]	
(3) Transactions permissible for a state member bank	
(4) Any other transaction involving a forward contract, an option, futures, an option on a futures or similar contract (whether traded on an exchange or not) relating to a commodity that is traded on an exchange	
8. Investment transactions as principal	
a. Underwriting and dealing in government obligations and money market instruments	1984
b. Investing and trading activities. Engaging as principal in the following:	
(1) Foreign exchange	1984
(2) Forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on any rate, price, financial asset (including gold, silver, platinum, palladium, copper, or any other metal approved by the Board), nonfinancial asset, or group of assets, other than a bank-ineligible security, if the transaction meets certain requirements (A bank-ineligible security is any security that a state member bank is not permitted to underwrite or deal in under 12 U.S.C. 24 and 335.)	1997
(3) Forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on an index of a rate, a price, or the value of any financial asset, nonfinancial asset, or group of assets, if the contract requires cash settlement	1997
9. Management consulting and counseling activities	
a. Providing management consulting advice on any matter (financial, economic, accounting, or audit) to any other company[7]	
• Unaffiliated banks (depository institutions)	1974
• Nonbank depository institutions	1982
• Other unaffiliated depository institutions	1997
• Any financial, economic, account, or audit matter to any other company	1997
b. Employee benefits consulting services	1997
c. Career counseling services	1997
10. Support services	
a. Courier services	1973
b. Printing and selling MICR-encoded checks and related documents	1997
11. Insurance agency and underwriting	
a. Credit insurance: acting as principal, agent, or broker for insurance (including home mortgage redemption insurance)	
• Acting as insurance agent or broker primarily in connection with credit extensions[8]	1971
• Underwriting credit life and credit accident and health insurance related to an extension of credit	1972

Permitted by Regulation[1]	*Year Added to Regulation Y*
b. Finance company subsidiary: insurance agent or broker for extension of credit by finance company subsidiary	1982
c. Insurance agency activities in small towns	1984
d. Insurance agency activities conducted on May 1, 1982	1984
e. Supervision of retail insurance agents	1984
f. Insurance agency activities by small bank holding companies	1984
g. Insurance agency activities conducted before 1971	1984
12. Community development	
a. Financing and investment in community development activities	1971
b. Advisory and related services designed to promote community welfare	1997
13. Issuance and sale of payment instruments	
a. Issuance and sale of retail money orders	1984
b. Sale of savings bonds	1979
c. Issuance and sale of traveler's checks	1981
14. Data processing	
a. Providing data processing and data transmission services; facilities (including data processing and data transmission hardware,[9] software, documentation, or operating personnel); databases; advice; and access to services, facilities, or databases by any technological means	
• Providing bookkeeping and data processing	1971
• Data processing and transmission services	1982
• Providing data processing and transmission advice to anyone on processing and transmitting banking, financial, and economic data	1997
b. Conducting data processing and data transmission activities not described in "a." that are *not* financial, banking, or economic[10]	1997

1. See section 225.28(b) of Regulation Y for the details of the regulatory authorizations.
2. A Board staff opinion, issued July 9, 2002, concluded that a BHC's certain proposed flood zone–determination services are usual in connection with making mortgage loans and that these activities are within the scope of permissible activities related to extending credit under section 225.28(b)(2) of Regulation Y.
3. The provision of higher residual value leasing for tangible personal property was added to Regulation Y in 1992, including acting as agent, broker, or adviser in leasing such property.
4. The words "and similar transactions" were added in 1997.
5. Feasibility studies do not include assisting management with the planning or marketing for a given project or providing general operational or management advice.
6. Transactions described in section 225.28(b)(8) of Regulation Y.
7. Management consulting services may be provided to other customers not described in section 225.28(b)(9) of the rule, but the revenues derived therefrom are subject to a 30 percent annual revenue limitation.
8. Scope narrowed to conform to court decisions in 1979 and 1981; in 1982, it was further narrowed by title VI of the Garn–St Germain Depository Institutions Act.
9. Beginning in April 1997, the general-purpose hardware may not constitute more than 30 percent (previously 10 percent) of the cost of any package offering.
10. The total revenue may not exceed 30 percent (increased to 49 percent, effective January 8, 2004) of the company's total annual revenues derived from data processing, data storage, and data transmission activities.

3000.0.3 APPENDIX 2—Activities Considered "Closely Related to Banking" Under Section 4(c)(8) of the Bank Holding Company Act

	Permitted by Order on an Individual Basis	*Year Approved*	*Manual Section 3600.*
1.	Operating a "pool-reserve plan" for the pooling of loss reserves of banks with respect to loans to small businesses	1971	1
2.	Operating an article XII New York investment company	1977	5.1
3.	Underwriting and dealing in commercial paper to a limited extent	1987	21.1
4.	Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, and commercial paper	1987	21.2
5.	Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, consumer receivable–related securities, and commercial paper	1987	21.3
6.	Issuing and selling mortgage-related securities backed by the guarantees of the Government National Mortgage Association	1988	23
7.	Engaging in title insurance agency activities (approved under exemption G of the Garn–St Germain Depository Institutions Act of 1982)	1988	17.1
8.	Underwriting and dealing in, to a limited extent, corporate debt and equity securities	1989	21.4
9.	Acting as a sales-tax refund agent	1990	24.1
10.	Providing real estate settlement activities through a permissible title insurance agency (exemption G companies only)	1990	26
11.	Providing administrative and certain other services to mutual funds	1993	27
12.	Acting as a dealer-manager in connection with cash-tender and exchange-offer transactions	1993	21.5
13.	Privately placing limited partnership interests	1994	8
14.	Engaging in real estate title abstracting	1995	30
15.	Providing employment histories to third parties	1995	29
16.	Underwriting "private ownership" industrial development bonds by a section 20 company	1995	21.6
17.	Serving as a commodity pool operator of investment funds engaged in purchasing and selling futures and options on futures on certain financial and nonfinancial commodities	1996	13.1

Permitted by Order on an Individual Basis	*Year Approved*	*Manual Section 3600.*
18. Development of broader marketing plans and advertising, sales literature, and marketing materials for mutual funds (see 1997 FRB 678)	1997	28
19. Sale of government services involving (see 1998 FRB 481)—	1998	25
a. postage stamps and postage-paid envelopes b. public transportation tickets and tokens c. vehicle registration services (including the sale and distribution of license plates and license tags for motor vehicles) d. notary public services		
20. Operating a securities exchange	1999	6
21. Acting as a certification authority for digital signatures	1999	7

3000.0.4 APPENDIX 3—Activities Considered Not to Be "Closely Related to Banking" Under Section 4(c)(8) of the Bank Holding Company Act

Activities Denied by the Board	*Year Denied*
1. Insurance premium funding ("equity funding") (combined sales of mutual funds and insurance)	1971
2. Underwriting general life insurance not related to credit extension	1971
3. Real estate brokerage	1972
4. Land investment and development	1972
5. Real estate syndication	1972
6. General management consulting	1972
7. Property management	1972
8. Trading in platinum and palladium coin and bullion[1]	1973
9. Armored car service[2]	1973
10. Sale of level term credit life insurance	1974
11. Underwriting mortgage guarantee insurance	1974
12. Computer output microfilm services[3]	1975
13. Operating a travel agency	1976
14. Underwriting property and casualty insurance	1978
15. Real estate advisory activities	1980
16. Certain contract key entry services	1980
17. Offering investment notes with transactional features	1982
18. Engaging in "pit arbitrage" spread transactions on commodities exchanges to generate trading profits	1982
19. Engaging in the publication and sale of personnel tests and related materials	1984
20. Providing credit ratings on bonds, preferred stock, and commercial paper	1984
21. Providing independent expert actuarial opinions of a general nature for purposes such as divorce action and personal injury litigation	1984
22. Acting as a specialist in foreign-currency options on a securities exchange	1985

Activities Denied by the Board	*Year Denied*
23. Title insurance activities (See the Board letter dated March 17, 1986, re: Independence Bancorp, Inc. and the Board order at 1989 FRB 31)	
24. Acting as a broker for customers in the purchase and sale of forward contracts based on certain financial and nonfinancial commodities, and acting as the primary clearing firm for professional floor traders[4]	1991

1. Authorized by the Board in 1995 FRB 190 (platinum) and 1996 FRB 571 (palladium).

2. On June 18, 1990, the Board determined that the activity of providing armored car services to the general public is closely related to banking (see 1990 FRB 676). In order for the Board to approve a nonbank activity for a bank holding company, the Board must also find that the activity is a "proper incident thereto." On February 10, 1993, the Board denied the application (1993 FRB 352), finding that the proposed transactions posed potential violations of section 23B of the Federal Reserve Act and that the applicant had failed to prove that the activity is a proper incident to banking.

3. The Board's interpretation of Regulation Y at 12 C.F.R. 225.123 was amended on November 25, 1987, by deleting item (e)(4) relating to the impermissibility of the activity (see 52 *Federal Register* 45160–45161 and 1987 FRB 933).

4. The Board subsequently approved this activity by Board order. (See 1997 FRB 138.)

Section 2(c) of the BHC Act (Savings Bank Subsidiaries of BHCs Engaging in Nonbanking Activities) Section 3001.0

As an FDIC insured institution, a savings bank qualifies as a "bank" under section 2(c) of the BHC Act, as amended by section 101(a) of the Competitive Equality Banking Act of 1987 ("CEBA"). CEBA amended the BHC Act, in section 3(f), stating that any qualified savings bank, which is a subsidiary of a bank holding company, could engage directly, or through a subsidiary, in any nonbanking activity, except for certain insurance activities, that it is permitted to engage in by State law—including activities which are not otherwise permitted for bank holding companies under section 4(c)(8) of the BHC Act. In order for a qualified savings bank, that is a subsidiary of a bank holding company, to engage in such activities, however, the bank holding company must be a savings bank holding company as defined in section 2(1) of the BHC Act, in other words, 70 percent of the assets of the bank holding company must consist of one or more savings banks at the time of formation.

Insurance activities of any qualified savings bank which is a subsidiary of a bank holding company are limited to the insurance activities allowed under section 4(c)(8) of the BHC Act. A qualified savings bank that was authorized to engage in the sale or underwriting of savings bank life insurance, as of March 5, 1987, can sell or underwrite such insurance directly, provided that it is permitted to underwrite and engage in the sale of savings bank life insurance as that activity is authorized for savings banks by state law, and is located in Massachusetts, Connecticut, or New York. Should the bank holding company parent of the qualified savings bank cease to be a savings bank holding company, the savings bank must cease engaging in these activities within two years.

In a separate application a nonoperating company, which was formed for the purpose of acquiring a savings bank, insured by the Federal Deposit Insurance Corporation, applied for the Board's approval to become a bank holding company pursuant to section 3(a)(1) of the Bank Holding Company Act, acquiring all of the voting shares of the savings bank. The savings bank engages through subsidiaries in real estate investment and development activities authorized pursuant to State law.

As part of the Board's analysis in this case, including its evaluation of the capital and financial resources of the bank holding company and the bank involved, the Board considered the risk to the Applicant and to the savings bank of the real estate development activities to be conducted by the savings bank through its nonbank subsidiaries. The Board expressed serious reservations with regard to this application and similar applications by bank holding companies to acquire savings banks engaged directly or through subsidiaries in real estate development activities. In the Board's view the conduct of real estate development activities through a holding company subsidiary rather than a bank subsidiary would provide more effective corporate separateness.

The Board approved the application by Order on October 30, 1987 (1987 FRB 925), relying on the Applicant's commitments.

WHAT'S NEW IN THIS SECTION

Effective January 2006, this section has been revised to incorporate a table of Laws, Regulations, Interpretations, and Orders concerning a credit card bank exemption found in section 2(c)(2)(F) of the Bank Holding Company Act. (See the discussion below of the Board staff legal interpretation dated February 18, 2005.)

3005.0.1 SECTION 2(c)(2)

Section 2(c)(2) of the Bank Holding Company Act (the BHC Act) provides 10 exemptions from the definition of a bank for purposes of the BHC Act. Section 2(c)(2)(F) sets forth the criteria that an institution must meet in order to qualify for the so-called credit card bank exemption. The credit card bank exemption applies to any "institution, including an institution that accepts collateral for extensions of credit by holding deposits under $100,000, and by other means which—

1. engages only in credit card operations;
2. does not accept demand deposits or deposits that the depositor may withdraw by check or similar means for payment to third parties or others;
3. does not accept any savings or time deposit of less than $100,000;
4. maintains only one office that accepts deposits; and
5. does not engage in the business of making commercial loans."[1]

3005.0.2 SECTION 2(c)(2)(F)

On February 18, 2005, Board staff issued an interpretation in response to a bank's (MB Bank's) legal counsel, who had requested a determination that (1) MB Bank would qualify for the "credit card bank exemption" from the definition of bank in section 2(c)(2)(F) of the BHC Act and that (2) no application to the Board would be required under the BHC Act either for the proposed acquisition of control of MB Bank (the acquisition) by Financial Group (a joint venture), or for the proposed redemption of shares of common stock of MB Bank's parent, MB BHC—a bank holding company for the purposes of the BHC Act—in connection with the acquisition.

1. 12 U.S.C. 1841(c)(2)(F).

Financial Group proposed to acquire substantially all of the outstanding stock of MB BHC and, indirectly, MB Bank. Prior to the acquisition, MB Bank planned to convert itself to a depository institution that would qualify for the credit card bank exemption under the BHC Act. Before the acquisition, but after MB Bank's conversion to a credit card bank, MB BHC also proposed to redeem approximately 50 percent of its common stock.

To comply with the provisions of the credit card bank exemption under the BHC Act, other representations and commitments were made by and on behalf of MB Bank and MB BHC. Under these commitments, MB Bank would—

1. engage only in credit card operations[2] as of and after the acquisition, including selling advertising space in monthly statements mailed to account holders ("statement stuffers");
2. provide, as agent, limited debt-protection services to its credit card customers—services in which, for a fee, customers can receive debt relief from MB Bank during certain unexpected hardships (the limited debt-protection coverage provides for the payment of MB Bank's outstanding credit card balance in the event of the borrower's death, disability, or involuntary unemployment); and
3. not engage in the business of making commercial loans as of and after the acquisition.

MB Bank also agreed to cease providing certain ancillary services within three months of the acquisition by (1) selling a credit report–monitoring service offered by an unaffiliated third party and (2) selling a membership-based roadside-assistance product offered by an unaffiliated third party. In addition, MB Bank committed to restricting the scope of its deposit operations as of, and after, the acquisition to comply with the credit card bank exemption provisions of the BHC Act. MB Bank agreed to not accept demand deposits or deposits that the depositor may withdraw by check or similar means for payment to third parties or others.

2. The Senate report accompanying S. 790 states that the "engage only in credit card operations" language was intended to limit a qualifying institution to engage "only in the business of issuing and processing credit cards for individuals and in transactions that are necessary and incident to that business."

Moreover, except for deposits that serve as collateral for MB Bank's credit card loans (collateral deposits), MB Bank will not accept savings or time deposits of less than $100,000. MB Bank also represented that each collateral deposit held by MB Bank will be no greater than the amount of the relevant customer's line of credit with the bank. Any deposit not conforming to the credit card bank exemption requirements or the representations and commitments within the letter of interpretation and not transferred to an unaffiliated third party prior to the acquisition would be liquidated by MB Bank prior to the acquisition through a wire transfer to the relevant depositor. MB Bank would maintain only one office that accepts deposits.

At the time of the determination request, MB Bank was issuing debit cards and holding related deposits that were not permissible for a depository institution that qualifies for the credit card bank exemption under the BHC Act. Therefore, to qualify for the credit card bank exemption, MB Bank committed to transferring, before the acquisition, its current debit card accounts and related deposits to another bank (the issuing bank), which would issue new debit cards under the issuing bank's name to the current holders of MB Bank's debit card accounts. MB Bank also committed that it would cease all debit card–related activity, including origination, servicing, and marketing services provided to the issuing bank, within three months of the acquisition. MB Bank would also cease engaging in any account-servicing activities for debit card or credit card accounts of affiliated or unaffiliated banks within three months of the acquisition (except on a temporary basis in connection with acquisitions of credit card accounts by MB Bank from other credit card lenders).

Various other specific representations and commitments regarding MB Bank's investment activity were also made, including a commitment to divest within two years of the acquisition certain reverse-mortgage-loan participations. Based on all the facts of record and subject to the commitments and representations stated in the Board staff's February 18, 2005, interpretation and in letters to the Board's Legal Division, the Board's Legal Division informed MB Bank's legal counsel that it would not recommend that the Board find MB Bank to be a bank for purposes of the BHC Act as of and after the acquisition, or that the Board require Financial Group or its parent companies to file an application with the Board under section 3 of the BHC Act for the acquisition. Because MB Bank would cease to be a bank, the Board also determined that it would not require MB BHC to provide notice to the Board to redeem MB Bank shares pursuant to 12 C.F.R. 225(4)(b).

2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

3010.0.1 INTRODUCTION

The prohibitions against a bank holding company having or acquiring nonbank interests do not apply to bank holding companies meeting the requirements of section 4(c)(i) and (ii) of the Act.

3010.0.2 LABOR, AGRICULTURAL OR HORTICULTURAL ORGANIZATIONS

Section 4(c)(i)—"Any company that was on January 4, 1977, both a bank holding company and a labor, agricultural or horticultural organization exempt from taxation under section 501 of the Internal Revenue Code of 1954, or . . . any labor, agricultural or horticultural organization to which all or substantially all of the assets of such company are hereafter transferred."

Exemption under this section was amended when the Financial Institutions Regulatory and Interest Rate Control Act of 1978 became effective early in 1979. The effect of the amendment was to repeal exemption under this section for labor, agricultural or horticultural organizations becoming BHCs after *January 4, 1977,* except for those organizations becoming BHCs by means of acquiring all or substantially all of the assets of a company that was both a BHC and a labor, agricultural or horticultural oganization exempt from taxation on January 4, 1977. In order for a holding company to be entitled to this exemption, net income derived from the organization cannot inure to the benefit of any individual. Organizations must be formed primarily for the betterment of the working conditions of the labor organization's members, or improvement in the grade of agricultural or horticultural products for an agricultural or horticultural organization. The growing of products for profit by agricultural or horticultural organizations would disqualify them for exemption. Thus the phrase "any labor, agricultural or horticultural organization" is intended to include only such organizations that are also exempt from taxation under section 501 of the Internal Revenue Code of 1954.

In order for a labor, agricultural or horticultural organization to receive exemption from taxation under section 501(c)(5) of the Internal Revenue Code of 1954, it must file an application (form 1024) with the IRS. In response to the application, the organization receives a determination letter which should be reviewed to assure that exemption was allowed and to verify the date the company became exempt under section 501. The date of exemption is determined as follows. A company which files for exemption within 18 months after its organization is considered exempt as of the date of its organization. The date of IRS approval is the date of exemption if application for exemption is filed more than 18 months after organization. The date of exemption must be no later than January 4, 1977, for the company to be entitled to exemption from section 4 of the Act. The fact that an organization pays income taxes annually does not disallow its exemption under section 501 of the tax code. Despite its tax exemption, an organization is subject to tax on its unrelated business income.

3010.0.3 FAMILY-OWNED COMPANIES

Section 4(c)(ii)—"A company covered in 1970 more than 85 percentum of the voting stock of which was collectively owned on June 30, 1968, and continuously thereafter, directly or indirectly, by or for members of the same family, or their spouses, who are lineal descendants of common ancestors."

The phrase "voting stock" does not limit the form of an organization to an incorporated entity. Exemption under this section extends to other forms of business associations which meet the definition of a company. For example, for a partnership, the 85 percent rule applies to "general partnership interest" and for a trust which meets the definition of a company, the 85 percent rule applies to "beneficial ownership." A company must continue to control the same subsidiary bank that it controlled on June 30, 1968, to retain its exemption under this section. Lineal descendants of common ancestors include descendants by half as well as full blood and legally adopted children.

In January 1980, the Board approved an application of a one-bank holding company covered by the exemption in 4(c)(ii) to acquire an additional bank, but stated that the holding company could no longer rely on that section for conducting its nonbanking activities. Based upon its review of the legislative intent of Congress in providing this exemption, it was the Board's judgment that the exceptionally broad exemption afforded by section 4(c)(ii) must be limited to family-owned one-bank holding companies that are not engaged in the management of banks. Moreover, in the Board's view, upon the acquisition of an additional bank, a one-bank holding company that is exempt under section 4(c)(ii) of the Act, would become engaged in the management of banks, and would thereby terminate its eligibility for the exemption. In addition, the Board believed that to permit unsupervised nonbank expansion by a multibank holding company would constitute an evasion of the Act, which the Board is authorized to prevent pursuant to section 5(b) of the Act.

3010.0.4 INSPECTION OBJECTIVES

1. To verify that a holding company qualifies for exemption from the prohibitions of section 4 by virtue of either section 4(c)(i) or 4(c)(ii).
2. Review the activities conducted by a company qualifying for an exemption under section 4(c)(ii) of the BHC Act, which may be faced with revocation of the exemption, and determine if there may be eligibility for permanent grandfathering under section 4(a)(2) of the BHC Act.

3010.0.5 INSPECTION PROCEDURES

1. Although bank holding companies qualifying for a section 4(c)(i) or 4(c)(ii) exemption are not routinely inspected on a periodic basis, when inspected their exempt status should be verified. All nonbank activities of exempt organizations should be examined in the inspection. The nature of all such activities and the dates they were commenced should be documented in the work papers to establish their current permissibility in the event the organization should lose its exemption from section 4.
2. For BHCs exempt under section 4(c)(i), the examiner should ascertain the date the company became exempt under section 501 of the tax code. Also, the stock books of the subsidiary bank or other pertinent documents should be reviewed to assure that the company was a BHC on January 4, 1977.
3. When verifying a company's exemption under section 4(c)(ii), the stock records of the subsidiary bank and the stock records, partnership agreements, trust agreements and other records of the bank holding company should be reviewed to assure that the following conditions have been satisfied:
    a. 25 percent or more of the voting stock of the subsidiary bank has been continuously owned by the BHC since June 30, 1968;
    b. Members of the same family have continuously held an 85 percent or more interest in the holding company since June 30, 1968.

3020.0.1 INTRODUCTION

By virtue of section 4(c)(1) of the Act, a bank holding company may invest, without supervisory approval, in the shares of companies engaged in activities that Congress felt were incidental to the business of banking. The following activities are permissible investments for bank holding companies under this section.

3020.0.2 PROVIDING BANKING QUARTERS

Section 4(c)(1)(A) provides that a BHC may invest in a company engaged in holding or operating properties used wholly or substantially by any banking subsidiary of such bank holding company in the operations of such banking subsidiary or acquired for such future use.

Normally, bank utilization of 50 percent or more of the property would meet the requirements of this section. Investments in property where usage of such property by subsidiary banks is less than 50 percent will be reviewed on an *ad hoc* basis to determine its permissibility under this section. Future needs of the bank holding company and its bank subsidiaries will be considered when reviewing these cases.

In acquiring property, a bank holding company must have definite plans for use of the property as a subsidiary bank's premises within a reasonable period of time. Property may not be acquired and indefinitely warehoused until a need develops for the property.

This section of the BHC Act does not provide the authority for a BHC to invest in the shares of a company engaged in holding or operating properties used by nonbank subsidiaries. Directly holding or operating properties used by a nonbank subsidiary is considered an incidental activity necessary to carry on the main business activity of the subsidiary and thus is exempt under section 4(a)(2)(A) of the Act and section 225.22(a)(2)(vi) of Regulation Y.

3020.0.3 SAFE DEPOSIT BUSINESS

Section 4(c)(1)(B) of the Act provides that a holding company may invest in the shares of a company whose activities are limited to conducting a safe deposit business. Refer to Section 225.22(b) of Regulation Y.

3020.0.4 FURNISHING SERVICES TO BANKING SUBSIDIARIES

Section 4(c)(1)(C) of the BHC Act provides that a BHC may invest in a company which furnishes services to or performs services for the bank holding company or its banking subsidiaries. Section 225.22(a) of Regulation Y provides that a bank holding company may, without the Board's prior approval, furnish services to or perform services for its banking and nonbanking subsidiaries either directly or indirectly through a subsidiary. Generally, a BHC may only provide services related to the internal operations of the BHC or its subsidiaries. A bank holding company or its subsidiaries may not rely on the servicing exemption to deal with the public as principal, but may deal with outside parties provided they are acting only as agent for the holding company or its subsidiaries.

The term ''services'' implies servicing operations a bank may carry on itself, but which the BHC chooses to have done through a nonbank subsidiary. Section 225.22(a)(2) states that services for the internal operations of the bank holding company or its subsidiaries include: accounting, auditing, appraising, advertising, public relations, data processing, data transmission services, data bases or facilities, personnel services, courier services, holding or operating property used wholly or substantially by a subsidiary in its operations or for its future use, and selling, purchasing or underwriting insurance such as blanket bond insurance, group insurance for employees, and property and casualty insurance. For the later insurance activities, bank holding companies are permitted under the servicing exemption to act as agent or to underwrite insurance on their own risks (e.g. blanket bond insurance or employee group insurance plans). Refer to section 225.22(a)(2) of Regulation Y for other services permissible for the internal operations of the BHC or its subsidiaries.

The servicing exemption extends to services that are normally performed by a bank for its customers or correspondent banks. These activities generally include computerized billing, payroll, accounting, financial records maintenance and other similar data processing services as long as the subsidiary bank is permitted under applicable State or federal law to provide the service. These services may be provided only upon request by the customers to the subsidiary bank. Furthermore, the contractual arrangements must be made between the customer and the bank. The company can service existing service contracts the bank has originated but is prohibited from purchasing the contracts or entering into contracts to provide services directly to the public.

The purchasing of participations by the parent in loans from subsidiary banks generally is not considered an exempt activity under the authority of sections 4(a)(2) or 4(c)(1). Holding companies that engage in the purchase of participations from their subsidiary banks should file an application pursuant to Section 4(c)(8) of the BHC Act. Purchasing participations in loans for the purpose of providing liquidity or acquiring a portion of a line of credit to facilitate the needs of the bank's customers (overlines) provides a service or benefit to the bank and is considered an acceptable purchase under the services exemption. In all cases where a participation in a loan is purchased, the loan must be made in the name of the bank and serviced by the respective bank. The purchasing of a loan for reasons other than those set forth above may be viewed as a direct lending activity.

3020.0.5 FURNISHING SERVICES TO NONBANK SUBSIDIARIES

The Bank Holding Company Act of 1956 prohibited a BHC itself from engaging in any business except (1) banking, (2) managing or controlling banks, and (3) furnishing services to its bank subsidiaries. In 1970, Congress amended section 4 of the BHC Act to expressly authorize a BHC to furnish services to or perform services for its nonbank subsidiaries as well as its bank subsidiaries under exemption A of section 4(a)(2). While section 4(c)(1) authorizes a BHC to invest in shares of a company engaged in certain activities, exemption A provides the authority for a BHC to engage in those activities directly.

The Board issued an interpretation (12 C.F.R. 225.141), effective August 1980, which stated that it will permit, without any regulatory approval, a bank holding company to form a wholly-owned subsidiary to perform servicing activities for both banking and nonbanking subsidiaries that the holding company itself could perform directly or through a department or a division under section 4(a)(2)(A) of the BHC Act. In addition, an approved section 4(c)(8) company may form a wholly-owned subsidiary to engage in activities that such company could itself engage in.

3020.0.6 LIQUIDATING ASSETS

Section 4(c)(1)(D) provides that a BHC may own shares of a company which engages in liquidating assets acquired from such BHC (not including its nonbank subsidiaries) or its banking subsidiaries or which were acquired from any other source prior to May 9, 1956, or the date on which such company became a BHC, whichever is later.

Assets acquired for liquidation by a section 4(c)(1)(D) subsidiary are subject to the same time limitations as shares acquired D.P.C. pursuant to section 4(c)(2) of the Act.

BHCs seeking to hold the shares of a liquidating or nominee subsidiary organized to dispose of assets acquired D.P.C. by a BHC nonbank subsidiary, can rely on the Board's August 1980 interpretation permitting, without prior regulatory approval, a BHC to form a subsidiary to perform activities which itself could perform under exemption A of section 4(a)(2).

3020.0.7 INSPECTION OBJECTIVES

1. To determine whether the activities conducted by companies in which the BHC has a greater than 5 percent investment in the company and for which the BHC claims exemption under section 4(c)(1) of the BHC Act, are the types of permissible activities contemplated by that section—activities claimed under the premises exemption under 4(c)(1)(A), the safe deposit business exemption under 4(c)(1)(B), the services exemption under (4)(c)(1)(C), or the liquidating subsidiary exemption (4)(c)(1)(D).

3020.0.8 INSPECTION PROCEDURES

The inspection of a nonbank subsidiary exempt under section 4(c)(1) of the Act should center on a review of the activities to assure that those activities are the types permissible under section 4(c)(1) subsections A, B, C and D.

3020.0.8.1 Section 4(c)(1)(A)—Bank Premises

The following procedural steps should be performed in connection with an inspection of a bank premises company.

1. Obtain a list of all real estate held by the company including the following information:

a. Property description and location;

b. Date acquired;

c. Current utilization;

d. Extent of utilization by banking subsidiaries and others indicating percentage of square feet leased to subsidiaries.

2. When use of the property by a subsidiary bank(s) is less than 50 percent, discuss future plans for the use of the property with management. Note any related discussion contained in the minutes of directors' and committee meetings, and action taken to date to implement these plans. Lease agreements with other tenants should be reviewed to determine the term of a lease including options to renew.

3. Evaluate the permissibility of holding each property under the premises exemption.

4. Review and evaluate other activities engaged in and assets held by the company to establish their permissibility under the premises exemption. Such activities could include leasing property and providing a general maintenance service to other tenants.

3020.0.8.2 Section 4(c)(1)(B)—Safe Deposit Business

Activities exempt under this section are restricted to conducting a safe deposit business. All activities engaged in and assets held by companies for which the BHC is claiming exemption under this section should be reviewed and evaluated to determine their permissibility under this exception.

3020.0.8.3 Section 4(c)(1)(C)—Services

The following procedural steps should be performed when inspecting service companies.

1. List and describe all services provided to subsidiaries in the inspection report.

2. Review and evaluate the types of services provided to the banking and nonbanking subsidiaries to determine their permissibility.

3. Obtain from management any written bank holding company policies concerning the provision of services and the assessment of fees or discuss with management the basis on which service fees are established.

4. Comment on the reasonableness of fees relative to the fair market value, cost, volume, or quality of such services rendered.

5. Indicate if all service contracts have been approved by each subsidiary's board of directors.

6. When reviewing services provided to banking subsidiaries for their customers:

a. List and describe all services provided;

b. Determine that the company is operating as an adjunct to its affiliated banks for the purpose of facilitating the bank's operations, and not as a separate, self-contained organization;

c. Review contractual arrangements to assure that the company has not purchased any service contracts from a subsidiary bank and has not entered directly into agreements to provide services to any party other than the bank;

d. Review and evaluate all services to determine whether they are services that the subsidiary bank is permitted to provide under applicable State or federal law.

3020.0.8.4 Section 4(c)(1)(D)—Liquidating Subsidiary

The following procedural steps should be followed in connection with an inspection of a liquidation company in which the BHC holds an investment.

1. Obtain a list of all assets acquired by the company for the purpose of liquidation including the following information:

a. Asset description and location;

b. Date acquired;

c. Source of acquisition;

d. Liquidation plans, including timetable and selling price;

e. Cost of assets and book value, including detail on any improvements.

2. Verify that assets acquired from sources other than the parent or its subsidiary banks were acquired prior to May 9, 1956, or the date on which the holding company became a BHC, whichever is later.

3. Verify that assets acquired for liquidation did not originate in a nonbank subsidiary. If a section 4(c)(1)(D) liquidating subsidiary is holding a material amount of assets acquired from a nonbank subsidiary, discuss the propriety of these holdings with the Reserve Bank office staff and, if necessary, Board staff in the Division of Banking Supervision and Regulation or the Legal Division.

4. Review the bank holding company's policies, practices and procedures concerning the liquidation of assets and determine if the subsidiary is in compliance with the time limits indicated above.

5. Discuss with management and note the

liquidation plans and progress to date in liquidating assets that have been held in excess of 12 months. Note any related discussion found in the minutes of directors' and committee meetings.

6. Comment on whether management is making a *bona fide* effort to dispose of all assets for fair value.

7. Check improvements made to property by the company to assure that the nature and use of the asset has not substantially changed. The investment of funds to change substantially the nature of the asset (such as undeveloped real estate) to increase its value would generally be viewed as engaging in real estate development, an activity which is not permissible.

3. Federal Reserve Regulatory Service reference.

Section 4(c)(2) of the Bank Holding Company Act permits a bank holding company or any of its subsidiaries to acquire shares in satisfaction of debts previously contracted (DPC) in good faith. The shares must be disposed of within two years from the date they were acquired, except that the Board is authorized upon application of a company to grant additional exemptions if, in its judgment, the extension would not be detrimental to the public interest and either the bank holding company has made a good faith attempt to dispose of those shares during the five-year period, or the disposal of the shares would have been detrimental to the company. The aggregate duration of the extensions cannot extend beyond 10 years.

Even though the statute refers specifically to shares, the Board has taken the position, in section 225.22(d) of its Regulation Y and in an interpretation (12 C.F.R. 225.140), that the congressional policy evidenced by section 4(c)(2) should apply to DPC acquisitions of other assets, other than shares (assets), and real estate by bank holding companies and their nonbanking subsidiaries. Section 225.22(d)(1) provides the same holding periods (including provision for extensions) for other DPC assets or real estate as are provided by statute for DPC shares.

Regulation Y, section 225.22(d), addresses nonbanking acquisitions that do not require prior Board approval. With respect to DPC acquisitions, voting securities, or other assets or real estate acquired by foreclosure or otherwise, in the ordinary course of collection of a debt previously contracted (DPC property) in good faith, Regulation Y does not require the Board's prior approval if the DPC property is divested within two years of acquisition. Regulation Y further states that the Board may, upon request, extend the two-year period for up to three additional years. Further, the Board may permit additional extensions for up to five years (for a total of 10 years). This provision applies to shares, real estate, or other assets in which the holding company demonstrates that each extension would not be detrimental to the public interest and either the bank holding company has made good faith attempts to dispose of such shares, real estate, or other assets, or the disposal of the shares, real estate, or others assets during the initial period would have been detrimental to the company. Transfers within the bank holding company system do not extend any period for divestiture of the property.

Under the Board's delegated authority, the Reserve Banks may approve a BHC's requests for extensions beyond the two-year divestiture period.[1] In accordance with a Board interpretation (12 C.F.R. 225.138), extensions should not be granted except under compelling circumstances, and periodic progress reports on divestiture plans are generally required. When these permissible extension periods expire, the Board no longer has discretion to grant further extensions. A BHC would be in violation of the act if shares, other assets, or real estate acquired DPC is not disposed of within the prescribed time frame.

In July 1980, the Board issued an interpretation of Regulation Y (12 C.F.R. 225.140) that provided for a possible approval for an additional five-year period for the divestiture of real estate acquired DPC. With respect to DPC real estate, this interpretation requires that (1) the value of the real estate on the books of the company be written down to fair market value, (2) the carrying costs cannot be significant in relation to the overall financial position of the company, and (3) the company must make good faith efforts to effect divestiture. Fair market value should be derived from appraisals, comparable sales, or some other reasonable method. Companies holding real estate for this extended period are expected to make active efforts to dispose of it, and they should advise the Reserve Bank regularly concerning their ongoing efforts.

In accordance with the Board's interpretation (12 C.F.R. 225.140), after two years from the date of acquisition of DPC assets, the holding company is to report annually to the Federal Reserve on its efforts to accomplish divestiture of the assets. The Reserve Bank will monitor the efforts of the company to effect an orderly divestiture. Divestiture may be ordered before the end of the authorized holding period (beyond the initial two-year period that requires no Board authorization) if supervisory concerns warrant such action.

Section 4(c)(1)(D) allows a bank holding company to establish a subsidiary to hold real estate acquired by itself or by any of its banking subsidiaries for debts previously contracted, for the purpose of disposing of the real estate in an orderly manner. Permissible activities of this

1. Each Federal Reserve Bank has been delegated the authority (12 C.F.R. 265.2(f)(12)) to extend the time within which a bank holding company or any of its subsidiaries must divest itself of interests acquired in satisfaction of a debt previously contracted.

liquidating subsidiary include completion of a real estate development project and other activities necessary to make the real estate saleable. The "date of acquisition" is the date the bank holding company (or subsidiary of the bank holding company) acquired the DPC asset. Section 4(c)(1)(D) may not be used to extend the time under which a bank holding company may indirectly hold DPC property under section 4(c)(2). In most cases where a subsidiary bank has held property for the statutory holding period, a BHC may not shift the property to another subsidiary or to the parent to avoid disposing of the property. However, due to the complexity and potential impact on the organization of a forced divestment at the end of the holding period, inspection personnel and Reserve Bank staff are encouraged to discuss the situation with Board staff to tailor the supervisory response to the particular situation.

With respect to the transfer by a subsidiary of other DPC shares, other assets, or real estate to another company in the holding company system, including a section 4(c)(1)(D) liquidating subsidiary, or to the holding company itself, such transfers would not alter the original divestiture period applicable to such shares or assets at the time of their acquisition. Moreover, to ensure that assets are not carried at inflated values for extended periods of time, the Board expects, in the case of all such intercompany transfers, that the shares or assets will be transferred at a value no greater than the fair market value at the time of transfer and that the transfer will be made in a normal arm's-length transaction. With regard to DPC assets (except for DPC shares as described above) acquired by a banking subsidiary of a holding company, as long as the assets continue to be held by the bank itself, the Board will regard them as being solely within the authority of the primary supervisor of the bank.

Section 4(c)(3) of the Bank Holding Company Act permits a bank holding company to acquire shares or real estate from any of its subsidiaries if a subsidiary had been requested to dispose of the shares by any federal or state authority having power to examine the respective subsidiary. The Board does not have authority to extend the two-year disposition period under section 4(c)(3) of the act. Section 4(c)(3) may not be used to extend the statutory period in which a bank must dispose of DPC assets (10 years in the case of DPC real estate assets, five years for all other).

3030.0.1 EXEMPTION TO SECTION 4(c)(2) DISPOSITION REQUIREMENTS OF DPC SHARES

Section 4(c)(5) of the Bank Holding Company Act allows a bank to own shares in certain nonbanking companies, specifically, the kinds and amounts eligible for investment by national banking associations under the provisions of section 5136 of the Revised Statutes (see section 3050.0 for a detailed explanation of section 4(c)(5)). The exemption provided by section 4(c)(5) covers any shares, including shares acquired DPC, that meet the conditions set forth in that exemption. Therefore, DPC shares held by a banking subsidiary of a bank holding company which meet section 4(c)(5) conditions are not subject to the disposition requirement prescribed in section 4(c)(2); however, such shares would continue to be subject to requirements for disposition as may be prescribed by provisions of any other applicable banking laws or by the appropriate bank supervisory authorities.

Section 4(c)(6) of the act allows a bank holding company to own shares, including those acquired DPC, of any nonbank company that does not exceed 5 percent of the outstanding voting shares of such company. The Board has expressed an opinion (12 C.F.R. 225.101(f)) that any shares acquired DPC under this section, whether by a holding company or a bank subsidiary, are not subject to the disposition requirements of section 4(c)(2) of the act.

Real property is often shown on an entity's books as other real estate (ORE). Possession of ORE usually results from a distressed loan collateralized by a lien on real estate. In addition, in attempting to salvage other types of credit, an entity may have obtained title to real property through process of law or by voluntary deed. Acquisition costs for other real estate acquired for debts previously contracted usually consist of the principal amount that was due on the defaulted loan at the time the entity took possession, unpaid interest, legal fees and other foreclosure costs, accrued and unpaid taxes, and mechanic's liens. Property acquired DPC may be recorded on the company's books by capitalizing the loan amount and acquisition costs. Advances to complete the project can be included in the capitalized investment if the ORE is an unfinished project. The fact that the additional investment is being used to improve the property and make the property more saleable should be evident.

A company owning a DPC asset should maintain records documenting its efforts to dispose of the asset. Because an ORE asset is normally a nonliquid, nonproductive asset of uncertain value, a company should attempt to dispose of the asset at the earliest date possible. Unless special circumstances are present, a company should sell the ORE asset when a price offer sufficient to cover the acquisition, investment, and carrying costs is obtained.

3030.0.2 INSPECTION OBJECTIVES

1. To determine compliance with applicable laws, rulings, and regulations, and to initiate corrective action when violations appear in these areas.
2. To determine whether policies, practices, and internal controls regarding DPC shares, other assets, or real estate are adequate and to recommend correction when deficiencies are noted.
3. To evaluate the quality of DPC shares, other assets, or real estate and the progress toward their disposition.
4. To determine whether the DPC shares, other assets, or real estate acquired are recorded at fair market value.

3030.0.3 INSPECTION PROCEDURES

1. During the preinspection review, compile a list of shares, other assets, and real estate known to have been acquired DPC by the bank holding company and its nonbank subsidiaries, as well as a list of shares known to have been acquired DPC by the BHC's bank subsidiaries. Information on this list should include—
   a. a description of the shares or asset(s);
   b. the fair market value of the shares and asset(s), and the method of valuation, if available;
   c. the name of the company owning the shares and asset(s); and
   d. the date the shares and asset(s) were acquired.
2. If the shares or asset has been held longer than the initial holding period, determine whether the BHC has requested an extension of time.
3. In the Officer's Questionnaire, request a list of DPC shares, other assets, or real estate owned by the holding company and its nonbanking subsidiaries, and a list of DPC shares owned by the holding company's bank subsidiaries, including a detailed description of the shares or asset, the value of the shares or asset on the entity's books, the date the shares or asset was acquired, and plans for disposal of the shares or asset. In addition, a list of DPC shares, other assets, or real estate which has been disposed of since the previous inspection or within the past year should be obtained. Compare these lists with the list compiled during the preinspection review.
4. Review other real estate owned accounts to evaluate—
   a. the fair market value of the property (A qualified appraiser should appraise the property at the time of acquisition, and subsequent timely appraisals should be conducted to determine the current fair market value of the property.);
   b. the carrying costs of the property; and
   c. the company's efforts to dispose of the property (Information on file should include documentation showing a record of offers made by potential buyers and other information reflecting efforts to sell the property (i.e., advertisement brochures)).
5. Determine whether additional advances have been made on an unfinished project and whether evidence supports that the advances are making the property more saleable.
6. Determine whether a first-lien status exists and whether there are any tax liens or other encumbrances against the property.
7. Discuss DPC shares, other assets, or real estate and their values with management who is familiar with the history and current status of the shares or asset and assign classification, if warranted. A substandard classification may be applied when a company is sustaining losses in maintaining the property, and prospects for sale are not evident or encouraging. A company's acquisition of property through foreclosure often indicates a lack of demand and, as time elapses, the value of the real estate may become more questionable if the lack of demand persists. If the carrying amount of the investment exceeds the estimated value of the property, an adequate allowance reserve for any difference should be established and maintained. Property that is in the process of being sold for an amount in excess of the carrying value should not be classified if it appears that ultimate payment will be forthcoming.
8. List shares, other assets, and real estate acquired DPC under "other assets" in the inspection report. For significant shares and assets, the examiner may choose to present in the inspection report or in the workpapers, whichever is deemed appropriate, the following information:

a. a brief description sufficient to identify the property, the manner in which the property was acquired, and the reasons for its acquisition

b. the value of the shares or assets on the books of the company, the method used to determine the booked value, and whether it is the fair market value

c. a brief statement as to management's efforts to sell the property, its opinion of the likelihood of sale, and the anticipated sales price

d. a summary of the carrying costs subsequent to assumption and income generated from the property

e. the date when the holding company or its subsidiary must dispose of the property or request an extension to continue to hold the DPC shares or asset

f. the amount classified, if appropriate

g. any apparent discrepancies with rules or regulations

3030.0.4 Laws, Regulations, Interpretations, and Orders

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The Federal Reserve issued a policy statement on April 5, 2012, indicating that banking organizations[1] may rent one- to four-family residential "Other Real Estate Owned" (OREO) properties without having to demonstrate continuous active marketing of the properties, provided that suitable policies and procedures are followed.[2] Key risk-management considerations are described for banking organizations that engage in the rental of residential OREO, including compliance with holding-period requirements for OREO, compliance with landlord-tenant and associated requirements, and accounting according to generally accepted accounting principles (GAAP). Rental OREO properties with leases in place and demonstrated cash flow from rental operations sufficient to generate a reasonable rate of return should generally not be classified.

The statement establishes specific supervisory expectations for banking organizations that undertake large-scale residential OREO rentals (generally, 50 properties or more available for rent). Such organizations should have formal policies and procedures governing the operation and administration of OREO rental activities, including property-specific rental plans, policies and procedures for compliance with applicable laws and regulations, a risk-management framework, and oversight of third-party property managers. (See SR-12-5/CA-12-3 and their attachments.)

3032.0.1 POLICY STATEMENT ON RENTAL OF RESIDENTIAL OTHER REAL ESTATE OWNED PROPERTIES

In light of the large volume of distressed residential properties and the indications of higher demand for rental housing in many markets, some banking organizations may choose to make greater use of rental activities in their disposition strategies than in the past. This policy statement reminds banking organizations and examiners that the Federal Reserve's regulations and policies permit the rental of residential OREO properties to third-party tenants as part of an orderly disposition strategy within statutory and regulatory limits.[3]

The general policy of the Federal Reserve is that banking organizations should make good-faith efforts to dispose of OREO properties at the earliest practicable date. Consistent with this policy, in light of the extraordinary market conditions that currently prevail, banking organizations may rent residential OREO properties (within statutory and regulatory holding-period limits) without having to demonstrate continuous active marketing of the property, provided that suitable policies and procedures are followed. Under these conditions and circumstances, banking organizations would not contravene supervisory expectations that they show "good-faith efforts" to dispose of OREO by renting the property within the applicable holding period. Moreover, to the extent that OREO rental properties meet the definition of community development under the Community Reinvestment Act (CRA) regulations, they would receive favorable CRA consideration.[4] In all respects, banking organizations that rent OREO properties are expected to comply with all applicable federal, state, and local statutes and regulations.

Home prices have been under considerable downward pressure since the financial crisis began, in part due to the large volume of houses for sale by creditors, whether acquired through foreclosure or voluntary surrender of the property by a seriously delinquent borrower (distressed sales). Creditors, in turn, often seek to liquidate their inventories of such properties quickly. Since 2008, it is estimated that millions of residential properties have passed through lender inventories. These distressed sales represent a significant proportion of all home sales transactions, despite some ebb and flow, and thus are a contributing element to the downward pressure on home prices. With mortgage delinquency rates remaining stubbornly high, the continued inflow of new real estate owned prop-

1. The policy statement applies to state member banks, BHCs, nonbank subsidiaries of BHCs, savings and loan holding companies, non-thrift subsidiaries of savings and loan holding companies, and U.S. branches and agencies of foreign banking organizations (collectively, banking organizations).

2. This policy statement supplements other relevant Federal Reserve guidance, including the Board's policy statement on the disposition of property acquired in satisfaction of debts previously contracted. See 12 CFR 225.140. Also see sections 3020.0.6, 3030.0, and 3090.2.4.6 of this manual and section 2200.0 of the *Commercial Bank Examination Manual.*

3. The term "residential properties" in this policy statement encompasses all one-to-four family properties and does not include multi-family residential or commercial properties.

4. The Federal Reserve's CRA regulations define community development to include activities that provide affordable housing to low- and moderate-income individuals as well as those activities that revitalize or stabilize low- and moderate-income areas (see 12 CFR 228.12(g)(1) and (4)).

erties to the market—expected to be millions more over the coming years—will continue to weigh on house prices for some time.[5]

Banking organizations include their holdings of such properties in OREO on regulatory reports and other financial statements.[6] Existing federal and state laws and regulations limit the amount of time banking organizations may hold OREO property.[7] In addition, there are established supervisory expectations for management of OREO properties and the nature of the efforts banking organizations should make to dispose of these properties during that period.

3032.0.1.1 Risk-Management Considerations for Residential OREO Property Rentals

In all circumstances, the Federal Reserve expects a banking organization considering such rentals to evaluate the overall costs, benefits, and risks of renting. The banking organization's decision to rent OREO might depend significantly on the condition of individual properties, local market conditions for rental and owner-occupied housing, and its capacity to engage in rental activity in a safe and sound manner and consistent with applicable laws and regulations.

Banking organizations should have an operational framework for their residential OREO rental activities that is appropriate to the extent to which they rent OREO properties. In general, banking organizations with relatively small holdings of residential OREO properties—fewer than 50 individual properties rented or available for rent—should use a framework that appropriately records the organizations' rental decisions and transactions as they take place, preserves key documents, and is otherwise sufficient to safeguard and manage the individual OREO assets.[8] In contrast, banking organizations with large inventories of residential OREO properties[9]—50 or more individual properties available for rent or rented—should utilize a framework that systematically documents how they meet the supervisory expectations described in the next section. All banking organizations that rent OREO properties, irrespective of the size of their holdings, should adhere to the guidance set forth in this section.

3032.0.1.1.1 Compliance with Maximum OREO Holding-Period Requirements

Banking organizations should pursue a clear and credible approach for ultimate sale of the rental OREO property within the applicable holding-period limitations. Exit strategies in some cases may include special transaction features to facilitate the sale of OREO, potentially including prudent use of seller-assisted financing or rent-to-own arrangements with tenants.

3032.0.1.1.2 Compliance with Landlord-Tenant and Other Associated Requirements

Banking organizations' residential property rental activities are expected to comply with all applicable federal, state, and local laws and regulations, including landlord-tenant laws; landlord licensing or registration requirements; property maintenance standards; eviction protections (such as under the Protecting Tenants at Foreclosure Act); protections under the Servicemembers Civil Relief Act;[10] and anti-discrimination laws, including the applicable provisions of the Fair Housing Act and the Americans with Disabilities Act. Prior to undertaking the rental of OREO properties,

5. For further discussion of housing market conditions and the obstacles to conversions of OREO properties to rental, see "The U.S. Housing Market: Current Conditions and Policy Considerations," Federal Reserve staff white paper, January 4, 2012 (housing white paper).

6. "Other real estate owned" is comprised of all real estate other than (1) bank premises owned or controlled by the bank and its consolidated subsidiaries and (2) direct and indirect investments in real estate ventures.

7. Generally, the Federal Reserve allows BHCs to hold OREO property for up to five years, with an additional five-year extension subject to certain circumstances (see 12 CFR 225.140). National banks are subject to similar restrictions. State member banks and licensed branches of foreign banks are subject to the holding periods and other limitations on OREO activity established by their respective licensing authorities, which vary. Savings and loan holding companies generally may acquire real estate for rental (see 12 USC 1467a(c)(2) and 12 CFR 238.53(b)).

8. A preliminary analysis of the Consolidated Reports of Condition and Income (Call Report) data suggests that roughly 98 percent of community banks held 50 or fewer residential OREO properties.

9. For purposes of this guidance, the supervisory expectations for OREO rentals and the number of properties available for rent should include those properties for which tenants were already in place at the time of foreclosure or transfer of ownership, and for which tenants are afforded certain protections under the Protecting Tenants at Foreclosure Act of 2009. See the Federal Reserve's *Consumer Compliance Handbook*, section IV, for further information.

10. See CA-09-5, "Information and Examination Procedures for the 'Protecting Tenants at Foreclosure Act of 2009,'" July 30, 2009, and CA-05-3, "Servicemembers Civil Relief Act of 2003," May 6, 2005.

banking organizations should determine whether such activities are legally permissible under applicable laws, including state laws. When applicable, banking organizations should review homeowner and condominium association bylaws and local zoning laws for prohibitions on renting a property. Banking organizations may use third-party vendors to manage properties but should provide necessary oversight to ensure that property managers fully understand and comply with these federal, state, and local requirements.

3032.0.1.1.3 Other Considerations

Banking organizations should account for OREO assets in accordance with GAAP and applicable regulatory reporting instructions.[11] Banking organizations should also provide the appropriate classification treatment for their residential OREO holdings. Residential OREO is typically treated as a substandard asset, as defined by the interagency classification guidelines. (See section 5010.10.1 which discusses the Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts, as revised June 15, 2004.) It sets forth the definitions of the classification categories and the specific examination procedures and information that are to be used for classifying bank assets, including securities. (See SR-04-9.) See also section 2060.1 of the *Commercial Bank Examination Manual*. Residential properties, however, with leases in place and demonstrated cash flow from rental operations sufficient to generate a reasonable rate of return[12] should generally not be classified.

3032.0.1.2 Specific Expectations for Large-Scale Residential OREO Rentals

Banking organizations with large inventories of residential OREO properties that decide to engage in rental activities should have in place a documented rental strategy, including formal policies and procedures for OREO rental activities, and a documented operational framework. Policies and procedures should clearly describe how the banking organization will comply with all applicable laws and regulations. Policies and procedures should include processes for determining whether the properties meet local building code requirements and are otherwise habitable, and whether improvements to the properties are needed in order to market them for rent. In addition, policies and procedures should establish operational standards for the banking organization's rental activities, including that adequate insurance policies are in place, that property and other tax obligations are met on a timely basis, and that expenditures on improvements are appropriate to the value of the property and to prevailing norms in the local market.

Policies and procedures should also require plans for rental of residential OREO properties, down to the individual property level, that cover the full holding period from the time the bank received title to ultimate sale by the bank. Plans should identify which properties would be eligible for rental. Plans also should establish criteria by which properties are chosen for marketing as rental properties, and the process by which rental decisions should be made and implemented. Plans should describe the general conditions under which the organization believes a rental approach is likely to be successful, including appropriate consideration of rental market and economic conditions in respective local markets.

Finally, policies and procedures should address all risk-management issues that arise in renting residential OREO properties. Some risk elements parallel those found in other banking activities, for example, the credit risk associated with tenants' potential failure to make timely

11. See the instructions for the Call Report as to the reporting of OREO transactions and to the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C). See more generally this manual's section 2200.1, "Other Real Estate Owned."

12. Whether a rate of return is reasonable depends on a number of considerations including local market conditions, the time horizon of the rental, and the nature of the property. Commonly used measures include a capitalization rate (known as a "cap rate," which generally is the expected annual cash flows from renting the property relative to the price at which the property holder could expect to sell it in the owner-occupied market), as discussed in the housing white paper, or other measures of internal rate of return. Depending on the circumstances and risks associated with the property, valid indications that a level of return is reasonable could include (but would not be limited to) comparisons with normal returns for single-family rentals in the relevant local market; rates of return on other similar local real estate investments; or cap rates or other measures of internal rate of return on investments with similar risk profiles. For example, in many markets a cap rate above 8 percent would likely represent a reasonable rate of return. Large one-time expenditures that are idiosyncratic to a given year but are normal to residential properties over their lifetime, such as replacement cost for worn-out appliances, should generally not be the reason that a property would be classified. Costs of improvement should be treated as capital expenditures with a corresponding effect on properties' carrying value to the extent the improvements improve the properties' values.

rent payments, or potential conflict of interest issues such as the use of a firm by a banking organization to both provide information on a property's value and list that property for sale on behalf of the banking organization. Other risks unique to such rental include

- dealing with vacancy, marketing, and re-rental of previously occupied properties;[13]
- liability risk arising from rental activities, along with the use and management of liability insurance or other approaches to mitigate that liability and risk; and
- legal requirements arising from the potential need to take action against tenants for rent delinquency, potentially including eviction. Such requirements may include notice periods.

Banking organizations may need to develop new policies and risk-management processes to address properly these categories of risk.

In many cases, banking organizations will use third-party vendors (for example, real estate agents or professional property managers) to manage their OREO properties. Policies and procedures should provide that such individuals or organizations have appropriate expertise in property management, be in sound financial condition, and have a good track record in managing similar properties. Policies and procedures should also call for contracts with such vendors to carry appropriate terms and provide, among other key elements, for adequate management information systems and reporting to the banking organization, including rent rolls (along with actual lease agreements), maintenance logs, and security deposits and charges to these deposits. Banking organizations should provide for adequate oversight of vendors.[14]

- ASC 360-10-35, Property, Plant and Equipment-Subsequent Measurement.
- The disposition of other real estate is addressed in ASC 360-20-40, Property, Plant and Equipment-Real Estate Sales-Derecognition (formerly within FAS 66, "Accounting for Sales of Real Estate"), which includes specific criteria for the recognition of profit.
- SR-10-16, "Interagency Appraisal and Evaluation Guidelines," December 2, 2010 and this manual's section 4140.1. For the sale of OREO property with a value of $250,000 or less, a BHC or state member bank may obtain an evaluation in lieu of an appraisal.
- SR-95-16, "Real Estate Appraisal Requirements for Other Real Estate Owned (OREO)," March 28, 1995.

13. Various jurisdictions may apply specific requirements to landlords in their marketing and re-rental activities (for example, an obligation to offer potential tenants an initial lease term of two years).

14. See Federal Financial Institutions Examination Council statement on *Risk Management of Outsourced Technology Services* (November 28, 2000, SR-00-17 and the appendix of section 4060.1 of the *Commercial Bank Examination Manual*), which provides illustrative guidance on constructing outsourcing risk assessments, due diligence in selecting a service provider, contract review, and monitoring of a third party that provides services to a regulated institution.

Section 4(c)(4) of the Bank Holding Company Act (the act) provides that nonbank shares held or acquired by a bank in good faith in a fiduciary capacity are exempt from the general prohibitions of section 4 of the act. This exemption is provided to allow banks to continue their normal fiduciary operations without significant interference and without being subject to the limitations of the Bank Holding Company Act. Without this exemption, a subsidiary bank could act as trustee for up to only 5 percent of a nonbank company's shares, as provided by section 4(c)(6) of the act.

Certain exceptions were included within the body of the section 4(c)(4) exemption to prevent use of the trust vehicle to circumvent the intent of the act. The section 4(c)(4) exemption is not applicable when shares acquired are held by a trust that is considered a "company" under section 2(b) of the act. Under section 2(b), a trust is defined as a company if it does not terminate within 25 years or within 21 years and 10 months after the death of individuals living on the effective date of the trust. Such trusts are generally referred to as perpetual trusts and include employee benefits and charitable trusts that can operate in perpetuity.

Another exception to the exemption implies that no more than 5 percent of the shares of a nonbank company may be held by a subsidiary bank as trustee under a trust established for the benefit of the bank itself; the bank's parent company or any of its subsidiaries; or the shareholders or employees of the bank, the parent company, or its subsidiaries, as indicated in section 2(g)(2) of the act. Employee benefit trusts have become a principal source of banks' trust assets. As strictly applied, section 4(c)(4) would limit acquisition of stock of a nonbank company to 5 percent of its shares for employee trust accounts of banks that are subsidiaries of bank holding companies.

3040.0.1 TRANSFER OF SHARES TO A TRUSTEE

Under section 4(c)(4), if a bank holding company transfers nonbank shares to a trustee and the trustee has one or more directors in common with the bank holding company, the nonbank shares are deemed to be controlled by the bank holding company until the Board determines otherwise.

3040.0.2 TRUST COMPANY SUBSIDIARIES

Even though section 4(c)(4) refers to shares held or acquired by a bank in good faith in a fiduciary capacity, the exemption also applies to shares held or acquired in a fiduciary capacity by a trust company subsidiary of a bank holding company.

3040.0.3 QUALIFYING FOREIGN BANKING ORGANIZATION OWNING OR CONTROLLING SHARES OF A COMPANY IN A FIDUCIARY CAPACITY

A foreign bank that maintains branches in the United States is subject to the provisions of the BHC Act in the same manner and to the same extent as a U.S. bank holding company.[1] Section 4 of the BHC Act prohibits a bank holding company and its subsidiaries from owning or controlling nonbanking assets or shares or engaging in any nonbanking activity unless it qualifies for an exemption.[2] Accordingly, such a foreign bank may not own nonbanking assets or shares (such as real estate), directly or through any company it controls, unless it qualifies for an exemption from the nonbanking prohibitions of section 4 of the BHC Act.

Under section 211.23(f)(4) of Regulation K, a qualifying foreign banking organization may "[o]wn or control voting shares of any company in a fiduciary capacity under circumstances that would entitle such shareholding to an exemption under section 4(c)(4) of the [BHC Act] . . ."[3] Section 225.22(d)(3) of the Board's Regulation Y (which implements section 4(c)(4) of the BHC Act) provides that the BHC Act's nonbanking prohibitions shall not apply to "voting securities or assets acquired by a bank or other company (other than a trust that is a company) in good faith in a fiduciary capacity, if the voting securities or assets are . . . held in the ordinary course of business and not acquired for the benefit of the company or its shareholders, employees, or subsidiaries."[4]

1. 12 U.S.C. 3106(a).
2. 12 U.S.C. 1843.
3. 12 C.F.R. 211.23(f)(4).
4. 12 C.F.R. 225.22(d)(3).

Two subsidiaries of the foreign bank CMB AG (the foreign bank) that are located in Germany currently invest in non-U.S. real estate for the benefit of third-party investors. One of the subsidiaries, IGC, manages only retail investment trusts (beneficial interests in which are typically sold widely to retail investors); the other subsidiary, SGC, manages only institutional investment trusts (beneficial interests in which are sold to 30 or fewer institutional investors). Through its legal counsel, the foreign bank requested an interpretation of section 4 of the BHC Act (12 U.S.C. 1843) and section 211.23(f)(4) of the Board's Regulation K (12 C.F.R. 211.23(f)(4)) that would permit its two asset-management subsidiaries, IGC and SGC, to sponsor and manage German-based investment trusts that invest in U.S. real estate.

The powers and duties of the asset-management services provided by IGC and SGC to their investment trusts are governed by the German Investment Law and a trust agreement entered into between IGC or SGC, on the one hand, and the investor, on the other hand (the trust agreement). IGC and SGC are subject to the supervision and regulation of the German bank supervisory authority (BaFin). Compliance by IGC and SGC with the German Investment Law and the trust agreement would be monitored and enforced by BaFin. Amendments in 2002 to the German Investment Law liberalized the ability of companies to sponsor, manage, and serve as distributor for one or more retail or institutional investment trusts, allowing investment in real estate outside the European Economic Area, including in the United States.

In light of the 2002 changes in German law, IGC established a retail investment trust (the retail trust) to invest in real estate located in the United States, Europe, and Asia. In addition, SGC is established as an investment trust for institutional investors (the institutional trust, and, together with the retail trust, the trusts) to invest in U.S. real estate. The trusts proposed to invest in existing commercial real estate properties in major U.S. cities (the properties), but not in undeveloped U.S. real estate. As required by the German Investment Law, title to each of the properties would be held either directly by IGC or SGC or by a special-purpose entity established and controlled by IGC or SGC.

Interests in the trusts would be sold only to non-U.S. persons. All property management, leasing, real estate brokerage, and refurbishment services obtained by the properties would be obtained from parties that are unaffiliated with the foreign bank or any of its subsidiaries. For their services to the trusts, IGC and CGS would receive an annual management fee based primarily on the net asset value of the trusts. The foreign bank's legal counsel contended that the proposed ownership of U.S. real estate by IGC and SGC for the account of the trusts would qualify for the fiduciary exemptions available in Regulation K and Regulation Y.

Under the arrangement, the two subsidiaries are subject to fiduciary duties that closely resemble those of a trustee in the United States. Under the German Investment Law, the investment trusts would not be legal entities separate from the two subsidiaries, IGC and SGC. The foreign bank made several representations and commitments in support of its inquirer's interpretation that the proposed ownership of U.S. real estate by IGC and SGC for the account of the trusts would qualify for the fiduciary exemptions under section 211.23(f)(4) of Regulation K and section 225.22(d)(3) of Regulation Y. In particular, the foreign bank committed that neither it nor its subsidiaries or employee benefit plans would own any beneficial interests in the investment trusts.

Based on all the facts, including all the representations and commitments made by or on behalf of the foreign bank, IGC, and SGC, Board legal staff stated that it would not recommend that the Board disagree with the inquirer's interpretation of the availability of the fiduciary exemptions in section 211.23(f)(4) of Regulation K and section 225.22(d)(3) of Regulation Y to the foreign bank. The fiduciary exemptions in the Board's Regulations K and Y (12 CFR 211.23(f)(4) and 225.22(d)(3)) would, therefore, permit the two subsidiaries of the foreign bank to take title to U.S. real estate on behalf of the investment trusts and for the benefit of the investors in the trusts. (See the Board staff's legal interpretation dated November 24, 2004. See also the summary of the interpretation in the *Federal Reserve Regulatory Service* at 3-744.13 and 4-305.2.)

3040.0.4 OTHER REPORTING REQUIREMENTS

In certain circumstances, holdings in fiduciary capacities of nonbank stock over 5 percent may also trigger reporting requirements under the federal securities laws.

3040.0.5 INSPECTION OBJECTIVES

To determine that nonbank shares held by a bank in a fiduciary capacity are in compliance with section 4(c)(4).

3040.0.6 INSPECTION PROCEDURES

Review the holding company's internal reporting procedures to establish that bank trust departments report 5 percent holdings in nonbank companies. In multibank companies, determine that controls are in place to aggregate nonbank shares held by each bank so that if an aggregate of 5 percent is held, it is reported in the Y-6.

3040.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Interests in nonbanking organizations	1843 1843(c)(4)	225.12(a) 225.22(d)(3)	3–744.13	
A qualifying foreign banking organization may own or control voting shares of any company in a fiduciary capacity		211.23(f)(4)	4–305.2	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(5) of the Bank Holding Company Act permits (without prior approval) investments by a bank holding company in shares of the kinds and amounts eligible for investment by national banks under the provisions of section 5136 of the Revised Statutes (12 U.S.C. 24(7)).

National banks are prohibited by section 5136 of the Revised Statutes from purchasing and holding shares of any corporation except those corporations whose shares are specifically made eligible by federal statute. This prohibition is made applicable to State member banks by section 9, paragraph 20 of the Federal Reserve Act (12 U.S.C. 335).

In 1968, the Board interpreted section 5136 as permitting a member bank to purchase shares of a corporation engaging in business (at locations the bank is authorized to engage in business) and carrying out functions the bank is empowered to perform directly. Section 5136 is a broad statute with types of permissible activities both explicitly defined and implied indirectly without express definition. Therefore, to limit the need for constant Board interpretation regarding the implied areas of section 5136, the Board curtailed the authority of a bank holding company to acquire shares on the basis of section 4(c)(5) through section 225.22(d) of Regulation Y. As a result, effective June 30, 1971, permissible shares for bank holding company acquisition under section 4(c)(5) are limited to those *explicitly* authorized by any federal statute. Additional reasons for limiting the scope of activities to those explicitly defined by statute, are that section 4(c)(5) acquisitions require neither prior Board approval, nor the opportunity for interested parties to express their views, nor any prior regulatory consideration of anti-trust and related matters.

3050.0.1 COMPANIES IN WHICH BHC'S MAY INVEST

The following is a list of permissible companies expressly authorized by federal statute. The list includes the companies most frequently encountered.

1. Small business investment companies ("SBICs").
2. Agriculture credit companies.
3. Edge and agreement corporations.
4. Bank premises companies (usually exempt under section 4(c)(1)(A)).
5. Bank service corporations (usually exempt under section 4(c)(1)(C)).
6. Safe deposit companies.
7. Obligations of student loan marketing associations.
8. State housing corporations.

3050.0.2 LIMITATIONS

On most 5136 authorizations, share investments are limited in some form, usually based on a percentage of the bank's capital and surplus. Under section 4(c)(5), a holding company's investment in such shares is also limited by amount and type to those permitted for a national bank to prevent avoidance of these limitations by a bank holding company.

3050.0.3 INSPECTION OBJECTIVES

1. To determine the permissibility of each activity encountered during the inspection which claims a section 4(c)(5) exemption.
2. To determine if the operations and financing of the section 4(c)(5) activity is not to the detriment of the bank(s).

3050.0.4 INSPECTION PROCEDURES

1. Review compliance with section 5136 of the Revised Statutes to determine if the activity is expressly permitted by any federal statute.
2. Determine the financial condition of the activity and its impact on the bank affiliate.

3050.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

3060.0.1 SECTION 4(c)(6)

This section provides an exemption for ownership of shares of any nonbank company that do not exceed 5 percent of the outstanding voting shares of such company. The exemption is designed to permit diversification of investments by a bank holding company and its subsidiaries which do not result in control of a nonbanking organization. The Board has indicated through an interpretation of 12 U.S.C. 225.101, that in its opinion, the 5 percent limitation applies to the aggregate amount of voting stock in a particular nonbank company held by the entire bank holding company organization including the parent company and all of its direct and indirect bank and nonbank subsidiaries. This is to prevent a holding company from acquiring a controlling interest in a nonbank company through ownership of small blocks of stock by numerous subsidiaries in circumvention of the provisions of section 4 of the BHC Act.

3060.0.1.1 D.P.C. Shares

The same interpretation (12 C.F.R. 225.101) also addresses the question of the applicability of section 4(c)(6) to nonbank shares acquired in satisfaction of debts previously contracted (D.P.C.) by a subsidiary bank, any nonbank subsidiaries, or the parent company. In this instance, the Board expressed the opinion that the 5 percent exemption provided by section 4(c)(6) covers any nonbank shares, including those acquired D.P.C. Consequently, shares which meet such conditions are not subject to the disposition requirements of section 4(c)(2) of the Act. It is important to remember that the exemption provided by section 4(c)(6) applies only to shares of any nonbank company. Acquisitions of any bank shares are subject to the provisions contained in section 3(a) of the Act.

Although the 5 percent limitation of this section applies, by its language, to ''voting shares'' rather than ''any class of voting shares'' as used elsewhere in the Act, the Board has indicated in 12 C.F.R. 225.137 that it applies to ''any class of voting shares'' rather than to the aggregate of all classes of voting shares held. Thus section 4(c)(6) is not available to a group of BHCs each owning a ''class of voting securities'' even if each BHC owns less than 5 percent of all shares outstanding. Further, section 4(c)(6) must be viewed as permitting ownership of 5 percent of a company's voting stock only when that ownership does not constitute ''control'' as otherwise defined in section 2 of the Act.

Note that section 4 prohibits engaging in nonbank activities other than those permitted by section 4(c)(8). Thus, if a BHC may be deemed to be ''engaging in an activity'' through the medium of a company in which it owns less than 5 percent of the voting stock it may nevertheless require Board approval, despite the section 4(c)(6) exemption.

3060.0.1.2 Acquisition of Nonbank Interests—Royalties as Compensation

A bank holding company requested an opinion on the permissibility of its subsidiary's receiving limited overriding royalty interests in oil, gas, and other hydrocarbon leasehold interests as partial compensation for investment advisory services in connection with those properties. The bank holding company was not acquiring more than 5 percent interest in any project. The subsidiary was to place the assigned royalties in a compensation plan for assignment to certain professional employees. Neither the subsidiary nor any affiliate were to acquire, hold, locate, sponsor, develop, organize, or manage any other energy property investment or in any other manner control the investment. The subsidiary was to hold interest in energy properties only if the interest had not yet been reassigned to an employee, or if an employee terminates service with the subsidiary and is required to reassign his or her energy properties to the subsidiary. The bank holding company's proposal was consistent with section 4(c)(6) of the Bank Holding Company Act, which exempts passive investments of 5 percent or less from the prohibitions of section 4 of the Bank Holding Company Act.

3060.0.2 SECTION 4(c)(7)

This section provides bank holding companies the opportunity to own, directly or indirectly, shares of an investment company (any amount up to 100 percent of outstanding shares) provided that each of the following conditions is met:

1. The investment company is not itself a bank holding company;
2. The investment company is not engaged in

any business other than investing in securities; and

3. Securities in which the investment company invests do not include more than 5 percent of the outstanding voting securities of any company.

4. As in section 4(c)(6), the 5 percent limitation applies, by its language, to ''voting shares'' rather than ''any class of voting shares,'' as used elsewhere in the Act. However, the criterion applies to ''any class of voting shares'' for purposes of this section.

The 5 percent restriction does not prevent an investment company from having direct or indirect subsidiaries of its own, provided that ownership of such subsidiaries is permitted under another provision of the Act. Rather, the limitation is intended to apply only to securities purchased in the ordinary course of investing by the investment company.

The legislative history of this provision of the Act does not provide a clear indication as to the type of institutions encompassed under the term ''investment company'' as used in this section. It appears, however, that any company primarily engaged in the purchasing and ownership of securities may be regarded as an investment company for purposes of this section. Section 4(c)(7) can be viewed, more or less, as an extension of section 4(c)(6) which permits a bank holding company to directly or indirectly through subsidiaries own up to 5 percent of the voting stock of any nonbank company. In fact, until the Amendments of 1966, the Bank Holding Company Act incorporated both section 4(c)(6) and section 4(c)(7) under one section. From a practical standpoint, the parent company is allowed, under section 4(c)(6), to directly engage in the same activities as an investment company. Accordingly, most holding companies conduct these activities through the parent company, rather than through an investment company subsidiary. Such an arrangement prevents duplicate payment of certain taxes and provides more flexibility for utilizing funds in other areas of the organization.

3060.0.3 INSPECTION OBJECTIVES

3060.0.3.1 Section 4(c)(6)

1. To determine that the investments held pursuant to section 4(c)(6) comply with the Act and 12 C.F.R. 225.101 and 225.137.

2. To determine that no more than 5 percent of the voting shares of any nonbank company (other than those owned pursuant to other provisions of the Act) is held by the bank holding company and its subsidiaries.

3060.0.3.2 Section 4(c)(7)

1. To determine the overall quality of the investments held.

2. To determine the financial impact of the ownership of such shares upon the bank holding company and its subsidiaries.

3. To determine if policies, practices and procedures regarding investments are adequate.

4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.

3060.0.4 INSPECTION PROCEDURES

3060.0.4.1 Section 4(c)(6)

1. Review investments held to determine that the BHC has a total interest of no more than 5 percent.

2. Determine that 5 percent does not constitute control.

3. Determine that the BHC is not ''engaged'' in any nonbank activity through its 5 percent ownership.

3060.0.4.2 Section 4(c)(7)

1. Where section 4(c)(7) applies, compare the investment company's general ledgers with statements prepared for the latest FR Y–6.

2. Obtain schedules of investments in voting shares of any companies. Review quality of such shares (utilizing rating service publications, etc.) and check for ownership interests exceeding 5 percent.

3. Review policies (written or oral) regarding purchase and sale of stocks.

4. Obtain and evaluate documentation relating to credit review for securities held. Determine adequacy of procedures to maintain credit updates.

5. Compare carrying value of stocks to current market value to determine market depreciation, if any and determine adequacy of any established reserves.

6. Perform verification procedures, including physical review of stock held in safekeeping, where practical.

7. Determine that purchases and sales of stocks are appropriately approved by directors or designated officers.

8. Review minutes of the board of directors meetings (where an investment company subsidiary is involved).

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2014, this section was revised to include a brief discussion of the December 13, 2013, "Interagency Statement on Supervisory Approach for Qualified and Non-Qualified Mortgage Loans" that was issued to clarify the safety and soundness expectations and Community Reinvestment Act (CRA) considerations for regulated institutions engaged in residential mortgage lending. The section references the Consumer Financial Protection Bureau's (CFPB) Ability-to-Repay and Qualified Mortgage Standards Rule that was issued on January 10, 2013 (effective on January 10, 2014). Institutions may issue qualified mortgages or non-qualified mortgages, based on their business strategies and risk appetites. Refer to SR-13-20 and its attachment.

A mortgage banker specializes in the origination, acquisition, and sale of residential real estate loans to permanent investors (the secondary mortgage market). Most mortgage banking firms that are affiliated with banks and bank holding companies primarily originate residential real estate loans, although some firms may engage in interim and other lending secured by real estate. Unlike their nonbank competitors, the vast majority of the loans mortgage banks originate are sold to permanent investors in the secondary mortgage market.

Mortgage banks can retain or sell their loans and sell or retain the servicing of their mortgages. The mortgage banking industry currently offers a wide variety of products, market mechanisms, financing vehicles, and financial strategies due to competitive pressures within the mortgage banking industry and rapid growth in the demand for loans and related securities within the secondary mortgage market. Mortgage bankers use these marketing and financing strategies to differentiate themselves from the competition in terms of interest rates, maturities, down-payment requirements, and product offerings.

The earnings stream, cash flow, and capital needs of a mortgage banking company are all highly influenced by management's decision whether to retain or sell the mortgage loans as well as the related mortgage-servicing rights. The majority of loans that are sold in the secondary market are originated under government-sponsored programs. Such loans are either sold directly or are converted into securities that are collateralized by the underlying mortgages (mortgage-backed securities). The pools of collateralized mortgage loans backing mortgage-backed securities provide a form of risk diversification for the investor.

Originations, secondary market sales, and servicing constitute the primary functional business lines within a typical mortgage company. As an originator of mortgages, the company is responsible for the initial phase of the mortgage, from original contacts with the borrowers to the closing of the loans. At closing, the company disburses its funds and becomes the lender of record. Mortgage loans can also be acquired through a network of correspondent companies. Most mortgage banking companies use a combination of origination and acquisition strategies. The decision about whether to originate or purchase loans also varies over time due to fluctuations in demand and pricing discrepancies.

The secondary marketing department is responsible for selling loans in the secondary market and managing the interest-rate risk associated with loans during the interim period. In most cases, the mortgage company retains the loans until it can find a permanent investor to purchase the loans. The mortgage banker obtains purchase commitments from permanent investors and submits completed loan documentation packages to the investors for their approvals in satisfaction of the commitments.

As part of the overall process, the mortgage banker maintains a relationship with a variety of other permanent investors to whom the originated mortgages are sold. These investors are generally institutional investors such as securities dealers, commercial banks, life insurance companies, pension funds, and other financial and nonfinancial institutions. Some of these investors are restricted by state law, charter, or bylaws as to the type of mortgages and the locations of the property in which they can invest. Accordingly, their purchase commitments should incorporate these limits as well as the price and/or required yield of the mortgage loans or mortgage-backed securities. When these commitments are filled and the mortgages sold to the investors, the mortgage banker may retain the servicing rights to the mortgages it sells to permanent investors or sell the servicing rights in the secondary market.

The servicing department manages the loans that were retained in permanent loan portfolio or those that were sold to another permanent investor. Fees paid for services rendered in administering the mortgage portfolios of investors are a principal source of revenue for most mortgage bankers. In general, the company receives a fee that is usually based on a percent of the unpaid balance of the administered mortgages. In return for the fee, the servicer is responsible for collecting and remitting payments, managing the tax and insurance escrow accounts, inspecting the properties when required, pursuing delinquent borrowers, foreclosing on the mortgages when necessary, and providing accounting support. Considering the services rendered and the generally low fees involved, the servicing portfolio must be sizable for the company to be profitable. The servicing portfolio may represent very little credit risk to the servicer and can be a valuable source of residual income to the company.

The mortgage banking industry is experiencing significant consolidation. To be competitive, participants must maximize economies of scale and efficiencies. Emphasis has been placed on using more efficient systems and technologies that enhance loan processing, underwriting, servicing, and the management of pipeline risk (the interest-rate risk associated with the holding period for the mortgages). Existing mortgage banking firms are larger and operate more efficiently (faster, cheaper, and with higher quality) than they did in the past. Operating efficiencies are achieved through the use of sophisticated information systems, such as electronic data interchange, imaging, optical character recognition, expert systems, and other forms of artificial intelligence.

Within a bank holding company, mortgage banking subsidiaries generally focus on residential mortgage lending. As discussed initially, these mortgage bankers may also engage in other forms of lending. On an industry basis, they extend loans to real estate brokers who buy properties for resale, engage in second mortgage and home improvement lending (usually through dealer agreements), and extend interim loans. Interim loans represent a means of funding a project through one or more phases, with the property and improvements as collateral for the loan. The size of interim loans may range from a single residence under construction to large industrial, commercial, or residential projects. Construction lending and other forms of lending may be provided by other such real estate lending subsidiaries located elsewhere within the bank holding company's organizational structure.

The mortgage banker, as a lender, has the flexibility to fund any and all phases of a project including land acquisition, development, and construction. Land acquisition credit may be extended for the acquisition of more than one parcel of land, which may not necessarily be identified with a specific project. More frequently, acquisition credit is tied into a specific project for which the lender expects to fund more than one phase. In development-phase lending, funds are advanced to "improve" the property, bring utilities on-site, cut roadways, and prepare the site for its intended use. Many residential and industrial park projects are funded through this phase, with the sale of individual parcels providing the repayment of the loan. Construction lending funds the project from the foundation to completion. For those loans that fund two or more phases, there may be no clear distinction between the phases as certain elements of each may be underway concurrently.

On large projects funded through completion, such as apartment and office buildings where the construction is to be repaid from a permanent mortgage, the lender will usually require the borrower to obtain a permanent mortgage commitment from a third party. While this "takeout" commitment may or may not be arranged through the lender's network of investors, this commitment provides the lender with some assurance of repayment. In some cases, particularly in unsettled market environments, these takeouts are not available, and the lender may issue a "standby" commitment. On occasion, no permanent financing will be available upon completion and the lender will extend a "bridge" loan for the interim period between project completion and the placement of a permanent mortgage. Making construction loans without takeout commitments from responsible term lenders could expose the construction lender to adverse interest-rate movements as well as the market acceptability of the project. The absence of a takeout can represent a weakness in a loan. The general lack of takeouts in a portfolio should be a criticizable management practice (unless mitigating circumstances prevail) and should be discussed with management.

This section provides inspection guidance and procedures for mortgage banking nonbank subsidiaries of bank holding companies. Except for the limited guidance that pertains only to bank holding companies, they may also serve as examination guidance and procedures for mortgage banking subsidiaries of state member banks. The way in which these procedures are used should be determined on a case-by-case basis depending on the size of a particular company and its business activities. The information in "Board Oversight and Management," "Financial Analysis," and "Intercompany Transactions" presented in this section is applicable to all mortgage banking reviews. The subsection "Mortgage-Servicing Rights" is recommended for use in companies that have significant risk exposure. The examiner should also target functional areas such as production, marketing, and servicing/loan administration.

3070.0.1 BOARD OVERSIGHT AND MANAGEMENT

The examiner should assess the quality and effectiveness of a mortgage banking company's board of directors (board) and executive management team, the appropriateness of its organizational structure, the nature of its internal control environment, and the effectiveness of internal control programs.[1] Such internal control programs may include internal and external audits, loan review, quality control over mortgage loans originated and/or serviced for investors, compliance, fraud detection, and related employee training programs.

The board and executive management team must be evaluated within the context of the particular circumstances surrounding each mortgage banking company. Since business complexities and operating problems vary according to the institution's size, organizational structure, and business orientation, directors and managers who are competent to effectively discharge their responsibilities under one set of conditions may be less competent as these conditions change.

Board oversight and management should be rated satisfactory, fair, or unsatisfactory based on both objective operating results and more subjective criteria. Performance must be evaluated against virtually all the factors necessary to operate the mortgage banking company's activities in a safe, sound, and prudent manner, including the ability to anticipate and plan for future events that may have a material impact on the company's financial condition. Such a rating should also be considered when assigning a consolidated rating of risk management (see sections 4070.1 (SR-95-51) and 4071.0 (SR-16-11)).

3070.0.1.1 Board Oversight

The mortgage banking company's board provides oversight, governance, and guidance to the executive management team. The board may include executives of the mortgage banking company, executives of the bank holding company and other affiliated companies, and outside directors.

The examiner should determine whether a separate board exists, as well as the identity and qualifications of the members. Minutes of board meetings should be reviewed to determine whether directors are fulfilling their fiduciary responsibilities. At a minimum, directors should—

- select and retain a competent executive management team;
- establish, with management, the company's short- and long-term business objectives and adopt operating policies to achieve those objectives in a safe and sound manner;
- monitor operations to ensure they are controlled adequately and are in compliance with laws and policies;
- oversee the mortgage banking company's business performance; and
- ensure that the mortgage banking company meets the community's residential mortgage credit needs.

The examiner should assess whether directors exercise independent judgment in evaluating management's actions and competence, attend board and committee meetings regularly, remain well informed regarding the company's activities and the mortgage banking industry overall, and are knowledgeable regarding all applicable state and federal laws and regulations. The examiner should also review the quality of board reporting. Board reports must provide accurate and timely information to directors with respect to operating results, asset-quality trends, liquidity and capital needs, and relevant industry and peer-group performance statistics for each

1. See section 1010.1 of the *Commercial Bank Examination Manual* and a report, "Internal Control—Integrated Framework," which was issued in September 1992 by the Committee of Sponsoring Organizations of the Treadway Commission, for a more detailed discussion of internal controls. The Treadway Commission report broadly defines internal control as a process, effected by an entity's board of directors, management, and other personnel, designed to provide reasonable assurance regarding the effectiveness and efficiency of operations, reliability of financial reporting, and compliance with applicable laws and regulations.

operational area. Directors should also receive information regarding exceptions to established policies and operating procedures, volume-related processing backlogs, and the effectiveness of the internal control programs. Information on hedging products and strategies should be routinely provided to the board and to holding company management. In connection with this portion of the review, examiners should also request and review information regarding all loans to insiders and their related interests to ensure that no preferential transactions have been extended to these parties.

3070.0.1.2 Management

The executive management team generally consists of a president and chief executive officer (CEO), chief operating officer (COO), chief financial officer (CFO), and senior executives in charge of production, marketing, and servicing/loan administration. Management formulates operating policies and procedures and oversees the day-to-day administration of mortgage banking activities. Management should be evaluated in terms of its technical competence, leadership skills, administrative capabilities, and knowledge of relevant state and federal laws and regulations. The management assessment should evaluate management's attitude toward risk, as evidenced by the type of products that are offered; the existence of effective hedging programs; and/or the degree of reliance that is placed on the resources of affiliate banks, nonbanks, and other entities to support mortgage banking company activities.

Prudent operating policies and procedures that are consistent with the business needs and risk-management practices of the parent bank holding company should be in place for each functional area. An effective risk-management program should also be in place. Without adequate management oversight, excessive errors can occur, fraud or other violations of law may go undetected, and financial information may be reported incorrectly. Any of these events can damage the company's image, impair its access to external funding sources, and jeopardize its ability to originate and sell mortgage loans in the secondary market.

It is management's responsibility to develop and maintain management information systems (MIS), which should be dedicated to obtaining, formatting, manipulating, and presenting data to managers when needed. Such systems should generate accurate financial statements; identify the need for financial, human, technological, and physical resources; and produce timely and useful management exception reports.

Management should also be evaluated on its ability to plan effectively. Effective planning entails the annual approval of an operating budget and the development of a long-term strategic plan that helps management anticipate changes in the internal and external environment and respond to changing circumstances. Because losses on the origination of mortgage loans are common in the mortgage banking industry, management should assess the servicing time necessary to recapture costs and achieve required returns. This information is critical to decisions to purchase mortgage-servicing assets, and it should be incorporated into hedging strategies.

The strategic plan should identify the company's strengths and weaknesses, growth targets, and other strategic initiatives (including management's philosophy toward the business, the extent of financial risk-taking, commitments to maintaining procedures and controls in managing the business, and management's commitment to staff development) over a one- to three-year time horizon. Planning efforts should also address system deficiencies and technological advancements within the industry. Without appropriate planning, the company can only react to external events and market forces.

Management should be results-oriented, but not at the expense of sound risk-management practices. Goals and objectives should be specific and measurable. Management should develop a performance measurement system that tracks progress toward achieving both financial and nonfinancial goals.

3070.0.1.3 Organizational Structure

The organizational structure should be reviewed to determine, on a legal-entity basis, the relationship between the mortgage banking company, the bank holding company, and any other bank or nonbank subsidiaries. The structure should also be reviewed to determine whether the lines of authority are clearly defined, the responsibilities are allocated logically, and management depth is sufficient within each division, department, or functional area.

The president and CEO usually reports directly to the mortgage banking company's board of directors, as well as to an executive management committee at the affiliate bank or the bank holding company level. Other reporting lines may exist between functional area executives and their counterparts at either a bank affiliate or the holding company level.

3070.0.1.4 Control Environment

Management's attitude toward risk is communicated to employees through the company's corporate culture. In general, the CEO should establish and communicate a corporate culture that promotes safe, sound, and prudent business practices. The corporate culture should provide a positive control environment, set high standards, and reward ethical, desirable behavior.

Management's failure to communicate acceptable standards of behavior may encourage impermissible or high-risk business practices. For instance, compensation programs that are incentive-based may generate poor-quality loans. Below-market pricing strategies or overly aggressive growth targets may further exacerbate asset-quality problems or generate loans in excess of processing and servicing capabilities.

3070.0.1.5 Control Programs

Management controls in a mortgage banking company consist of an internal audit, an external audit, loan review, compliance, quality control over loans originated and/or serviced for investors, fraud detection procedures and related employee training programs, insurance coverage, and legal review. The examiner should review recent reports conducted by internal loan review, state and federal agencies, and private investors to determine the scope of the review, the nature of any problems noted, and the adequacy of management's response.

3070.0.1.5.1 Internal Audit

The internal audit function in a mortgage banking company is responsible for detecting irregularities; determining compliance with applicable laws and regulations; and appraising the soundness and adequacy of accounting, operating, and administrative control systems. Accounting, operating, and administrative control systems are designed to ensure the prompt and accurate recording of transactions and a proper safeguarding of assets.

Internal audit activities may be conducted through a separate department located on-site or through the internal audit department of the bank holding company. Very small financial institutions that do not maintain a separate audit function may rely solely on their external auditor to perform these functions.

Regardless of the organizational structure, internal auditors must be independent of the line areas being reviewed, have access to all company records, and maintain sufficient status and authority within the company. The internal auditors' findings should be reported directly to the board or a designated committee thereof.

The scope, frequency, and coverage provided through the internal audit program should reflect the size and complexity of the institution. The audit schedule should cover underwriting practices and other high-risk areas of mortgage banking, including the most significant balance-sheet accounts, income statement accounts, and internal control systems.

To yield meaningful results, the department must be adequately staffed with individuals who are experienced and knowledgeable about mortgage banking. Audit staff should receive ongoing training and be encouraged to hold professional industry certifications. Internal audit reports should be issued and responded to by line management in a timely fashion. Follow-up procedures should be in place to ensure that corrective measures are taken.

3070.0.1.5.2 External Audit

External auditors generally review and assess the mortgage company's financial condition and the adequacy of internal controls. The engagement letter sets forth the external auditor's responsibilities, scope, and extent of reliance that is placed on the internal audit department with respect to the type of engagement. When an external audit is to be performed, the audit is an examination that is conducted to determine that the present financial condition of the company and the results of operations are fairly stated and are in conformity with generally accepted accounting principles.

Examiners should review the most recent external audit report to determine whether the opinion regarding the company's financial statements and their disclosures was qualified in any manner. If applicable, examiners should note any significant concerns or weaknesses in the company's internal control structure. Examiners should also review management's written response to the audit to determine whether corrective measures were appropriate, complete, and timely and whether the response reveals any internal control weaknesses.

The reason behind any changes in external audit firms used should be investigated. Unusual items and areas of potential concern should be discussed with management and/or the external auditor. If questions arise during the safety-and-soundness review, the examiner should determine whether the area of concern was considered to be a material item by external auditors, the nature of audit work performed, and the outcome of that review. If questions persist, the examiner may want to request access to specific external audit workpapers.

3070.0.1.5.3 Loan Review

Loan review activities may be conducted at the mortgage banking company or in conjunction with the loan review activities of either an affiliate or the parent bank holding company. In any event, loan review should determine whether mortgage loans that are originated and/or purchased meet underwriting standards as defined in the internal loan policy. Loan review may also sample loans to determine whether they meet underwriting criteria established by investors. The scope of the loan review program should be evaluated. The examiner should also review a copy of the most recent loan review to determine whether problems are identified and addressed in a timely manner.

3070.0.1.5.4 Quality Control

Mortgage banking companies that service loans for investors must also maintain a separate quality control department to test the quality of loans produced and serviced for investors. Investors such as the Government National Mortgage Association (GNMA or Ginnie Mae), Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac), and FannieMae issue very specific guidelines that must be met with respect to the scope and frequency of such reviews.

At a minimum, these investors require that the mortgage banking company sample at least 10 percent of all closed loans each month and conduct a quality control review to determine the extent of accuracy, completeness, and adherence to agency underwriting standards. Random samples should include loans originated through the company's own production network, purchased loans, loans for which work was performed by a third party (outsourced), and loans with various product characteristics, such as a high loan-to-value or a convertible feature.

Quality control personnel reverify loan documentation, including the appraisal, down payment, employment, and income information. After each review, the department should issue a comprehensive report detailing specific quality control findings and recommendations. Quality control reviews must be completed within 90 days of closing. Exceptions to company policy or investor underwriting standards should be documented and communicated to executive management. Corrective measures should be initiated promptly.

The quality control function should serve as an early warning system that alerts management to situations that may jeopardize the financial strength, image, or origination and sale capacity of the company. To function as an effective management control, the quality control department should operate independently from the production and servicing/loan administration departments. Quality control should complement, not substitute, work performed by the internal audit and loan review functions.

3070.0.1.5.5 Insurance Program

The insurance program should be reviewed to determine whether coverage adequately protects the mortgage banking company and its affiliates against exposure to undue financial risk. Insurance policies should be reviewed and approved by the board at least annually.

3070.0.1.5.6 Litigation

The legal department should be contacted to determine whether existing or pending litigation exposes the mortgage banking company or its affiliates to undue financial risk. Particular attention should be paid to the status of any actual or pending class action lawsuits of a material nature.

Examiners should also determine whether procedures exist to detect and investigate suspected fraud, either internal or external. In many instances, the legal department coordinates fraud training and investigations, as well as the submission of criminal referral or suspicious activities reports and the initiation of legal action. If a separate fraud division or unit does not exist, examiners should determine whether procedures governing the detection, investigation, and referral of potentially fraudulent situations exist and function effectively. Examiners should also determine whether management reports adequately detail and track potential exposure.

3070.0.1.5.7 Supervisory Approach for Qualified and Non-Qualified Mortgage Loans

An "Interagency Statement on Supervisory Approach for Qualified and Non-Qualified Mortgage Loans," dated December 13, 2013, was issued to clarify the safety-and-soundness expectations and Community Reinvestment Act (CRA) considerations for regulated institutions engaged in residential mortgage lending. The Consumer Financial Protection Bureau's (CFPB) Ability-to-Repay and Qualified Mortgage Standards Rule[1a] was issued on January 10, 2013 (effective on January 10, 2014). Institutions may issue qualified mortgages or non-qualified mortgages, based on their business strategies and risk appetites. Residential mortgage loans will not be subject to safety-and-soundness criticism based on their status as either qualified mortgages or non-qualified mortgages. As for safety-and-soundness expectations, the agencies[1b] continue to expect institutions to underwrite residential mortgage loans in a prudent fashion and to address key risk areas in their residential mortgage lending, including loan terms, borrower qualification standards, loan-to-value limits, documentation requirements, and appropriate portfolio and risk-management practices. Refer to SR-13-20 and its attachment.

3070.0.1.6 Inspection Objectives—Board Management and Oversight

1. To assess the composition, qualifications, and degree of oversight provided by the mortgage company's board and executive management team.
2. To determine whether the organizational structure is appropriate given the nature and scope of the mortgage banking company's operations.
3. To evaluate the reasonableness of the operating budget, long-term business planning, performance measurement systems, and MIS and related management and board reports.
4. To determine the nature of the company's internal control environment and the effectiveness of its system of internal controls, including internal and external audits, loan review, quality control, suspicious activities and fraud detection (including criminal referral and suspicious activities reporting) and related employee training programs, insurance coverage, and pending litigation.

3070.0.1.7 Inspection Procedures—Board Management and Oversight

Board Oversight

1. Review biographies of the board of directors and minutes from board and committee meetings to determine whether directors are qualified and fulfilling their fiduciary responsibilities.
2. Review the most recent package of information that was provided to directors. Do they receive sufficient detail regarding the financial condition, internal controls, and risk-management techniques employed within the company?

Management

1. Review biographies of members of the executive management team to determine their level of experience, technical knowledge, leadership skills, and administrative capabilities. Discuss whether salaries are commensurate with management's experience level and expertise.
2. Evaluate the quality of operating policies and procedures within each division or functional area and the extent to which compliance with such policies and procedures is monitored and reported.
3. Evaluate the output from the planning process, including the most recent operating budget, business plan, and related performance measurement system reports. Determine whether objectives, goals, and growth targets are reasonable.

1a. See the Ability-to-Repay and Qualified Mortgage Standards Rule (the Ability-to-Repay Rule)_ under the Truth in Lending Act (Regulation Z), 78 *Fed. Reg.* 6408 (January 30, 2013), as amended. The Ability-to-Repay Rule requires institutions to make reasonable, good faith determinations that consumers have the ability to repay mortgage loans before extending such loans. In accordance with the rule, a "qualified mortgage" may not have certain features, such as negative amortization, interest-only payments, or certain balloon structures, and must meet limits on points and fees and other underwriting requirements.

1b. The federal banking financial institutions regulatory agencies (the Federal Reserve, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency).

Organizational Structure

1. Review the organization chart to determine whether the organizational structure is appropriate, as well as the appropriateness of the division of functional responsibilities and the degree of management depth within each division or functional area.

Internal Control Environment

1. Evaluate the nature of the internal control environment and how risk parameters are communicated to employees.

Internal Control Programs

1. Assess the effectiveness of internal controls in identifying and controlling risks. Internal controls include internal and external audits, quality control for mortgage loans, insurance coverage, and fraud detection procedures and related employee training programs.

Internal Audit

1. Determine whether a separate internal audit function exists and, if so, its degree of independence.
2. Review the qualifications of the internal audit manager and his or her staff for mortgage banking and accounting and auditing expertise. Consider the size of the department and its ongoing training programs, as well as the experience levels, educational backgrounds, and professional certifications of the department's staff.
3. Determine the scope and frequency of the internal audit program to ensure that all high-risk areas are reviewed regularly.
4. Review all internal audit reports, management responses to them, and follow-up audit reports for work conducted since the previous inspection.
5. Select a significant sample of internal audit reports and respective workpapers and conduct an intensive review of the internal audit program. Determine that all issues and exceptions were brought forward to the final audit report, the report was presented to the board or a committee thereof, and that any detected and disclosed problems or control weaknesses received appropriate management attention.
6. Evaluate the internal audit department's system for following up on issues and exceptions. Determine whether prompt, satisfactory resolution of issues was effected.

External Audit

1. Review the engagement letter for the most recent external audit to determine the external auditor's scope, responsibilities, and extent of reliance on the internal audit department.
2. Review the most recent external audit report to determine whether the opinion regarding the company's financial condition was qualified in any way and whether any internal control weaknesses were noted. Review the notes to the financial statements for appropriate disclosures.
3. Discuss any unusual items and areas of potential concern with management and/or the external auditor. Determine whether any areas of concern were considered to be material items by the external auditors, based on the nature of audit work performed, management's representations in the management letter, and the outcome of that review. If questions persist, consider the need to request and review specific external audit workpapers.
4. Discuss the reasons for any recent changes in external auditors with management.

Compliance and Disaster Recovery

1. Review the methods used to ensure compliance with state and federal laws and regulations by—
   a. interviewing the person who is responsible for compliance to determine the nature of outstanding problems and the adequacy of corrective measures that have been taken, and
   b. reviewing the system for logging, tracking, and responding to customer complaints.
2. Determine whether the disaster recovery plan is adequate.

Quality Control

1. Review the quality control department's policies and procedures to determine whether the quality control program meets minimum investor requirements.
2. Review a sample of reports issued by the quality control unit to determine whether they were issued in a timely manner and conclusions were adequately documented.
3. Determine whether quality control results

are relayed to executive management and whether follow-up procedures are adequate.

4. Determine whether the quality control unit is sufficiently staffed and independent.

5. Determine whether quality control outsources work to outside parties. If so, are adequate controls in place to ensure that such outsourcing meets the company's own quality standards?

Insurance

1. Review insurance policies maintained for the mortgage banking company to determine whether coverage is adequate and whether the majority of insurable risks is included, giving consideration to a cost versus benefits analysis.

2. Review board minutes to ascertain the date the board last reviewed and approved the insurance program.

Litigation

1. Review all current and pending litigation of a material nature and determine whether adequate reserves are maintained to cover anticipated financial exposure.

Fraud Detection and Training

1. Determine whether a separate fraud unit exists and whether procedures are in place regarding the detection and investigation of suspected fraudulent activity and the issuance of related management reports.

2. Evaluate the company's early warning system for detecting potential fraud. Is the level of training adequate?

3. Review any criminal referral or suspicious activities forms filed since the prior inspection and discuss their status with management.

3070.0.2 PRODUCTION ACTIVITIES

Loan production covers the process of originating or acquiring loans. Production begins with the initial loan application and ends when a loan has been underwritten and processed, closed, and reviewed by post-closing.

3070.0.2.1 Types of Loans

Loans are categorized as either government or conventional loans. *Government loans* generally carry a below-market interest rate and are either insured by the Federal Housing Administration (FHA) or guaranteed by the Veterans Administration (VA). Both agencies protect investors holding such securities against losses in the event of a borrower default, thereby slightly reducing investors' required yields. To be insured or guaranteed, a loan must meet agency standards regarding the size, interest rate, and terms. The lender can obtain a certificate of insurance or guaranty to give support to a loan for securitization. A certificate of insurance or guaranty may not be needed for a loan to be securitized.[2]

Loans that are not FHA-insured or VA-guaranteed are referred to as *conventional loans*. Conventional loans are generally originated for larger loan amounts and made to stronger borrowers. Conventional loans typically require higher down payments and bear market interest rates. Most lenders that offer programs with smaller down-payment terms require that the borrower purchase private mortgage insurance for the top 5 to 20 percent of the loan principal balance so that a proportionate share of the credit risk is borne by a private mortgage insurance (PMI) company.

The extent of credit risk associated with a loan often depends on the marketing program under which the loan is originated. Marketing programs and participants are described briefly here; for a more detailed description, see "Marketing Activities" later in this section.

The market for residential real estate loans is dominated by three government-sponsored entities: the Government National Mortgage Association (GNMA), the Federal Home Loan Mortgage Corporation (FHLMC), and the Federal National Mortgage Association (FannieMae). GNMA is a government agency that guarantees the timely payment of principal and interest on pass-through securities that are backed by pools of FHA-insured or VA-guaranteed mortgages. These guaranties are backed by the full faith and credit of the U.S. government. Although investors will get paid in full, servicers may retain some risk of loss, particularly with respect to VA loans (see subsection 3070.0.4.5 for addi-

2. See the appropriate agency seller/servicer guide for standards and requirements regarding certificates of insurance or guaranty.

tional information on "VA no-bids").

Pass-through securities provide for monthly installments of interest at the stated certificate rate plus scheduled principal amortization on specific dates, despite the delinquency status of the underlying loans, as well as any prepayments and additional principal reduction. The issuer collects the mortgage payments and, after retaining servicing and any other specified fees, remits monthly payments to the certificate holders.

Although FHLMC and FannieMae are not extensions of the U.S. government, the market believes that there is an implicit guaranty that their securities will be repaid. FHLMC and FannieMae securitization involves the purchase of conventional loans from lenders and the selling of mortgage-participation certificates, which are similar to GNMA pass-through securities. Participation certificates represent an ownership interest in pools of conventional loans. FHLMC and FannieMae guarantee the monthly pass-through of interest, the scheduled amortization of principal, and the ultimate repayment of principal. Unlike GNMA pass-throughs, however, participation certificates are not backed by the full faith and credit of the U.S. government.

Conventional loans are classified as either conforming or nonconforming. *Conforming* loans must comply with FannieMae's and/or FHLMC's underwriting and documentation guidelines in order to be sold in the secondary market. Conforming mortgages may be sold to FannieMae or FHLMC on either a recourse or nonrecourse basis.

Private pools of *nonconforming* loans that do not meet FannieMae or FHLMC guidelines may be sold in the secondary market under a private label structure. Nonconforming loans are often "nontraditional" products such as loans with teaser rates, limited documentation, and graduated payment schedules, as well as "jumbo" loans that exceed maximum agency size requirements. To improve salability, pools of nonconforming loans may be insured through third-party credit enhancements (for example, letters of credit) or various senior/subordinate structures. Since the underlying mortgages generally already carry private mortgage insurance, such pools are, in effect, doubly insured.

3070.0.2.2 Production Channels

Mortgage loan applications are generated through either *retail* (internal) or *wholesale* (external) production channels. Retail loans are originated through the company's own branch network. A branch network is relatively costly, since origination costs often exceed the origination fees received from the borrowers.

Wholesale production channels (where contact with the borrower is made by another party) take several forms. Whole loans can be purchased either individually or by using bulk commitments. Bulk commitments either require the correspondent to deliver a set amount of loans (mandatory) or deliver all registered loans that close (best effort or optional).

Loans may be closed in the buyer's own name using its own funds, closed in the seller's name using the buyer's own funds, or closed and funded by the seller with delivery to the buyer within a certain number of days. If the seller closes in its own name, the mortgage and note are generally assigned to the buyer simultaneously upon closing.

Three hybrid production channels are worth mentioning here. Examiners should note that terminology within the industry varies greatly. Under the first method, *table funding*, a mortgage banking company funds loans at closing that have been originated by a correspondent or broker according to the company's own specifications. Historically, the company's ability to record mortgage-servicing rights depended on the degree of independence that was maintained and the extent of risk borne by the originator. See subsection 3070.0.6, on "Mortgage-Servicing Assets and Liabilities."

The second hybrid method, *assignment of trade*, involves the bulk purchase of loans and investor commitments to sell the loans in the secondary market. The purchaser bears virtually no market risk under this production method. The third hybrid method, *co-issue*, entails the acquisition of servicing rights only, at the time a security is issued.

Most mortgage originators operate on a nonrecourse basis. For purchasers of correspondent production, credit risk increases to the extent that the lender relies on other parties to correctly process and underwrite the loan. Contracts with correspondents should include representations and warranties from the correspondent that loans delivered meet the underwriting requirements of the agency or investor program for which the loan was originated. Approved correspondent lenders should be continually monitored for the quality of the product delivered and the financial ability to repurchase mortgages that do not meet the standard representations and warranties under which the mortgages are sold.

3070.0.2.3 Production Strategies

A successful production strategy combines high credit-quality standards with cost containment and effective marketing. In contrast, an overly aggressive or inappropriate strategy leads to heightened production risk. High-risk production strategies can be evidenced by relaxed credit standards, low documentation requirements, an executive officer's compensation based on volume, an emphasis on high-risk product types or geographic areas, and/or dependence on a limited number of production channels. Examiners are responsible for recognizing and reaching agreement with management to better control such high-risk production strategies where appropriate.

3070.0.2.4 Production Process

There are five principal steps in the retail production process: (1) pipeline entry, (2) processing, (3) underwriting, (4) closing and funding, and (5) post-closing. Each of these functions should be independent from one another and separately supervised to ensure the quality of the loans produced. Each step is briefly discussed below.

1. *Pipeline entry.* A loan has entered the pipeline when a prospective borrower completes a loan application. The applicant authorizes the lender to verify his or her employment, credit history, bank deposits, and other information that evidences repayment capacity.

2. *Processing*. The application is then processed to qualify the applicant and the property for the loan. Processing personnel verify the applicant's employment history and credit information and order an appraisal on the property. Processing activities should be controlled through standardized procedures, checklists, and systems.

3. *Underwriting*. The underwriting unit approves or disapproves applications based on underwriting criteria that are established by the FHA, VA, FannieMae, and FHLMC and by private mortgage insurers and institutional investors. To ensure objectivity, the underwriting unit should not report to management of the production function.

4. *Closing and funding*. After an application has been approved, the lender generally issues a commitment letter to the borrower, which states the interest rate and terms of the loan. At closing, the lender or its agent obtains all the legal and related documents executed by the parties to the sale, disburses the proceeds of the loan, and collects certain funds from the borrower.

5. *Post-closing*. After closing, a post-closing review is performed to ensure that documents were properly executed and underwriting instructions were followed. The post-closing review also identifies any trailing or missing documents that must be tracked and obtained to meet investors' pool certification requirements. Specific agency requirements are detailed in the agency seller/servicer guides. Before the loan is transferred to the delivery or shipping department, processing begins for the final mortgage insurance (from the private mortgage insurer or from the FHA/VA guaranty certificate). Receipt of the actual certificate may take 45 to 60 days or longer. Pool custodians and investors will allow the lender to complete the sale if final documentation, including the insurance certificate, is expected to be received within a reasonable timeframe.

3070.0.2.5 Production Risks

The production process can present risks of both a short- and potentially long-term impact. Operational inefficiencies can result in high management and staff turnover, an inability to meet investor documentation requirements, an increasing number of pools that have not received final certification, or an unusually high production cost structure. Operations risk often increases during peak volume periods. If additional resources (which can include independent service providers) are not allocated to the processing, underwriting, closing, and post-closing areas, delinquency levels may increase and workloads may exceed existing capacity.

Management should be prepared to quickly respond to interest-rate cycles and related volume increases or declines, since failure to act promptly can affect earnings and capital. During the pooling and securitization process, for example, if the number of pools that lack final certification exceed a certain limit, the company may be required to seek financial support in the form of a letter of credit from an affiliate bank or bank holding company to ensure that all required loan documentation is secured in a timely manner. Credit risk and operational inefficiencies may also create liquidity problems and additional interest-rate risk if the company is unable to sell its loans in the secondary market.

To the extent a company retains servicing on either its retail or correspondent production, long-term credit risk issues may develop. These include exposure to the pools being serviced through recourse arrangements, potential non-reimbursable foreclosure costs, or costs associated with VA "no-bid" options.

3070.0.2.6 Overages

In certain instances, originators and loan brokers may have the ability to deviate from mortgage loan prices that are established by the marketing department. An overage exists when a lender permits an originator or broker to impose a higher number of points (or a higher interest rate) on a loan to certain borrowers than is imposed for the same product offered to other borrowers at a given point in time. (See CA-94-6.)

Overages are often used as an incentive to compensate originators or brokers. The amount that is received over the expected price is often shared by the mortgage banking company and the originator or broker. The practice of permitting overages may contribute to or result in lending discrimination under the Equal Credit Opportunity Act (ECOA) and the Fair Housing Act (FHAct).

Examiners should review the mortgage banking company's lending policy and determine whether overages are permitted and whether the practice has resulted in lending discrimination. If a more detailed review of overages is deemed necessary, such review should be performed in conjunction with the appropriate Federal Reserve System's legal and consumer compliance staff.

3070.0.2.7 Inspection Objectives—Production Activities

1. To determine the types of loans offered to borrowers and any significant changes in product mix.
2. To determine whether mortgage loans are securitized; if so, to determine whether mortgage-backed securities are insured or otherwise guaranteed by government-sponsored agencies or private entities.
3. To determine what channels are used to originate loans.
4. To determine if production processes are consistent with operational risk controls and efforts to minimize risk.
5. To determine whether production processes can handle cyclical changes in volume.
6. To determine whether overages are permitted and to assess whether the practice has resulted in lending discrimination.

3070.0.2.8 Inspection Procedures—-Production Activities

General

1. Review organization charts to determine the structure of the production function and its status within the company. Verify that functional units such as underwriting and quality control are independently managed.
2. Determine the types of mortgage products offered and the company's target markets. Evaluate portfolio trends for overreliance on one product type and undue concentrations in one geographic area.
3. Discuss the company's credit culture, compensation methods, and growth targets to determine whether income and loan volume are emphasized over credit quality.
4. Determine whether the level of nonconforming or unsalable loans being originated present undue risk and whether the quality and delinquency trends for such loans are adequately monitored.

Originations

1. Review policies and procedures for retail branch originations. How are originators compensated? Determine whether originators have the authority to alter loan pricing parameters set by the marketing unit.
2. Determine the size of the branch network and its cost structure. Is the network growing or shrinking? How does management plan for anticipated changes in loan volume?
3. Determine if the mortgage banking company is involved in overage activities. If so—
   a. determine whether management has developed comprehensive policies and procedures, detailed documentation and tracking reports, accurate financial reporting systems and controls, and comprehensive customer complaint tracking systems to adequately monitor and supervise overage activities;
   b. review whether overages are an essential component of the mortgage banking company's earnings and origination activities, and review the percentage of mortgages originated

since the previous inspection that resulted in overages and the average overage per loan;

c. determine if management reviews overage activity for disparate treatment and disparate impact; and

d. determine if overages are a major component of loan officer and/or broker compensation.

4. Review policies and procedures for wholesale purchases. Which production channels are used and how do they work? Channels may include whole loan purchases (production flow), table funding, assignment of trade, or co-issuances (bulk purchases of servicing rights only). For each production channel, review how brokers and correspondents are compensated.

5. Review the method for reviewing and approving brokers and correspondents and specific programs under which wholesale loans are purchased. Is there an approved list of correspondents? How is it updated and how frequently? Determine whether exceptions to this list are made and by whom, and whether controls are in place to prevent unauthorized purchases.

6. Evaluate the process for conducting financial reviews on correspondents. How often are financial statements obtained, and who analyzes them?

7. Determine whether adequate controls are in place to detect changes in the financial condition of a correspondent, test and monitor the quality of loans purchased, and evaluate the correspondent's financial capacity to perform under contractual repurchase obligations.

8. Select a sample of contracts for the largest correspondents for additional review. Do contracts clearly state pricing structures, maximum dollar volumes, recourse arrangements, and whether loans are purchased on a mandatory delivery or a standby basis? Have any legal issues arisen as a result of the contract language? How frequently does management put back loans to its largest correspondents?

9. Determine whether management information systems adequately track approvals and denials by loan type and production channel. Are exceptions to policy adequately tracked and monitored?

Processing

1. Determine whether processing is performed in-house or by another party (a third-party contractor or the originator). Review checklists and procedures for the processing unit and determine whether loan tracking systems are adequate.

2. Review steps that have been taken to address any audit or quality control findings. Determine whether additional corrective actions are necessary.

Underwriting

1. Determine whether underwriting is performed in-house, by third-party underwriters, or by the originator. Is management planning for peak volume periods and are controls over the underwriting process adequate?

2. Review policies and procedures to gain a reasonable assurance that underwriting standards are prudent and comply with investor guidelines. If individual underwriters perform this function, determine whether management has established approval limits, developed exception procedures for loans that are rejected or suspended, and receives reports that track loan quality for each underwriter. If a committee performs the underwriting function, review its charter, composition, and minutes. If a scoring system is used, review credit scoring methodology. Can the system be overridden? If so, by whom?

3. Review a representative sample (preferably a statistical sample) of current loans to test the underwriting policies and procedures and also determine the validity and adequacy of documentation supporting loans held for sale or investment.

4. If an unusual increase in unmarketable loan inventory has been noted, select a small sample of loans in current production for additional review. Does underwriting comply with established guidelines? If a credit scoring system is used, focus on loans that are of the lowest acceptable grade. If deficiencies are noted, consider expanding the review sample.

5. Review loans that were rejected and then approved. Did the proper authority approve such loans, and was management's rationale adequately documented?

Closing/Post-Closing

1. Evaluate procedures, checklists, and systems for closing loans. Are all required documents obtained from the borrower before funds are disbursed? If not, evaluate the appropriateness of suspense items.

2. Determine if a post-closing documentation review process exists to differentiate, track, and

obtain both trailing and missing documents. Assess its effectiveness.

3. Determine if wholesale loans are re-underwritten at delivery. If not, how does management ensure that loans are re-underwritten in accordance with secondary marketing program requirements?

4. Determine the number of pools that lack final pool certification. Has this number exceeded the maximum allowable limit since the previous review? Why has this problem occurred, and what steps are being taken to secure the necessary documentation? Has a letter of credit been posted? Does the situation pose undue financial risk for the company or any of its affiliates?

3070.0.3 MARKETING ACTIVITIES

The marketing department is typically responsible for the development of mortgage products, determination of products to be offered, and the establishment of daily mortgage prices. The marketing department, which is also referred to as secondary marketing, is also responsible for the sale of mortgage loans to investors. Given these roles, the marketing department acts as an intermediary between the borrower and the investor. All of these activities require close coordination to be effective and are appropriately placed within one department.

3070.0.3.1 Oversight

Marketing activities are generally supervised by a marketing committee, which may consist of the chief executive officer, chief operating officer, chief financial officer, and the executive officers responsible for marketing, production, and servicing/loan administration. The marketing committee is responsible for the formulation of marketing policies, departmental operating procedures, pricing strategies, and parameters governing the use of various mortgage-related products and strategies used to hedge the interest-rate risk associated with certain mortgage loans.

3070.0.3.2 Securitization

The marketing department's primary tool in performing its activities involves securitization outlets. Securitization activities are discussed in SR-90-16, which transmitted the following documents: (1) the Examination Guidelines, (2) An Introduction to Asset Securitization, and (3) Accounting Issues Relating to Asset Securitization. There is also a discussion of these activities in the *Commercial Bank Examination Manual*, section 4030.1. A review of the securitization process can provide a clearer understanding as to the value the marketplace assigns to a mortgage banker's production. Mortgage securities, however, are usually issued by an entity other than the mortgage banking company under inspection (such as government-sponsored agencies, securities affiliates, or brokerage firms).

Many approaches are used for securitization, but the great majority of activity occurs with conduits such as GNMA, FHLMC, and FannieMae. Conduits provide many programs that a mortgage originator can use to deliver a mortgage or pools of mortgages in return for cash or securities. To investigate current program requirements and available options, the examiner should consult the seller guidelines issued by the agencies.

The securitization process presents the marketing department with a complex set of options to consider when deciding how to sell the company's loan production for maximum profit. If the company's own servicing valuation differs from pricing offered by the agencies, for instance, the marketing department can use some flexibility in pool formation guidelines to retain or divest servicing cash flows. Recourse to the originator or servicer can be negotiated to reduce agency guaranty fees. Agencies also alter guaranty fees based on different methods of remitting principal and interest payments. Sales to the agencies can be on a best-efforts or mandatory basis. A best-efforts basis is when loan delivery is not required if the loan does not close. Better prices are received for the lender's acceptance of the more rigid performance requirements of mandatory commitments. Master commitment contracts can be reviewed by the examiner to determine negotiated terms.

Although most securitization activity occurs within the programs already mentioned, private security issues are also used. The private issues are used primarily for loans that do not meet the underwriting criteria of the agencies, commonly due to larger than accepted loan amounts (jumbo loans). Nonconforming loan production is usually sold to brokers or security affiliates who have marketed the product to investors, sometimes using complex real estate mortgage investment conduits (REMICs).

3070.0.3.3 Pooling Practices

As an intermediary between the borrower and the investor, marketing personnel coordinate the flow of loan documents from the shipping department to the pool custodian and the ultimate holder. If servicing is retained, the loan will be input into the company's servicing system soon after closing. Staffing levels should be adequate to ensure that processing backlogs are managed and workloads remain reasonable. Temporary help and/or outsourcing may be used during peak volume periods.

Operating procedures governing the selection of mortgage loans for pooling, packaging, and sale should be evaluated to ensure that the shipping and pooling processes are efficient and that loan files ultimately contain complete documentation. Management reports should identify and track the number of pools that lack final agency certification and the status of missing (unavailable) and trailing (delayed) documentation.

If third-party guaranties are used during the securitization process, procedures should also establish methods for evaluating and monitoring the financial condition of all third-party entities that provide credit enhancement. If loans or securities are sold with recourse, management reports should identify and track potential recourse obligations. Management should also analyze historical recourse losses by investor and product type and determine the appropriate level of reserves to cover estimated recourse exposure.

3070.0.3.4 Marketing Risks and Risk Management

3070.0.3.4.1 Techniques

The marketing department manages several risks, which can be categorized as follows:

- unsalability
- pricing
- fallout
- counterparty performance

3070.0.3.4.2 Unsalability

Under most circumstances, a mortgage banking company will originate mortgage products that are acceptable to GNMA, FannieMae, FHLMC, or other major investors. This minimizes the risk that mortgage products originated will not be marketable to investors and have to be retained as a portfolio investment. However, the marketing department may also initiate certain products that are intended for the loan portfolio of the mortgage company or portfolios of bank or nonbank affiliates. In the case of production for bank affiliates, underwriting and pricing arrangements must be structured to ensure compliance with the restrictions imposed by sections 23A and 23B of the Federal Reserve Act. See the subsections on production activities (3070.0.2) and intercompany transactions (3070.0.7).

3070.0.3.4.3 Pricing Risk

The mortgage banking business is volume driven. Because profit margins are thin and fixed costs associated with loan production can be large (especially in the case of a retail origination network), it takes a significant volume of mortgages to generate profits. Mortgage pricing decisions are critical because the price is a major determinant in the volume of mortgages originated.

Pricing strategies can be affected by divisional profit and loss allocations or external industry practices. A neutral price structure sets mortgage prices that are equivalent to the expected price for which the mortgages will be sold to investors, plus a normal servicing spread of 25 to 50 basis points depending on the type of loan. Daily adjustments are usually made to prices to reflect market changes for future settlement of mortgage-backed securities (MBS).

Due to regional or local competition, mortgage banking companies often find it necessary to deviate from a purely neutral pricing strategy to maintain volume in certain markets. However, large deviations from market price in either a lower or even upward direction can have adverse consequences. In addition to causing marketing losses, price cutting could place operational strains on the production and servicing areas. Premium pricing can position the company as a lender of last resort with adverse credit quality implications.

The marketing department attempts to minimize price risk by matching origination pricing with the price it expects to receive from investors. However, estimating the price at which the mortgages can be sold can be difficult because it is determined in large part by external factors such as interest rates. The longer the elapsed time between when the mortgage applicant decides to lock in a loan rate and the time the loan closes, the greater the risk that the prices for which the mortgages can be sold will change. Some companies encourage customers to "float" their interest rate until closing approaches to reduce the volume and costs of hedging.

3070.0.3.4.4 Fallout

A third type of risk that the marketing department manages relates to pipeline "fallout." This is the risk that the proportion of loans in the rate-committed pipeline that are expected to close will change with a given change in interest rates. As market interest rates decline, fewer mortgages in the pipeline will close because applicants will opt to make new applications at the lower rates. As interest rates rise, the proportion of pipeline loans that will close increases as more applicants choose to lock in rates. Mismatches that occur in the long and short positions can result in financial losses when the institution needs to settle its trades.

3070.0.3.4.5 Hedging Strategies

The most common hedging strategy used to protect the inventory of closed loans and the rate-committed pipeline against adverse interest-rate movements involves the use of mandatory and optional forward sales of MBS. Under this hedging strategy, the inventory and rate-committed pipeline (the long position) are generally covered through short sales (mandatory delivery contracts with settlements corresponding to expected delivery volumes). Put and call options on MBS are sometimes purchased to manage heightened fallout risks during periods of volatile interest-rate fluctuations.

The typical practice is to hedge 100 percent of the closed loan inventory that is marketable. In addition, pipeline loans very near to closing are generally also hedged at or close to 100 percent. However, a significant degree of uncertainty exists as to the amount and timing of 30- and 60-day rate-committed pipeline closings due to interest-rate fluctuations, underwriting delays, and cancellations. To control exposure to rate movements, management must estimate the percentage of the rate-committed pipeline that is expected to close in the current economic environment.

Although estimation techniques vary, data are generally collected on a number of pipeline characteristics such as product type, whether the loan is a purchase or refinance, and whether it is retail- or wholesale-originated. Fallout behavior can vary depending on these and other factors. Based on this information, management then derives an estimated closing percentage that becomes management's operating target for coverage of the rate-protected pipeline.

Marketing personnel often use simulation modeling to assess fallout percentages, assist in balance-sheet valuations, and develop appropriate hedging strategies. Such models may be either purchased from outside vendors or developed in-house, and they vary greatly in their degree of sophistication. In any event, the primary assumptions and inputs to the model should be reasonable, well documented, and reviewed periodically by both the marketing committee and by an independent source such as an internal or external audit. Results from the marketing simulation model should be provided to management through summary reports. Information may also be provided to bank holding company personnel for asset/liability management purposes.

Other products may also be used to hedge inventory loans and the rate-committed pipeline, particularly loans with an adjustable rate feature or other specialized characteristics. The marketing committee should review and approve all specialized hedge products used, the degree of correlation between the hedge product and the underlying position being hedged, and the degree of risk that each strategy or position entails. The accounting department should also determine whether such products qualify for hedge accounting treatment, establish appropriate management reports, and establish accounting policies. See subsection 3070.0.6, "Mortgage-Servicing Rights."

3070.0.3.4.6 Position Reports

To limit risk, the marketing committee should place prudent limits on the amount of exposure that can be incurred through hedging operations. Limits, which may be contained in the marketing policy, might establish a constraint on the size of uncovered long positions, require that coverage be maintained at the marketing committee's current closure estimates, or establish a constraint based on an earnings-at-risk measurement.

Compliance with limits should be monitored through regular position reports, which should be provided to senior management (the marketing committee and perhaps the treasury function of the parent company, if they participate in decisions or policy enforcement) at least weekly. Position reports should detail the company's long and short positions in relation to limits, as well as unrealized and realized gains and losses on loans and securities. Department managers generally require daily position reports in order to effectively monitor the position. Marketing position reports may not reconcile directly with reports prepared by the accounting department for financial reporting purposes. Significant differences should be investigated.

3070.0.3.4.7 Counterparty Performance

The marketing committee is also generally responsible for managing investor/counterparty performance risk. The marketing committee (or the treasury department of the parent bank holding company) should approve all brokers and dealers to which securities are sold before trading commences. Dealer limits should be established to limit the maximum amount of trades outstanding with each firm. Frequent position reports should be prepared to monitor compliance with established limits. The accounting department may be responsible for the ongoing monitoring of the financial capacity of the brokers and dealers.

3070.0.3.5 Inspection Objectives—Marketing Activities

- To review the types of products developed.
- To determine the pricing strategies offered to borrowers and investors.
- To review pipeline fallout estimation techniques.
- To review hedging methods as they relate to loan production.
- To determine whether information systems are adequate for senior management to monitor fallout behavior and hedge performance.

3070.0.3.6 Inspection Procedures—Marketing Activities

Management Oversight

1. Review the composition of the marketing committee and minutes from recent committee meetings to determine the nature and scope of its responsibilities, the frequency of meetings, and the degree to which oversight over marketing activities is provided.

2. Review the marketing policy as it relates to product offerings, pricing strategies, loan sales, and hedging operations. Are all relevant marketing risks identified? Note the date the marketing policy was last reviewed and approved by the board of directors.

3. Determine how management measures and controls interest-rate risk associated with closed loans in inventory and rate-locked loan applications in the pipeline. How are limits established and quantified (i.e., earnings at risk, economic value of equity at risk, percentage of capital, etc.)? Are such limits reasonable? Evaluate management's oversight of asset securitization activities in accordance with SR-90-16, as applicable.

4. Assess the adequacy of management information systems and related management reports that are designed to track compliance with established policy. Determine the extent to which operational practices adhere to policy. How are exceptions handled?

Securitization and Pooling Practices

1. Determine the secondary marketing programs used to sell mortgages to investors and the volume of sales under each program.

2. Discuss the strategies and procedures used for the selection of mortgage loans for pooling, packaging, and sale. Are there quality control procedures in place to ensure that the files of pooled loans contain complete documentation? What impact does strategy have on departmental profitability?

3. Evaluate the company's securitization practices:

- Determine how much risk the company retains and in what form.
- Determine the source, conditions, and costs of third-party guaranties. Verify that the financial condition of all third-party credit enhancers is substantiated.
- Determine the procedures used to obtain final pool certifications from investors (coordinate with the examiner(s) assigned to the production function). Determine the number and volume of securities that lack final certification. Is management doing everything possible to obtain missing documents? Are problems volume-driven or due to a lack of internal controls?

4. Determine whether loans or securities are sold with recourse. If so, are management information systems in place to track recourse obligations? Are analyses of recourse losses conducted by investor and product type? Are reserves held for recourse loans? What is the methodology for determining the adequacy of reserves? Review actual and potential losses. Are reserve levels adequate to cover identified exposure? Is compensation tied to trading profit?

Unsalability

1. Review the marketing policy to determine whether all mortgage products originated by the mortgage company are intended to be salable in the secondary market (for example, do they conform to guidelines issued by GNMA, Fannie-Mae, FHLMC, or other major investors?). How is actual salability monitored?

2. Determine if mortgage loans that are not salable are generated specifically for the permanent investment portfolio of either the mortgage banking company or its bank or nonbank affiliates.

3. Determine who is responsible for the review of temporarily unsalable loans, the frequency of such reviews, the actions taken to correct documentation and/or credit deficiencies, and if internal controls are adequate. This information is needed to ensure that hedge volumes are accurate.

Pricing Strategies

1. Review the current list of mortgage product offerings and the daily price sheet. Are prices determined centrally and are they uniform? Discuss pricing strategies with management to determine whether the company uses a neutral, above-market, or below-market pricing strategy.

2. Ascertain what procedures are in place to ensure that deviations from the approved pricing policies receive the proper degree of scrutiny and approval by senior management. If such discrepancies are common, why is this occurring (competition, compensation schemes, or departmental profitability considerations)? What impact have such deviations had on production volumes and the company's overall profitability?

3. Determine what policies are in effect regarding customer rate-locks. If a rate-lock expires, is it automatically renewed or is it renegotiated at current interest rates? Are the number and dollar volume of loans with expired rate-locks adequately monitored and tracked?

Fallout

1. Discuss the methodology used to predict the volume of applications that are expected to "fall out" of the mortgage pipeline. Is fallout methodology well documented?

ALCO/Simulation Modeling

1. Determine whether the expected fallout ratio is based on intuition, historical data, or an empirical model. Are assumptions reasonable? Are volatility assumptions based on historical performance or on implied volatility levels in the market? Who is responsible for reviewing model assumptions, and are these individuals sufficiently independent from the process itself? Does management also engage in sensitivity analyses to determine the impact interest-rate fluctuations will have on expected fallout levels?

2. Determine to what extent management uses output from these models in business planning, financial management, and budgeting.

3. Assess the degree to which mortgage banking activities are incorporated into the parent company's asset/liability management reports and program.

Hedging Practices

1. Discuss management's philosophy and strategy to determine the amount of interest-rate risk they are willing to accept. How successful has the company's marketing strategy been over the past few years and how is it changing? What are management's primary sources of market information? Are sources sophisticated enough given the size of the company and the scope of its activities?

2. Review the marketing policy to determine products and strategies used to hedge the interest-rate risk associated with inventory loans and rate-locked loan applications in the pipeline. Review actual hedging practices to determine whether they conform with established policy limitations and guidelines. What percentage of closed loans held in inventory and loan applications in the pipeline are matched against specific investor commitments? How are coverage levels determined and how have they changed over

time? Is the basis for this coverage ratio adequately documented? Determine whether the current coverage ratio exposes the company to undue risk associated with potential marketing losses.

3. Determine the adequacy of management's strategies for hedging loans that have special risks (ARMs with interest-rate caps and floors).

4. Ascertain if basis risk exists for any hedging products, whether such risks are significant, and the impact on correlation. How is basis risk identified, monitored, and controlled?

5. Determine whether call options are written to enhance inventory yields. If so, verify that they are written against covered positions. Determine whether management is speculating in any way and whether this activity subjects the company to undue risk.

6. Obtain profit/loss reports on hedging activities. How frequently are they prepared, how are they used, and to whom are they distributed? Evaluate the financial results of the hedging program over the past three years. Is management taking on excessive risk to record profits in this area?

7. Review management reports relating to pipeline and closed-loan hedging operations. Determine whether such reports are complete, accurate, and timely. Do such reports adequately limit excesses, record exception approvals, and detail risk exposures?

8. Review information provided to executive management and the board to determine whether hedging practices are adequately supervised.

Counterparty Risk

1. Review the marketing committee's list of approved brokers and dealers. Have appropriate dealer limits been established and are such limits adhered to? How are exceptions monitored, reported, and controlled?

3070.0.4 SERVICING/LOAN ADMINISTRATION

Mortgage banking companies that originate and sell residential real estate loans in the secondary market often retain the right to service those loans for the investor for a fee. In return, the servicer collects monthly payments from mortgagors, collects and maintains escrow accounts, pays the mortgagors' real estate taxes and insurance premiums, and remits principal and interest payments to the ultimate investors. The servicer also maintains records for the mortgagor, collects late payments on delinquent accounts, inspects property, initiates and conducts foreclosures, and submits regular reports to investors. Such functions and responsibilities should be documented within a formal written servicing agreement.

3070.0.4.1 Revenue Generation

The right to service mortgage loans provides a stable source of earnings and the potential for one-time gains. For this reason, servicing portfolio growth has become a primary objective for many mortgage banking companies.

Mortgage-servicing revenues are derived from six sources. The primary source is the contractual servicing fee. Because this fee is usually expressed as a fixed percentage of each outstanding mortgage loan's principal balance, servicing-fee revenues decline over time as the loan balance declines.

The second source of servicing income arises from the interest that can be earned by the servicer from the escrow balance that the borrower often maintains with the servicer for the payment of taxes and insurance on the underlying property. This income may vary, however, as some states require that interest payments on escrow balances be paid to the borrower.

The third source of revenue is the float earned on the monthly loan payment. This opportunity for float arises because of the delay permitted between the time the servicer receives the payment and the time that the payment must be remitted to the investor.

The fourth source of revenue consists of income late fees charged to the borrower if the monthly payment is not made on time. A fifth source is income in the form of commissions that many servicers receive from cross-selling credit life and other insurance products to the borrowers. The sixth and last source is when the servicer might generate fee income by selling mailing lists to third parties.

3070.0.4.2 Cost Containment

Long-term profitability is achieved through cost containment, technological improvements, and economies of scale, which reduce the per-unit cost of servicing. Servicing costs vary widely across institutions depending on portfolio characteristics such as product type, loan size and age, delinquency status, and foreclosure statistics. Nevertheless, two efficiency measures frequently used within the industry to measure cost containment are unit-servicing costs and the number of loans serviced per employee. The minimum size of a loan-servicing portfolio needed to achieve economies of scale varies across institutions and depends on portfolio characteristics and the servicer's expertise and technological capabilities.

Servicing data are available through the Mortgage Bankers Association's publication, "Mortgage Banking Performance Report." Based on detailed financial-statement information from a sample of companies, the report presents a compilation of performance data on all aspects of the mortgage banking industry.

3070.0.4.3 Growth Strategies

Many companies have established aggressive growth targets for their servicing portfolios. The size of the portfolio may be increased through originations, purchases of loans (individual or bulk), or purchased servicing rights. Portfolio size is reduced through normal runoff, prepayments, and sales of either loans or servicing rights only. Management's growth strategy should be examined in light of its expertise and systems capabilities.

3070.0.4.4 Servicing Agreements

The servicer generally operates under a written contract with each investor. This contract, also known as a servicing agreement, establishes minimum conditions for the servicer such as its fiduciary responsibilities, audit requirements, and fees. Contracts may be standardized or tailored to the individual investor.

Under most servicing agreements, the servicer warrants that full principal has been advanced, the mortgage is in fact a first mortgage on the property, and that the first mortgage position will be maintained by the servicer. Additional warranties that are either unwritten or implied may create significant exposure for the servicer.

A servicer may also enter into an agreement with another company to subservice certain loans or portfolios of loans. The company's method of evaluating and monitoring the financial condition of its subservicers should also be reviewed. Servicing and subservicing agreements should be evaluated in terms of the subservicer's responsibilities, reporting requirements, performance, and fees. They should also be reviewed to determine that no additional liabilities, real or contingent, are imposed upon the company beyond its responsibilities as a servicing agent.

3070.0.4.5 Recourse Obligations

A servicing agreement may contain specific recourse obligations that go beyond the servicer's customary fiduciary obligations. A mortgage banking company can choose to service loans for investors either with or without recourse back to the mortgage banking company. Servicing agreements should be reviewed to determine the extent of any recourse obligations. The risk of recourse should also be discussed with management to assess whether the risk is being identified and effectively managed.

The degree of recourse varies by investor. FannieMae offers either "regular" or "special" servicing options. With FannieMae's regular option, the servicer retains all risk of loss from mortgage default. With FannieMae's special servicing option, the mortgage banking company only retains exposure for normal representations and warranties. FHLMC offers similar servicing options. FannieMae and FHLMC generally limit eligibility for the regular servicing option to participants with the knowledge and financial wherewithal to make good on their recourse obligations.

GNMA servicing carries no contractual recourse. However, in the event of mortgage default, the servicer may have exposure to principal loss and other nonreimbursable expenses, particularly with respect to VA-guaranteed loans. If a borrower defaults on a VA-guaranteed loan, the VA can exercise a "no-bid" put option, which allows the VA to pay out its guaranty and leave the property with the servicer for disposition.

When a borrower defaults on a VA-guaranteed loan, the VA makes a calculation that will guide its decision to accept or reject conveyance of the property. The VA's decision to exercise its no-bid option is based on the net value of loan collateral and the VA's guaranteed percentage of the indebtedness. The mortgage servicer, at its option, could pay down the outstanding principal balance on the loan to a point where the VA would not be expected to exercise its no-bid option. Such "buydowns" result in additional foreclosure losses for the servicer.

The risk-based capital guidelines require a charge to capital when any risk of loss is retained on such recourse obligations. The charge would be at the bank holding company, the bank, or both,[3] depending on ownership of the risk. For this reason, the accuracy of reported recourse obligations should be verified.

3070.0.4.6 Guaranty Fees

The amount of guaranty fee the mortgage banking company pays the government-sponsored agencies (or private issuer) is negotiated. Guaranty fees vary based on the amount of recourse assumed by the mortgage banking company (the servicer) and the timing of the cash flows. A smaller guaranty fee is negotiated when the guarantor assumes less risk or receives payments sooner in the remittance cycle. Remittance cycles vary by investor.

The examiner should discuss with servicing personnel the amount of risk that has been taken on by the marketing department in exchange for reduced guaranty fees. Excessive risk accepted by the mortgage banking company should be incorporated into the assessment of management.

3070.0.4.7 Internal Controls

The servicing process begins after the post-closing review has been completed and the loan has been set up on the mortgage banking company's servicing computer system. Servicers are responsible for adequately safekeeping loan documents. Documents must be stored in a secured and protected area such as a fireproof vault. Servicers must also maintain a tracking system for following up on missing documents.

The control environment that sets the tone of a servicing department's operation should be assessed. A servicing department's management faces a variety of risks that it should identify and control. In addition to identifying and controlling risks, management also needs to institute adequate and effective internal controls to match a servicing portfolio's growth and the department's technological changes. When assessing the control environment, the examiner needs to consider the extent to which management uses internal and external audits, quality control reports, and investor audits to ensure that its policies and procedures are followed.

The servicer's performance should be evaluated, with any loss of servicing due to operating inefficiencies or excessive risk-taking discussed and noted. A discussion of the risks within each operational area, as well as the management reports and internal controls, follows.

- *Loan accounting*. Incoming payments may be processed in-house, through a lockbox, or through some combination of both. Payments are deposited into a clearing account and then transferred to the respective investor custodial bank accounts the next day. Investor remittances may be required daily, weekly, monthly, or as funds are received. In certain cases, servicing agreements may specify that payments be sent directly to security holders. Numerous accounts through which incoming and outgoing payments pass should be reconciled daily to avoid costly processing errors. The reconcilement process should be reviewed with management to ensure that reconcilements are performed on a timely basis and without chronic discrepancies.
- *Escrow administration*. In addition to receiving and remitting payments, servicers are also responsible for paying taxes and insurance on the underlying property. Accurate information must be maintained for each loan regarding a legal description of the property; the appropriate taxing authority, due dates, and amounts for taxes owed; and the insurance provider and due dates and amounts for insurance owed. Failure to maintain such information may result in missed tax and insurance payments on the property, which may lead to penalties and/or lapsed insurance coverage. The servicer's record of tax penalties paid over the past several years should be reviewed to determine whether a problem exists in this area.

  Escrow account balances should be adequate to meet expected tax and insurance obligations. If the servicer advances its own funds to cover an escrow overdraft, such payments may be capitalized and recorded as a receivable only if the servicer is to be reimbursed by either the mortgagor or the investor. Escrow receivables should be aged, with stale or otherwise uncollectible receivables charged off.

  Escrow accounts should be analyzed at least annually, with a copy of the analysis sent to the mortgagor. Shortages (overdrafts) may be billed or spread out over 12 months.

3. If at the bank, then it is also consolidated at the bank holding company level.

Overages should be returned to the borrower or handled in a manner consistent with federal and state laws and regulations. For loans that were set up without an escrow account, the examiner should verify that adequate information has been obtained from the mortgagor to ensure that taxes and insurance are current.

- *Investor reporting.* Investor remittance and reporting requirements vary greatly. Remittances are contractually arranged. In some instances, the servicer may be required to advance to investors funds that have not yet been received from the mortgagor (for example, cash advances to ensure timely payment of principal and interest). In such cases, a receivable is created on the balance sheet. Receivables relating to investor remittances should be aged in the same manner as escrow receivables and periodically reviewed by a supervisor. Stale or otherwise deemed uncollectible receivables should be periodically charged off in a timely manner.

  Investor reports should include detailed account reconciliations and information on the mortgagor's name, principal balance outstanding, escrow balance, delinquency status of the account, and any foreclosure activity or transfer to the servicer's other real estate owned account. The quality and accuracy of investor reporting should be periodically reviewed by internal or external auditors.

- *Collections, foreclosures, and other real estate (ORE).* Investor requirements also vary concerning contact with delinquent borrowers, forbearance policies, and reimbursement for foreclosure expenses, ORE write-downs, and related losses. Detailed policies concerning collection efforts and foreclosures should be in place and followed. The property should be inspected regularly to ensure that its condition is adequately monitored. Delinquency and foreclosure statistics should be tracked by product type and originator.

  Foreclosures are generally initiated after three full installments are due and unpaid. The servicer notifies the mortgagor of its intent in writing and refers the case to an attorney. Detailed records should be maintained for all expenses that are incurred. If the loan is insured, claims may ultimately be filed against the FHA, VA, or private mortgage insurance (PMI) company. However, it should be noted that certain interest expenses and collection or foreclosure costs are not reimbursable.[4] These expenses are a cost of doing business that must be factored into the servicing fee charged for providing these services.

  The timeframe for taking title on foreclosed property varies widely and is determined by state law. *Once title is taken, the property should be classified as ORE.* Although all ORE is generally managed through a centralized unit, for accounting purposes, ORE may fall into one of two distinct categories: ORE that is owned by the mortgage banking company, and ORE that is serviced on behalf of the investor. ORE that is owned should reconcile to the balance sheet, whereas ORE that is serviced for others is an off-balance-sheet item. ORE appraisal, valuation, and financing policies should be consistent with regulatory policy. In-substance foreclosures and any troubled debt restructurings should be properly identified and accounted for.

- *Payoffs.* Loans are considered "paid off" when the loan matures, the loan is refinanced, or the property is sold. Prior to payoff, the servicer is responsible for sending payoff instructions to the mortgagor. After a loan has been paid off, the servicer makes a satisfaction remittance to the investor or the pool; obtains documentation; cancels the note; and forwards the satisfied mortgage documentation plus an escrow refund check, if applicable, to the mortgagor. A high level of refinance activity may strain payoff personnel's ability to perform this obligation accurately and promptly. Management reports should monitor the level of payoff activity and alert supervisors to operational backlogs, the need to hire temporary personnel, or the need to outsource work to third parties.

- *Customer service.* Poor service may damage the mortgage banking company's business reputation (reputation risk) and ability to originate, sell, and service loans within the community. Because of name recognition, problems in this area may also adversely affect affiliate banks or the bank holding company and its nonbank companies.

  For this reason, servicers should maintain an adequate system for logging, tracking, and responding to customer inquiries and complaints. Management reports should track the volume and disposition of such inquiries and complaints. Inordinate volumes of complaints may be an indication of operational backlogs, inefficiencies, or mishandling of accounts. If this occurs, corrective measures should be

4. For a detailed list of both reimbursable and nonreimbursable expenses, see the agency seller/servicer guides.

initiated immediately.

3070.0.4.8 Data Security/Contingency Planning

The servicing system should be of a complexity and size necessary to accommodate both the current and the projected volume of transactions. Examiners should obtain information on the servicing system in use and any limitations it might pose in terms of future growth plans.

Procedures for maintaining physical security in the workplace, data security, and file backup also should be discussed with management. A contingency plan should describe the use of alternative backup sites, as well as procedures that would be followed to reconstruct altered or destroyed files. Contingency plans should be reviewed and approved at least annually and tested regularly.

3070.0.4.9 Inspection Objectives—Servicing/Loan Administration

1. To assess the adequacy of management oversight of risk through policies and procedures, management information systems and reports, and other internal and external audits, with respect to the following:

- collecting monthly payments from mortgagors
- reporting loan activity and remitting funds to investors
- monitoring escrow account balances
- disbursing property insurance and real estate tax payments
- monitoring delinquencies, initiating collection activities, and initiating foreclosure proceedings in a timely manner

2. To evaluate the level of risk assumed by the mortgage banking company through servicing recourse arrangements.

3070.0.4.10 Inspection Procedures—Servicing/Loan Administration

Management Assessment

1. Obtain an organization chart for the servicing department and resumes for senior management and key staff members. Evaluate management's qualifications and expertise.

2. Review servicing policies and procedures manuals to determine whether reasonable operating standards have been established for each functional area. Also assess whether management reports adequately monitor compliance with established policies and procedures. Determine how exceptions are identified and addressed.

3. Review internal and external audits, quality control reports, and investor audits to determine whether internal controls are functioning effectively.

4. Evaluate safeguards in place for loan documents and determine if an adequate document tracking system exists.

5. Verify that a disaster recovery plan is in place that covers all in-house servicing functions. Verify that backup systems exist should primary systems fail. Determine if backup systems would provide information to substantiate servicing portfolio asset values.

6. Obtain a list of subservicers and vendors, if any, employed to perform servicing functions.

- Determine if a periodic review of services provided by each subservicer is conducted. In addition, the financial condition of each subservicer should be evaluated at least annually.
- Determine whether a contingent operating plan has been established should subservicers and vendors be unable to perform their contractual obligations.

Profitability Analysis

1. Review business line profitability for the servicing department to identify significant trends and/or areas of potential weakness. Discuss and review key efficiency measures such as unit cost and cost per employee.

2. Analyze servicing income and expenses to determine whether operations are profitable and economies of scale are being achieved in line with industry norms:

- Determine whether all direct and indirect costs are included.
- Compare servicing revenues with costs.
- Assess the impact of any bulk servicing purchases or sales on departmental profitability.
- Analyze efficiency in light of management's growth projections.

3. Review servicing portfolio trends and characteristics, including the following:

- investors (GNMA, FannieMae, FHLMC, private)
- recourse provisions
- loan types (30-year fixed, 15-year fixed, ARM, balloon)
- average loan size
- interest rates (particularly those above market)
- remaining contractual life
- projected life
- geographic distribution of mortgagors
- delinquency statistics
- foreclosure statistics
- number of subserviced loans and servicers

Loan Accounting

1. Review with management the procedures for receiving payments from mortgagors and depositing funds into segregated accounts. Determine that the segregation of duties and other controls over custodian accounts are adequate.

2. Review any outstanding advances to investors. Evaluate the collectibility of advances, the timeliness of charge-offs, and the adequacy of reserves.

3. Determine whether outstanding items related to investor account reconciliations are being resolved in a timely manner. Are reconciliations routinely reviewed and approved by a supervisor?

Escrow Administration

1. Review with management the system in place for ensuring the timely payment of taxes, insurance, and other obligations.

2. Review the servicer's method for analyzing the amount and adequacy of escrow account balances, and evaluate its effectiveness. Assess procedures relating to shortages and overages in escrow accounts:

- Determine whether procedures comply with 12 U.S.C. 2609 (RESPA) and to the extent possible with state laws.
- Determine whether the borrower is sent an analysis statement showing the amount of discrepancy, how it occurred, and an explanation of how it is to be corrected.

3. Determine the volume of loans with no escrow requirement and procedures for ensuring that insurance payments and taxes are current.

4. Determine how escrow funds are invested, assess the appropriateness of the investment vehicles, and review management's analysis of yield on escrow funds.

5. Evaluate whether controls are in place to prevent the use of escrow custodial accounts to meet other obligations.

6. Review outstanding escrow advances, and determine if claims for reimbursement are processed in a timely manner. Evaluate the collectibility of outstanding advances and verify that uncollectible advances are charged off in a timely manner.

Investor Reporting

1. Review the list of investors for which servicing is performed.

2. Review servicing contracts to verify that signed, current contracts exist. Discuss with management the nature of any recourse provisions, forbearance requirements, and nonreimbursable collection and/or foreclosure expenses.

3. Review the most recent investor audit reports on the servicing function. Discuss findings with management and evaluate the adequacy of any actions taken to correct deficiencies.

4. Determine whether any servicing contracts have been terminated for cause or are likely to be lost in the near future. Determine the reason for any termination and the extent of any corrective actions taken.

Collections and Foreclosures

1. Review and assess, on a statistical-sample basis, the accuracy and adequacy of loan delinquency reports by product type and originator. Ascertain the reasons for poor or declining asset quality within the servicing portfolio.

2. Review policies and procedures for collecting late payments.

- Determine when collection efforts start once an account becomes delinquent.
- Verify that all attempts at collecting past-due payments are documented, including each date of communication with borrowers, the nature of the communications, and the customers' replies.

3. Select a sample of files for borrowers who are 120 days or more delinquent and determine whether foreclosure proceedings are instituted in a timely manner.

- Determine if borrowers and investors are appropriately notified of the initiation of foreclosure action.
- Verify that contacts with borrowers are documented.
- Determine whether property inspections are conducted in accordance with policy.
- Verify that foreclosure practices comply with FHA/VA/PMI requirements and guidelines.

4. Determine the average foreclosure costs for each product type. Foreclosure costs include inspections, legal and administrative costs in excess of those defined as normal and customary, VA no-bid, and VA write-downs.

5. Obtain a list of loans in foreclosure in which action has been delayed, and determine if the justifications for delay are reasonable.

6. Determine the number and dollar volume of delinquent loans that were purchased from the servicing portfolio (buyouts or buybacks).

- Assess the impact of repurchases on profitability, the appropriateness of this practice, and the accounting procedures for these loans.

7. Discuss with management the effect that negotiated guaranty fees may have on the level of losses associated with foreclosures.

Payoffs

1. Review procedures for payoffs to determine whether—

- payoff instructions are sent to the mortgagor before payoff;
- satisfaction remittances are made to the investor or to the pool, necessary documentation is obtained, notes are canceled properly, and documentation plus any escrow refund checks are sent to the mortgagor in a timely manner; and
- internal controls are in place to ensure that funds are not misappropriated and employee fraud is detected and reported according to policy.

Other Real Estate

1. Determine the number and dollar volume of ORE by geographic location.

- Compare the volume of ORE with historical levels and the industry average for similar-sized servicers.
- Evaluate the impact of ORE on profitability.
- Review the policies and practices for ORE accounting, property supervision, and marketing. Verify that policies are consistent with investor guidelines and regulatory policies.

2. Determine whether ORE parcels are purchased from the servicing unit by the bank holding company or its affiliates.

- Evaluate the controls in place to limit or prevent this practice and the accounting treatment for such loans.
- Verify that information regarding ORE is properly reported to the parent bank or holding company for consolidation into regulatory reports.

Customer Service

1. Review the system for logging, tracking, and responding to customer complaints. Has the volume of complaints grown? Are complaints addressed promptly with any problems resolved in a timely manner?

2. Review the servicer's customer-complaint file to gain more insight into the nature of the complaints. Do complaints suggest that internal policies and procedures are not being followed or that staffing levels are inadequate?

3070.0.5 FINANCIAL ANALYSIS

This section provides the examiner a framework with which to analyze the financial condition of a mortgage banking company. The analysis begins with a review of the mortgage company's balance sheet and income statement. The financial analysis should incorporate a review of primary balance-sheet and income-statement levels and trends, off-balance-sheet assets and liabilities, asset quality, market share and earnings performance, funding sources, liquidity needs, and capital adequacy. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or its parent bank holding company to undue financial risk should be brought to management's attention and documented in page one, Examiner's Comments and Matters Requiring Special

Board Attention. The examiner should focus on items that are either large relative to the company's operations or that may pose undue financial risk. The examiner should also investigate any trends that appear inconsistent with the mortgage banking company's industry peer group, business orientation (such as wholesale versus retail, originations versus servicing, etc.), and future growth plans or with the current economic and interest-rate environment.

Financial-statement presentation may vary across mortgage banking companies. If questions arise, financial-statement presentation and accounting should be reviewed with the company's internal and/or external accountants for propriety. During the review of the financial statements, the examiner should establish whether regulatory reports are prepared accurately. Banks must conform to the reporting requirements of the Commercial Bank Reports of Condition and Income (call report). Bank holding companies and their direct subsidiaries must conform to generally accepted accounting principles (GAAP). Relevant GAAP statements of the Financial Accounting Standards Board include SFAS No. 65, "Accounting for Certain Mortgage Banking Activities," as amended; SFAS No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases"; SFAS No. 115, "Accounting for Certain Investments in Debt and Equity Securities"; SFAS No. 125, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities;" and SFAS No. 80, "Accounting for Futures Contracts." Other relevant accounting pronouncements are identified in appendix B, Accounting Literature.

The financial analysis should also include an assessment of asset quality, earnings, liquidity and funding, and capital. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or the parent bank holding company to undue financial risk should be brought to management's attention and discussed in the Examiner's Comments and Matters Requiring Special Board Attention.

3070.0.5.1 Balance Sheet

3070.0.5.1.1 Assets

The asset side of the balance sheet may consist of cash, reverse repurchase agreements, marketable securities, receivables and advances, mortgage loans held for sale, mortgage loans held for investment, mortgage-servicing assets (MSAs) (including mortgage-servicing rights), reserves for loan and other credit-related losses (contra accounts), other real estate owned (OREO), and other assets.

3070.0.5.1.1.1 Mortgage-Related Securities

The examiner should determine whether the accounting treatment for mortgage-related securities reported on the balance sheet is consistent with SFAS 115. SFAS 115 applies to equity securities having readily determinable fair values and to all debt securities. It does not apply to loans purchased.

Under SFAS 115, at acquisition and at each subsequent reporting date, all debt and equity securities that fall under the scope of the statement should be classified into one of the following categories:

- trading securities
- available-for-sale securities
- held-to-maturity securities

Both debt and equity securities can be assigned to the above first two categories. The third classification can only consist of debt securities.

Trading. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities should be classified as trading securities and reported at fair value. Debt securities not held to maturity and equity securities that have readily determinable fair values should be classified as trading securities when (1) they are held for short periods of time and (2) they have been acquired with the expectation of a profit from short-term price differences. Securities that are actively traded should be carried at fair value on the balance sheet, with net unrealized gains or losses included in income.

Available-for-sale. Debt and equity securities having readily determinable fair values that are not otherwise classified, as above, should be categorized as available-for-sale and carried at fair value on the balance sheet. Unrealized holding gains and losses should be reported in a separate component of shareholders' equity and should not be included in income.

Held-to-maturity. For a security to qualify as held-to-maturity under SFAS 115, the mortgage banking company must demonstrate the positive intent and ability to hold it until maturity.

3070.0.5.1.1.2 High-Risk Securities

The examiner should also review any high-risk mortgage securities that are on the balance sheet, such as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), CMO and REMIC residuals, and stripped mortgage-backed securities (stripped MBSs). See sections 2126.1 and 2190.0.5.

3070.0.5.1.1.3 Mortgage Loans Held for Sale

The examiner should determine whether the accounting treatment for mortgage loans held for sale is consistent with SFAS 65, as amended. Mortgage loans held for sale shall be reported at the lower of cost or market value, determined as of the balance-sheet date.[5] The amount by which the cost exceeds market value shall be accounted for as a valuation allowance. Changes in the valuation allowance shall be included in net income of the period in which the change occurs.

3070.0.5.1.1.4 Mortgage Loans Held for Investment

Mortgage loans held for investment may include loans that (1) do not meet secondary-market guidelines and are therefore unsalable, (2) loans that were repurchased from an investor due to poor documentation and/or improper servicing, (3) loans put back to the mortgage banking company under recourse agreements, and (4) loans intentionally originated for portfolio.

SFAS 65 states that a mortgage loan transferred to a long-term investment classification shall be transferred at the lower of cost or market value as of the transfer date. The securitization of a mortgage loan held for sale shall be accounted for as the sale of the mortgage loan and the purchase of an MBS classified as a trading security at fair value. Any difference between the carrying amount of the loan and its principal balance shall be recognized as an adjustment to yield by the interest method.

A mortgage loan shall not be classified as a long-term investment unless the mortgage banking company has both the intent and the ability to hold the loan for the foreseeable future or until maturity. If the ultimate recovery of the carrying amount of the loan is doubtful and the impairment is considered to be other than temporary, the carrying amount of the loan shall be reduced to its expected collectible amount, which becomes the new cost basis. The difference is recognized as a loss. A recovery of the new cost basis shall only be reported as a gain upon sale, maturity, or disposition of the loan.

5. According to SFAS 65, as amended, the capitalized costs of acquiring rights to service mortgage loans, associated with the purchase or origination of mortgage loans, shall be excluded from the cost of mortgage loans for the purpose of determining the lower of cost or market value.

3070.0.5.1.2 Liabilities

The liability side of the balance sheet may include repurchase agreements, commercial paper, revolving warehouse lines of credit, long-term debt instruments, intercompany payables, and equity capital.

3070.0.5.1.2.1 Repurchase Agreements

A mortgage banking company may finance its mortgage loans or MBSs held for sale by transferring mortgage loans or MBSs temporarily to banks, nonbanks, or other financial institutions under formal repurchase agreements that indicate that control over the future economic benefits relating to those assets and the risk of market loss are retained by the mortgage banking company.

Repurchase agreements can provide a cost-effective method of holding mortgage-backed securities before their sale to investors. Securities dealers repo the securities for a period of 30 to 180 days at a substantial cost advantage to warehouse facilities. Repurchase agreements involve delivery of the security to the dealer with an agreement to repurchase it on a specified date. Upon receipt, the dealer wires the haircut proceeds to the mortgage company. The mortgage company then reduces the amount of its outstanding warehoused loans. If the repo is being handled by the dealer that is arranging the ultimate sale of the security, the amount of that discount should approximate the discount on the sale. If another dealer is involved in the ultimate sale, the haircut may be greater because the security must be repurchased and redelivered to the second dealer. This may also require a rehousing to provide funds to honor the repurchase commitment. Most warehouse lenders allow traditional warehouse lines to be collateralized by individual mortgages and mortgage-backed securities.

A mortgage banking company may use repurchase agreements in conjunction with sales of loan pools. The company may use repurchase agreements to pledge mortgage loans and/or MBSs as collateral for borrowings. In return, it receives advanced funds against future deliveries. The lenders are repaid through the sales of MBSs. The amount outstandings bear interest for the number of days the funds are outstanding.

Under repurchase agreements, the same loans or MBSs are generally reacquired when they are sold to permanent investors. Mortgages or MBSs may also be transferred temporarily without a repurchase agreement. However, some type of informal agreement generally exists. Mortgage loans and MBSs held for sale that are transferred under either formal or informal repurchase agreements shall be accounted for as collateralized financing arrangements and reported as either mortgage loans held for sale or MBSs classified as trading securities on the mortgage banking company's balance sheet.

3070.0.5.1.2.2 Commercial Paper

Another source of short-term funding is the issuance of commercial paper. In general, commercial paper represents unsecured notes with maturities up to 270 days from the date of sale. Because of its short maturity, proceeds should be limited to current transactions with short-term maturities. Commercial paper proceeds should not be used to fund loans held for sale for a period greater than one year.

Commercial paper can be less reliable than warehouse lines of credit. If commercial paper funding is used, examiners should review related commercial paper backup lines of credit and ratings issued by credit rating agencies. The reason for any rating changes during the prior year should be investigated. Additional guidance on this topic is set forth in sections 2080.05, 2080.1, and 5010.23.

3070.0.5.1.2.3 Revolving Warehouse Lines of Credit

Short-term revolving warehouse credit lines are often used to fund loans held for sale, which is generally the largest asset on the company's balance sheet. Revolving credit lines may be obtained from an affiliate bank, the parent bank holding company, or an unrelated third party.

The extension of credit for a particular loan is paid off when the mortgage lender sells the mortgage loan to a government-sponsored agency such as GNMA, FannieMae, or FHLMC or to a private investor. Lenders who provide warehouse lines of credit typically enter into a warehouse credit agreement with the borrower. Under the agreement, the warehouse lender agrees to extend credit to the mortgage banking company for the purpose of originating loans. The mortgage banking company agrees to repay each extension of credit within the terms of the agreement. Each extension of credit is secured by placing a lien on the originated mortgage loan. The warehouse lender perfects its security interest by taking possession of the original promissory note executed by the borrower, endorsed "in blank," together with an assignment of the mortgage securing the loan. To further protect its security interest, the warehouse lender usually takes the responsibility of delivering the loan package to the secondary market investor for purchase. The investor, in turn, delivers the purchase price of the mortgage directly to the warehouse borrower (mortgage banking company). Each portion of the warehouse line may be priced separately to reflect various levels of risk and the documentation requirements of each.

The details of all credit lines should be specified in formal, written credit agreements. Revolving credit lines may be either unsecured or secured by a lien on the underlying mortgages. Under most secured lines, a formula is used to calculate the borrowing base, which generally consists of cash, cash equivalents, loans held for sale, securities, and a percentage of the mortgage-servicing portfolio less certain short-term indebtedness. Some credit lines require the maintenance of compensating balances.

Internal credit arrangements (conducted either by a mortgage banking subsidiary of a bank or bank holding company) must comply with sections 23A and 23B of the Federal Reserve Act. See sections 2020.1 and 3070.0.7 of this manual.

Examiners should evaluate the adequacy and efficiency of warehouse funding operations. The examiner should determine whether the warehouse lender is of a sufficient size and whether it is well positioned financially to provide adequate lines of credit, as needed. Examiners should ascertain whether funding must be regularly derived from more than one warehouse lender (including whether the warehouse line has to be participated out to other lenders) and whether the lender has proper internal controls to safeguard collateral documents for pool certification. The examiner should also determine what management's contingency plans are for the use of alternative financing sources beyond standard warehouse lines of credit for backup financing and lower-cost efficiency purposes. Has management (1) explored variations in existing lines of credit to reduce overall borrowing costs and (2) determined what competitor lenders are paying for similar financing facilities?

Procedures should be in place to monitor compliance with all short-term debt covenants. Covenants may limit servicing of loans with recourse, limit total debt to specified levels, and/or require minimum tangible net worth, leverage, and current ratios. Most credit agreements also limit the borrower's financial flexibility if the company's long-term debt ratings decline or the company becomes unrated or if certain events occur related to securities.

3070.0.5.1.2.4 Long-Term Debt

Longer-term assets are more appropriately funded through the issuance of longer-term liabilities or capital. Toward this end, mortgage banking companies may issue medium- or long-term public debt securities (including warrants to purchase debt securities). Debt may be issued in the form of fixed-rate or floating-rate notes with various repayment or redemption terms. Loan agreements should specify all relevant terms and conditions and may contain debt covenants similar to those found in the warehouse funding arrangements.

Long-term debt may incorporate restrictive covenants which limit the company's activities in certain respects. These covenants may set limits on the amount of senior debt outstanding and the minimum amount of liquid net worth (as defined by the documents), and may limit the proportions of specific categories of assets. Such covenants should be reviewed to make certain that they are not too restrictive and that they permit financial flexibility.

3070.0.5.1.3 Equity Capital

Funding is also provided through equity capital, which may be supplemented by capital contributions from the parent company or the direct issuance of equity securities.

3070.0.5.2 Income Statement

Mortgage banking revenues generally consist of the following: loan servicing/administration revenue; loan-origination-fee revenue; interest income; gains (losses) on the sale of mortgage loans, mortgage securities, or mortgage-servicing rights; and management and other fee income. The examiner may find that gross gain (loss) on the sale of mortgage loans or securities is reported on the income statement net of loan-origination fees and direct loan-origination costs such as personnel and office expenses.

Expenses may include interest expense; salaries, commissions, and other personnel costs; interest losses on MBS pools; amortization of mortgage-servicing assets and any other purchased intangible assets; electronic data processing and other selling, general, and administrative costs; occupancy and equipment; depreciation; provision for foreclosure and other loan losses; and a provision for income taxes. Some companies net amortization of MSAs directly against loan-servicing revenues.

3070.0.5.3 Unique Characteristics

The financial analysis should reflect certain operational characteristics that are unique to the mortgage banking industry. Many of these characteristics are cyclical based on interest rates and economic conditions.

For example, the cost of funding loans in the warehouse is relatively inexpensive during periods of low interest rates, but may increase significantly as interest rates rise. Marketing operations are also highly dependent on the interest-rate cycle. During periods of falling interest rates, the company may experience substantial gains on the sale of mortgage loans and securities to permanent investors. Alternatively, during periods of rising interest rates, the company will usually experience losses on the sale of mortgages and securities. Interest-rate volatility can cause large fluctuations in warehouse funding costs and marketing gains and losses.

The examiner should also consider the impact of current economic conditions on the size and composition of the mortgage banking company's balance sheet. When the economy expands, loan volume increases and the overall size of the balance sheet tends to grow. During recessions, the balance sheet should contract, reflecting the lower demand for new loans. Management's planning efforts should incorporate this type of economic trend analysis in their growth targets. Steady annual growth may or may not be anticipated.

Efficiency measures, such as activity ratios (inventory turnover and efficiency ratios), should be used to determine management's ability to originate and sell loans efficiently. The inventory of loans held for sale is transitory, lasting between 45 to 60 days. A buildup of loans on the balance sheet may indicate processing delays and/or asset-quality problems that may prevent their ultimate sale to permanent investors. Because of the transitory nature of the balance sheet, traditional leverage ratios (asset-to-equity capital) may not be meaningful and should be used sparingly.

Another unique characteristic of a mortgage banking company is the economic value of its mortgage-servicing operations, which constitutes an off-balance-sheet item. Failure to incorporate this economic value into the financial analysis may overstate the degree of financial leverage that is employed within the company.

3070.0.5.4 Asset Quality

The quality of assets that are on the balance sheet is evidenced by the following: compliance with original underwriting standards; the existence of effective loan review and quality control programs; borrower payment and agreement performance; the fair value of MBSs held for sale or investment; the collectibility, independent valuation, nature, volume, and existence of recorded assets; the application of GAAP in accounting for the assets; and the degree of protection afforded by real estate mortgage collateral, including any private mortgage insurance. The value afforded by real estate mortgage collateral includes the extent of compliance with the Federal Reserve Board's real estate appraisal regulations and guidelines. (See section 2231.0.) Asset quality should be analyzed in terms of regional and national economic factors as well as portfolio and managerial factors.

For any review of any loan portfolio, a sampling of real estate appraisals should be included to determine whether the appraisal results reasonably support the amount loaned. If the property appears to be overappraised or if there is a problem with the appraisal (for example, the appraisal is obsolete or the validity of the appraisal is in question), the examiner should consider recommending that a new appraisal be performed.[6] It may be necessary for the examiner to classify the loan (i.e., as a loss) and for the parent holding company to increase its allowance for loan and lease losses.

Bank holding companies and/or their nonbank subsidiaries should be criticized if initial appraised values appear to be inadequate and/or not properly supported by proper documentation. If corrective action is not taken by management, formal enforcement action should be considered. Such actions may require the bank holding company to revamp its appraisal activities and/or collection procedures and, if warranted, to retain the services of an independent appraiser to conduct an evaluation of loan collateral.

With respect to MBSs, the quality characteristics of the underlying mortgage collateral should be considered. If the securities are backed by GNMA, FannieMae, or FHLMC, the rating agencies consider such securities to be the highest quality asset because of their linkage to the federal government. If the collateral consists of unsecuritized mortgages, the examiner should consider the geographic dispersion, type of mortgage and property, underwriting standards, and term to maturity of the underlying pool of mortgage loans. External factors can affect the value of mortgage securities directly, such as the default or downgrading (by a credit rating agency) of a private mortgage insurer.

To a large extent, insurance and guaranties provided by government-sponsored agencies and other third parties (for example, private mortgage, bankruptcy protection, fraud, and mortgage pool insurers, as well as performance bond insurers and other guarantors) mitigate credit risk for an originator; however, the originator still remains responsible for the quality of loans sold to investors for at least the first 90 days, as well as for any loans sold under recourse arrangements. As a servicer, the company also can be held liable if it does not initiate collection and foreclosure actions in strict accordance with investor-servicing agreements. In addition, certain interest losses and expenses relating to collections, foreclosure, and ORE are not fully reimbursable and should be anticipated.

The mortgage banking company must maintain adequate management reports to measure and track the quality of originated, purchased, and serviced assets. Proper administration over loans and other assets held for sale or investment requires the use of aging and other tracking reports. For assets held for sale, the reports should identify loans and other marketable assets,

6. For certain credits, the bank holding company should develop criteria for obtaining reappraisals or revaluations as part of a prudent portfolio review and monitoring program.

other than marketable securities,[7] that have been in this category longer than 60 days. In such instances, a determination should be made as to whether credit quality problems and/or documentation deficiencies exist that will prevent the timely sale of the loan in the secondary market. If problems are not correctable within a reasonable timeframe, the loans and other related assets should be revalued and transferred to the held-for-investment category. Procedures governing the valuation and transfer of poor-quality assets should be in writing and should be followed.

The MIS should also generate for management's review reports on the delinquency status of loans held for investment and loans serviced for investors. Such reports provide an early warning system and an analysis tool to evaluate internal collection activities. If a loan becomes delinquent (30 days or two payments past due), the borrower should be contacted. Collection efforts should be strengthened if the delinquency continues. If the loan becomes severely delinquent, foreclosure proceedings should be initiated consistent with the investor-servicing agreement, and the value of the collateral supporting the loans should be assessed. Anticipated shortfalls should be recognized as losses in a timely manner.

MIS should also include an internal loan-grading system, which tracks the borrower's ability to meet its monthly payment obligations. Although MIS should be tailored to meet management's needs, information should be consistent with loan-grading systems that are used by the controlling bank holding company and federal bank regulatory agencies. Reports should also track collection and foreclosure actions initiated by the servicer and repurchase requests initiated by a permanent investor or other third party.

Examiners should also verify that appraisal practices are consistent with the Board's appraisal regulations,[8] the interagency appraisal and evaluation guidelines (see SR-94-50, SR-94-55, SR-95-16, SR-95-27, and SR-99-26), and any other state and federal laws and regulations. Mortgage banking companies that are subsidiaries of either state member banks or bank holding companies are subject to the same appraisal standards and requirements as their parent companies.

7. For mortgage-backed securities available-for-sale, similar account classification procedures apply, but those are accounted for in accordance with SFAS 115.

8. See Regulation Y, subpart G (12 C.F.R. 225.61–67), and its incorporation by reference into Regulation H (12 C.F.R. 208.18).

3070.0.5.4.1 Classification Procedures

The classification process begins with an analysis of delinquent loans. The examiner should begin by obtaining an aged listing of all delinquent loans in the held-for-sale and the held-to-maturity portfolios. Clear-cut shortfalls in property values compared with loan or investment values should usually be classified unless there are mitigating circumstances. Usually loans or investments with doubtful or loss elements have other significant weaknesses that will ordinarily justify a classification of substandard for the remaining balance. Loans secured by collateral such as real estate should be classified in accordance with these guidelines and the applicable classification guidance found in sections 2060.1 and 2090.1 of the *Commercial Bank Examination Manual* and sections 2010.2, 2065.1, 2240.0, and 5010.10 of this manual.

Portions of these loans may warrant a more severe classification if the value of the underlying collateral is insufficient to fully repay the loan. The identification of potential or actual loss exposure may warrant the use of either a split (substandard and loss) or a doubtful rating.

The examiner should also review the ORE portfolio, notes and accounts receivable, and other investments on the company's balance sheet for potential classifications. ORE may usually warrant a substandard classification due to an investment's nonearning status and an increased probability of loss on disposal of the underlying assets.

Assets that represent illegal or impermissible holdings or those that are subject to some regulatory concern should not be classified, per se, for these factors. Such holdings should be treated separately within the report. In those instances where a credit-quality issue is also present, the classification and the separate treatment should be cross-referenced.

The examiner should also review any off-balance-sheet exposure for which credit risk is retained. Loans sold to investors on a recourse basis have the potential of being put back to the servicer. The portion of the recourse portfolio that is severely delinquent should be classified according to the guidelines provided previously, since the exercise of this "put option" is highly likely.

At the end of the classification process, the examiner should evaluate the level and trend of classified assets to determine whether asset quality poses undue financial risk to the mortgage banking company or its parent bank holding company. A list of total classifications should be compiled and left with management.

As part of the analysis of asset quality, the aggregate of loss classifications plus an amount expected to ultimately be loss should be compared with the existing allowance for loan and lease losses. If the aggregate exceeds the existing contra asset balance(s) then additional loan-loss provisions are needed. In such situations, the parent company should be advised of the deficiency and reminded of its responsibility to ensure that an adequate allowance for loan and lease losses, as well as other contra asset valuation balances, is maintained by the subsidiary for its asset portfolio.

Any discrepancies between the classifications list and information contained on the company's MIS should also be discussed with management. If asset quality presents undue or excessive risk, appropriate comments should be documented and brought forward on Examiner's Comments and Matters Requiring Special Board Attention, page one of the report.

3070.0.5.4.2 Presentation of Classifications

As a minimum standard, brief write-ups stating the reason for classifications should be provided for any nonbank subsidiary's asset whose doubtful and/or loss classification exceeds the lesser of $100,000 or 5 percent of the subsidiary's total assets. In general, substandard assets should be listed without a write-up, regardless of size. However, a brief write-up is required for any asset whose classification is challenged by management. The examiner has the option to provide a write-up for any classified assets, regardless of size.

While the following presentation guidelines may be useful in structuring the write-ups, the examiner may include any other format appropriate to the situation:

- recapitulation of the status and purpose of the loan, the lien position, type and appraised value of the collateral, its delinquency and accrual status, guarantors and other debit or credit balances related to the loan
- the problems with the loan, borrower, or collateral, presented in a concise, descriptive narrative
- the examiner's evaluation of the situation, indicating estimated values, major assumptions, and mitigating or negative factors
- the classification, which should represent a logical combination of the relevant factors presented in the first three elements

Within the elements presented, the examiner should stress accuracy, brevity, and clarity in the presentation, as well as a logical pattern leading to the classification. Historical information and financial data that are not pertinent or that are too stale to have a direct bearing on the present situation should not be included.

Presentations for OREO properties need not include the original loan date, history, and financial information, unless there is some relevance to the current condition (for example, the property has been foreclosed on for the second time or some circumstance before foreclosure continues to have an impact). For those companies in which numerous loans and OREO properties are classified, a summary of classifications, segmented by loans and real estate owned and indexed to the pages containing the classifications, presents clear benefits to the users of the report. This becomes more pertinent when numerous assets below the write-up line are included in total classifications. In addition, both management and the subsequent examiners will have an official listing of the classifications.

3070.0.5.4.3 Reserves

Management should establish and maintain adequate contra asset allowances and other contingency reserves to cover identified loss exposure. Policies and procedures, and financial statement disclosures, should clearly state the purpose of and intended accounting treatment for each reserve. Management should evaluate the level of each reserve account at least quarterly, document this analysis, and replenish each reserve as necessary.

The financial presentation for reserves varies. Reserves maintained for on-balance-sheet exposure are generally reported as a contra asset. Reserves maintained for contingent liabilities relating to the sale of loans and servicing of loans for investors may be shown as a liability in practice.

Disclosures relating to valuation reserves should be consistent with GAAP. Examiners may wish to confer with the mortgage banking company's external auditors regarding the nature or appropriateness of any reserve accounts that are unusual.

3070.0.5.5 Earnings Performance

Earnings performance should be assessed in terms of the level, composition, quality, and trend of net income. The earnings analysis should consider internal factors such as the company's business orientation and management's growth plans, as well as relevant external factors such as interest rates and economic trends.

Unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, provisions for losses, salaries and overhead items, or income taxes should be discussed with management, as well as with internal or external auditors. Large write-downs or amortization adjustments relating to mortgage-servicing rights should also be investigated. (See section 3070.0.6.)

Current and historical ratio trend analysis, compared with published industry results (for example, see the Mortgage Bankers Association's annual statistics in the "Mortgage Banking Performance Report"), should also be incorporated into the profitability analysis, where appropriate. This includes income structure, expense structure, and operating performance ratios. However, ratios that compare earnings to average assets or equity may be of limited use unless the examiner also considers the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company's use of financial leverage. Finally, the examiner should consider the company's ability to generate sustainable positive earnings consistently over time, as well as the proportionate share of consolidated earnings (or losses).

3070.0.5.6 Liquidity and Funding

Management's ability to satisfy the company's liquidity needs and plan for contingencies without placing undue strain on affiliate bank or nonbank resources or reliance on the parent bank holding company is crucial. Liquidity needs depend on the size of the warehouse, the nature and extent of longer-term assets, opportunities to issue debt at a reasonable price, and management's ability to forecast and plan for contingencies. Liquidity is often dependent on cash generated through short-term liquid assets and on short-term borrowings to fund operations. Earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity plans are all significant factors in the evaluation of liquidity. Liquidity can quickly erode if investor perceptions of a company's credit standing change. Consequently, the ability to fund mortgage operations under economic duress and access to alternate liquidity sources become key considerations.

Funding needs are driven by the need to temporarily finance mortgage loans and MBSs before their sale to a permanent investor. The examiners should do a trend review of external liquidity to assess how easy it is to sell mortgage-backed securities by the firm in the secondary market. The analysis should include the normal trading volume in MBS securities, the volume of loans held for sale and their market value, and the size of the "floating" supply of mortgage securities or loans that are not closely held. Liquidity needs must also take into consideration longer-term assets such as fixed assets, mortgage-servicing rights, and permanent loan and MBS portfolios. (See section 2080.05.)

3070.0.5.6.1 Financial Flexibility

The liquidity analysis should include a determination as to the company's financial flexibility. Financial flexibility is the ability to obtain the cash required to make payments as needed. Cash can be obtained from (1) business operations; (2) liquid assets already held by the company either in the form of cash or marketable securities or by selling liquid assets such as receivables or inventories for cash; and (3) external lines of credit, bank borrowings, or the issuance of debt or equity securities in the capital markets.

3070.0.5.6.2 Cash-Flow Analysis

The liquidity analysis should also include a review of the net current items on the cash-flow statement pertaining to cash flow from operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. The examiner's analysis of cash flows may reveal transactional trends between cash inflows and outflows. For example, within the Cash Flows from Operating Activities, cash flow from the sale and principal repayments on mortgage loans held for sale may correlate with originations and purchases of mortgage loans available for sale. With regard to investing activities, attention should be given to the differences between short-term purchases of mortgage loans held for investment versus principal repayments on mortgage loans held for short-term investment. In addition, purchases of real estate owned from the loan-servicing portfolio may correlate with net sales of real estate owned. A review of the financing activities should indicate if there is sufficient cash flow provided from revolving warehouse lines of credit, commercial paper, proceeds from the issuance of any other short-term debt, and net changes in advances payable to affiliates.

The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity. When analyzing liquidity, the examiner needs to consider the principles and guidelines set forth in section 2080.05, "Funding (Bank Holding Company Funding and Liquidity)" of this manual.

3070.0.5.6.3 Asset/Liability Management

In general, funding liability maturities should closely approximate the maturities of underlying assets to mitigate the risk of a funding mismatch. Otherwise, the company is exposed to short-term interest-rate fluctuations unless appropriately hedged. Funding mismatches can lead to significant earnings volatility in the event that interest rates change rapidly. Management's asset/liability management program should be evaluated in terms of the degree of matching, risk aversion, and the accuracy of information that is provided to the holding company through daily, weekly, or monthly management reports.

3070.0.5.7 Capital Adequacy

Capital must be adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by third-party creditors and investors. At a minimum, a mortgage banking company must meet the nominal capital levels required by investors such as FannieMae ($250,000) or FHLMC ($1 million, based on financial reporting under GAAP, or $500,000, adjusted for certain assets and any deferred-tax liability). Additional capital is required based on the outstanding principal balance of loans serviced for investors. If these requirements are not met, the company may not be able to sell mortgages to and/or service mortgages for these investors.

As noted above, these are minimum capital requirements. Management should identify the level of capital that is required to support current operations and projected future growth, given the risk tolerance preferences of management and the board. Capital levels, dividend payments, and capital planning should be addressed in a written capital plan that is reviewed and approved by the board at least annually in conjunction with the budgeting and strategic planning activities.

There also may be a need to meet minimum leverage ratios established by the parent bank holding company or to meet debt covenants set forth in either warehouse credit facilities or long-term debt instruments. Companies that have excessive off-balance-sheet risk or high growth expectations may require additional capital. In addition, risk-based capital guidelines impose certain reporting requirements and limitations regarding the amount of MSA mortgage banking companies may include in their regulatory capital.

Capital levels should be monitored and reported to the company's board of directors regularly to mitigate the risk of inadequate or eroding capital. Management and the board are further encouraged to adopt a capital policy that specifically addresses the particular needs of the company.

The examiner should evaluate capital adequacy, the amount of dividends that are upstreamed to the parent bank holding company, and the extent to which the parent company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. In some instances, the parent company may operate on the premise that the mortgage banking company requires little capital of its own as long as the parent company remains adequately capitalized.[9] Under the Federal Reserve's source-of-strength doctrine, the parent company must be prepared to support its subsidiaries should the financial need arise. If the parent is not prepared to inject capital and capital levels have declined, the examiner should comment on the mortgage banking company's extended leveraged position on page one of the inspection report. Under extreme circumstances, the examiner should also recommend that its leverage be reduced and its capital structure augmented to ensure that mortgage operations are conducted in a safe, sound, and prudent manner.

9. When MSAs are valued for inclusion in capital, the risk-based capital guidelines for banks and BHCs require the discount rate to be not less than the original discount rate inherent in the intangible asset at the time of its acquisition, based on the estimated future net cash flows and price paid at the time of purchase.

3070.0.5.8 Overall Assessment

The overall financial condition of the mortgage banking company should reflect its financial statement presentation, asset quality, earnings, liquidity and funding practices, and capital adequacy. Report comments should be prepared to the extent necessary.

3070.0.5.9 Inspection Objectives

1. To evaluate the financial condition of the mortgage banking company based on a review of the following:

- primary balance-sheet and income-statement levels and trends
- off-balance-sheet exposure such as the servicing portfolio
- asset quality
- earnings performance
- funding sources and liquidity needs
- capital adequacy

2. To determine the accuracy of regulatory reporting (regulatory accounting practices (RAP) and GAAP) and compliance with applicable state and federal laws and regulations.

3. To evaluate the quality of the mortgage banking company's assets for collateral sufficiency, performance, credit quality, and collectibility.

4. To assess earnings performance through the analysis of the level, composition, and trend of net income. If material, interest income, impairment of mortgage-servicing assets, gains and losses on asset sales, and personnel and other expenses should be factored into the analysis.

5. To assess the funding and liquidity needs of the mortgage banking company through ratio analysis and a review of the funding instruments used.

6. To assess capital adequacy by ensuring that investor minimum requirements are met and by comparing capital levels with peer and industry data. Consideration of the capital needs of the individual mortgage banking company should override any comparison with peers.

3070.0.5.10 Inspection Procedures

Financial Statement Level and Trends

1. Review the mortgage banking company's financial statements and related notes over the previous three-year period.

2. Discuss significant balance-sheet and income-statement categories with management, as well as with internal and external auditors.

3. Determine whether financial trends are consistent with the economic environment, interest-rate movements, the company's business orientation, and management's intended growth strategy.

4. Determine whether reports filed with regulatory agencies are prepared accurately and submitted in a timely manner, with particular attention paid to the reporting for mortgage-servicing assets and recourse obligations retained by the mortgage banking company.

Asset Quality

1. Spread past-due and nonaccrual loans by balance-sheet asset category (for example, mortgage loans held for sale, mortgage loans held for investment), product type, and delinquency status (for example, 31–90 days, 91–180 days, and 181 days and over). Include any loans in the process of foreclosure.

2. Obtain a trial balance and delinquency listing for loans held for sale and loans held for investment.

a. Reconcile balances of the real estate held for sale and investment to the respective general ledger accounts.

b. Classify severely delinquent loans as required based on the financial condition of the borrower, his or her inability to make monthly payments as required, and the protection afforded by current collateral values.

c. Determine accounting policies and practices with respect to these loans. Review aging reports for loans held for sale and for investment. Discuss the frequency of reviews for loans held for sale, revaluation practices, and transfers among accounts. Verify that accounting practices are consistent with GAAP and RAP.

3. Obtain a listing of loans in the process of foreclosure and bankruptcy and discuss these with management for potential classification.

4. Reconcile all other real estate owned by the mortgage banking company to the general ledger and classify based on risks and any income-producing characteristics of the properties. Compare current appraisals to carrying value for potential write-downs.

5. Obtain a list of loans sold under recourse

arrangements and assess for potential classification.

6. Discuss the methodology used to establish foreclosure reserves and related accounting procedures. Review analysis used to project future foreclosures.

- Evaluate the adequacy of foreclosure reserves based on the volume of projected foreclosure actions, average foreclosure costs, and the past history of reinstated loans.

7. Review other reserve accounts and assess for reasonableness.

Earnings Performance

1. Assess earnings performance in terms of the level, composition, and trend of net income. Consider internal factors, such as the company's business orientation and management's growth plans, and external factors, such as interest rates and the economic environment, when evaluating earnings trends.

2. Discuss any unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, reserves, write-downs or adjustments in MSA amortization, salaries and overhead items, or income taxes with management, as well as with internal or external auditors.

3. Incorporate ratio and industry comparisons into the earnings analysis, where appropriate. Bear in mind that ratios that compare earnings to total assets or equity are of limited use unless the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company's use of financial leverage are taken into consideration.

Liquidity and Funding

1. Determine the mortgage banking company's liquidity needs based on a review of the size of its warehouse and the nature and extent of other longer-term assets.

2. Determine whether sources of liquidity are adequate, both under current conditions and economic duress. Consider earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity-planning capabilities.

3. Evaluate financial instruments used to fund mortgage operations. Financial instruments may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and/or long-term debt. Review related credit agreements and systems used to monitor compliance with debt covenants.

4. Establish whether excessive borrowing activities have led to a highly leveraged financial condition that exposes the company to money market changes in the cost of funds. Evaluate the impact a change in the company's cost of funds would have on its net interest margin and earnings.

5. Determine the degree of financial flexibility the company maintains. Financial flexibility is the ability to obtain the cash required to make payments as needed. Does the company possess adequate financial strength and have access to lines of credit and/or assets that can be easily collateralized?

6. Review the net current items on the cash-flow statement pertaining to cash flow from operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. Determine whether sufficient positive cash flow exists from the level of current transactions. The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity.

7. Review asset/liability management practices to determine whether funding maturities closely approximate the maturities of underlying assets or whether a funding mismatch exists. Is the company exposed to short-term interest-rate fluctuations that may lead to significant earnings volatility in the event that interest rates change rapidly?

Capital Adequacy

1. Determine whether capital levels are adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by investors whose loans are serviced and other external parties.

2. Review policies and procedures to determine whether management adequately monitors and reports capital levels to the board of directors. Review the capital plan to determine whether it adequately addresses the particular needs of the company.

3. Evaluate the amount of dividends that are upstreamed to the parent bank holding company, as well as the extent to which the parent

company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. Is the parent company prepared to support its subsidiaries should the financial need arise? Are cash dividends paid by the mortgage banking subsidiary to the parent company reasonable?

Accounting

1. Review accounting procedures for retail loans. Determine whether loan fees in excess of cost are deferred in accordance with SFAS 91. Verify that income is recognized over the estimated life of the asset and not in the current period and that fees and costs are allowable under SFAS 91. Are controls in place to ensure proper recognition for net fee income when loans are sold? (SFAS 91 applies to loans held in portfolio, as well as to loans swapped for securities when the securities are retained.)

2. Determine if the accounting for recognizing sales of loans and mortgage-backed securities (including participation agreements) is in accordance with the three conditions for true sales recognition specified in SFAS 77, ''Reporting for Transfers of Receivables with Recourse.''[10] Also determine if the sales price was adjusted for all probable adjustments (as defined in SFAS 5, ''Accounting for Contingencies''). If the mortgage banking company is a subsidiary of a bank, refer to the bank call report, glossary entry on ''sales of assets.''

3. If servicing is retained, determine if a ''normal servicing fee'' is set and how it conforms to FannieMae/FHLMC fees and to FASB Technical Bulletin 87-3, ''Accounting for Mortgage-Servicing Fees and Rights.''[11] If the mortgage banking subsidiary is a subsidiary of a bank, see the reporting instructions for Schedule F of the bank call report (Schedule RC-F for Other Assets, Item 3—Excess residential mortgage-servicing fees receivable).

Overall Financial Condition

1. Evaluate the overall financial condition of the mortgage banking company, considering its asset quality, earnings, liquidity, and capital adequacy. Update the financial component of the supervisory rating and prepare report comments as necessary.

3070.0.6 MORTGAGE-SERVICING ASSETS AND LIABILITIES

This subsection discusses mortgage-servicing assets (MSAs) and liabilities and provides guidance with respect to the measurement, impairment testing, and financial reporting requirements of MSAs. The subsection concludes with a discussion of MSA hedging practices and instruments.

SFAS No. 125 ''Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,'' was issued in June 1996 as an amendment to SFAS Nos. 65, 76, 77, and 115. The provisions of SFAS 125 supersede SFAS 122 and are to be applied prospectively in fiscal years beginning after December 31, 1996. The statement requires that a liability be derecognized when either (1) the debtor pays the creditor and is relieved of its obligation for the liability or (2) the debtor is legally released from being the primary obligor under the liability either judicially or by the creditor.

Under SFAS 125, a mortgage banking company is required to recognize as separate assets or liabilities the right to service mortgage loans for others, however those servicing rights are acquired. Servicing of mortgage loans includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure

10. A transfer is recognized as a sale if—

a. The transferor surrenders control of the future economic benefits of the receivables;

b. The transferor's obligation, under the recourse provisions of the sale agreement, can be reasonably estimated. The transferor should have had past experience with the recourse provisions so that a reasonable estimate can be made. The current transferred receivables should possess characteristics similar to previously transferred receivables evidencing the transferor's relevant prior experience.

c. The transferor cannot require the transferee to repurchase the receivables, except as stated in the agreement's recourse provisions.

11. According to FASB Technical Bulletin No. 87-3, the servicing-fee rates set by GNMA, FHLMC, and FannieMae in servicing agreements should be considered a normal servicing-fee rate for transactions with those agencies. If the normal service fees are expected to be less than the estimated servicing costs, the expected loss should be recognized at the time the loans are sold. If a seller/servicer sells mortgage loans directly to private-sector investors and retains servicing on the loans, the seller/servicer should consider the normal servicing-fee rate that would have been specified in comparable servicing agreements if the loans had been sold to or securitized by one of the federally sponsored secondary market makers. As of May 1995, normal servicing-fee rates established by GNMA, FHLMC, and FannieMae were 44, 25, and 37.5 basis points, respectively.

if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interest in the mortgage loans. Servicing is inherent in all mortgage loans; however, it becomes a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing.

3070.0.6.1 Measurement

A mortgage banking company initially acquires MSAs either by (1) purchasing the right to service mortgage loans separately or (2) purchasing or originating mortgage loans and selling those loans with servicing rights retained. When a mortgage banking company purchases or originates mortgage loans, the cost of acquiring those loans includes the cost of the related MSAs.

With respect to SFAS 125, when an entity incurs an obligation to service financial assets, it must record servicing assets or a servicing liability for each servicing contract, unless it securitizes the assets and retains all of the resulting securities, classifying them as debt securities that are to be held to maturity. When servicing assets or liabilities are assumed, rather than being acquired by a sale or undertaken in a securitization of the financial assets that are to be serviced, they are measured initially at fair value (that is, the price paid). A servicing asset or liability is amortized in proportion to and over the period of estimated net servicing income (loss). Any impairment of a servicing asset or liability is determined based on fair value.

When the mortgage banking company sells or securitizes the loans and retains the MSAs, management shall allocate the total cost of the mortgage loans (the recorded investment in the mortgage loans including net deferred loan fees or costs and any purchase premium or discount) to the MSAs and the loans (without the MSAs) based on their relative fair values if it is practicable to estimate those fair values. If a mortgage banking organization undertakes a servicing liability in a sale or securitization, the servicing liability should initially be measured at fair value.

The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information that is available, including prices for similar assets and the results of valuation techniques used by management. Valuation techniques may include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved; option-pricing models; matrix pricing; option-adjusted spread models; and fundamental analysis. Valuation techniques for measuring MSAs should be consistent with the objective of measuring fair value and should incorporate assumptions that market participants would use in their estimates of future servicing income and expense, including assumptions about prepayment, default, and interest rates. If it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs), the entire cost of acquiring the mortgage loans shall be allocated to the mortgage loans (without the MSAs) and no cost shall be allocated to the MSAs.

The amount capitalized as MSAs shall be amortized in proportion to and over the period of estimated net servicing income. Estimates of future servicing revenue shall include expected late charges and other ancillary revenue. Estimates of expected future servicing costs shall include direct costs associated with performing the servicing function and appropriate allocations of other costs. Estimated future servicing costs may be determined on an incremental-cost basis.

MSAs are highly subject to interest-rate and prepayment-rate risk since the amount of future cash flows that are provided to the holder is derived from, and is thus dependent on, the outstanding balances of the underlying mortgage loans.[12] Prepayments of underlying mort-

12. Several conventions exist for quantifying prepayment speed. The most common convention is a measure developed by the Public Securities Association (PSA). The PSA measure was based on actual historical experience of FHA mortgages, but it is not predictive. The PSA measure assumes that mortgages prepay at a rate of .2 percent per year in the first month, increase by .2 percent each subsequent month up to 30 months, and remain at 6 percent per year thereafter until maturity. This 6 percent level is referred to as 100 percent PSA. Mortgages that prepay at 200 percent PSA pay off twice as fast as a mortgage that is performing at 100 percent PSA. Another convention is known as the conditional prepayment rate (CPR) measure. CPR assumes that a constant fraction of the

gage loans accelerate during periods of declining interest rates as borrowers take advantage of the option they hold to refinance their loans. As interest rates decline, holders of MSAs are exposed to a risk of prepayment of the underlying loans, and thus a diminished amount of cash flow from their investment. Holders of interest-only stripped securities (I/O strips) are exposed to similar interest-rate and prepayment risks when interest rates decline. I/O strips possess very similar prepayment risk characteristics.

A particular mortgage company's exposure to prepayment risk can also be influenced by portfolio composition factors such as geographical mix, loan-to-value ratios, and the proportion of government (FHA/VA) and conventional loans in the portfolio. Government loans that may be assumable by the purchaser of a home are generally for smaller amounts and may be extended to borrowers with limited financial resources. As a result, government loans tend to prepay more slowly than conventional loans.

Unanticipated changes in interest rates, prepayment speed, or other valuation assumptions may impair the carrying value of MSAs and require accelerated amortization or a write-down. Therefore, the recoverability of the unamortized balance should be evaluated periodically, and amortization and/or the value of the asset should be adjusted accordingly. To the extent that impairment is not recognized, MSA values may be inflated. As a result, assets, earnings, and capital may be overstated.

3070.0.6.2 Impairment Testing

SFAS 125 states that a mortgage banking company shall measure impairment of capitalized MSAs[13] based on their fair value. For the purpose of evaluating and measuring impairment of capitalized MSAs, management should stratify those assets based on one or more of the predominant risk characteristics of the underlying loans.[14] Those characteristics may include loan type, loan size, note rate, date of origination, term, and geographic location.

Impairment shall be recognized through a valuation allowance for an individual stratum. The amount of impairment that is recognized shall be the amount by which the capitalized MSAs for a given stratum exceed their fair value. The fair value of MSAs that have not been capitalized shall not be used in the evaluation of impairment.

Subsequent to the initial measurement of impairment, management shall adjust the valuation allowance to reflect changes in the measurement of impairment. Fair value in excess of the capitalized MSAs shall not be recognized. If the fair value of a mortgage-servicing liability increases above the book value, the increased obligation shall be recognized as a loss in current earnings. SFAS 125 does not address when a mortgage banking company should record a direct write-down of capitalized MSAs; therefore, examiner judgment in this area is required.

3070.0.6.3 Disclosures

SFAS 125 requires that the fair value of capitalized MSAs, and the methods and significant assumptions used to estimate that fair value, be disclosed. If no cost is allocated to certain MSAs, management shall describe those MSAs and describe the reasons why it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs). The risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment shall also be disclosed. For each period for which results of operations are presented, the activity in the valuation allowances for capitalized MSAs, including the aggregate balance of the allowances at the beginning and end of each period, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances shall be disclosed.

3070.0.6.4 Intercompany MSAs

Intercompany MSAs may arise when a mortgage banking company originates loans, sells the loans to an affiliate bank, and the affiliate bank records related MSAs. Intercompany MSAs should be evaluated closely to determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has

remaining principal is prepaid each period, "conditional" on the previous period's remaining balance. Typically, CPR is computed over a one-month time period. The PSA model simply represents a series of stable CPR assumptions.

13. The term "capitalized mortgage-servicing rights" refers to the cost originally allocated to the MSAs less the amount amortized.

14. SFAS 65, as amended, applies to impairment evaluations of all capitalized MSAs. However, a mortgage banking company may continue to apply its previous accounting policies for stratifying MSAs to MSAs that were capitalized before the adoption of the amendments to SFAS 65.

revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

3070.0.6.5 Table Funding

One method of acquiring mortgage loans, and recording related MSAs, is through so-called "table-funding arrangements." In a table-funding arrangement, the mortgage banking company provides the original funding when a mortgage broker or correspondent closes the mortgage loan with the borrower. Concurrent with the loan closing, the mortgage banking company acquires the loan and the related MSAs.

Emerging Issues Task Force Issue No. 92-10 (EITF 92-10), "Loan Acquisitions Involving Table Funding Arrangements," clarified under what conditions these arrangements could be characterized as loan purchases. According to EITF 92-10, a mortgage banking company may account for a loan acquired in a table-funding arrangement as a purchase only if *all* of the following conditions are met:

- The correspondent is registered and licensed to originate and sell loans under the applicable laws of the states or other jurisdictions in which it conducts business.
- The correspondent originated, processed, and closed the loan in its own name and is the first titled owner of the loan, with the mortgage banking company becoming a holder in due course.
- The correspondent is an independent third party and not an affiliate of the mortgage banking company as defined in SFAS 65. As a nonaffiliate, the correspondent must bear all of the costs of its place of business, including the costs of its origination operations.
- The correspondent must sell loans to more than one mortgage banking enterprise and not have an exclusive relationship with the purchaser.
- The correspondent is not directly or indirectly indemnified by the mortgage banking company for market or credit risks on loans originated by the correspondent. However, a commitment by the mortgage banking company for the purchase of loans from the correspondent is not considered to be an indemnification for purposes of this requirement.

If any one of the above criteria is not met, the mortgage banking company must account for the loan as an origination. MSAs that were recorded before the adoption of the SFAS 65 amendments should be reviewed to ensure that they were originated and funded consistent with the above requirements. MSAs that are recorded under SFAS 125 may arise in connection with either originated or purchased mortgage loan transactions.

3070.0.6.6 Regulatory Reporting

The examiner should also determine whether the method used to value MSAs is in accordance with the instructions for the Bank Report of Condition and Income (call report) and the BHC reporting instructions (FR Y-9C). If capitalized MSAs are not appropriately valued, they cannot be included in capital. Management should review the carrying amount at least quarterly, adequately document this review, and adjust the book value as necessary.

3070.0.6.7 Risk-Based Capital

Readily marketable MSAs may be included in a bank or bank holding company's tier 1 capital subject to certain limitations. Tier 1 capital for bank holding companies includes common equity, minority interest in the equity accounts of consolidated subsidiaries, qualifying noncumulative perpetual preferred stock, and limited qualifying cumulative perpetual preferred stock.[14a] Tier 1 capital excludes goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, exceed 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, exceed 25 percent of tier 1 capital;[15] all other identifiable intangible assets; and deferred-tax assets that are dependent upon future

14a. Cumulative perpetual preferred stock is limited to 25 percent of tier 1 capital.

15. Amounts of MSAs, non-MSAs, and PCCRs in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from an organization's core capital requirements in determining tier 1 capital. Identifiable intangible assets, however, exclusive of MSAs and PCCRs, acquired on or before February 19, 1992, generally will not be deducted from capital for supervisory purposes. They will, however, continue to be deducted for applications purposes.

taxable income, net of their valuation allowance, in excess of certain limitations.

The amount of MSAs which may be included in capital is also limited to the *lesser* of—

- the amount recorded on the balance sheet under GAAP, or
- 90 percent of their fair market value. If both the application of the limit on MSAs and the adjustment of the balance-sheet amount for MSAs would result in an amount being deducted from capital, the bank holding company would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

3070.0.6.8 Previously Recognized Excess Servicing-Fee Receivables

SFAS No. 125, "Accounting for the Transfers and Servicing of Financial Assets and Extinguishments of Liabilities" (paragraph 20), addresses the accounting treatment for excess servicing-fee receivables based on contracts that were in existence before January 1, 1997. Previously recognized servicing rights and excess servicing-fee receivables are to be combined, net of any previous servicing obligations under the contract, as a servicing asset or a servicing liability. Any previously recognized excess servicing-fee receivables that exceed contractually specified servicing fees are to be reclassified as interest-only strips receivables.

3070.0.6.9 MSA Hedging Practices and Instruments

During the refinancing waves of 1992 and 1993, several mortgage banking companies experienced large losses due to the impact of rising prepayments on the value of servicing rights. As a result, many companies have begun to hedge MSAs. An effective hedge program should reflect a solid understanding of the underlying MSA risk characteristics.

3070.0.6.9.1 Hedging Practices

Interest-rate and prepayment-rate risk are often reduced through the natural offset between the production and servicing functions; however, the degree of protection afforded by this relationship depends on the company's business orientation (originations versus purchases) and can be very difficult to measure.[16] Other financial instruments are also used to mitigate interest-rate and prepayment-rate risks. The remainder of this subsection discusses existing hedge accounting guidance and rudimentary descriptions of certain customized MSA hedge products. Examiners should also refer to the Federal Reserve System's *Trading Activities Manual* for additional guidance on derivatives.

3070.0.6.9.2 Hedge Accounting

Existing accounting literature is vague with respect to the accounting treatment for MSA hedge products, particularly in the area of derivatives. However, analogies exist that facilitate the application of existing accounting standards. SFAS No. 80, "Accounting for Futures Transactions," provides financial reporting standards for exchange-traded futures contracts on both interest-rate products and raw materials (commodities). Several EITF issues releases provide financial reporting guidance for interest-rate swap transactions. Finally, an issues paper prepared by the American Institute of Certified Public Accountants (AICPA), "Accounting for Options," provides informal but nonauthoritative guidance relating to options contracts. The AICPA issues paper addresses options on all tangible goods, including both exchange-traded options and nonexchange traded options on interest-rate caps and floors.

To qualify for hedge-accounting treatment under SFAS 80, a financial instrument must meet two criteria:

- The hedged item exposes the entity to price or interest-rate risk.
- The financial instrument used as a hedge reduces that exposure and is designated as a hedge.

SFAS 80 states that at the inception of the hedge and throughout the hedge period, changes in the market value of the financial instrument used as a hedge should correlate highly with changes in

16. When interest rates fall, increases in production volumes and related revenues tend to offset runoff in the servicing portfolio and reductions in servicing-fee income. Alternatively, to the extent that the marketing department hedges less than 100 percent of its estimated long position (closed loans plus rate-locked loans that are expected to close) and interest rates fall, the resulting marketing gains on the uncovered position tend to offset a portion of any required write-downs in the servicing portfolio.

the fair value of, or interest income or expense associated with, the hedged item(s) so that the results of the financial instrument(s) used as a hedge will substantially offset the effects of price or interest-rate changes on the exposed item(s). Although required correlation levels are not specifically defined, the accounting industry has determined that 80 percent is a reasonable benchmark.

Before claiming hedge-accounting treatment, management must obtain an opinion from its CPA or internal accountant confirming that the instrument that is proposed would qualify for such treatment. If these criteria are not met, the financial instrument should be carried at its market value (i.e., marked to market). Hedge performance should be monitored daily and reported to the responsible management or board committee at least quarterly.

3070.0.6.9.3 Relevant MSA Characteristics

To evaluate a mortgage banking company's hedge program for MSAs, one must first understand how MSAs perform. Duration, convexity, and amortization are useful concepts that will be reviewed as they relate to MSAs. Duration measures the change in the value of MSAs (or their cash flows) for a given change in interest rates. Duration can be either positive or negative. An asset with a positive duration, such as a fixed-income bond, tends to increase in value as interest rates fall. Conversely, an asset with a negative duration, such as an MSA, tends to decrease in value as interest rates fall.

Convexity measures the rate of change in an instrument's duration, or the nonlinearity of its price/yield curve. Like duration, convexity can be either positive or negative. An asset with a positive convexity will rise more in value for a given change in interest rates than it will fall if interest rates move equally in the opposite direction. Conversely, an asset with a negative convexity will decline more in value for a given change in interest rates than it will increase in value if interest rates move equally in the opposite direction. Because of their prepayment characteristics, MSAs and most other mortgage-related assets are negatively convex within a specified range of interest rates. Borrowers can be expected to exercise their option to prepay a loan at a time that is most disadvantageous to the MSA holder.

MSAs are also an amortizing asset. When a prepayment occurs, the loss of value is permanent and cannot be recovered. The use of a nonamortizing asset as a hedge would necessitate an active hedge-management strategy to adjust the position as the unamortized balance of the MSAs declines. If the position is not adjusted correctly, this strategy may expose earnings and capital to additional risks that are not within the scope of the company's MSA hedge program.

3070.0.6.9.4 Hedge Instruments

An effective MSA hedge instrument will possess characteristics that mitigate the interest-rate and prepayment risks associated with MSAs without assuming additional basis risk. Basis risk measures how well changes in the value of the hedge instrument correlate to changes in the value of the MSA. An effective hedge should also be reasonable in terms of transaction costs and management's time.

Several types of specialized derivative products have evolved to meet the needs of mortgage banking companies. Early MSA hedge products were interest-rate-driven, utilizing zero-coupon Treasury bonds or interest-rate swaps. However, the basis risk of such hedges proved to be excessive. Next came principal-only (PO) and super-principal only (SPO) bonds, which were prepayment-driven.[17] However, these products also proved ineffective due to geographic basis risk, potential average-life mismatches, additional capital requirements, and dissimilar accounting treatment which led to accounting losses.

MSA hedge products generally fall into three categories: bond hedges, short-term option hedges, and long-term option hedges. Bond hedges use Treasury bonds, "plain vanilla" interest-rate swaps, interest amortizing rate swaps, positive convexity swaps, POs, and SPOs. Bond hedges may be either interest-rate-driven or prepayment-rate-driven. Prepayment-rate-driven products reduce more basis risk and are therefore more expensive. Although most bond hedges are positively convex, they fail to provide enough positive convexity to offset the negative convexity in MSAs. In other words, when interest rates decline, the value of the bond hedge will not increase in an amount sufficient to offset the simultaneous decline in the MSAs. Another disadvantage to bond hedges is that the downside

17. A special class of REMIC securities backed by POs. SPOs are a more leveraged type of PO.

risk is generally unlimited.

Short-term option hedges consist of over-the-counter (OTC) Treasury options, options on futures contracts, and options on OTC mortgage securities. Short-term option hedges generally contain enough positive convexity to offset the negative convexity of MSAs, and the downside risk is limited to the option premium paid at inception. However, option strategies using these products require frequent rebalancing, are therefore expensive, and do not work well in a rapidly changing interest-rate environment because they are not amortizing assets.

Long-term option hedges include prepayment caps, interest amortizing rate (IAR) servicing hedges, LIBOR floors, and swaptions. These products may protect the servicer and/or seller against changes in either interest rates or prepayments. As off-balance-sheet products, they impose very few capital constraints on the MSA holder.

A prepayment cap is an off-balance-sheet, prepayment-driven option product that can be used to hedge a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a payment from the counterparty every month that the option is "in the money." The option is in the money if the difference between the "strike balance" and the actual balance of a "reference portfolio," less the sum of previous balance differences, is positive. Each month the option is in the money, the counterparty will pay the "strike price," usually the book cost of the servicing portfolio, multiplied by this balance shortfall. The reference portfolio, strike price, and strike balance can be customized to match the servicer and/or seller's risk parameters and individual portfolio.

An IAR servicing hedge is an off-balance-sheet, interest rate–driven option product that can be used as either a revenue or a balance-sheet hedge of a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a series of payments from the counterparty to the extent that amortization of a "reference balance" exceeds scheduled amortization of a "strike balance." The main difference between an IAR and a prepayment cap is that with an IAR, option payments are based on the performance of a "reference portfolio" rather than the seller and/or servicer's actual portfolio. For an IAR revenue hedge, the option payout is based on the current balance shortfall between the reference and strike balances. For an IAR balance-sheet hedge, option payouts are based on the cumulative excess amortization of the reference balance over the strike balance. IAR hedges are less expensive than comparable prepayment-linked hedges because they contain basis risk. If actual prepayments occur more rapidly than predicted at the onset of the hedge, the servicer and/or seller will be underhedged.

Numerous other types of customized hedge products are available. The advantages and disadvantages of each product should be well understood before it is incorporated into a mortgage banking company's interest-rate risk management strategies.

3070.0.6.10 Inspection Objectives

1. To determine whether MSAs pose a significant financial risk to earnings and capital.
2. To evaluate management's expertise and the oversight provided by the board of directors.
3. To determine whether policies and procedures used to initially record, amortize, and reevaluate MSAs are in conformance with GAAP and risk-based capital requirements, and whether actual practice is consistent with stated policies and procedures.
4. To verify that asset values are fairly stated.
5. To evaluate the methods used to hedge interest-rate and prepayment risks associated with MSAs, the degree of oversight provided by management or the board of directors, the adequacy of written policies and procedures, and the effectiveness of the company's hedge program for MSAs.
6. To identify any excessive risk-taking which is caused by the company's business mix and/or strategy.

3070.0.6.11 Inspection Procedures

1. Determine the extent of financial risk associated with MSAs through a review of the following:

    a. Significant changes in the size of the servicing portfolio. Obtain a reconciliation for the servicing portfolio for the prior fiscal year and the most recent interim period. If significant growth has occurred, determine whether loans were originated, purchased individually (on a flow basis), purchased in bulk transactions, or acquired through whole company acquisitions. If the portfolio size has declined, determine the reason for such decline (sales of servicing rights, prepayments) and the impact on the remaining servicing portfolio.

b. The proportion of capitalized MSAs relative to the outstanding principal balance of mortgage loans in the servicing portfolio.

c. Other unusual characteristics of the servicing portfolio that may present undue risk, such as the weighted average coupon rates, weighted average maturities, delinquency characteristics, or mix of government (FHA/VA) loans versus conventional loans.

If the level of financial risk is sufficient to place earnings and capital at risk, the examiner should complete the remainder of the MSA procedures.

2. Review the qualifications of the individuals who are responsible for initially recording, amortizing and evaluating MSAs. Does management possess the necessary accounting expertise and experience with respect to valuation methodologies?

3. Review the accounting systems used to track MSAs. Is the necessary information being maintained in an understandable and useable form? Does the adoption of SFAS 65, as amended, and 125 pose any system problems for the company? Are such problems being addressed in a timely manner? At a minimum, MSAs should be tracked by product type and year of origination. The following information should be maintained for each pool of loans: the original and current principal balance for each pool; original and current book values of related MSAs; prepayment speeds, normal servicing fees, and the original discount rate used; and the actual historical payment experience for each pool.

4. Review written policies and procedures for initially recording, amortizing, and periodically revaluating MSAs. Determine the management or board committees responsible for approval of such policies, the date of last approval, and the frequency of their review.

5. Determine whether MSA policies and procedures are in conformance with GAAP and risk-based capital requirements and whether actual practice conforms with established policies and procedures. At a minimum, policies and procedures should clearly address the following areas:

a. Initial valuation of MSAs and related pricing policies. With respect to MSAs, policies and procedures should describe the method for allocating the total cost of originated and purchased mortgage loans to the MSAs and the related loans (without the MSAs) based on their relative fair values at the date of origination or purchase; procedures to be followed if a definitive plan for sale of the loans does not exist and loans are sold at a later date; procedures to be followed in the event that it is not practicable to estimate the fair value of the MSAs and the related loans (without MSAs); and MSAs recorded under table funding relationships with correspondents and/or brokers.

b. The method for amortizing MSAs over the estimated lives of the assets, and instances where amortization lives may be adjusted.

c. The method for measuring impairment of capitalized MSAs based on their fair value. Policies and procedures should address the basis for stratification of MSAs based on the risk characteristics of the underlying loans; the types of valuation allowances used to reflect changes in the measurement of impairment; the method used to arrive at the fair value of assets (quoted market prices, estimated prices for similar assets, and the results of valuation techniques); the frequency of revaluation tests; the presentation of valuation test results to senior management and the board of directors; instances where write-downs would be required; disclosures; and the basis for assumptions used.

6. Verify that the valuation techniques for measuring MSAs are consistent with the objective of measuring fair value. Review model output and related manuals and/or marketing materials. Evaluate the reasonableness of all key parameters and assumptions, with an emphasis on the source for prepayment speed estimates, the number of interest-rate "paths" used (vectoring or binomial models being more desirable than a single interest-rate projection path), the basis for the interest rate used to discount cash flows, and the source of servicing revenue and cost data.

7. Review the most recent quarterly valuation process and the related output to determine whether necessary write-downs or amortization adjustments were made, management or board oversight was adequate, and actual practice is consistent with established policies and procedures. Ensure that any significant changes to the model's parameters and/or output are approved by the appropriate management or board committee and that such changes are adequately documented.

8. Verify that disclosures are accurate with respect to the following:

- the fair value of capitalized MSAs
- the methods and significant assumptions used to estimate that fair value
- a description of MSAs for which no cost

has been allocated and the reasons why it is not practicable to estimate the fair values of those MSAs and the mortgage loans (without the MSAs)
- the risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment
- the activity in the valuation allowances for capitalized MSAs, including the aggregate balance of the allowances at the beginning and end of each period; aggregate additions charged and reductions credited to operations; and aggregate direct write-downs charged against the allowances

9. Obtain a list of intercompany MSAs as of the close of business for the most recent quarter-end. Determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

10. Review policies and practices regarding the sale of MSAs and liabilities to investors.

11. If the company sells loans with recourse, are recourse reserves established at the time of sale? Are estimated losses factored into the calculation of gain/loss on sale of loans?

12. Obtain an organizational chart to determine the individuals responsible for hedging MSAs. Review biographies to ensure that staff members responsible for this function are knowledgeable regarding accounting guidance, hedge products, and related strategies.

13. Review methods used to hedge the interest-rate and prepayment-rate risk associated with MSAs. Verify the management or board committee responsible for approving hedge instruments, the list of approved products, and the frequency and date of last review.

14. Review management reports to determine the correlation between hedge instruments and the underlying assets, the accounting treatment for hedges, related gains and losses, and the overall effectiveness of the company's hedge program. If hedge accounting treatment is being used, management and/or the company's external accountants must perform the appropriate level of due diligence and maintain adequate supporting documentation. In determining the effectiveness of the hedging program, the examiner should compare the actual results of hedge performance with the expected results.

15. Evaluate the quality of information that is communicated to senior management, the board of directors (if applicable), and the parent company's senior management and board of directors to determine whether management and directors are adequately informed regarding the financial risks associated with MSAs, amortization methods and hedging techniques, and the degree of risk inherent in the company's strategic focus and business mix with respect to the projected volume of MSAs.

3070.0.7 INTERCOMPANY TRANSACTIONS

A mortgage banking company that is organized as a nonbank subsidiary of a bank holding company often sells assets to, receives funding from, or services loans for its bank affiliates. Given the trend toward managing mortgage banking activities as a line function rather than by legal entity, such intercompany transactions have become an area of heightened supervisory concern.

In general, sections 23A and 23B of the Federal Reserve Act are designed to prevent a bank from being disadvantaged through the purchase of low-quality assets from an affiliate, the pressure to fund the majority of an affiliate's working-capital needs, and intercompany transactions that either inadequately compensate the bank or are not conducted on an arms-length basis.

3070.0.7.1 Section 23A of the Federal Reserve Act

Section 23A was enacted as part of the Banking Act of 1933 (the Glass-Steagall Act) for state member banks and later extended to all federally insured banks.[18] Section 23A defines companies that control or are under common control with the bank as affiliates of the bank. For example, the term "affiliates" includes bank holding companies and their subsidiaries as well as banks and nonbanking companies that are under common individual control.[19] The two

18. As originally enacted, the Banking Act of 1933 covered only member banks. In 1966, Congress amended section 18(j) of the Federal Deposit Insurance Act, 12 U.S.C. 1828(j), to extend the coverage of section 23A to include insured nonmember banks. As a result, section 23A now applies to all federally insured banks. (12 U.S.C. 371c)

19. Nonbank subsidiaries of banks, as opposed to nonbank subsidiaries of bank holding companies, are not affiliates for purposes of section 23A, unless the Board of Governors of the Federal Reserve System determines otherwise. Banks that are

primary aspects of section 23A—quantitative restrictions and collateral requirements—are discussed next.

3070.0.7.1.1 Quantitative Restrictions

The quantitative restrictions imposed by section 23A generally limit the aggregate amount of so-called "covered transactions" to 10 percent of the bank's capital and surplus for transactions with a given affiliate, and 20 percent of the bank's capital and surplus for transactions with all of its affiliates.[20] Covered transactions include—

- a loan or extension of credit by a bank to an affiliate, such as a warehouse line of credit provided to the affiliate;
- the purchase of or investment in securities such as a privately issued MBS issued by an affiliate;
- the purchase of assets from an affiliate, such as a loan purchased either as an accommodation to a bank customer or for the bank's asset/liability management purposes;
- the acceptance by a bank of securities issued by an affiliate as collateral for a loan or extension of credit by the bank to any person or company (Securities might include either the stock of a publicly held affiliate or the stock from one of its officer's own business enterprises.); or
- the issuance by a bank of a guaranty, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate (A letter of credit might be posted by the bank to cover an excessive number of GNMA pools that lack final pool certification.).

The examiner should determine the bank's method for identifying covered transactions and applying the quantitative limits for section 23A purposes. If a covered transaction is found that exceeds these quantitative limits, either on an individual or an aggregate basis, an apparent violation of section 23A has occurred. All such apparent violations of law should be discussed with management and cited in the report.

Particular attention should be paid to intercompany asset transfers and funding arrangements to determine whether they constitute covered transactions under section 23A. In Interpretation 250.250 (12 C.F.R. 250.250)[21] the Board determined that a member bank's purchase, without recourse, and at face value, of a mortgage note, or a participation therein, from a mortgage banking subsidiary of the parent bank holding company, which had no financial interest in the underlying asset on which it had granted credit through the note, did not involve a "loan" or "extension of credit"[22] from the member bank to the seller of the mortgage note within the meaning of section 23A if—

- the member bank's commitment to purchase the loan or participation therein was obtained by the affiliate within the context of a proposed transaction or series of proposed transactions in anticipation of the affiliate's commitment to make such loan(s),
- the commitment to purchase the loan was based on the bank's independent credit evaluation of the creditworthiness of the mortgagor(s),[23] and
- there could be no blanket advance commitment by the member bank to purchase a stipulated amount of loans that bore no reference to specific proposed transactions. Accordingly, the nonbank affiliate must have adequate and independent working capital to fund its operations.

The Board stated that if the bank followed these procedures, then the bank would be taking advantage of an individual investment opportunity and thus should be exempt from section 23A. However, the Board was concerned that the bank should not be allowed to set up a business relationship with any affiliate which could create the opportunity for the bank, at some time in the future, to engage in unsafe transactions because the bank felt impelled by an improper incentive to alleviate the working-capital needs of the affiliate. Accordingly, the bank's transactions with the affiliate should not be of such a volume as to create pressure on the bank to relax its sound credit judgment concerning the individual loans involved and thereby

part of a chain banking organization are subject to the restrictions of section 23A.

20. For section 23A purposes, the definition for capital and surplus includes the allowance for loan and lease losses.

21. See also *Federal Reserve Regulatory Service*, 3–1133.

22. Under section 23A, as amended by the Garn–St Germain Act in 1982, a member bank's purchase of a loan from its nonbank affiliate that was made to an unaffiliated party is now considered a purchase of an asset from the affiliate unless it is excepted under interpretation 250.250.

23. Dual employees may not be used to satisfy the independent credit evaluation requirement.

result in an inappropriate risk to the soundness of the bank.

3070.0.7.1.2 Collateral Requirements

In addition to the quantitative restrictions, certain covered transactions between a bank and an affiliate must also be secured at the time of the transaction by collateral having a certain market value. Unless otherwise exempted, covered transactions that must be adequately secured include loans or extensions of credit, guaranties, acceptances, and letters of credit issued on behalf of the affiliate.

Collateralization requirements range from 100 percent to 130 percent depending on the type of collateral used. Acceptable forms of collateral include U.S. government or U.S. government–guaranteed obligations, instruments that are acceptable at the Federal Reserve's discount window, bank deposits that are segregated into accounts specifically earmarked for this purpose, other debt instruments, stock, leases, or other real or personal property. According to an August 31, 1987, Board interpretation (at FRRS 3–1164.3), mortgage-servicing rights do not constitute a permissible form of collateral for purposes of section 23A because of (1) their inherent volatility, making it difficult to accurately value the rights, and (2) the need to secure permission to transfer servicing rights from the legal owner of the underlying mortgage.[24]

An example of a covered transaction that is subject to both the quantitative restrictions and the collateral requirements of section 23A would be an overdraft in the mortgage company's checking account with an affiliate bank, which is considered an extension of credit. A line of credit by a bank to a nonbank affiliate also constitutes a covered transaction. It is important to remember that the full value of the line, not just the portion drawn down, must satisfy the quantitative and the collateral requirements of section 23A at all times. The examiner should review checking accounts and funding arrangements to ensure that the appropriate level and type of collateral is maintained. Collateral values should be monitored regularly so that depreciated or matured collateral is replaced as needed.

24. Item (2) refers to the bank's ability to sell the mortgage-servicing rights if the affiliate defaults on its loan.

3070.0.7.1.3 Prohibited Transactions

In addition to the quantitative and collateral requirements, section 23A also prohibits certain affiliate transactions altogether. Most importantly, a bank and its subsidiaries may not purchase a low-quality asset (generally a classified or past-due asset) from an affiliate or accept a low-quality asset as collateral for a loan. Section 23A also requires that all covered transactions be conducted on terms that are consistent with safe and sound banking practices.

3070.0.7.1.4 Exemptions from Section 23A of the FRA

As mentioned previously, several types of intercompany transactions are exempted from the requirements of section 23A. For example, transactions between banks in which 80 percent or more of each bank's stock is owned by the same bank holding company (so-called "sister banks") are exempt from most provisions of section 23A.[25] Other transactions that are exempt include the following:

- deposits received from the affiliate during the ordinary course of business (checks in the process of collection)
- immediate credit given to an affiliate for uncollected items received in the ordinary course of business
- loans, extensions of credit, guaranties, acceptances, or letters of credit issued on behalf of the affiliate that are fully secured by obligations issued or guaranteed by the U.S. government or a segregated earmarked account in the bank
- the purchase of assets having a readily and identifiable market price at the time of purchase
- transactions that are deemed to be in the public interest and consistent with the purposes of the act

Internal controls should be in place to ensure

25. Foreign banks do not qualify as sister banks for section 23A purposes. These transactions are still subject to the prohibition against the purchase of low-quality assets and to the requirement that covered transactions be on terms and conditions that are consistent with safe and sound banking practices. It should also be noted that federal savings banks do qualify for the sister-bank exemption if all banks in the corporate chain have met their fully phased-in capital guidelines, as provided for in the Home Owner's Loan Act.

that all transactions are adequately reviewed. Documentation should be maintained for intercompany transactions that are exempted from the requirements of section 23A.

3070.0.7.2 Section 23B of the Federal Reserve Act

The Competitive Equality Banking Act of 1987 amended the Federal Reserve Act to add a new provision, known as section 23B. In general, section 23B provides that covered transactions between a bank and its affiliates must be on terms and under circumstances, including credit standards, that are substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If no comparable transactions exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonaffiliated companies. A bank is also generally prohibited from purchasing as a fiduciary securities or assets from an affiliate except under specified circumstances. Finally, a bank and its affiliate may not advertise or enter into an agreement that suggests the bank is in any way responsible for the obligations of the affiliate.

Section 23B applies to any covered transaction with an affiliate, as that term is defined in section 23A. However, section 23B excludes banks from the term ''affiliate.'' Therefore, transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B.

3070.0.7.3 Management and Service Fees

The Federal Reserve System's 1979 policy statement on diversion of bank income practices is intended to prevent excessive or unjustifiable management or service fees, as well as any other unwarranted payments or practices that, by diverting bank resources to the parent company or a nonbank affiliate, may have an adverse financial impact on a subsidiary (paying) bank (see section 2020.6). Diversion of income practices with respect to a mortgage banking company might potentially include, but are not limited to—

- servicing fees, or other payments assessed by the mortgage banking company and paid by the bank that bear no reasonable relationship to the fair market value, cost, volume, or quality of services rendered by the nonbank subsidiary in its role as servicer and/or seller;
- balances maintained by the bank primarily in support of mortgage banking company borrowings without appropriate compensation to the bank;
- prepayment of fees to the mortgage banking company for services not yet rendered;
- nonreimbursed origination fees, marketing costs, or other expenses incurred by the bank that primarily support the mortgage banking company's activities; and
- loan repurchase agreements between the bank and the mortgage banking company while the mortgage banking company is processing loans in the mortgage pipeline.

Purchase and funding agreements should adequately itemize and document the types of services provided and the basis for fees. Billing statements and other documentation should clearly evidence that fees actually charged and paid are reasonable and consistent with regulatory policy requirements as described.

3070.0.7.4 Tie-In Considerations of the BHC Act

Section 106 of the BHC Act Amendments of 1970 contains five restrictions intended to prohibit anticompetitive behavior by banks: two prohibit tying arrangements; two prohibit reciprocity arrangements; and one prohibits exclusive dealing arrangements.[26] The tying restrictions, which have the greatest effect on industry practices, prohibit a bank from restricting the availability or varying the consideration for one product or service (the *tying product*) on the condition that a customer purchase another product or service offered by the bank or by any of its affiliates (the *tied product*).

Section 106 was adopted in 1970 when Congress expanded the authority of the Board to approve proposals by bank holding companies to engage in nonbanking activities. The provisions of section 106 were based on congressional concern that banks' unique role in the economy, in particular their power to extend credit, would allow them to create a competitive advantage for their affiliates in the new, nonbanking markets that they were being allowed to enter.[27]

26. 12 U.S.C. 1972.
27. See S. Rep. No. 1084, 91st Cong., 2d Sess. (1970).

Congress therefore imposed special limitations on tying by banks—restrictions beyond those imposed by the antitrust laws. Section 106 is a broader prohibition; unlike the antitrust laws, a plaintiff in action under section 106 need not show that (1) the seller has market power in the market for the tying product, (2) the tying arrangement has had an anticompetitive effect in the market for the tied product, or (3) the tying arrangement has had a substantial effect on interstate commerce.

Section 106 applies only when a *bank* offers the tying product.[28] The Board has authority to grant exceptions to section 106, which it has used to allow banking organizations to package their products when doing so would benefit the organization and its customers without anticompetitive effects.

3070.0.7.4.1 Section 225.7(d) of Regulation Y

The Board originally extended section 106, which covers tying arrangements by *banks* only, to cover nonbank affiliates and bank holding companies. The Board rescinded this extension of the statute effective April 21, 1997. Thus, unless subject to another exemption, section 106 *prohibits*—

- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from the bank; and
- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from an affiliate of the bank.

Section 106 and the Board's regulation allow—

- a broker-dealer affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from an affiliated bank; and
- a broker-dealer affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from a nonbank affiliate.

These distinctions make sense if one keeps in mind the concern of the statute: banks (*not* nonbanks) have special power over credit and, thus, are able to induce or coerce their customers into purchasing products that they would otherwise prefer not to purchase or to purchase from someone else.[29]

28. See 1997 FRB 275.

3070.0.7.4.2 Interaffiliate Tying Arrangements Treated the Same as Intrabank Arrangements

Section 106 contains an explicit exception (the *statutory traditional bank product exception*) that permits a bank to tie any product or service to a loan, discount, deposit, or trust service offered by that bank.[30] For example, a bank could condition the use of its messenger service on a customer's maintaining a deposit account at the bank. Although the statutory traditional bank product exception appears to have been effective in preserving traditional relationships between a customer and bank, the exception is limited in an important way—it does not extend to transactions involving products offered by affiliates.

The Board has adopted a *regulatory traditional bank product exception* that extends the statutory exception to transactions involving affiliates.[31] Although the Board has previously limited the scope of this extension, interaffiliate arrangements are now exempt to the same extent as intrabank arrangements.[32]

3070.0.7.4.3 Foreign Transactions Under Section 106

The Board has adopted a "safe harbor" from the anti-tying rules for transactions with corporate customers that are incorporated or otherwise organized and that have their principal place of business outside the United States, or with individuals who are citizens of a foreign country and are not resident in the United States. However, the safe harbor would not protect tying arrangements in which the customer is a U.S.-incorporated division of a foreign company. Furthermore, the safe harbor would not

29. The Board's rule also includes a limited prohibition on tying arrangements involving electronic benefit transfer services (12 C.F.R. 225.7(d)).
30. 12 U.S.C. 1972(1)(A).
31. See 12 C.F.R. 225.7(b)(1).
32. A similar action was taken for interaffiliate reciprocity arrangements, in which section 106 permits a bank to condition the availability of a product or service on the customer's providing to the bank some product or service "related to and usually provided in connection with" a loan, discount, deposit, or trust service (12 U.S.C. 1972(1)(C)).

shelter a transaction from other antitrust laws if they were otherwise applicable.[33]

3070.0.7.4.4 Technical Change

The Board also has adopted a definition of "bank" for purposes of the anti-tying rules. The definition clarifies that any exemptions afforded to banks generally also would be applicable to credit card and other limited-purpose institutions and to U.S. branches and agencies of foreign banks.[34]

3070.0.7.5 Inspection Objective

1. To evaluate transactions between a mortgage banking company organized as a direct subsidiary of a bank holding company and affiliated banks for compliance with federal laws and regulations, and related policy guidance.

3070.0.7.6 Inspection Procedures

1. Review management's method for monitoring and identifying section 23A and 23B covered transactions and applying the quantitative limitations. Determine whether—

   a. all covered transactions have been identified;

   b. quantitative limits are calculated correctly;

   c. covered transactions, including any overdrafts and lines of credit, meet both the quantitative limits and collateral requirements of section 23A; and

   d. adequate collateral values have been maintained over the life of the covered transactions (For example, collateral is maintained for the full amount of any credit lines with the bank, and any depreciated or matured collateral has been replaced as required.).

2. Review purchase and funding contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine that—

   a. asset purchases by the bank are either within the quantitative limits of section 23A or meet the exemption requirements of C.F.R. section 250.250,

   b. all purchases are at fair market value and consistent with market terms as required by section 23B,

   c. no low-quality assets were transferred to the bank since the previous inspection,

   d. the method of compensating the bank for balances maintained and net interest income earned on warehouse loans or lines is reasonable and based on market terms.

3. Review servicing contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine—

   a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?);

   b. the nature of all services provided; and

   c. billing arrangements, the frequency of billing, the method of computation, and the basis for such fees.

4. Review the bank holding company's policy statement on the prohibition of tie-in arrangements, the adequacy of training provided to employees, and whether its respective subsidiaries are in full compliance with internal policy.

3070.0.8 REGULATION Y COMPLIANCE

During the course of the on-site inspection, the examiner is expected to conduct sufficient tests and inquiries to determine whether the company is in compliance with Regulation Y and the act. Such tests and inquiries would include a listing of company offices which can be compared with the approved offices, comparisons of credit-related insurance policies and rate schedules against stipulated public benefits cited in Board orders, and reviews of various activities for technical compliance.

While not specifically detailed in this guidance, the examiner may find it necessary to conduct a review of the company's ledgers and accounts that is sufficient to disclose possible impermissible activities and potential violations of law. The audit function, both internal and external, should not be solely relied on for this disclosure because the auditor's program may emphasize other areas of concern. As a nonbank subsidiary of a bank holding company, reference should be made to part 225 of the Code of Federal Regulations (such as section 225.28(b) of Regulation Y) and other relevant sections thereof.

Concurrent with the review of assets for credit quality, the examiner should undertake a review

33. See 12 C.F.R. 225.7(b)(3).
34. See 12 C.F.R. 225.7(e).

of asset-related activities for compliance with the subsidiary's approval orders. In mortgage banking firms, it is possible that the company is engaging unknowingly in certain impermissible activities, such as those described by 12 C.F.R. 225.126 (i.e., real estate brokerage, land development, real estate syndication, and property management) and those deemed impermissible by Board order (see sections 3000.0.4 and 3700.0 to 3700.12). The Board of Governors has ruled (1972 FRB 429) that the purchase and development of land for sale to third parties constitutes land development by a nonbank subsidiary. However, the completion of a foreclosed property to facilitate the recovery of funds advanced under the loan appears to be permissible, provided that the additional work brings the project underway at foreclosure up to a saleable condition. The Board has also ruled that property management for third parties is impermissible (1972 FRB 652). However, property management as a fiduciary, for operating premises of affiliates, or for properties acquired for debts previously contracted (DPC) is permissible. In addition to the other impermissible activities, engaging in real estate joint ventures has also been ruled impermissible. If such impermissible activities are found, they represent violations and should be appropriately treated. The servicing agreements should be reviewed to determine that no additional liabilities, real or contingent, are imposed on the company beyond its responsibilities as a servicing agent.

The usual source of growth in the servicing portfolio is the company's own origination activity. However, it is not uncommon for a company to supplement this growth with bulk purchases of serviced mortgages from other companies. Under certain circumstances, usually relating to the relative percentage of the seller's portfolio, these transactions may not comply with 12 C.F.R. 225.132. Since these transactions may represent the effective acquisition of a going concern subject to prior approval by the Federal Reserve System, "servicing portfolio" acquisitions should be reviewed for compliance.

Section 225.22(d)(1) of Regulation Y provides an exemption from required Board approval for DPC property acquired in good faith and divested within two years of acquisition. The Board may permit additional extensions that can result in the property being held by a bank holding company for a total of 10 years, if the property has value and marketability characteristics similar to real estate. In conjunction with the review of real estate owned, the examiner should determine if any subsidiary holds title to any property that should have been disposed of within the time limits of Regulation Y, the book value of which has been reduced to zero and the property is not disclosed on the balance sheet. See section 3030.0 "Acquisition of DPC Shares or Assets," for additional information on DPC property acquired.

Legal counsel representing a BHC requested an opinion as to whether certain proposed flood zone–determination activities, to be conducted through a majority-owed (50 percent) joint venture company, would be within the scope of activities related to extending credit as defined in section 225.28(b)(2) of Regulation Y. The BHC proposes to engage in a variety of lending-related activities, including providing real estate appraisals and flood zone determinations.

The Board has determined, in section 225.28(b)(2) of Regulation Y, that it is permissible for bank holding companies to engage in "[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board."[35] (See 12 C.F.R. 225.28(b)(2).) The Board also determined by regulation that performing real estate appraisals is an activity that is usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit. (See 12 C.F.R. 225.28(b)(2)(i).) The Board had not specifically addressed whether providing flood zone determinations is an activity that is usual in connection with lending activities.

The proposed flood zone–determination services are considered to be a necessary aspect of mortgage lending in the United States. As noted, federal law prohibits a federally regulated lender from making, increasing, extending, or renewing a loan that is secured by improved real estate or a mobile home located in an area

35. The Gramm-Leach-Bliley Act (the GLB Act) amended the Bank Holding Company Act to limit bank holding companies that are not financial holding companies to engaging only in "activities which had been determined by the Board by regulation or order under this paragraph as of the day before the date of the enactment of the Gramm-Leach-Bliley Act on November 12, 1999, to be so closely related to banking as to be a proper incident thereto (subject to such terms and conditions contained in such regulation or order, unless modified by the Board)" (12 U.S.C. 1843(c)(8)). Before November 12, 1999, the Board had determined that "[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board" was closely related to banking. Accordingly, the Board retains authority after the GLB Act to define the scope of this section 4(c)(8) activity and to modify the terms and conditions that apply to the activity.

designated by the Federal Emergency Management Agency (FEMA) as a special flood hazard area unless the borrower obtains flood insurance.[36] (See 12 C.F.R. 208.25(c).) Further, federal law also provides that if a federally regulated lender determines, at any time during the life of a loan, that the improved real estate or mobile home securing the loan is located in a special flood hazard area and is not covered by flood insurance, the lender must instruct the borrower to obtain flood insurance and must purchase flood insurance on the borrower's behalf if the borrower fails to promptly purchase the required insurance. (See 12 C.F.R. 208.25(g).)

In addition, federal law requires the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Government National Mortgage Association (the government-sponsored enterprises or GSEs) to have procedures reasonably designed to ensure that flood insurance is in place where required at the initiation of, and during the lives of, the mortgage loans they purchase. (See 12 U.S.C. 4012a(b).) The GSEs meet this requirement by requiring lenders that sell loans to them, and companies that service loans for them, to monitor on an ongoing basis the flood zone status of any loans sold to, or serviced for, the GSEs. To comply with the requirements of federal law and the GSEs, mortgage lenders must obtain an initial flood zone determination before the origination of each mortgage loan and must take steps to monitor, throughout the life of the loan, the flood zone status of any improved real estate or mobile home collateral securing the loan.[37]

The joint venture company proposes to provide initial flood zone determinations to mortgage lenders and to provide mortgage lenders with ongoing flood zone–tracking services with respect to their mortgage loans. The company's activities would be limited to making determinations as to whether particular parcels of real estate are in designated flood zones, preparing the FEMA standard flood zone–determination form, and communicating flood zone determinations to customers. The company committed to not be involved in placing, underwriting, or issuing flood insurance or in the collection of flood insurance premiums. The proposed flood zone determinations would be provided in connection with providing real estate appraisals and as a separate service. In addition, the joint venture company may assist customers who wish to request that FEMA amend its flood maps to remove a property from a designated special flood hazard area.

The proposed flood zone–determination services were found to be an essential part of mortgage lending, designed to assist mortgage lenders in complying with the requirements of federal law and the GSEs. The services generally would be provided to mortgage lenders,[38] thus usual in connection with making mortgage loans. Board staff therefore issued the opinion on July 9, 2002, concluding that the proposed flood zone–determination services are within the scope of permissible activities related to extending credit under section 225.28(b)(2) of Regulation Y (12 C.F.R. 225.28(b)(2)).

3070.0.9 ON-SITE INSPECTION OF MORTGAGE BANKING SUBSIDIARIES

Scheduling of on-site inspections of mortgage banking nonbank subsidiaries of bank holding companies should be done in accordance with the Board policy for frequency and scope of inspections. (See section 5000.0.2.) After reviewing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by nonaccrual and delinquency reports, the level of risk exposure to the organization (see section 4030.2), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted.

36. Statutory authority to issue flood insurance policies under the National Flood Insurance Program (NFIP) expired on December 31, 2002, after Congress adjourned without extending the FEMA authority. On January 13, 2003, the National Flood Insurance Program Reauthorization Act was approved, extending the authorization of the NFIP to December 31, 2003; this authorization was also made retroactive to December 31, 2002.

37. Lenders are specifically permitted to charge a reasonable fee to borrowers for flood zone determinations and life-of-the-loan tracking. For example, see 12 C.F.R. 208.25(h).

38. It was represented that the joint venture company would only market its services to mortgage lenders and that it would rarely provide services to nonlenders.

Conversely, a deteriorating condition might be detected that would require a visit, even though a satisfactory condition had been determined during the previous inspection. Mortgage subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected. All significant mortgage banking subsidiaries should be fully inspected at least once every three years.

3070.0.11 APPENDIX A—FIRST DAY LETTER

FEDERAL RESERVE BANK
OF BOSTON

P. O. BOX 2076
BOSTON, MASSACHUSETTS 02106-2076

June 15, 19x9

Mr. John Doe
President
XYZ Mortgage Bank Corporation
Boston, Massachusetts 02107

Dear Mr. Doe:

In conjunction with the inspection of the XYZ Bank Holding Company, we plan to begin an inspection of XYZ Mortgage Bank Corporation on July 15, 19x9. To facilitate this inspection, please provide a copy of or make available the following information relative to your organization's mortgage banking activities. Information should be as of xx/xx/xx and should be delivered to the examiner-in-charge as soon as it is available. Whenever possible, standardized management reports should be provided. Please include the name and telephone extension of the appropriate persons to contact, by department, if additional information is necessary.

Board Oversight and Management

1. Provide a listing of the mortgage banking company's board of directors that includes each individual's name, place of employment, title and position, age, management responsibilities (if any), and the length of time he or she has served on the board.
2. List significant management and board committees and have minutes from these meetings available for examiner review. Provide a copy of standardized reports that are provided before each meeting.
3. Provide an organizational chart that highlights individuals who are responsible for the following functional areas: production, warehousing and funding, marketing, servicing, finance, mortgage-servicing asset (MSA) valuations, internal audit, quality control, loan review, compliance, and legal. Include biographies and salary information.
4. Describe any organizational changes that have taken place at the mortgage banking company since xx/xx/xx, including any mergers, acquisitions, or consolidation of mortgage banking activities. Describe any management changes at or above the senior vice president level and provide details on management's new responsibilities.
5. Provide a copy of standardized management reports that are used to monitor compliance with established policies, operating procedures, and controls within each functional area.
6. Provide a copy of the mortgage banking company's most recent operating budget and its long-term strategic plan. Evaluate how interest-rate movements, competition, and other external factors have affected product mix, staffing levels, and the allocation of capital.
7. Describe the internal control environment and the internal control programs that are in place within the mortgage banking company. Have available for examiner review the following reports that were conducted since xx/xx/xx:
   a. internal and external audits
   b. loan reviews

c. internal control and compliance audits completed by or on behalf of agencies such as HUD, FHA, GNMA, FannieMae, FHLMC, state agencies, and private investors

Also have available management's response to each report and the most recent copy of any management reports that monitor the status of outstanding issues or problems.

8. Provide an organization chart for the *internal audit* department. Indicate the scope and frequency of internal audits for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make internal audit workpapers available for examiner review.
9. Provide an organization chart for the *loan review* department. Indicate the scope and frequency of loan reviews for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make loan review workpapers available for examiner review.
10. Provide details on the nature and scope of the quality control program for loans originated and/or serviced for investors. Include an organization chart for the unit(s) involved in such activities, details on any outsourcing programs used since the previous inspection, copies of quality control reports submitted to senior management, and management responses.
11. Describe the method for ensuring compliance with state and federal laws and regulations. Make available for examiner review the procedures manual, work programs, and workpapers compiled by the person/department responsible for compliance.
12. Describe the insurance coverage in effect for the mortgage banking company and its officers and the date it was last reviewed by the board of directors.
13. Recap all mortgage banking–related legal claims/lawsuits in excess of $1 million. Indicate the nature of any legal reserve that is maintained and the method used to assess reserve adequacy.
14. Describe the system for logging, tracking, and responding to customer complaints. The customer complaint file should be made available for examiner review while on-site.
15. Provide a copy of the disaster recovery plan and describe safeguards in place to protect loan documents and data processing input records.

Production and Correspondent Lending Data

16. Provide detailed organization charts for departments within the company which relate to the production function (i.e., retail originations, wholesale purchases, processing, underwriting, closing, shipping).
17. Provide information on the total number and dollar amount of loans generated by the following sources during the two most recent fiscal years and the interim year-to-date period. For purchased loans, please specify the method of purchase (i.e., bulk versus flow), program name, and amount subject to recourse back to either the seller or the investor):

    a. originated by the mortgage banking company

    b. purchased from affiliates

    c. purchased from nonaffiliated third parties
18. Provide written policies and procedures manuals that describe traditional and nontraditional mortgage products, underwriting standards, closing and funding procedures, exception reporting practices, management and employee compensation methods, and training programs for loan production personnel. State methods used to establish ongoing compliance with written policies and procedures and provide copies of relevant management exception reports.
19. Describe the credit approval process used for in-house originations. Include information on rate commitment options extended to the borrower, the average length of the commitment period,

controls that are in place to monitor fallout caused by processing backlogs, and procedures for expired commitments.

20. Provide details on the correspondent lending program, including a list of approved institutions and copies of the most recent loan-quality reports. Describe the credit review process before purchase and any controls that are in place to protect the mortgage banking company against future losses on loans purchased from affiliates and from correspondents.
21. Determine whether rate-locks are provided to correspondents on best effort production programs. What methods are used to verify reported loan fallout?
22. Provide information on the average income and cost per origination and compare with industry standards. Describe the method of accounting used for origination fees and other related noninterest income and expenses.
23. If the mortgage banking company is a subsidiary of a state member bank or sells loans to a bank affiliate that is subject to Regulation O, furnish a list of extensions of credit to "an executive officer, director, or principal shareholder" (as defined in section 215.2 of Regulation O) of—

    a. the state member bank;

    b. a bank holding company of which the state member bank is a subsidiary;

    c. any other subsidiary of that bank holding company;

    d. a company controlled by an insider, as defined by Regulation O; and

    e. a political or campaign committee that benefits or is controlled by an insider as defined by Regulation O.

    For all such extensions of credit, include the amount, date the loan(s) was originated or renewed, interest rate, collateral requirements, total amount of loans outstanding to that individual or company, and date of approval by the board of directors. Also include the aggregate amount of loans outstanding to all such insiders as of the inspection date in relation to the bank's unimpaired capital and unimpaired surplus as defined in Regulation O. (See subsection 2050.0.3.2.)

Marketing and Hedging Data

24. Provide detailed organization charts for departments within the company that relate to the marketing and hedging functions. Describe management's roles and responsibilities with respect to the sale of loans in the secondary market, asset securitization, funding, liquidity risk management, interest-rate risk management, and interaction with the asset/liability management function at the parent company.
25. Provide a copy of written policies and procedures used to hedge interest-rate risk associated with the pipeline and closed-loan warehouse. Describe any parameters and limits that are in place and provide a list of securities dealers with whom management is authorized to conduct business.
26. Provide management reports on pipeline and closed-loan (warehouse) inventory volume, mix, yield, age, and turnover as of the inspection date. Describe the method used to project fallout and any models that are used to determine the sensitivity of the pipeline to interest-rate fluctuations.
27. Indicate the methods used to securitize loans for sale in the secondary market, including the use of third-party guaranties and other forms of credit enhancement. Are securities generally sold or retained on the balance sheet?
28. Provide information on the number and volume of securities that lacked final pool certification as of the inspection date. State whether this volume is in compliance with investor guidelines. If

applicable, indicate whether the requirements for obtaining a letter of credit or other guaranty have been satisfied.

Servicing Data

29. Provide a detailed organization chart for the servicing department.
30. List subservicers and vendors who are employed to perform servicing functions. Briefly describe the nature of the services provided.
31. Indicate whether any contracts with subservicers and/or vendors have been terminated for cause since the prior inspection.
32. Provide the monthly servicing management reports since the prior inspection, including the number of loans serviced, dollar volume, and composition of the servicing portfolio in terms of product mix, average loan size, weighted average coupon rates, weighted average maturities, geographic location, and delinquencies and foreclosures.
33. Provide a list of investors for whom servicing was performed as of the most recent quarter-end. Identify any recourse or repurchase provisions and/or forbearance requirements.
34. State whether any investors have terminated servicing contracts with the mortgage company and/or its affiliates for cause since the prior inspection, or if any are likely to be terminated in the near future.
35. Provide a list of all major bulk purchases and sales of servicing since the prior inspection. Identify the terms of each sale and any resulting gains or losses.
36. Provide a list and aging of all outstanding advances to investors as of the date of inspection.
37. Provide access to the servicing policies and procedures manual. Indicate the frequency with which manuals are updated. How does management ensure that subservicers and vendors comply with these same policies and procedures?
38. Provide a servicing-fee schedule (in basis points) for conventional, government, and nontraditional loans serviced for third parties.
39. Provide copies of management reports used to track portfolio runoff.
40. Provide a loan delinquency report segmented into 30, 60, 90, 120, and 180 foreclosure categories. Indicate the volume and number of loans in each segment by loan type. Also include information on the number and dollar volume of delinquent loans that were purchased out of investor pools.
41. Detail the number and dollar volume of other real estate (ORE) parcels segregated by company-owned and investor-owned. Provide a list of loans in foreclosure for which action has been delayed, if applicable.
42. Provide access to the customers' complaint file so that examiners can review it while on-site.

Financial Data

43. Provide copies of the Report of Condition and Income and/or Y-series report that was filed by the mortgage banking company for the two previous fiscal years and the most recent interim period.
44. Provide an internally prepared balance sheet and income statement that reconcile with the most recent Report of Condition and Income and/or Federal Reserve Board Y-series report.

45. Provide the latest published financial statements, if applicable, including the annual report, SEC 10K, 10Qs, and any press releases.

46. Provide copies of the accounting policies pertaining to mortgage loans, securities, and other assets held for sale and held for investment. Also provide copies of management reports that monitor compliance with SFAS No. 115 (securities), the current SFAS No. 65 (loans), SFAS No. 125 (mortgage-servicing assets), and internal policies as of the close of business of the most recent quarter.

47. Provide details on all formal and informal funding mechanisms, including but not limited to repurchase agreements, commercial paper programs, and debt issuance facilities. Indicate the counterparties, where applicable; the amount uncommitted; and the amount outstanding under each facility as of the close of the most recent quarter. Provide copies of all formal and informal written agreements.

48. Provide copies of credit agreements for all funding lines from affiliated and nonaffiliated institutions. Describe methods used to monitor the credit quality of all funding sources. The following information should be included:

    a. lending bank (include copies of confirmation letters)

    b. total credit line

    c. amount in use as of the inspection date

    d. amount available for use and by whom

    e. expiration date

    f. compensating balance and/or fee arrangements

    g. purpose

    h. whether the credit lines are contractual obligations of the lenders

    i. reciprocity arrangements, if any

    j. collateral requirements

    k. legal opinions evidencing compliance with sections 23A and 23B of the Federal Reserve Act, as amended

49. Provide copies of any contingency planning documents that outline alternative courses of action should the condition of traditional funding sources deteriorate.

50. Provide a copy of any standardized financial presentations made to the executive management team and to the board of directors.

51. Provide a copy of standardized management reports used to measure and track the quality of originated, purchased, and serviced assets. Include an aging report that identifies loans that are past due 30, 60, 90, 120, and 180 or more days and indicate whether such loans are *held for sale, held for investment,* or *serviced for investors*.

52. Provide a copy of internal policies that apply to loans held for investment. Indicate the date each loan that was on the books as of the most recent quarter-end was transferred to this account, its amortized cost, market value, and any write-downs or adjustments to yield at the date of transfer. Indicate the person responsible for reviewing these loans for collectibility, the frequency of such reviews, and any adjustments or write-downs taken over the past year.

53. Provide detail pertaining to the transfer or sale of assets between the nonbank mortgage banking company and affiliated entities since the last inspection and that supports the FR Y-8 Reports. Also provide related documentation evidencing methods for asset valuation and credit-quality determination.

54. Provide detail on the allowance for loan and lease losses, contra asset valuation allowances, and

other reserve accounts as of xx/xx/xx (fiscal) and xx/xx/xx (interim). For each account in use, provide a copy of the most recent analysis and a description of the applicable loan and other losses provisions reserving methodology.

55. Provide a copy of the company's policy with respect to real estate appraisals.

56. Provide a copy of management reports that are used for liquidity, funding, and asset/liability management. If these activities are coordinated with affiliate bank or parent bank holding company personnel, provide copies of the information that is routinely provided.

57. Indicate the method for assessing capital adequacy at the mortgage company level. Provide a copy of the company's capital and dividend policies, as well as a list of dividends paid to shareholders during the two previous fiscal years and the most recent interim period. Are any changes in the level of dividends planned or anticipated?

Mortgage-Servicing Assets

58. Provide an organization chart highlighting those areas and individuals responsible for the recording, measurement, and impairment testing for originated and purchased mortgage-servicing rights (MSAs).

59. Provide an inventory listing of all MSAs as of the close of business of the most recent quarter.

60. Discuss the various loan-origination and -purchase programs that give rise to MSAs; the method for calculating and communicating the price paid to correspondents and brokers for service release premiums; whether MSAs are recorded on table-funded loans; and the details on any bulk purchases since the previous inspection, including the price paid and yield realized.

61. Discuss the various loan-sale programs that give rise to MSAs, the method for calculating and recording the initial value of MSAs.

62. Provide a copy of detailed written policies and procedures regarding the initial recording, amortization, and periodic revaluation and impairment testing for MSAs. Indicate the management and/or board committee responsible for approving such policies and the date of last approval.

63. Provide detailed information on any valuation models used for MSA revaluations and a copy of the output as of the most recent quarter-end. Indicate whether such revaluations are performed in-house or by an outside vendor and the frequency of such revaluations.

64. Reconcile fair market values of MSAs to their respective book values as of the most recent quarter-end. Provide a copy of management reports and related journal entries used to record amortization adjustments and/or write-downs.

65. Provide copies of worksheets used to calculate the amount of MSAs included in Tier 1 capital for regulatory reporting purposes as of the most recent quarter-end.

66. Furnish copies of any management reports or presentations to the board of directors or a committee thereof regarding the risk characteristics of MSAs, business risk analysis, and methods used to hedge the interest-rate and prepayment-rate risks associated with capitalized MSAs.

67. Provide an organization chart highlighting those areas and individuals responsible for hedging the interest-rate and prepayment-rate risk associated with MSAs.

68. Provide information on any financial instruments used to hedge interest-rate and prepayment-risk associated with MSAs. Include a detailed prospectus on any customized hedge products that are purchased from investment bankers and a statement from either internal or external accountants on whether such instruments qualify for hedge accounting treatment under SFAS No. 80.

69. Provide a copy of management reports that identify the number of contracts or instruments used, their current market value, and the degree of correlation between the hedge instrument and the underlying MSAs being hedged. Such reports should demonstrate the effectiveness of the hedge under varying market conditions.
70. Provide information on the number and dollar volume of servicing rights sold during the most recent fiscal year and interim period.
71. If mortgage-servicing assets are sold, provide information on the number and dollar volume sold during the most recent fiscal year and interim period.

Intercompany Transactions

72. Provide an organizational chart on a legal-entity basis that includes the bank holding company and all directly held bank and nonbank affiliates.
73. If the mortgage banking company is a direct nonbank subsidiary of the bank holding company, describe the method for identifying transactions that constitute "covered transactions" under sections 23A and 23B of the Federal Reserve Act, as well as the method for applying quantitative limits for section 23A and 23B purposes.
74. Provide a current listing of collateral that is maintained for covered transactions. Indicate whether collateral is maintained for the full amount of any credit lines with the bank and whether any depreciated or matured collateral has been replaced since the previous review.
75. Provide copies of any purchase and funding contracts between the mortgage banking company and affiliated bank(s). Please address whether any or all of the following conditions are met and/or provide written support, where applicable:
    a. asset purchases by the bank have been reviewed by management and are either within the quantitative limits of section 23A or meet the exemption requirements of section 250.250
    b. all purchases are at fair market value and consistent with market terms as required by section 23B
    c. no low-quality assets were transferred to a bank affiliate since the previous inspection
    d. the method of compensating bank affiliates for balances maintained by the parent company or its nonbank subsidiaries and the net interest income earned on warehouse loans or lines is reasonable and based on market terms
76. Provide copies of any servicing contracts between the mortgage banking company and affiliate bank(s). If not so stated, indicate the following information:
    a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?)
    b. the nature of all services provided
    c. billing arrangements, the frequency of billing, the method of computation and the basis for such fees
    d. the date of last review and approval by the mortgage banking company's board of directors
77. Provide a copy of the bank holding company's policy statement on the prohibition of tie-in arrangements, a description of training that is provided to employees in this area, and an attestation as to whether the nonbank subsidiary is in full compliance with internal policy.
78. If the mortgage banking company charges management or other fees, describe the nature of the

fees, the method of computation for such fees, and the settlement procedures. Include a listing of fees charged for the prior two fiscal years and the most recent interim period.

79. Provide a copy of the bank holding company's intercompany tax allocation policy. Indicate the amount and timing of intercompany tax payments and credits received during the two previous fiscal years and the most recent interim period. If credits are due, please indicate the amount owed to the subsidiary and the date the intercompany receivable originated.

Sincerely yours,

Vice President,
Federal Reserve Bank of Boston

3070.0.12 APPENDIX B—ACCOUNTING LITERATURE

The following is a list of generally accepted accounting principles (GAAP) governing the mortgage banking industry that are in the form of accounting standards and interpretations. Accounting standards may change over time. Current accounting literature should be reviewed with management during each inspection.

Statements of Financial Accounting Standards (SFAS)

SFAS No. 5, "Accounting for Contingencies"

SFAS No. 65, "Accounting for Certain Mortgage Banking Activities," as amended

SFAS No. 77, "Reporting by Transferors for Transfers of Receivables with Recourse"

SFAS No. 80, "Accounting for Futures Transactions"

SFAS No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases"

SFAS No. 115, "Accounting for Certain Investments in Debt and Equity Securities"

SFAS No. 125, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities"

FASB Technical Bulletin

Technical Bulletin No. 87-3, "Accounting for Mortgage Servicing Fees and Rights"

Emerging Issues Task Force (EITF)

Issue No. 85-13, "Sale of Mortgage Service Rights on Mortgages Owned by Others"

Issue No. 85-26, "Measurement of Servicing Fee under FASB Statement No. 65—When a Loan Is Sold with Servicing Retained"

Issue No. 85-28, "Consolidation Issues Relating to Collateralized Mortgage Obligations"

Issue No. 86-38, "Implications of Mortgage Prepayments on Amortization of Servicing Rights"

Issue No. 86-39, "Gains from the Sale of Mortgage Loans with Servicing Rights Retained"

Issue No. 87-25, "Sale of Convertible, Adjustable-Rate Mortgages with Contingent Repayment Agreement"

3070.0.13 APPENDIX C—REGULATORY GUIDANCE

The following is a list of sections in this manual that examiners may find particularly useful in the review of mortgage banking activities. Regulatory guidance also evolves over time. This list is not all inclusive.

2010.0.1	Policy Statement on the Responsibility of Bank Holding Companies to Act as Sources of Strength to Their Subsidiary Banks
2020.0–.7	Intercompany Transactions
2050.0	Extensions of Credit to BHC Officials
2060.0–.6	Management Information Systems
2065.2	Determining an Adequate Level for the Allowance for Loan and Lease Losses
2080.05	Bank Holding Company Funding and Liquidity
2080.0–.3	BHC Funding Practices
2125.0	Trading Activities of Banking Organizations
2126.0	Nontrading Activities of Banking Organizations
2126.1	Investment Securities and End-User Derivatives Activities
2128.02	Asset Securitization
2130.0	Futures, Forward, and Option Contracts
2150.0	Repurchase Transactions
3070.0	Section 4(c)(8)—Mortgage Banking
3080.0	Section 4(c)(8)—Servicing Loans
4000 sections	Financial Analysis
4030.0.2	Nonbanks (Analysis of Financial Condition and Risk Assessment)
4070.0	BHC Rating System

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2015, this section is revised to delete a footnote reference to SR letter 02-16, "Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations" and its attachment, superseded by SR letter 15-6 "Interagency Frequently Asked Questions on the Regulatory Capital Rule." Refer to subsection 3070.3.2.5., "Secondary Market Activity."

The Federal Reserve and the other federal banking and thrift regulatory agencies (the agencies)[1] issued the Interagency Guidance on Nontraditional Mortgage Product Risks on September 29, 2006. The guidance addresses both risk-management and consumer disclosure practices that institutions[2] should employ to effectively manage the risks associated with closed-end residential mortgage products that allow borrowers to defer repayment of principal and, sometimes, interest (referred to as nontraditional mortgage loans). (See SR-06-15.)

Residential mortgage lending has traditionally been a conservatively managed business with low delinquencies and losses and reasonably stable underwriting standards. However, during the past few years consumer demand has been growing, particularly in high-priced real estate markets, for nontraditional mortgage loans. These mortgage products include such products as "interest-only" mortgages, where a borrower pays no loan principal for the first few years of the loan, and "payment-option" adjustable-rate mortgages (ARMs), where a borrower has flexible payment options with the potential for negative amortization.[3]

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

2. The term *institution(s)*, as used in this interagency guidance, applies to Federal Reserve-supervised state member banks and their subsidiaries, bank holding companies, and the nonbank subsidiaries of bank holding companies. It also refers to all other *federally supervised* banks and their subsidiaries, savings associations and their subsidiaries, savings and loan holding companies and their subsidiaries, and credit unions.

3. Interest-only and payment-option ARMs are variations of conventional ARMs, hybrid ARMs, and fixed-rate products. Refer to the appendix at 3060.3.4 for additional information on interest-only and payment-option ARM loans. This guidance does not apply to reverse mortgages; home equity lines of credit (HELOCs), other than as discussed in the Simultaneous Second-Lien Loans section; or fully amortizing residential mortgage loan products.

While some institutions have offered nontraditional mortgages for many years with appropriate risk management and sound portfolio performance, the market for these products and the number of institutions offering them has expanded rapidly. Nontraditional mortgage loan products are now offered by more lenders to a wider spectrum of borrowers; these borrowers may not otherwise qualify for more traditional mortgage loans and may not fully understand the risks associated with nontraditional mortgage loans.

Many of these nontraditional mortgage loans are underwritten with less stringent income and asset verification requirements (reduced documentation) and are increasingly combined with simultaneous second-lien loans.[4] Such risk layering, combined with the broader marketing of nontraditional mortgage loans, exposes financial institutions to increased risk relative to traditional mortgage loans.

Given the potential for heightened risk levels, management should carefully consider and appropriately mitigate exposures created by these loans. To manage the risks associated with nontraditional mortgage loans, management should—

- ensure that loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower's repayment capacity;
- ensure that consumers have sufficient information to clearly understand loan terms and associated; and
- recognize that many nontraditional mortgage loans, particularly when they have risk-layering features, are untested in a stressed environment. As evidenced by experienced institutions, these products warrant strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio.

The Federal Reserve expects institutions to effectively assess and manage the risks associated with nontraditional mortgage loan products.[5]

Institutions should use the guidance to ensure that risk-management practices adequately

4. Refer to the appendix for additional information on reduced documentation and simultaneous second-lien loans.

5. Refer to the Interagency Guidelines Establishing Standards for Safety and Soundness in 12 C.F.R. 208, appendix D-1.

address these risks. Risk-management processes, policies, and procedures in this area will be carefully scrutinized. Institutions that do not adequately manage these risks will be asked to take remedial action.

This guidance focuses on the higher risk elements of certain nontraditional mortgage products, not the product type itself. Institutions with sound underwriting, adequate risk management, and acceptable portfolio performance will not be subject to criticism merely for offering such products.

3070.3.1 NONTRADITIONAL LOAN TERMS AND UNDERWRITING STANDARDS

When an institution offers nontraditional mortgage loan products, underwriting standards should address the effect of a substantial payment increase on the borrower's capacity to repay when loan amortization begins. Underwriting standards should also comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines.[6]

Central to prudent lending is the internal discipline to maintain sound loan terms and underwriting standards despite competitive pressures. Institutions are strongly cautioned against ceding underwriting standards to third parties that have different business objectives, risk tolerances, and core competencies. Loan terms should be based on a disciplined analysis of potential exposures and compensating factors to ensure that risk levels remain manageable.

3070.3.1.1 Qualifying Borrowers for Nontraditional Loans

Payments on nontraditional loans can increase significantly when the loans begin to amortize. Commonly referred to as *payment shock*, this increase is of particular concern for payment-option ARMs where the borrower makes minimum payments that may result in negative amortization. Some institutions manage the potential for excessive negative amortization and payment shock by structuring the initial terms to limit the spread between the introductory interest rate and the fully indexed rate. Nevertheless, an institution's qualifying standards should recognize the potential impact of payment shock, especially for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores. Recognizing that an institution's underwriting criteria are based on multiple factors, an institution should consider these factors jointly in the qualification process and potentially develop a range of reasonable tolerances for each factor. However, the criteria should be based upon prudent and appropriate underwriting standards, considering both the borrower's characteristics and the product's attributes.

For all nontraditional mortgage loan products, an institution's analysis of a borrower's repayment capacity should include an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate,[7] assuming a fully amortizing repayment schedule.[8] In addition, for products that permit negative amortization, the repayment analysis should be based upon the initial loan amount plus any balance increase that may accrue from the negative amortization provision.[9]

6. Refer to 12 C.F.R. 208.51 subpart E and appendix C and 12 C.F.R. 225 subpart G.

7. The fully indexed rate equals the index rate prevailing at origination plus the margin that will apply after the expiration of an introductory interest rate. The index rate is a published interest rate to which the interest rate on an ARM is tied. Some commonly used indices include the 1-Year Constant Maturity Treasury Rate (CMT), the 6-Month London Interbank Offered Rate (LIBOR), the 11th District Cost of Funds (COFI), and the Moving Treasury Average (MTA), a 12-month moving average of the monthly average yields of U.S. Treasury securities adjusted to a constant maturity of one year. The margin is the number of percentage points a lender adds to the index value to calculate the ARM interest rate at each adjustment period. In different interest-rate scenarios, the fully indexed rate for an ARM loan based on a lagging index (for example, the MTA rate) may be significantly different from the rate on a comparable 30-year fixed-rate product. In these cases, a credible market rate should be used to qualify the borrower and determine repayment capacity.

8. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a loan with a 5-year interest-only period and a 30-year term would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

9. The balance that may accrue from the negative amortization provision does not necessarily equate to the full negative amortization cap for a particular loan. The spread between the introductory or "teaser" rate and the accrual rate will determine whether a loan balance has the potential to reach the negative amortization cap before the end of the initial payment-option period (usually five years). For example, a loan with a 115 percent negative amortization cap but only a small spread between the introductory rate and the accrual rate may reach a moderate 109 percent maximum loan balance before the end of the initial payment-option period, even if only minimum payments are made. The borrower could be qualified based on this lower maximum loan balance.

Furthermore, the analysis of repayment capacity should avoid overreliance on credit scores as a substitute for income verification in the underwriting process. The higher a loan's credit risk, either from loan features or borrower characteristics, the more important it is to verify the borrower's income, assets, and outstanding liabilities.

3070.3.1.2 Collateral-Dependent Loans

Institutions should avoid the use of loan terms and underwriting practices that may heighten the need for a borrower to rely on the sale or refinancing of the property once amortization begins. Loans to individuals who do not demonstrate the capacity to repay, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound.[10] Institutions that originate collateral-dependent mortgage loans may be subject to criticism, corrective action, and higher capital requirements.

3070.3.1.3 Risk Layering

Institutions that originate or purchase mortgage loans that combine nontraditional features, such as interest-only loans with reduced documentation or a simultaneous second-lien loan, face increased risk. When features are layered, an institution should demonstrate that mitigating factors support the underwriting decision and the borrower's repayment capacity. Mitigating factors could include higher credit scores, lower LTV and DTI ratios, significant liquid assets, mortgage insurance, and other credit enhancements. While higher pricing is often used to address elevated risk levels, it does not replace the need for sound underwriting.

3070.3.1.4 Reduced Documentation

Institutions increasingly rely on reduced documentation, particularly unverified income, to qualify borrowers for nontraditional mortgage loans. Because these practices essentially substitute assumptions and unverified information for analysis of a borrower's repayment capacity and general creditworthiness, they should be used with caution. As the level of credit risk increases, the Federal Reserve expects an institution to more diligently verify and document a borrower's income and debt-reduction capacity.

Clear policies should govern the use of reduced documentation. For example, stated income should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. For many borrowers, institutions generally should be able to readily document income using recent W-2 statements, pay stubs, or tax returns.

3070.3.1.5 Simultaneous Second-Lien Loans

Simultaneous second-lien loans reduce owner equity and increase credit risk. Historically, as combined loan-to-value ratios rise, so do defaults. A delinquent borrower with minimal or no equity in a property may have little incentive to work with a lender to bring the loan current and avoid foreclosure. In addition, second-lien HELOCs typically increase borrower exposure to increasing interest rates and monthly payment burdens. Loans with minimal or no owner equity generally should not have a payment structure that allows for delayed or negative amortization without other significant risk-mitigating factors.

3070.3.1.6 Introductory Interest Rates

As a marketing tool for payment-option ARM products, many institutions offer introductory interest rates set well below the fully indexed rate. When developing nontraditional mortgage product terms, an institution should consider the spread between the introductory rate and the fully indexed rate. Since initial and subsequent monthly payments are based on these low introductory rates, a wide initial spread means that borrowers are more likely to experience negative amortization, severe payment shock, and an earlier-than-scheduled recasting of monthly payments. Institutions should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates.

3070.3.1.7 Lending to Subprime Borrowers

Mortgage programs that target subprime borrowers through tailored marketing, underwriting standards, and risk selection should follow the

10. A loan will not be determined to be "collateral-dependent" solely through the use of reduced documentation.

applicable interagency guidance on subprime lending.[11] Among other things, the subprime guidance discusses circumstances under which subprime lending can become predatory or abusive. Institutions designing nontraditional mortgage loans for subprime borrowers should pay particular attention to this guidance. They should also recognize that risk-layering features in loans to subprime borrowers may significantly increase risks for the institution and the borrower.

3070.3.1.8 Non-Owner-Occupied Investor Loans

Borrowers financing non-owner-occupied investment properties should qualify for loans based on their ability to service the debt over the life of the loan. Loan terms should reflect an appropriate combined LTV ratio that considers the potential for negative amortization and maintains sufficient borrower equity over the life of the loan. Further, underwriting standards should require evidence that the borrower has sufficient cash reserves to service the loan, considering the possibility of extended periods of property vacancy and the variability of debt service requirements associated with nontraditional mortgage loan products.

3070.3.2 PORTFOLIO AND RISK-MANAGEMENT PRACTICES

Institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of their nontraditional mortgage loan portfolios and changes in the market. Active portfolio management is especially important for institutions that project or have already experienced significant growth or concentration levels. Institutions that originate or invest in nontraditional mortgage loans should adopt more robust risk-management practices and manage these exposures in a thoughtful, systematic manner. To meet these expectations, institutions should—

- develop written policies that specify acceptable product attributes, production and portfolio limits, sales and securitization practices, and risk-management expectations;
- design enhanced performance measures and management reporting that provide early warning for increasing risk;
- establish appropriate ALLL levels that consider the credit quality of the portfolio and conditions that affect collectibility; and
- maintain capital at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility. Institutions should hold capital commensurate with the risk characteristics of their nontraditional mortgage loan portfolios.

11. See SR-99-6, Subprime Lending and its attachment, Interagency Guidance on Subprime Lending, March 1, 1999, and SR-01-4, Subprime Lending and its attachment, interagency Expanded Guidance for Subprime Lending Programs, January 31, 2001.

3070.3.2.1 Policies

An institution's policies for nontraditional mortgage lending activity should set acceptable levels of risk through its operating practices, accounting procedures, and policy exception tolerances. Policies should reflect appropriate limits on risk layering and should include risk-management tools for risk-mitigation purposes. Further, an institution should set growth and volume limits by loan type, with special attention for products and product combinations in need of heightened attention due to easing terms or rapid growth.

3070.3.2.2 Concentrations

Institutions with concentrations in nontraditional mortgage products should have well-developed monitoring systems and risk-management practices. Monitoring systems should keep track of concentrations in key portfolio segments such as loan types, third-party originations, geographic area, and property occupancy status. Concentrations also should be monitored by key portfolio characteristics such as non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features. Further, institutions should consider the effect of employee incentive programs that could produce higher concentrations of nontraditional mortgage loans. Concentrations that are not effectively managed will be subject to elevated supervisory attention and potential examiner criticism to ensure timely remedial action.

3070.3.2.3 Controls

An institution's quality control, compliance, and audit procedures should focus on mortgage lending activities posing high risk. Controls to monitor compliance with underwriting standards and exceptions to those standards are especially important for nontraditional loan products. The quality control function should regularly review a sample of nontraditional mortgage loans from all origination channels and a representative sample of underwriters to confirm that policies are being followed. When control systems or operating practices are found deficient, business-line managers should be held accountable for correcting deficiencies in a timely manner.

Since many nontraditional mortgage loans permit a borrower to defer principal and, in some cases, interest payments for extended periods, institutions should have strong controls over accruals, customer service, and collections. Policy exceptions made by servicing and collections personnel should be carefully monitored to confirm that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk. Customer service and collections personnel should receive product-specific training on the features and potential customer issues with these products.

3070.3.2.4 Third-Party Originations

Institutions often use third parties, such as mortgage brokers or correspondents, to originate nontraditional mortgage loans. Institutions should have strong systems and controls in place for establishing and maintaining relationships with third parties, including procedures for performing due diligence. Oversight of third parties should involve monitoring the quality of originations so that they reflect the institution's lending standards and compliance with applicable laws and regulations.

Monitoring procedures should track the quality of loans by both origination source and key borrower characteristics. This will help institutions identify problems such as early payment defaults, incomplete documentation, and fraud. If problems involving appraisals, loan documentation, credit problems, or consumer complaints are discovered, the institution should take immediate action. Remedial action could include more thorough application reviews, more frequent re-underwriting, and even termination of the third-party relationship.

3070.3.2.5 Secondary-Market Activity

The sophistication of an institution's secondary-market risk-management practices should be commensurate with the nature and volume of activity. Institutions with significant secondary-market activities should have comprehensive, formal strategies for managing risks. Contingency planning should include how the institution will respond to reduced demand in the secondary market.

While third-party loan sales can transfer a portion of the credit risk, an institution remains exposed to reputation risk when credit losses on sold mortgage loans or securitization transactions exceed expectations. As a result, an institution may determine that it is necessary to repurchase defaulted mortgages to protect its reputation and maintain access to the markets.

3070.3.2.6 Management Information and Reporting

Reporting systems should allow management to detect changes in the risk profile of its nontraditional mortgage loan portfolio. The structure and content should allow the isolation of key loan products, risk-layering loan features, and borrower characteristics. Reporting should also allow management to recognize deteriorating performance in any of these areas before it has progressed too far. At a minimum, information should be available by (1) loan type (for example, interest-only mortgage loans and payment-option ARMs); (2) risk-layering features (for example, payment-option ARMs with stated income and interest-only mortgage loans with simultaneous second-lien mortgages); (3) underwriting characteristics (for example, LTV, DTI, and credit score); and (4) borrower performance (for example, payment patterns, delinquencies, interest accruals, and negative amortization).

Portfolio volume and performance should be tracked against expectations, internal lending standards, and policy limits. Volume and performance expectations should be established at the subportfolio and aggregate portfolio levels. Variance analyses should be performed regularly to identify exceptions to policies and prescribed thresholds. Qualitative analysis should occur when actual performance deviates from estab-

12. Reserved footnote.
13. Reserved footnote.

lished policies and thresholds. Variance analysis is critical to the monitoring of a portfolio's risk characteristics and should be an integral part of establishing and adjusting risk-tolerance levels.

3070.3.2.7 Stress Testing

Based on the size and complexity of their lending operations, institutions should perform sensitivity analysis on key portfolio segments to identify and quantify events that may increase risks in a segment or the entire portfolio. The scope of the analysis should generally include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the institution's immediate control. Stress tests typically assume rapid deterioration in one or more factors and attempt to estimate the potential influence on default rates and loss severity. Stress testing should aid an institution in identifying, monitoring, and managing risk, as well as developing appropriate and cost-effective loss-mitigation strategies. The stress testing results should provide direct feedback in determining underwriting standards, product terms, portfolio concentration limits, and capital levels.

3070.3.2.8 Capital and Allowance for Loan and Lease Losses

Institutions should establish an appropriate ALLL for the estimated credit losses inherent in their nontraditional mortgage loan portfolios. They should also consider the higher risk of loss posed by layered risks when establishing their ALLL.

Moreover, institutions should recognize that their limited performance history with these products, particularly in a stressed environment, increases performance uncertainty. Capital levels should be commensurate with the risk characteristics of the nontraditional mortgage loan portfolios. Lax underwriting standards or poor portfolio performance may warrant higher capital levels.

When establishing an appropriate ALLL and considering the adequacy of capital, institutions should segment their nontraditional mortgage loan portfolios into pools with similar credit-risk characteristics. The basic segments typically include collateral and loan characteristics, geographic concentrations, and borrower qualifying attributes. Segments could also differentiate loans by payment and portfolio characteristics, such as loans on which borrowers usually make only minimum payments, mortgages with existing balances above original balances, and mortgages subject to sizable payment shock. The objective is to identify credit quality indicators that affect collectibility for ALLL measurement purposes. In addition, understanding characteristics that influence expected performance also provides meaningful information about future loss exposure that would aid in determining adequate capital levels.

Institutions with material mortgage banking activities and mortgage servicing assets should apply sound practices in valuing the mortgage servicing rights for nontraditional mortgages. The valuation process should follow generally accepted accounting principles and use reasonable and supportable assumptions.[14]

3070.3.3 CONSUMER PROTECTION ISSUES

While nontraditional mortgage loans provide flexibility for consumers, the Federal Reserve is concerned that consumers may enter into these transactions without fully understanding the product terms. Nontraditional mortgage products have been advertised and promoted based on their affordability in the near term; that is, their lower initial monthly payments compared with traditional types of mortgages. In addition to apprising consumers of the benefits of nontraditional mortgage products, institutions should take appropriate steps to alert consumers to the risks of these products, including the likelihood of increased future payment obligations. This information should be provided in a timely manner—before disclosures may be required under the Truth in Lending Act or other laws—to assist the consumer in the product selection process.

3070.3.3.1 Concerns and Objectives

More than traditional ARMs, mortgage products such as payment-option ARMs and interest-only mortgages can carry a significant risk of payment shock and negative amortization, neither of which may be fully understood by consumers. For example, consumer payment obliga-

14. See SR-03-4, dated February 25, 2003, Interagency Advisory on Mortgage Banking and its attachment, which has the same title.

tions may increase substantially at the end of an interest-only period or upon the "recast" of a payment-option ARM. The magnitude of these payment increases may be affected by factors such as the expiration of promotional interest rates, increases in the interest-rate index, and negative amortization. Negative amortization also results in lower levels of home equity as compared with a traditional amortizing mortgage product. When borrowers go to sell or refinance the property, they may find that negative amortization has substantially reduced or eliminated their equity in the property—even when the property has appreciated. The concern that consumers may not fully understand these products is exacerbated by marketing and promotional practices that emphasize potential benefits without also providing clear and balanced information about material risks.

In light of these considerations, communications with consumers, including advertisements, oral statements, promotional materials, and monthly statements, should provide clear and balanced information about the relative benefits and risks of these products, including the risks of payment shock and of negative amortization. Clear, balanced, and timely communication to consumers of the risks of these products will provide consumers with useful information at crucial decision-making points, such as when they are shopping for loans or deciding which monthly payment amount to make. Such communication should help minimize potential consumer confusion and complaints, foster good customer relations, and reduce legal and other risks to the institution.

3070.3.3.2 Legal Risks

Institutions that offer nontraditional mortgage products must ensure that they do so in a manner that complies with all applicable laws and regulations. With respect to the disclosures and other information provided to consumers, applicable laws and regulations include the following:

- Truth in Lending Act (TILA) and its implementing regulation, Regulation Z
- Section 5 of the Federal Trade Commission Act (FTC Act)

TILA and Regulation Z contain rules governing disclosures that institutions must provide for closed-end mortgages (1) in advertisements, (2) with an application,[15] (3) before loan consummation, and (4) when interest rates change. Section 5 of the FTC Act prohibits unfair or deceptive acts or practices.[16]

Other federal laws, including the fair-lending laws and the Real Estate Settlement Procedures Act (RESPA), also apply to these transactions. Moreover, the Federal Reserve notes that the sale or securitization of a loan may not affect an institution's potential liability for violations of TILA, RESPA, the FTC Act, or other laws in connection with its origination of the loan. State laws, including laws regarding unfair or deceptive acts or practices, also may apply.

3070.3.3.3 Recommended Practices

Recommended practices for addressing the risks raised by nontraditional mortgage products include the following:[17]

3070.3.3.4 Communications with Consumers

When promoting or describing nontraditional mortgage products, institutions should provide consumers with information that is designed to help them make informed decisions when selecting and using these products. Meeting this objective requires appropriate attention to the timing, content, and clarity of information presented to consumers. Thus, institutions should provide consumers with information at a time that will help consumers select products and choose among payment options. For example, institutions should offer clear and balanced product descriptions when (1) a consumer is shopping for a mortgage (such as when the consumer makes an inquiry to the institution about a mortgage product and receives information about nontraditional mortgage products) or (2) market-

15. These program disclosures apply to ARM products and must be provided at the time an application is provided or before the consumer pays a nonrefundable fee, whichever is earlier.

16. The Board of Governors enforces this provision under the FTC Act and section 8 of the Federal Deposit Insurance Act. See the joint Board and FDIC guidance titled Unfair or Deceptive Acts or Practices by State-Chartered Banks, March 11, 2004.

17. Institutions should review the recommendations relating to mortgage lending practices set forth in other supervisory guidance from their respective primary regulators, as applicable, including guidance on abusive lending practices.

ing relating to nontraditional mortgage products is provided by the institution to the consumer. Clear and balanced information should not be offered by the institution only upon the submission of an application or at consummation.[18] The provision of such information would serve as an important supplement to the disclosures currently required under TILA and Regulation Z, as well as other laws.[19]

3070.3.3.4.1 Promotional Materials and Product Descriptions

To assist consumers in their product selection decisions, promotional materials and other product descriptions should provide information about the costs, terms, features, and risks of nontraditional mortgages (including information about the matters discussed below).

Payment Shock. Institutions should apprise consumers of potential increases in payment obligations for these products, including circumstances in which interest rates or negative amortization reach a contractual limit. For example, product descriptions could state the maximum monthly payment a consumer would be required to pay under a hypothetical loan example once amortizing payments are required and the interest rate and negative amortization caps have been reached.[20] Such information also could describe when structural payment changes will occur (for example, when introductory rates expire or when amortizing payments are required) and what the new payment amount would be or how it would be calculated. As applicable, these descriptions could indicate that a higher payment may be required at other points in time due to factors such as negative amortization or increases in the interest-rate index.

Negative Amortization. When negative amortization is possible under the terms of a nontraditional mortgage product, consumers should be apprised of the potential for increasing principal balances and decreasing home equity, as well as other potential adverse consequences of negative amortization. For example, product descriptions should disclose the effect of negative amortization on loan balances and home equity, and could describe the potential consequences to the consumer of making minimum payments that cause the loan to negatively amortize. (One possible consequence is that it could be more difficult to refinance the loan or to obtain cash upon a sale of the home.)

Prepayment Penalties. If the institution may impose a penalty in the event that the consumer prepays the mortgage, consumers should be alerted to this fact and to the need to ask the lender about the amount of any such penalty.

Cost of Reduced Documentation Loans. If an institution offers both reduced and full documentation loan programs and there is a pricing premium attached to the reduced documentation program, consumers should be alerted to this fact.

3070.3.3.4.2 Monthly Statements on Payment-Option ARMs

Monthly statements that are provided to consumers on payment-option ARMs should provide information that enables consumers to make informed payment choices, including an explanation of each payment option available and the impact of that choice on loan balances. For example, the monthly payment statement should contain an explanation, as applicable, next to the minimum payment amount that making this payment would result in an increase to the consumer's outstanding loan balance. Payment statements also could provide the consumer's current loan balance, what portion of the consumer's previous payment was allocated to principal and to interest, and, if applicable, the amount by which the principal balance increased. Institutions should avoid leading payment-option ARM borrowers to select a non-amortizing or negatively amortizing payment (for example, through the format or content of monthly statements).

18. Institutions also should strive to (1) focus on information important to consumer decision making; (2) highlight key information to make it more prominent; (3) employ a user-friendly and readily navigable format for presenting the information; and (4) use plain language, with concrete and realistic examples. Comparative tables and information describing key features of available loan products, including reduced documentation programs, also may be useful for consumers who are considering the nontraditional mortgage products and other loan features described in this guidance.

19. Institutions may not be able to incorporate all of the practices recommended in this guidance when advertising nontraditional mortgages through certain forms of media, such as radio, television, or billboards. Nevertheless, institutions should provide clear and balanced information about the risks of these products in all forms of advertising.

20. Consumers also should be apprised of other material changes in payment obligations, such as balloon payments.

3070.3.3.4.3 Practices to Avoid

Institutions also should avoid practices that obscure significant risks to the consumer. For example, if an institution advertises or promotes a nontraditional mortgage by emphasizing the comparatively lower initial payments permitted for these loans, the institution also should provide clear and comparably prominent information alerting the consumer to the risks. Such information should explain, as relevant, that these payment amounts will increase, that a balloon payment may be due, and that the loan balance will not decrease and may even increase due to the deferral of interest or principal payments. Similarly, institutions should avoid promoting payment patterns that are structurally unlikely to occur.[21] Such practices could raise legal and other risks for institutions, as described more fully above.

Institutions also should avoid such practices as (1) giving consumers unwarranted assurances or predictions about the future direction of interest rates (and, consequently, the borrower's future obligations); (2) making one-sided representations about the cash savings or expanded buying power to be realized from nontraditional mortgage products in comparison with amortizing mortgages; (3) suggesting that initial minimum payments in a payment-option ARM will cover accrued interest (or principal and interest) charges; and (4) making misleading claims that interest rates or payment obligations for these products are "fixed."

3070.3.3.5 Control Systems

Institutions should develop and use strong control systems to monitor whether actual practices are consistent with their policies and procedures relating to nontraditional mortgage products. Institutions should design control systems to address compliance and consumer information concerns as well as the safety and soundness considerations discussed in this guidance. Lending personnel should be trained so that they are able to convey information to consumers about product terms and risks in a timely, accurate, and balanced manner. As products evolve and new products are introduced, lending personnel should receive additional training, as necessary. Lending personnel should be monitored to determine whether they are following these policies and procedures. Institutions should review consumer complaints to identify potential compliance, reputation, and other risks. Attention should be paid to appropriate legal review and to using compensation programs that do not improperly encourage lending personnel to direct consumers to particular products.

With respect to nontraditional mortgage loans that an institution makes, purchases, or services using a third party, such as a mortgage broker, correspondent, or other intermediary, the institution should take appropriate steps to mitigate risks relating to compliance and consumer information concerns discussed in this guidance. These steps would ordinarily include, among other things, (1) conducting due diligence and establishing other criteria for entering into and maintaining relationships with such third parties, (2) establishing criteria for third-party compensation designed to avoid providing incentives for originations inconsistent with this guidance, (3) setting requirements for agreements with such third parties, (4) establishing procedures and systems to monitor compliance with applicable agreements, bank policies, and laws, and (5) implementing appropriate corrective actions in the event that the third party fails to comply with applicable agreements, bank policies, or laws.

3070.3.4 APPENDIX (TERMS USED IN THIS DOCUMENT)

Interest-Only Mortgage Loan. An interest-only mortgage loan refers to a nontraditional mortgage in which, for a specified number of years (for example, three or five years), the borrower is required to pay only the interest due on the loan, during which time the rate may fluctuate or may be fixed. After the interest-only period, the rate may be fixed or it may fluctuate based on the prescribed index and payments, including both principal and interest.

Payment-Option ARM. A payment-option ARM is a nontraditional adjustable-rate mortgage that allows the borrower to choose from a number of different payment options. For example, each month, the borrower may choose a minimum payment option based on a "start" or introductory interest rate, an interest-only payment option

21. For example, marketing materials for payment-option ARMs may promote low predictable payments until the recast date. Such marketing should be avoided in circumstances in which the minimum payments are so low that negative amortization caps would be reached and higher payment obligations would be triggered before the scheduled recast, even if interest rates remain constant.

based on the fully indexed interest rate, or a fully amortizing principal and interest payment option based on a 15- or 30-year loan term, plus any required escrow payments. The minimum payment option can be less than the interest accruing on the loan, resulting in negative amortization. The interest-only option avoids negative amortization but does not provide for principal amortization. After a specified number of years, or if the loan reaches a certain negative amortization cap, the required monthly payment amount is recast to require payments that will fully amortize the outstanding balance over the remaining loan term.

Reduced Documentation. Reduced documentation is a loan feature that is commonly referred to as ''low doc/no doc,'' ''no income/no asset,'' ''stated income,'' or ''stated assets.'' For mortgage loans with this feature, an institution sets reduced or minimal documentation standards to substantiate the borrower's income and assets.

Simultaneous Second-Lien Loan. A simultaneous second-lien loan is a lending arrangement where either a closed-end second lien or a home equity line of credit (HELOC) is originated simultaneously with the first-lien mortgage loan, typically in lieu of a higher down payment. 3070.3.5

3070.3.5 INSPECTION OBJECTIVES

1. To ascertain if the banking organization[22] has adequate risk-management processes, policies, and procedures to address the risk associated with its nontraditional mortgage loans.
2. To evaluate whether the banking organization's nontraditional mortgage loan terms are supported by a disciplined analysis of its potential exposures versus the mitigating factors that ensure that risk levels are adequately managed.
3. To determine if the underwriting standards for nontraditional mortgage loans comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines.
4. To evaluate whether the banking organization's management carefully considers and appropriately assesses and mitigates the risk exposures created by the nontraditional mortgage loans by ensuring that—
   a. its loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower's repayment capacity;
   b. its nontraditional mortgage loan products have strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
   c. its consumers have sufficient information to clearly understand the loan terms and associated risks prior to making a nontraditional mortgage loan product choice.
5. To determine if the banking organization has borrower qualification criteria that include an evaluation of a borrower's repayment capacity and ability to repay the debt—the full amount of the credit extended, including any balance increase that may accrue from negative amortization—by the final maturity date at the fully indexed rate.

22. Going forward in this section (for bank holding company inspection purposes) ''banking organization'' refers to the bank holding company and its nonbank subsidiaries that are supervised by the Federal Reserve System.

3070.3.6 INSPECTION PROCEDURES

Risk Mitigation

1. Assess the banking organization's management procedures to mitigate the risk created by nontraditional mortgage products. Determine that—
   a. underwriting standards and terms are consistent with prudent lending practices, including consideration of each borrower's repayment capacity;
   b. products are supported by strong risk-management standards, capital levels that are commensurate with their risk, and an allowance for loan and lease losses that reflects the collectiblity of the portfolio; and
   c. borrowers have sufficient information to clearly understand the terms of their loans and their associated risks.

Underwriting Standards

1. Determine if the banking organization's underwriting standards—
   a. address the effect of a substantial pay-

ment increase in the borrower's capacity to repay when loan amortization begins,
   b. comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines, and
   c. require that loan terms are based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels remain manageable.
2. Verify that the banking organization's nontraditional mortgage loan qualification standards recognize the potential impact of payment shock (particularly for borrowers with high loan-to-value ratios, high debt-to-income ratios, and low credit scores).
3. Ascertain that the analysis of a borrower's repayment capacity include—
   a. an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule;
   b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision; and
   c. avoiding an overreliance on credit scores as a substitute for income verification or reliance on the sale or refinancing of the property (pledged as collateral) when amortization begins.
4. Determine whether originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower's repayment capacities.
5. Verify that the banking organization has clear loan underwriting policies governing the use of—
   a. reduced documentation of the borrower's financial capacity (for example, nonverification of reported income when the borrower's income can be documented based on recent W-2 statements, pay stubs, or tax returns),
   b. minimal or no owner's equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors),
   c. introductory interest rates (banking organizations should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates),
   d. subprime lending (adherence to the interagency guidance on subprime lending),[23] and
   e. non-owner-occupied investor loans (qualifications should be based on the borrower's ability to service the debt over the life of the loan, which would include a combined LTV ratio that considers negative amortization and sufficient borrower equity, and continuing cash reserves).

Portfolio and Risk-Management Practices

1. If the banking organization originates or invests in nontraditional mortgage loans, determine if more robust risk-management practices have been adopted to manage the exposures.
   a. Verify that there are appropriate written lending policies that have been adopted and are being used and monitored, specifying acceptable product attributes, production and portfolio limits (growth and volume limits by loan type), sales and securitization practices, and risk-management expectations (acceptable levels of risk).
   b. Determine if enhanced performance measures have been designed and if there is management reporting that provides an early warning for increasing risk.
   c. Find out if the appropriate ALLL levels have been established that consider the credit quality of the portfolio and the conditions that affect collectibility.
   d. Evaluate whether adequate capital is maintained at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility.
   e. Determine if capital is held commensurate with the risk characteristics of the banking organization's nontraditional mortgage loan portfolios.
2. If the banking organization has concentrations in nontraditional mortgage products, determine if there are—
   a. well-developed monitoring systems and risk-management practices, which monitor and keep track of concentrations in

23. See SR-01-4 and SR-99-6.

key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status, and
  b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loan and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features.
3. Determine if the banking organization has adequate quality controls and compliance and audit procedures that focus on mortgage lending activities posing high risk.
   a. Determine if the banking organization has strong internal controls over accruals, customer service, and collections.
   b. Verify that policy exceptions made by servicing and collections personnel are carefully monitored and that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk.
   c. Find out if the quality control function regularly reviews (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters confirming that underwriting policies are followed.
4. Bank oversight of third-party originators—
   a. determine if the banking organization has strong systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence, and
   b. find out if the oversight of third-party mortgage loan origination lending practices includes monitoring the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) so that they are reflective of the banking organization's lending standards and in compliance with applicable laws and regulations.
5. Determine if the banking organization's risk-management practices are commensurate with the nature, volume, and risk of its secondary-market activities.
   a. Find out if there are comprehensive formal strategies for managing the risks arising from significant secondary-market activities.
   b. Ascertain if contingency planning includes how the banking organization will respond to a decline in loan demand in the secondary market.
   c. Determine if there were any repurchases of defaulted mortgages and if the banking organization complies with its risk-based capital guidelines.
6. Evaluate the appropriateness of management information and reporting systems for the level and nature of the banking organization's mortgage lending activity.
   a. Verify that the reporting allows management to detect changes in the risk profile, or deteriorating performance, of its nontraditional mortgage loan portfolio.
   b. Determine if management information is reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance.
   c. Find out if—
      1) portfolio volume and performance are tracked against expectations, internal lending standards, and policy limits;
      2) volume and performance expectations are established at the subportfolio and aggregate portfolio levels;
      3) variance analyses are regularly performed to identify exceptions to policies and prescribed thresholds; and
      4) qualitative analyses are performed when actual performance deviates from established policies and thresholds.
7. Determine if the banking organization, based on the size and complexity of its lending operations, performs sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio.
8. Verify that the scope of the sensitivity analysis includes stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the banking organization's immediate control.
9. Find out if the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels.
10. Determine if the banking organization has established an appropriate ALLL for the estimated credit losses and commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks).
11. If the banking organization has material

mortgage banking activities and mortgage servicing assets—

a. evaluate whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages and
b. ascertain if the valuation process followed the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and whether reasonable and supportable assumptions were used.

3071.0.1 INTERAGENCY ADVISORY ON ACCOUNTING AND REPORTING FOR COMMITMENTS TO ORIGINATE AND SELL MORTGAGE LOANS

On May 3, 2005, the Federal Reserve and the other federal financial institution regulatory agencies[1] (the agencies) issued an Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.[2] (See SR-05-10.)

The advisory provides guidance on the appropriate accounting and reporting for commitments to—

- originate mortgage loans that will be *held for resale,* and
- sell mortgage loans under mandatory-delivery and best-efforts contracts.

Commitments to originate mortgage loans that will be held for resale are derivatives and must be accounted for at fair value on the balance sheet by the issuer. All loan-sales agreements, including both mandatory-delivery and best-efforts contracts, must be evaluated to determine whether the agreements meet the definition of a derivative under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by Statement of Financial Accounting Standards No. 149, "Amendment of Statement 133 on Derivative Instruments and Hedging Activities" (collectively, FAS 133). A financial institution should also account for loan-sales agreements that meet the definition of a derivative at fair value on the balance sheet.

The advisory discusses the characteristics that should be considered in determining whether mandatory-delivery and best-efforts contracts are derivatives and the accounting and regulatory reporting treatment for both commitments to originate mortgage loans that will be held for resale and those loan-sales agreements that meet the definition of a derivative. The advisory also addresses the guidance that should be considered in determining the fair value of derivatives.

The advisory provides additional guidance on the application of FAS 133. Financial institutions, including those that are *not* required to file reports with the Securities and Exchange Commission (SEC), are expected to follow the guidance in SEC Staff Accounting Bulletin No. 105, "Application of Accounting Principles to Loan Commitments" (SAB 105).[3]

A financial institution is expected to account for and report derivative loan commitments and forward loan-sales commitments as derivatives in accordance with generally accepted accounting principles (GAAP), which include the use of valuation techniques that are reasonable and supportable in the determination of fair value. An institution's failure to account for and report derivative loan commitments and forward loan-sales commitments in regulatory reports in accordance with GAAP may be an unsafe and unsound practice.

3071.0.1.1 Accounting and Reporting

3071.0.1.1.1 Accounting Policies

Well-managed financial institutions have written and consistently applied accounting policies for commitments to originate mortgage loans that will be held for resale and to sell mortgage loans under mandatory-delivery and best-efforts contracts, including approved valuation methodologies and procedures to formally approve changes to those methodologies. The methodologies should be reasonable, objectively supported, and fully documented. Procedural discipline and consistency are key concepts in any valuation-measurement technique. Institutions should ensure that internal controls, including effective independent review or audit, are in place to provide integrity to the valuation process. Institutions' practices should, therefore, reflect these concepts to ensure the reliability of their valuations of derivative loan commitments and forward loan-sales commitments.

3071.0.1.1.2 Derivative Loan Commitments

A financial institution should account for deriva-

1. The agencies are the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

2. The guidance in the interagency advisory is also intended to apply to financial-statement reporting by bank holding companies.

3. Staff accounting bulletins (SABs) summarize the views of the SEC's staff regarding the application of generally accepted accounting principles.

tive loan commitments at fair value on the balance sheet, regardless of the manner in which the intended sale of the mortgage loans will be executed (e.g., under a best-efforts contract, a mandatory-delivery contract, or the institution's own securitization). An institution should report each fixed, adjustable, and floating derivative loan commitment as an "other asset" or an "other liability" in their regulatory reports based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.[4]

With respect to floating derivative loan commitments, because the interest rate on such a commitment "floats" on a daily basis with market interest rates, the fair value of a floating derivative loan commitment approximates zero as long as the creditworthiness of the borrower has not changed. However, as with other derivative loan commitments, an institution must report the entire gross notional amount of floating derivative loan commitments in its regulatory reports.

Commitments to originate mortgage loans that will be held for investment purposes and commitments to originate other types of loans are not within the scope of FAS 133 and, therefore, are not accounted for as derivatives.[5] An institution should report the unused portion of these types of commitments, which are *not* considered derivatives, as "unused commitments" in its regulatory reports.

3071.0.1.1.3 Forward Loan-Sales Commitments

A financial institution should account for forward loan-sales commitments for mortgage loans as derivatives at fair value on the balance sheet. Each forward loan-sales commitment should be reported as an "other asset" or an "other liability" based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.[6]

3071.0.1.1.4 Netting of Contracts

For balance-sheet-presentation purposes, FAS 133 does not provide specific guidance on financial-statement presentation.[7] A financial institution may not offset derivatives with negative fair values (liabilities) against those with positive fair values (assets), unless the criteria for "netting" under GAAP have been satisfied.[8] In addition, an institution may not offset the fair value of forward loan-sales commitments against the fair value of derivative loan commitments (the pipeline) or mortgage loans held for sale (warehouse loans). Rather, forward loan-sales commitments must be accounted for separately at fair value, and warehouse loans must be accounted for at the lower of cost or fair value (commonly referred to as "LOCOM")[9] with certain adjustments to the cost basis of the loans if hedge accounting is applied.

3071.0.1.1.5 Hedge Accounting

A financial institution should follow the guidance in FAS 133 when applying hedge accounting to its mortgage banking activities. If the FAS 133 qualifying criteria are met, an institution may apply—

- fair-value hedge accounting in a hedging relationship between forward loan-sales commitments (the hedging instrument) and fixed-rate warehouse loans (the hedged item), or
- cash-flow hedge accounting in a hedging relationship between forward loan-sales com-

4. When preparing Reports of Condition and Income (Call Reports) and the Consolidated Financial Statements for Bank Holding Companies (BHC reports), fixed, adjustable, and floating derivative loan commitments should not be reported as unused commitments in Schedule RC-L, Derivatives and Off-Balance Sheet Items (Schedule HC-1 for bank holding companies), because such commitments are to be reported as derivatives in this schedule.

5. See FAS 133, paragraph 10(i).

6. Regardless of whether the underlying mortgage loans will be held for investment or for resale, commitments to purchase mortgage loans from third parties under either mandatory-delivery contracts or best-efforts contracts are derivatives if, upon evaluation, the contracts meet the definition of a derivative under FAS 133. An institution should report its loan-purchase commitments that meet the definition of a derivative at fair value on the balance sheet.

7. That is, FAS 133 does not provide specific guidance where, in the financial statements, the fair value of derivatives or the changes in the fair value of derivatives should be classified and presented on the financial statement.

8. When an institution has two (or more) derivatives with the same counterparty, contracts with positive fair values and negative fair values may be netted if the conditions set forth in FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts" (FIN 39), are met. Those conditions are as follows: (1) each of the parties owes the other determinable amounts; (2) the reporting party has the right to set off the amount owed with the amount owed by the other party; (3) the reporting party intends to set off; and (4) the right of setoff is enforceable at law. In addition, without regard to the third condition, fair-value amounts recognized for derivative contracts executed with the same counterparty under a master netting arrangement may be offset.

9. See Statement of Financial Accounting Standards No. 65, "Accounting for Certain Mortgage Banking Activities" (FAS 65), paragraph 4.

mitments (the hedging instrument) and the forecasted sale of the warehouse loans and/or the loans to be originated under derivative loan commitments (the forecasted transaction).[10]

If a financial institution does not apply hedge accounting, either because the FAS 133 hedge criteria are not met or the institution chooses not to apply hedge accounting, forward loan-sales commitments should be treated as nonhedging derivatives. If hedge accounting is not applied, an institution will account for its warehouse loans at the lower of cost or fair value. Because nonhedging forward loan-sales commitments are accounted for at fair value through earnings, such an approach causes volatility in reported earnings if the fair value of the warehouse loans increases above their cost basis. In this situation, the volatility is a result of recognizing the full amount of any decline in the fair value of the forward loan-sales commitments in earnings while not adjusting the carrying amount of the warehouse loans above their cost basis.

3071.0.1.1.6 Income-Statement Effect

Unless cash-flow hedge accounting is applied, a financial institution should include the periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments in current-period earnings. An institution should report these changes in fair value in either "other non-interest income" or "other non-interest expense," but not as trading revenue, in their regulatory reports. However, an institution's decision as to whether to report the changes in fair value in its regulatory reports in an income or expense line item should be consistent with its presentation of these changes in its general-purpose external financial statements (including audited financial statements)[11] and should be consistent from period to period.

3071.0.1.2 Valuation

3071.0.1.2.1 Fair Value

FAS 133 indicates that the guidance in Statement of Financial Accounting Standards No. 107, "Disclosures About Fair Value of Financial Instruments" (FAS 107), should be followed in determining the fair value of derivatives.[12] That guidance provides that quoted market prices are the best evidence of the fair value of financial instruments. However, when quoted market prices are not available, which is typically the case for derivative loan commitments and forward loan-sales commitments, estimates of fair value should be based on the best information available in the circumstances (e.g., valuation techniques based on estimated expected future cash flows). When expected future cash flows are used, they should be the institution's best estimate based on reasonable and supportable assumptions and projections.

Estimates of fair value should consider prices for similar assets or similar liabilities and the results of valuation techniques to the extent available in the circumstances. In the absence of (1) quoted market prices in an active market, (2) observable prices of other current market transactions, or (3) other observable data supporting a valuation technique, the transaction price represents the best information available with which to estimate fair value at the inception of an arrangement.

A financial institution should not recognize an unrealized gain or loss at inception of a derivative instrument unless the fair value of that instrument is obtained from a quoted market price in an active market or is otherwise evidenced by comparison to other observable current market transactions or based on a valuation technique incorporating observable market data.[13] Based on this guidance, derivative loan commitments generally would have a zero fair value at inception.[14] However, subsequent changes in the fair value of a derivative loan commitment must be recognized in financial statements and regulatory reports (e.g., changes in fair value attributable to changes in market interest rates).

When estimating the fair value of derivative loan commitments and those best-efforts contracts that meet the definition of a derivative, a

10. See FAS 133, paragraphs 20–21, and related FAS 133 guidance for hedging instruments, hedged items, and forecasted transactions that qualify for fair-value and cash-flow hedge accounting.

11. See footnote 7.

12. See FAS 133, paragraph 17.

13. See footnote 3 in Emerging Issues Task Force Issue No. 02-3 (EITF 02-3), "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities."

14. If a potential borrower pays the lender a fee upon entering into a derivative loan commitment (e.g., a rate-lock fee), there is a transaction price, and the lender should recognize the derivative loan commitment as a liability at inception using an amount equal to the fee charged to the potential borrower.

financial institution should consider predicted "pull-through" (or, conversely, "fallout") rates. A pull-through rate is the probability that a derivative loan commitment will ultimately result in an originated loan. Some factors that may be considered in arriving at appropriate pull-through rates include (but are not limited to) the origination channel (which may be either internal [retail] or external [wholesale or correspondent, to the extent the institution rather than the correspondent closes the loan]),[15] current mortgage interest rates in the market versus the interest rate incorporated in the derivative loan commitment, the purpose of the mortgage (purchase versus refinancing), the stage of completion of the underlying application and underwriting process, and the time remaining until the expiration of the derivative loan commitment. Estimates of pull-through rates should be based on historical information for each type of loan product adjusted for potential changes in market interest rates that may affect the percentage of loans that will close. An institution should not consider the pull-through rate when reporting the notional amount of derivative loan commitments in regulatory reports but, rather, must report the entire gross notional amount.

3071.0.1.2.2 SAB 105

In March 2004, the SEC issued SAB 105 to provide guidance on the proper accounting and disclosures for derivative loan commitments. SAB 105 is effective for derivative loan commitments entered into after March 31, 2004. SAB 105 indicates that the expected future cash flows related to the associated servicing of loans should not be considered in recognizing derivative loan commitments. Incorporating expected future cash flows related to the associated servicing of the loan essentially results in the immediate recognition of a servicing asset. Servicing assets should only be recognized when the servicing asset has been contractually separated from the underlying loan by sale or securitization of the loan with servicing retained.[16] Further, no other internally developed intangible assets (such as customer-relationship intangible assets) should be recognized as part of derivative loan commitments. Recognition of such assets would only be appropriate in a third-party transaction (for example, the purchase of a derivative loan commitment either individually, in a portfolio, or in a business combination).

15. If an institution commits to purchase a loan that will be closed by a correspondent in the correspondent's name, the institution would have a loan-purchase commitment rather than a derivative loan commitment. See footnote 6.

16. See Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," paragraph 61.

3071.0.1.3 Standard-Setter Activities

Financial institutions should be aware that the SEC or the Financial Accounting Standards Board (FASB) may issue additional fair-value, measurement, or recognition guidance in the future (e.g., a fair-value measurement statement). To the extent that additional guidance is issued, institutions must also consider the guidance in developing fair-value-estimate methodologies for derivative loan commitments and forward loan-sales commitments as well as measuring and recognizing such derivatives.

3071.0.1.4 Changes in Accounting for Derivative Loan Commitments and Loan-Sales Agreements

Financial institutions should follow Accounting Principles Board Opinion No. 20 (APB 20), "Accounting Changes,"[17] if a change in their accounting for derivative loan commitments, best-efforts contracts, or mandatory-delivery contracts is necessary. APB 20 defines various types of accounting changes and addresses the reporting of corrections of errors in previously issued financial statements. APB 20 states, "Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared."

For regulatory reporting purposes, a financial institution must determine whether the reason for a change in its accounting meets the APB 20 definition of an accounting error. If the reason for the change meets this definition, the error should be reported as a prior-period adjustment if the amount is material. Otherwise, the effect of the correction of the error should be reported in current earnings.

If the effect of the correction of the error is

17. Effective December 15, 2005, APB 20 will be replaced by FASB Statement No. 154, "Accounting Changes and Error Corrections—A Replacement of APB Opinion No. 20 and FASB Statement No. 3."

material, a financial institution should also consult with its primary federal regulatory agency to determine whether any of its prior regulatory reports should be amended. If amended regulatory reports are not required, the institution should report the effect of the correction of the error on prior years' earnings, net of applicable taxes, as an adjustment to the previously reported beginning balance of equity capital. For the Call Report, the institution should report the amount of the adjustment in Schedule RI-A, item 2, "Restatements due to corrections of material accounting errors and changes in accounting principles," with an explanation in Schedule RI-E, item 4.

The effect of the correction of the error on income and expenses since the beginning of the year in which the error is corrected should be reflected in each affected income and expense account on a year-to-date basis beginning in the next quarterly income statement (Call Report) to be filed and not as a direct adjustment to retained earnings.

3071.0.1.5 Definitions of Terms Used in the Advisory

3071.0.1.5.1 Derivative Loan Commitment

The term *derivative loan commitment* refers to a lender's commitment to originate a mortgage loan that will be held for resale. Notwithstanding the characteristics of a derivative set forth in FAS 133, these commitments to originate mortgage loans *must* be accounted for as derivatives by the issuer under FAS 133 and include, but are not limited to, those commonly referred to as *interest-rate-lock commitments.*

In a derivative loan commitment, the lender agrees to extend credit to a borrower under certain specified terms and conditions in which the interest rate and the maximum amount of the loan[18] are set prior to or at funding. Under the agreement, the lender commits to lend funds to a potential borrower (subject to the lender's approval of the loan) on a fixed- or adjustable-rate basis, regardless of whether interest rates change in the market, or on a floating-rate basis. In a typical derivative loan commitment, the borrower can choose to—

- "lock in" the current market rate for a fixed-rate loan (i.e., a fixed derivative loan commitment),
- "lock in" the current market rate for an adjustable-rate loan that has a specified formula for determining when and how the interest rate will adjust (i.e., an adjustable derivative loan commitment), or
- wait until a future date to set the interest rate and allow the interest rate to "float" with market interest rates until the rate is set (i.e., a floating derivative loan commitment).

Derivative loan commitments vary in term and expire after a specified time period (e.g., 60 days after the commitment date). Additionally, derivative loan commitments generally do not bind the potential borrower to obtain the loan, nor do they guarantee that the lender will approve the loan once the creditworthiness of the potential borrower has been determined.

3071.0.1.5.2 Forward Loan-Sales Commitment

The term *forward loan-sales commitment* refers to either (1) a mandatory-delivery contract or (2) a best-efforts contract that, upon evaluation under FAS 133, meets the definition of a derivative.

3071.0.1.5.3 Mandatory-Delivery Contract

A *mandatory-delivery contract* is a loan-sales agreement in which a financial institution commits to deliver a certain principal amount of mortgage loans to an investor at a specified price on or before a specified date. If the institution fails to deliver the amount of mortgages necessary to fulfill the commitment by the specified date, it is obligated to pay a "pair-off" fee, based on then-current market prices, to the investor to compensate the investor for the shortfall. Variance from the originally committed principal amount is usually permitted, but typically may not exceed 10 percent of the committed amount.

All loan-sales agreements must be evaluated to determine whether they meet the definition of a derivative under FAS 133.[19] A mandatory-

18. In accordance with the "Background Information and Basis for Conclusions" in Statement of Financial Accounting Standards No. 149 (FAS 149), the notional amount of a derivative loan commitment is the maximum amount of the borrowing. See FAS 149, paragraph A27.

19. See FAS 133, paragraph 6, for the characteristics of a financial instrument or other contract that meets the definition of a derivative.

delivery contract has a specified underlying (the contractually specified price for the loans) and notional amount (the committed loan-principal amount), and requires little or no initial net investment. Additionally, a mandatory-delivery contract requires or permits net settlement or the equivalent thereof as the institution is obligated under the contract to either deliver mortgage loans or pay a pair-off fee (based on the then-current market prices) on any shortfall on the delivery of the committed loan-principal amount. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the mortgage loans to be delivered are considered readily convertible to cash.[20] Based on these characteristics, a mandatory-delivery contract meets the definition of a derivative at the time an institution enters into the commitment.

3071.0.1.5.4 Best-Efforts Contract

The term *best-efforts contract* refers to a loan-sales agreement in which a financial institution commits to deliver an individual mortgage loan of a specified principal amount and quality to an investor if the loan to the underlying borrower closes. Generally, the price the investor will pay the seller for an individual loan is specified prior to the loan being funded (e.g., on the same day the lender commits to lend funds to a potential borrower). A best-efforts contract that has all of the following characteristics would meet the definition of a derivative:

- an underlying (e.g., the price the investor will pay the seller for an individual loan is specified in the contract)
- a notional amount (e.g., the contract specifies the principal amount of the loan as an exact dollar amount or as a principal range with a determinable maximum amount)[21]
- requires little or no initial net investment (e.g., no fees are exchanged between the seller and investor upon entering into the agreement, or a fee that is similar to a premium on other option-type contracts is exchanged)
- requires or permits net settlement or the equivalent thereof (for example, the seller is contractually obligated to either (1) deliver the loan to the investor if the loan closes or (2) pay a pair-off fee, based on then-current market prices, to the investor to compensate the investor if the loan closes and is not delivered. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the loan to be delivered is considered readily convertible to cash.).

3071.0.1.5.5 Master Agreement

A financial institution may enter into one of several types of arrangements with an investor to govern the relationship between the institution and the investor and set the parameters under which the institution will deliver individual mortgage loans through separate best-efforts contracts. Such an arrangement might include, for example, a *master agreement* or an *umbrella contract.* These arrangements may specify an overall maximum principal amount of mortgage loans that the institution may deliver to the investor during a specified time period, but generally they do not specify the price the investor will pay for individual loans. Further, while these arrangements may include pair-off-fee provisions for loans to be sold under individual best-efforts contracts covered by the arrangements, the seller is neither contractually obligated to deliver the amount of mortgages necessary to fulfill the maximum principal amount specified in the arrangement nor required to pay a pair-off fee on any shortfall. Because these arrangements generally either do not have a specified underlying or determinable notional amount or do not require or permit net settlement or the equivalent thereof, the arrangements typically do not meet the definition of a derivative. As discussed above, an individual best-efforts contract governed by one of these arrangements may, however, meet the definition of a derivative.

As the terms of individual best-efforts contracts and master agreements or umbrella contracts vary, a financial institution must carefully evaluate such contracts to determine whether the contracts meet the definition of a derivative in FAS 133.

20. See FAS 133, paragraph 57(c)(1), for a description of contracts that have terms that implicitly or explicitly require or permit net settlement.

21. The use of a maximum amount as the notional amount of a best-efforts contract is consistent with the loan-commitment discussion in the "Background Information and Basis for Conclusions" in FAS 149. See FAS 149, paragraph A27.

3071.0.1.6 Example of the Accounting for Commitments to Originate and Sell Mortgage Loans[22]

3071.0.1.6.1 ABC Mortgage Financial Institution (Best-Efforts Contracts and No Application of Fair-Value Hedge Accounting)

The following simplified example was developed to provide a financial institution that has a limited number of derivative loan commitments general guidance on one approach that may be used to value such commitments.[23] This example also illustrates the regulatory reporting requirements for derivative loan commitments and forward loan-sales commitments.

The guidance in this example is for illustrative purposes only, as there are several ways that a financial institution might estimate the fair value of its derivative loan commitments. A second approach to valuing derivative loan commitments is described in *Derivative Loan Commitments Task Force Illustrative Disclosures on Derivative Loan Commitments,* a practice aid developed by staff of the American Institute of Certified Public Accountants (AICPA) and a task force comprising representatives from the financial services, mortgage banking, and public accounting communities.[24] As indicated in the body of the interagency advisory, a financial institution must consider the guidance in FAS 133, FAS 107, EITF 02-3, and SAB 105 in measuring and recognizing derivative loan commitments and forward loan-sales commitments. In addition, an institution should be aware that the SEC or FASB may issue additional guidance in the future that may alter certain aspects of this example.

3071.0.1.6.1.1 Background

ABC Mortgage Financial Institution (ABC) enters into fixed, adjustable, and floating derivative loan commitments to originate mortgage loans that it intends to sell. The institution accounts for the commitments as derivative financial instruments as required under FAS 133.

ABC enters into best-efforts contracts with a mortgage investor under which it commits to deliver certain loans that it expects to originate under derivative loan commitments (i.e., the pipeline) and loans that it has already originated and currently holds for sale (i.e., warehouse loans). ABC and the mortgage investor agree on the price that the investor will pay ABC for an individual loan with a specified principal amount prior to the loan being funded. Once the price that the mortgage investor will pay ABC for an individual loan and the notional amount of the loan are specified, and ABC is obligated to deliver the loan to the investor if the loan closes, the contract represents a forward loan-sales commitment. Under FAS 133, ABC accounts for these forward loan-sales commitments as derivative financial instruments.

On December 31 of a given year, the notional amounts of ABC's mortgage banking derivative loan commitments and forward loan-sales commitments are as follows:

Table 1—Notional Amounts of Derivative Loan Commitments and Forward Loan-Sales Commitments

	Notional amount
Derivative loan commitments	
Fixed-rate commitments	$ 8,500,000
Adjustable-rate commitments	1,500,000
Floating-rate commitments	2,000,000
Total derivative loan commitments	$12,000,000 [A][25]

22. This example uses the definitions and concepts presented in the body of the Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (the interagency advisory). Refer to the interagency advisory for clarification of the terms and concepts used in this example.

23. Estimating fair values when quoted market prices are unavailable requires considerable judgment. Valuation techniques using simplified assumptions may sometimes be used (with appropriate disclosure in the financial statements) to provide a reliable estimate of fair value at a reasonable cost. See FAS 107, paragraphs 60–61.

24. The practice aid is available at www.aicpa.org/download/members/div/acctstd/Illustrative_Disclosure_on_Derivative_Loan_Commitments.pdf.

25. Alpha references in table 1 and the text of this example refer to the "Reference" column in table 3.

Table 1—continued

	Notional amount	
Forward loan-sales commitments		
Pipeline loan commitments	$12,000,000	
Warehouse loan commitments	8,000,000	
Total forward loan-sales commitments	$20,000,000	[B]

Market interest rates have changed throughout the time period that ABC's derivative loan commitments and forward loan-sales commitments have been outstanding. Some of the fixed-rate commitments are at rates above current market rates while others are at rates at or below current market rates. All of ABC's adjustable-rate commitments are at rates below current market rates.

Based on its past experience, ABC estimates a pull-through rate of 70 percent on its fixed-rate commitments for which the locked-in rate is above current market rates (i.e., 70 percent of the commitments will actually result in loan originations) and a pull-through rate of 85 percent for its fixed-rate commitments for which the locked-in rate is at or below current market rates. ABC also estimates a pull-through rate of 85 percent for all of its adjustable-rate commitments that are below market rates.

The pull-through-rate assumptions in this example have been simplified for illustrative purposes. In determining appropriate pull-through rates, a financial institution must consider all factors that affect the probability that derivative loan commitments will ultimately result in originated loans. Therefore, an institution is expected to have more granularity (i.e., stratification) in its application of pull-through-rate assumptions to its derivative loan commitments.

3071.0.1.6.1.2 Discussion of ABC's Approach to Valuing Derivative Loan Commitments and Forward Loan-Sales Commitments

ABC estimates the fair value of its derivative loan commitments using the best information available in the circumstances because quoted market prices are not available. In this case, ABC uses valuation techniques that take into account current secondary-market loan pricing information.[26] ABC had noted the appropriate reference price for the underlying loans on the day that each derivative loan commitment was given to a borrower, and assigned an initial fair value of zero to each loan commitment consistent with the guidance in SAB 105 and EITF 02-3. At the end of the month, ABC compares the current reference price of each underlying loan with its initial reference price and calculates the price difference. ABC then calculates the fair value of these derivatives by multiplying the price difference by the estimated pull-through rate. This approach is illustrated in table 2.

As illustrated in table 2, ABC excludes time value from its fair-value-estimate methodology due to the short-term nature of the derivative loan commitments. As the exclusion of time value is not appropriate for all fair-value estimates, an institution must consider the terms of its specific agreements in determining an appropriate estimation methodology.

In the example in table 2, ABC estimated the initial reference price of the underlying loan to be originated under the commitment, excluding the value of the associated servicing rights, to be $100,000. That is, at the date it entered into the fixed derivative loan commitment with the borrower, ABC estimated it would receive $100,000, excluding the value of the associated servicing rights, if the underlying loan was funded and sold in the secondary market on that day. Because this amount is equal to the notional amount of the loan, ABC would not experience a gain or loss on the sale of the underlying loan (before considering the effect of the loan-origination fees and costs associated with the loan). As such, the fair value of this derivative loan commitment would be zero, and there would not be any unrealized gain or loss at the inception of the derivative loan commitment. This may not be true for all derivative loan commitments.

ABC defers all unrealized gains and losses at the inception of its derivative loan commitments until the underlying loans are sold. ABC's policy is based on the short-term nature of its

26. In general, source data for secondary-market loan-pricing information may include, for example, quotations from rate sheets; brokers; or electronic systems such as those provided by third-party vendors, market makers, or mortgage loan investors. When secondary-market loan-pricing information that includes the value of servicing rights is used, the fair value of the derivative loan commitments ultimately must exclude any value attributable to servicing rights.

Table 2—ABC's Calculation of the Fair Value of Derivative Loan Commitments: An Example of a Fixed Derivative Loan Commitment for Which the Locked-In Rate Is Above the Current Market Rate*

Notional amount of loan	*Initial reference price of loan to be originated under commitment—excluding servicing rights*	*Current reference price of loan to be originated under commitment—excluding servicing rights*	*Price difference*	*Pull-through rate*	*Fair value of derivative loan commitment*
(1)	(2)	(3)	[(3) - (2)]	(4)	[(3) - (2)] × (4)
$100,000	$100,000	$100,500	$500	70%	$350

* The example in this table presents the fair-value calculation for one derivative loan commitment. The fair value of this derivative, which is positive, would be added to all the other derivative loan commitments with positive fair values. Netting derivatives with positive fair values (assets) against derivatives with negative fair values (liabilities) is not permitted unless the conditions stipulated in FIN 39 are met. Refer to footnote 8.

derivative loan commitments and was adopted in order to not accelerate the timing of gain recognition. As this practice may not be appropriate for all derivative loan commitments or other derivatives initially accounted for under EITF 02-3, and due to the lack of authoritative guidance in this area, an institution should consult with its accounting advisers concerning the appropriate accounting for its specific agreements.

After applying the methodology described above to individual derivative loan commitments, ABC aggregates the fair values of the derivative loan commitments by type (i.e., fixed, adjustable, and floating) and by whether the commitments have above-, at-, or below-market rates. The fair values of the fixed derivative loan commitments with above-market rates, adjusted for the appropriate pull-through rate, total $21,000 [C], which represents an asset. The aggregate fair value of the fixed derivative loan commitments that have at- or below-market rates, adjusted for the appropriate pull-through rate, sums to ($31,000) [D], which represents a liability. For the adjustable derivative loan commitments, the aggregate fair value, adjusted for the pull-through rate, is approximately ($2,000) [E], which is also a liability. The fair value of the floating derivative loan commitments approximates zero.

ABC also estimates the fair value of its forward loan-sales commitments outstanding at the end of the month using a similar methodology as that described above. Based upon this information, ABC determines that the estimated fair value of the forward loan-sales commitments related to its derivative loan commitments and warehouse loans with above-market rates is approximately ($45,000) [F], which represents a liability, because current market interest rates for comparable mortgage loans are lower than the rates in effect when the derivative loan commitments were initiated. (Consequently, current offered delivery prices for similar commitments are greater than the delivery prices of ABC's existing forward loan-sales commitments. Therefore, the change in the fair value of ABC's forward loan-sales commitments since they were entered into represents a loss.) The fair value of ABC's forward loan-sales commitments related to its derivative loan commitments and warehouse loans with at- or below-market rates is estimated to be $50,000, which is an asset.[27]

3071.0.1.6.1.3 Regulatory Reporting

The following table illustrates the regulatory reporting requirements for the derivative-related dollar amounts cited in the example.

As illustrated in table 3, depending upon particular market circumstances, individual derivative loan commitments and forward loan-sales

27. The absolute value of the fair value of the forward loan-sales commitments is greater than the absolute value of the fair value of the related derivative loan commitments because the forward loan-sales commitments also apply to, and act as an economic hedge of, ABC's warehouse loans. ABC accounts for its warehouse loans at the lower of cost or fair value in accordance with FAS 65. In this example, ABC does not apply hedge accounting to its warehouse loans.

Table 3—Regulatory Reporting Implications for Derivative Loan Commitments and Forward Loan-Sales Commitments

	Amount	*Reference*
Derivative loan commitments		
Notional amount of "over-the-counter written options"[28]	$12,000,000	[A]
Derivatives with a *positive* fair value held for purposes other than trading (asset)	$21,000	[C]
Derivatives with a *negative* fair value held for purposes other than trading (liability)	$33,000	[D + E]
Forward loan-sales commitments		
Notional amount of "forward contracts"	$20,000,000	[B]
Derivatives with a *positive* fair value held for purposes other than trading (asset)	$50,000	[G]
Derivatives with a *negative* fair value held for purposes other than trading (liability)	$45,000	[F]
Derivative loan commitments and forward loan-sales commitments		
Total notional amount of derivative contracts held for purposes other than trading	$32,000,000	[A + B]

commitments may have either positive or negative fair values, which ABC properly reports gross as assets or liabilities on its balance sheet. In addition, for regulatory reporting purposes, ABC consistently reports the periodic *changes* in the fair value of its derivative contracts in "other non-interest expense" in its income statement. Alternatively, ABC could have chosen to consistently report these fair-value changes in "other non-interest income" in its regulatory reports.

3071.0.2 INSPECTION OBJECTIVE

1. To find out if the bank holding company accounted for and reported the following transactions at their fair value: (1) its commitments to originate mortgage loans that were held for resale (derivatives) and (2) its loan-sales agreements that are derivatives. If so, ascertain if these transactions were accounted for and reported—
   a. in accordance with the instructions for the BHC reports (for example, the FR Y-9C); GAAP; and SR-05-10 and its attached May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans and
   b. based on reasonable and supportable valuation techniques as prescribed by the May 3, 2005, interagency advisory.

3071.0.3 INSPECTION PROCEDURES

1. Determine whether the bank holding company has written and consistently applied accounting policies to its commitments to (1) originate mortgage loans that were held for resale and (2) sell mortgage loans under mandatory-delivery and best-efforts contracts.
2. Find out if the bank holding company has developed and uses approved valuation methodologies and procedures to obtain formal approval for changes to those methodologies.
   a. Ascertain whether the valuation methodologies are reasonable, objectively supported, and fully documented.

28. Because derivative loan commitments are in certain respects similar to options, they are reported with "over-the-counter written options" for regulatory reporting purposes.

b. Determine if the bank holding company has internal controls, including an effective independent review or audit, in place that give integrity to the valuation process.
3. If the bank holding company issues fixed-, adjustable-, and floating-rate derivative loan commitments or forward loan-sales commitments, review an adequate sample that evidences the full coverage of these types of transactions.
   a. Ascertain if these transactions were properly reported on the balance sheet as an ''other asset'' or an ''other liability,'' based on whether the individual commitment has a positive (asset) or negative (liability) fair value in accordance with the instructions for the BHC reports.
   b. Determine if the floating-rate derivative loan commitments and other derivative loan commitments were reported at their entire gross notional amount in the BHC's reports (such as the FR Y-9C).
   c. Find out if the balance sheet correctly presents accounts for all such transactions, including the netting of contracts, the application of hedge accounting to mortgage banking activities, the valuation of derivatives, and any material or other accounting changes for derivative loan commitments and loan-sales agreements. Also determine if the bank holding company complies with the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans and with GAAP.
   d. Ascertain if periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments are reported in current-period earnings as either ''other non-interest income or ''non-interest expense, as appropriate.
4. Report to the central point of contact or examiner-in-charge any failure by the bank holding company's management to follow (1) the bank holding company's accounting and valuation policies for its commitments to originate mortgage loans that are held for resale and its commitments to sell mortgage loans, (2) the instructions for the Consolidated Financial Statement for Bank Holding Companies, (3) the May 3, 2005, interagency advisory, or (4) GAAP.
5. When additional inspection scrutiny is needed—based on the examination's findings; the supervisory concerns discussed in section 3071.0; the February 23, 2003, Interagency Advisory on Mortgage Banking (see SR-03-4 and its attachment); and the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (see SR-05-10 and its attachment)—consider using the comprehensive mortgage banking examination procedures in the appendix section A.2040.3 of the *Commercial Bank Examination Manual.*

In 1997, the Board amended Regulation Y to include "activities related to extending credit" in section 225.28(b)(2), which includes the following permissible nonbanking activities:

	Section No.
1. real estate and personal property appraising	3270.0
2. arranging commercial real estate equity financing	3220.0
3. check-guaranty services	3320.0
4. collection agency services	3330.0
5. credit bureau services	3340.0
6. asset-management, servicing, and collection activities	3084.0
7. acquiring debt in default	3104.0
8. real estate settlement services[1]	3072.8

1. Real estate settlement services do not include providing title insurance as principal, agent, or broker.

In 1997, the Board incorporated real estate servicing into section 225.28(b)(2) as one of the activities related to extending credit. (See 12 C.F.R. 225.28(b)(2)(viii).) Real estate settlement services do not include providing title insurance as principal, agent, or broker. Previously, the Board had approved the activity by Board order. In the order, the Board found that real estate settlement services consist of—

1. reviewing the status of the title in the title commitment, resolving any exceptions to the title, and reviewing the purchase agreement to identify any requirements that need to be complied with;
2. verifying payoffs on existing loans secured by the real estate and verifying the amount of and then calculating the prorating of special assessments and taxes on the property;
3. obtaining an updated title insurance commitment to the date of closing; preparing the required checks, deeds, and affidavits; and obtaining any authorization letters needed;
4. establishing a time and place for the closing, conducting the closing, and ensuring that all parties properly execute all appropriate documents and meet all commitments;
5. collecting and disbursing funds for the parties, holding funds in escrow pending satisfaction of certain commitments, and preparing the HUD settlement statement, the deed of trust, mortgage notes, the Truth-in-Lending statement, and purchaser's affidavits; and
6. recording all of the documents required under law. (See 1990 FRB 1058.)

3072.8.1 REAL PROPERTY EXCHANGE TRANSACTIONS UNDER SECTION 1031 OF THE INTERNAL REVENUE CODE

A request submitted to the Board on behalf of a bank holding company (BHC) requested an advisory opinion pursuant to section 225.27 of Regulation Y (12 C.F.R. 225.27). The BHC was proposing the acquisition of a subsidiary (the 1031 exchange subsidiary) that provided services to customers seeking to make exchanges of real property pursuant to section 1031 of the Internal Revenue Code (1031 exchange transactions).

Section 1031 of the Internal Revenue Code provides a U.S. taxpayer with deferral of gain when the taxpayer exchanges his or her property for another property of a "like kind." In a "forward" 1031 exchange transaction, the taxpayer first sells his or her existing property and later purchases a replacement property.[1] In order to complete a forward 1031 exchange transaction successfully, a taxpayer must satisfy certain conditions in section 1031 of the Internal Revenue Code and the U.S. Treasury regulations that implement section 1031. For example, in a forward 1031 exchange transaction, at the closing of the sale of the initial property, the proceeds of the sale must be held by an individual or entity otherwise unrelated to the transaction (the qualified intermediary). In addition, the taxpayer engaging in the forward 1031 exchange transaction may not receive the sale proceeds during the period in which a replacement property is identified (up to 45 days) and acquired (up to 180 days). In this request, the BHC was proposing to acquire a subsidiary that would act as a qualified intermediary in forward 1031 exchange transactions involving real property.

The 1031 exchange subsidiary would engage in several activities in order to facilitate forward 1031 exchange transactions. First, the subsidiary would provide its customer with documents related to the exchange to ensure that the exchange qualified as a valid forward 1031 exchange transaction. Specifically, the subsidiary would provide an exchange agreement, an assignment agreement, and a notice. The exchange agreement is a contract between the customer and the subsidiary that, among other features, notes the requirements for the successful completion of the transaction. The assignment agreement transfers from the customer to the subsidiary certain responsibilities for the sale of the initial property and the receipt of sales proceeds in order to ensure that the customer does not "constructively receive" the proceeds of the initial property sale for tax purposes. These responsibilities may include taking the transitory title to the initial property and replacement property as they are transferred from seller to buyer. The notice informs the purchaser of the initial property that the transaction is part of a forward 1031 exchange transaction; it helps establish that the mecha-

1. In a "reverse" 1031 exchange transaction, the taxpayer first purchases a replacement property and later sells his or her property. The proposal did not include the provision of services to customers seeking to make reverse 1031 exchange transactions.

nism for the forward 1031 exchange transaction is in place at the time of the sale.

Second, the 1031 exchange subsidiary would invest the proceeds of the sale of the initial property on behalf of the customer until the customer acquired the replacement property. The proceeds would be invested at the discretion of the subsidiary but would typically be deposited into deposit accounts at the BHC's subsidiary state-chartered commercial bank.[2] The subsidiary would also transfer the necessary funds to the appropriate party to effect the customer's purchase of the replacement property. If the customer does not identify a replacement property or purchase the replacement property within the required time periods set forth in section 1031 of the Internal Revenue Code or U.S. Treasury regulations implementing section 1031, the proceeds of the sale of the initial property would be transferred to the customer. It was represented that the subsidiary would act in a fiduciary capacity in holding, investing, and disbursing the customer's funds and that a state-chartered nondepository trust company would be allowed to engage in the activities of the subsidiary.

The 1031 exchange subsidiary (1) would not participate in negotiating the terms of the real property sale and purchase transactions that constitute the forward 1031 exchange transaction and (2) would not assist the customer in locating a buyer of the initial property or a seller of the replacement property. The requestor also asserted that the proposed services are permissible nonbanking activities for BHCs under section 225.28(b) of Regulation Y (12 C.F.R. 225.28(b)).

In view of all the facts of the record, Board staff opined that the proposed activities of the 1031 exchange subsidiary would be permissible real estate settlement services under section 225.28(b)(2)(viii) of Regulation Y (12 C.F.R. 225.28(b)(2)(viii)); would be trust company functions under section 225.28(b)(5) of Regulation Y (12 C.F.R. 225.28(b)(5)); and would be financial advisory services, including tax-planning and tax-preparation services, under section 225.28(b)(6) of Regulation Y (12 C.F.R. 225.28(b)(6)).[3]

The opinion is limited to the activities relating to the 1031 exchange transaction described in the opinion and in the correspondence exchanged between the requestor and Board staff. See the Board staff's February 9, 2006, legal interpretation.

2. The BHC's commercial bank subsidiary also may be a lender with respect to real properties involved in the 1031 exchange transaction. Any lending relationship between the bank and the customer would depend on the ability of the customer and the loan transaction to meet the bank's standard underwriting terms and conditions.

3. The Office of the Comptroller of the Currency (OCC) authorized national banks to provide a wide range of services to facilitate their customers' 1031 exchange transactions. See OCC Interpretive Letter No. 880 (December 16, 1999) and OCC Corporate Decision No. 2001–30 (October 10, 2001).

3073.0.1 EXPANDED STUDENT-LOAN-SERVICING ACTIVITIES

A bank holding company applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and section 225.23 of Regulation Y to expand the student-loan-servicing activities of its nonbank subsidiary. The activities would consist of—

1. providing student-loan authorities (the authority) with regular reports that include information in the aggregate and by individual lenders concerning the volume of loans being serviced for the authority and the volume of loans outstanding;
2. preparing projections for approval by the authority of student loans to be purchased and commitments to be issued in the future, based on the volume of loans being serviced and commitments outstanding, consistent with the amount of funds available to the authority as the result of its sale of bonds;
3. advising eligible lenders, borrowers, and other interested parties of the authority's student-loan-purchase program, including the criteria used by the authority in purchasing student loans and the extent to which the authority will be purchasing loans in the future based on the availability of funds; and
4. meeting regularly with the authority to advise it of the nonbank subsidiary's efforts in connection with the student-loan activities.

Under no circumstances would the nonbank subsidiary be authorized to bind the authority or its bank trustee to commit to purchase or actually to purchase student loans from eligible lenders.

The proposed activities were regarded as being equivalent to the activities of a mortgage banking subsidiary of a bank holding company, authorized under section 225.28(b)(1) of Regulation Y, with respect to acquiring and servicing mortgage loans for institutional investors or in connection with the secondary-mortgage market. The activities proposed and currently conducted by the applicant, to the extent that they were different from the services performed by any institution that services loans for others, were perceived as being different only in that they related to servicing student loans for a governmental authority. Banks and their nonbank subsidiaries generally provide comprehensive loan-acquisition and -servicing "packages" for investors in mortgage and other loans. The bank holding company's nonbank subsidiary was the nation's largest servicer of student loans, and was thus particularly well equipped to perform the proposed expanded services.

In addition to determining that the proposed activities were closely related to banking to approve the application, the Board had to conclude that the proposed activities would produce benefits to the public that would outweigh any possible adverse effects, such as unsound banking practices, unfair competition, conflicts of interests, or undue concentration of resources. The Board made that conclusion in addition to determining that the balance of public interest factors that it is required to consider under section 4(c)(8) of the BHC Act was favorable. Accordingly, the application was approved on July 1, 1985 (1985 FRB 725).

Section 4(c)(8) of the BHC Act (Servicing Loans)

A bank holding company or its subsidiary may engage in the activity of servicing loans or other extensions of credit for either affiliated companies or for persons or institutions not affiliated with the holding company. The service will often be carried on as an additional activity of a credit-extending subsidiary, such as a mortgage company, where the loan serviced was originated by the subsidiary and subsequently sold to an investor. A servicing company provides the collection vehicle through receipt and disbursement of funds for investors who may not possess the resources to accomplish the activity. The purpose of servicing is to keep a sound loan in good standing for a passive investor. The servicing company's remuneration is usually based upon a percentage of the outstanding balance of the loan.

The traditional servicing arrangement arises from the normal business of a mortgage company. The company grants extensions of credit to qualified borrowers and subsequently packages and sells these loans, normally without recourse, to individuals or institutional investors who contract the collection of the credit to the mortgage company. The company may also purchase mortgages or other extensions of credit in the open market with the intention of reselling the credit and retaining the servicing or can simply purchase servicing portfolios (12 C.F.R. 225.132). The collection itself is basically a bookkeeping function.

Servicing loans for others is relatively risk-free to the company when the credits are sold without recourse to investors. A credit which has been sold with recourse represents an unusual circumstance and should, therefore, be reviewed in detail. The serviced loans will generally be high quality mortgages which are in turn purchased from the company by passive investors desiring a fixed rate of return on their funds. The risk to a servicing company lies in its portfolio of unsold loans, or its "warehouse." The risk is two-fold: (1) the loan may not be of high enough quality to attract an investor so that the servicing company will have to continue to carry the credit for its own account, and (2) the loan was made at an interest rate which is below current market rates. In the latter case, the servicing company must either sell the loan at a discount or continue to hold the credit for its own account. In either case, the loan is treated as an asset of the company and involves credit risk.

The inspection of a servicing company, or a servicing department of a credit-extending subsidiary, should focus on adequacy of documentation and controls, and on the quality and marketability of the warehoused loans. The examiner should obtain a past due report for the portfolio and note in the inspection report significant credits which are past due together with the period of delinquency, the type of loan, and the asset classification, if any. The nature of the servicing business is such that the number of past dues should be small because loans are only warehoused for a short period of time until they can be sold to an investor. As a rule, a past due loan or a current loan which has been warehoused for more than several months is indicative of some problem with the credit. Each loan should be evaluated to determine the reason it has not been sold.

During periods of rising long-term interest rates, the warehouse portfolio becomes subject to the risk that a loan may not be marketable, except at a discount, because of its relatively low yield. This affects both the servicer's income and liquidity.

In the case of the parent company acting as a servicer, the inspection should also determine whether the activity is being carried on under the proper exemption. A bank holding company may act as a servicer under section 4(c)(8) of the Act or under the provisions of sections 4(a)(2) and/or 4(c)(1) of the Act. If carried on under Section 4(a)(2) of the BHC Act, the holding company is limited to servicing loans only for its own account or its banking and nonbanking subsidiaries. If carried under Section 4(c)(1)(C) of the BHC Act, the bank holding company is limited to servicing loans only for its own account or its banking subsidiaries.

Finally, the income of the company should be subject to scrutiny. A servicing company should be a profitable business. The servicer receives a fee based upon a percentage of the outstanding balance of the loan. In the early years of the payback period, the fee should significantly exceed the cost of the service, and because much of the portfolio will be refinanced either prior to its maturity or prepaid, the fee income should be sufficient to cover the servicer's cost plus profit. The reason for poor earnings in this activity is generally either inefficiency in the collection area, failure to attain the breakeven point of servicing volume, or the inability to turnover the warehouse portfolio often enough to maintain new fee generation. In the event that the servicer is unprofitable, the examiner should determine the reasons and clearly set them forth in the inspection report.

The servicing arrangement is of a fiduciary nature and as such it gives rise to certain contingent liabilities. In the situation where the servicer is not fully and properly discharging its servicing responsibilities in accordance with the servicing agreement, the holder of the serviced notes might bring legal claims against the servicer. The inspection process should direct attention to this area including a review of the servicing agreement and verification that the servicer is fulfilling its obligations. Management should be reminded of the significant loss exposure which can result from improper attention to its fiduciary responsibilities.

3080.0.1 INSPECTION OBJECTIVES

1. To determine that internal controls are adequate to administer effectively the servicing of the loan portfolio.

2. To determine the level of exposure to credit risk of loans held for the firm's own account.

3. To determine if the firm's earnings are sufficient so as not to be a burden on the parent or subsidiary bank.

3080.0.2 INSPECTION PROCEDURES

1. Review the balance sheet to determine the volume of credits held for the firm's own account and evaluate their asset quality.

2. Review internal controls and evaluate their adequacy.

3. Review earnings and appraise the impact on the parent and bank subsidiaries.

4. Review servicing agreements and evaluate the potential or contingent risks to which the firm is exposed in the event of failure by a borrower to service its loan properly.

5. Determine whether mortgage servicing rights are recorded as an asset and whether they are being amortized over the average life of the loans being serviced.

A bank holding company may engage under contract with a third party in the management, servicing, and collection[1] of the types of assets that an insured depository institution may originate and own. The company cannot engage in real property management or real estate brokerage services as part of these services. See Regulation Y, section 225.28(b)(2)(vi). Provided below are some initial historical examples of Board orders that involve asset-management services related to this nonbanking activity. The commitments and conditions provided for within the Board orders should not be considered to be currently applicable.

3084.0.1 ASSET-MANAGEMENT SERVICES TO CERTAIN GOVERNMENTAL AGENCIES AND UNAFFILIATED FINANCIAL INSTITUTIONS WITH TROUBLED ASSETS

Three bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in providing asset-management services to the Resolution Trust Corporation and the Federal Deposit Insurance Corporation, and generally to unaffiliated financial institutions with troubled assets. The applicants committed to conduct these activities under the same terms and conditions as set out in 1988 FRB 771.

The commitments and conditions of this order required that (1) the asset-management activities would be provided to the banks and savings associations, (2) the applicant would obtain the Board's approval before providing asset-management services for pools of assets that were not originated or held by financial institutions and their affiliates, (3) the applicant would cause its asset-management subsidiary to establish procedures to preserve the confidentiality of information obtained in the course of providing asset-management services, and (4) neither the applicant nor its management subsidiary would take title to the assets managed by the asset-management subsidiary.

The applications of these holding companies were approved by a Board order on December 24, 1990 (1991 FRB 124). Two additional orders about providing asset-management services were approved on March 25, 1991 (1991 FRB 331 and 334).

3084.0.2 ASSET-MANAGEMENT SERVICES FOR ASSETS ORIGINATED BY NONFINANCIAL INSTITUTIONS

Two bank holding companies (the applicants) applied jointly for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in collection-agency activities pursuant to Regulation Y through a joint venture. The Board concluded that the collection activities were permissible.

The bank holding companies also applied for the Board's approval to engage in asset-management, asset-servicing, and collection activities through a nonbank of the joint venture located in New Jersey. The subsidiary would provide asset-management services to the Resolution Trust Corporation (RTC) and the Federal Deposit Insurance Corporation (FDIC). It would also provide these services to unaffiliated third-party investors that purchase pools of assets assembled by the RTC or the FDIC. Under the proposal, neither the applicants nor this nonbank subsidiary would acquire an ownership interest in the assets that they manage or in the institutions for which they provide the asset-management services. The applicants further committed that they would not provide real property management or real estate brokerage services as part of the proposed activities.

The Board previously determined that, within certain parameters, providing asset-management services for assets originated by financial institutions (banks, savings associations, and credit unions) and their bank holding company affiliates is an activity closely related to banking (see 1991 FRB 331, 334 and section 3600.15.3). The applicants proposed to conduct all asset-management activities subject to the same conditions as in the Board orders previously cited.

The applicants proposed to engage in asset-management activities for assets originated by nonfinancial institutions as well as by financial institutions. These assets include real estate, consumer, and other loans; equipment leases; and extensions of credit. Assets of nonfinancial institutions include pension funds, leasing com-

1. Asset-management services include acting as agent in the liquidation or sale of loans and collateral for loans, including real estate and other assets acquired through foreclosure or in satisfaction of debts previously contracted.

panies, finance companies, and investment companies formed to engage in asset-management activities. The managed assets would be limited to the types of assets that financial institutions have the authority to originate. The Board concluded that the applicants would have the expertise to engage in managing these types of assets, regardless of the originating entity. The Board also determined that the proposal was consistent with the asset-management proposals approved in its prior orders. The Board concluded that the applicants' proposed activities are closely related to banking and approved the order on December 21, 1992. (1993 FRB 131)

Section 4(c)(8) of the BHC Act (Receivables) Section 3090.0

Two nonbanking activities authorized under section 4(c)(8) of the BHC Act, per Regulation Y in section 225.28(b)(1), are the discount purchasing of a client's accounts receivables (factoring) and the establishment of a revolving credit facility secured by an assignment of accounts receivable (accounts receivable financing). These activities date back to Board orders issued in 1951. See sections 3090.1 and 3090.2.

3090.1.1 INTRODUCTION

Factoring is the discount purchasing of the client's accounts receivable invoices for goods that have been manufactured and shipped. Factoring differs from accounts receivable financing in that the factor assumes the credit risk of collecting payment from the recipient of the goods. The principal advantage of factoring is that the client is assured of the collection of the proceeds of its sales, regardless of whether the factor is paid.

A factor generally offers four basic services: (1) credit investigation and approval; (2) buying the client's accounts receivable at a discount (generally between .75 and 1.5 percent) after shipment of the goods to which there is no subsequent claim, just a claim against the invoices; (3) bookkeeping in the form of posting accounts; and (4) advancing funds in the form of an "open account" when there could be 30 days between shipment and payment. The later allows the client to replenish inventory loans for working capital or expansion.

Maturity factoring and advance factoring are the basic techniques of the industry. In maturity factoring, an average maturity due date is computed for the receivables purchased during a period and the client receives payment on that date. Advance factoring uses the same computations, however, the client has the option of taking advance payments equal to a percentage of the balance due at any time *prior* to the computed average maturity due date. The unadvanced balance, sometimes called the "client's equity," is payable on demand at the due date.

The factor's balance sheet reflects the purchases as "factored receivables" and the liabilities as "due to clients." Usually the due to clients balance will be significantly less than the factored receivables balance because of payments and advances to the clients. The income statement will show factoring commissions, which represent the discount on the receivables purchased. Interest income for advances on the due to client balances may or may not be a separate line item.

The factor is a pivoting point between the buyer and the seller. The buyer must pay or all parties lose. Also the seller must have a reputation for delivering quality merchandise. The factor must know the business well enough to account for sudden increases in returns for out-of-specification merchandise or for merchandise of low quality. If the seller does not perform adequately, payment for the goods may not be forthcoming, and if bankruptcy threatens the seller, buyers may hold back their future purchases.

3090.1.2 FUNDING

Since factors traditionally provide financing to industries with seasonal borrowing requirements, such as textiles, shoes, clothing, and other consumer goods, their own funding programs will usually reflect this volatility. It may be expected that factors generally will have greater access to short-term unsecured credit facilities than would be expected for other nonbank activities. This would hold true for factors funded solely from internal sources as well as external sources.

Because of a factor's inherent funding volatility, a major portion of a factor's liabilities will be short-term debt. For the internally funded company, this source will be predominantly commercial paper proceeds from the parent company, with perhaps some bank line proceeds intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries. The terms and covenants of long-term debt appear to allow for relatively more flexibility in operations and more highly leveraged positions than similar debt for other financing industries in recognition of the volatility of factoring operations and the liquidity of factoring assets.

The principal suppliers of senior and subordinated funds to factors and accounts receivable financers appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data is limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy. The "due to clients" account is another significant measure of a factor's liabilities. As noted before, the account represents the accumulation of the amounts payable to the clients upon the maturity of their factored receivables. This liability is, to a large extent, self-liquidating through the collection of those receivables.

An analysis of the changes in the relative proportions of the "due to clients" account should provide valuable input into the analysis of a factor's earnings. Since factoring is a highly competitive industry, price cutting has reduced factoring commissions to a point where they provide minimal support to earnings; therefore, the interest margins on factoring advances have a significant impact on net income. The implication of the analysis of proportional changes is that as more clients take advances (reducing "due to clients"), profit margins should widen, and conversely, as the "due to clients" proportion of total liabilities rises, profit margins may be expected to narrow.

3090.1.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.
2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.
3. To determine the quality of the asset portfolios, and whether lending, monitoring and collection policies are adequate to maintain sound asset conditions.
4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.
5. To determine the viability of the company as a going-concern, and whether its affiliate status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.1.4 INSPECTION PROCEDURES

The inspection procedures for a factor have been divided into two phases, preliminary and on-site, when considered necessary.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site. The on-site segment of the procedures expresses some of the typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. System approvals for offices and activities, including stipulated public benefits;
2. Financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns;
3. All management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status;
4. External debt instruments to determine material restrictive covenants;
5. Internal audit reports and workpapers;
6. Minutes of the board of directors, executive committee and loan committee, if available at the parent company;
7. The results of a parent company loan review, if any.
8. To be requested:
   a. Schedules of past due loans, intercompany participations, and large loans;
   b. Schedules of problem accounts, liquidating accounts, and repossessed assets;
   c. General ledger trial balance;
   d. Loan trial balance, including overadvances;
   e. Statements of company lending, accrual, and other policies;
   f. Reconcilement of the loan loss reserve for the period between inspections;
   g. Listing of common borrowers between affiliates.

3090.1.4.1 On-Site Procedures

After reviewing the material available at the parent company, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision are relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The following comments provide a general outline of the factor's basic operation. This outline will provide a background for the comments in the inspection procedures.

While the typical factoring agreement stipulates that all accounts receivable of a client are assigned to the factor, not all are purchased without recourse. The agreement between the factor and the client will usually state that receivables subject to shipping disputes and errors, returns, and adjustments are chargeable to the client because they do not represent bona fide sales. In addition, sales made without the factor's approval are considered *client risk* receivables, with full recourse to the client if the customer fails to pay.

The usual approval process requires the client to contact the factor's credit department before filling a sales order on credit terms. The credit department will research its files, determine the credit worthiness of the customer, and approve or reject the sale. As stated before, if the credit department rejects the sale, the client may complete the sale, but at its own risk. The most common reasons for rejection are sales to affiliates, sales to known bad risks, sales to customers whose credit cannot be verified, and sales to customers whose outstanding payables exceed the factor's credit line.

Once a sale has been made and the receivable assigned to the factor, approved or not, the client's account will be credited for the net invoice amount of the sale. That is, any trade or volume discounts, early payment terms, and other adjustments are deducted from the invoice amount. The receivable then becomes part of the client's "availability" to be paid in advance or at the computed due date, depending upon the basis of the factoring arrangement.

Each month the client will receive an "accounts current" statement from the factor which details the transactions on a daily basis. This statement will reflect the daily assignments of receivables, remittances made, deductions for term loans, and interest charges and factoring commissions. Credit memos, client risk, charge backs, and other adjustments will also be shown. Client risk charge backs are the amounts deducted from the balance due to the client upon the failure of customers to pay receivables factored at client risk.

The accounts current statement and the availability sheets will be necessary for the asset analysis process. Considering the volume of transactions, the accounting system that develops this data will probably be automated, which may allow the factor to obtain comparison and monitoring data on the client. If a monitoring system is in place, the data provided will be valuable in the asset analysis process.

The evaluation of a factor includes a review of its systems and controls as well as an analysis of the quality of its assets, both of which may be accomplished by a two segment analytical approach. A major portion of a factor's assets will be factored receivables, for which the credit department has the responsibility for credit quality and collection. The other major portion of the assets will be the client loans and credit accommodations, for which the account officers are responsible. The procedures for each area will be dealt with separately.

3090.1.4.2 Credit Department

Because of its integral function in the credit and collection process, the credit department is the heart of a factor. The department maintains credit files, which are continually updated as purchases are made and paid for by the customers. These files will include financial statements, credit bureau reports, and details of purchasing volume and paying habits. Usually, each customer will have an assigned credit line, which is the credit department's estimate of the customer's credit capacity.

The evaluation of this department should take the form of a review of a sample of the customer files. The sample may be drawn from lists of large volume customers and closely monitored customers, or it may be a random sample. The examiner should have either a copy of departmental policies and procedures or a verbal understanding of them prior to the review. It should be kept in mind that the objective of the review is to critique the credit and collection process and to verify departmental effectiveness, and not to obtain classifications.

3090.1.4.3 Asset Evaluation

Prior to the review of asset quality, the examiner should receive the lists of problem clients, client over-advances, term loans, and credit accommodations; as well as the aging schedule of factored receivables including client risk receivables. These will be used as the basis for selecting the clients to be reviewed. It is recommended that the selection be made from the list of clients with term loans, largest first, in addition to the acknowledged problems. Clients with high dilution rates and those with client risk receivables equal to 20 percent or more of factored volume may also be included.

It should be noted that a factor usually collects principal and interest payments directly from the client's availability, which means that the expected delinquency rate is minimal. Past due factored volume is not an effective measure of client quality.

A maturity client's availability is the sum of all factored receivables, less trade and other discounts, factoring commissions, credit memos, and client risk charge-backs. There may also be other deductions for letters of credit and other credit accommodations. An advance client's availability would be further reduced by advances on the factored receivables, interest charges, and the reciprocal of the contractually agreed upon ''advance'' percentage. This reciprocal, 20 percent in the case of an 80 percent advance client, is sometimes referred to as the client's ''equity'' in the factored receivables. Availability may be increased by liens on additional collateral such as inventory, machinery and equipment, real estate, and other marketable assets.

The review and analysis of asset quality will be procedurally similar to that used in accounts receivable financing. However, certain aspects of the financial statements may need elaboration. The client's balance sheet will have a ''due from factor'' account instead of accounts receivable. The account balance may be somewhat lower than a normal receivables balance, which would affect turnover ratios and other short-term ratios. The difference relates to the client's ability to convert sales to cash faster with a factor than if the receivables were to be collected normally. In addition, the analysis of the statements should incorporate an assessment of the client's ability to absorb normal dilution and the potential losses associated with client risk receivables, particularly when these factors are higher than usual for the portfolio.

As a factor's systems and controls for client loans are somewhat similar to those for accounts receivable financing, the evaluation of asset quality must consider these factors before the classification of a client is made. While the typical client may have less than satisfactory financial statements, the factor's working knowledge of the client's operations and industry tends to mitigate the risk factors present.

For classification purposes, ''client risk receivables'' is the only portion of factored volume that is appropriate for use in the amount classified. Because of the recourse aspect the balance is considered as an indirect obligation rather than a direct obligation.

As a further step in the evaluation of the lending area and its controls, the evaluation of the steps taken and the results of at least one recent client liquidation should be made. By reviewing the chronology of events along with the loan and collateral balances, the effectiveness of systems and controls under extended circumstances may be assessed. The type of liquidation will have a bearing on the losses taken. Losses tend to be higher when client fraud is involved.

In the process of evaluating a factor's condition, the adequacy of systems and controls and the capability of management are considered significant measures. Asset quality, as measured by classifications, may be influenced by seasonal aspects and should be carefully analyzed to allow for such influences. Because of a lack of regular and consistent comparative data for the industry, earnings and capital adequacy are evaluated in terms of the company's own performance.

The review of the company's internal systems and controls should be continuous during the inspection. Considering the large volume of daily transactions that flows through a factor, any internal control that can be easily negated represents a potential problem and should be brought to management's attention. In the broad context, this review would include the credit controls for both clients and customers. Since credit problems can develop rapidly in factoring, credit controls and systems must be responsive to the identification of these problems. Deficiencies noted should be discussed with management and, if significant, cited in the report. The company's earnings trends may be evaluated by using a comparative yield on assets approach. By analyzing yields on asset categories from period to period the examiner will be able to make a judgment as to the efficiency of the systems. Factors are subject to the same price competition in the commercial finance market as accounts receivable financers. Declining portfolio yields may reflect the inroads made by competition and may indicate a decline in future profitability.

The subject of capital adequacy is influenced by the aforementioned seasonal characteristics. Over the period of a year, the comparisons of equity to assets and equity to liabilities will vary significantly. It is suggested that an average balance sheet be used to stabilize the variations.

In addition to balance-sheet ratio analysis, the effects of dividends and fees paid to the parent company on the capital accounts may be analyzed to determine the rate of internal capital generation. If the company is in a growth profile, or attempting to gain market share, the comparisons between fiscal periods may reflect a declining trend. Such a trend should be discussed with parent company management.

The report comments should summarize these considerations in a clear, concise presentation.

3090.2.1 INTRODUCTION

Accounts receivable financing is a revolving credit facility secured by an assignment of accounts receivable. As a financing technique, it allows the client (the financed company) to obtain working capital without waiting for customer payments. This form of financing is frequently used by companies with working-capital shortages, companies in seasonal industries, and companies with weak financial conditions. Typically, the funding requirements of these companies are in excess of any amounts that would be available through unsecured bank financing.

The financing process begins with a bona fide credit sale by the client and the assignment of the resulting receivable to the financer. Upon assignment, the financer advances a specific percentage of the receivable to the client. The loan is repaid by customers' direct payments or, in the case of a lockbox, by the remittance of the customer's payment to the financer, who returns the amount in excess of the loan to the client. While a simple concept for a single transaction, the operations of an accounts receivable financer become a complex process when many clients and perhaps thousands of receivables are involved.

Companies engaged in accounts receivable financing usually incorporate the full range of commercial financing activities into their operation. These activities would include inventory financing, loans secured by machinery and equipment, some forms of real estate loans, and loans secured by other assets. As a general statement, these companies will provide working-capital financing using almost any form of viable collateral to secure the loans. These additional activities are facilitated by the financer's in-depth knowledge of the borrowers' financial conditions and cash flows. This knowledge comes from the controls placed on the borrowers, such as periodic field audits, the flow of the borrower's cash through the company, and an internal staff that specializes in the financed industries.

3090.2.2 FUNDING

Accounts receivable financing companies, like factors, traditionally provide working-capital financing to seasonal industries. Consequently, the funding programs of these financing companies will reflect these variations in their increased use of short-term funds relative to other nonbanking activities.

Since many accounts receivable clients have seasonal businesses, a large portion of the financer's liabilities will be short-term debt. For internally funded financers, this debt will be predominantly commercial paper proceeds from the parent company, with perhaps some bank lines intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries, another parallel to factoring. The terms and covenants of long-term debt appear to allow for more flexibility in operations and somewhat more highly leveraged positions than similar debt for other financing industries. This practice is apparently in recognition of the volatility of this form of financing and the liquidity of the assets supporting the financer's loans.

The principal suppliers of senior and subordinated funds to collateral lenders (factors and accounts receivable financers) appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance-sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data are limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy.

3090.2.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.
2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.
3. To determine the quality of the asset portfolios and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.
4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.
5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.2.4 INSPECTION PROCEDURES

The inspection procedures for an accounts receivable company have been divided into two phases, preliminary and on-site.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site, if required. The on-site segment of the procedures expresses some of the typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status
4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers—
    a. internal control exception report to determine weaknesses and corrective actions,
    b. flow charts in the workpapers which will enable the examiner to become familiar with company systems, and
    c. additional internal reports may be identified which may assist the inspection on-site
6. minutes of the board of directors, executive committee and loan committee, if available at the parent company
7. the results of a parent company loan review, if completed
8. To be requested:
    a. schedules of past-due loans, intercompany participations, and large loans
    b. schedules of problem accounts, liquidating accounts, and repossessed assets
    c. general ledger trial balance
    d. loan trial balance
    e. statements of company lending, accrual, and other policies
    f. reconcilement of the loan-loss reserve for the period between inspections
    g. listing of common borrowers between affiliates

3090.2.4.1 On-Site Procedures

After reviewing the material available at the parent company level, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The on-site inspection procedure will be similar to that used in a commercial department of a bank. Selection and evaluation of the assets, review of internal controls, identification of lending policies, and credit review procedures are all familiar areas to the examiner and do not need further explanation. However, the accounting and reporting systems are somewhat different and will require the examiner to become familiar with systems and policies before proceeding with the asset evaluation process.

3090.2.4.2 Accounting and Controls

There are two basic systems within the accounting and control environment of an accounts receivable company. The first system provides accounting and control for client loans and collateral balances and is frequently automated to handle the large flows of data generated in the operation. It is also common to find lockbox arrangements with banks that tie into the client system for the receipt of customer remittances. Such lockbox arrangements provide a greater degree of control over remittances.

The mechanics of the client system will be detailed in the internal audit file, which should also indicate the adequacy and efficiency of the system's controls. The audit file may also indicate the accounting techniques used and the client-monitoring reports that are generated by the system, such as dilution rates and trends, and year-to-year volume and operating comparisons. The client system provides the basic data for the company's accounting and control system. While the basic accounting considerations are outlined in the AICPA *Industry Audit Guide: Audits of Finance Companies*, there are certain accounting aspects which deserve additional treatment. In some cases where a group of related companies are clients, the financing arrangements may include cross-guarantees and cross-collateralization agreements. In these cases, the financer might utilize excess availability for some of the related entities to offset the over-advance of another entity. Another treatment that may be applied is the use of a "reserve for liquidating accounts," which in some instances is a specific reserve for a problem account that reverses at least current period earnings for the account. This reserve is in addition to the allowance for bad debts and may not be an explicit balance sheet account, but an offset to gross loans outstanding.

3090.2.4.3 Definitions

While many of the following comments define certain routine accounting and control considerations for accounts receivable financing, certain of the concepts are necessary for proper evaluation of client quality (i.e., availability, dilution, over-advances, and advances on other collateral). These definitions are general in nature as is the terminology, however, the processes will be similar in almost every company.

Loans to the client are based upon a contractual percentage of the client's eligible receivables against which the financer has agreed to advance funds. Eligible receivables include all assigned receivables, less trade discounts, early payment discounts, contra-accounts (reciprocal sales between the client and customers), receivables past due beyond the eligibility period specified in the contract, and other adjustments. The advance percentage is determined by a number of factors which include the expected average dilution rate (disputed invoices, misshipped goods, returns and allowances, etc.) and the client's expected gross profit margin. As a general rule, lenders in this field try to finance only the cost of sales and not the client's profits.

Because this form of financing involves rapidly changing collateral balances, a high volume of customer payments, and frequent loan requests, the financer has to determine the client's "availability" (loanable funds) before advancing the loan. Availability is the total of eligible receivables times the advance percentage less credit memos and the current loan balance. Credit memos are adjustments to the customer's account for errors in the client's shipments (i.e., the quantity shipped was less than that ordered). It is the client's responsibility to provide this information to the financer on a daily basis. If there is sufficient availability, the requested amount is usually advanced. On occasion, the availability computation will show the client to be "over-advanced," that is the loan balance exceeds the agreed percentage advance against collateral. This situation may have occurred because some receivables have become past due, or the financer may have authorized additional funds to meet some valid client requirement. As a rule, over- advance positions are usually subject to a quick paydown to reduce the loan balance to the original contractual terms.

At times, the availability computation will reflect additional collateral value in the form of inventories, machinery and equipment, and other assets, shown net of an advance percentage. These categories usually indicate term loans, secured by liens against the respective assets, which expand the collateral base and provide additional support to the client's working capital requirements. These term loans should not be confused with loans for the acquisition of such assets which might appear only in the client's monthly statement.

The accounts receivable financer charges interest on the daily cash borrowings of the client and accumulates these charges on the client's monthly statement. The total interest charge for advances on receivables and other loans is deducted directly from remittances received by the financer. Accordingly, the expected delinquency rate for an accounts receivable operation is low except for the rare loan which is paid directly by the client and other assets which formerly belonged to a defunct client.

3090.2.4.4 Over-Advances and Other Loans

It was indicated earlier that an over-advance represented funds advanced in excess of available loanable funds and that there are two basic causes for over-advances. Some over-advances occur because a portion of eligible receivables becomes past due and ineligible for advances. This condition is usually corrected by the assignment of additional receivables or receipt of customer payments, and therefore may exist only for a few days.

The other basic over-advance occurs when a client requires additional funds for valid business purposes, such as an inventory buildup at the beginning of a season. In such cases, the over-advance is set up as a very short-term loan and paid down rapidly out of the client's availability. While the policy for over-advances varies between financers, when they are permitted they are usually carefully analyzed by the internal credit committee and closely monitored until paid off.

If a client is involved only in receivables financing and has made an over-advance request, the financer generally will prefer to take a lien against inventory rather than make an unsecured over-advance. Regardless of the purpose of the inventory loan, the financer will advance only a small percentage of the inventory value (40 to 50 percent) to allow for shrinkage, spoilage and obsolescence of the collateral. While inventory liens are in effect, the field audit staff will partially verify the inventory during each audit.

While machinery and equipment may be pledged as additional collateral to support working capital loans during the business period, most client companies will also finance equipment purchases on a secured basis. In either case, the financer usually advances a percentage of the quick sale or auction value of the equipment as determined by an appraisal. During field audits, the presence of the equipment and appropriate lien tagging are verified by the field auditors.

On occasion, a lien on real estate is part of the pledged collateral. The real estate may be operating premises, land, or the property of the principal of the client. Such liens may occur when the client is acquiring new, or expanding old, operating facilities and is using the financing relationship to fund the project. However, in many cases the lien was taken to provide additional collateral for working capital loans. In either case, appropriate documentation and appraisals should be on file.

It should be noted that loans on real estate collateral are limited to those providing support to the primary business of the client. Loans to finance speculative real estate acquisitions, and unrelated commercial property are not considered to be the usual practice of this industry, and would be considered as not complying with the general activities of a commercial finance company, unless specifically approved.

3090.2.4.5 Asset Evaluation

In selecting the loans to be reviewed, the first group to be considered is the acknowledged problem accounts. The next sample should be drawn from accounts with high dilution rates, those with frequent or large over-advances, and those which constantly take down all of their availability. Participations, purchased or sold, between affiliates should also be included in the examiner's sample. While this approach may exclude some of the larger accounts, it is intended to include those accounts which are potential problems in the primary review group. Should the company have a monitoring system for potential problem accounts, the system should be used for drawing the review sample.

The principal tools for the review process should include: the credit file, the field audit file, the monthly statement for the inspection date, the availability sheet for the inspection date, and updated information for the interim period ending with the on-site inspection date. Within the credit file, the copies of the financing agreements will indicate the specific terms of the borrowing relationship: the pledged collateral; advance percentage; interest rate; guarantees; appraisals; and the required communications, such as monthly receivables agings, inventory and machinery and equipment certification, etc. The usual file information will also include management's analysis of the client's operations.

The field audit file will contain the audit reports originated by the financer's field audit staff. These reports are usually quite comprehensive, with a primary focus upon critical financial areas. As a minimum, the auditors will analyze trade payables, State and federal taxes, cash flows, inventories, and receivables. Particular attention is paid to the client's sales and shipping procedures in order to ascertain that valid invoices are being assigned to the financer. The client's accounting procedures are also analyzed to determine their effectiveness and accuracy. These reports represent a primary source of information regarding the general financial condition of the client.

The client's monthly statement and availability sheets represent spot information on the client's activity. Many clients operate in seasonal industries such as clothing and textiles. In such industries, a client will tend to use all of its availability, as well as seasonal over-advances, during its inventory buildup period, and will pay off the over-advances and may have excess availability during the sales and collection period. The examiner will have to analyze the client's current position with regard to its particular operating cycle. Over-advances granted to a client for valid reasons do not necessarily represent undue exposure or a substandard asset for the financer.

The financial statements of a client quite frequently reflect a "relatively unsatisfactory or weak" financial condition, with minimal working capital, high leverage, and uncertain earnings as prime ingredients. There have been cases where both deficit working capital and deficit net worth were in evidence, however, the financing relationship has continued to function properly. The financer can continue these relationships if the short-term factors (sales volume, receivables and inventory turnover, and current liabilities) are appropriate and the character of the principals warrants the exposure. Analysis of a financed client should emphasize the short-term analytical factors and the related trends in the evaluation of asset quality.

Such factors as the success of the selling season, availability of materials, and fad merchandising will have direct impact on the client's financial condition. While the loan may be adequately protected by pledged collateral, the ability of the client to continue operations may be affected by these short-term factors.

For classification purposes, the financer's controls will have to be considered in addition to weighing the degree and quality of collateral protection, short-term factors, and the client's ability to withstand any financial reverses that are evident. Clients with deficit net worth, past-due trade obligations, and delinquent taxes should be considered to be problems and appropriately classified. The ability of the financer to control the risk exposure in the portfolio will be an important consideration in determining whether to classify a specific loan.

3090.2.4.6 DPC Assets

In some companies, assets acquired from defunct clients remain in the loan account instead of being reclassified to another balance-sheet category. Usually, these assets are uncollected accounts receivable, inventory, and machinery and equipment which have not been liquidated. However, these assets may include securities, as well as business and personal real estate, which had been pledged as collateral. By retaining these assets in the loan category, effective liquidation of the respective assets may be delayed because they usually represent small dollar amounts. Apart from this consideration, classification as loans may disguise the fact that certain of the assets may be subject to provisions of Regulation Y and the act, such as control and retention considerations. Separate control of these assets is recommended.

It is common practice in the accounts receivable and factoring industry for the lender to require a pledge of client company stock by the principals, particularly in overextended situations. Additional pledges of securities owned by the principals may also provide added collateral. While such pledges are not precluded by Regulation Y and the act, once they become company assets they should be reviewed for control and retention purposes.

3090.2.4.7 Financial Condition

Secured lending relies upon the four C's of credit: the traditional Capital, Character, Capacity, and Collateral. Pragmatically, these lenders practice a fifth C, Control. In this context, control implies the continuous monitoring of the client's financial condition, continued evaluation of the collateral, constant contact with the client, and the adjusting of the credit accommodation to conform to the client's current situation. This control is the reason that the secured lender can maintain a proper and mutually profitable financing arrangement with the client.

It is to be expected that the typical portfolio may include clients with less than satisfactory financial conditions. Considering the controls imposed upon the borrowing relationships, the secured lender has compensated for some of the additional risk in the loans. The combination of field audits, collateral controls, and account officer contact can be expected to reduce the exposure to unsatisfactory clients to a minimum. However, clients do fail and losses may be taken in liquidating the account. The incidence rate of liquidations and the extent of losses taken may be an indicator of the effectiveness of company controls.

The earnings of an accounts receivable company are based upon loans carrying interest rates above prime, which means that loan volume is a major determinant of revenues. Because this industry is very competitive, loan pricing is frequently used to obtain new clients from other lenders in order to promote growth in loan volume. Increases in loan volume combined with declining interest margins may be an indicator of price competition that is yielding negative results. Analysis of client turnover may verify this possibility.

In summary, management's ability to control risk and achieve profitability is essential to the soundness of an accounts receivable operation.

The effectiveness of company policies, the expertise of the lending staff and field audit staff, and the adequacy of systems and controls are the expressions of this ability to control risk. Company profitability is a measure of management's ability to obtain satisfactory client quality and terms in a price-competitive environment. The examiner will have to balance these factors in assessing the condition of the company.

3090.2.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Loans to affiliates	23A FR Act 371c			
Purchase of affiliate's notes from a third party			3–1131	1951 FRB 960

2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

3100.0.1 INTRODUCTION

The basic activity of a consumer finance company is making installment loans to individuals and is permissible pursuant to section 225.28(b)(1) of Regulation Y and section 4(c)(8) of the BHC Act (the act). In most areas, a company may make these loans under one or more of the following licenses: consumer discount, small loan, sales finance, or second mortgage. Most of a company's activity will probably be direct cash lending, in which the borrower and the lender come into direct contact with one another in the credit-extension process. However, a significant volume of lending is done through third-party contact. This is sales finance lending in which the company purchases, or discounts, the loans originated by a durable goods dealer in daily retail sales activity. Second mortgage lending may be originated from either direct contact or through home-improvement contractors.

Most consumer finance companies offer credit-related insurance as part of their services, and may have a captive insurance subsidiary if they are large enough. Inspection considerations and procedures for reviewing credit-related insurance activities are covered in section 3170.0.

3100.0.2 FUNDING

In some holding companies, management has elected to use a conventional industry funding pattern to support its consumer finance company operations. This pattern makes use of long-term subordinated debt in a specific proportion to equity capital. The further addition of senior long-term and short-term debt is then limited by restrictive covenants incorporated into the subordinated debt agreements. These covenants also provide operating limits for management in such areas as the proportions of specific classes of assets, minimum levels of net worth to be maintained, and the maximum dividend payout allowable. Since the wording and limits of these covenants are negotiated between the borrower and the subordinated debt holder, generalizations regarding the usual terms are not practicable.

It appears that certain life insurance companies supply most of this subordinated debt to the consumer finance industry. Along with their general knowledge of the industry, these insurance companies police their loans by requiring periodic reports from the borrower and by sending teams of their people to review the borrower's operations. In a sense, this approach to funding represents regulation and control by market forces rather than by governmental intervention.

In other holding companies, management has elected to support these operations using holding company funding sources such as commercial paper and lines of credit. In using this approach, operating management is generally free from market restrictions on operations.

It is likely that most affiliated consumer finance companies will have a funding plan that falls somewhere between these two extremes. Since commercial paper generally carries a lower total cost than bank lines of credit, the examiner may find that the senior short-term debt component is almost completely supplied by the parent company. On the other hand, long-term debt may have been obtained directly, or with the parent company's guaranty, or it may have been borrowed from the parent company's sources—that is, the parent borrows from a third party and re-lends the proceeds to the subsidiary.

Since a large volume of consumer installment paper carries maturities of three years or more, the use of commercial paper proceeds with maximum maturities of 270 days warrants some comment. Securities Act Release No. 401 specifically recognizes this use of commercial paper as appropriate. Further information may be found in the Code of Federal Regulations, 17 C.F.R. 231.4412. Also see sections 2080.1 and 5010.16 for information on commercial paper.

3100.0.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.
2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.
3. To determine the quality of the asset portfolio, and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.
4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.
5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence on the condition of the consolidated corporation or the subsidiary bank(s).

3100.0.4 INSPECTION PROCEDURES

After reviewing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by delinquency reports and industry comparisons (detailed later in this section), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted, providing that a fairly recent on-site inspection had been conducted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The inspection procedures for a consumer finance company have been divided into two phases: preliminary and on-site. The preliminary phase entails the gathering and analysis of information at the parent company to determine the scope of the field work to be performed on-site. The on-site phase establishes a minimum scope of the inspection at the main office, and includes considerations to be incorporated into a visit to field offices if the inspection scope is expanded to that degree.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, delinquencies, and other reports regarding loan portfolio and company status including the Robert Morris Associates' *Direct Cash Lending Questionnaire* and similar reports
4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers:
   a. internal control exception reports to determine weaknesses and corrective actions
   b. flow charts in the workpapers to become familiar with company systems
   c. additional internal reports may be identified which may assist the inspection on-site
6. examination reports of any state regulatory agencies having jurisdiction over the company's offices
7. minutes of the board of directors, executive committee, and any other such committee, if available at the parent company
8. the results of a parent company loan review or operations review, if conducted and available
9. the following items to be requested from management:
   a. detailed past-due schedules and intercompany participations
   b. schedule of problem accounts, liquidating accounts, and repossessed assets
   c. general-ledger trial balance
   d. loan trial balance
   e. policy statements on lending, accrual, and charge-offs
   f. reconcilement of the loan-loss reserve for the period between inspections
   g. organization chart
   h. listing of company offices with addresses and operating licenses

3100.0.4.1 On-Site Phase

The procedures of the on-site inspection are intended to evaluate management and its supervisory efforts, to determine the soundness and compliance with the company's operating policies, and to analyze the impact of these policies on the company's financial condition using ratio analysis. A thorough understanding of the policies and systems of the company is necessary for the examiner to accurately determine the company's condition.

During the initial period on-site, the examiner may obtain an overview of the company's systems by interviewing the key staff officers. These individuals can provide the examiner with the detailed reports, policy manuals, and other information necessary for the inspection.

3100.0.4.2 Policy Evaluation

Because of its large volume of transactions and the number of offices involved, the typical consumer company will maintain an extensive set of policy and procedure manuals which are intended to guide company personnel in their daily activities. During the review of these manuals, the examiner should bear in mind that liberal policies and procedures may allow the company to mask portfolio problems and reflect other than an accurate condition in its financial statements.

The principal policies to be considered cover such areas as:

1. extensions of credit;
2. treatment of delinquent accounts and partial payments;
3. loan renewals;
4. loan charge-offs;
5. provisions for loan losses;
6. bulk purchases of loans, for both credit and account purposes; and
7. treatment of deferred income.

After assessing the soundness of company policies, the next step is to test their implementation through a review of the company's supervisory structure.

3100.0.4.3 Evaluation of the Supervisory Structure

The effectiveness of the supervisory structure is a key element in the condition of a consumer finance operation. This system serves two functions: it communicates the policies to the field personnel, and it enforces those policies. Assuming that management's policies are valid, the effectiveness of this system will be partially reflected in the ratio analysis of the company. However, it may take close analysis to determine whether any poor ratios are due to inadequate policies or ineffective enforcement.

In order to evaluate the supervisory effort, the examiner may review a sample of the various supervisor's reports which are prepared after visits to the loan offices. The sample should represent a cross-section of the offices and supervisors in order to obtain a balanced view of the company.

A further evaluative step may be undertaken if there are sufficient resources available to the examiner. The on-site visits to selected loan offices may provide considerable input to the examiner in assessing supervisory effort. In selecting the offices to be visited, well-performing as well as poor-performing offices should be selected. Concentration on poor offices will result in a biased assessment of the supervisory effort and may result in an invalid evaluation of company policies. The selection of the offices may be made by using the number of policy exceptions cited, poor performance records, or local economic conditions as criteria.

3100.0.4.4 Detailed Procedures for an Office Visit

The following steps outline a general procedure for determining field compliance with company policies and assessing the effectiveness of the supervisory effort. The examiner may modify, eliminate, or expand any of these steps or may devise any procedure deemed appropriate under the circumstances present.

The review of loans on-site should be oriented toward confirming the implementation of company policies for delinquency, balance renewals, charge-offs, extensions, partial payments, collection, and loan approvals. This review is intended to be a test of compliance and not a review of specific assets for classification purposes.

1. Review the detailed delinquency report for the selected office for a short period before the inspection date, generally two or three months. Trace the well overdue loans through to resolution, pay-off, charge-off, or reinstatement. Check these loans against the loan register to determine whether new loans have been granted to these customers and if so, determine if they are in accordance with company policy.
2. Review the controls for charging off loans and determine the effectiveness of the collection and recovery effort.
3. Review the loans to present borrowers. While renewals are usually granted to the better customers, the examiner will find a volume of renewals (''under 10 percent new money advanced'' loans). In some companies, these ''under 10 percent new money'' loans represent efforts to rehabilitate borrowers with poor payment records due to ill health, unemployment, etc. However, the examiner may find that management is using this approach to adjust and control delinquency and loss rates. There should be sufficient internal controls present to prevent the continuous renewal of such loans to poor borrowers.

The examiner may find that some office personnel are circumventing these controls, for example, by advancing 11 percent new money to the borrower. If found, such circumvention raises serious questions regarding portfolio quality, the adequacy of internal controls, and the effectiveness of the supervisory effort. A high volume of "under 10 percent" loans or evidence of circumvention of controls may warrant separate treatment in the report.

4. Review partial-payment, interest-only, and extension accounts. Significant numbers of these accounts may indicate potential problems for the loan portfolio and the office.
5. Review credit-extension and loan documentation procedures, especially if the office's portfolio has a high level of losses or frequent litigation. Proper credit controls and documentation are essential for sound operations. If the office extends second mortgage financing, appraisals and lien searches should be included with the documentation.
6. Test the office's delinquency reporting. There are two methods for computing delinquencies, a contractual basis and the recency basis. On a contractual basis, principal reductions are applied to the most overdue payment under the contract and the loan is considered past due from the date of the oldest unsatisfied payment. On a recency basis, delinquency is computed from the date of last payment regardless of contract terms.

   As an example, assume a loan was granted with payments beginning the first of March. The borrower makes the first payment on time and the second payment on the first of June. On the first of April, the loan is a 30-day recency account and current contractually. On the first of May, the loan is a 60-day recency account and a 30-day contractual account. Upon receipt of payment in June, the loan is current on a recency basis and a 60-day (two-payment) contractual account. Notice the difference in computations between the banking industry and the consumer finance industry.

   The consumer finance industry has begun to institute contractual delinquency reporting standards. As these standards are developed and refined, changes in the computation of delinquent accounts may be expected.
7. Review the collection effort. The past-due accounts will be under the control of the collection manager, whose objective is to return these accounts to current status. The manager's collection efforts must begin early in the delinquency pattern if the loans are to be salvaged from charge-off. Consistent, persistent, frequent effort is expected.

The foregoing steps should provide the examiner opportunity to evaluate the company's policies, procedures, and supervisory systems.

3100.0.4.5 Additional Procedures

While field visits are a desirable aspect of the inspection procedure, the examiner may have to rely on other procedures to be satisfied with certain aspects of company operations, particularly when the company reports past-due receivables on a recency rather than a contractual basis. The additional procedures may be necessary when the examiner has other reasons to question portfolio quality or the adequacy of internal controls.

The examiner may perform an extensive review of the most recent audit of the company, including the workpapers and programs of the internal and independent auditors, when available. In this review, the examiner should be able to determine whether internal controls are adequate, and portfolio characteristics are properly reported.

3100.0.4.6 Compliance

Certain aspects of the company are subject to review for compliance with the requirements of the act and Regulation Y. These include public benefits, office activities and locations, and bulk purchases of assets.

1. Public benefits stipulated in approval orders frequently require continuing reduced interest rates or insurance charges as part of the approval to operate. It is expected that these relative public benefits continue in effect despite changes in state-mandated rates.
2. Office locations and activities are subject to approval by the Board before opening for business. The operating licenses and activities of the offices should also be reviewed for compliance with the respective approvals.
3. On occasion, a consumer finance company may make a bulk purchase of loans or other assets of another finance company. Under certain circumstances, these purchases require the prior approval of the Board (12 C.F.R. 225.132). These bulk purchases should not be confused with the bulk purchase of sales finance contracts from a retailer recently signed to a dealer agreement.

4. While most consumer finance activity relates to consumer installment loans, some companies also extend credit under the "large loan" provisions of the consumer lending statutes of certain states. While the limitations vary from state to state, these provisions allow loans of many times the size of normal consumer loans. A review of these large loans may indicate that there are extensions of credit to local businesses which may constitute commercial installment lending. Unless specifically approved by the System, this activity may not be permissible for the company being inspected. Review for compliance with various consumer regulations is the responsibility of the Federal Trade Commission.

3100.0.4.7 Asset Classification Policy

As previously discussed, companies use one of two different methods of delinquency computation. In general, classifications should be based on the *contractual* reporting basis whenever possible. Since much of the industry utilizes *recency* reporting, which tends to reduce classifications comparatively, the classification approach enumerated above may unduly penalize an affiliated company using the contractual basis. This is particularly true when such important measures of portfolio quality as the liquidation ratios are in line with industry averages. Therefore, formula classification may result in more severe classifications for companies using the contractual method than those reporting on a recency basis. Examiners should indicate the reporting method used when calculating classifications.

Classification information is used to evaluate the adequacy of the loss reserve. In assessing the adequacy of the loss reserves, the examiner should take into consideration the charge-off frequency, the period of delinquency which would require charge-off under company policy, and the controls regarding renewal of severely past-due accounts. A shorter charge-off cycle prevents the accumulation of poor-quality assets; in this respect, monthly charge-offs are preferable to annual charge-offs. An unlimited "when deemed uncollectible" charge-off policy is considered lax and inadequate. The delinquency period to required charge-offs refers to the period of time a loan is past due before it is charged to the reserve; a six-month period is understandably preferred to a nine-month or one-year period. Management should have sufficient controls in place to prevent the continued renewal of loans to avoid charge-off. Adequate controls might include special coding of such loans, with supervisory review of the renewals. Inadequate controls over these assets represent poor management practices deserving special comment.

Most subordinated debt agreements provide for an adjustment (reduction) to net worth when calculating compliance with leverage limits for any loans past due 60 days on a recency basis that exceed loss reserves. As there are some seasonal characteristics to the loan portfolio, it may be of benefit to compare the delinquency statistics on inspection date to the company's seasonal pattern as revealed in both the subordinated debt calculations and monthly past-due reports. It is possible that a currently adverse portfolio condition may be due to local economic conditions which correct themselves over a period of time. Such conditions may relate to a tourist economy, an agricultural community, or a strike at a major local employer's plant. Consumer finance companies are very sensitive to these local factors; therefore, these factors may temper the examiner's evaluation of the loss reserves.

3100.0.4.8 Ratio Analysis

In order to assess the condition of a company using ratio analysis, the examiner will have to be familiar with the company's accounting policies and systems. It will become obvious from the data used in the ratios that, under certain accounting treatments, the data can be misinterpreted. The following analysis has been structured around the *Direct Cash Lending Questionnaire,* published by the Robert Morris Associates and endorsed by the National Consumer Finance Association, in an effort to provide both a format for developing the information and a means of minimizing the possibility of misinterpretation. While some consumer companies do not prepare the questionnaire, much of the information is required for management purposes and should be available from company systems.

The analytical factors presented have been derived from two principal sources: *A Lender's Approach to a Realistic Analysis of Consumer Finance Companies* by Richard E. Edwards (Philadelphia: The Philadelphia National Bank, 1970) and the *Industry Audit Guide: Audits of Finance Companies* by the Committee on Finance Companies (New York: American Institute of

Certified Public Accountants, 1988). These sources provide basic information on certain accounting and management policies and are recommended as references for the examiner. While the Federal Reserve System stipulates no specific accounting policies, the examiner may choose to criticize those policies which result in a misleading presentation of the company's financial condition.

Each year the *Annual Statement Studies,* published by Robert Morris Associates, includes sets of consumer finance company operating ratios. This information will provide a background against which the performance of the company under inspection can be measured. Such compiled ratios should be used only as background as they represent the "average company" in the respective sample. Attention should be directed toward the company's trends as they compare to the industry's trends and the changes in the company that are indicated by those trends.

3100.0.4.9 Delinquency

As shown in the *Annual Statement Studies,* the delinquency rates are on a recency-of-payment basis. *While past-due statistics based on contractual payments are preferred,* companies continue to report on a recency basis. It is important to have full knowledge of the company's reporting, lending, and renewal policies in order to fully understand the implications of this data. The trends for "interest-only" accounts and "partial-payment" accounts will provide some measure of the adherence of the operating personnel to company policy regarding these loan categories.

3100.0.4.10 Liquidation

Liquidation ratios provide two types of information. First, they indicate the amount of principal cash flowing back to the company for liquidity purposes. Secondly, they indicate the amount required to pay senior debt and the period of time required to do so. Several ratios follow:

1. Average monthly cash principal collection to average net monthly outstanding.

   The higher this percentage, the more liquid the portfolio. A company following conservative policies such as requiring full payments and a contractual aging of receivables will tend to show a higher principal collection percentage and, accordingly, a higher liquidity. This ratio can be used to estimate near term collections as compared to current outstandings.

   Monthly cash collections should not include loan renewals or rebates during the period. On an industry-wide basis, there appears to be a pattern of increased loan renewals during November and December, which would be reflected in a seasonal decrease in principal cash collections. Lower than expected collections may be indications of changes in local economic patterns or of increased market effort by a competitor which has resulted in loan payoff. In any event, adverse change in the collection pattern should be reviewed for the underlying causes.
2. The ratio of unsubordinated liabilities less cash and near cash to estimated monthly principal collections results in the number of months it would take to pay senior debt.
3. The ratio of senior debt to gross receivables reflects the proportion of gross receivables which would have to be liquidated to repay senior debt. The higher the percentage, the more senior lenders are relying on the assets for protection.

3100.0.4.11 Loss Reserves

Analysis of the loss reserve for a specific entity has to include company policy regarding loan charge-offs, delinquencies, payments, and charge-off frequency. In addition, if charge-offs are made gross of deferred income, the reserve account may be slightly larger than if charge-offs were net of deferred income. Ratios used to evaluate loss reserves include—

1. Reserve for loan losses to total receivables, net of deferred income,
2. Loans charged off less recoveries to average outstandings (net or gross of deferred income, depending on policy).

   Unless the company's charge-off and delinquency policies are realistic, this ratio will not depict true losses over the periods, and
3. Recoveries to loans charged off tends to be higher in companies with conservative charge-off policies than those with liberal policies. This ratio is indicative of the effectiveness of a company's collection and follow-up policy.

3100.0.4.12 Volume

Analyzing aspects of a company's loan volume can provide the examiner with some information regarding the company's renewal and credit policies.

Lengthening of loan maturities during the current period will be reflected in the future average monthly principal collections and in the company's liquidity. While loans of longer maturity are not necessarily indicative of an adverse trend, the reasons behind a longer maturity portfolio should be analyzed. Ratios used to evaluate loan volume include:

1. *New money advanced to present borrowers to total loan volume.*

   This ratio is somewhat indicative of whether the company's renewal policy is conservative or liberal. A high percentage may indicate that a volume of new money is being advanced along with the renewal of the previous balance.

2. *Loans to present borrowers with less than 10 percent new money advanced to loan volume.*

   A high ratio can indicate the possibility of disguised delinquencies and potential charge-offs. The examiner may take a random sample of loans in the new money advanced to present borrowers category and review them to determine whether or not the company's "balance renewal" policy is being followed.

The preceding ratios were presented because they represent a means of measuring the effect of certain company policies. The analysis of company operations may be expanded to include other ratios such as return on equity, return on assets, interest margins, and other conventional measurements. The particular format utilized will, of course, vary to some degree between companies, however, the analysis should be broad enough in scope to determine the company's trends and the causes of those trends.

3100.0.4.13 Evaluation of the Company's Condition

Ratio analysis of a consumer finance company is a feasible technique for evaluating its condition because of the "portfolio effect" of its assets. However, the examiner must look beyond the ratios and analyze the effects of company policies on the elements of the ratios. As an example, if a company only charges off loans once a year, the losses determined by a formula classification would be less just after the charge-off date than just before.

In comparing classifications from one inspection to another, there might be a difference in the loss classifications which may be interpreted as an apparent improvement or decline in asset quality should the inspections bracket the charge-off date. Similar misinterpretations can occur from a change in charge-off frequency, a change to an automatic charge-off policy, or a shortening in the past-due period required for charge-off.

Certain accounting and reporting techniques may also be misleading in ratio analysis. For example, an artificial improvement in earnings would be reported when a company changes from a collection basis to an accrual basis of income recognition, if the collection and follow-up policy had been poor or deteriorating. Only a thorough review of the accounting policies and an understanding of their interplay with operating policies will prevent this type of misinterpretation. In some cases, the company's accounting system may yield results that inadvertently distort the ratios. A company recognizing income on a straight-line basis would, during a period of low loan volume, reflect improving gross interest income as a percentage of loans outstanding. While the importance of realistic accounting policies cannot be overstated, neither can the proper interpretation of reported results be overstressed.

One of the key elements in the evaluation of the company's performance is reflected in the ratios, but not quantified by the analysis. The company's internal controls and management information systems are the primary means of controlling asset quality and communicating management's policies. The supervisory effort is not only reflected by the ratios, but also in such areas as personnel turnover, citations in state supervisory reports, audit exceptions, and litigation. The systems relied on by management should be responsive not only to the changing needs of the company, but also to the changing climate of consumer regulations.

In the inspection report commentary, the examiner should maintain an objective view of the company under inspection. Management's corrective actions for exceptions and plans to reverse adverse trends are a necessary ingredient in the commentary. Report comments should give the reader an accurate picture of the condition of the company and its relationship with, and impact on, the financial condition of the consolidated corporation and the subsidiary bank(s).

3100.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Subject	*Laws* [1]	*Regulations* [2]	*Interpretations* [3]	*Orders*
Activities not closely related to banking		225.126	4–184	
Marketability of collateral under section 23A			3–1121	1935 FRB 395
Activities closely related to banking		225.123	4–176	1971 FRB 514 1975 FRB 245
Expansion of activities of a trust company, or acquisition of a de novo bank, to include consumer lending		225.28(b)(1)		1984 FRB 371 1985 FRB 51 1985 FRB 55 1985 FRB 61 1985 FRB 253

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. Federal Reserve Regulatory Service reference.

The Board amended Regulation Y, effective April 21, 1997, to include the acquiring of debt in default as an authorized nonbanking activity for bank holding companies (see Regulation Y, section 225.28(b)(2)(vii)). A bank holding may acquire debt that is in default at the time of acquisition if the company—

1. divests shares or assets securing debt in default that are not permissible investments for bank holding companies, within the time period required for divestiture of property acquired in satisfaction of a debt previously contracted under section 225.12(b) of Regulation Y;
2. stands only in the position of a creditor and does not purchase equity of obligors of debt in default (other than equity that may be collateral for such debt); and
3. does not acquire debt in default secured by shares of a bank or bank holding company.

The Board held that these restrictions were necessary to define the scope of the activity and to ensure that the activity remains the acquisition of debt instead of an impermissible nonbanking activity involving the acquisition of securities or other assets. As for calculating the time period for disposing of the underlying shares or assets, the time period is the same as that applied under the BHC Act to disposing of shares or assets acquired in satisfaction of a debt previously contracted. During this period, a bank holding company can divest the property or, in the case of any debt that has been previously contracted, restructure the debt.

The initial Board order that was issued to permit the acquisition of defaulted debt is summarized here as a historical example of the nonbanking activity. Provisions or commitments made in the Board order should not be relied upon. The current requirements are found in section 225.28(b)(2)(vii) of Regulation Y.

3104.0.1 ACQUISITION OF DEFAULTED DEBT—BOARD ORDER

A bank holding company (the applicant) within the meaning of the BHC Act gave notice under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and the Board's Regulation Y that it proposed to acquire a company (the company) and engage nationwide in asset-based commercial lending and management of assets.

The applicant proposed to engage through the company in managing certain assets as the corporate general partner in two limited partnerships (the partnerships).[1] The applicant committed to conduct the activities, which the Board previously determined to be permissible, through the partnerships, subject to the limitations previously established by the Board.[2]

One nonbanking activity proposed by the partnerships, acquisition of defaulted debt, was an activity that the Board had not previously approved. The partnerships are engaged primarily in making, servicing, and investing in discounted bank loans and other debt securities.[3] The partnerships acquire debt that has been or is in the process of being restructured, including secured and unsecured debt in the form of bank loans, privately placed and publicly traded debt instruments, bonds, notes, debentures, and discounted receivables.[4] The applicant stated that the partnerships will take an active role in the restructuring of the defaulted debt they acquire, including participating on creditors' committees. The applicant indicates that such discounted debt would be acquired for the purpose of restructuring the debt to achieve a higher yield and greater collateral protection.

Some of the debt the partnerships would acquire may be in default at the time of acquisition and may be secured by voting shares or

1. The first partnership group (in which the company owned more than a 50 percent interest) was to terminate by December 31, 1995. The company owned less than 50 percent of the second partnership group, which would terminate by December 31, 1999.

2. See 1994 FRB 736. The partnerships, together with the applicant and its affiliates, would hold not more than 5 percent of any class of voting securities of any issuer and not more than 25 percent of the total equity, including subordinated debt, of any issuer. In addition, the applicant committed that no directors, officers, or employees of the applicant or its affiliates will serve as directors, officers, or employees of any issuer of which the applicant and its affiliates hold more than 10 percent of the total equity. The applicant also committed that future limited partnerships would be structured in the same manner as the current partnerships.

3. The partnerships are not leveraged, and the applicant stated that the partnerships will not be leveraged. The applicant has committed that neither the applicant nor any of its subsidiaries would be permitted to make loans to the partnerships.

4. The debt investments may include investments in companies that may be contemplating, be involved in, or recently have completed a negotiated restructuring of their outstanding debt or a reorganization under chapter 11 of the Federal Bankruptcy Code.

other assets that would be impermissible for a bank holding company to hold without Board approval.[5] Because the partnerships would have the right in some cases to take title immediately to shares or assets securing defaulted debt that they acquire, the applicant committed that the partnerships would treat this collateral, as well as any other assets acquired in renegotiating this debt, as assets acquired in satisfaction of a debt previously contracted (DPC). Under the BHC Act, a bank holding company must divest any shares or assets acquired as DPC within two years from the date the asset is acquired. For this purpose, the applicant has committed that it will consider shares or assets acquired in satisfaction of defaulted debt to have been acquired on the date the defaulted debt is acquired.[6]

The Board stated that the acquisition of defaulted debt under the circumstances and conditions proposed by the applicant is an activity that is closely related to banking. The applicant stated that it will only purchase debt, not equity, and will stand in the position of a creditor.

Based on all the facts of record, the Board concluded that the proposed activities are closely related to banking. The Board approved the notice on October 17, 1995 (see 1995 FRB 1128). Approval was specifically conditioned on the applicant's compliance with the commitments made in connection with the notice.

5. The applicant has committed that the partnerships will not acquire debt in default that is secured by shares of banks or bank holding companies.

6. The applicant could apply for up to a three-year extension. See 12 C.F.R. 225.22(d)(1). The Board notes that the divestiture requirement would be satisfied if, during the divestiture period, the partnerships renegotiate the debt into a performing obligation and release the collateral to the borrower as part of the renegotiation. To the extent that defaulted debt acquired by the partnerships is secured by assets or shares that would be permissible investments for a bank holding company, this divestiture commitment would not apply.

A bank holding company applied for the Board's approval, pursuant to section 4(c)(8) of the BHC Act, to engage de novo, through its existing nonbank subsidiary, in credit card authorization services and lost/stolen credit card reporting services. The credit card authorization activity would consist of providing, for a fee, a service to issuers of credit cards that would enable merchants to determine the validity and credit limits of cards tendered to them. In addition, the applicant was to provide, for a fee, a reporting service to credit card holders, that would enable them to report the loss or theft of any of their credit cards via a single toll-free telephone call to the nonbank subsidiary.

A number of banks indirectly offer the service of reporting lost cards that are issued by other institutions by arranging with independent companies to provide the service under a trade name associated with the bank. With respect to credit card authorization services, banks have a financial interest in the security of the credit cards and the availability of credit. Based on the foregoing, the Board believed that banks generally have, in fact, provided the services proposed by the applicant and are particularly well suited to provide the proposed services. On that basis, the Board concluded that the proposed services were closely related to banking.

Since the proposed credit card reporting service would create more competition and provide greater conveniences by allowing an individual who loses more than one card to report all lost cards at once to one source rather than having to make separate notifications to each card issuer, and there was no evidence of adverse effects as a result of the proposal, the application was approved by the Board on January 5, 1985 (1985 FRB 648). See Regulation Y, section 225.28(b)(2).

A domestic bank holding company (the applicant) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of the Board's Regulation Y to engage de novo, through a wholly owned subsidiary, in the following services to customers who make loans secured by inventory:

1. identifying inventory and deciding its general condition, level of protection, and amount of use, as appropriate
2. identifying inventory subject to a purchase-money security interest under the Uniform Commercial Code
3. identifying missing inventory and any credit exposure that could result
4. supporting the proper allocation of loan payments that are related to the aging or sale of inventory[1]

The applicant would provide the above inventory-inspection services only in connection with an extension of credit either by the BHC (applicant) or a third pary. The service would be provided throughout the United States, but only in connection with inventory pledged as collateral for a loan.

Bank holding companies currently inspect and survey collateral for loans made or services provided by them. Banks inspect collateral for loans originated in direct lending activities. The applicant suggested that its proposed collateral-inspection services to third-party lenders are identical to the collateral-inspection services performed for its own extensions of credit.

In accordance with section 225.28(b)(1) of Regulation Y, the Board authorized bank holding companies to make, acquire, and service loans for the company's own account or for the account of others. The Board believes that these activities include collateral-inspection services provided to third parties in connection with third-party extensions of credit. The Board also believes that bank holding companies have the necessary expertise to provide this service for other lenders (on a stand-alone basis).

The Board found that public benefits would result from a potential increase in the availability of inventory financing. It noted that there was no evidence suggesting that the proposal would result in significant adverse effects. The financial and managerial resources of the applicant were believed to be consistent with previous approvals. The Board, based on the facts of record, and the commitments and conditions made by the applicant, approved the request on September 13, 1993 (1993 FRB 1053).

1. For example, a loan may be secured by a pool of inventory collateral, but there may be an agreement to apply loan proceeds to specific items of collateral in a specified order. Equipment used beyond a stated number of hours might be of limited value, and the lender might agree to release its security interest in such items. The inspection of inventory collateral would verify the equipment's proceeds to pay off the oldest (or the youngest) items of collateral first (or last), rather than applying the proceeds pro rata to all items.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, this section was revised to amend the beginning discussion and to include statutory and regulatory citations and a current Board order reference within section 3110.0.4.

A bank holding company may acquire or retain an industrial bank to the extent authorized by state law, under section 225.28(b)(4) of Regulation Y only if the industrial bank acquired by the holding company is not a "bank" within the meaning of the Bank Holding Company Act. Industrial loan companies, industrial banks, and Morris Plan banks are state-chartered financial institutions that engage primarily in the business of furnishing consumer loans and small- business loans. The distinction between these institution and consumer finance companies lies in the ability of the industrial loan company to generate funds through the acceptance of deposits or issuance of certificates of indebtedness (thrift notes). Although some of these institutions have the same charters as banks (in some states), they traditionally have not been considered to be banks for purposes of the Bank Holding Company Act as they cannot both make commercial loans and accept demand deposits, although in some states they have been empowered to offer NOW accounts. Under a decision of the Supreme Court, NOW accounts are not demand deposits for the purposes of defining what a bank is. Thus, industrial loan companies and similar institutions may offer NOW accounts and make commercial loans without being treated as banks for purposes of the Bank Holding Company Act. These institutions may be insured by the Federal Deposit Insurance Corporation and are eligible for membership in the Federal Reserve System.

3110.0.1 NONBANKING ACQUISITIONS NOT REQUIRING PRIOR BOARD APPROVAL

In accordance with 12 C.F.R. 225.22(d)(8) of Regulation Y, the Board's prior approval is not required for certain asset acquisitions by a lending company or industrial bank. This refers to the assets of an office(s) of a company of which all, or substantially all, the assets relate to making, acquiring, or servicing loans for personal, family, or household purposes, if—

- the acquiring company has previously received Board approval to engage in lending or industrial banking activities under Regulation Y;
- the assets acquired during any 12-month period do not represent more than 50 percent of the risk-weighted assets (on a consolidated basis) of the acquiring lending company or industrial bank, or more than $100 million, whichever amount is less;
- the assets acquired do not represent more than 50 percent of the selling company's consolidated assets that are devoted to lending activities or industrial banking business;
- the acquiring company notifies the Reserve Bank of the acquisition within 30 days after the acquisition; and
- the acquiring company, after giving effect to the transaction, meets the Board's capital adequacy guidelines and the Board has not previously notified the acquiring company that it may not acquire the assets under the exemption.

3110.0.2 INSPECTION OBJECTIVES

1. To determine the quality of the loan portfolio and the overall condition of the company.
2. To determine what exposure the subsidiary presents to the holding company and subsidiary bank(s).
3. To determine compliance with applicable laws and regulations.

3110.0.3 INSPECTION PROCEDURES

1. Contact the applicable state regulatory agency to determine the legal parameters within which the company operates and to assess the degree to which the company is supervised. Each of the institutional structures under this exemption is state chartered, and the laws and regulations vary widely from state to state. The company may be directly supervised by its state department of banking or may be subject to virtually no supervision or regulation. If the company is insured by the Federal Deposit Insurance Corporation or is a member of the Federal Reserve System, the company is primarily subject to the primary supervision and regulation of that agency. In cases in which the

company is supervised by a banking agency, that agency's report of examination will generally suffice. However, when the company is not supervised or examined, or when the Reserve Bank finds the supervising agency's report inadequate, an on-site inspection is necessary.

2. Focus on an evaluation of the loan portfolio and securities account, a determination of the volatility of the deposits, an appraisal of the adequacy of the audit program, and a review of the company's internal policies.
3. Review the receivables representing lending activities. The company should provide a schedule of the aging of the consumer receivables. It is preferable that the aging be done on a contractual method. Classification of the consumer paper may be done on a formula basis. The larger credits must be given a complete evaluation.
4. Review the adequacy of the allowance for loan and lease losses in conjunction with the asset evaluation.
5. Price the securities portfolio, with particular emphasis placed upon determining its liquidity. Since the deposits of these institutions are not always insured, they are more susceptible to a deposit run off; therefore, the requirement of adequate liquidity is of paramount importance.

   The deposits may be insured by a guaranty corporation up to a certain limit in some states. These guaranty corporations have provided some stability to the industry. The guaranty corporations are independent of any government agency or municipality and therefore are limited in the amount of protection which can be offered depositors.
6. Review back-up lines of credit available to ensure secondary liquidity to the company.
7. Review the deposit accounts of the company. The deposits are evidenced by certificates of indebtedness, or thrift notes. Information regarding the number of deposits, the size of accounts, and maturity distribution should be obtained to assess the stability of the funding base.
8. Determine that the institution makes proper disclosure to the public as to the type of instrument the certificate represents. Some states require that a disclosure statement, or a prospectus, be filed with the public yearly, which sets forth the uses to which the funds are being put and states that the funds are not insured. This prospectus should be reviewed for proper disclosure of the required information to ensure against possible suits.
9. Check the company's policy concerning withdrawals, giving recognition to state law requirements, to ascertain whether funds are generally not allowed to be withdrawn without prior notice.
10. Review the scope of the internal or external audits.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2016, this section was revised to include in subsection 3111.03 additional Board orders that have authorized the acquisition of savings and loan holding companies.

3111.0.1 ACQUISITION OF A SAVINGS ASSOCIATION

Prior to 1989, the Board had determined that the operation of a savings association was closely related to banking but concluded, as a general rule, that the operation of a savings and loan association was not a proper incident to banking because the potential adverse effects, of allowing the affiliations of banks and thrift institutions outweighed the potential public benefits (1977 FRB 280). Upon consideration of some individual cases, the Board found that the adverse effects of the affiliation would be outweighed by the public benefits of preserving the failing thrift institution as a competitor in its market and of ensuring public confidence. (See 1985 FRB 462.) The 1982 Garn–St Germain Act recognized the Board's authority under section 4(c)(8) of the BHC Act to approve such acquisitions by authorizing the Board to dispense with the necessary notice and hearing requirements of this section under appropriate emergency circumstances.

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) amended section 4 of the Bank Holding Company Act (BHC Act) to authorize, effective August 9, 1989, bank holding companies (BHCs) to acquire any savings association. The legislation lifted the previously existing "tandem operations" restrictions as they applied to savings associations owned by BHCs. (See 1989 FRB 716, appendix I.) These restrictions (1) provided that savings associations acquired by a BHC could not be operated in tandem with any other subsidiary of the BHC and (2) required approval by the appropriate Federal Reserve Bank before the savings association engaged in any transactions with the BHC or its other subsidiaries. The Board may not impose these restrictions on such transactions in the future, except for those restrictions required by sections 23A and 23B of the Federal Reserve Act.

With respect to previous Board approvals of the acquisition of problem thrifts by BHCs, FIRREA required the Board to modify those approvals by limiting any restrictions on transactions between the savings association and its holding company affiliates to those required under sections 23A and 23B of the Federal Reserve Act. In 1989, the Board removed the tandem restrictions imposed on the operations of savings association subsidiaries of a BHC. (See 1989 FRB 71b.)

The Board amended Regulation Y pursuant to FIRREA, effective October 10, 1989 (12 C.F.R. 225.28(b)(4)(ii)). The regulation allows BHCs to acquire healthy and failed or failing savings and loan associations in accordance with FIRREA. The regulation permits BHCs to acquire savings and loan associations in any state, regardless of whether the holding company may operate a bank in that state. It does not impose any operational or branching conditions on the operation of savings and loan associations. The regulation authorizes, as a permissible activity under section 4(c)(8) of the BHC Act, the owning, controlling, or operating of a savings association if the savings association engages only in deposit taking, lending, and other activities that are permissible for BHCs.[1] The Board has permitted a short divestiture period for impermissible investments and other activities. (See 1992 FRB 707.)

The Board requires that when a BHC acquires a savings association, the BHC must conform the acquired institution's direct and indirect activities to those permissible for BHCs under section 4 of the BHC Act.

In 2002, a foreign banking organization subject to the provisions of the BHC Act, and its wholly owned subsidiary, requested the Board's approval under section 4(c)(8) and section 4(j) of the BHC Act to acquire a savings association and thereby engage in operating a savings association, and to conduct certain nonbanking activities as a result of that acquisition. The foreign banking organization committed that it would conform all the activities of the acquired savings association to those permissible under

1. Section 225.2(m) of Regulation Y defines a savings association as (1) any federal savings association or federal savings bank; (2) any building and loan association, savings and loan association, homestead association, or cooperative bank if such association or cooperative bank is a member of the Savings Association Insurance Fund; and (3) any savings bank or cooperative deemed by the director of the Office of Thrift Supervision to be a savings association under section 10(*l*) of the Home Owners' Loan Act.

section 4(c)(8) of the BHC Act and Regulation Y. (See section 225.28(b)(4)(ii). See also 2002 FRB 385, 2002 FRB 485, 2003 FRB 439, 2004 FRB 503, and 2005 FRB 91.) The foreign banking organization was also treated as a financial holding company. Any other activities of the acquired savings association were, therefore, required to conform to those permissible for a financial holding company under section 4(k) of the BHC Act.

3111.0.2 APPROVAL TO BECOME A BHC BY ACQUIRING ANOTHER BHC

A savings and loan holding company (SLHC) requested the Board's approval, under section 3 of the BHC Act, to become a bank holding company (BHC), by merging with HN Corporation (a bank holding company) and thereby acquire HNB, a national bank. The SLHC requested the Board's approval to continue to operate SB, a subsidiary federal savings bank, until its conversion to a national bank. After the merger, SLHC would convert SB to a national bank and merge its subsidiary commercial bank (SCB) and HNB into SB, the survivor being SB.

SLHC also requested the Board's approval under section 3 of the BHC Act to acquire HN's minority interest in another BHC, BBI and its subsidiary bank, B Bank.

3111.0.2.1 Financial, Managerial, and Other Supervisory Considerations

Sections 3 and 4 of the BHC Act require the Board to consider the financial and managerial resources and future prospects of the companies, banks, and savings associations involved in a proposal and certain other supervisory factors.[2] These factors include supervisory and examination information received from the relevant federal and state supervisors of the organizations involved in the proposal, and other available financial information, including information provided by the SLHC. The Board is required to consider the managerial resources of the organizations involved and the proposed combined organization.[3]

3111.0.2.2 Nonbanking Activities

The SLHC filed a notice pursuant to sections 4(c)(8) and 4(j) of the BHC Act to (1) retain its ownership interest in SB and thereby operate a savings association and (2) engage in activities that are permissible for BHCs through its nonbanking subsidiaries, including lending, loans servicing and related activities, leasing, and selling credit-related insurance. The Board previously has determined by regulation that the operating of a savings association by a BHC and the other nonbanking activities for which SLHC has requested approval, are closely related to banking for the purposes of section 4(c)(8) of the BHC Act.[4]

With respect to the public interest factors under section 4(j) of the act, the Board must determine whether the operation of SB as a savings association by a BHC can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices. The record indicated that consummation of the proposal would create a stronger and more diversified financial services organization and would provide current and future customers of HNB with expanded financial products and services.

2. 12 U.S.C. 1842(c)(2) and (3).

3. A comment received from the public expressed concern that SLHC acquired control over HN before obtaining the Board's approval of the application as the result of an extension of credit the SLHC made to HN. The extension of credit was made after the SLHC had filed its application with the Board to acquire HN. The SLHC loaned HN $50 million, secured by the shares of HNB. HN invested the loan proceeds in HNB to increase the bank's capital.

The Board noted its concern about a banking organization seeking to acquire another banking organization and making a loan to the acquiree in advance of the Board's approval of the acquisition. Such types of loans raise concern that the transactions would be, in substance, the acquisition of a controlling interest or would provide the acquirer with the ability to exercise a controlling influence over the management and policies of the BHC before receiving approval. The Board carefully reviewed the loan transaction, its supporting documentation, and the relationships of the organizations after the loan transaction. Based on all the facts of record, the Board concluded that the loan did not result in SLHC acquiring voting securities of, or a controlling equity interest in, HN, or in SLHC exercising, or having the ability to exercise, a controlling influence over HN. The Board noted that it continues to believe that when a loan is made by an acquirer to a target organization before it receives agency approval of its acquisition proposal, it raises important issues, and that it will review these arrangements critically and carefully.

4. See 12 C.F.R. 225.28(b)(1), (2), (3), (4), (8), and (11).

3111.0.2.3 Noncontrolling Investment

The SLHC proposed to acquire 17.5 percent of BBI's voting shares that HN currently owned and to increase up to 19.9 percent its total ownership of BBI's voting shares. The Board previously had approved HN's investment in BBI as a passive investment, and HN complied with certain commitments that were previously relied on by the Board in determining that an investing BHC would not exercise a controlling influence over another BHC or bank for the purposes of the BHC Act ("Passivity Commitments").[5] The SLHC indicated that it did not propose to control or exercise a controlling influence over BBI and that its indirect investment in B Bank also would be a passive investment. The SLHC provided the passivity commitments to the Board (see appendix A). Based on those commitments, the Board concluded that the SLHC would not acquire control of, or have the ability to exercise a controlling influence over, BBI or B Bank through the proposed acquisition of BBI's voting shares.

3111.0.2.4 Appendix A Passivity Commitments

The SLHC will not, without the prior approval of the Federal Reserve Board or its staff, directly or indirectly:

1. Exercise or attempt to exercise a controlling influence over the management or policies of BBI or any of its subsidiaries;
2. Have or seek to have a representative of SLHC serve on the board of directors of BBI or any of its subsidiaries;
3. Have or seek to have any employee or representative of SLHC serve as an officer, agent, or employee of BBI or any of its subsidiaries;
4. Take any action that would cause BBI or any of its subsidiaries to become a subsidiary of SLHC;
5. Acquire or retain shares that would cause the combined interests of SLHC and its officers, directors, and affiliates to equal or exceed 19.9 percent of the outstanding voting shares of BBI or any of its subsidiaries;
6. Propose a director or slate of directors in opposition to a nominee or slate of nominees proposed by the management or board of directors of BBI or any of its subsidiaries;
7. Solicit or participate in soliciting proxies with respect to any matter presented to the shareholders of BBI or any of its subsidiaries;
8. Attempt to influence the dividend policies; loan, credit, or investment decisions or policies; pricing of services; personnel decisions; operations activities, including the location of any offices or branches or their hours of operation, etc.; or any similar activities or decisions of BBI or any of its subsidiaries;
9. Dispose or threaten to dispose (explicitly or implicitly) of shares of BBI in any manner as a condition or inducement of specific action or non-action by BBI or any of its subsidiaries;
10. Enter into any other banking or nonbanking transactions with BBI or any of its subsidiaries, except that SLHC may establish and maintain deposit accounts with BBI, provided that the aggregate balance of all such deposit accounts does not exceed $500,000 and that the accounts are maintained on substantially the same terms as those prevailing for comparable accounts of persons unaffiliated with BBI.
11. Acquire or seek to acquire any nonpublic financial information of BBI or any of its subsidiaries, beyond the information already available to it as a shareholder of BBI. SLHC also confirms that there are no legal, contractual, or statutory provisions that would allow it or its subsidiaries to have any access to financial information of BBI or its subsidiaries beyond the information available to shareholders.

3111.0.2.5 Interstate Acquisition

Under the Dodd-Frank Act, the Board of Governors of the Federal Reserve System may not approve the acquisition of an insured depository institution (including a savings association) if the home state of the insured depository institution is a state other than the home state of the

5. The Board previously determined that the acquisition of less than a controlling interest in a bank or BHC is not a normal acquisition for a BHC. The requirement in section 3(a)(3) of the BHC Act that the Board's approval be obtained before a BHC acquires more than 5 percent of the voting shares of a bank seems to suggest, however, that Congress contemplated the acquisition by BHCs of between 5 and 25 percent of the voting shares of banks. See 12 U.S.C. 1843(a)(3). On this basis, the Board has previously approved the acquisition of a BHC of less than a controlling interest in a bank or BHC. See 2006 FRB C37 (acquisition of up to 24.89 percent of the voting shares of a BHC); 2005 FRB 74 (acquisition of 24.9 percent of the shares of a BHC); and 2000 FRB 52 (acquisition of up to 9.9 percent of the voting shares of a BHC).

bank holding company and the applicant controls, upon consummation, more than 10 percent of the total amount of insured deposits in the United States. (For the Dodd-Frank cite, see 12 USC 1843(c)(8). Pub. L. 111-203 124 stat 1547, 1634)

Section 4(c)(8) of the BHC Act (Trust Services) Section 3120.0

The performance of trust services by a trust company subsidiary that is neither a ''bank'' nor a nonbank bank encompasses virtually any kind of fiduciary, agency, or custodial service commonly performed by a trust company so long as the subsidiary does not accept demand deposits or make loans, except as expressly permitted by section 225.28(b)(5) of Regulation Y. Generally, under Regulation Y, a trust company may only accept deposits arising out of trust funds not currently invested; perform escrow services, such as receiving, holding, and disbursing downpayments and other funds deposited by purchasers in real estate transactions; and act as an agent for an issuer of, or broker or dealer in, securities in a capacity of a paying agent, dividend-disbursing agent, or securities clearing agent, so long as the funds are not used by the customer as a general-purpose checking account and do not bear interest. The subsidiary's lending activities are restricted to making call loans to securities dealers and to purchasing money market instruments; however, such loans may not be used to provide funding for nonbank subsidiaries of the holding company.

Trust companies may be either state chartered or nationally chartered. Some nationally chartered trust companies have national bank charters but have agreed through limitations in their bylaws to engage only in those activities permitted for trust departments of national banks. To prevent the use of a trust company as a vehicle for evasion of section 3(d) of the Bank Holding Company Act, the Board has conditioned its approval of certain interstate acquisitions by requiring that (1) the trust company's demand deposit–taking activities not be operated in tandem with any other subsidiary, (2) demand deposit and commercial lending services of affiliates will not be linked in any way, and (3) the trust company will not engage in any transactions with affiliates, other than the payment of dividends or the infusion of capital, without the Board's approval (for example, see U.S. Trust Corporation, 1984 FRB 371). The scope of these conditions may be reviewed by the Board in connection with nonbank bank applications.

As part of normal administration of its trust accounts, a trust company will from time to time engage in an activity, such as property management or land development, that has been determined to be *not* closely related to banking by the Board. Any such service may only be performed incidentally to fiduciary-account administration and may not be offered or marketed as a separate service.

The board of directors and senior management of financial holding companies (FHCs) and bank holding companies (BHCs) are responsible for overseeing the operations of their fiduciary activities in a safe and sound manner. Such oversight (particularly for those BHCs and FHCs engaged in a broad range of financial activities) at the consolidated level is important because the risks associated with financial activities as well as fiduciary activities can cut across legal entities and business lines. Federal Reserve examiners review and assess the internal policies, reports, and procedures and effectiveness of the BHC/FHC consolidated risk-management process.

The appropriate regulator of trust activities (including activities of a fiduciary, agency, or custodial nature) has the primary responsibility for evaluating risks, hedging, and risk management at the legal-entity level for any subsidiary or subsidiaries that the regulator supervises. Federal Reserve examiners should seek to use the examination findings of the appropriate regulators. (See SR-00-13.)

To determine the complete scope of fiduciary assets within an FHC/BHC, examiners should reference the Uniform Bank Performance Report (UBPR), which reflects the information gathered on Schedule RC-T. To further understand the scope of fiduciary assets within an FHC/BHC, an examiner should also look at information reported on Schedules Y-11 and Y-9C with respect to income derived from trust, fiduciary, and asset-management activities. (See also page 4 of the Bank Holding Company Performance Report (BHCPR) for the amount and percentages of income from fiduciary activities to adjusted operating income (tax-equivalent), including the BHC's corresponding peer-group ratios.)

Peer analysis is also available at the bank level. Examiners should refer to pages Trust 1 and Trust 1A of the UBPR. General comparison information is also available on a lagged basis in the FFIEC's electronic report ''Trust Assets of Financial Institutions'' (www2.fdic.gov/structur/trust/index.asp). Aggregate data are listed by year back to 1996.

3120.0.1 ON-SITE INSPECTIONS

Trust companies are normally engaged in activities such as management of funds for individuals. These activities are significant to the integrity of the banking system and involve significant potential liability to the bank holding company if not properly conducted. Therefore, periodic on-site inspections should be performed. If the trust company is examined by a state banking department, then alternate-year examination procedures may apply. If nationally chartered, a review of the periodic on-site examinations of the Comptroller of the Currency will generally suffice. If the trust company is not subject to a regular examination by another federal banking agency (i.e., if it is an uninsured, state-chartered nonmember trust company), the Reserve Bank should perform regular on-site inspections to include, at a minimum, full-scope reviews of the trust activity. The inspections would use procedures such as those used in the examinations of trust activities of state member banks. This portion of the inspection should be performed by examiners specially trained in trust examinations. Holding company inspectors should specifically review trust activities for compliance with any conditions imposed by the Board in connection with the approval of an application.

The main sections that follow (sections 3130.1 through 3130.9) address all financial and investment advisory activities under section 4(c)(8) of the BHC Act and section 225.28(b)(6) of Regulation Y that have been authorized by the Board. This section provides general inspection objectives and procedures that relate to such financial and investment advisory activities. These objectives and procedures can be applied to the BHC inspection of every advisory activity when advisory activities are not listed separately in any of this manual's individual advisory sections.

Any commitments that were made by the bank holding company or its nonbank subsidiaries to the Federal Reserve System pertaining to its financial and investment advisory nonbanking activities should be reviewed by the examiner for compliance and applicability, in accordance with the current statutory and regulatory provisions. Any existing commitments or conditions that relate to the financial resources of a bank holding company or its subsidiaries or to commitments or conditions that relate to the risk-management policies of the organization should remain intact and should be reviewed by an examiner for compliance during each inspection.

The Board's Regulation Y, effective April 1997, resulted in a structural reorganization of financial and investment advisory nonbanking activities. The provision of discretionary investment advice is no longer limited to institutional customers. Bank holding companies and their subsidiaries may engage in financial and investment advisory activities without restriction. Bank holding companies can manage retail customer accounts outside of the trust department of an affiliated bank (to the extent permitted by law). Further, bank holding companies may engage in any combination of permissible nonbanking activities listed in Regulation Y. Accordingly, bank holding companies may provide financial and investment advice jointly with permissible agency transactional service, investment or trading transactions as principal, or any other listed nonbanking activity.

The rules in Regulation Y provide examples of financial and investment advisory activities that are illustrative rather than exclusive. With regard to the examples, a bank holding company may act as an investment or financial adviser without restriction to any person, including

1. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to an investment company registered under that act, including sponsoring, organizing, and managing a closed-end investment company;
2. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies;
3. providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, financing transactions and similar instruments, and conducting financial-feasibility studies;
4. providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instrument;
5. providing educational courses and instructional materials to consumers on individual financial-management matters; and
6. providing tax-planning and tax-preparation services to any person.

Sections 3130.1 through 3130.9 include many historical examples of various financial and investment advisory activities that have been approved by the Board. These examples are to be viewed as historical references. They should be considered as to their applicability to current statutory and regulatory provisions. Some examples include, but are not limited to, providing financial advice in rendering fairness opinions and providing valuation services in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, and capital structurings. Other examples include providing advice on financing and similar transactions with respect to private and public financings and loan syndications; conducting financial-feasibility studies; and providing financial advice to state and local governments with respect to the issuance of their securities.

3130.0.1 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of its management to conduct business, and to determine whether they are satisfactory.

2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.
3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts to determine whether they are appropriate.
6. To evaluate funding sources, including indebtedness, and their management with respect to maturities and interest rates.
7. To determine the adequacy of internal and external audits.
8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.

3130.0.2 INSPECTION PROCEDURES

1. Review System approval and activities for conformance with any limitations. Determine if the activity is conducted through a separately incorporated subsidiary of the bank holding company that—
   a. refrains from taking positions for its own account;
   b. observes the standards of care and conduct applicable to fiduciaries with respect to its advisory and transactional services; and
   c. avoids executing customer transactions when acting in an advisory capacity.
2. Prepare financial statements for the last two fiscal years, plus interim if appropriate. Analyze for adverse trends and evaluate for negative effects on affiliates.
3. Evaluate asset quality when warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate reserve adequacy.
4. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates' concentrations, and dependability. Review borrowings from affiliate banks for compliance with section 23A of the Federal Reserve Act.
5. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
6. Review the company's revenue sources to determine that it has not taken positions and does not, itself, execute transactions when acting in an advisory capacity.
7. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
8. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct transactions for the company's customers. Determine whether the bank is being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the company.
9. Review checking-account statements for all accounts at affiliate banks for overdrafts since the previous inspection.
10. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or are using bank assets. If so, is the bank adequately compensated?
11. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
12. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and evaluate potential effects on the financial condition.
13. Obtain and review internal and external audit reports and workpapers.

14. Obtain and review internal and external asset-review reports.
15. Obtain and review copies of the board of directors' and senior management's policies and procedures.
16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal shareholders and their related interests of the holding company and its affiliates.
18. Evaluate insurance for adequacy.
19. Obtain or verify that workpapers contain the following permanent documentation:
    a. System approval letters
    b. date of incorporation or date acquired
    c. date activity commenced
    d. articles of incorporation and by-laws
    e. commitments
    f. supervisory actions
    g. other pertinent correspondence
20. Obtain and review a listing of shareholders for each class of stock outstanding, and a schedule of officers, directors, and their related interests.

WHAT'S NEW IN THIS REVISED SECTION

This section is revised to amend section 3130.1.6, Laws, Regulations, Interpretations, and Orders. The table references a 2015 Board order that authorizes the merger of two bank holding companies and the acquisition of a bank, which were immediately followed by the acquisition of nonbank subsidiaries authorized to be engaged in financial and investment advisory activities under section 225.28(b)(6) of Regulation Y.

A bank holding company or its nonbank subsidiary that engages in investment or financial adviser activities is subject to section 225.28(b)(6) of Regulation Y. The purpose of an inspection of a company providing investment or financial advice is to determine that it is operating according to applicable laws, regulations, and interpretations, and to determine that the company is subject to an adequate audit program. Regulation Y allows a bank holding company to serve as an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940 (15 U.S.C. 80a-2(a)(20)), which defines an "investment adviser" of an investment company as "...any person who pursuant to contract with such company regularly furnishes advice to such company with respect to the desirability of investing in, purchasing or selling securities or other property, or is empowered to determine what securities or other property shall be purchased or sold by such company..."

The Board has issued an interpretive rule regarding the investment adviser activities of bank holding companies under Regulation Y (12 C.F.R. 225.125). The following is a list of some of its provisions:

1. Bank holding companies, including their bank and nonbank subsidiaries, may act as investment advisers to various types of investment companies such as mutual funds and closed-end investment companies. Mutual funds and closed-end investment companies are described in the interpretation.
2. Bank holding company investment adviser activities are limited by the Glass-Steagall Act (Banking Act of 1933 (12 U.S.C. 24, 78, 377, 378)). This act generally prohibits member banks from engaging in the purchase or sale of equity securities other than in an agency capacity.
3. A bank holding company may not sponsor, organize, or control a mutual fund. This does not apply to closed-end investment companies so long as they are not primarily or frequently engaged in the issuance, sale, or distribution of securities.
4. A bank holding company should not act as investment adviser to an investment company which has a name similar to the bank holding company or any of its subsidiary banks, unless the prospectus of the investment company contains certain required disclosures. In no case should a bank holding company act as investment adviser to an investment company that has either the same name as the name of the bank holding company or any of its subsidiary banks, or that has a name that contains the word "bank."
5. Since investment adviser activities may create potential conflicts of interest, the Board determined that a bank holding company and its subsidiaries should not purchase in their sole discretion, in a fiduciary capacity (including as managing agent), securities of any investment company for which the bank holding company acts as investment adviser, unless the purchase is specifically authorized by (1) the terms of the instrument creating the fiduciary relationship, (2) court order, or (3) the law of the jurisdiction under which the trust is administered.
6. A bank holding company may not engage, directly or indirectly, in the underwriting, public sale, or distribution of securities of any investment company for which it or any nonbank subsidiary acts as investment adviser, except in compliance with section 20 of the Glass-Steagall Act. The Board has determined, however, that the conduct of securities brokerage activities by a bank holding company or its nonbank subsidiaries, when conducted individually or in combination with investment advisory activities, is not deemed to be the underwriting, public sale, or distribution of securities prohibited by the Glass-Steagall Act.
7. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to conduct securities brokerage activities (either separately or in combination with investment advisory activities) may act as agent, upon the order and for the account of customers of the holding com-

pany or its nonbank subsidiary, to purchase or sell shares of an investment company for which the bank holding company or its subsidiaries act as an investment adviser.

8. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to provide investment advice to third parties generally (either separately or in combination with securities brokerage services) may provide investment advice to customers with respect to the purchase or sale of shares of an investment company for which the holding company or any of its subsidiaries acts as an investment adviser.
9. A bank holding company or its subsidiary bank, at the time a service is provided, must caution customers to read the prospectus of the investment company before investing. Customers must be advised in writing that the investment company's shares are not insured by the Federal Deposit Insurance Corporation and are not deposits, obligations, or endorsed or guaranteed in any way by any bank (unless that is the case). The role of the company or affiliate as adviser to the investment company must be disclosed in writing. Such disclosures may be done orally, but the cusotomer must be given such disclosures in writing immediately thereafter.
10. Because of potential conflicts of interest, a bank holding company which acts both as custodian and investment adviser for an investment company should exercise care to maintain at a minimum level demand deposit accounts of the investment company which are placed with a bank affiliate, and should not invest cash funds of the investment company in time deposit accounts (including certificates of deposit) of any bank affiliate.

3130.1.1 REAL ESTATE DEVELOPMENT ADVISERS FOR STATE AND LOCAL GOVERNMENTS

Advising state and local governments about methods available to finance real estate development projects, and evaluating projected income to determine if debt resulting from proposed development projects can be adequately serviced is permissible if the activities are authorized under section 225.28(b)(6) of Regulation Y.

Before this activity was incorporated into Regulation Y, in 1980, the Board had received certain comments noting that certain aspects of these advisory services may be within the scope of the activity of "management consulting." The Board had found that it was not permissible for bank holding companies to offer management consulting services to nonaffiliated companies. Certain management consulting advice could be provided to unaffiliated depository institutions, however. In view of the relationship that had traditionally existed between banks and state and local governments, and the net public benefits that would result from provision of advice to such governments by bank holding companies, the Board indicated that it would be more flexible in determining what particular services constitute "providing financial advice" rather than "management consulting" when the services are solely for state and local governments rather than other nonbank organizations. With the Board's April 1997 revision of Regulation Y, investment and financial advisory activities were grouped together and a bank holding company could act as an investment or financial adviser without restriction.

The Board also allowed the provision of management consulting services regarding any financial, economic, accounting, or audit matter to any company. These financial activities are directly related to the activities and expertise of bank holding companies. Management consulting services are subject to a revenue limitation, however. They may be provided to any customer on any matter, provided that the total annual revenue derived from the management consulting services does not exceed 30 percent of the company's total annual revenue derived from management consulting activities. Thus, any services provided to state and local governments that are deemed management consulting services are subject to this revenue limitation.

3130.1.2 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of management to conduct business, and to determine whether they are satisfactory.
2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.

3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts, and to determine whether they are appropriate.
6. To evaluate funding sources, including indebtedness, and their management based on maturities and interest rates.
7. To determine the adequacy of internal and external audits.
8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.

3130.1.3 INSPECTION PROCEDURES

1. Obtain the company's policy and procedure manuals, and distribute relevant portions to the examiners for review and compliance evaluation.
2. Review the minutes of meetings of the board of directors, audit committees, and any officer-level committees. Ensure that examiners performing other portions of the inspection review relevant minutes or summaries thereof.
3. Obtain, review, and evaluate the adequacy of internal and external audit procedures, reports, and workpapers.
4. Prepare financial statements for the last two fiscal years, plus the interim period, if appropriate. Analyze and evaluate the information for adverse trends and for negative effects on affiliates.
5. Obtain, review, and evaluate internal and external asset-review reports.
6. Evaluate asset quality where warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate the adequacy of contra asset allowances.
7. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates, concentrations, and dependability. Review borrowings from affiliate banks for compliance with section 23A of the Federal Reserve Act.
8. Review checking-account statements for all accounts at affiliate banks, checking for overdrafts since the previous inspection.
9. Complete the inspection checklist (see the sections beginning at 3130.1.3.2) based on the guidance provided in section 3130.1.3.1.
10. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
11. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and summarize the matters in litigation (or in threatened litigation) and any compromise actions. Evaluate the potential effects on the company's financial condition.
12. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
13. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
14. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or whether bank assets are being used. If so, is the bank adequately compensated?
15. Review FR System approvals, and check conformance with any specified limitations or commitments.
16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal share-

holders and their related interests of the holding company and its affiliates.

18. Evaluate insurance, including bond coverage, for adequacy. Determine the extent of current liability insurance relating to the adviser function, and evaluate the adequacy of such coverage—particularly the extent to which possible significant surcharges would be covered by such insurance.
19. Obtain a listing of shareholders for each class of stock outstanding and a schedule of officers, directors, and their related interests.
20. Obtain or update biographical and experience information for key management personnel, together with overall staffing and salary levels as appropriate for full evaluation.
21. Determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with contractual responsibilities.
22. Ascertain if senior management is aware, or has adopted the procedures necessary to become aware, of its current and potential responsibilities in connection with any regulatory-reporting and/or regulatory-compliance requirements.
23. Obtain or verify that workpapers contain the following permanent documentation:
    a. System approval letters
    b. date of incorporation or date acquired
    c. date activity commenced
    d. articles of incorporation and by-laws
    e. commitments
    f. supervisory actions
    g. other pertinent correspondence

3130.1.3.1 Scope of Inspection

It is expected that inspections of investment adviser subsidiaries will generally be conducted as part of regularly scheduled bank holding company inspections. If, however, the investment adviser subsidiary provides portfolio management services for a significant portion of trust assets held by a state member bank, the Reserve Bank should inspect the investment adviser subsidiary at the same time it examines the trust operations of the bank subsidiary. The scope of the inspection should be based on a review of the nature and complexity of the financial services provided to customers. An adviser which merely provides investment advice and does not provide any additional financial services, such as portfolio management, safekeeping, recordkeeping, or trading services, may not require an inspection. However, an adviser which provides portfolio management, safekeeping, or other services will require an inspection. To determine the scope of the inspection, it is essential to identify what types of services are being offered to customers and to assess the risks associated with those services.

The examiner needs to understand the adviser's operations, including how it represents itself to clients and whether the adviser has any vested interests in the financial services which it offers. Examiners should use their discretion to schedule inspections based on the size and complexity of the adviser's operations. Most section 4(c)(8) BHC subsidiaries will be subject to SEC registration requirements. (See SR-91-4 (SA).) Appropriate checklist questions should be completed for registered investment advisers which provide investment advice to affiliated banks or trust companies and for investment advisers which engage in activities which could have a significant impact on the bank holding company's financial safety and soundness. The checklist should also be completed for all advisers that manage investment portfolios for their customers. The checklist is only a guideline and some of the sections in the checklist may not be applicable. Conversely, the scope of such examinations is not limited to the items included in this checklist.

3130.1.3.2 Inspection Checklist

The questions in this checklist will assist the examiner in evaluating various areas of supervisory concerns.

3130.1.3.2.1 Review of Fundamental Policies and Procedures

The investment adviser's policies and procedures should be reviewed using the following checklist to ensure that fundamental policies and procedures have been established and implemented.

1. Are adequate minutes of the board and board committee meetings prepared?
2. Is the adviser properly chartered and registered?
3. Does the adviser have sufficient blanket bond or other fidelity or liability coverage in place?
4. Is corporate and regulatory reporting performed on a timely basis?

5. Does the above reporting fairly present the accounting and supplemental data reflected by the corporate records?
6. Are internal accounting controls, provided by a segregation of duties or a need for administrative approvals, adequate?
7. Are duties properly segregated in the receiving, disbursing, and recording of cash and cash transactions?
8. Are fee calculations and billing procedures adequate to ensure accuracy and propriety?
9. Are all security transactions authorized or approved by the appropriate management level, and is there documented evidence of the authorization or approval?

3130.1.3.2.2 Supervision and Organization

Supervision refers to the conduct of an adviser's board of directors and senior management in establishing, communicating, and enforcing a system of policies, procedures, and practices suitable to its business objectives and legal requirements. Organization may be characterized as the framework of committees and the assigned responsibilities through which supervision functions. The examiner should (1) review the structure of the organization for adequacy of management information systems and (2) the organization framework as both relate to meeting the entity's stated responsibilities as well as generally accepted standards of conduct. The examiner should review the supervisory function by first identifying the duties and responsibilities of the board of directors. The directors owe the duty of reasonable supervision, including appropriate attention to areas in which the adviser is assuming sensitive and complex fiduciary responsibilities. The next level of review is the committee and officer positions to which certain authority has been delegated. In reviewing this level of supervision, the examiner should keep in mind that certain functions cannot be delegated; for example, approval of significant new services or lines of business, approval of formal policies designed to ensure that the adviser operates in basic compliance with laws and regulations, and the selection and supervision of senior management cannot ordinarily be delegated. Informal delegations and operating practices represent the last level of review. In reviewing both formal and informal delegations, consideration should be given to the institution's size and complexity. A final determination of the adequacy of supervision and organization must be based on findings of the entire inspection of the bank holding company or its nonbank subsidiaries. While topics that have direct or indirect impact on the adequacy of director supervision and management competence are of particular sensitivity, examiners nevertheless have a responsibility to carefully address and comment upon such issues. During the course of the inspection, the examiner should review the supervisory and organizational structure of the bank holding company, with particular reference to investment-related activities. The examiner should determine whether the board of directors has developed adequate objectives and policies.

3130.1.3.2.2.1 Supervision and Organization Checklist

1. If the board of directors does not directly supervise investment adviser activities—
   a. has a responsible board committee(s) been named to exercise this function?
   b. are any delegations consistent with bylaw provisions and other appropriate principles?
   c. do the board's minutes nevertheless reflect periodic but timely review of the conduct and operating results of the function?
2. Do minutes of the board, or its committee(s), reflect that members—
   a. attend meetings with reasonable frequency?
   b. require and approve, where necessary, appropriate written policies, strategic plans, and management reports relating thereto?
   c. review audit and regulatory reports (and management proposals and corrective measures in response thereto), litigation developments, earnings and expense reports, and changes to fee schedules?
3. Through adoption of formal policies and provisions for auditing, does the board adequately seek to ensure the integrity of the organization's records and operational systems?
4. Are policies and procedures adequately communicated to officers and staff?
5. Does the board or a board committee consider, periodically review, and provide for insurance protection?
6. Does the bank holding company maintain access to competent legal counsel and, where appropriate, obtain written opinions on sig-

nificant legal questions such as—
   a. pending or threatened litigation?
   b. account agreements whose terms are unclear or ambiguous or raise complicated points of law?
   c. proposed actions or policies involving matters such as conflicts of interest, restricted securities, ERISA, and other matters involving possible legal exposure?
7. If an account's securities are registered in a nominee name(s)—
   a. is the nominee agreement current?
   b. is the nominee registered with the American Society of Corporate Secretaries (to guard against duplication of the nominee name) and state authorities (where required by local law)?
8. Is staffing adequate, in terms of both numbers and qualifications, to handle the current volume of business?
9. Is there adequate provision for management succession, or for continuing operations in case of the loss of key personnel?
10. Is senior management aware of its responsibilities in connection with, and has it established written policies and procedures to ensure compliance with, any applicable regulatory-reporting requirements?
11. Are significant functions of the investment adviser subject to either internal or external audit? If not, ascertain whether an audit program should either be developed or expanded.
12. When appropriate in light of the size and complexity of the adviser's operations, has management had an audit of financial statements performed by certified public accountants?
13. Have all significant exceptions and recommendations in audits or examinations or inspection reports been corrected, implemented, or otherwise satisfactorily resolved?

3130.1.3.2.3 Portfolio Management

Investment selection is the process whereby the adviser evaluates, selects, and reevaluates those securities or other financial assets it will buy or sell for its clients, or for which it will make recommendations. It includes the process of researching and selecting recommended individual stocks and bonds, and setting objectives or strategies for diversifications by types and classes of securities into general or specialized portfolios, as well as the process of communicating and executing overall strategies for particular accounts.

When an adviser holds itself out as a professional, the adviser will be held to a high standard of prudence and expertise in the investment-selection and -review process. Therefore, advisers must carefully consider policies and procedures in this area in accordance with the size and character of the investment-selection responsibilities undertaken. In furnishing portfolio investment advice, particularly to retail clients, an investment adviser should observe the standards of care and conduct applicable to fiduciaries.[1]

3130.1.3.2.3.1 Investment Standards and Research

1. Are the general investment standards and review and selection responsibilities defined and approved by the board of directors?
2. Does management or senior investment personnel review overall investment policy and potential investment problems at least annually?
3. Is portfolio management policy adequately communicated to appropriate personnel (for example, by including it in committee minutes, directives, or memoranda circulated to such personnel)?
4. Does the institution, where appropriate, diversify investments according to—
   a. types of assets, such as common stocks, fixed-income securities, and real estate?
   b. types of securities by characteristics such as income, growth, and size of company?
   c. types of securities by industry and specific companies within industries?
   d. maturities of debt securities?
   e. geographic location of companies of issue, such as utilities?
   f. tax-exempt income?
5. If the institution has a list of securities approved for purchase, retention, and/or sale—
   a. are recommendations for additions to or deletions from such list(s) approved by a committee or group with appropriate authority and expertise?
   b. are periodic reviews made of the lists of

1. The term "portfolio investment" is intended to refer generally to the investment of funds in a "security" as defined in section 2(1) of the Securities Act of 1933 (15 U.S.C. 77b) or in real property interests, except when the real property is to be used in the trade or business of the person being advised. In furnishing portfolio investment advice, bank holding companies and their subsidiaries shall observe the standards of care and conduct applicable to fiduciaries.

securities approved for purchase, retention, or sale to assess the current appropriateness of the investments listed?

6. If the institution uses any research or analysis in its general investment-review and -selection process—
   a. are appropriate factors taken into account?
   b. is appropriate documentation obtained and filed to reflect consideration of such factors?
7. If the size and character of the entity's discretionary investment responsibilities are such that the type of detailed research considerations and files envisioned in the previous question are not relied on, does it use ratings by acceptable financial-rating agencies, such as Moody's or Standard and Poor's, together with evaluation of basic relevant factors pertaining to the type of security under consideration?
8. Where appropriate, does the organization differentiate its investment-selection process as to the type of account in question, such as those for which the need for growth or income is paramount, or for taxable versus tax-free trusts or retail versus institutional accounts?
9. Do personnel possess sufficient expertise and experience to properly implement the firm's investment-selection systems and responsibilities?

3130.1.3.2.3.2 Account Administration

Special consideration has to be given to accounts subject to the Employee Retirement Income Security Act of 1974 (ERISA), which imposes fiduciary responsibilities upon any person who has any power of control, management, or disposition over the funds or other property of any employee benefit fund. When an adviser exercises investment discretion over such plans, the extensive fiduciary responsibility and prohibited transaction rules of ERISA will apply.

1. Does the adviser have portfolio management procedures which provide for—
   a. consideration of the needs and objectives of particular types of accounts, such as the need for income versus growth or taxable versus tax-free income?
   b. conformity with investment provisions of governing instruments?
   c. consideration of the liquidity needs of the account for anticipated distributions?
   d. appropriate diversification, including avoidance or elimination of concentrations in individual securities and by type and subclass of securities?
2. When assets in discretionary accounts are considered unsuitable, is a program of prudent and timely sale of such assets followed unless retention is required?
3. In order to determine the advisability of retaining or changing assets, does the adviser have procedures for periodic reviews?
4. Do minute books or other records—
   a. identify reviewed accounts?
   b. report written conclusions on the advisability of retaining or disposing of assets in the accounts?
5. As appropriate to the size and character of business, are account synopses and historical data used in the review of account assets?
6. Does the investment-review information include—
   a. amount and description of investment?
   b. categories of investment, such as bonds and stocks?
   c. types of investments within each category, such as industry groups for stocks?
   d. cost?
   e. market or appraised value at review date?
   f. annual income?
   g. yield at market?
   h. rating of recognized financial service?
7. For accounts in which the adviser makes investments at the direction of the client, does the adviser—
   a. review the account to detect illegal, nonconforming, substandard, or otherwise unsuitable investments?
   b. advise the power holder of any improper investments?
   c. inform parties at interest in the account if any improper investment is not disposed of, and seek legal relief, if necessary?
   d. resign from the account if corrective action is not taken concerning improper investments?
8. Have proxy voting policies and procedures as listed below been established for ERISA accounts that are suitable in relation to assumed responsibilities?
   a. voting of routine proxies?
   b. identification and handling of proxy or tender determinations when sensitive social issues, conflicts of interest, significant increases in management power or perquisites, or merger or buy-out proposals are involved?

      NOTE: For requirements relating to

proxy processing and the Shareholder Communications Act of 1985, see Operations and Internal Controls in the *Trust Examination Manual.* For questions relating to the voting of affiliate stock, see Conflicts of Interest in the *Trust Examination Manual.*

When an adviser invests accounts in options and/or futures, the following checklist questions (numbers 9 through 13) should be completed. For additional information as to appropriate uses of options and futures contracts, see SR-83-2(SA) and SR-83-39(SA).

9. When an adviser uses options and/or futures, has the board of directors or a directors'-level committee approved a policy and strategy for their use? Does the policy address—
   a. the investment objectives to be accomplished by the use of these contracts?
   b. the specific types of contracts to be used?
   c. the types of accounts authorized to use these contracts?
   d. restrictions and/or conditions upon use of contracts, such as selection of brokerage houses, position limits, time frames, leveraging, etc.?
10. Was adequate disclosure made and adequate authorization obtained to execute contract transactions for various types of participating accounts?
11. Are adequate systems and controls in effect to ensure—
    a. proper tax treatment?
    b. proper segregation of securities and/or monies?
    c. conformance with account objectives?
    d. adherence to adopted strategy, position limits, and related program parameters?
    e. periodic management evaluation and reporting systems with respect to—
       - results of contract activities upon overall investment performance?
       - market developments, including current liquidity of relevant futures and options contracts in which positions are taken?
       - financial condition, fee competitiveness, and performance of involved broker-dealers?
12. Does the accounting system accurately reflect contract activities with respect to—
    a. transaction details?
    b. current gains or losses on open contract positions?
    c. necessary tax information?
13. Do operating personnel appear sufficiently knowledgeable relative to the level of contract-transactions activity?

3130.1.3.2.4 Conflicts of Interests

The inspection of an investment adviser subsidiary which provides services to an affiliated trust company or bank with a trust department requires expanded inspection procedures. Often the investment adviser subsidiary was organized for the purpose of providing investment advice and services for the trust accounts held at one or more of its affiliates. These subsidiaries often employ the same individuals who worked in the banks or trust company which they advise.

Conflict-of-interest problems may arise when the adviser exercises any "discretion" when there are mutually opposing interests. The most serious conflict of interest is self-dealing, which could include transactions such as an investment in affiliated banks or the purchase of securities from or through an affiliate. To resolve conflicts of interest, such transactions and the fees associated with them must be fully disclosed and authorized by the appropriate parties.

Potential conflict-of-interest situations are not limited to transactions between affiliates, but can be between the adviser and any of its directors, officers, or employees individually. Due to the complexity, sensitivity, and exposure involved in conflicts of interest, it is particularly important that an adviser develop the awareness and policies and procedures to identify and deal with conflicts situations. Therefore, it is considered highly desirable, even when not specifically required by regulation, that written policies be adopted and periodically revised as necessary.

3130.1.3.2.4.1 Self-Dealing

1. Has the adviser—
   a. acquired any assets from itself or its affiliates?
   b. acquired any assets from directors, officers, or employees of the organization or its affiliates, or from any other individuals with whom a connection exists that might affect their best judgment?
2. Has the adviser sold or transferred any account assets, by loan or otherwise, to—
   a. any affiliates?
   b. directors, officers, or employees of any affiliates?

   c. other individuals or corporations with whom such a connection exists or other organizations in which such an interest exists that might affect the exercise of its best judgment?
3. Has the company purchased any securities for a customer account from any member of an undivided syndicate for which the adviser or any of its affiliates are participating, or from a private placement which the adviser assisted?
4. Does the company have satisfactory policies and procedures, in terms of its size and character of business, to address the preceding situations?
5. If the company directs extra fee-producing business to itself or an affiliate (for example, brokerage services or options-trading services), or if it charges separate fees to accounts for securities transactions or other services commonly provided as part of general account administration (for example, fees for cash management or investments in mutual funds when management or administration fees are received by the company or an affiliate)—
   a. has it identified those accounts which may properly participate in such services in accordance with adopted policy, legal opinion, a Department of Labor ruling, and/or other necessary determinations?
   b. has it made appropriate prior disclosures and obtained adequate specific authorizations for those accounts identified as entitled to the services?
